THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXXX

BEING FROM JANUARY TO MARCH 1938, INCLUSIVE

LONDON:

PUBLISHED AT THE ECONOMIST OFFICE,
8 BOUVERIE STREET, FLEET STREET, LONDON, E.C.4

Faith or Works?

IT is a long time since New Year's day fell at a juncture when the immediate future was so hard to forecast as it is to-day. In the next article an attempt is made to probe some of the grim mysteries of the great international game of power politics; and on pages 11 to 17 of this issue of *The Economist* we inquire at some length whether the economic auspices point to continued prosperity or to onsetting decline.

The conclusions of our survey, which is concerned solely with diagnosis and makes no attempt to formulate policy, need only be briefly and dogmatically summarised here, since the full argument is within easy reference. It is becoming clearer each succeeding week that the economic climate has changed in the last few months. Between August and October British recovery reached its summer solstice, and there has been since then a slight but perceptible recession in almost all the different fields of enterprise. There is not, however, in economic affairs, any astronomical inevitability of decline from high summer to the dark days of midwinter. If some further upward stimulus can be provided there is no reason why the present high level of output in this country should not be broadly maintained, even though it is unlikely that there will be any considerable further increase. A successful economic policy, that is to say, may perform the biblical miracle of making the sun stand still, though it is unlikely to raise it still higher in the heavens. And in any case, even if this success cannot be achieved, there is no reason to

anticipate a sudden eclipse, or anything more drastic than a gradual decline.

The obvious practical conclusion to be drawn from this analysis is that economic statesmanship should be preparing itself to fight a battle in defence of our present prosperity. The Government have hitherto chosen to wage this battle with the weapons of faith. Before Parliament adjourned, the PRIME MINISTER, once more denied that there was any threat of a slump, declared that "this country is in a far better position to meet any temporary decline in trade than at any time since the War," and condemned talk of depression as "not only exaggerated but dangerous," and he has reiterated the same view this week in a New Year message to the Conservative Party.

This attitude has considerable logical justification. It is a commonplace that public psychology plays a very large part in the causation of economic fluctuations, and in the very earliest stages of a downward movement it is the soundest of policies to do nothing to disturb, and everything to maintain, the highest degree of public confidence in the continuance of recovery. It is becoming more and more questionable, however, whether the time for such a policy has not already passed. The disheartening returns of unemployment in November were only the most obvious of many signs which must by now have convinced the majority of thinking men that there is some change in the economic atmosphere. When, in such circumstances, the public authorities persist in declaring that

nothing is or can be wrong, there is a danger lest the effect of their declarations should be to persuade the public that they are either out of touch with the facts or unwilling to accept them. The fate of MR HOOVER's very similar endeavours in the winter of 1929-30 should be a standing warning against any too long-maintained reliance upon faith-healing alone.

The search for a more positive policy is not an altogether easy one. It so happens that almost all of the specifics usually prescribed to guard against trade depression are not available in our present circumstances. Cheap money, for example, is one of these, but the rates of interest in the money market and the gilt-edged market could hardly be much reduced below their present level. Expansion of the basis of credit is another device that has been fully utilised, to such effect that the banks are already carrying an unusually high proportion of investments. Depreciation of the pound, which brought great relief to the British economy six years ago, could not be tried again without evoking reprisals that would rob it of all useful effect. The chief item of the "doctor's mandate" in 1931 was the balancing of the Budget. Whether or not that would be a sound policy for to-day, it cannot be done so long as foreign anxieties prevent us from abandoning the costly re-armament programme. Even that dubious narcotic, another dose of industrial protection, is fortunately far removed from practical politics at the moment.

There is only one policy left for adoption, and that is the policy usually and somewhat misleadingly described as "public works." Within the last few weeks both SIR ARTHUR SALTER and MR J. M. KEYNES have publicly drawn attention to the virtually unanimous opinion among economists that the most useful form of economic policy at the moment would be to prepare schemes of useful capital development to be put into effect if there should be a serious rise in unemployment. With employment near its peak, it would, of course, be foolish to put any such scheme into actual execution at the moment, but the announcement that plans were in preparation would serve as a more effective buttress to confidence than mere declarations of unconcern.

Only the most enthusiastic devotees of public works would claim that they are a remedy of universal application, or that, unassisted, they can change the trend of economic events. Indeed, it is easy to imagine circum-

stances in which a public works policy would do more harm in undermining confidence in the solvency of the State than good in creating employment. Our present circumstances, however, provide an almost uniquely favourable conjuncture for the preparation of such a policy, in which both of the major objections usually urged against it could be avoided. The first of these is that public works are works of no value, which are not required. At present, however, houses for the ill-housed poor and roads for the rapidly expanding volume of motor transport provide by themselves sufficient scope for large expenditures which will in any case have to be undertaken within the next decade or so. There can be no question of "making work" when there is so much work of this nature which needs to be done.

The second possible objection is that a public works programme would create an enormous deficit in the Budget, and lead to another *crise de confiance* such as that of 1931. But the two examples that have been mentioned—roads and houses—can be financed by methods that would impose a very small extra burden on the Budget. If the Road Fund were resurrected, it could raise an autonomous loan for a large programme of construction on the security of its future increase in revenue. In the case of houses, the Exchequer's financial support would be given in the form of a continuing subsidy, and the burden on any one year's Budget would be very small.

The advantages of such a course of positive defence against depression are thus very considerable. It is urged on the Government by an unusual concurrence of opinion. The economic circumstances of the moment make sure that any such programme, if boldly launched whenever unemployment should increase, would have its maximum effect in stimulating enterprise. And the programme could be so arranged as to minimise its fiscal disadvantages. Its adoption by the present Government would have one more circumstance in its favour, for there is a very widespread belief in the country that the National Government laid the foundations for recovery in 1931-32, and any policy of economic preparedness adopted by that Government could be expected to evoke an unusually favourable psychological response from the business community. No Government in modern times has more deliberately sought to build its reputation on its economic policy. The next few months will be a test of its ability and willingness to adapt itself to the dynamic of events.

A Fateful New Year

THE New Year finds the world in a state of utter uncertainty as to what the near future is likely to bring forth. Our situation would be less uncanny if we foreknew that the utter discord which may be ahead of us was inevitable; but that is just what we cannot tell. The thunderclouds that have been piling up, bank on lowering bank, for the past six years, are not bound to discharge an annihilating thunderbolt. Their sensational accumulation may be followed by an unsensational dispersal, and the skies, while remaining murky, may cease to be menacing. Our complete inability to predict our own future is the sign of the times. What a contrast to the outlook of our fathers and grandfathers, who foresaw their future and beheld that it was very good—with a vision that saw true up to the point marked 1914 in the Recording Angel's calendar.

Perhaps just one thing can be predicted: the future is likely to be less obscure—for good or evil—twelve months hence than it is to-day; 1938 seems likely to be a fateful year, though not necessarily a fatal one. As it opens one question is in every mind: what are the chances of aggression or against it?

Against aggression there militate two hard facts, one

technical and the other economic. The technical fact is that, in the art of war to-day, the defence is decidedly, and perhaps even decisively, superior to the attack. The economic impediment to aggression is that an overwhelmingly large proportion of the world's economic resources are under the control of non-aggressive Powers. Unfortunately, however, these considerations are not so conclusive as might appear at first sight. For the defence is, of course, only superior to the attack when both the combatants are approximately at a parity of efficiency in the widest sense of the term. To take an extreme case, an Abyssinian defence is no match at all for an Italian attack. The great risk of 1938 is that the democratic and non-aggressive Great Powers may still seem, in the eyes of a potential aggressor, to be a possible prey, since he sees that they are technically still largely unprepared, while he guesses that they are still morally pusillanimous.

All the same, the actual or would-be aggressors cannot be feeling very cock-a-hoop at this moment if they are looking the facts in the face, for the course which aggression has run during the past six years has been etched with a biting irony. On the one hand, the inability of the

victims of aggression to defend themselves, and the unwillingness of their fellow members of the League of Nations to carry out their obligations under the Covenant, have no doubt surpassed the aggressors' most sanguine expectations. Japan in Manchuria and Italy in Abyssinia have pursued their way unhindered. But here comes the irony; for the successfully conquered territories have turned out to be as great liabilities as they were expected to be great assets; and to keep up the illusion of enriching expansion, each country has been impelled to plunge into a second adventure in aggression—Italy in Spain and Japan inside the Great Wall. Looking at these first two stages in the Japanese and Italian progress, a Germany which has not yet broken out may well hesitate.

Can a German outbreak *à la japonaise* or *à l'italienne* be averted? This is perhaps the most crucial of the imminent practical questions of the day. There is no reason to think that the men who have the last word in determining the policy of the Third Reich are themselves in a desperate mood at present. But they might be driven into desperate courses by economic difficulties at home that have been mainly of their own making; or again they might be drawn into desperate causes by a despairing ally.

Of all the seven Great Powers, Italy is manifestly the least capable of standing the competition in brute force which SIGNOR MUSSOLINI himself has precipitated. Already the DUCE's policy has caused Italy to forfeit her post-war influence in Central and South-Eastern Europe to her now re-armed German ally. Italy is economically weak and already under heavy strain; and her only alternative to a confession of frustration may be a quest for power and territory in the Mediterranean and Africa at the expense of France and Great Britain to set off against her losses to Germany on the Danube and the Brenner. But she could only attempt so desperate an adventure as this if she could succeed in embroiling Germany too. Is she likely to succeed in that if she tries? SIGNOR MUSSOLINI's strong card would be to play upon Germany's fear of being left isolated in Europe, without an ally, if the southern end of the Berlin-Rome axis came to a smash. This was the card which Austro-Hungarian diplomacy played with success in July, 1914; and it is perhaps unlikely that the Germans will allow themselves, twice running, to be lured into disaster at the tail of a weak ally. The Reichswehr have forgotten neither July, 1914, nor those months in the following year in which the Italian member of the Triple Alliance abandoned even neutrality in order to stab her old allies in the back. The German General Staff are not going

to pull MUSSOLINI's Spanish chestnuts out of the fire if they can help it.

These German misgivings about Italy's adventures in aggression are no doubt being greatly accentuated at this moment by even more acute anxieties about the behaviour of Germany's other ally, Japan. Germany has been hoping to find in Japan a second arm for a pair of nut-crackers that are to crush the Soviet Union when the favourable moment turns up. But the Japanese have thought otherwise. Instead of attacking a Power which can bomb Tokyo and Osaka from Vladivostok, the Japanese have run their heads into a China who is as difficult to cope with as PIER GYNT's antagonist the BOYD. The Japanese ram is driving his horns so deep into the Chinese clay-bank that he may never be able to pull them out; and to make matters worse for Germany, the frenzied animal is at the same time trampling with his forefeet upon German trade in China while he is lashing out with his hind legs against the British Empire and the United States.

The rapid and brilliant success of Japanese diplomacy in rousing the English-speaking peoples and bringing them closer together may set German diplomacy on a new tack. For Japan's imbroglios are lightening the pressure on Russia. Germany would have no stomach for trying an anti-Russian adventure if, instead of taking the shape of a limited German-Japanese attack on the Soviet Union, with the rest of the world neutral, it were to mean a world-war in which Germany would once more find the English-speaking peoples ranged against her. It is possible that this new constellation of forces, made in Japan, will incline Germany to look for a realisation of her economic ambitions in Eastern Europe through an *entente* with Russia and not through an assault upon her. Any such re-alignment would present to each of the other Great Powers the task of thinking out again *ab initio* its place in the world. But its immediate effect would be greatly to relieve the present tension. There would be at least an interval, in which the nations could make another attempt to live side by side as members of a genuine international society instead of being offered the tragic choice between the rôles of anvil and hammer. In this fateful year 1938, German statesmanship could perform no greater service to the German people than by making up its mind to keep the peace with Russia as well as with the Western Powers, and thus securing golden advantages, both in Eastern Europe and in Africa, by a process of friendly negotiation, without having to put Germany's fortunes to the perilous hazard of another Great War.

Gas or Electricity?—I

The Rival Industries

IN this age of scientific wonders there is little of the magic of the whole thousand-and-one Arabian Nights that the average British citizen, who keeps the peace and pays his bills, cannot have for the asking. Gas and electricity have contributed largely to this result and, in consequence, have added much to the total of human happiness. But they are rival geni, whose emulation, if carried to extreme lengths, may have consequences neither in the public interest nor in their own. We propose, therefore, to examine some of the consequences of their present-day competition and to see how far a *modus vivendi* is practicable between the two great public utilities.

First, we may indicate their respective extent and scope by a few significant figures. In 1936 there were 11,318,174 gas consumers, industrial and domestic, in the United Kingdom. In the year ended March 31, 1937, there were 7,652,000 premises connected to electricity systems in the supply areas of Great Britain, and of these premises

some 6,484,000 were domestic. The total number of consumers of electricity in the United Kingdom is put at about 8,000,000, of which over 87 per cent. are domestic consumers. The output figures of the two industries are given in the following table:—

GREAT BRITAIN: OUTPUT OF GAS AND ELECTRICITY

	Gas (million cubic feet)	Electricity* (million units)
1920 ...	259,000†	...
1929 ...	316,419	10,294
1930 ...	313,046	10,914
1931 ...	313,753	11,413
1932 ...	309,336	12,224
1933 ...	309,557	13,562
1934 ...	313,546	15,459
1935 ...	319,342	17,569
1936 ...	334,049	21,650

* Authorised undertakings only.

† Partly estimated.

Electricity, the newer industry, has naturally achieved the more rapid progress during recent years. Its output,

nothing

indeed, has more than doubled since 1929. The gas industry, nevertheless, has shown steady expansion; for in 1936 the output of authorised undertakings in Great Britain was 5½ per cent. higher than in 1929 and about 30 per cent. higher than in 1920. Industrial consumption of gas, in particular, has a healthy upward trend. But electricity, undoubtedly, has the wider scope for expansion in the near future.

Hitherto, increased demand for electricity has come largely from new consumers, many of whom use it only for lighting purposes. There is still room for further expansion, since on March 31st last about 40 per cent. of potential consumers were still unconnected to any source of electricity supply. But as the field for new development becomes more restricted, on the domestic side, the industry will need to persuade customers to take electricity for other purposes than lighting, particularly for space heating, water heating and cooking. And here strong resistance will undoubtedly be encountered from the gas industry. The latter, having been first in the field, to-day holds the larger part of it. There were installed in the 12 million occupied dwellings of Great Britain, at the end of 1936, some 636,400 electric cookers, 200,800 water heaters and 150,300 electric wash boilers. In other words, there was one electric cooker to approximately every nineteen dwellings, one water heater to every 56 and one wash boiler to every 80. But a single large gas producer, the Gas Light and Coke Company, whose area holds less than 14 per cent. of the total number of gas consumers, installed 397,450 gas cookers and 99,447 gas water heaters in a single year—1936.

Both industries have made extensive and effective use of the modern weapon of co-operative advertising. The consumer, whose custom is thus vigorously solicited by two great industries, is free, in theory, to choose the form of lighting, heating and power which best suits his particular purposes. In practice, his choice is effectively limited by considerations which may be purely local in character, and are concerned mainly with relative charges. Standards of efficiency are not uniform among suppliers in all areas, but, broadly speaking, in districts where both gas and electricity undertakings are reasonably well run, and the relative prices charged per unit are not unduly high (by existing standards), there is a tendency for many consumers to have both gas and electricity connected to their houses. Competition for new business, consequently, focusses itself on the persuasion of the customer to instal heating and cooking appliances. How far should the two industries go in offering inducements to potential users by means of special tariffs?

The practice of most electricity companies is to charge a high flat rate, in relation to generation costs, for lighting purposes, but to offer the consumer the alternative of a two-part tariff. Under this tariff a standing charge, based on either the number of rooms or some other index, is combined with a low charge per unit. Critics of this system argue that it compels the lighting consumer to pay a higher price than is economically justified in order to subsidise the heating or cooking consumer. To this contention the reply has been made that, since lighting provides the "peak load" for the makers and suppliers of electricity, it is in everybody's interest to encourage consumption in the "off-peak" hours by offering lower over-all prices to those who use electricity for purposes other than lighting.

Whatever the position, it is generally acknowledged that the two-part tariff is a powerful weapon of the electricity industry in competition with its rival. In this respect the gas industry has hitherto been at a considerable disadvantage. A company must supply gas to any person within a specified distance of a main and has no power to charge for the installation; whereas the electricity supplier can bargain for a cash payment or annual instalments towards the installation costs. Many gas consumers are, in fact, so

small as to be unremunerative to the companies who supply them—in the sense that their consumption is insufficient to carry a due share of the total cost of gas distribution (as distinct from that of manufacture). Many attempts have consequently been made to encourage individual consumers to burn more gas. In October, 1935, the Gas Light and Coke Company even introduced a voluntary form of two-part tariff, by giving consumers the option of paying a flat rate of 8.6d. per therm or a fixed standing charge plus 4d. per therm for all gas consumed. In the industry as a whole, however, the difficulty is that, after more than a century's operation, the uneconomic consumer has reduced flat-rate charges to levels which leave very limited scope for offering consumers any inducements. To do so would normally involve the raising of flat rates—which, in most cases, is quite impracticable.

An attempt to solve the problem on rather different lines was made in September, 1936, when the South Metropolitan Gas Company introduced a three-decker tariff: 11d. per therm for the first ten therms per month, 7½d. per therm for a further quantity calculated according to the consumer's probable maximum demand, and, thereafter, 4d. per therm. The object of this new system was to ensure that each consumer should first pay a price to cover the standing charges on his installation and then receive gas for a payment only slightly in excess of the actual manufacturing cost. The proposal was, however, abandoned in face of considerable opposition because it threatened the majority of consumers with a compulsory increase in price and the poorer consumers with definite hardship.

Consequently, the gas industry to-day is limited to three systems of charging. The first was established by law the best part of a century ago, and prescribed a maximum selling price for gas, coupled with a maximum dividend on ordinary capital. This maximum price system, designed to constrain what was then a monopoly, meant that the consumer received no benefit from improved efficiency until the maximum dividend was reached. This system was later supplemented by the standard price system, which embodied a sliding scale of charges, based on the principle that the consumer was entitled to the bulk of the economies of increased efficiency, but the shareholder had a right to between one-tenth and one-fifth of the proceeds of such economies. The third system, introduced by the South Metropolitan Gas Company in 1920, was the basic price system; a basic price was laid down by statute, and the difference between the actual revenue and the revenue which would have been received had all the gas been sold at the basic price was to be divided between the stockholder, the consumer and the worker.

The complaint of the gas producers is, briefly, that none of these systems, to which they are bound by circumstances and by statute, really allows them to meet the rival appeal of electricity on level terms. The consumer makes his choice for domestic or industrial purposes by comparing prices; and the gas industry is prevented, largely by extraneous and historical reasons, from offering really competitive tariffs. There is certainly some justification for this contention; and the results are serious both from the viewpoint of the gas industry and of the public, whose interests demand the most efficient use of the national fuel resources. As we have seen, the two industries are still going ahead together despite their rivalry, and there is room for much more expansion. But, if the consumer's choice is to result in the most economic use of fuel and a proper functional separation between the uses of gas and electricity, competition on the basis of price is not the end of the matter. The question is not merely one of productive efficiency; efficiency in consumption deserves much more attention than it has had hitherto. To this question, and to the possibilities of co-ordination between the two industries, which it opens up, we propose to turn in a concluding article.

Publicity for Whitehall

PROPAGANDA is the ugliest child of the Great War. It was discovered in 1918 that the victor depended for success as much upon the mobilisation of the public mind as upon the mustering of men and material. The lesson was learned so completely in some countries that the deliberate control of public opinion is now a recognised part of the mechanism of a Fascist State. Great Britain, which was credited with the most skilful and effective propaganda machine in wartime, abandoned it at the Armistice, and has only very recently begun, in this department as in others, to re-arm in self-defence against the potential threat of the Dictator States.

The full power of propaganda, however, is not to be seen in international relations so much as in the internal public opinion of countries from which all other sources of news and opinion are excluded. These recent extensions of the power of governments over the minds and souls of their subjects are so deadly poisonous to the democratic idea that they must inevitably be regarded with the utmost abhorrence by all who see in the freedom of the human spirit the chief hope for the future progress of mankind. But there is some danger that, in our detestation of Government propaganda, we shall be led to disapprove of another entirely different and much less objectionable development—the gradual provision of an efficient publicity service for the doings of Government. It may not in every specific case be possible to draw a clear line where publicity ends and propaganda begins, since one man's news may be another man's propaganda, but the distinction in principle is unmistakable: publicity seeks to enlarge the supply of facts available to the public in free competition with other sources of information; propaganda seeks to mould opinion without any particular regard to truth. We may agree with JOHN STUART MILL that any attempt by the State to bias the opinions of mankind on controversial questions would be a great evil, and yet hold that there is room for a very great improvement in the machinery by which the State keeps its citizens informed of what it is doing and, where necessary, solicits their co-operation.

In Great Britain, apart from the great development of official publicity during the war of 1914-18, there were no significant efforts by the administrative (as distinct from the political) machinery of State to inform public opinion, still less to influence it, for a particular purpose, until the foundation of the Empire Marketing Board. Then, for the first time in British administrative history, a high-pressure publicity department was created in the service of an economic cause. Its career was brief, but not inglorious. It set new standards in official propaganda and it even surpassed the achievement of many commercial undertakings.

The Empire Marketing Board was killed by the economy crisis of 1931. But that same crisis saw a further development of State publicity in the intensified campaign to "Buy British," and in the next year the conversion of War Loan was "put across" by means of widespread publicity.

These examples, however, were all of a more or less temporary character and for specific purposes. The tradition of Government departments and of their political heads remained until very recently one, at best, of passively providing information only when asked for it, and, at worst, of retiring behind a screen of secrecy and anonymity. The only pre-1932 exception to this rule was the excellent News Department of the Foreign Office, itself a survival of the war, which has continued to foster excellent relations between the Foreign Office and the Press without the exercise of any pressure save that of fact and reason.

The first breach of the official tradition came not in Whitehall but in the City, when the General Post Office secured the services both of the Empire Marketing Board's successful film unit and of SIR STEPHEN TALLENTS, who had first shown in his administration of the Board what public relations might do for a Government department. So successful has been the example of the publicity given by the Post Office to its activities and services that, in the short space of six or seven years, Whitehall has already transformed itself. It was probably no mere coincidence that after the promotion of the POSTMASTER-GENERAL to the Cabinet rank of MINISTER OF HEALTH a joint Public Relations Department was created to serve both the Ministry of Health and the Board of Education, neighbours in the same building. Although the two departments have since severed the union, the divorce was not the result of a weakening faith of either in the common cause. Each department now has its separate service, and the current campaign to make the health services more widely known is the biggest and most important achievement of administrative advertisement to date.

Many of the other Departments have taken similar steps. The Ministry of Labour has sought to popularise training and transfer schemes in the derelict areas. The Ministry of Agriculture has obtained publicity for its National Mark and marketing schemes, and has provided an information service both for farmers and for the public. The Ministry of Transport in recent years has necessarily made a direct appeal to the public, and MR HORE-BELISHA, like SIR KINGSLEY WOOD, has carried the infection of publicity from one department to another, since one of his earliest actions at the War Office was to appoint a Director of Public Relations. In short, the Department that makes no attempt to supply information or to obtain publicity for its actions is now the exception rather than the rule.

The mere provision of a Public Relations Department, however, does not by itself ensure that a Government office secures that share of the public attention which it desires, and still less that the public is given all the information it wants about the activities of the Civil Service. There are enormous differences, as any journalist knows, between the services which different departments provide for the seeker after information. Some Ministries still consider it the chief purpose of their Public Relations Officer to hold the enquirer at bay. In others, the Officer is not given sufficient scope to be able to be of much service to the public. Generally speaking, it is only those departments where either the political or the permanent head is a convinced believer in the virtues of publicity that make a real effort to give a good account of themselves to the public. The change, however, has been rapid, and the discovery that publicity is a political asset to the Cabinet Minister at the head of a department is sufficient by itself to guarantee its further extension in the future.

This sort of publicity is a new development in the British political machine. Hitherto the only link between the Civil Service and the public has been the House of Commons, and it must not be thought that the creation of a new link through the Press and other media, such as the cinema and the hoarding, finds universal approval. It is thought by many civil servants to transgress against the Gladstonian traditions of their service. There is also the danger, hitherto successfully avoided, of overstepping the line between publicity for the actions of the Government and propaganda for the policies of the political party in power. Parliamentary criticism and control is very necessary as a safeguard against abuse of the new weapon. Any form of publicity, especially when it is based on exclusive

nothing.

of information, is necessarily to some extent persuasive as well as informative in character, and it is essential to have some assurance that it is used only for purposes—such as better housing, better nutrition, better health—which are generally acceptable. Just as Ministers, when giving information to the House of Commons, are subject to criticism and questioning which they cannot evade, so in the new development of direct publicity, it is essential that information should not merely be handed out in a form which provides no opportunity for testing its value. In other words, to achieve its full value, publicity for Whitehall must be two-way publicity. If the Departments want the benefits of publicity, they must bear its obligations. They must not claim the interest of the public one minute and rebuke its inquisitiveness the next.

The new development of State publicity thus has its

dangers. But to attempt to arrest it would be swimming upstream. Like democracy, it is a difficult system to work without abuse, but the effort is worth while. The example of the United States, where direct relations, on equal terms, between public officials and the Press have gone much further than in this country, gives cause for much more encouragement than alarm. For the American citizen is kept closely in touch with the actions, theories and aspirations of his Government without being unduly or exclusively prejudiced in its favour. On the contrary, the free supply of information is frequently of great advantage to the Opposition. In the modern democratic State, with its mass electorates, the rulers of the people must prove themselves in the widest forum. In the long run, anything that enlarges the mutual contacts between the administrators and the administrated cannot fail to bring benefits.

Topics of the Week

Changes in *The Economist*.—This issue, No. 4923, of *The Economist* is the first since the paper's inception, ninety-five years ago, to be printed on a rotary machine. The change, with its time-saving possibilities, is a logical sequel to increased readership; for *The Economist's* circulation, as the annexed chart shows, has risen by 80 per cent. in little more than a decade. We have associated the technical changes inseparable from the replacement of flat-bed by rotary printing with a re-arrangement and extension of reading matter which will, we trust, be found acceptable by our subscribers, old and new. Familiar features such as Leading Articles, Notes (now called "Topics") of the Week, Overseas Correspondence and Book Reviews have been retained. In place, however, of

body type combining suitability for rotary printing with the satisfaction of more æsthetic canons, whose name commemorates a great master-printer of the sixteenth century: Christopher Plantin of Antwerp. Industrial, financial and investment questions have become part of the warp and woof of daily life, and if our innovations contribute by one whit to their clearer understanding our purpose will have been well served.

Christmas in 1937.—Not even the vicissitudes of foreign affairs are comparable with those of the British climate. Christmas in 1937 was preceded by snowfalls and frozen roads. On the eve of the holiday, however, temperatures rose, fog descended, and almost everywhere Christmas Day was celebrated in moist murkiness. Yet it was a good Christmas, befitting a year of prosperity; and as much money as ever before was spent on gifts, travelling and greetings—so, at least, say the oracles. It was a family Christmas when millions of people congregated by the fireside and listened to the broadcast message of His Majesty the King, speaking from the bosom of his own family. Two years before, King George V had addressed the whole of the British Empire; this year, King George VI spoke, more informally, to his subjects in the British Commonwealth. He spoke of peace and friendship, in terms of quiet confidence, in which, through good times and ill, lies a nation's best strength.

New Laws in 1938.—Most of the legislative achievements of 1937 either have already been put into effect or have still to be consummated. This generation's belated Factory Act does not begin to pass stage by stage into operation until next July. The Coal Mines and Films Bills are still on their several ways to the statute book. And other important measures, like Mr Morrison's Agriculture Act, become operative as and when the Minister orders. Nevertheless, 1937 has no mean contribution to make to the *début* of its successor. On New Year's Day, 1938, there will come into force the most remarkable of the previous year's laws. The Matrimonial Causes Act (or, more popularly, the Herbert Act) comes into effect on January 1st. This law, which deservedly commemorates the earnest conviction and the Parliamentary generalship of the senior burgess from the University of Oxford, should, if rightly administered, alleviate some of the worst consequences of error in the conclusion of one of the most solemn and durable of human contracts. Its welcome counterpart, the Summary Procedure (Domestic Proceedings) Act, which created machinery to settle domestic disputes speedily and satisfactorily, came into operation three months ago. Another law which begins to operate on January 1st is the National Health Insurance (Juvenile Contributors and Young Persons) Act, designed to fill in

one of many gaps in the health services. And two days later, on the "first Monday in January," the provisions of the Widows', Orphans' and Old Age Contributory Pensions (Voluntary Contributors) Act will be put into effect. The trend and character of modern legislation are well exemplified by these New Year measures of reform and social provision.

Ex-Service Pensions.—Before the House of Commons dispersed for its Christmas holidays, members heard an impressive appeal from Mr F. O. Roberts for more generosity in the administration of pensions for ex-servicemen. Mr Roberts' argument was appropriate to the season of goodwill. Himself an ex-Minister of Pensions, he spoke with authority and asked for a review of pension grants by a Select Committee and, in particular, for a special fund to meet the needs of hard cases. His main point was that several groups of ex-servicemen were dissatisfied because, owing to the inflexibility of the present pension regulations, their applications for grants had been refused. The case for a review of the kind proposed by Mr Roberts was stated as long ago as last autumn at no less a gathering than the Conservative Party Conference. In the course of the debate on December 23rd, it was argued that because now, nearly twenty years after the end of the war, it was naturally difficult to decide precisely the causes of applicants' disabilities, was an argument, not for greater stringency, but rather for more generous decisions. The Minister replied that the charges made at the Conservative Conference had been proved ill-founded. The total number of complaints from ex-servicemen in 1937 was 3,129—a figure equal to no more than 0.07 per cent. of the 4,000,000 survivors of the war. None of the criticisms made about the treatment of ex-servicemen's widows could be substantiated; and the British Legion was satisfied. Clearly, after the lapse of two decades, new principles of pensions policy cannot be lightly introduced. Nevertheless, the condition of men who, to-day, are prematurely aged, presumably as a result of their war-service, is a new and serious problem. There is also *prima facie* evidence of a certain punctiliousness among local committees in the treatment of applications. In general, a difficult job is being well done; but the case for generosity and elasticity is strong.

Apologies Accepted.—The Japanese Government's apology for the sinking of the "Panay" was received in Washington on Christmas Eve, and it has been accepted by the United States Government as "responsive" to their own demands. This "responsiveness" presumably lies in the obsequiousness of the tone of the Japanese note, and not in the account of the "Panay" incident, which the Japanese Government have officially adopted. The Japanese note states that, as a result of a thorough investigation, it has now been fully established that the attack was "entirely unintentional." To this Japanese assertion, the American Government have implicitly given the lie in their own declaration that they rely on the report of the findings of the Court of Inquiry of the United States Navy. This report will presumably receive ocular confirmation from the film of the Japanese attack, which was taken on board the "Panay," and which was almost the only material object at stake that the Japanese assailants failed to destroy. This film will now be seen by millions of eyes in every corner of the United States; and this will be the real answer to the Japanese note. What the Japanese have succeeded in doing in that historic day's work in the Yangtse is to provide the American people with materials for a lightning course of self-education in international affairs. American men and women whose homes are thousands of miles distant from the nearest sea-board will now be enabled to teach themselves that the insulation of their country from the fortunes of the rest of the world is an unattainable ideal. The prospective increase in the American Naval Budget comes too soon after the event to be a direct consequence of the "Panay" affair, but it clearly has a close bearing on it in the American mind. For our part, we believe that

the logic of coming events would anyhow have convinced American minds in the course of the next few years. The effect of the "Panay" film will have been to speed the demonstration up; and, in an issue in which the time-factor is crucial, this quickening of tempo in the United States may prove to have been decisive. The bombing of the "Panay" is not the only outrage for which Tokyo has been busy apologising this week. A not dissimilar Note has been sent to the British Government about the shelling of H.M.S. "Ladybird," and is likely to meet with a reception in London similar to that of the "Panay" note in Washington—namely, an acceptance of the apologies it contains, together with a total rejection of the excuses put forward for what, by any test, was inexcusable.

Japanese Advance Continues.—The Japanese army continues to make rapid progress both at the various battle-fronts and also in its dealings with the foreign settlements at Shanghai. After the capture of Nanking and Wuhu, it appears to have been decided to go no further up the Yangtse Valley for the time being, and the attention of this army has been turned to the coast south of Shanghai. Hangchow, the capital of the province of Chekiang, was captured at the end of last week. In the north, the province of Shantung is now being overrun. Tsinan, the provincial capital, has been peacefully occupied, and the Japanese are making a rapid advance on the port of Tsingtao. This movement into Shantung has a double significance: it brings the Japanese definitely to the south of the Yellow River, and it also brings them up against the disciplined troops of the efficient Governor of the province, General Han Fu-Chu. In spite of the stiffer resistance to be expected, however, it seems to be only a matter of time until the Northern and Yangtse armies make a junction and drive the Chinese away from the whole coast-line, at least as far south as Hangchow. After that, the next step will clearly be the occupation of the southern coast, for which Canton is the crucial point. Troopships have now appeared near Macao, but the invasion of this part of China has not yet been seriously begun. At Shanghai it is daily becoming clearer that the authority of the Municipal Council of the International Settlement is allowed to continue only on sufferance. The Japanese have proclaimed what amounts to martial law not only in the Chinese territory outside the Settlement, but also in the southern half of the International Settlement itself, and they have refused to give any assurance that this martial law will not be applied to foreigners. With four million Chinese in the Settlement and the French Concession, half of them refugees from the war areas, sporadic bomb-throwing against the Japanese troops is inevitable, and several of these incidents have already occurred. The Japanese army has shown itself in the last few years to be adept at taking advantage of incidents, and it will no doubt have plenty of opportunities for practising its polished technique in Shanghai.

THE CIRCULATION OF THE ECONOMIST
(Index number of annual averages: 1924=100)

the separate divisions of the paper formerly devoted, respectively, to finance and banking, the Stock Exchange and industry, readers will find a single self-contained section headed "The Business World." This section, with its sequence of leading articles, shorter notes, market reports and statistics, has been designed to furnish business men, investors and general readers with a succinct, comprehensive, up-to-date and conveniently arranged compendium of specialised fact and inference. Its presentation, incidentally, embodies numerous typographical expedients, including the interposition of three-column with two-column matter, which are new to the regular pages of *The Economist*, but will, we trust, make for improved appearance and readability. Finally, our "Current Statistics" section will, from now onwards, include various new tables, together with a series of weekly charts illustrating a wide range of contemporary economic trends. For *The Economist*, in its new guise, we have chosen a

Spanish Government's Success.—The Spanish insurgents, gallantly ignoring all but one of the facts, still maintain that Teruel has not fallen to the Government's "New Army." The single fact that supports this thesis is that the Insurgent troops still hold out in the civil government building in the centre of the town; but the rest of the town and the surrounding countryside is securely in the possession of the Government. It can now be seen that the capture of Teruel was a considerable tactical success. The attacking forces were assembled in secret and struck swiftly at a surprised enemy. This looks like being the first occasion in the course of the war when the Government has been able both to take the initiative and to carry its initial attack to a successful conclusion. The successful conclusion, however, is not yet quite attained, for an insurgent relieving column is trying to fight through to the city under the command of General Moscardo, the defender of the Alcazar at Toledo, and General Aranda, who withstood a siege at Oviedo, and their names are a possibly ominous reminder that the Government army has not shone in siege work hitherto. How important the capture of Teruel is for the strategy of the 1938 campaign cannot yet be determined, although it looks as if General Franco has had to rearrange his plans for an early offensive in order to draft troops to the assistance of Colonel Rey in Teruel. The most decisive results of the affair are likely to be moral, for the new Republican army is naturally elated, and outside Spain the belief that the insurgents held the decisive military advantage has had to be very drastically revised.

Neutrals and the League.—On December 22nd the President of the Swiss Confederation, M. Motta, made a speech before the Swiss Federal Parliament in which he—very reasonably, from the Swiss point of view—expressed grave concern over the fact that two out of the three Great Powers that are Switzerland's immediate neighbours are now out of the League of Nations. He referred with regret to the departure of Italy, Germany and Japan and the admission of Russia, and he recalled the fact that in 1935 Switzerland had declined to go all the way with her fellow States members in imposing sanctions upon Italy. M. Motta explicitly reaffirmed a declaration—already made by him on August 1st last in a broadcast address to Swiss citizens abroad—that Switzerland must "proclaim with increasing vigour the will to be neutral even in regard to the League of Nations." Article 16 of the Covenant ought, he said, to be cut out. As things were, the League was in danger of becoming, even without wishing it, a coalition opposed to another coalition, and this would be fatal. This Swiss reaction is, no doubt, exactly the kind of result aimed at by Signor Mussolini in formally seceding from the League, and by Dr Goebbels in instructing the German Press to refer to the League as "the Geneva Coalition."

Switzerland is not the only small country in Western Europe to feel in this way at this time. Last year saw Belgium's breakaway from her alliance with France and Great Britain, and at this moment the Dutch Government is negotiating with the other signatories of the Oslo trade convention (i.e. with Belgium, Luxembourg and

the four Scandinavian countries) with a view to their making a joint *démarche* to the British and French Governments on the subject of the diplomatic recognition of the Italian conquest of Abyssinia. The Dutch suggestion is that the Oslo States should inform the two West European Powers that they intend, for their part, to accord this recognition, and should at the same time inquire whether France and Great Britain feel disposed to join them in this move. One of the Oslo States—Norway—has already declined the Dutch invitation, but the meaning of these Dutch and Belgian and Swiss gestures is plain. The small countries of Western Europe have given up hope of the organisation of international law and order, and they are bending all their own efforts to the object of preserving their own neutrality if another war between the Great Powers should break out. For this flight from the League the British and French Governments have only themselves to blame.

Strikes in Paris.—During the Christmas Holidays sectional strikes broke out in Paris among the transport workers and in the larger food warehouses. On December 28th the movement spread further, when, as the result of a snap decision taken late at night, a general strike was arranged in the Paris municipal and transport services. Numerous reasons were given for this drastic step. For example, complaints were made of victimisation arising out of the earlier Christmas strikes, and resentment was expressed over the use of Army lorries to ensure supplies of food. More generally, disquiet has been aroused by the rapidity with which the rising cost of living has wiped out the gains in wages accorded under M. Blum's New Deal. Yet neither these pretexts nor the technical difficulties which have recently arisen about labour recruitment were actually responsible for the general strike, which was largely political in character. A dissident minority, who regard M. Chautemps' financial liberalism and his determination to prolong the "pause" in social reform as betraying the Popular Front, took advantage of the absence of several of the most important trade union leaders to precipitate the strike. Momentarily, their manoeuvre was surprisingly successful. Transport in Paris was brought to a standstill throughout December 29th, and all but the "key" workers in the gas, electricity, water, cleansing and hospital departments of the municipal services ceased work. The strike was peaceful at its outset, but its potentialities for civil conflict were enormous.

The Cabinet unanimously agreed to take a firm line. They called upon the strikers to return to work, and threatened to take over and operate the transport services under a decree of 1926. Early in the morning of December 30th the trade union leaders called off the strike. The Government's ultimatum, endorsed by Socialists and Radicals alike, with its latent threat of action similar to that of M. Briand in 1910, when he mobilised the railway strikers as soldiers, was too potent to be ignored—unless the union leaders were prepared for something not far short of civil war. Events have shown that they were not. Indeed, the union leaders have been scrupulously moderate since M. Blum left office, and this sudden strike may well have been as distasteful to them as it was dangerous to their cause. As the Socialist *Populaire* pointed out on December 29th, there were no grounds for believing that the strike would find any support in public opinion. At the least, it was likely to injure the whole trade union movement. And it has probably weakened the position of the Socialists in the Popular Front almost as much as the Government's prompt and resolute action has enhanced the prestige of M. Chautemps and his policy.

French Budget.—Despite attacks from both Left and Right, M. Bonnet has secured the approval of the Chamber for his Budget programme. On the one hand it has been argued, by spokesmen like M. Reynaud, that his estimates are too optimistic, and that he will have to

borrow more than he has allowed for, while receiving less than he anticipates in revenue. On the other hand, the extreme Left is not content with the liberal financial policy to which MM. Chautemps and Bonnet, faithful to the Tripartite Agreement, have nailed this flag. M. Bonnet refuted the calculated pessimism of M. Reynaud, who had argued that the Government were inflating public expenditure, at a time of general economic deflation, which could only lead to monetary inflation in the end. The Treasury would borrow no more than 20,000 million francs, M. Bonnet declared, and would tolerate no expenditure beyond that limit. The estimated requirements of the Treasury in 1938 were 46,000 million francs, and would not be exceeded. Since the Budget report was accepted, M. Bonnet has restated his confidence. It is, however, admitted (as our Paris correspondent points out on page 18) that without a marked acceleration of business activity neither taxes nor loans can be realised as estimated. There are many reasons why such an improvement should take place, but it can only do so with the maximum of co-operation and hard work in French industry and trade.

Eire Begins.—The Irish Free State expired at midnight on Wednesday, when the new constitution of "Eire," or Ireland, came into force. The changes between the old regime and the new are metaphysical rather than practical. Mr De Valera ceases to be the President of the Executive Council and assumes the new office of Taiseocht, or Prime Minister, but the change makes no difference to the personal dominance that he exercises over the Government, or for that matter over the whole of Irish politics. The President, or ceremonial head of the State, is represented for the time being by a Commission consisting of the Chief Justice, the President of the High Court, and the Speaker of Dail Eireann, and the election for the presidency is to take place within 180 days. Mr De Valera's candidate is believed to be Mr Sean O'Kelly, his present chief lieutenant, but he may be opposed in the election by Mr Alfred Byrne, the very popular Lord Mayor of Dublin. Since the new constitution claims to apply in theory to the whole of Ireland, official cognisance has had to be taken of it by the British Government. A statement was issued in London on Wednesday to the effect that His Majesty's Government in the United Kingdom, in agreement with the Governments of Canada, Australia, New Zealand and South Africa, have decided that the new constitution shall be regarded as making no change in the relations between the Irish Free State and the other members of the Commonwealth. At the same time it is explicitly declared that the new Government in Dublin can no more than the old be regarded as having any jurisdiction over the six counties of Northern Ireland. The unreality of the change is revealed at its clearest by this question of Ulster, for though the constitution bravely incorporates the whole of the island within the new State, it is evident to everybody that Ulster cannot be subordinated to Dublin except by consent, and that such consent will not be forthcoming in any foreseeable time. The final irony is that if the referendum on the new constitution had been held over the whole territory to which the document claims to apply it would have been rejected by a majority of the voters.

Nazi Cuts Nazi.—The first international sequel to the recent establishment of a semi-Fascist regime in Brazil is one that must be as disconcerting to Berlin as it will be reassuring to Washington. In the Brazilian State of Rio Grande do Sul, which has a large German element in its population, the police have just banned the wearing of Nazi badges and have taken steps to protect against victimisation those members of the local German community who have been unwilling to turn Nazi at a word of command from Party Headquarters in the Reich. These German settlers have been as valuable, and as highly valued, a reinforcement to the population of Brazil as the corresponding German community in North America has been to the population of the United

States. In their unobtrusive but effective way the German emigrants of the pre-Nazi era have served as witnesses abroad to the virtues of German culture. No sooner, however, had Herr Hitler come into power in the Reich than the Party set itself to make the position of these *Auslandsdeutsche* impossible by pressing them to assume a militantly chauvinistic attitude which would be intolerable in any minority in any country in the world. The Brazilian authorities in Rio Grande do Sul have now had the same disagreeable experience as the South African authorities in South-West Africa. It is no wonder that, under a regime which has taken a leaf out of Mussolini's and Hitler's book, the Brazilians should have reacted forcefully against a challenge to their own mastery in their own house. The incident illustrates the difficulties in the way of co-operation between hyper-nationalistic regimes whose only common bond is, after all, their respective determination to assert their own tribal egoism against everybody and everything that lies outside the tribal zereba.

Crisis in Roumania.—The peculiar course chosen by King Carol before the Roumanian General Election on January 20th has brought him into severe difficulties. The Liberals, who have formed the Government for the past four years, had hoped by allying themselves with two small parties, the Roumanian Front and the National Democrats, and by exercising all the pressure which their control of the administrative machinery placed in their hands, to secure the 40 per cent. of the total vote which, by the peculiar Roumanian electoral law, would give them 60 per cent. of the seats in the Chamber. They were, however, outflanked by an agreement between the largest Opposition parties of the Left and the Right, the National Peasants and the Iron Guard, to co-operate in maintaining the freedom of the elections. In the event, the Liberals and their allies received only 37 per cent. of the votes. The National Peasants and the Iron Guard both gained, the latter especially. This result placed the King in a quandary. By excluding the National Peasants from what they considered their right to office before the election, he had made co-operation with them very difficult even in the form of a Liberal-Peasant coalition. The National Peasants and the Iron Guard could not form a coalition since they have in common only their hostility to the persons of the King and Mme. Lupescu. In the end, the Tatarescu Government has resigned and a new Cabinet has been formed by M. Goga, leader of the National Christians, the smallest of the important Roumanian parties, which has less than one-tenth of the seats in the Chamber. The Cabinet contains four members who are titular National Peasants, but they have been disowned by their party. The newly-elected Parliament will not be summoned, or will be summoned only to be dissolved, and new elections are to be held in April or May. The intervening period will be utilised by the Government to

prepare the ground for an electoral victory, and the good work has already been begun by the suppression of newspapers and the dismissal of prefects. The National Christian Party has a programme of fanatical anti-Semitism, totalitarian restrictions on liberty and alignment with the Fascist dictatorships. How far the policy will be applied is not clear. The new Foreign Minister, M. Micescu, is a recent convert from the Liberal Party, and it is probable that King Carol will be his own Foreign Minister. Formally, the Government has declared that it will religiously guard all the alliances and friendships of the past, but Roumania's allies in Paris and the Little Entente countries will not take such words very seriously. Roumania has, in fact, through the King's interference, been set upon the Fascist path under the leadership of a party which is not even the largest Fascist faction in the State. The situation looks very much like Germany in 1932, with M. Goga in the rôle of Herr von Papen and the King in that of Hindenburg. If the King is to avoid complete eclipse, he will have by some means to maintain his chosen Government against nine-tenths of the Roumanian people at home and all their friends abroad.

* * *

Rising Wages and Industrial Peace.—The past year has been remarkably free from important labour disputes. A year of busy prosperity, in which the cost of living has risen fairly rapidly, might well have shown a record of strife and controversy. Actually, wages in general have been readily adjusted to changing conditions by mutual arrangement between employers and employed. The chief changes in weekly wages during the eleven months from January to November, according to the returns of the Ministry of Labour, were made in coal-mining, engineering, textiles, clothing, building and public works contracting, and transport. Some 4,928,000 workpeople, excluding agricultural labourers, shop assistants, clerks and Government employees, were affected, and the net increase in full-time rates of wages was about £723,250 a week, compared with a net increase of only £422,000 a week affecting 3,520,000 workpeople in the first eleven months of 1936. Nor have wages alone been changed; during the eleven completed months of 1937 some 380,000 workpeople have had an average reduction of about two and a half hours per week in hours of labour. The instances of lower wages and longer hours (apart from overtime) were slight. The technical efficiency of the machinery for negotiations between employers and employed has clearly enabled changes to be made with the minimum of friction. There have been strikes and threats of strikes, but they have been relatively inconspicuous. Some 1,076 disputes, affecting 598,900 workpeople and involving the loss of 3,406,000 working hours, have occurred in eleven months. Last year only 1,634,000 hours were lost in 759 disputes. By contrast with the United States and France the labour scene in Britain has been peaceful and calm.

* * *

Waterloo Bridge.—The latest chapter in the confused story of London's inadequate bridges was closed on December 22nd. The Minister of Transport then announced in the House of Commons that a contribution of 60 per cent. of the total cost of rebuilding Waterloo Bridge would be made from the Road Fund. To say the least, the Government have not up to now been open-handed. They were unable to contribute anything towards the cost of demolishing the old structure. For a time they were even reluctant to allow the London County Council to borrow to build the new bridge; and they have hitherto been adamant in their refusal to contribute towards the cost of the scheme. They have now decided, however, that "a number of important improvements in London's highway facilities are necessary, including cross-river facilities on the site of old Waterloo Bridge." The discovery may be a little belated, but the Government, nevertheless, must be congratulated on it. The decision will save the L.C.C. interest and sinking fund charges on £400,000, and despite the inadequacy of the southern approaches to the bridge, will ease the traffic burdens of London.

Typhoid Inquiry.—When the inquiry into the typhoid epidemic was resumed after the Christmas holidays, 289 cases had been reported and 30 deaths had occurred. This was only a slight increase on the previous total, and it is obvious that the outbreak has now, happily, spent its force. It has been stated at the inquiry, on behalf of the Croydon authorities, that although the well at Addington (which supplies about 5,000,000 gallons of water) was contaminated in 1931, it was clear and harmless in 1935, while a chlorination apparatus was introduced in 1936. On the other side, it has been argued that the monthly analyses of the Addington water were not regular enough, nor were they carried out in sufficiently close co-operation with the Medical Officer. Admittedly, the well showed a high degree of contamination on November 3rd, which might have been caused by adjacent cesspits and latrines, or even by foul matter from farms. Could this have been foreseen or averted? In particular, once the outbreak began on October 19th, could not the source have been located sooner than it was, in view of the history and environment of the Addington well? In reply to these criticisms, it has been urged that only by eliminating all possible sources of infection, such as flies, food, drains and other water, could the responsibility of Addington be proved. And, even then, the disease might have been transmitted by a carrier, rather than have been water-borne. With regard to the steps taken once the epidemic was proved, the Medical Officer has stated his disinclination on November 4th to precipitate public alarm. All necessary measures were, it is claimed, quietly carried out, and the large number of typhoid victims is contended to be relatively small for a water-borne epidemic. The inquiry is still proceeding.

* * *

Road Haulage Vehicles.—Certain figures given recently by the Minister of Transport, in reply to parliamentary questions, bring out the significant fact that the increase in the number of authorised road haulage vehicles during the fourteen months to June, 1937, was attributable entirely to the "C" licensee—i.e. the ancillary vehicle user. Indeed, the number of "A" (general carriers') licences and the total vehicles so licensed have actually shown a slight decline:—

	No. of Licence Holders		Vehicles Authorised	
	April 1936	June 1937	April 1936	June 1937
"A" Licences*	28,916	28,888	91,567	91,101
"B" Licences	34,320	34,589	53,061	53,775
"C" Licences	161,535	186,734	324,233	362,380
Total	224,771	250,211	468,861	507,256

* Including "A" contract.

According to the meagre particulars given in the reports of licensing authorities, the decline in Class "A" vehicles began well before April, 1936. The falling-off is greater than the figures suggest, since the totals are swelled by the conversion of horse-drawn vehicles to motor transport.

* * *

The slight increase in "B" licence holders (who use their vehicles partly for hire and partly in their own business) reflects, in part, the tendency of some licensing authorities to substitute a limited for a full public carrier's licence when the latter comes up for renewal, usually coupled with a limited radius of operation. On the whole, the position of the public operator, as distinct from the ancillary user, seems unlikely to be substantially improved in the near future. It is true that the recent report of the Transport Advisory Council on "Services and Rates," which laid down the principle that "there should be an unfettered right on the part of the trader to select the form of transport of which he approves and which is most convenient and economic for his purposes," may be regarded as giving the public operator a virtual charter of operation. He is faced, however, with competition from the ancillary user as well as from other forms of transport. The public haulier can obtain business only by organising his work so that he can quote lower charges than the ancillary user's cost of doing the work himself.

THE ECONOMIC OUTLOOK

A New Year Survey

INTRODUCTION

The Economist of June 13, 1936, contained, under the title of "1936 and After: A Survey of British Economic Prospects," a lengthy analysis of the British economic outlook at that time, together with a little cautious prophecy of the future. The caution of the prophecy has been justified by events; for the most definite prediction made in June, 1936, was that the movement of British recovery, which was then already comfortably middle-aged when judged by any historical standard, would last for a further period of between twelve and eighteen months.

Those eighteen months have now elapsed, and the British national economy finds itself in a state of puzzlement, an almost hypochondriacal mood of worry over the diagnosis of its own state of health. For the last three months the economic news has worn a faint air of apprehension. Nothing has been actually wrong; but everywhere, and most notably in Throgmorton Street, there have been premonitions. We cannot yet say for certain, though an attempt will be made later in this Survey to guess, whether the very slight downward moves of the indices this autumn are the beginning of a major decline. If they are, then the peak of this trade cycle was passed between August and October, and the first signs of its approach were clearly visible, in the summer months, in the failure of anæmic security and commodity markets to recover from a series of blows, such as the National Defence Contribution and the gold scare, none of which, had the markets been healthier, need have caused more than temporary hesitation.

But we go too fast. It is clear that there was at least a local peak this autumn. But was it the peak of the whole cycle? Eighteen months ago *The Economist* boldly prophesied not only that recovery would last until the summer or autumn of 1937, but also that 1938 would see the beginning of a slow decline in activity. Is this prophecy about to be justified?

An attempt will be made in the following pages to supply not so much confident replies to these questions as the materials from which the reader can fashion his own answers. Clearly, there could be no more appropriate moment for attempting the task than this New Year's Day, 1938. Before it is begun, however, two preliminary words of warning are appropriate. The first is that no account can be taken of the possibility of a European war, which would upset all calculations. The second is that economic prognostication has become in recent months the football of party politics. It need hardly be said that *The Economist* is affected neither by the desire to buttress confidence that may be false nor by the wish to make political capital out of economic movements that may spell national adversity.

THE RECORD OF 1937

The year 1937, taken as a whole, has undoubtedly been not only a good year, but a very good year. Almost every business index in the country has broken new records in the course of the year. This can be most strikingly illustrated by the component series of *The Economist* Index of Business Activity. There are fourteen of these series, covering directly or by implication every phase of the national economic life. The figures for the last month of 1937 are not yet available, and some of the figures for other recent months are provisional, but if an average for 1937, subject

to these two qualifications, be compared with the averages of previous years there are only two series for which 1937 was not at least the best recovery year, and only five for which it was not the best year ever known.

The record is almost tedious in its excellence. But averages are deceptive and close inspection of the figures brings out the very significant fact that all but three of the fifteen series finished the year below their best figure (they are all statistically corrected to eliminate the normal seasonal fluctuation). The months in which each series reached its peak for the year are interesting (the latest month is given when there are two or more months with an equal figure):—

February: Town Clearings.

March: Metropolitan, Country and Provincial Clearings.

April: Postal Receipts, Building Activity.

May: Consumption of Coal, Consumption of Cotton, Shipping Movements.

June: Exports of British Manufactures (volume).

August: Merchandise on Railways.

September: Employment, Imports of Raw Materials (volume), Complete Index.

November: Consumption of Electricity, Consumption of Iron and Steel, Commercial Vehicles.

This may, of course, be a statistical accident. But it is notable that both in 1935 and in 1936 nine out of fourteen series, and the complete index, reached their peak for the year in November or December.

So much for the evidence of the Index of Business Activity. It is confirmed by the two great indicators not comprehended in it: security prices and wholesale prices. Each of them reached, or equalled, its post-depression peak in 1937, security prices in January, commodity prices in March. But each finished the year well below this peak and on the down-grade—if, indeed, "grade" is not an understatement for the autumn tendencies of the Stock Exchange.

In retail trade, another department of the national economic life which is not directly comprehended in the Index of Business Activity, the evidence is inconclusive. The figures published by the Bank of England continue to show sales larger than a year ago. But these figures relate to the money value, not the unit volume, of transactions, and for some time it has seemed probable that the expansion of money value has only just kept pace with rising prices, leaving no room for increase in the actual volume of goods sold. Moreover, there have been distinct hesitations in some recent months. October, for example, was a bad month for many large stores in the West End, and November also showed some disquieting tendencies. But the Christmas shopping was satisfactory on the whole. Some of the large manufacturers of branded goods have noticed a decline in sales in recent months, and there has also been some decline in the demand for new motor-cars, which has shown itself in the most recent figures of cars registered for the first time. On the other hand, provision shops report no decline. Furthermore, many of the industries which are still very busy, such as several branches of heavy metallurgical industry and shipbuilding, report some decline in recent months in the volume of new orders for work to be executed in 1938.

As a final indication of the present position, we may devote particular attention, as in the earlier survey eighteen months ago, to the great popular measure of prosperity and depression, the returns of employment and unemployment. For the greater part of the year these have been

nothing

excellent. The figure of insured persons in employment has been particularly satisfactory, breaking its own record almost from month to month. Moreover, when the annual census of the employed was taken in July, it was found that the monthly estimates had understated the improvement to the cumulative amount of 100,000.

Unemployment, though it is still well above the figures of a decade ago, has been declining steadily for three-quarters of the year. The following figures show the improvement recorded each month in comparison with the year before:—

REDUCTION OF UNEMPLOYMENT

(The figure against each month shows the reduction in the total of registered unemployed in Great Britain as compared with the same month in the previous year.)

	Thous.		Thous.
January, 1936	165	January, 1937	471
February	260	February	397
March	272	March	281
April	213	April	377
May	340	May	244
June	297	June	346
July	321	July	273
August	334	August	256
September	335	September	235
October	304	October	*172
November	295	November	*70
December	240		

* Approximately corrected for effects of a new method of enumeration.

Thus every month of 1937 has shown a substantial improvement over the previous year, which was itself much better than 1935. But in 1936 there was a definite tendency for the rate of improvement to speed up as the year progressed (except for December, 1936), while in 1937 the improvement has shown a declining tendency, and in the last quarter of the year, it has diminished sharply. The unemployment returns for October and November—and to some extent that for September also—have been definitely unsatisfactory. It is very unfortunate that, precisely at this crucial moment, a change in the methods of enumeration should have been made which impedes direct comparison. But, in any case, it is clear that at a time of year when unemployment normally falls, or at least remains stationary, it has been rising. Taken by itself, this might be a momentary or accidental incident in the statistics. But when it is added to the testimony of all the other indices which have closed the year below their best figures, it becomes impressive. It is not yet obvious on the surface that there has been more than a very slight downturn in activity in Great Britain. But when the evidence is examined under the microscope, its meaning is inescapable.

In the light of all the figures that have been quoted, it can be stated as a fact that in the last quarter of 1937 the movement of economic recovery in Great Britain

received the first serious check to its further progress which it has suffered since it began in the autumn of 1932. What we cannot state as a fact, but can only guess, is whether this check is more than an interruption. The recovery in Britain has been singularly free from interruptions up to the present, and it may only be the unprecedented smoothness of our progress hitherto which leads us to attach such importance to the movements of a single quarter. There is no statistical method of settling this question. Light can, however, be shed upon it by an examination of the stage in recovery at which we have now arrived.

EMPLOYMENT AT THE MAXIMUM

As a first step in this process, it is useful to analyse the total of unemployment into its constituent economic elements. There are, broadly speaking, three such elements. *Normal* unemployment may be said to be that volume of unemployment which can be expected to exist at any time owing to the changing and dynamic character of modern industry. *Cyclical* unemployment is caused by the fluctuations of the trade cycle, rising to a maximum at the bottom of a slump and vanishing at the peak of the trade cycle. *Special* unemployment is that caused in individual industries or localities by circumstances peculiar to them; such are, for example, the special unemployment in the coal and cotton industries, which are fundamentally due to changes in the export markets precipitated by the Great War.

In the chart at the foot of this page, these three categories of unemployment are approximately estimated. The statistical method of calculating the figures is that used and explained in our previous special survey (*The Economist*, June 13, 1936, page 601) and on one other intermediate occasion (March 20, 1937, pages 633-4).^{*} The analysis is not claimed to be more than a rough first approximation, but it is believed to be broadly true. If so, it tends to show that employment is at its peak. Only the continued existence of Special Unemployment in certain districts, owing its origin to causes more fundamental than the ups and downs of the trade cycle and, for that reason, insusceptible of cure by general economic recovery, impedes general recognition of the fact that, except for the Special Areas, British labour is now working to capacity.

Wage demands have played a considerable part in the noticeable rise in industrial costs of production in 1937.

^{*} The assumed percentage of normal unemployment has been increased from 5½ to 6. The higher figure seems to accord better with the circumstances of 1929, when the volume of unemployment in the most prosperous part of the country can be supposed to have been reduced to, or even below, the normal level for several months.

UNEMPLOYMENT IN THE UNITED KINGDOM, 1929-1937
(Seasonal Fluctuations Eliminated)

Normally, rising costs are a danger signal. They tend to lessen consumption by raising prices. Capital works are deferred because the rise in their cost (which has been steep in 1937) puts them out of remunerative relation to the profits they could be expected to yield. Rising costs also, by reducing the margin of profits, tend to check the growth of enterprise. In short, in the orthodox trade cycle, when a period of business expansion has reached the phase of putting up costs of production it has begun to sow the seeds of its own decline.

ARE WE AT THE PEAK?

There are two other arguments from past experience which, if the historical analogy be accepted, have considerable bearing on our present state. Both the *duration* and the *extent* of the normal trade cycle are susceptible of measurement, and in both respects our present recovery has already exceeded the norm. The normal length for the recovery period of the cycle is four years, and there is only one previous case on record (1893-99) when recovery, as measured by the unemployment figures, lasted for more than five years.^{*} Our present recovery was five years old in September, 1937. As for the *extent* of the normal recovery, the gradual growth in average productivity has in the past been fairly regular from cycle to cycle. The rate of growth from peak to peak in the pre-war world averaged about 1 per cent. per annum per head. In the first decade after the war it was rather lower.[†] But from the peak of September, 1929, to September, 1937, the rate of growth was 1.2 per cent. per annum per head. These two comparisons with the past show that the present recovery has already lasted for a longer time and pushed the indices to a greater relative height than the normal trade cycle of the past. Historical lessons are not by any means conclusive; but they set up strong presumptions which can only be overturned by a weight of positive evidence that circumstances this time are radically different.

There are, in fact, several notable differences between our present position and the usual appearance of a boom shortly before its collapse. The most important of these is the continuance of cheap money and the assurance given by the absence of a rigid gold standard that money will remain cheap. "Money" in this sense, however, means money in the money market and the gilt-edged market. In the market for industrial capital there has been a sharp rise in interest rates in recent months. In spite of this, however, cheap money cannot be overlooked as a very important favourable circumstance in our present position.

Secondly, there is an absence of speculative excitement. Indeed, the indices of security and commodity prices and of banking transactions in the City of London, which should be the first to reflect the volume of speculation, have been declining for most of the year, as the following chart shows:—

INDICES OF SPECULATIVE ACTIVITY, 1937
(1935=100)

This absence of speculative excitement is important; if there is no bubble there is nothing to burst. But its importance must not be exaggerated; for there was a similar damping-down of speculation in the world's commodity markets and also in security markets in England (though not, of course, in New York) throughout the year 1929. Moreover, depressed markets must be presumed to reflect

^{*} D. H. Macgregor, "Enterprise, Progress and Profits," Chap. III.

[†] Colin Clark, "National Income and Outlay," Chap. XIII.

depressing news from industry about future prospects. And they certainly assist to generate and spread a general psychological feeling of pessimism. In addition, falling commodity prices, if there is a prospect of a further fall, lead to the reduction of stocks by industry. It has been suggested that this variety of "disinvestment" may conceivably have amounted already this year to £100 millions. If so, it is a very important factor.

The various factors that have been mentioned in this discussion can now be collected together in tabular form and arbitrarily assigned to one side or the other according as they support an optimistic view (i.e. that the current recession will give place to a renewed advance) or a pessimistic view (i.e. that the local peak of August-September was the cyclical peak):

Favourable factors	Unfavourable factors
1. Rate of activity so high that small reduction can be borne without necessarily setting up the vicious spiral of deflation.	1. Setback already general, affecting most business indices.
2. Progress of recovery hitherto so regular that interruption is long overdue.	2. Virtual disappearance of cyclical unemployment makes further advance difficult and costly.
3. Continuance of low interest rates for short-term loans and gilt-edged securities.	3. Bad unemployment figures in October and November.
4. Absence of speculative boom.	4. Rising costs of production.
	5. Rising rates of interest on industrial capital.
	6. Recovery has already lasted an almost unprecedentedly long time.
	7. Its pace has been very rapid.
	8. Falling commodity prices are leading to industrial de-stocking.
	9. Some (but inconclusive) evidence that feeling of pessimism afflicting the markets is beginning to affect consumption industries and retail trade.

Setting out the various factors in this way makes it apparent that the favourable factors are in the main negative and static; they do not include anything new. On the other hand, several of the unfavourable factors have only recently appeared and some of them (especially items 8 and 9) can be expected to be cumulative in their effect.

So far in this survey no statement has been made that has not been at least partially verified by reference to recorded facts. The time has now come, however, to take the first hurdle of unsupported estimation:—

It seems probable that if there is no change in the circumstances now existing, the present slight recession in activity will continue.

Two questions remain for discussion. Is any change in the present circumstances to be anticipated? If not, how rapidly can the recession be expected to proceed? Both these questions can only be answered by a more detailed examination of the more important departments of the national economy.

In the remaining pages of this survey, four of these subsidiary inquiries are briefly pursued. The needed stimulus is sought, first, in the consuming power of the domestic population; secondly, in the possibility of further expansion in the capital goods industries; thirdly, in the prospects of the export trades; and, finally, in the influence of American conditions.

THE BRITISH CONSUMER

The consumer is an abstraction very familiar in treatises on economics. Unfortunately it is very difficult to give him a statistical embodiment. It is, however, possible to make an estimate of the consuming power of the wage-earning class.

The diagram overleaf presents an index of the total real income of the insured population, employed and unemployed together. The insured population is not, of course, the same thing as the working class, since there are some six million people who are included in National Health Insurance but not in Unemployment Insurance. But for the purposes of a first approximation, the smaller body can be taken as representative of the larger.

The index has been calculated on the basis of the official indices of wage rates and of the cost of living, of the

monthly returns of employed and unemployed and of the returns of sums paid by various agencies to the unemployed. Its chief defect is that it makes no allowance either for overtime or for such short-time as does not appear in the unemployment returns. Subject to this qualification, the index can be regarded as a broadly true indication of the trend of consuming power of the British working class. It should be noted that it is not an index of consuming power *per head*, but of the working class as a whole.

INDEX OF CONSUMING POWER OF BRITISH WORKING CLASS (1935=100)

The chart reveals one fact which, though vitally important for a proper understanding of the British economy, has received remarkably little attention. That strictly statistical conception, the British consumer, was benefited rather than the reverse by the great depression. From 1929 to 1932 his potential standard of living rose rapidly. The explanation is, of course, that Great Britain imports most of her food and a large part of her raw materials from abroad. In a depression she can get them below their cost of production. The consequent gain to the standard of living of the majority who remain in work outweighs (in a strictly statistical sense, not in terms of happiness) the loss to those who are thrown out of work by the depression. The British consumer, in fact, has for several years been getting the best of both worlds. From 1929 to 1932 the fall in prices outweighed to his advantage the fall in employment. And from 1933 to 1937 the rise in employment outweighed to his advantage the rise in prices.

The movement in incomes other than those of the population insured against unemployment is more difficult to calculate, but there are some estimates available. In the following table, the first column shows an index number calculated from Mr Colin Clark's estimates of incomes other than wages and salaries below £250.* The second column shows, for years beginning July 1st, the profits published by a varying number of public companies, as tabulated in *The Economist* (profits, of course, being one of the largest, and possibly the most volatile, of the constituents of these larger incomes).

INDICES OF LARGER INCOMES AND PROFITS (1929 = 100)

Incomes other than Wages and Small Salaries		Company Profits
1932	85	1931-32..... 65
1933	88	1932-33..... 61
1934	94	1933-34..... 69
1935	102	1934-35..... 82
1936	110	1935-36..... 92
1937—1st qr. ...	118	1936-37..... 106
2nd qr. ...	121	

These two series of figures do not entirely confirm each other, but both are agreed that the movement of expansion of income was continuing up to the time of the latest figure, and that it is now well above the 1929 level. It is difficult to make the transition from income to consumption,

* *Economic Journal*, June, 1937, page 310; 1937 figures from *A Commercial Barometer*, published by Messrs F. C. Pritchard Wood and Partners, Ltd.

tion, since saving in this category is not only much larger, but also much more variable, than in the smaller incomes. Moreover, conversion of money figures into real terms is almost impossible, as the index of the cost of living is quite inapplicable to middle-class incomes.

What are the prospects for a further expansion of the real purchasing power of the community in 1938 and 1939? Here, again, we must confine ourselves, at least to begin with, to the insured population. There will be very little increase in the total numbers of insured persons. The total number of persons (whether in the insured category or not) between the ages of 14 and 65 will increase by only a quarter of one per cent. per annum in the next two years, though the number of males between these ages will increase by about $\frac{1}{8}$ per cent. per annum. There is clearly no increase, or only a negligible increase, in the total of wages and unemployment pay to be expected from an increase in the number of occupied persons.

Some reduction in the cost of living is possible. In the next few months the normal seasonal downward tendency will be accentuated by the delayed effect of the falls in wholesale commodity prices in the autumn. But not all the recent increase in the cost of living is attributable to the prices of raw materials. Wage increases, which have been prevalent in the food processing and distributive trades, have also contributed their share to the rise in the cost of living—and a share that is extremely unlikely to be reversed in the immediate future. The fall in the cost of living is thus not likely to be large, unless there are still further falls in the prices of raw materials, in which case there is likely to be an offset (though not perhaps immediately) in rising unemployment, since lower commodity prices mean lower exports. The last time these circumstances arose was in 1930, when the fall in the cost of living outdistanced the rise in unemployment. But the international price structure is not now nearly as vulnerable as it was then, and the same result might not follow now. Indeed, it is possible that the prices of primary products will recover in 1938. If so, there will be no fall on balance.

Little can be said about the prospects of non-wage-earning incomes. So far as profits go, the Stock Exchange (whose livelihood depends on the accurate prediction of profits) takes a gloomy view, holding that, if activity is maintained, profits will be reduced by rising costs, and that if activity is not maintained, they will suffer from falling turnover. Few could be found to forecast bigger profits in 1938 than in 1937.

The upshot of this discussion is that while it would be rash to prophesy a fall in the purchasing power of the people, a further substantial rise seems out of the question. It could only be produced by a fall in the cost of living of the 1930 type; and even though 1930 repeated itself, it might increase popular purchasing power, but it would bring on depression. Thus if there is a further increase in purchasing power, it will not be the *preventive* of a decline in activity in Great Britain, but the *consequence* of a decline in activity in the outside world. It may once again, as in 1930-32, store up a stimulus for domestic recovery two years later. But it will not help us in the meantime.

The new impetus for which we are looking is evidently not to be found in the consumption trades.

CAPITAL GOODS

The most interesting and economically the most important capital goods industry is building. Its expansion since 1932 has been one of the outstanding phenomena of recovery. For at least two years the imminent demise of the building boom has been predicted, but it is still obstinately alive.

There are great difficulties in the way of calculating an accurate index of building activity. The most complete would be the figures of men employed in the industry, but they are known accurately only at yearly intervals and the facility with which labour moves into and out of the industry makes interpolated estimates very approximate. For what they are worth, the following are the figures (in the form of an index number) of insured workpeople em-

ployed in the building and contracting trades in June of each of the recent years:—

	Building	Public Works Contracting
June, 1929	126.8	136.0
" 1930	121.8	146.7
" 1931	117.9	213.5
" 1932	106.2	188.0
" 1933	118.8	159.6
" 1934	132.5	154.7
" 1935	141.5	159.7
" 1936	152.8	178.7
" 1937	155.5	193.8

The boom thus appeared to be continuing at least as late as June, and the seasonal rise in unemployment since then has been less, in both sections of the industry, than in the same period of 1936.

On the other hand, evidence accumulates from month to month of the approaching end of at least the residential building boom. In any case, it cannot last indefinitely. For if the recent volume of building were maintained, it would be sufficient either to double the number of houses in existence, or alternatively to replace every house now existing, in about thirty years, and it is the safest of safe predictions that neither thing is going to happen. Since the boom must come to an end sometime soon, the only question is when its end will come.

The figures of building plans approved by 146 local authorities have been showing a declining tendency for months past. These figures vary considerably from month to month and the only reasonable basis of comparison is to take a twelve months' moving average, so that the figure set against each month represents the total of the plans approved in the preceding twelve months. Moreover, the figures of plans are in money values and rising figures might denote merely rising costs. In the following chart, accordingly, the figures have been corrected by an index of building costs:—

BUILDING PLANS APPROVED

(Index of Plans Approved by 146 local authorities; 12-months' moving average; corrected for fluctuations in building costs, 1935=100).

The figures omit London, Wales and country districts. But it is very unlikely that they happen to include all the districts where building is on the edge of a decline and to exclude all those where it is still expanding. Geographically, the figures are representative. A more serious defect is that they exclude all building work done by or under contract from the Government. But it seems probable that the building part of the re-armament programme is approaching, or is possibly already at, its peak. Many of the factories for making armaments, that is to say, are erected or nearing completion. There is a great deal of this constructional work still to come, but it seems likely that the monthly total of work on hand will show little further increase.

This evidence of an impending building decline is confirmed from other sources. At last the very rapid provision of new houses is beginning to cause a sharp rise in the number of vacant dwellings. Light is cast upon this development in London by some figures which we are

enabled to give through the courtesy of the Gas Light and Coke Company. There is a gas meter in nearly every separate dwelling. When a dwelling is vacated, the meter is "capped" (i.e. temporarily disconnected). If the house stays empty, the meter is removed. Consequently, the number of "capped" meters is a fairly faithful measure of the number of recently vacated premises. The figures are given for the same month in each of the last ten years:—

Total Meters "Capped" in Use	Meters	Total Meters "Capped" in Use	Meters
1928 ...	1,115,384	1933 ...	1,243,334
1929 ...	1,139,580	1934 ...	1,273,423
1930 ...	1,163,829	1935 ...	1,305,058
1931 ...	1,173,148	1936 ...	1,339,475
1932 ...	1,217,248	1937 ...	1,374,688

The growing pressure of vacant space is beginning to depress the demand for new houses. From all sides it is reported that the large speculative builders are having increasing difficulty in selling the houses on their newest estates—though this may be in part because the newest estates are necessarily further from the centre than the earlier ones. There is even a significant increase in the amount of building to let—a phenomenon which not only springs from a lessening of the demand for houses, but also presages a reduction in the supply, since building to let ties up far more of the builder's capital than building to sell. Finally, the building societies, who are in the best position of all to judge of the position and outlook, have begun in the last few months to adopt a noticeably more conservative attitude. At least one of the largest societies has made no secret of the fact that it anticipates a decline in building in 1938.

A word should also be said about building by public authorities. Slum clearance is now at its height; in the six months ended March 31, 1937, it was responsible for 26,340 houses—a rate of almost 53,000 per annum. It may have increased since then, but the total of houses built in the same six months was as much as 181,462, so that slum clearance building does not account for much more than 15 per cent. of all houses built. The programmes for the relief of overcrowding have hardly yet begun, and will not, in any case, be as large as the slum clearance programmes. It is always possible for the Government to initiate supplementary programmes of subsidised building, but even if an announcement were made immediately of their intention to do so, very little actual building would be started under these new programmes until 1939. In 1938, accordingly, subsidised house-building will show no increase, and possibly a decrease.

The foregoing applies to residential building. Of commercial and industrial building it is much more difficult to speak. The volume of Government work is, of course, very high, and although, as already argued, there may not be any further increase, it is unlikely that there will be any substantial decline in 1938. Industrial building other than Government work has also been very heavy in 1937. But opinions differ about the outlook for 1938. Some large contracting firms report a very sharp decline in inquiries for new factories during the autumn months; other firms have noticed very little change. But this is a field of building in which the depressing effect of falling security markets could be expected to show itself, and it would be optimistic to expect more for 1938 than a maintenance of the present volume of activity. A decline seems more probable.

Of the four varieties of building, then, a decline in activity is almost certain in one (private house building), probable in one (private non-residential building) and possible in the remaining two. Only in one category (Government non-residential building) does an increase seem possible, and even there it is not very likely. The importance of this conclusion may be estimated from the fact that, in July last, the building and public works contracting industries employed no fewer than 1,100,000 men.

Detailed attention has been paid to building partly because it is in a strategic position, partly because it lends itself to estimation. Not nearly so much can be said about the other capital goods industries. The iron and steel industry is now working to capacity, with a higher rate of output than ever before in its history. It is, of course, very

heavily affected by the re-armament programme, but it would be a mistake to exaggerate the extent of this influence. It is unlikely that more than between a quarter and a third of the present production of steel (if, indeed, as much) goes directly or indirectly into armament work. This being so, the industry cannot consider itself immune to trade depression. The volume of non-armament demand for steel is subject to the influences of steel prices, the outlook for profits and the state of the capital market. It cannot be said that any one of these factors is as favourable to the continuance of a heavy demand for steel as it was twelve months ago. Steel prices have been stabilised at a level which the consumers of steel publicly consider too high. Under the lead of the Stock Exchange, a not very optimistic view is being taken of future profits. And it has become less easy to raise new capital in the market. It is true that a number of large and wealthy companies have work of a capital character waiting for lower prices, and if steel prices could be substantially reduced without any worsening of the general business outlook, the demand would prove itself quite elastic. But the proviso is important, and if, as seems more probable, steel prices come down only as the result of a decline in activity, the change in the outlook for profits in industry as a whole may by then be such that the postponed orders will not materialise.

Thus it is not impossible that even the steel industry, which feels the full weight of re-armament, may not be able to maintain its present rate of production. And in any case there is very little possibility, for physical reasons, of a rapid expansion of production. The same conclusion applies, in a general way, to the other capital goods industries. Engineering is also very heavily influenced by re-armament, but it has in addition an enormous "peace-time" market and must not be considered to be completely dominated by re-armament. The same is true of shipbuilding where, in the last few weeks, there has been a noticeable decline in private orders, which has not been compensated by an expansion of Government work.

Of the capital goods industries as a whole, then, it can be said that one of them—building—is almost certain to suffer a decline, and that the others are unlikely to show any increase. On balance, a drop in the employment provided in these industries seems likely in 1938—not by any means a sharp drop, but enough to show that no stimulus for further general expansion can be expected from this source.

OUTLOOK FOR EXPORTS

International trade has suffered two decades of attrition. Though its volume has recovered quite substantially in the last year or two, it still makes up a much reduced proportion of the whole production of the world. In 1936, for example, the total value of British exports was only something of the order of 8 per cent. of the whole national income and even imports were only about 16 per cent. Merchandise trade with overseas, to judge by these rough calculations, thus concerns, at the very most, only one-sixth of the economic activity of the nation, and exports take only about one-twelfth of total production.

It is, nevertheless, a very important twelfth. In our national economy, whose internal fluctuations are comparatively moderate, exports tend to be the marginal factor between prosperity and depression. In our present state, moreover, it is only in the export industries—and even there only in some of them—that there is still a large reservoir of idle labour and idle productive equipment. On both scores it is important to make some estimate of the prospects for 1938.

In the last few years of recovery there has been a noticeable tendency for British exports to follow, with a time-lag, the movements of British imports, particularly imports of foodstuffs and raw materials. This, after all, is understandable, since most countries nowadays watch their balances of payments very closely and buy only in strict proportion to the resources they have available, and the working of this mechanism of rigid balancing will tend to be more automatic in the primary producing countries. Whatever may be the explanation, the phenomenon is clearly observable and the attached diagram has been designed to demonstrate it. The two lines show, for each

year, the percentage increase or decrease in the value of British exports or of British imports of foodstuffs and raw materials in comparison with the preceding year. Thus the export line is plotted at +7.6 per cent. for 1934, indicating that the value of exports in that year was 7.6 per cent. higher than in 1933. The lines have, however, been plotted with the export line lagging one year behind the import

INCREASE OR DECLINE OF BRITISH IMPORTS AND EXPORTS, 1931-37
(See explanation in text)

line. This device clearly shows how closely the movement of exports in one year has followed the movements of imports in the year before. In the earlier recovery years, British imports were held back by the various quotas and tariffs, while exports were assisted by the depreciation of the pound, but this stimulus may be supposed to have worn off between 1934 and 1935.

Too much stress should not be laid upon a phenomenon of this nature. It is too regular to be a coincidence. But what applies during a recovery period might be totally invalid in a period of contraction; British imports were higher in 1929 than in 1928, but that did not prevent a sharp slump in exports in 1930. On the other hand, the differences between 1929 and 1937 are nowhere greater than in the field of international trade; in particular, there are no overseas countries to-day relying on an abundant and steady stream of new borrowings to balance their accounts. On the contrary, all the primary producers are now solvent, and many of them are still piling up substantial reserves in London. And the fact remains that the exporters of primary products have had a very good year in 1937. British imports of foodstuffs and raw materials, as the diagram shows, have been nearly 20 per cent. higher in 1937 than in 1936. Wholesale prices, though they have fallen, are still higher than last year's average. The *Economist* index of the prices of primary products, for example, is now 146.7 (September, 1931=100), and though this is 17.2 points below December, 1936, it is still 6.5 points above the average for 1936. Moreover, the 1937 average, at 163.4, is 23.2 points above the 1936 average. The volume (as distinct from value) of British imports in the first three quarters of 1937 was 6.4 per cent. higher than in the same period of 1936. Thus both by value and by volume the primary producing countries have been doing very well, on the whole, in 1937. A considerably increased volume of sterling has accrued to them during the past year and much of it must still remain available for spending on British exports.

All the visible omens would thus seem to favour another year for exporters as good as 1937. It may, indeed, be better, though there have been several reports in recent months of cancelled orders from overseas. But unless commodity prices again fall sharply below their present reduced level, it is difficult to see why there should be anything worse than a slight diminution of exports.

THE AMERICAN ENIGMA

This prediction, however, is conditioned upon the course of commodity prices. And the course of commodity prices, in its turn, depends in the short run of the next few months upon the development of affairs in the United States. Of many important raw materials, America is a greater importer even than Britain, and the effect on the world's markets of the sudden cessation of American purchases during the past autumn has been too obvious to be mistaken. It is not only through commodity prices that events in America affect the economic conjuncture here. The links between Wall Street and the City have never been closer than to-day, and if American business and finance are feeling depressed, the gloom is very quickly communicated to London and, from London, to British industry in general. America must certainly be accounted one of the four major influences on the British economy.

The economic outlook in America has recently been studied in some detail in *The Economist* (November 6, 1937, pages 247-9), and it is not proposed to repeat the argument here. Briefly, however, the conclusion was reached that the cause of the sudden slump of this last autumn was to be found in the failure of the capital goods industries to maintain their previous level of output. This failure was certainly not due to any lack of real and urgent need for new capital equipment. Nor was it merely the reaction from a boom activity which could not, in any case, be permanently maintained. It was due to a breakdown of the nexus of finance and confidence which links the need for capital equipment with the industries that are ready to supply it.

If this argument is correct (and it is accepted by the majority of authorities), the most reasonable forecast of the immediate future is that the psychological gap will be filled and recovery will be resumed. It must be very clearly emphasised, however, that there is as much guesswork as reasoning in this conclusion. Of the three possible forecasts—that there will be no recovery at all from the present low levels; that the recovery will be insufficient to regain the peaks of 1937; and that it will carry the indices to new high levels—the first can perhaps be dismissed as extreme pessimism. But the choice between the other two must be based on hunch rather than on fact.

Only one thing is tolerably certain: that the American economy will not stand still where it is, but will move either up or down. If it moves up, commodity prices throughout the world will recover; British exports will be even larger than in 1937 and the improved state of general business confidence will assist the capital goods industries; but on the other hand a further rise in the cost of living will turn the curve of domestic consuming power definitely downwards. If, on the other hand, the average level of activity in America in 1938 is substantially below 1937, the omens will be correspondingly against British recovery and the only consolation will be the fall of the cost of living.

CONCLUSION

The various threads of this detailed discussion may now be drawn together. Evidence has been marshalled to show that there has already been a noticeable change in the trend of economic events in this country—a change that is visible in almost every statistical series and affects every department of the national economy.

We have given reasons for believing that, unless there is some change in the outward conditions under which the British national economy is operating, the slight downward tendency of the indices will continue. The period through which we have been living has not in every respect resembled the classical boom. But it nevertheless seems likely that the cumulative forces of industrial fluctuation are beginning to work in a downward direction.

We have consequently conducted a search for some

fresh stimulus which will serve to check the action of these cumulative forces. We did not find it in the consumption trades. On the contrary, the only possibility of a considerable expansion in the consuming power of the people seems to reside in a sharp fall in prices, which is almost a synonym for a depression.

In the capital goods industries, we have found evidence of a decline in building and little sign of a substantial expansion in other lines. There is no stimulus here.

The outlook for the export trades is encouraging, and there may even be some further increase if commodity prices are well maintained.

The chief possibility of a favourable development lies in the United States. Among several possible guesses about the course of American industry in 1938 (none of which, however, are more than guesses) the majority view is that the movement of recovery, which never reached a mature phase, will be resumed some time this year. If so, there will be an immediate favourable reaction on the commodity markets and on the general psychology of international business. But there will be offsetting factors; for any such recovery will drive up both the cost of living and costs of production in Great Britain.

No two persons will put the same valuation on these various factors, or combine them to the same result. It may, however, be useful to set down the limits within which a reasonable conclusion must lie. It does not seem possible that there will be any considerable further expansion of production in 1938. The Index of Business Activity will probably not go much, if at all, higher than it is to-day. And even the maintenance of the present level involves putting the optimistic interpretation on the doubtful factors.

On the other hand, no factor has been discovered which would give reasonable ground for anticipating a very sharp depression. A slump of the magnitude of 1930-31 would add over 700,000 a year to the register of unemployment, or nearly 2,000,000 in all. There are two reasons why no figures of this sort are to be anticipated. The first is that in the earlier period the total number of insured persons, employed and unemployed together, was rising by from 300,000 to 400,000 a year, so that unemployment would have increased by these amounts even without any reduction in employment. In the next few years the increase will be only something of the order of 100,000 a year—indeed, it may be less, as there is a substantial volume of delayed retirements from industry to be worked off. Secondly, even apart from the operation of this mathematical factor, no such economic blizzard as burst upon the world in 1929 can be foreseen. It may be of interest to note that the Unemployment Insurance Statutory Committee, advised by the Committee on Economic Information of the Economic Advisory Council, have taken an unemployment percentage of about 16½ per cent. as the probable average during the next trade cycle. If the maximum percentage be supposed to be as far above this average as the present percentage is below it, that gives a figure of 22½ per cent., which, with the present total of insured persons, would mean a total of some 2,900,000 unemployed, or 1,500,000 more than at present. This might mean an increase at the rate of about 500,000 per annum.

For the present, however, this figure of 500,000 more unemployed in twelve months must be regarded as a maximum, which would involve putting the most pessimistic interpretation on every doubtful factor.

The truth, then, in all probability lies somewhere between the two extremes. It seems unlikely that on New Year's Day, 1939, the total of unemployed in Great Britain will be less than it is to-day. But it seems equally unlikely that it will have increased in the meantime at anything like the 1930-31 rate. Which extreme will prove nearer to the truth depends on America more than on any other factor. And within a very few months it ought to be possible to indicate which is the more likely.

France

A Period of Transition

PARIS, December 29.—The year 1936 was a year of great world prosperity, while France was upset by social troubles. This year, on the other hand, has been marked by economic recession in the United States and in France by the "pause" in the New Deal. The capital which left France in 1936 has been partly repatriated in 1937.

The struggle between the two blocs of socialism and capitalism is largely over. The Right has learned the error of its ways, and events have demonstrated to the Left the futility of their extreme claim that "everything is possible." Public opinion is now in favour of necessary social reforms, which is the chief gain of two years of extreme difficulties. The liberal Radical Party seems destined to carry through the reconstruction of the country on this basis.

M. Chautemps's Radical Government has already obtained important financial results, which M. Bonnet underlined before the Senate on the occasion of the voting of the 1938 Budget. But the Opposition has not yielded. Some leaders of the Left had envisaged other circumstances leading to exchange control and fundamental reforms in the structure of the State. They were mistaken—no less in the spheres of finance and politics than in foreign affairs. The Communists cannot be satisfied with the recent trip of M. Delbos in Central Europe which took the same lines as that of Herr von Neurath. Indeed, the tone of the latest strikes in food and in transport suggests that perhaps these developments have not pleased the extreme Left.

On the other hand, the Prime Minister, who has just submitted to M. Lebrun the decrees modifying the application of the 40-hour week in a few basic industries, is conscious that public opinion is equally the enemy of disorder and severe reprisals. He has adopted a firm policy towards the strikes, and the ultimatum of December 29th, which threatened to take over and operate the public services, speedily ended an adventure which, if prolonged, might have had extremely serious consequences.

Difficulties Ahead

The country needs more than the repatriation of flight capital. To balance the Budget an increase of 20/25 per cent. in fiscal receipts will be needed. To raise 30,000 million francs in loans will call for a great effort from people who save. In both cases a considerable investment of capital as the outcome of business activity is required, which is unlikely in the present political and social instability.

Statistics show that the liquid funds of the market are being entirely absorbed by the State. Monthly issues of new companies were three million francs in 1937, against four million francs in 1936 and 48 million francs in 1926. Monthly issues of old companies were 42 million francs for stocks and 48 million francs for debentures, against 610 million francs and 531 million francs respectively, in more normal years. The rates of interest in 1937 were 6, 7, 10 and 7.50 per cent. respectively, against 5.17 and 6.07 per cent. in 1935 and 1934.

Fiscal receipts, on the other hand, show some improvement. This, however, is very largely due to the rise in prices and increases of the rate of tax. The increase in private incomes is slower than the rise in public charges. Fiscal receipts in November were 4,201 million francs, of which 3,869 million francs were ordinary receipts:—

Direct taxes	1,390 million francs
Indirect taxes	2,429 " "
Estate duties	49 " "

Fiscal receipts for the first eleven months of the year were 33,940 million francs, against 29,600 million francs in the same period of 1936; the difference between last year and this, which is now 4,300 millions, will probably reach 5,000 million francs by the end of the year. But the forecasts of M. Auriol, based on the recovery of business, and those of M. Bonnet, based on increased taxation, should have realised

an increase in receipts of 8,000 million francs instead of merely 5,000 million francs.

The Paris Exhibition

The final accounts of the 1937 Exhibition were as follows:—

(Francs 000,000's omitted)

Expenditure	1,443
Receipts	150
Deficit	1,293

Two-thirds of this amount, about 813 million francs, are already covered by various means. The other 500 million francs are still uncovered.

The report of M. Caillaux severely criticises the organisation of the Exhibition and the social disturbances which have hampered its construction and success. Other reports, however, underline the material and moral benefit derived by France from the Exhibition, pointing out that the turnover of many businesses and tourist industries was doubled in 1937. The Municipality of Paris, not unnaturally, voted for the reopening of the Exhibition in 1938. The Chamber did likewise, but with a much smaller majority, and the decision of the Senate is uncertain.

Belgium

Increased Taxation Expected

BRUXELLES, December 14.—Belgium's new Government has taken over the programme of M. van Zeeland. No new policy has been announced, but even if the Government does only what M. Van Zeeland set out to do, the task will be heavy. Moreover, the Government must face an economic situation not so favourable as in the recent past.

The Belgian public has been unpleasantly surprised to learn that the Budget for 1938 will involve some increase in fiscal burden. M. de Man, the Minister of Finance, is likely to ask Parliament to vote 500 million francs of new taxes; thereby half of the relief given to the taxpayers in the last two years will be rescinded.

One reason for this increase is that the increases in old-age pensions, approved by Parliament, are likely to cost some 125 million francs a year. Another is that the financial state of the larger towns has become so critical that the Finance Minister wishes to increase their annual subventions from the Central Exchequer by about 200 million francs.

The Belgian National Railway Company has adopted a plan providing for a 10 to 20 per cent. advance in both goods charges and passenger fares. For 1937 the railways' accounts may be deemed to be balanced, after the payment of financial charges contracted since 1926. But no profit will be left to remunerate the capital invested by the State; and though the National Company is applying for tariff increases, their aim is to cover increasing expenses, not to meet other obligations. The railways' labour costs increase automatically as the cost of living rises, because the wage agreement is linked to the cost-of-living index. There will be strenuous opposition among the public and in Parliament against both increased taxation and advances in railway rates and fares.

Shorter Hours or Higher Wages?

The reduction of the working day in collieries is a problem which the Government must now solve. Some imprudent pledges were given under the influence of the New Deal in France. The working day has already been reduced from 48 hours to 45 hours; and the miners have asked for a further reduction to 42 hours. The Socialist Ministers would rather postpone this question and substitute wage increases

for shorter hours. Probably the working day will be reduced to 42 hours in principle; but it will be made possible to work three hours extra in return for a higher rate of pay for overtime. The Government is, however, inclined to reduce the working day to six hours in particularly unhealthy occupations, though this is being resisted by employers, who maintain that it would impair the competitive position of Belgian industry. Many observers believe that it would be more useful for the workers to press for increased wages rather than for shorter hours.

No Marked Recession

As in most countries, there has been some slackening of activity in Belgium. Heavy industry, coal-mining and iron and steel, are still fully employed. The textile industry, on the other hand, has fared less well, and since the end of October short time has been frequent. Nevertheless, certain special lines, such as linen weaving and the manufacture of cotton carpets, have remained very active.

The Brussels Stock Exchange has witnessed no sensational failures, despite the drop in stock quotations. And most other elements in Belgian economy are in a very satisfactory position. Prices are remunerative; and the movements of the French franc have caused no serious uneasiness in Belgium.

Holland

Setback Unlikely?

AMSTERDAM, December 17.—A great deal of interest is still being focused on the question whether the declining prosperity in America will have repercussions in this country. Economic recovery has made practically no progress in the last few months, and the possibility of a new period of depression is being viewed with considerable misgiving. The period of reviving prosperity in this country has lasted barely a year; the enormous losses sustained during the years of depression have not been recovered; and new reserves have not been accumulated.

Holland is therefore less capable of withstanding a new depression than was the case in 1929. Since the Netherlands failed to benefit by the world-wide recovery for such a long time because of the protracted maintenance of the gold standard, it is hoped and expected that a fresh setback may pass without affecting Holland.

The country is, however, bound to be largely dependent upon the state of prosperity beyond her borders, in view of her shipping, shipbuilding and port interests, her extensive investments abroad, and her export markets. In particular the Netherlands Indies, with their enormous production of a great diversity of raw materials, are very closely affected by the course of prices on the world markets.

Nevertheless, there is still an absence of factors suggesting that a breakdown may be imminent. There has been no boom in trade and industry in the Netherlands; wages have hardly been raised; the money and capital markets are abundantly provided with funds; and undue expansion or excessive investment have been avoided.

Moreover, as is emphasised in a review published by the Central Statistical Bureau, Holland finds her principal foreign outlets for agricultural and dairy produce in Great Britain and Germany, for industrial products in the Netherlands Indies and to a lesser extent in Belgium and the United States, and for her coal in Belgium, France and Germany. It is hardly likely, therefore, that the state of affairs in America will have any direct effect on developments in Holland.

New Issues Inactive

November was a very quiet month on the new issues market. There were no calls for new funds, while conversions were hampered by the fact that the balance of the 3 per cent. Conversion Loan for the Netherlands Indies has not yet been disposed of. Although interest rates are still on the decline, and 3 per cent. municipal and provision loans are being issued more and more, the State is still teetering with the conversion of its 4 per cent. loans.

However, as soon as the balance of the Netherlands Indies conversion has been accommodated the conversion of the further outstanding 4 per cent. State loans is expected. Although 52 million guilders' worth of shares were issued in the first ten months of the year, November passed without a single issue of shares on the Amsterdam market—wholly as a result of the discouraging course of events in commerce and industry.

Bank Releases Gold

In the course of the last two weeks, the Netherlands Bank has released gold to an aggregate of 79 million guilders. This has no connection with the situation of the guilder, but is explained by the credit of up to 150 million guilders granted by the Bank to France. For the remitting of the credit, the Netherlands Bank has transferred the amount in gold to avoid disturbing the foreign exchange market.

The stocks of gold of the Netherlands Bank amount to 1,365,840,000 guilders, and the bank note circulation to 862,717,000 guilders. The great liquidity of the Amsterdam money market is amply illustrated by the fact that the balances held by the Netherlands Bank yielding no interest amount to no less than 760 million guilders.

Decline in Exports

Foreign trade in November proved less satisfactory than in the previous month. Neither imports nor exports could be maintained at the level of October, either in volume or in value. Imports declined from 2,232,000 tons, valued at 148,542,000 guilders in October to 1,952,000 tons, valued at 130,329,000 guilders in November. The figures for November are, nevertheless, considerably higher than those for the corresponding month of 1936. Following the sharp advance of the import surplus to 42,333,000 in October, November showed a pronounced reaction, with an import surplus of only 32,415,000 guilders.

The following table sets out imports and exports (excluding gold and silver) month by month during recent years:—

	Imports (in million guilders)				Exports			
	1934	1935	1936	1937	1934	1935	1936	1937
January	100	76	79	106	56	55	50	73
February	81	70	74	105	51	51	50	79
March	94	80	79	125	61	54	55	94
April	85	78	81	142	54	50	57	101
May	87	78	76	128	57	58	52	90
June	89	73	77	140	59	51	53	95
July	86	76	80	146	58	54	60	102
August	87	76	82	122	69	61	63	98
September	78	76	82	130	69	59	72	113
October	87	94	92	149	62	70	76	106
November	88	86	101	130	60	60	77	98
December	75	73	114	...	56	52	80	...

Exports in November declined because of seasonal factors. In addition, however, the sharp reaction in the raw materials market and declining prosperity in many countries have also contributed towards the decline; just as the decline of world prices has reduced the value of exports and imports.

Poland

Opposition in Parliament

WARSAW, December 20.—The Sejm and Senate were convened in ordinary session this month to pass the Budget Bills for the fiscal year beginning April 1, 1938. The session so far has been much livelier than any since this Parliament was hand-picked in the autumn of 1935 under the "electoral" system—enacted after Pilsudski's death—which went much farther than the Constitution apparently intended in restricting the franchise. The franchise, in fact, was so restricted that the present Parliament, which is "organised" on a regional and non-political basis, actually represents less, and perhaps substantially less, than 50 per cent. of the adult population.

Newfoundland and the United States

It is none the less characteristic of the prevailing confusion that Deputies who were virtually "given jobs" now rise in the Sejm to abuse the Government in terms that the Opposition newspapers would not be allowed to employ save in the form of Parliamentary reports. An especially sharp, and, to them, shocking attack on the leaders of the Pilsudski regime was made a few days ago by General Zeligowski, the "Conqueror of Vilna," and one of the oldest and closest friends of the late Marshal Pilsudski; while M. Mudryj, who is a Deputy-Speaker of the Sejm and a leader of the Ukrainians, said that the Ukrainian group this year would, for the first time in the present Parliament, "adopt a passive attitude" towards the Budget Bills. He even went as far as to demand autonomy for the Ukrainians.

The Government and the Peasants

Many Deputies have also criticised the Government's handling of the peasants' strike in Galicia last August, the consensus of opinion, even among supporters of the Government, being that the methods used in breaking up the strike were needlessly ruthless. The Prime Minister has stated that thirty-six peasants were killed during the strike, and many others have since been given severe gaol sentences for taking part in it.

Although the Sejm has just approved supplementary credits of 2,688,360 zlotys for strengthening the police force, the state of feeling throughout the country appears now to be much less tense than it was a few months ago. Disunity among the political parties and groups outside of the Pilsudski regime is decidedly more chronic than the discord which has developed within the regime.

M. Kwiatkowski, the Deputy Prime Minister and Minister of Finance, who has already produced two balanced ordinary Budgets, has undertaken to keep next year's expenditure within the ordinary revenue. The Budget estimates for the present fiscal year were balanced at 2,316,700,000 zlotys, and the revenue and expenditure totals for next year are estimated at 2,447,000,000 zlotys. About one-third of the ordinary Budget expenditure will be devoted to national defence. M. Kwiatkowski expects to provide 200,000,000 zlotys from the ordinary revenue towards the 1,000,000,000 zlotys which he plans to spend from January 1, 1938, to March 31, 1939, on the public works and investment programme—which is really an extraordinary Budget.

The Strategic Triangle.

The most important item in this programme is the Four-Year Plan, which was started a year ago, to create a new industrial region in the "strategic triangle" formed by the Bug, San and Dniester rivers. About 800,000,000 zlotys, of which the ordinary Budget has provided nearly 300,000,000 zlotys, have been spent this year on pioneer investments in the triangle—mainly on waterways, dams, electrification works, roads and railways.

M. Kwiatkowski, who was largely responsible for the building of the port of Gdynia, is now virtually the financial and economic dictator of Poland. Many regard him as the most efficient and effective member of the Cabinet; and, like Dr Schacht in Germany, he is skilled in the use of the credit market. Part of the money needed for the investment programme is coming from the French military credits arranged for a year or so ago, but much of it is being borrowed internally, through the sale of Treasury bills and notes, which in due course will presumably be converted into long-term obligations.

The Burden of Public Expenditure

A substantial measure of relief has been obtained for the Treasury, as well as for the Bank of Poland, which must provide most of the foreign exchange, through agreements recently concluded with American, British, Swedish and other creditors, for the reduction of interest on Polish bonds issued in foreign currencies and still held abroad. About \$37,000,000 of repatriated bonds, most of which carried a 7 per cent. coupon, have also been converted during recent months into a new 4½ per cent. internal loan payable only in zlotys.

Thus the external debt structure is now being brought into much better relationship with Poland's capacity to pay; but any hope of widespread economic improvement appears to be ruled out because of the continuous growth of expenditure on national defence and a State investment programme governed by military rather than purely economic considerations. It is a great misfortune that a country which is economically nearly the most backward in Europe must squander so much of its income and savings on national defence as to preclude any possibility of substantially raising the standard of living.

Jugoslavia

Treaty with France

BELGRADE, December 15.—The concrete result of M. Delbos' visit to Belgrade was the signing of a commercial treaty. This abolishes clearing and introduces payment in devisen; lowers the tariffs on certain French goods (calcium sulphate, champagne, cosmetics, etc.); and guarantees to Yugoslavia extra quotas of maize, haricot beans, fruit, cheese and other goods. The treaty gives Yugoslavia the right to an export surplus of 20 per cent. in trade with France, and follows the precedent set by similar treaties with Great Britain, Holland, Denmark, Sweden and Belgium.

The official reception of M. Delbos was cordial and the *communiqué* underlined the "traditional friendship between France and Yugoslavia." This was to convey that the recent improvement in relations with Italy, confirmed during Dr Stojadinovic's visit to Rome, had in no way affected those with France. The popular welcome of the French Minister was markedly enthusiastic. In general it may be said that, so far as this country is concerned, M. Delbos' visit served to confirm optimism on both the economic and political fronts.

Business Still Prosperous

There are no signs as yet that the recession noticed in some countries has affected Yugoslavia. This is chiefly due to the fact that the end of the year, which coincides with the export season, is always the most prosperous time; and also to the fact that corn and timber, which are among the most important Yugoslav export articles, have not suffered from the setback in prices. There are, moreover, no perceptible indications that, even when the seasonal fillip has been exhausted, the country is due for any marked setback in economic activity. Exports for the first ten months of 1937 were well above last year's level, being 3,722,000 tons worth 5,110 million dinars, compared with 2,197,000 tons valued at 3,306 million dinars in 1936.

Exports have thus risen by 71.69 per cent. in volume and 54.56 per cent. in value. Imports have also increased by 14.95 per cent. in volume and 27.77 per cent. in value. Some 904,000 tons were imported worth 4,265 million dinars, against 787,000 tons worth 3,286 million dinars in 1936. The export surplus is valued at 845 million dinars, against only 20 million dinars last year.

Increased Expenditure

The Budget for 1938-39 amounts to 12,180 million dinars, which is 11.6 per cent. above that of 1937-38 as it originally stood (though additional credits of 424 millions were voted later). The increase is chiefly due to defence, the building of new railways, and the enlargement of the scope of state economic enterprises. No new taxes have been introduced, except the raising of the gold *agio* on import to 13 per cent., since the Minister of Finance expects to be able to cover the Budget from increased economic activity.

The Minister's expectations are partly based on the results of state receipts during the last eighteen months. The 1936-37 Budget produced a net surplus of 248 million dinars, while the first half of 1937-38 has yielded revenue of 5,631 millions, against 4,827 millions in the last year. Budgetary expectations have been fully realised. August and September, in fact, both yielded over 1,000 million dinars, and established records for receipts in the last seven years.

Higher National Income

The national income in 1937 was estimated by the Minister of Finance at 44,200 million dinars, against 42,000 millions in 1936. The highest post-war figure was that of 1926, when national income reached 69,600 millions, and the lowest, in 1932, was only 37,500 million dinars. The present monetary income works out at 2,875 dinars per head per annum, from which should be deducted the average fiscal burden of 503 dinars, giving a net total of 2,372. In an agricultural country like Yugoslavia such a low monetary income is to a great extent supplemented by income in produce which, being raised by self-sufficient households, never reaches the market.

The main economic indices are still satisfactory. Employment is steady at about 715,000. The index of mining for October improved to 139.7, against 132.7 in October, 1936; and that of smelting to 158.1 from 141.7. Savings have grown from 10,622 to 11,755 million dinars, and the increase has been equally distributed between privately-owned and state guaranteed institutions. The only disturbing factor, from the point of view of the town population with fixed incomes, is the rapidly rising index of prices which in September reached 78.1, against 67 last year.

Hongkong

Political Calm

HONGKONG, December 8.—Despite the bitter feeling aroused by Japanese atrocities, Chinese behaviour here has been exemplary. Tension has, of course, been increased by the conduct of the Japanese military authorities in Shanghai as well as by veiled threats directed against Hongkong. But these threats are not taken very seriously.

Although the Canton-Kowloon Railway has been persistently bombed for the past two months no serious damage has been done and interruptions have been very brief. The link between this railway and the Canton-Hankow Railway has proved invaluable, as a large amount of through traffic now passes between the Yangtze valley and the coast at this port.

Canton's Plight

The situation in Canton is not very happy. The daily bombardment has certainly not broken the spirit of the population, but the trade of the city has been dislocated. Plants such as the sugar refinery, the brewery, the fertiliser factory, the cement works, and the spinning and weaving mills, are reported to be either working short time or else at a standstill. At present the Kwangtung dollar is at a discount of over 40 per cent. Exports of produce from Canton are moving freely, but direct trade between Shanghai and Canton has been affected by the restrictions on shipping.

The Hongkong Budget for 1938 does not call for additional taxation. The revised estimates for 1937 anticipate a deficit of \$862,000, which will leave the Colony reserve fund at just over \$12 millions at December 31st. The estimates for 1938 contemplate a deficit of \$3,000,000, which would reduce the reserve fund to well below the normal level of \$10 millions.

War and Trade

In most respects, ever since the outbreak of the undeclared war between China and Japan the trade of this Colony has been in an abnormal state. Imports in September and October showed an increase of over 60 per cent. compared with the corresponding months of last year, because of the large volume of merchandise which was destined for Shanghai but landed here. Exports, swollen by produce filtering into the Colony via the Canton-Hankow Railway, have also risen, although their increase is not much more than 30 per cent. The most noticeable feature of the trade returns, however, is the huge amount of treasure which has

passed in and out of the Colony during recent months, as the following table shows:—

	July	August	September	October
	\$	\$	\$	\$
Imports	133,607,000	10,926,000	140,669,000	92,875,000
Exports	2,137,000	7,297,000	71,517,000	126,440,000

These figures are made up to a large extent of Chinese dollars and subsidiary coins from Shanghai and Canton, forming part of China's note reserve and sent here in the first instance to evade seizure by the Japanese. Subsequently most of this specie was shipped to London and possibly disposed of in part before the recent break in the price of bar silver.

War conditions in China have affected Hongkong in many ways. The large influx of refugees has seriously taxed housing accommodation, and has created an extra demand for foodstuffs. Rents, at an uneconomic level for some years, have now risen substantially, and food prices have gone up despite the extra stocks available through Shanghai shipments being dumped here.

In general, retailers have been doing a brisk business, but stores which normally stock a large proportion of Japanese manufactures, and particularly piece goods, have been handicapped. The amount of capital tied up in Japanese goods which cannot be sold must be very large, but the chief sufferers are the importers, mainly Japanese concerns who are finding it impossible to force dealers to clear.

Imperial Preference

Hongkong industries are passing through a period of transition due to the tightening up of Imperial preference relations. Hitherto Japanese materials have entered into the manufacture of various types of garments made in Hongkong, but exports to British Colonies extending preference to Hongkong are now required to be "spun, woven and finished within the British Empire."

This standard was established for rubber shoes a few years back, but until recent months Japanese cotton yarn, artificial silk yarn, and even Japanese woven cloth, were being used in Hongkong factories in the making of garments, showing a "25 per cent. Empire content." Now Hongkong manufacturers are required to satisfy the local authorities as to the Empire origin of their raw material, and this has meant switching over to Indian yarn for various textile garments and to British spun artificial silk yarn. The output of Hongkong textile factories is almost entirely marketed in Crown Colonies, where the purchasing power of the native population is on a low level, and it has to a large extent replaced Japanese goods.

Letters to the Editor

Lancashire's Remedy

TO THE EDITOR OF THE ECONOMIST

SIR,—Proposals for reorganising the cotton industry from the Joint Committee of Cotton Trade Organisations are being placed before the various sections of the trade for their approval. This is no industry suffering from severe foreign competition at home; for Lancashire still "supplies practically the whole requirements of the home market." On the contrary, it is an industry which still retains nearly a third of the world trade in cotton goods.

During the last twelve months, various interests in the cotton trade have failed to persuade the Government to give them legal powers to enforce schemes for production control, quotas and the removal of surplus capacity. In July the President of the Board of Trade told a deputation that the Government would give help towards reorganisation so long as that reorganisation was devised to consider the trade as a whole and would assist the export trade. The proposals put forward under the heading of "Lancashire's Remedy" are designed to meet these conditions.

Briefly, it is proposed that the Government should pass an Enabling Bill under which sections of the trade may legalise their schemes through a draft order which, if approved by Parliament, would be given statutory effect without delay. All such schemes must first be passed by a Board representative of the whole industry and an Advisory Committee of three outsiders. The schemes which may come under the jurisdiction of the Board include the reduction of surplus capacity, the prevention of waste from excessive competition,

the regulation of the production and sale of goods, the establishment of minimum prices, the institution of pools and quotas, and the imposition of levies on the trade.

It is difficult to understand how the promoters of "Lancashire's Remedy" hope to recapture by these means an export trade which has been lost by high costs of production at home, high tariffs abroad, and the fact that other countries, notably Japan, China and India, are now making what we previously made for them. In a very natural desire to fix prices at a level at which they are remunerative to her, Lancashire seems to have forgotten that that level may be, and recently has been, very considerably above the world price level; and it is the latter, and not any price which she

FIXED DEPOSIT ACCOUNTS

Rates will be quoted on application

may fix for herself, that determines the amount of business Lancashire is likely to do abroad. If Lancashire is to expand her export trade, she can only do so by competing in world markets at world prices.

Experience has taught us that the institution of pools and quotas and the establishment of minimum prices have done nothing to accelerate expansion in exports. Since the Coal Mines Act of 1930 officially recognised a system of pools and quotas, the percentage of coal exports to coal production in this country has declined from 22.5 per cent. in 1930 to 17.4 per cent. in 1935. Lancashire might do well to note the unfortunate experience of the United States. After three years of control in production, the price of cotton is 30 per cent. lower than it was a year ago, and the policy of control and price fixing has so stimulated the production of cotton in other countries that the U.S.A. has now lost her virtual monopoly of the cotton markets of the world.

The consumers of coal, a raw material, are well aware how difficult it has been since the introduction of pools and quotas to get continued deliveries of the sorts they require. How much more difficult would it be to obtain that delivery were a similar system introduced into an industry like cotton, producing a finished article in an infinite variety of different styles. In such an industry any system of pools and quotas means stereotyping the existing organisation, fettering the efficient for the benefit of the inefficient, and creating a rigid, cumbersome, bureaucratic control to deal with circumstances that demand infinite flexibility and rapid decision.

The Government has rightly accepted the postulate that the crying need of the cotton industry is for increased foreign trade. It is difficult to see how they can approve of a scheme as a result of which the export trade may well be limited rather than expanded. The need is to make it possible for the industry to compete in foreign markets. This can be done by producing better goods at the same price, or the same goods at lower prices; both require cheap capital in order that the industry may purchase the best and most efficient modern machinery to do the work. With such machinery available, and bearing in mind the shortage of labour in the trade, it should be possible, with Government help, for a conference of employers and employed to substitute for the out-of-date and involved wage systems at present in force a new method which would mean more pay to the operatives at a lower cost of production to the employers.

The trade may yet be saved by the discovery of new uses for cotton; the tyre trade, the shoe trade, and the hosiery and corset trades are a few examples. A committee of experts to investigate and discover new uses for cotton would undoubtedly do more for the well-being of the whole industry than any grandiose schemes such as those suggested in "Lancashire's Remedy."

Yours truly,

S. B. L. JACKS.

Manchester.

Books and Publications

Realpolitik in Palestine

A BOOK on Palestine at this juncture from "Scrutator's" pen* could hardly fail to be an able and important piece of work. On this subject Mr Sidebotham has a double right to make his voice heard. His general mastery of international affairs is here reinforced by close study and keen enthusiasm; and Mr Sidebotham was the non-Jewish member of a triumvirate of Manchester men who bedded the Balfour Declaration out of a Mancunian nursery garden.

Mr Sidebotham's approach to the Balfour policy is characteristically British. He is bent on proving that the policy is both good for goodness' sake and good for British interests. This time-honoured British dodge of hitching a star to our own particular wagon is what the rest of the world calls British hypocrisy.

Time and again, one of these stars of idealism has been converted into motive power to propel the Imperial perambulator another stage further on its upward course. Will the old dodge work in Palestine under the post-war conditions of international politics? That is the question. Mr Sidebotham still answers it in the affirmative, and he has written this book to support his thesis.

Eire

TO THE EDITOR OF THE ECONOMIST

SIR,—I am surprised at one grave omission in the acute and penetrating article on "Eire" which appeared in your issue dated December 25th. The new Irish Constitution imports *not one* significant and effective change as compared with the former one. It roots out one set of humbugs and introduces a new set, but produces no effect either on the internal administration of the State or on its relations with the United Kingdom, apart from the incidental exasperation of the Ulster majority by claiming them as a *terra irredenta*.

Since 1922, some eight significant changes have been brought about in the operation of the Free State Constitution. They are: the abolition of the appeal to the Judicial Committee of the Privy Council; the incipient politicisation of the judicial bench; the weakening of civil servants' security of tenure; the surrender by Parliament to Ministers of extensive administrative and legislative (including taxing) powers; the creation of many semi-governmental institutions whose personnel is outside the scope of the Civil Service Regulation Acts; the restriction of the citizen's liberty in many directions; the abandonment of security of tenure and freedom of sale of agricultural holdings as an objective of agrarian reform; the weakening of the legislative influence of the Senate. But it is not the new Constitution that has imported these. They have been effected by distinct legislative and administrative acts over the last fifteen years. Compared with these innovations, the new Constitution deserves the hackneyed comment: "*Plus ça change, . . .*"

Yours faithfully,

Rathgar, Dublin.

G. A. DUNCAN.

The Republics of South America

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the review of "The Republics of South America" in your issue of December 25th, you state that "there is no industrialisation and no possibility of more than the most artificial industrial growth" [in South America].

May I ask you to consider these figures?

Exports of Cotton Piece-goods from the United Kingdom to Brazil.			
	Quantity.		Value.
1903 ...	266,000,000 yds.	...	£3,100,000
1913 ...	97,000,000 yds.	...	£1,600,000
1937 (11 months)	979,000 sq. yds.	...	£50,460

That this growth is artificial, I agree, for it has taken place behind an insurmountable tariff wall; but the statement that there is no industrialisation can, I think, hardly be upheld.

Yours truly,

Manchester.

W. H. ZIMMERN.

anyone who studies the vastly different geographical distribution of forces in the world to-day must surely see that the British Empire's one chance of survival now is to strive with all its might for the establishment of a system of international law and order with a world-wide application.

World-order is no doubt more like a nebula than a star. All the same, it is the only British interest that any longer counts. Mr Sidebotham scents this truth when he observes in passing that a defence of the principles of the League of Nations might be regarded as a primary British interest (page 182)—but after all he passes by on the other side.

This is the frame of ideas in which his Palestinian arguments are set. He has some hard things to say about the Royal Commission's Report, but his arrows glance off because his attack is aimed not so much at the substance of the Report as at what he feels to have been a breach of etiquette on the Commissioners' part. In recommending partition, he argues, they went beyond their terms of reference. Possibly they did; but, anyhow, the British Government have blessed them for it.

Mr Sidebotham himself does not blast the Commission root and branch. He would appear to have resigned himself (like the majority of the Zionist Congress) to the principle of partition, with a plea for somewhat enlarging the proposed area of the Jewish state. (His well-put Jewish arguments in favour of partition on pages 269-70 are more convincing than his British military arguments against it on pages 255-8).

In one illuminating passage, Mr Sidebotham gives reason to the Arab charge that Zionism, in its heart of hearts, has always thought of the Palestinian Arabs as exterminable aborigines.

Nothing was more certain than that if Palestine became part of the British Empire it would never be colonised in any real sense by the sort of Englishmen who have made Canada and Australia. The only possible colonists of Palestine were the Jews.

Delenda est stirps Arabica! If the Englishman is disinclined to play this game we must find somebody who will.

Shorter Notices

"Armaments Year Book for 1937." League of Nations Publications. Allen and Unwin. 1,113 pages. 25s.

The thirteenth edition of this valuable annual includes all the officially published information about the armies, navies, air forces and national defences of 64 countries, together with articles on the organisation of these countries' fighting services. The figures given are remarkably up to date, and were it not for the fact that governments do not publish exact information about the war-footing of their armaments and defences, this volume would be a mirror of the foreboding arms race in which all countries are now engaged.

"Marketing Survey of the United Kingdom." Edited by Cecil Chisholm. Second edition. Business Publications Ltd. 564 pages. Price 40s.

The major part of this second edition of "the salesman's statistical abstract" is a gazetteer of town and county markets. For each market we are given the figures of the population, the proportions of families earning different incomes, the amount of rates and the numbers of shops and cinemas. Even school teachers, editors and dog licences find their place in this exhaustive array of statistics. Home market trends are carefully examined. Mr and Mrs Consumer are as readily detected buying groceries and shoes as spending an evening at the cinema or the dogs. On holiday, too, their favourite seaside resort is betrayed by their habit of writing letters and post cards. For 132 markets an index number of purchasing power has been computed. To draw distributors' attention to places which might repay further investigation it is useful and above criticism. But one may question whether an index based almost entirely on the numbers of persons in employment, and on necessarily doubtful estimates of the numbers of families earning between £250 and £500 and over £500 respectively, can be more than the bluest of guides. When we are told that Coventry and Oxford are at the top of the purchasing power scale and Merthyr Tydfil and Rotherham at the bottom, we do not feel we have learnt anything strikingly new. And it is doubtful whether much significance can be attached to the fact that Manchester shows six points more prosperity than Greater London.

A GOVERNMENT SERVICE for BUSINESS MEN throughout 1938

"THE BOARD of TRADE JOURNAL"

The authoritative weekly journal of the Board of Trade contains essential news for exporters. It includes news of trade openings, exchange regulations, commercial treaties, Customs regulations, &c. The issue of 23 December 1937 contained a supplement giving the general summary of the preliminary results of the Census of Production 1935. Annual Subscription 30s. post free.

MINISTRY OF LABOUR GAZETTE

An invaluable monthly news service on very many aspects of industrial labour and employment including employment and unemployment, wages and hours, cost of living, strikes and lock-outs, legal cases, etc. 6d. per copy. Annual subscription, 7s. post free.

THE LOCAL UNEMPLOYMENT INDEX, a monthly statistical return for over 600 towns. £3 3s. 0d. per annum.

ACCOUNTS relating to TRADE and NAVIGATION

These monthly returns give the volume and value of imports and exports for the current month with aggregate figures for the previous months of the year. Similar totals for the corresponding periods in the previous two years are given for purposes of comparison. Summary tables of imports and exports preface the detailed statistical analysis. In the return for December, preliminary figures are given for the past year. Each monthly return is adequately indexed. Annual subscription, £2 17s. 0d.

ANNUAL STATEMENT of the TRADE of the UNITED KINGDOM

This work, appearing in four volumes, contains the final figures for each year's trade analysed in considerable detail with comparative figures for the previous four years. The division is as follows:

Vol. I.—Summary of imports and exports.
Vol. II.—Detailed Statements of imports; exports of imported merchandise, bullion and coin and free goods in transit.
Vol. III.—Detailed Statements showing exports of produce and manufactures of the United Kingdom.
Vol. IV.—Detailed statement of the trade at each port or place, etc.

Prices for the volumes relating to the year 1936 are as follows: Vol. I, 13s. (13s. 6d.); Vol. II, 32s. 6d. (33s. 1d.); Vol. III, 20s. (20s. 6d.); Vol. IV, in the press. Post-free prices in brackets.

OVERSEAS TRADE REPORTS

Concise and informative accounts of the commercial and economic conditions prevailing in the principal countries throughout the world are presented in the series of reports by H.M. Trade Commissioners; Commercial, Diplomatic and Consular Officers. Some thirty to forty reports are issued annually at a subscription price of 40s. post free. Reports on individual countries may be obtained separately at various prices.

THE BUSINESS WORLD

Our Changing Industries

AFTER an abrupt recession between 1929 and 1932, British business activity has been expanding steadily for nearly five and a half years, and now stands well above the level attained in 1929. *The Economist's* Index of Business Activity (1935 = 100), which fell from 99½ in August, 1929, to 81½ in September, 1932, stood at 113½ last September and 112 in November. This recovery has been associated with a welcome rise in the number of employed workers, whose total in 1937 reached the highest level on record. The increase in the total volume of activity and of employment, however, is a composite of innumerable changes in separate industries and geographical areas, and these changes have been anything but uniform. Factors like the trade cycle, technical progress and the changing proportion of the national resources employed for the home and export markets have affected different industries unequally. What has been the nature of these changes during the past eight years?

The material for a detailed and illuminating answer to this question is given in the official reports of the Ministry of Labour on the results of a "census" of insured workers, taken by the Ministry, in June of each year. The latest of these reports was published in *The Ministry of Labour Gazette* of last December. The official employment analyses, unfortunately, do not cover the whole of Britain's occupied population, but only that section of our human resources which is covered by the Unemployment Insurance Acts.

During the years since 1929 industrial changes have been particularly rapid. The proportion of our resources employed for the satisfaction of the domestic market has increased considerably, and technical progress has been marked both in old and newly established industries.

The main trends in employment are shown graphically in a series of diagrams on page 45. In the first place, the total number of insured persons aged 16 to 64 in the United Kingdom has increased by 1,603,000 during the past eight years, from 12,094,000 in June, 1929, to 13,697,000 in the corresponding month this year. The number of insured persons in employment, on the other hand, declined from 10,930,000 in June, 1929, to 9,967,000 in 1932, but rose to 12,327,000 in 1937; thus there was a net increase of 1,397,000 during the eight years. These figures show that, despite the remarkable expansion of business activity since 1932, the growth of employment has not fully kept pace with the increase in the number of insured persons. Thus, while the numbers in employment last June were 12.8 per cent. greater than in 1929, the increase fell short, by some 206,000, of absorbing the total increase in the insured population.

So much for employment in general. How has the depression and subsequent recovery affected the distribution of employment among the main branches of activity? Which industries have absorbed the 1,396,000 additional workers who have found employment between 1929 and 1937? The answer is given in Table I (see next column), which shows changes in the number of employed persons aged 16 to 64 by broad categories (a) between June 1929 and 1932, (b) between June, 1932 and 1937, and (c) between 1929 and 1937. This analysis shows that the decline in employment during the depression was confined to the so-called "productive" industries, including fishing, mining, manufacturing, and building and public works contracting. Employment in these industries declined altogether by 1,169,000 between June, 1929, and June, 1932. On the other hand, employment in the "service" industries continued to rise during the depression, the total increase in the five branches of activity shown separately amounting to 206,000. The continued expansion of the "service" industries

TABLE I. CHANGES IN EMPLOYMENT IN THE UNITED KINGDOM SINCE 1929

Industry Group	Number employed in June, 1937	Increase (+) or decrease (-) in the number employed		Net increase (+) or decrease (-) 1929-37
		1929-32	1932-37	
Fishing	28,182	- 1,180	+ 3,940	+ 1,760
Mining and quarrying	794,315	- 273,920	+ 99,830	- 174,090
Manufacturing	5,947,552	- 823,550	+ 1,378,000	+ 554,450
Building and contracting	1,119,145	- 70,840	+ 299,610	+ 228,770
Transport and distribution	2,693,132	+ 128,360	+ 279,130	+ 407,490
Gas, water and electricity supply	202,661	+ 2,300	+ 47,390	+ 49,690
Miscellaneous services	835,466	+ 41,480	+ 167,170	+ 208,650
Commerce, banking, insurance and finance	260,354	+ 8,720	+ 28,720	+ 37,440
National and local government services	445,985	+ 25,290	+ 56,000	+ 81,290
All industries and services	12,326,790	- 963,340	+ 2,359,790	+ 1,396,450

tries during the depression has thus offset, to some extent, the severe decline in the "productive" trades. In the upward phase of the trade cycle, however, it is clear that employment increased in every branch of activity which is shown separately in the table, though numerically the increase was most marked in the manufacturing group. During the whole period from 1929 to 1937 all branches of activity, except mining and quarrying, showed an increase in employment.

Changes in the relative importance of the main branches of industrial activity are shown in the next table. The number of employed aged 16 to 64 in each group is shown as a percentage of the total number of insured workers in employment in each year.

TABLE II. CHANGES IN THE DISTRIBUTION OF EMPLOYMENT SINCE 1929

Industry Group	Proportion of the total number of insured persons employed in different industrial groups at the end of June			
	1929	1932	1936	1937
Fishing	0.2	0.2	0.2	0.2
Mining and quarrying	8.9	7.0	6.1	6.4
Manufacturing	49.4	45.9	47.4	48.3
Building and contracting	8.2	8.2	9.3	9.1
Transport and distribution	20.9	24.2	22.6	21.9
Gas, water and electricity supply	1.4	1.6	1.7	1.6
Miscellaneous services	5.7	6.7	6.9	6.8
Commerce, banking, insurance & finance	2.0	2.3	2.2	2.1
National and local government services	3.3	3.9	3.6	3.6
All industries and services	100.0	100.0	100.0	100.0

The table reveals the growth of the "service" industries between 1929 and 1937. The proportion of the total number employed engaged in fishing, mining, manufacturing, and building and contracting declined from 66.7 per cent. in 1929 to 64.0 per cent. in 1937. The relative decline of the productive industries, however, was mainly due to the decline in the number employed in coalmining, which, in turn, can be attributed—in part, at least—to mechanisation of mining operations. The relative importance of the manufacturing group of trades has also diminished during the past eight years, but these trades still employ nearly half of the total number of insured persons. The relative importance of all the "service" industries increased markedly between 1929 and 1937, and in the latter year they accounted for as much as 36 per cent. of the total number of insured persons in employment.

This increased importance of the "service" industries is a normal concomitant of a rise in the general standard of living. But there have been equally significant shifts within the manufacturing group of industries. These are revealed

in the last table, which shows the trend of employment in the food, drink and tobacco, textile and clothing, and metal industries between June 1929 and 1937. This classification has been adopted in order to draw a rough distinction between consumption and capital goods industries. While the metal industries, producing mainly durable goods, usually bear the brunt of cyclical variations in business activity, fluctuations in expenditure on non-durable consumption goods are usually less marked:—

TABLE III. NUMBERS IN EMPLOYMENT IN IMPORTANT MANUFACTURING INDUSTRIES (In thousands)

June	Food, Drink and Tobacco	Textiles and Clothing	Metal Industries	Other Industries	Total Manufacturing
1929	477	1,697	1,910	1,207	5,291
1931	461	1,390	1,501	1,110	4,462
1932	465	1,444	1,449	1,212	4,570
1936	508	1,555	2,059	1,399	5,512
1937	531	1,614	2,322	1,451	5,948

As was to be expected, recovery has been most marked in the metal industries. While employment in the food, drink and tobacco trades in 1937 was only 11.3 per cent. higher than eight years ago, the number actively engaged in the metal industries rose by 21.6 per cent. during that

period. Largely as a result of the decline in export business, employment in the textile and clothing group last June was actually 5.1 per cent. smaller than in 1929.

Apart from the important changes in the relative importance of the main branches of activity, there has been a significant geographical redistribution of employment between 1929 and 1937. For example, the number of insured workers employed in London and South-East England rose by 23 per cent. during the past eight years. The Midlands and South-West England have gained 19 per cent., but employment in the North of England showed an increase of only 5 per cent. In Wales and Scotland the number employed in June, 1937, was only slightly higher than eight years ago.

We may briefly sum up the conclusions suggested by this survey. There have obviously been far-reaching changes since 1929 in the relative importance both of individual branches of industry and of geographical areas. The growth of the "service" industries has been accompanied by a marked concentration of activity in and around London and in the Midlands. Among the productive industries there has been a marked expansion of the durable goods trades, but employment in the textile and clothing trades has declined both absolutely and relatively between 1929 and 1937. Finally, the net increase in employment between June 1929 and 1937 has been measurably smaller than the growth of the insured population during that period.

Investment Signs and Portents

THE careful investor, like Mr Samuel Pepys nearly three centuries ago, will spend this week-end striking his balance of profit and loss for 1937. His task will not be a happy one. For the first year since 1931 ordinary share prices declined last year, almost uninterruptedly, and finished with a net loss of 18½ per cent. The actual fall in many leading issues was much greater. The stock-taking investor will discover that British Oxygen have fallen from the year's highest point by 40 per cent., Imperial Tobacco by 20 per cent., Marks and Spencer by 35 per cent. and Woolworth by 27½ per cent. After a 4½ years' bull market these are hard facts indeed.

Why has the Stock Exchange changed its outlook so fundamentally? A year ago we epitomised our view of prospects for 1937 in a question: Green Light or Amber? At that time, we were in a small minority in suggesting even the possibility of a substantial recession in Stock Exchange values. To-day opinion has altered significantly. The investor has shortened sail—the year, indeed, has taught us how wide an area of speculative canvas had been unfurled. The majority of Stock Exchange operators would probably acquiesce reluctantly in two general propositions whose importance is fundamental at the present time. The first is that opportunities for securing handsome capital profits on ordinary shares can no longer be expected in the present cycle; the second, that the rising tendency of industrial profits may well be checked some time in 1938.

In short, the less favourable factors which we discussed a year ago, have been accentuated. The most striking feature of the past year has been the disposition of the market to make its downward adjustments quickly—so rapidly, indeed, that prices were discounting a considerable trade recession a few weeks ago, while our Index of Business Activity was still advancing to new all-time high levels. Viewed in retrospect, some of the "special causes" assigned for the continuing fall in equity prices during 1937 lose all but a purely contemporary significance. For example, N.D.C. was merely a confusing shock; the gold scares were unfounded; the commodity price boom in the spring invited rapid retribution. It is clear enough to-day that the market's basic trouble arose from the fact that, by the end of 1936, share prices had been carried too high in relation to reasonable expectations of profits.

The two charts reproduced on the next page (and the year's main price changes, given on page 52) suggest two conclusions. The first is that the conjuncture of rising industrial activity and falling share values is explainable only on the ground that investors expect some

economic recession; they are no longer prepared to pay a handsome price in order to "buy time." The second inference is that, once the possibility of a check to the upward movement of earnings and dividends has been admitted, the margin between the income yield on ordinary shares and on gilt-edged securities has needed substantial adjustment. A year ago, according to the Actuaries' Index, the yield on representative equity shares was 0.73 per cent.

BREWERY UNIT TRUST

Trustees:
MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD.

● Brewery Units make it possible for the first time for both small and large investors to acquire a well-spread interest in brewery undertakings.

● Brewery dividends are more consistent over periods of years than those of almost any other industry and rank among the safest shares in the industrial market.

● The fact that Brewery and Distillery Shares are tightly held and in many cases difficult to obtain, makes the facilities offered by the Brewery Unit Trust of real value to the private investor.

● The Brewery Unit Trust has been formed in consonance with the Board of Trade Report on Unit Trusts.

● The current price of Brewery Units is quoted in the financial columns of daily newspapers. The estimated yield is about 4½% from cash dividends alone.

● Comprehensive booklet about the Brewery Unit Trust which forms the basis of all transactions, is obtainable from any Bank or Stockbroker, or direct from the Managers.

higher than the yield on 2½ per cent. Consols. To-day the difference is as much as 1.55 per cent.

These conclusions are of major importance in any attempt to evaluate the course of the markets in future months. For the industries on which investment attention was largely focussed during the period of rising values were precisely those whose progress has been most vital to Britain's industrial recovery, and whose position to-day—as we show in a special review of economic prospects on page 11—is most debatable. In particular, the rôle of the building trades and the steel making and consuming group of industries has been, and is, crucial. Any further stimulus to these Key industries, in the present phase of the trade cycle, seems unlikely. They have, however, a significant bearing on the industrial and investment aspects of

BUSINESS ACTIVITY, EQUITY PRICES AND COMMODITY PRICES—1929-37

(Sources: *The Economist* and Act. Price Index)

other trades. So far as industrial conditions determine Stock Exchange values, there seems to be little reason to expect a strong upward movement in 1938. But Stock Exchange quotations are also determined by the actual or probable level of general interest rates. In our comparison of average income yields we have taken as a datum the yield on 2½ per cent. Consols. Is that datum itself likely to change? If the industrial trend has, in fact, taken the turn, we have passed a cyclical peak without the attendant monetary crisis which has always marked such points of inflexion in the past. The setback in gilt-edged prices last year was confined to the first three months, and quotations have since been fairly firm.

There are two explanations for the limited rise of interest rates over the year. The managers of cheap money, on the one hand, have received substantial assistance from the growth of extra-budgetary social funds,

whose additional resources, broadly speaking, have covered the first instalment of re-armament borrowing. On the other hand, switching by investors from industrials into gilt-edged—particularly “dated” gilt-edged—appears comfortably to have offset sales of investments by the banks. These factors suggest a firm gilt-edged market for some time to come. The generalisation, however, is subject to two contingencies: rising taxation and a permanently expanded Budget; and the possibility of gilt-edged sales by the extra-budgetary funds if industrial conditions become markedly adverse. There is, accordingly, sufficient obscurity, even in the gilt-edged outlook, to underline the attractions of stocks with a definite redemption date, despite their low current income return. The large section of the security market which is conditioned by gilt-edged movements, includes stable industrial equities of the J. Lyons type, and industrial preference and debenture issues. It may, perhaps, be open to question whether these two latter classes fully reflect potential industrial changes as

YIELDS ON INDUSTRIAL SHARES AND OLD CONSOLS—1929-37 (Actuaries Index)

yet. The Actuaries' Index shows that the average yield on miscellaneous industrial debentures and preference issues actually rose last year by an appreciably smaller percentage than the yield on Old Consols. Thus a state of affairs has arisen in which London Brick ordinary stock, for example, is on 7¼-8 per cent. dividend yield basis and discounts an appreciable fall in building activity, while the preference stock still yields no more than 4.2 per cent.

The decline in industrial share values, in this and in other cases, has already discounted so much that a repetition in 1938 of anything like the set-back of 1937 seems inherently improbable. Will there be even a temporary movement the other way? The answer may depend on the course of events in the United States, which has yet to enjoy a recovery in any full sense, and is now experiencing a marked recession. Whether this will be succeeded, six months hence, by increased activity in the constructional trades is an open question. But without the help of “recovery” in the United States, with its beneficial effect on commodity prices and, through them, on international trade, British investors may be more concerned with the security of their capital than with capital profits in 1938.

Whither British Banking?

EIGHT years have elapsed since the beginning of the last depression, and six years since Great Britain suspended the gold standard. Most of the latter period has embraced a deliberate, substantial and successful attempt to foster recovery in this country, by means of an enlargement of the credit base and the institution of a regime of cheap and plentiful money. Subsequently, there has been an expansion of joint-stock bank cash and resources, a considerable increase in the note circulation, a definite rise in the price level, a marked fall in interest rates and a growth in business activity to a point considerably above the 1929 peak. Only within the last month or two have there been signs of a downward turn in business activity.

At the opening of a new year it is opportune to consider

the differences which the past eight momentous years have made to banking structure and policy. Let us take first the changes in the credit base, as illustrated by the returns of the Bank of England:—

	Nov., 1929	June, 1932	Nov., 1935	Nov., 1937
Gold	131.9	134.5	196.5	326.4
Fid. Note Issue	260.0	275.0	260.0	200.0
Note Circulation	358.1	357.4	401.4	485.6
Reserve	34.7	52.8	55.9	42.4
Securities*	95.3	107.2	107.2	133.1
Bankers' Deposits	54.7	87.5	92.9	90.9

* In banking department.

The main point which leaps to the eye is the enormous increase in the Bank's gold reserves. Moreover the Bank's gold is seriously undervalued; at 140s. per ounce it would amount to the tremendous sum of £537 millions. Furthermore, this gold is immune both in law and practice from withdrawals on foreign account; for the Exchange Account's gold, amounting to nearly £200 millions, serves as an effective buffer. In comparison with the Bank's gold, the increase in the banking department is very moderate. Moreover, if the securities behind the fiduciary note issue are taken into account, the Bank is holding less securities to-day than at any of the previous dates in our table. The expansion in the credit base has been entirely a gold expansion.

On the other hand most of the expansion since 1932 has been absorbed by the increase of over £100 millions in the note circulation. The Reserve is actually lower than in June, 1932, or November, 1933. Nevertheless, the apparently moderate increase in bankers' deposits (reduced slightly last November by a temporary increase in public deposits) has been sufficient to bring about an increase in joint-stock bank resources great enough to create several new problems.

This appears from the next table showing the position of nine English clearing banks. The District Bank is necessarily omitted, as it was not a member of the London Clearing House in the earlier years:—

	Nov., 1929	June, 1932	Nov., 1935	Nov., 1937
Cash	186.4	188.3	211.1	223.5
Call and Short Loans	139.7	108.9	142.3	145.8
Discounts	230.7	275.8	291.6	291.9
Investments	259.5	348.5	604.5	589.6
Advances	973.0	836.8	759.3	939.2
Deposits	1,751.4	1,726.8	2,002.0	2,193.1
Ratio to Deposits				
Discounts	13.2%	16.0%	14.6%	13.3%
Investments	14.8%	20.2%	30.2%	26.9%
Advances	55.5%	48.5%	37.3%	42.8%

We may reserve comments upon this table for a moment, and proceed to show a comparison of long-term and short-term interest levels for the four selected dates:

	Nov., 1929	June, 1932	Nov., 1935	Nov., 1937
Bank Rate	6%	2½%	2%	2%
London Deposit Rate	4	½	½	½
Short Loans	5½	¾-1½	1½-1	1½-1
Treasury Bills	5½	1½	½	½
Bank bills (three months)	5½	1	9½	9½
Consols (yield)	4¾	3½-16	2½-16	3¼

Using these figures as our text, let us first consider recent changes in the structure of the joint-stock banks.

First, we find that there has been a steady growth in bank cash, and therefore in the power of the banks to acquire earning assets and, as an automatic consequence, to add to their deposits.

The striking feature of the second table is the drop in advances, first between 1929 and 1930 and subsequently between 1932 and 1935. Trade depression, the fall in prices, and the writing-off of bad debts, together explain the earlier decline. The decrease up to 1935 was due to a variety of causes. The initial stages of recovery permitted the repayment of previously frozen loans. Industrial amalgamations reduced the demand for new loans. The municipalities borrowed far less from their bankers partly because their needs were lower, and partly because they could obtain money elsewhere.

The result was that the banks had to employ their surplus resources in securities, as is shown both by the absolute growth in investments and by the drop in the ratio of advances to deposits and the big growth in the investment ratio.

Reference to the third table shows that in comparison with 1929, liquid banking assets, such as call and short loans and discounts, no longer earn their keep. The banks hold more securities than they did, both absolutely and relatively to deposits, and the yield on those securities is less than in 1929 or in 1932. Advances have shrunk both absolutely and relatively, and the banker's former slogan for advance rates, “One above Bank rate, minimum five,”

has completely gone by the board. Loans at 4½ per cent., 4 per cent., and even less, are readily obtainable by large borrowers.

On the other hand there has been a drop in deposit rates, both in London and the country. There has been no saving on the majority of current accounts, which received no interest in 1929, and cannot receive less to-day. Bank charges on unremunerative accounts cannot be increased without provoking public resistance. Competition between the banks continues and so does the public demand for gratuitous or unremunerative services.

We imagine that while few bankers would seriously quarrel with this diagnosis, no two would agree on the changes in banking policy it may ultimately entail. An early return to a regime of dearer money now seems highly unlikely. The banks can scarcely expect significantly to reduce their total gilt-edged security holdings, at a time when the Government has several hundred millions of Defence Loan still to place; on the contrary, their holdings are likely still further to increase. Certain other expedients need only be stated in order to demonstrate their impracticability. The banks, for example, cannot seriously reduce their standards of security for advances, or voluntarily tie up their resources in long-term loans, and this factor in itself imposes a definite upper limit on the return they can expect to earn. In case of dire necessity, they might contemplate various internal adjustments, including possibly a reduction in the number of their branches; for no system, however efficient, is sacrosanct, and circumstances alter cases. But here the banks would encounter a difficulty which would be even more formidable if they endeavoured to take the logical step of revising the charges for some of their “unremunerative” services, particularly cheque clearing. They provide a species of “public utility” service, and public opinion would contemplate a reduction in their profits much more complacently than a curtailment of their facilities.

On the other hand, the banks may reflect that the railways, faced with a problem similar in some respects to their own (though far more acute), stemmed the decline in their traffics by introducing cheap fares and more excursion trains. In the long run, the banks in making advances to customers must necessarily follow the policy of charging what the traffic will bear. The reductions they have already made in their average interest charges honour that principle; and a marginal advance may be profitable, even if it earns only a little more than the yield on gilt-edged securities.

Whether the boundaries of banking business, in the traditional British sense, should eventually be enlarged is a far wider question. In view of recent American and Continental experience, there would be little serious support for the suggestion that the banks should participate in industrial enterprises or make large-scale advances on mortgage against real property. But there certainly exists to-day a demand for medium-term credit for industry and for capital for small but progressive businesses, which the banks might well be able to meet. These questions may assume increasing importance as time goes on. Meanwhile, it is clear that banking profits will not return speedily to the levels of 1927-29. But, after all, the present return on bank shares can scarcely be called inadequate or be used as a powerful argument for the necessity of restoring pre-depression earnings by reducing the banks' facilities or increasing their charges to the public.

Finance and Banking

Christmas Currency.—On December 23rd the note circulation reached the record level of £509.3 millions, making this year's Christmas increase one of £28.9 millions. It is impossible to assess the amount of currency actually in use during the period of Christmas trade, for the period covers several weeks, during which notes are continually being paid into the banks and drawn out again. Still, the actual expansion in the circulation between mid-November gives a fair indication of the intensity of Christmas trade, especially when used as a basis of comparison with earlier years:—

	NOTE CIRCULATION (£ million)			
	1934	1935	1936	1937
Mid-November	376.9	398.9	444.9	480.4
Christmas week	405.1	424.5	474.1	509.3
Increase (actual)	28.2	25.6	29.2	28.9
Increase (per cent.) ...	7.5	6.4	6.6	6.0

Absolutely, the 1937 Christmas increase compares well with the average for earlier years, but when it is remembered that trade a year ago was interrupted by the constitutional crisis, Christmas, 1937, does not compare too well with Christmas, 1936. Again, if the increase is expressed as a percentage on the note circulation of mid-November, 1937 does not come out particularly well. The significance of this last comparison can be realised when it is remembered that retail prices are some five or ten per cent. higher than a year ago, while the cost of most Christmas railway travelling has also gone up by five per cent. Hence it is possible that the *volume* of Christmas spending was less this year than last. This is a natural but regrettable consequence of the year's setback on the stock markets and rise in retail prices.

France's Capital Requirements.—The £40,000,000 French railway credit has now been repaid, but reports are already busy crediting the French Government with the intention of returning to London for fresh accommodation early in the New Year. Such a decision should cause no surprise. The French Government's capital requirements for 1938 amount to Frs. 28,000 millions, according to the official estimates; if we are to believe calculations recently made by M. Paul Reynaud they will reach over Frs. 45,000 millions. On present indications the domestic capital market cannot satisfy these requirements, and if there is no external borrowing they will have to be met, whether directly or indirectly, by inflationary borrowing. There has been some repatriation of capital to France—M. Bonnet estimated the movement at Frs. 10,000 millions in the recent Budget debates—but there has been no apparent sign of the re-investment of that capital in the French market. Most of it was probably liquid industrial and commercial capital which was repatriated together with its devaluation profits and was re-employed in the enterprises concerned. But the market for French rentes continues to reveal the investor's strike that is still proceeding in France. The latest issue of 5 per cent. 3-, 6- and 9-year bonds had to be made on an average yield basis of 6½ per cent. and, even so, the operation brought in only Frs. 3,600 millions. Another approach to the London market for temporary accommodation may thus be in prospect.

Royal Bank of Canada.—It is interesting to compare the recent trend of Canadian banking, as exemplified by the Royal Bank's latest report, with the British trend discussed in a leading article on another page. The accounts of the Royal Bank, summarised below, suggest

one or two significant conclusions. First there has been an increase in advances during the past year, but it is proportionately much less than the British increase. Next, the drop in call loans, both inside and outside Canada, reflects both the year's trend of the stock markets and a cardinal distinction between British and Canadian banking; for the Canadian call market, like the American call market, deals in loans against securities, and not against bills as is the case in Great Britain. The rise in deposits, both in Great Britain and in Canada, is of the order of one per cent., and so is very moderate. Finally, the limited increase in the Royal Bank's advances, together with a drop in call loans, has led it to add appreciably to its investments; while the British bank's investments have fallen during the past year.

	November 30 1936	1937
Liabilities:—		
Deposits	746.8	756.1
Note circulation	29.5	28.6
Assets:—		
Cash	179.3	168.6
Call loans	40.8	29.5
Investments	293.2	316.6
Advances	300.1	308.5
Net profits	3.5	3.7

In spite of the year's decrease in cash, the bank's position remains liquid, when it is recalled that the bulk of its investments are in Dominion and Provincial Government securities. It is to be assumed that ample reserves are held against any conceivable depreciation. Advances represent 40.8 per cent. of deposits, or much the same proportion as now exists in England. Net profits have risen from \$3,506,000 to \$3,711,000, and an extra \$100,000 is being given to the Pension Fund Association.

Canadian Bank of Commerce.—According to a cabled summary, the latest accounts for the bank confirm the general Canadian banking trend. Deposits at \$560.7 millions show a moderate increase over last year, while cash has fallen to \$110.5 millions, and call loans have contracted sharply to \$32.4 millions. Investments are higher at \$262.9 millions. So far as can be told from the summary, advances at \$200 millions are much the same as last year. Net profits at \$2,934,000 are slightly higher. The latest balance sheet of both this bank and the Royal Bank called attention to one possible source of weakness in American and Canadian banking practice. Call and short loans are essentially the way of employing such surplus funds as a bank has at any moment. That surplus is clearly subject to frequent variations, and a banker should obviously have the assurance that he can always dispose of that surplus in the call market. In England, call and short loans are made largely against bills, and in practice, little difficulty arises. Across the Atlantic, however, there is no well-developed bill market, and call loans are habitually made against securities. Last year's Canadian banking experience has shown that, quite apart from the bank's needs, call loans have had to be drastically reduced simply because of the year's recession in the stock markets. The banks therefore have apparently been driven to invest their floating resources in securities. At the same time, while the banks show more securities and deposits, they also show less cash than a year ago. It would be interesting to know the reason for these three movements, taken in conjunction with one another.

Average Money Rates.—For purposes of record we give below a table of annual averages of short loan and discount rates over the past nine years. In interpreting the

table, however, a sharp distinction must be drawn between the earlier and later years. During the past few years, both short loan and discount rates have been pegged within fairly narrow limits, mainly through co-operation between the clearing banks. There has thus developed a controlled market in place of a free market.

AVERAGE MONEY RATES

Year	Bank Rate	Market Rate 3 Months' Bills	London Deposit Rate, Banks	Short Loans
1929	5 10 0	5 5 4	5 10 0	4 12 3
1930	3 8 5	2 12 3	1 8 5	2 9 6
1931	3 18 7	3 11 0	2 1 0	3 0 10
1932	3 0 2	1 16 9	1 5 2	1 15 7
1933	2 0 0	0 13 10	0 10 0	0 15 5
1934	2 0 0	0 16 7	0 10 0	0 16 10
1935	2 0 0	0 11 3½	0 10 0	0 14 10½
1936	2 0 0	0 11 10½	0 10 0	0 15 6
1937	2 0 0	0 11 6½	0 10 0	0 15 1½

To illustrate the distinction, since nearly two years ago the clearing banks have as a rule lent money at fixed rates of

½, ¾ and 1 per cent., the rate depending on the collateral lodged against each loan. Other banks and financial houses, known as "outside lenders," vary their rates at will, but a common rate is ½ per cent. for loans against bills, and ¾ per cent. for loans against bonds. Thus the effective average rate for loans against bills has lately been ½ per cent. As regards discount rates, the clearing banks have agreed to buy Treasury bills at not less than ½ per cent., and during most of the year their minimum rate was also the actual rate at which the bulk of the Treasury bills were bought and sold. Three months' bank bills were dealt in more freely—in practice at rates just above the Treasury bill rate. These considerations explain the apparent anomaly in the table of the short loan rate being higher than the market rate for three months' bank bills. This phenomenon has been apparent ever since 1933; it arises directly out of the fact that the market rate of discount on Treasury Bills has fallen far below the rates to be obtained on bonds and other securities. The actual rate for short loans against bank bills was ½ per cent., compared with an average market rate of just over ¾ per cent. Thus bill brokers had a very small margin of profit.

MONEY MARKET NOTES

The Bank Return

Coincident with the increase in the circulation to the new high record of £509.3 millions, the Reserve shrank on December 22nd to £38.0 millions. Had it not been for the seasonal increase of £20 millions in the fiduciary note issue, the Reserve would have been down to £18.0 millions, and the Proportion to 12.4 per cent. This week the Christmas currency has begun to return, and the circulation is down to £505.3 millions.

	Dec. 30, 1936	Dec. 15, 1937	Dec. 22, 1937	Dec. 29, 1937
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.

Issue Dept.	313.7	326.4	326.4	326.4
Gold	467.4	502.0	509.3	505.3
Notes in circulation	46.8	45.6	38.0	41.9
Reserve	12.1	11.4	10.8	11.4
Public Depts.	150.6	103.4	98.2	120.6
Bankers' Depts.	39.2	36.5	36.5	36.6
Other Depts.	134.5	95.0	96.5	114.6
Govt. Secs.	17.5	7.8	7.5	9.2
Discounts and Advances	21.2	20.7	21.5	20.9
Other Secs.	23.1%	10.1%	26.1%	24.8%
Proportion				

In the banking department, the final week of the Christmas currency expansion reduced bankers' deposits to £98.2 millions. This week they have recovered to £120.6 millions, because of heavy Treasury bill maturities and no payments. Discounts and advances have only risen this week from £7.5 to £9.2 millions. Thus, up to December 29th there had been very little market borrowing from the Bank in preparation for the end of the year. This confirms the market view that there will be comparatively little pressure on the last day of the year.

The Money Market

At the Treasury bill tender last week the market concentrated upon bills to be paid for on January 1st. Immediately after Christmas one or two of the banks continued to buy bills, in contrast to their usual custom so near the end of the year, and the market was able to sell a few February and March Treasuries at ¾ per cent. There were also very heavy maturities of Treasury

bills on December 30th. As a result comfortable conditions prevailed during most of the week, and up to the moment of going to press there was no report of any borrowing at the Bank.

	Dec. 31, 1936	Dec. 22, 1937	Dec. 30, 1937

Three months' bank bills	11½-3¼	23½-3¼	9½-5½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The clearing banks continued to lend day-to-day money at ½ per cent. against bills, and were renewing old weekly fixtures into the New Year at ½ per cent. Otherwise 2 per cent. was charged for loans over the turn of the year. The market had the proceeds of Thursday's maturities on their hands over that night, for the banks only called for balance-sheet purposes on Friday. Still the market naturally preferred to forgo a day's interest rather than carry bills over the turn of the year and have to borrow from the Bank for eight days at 2½ per cent. There were no hot Treasury bills available during most of the week, but there was some business in March bills at ½ per cent. for delivery in early January.

The Bullion Market

Dealings in gold this week have been mainly noticeable for a continued shrinkage in the premium over the American shipping price, which by Thursday had dropped to as low as 4½d. There has been a fair Continental demand, including both private and official arbitrage demand from Belgium. Supplies of gold have come almost entirely from the British authorities, who have shown a willingness at the fixing to meet all demands. This does not necessarily indicate any particular line of policy, for both the Transvaal and Russian gold coming to London is normally disposed of by the authorities. It has been noticed that

for several weeks past Switzerland could have bought gold in London at a profit, and this week the London price was at a discount of about 4½d. below the Swiss parity price.

* Above or below American shipping price. The New York price of silver remained at 45 cents per ounce .999 fine during the week.

The silver market has been awaiting the declaration of the Administration at Washington regarding the United States' future silver-buying policy. The latest impression was that this would not be made until January 31st. Meanwhile the market was weak up to Tuesday under Indian selling relieved to some extent by bear covering. Then on Tuesday afternoon came the news that the United States had agreed to continue buying, during January at least, Mexican silver on the 1937 terms. This caused the market to stiffen, and at Wednesday's fixing the price for both cash and forward rose by ¼d.

Foreign Exchanges

The French strikes caused francs to be offered on Wednesday up to Frs. 147½. The French Control then brought the rate back to Frs. 147½. Three months' francs similarly weakened to Frs. 4½ discount, came back to Frs. 4½ and then went out again to Frs. 4½ discount. It was believed in London that this week the French authorities have had to buy a fair quantity of francs. Belgas were offered a little this week, and the spot rate for sterling rose to Bel. 29.46½. The forward rate remained steady. There was no change and very little business in dollars, guilders or Swiss francs, and altogether it has been a very quiet market.

Investment

Wall Street in 1937.—There is a disposition among some British investors to ascribe to Wall Street, in 1937, the rôle of the Wicked Fairy at the Stock Exchange Feast. Chronologically, the indictment cannot stand. *The Financial News* daily index of ordinary share values in London attained its highest point for the year on January 8th and had fallen by 4 per cent. by March 6th, when the Standard Statistics daily index of industrial equities reached its own high point for 1937. Thereafter, it is true, the decline was steeper in New York than in London; for the Standard Statistics index on December 29 had fallen 44 per cent. below the highest figure of the year, whereas the total drop in *The Financial News* index was limited to 23 per cent. And it is beyond question that the American slump inflicted loss on a number of British investors and speculators in American equities, and, at a later stage, compelled a number of American operators to liquidate their holdings in leading London equities in order to cover themselves at home. London, which has thus had the worst of it both ways, can hardly be expected to take an unbiased view. On the whole, however, if due allowance be made for the fact that New York's upswings and downswings alike are normally more violent than those of London, the movements in the two markets do not seem to have been wholly disproportionate. The market's disappointment has been rather due to the fact that, a year ago, trade recovery was believed to have advanced less far—and consequently to have a longer prospective lease of life—in America than in Great Britain.

* * *

Both markets have now discounted a good deal, and in both cases it is difficult to say how far purely technical factors have influenced the trend of prices. In America, certainly, prevailing conditions made for rapidity in the downward movement, once it had begun. The exact degree of importance which can be attached to factors like the popularity of the Dow Theory and the effect of official and semi-official regulations in creating "thin" markets, is difficult to estimate—and, probably, easy to over-estimate. What has probably been more important is the widespread realisation of the deflationary effect of the American Government's determination to work towards a balanced budget, after many months during which successive spurts of trade recovery had coincided with the outpouring of large sums of money and a rapid increase in the public debt. The check to industry which this decision would in any case have entailed was aggravated by the dual objective of the President, who made taxation a vehicle not only for collecting money but for prosecuting his campaign against big business. The end of the year finds Wall Street still in depressed mood. In the United States, recession in industry, particularly in some of the capital producing industries, is at present a statistical fact, and not, as in Great Britain, a coffee-house topic. Whether the depression will be shaped like the letter "V" or the letter "U" lies mainly with the gods and the White House.

Brazilian Bond Service.—As we go to press, the fate of the Brazilian coupons which are due for payment on January 1st is not finally known. It was understood, when the first reports of default were received in this country, that arrangements had been made to cover these coupons. The senior Funding issue of 1898 has a quarterly coupon due on January 1st, but the larger issue of 1914 has quarterly interest dates commencing with February. The lack of precise news regarding the future of the service is becoming a leaden weight on the bond market, which must now feel that the reopening of dealings was premature, judged at least by the prospects of a definite undertaking regarding future service. Bondholders learned, before the Christmas recess, that the British Ambassador in Brazil has been conferring with President Vargas and his Finance Minister, but it is not known whether the rumour that Brazil contemplates the resumption of debt payments on the basis of one-third of the full amounts due represents the sense of the discussions. A provision of 240,000 contos of reis has been made in the Budget for 1938 to provide for the service "until the conclusion of new agreements," but bondholders know, by bitter experience, that budgetary provision is not the same thing as actual payment. The provision appears to compare with a total of 316,762 contos for 1937—a reduction of approximately 25 per cent. Does this envisage a substantial scaling-down of payments on the Funding issues, on which full interest payments have been made under the 1934 scheme? Lest bondholders should feel that the New Year has opened in unrelieved darkness, it may be recorded that the arrangements reached in November, 1936, regarding the final settlement of partly-paid Bulgarian loan coupons are to be continued by the Government under the same conditions. These payments, it will be recalled, have been previously recommended for acceptance by the League Loans Committee and the other bondholders' organisations.

* * *

A Pending Cement Merger?—The announcement that Associated Portland Cement Manufacturers may shortly make an offer for the ordinary shares of Alpha Cement rescued the Christmas Eve financial headlines from complete dullness. It is understood that negotiations are still proceeding, though it is officially suggested that the basis for the exchange might be nine Associated shares for every 20 Alpha shares. The participation of Tunnel Portland Cement is anticipated if the merger is carried through. To discuss these terms in detail until they are officially offered is supererogatory. They correspond, within a few pence, to current share prices, and also to the latest earnings ratios, and whether or not Alpha has greater immediate profits potentialities is beside the immediate point. It is clearly more important, at this stage, for the cement shareholder to place the proposals in their proper historical perspective. The record of the cement industry during the present century is a continuous succession of mergers and absorptions; the Associated group itself was formed in 1900 to acquire cement undertakings in the Thames and Medway districts. No ordinary dividends had been paid for more than a decade, up to the formation of British Portland Cement Manufacturers in 1911. The acquisition of new capacity continued after the war. The group acquired the "Red Triangle group" in 1931, after cement prices had fallen 36 per cent. in the preceding six years, at the moderate price of slightly over £2 millions.

* * *

The recurrent expansion of new capacity, however, still continued, and by 1934 the Alpha Cement Company was plainly destined to take an important place among "outside" producers. A period of unofficial price cutting was terminated in April of that year by a price and quota agreement, under which official prices were lowered but un-

official prices considerably strengthened. In this development the managing director of the Alpha company played a large part. The present move has come, not after a similar outburst of price cutting, but immediately following the announcement of an increase in cement prices by 3s. per cwt. to offset rising costs. The present merger proposals, therefore, are quite different in nature from similar proposals in the past, for the price cartel has worked without trouble for nearly four years of recovery. But if constructional activity were to fall off there might be some difficulty in keeping certain of the lusty newcomers in the industry within the bounds of a given price policy. It is calculated that the Associated group controls about 55 per cent. of British cement capacity, Alpha some 15 per cent. and Tunnel Cement some 12½ per cent. For the time being investors may regard the merger plan in the light of a co-operative insurance proposal, taken out by the principal producers, rather than a signal that the existing price arrangements are not giving them satisfactory results.

* * *

Gaumont-British Controversy.—The opposition which expressed itself at the Gaumont-British Picture Corporation annual meeting last October has continued its campaign. On that occasion an amendment for the rejection of the report and accounts, and for a Board of Trade inquiry into the Corporation's affairs, was lost on a show of hands, and the accounts were adopted by a large majority. Shareholders have lately been circularised from both sides. A Provisional Shareholders' Committee announced in the middle of December that it was ready to proceed with the proposed application to the Board of Trade for an investigation. The directors of the Corporation have replied to this circular by another, in the course of which they ask shareholders to "consider the responsibility that the authors of the circular (i.e. the Shareholders' Committee) invite you to undertake." If the blue form is signed "you yourself accept responsibility for the many inaccurate and misleading statements in the document expressed to be 'grounds on which application is made to the Board of Trade.'" The meaning of this passage in the directors' reply might well have been clarified, though its burden of suggestion, presumably, is to invite the shareholders to consider certain unspecified legal consequences.

* * *

It is, of course, rare for action of this sort to be proposed in the case of a public company with a combined loan and share capital totalling £11½ millions. In 1934, for example, only ten applications were made under the relevant Section 135 of the Companies Act; in three cases an inspector was appointed, three applications were refused and four applications were not proceeded with. The Act requires that the application must be backed by members holding not less than one-tenth of the shares issued. Applicants must satisfy the Board of Trade that they are not actuated by any malicious motive, and may be required to deposit a sum not exceeding £100 as security for costs. Inspectors have power to examine officers or agents of the company concerned on oath, and the examinations are conducted in private. If, from the inspectors' report, it appears that any person has been guilty of any offence in relation to the company for which he is criminally liable, the Board must refer the matter to the Director of Public Prosecutions. The powers of the Board of Trade in the matter of inspections are thus permissive, and not mandatory.

* * *

Old Silkstone Collieries Scheme.—The need for a reorganisation of capital by Old Silkstone Collieries has long been recognised, and its appearance is opportune at a time when a return to dividends appears possible. No dividends have been paid on the existing 397,560 8 per cent. cumulative £1 preference shares since September, 1924, nor on the £476,393 of ordinary capital since 1923-24. The auditors' reports have been qualified, and in the past ten years the profits record has been irregular and unsatisfactory. Shareholders now have the scheme,

clearly expounded in the board's circular. A net assets deficiency of £317,538 is to be met by writing down the nominal value of the ordinary shares by two-thirds. The ordinary shareholders are to retain only three-fourths of the resulting issued capital of £158,854. The balance of one-quarter of the new equity is transferred to the preference shareholders, who will receive two new 1s. ordinary shares for each £1 preference share held. This allotment is offered in consideration of the sacrifice of arrears, which now amount to 100 per cent. gross, and of the modification of existing preferential rights. The existing preference capital is not reduced, but it is to be split equally into two classes, represented by £198,780 in 6 per cent. cumulative preference stock (with prior rights in a winding up) and by £198,780 in non-cumulative participating preference stock, carrying a 5 per cent. preferential dividend, with rights to participate *pari passu* with the ordinary shares in any surplus up to a further 5 per cent.

* * *

Thus, if full preferential participating dividends are paid, existing preference shareholders will receive their original 8 per cent., plus ordinary dividends, towards their arrears. But one-quarter of the equity seems a barely adequate compensation for the arrears that have accrued. And, in respect of the original preference holdings, rights (worth little, it is true, on the dividend record of the past decade) to a cumulative dividend of 8 per cent. are to be exchanged, in effect, for only 3 per cent. cumulative, 2½ per cent. non-cumulative and 2½ per cent. contingent. As the board's circular shows, profits of £39,747 are needed before these full dividends can be paid. The directors consider that, "subject to continuity of existing trade conditions and freedom from strikes and labour troubles, this figure is well within the earning capacity" of the company. This assurance is welcome as indicating an advance on the 1936-37 profits, which amounted to £30,749, and a striking advance on the 1935-36 figure of £8,518. The recent earnings record does not, of itself, guarantee the maintenance of profits amounting to nearly £40,000. The desirability of adequate compensation to the preference shareholders for the sacrifice of their arrears and the alteration of their rights does not seem to be recognised in the scheme, which might be amended to grant the preference shareholder somewhat fuller equity rights.

* * *

Oil Results.—The resumption of interim dividends by Lobitos Oilfields (whose directors have declared a 5 per cent. interim in respect of 1937 after an interval of four years), coupled with the preliminary announcement of good results by Apex (Trinidad), has provided no significant stimulus for the oil share market. Indeed, the market is still more sensitive to conditions on the Continental bourses than to the cold assessment of earnings and dividends by the British investor. Oil shares enjoyed their boom with other commodity shares earlier this year,

£1,300 instead of £1,000

UNDER *The Distinctive System* of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

HEAD OFFICE 6 St. Andrew Square, EDINBURGH

FUNDS EXCEED £24,500,000

although some apologists for oil shares object to the grouping of their favourites among the more volatile metal and plantation markets. The boom was based on estimates of potential earning power which, if not wholly dependable, have proved at least three-parts accurate. The Apex preliminary results for the year to September 30th last, for example, are very satisfactory. Oil profits have increased from £369,700 to £489,714, while the amount earned for dividends and directors' extra remuneration, after providing for amortisation of wells on a slightly increased scale (£138,754 against £132,378), taxation and expenses, has been raised from £188,305 to £273,311. Of this sum, the 45 per cent. total dividend absorbs £247,500. For 1935-36, the rate of dividend was 35 per cent., and the cash payment amounted to £175,000. The difference is accounted for by the issue of new shares a year ago which rank for this year's full payment.

—And Oil Prospects.—Apex is a crude oil producer, whose output is refined and marketed by Trinidad Leaseholds, and thus finds its way to the "Regent" petrol pumps in this country. The company is probably as closely dependent upon the British market as any other substantial concern in which the British investor is interested. This point is important when assessing the prospects for individual companies. Shell and, to a larger extent, Royal Dutch are interested in the American and world markets, Anglo-Iranian business is not restricted to this country, while Burmah Oil has an important stake in the Indian trade. These market divisions may make important differences to the fortunes of individual producers. But all are linked, ultimately if not directly, to the American oil market, and the oil shareholder has rightly kept a watchful eye on changes in American conditions during recent months. There are elements making for strength and for caution in the American oil industry. The crude oil price structure is unshaken. Mid-Continent and East Texas crude prices are still firmly pegged, and output has been brought under stricter control. The reduced December "allowables" have not been fully produced, except in California. The condition of the gasoline market, however, is less auspicious. One effect of the substantial increase in output of fuel oils, as the *Petroleum Press Bureau* points out in its current bulletin, has been to increase the supplies of gasoline at a time when demand is seasonally reduced. Moreover, substantially increased gasoline stocks were carried over from the summer. Although this increase was not seriously regarded at the time—actually end-summer stocks represented a smaller number of days' supply than twelve months before—the open fact of industrial recession in the United States has since raised the issue whether further adjustments of gasoline prices will be required.

Whether such adjustments would react upon the crude price structure, and whether, in turn, export markets might ultimately be affected, remains to be seen. But there are potentialities in the American oil situation which suggest the need for caution on the part of the long-sighted British oil shareholder. Meanwhile, cost conditions affecting British refiners are undergoing certain changes. Tanker freights, for example, are considerably lower than the summer peak, although there is no hint of significant weakness in the freight market. It has been recently reported that the national petrol distributors have conceded an increase in the retailers' margin amounting to one farthing per gallon. Since the oil share market was speculating on the possibility of a halfpenny cut in retail prices before this step was taken, the decision may be the answer to the bears. It seems probable that no immediate altera-

tion in British petrol prices is in contemplation. And since the volume of consumption in the British market would probably be well maintained for a time, even on the impact of a moderate trade recession, those who argue that oil shares have found a reasonable yield basis, at the Actuaries' average of 7.68 per cent., may well be right—also for a time. The next move, however, lies with the directors of the Royal Dutch-Shell group, whose interim statements are awaited with keen interest.

United Serdang Profits.—The time lag between the earning of plantation profits and their distribution in dividends is necessarily so long that substantial changes can occur in the commodity markets in the interim. So it happens that, since the close of United Serdang's financial year, rubber has fallen further from a fraction under 9d. to a bare 7d. per lb. These figures, in fact, approximate to the average selling prices for the past and the preceding financial years respectively. Profits for 1936-37 make an excellent comparison with those of the previous year. The total has increased from £173,286 to £278,523, and after providing the increased amount of £25,000 for depreciation of mature areas and £20,000 for taxation reserve, the net balance available for dividends is increased from £142,911 to £223,662:—

	Years to August 31		
	1935	1936	1937
Total Profits	£104,109	£173,286	£278,523
Expenses and fees	7,150	6,702	9,861
Depreciation, etc.	10,531	23,673	25,000
Taxation reserve	...	...	20,000
Earned for ordinary	86,428	142,911	223,662
Paid	85,396	142,327	213,491
Earned %	6.1	10.1	16.0
Paid %	6	10	15
Carried forward	82,169	82,753	92,923

The twopenny increase in the selling margin, however, does not obscure the effect of the substantial increase in rubber output, from 7,813,000 lbs. to 10,689,000 lbs.—a record for the company. It is difficult, however, to assess the potential production and price conditions which will apply throughout the current year. And since the company does not provide cost data, their effects upon profits would still remain uncertain. The price of the 2s. units, at 3s. 7½d., however, obviously discounts some potential reduction in earnings during the current year, although the shares are among the most popular of florin counters.

Motor Share Outlook.—Last week Lord Nuffield issued a fierce denunciation of those who asserted that activity in the motor industry was slowing down. Investors who weigh the authority of the speaker against the 12.6 per cent. fall in motor registrations in October (the figures are discussed at further length on page 37) will probably regard the issue as *non proven*. But assurances that all is well within the industry do not reflect the convictions of the share markets. Motor shares, in fact, have fallen some 35 per cent. on the average during 1937, compared with a general decline in industrial shares of 19 per cent. The average yield on the five motor shares included in the Actuaries' Index has increased from 3.97 per cent. to 5.98 per cent. and now exceeds the return on industrials generally by one per cent. Indeed, the only other industrial categories in the Actuaries' list which show an average yield of this order are steel and building materials shares. These

industries, indeed, have much in common. Both supply durable goods, whose replacement may be postponed in poor years and hastily overtaken in good years. Hence their profits curves in each case are likely to show more than normal fluctuations over the course of a trade cycle.

But the current doubts regarding motor shares do not rest on the cyclical factor alone, though its effects on demand are well recognised. The effect of rising cost of living is felt in the small car and second-hand car markets—and both have made important contributions to the industry's prosperity in recent years. But assuming that demand were quite unaffected, it would not follow that motor companies' profits would be maintained. Costs have increased, and although selling prices were advanced last July it is not clear whether profit margins in general have thereby been stabilised. It may, moreover, be symptomatic that

competition is increasing in the low horse-power categories. Despite the import duties, certain low-powered Continental models are finding a market here. And the latest developments by the Standard Motor Company, which evidently intends to make a bid for part of the small-car market, will increase the struggle in a hotly competitive area. In general, the present circumstances of the industry, despite the confidence of its leaders, appear to endorse the cautious attitude of the Stock Exchange.

Other Company Results.—Our usual table of company results, appearing on page 50, gives the profits of some twenty further concerns. Among the larger companies represented are *Rio Claro Investment*, *Scottish Stockholders* and *Roneo, Ltd.* We discuss the results on page 51 under the heading "Shorter Company Comments."

THE STOCK EXCHANGES London

SETTLING DAYS

TICKET: JANUARY 4 ACCOUNT: JANUARY 6

THE resumption of business after the holiday has been marked by poor attendances in the "House," seasonal indifference on the part of the general investor, and by early uneasiness from Paris and New York. In such circumstances, the week's record of prices and business is of no great investment significance. The Old Year has faded away with a last rallying gesture.

Conditions in the *gilt-edged* market opened quietly, though the tone was firm. Some demand for Redemption three per cents. was reported, but quotations generally subsequently fell on small selling. Home corporation scrips showed a similar easier trend, though the absence of support was more responsible than any selling pressure.

Foreign bonds were marked down. Selling of the Far Eastern issues found the market unresponsive, while Brazilian issues reflected the impatience with which official information is awaited regarding the future arrangements for the debt service. The position is discussed on page 30. Among European issues, German bonds were steady, but French bonds quoted in London were heavy on the serious strike situation.

Movements in the *home rail* market were limited, although the market received Mr William Whitelaw's statement regarding the prospects of nationalisation with some aloofness. Argentine issues, after re-opening unchanged, fell slightly on small selling.

Trading in *industrial* shares was quiet and conditions unsettled by Wall Street. Transatlantic issues opened weak, and most home issues were marked down, in the absence of buying support. Iron and steel shares were almost devoid of interest, though the list showed later improvement. Coal shares were dull, electrical equipment issues declined, and some early firmness among aircraft shares soon evaporated.

Substantial declines were reported in the motor group, whose prospects are discussed on page 32. New support for brewery and tobacco was almost lacking, and store prices tended to move lower where changed. Shipping shares

and the leading miscellaneous industrial equities were naturally affected, though movements in every case were small.

Dull conditions affected the commodity share markets. Oil issues declined, for London refused to take Amsterdam's lead about a new issue by Royal Dutch. Shell were easier, and despite some demand from Paris, closed lower in mid-week. Mexican Eagle were affected by the labour demands, and the company's statement.

A sharp fall in the commodity on the General Motors' statement affected rubber shares on Wednesday. While the volume of selling was still small, the shares were easily depressed. Tea shares, after a more promising start, also fell victim to the gloomier conditions.

In the mining section, *Kaffirs* received but little professional attention at first, and closed easier in mid-week. Some of the finance shares lost slight ground, and the developing counters like West Wits. and Western Reefs, which had made headway before the holiday, were more significantly affected. De Beers were marked down, and base metal issues were generally lower.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 177 industrial ordinary shares is calculated at 73.8 this week (December 28th), compared with 73.6 a month ago, and 90.8 at the end of 1936 (December 31, 1928 = 100). The corresponding yield figures are 4.91 per cent., 4.95 per cent. and 3.68 per cent. In the following tables we give the usual monthly index figures relating to fixed interest securities, from which it will be seen that the Old Consols index, calculated on the

same basis, has fallen from 150.9 to 132.7 during the year, but the movement in industrial debenture and preference issues has been small:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)

For purposes of record, the total index of industrial shares on December 21st stood at the same level of 73.8, and the average yield at 4.0 per cent.

New York

The improvement on Wall Street shortly before the holiday was deceptive. To the accompaniment of anti-monopoly charges by the Assistant Attorney-General, growing unemployment reports, the setting-off of 30,000 employees by General Motors, and a further fall in steel activity to no more than 19.2 per cent. of capacity, the market has broken badly. In active sessions on Monday and Tuesday, stocks fell \$4 and \$5. Steels were a weak feature, closely followed by motors and railroads. The impression that the Administration is contemplating a forward armaments programme failed to

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(Continued from page 33)

steady the market at first, but by mid-week the steel and base metal groups came into prominence in a late rally on shipbuilding and armament possibilities. General Motors, however, touched new lows. The sudden break of confidence is not assisted by *Iron Age's* estimate that the year has closed with the steel industry operating at 20 per cent. of capacity—the lowest level since September, 1934. Trading in bonds has been small, and conditions irregular.

Paris

DECEMBER was a quiet and undecided month on the Paris Bourse and though features were not entirely lacking, no real improvement in trend emerged. Prices of domestic issues, in particular, were barely maintained. Public support was again noticeably absent, the available business being due largely to professional operations. Early in the month Renten were rather weak on the announcement of the new loan. Internationals were the most active section of the market, though the news from the Far East, followed by the usual lethargy as the holidays approached, restricted business in the second half of the period. As in other centres, Royal Dutch were in demand on dividend and bonus expectations. Strikes at the end of the month subdued the Bourse.

Berlin

THE share market in December was dull, and in the first part of the month weak selling on emigrant accounts was evident. Potash shares, stimulated by news of the Salzdetfurth fusion, were the only important group to show strength. Bond issues had a fair turnover, but among them Reichsbank was at first very weak. The market later obtained a certain support from the announcement that the Property Tax assessment, due in January, 1938, would be postponed for a year; and from the arrangement for refunding impounded stock dividends. The latter part of the month witnessed a general but moderate recovery, and after the Christmas interval prices were firm. The market for reichsmark bonds was quiet, but the tendency was steady to firm. A feature was the strength of the German section of Young Loan. The announcement of the new Reich Rm. 1 milliard Loan had no effect on markets. The official shares index (1924-26 = 100) for November was 112.04, against 113.24 for October; bonds 99.62 as against 99.44.

Amsterdam

IN an unspectacular way, and despite the lack of cheerful sessions, December proved fairly satisfactory in Amsterdam. Business remained small in volume, but despite occasional hesitations, prices moved upward on the whole. Probably the oil group showed the greatest gains. Quotations generally resisted the inevitable slackening of interest towards Christmas, and shared instead the impetus given by some good dividend announcements.

BY STOCK EXCHANGE INTRODUCTION

Nineteen Twenty-Nine Investment Trust.—Particulars of issue of £200,000 4 per cent. debenture stock, placed by Messrs. Joseph Sebag and Company at par for 1/2 per cent. commission. Redeemable at par April, 1963. Further stock issuable up to maximum of amount of share capital (£1,000,000 at present).

PRIVATE PLACINGS

Powell Duffryn Associated Collieries.—This company has placed privately at 101 £500,000 4 per cent. debenture stock. The stock is on offer in the market at 102 1/2 free of stamp, and carrying three months' interest, due April, 1938.

Yorkshire Electric Power.—This company has placed privately, at 93, a further amount of about £440,000 of 3 1/2 per cent. debenture stock, 1965.

ISSUES TO SHAREHOLDERS ONLY

John Lewis Properties, Ltd.—Issue to share and debenture holders of £250,000 3 1/2 per cent. first debenture stock at 91.

Industry and Trade

Cotton Reorganisation.—At the invitation of the Board of Trade, the Joint Committee of Cotton Trade Organisations issued their proposals concerning the reorganisation of the cotton industry last October. The proposals were outlined and criticised in *The Economist* of October 23rd, page 155. Mr Oliver Stanley, President of the Board of Trade, has now conveyed the Government's and his own observations on the proposals to the Committee. He bluntly informed the Joint Committee of Cotton Trade Organisations that the Government is not prepared to initiate legislation on the basis of the proposals for an Enabling Bill. Mr Stanley pointed out that, while the main object of the proposals was stated to be the promotion of exports, the scheme submitted contained little indication of the methods by which this object was to be attained. Consequently, the Government rightly requested the formulation of more specific proposals. As a correspondent points out in a letter on page 21, the cotton industry, unlike coal-mining, will gain nothing from an increase in prices, for the bulk of its output is still sold abroad. Only if reorganisation ultimately brings about an increase in efficiency will it improve the industry's position. A good deal of misgiving has been aroused by the fact that many of the provisions foreshadowed for possible inclusion in the schemes for individual sections of the industry are intended initially to increase prices. The Government's demand for some assurance that the schemes will ultimately raise the efficiency of the industry is entirely justified, but the assurance cannot be given in the absence of fully worked out schemes, clearly destined to attain their objective.

Anglo-Polish Coal Pact Renewed.—After prolonged negotiations the Anglo-Polish Coal Agreement of December, 1934, which expired at the end of 1937, has been renewed. The agreement of 1934 provided for a fixed relationship between the coal exports of the two countries and for a termination of price competition. Owing to the disturbing German sales methods, however, the understanding did not bring the desired relief. The changed situation on coal export markets necessitated a partial revision of the agreement as from the beginning of 1937, under which the Polish export allowances were fixed independently of British exports. Since then the Polish exporters have continuously pressed for an increase of their allowances, and in view of the temporarily lessened export ability of British coalowners substantial increases in the quota were conceded to Poland for the current year. Nevertheless, the Polish exporters have been dissatisfied both with the provisions of the agreement itself and with its limited scope.

The tonnage of British, Polish and German coal exports, in recent years, is given below:—

	COAL EXPORTS (In million tons)	United Kingdom	Poland	Germany
1929	60.3	13.9	26.8	
1933	39.1	9.1	18.4	
1934	39.7	9.9	21.9	
1935	38.7	8.9	26.8	
1936	34.5	8.4	28.6	
1937—Jan.-Oct.	33.8	9.1	32.6	

The ratio of Polish to British exports was 25 per cent. in 1934, 23 per cent. in 1935 and 24 per cent. in 1936, but rose in 1937 to 27 per cent. The new agreement involves the granting of substantial tonnage concessions to Poland, but its conclusion has nevertheless been welcomed in the coal trade as a first step towards a comprehensive European coal understanding. Since the conclusion of the European

Coke Cartel a year ago the prospects for a more comprehensive agreement have improved. It is clear, however, that the prerequisite for a European coal agreement is the abandonment of Germany's dumping methods—and that is not yet in sight.

The Consumer Hesitates.—Despite the high level of pre-Christmas spending, evidence of a slackening in the demand for certain of the more durable consumers' goods has not been lacking recently; and the reason is not far to seek. The decline in stock exchange values during the past twelve months has reduced the resources of a not unimportant section of the population, while the gradual rise in the cost of living has had similar repercussions. The inevitable urge to "economise" has doubtless been powerfully reinforced by doubts concerning the future of business in general—and demand in the semi-luxury trades has consequently fallen off. The motor industry offers a case in point. Sales of private cars on the home market in September were over 5 per cent. below the previous year's corresponding figure, while sales in October (the latest month for which information is available) showed a drop of over 12 per cent. compared with 1936. The reduction in the case of goods vehicles was of a comparable order of magnitude. It is believed in the industry that the set-back will prove to have been due to temporary factors, such as the delay in the offer of new models and the fact that the commercial motor exhibition was not held until November. Whether or not these are the main explanations, time will show; but the registration figures will be closely watched in coming months.

The value of retail sales was well maintained in November, but the rate of increase over a year ago has perceptibly slowed down since last summer. The figures published in this week's *Board of Trade Journal* show that the November turnover was 7.1 per cent. higher in 1937 than in 1936. The gain was most marked in food and perishables (+ 9.0 per cent.), sales of other merchandise having risen by only 5 per cent. In November, following a slight decline in the previous month. The aggregate increase in November was thus greater than that for

October, but was below the monthly average for 1937. It must be remembered, moreover, that the Ministry of Labour's index of retail prices is now almost 6 per cent. above the level of a year ago. It is therefore difficult to resist the conclusion that the expansion in the volume of retail sales has been arrested and that turnover is now little larger than it was twelve months ago.

* * *

Census of Production, 1935.—A summary of the preliminary results of the Fifth Census of Production, relating to 1935, was published with last week's issue of the *Board of Trade Journal*. For purposes of the Census, industry was divided into 123 separate divisions, of which 109 consisted of manufacturing or processing trades carried on by private enterprise (the factory trades) and 14 of other trades and services (non-factory trades). As in the case of the 1930 Census and in the Import Duties Act enquiries in 1933 and 1934, the output of the firms employing less than 10 persons on an average were excluded.

* * *

The results, which are summarised on page 52, are provisional, for complete returns had not been received from all concerns at the time of publication. The essential changes between the results of the censuses of 1930 and 1935, however, may be briefly summarised. The gross value of the output of the factory trades rose from £2,608 millions in 1930 to £2,773 millions in 1935, but that of the non-factory trades declined slightly from £694 millions to £691 millions. The net output of the factory trades, after deducting the cost of materials and the amount paid for work given out, was £1,151 millions in 1935, against £1,065 millions in 1930. The net output of the non-factory trades, like their gross output, showed a decline from £439 millions to £425 millions. The average number of persons employed in the factory trades rose from 4,876,000 in 1930 to 5,018,000 in 1935, but those employed in non-factory trades declined from 2,266,000 to 2,058,000. Both factory and non-factory trades registered an increase in the net output per person employed, an indication of the increase in the efficiency of industry. Thus, the net output per person employed in the factory trades rose from £218 in 1930 to £229 in 1935, while in the non-factory trades output per head advanced from £194 to £206.

* * *

Among individual trades, the increase in the value of the net output was most marked in the iron and steel, non-ferrous metals, chemicals, and building materials trades. The increase in the net output per person between 1930 and 1935 exceeded 10 per cent. in the case of iron and steel, non-ferrous metals, and chemicals. On the basis of the value of net output, coal mining remained the most important industry in 1935, but mechanical and constructional engineering displaced private building and contracting from second place in order of importance. The motor and cycle manufacturing and repairing industry again occupied fourth place, but whereas tailoring, dressmaking and millinery occupied fifth place in 1930, that position was occupied by electrical engineering in 1935. The preliminary summary contains the usual analysis of the geographical distribution of production, which reveals significant changes between 1930 and 1935. It includes, also, for the first time an analysis of iron and steel consumption by industries.

The Year in Agriculture.—In many respects British agriculture failed to hold its own in 1937. Thus, the long-term decline in the arable area, temporarily interrupted in 1935, was continued; for 10,000 additional acres were turned over to grass and 91,000 went out of cultivation altogether. Production of the principal crops was smaller than in the previous year, yields per acre being below average in wheat, barley and oats. The output of turnips, swedes and mangolds was also lower, though home production of potatoes showed a modest increase. Cattle and sheep were more numerous than in 1936, but the pig population again declined. The number of horses on British farms, which has been steadily shrinking in the post-war period, was further reduced. During the last quarter of the year the livestock was afflicted by an epidemic of foot-and-mouth disease which has proved to be the most serious since 1923. In the sphere of Government policy, the replacement of Mr Elliot by Mr Morrison was followed by new departures. Arrangements were made for the grant of subsidies to reduce the cost of fertilisers and schemes were formulated for the encouragement of cereal production. The principles of the Wheat Act are, in fact, to be applied to barley and oats. On the other hand, the policy represented by the Agricultural Marketing Acts appeared last year to be waning in popularity. An application by the poultry industry for further restrictions on the importation of foreign eggs was rejected by the Government on the recommendation of the Import Duties Advisory Committee; while the Pigs and Bacon Marketing Schemes remained in a state of breakdown throughout the year. The interests concerned decided not to proceed with the proposed sugarbeet marketing scheme. Meanwhile, the Milk Board earned the gratitude of its electors by further raising the price of milk and the Potato Marketing Board had another successful year—at least from the producers' point of view.

* * *

Foot-and-Mouth Epidemic.—The outbreak of foot-and-mouth disease, which has wrought havoc in the livestock industry during the past three months, has not yet been brought under control. A further case was discovered near Windsor this week. The present epidemic—the worst since 1923—is causing serious loss to farmers and was responsible for dislocating the Christmas trade in a large number of country markets. Since March 31st last 155 outbreaks have been reported in 21 different counties. The official policy involves the slaughter of the infected beasts and of all animals that have been in contact with them. The number of animals destroyed in this way since the end of March includes 7,514 cattle, 14,497 sheep, 6,197 pigs and seven goats, while the amount of compensation paid to the farmers concerned amounts to £232,032. The Ministry's policy, however, is beginning to bear fruit and the epidemic now seems to be diminishing in intensity. Meanwhile, the experts are unable to reach final agreement on the question of causation. The theory that the virus is carried by migratory birds appears, however, to be gaining ground. At all events, there is general agreement that in the present state of veterinary knowledge the official policy is probably the best.

* * *

Another Tin Buffer Pool?—The wide fluctuations of tin prices in 1937 (the highest quotation of the past twelve months was £311 per ton and the lowest £175), and the sustained weakness of the metal, following the recent sharp cut in the quota, have led to a resuscitation of the plans for a buffer pool. The question is at present under the consideration of a sub-committee of the International Tin Committee. Unlike all previous agreements, the new international tin agreement, which came into operation on January 1, 1937, permits the accumulation of stocks up to 25 per cent. of the standard tonnages within the restricting countries. The accumulation of such a stock would certainly provide the safest possible buffer pool, since the tin held within the restricting countries hardly exists from the viewpoint of the market and would not seriously depress sentiment in times of declining trade.

Iron and Steel

Sheffield.—The market is quietly firm, but business is on a small scale. Consumers of pig-iron are well contracted over the next three months, and in some cases for the full half year. Although odd parcels of forge and foundry are well taken up, there is no such scramble for casual lots as some time ago. An indication that users are more confident concerning the regularity of supplies. The outlook for hematite iron is not very clear. Makers of both East and West Coast material are offered more business than they are ready to book at present. There is no change in the market for finished iron. Steel billets continue in very heavy request, and the slight easing of the pressure for constructional steel is merely a holiday incident. The market in the iron and steel scrap has been quiet; but the undertone is firm. Supplies of heavy basic steel for melting are nearer to demand than has been the case for a long period. Prices are unchanged.

Middlesbrough.—Although the weekly iron market was not cancelled, there were very few people in attendance and business is more or less in abeyance until after the holidays. Prices of Cleveland foundry pig iron and East Coast hematite pig iron are maintained at the official figures, the latter being in good demand by home consumers. There is still only a limited quantity of Cleveland foundry pig iron available, but it is expected that production will be increased early in the New Year. Semi-finished steel is in rather better supply. Producers of finished steel have sufficient orders on their books to dispose of output for some time, and the problem at the moment is one of overtaking arrears. Imports of foreign ore continue at about the previous month's level.

Glasgow.—Scottish works close on Friday for the New Year Holidays, which at most establishments will last for only a few days. But, as is usual at this season, the holiday will be extended at plants where much repair work has to be carried out. The year 1937 has been a prosperous one and despite some slackening off in demand towards its close, the outlook is regarded as promising, and it is anticipated that employ-

ment will be plentiful and regular during the coming year. At the Clyde shipyards output has been greater than in 1936 and the shipbuilders will begin the year with well-filled order books, and in many cases yards fully employed. Structural engineers in Glasgow have had a particularly busy year and have provided employment for a much greater number of men than has been possible for the past few years. Metal window makers have experienced a greatly increased demand and have several important contracts on hand.

In the heavy steel trade demand has been in excess of capacity and it is estimated that steelmakers have orders on hand which will absorb output for some six months to come. Sheet makers have been fully employed, but have been handicapped by the shortage of sheet bars. Supplies, however, are increasing. The demand for high-grade, finely-finished sheets continues to increase. Sheet galvanisers have maintained a steady output, although in this branch there has been some falling off in the requirements of several overseas markets. At the tube works plant has been operating steadily, but at some of the Lanarkshire shops the shortage of materials at times has caused temporary curtailment. Tank makers in Glasgow have been working full time throughout the year. Sheet metal workers have much work on hand with which to commence the New Year's operations. Carriage and wagon builders, machinery makers and indeed all the manufacturing industries have had a busy year and have every prospect of continued activity.

Cardiff.—In the tinplate industry work was suspended during the Christmas holidays, but operations were resumed at most of the mills on Tuesday. During the week ended December 18th, production was equal to 76.27 per cent. of capacity, and the improvement in tone which took place just before the holidays is being maintained. Export quotations are ruling nominally at the scheduled minimum of 22s. 6d. per basis box. The heavy branches of the iron and steel industry in South Wales continue active, with production at its highest point of the year. Exports of tinplates from Swansea in the week ended December 23rd totalled 5,201 tons, compared with 6,728 tons the previous week and 5,897 tons in the corresponding week last year. Stocks in warehouses and vans stand at 8,253 tons, compared with 11,553 tons a year ago.

Workington.—Demand in the North-West Coast hematite pig-iron market is again larger than can be satisfied. Makers have sold the whole of the next six months' make, and in some cases have entered into commitments to the September quarter. But they are chary of further forward selling, as it is not at all certain that another advance of prices may be not requested in the autumn. There is some prospect of an expansion of output during January. The furnace at Workington which is ready for relining is not to be put out of commission until the month after. It is hoped that the two furnaces at Ulverston now on basic may change

The past year closed on a note of hesitancy in industry, but in spite of the decline in new orders noticeable in recent months, current activity remains at a high level. The heavy industries, in particular steel, have a substantial amount of work on hand, and the pressure for delivery of iron and steel remains strong. The coal trade remains brisk, output during the week ended December 18th amounting to 5,281,000 tons, against 5,158,000 tons during the corresponding period last year. There has been a marked improvement in the position of South Wales. Moreover, as our Cardiff correspondent points out, the position of the Welsh tinplate trade has undergone a change for the better. There has been a welcome increase in the demand for cotton goods, and the firmer trend of raw wool prices has brought out more orders for finished materials. Business in jute goods, on the other hand, remains at a low level. The next few weeks are not expected to bring any important change in industrial activity.

Coal

Cardiff.—The pressure on the loading appliances at the South Wales docks last week was exceptionally heavy, and the volume of shipments was one of the largest during the year. For five and a half working days it totalled 434,800 tons compared with 456,500 tons in the preceding full week, and 338,582 tons in the corresponding period last year. Precedence in despatch was given to the most urgent cases, and only a comparatively few vessels were detained in dock over the week-end. Collieries resumed work with the repairing shift on Tuesday night, and with a heavy prompt tonnage position it is anticipated that stocks will be enormously reduced, if not depleted, during the current week in view of the holiday curtailment in the output. Prices are firm but nominally unchanged, and for an important Portuguese contract German suppliers are reported to have tendered at 3s. per ton below the price quoted for Welsh coals. It is unlikely, however, that the Cardiff offer will be modified.

Newcastle-on-Tyne.—The export trade of the North East coal market continues quiet, but the general position is firm as most collieries are comfortably sold on contract. Northumberland steam collieries are short of trade for large coals, but other grades are fairly firm and clear without difficulty. The Durham section remains firm under a brisk home demand and there is every indication this position will last for several months as collieries are so well sold ahead. Patent oven coke is steady, values showing little change from those ruling during the past few months.

Workington.—The coal trade is exceedingly brisk. Land sale is buoyant. The entire production is absorbed as fast as it becomes available. Industrial fuel needs are substantial, and Welsh coal has to be imported for the coking plants, whose make is needed by the furnaces on hematite. There is very little surplus left for the Irish market. Prices are steady.

over to hematite in the course of a few days unless unexpected difficulties arise.

As the steelworks were idle a week at Christmas, a not inconsiderable reduction of the arrears of deliveries has taken place, and users in the Midlands, South Wales and Scotland are receiving all the iron that ordinarily is required for local consumption. Prices are firm. Bessemer mixed numbers are quoted at £6 13s. per ton at Glasgow, £6 18s. 6d. at Sheffield, £7 1s. at Manchester, and £7 6s. at Birmingham, and three brands of low-phosphorus iron at from 10s. to 25s. per ton higher. Malleable iron is at £8 delivered at Birmingham, and ferro-manganese at £18 15s. home. Steel-makers begin rolling again on Monday next. They hold orders which will keep them busy throughout the whole of next year. Native ore, at 24s. 6d. f.o.t., is in exceptionally strong request. Heavy imports of foreign ore at Workington continue.

Textiles

Cotton.—Manchester.—Although holiday influences have prevailed in the market during the past week, trading has not been at a standstill, and some producers have reported an improved demand, the sales in certain quarters being larger than recently. There have been indications of some customers being in more urgent need of supplies, and the opinion is held that a firmer trend of raw material rates would result in increased activity. American cotton prices have been steady, the article deriving support from the substantial amount of material which is going into the Government loan. Some surprise has been expressed at the strength of the Egyptian staple in view of the large crop.

Demand in the yarn market has broadened somewhat, the sales in American and Egyptian qualities being larger than in recent previous weeks. Some special contracts have been arranged in fine Egyptian counts. Quite a number of ring spinning mills have been closed all the week. Sales of importance in piece goods have been absent, but rather more small lots have been booked. The better demand for India has been maintained, quite a useful business being done in bleaching and printing styles, chiefly for Calcutta and Karachi. Fancies have been sold for Java and Singapore, and light whites for Egypt. A few dyed goods have moved off for South America. Heavy materials have attracted attention for South Africa and dress goods for Australia. Home trade purchases have been restricted. Many manufacturers have extended the usual holiday stoppage.

Jute.—Dundee.—The jute trade drags along, and there are few orders of note being placed for any commodity. The raw material has shown a tendency to decline owing to the apathy of buyers at all centres. The

lower prices should favour Dundee spinners, who this season so far have bought only about one-third of their requirements. The quantity arrived here to date is only 209,000 bales, compared with 361,000 bales last season, while 189,000 bales are now afloat between Calcutta and Dundee, against 266,000 bales at same date last season. The total quantity received last season was 1,077,041 bales. The Indian jute mills continue to produce jute cloth and bags in larger quantities. For the eleven months ending November 30th last, they manufactured 1,762,488,993 yards of hessian cloth and bags and 1,326,570,742 yards of sacking cloth and bags, an increase of 109,365,905 yards and 104,409,606 yards, respectively, over the same eleven months of last year. Business in Calcutta goods has fallen off greatly, and prices have been declining to an even lower level, touching the lowest points of the year. The outlook for the trade in the new year is therefore unsatisfactory, and no improvement can be looked for until the Indian mills can agree on the question of working hours. The outside mills and the associated mills have recently been having negotiations for an agreement whereby the outside mills would reduce their working hours to 54 per week, same as the Associated mills, and there are hopes that unanimity will be reached within the next few months. Calcutta is certainly more optimistic on the matter.

Jute yarns are dull and nominal at 2s. for common 8 lb. cops and 2s. 1d. for 8 lb. spools. Twist has been sold at 3½d. for 3 ply 8 lb., and sacking yarns rule from 2½d. for 24 lb. weft and 3½d. for 8 lb. chains. Rove is firm at £21 for 48 lb. and £18 for 200 lb., while the better yarns are nominally unchanged. Carpet descriptions have been sold at 3½d. for 14 lb. warp.

The cloth market is practically idle, but an order has been received from the L.N.E.R. for 410,000 yards of twilled sacking, which should prove to be beneficial to the heavy end of the trade. Prices are more or less nominal at 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Linoleum hessians are inactive.

Prices for Calcutta goods are 16s. 9d. for 10 oz. 40 in. and 13s. 4d. for 8 oz., December/January, 16s. 9d. and 13s. 5d. February/March, and 16s. 10d. and 13s. 7d. April/June. Further forward delivery commands a premium of 3d.

THE COMMODITY MARKETS

HOLIDAY influences have predominated on the principal commodity markets this week and business has been restricted. With buyers offering little support, the markets in general have shown a disposition to follow the fluctuations of Wall Street. The tendency has consequently been easier in most cases.

Rubber prices showed one of the largest declines, the spot quotation losing ½d. per lb., mainly in consequence of the decision of the General Motors Corporation to discharge 30,000 of their employees. Non-ferrous metals were also lower, largely owing to the weakness of Wall Street and the restricted nature of American demand. Tin was most affected, this metal losing £8 2s. 6d. per ton, to close on Wednesday only slightly above the year's lowest. American cotton was reduced in price and other textile raw materials were barely steady.

Wheat was a more active market on Tuesday, but the improvement was short-lived and prices show a fresh decline on the week. Harvesting is now virtually complete in Argentina and Australia, the weather having been favourable during the past week. Among other foodstuffs, price changes have been few and business has been on quiet lines generally. No tea auctions were held this week, but sales will be resumed on Monday next.

The improvement of prices in the United States was not maintained. Thus Moody's daily index of staple commodity prices eased from 149.1 on December 21st (December 31, 1931 = 100) to 148.3 on Wednesday of this week. The latter figure compares with 146.3 a month ago and 207.1 on the corresponding day last year.

Other Metals

Copper.—Owing to holiday influences and the weakness of the stock markets, copper was easier this week. The standard cash quotation closed on Wednesday showing a loss of £1 10s. per ton on the week. There was no selling pressure, but consumers were very reserved. Meanwhile, no improvement has occurred on the American market, although it is usual for quotations to show an improvement at this season of the year, owing to "window-dressing" operations. Production in Northern Rhodesia amounted to 16,810 long tons in November, or 4,000 tons below market expectations. It appears, therefore, that the Rhodesian producers refrained from increasing their output in the last month of unrestricted production—which suggests that they are concerned to maintain the stability of the market.

Tin.—Tin was again the weakest of the principal non-ferrous metals, the cash price falling by £8 2s. 6d. in the week ended Wednesday, to close at £181 per ton. The latter price is only 5s. above the year's lowest. This week's decline was again traceable to the absence of demand in the United States. The American tinplate industry is now operating at less than 50 per cent. of nominal capacity, against 58 per cent. in the week before Christmas and 100 per cent. at the close of 1936. Since tin-

plate stocks in the United States are substantial, the industry is likely to remain slack during the next few weeks. In the circumstances there appears to be little prospect of a revival of American demand for tin—unless the low level of prices stimulates consumers to enter into forward commitments. Meanwhile, the recent decline in the price of tin, despite the cut in the production quota, has caused a revival of interest in the proposal to form a new buffer pool. This question is discussed in a Topic of the Week in the preceding section.

Lead and Spelter.—In the week ended Wednesday lead lost 2s. 6d., and closed at £15 10s. per ton, while spelter fell by 10s. to £14 17s. 6d. There was no change in the basic position of the markets, the decline being due to lack of buying interest. Reports from the high-cost producing areas state that preparations are being made for the closing of certain mines owing to the decline in prices; but there is no news of any mines having actually ceased production during the past few days.

Grains

The wheat markets, having been dull before the holidays, opened this week on a firmer note in sympathy with the gradual advance in North America and Greek demand for Australian wheat. The improvement was not fully held, however, and prices show a net loss on the week, Manitoba grades remaining at a premium. Harvesting in Argentina is being assisted by very favourable weather. In Australia, harvesting has been completed under satisfactory weather conditions, and the returns suggest that the official estimate of the outturn—162 million bushels—will be about realised.

Meanwhile, business in maize has been on quiet lines, as is usual at this season. The tone, nevertheless, remains fairly firm in sympathy with Argentina and Chicago. It is estimated by the *Corn Trade News* that the surplus remaining in Argentina has now shrunk to small dimensions. Demand for American, therefore, seems likely to improve in coming months. Very little business has been transacted in barley during the past week, but prices show little alteration. English malting barley continues to command high prices; medium grades are now scarce. Quotations for grains will be found in the table of British Wholesale Prices.

Other Foods

Provisions and Meat.—On the London Provision Exchange during the past few days, business has been restricted. The official quotations for bacon were advanced last week-end and the market has been firm at the higher level. Butter, on the other hand, was quiet and rather easier, while cheese was quiet at about late rates. The market in eggs was also of a holiday character and prices are now showing a seasonal decline. Following the holidays, business in meat at Smithfield Market was quiet for beef and fair for mutton and lamb. In mid-week the tone became dull in all sections.

Colonial Produce.—The London spot market in raw sugar has been quiet, but steady. Coffee, on the spot, was also a quiet market this week, while Accra cocoas were quietly steady. No tea sales have been held at Plantation House since Christmas, but the usual auctions will be resumed on Monday next.

Fruit.—Business at Covent Garden last week was moderate, but trade has been slack since the holidays, says *The Fruitgrower*. Apples were in demand at steady rates. Pears came in for a consistent inquiry, with quotations unchanged. Hothouse grapes sold fairly well but demand was by no means exceptional and prices were about steady. South African deciduous fruit met with a good reception but prices eased owing to the heavy arrivals.

Vegetables.—At Covent Garden during the past week asparagus encountered only a moderate inquiry, states *The Fruitgrower*. Meanwhile,

supplies of potatoes were fairly plentiful and in some instances prices were easier. At the Borough Market on Tuesday, however, best siltland and light soil King Edward were again quoted at 6s. 6d. to 7s. per cwt. ex market.

Miscellaneous Commodities

Rubber.—The market has been dull and prices show a net loss of about 8d. per lb. on the week. Idle conditions prevailed before Christmas and on Tuesday of this week. On Wednesday there was a sharp break in prices on receipt of the news that the General Motors Corporation of America had decided to discharge 30,000 men. There was little support from buying interests and prices closed at the day's lowest level. In view of the present weakness of the market and of the possibility of a further decline in American consumption in the near future, interest centres on the next meeting of the International Rubber Regulation Committee, to be held on January 25th. It seems improbable, however, that any further cut in the quotas will be made. Rubber prices will be found in the table of British Wholesale Prices.

COMPANY MEETINGS

BOWATER'S PAPER MILLS, LIMITED

HIGHER RAW MATERIAL PRICES

The annual general meeting of Bowater's Paper Mills, Limited, was held, on the 30th ultimo, at Southern House, Cannon Street, London.

Mr Eric V. Bowater (chairman of the company) who presided, said that shareholders naturally would be desirous of hearing from him an account of the circumstances that led up to and resulted in their expectations in respect of the year under review not being fully realised, and it was his intention to be as frank with them as circumstances and the welfare of their business permitted. It had been, in his belief, rightly stated that they were overtaken by market factors which were all but unforeseeable, such as at times affected all those engaged in "commodity industries."

Prices for their principal raw materials, groundwood pulp and sulphite pulp, had risen by approximately 100 per cent. and 130 per cent. respectively, whilst pulpwood, of which they were also large users, rose by over 100 per cent., and sea freights in some cases by as much as 200 per cent.

Since then, however, as a result no doubt of nervousness occasioned by the unsettled international situation, there had been noticeable in some countries what had been termed a "recession" in business followed by a not inconsiderable reduction in the prices of most commodities.

RECORD VOLUME OF ORDERS

As they would see from the profit and loss account, the profits of the company amounted to £263,897, an increase of £61,734; but for the rise in prices of raw materials to which he had already referred that increase in profits would have been materially greater.

He could say with complete confidence that at no time had the standard of efficiency of their mills been at a higher level than at present. The volume of orders on hand was the greatest so far attained, and, most important of all perhaps, their relations with their many newspaper customers were never closer than was now the case. It would thus be plain to them that the foundations of their business rested upon solid and secure ground, and he would like to make it abundantly clear that the effect upon their earnings that arose out of the unprecedented increase in the cost of raw materials was of a temporary nature only, in that it was confined to the years 1937 and 1938.

CURRENT YEAR'S PROSPECTS

Subject to no unforeseen circumstances arising, the increased revenue that would accrue to their company and its associates from the revision in the price of newsprint and the higher prices prevailing for other grades of paper, together with the provisions made in the accounts under review towards meeting increased costs, should result in the available profits for the current financial year being sufficient, after making all the usual provisions for fixed charges, depreciations, etc., to cover, with a reasonable margin, the dividends on all classes of preferred capital of the company and its associated and subsidiary companies, including the Edward Lloyd Investment Company, Limited. Further than that he could not and they would not expect him to go at that stage.

That brought him to the point where he would deal briefly with their plans for safeguarding their vital interests in respect of adequate future sources of supply of raw materials. It was essential that they should be protected against the possibility of a continuance of anything approaching the present level of prices of a recurrence of the recent threat to supplies. The board had secured an important but limited supply of groundwood pulp by acquiring an interest in one of the principal Swedish groundwood pulp mills and were in negotiation with the Government of Newfoundland and other interested parties for the acquisition of extensive timber limits in both Newfoundland and in Labrador. In the event of agreement on terms which the directors considered to be satisfactory to your company being reached, they contemplated the erection in Newfoundland of a sulphite pulp mill capable of providing an important part of their requirements of that material; the properties could also provide wo 1 in sufficient quantities to take care of the present requirements of the Kemsley Mill, and also of the Mersey Mill in the event of their deciding to equip that mill with the plant necessary to enable it to manufacture its own requirements of groundwood pulp. Generally their business was well established and he could see no reason why in 1939 and subsequent years it should not resume again its former prosperity.

The report and accounts were unanimously adopted.

BUTLIN'S LIMITED

POPULAR HOLIDAY CAMPS

The first annual general meeting of Butlin's Limited was held, on the 30th ultimo, in London.

Colonel Sir Thomas A. Polson, K.B.E. (the chairman), said that once again the company's amusement parks had shown an increase in profits. The holiday camp at Skegness, which was not entirely finished during the 1936 season, showed a substantial increase in profits in the past year. There was no doubt that they would be able to open the camp at Clacton-on-Sea in time for the 1938 season. At Skegness, with increased accommodation, they had been able to accommodate nearly 2,000 guests weekly throughout the busy season last summer. The policy of the company in giving the greatest possible all-in holiday value at the lowest reasonable price had proved exceedingly successful, and, in order to allow ample room for extensions, further land had been acquired at Skegness, giving them the entire island site of approximately 92 acres.

The directors were confident that both camps would be filled to capacity in the 1938 season. Their charges, low as they were, included not only all meals, but all the amenities—sports and games, with skilled instructors, music at every meal from their resident orchestras, dancing every night, and weekly concerts at which well-known variety artists regularly appeared. They had just appointed that famous chef, M. Herbodeau, who had retired from his position at the Carlton Hotel, London, to be chef-advisor to both camps for the next three years.

The company had been successful in obtaining the sole concession to provide the amusement park in the forthcoming Empire Exhibition at Glasgow, and the directors were confident that that concession would result in a substantial profit to the company.

It was obvious that the activities for 1938 would necessitate additional capital, and it was proposed to increase the capital of the company by the creation of 100,000 6 per cent. cumulative preference shares of £1 each, and 180,000 ordinary shares of 5s. each. It was proposed to issue that additional capital at the price of 20s. for the preference and 7s. 6d. for the ordinary shares and special consideration would be given to applications from existing shareholders and debenture stock holders.

The report was unanimously adopted, a dividend of 15 per cent. on the ordinary shares declared and the increase of capital approved.

BOOKER BROTHERS, McCONNELL AND COMPANY, LIMITED
BEST YEAR SINCE 1928

The annual general meeting of Booker Brothers, McConnell and Company, Limited, was held, on the 30th ultimo, in London.

Sir Alfred P. Sherlock (chairman and managing director) said that the profits amounted to £90,980, or nearly £14,000 better than last year, which was very satisfactory. In fact, it was the best year they had had since 1928, when the profits amounted to slightly over £93,000, of which £63,800 represented dividend from their main subsidiary, whereas in the present accounts they had only received £35,000 from their sugar company, while the general business had yielded nearly £56,000.

The sugar crop of the colony had been well maintained and, although prices were very low during 1936, their main subsidiary had been able to pay a 5 per cent. dividend and add to its reserves. The reserves of Bookers Demerara Sugar Estates, Limited, now amounted to approximately £110,000.

There had been no great change to report in the statistical position of sugar and the outstanding event during the year had been the signing of the International Sugar Agreement by which the output of sugar had been restricted. In British Guiana they would suffer more than in most colonies as their output had been reduced by approximately 12 per cent. instead of 7 per cent., as in the case of others. The one big advantage they derived from the agreement was that they now knew where they were as regarded preference for five years.

The balance sheet showed that the company was in a strong position. Resolutions would be submitted authorising £165,000 out of the company's reserves being issued as a bonus to the ordinary shareholders in the proportion of three new shares for every five now held.

With regard to future prospects, he saw no reason to think that the profits would be less next year. He was convinced that shareholders wanted a regular dividend, and the board would do their utmost to maintain 10 per cent. as the standard rate in future.

The report was unanimously adopted, the payments of the final dividend of 5 per cent. and bonus of 5 per cent., making 15 per cent. for the year, were confirmed, and the share bonus was approved.

YOUANMI GOLD MINES, LIMITED

PROGRESS OF DEVELOPMENT

RECENT GOOD DISCOVERIES

The third annual general meeting of Youanmi Gold Mines, Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, London.

The Rt. Hon. Viscount Lee of Fareham, P.C., G.C.B. (the chairman) said that the options granted to the original shareholders to subscribe for a further million ordinary shares at par had all been exercised with the exception of £800 worth. The original estimate to re-open and equip the mines was £200,000. The actual expenditure incurred up to June 30, 1937, was £262,337. Whilst many circumstances had contributed to this excess, the main cause had been the time factor. The delay in completing the equipment for the unwatering of the Pollard shaft workings had seriously affected the whole programme, as it had prevented access to the old workings and the commencement of re-conditioning and re-equipment underground as well as the undertaking of vital new developments.

At the last meeting shareholders were informed that the oxidised unit of the mill had been completed. During the period under review 35,864 tons had been crushed for a yield of 6,211 ounces of fine gold, which realised £43,595 sterling. The proceeds had largely helped to defray standing charges and some of the costs of development. To carry on development and at the same time to maintain output had been no light task.

EXPECTATIONS EXCEEDED

Underground developments in the Pollard shaft section continued to be satisfactory, whilst the results obtained in the main shaft section had exceeded the most sanguine expectations. Their consulting engineer, Mr Nicholls, who had recently completed a re-examination of the mine, cabled he was greatly impressed with the developments of the main shaft workings since his previous visit. The extension of old levels north of the shaft had struck a new ore body carrying high-grade sulphide between No. 3 level and No. 7 level. Developments now being carried out fully confirmed the values obtained by the old company. Estimates of proved and probable ore reserves totalled 144,069 short tons of an average value of 10 dwts. 18 grains, after deducting 22,622 tons crushed since the end of the financial year. Since the mill started head values had shown a progressive increase, but the value of the high-grade sulphide ore developed could not be reflected in the returns until the sulphide unit came into operation, when a substantial increase in head values would be expected. To sum up, in a little over two years since actual work started, not only had two mines, abandoned for eleven years, been unwatered and thoroughly reconditioned, but the property had also been fully supplied with both underground and surface equipment. That was a remarkable record.

POLITICAL CONDITIONS

The chairman added that there had been additional and extraneous obstacles to surmount in the general loss of confidence and depression of morale that had hung over industry of all kinds throughout the world like a poisonous miasma. The chief disturbing factor had been the perpetual and increasing "threats and rumours of war." But over and above that there had been political disturbances of the peace—some domestic and some international—in which the gold industry was in no way directly implicated, but which could not but affect it deeply. The "gold scare" crisis of last Spring had had one redeeming feature in revealing the extraordinary stability of gold as a commodity, but even gold could not be immune to the general malaise that had overtaken business confidence and was so largely attributable to causes which were basically political.

The "Civil War" that had for so long been smouldering in America between "New Dealers" and "Wall Street" was free of actual bloodshed, but was having far more disastrous effects on the markets of the world than the civil war in Spain. The Western Australian Goldfield had its own troubles but the gold was there and all that the industry needed was to be protected against too much "high financing" and too much paternal legislation. With regard to this latter, however, he felt confident that the Western Australian Government was too enlightened and too much alive to its responsibilities to allow burdens upon the industry to be further increased to a point which might paralyse its progress and consequently impair the revenue of the State.

After a number of shareholders had congratulated the board on the progress achieved during the year under review, and after the Chairman had replied to some questions, the report and accounts were unanimously adopted, the retiring directors and auditors were re-elected, and a hearty vote of thanks was passed to the Chairman, directors and staff.

MOUNT MAGNET GOLD MINES, LIMITED

EXTENSION OF PLANT

LORD LEE'S ADDRESS

The fourth annual general meeting of Mount Magnet Gold Mines, Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, London.

The Rt. Hon. Viscount Lee of Fareham, P.C., G.C.B. (the chairman), said that during the year under review 56,739 tons of mine ore had been treated and 1,651 tons of old slimes re-treated, making the total tonnage handled 58,390 for a recovery of 9,701½ ozs. of gold. The gold recovered had realised £67,939, equal to 23s. 4d. per ton. Mine working costs had amounted to 15s. 2d. per ton, as compared with 15s. 9d. during the previous financial year, and the net profit was £14,734, as against £13,575. Dividends amounting to £7,328 had been paid, leaving an unappropriated balance of £11,571, since reduced to £10,258 by the payment of the fixed preference dividend up to June 30, 1937.

At June 30, 1937, the company had entered into commitments amounting to £10,907 in respect of the purchase of additional plant. At the last annual general meeting the duplication of the existing milling plant had been foreshadowed and it had been intended to finance that out of funds to be provided by the issue to existing shareholders of a proportion of the unissued ordinary share capital. Early in the year the consulting engineer had reported from Australia that developments and prospects warranted the necessary steps being taken to provide the additional equipment without further delay. Consultation with power plant manufacturers in England indicated that the earliest deliveries which could be promised were from 5 to 6 months, and that the position was becoming more acute daily. The board had therefore decided to place orders at once for the additional engines required to double the milling plant and to arrange subsequently for the issue of further share capital.

DIFFICULT CONDITIONS

Shortly afterwards there had supervened the world financial crisis and the directors had been forced to the conclusion that it would be undesirable to invite subscriptions for further share capital. Those conditions still prevailed and the directors had been obliged to divert the existing cash resources of the company to meeting the obligations which had been incurred by reason of the purchase of that additional power plant. For that reason they regretted that, while profits had been earned which ordinarily would have enabled the payment of a further dividend on both classes of shares, the liquid cash capital was not at present available to permit that.

The abnormally low capitalisation, for which at an earlier stage they had been inclined to take too much credit, was now proving a serious handicap to the progress of the mine. That was a problem which was engaging the anxious consideration of the board, and, as soon as circumstances permitted, it was hoped to make arrangements to remedy the position.

SATISFACTORY OUTLOOK

Apart from those financial considerations, there was undoubted cause for disappointment in the—he hoped temporary—falling off of the grade of ore sent to the mill from the "Hill 60" workings. During the first six months, the average grade had been maintained at well over 4 dwts., but that had been reduced during the second half of the year, bringing the average grade for the whole year down to 3 dwts. 20 grs. To set against that, he was able to report that their acquisition of the contiguous "George" and "Western Lease" properties held out strong hopes of a more encouraging future for the Mount Magnet Mine as a whole. The company now owned three properties each containing lodes of exceptional width. Their geologist expressed the confident view that when unwatered and properly equipped, the "George" Mine would prove to be of even greater value than "Hill 60." Mr Nicholls (the consulting engineer) was of the opinion that no difficulty should be encountered in supplying a mill of double the capacity of the present one, i.e. a total capacity of 10,000 tons monthly. In a recent cable, Mr Nicholls stated that the present total ore reserves amounted to 302,585 tons of an average value of 4 dwts. 3 grs. He considered the future outlook satisfactory except for the fact that progress had been seriously hindered by the shortage of capital to carry out developments on a scale which the prospects of both old and new mines fully justified.

The report and accounts were unanimously adopted.

Country (c).....	300,601	323,994	+ 2.9	44,540	41,993	3,524,342	3,778,841
Total.....	3,524,571	3,480,914	- 5.1	637,379	528,967	40,413,423	40,332,969

Attention is drawn to the number of days covered in the various periods shown. In earlier issues aggregates for 1936 were adjusted to include the same number of days as in 1937; on the old basis, 1936 aggregates would be less than those in the table by (a) £437,401,000; (b) £23,637,000; and (c) £25,525,000. Clearings for the week to December 22, 1937 were (a) £673,847,000; (b) £41,101,000; and (c) £71,833,000. † Based on average working day.

Saker Bartle (South Africa).—No interim dividend on ordinary shares at present. An interim dividend of 5 per cent. was paid a year ago.

Buell Combustion.—It is stated that it is unlikely that a profit will be shown for 1937. As the cumulative preference dividend is only payable out of profits, the payment falling due at the end of this month will have to be deferred.

Smith's Dock.—Ordinary dividend, 7 per cent. for year against 3 per cent.

English Clays, Lovering Pochin and Co.—Final ordinary dividend, 3 per cent. against 2 per cent., making for year to September 30, 1937, 4½ against 3 per cent.

Chosen Corporation.—Final ordinary dividend, 5 per cent., making 84 per cent. for the year to June 30, 1937, against 10 per cent.

Apex (Trinidad) Oilfields.—Final dividend of 32½ per

THE ECONOMIST

Vol. CXXX

JANUARY 8, 1938

months. By its very nature, however, it cannot provide a permanent solution of their difficulties. Nor is its influence likely to be at all uniform throughout the Areas. Naval building affects South Wales, for example, only indirectly; and armament construction generally means little to derelict coal districts in South-West Durham. If revival in the basic industries of the Areas were to falter, or to suffer a slight setback, re-armament might take up some, or all, of the slack. But the future of the Areas ultimately turns on the peace-time prospects of Britain's heavy industries. So far as exports are concerned, much will depend, in 1938, on the course of world prices. The response of world trade to the sharp rise in the price of many commodities, during the latter part of 1936 and the first few months of last year, was speedy and striking. So far, the subsequent recessionary movement in prices has caused no sharp setback in our export trade, and if prices maintain even their present level the underlying conditions may be favourable to a higher total volume of exports this year than last. If prices fall further, however, the outlook will be much less promising.

And what of home demand? The industries whose well-being means most to the Special Areas may conceivably maintain, but are unlikely significantly to increase, their activity in the coming year. The coal industry has improved its organisation, particularly on the selling side, and no sudden decline in demand seems probable for some time. Steel, even more than coal, is dependent—apart from its share in re-armament—on the maintenance, at least, of something like the present degree of prosperity in industry as a whole. The Survey of Britain's immediate economic prospects which we published with last week's issue of *The Economist* suggests that, while industrial activity as a whole may not be decisively checked this year, the odds are against the maintenance of the pace of last year's advance. And the latest figures of unemployment are not encouraging in this respect. As the steel trades would be among the first to feel the effect of any marked recession in industry generally, the indices of national activity will be closely scanned, in coming months, by those who have special responsibility for the welfare of the Areas. On the Clyde and on Tyneside,

where mercantile shipbuilding has lately been more active than at any time since the depression began, solicitude is being felt over the present course of shipping freights, which for the last few months have been trending downwards after a phenomenally rapid rise in the earlier part of last year. On the other hand, the Areas are less directly interested in the maintenance of the house and factory building boom than some other districts.

Altogether, the evidence suggests that the immediate prospects of maintaining the current level of activity and employment in the Special Areas may be, if anything, slightly better than in Great Britain as a whole. But, failing a resumption of the strong upward movement of world trade and prices, which was interrupted last year, it may be too much to expect that the increasing tempo of armament production will in itself ensure the maintenance of revival at last year's pace, if non-armament demand ceases to increase or recedes from its peak level. At best, therefore, unemployment in all the Areas may not fall this year much below its present level of about 250,000—compared with over 350,000 three years ago. Much has been heard of various devices artificially to stimulate the settlement of new industries in the Special Areas. But all such efforts, praiseworthy though they be, obviously cannot make any considerable contribution to the net total of employment for some years to come. And the transference of workers to other districts cannot overcome the central problem of redundant and aged labour which has little chance of finding re-employment in any revival that can now be foreseen.

The case, therefore, for special measures by the Commissioners, the Nuffield Trust and other bodies, to alleviate difficulties which cannot wholly be cured is as strong to-day as ever. Plans for subsistence production, employment in minor crafts, group holdings, cottage homesteads, forestry and the cultivation of allotments are the very least the community can do for the distressed victims of its earlier prosperity. And even now the time is ripe to ask what the Government's policy would be if the eventual completion of their re-armament programme were to coincide in the Special Areas with a recession in trade activity as a whole.

New Deal and Business

THE message to Congress which the PRESIDENT OF THE UNITED STATES is constitutionally enjoined to deliver, "giving to the Congress information of the state of the Union, and recommending to their consideration such measures as he shall judge necessary and expedient," has rarely been more eagerly anticipated than this year. For some weeks there has been a genuine sense of uncertainty about the policies that PRESIDENT ROOSEVELT intends to pursue, both at home and abroad. The recent diplomatic action of the United States in the Far East has hardly reflected the full anti-aggressive vigour of the Chicago speech in October, and opinion in three continents had begun to wonder whether the policy there laid down had been modified, or whether it was merely being circumspectly applied. At home the PRESIDENT has seemed to show a considerable willingness to co-operate with the business world in measures to reverse the sudden onset of trade recession. But in the last few weeks close associates of his have been using words about alleged monopolistic practices of Big Business fully as scathing as any that were heard in the honeymoon days of the New Deal, and the not unnatural conclusion had been drawn that the PRESIDENT himself, disappointed with the results of a policy of kind-

ness towards business, had decided to return once more to the attack.

The message delivered on Monday did not entirely succeed in clearing up these uncertainties. MR ROOSEVELT made it clear that he has not modified in the least his conviction that democracy alone can ensure the peace of the world, and that the world's largest democracy must play its part in defending the system under which it has chosen to live. But the message failed to foreshadow any immediate action to be taken by the United States Government in pursuance of this policy, except by way of increasing its own armaments.

There is some evidence that the PRESIDENT intended the domestic portion of his speech to be taken as offering a firm front to the attacks of his business opponents. He went out of his way to emphasise the importance of capital in a sound economy, and to praise the attitude of the overwhelping majority of business men and bankers. But, in spite of these kind generalities, business men were promised very little indeed of what they asked for, unless the rather vague reference to tax reforms can be taken to mean the repeal of the much-anathematised Undistributed Profits Tax. The PRESIDENT also used stern words about the small

minority of business men who engaged in "practices which are dishonest or definitely harmful to society," or "who fail to note the trend of the times and continue the use of a machinery of economics and practices of finances as outworn as the spindle of 1870"; and this condemnation was driven home by a forecast, perhaps ominously vague, of legislation to limit some of the abuses of capital. Nevertheless, in spite of these indications that the PRESIDENT, though polite to Small Business, is still imbued with hostility to Big Business, the contrast between his more moderate language and the recent diatribes of MR ICKES and MR JACKSON was so welcome to the financial community that the speech can be said to have had a favourable reception in Wall Street. This is surprising; for the business community has fully persuaded itself that it will be unable to earn profits until it has a President after its own heart in the White House, and it is quite clear from Monday's message that Business is not going to have its desire until January, 1941, at the earliest. The slight recent improvement in the industrial news may, of course, have helped business men to look on the New Deal with somewhat less jaundiced eyes. But whatever the cause, it is gratifying to find that it is possible for the President to make a speech without Wall Street having a paroxysm in which tempers and security values suffer equally.

From the cooling distance of three thousand miles it seems clear that it would have been poor statesmanship on the PRESIDENT's part to have yielded to every demand made upon him by the representatives of industry and finance; for though some of their requests are reasonable and proper, others are illogical and harmful. For example, when industry clamours at one and the same time for a remission of taxes and a balanced Budget, it can only mean that it wants a very large reduction indeed in the expenditures of the Federal Government. But any paring of relief at this time would not only be against the wishes of probably a majority of the electorate, but would also, beyond any question, tend to deepen the existing recession. The PRESIDENT is entirely in the right in refusing to balance the Budget solely by making cruel reductions in expenditure. A refusal to accept the full Business programme can thus be justified, but the wisdom of deliberately defying the managers of industry, as some of the PRESIDENT's closest advisers advocate, is very much more questionable. The PRESIDENT may well be right in thinking that his duty to the nation is to pursue his own economic policy, but he will be wrong if he does not attempt to enlist the co-operation of every section of the community behind it. *Fortiter in re* is the right policy for him; but so is *suaviter in modo*.

Unfortunately, the obvious defects of the conservatives' policy do not automatically make the PRESIDENT's own programme ideally suited to rescue the country from the recession. He set before himself on Monday the task of increasing the national income from its 1937 level of \$68,000 millions to an amount of \$90,000 millions, or even \$100,000 millions. He proposes to achieve this admirable aim by the deceptively simple method of increasing the incomes of the farmers and the industrial workers, the two great productive classes of the nation. The instrument in the one case is to be higher prices for farm products; in the other it is to be higher wages for labour.

For agriculture, the prescription is the familiar one of the control of excessive crops in order to raise prices to their "parity level" and maintain them there. Now if control of this sort is applied with efficiency and moderation, it is an acceptable method of preventing the bankruptcy of the farming industry that might follow excessively heavy production and excessively low prices. But a country which itself consumes the greater part of its agricultural production is no richer because crops are smaller, and agricultural prices higher, than they would otherwise be. A gain to the farmers by this method can be achieved only at the expense of other sections of the community. The

cost may be worth paying to avoid the social consequences of agrarian ruin; but the substantial point at this juncture is that crop control, even though it increases the money income of farmers, in no way increases the real income of the nation as a whole.

The methods which the PRESIDENT proposes to follow in industry have a strong family resemblance to those prescribed for agriculture. The centre of his programme is occupied by the Wages and Hours Bill, which is intended, in his words, to "put a floor below which industrial wages shall not fall, and a ceiling beyond which the hours of industrial labour shall not rise." Here again, the social purpose of ameliorating the deplorable conditions in which some sections of American labour work is a wholly admirable one. The PRESIDENT, however, made it clear that the Wages and Hours Bill is not merely intended as a piece of social reform, but also as "an essential part of economic recovery." The theory is that by raising wage rates the individual worker will have a higher income, and that by shortening hours a larger number of workers will be employed, so that on both counts the "buying power" of the industrial population will be enhanced. In another part of his speech and another context the PRESIDENT recommended organised labour to think more in terms of the worker's total pay for a year than in terms of his remuneration per hour and per day. He might well have applied his own recommendation to the Wages and Hours Bill, for if labour costs are increased in a period when business is already sickly, the total amount of money paid out in wages is as likely to fall as to rise. This, at least, was the effect of the similar attempt made under N.R.A. in 1933-34, when the *elan* of recovery was much greater than it is to-day. Moreover, even if the increase of wage rates and the reduction of standard hours did succeed in its purpose of increasing the money incomes of wage-earning labour, this result would only be achieved, in default of an increase of production, at the expense of other sections of the community. There is nothing in the Wages and Hours Bill itself that will tend to raise the real national income.

This analysis of the remedies proposed in the PRESIDENT's message prompts the query whether he has yet realised the essential point that there is only one way of increasing the national income, and that is by instigating a larger production of goods and services. The measures he proposes, whether in regard to industrial wages or to agricultural prices or to the control of financial power, are excellent and praiseworthy accompaniments to a rising production of real wealth, but taken in themselves, at a time when the production of real wealth is tending to decline, their effect is as likely to be deflationary as stimulating, harmful as beneficent. MR ROOSEVELT, in short, is facing the familiar dilemma of social reformers. The aim of his political philosophy is to limit the dominance which profits and the profit-owners now exercise over the economic machine. But in so doing he must be very careful to maintain the volume of profits; for in an economy of which they are still the mainspring a reduction in profits means an increase in unemployment, and a rising total of unemployment is political death to the social reformer. This dilemma is not, of course, a pleasant or fortunate one, but nothing whatever is to be gained by attempting to deny its existence. In one country after another, in recent years, great schemes of social reform have found themselves in this difficulty. MR ROOSEVELT himself was saved in 1935 by the natural resilience of the American national economy. M. BLUM in 1937 had no such good fortune, and his *expérience* came to an untimely end because he neglected the volume of profits in attempting to control the use made of them. MR ROOSEVELT is now once more face to face with the same problem. The course of economic activity in the United States this year will very largely depend upon the degree of moderation he shows in carrying through his reform policies at a time when recovery is the first need.

The Consumer's Choice

IN an earlier article we described the recent growth of the gas and electricity industries and discussed the increasing competition between them. It is the purpose of this article, however, to show that there is, in fact, a strong case for a large measure of co-operation, in the joint interests of both industries and of the consumer.

Even to the ordinary domestic user, the choice between gas and electricity is more than a matter of mere convenience. Domestic fuel is needed for a variety of purposes, including lighting, space-heating, cooking and water-heating; and the type of fuel technically most suitable for one operation is not necessarily so for another. Both gas and electricity represent "fuel on tap"; but, whereas gas affords a supply of heat to the consumer, electricity is a form of mechanical energy which requires conversion to heat on the consumer's premises. Now there are many domestic appliances, such as vacuum cleaners, washing machines and hair-driers, for which electricity alone is used. In general, however, the total current consumed by these various appliances is limited, and under the existing system of tariffs (as we explained last week) it may be cheaper for the consumer to rely mainly on gas or mainly on electricity—even if this means using one or the other for purposes for which it is not technically the more suitable—in order to secure a reduction in price by increasing his total consumption. His choice, in fact, is not a free choice; for the aim of the rival claimants for his custom is to induce him to plump for one or the other, whereas he ought to be free to vote for both.

When we come to consider the purposes, however, for which each type of fuel is best suited, we must study not merely the consumer's convenience, but also the larger interests of the community. We must inquire into efficiency on the production as well as the consumption side. Which fuel, for instance, makes the more economical use of the country's coal resources? The actual consumption of coal in recent years by gas works and electricity undertakings is shown in the following table:—

	COAL CONSUMPTION (in millions of tons)	
	Gas Works	Electricity Undertakings
1920	17.57	7.36
1929	17.89	9.84
1930	17.67	9.68
1931	17.43	9.61
1932	17.00	9.81
1933	16.71	10.33
1934	17.14	11.17
1935	17.29	12.24
1936	18.33	13.60

The coal consumed in gas works in 1936 was 1.35 times greater than that consumed by electricity undertakings. The output of gas, expressed in British thermal units, was as much as 2.1 times greater than the output of electricity, similarly computed. Moreover, many valuable by-products are obtained in the manufacture of gas. Thus it would appear at first sight that a much more economical use of the country's coal resources could be made by conversion to gas rather than by generation of electricity.

This conclusion does not, however, include the slightly greater efficiency of gas distribution or take into account the greater efficiency of electricity-consuming appliances. Efficiency in this connection has, broadly, three meanings. In the first place, it can mean efficiency in production, measured by the thermal units obtained from the treatment of a given quantity of coal. On this interpretation, we have already seen that gas is produced more efficiently than

electricity. If complete efficiency be taken as 100 per cent., then, on the above figures (without reckoning the valuable factor of by-products), the efficiency of gas production is about 30 per cent., compared with the 20 per cent. efficiency of electricity generation. Secondly, efficiency may mean efficiency in distribution, measured inversely by the loss of energy involved in making available to the consumer a given quantity of light or power. Taking optimum efficiency as 100 per cent., while the efficiency of gas distribution may be taken as 95 per cent., that of electricity distribution is no more than 90 per cent. Thirdly, efficiency may mean the efficiency of particular appliances, measured inversely by the loss in use of heat or energy; in other words, the suitability of the appliances for the purpose they perform. Here the balance is rectified by the superior efficiency of electric fires, electric water-heaters, electric lighting and electrical power appliances. In the case of space-heating, for instance, the efficiency of an electric fire may be put at 100 per cent., against the 65 per cent. of the gas fire.

To measure the final or over-all efficiency of any gas or electric fitting, we must use all three meanings of the term—efficiency in production, in distribution and in use for a particular purpose. Thus, although electricity may lose 10 per cent. in efficiency in production as compared with gas and 5 per cent. in distribution, the over-all efficiencies of the two fuels for the specific task of space-heating are very similar, the figures being 18.5 per cent. in the case of gas and 18 per cent. for electricity. Again, if we compare a gas water heater with an efficiency in use of 70 per cent. with an electric immersion heater with an efficiency in use of, say, 88 per cent., the over-all efficiency of gas for heating water works out at 20 per cent., against 17.6 per cent. for electricity—when the efficiencies of the two fuels in production and distribution have been taken into account. For hotplate cooking the corresponding figures have been calculated as 12 per cent. for gas and 10 per cent. for electricity. In these and similar cases, therefore, the superior efficiency of gas in production and distribution is almost counterbalanced by the superior efficiency in use of electrical appliances. From the purely technical point of view, the consumer is better served by electrical equipment for these purposes; but from the general economic standpoint, which concerns the community as well as the consumer, there is very little to choose between the two fuels, though the balance may incline slightly on the side of gas. On the other hand, electricity is nearly four times as efficient as gas for lighting, while electricity is more than twice as efficient for power uses.

No hard and fast conclusions can thus be laid down about the superiority of gas to electricity or *vice versa*. We have merely attempted in this article to show that technical efficiency may be as important as comparative prices in suggesting the respective uses to which the two fuels might be put in a properly co-ordinated scheme. The situation is complicated, not only by indiscriminate competition, but also by the fact that the older protagonist, the gas industry, is hampered by statutory and historical circumstances. To arrive at the true cost of gas or electricity for any operation, it would be necessary to allow also for processing costs and capital charges. Broadly, however, the considerations to be taken into account in determining the optimum uses of gas and electricity are those which we have discussed. On all counts it would appear that co-operation between the two industries is desirable, and legislative action may have to be taken to bring it about.

The Budget Deficit

IN British Budgets, as in a mile race, it is the last lap that matters. Three-quarters of the financial year have now elapsed; but income tax, surtax and motor vehicle duties, which together provide more than two-fifths of the whole revenue, are largely collected after January 1st. The last quarter of the financial year always begins with a sizeable deficit, which is gradually reduced as the taxes come in. In keeping with the national character, the Government's finances are arranged in such a way as to become almost a sporting event, with all the excitement of a close finish on March 31st.

The current year, however, differs from all other post-war years in that a deficit of no less than £80 millions was foreseen from the start. Actually, the deficiency of revenue on January 1st this year is only £33.7 millions more than last year, and the moderate dimensions of the increase might lead one to suppose that the expected deficit will not be fully achieved, especially since there is £12.6 millions of the estimated increase in revenue still to come.

Any such expectation, however, would be reckoning without the re-armament programme, which is now getting into its full stride. The figures of defence expenditure in the last eleven quarters are given in the following table:—

	(£ millions)		
	1935-36	1936-37	1937-38
First Quarter	27.50	37.45	46.30
Second Quarter	30.30	41.20	58.30
Third Quarter	37.25	48.05	68.30
Fourth Quarter	41.90	59.37	...

It will be noticed that not only does expenditure tend to be heaviest in the last quarter of the year, but there has also been a tendency for the margin of increase of any quarter over the same period twelve months earlier to widen. If both tendencies hold good, the last quarter's expenditure this year may be well over £80 millions. Even this would not bring defence expenditure within £20 millions of the year's estimate. But it will be sufficient more than to outweigh the balance of the estimated increase in revenue that is still to come. At present the balance of the Budget is £33.7 millions further off than it was at this time last year, and the revenue will have to come in exceedingly well if this margin is not to be widened.

The details of revenue and expenditure can be seen in the tables at the foot of the page. Among the expenditure items other than the defence forces, it will be noticed that the service of the National Debt is costing appreciably

more than last year. On the other hand, the civil services show some savings. The expenditure under this head was expected to be £20.5 millions higher in the year, but with nine months gone it is only £8.5 millions higher.

The revenue items, with one, or possibly two, exceptions, are very satisfactory and clearly reflect the fact that 1937, in most branches of activity, was a highly prosperous year. The one certain exception is Stamps, the yield from which has fallen £2.5 millions behind last year; in the present state of the security markets it is unlikely that Stamps will be able to make up any of their leeway by April 1st. The doubtful item is the National Defence Contribution, from which £2 millions was expected in the year. So far only £59,000 has been collected, and though nobody outside the Treasury is qualified to express an opinion on the prospects of more sizeable collection in the current quarter, there does not seem to be any precipitate hurry among companies and partnerships to pay this new impost.

The income tax figure is quite satisfactory. The amount collected in the first three quarters is hardly more than a sample of what is to come, but the increase compared with last year is nearly 17 per cent., which is almost half as large again as the estimated proportion of increase for the whole year. Surtax, with only a sixth of the total amount collected, already shows a third of the estimated increase. Customs and Excise have each already exceeded their estimated increases, with three more months still to go. The death duties are perhaps the brightest spot in the list. In recent years these duties, with almost monotonous regularity, have brought in more than was expected, and this year, in spite of the weak tendency of security prices, is apparently no exception, for the yield is already more than £5 millions in excess of last year. If the tax revenue be taken as a whole, the estimates foresaw an increase of 6.6 per cent., whereas the actual collection to date has been 7.3 per cent. higher than last year. A margin of 0.7 per cent. sounds very small; but, applied to the total of the British Budget, it is nearly £6 millions, which is not to be despised even in these days of re-armament.

The fiscal outlook is, of course, dominated by the cost of the defence programme. But the other figures of the returns provide some source for mournful pride. If there were not this enormous burden of providing the means of slaughter, how happy would be our fiscal lot! But as it is, not even onerous rates of taxation, applied in a year of prosperity, can save us from a badly unbalanced Budget.

Topics of the Week

New Year Honours.—The makers of the New Year Honours List have followed the precedent of recent years in confining awards largely to public servants, political or permanent. Outside the group of civil servants and sound party men, whose recognition can be, and is, taken for granted, the List is diffident and scanty. In different ways, the further elevation of Lord Nuffield in the peerage and the bestowal upon Mrs. Grace Selinger (Miss Gracie Fields) of the Order of Commander of the British Empire will win approval more widespread than usual among a public which cares little for Honours Lists. For the rest, there are but few notable tributes to the non-political aspects of our public life. The regrettable disappearance of *The Morning Post*, and the personal distinction of its Editor, are appropriately marked by the award of the Companionship of Honour to Mr H. A. Gwynne. The honours conferred upon members of the educational world are at least representative: the secretary of the National Union of Teachers, the Vice-Chancellor of Reading University, the secretary of the Association of Local Government Authorities and the Provost of Oriel College, Oxford, are variously recognised, while Field Marshal Sir William Birdwood, Master of Peterhouse, Cambridge, is among the new peers. The only by-election will be caused in a safe Government constituency at Ipswich by the elevation of Sir Francis John Childs Ganzoni to the peerage. Several women and a former captain of Australia at cricket are also honoured.

Another Bad Month for Unemployment.—For the fourth time in succession the monthly unemployment returns make unpleasant reading. Indeed, if regard is paid solely to the amount by which unemployment has increased during the month, the December figures are the worst of the series. The count was taken on December 13th, when the total number of unemployed persons was 1,665,407. This was 166,204 more than the number on the register on November 15, 1937. It is also an increase, on a comparable basis, of about 92,000 as compared with December, 1936—the first time for many years that the unemployment figure for any month has been higher than in the same month of the preceding year. These total figures, however, somewhat exaggerate the deterioration in the employment position in December. The day of the count was one of exceptionally bad weather which caused a large increase in the numbers of workers temporarily suspended from work. For example, more than half of the increased unemployment in the building, public works, contracting, stone quarrying, and ship-building and repairing industries was of this character. The bad weather also affected the comparison with December, 1936, and the number of wholly unemployed persons is still 51,000 less than a year ago. These temporary factors tending to swell the total of unemployment should be duly noted, but it would be self-deception to imagine that they are more than a partial explanation of the rise. Many industries which are unaffected by bad weather have shown increases in unemployment, and the only industries which were substantially better off in December, 1937, than in December, 1936, were coal mining, the distributive trades and road transport. The biggest increase in unemployment, both on the month and on the year, was in building. The next largest increases as compared with 1936 were in the woollen and

worsted and cotton industries. The figures of employment naturally make a more favourable impression than those of unemployment, owing to the great increase in the past year in the total number of insured persons, and even in this bad month there were approximately 200,000 more insured persons at work than in December, 1936. There are thus a number of points in the returns from which consolation can be drawn. But December is normally a good month for employment; on the average of the four years 1933–36, for example, unemployment diminished between November and December by about 33,000. The increase this year, though it may be partly due to all too seasonable weather, is thus contrary to seasonal expectation. It cannot fail to reinforce the growing impression that the check to British recovery since the beginning of the autumn is of a more serious character than the Government have yet been willing to admit.

A Technical Commission for Palestine.—There have been suggestions in recent months that the British Government were contemplating the modification of the Royal Commission's plan for the partition of Palestine, or at least some delay in implementing it. Doubts about the Government's intentions should, however, be dispelled by the publication of a dispatch sent by the Colonial Secretary to the High Commissioner in Palestine just before Christmas. The Government, as is repeated in the dispatch, have accepted the principle of partition, but they are not committed to the details of the Royal Commission's plan and, in particular, they have not accepted the Commission's proposal for the compulsory transfer of Arabs from the Jewish to the Arab area. The dispatch adds that the Government are prepared to give further consideration to the suggestion made by the Permanent Mandates Commission at Geneva that the Arab and Jewish areas should be administered temporarily under a system of "cantonisation," or under separate mandates, rather than that they should be created independent states. But whatever British plan is eventually carried out, it is clear that there will need to be a delimitation of territory between the Arab area, the Jewish area and the enclave which is to remain under British control. The dispatch announces that a Technical Commission is shortly to be appointed to delimit these frontiers. It will be instructed to do so in such a way as to provide adequate security for self-supporting Arab and Jewish States, including the fewest possible Arabs and Arab interests in the Jewish area, and *vice versa*. The Technical Commission will also be given the task of making recommendations on the financial aspects of partition, including the allocation of public assets and public debt, the administration of railways and posts, etc., currency arrangements, customs administration and similar matters.

The dispatch has not had a very warm reception in Palestine. The Arabs see in it evidence of the British Government's determination to persevere with the policy of partition; on the other hand, the instruction to the Commission to include the fewest possible Arabs in the Jewish State has led the Jews to believe that the boundaries of their State are to be more narrowly drawn than in the Royal Commission's proposals. The problem of Palestine is of infinite difficulty and complication, but the one attitude of the British Government which would be sure to do harm would be to hesitate to work out in detail a policy that they have approved in principle. The new Commission will be largely confined to the ascertaining of facts, and it is possible that in the course of its labours means will be found for accommodating the interests of both Jew and Arab within a scheme of partition to a greater extent than either is at present prepared to believe.

The Political Conflict in Egypt.—The event has unhappily borne out the fears expressed in *The Economist* that the rising wind of political conflict in Egypt might blow up into a gale. The storm broke on the 30th of last month, when the King dismissed Nahas Pasha and invited Mahmud Pasha to form a Ministry in his stead. The new Prime Minister has banned all coloured-shirt private armies and has prorogued Parliament without having, so far, provoked any violent demonstrations of opposition. This does not mean, however, that all is necessarily quiet below the surface, or that Egypt has a smooth passage ahead. It is true that what King Farouk has done now was done by his father, King Fuad, on several occasions, and that Mahmud Pasha has played before the part that he is once again playing to-day. But these precedents may be delusive in a situation in which more than one important factor has changed. To begin with, there has been a change on the throne which has replaced an old, astute and experienced sovereign by a young man whose experience is still to be acquired and whose abilities are untested. It is natural enough that King Farouk should wish to emulate King Fuad's assertion of the royal power, and that he should chafe even more impatiently than his father at the semi-dictatorial party-tyranny of the Wafd. Yet, even if Nahas Pasha had deserved all the strictures that are made upon his administration in King Farouk's letter of dismissal, it was perhaps imprudent, and certainly unnecessary, to denounce in public a statesman and a movement that possess so powerful a hold upon the allegiance of so large a part of the nation. There has, it is true, been a split in the Wafd and a few leaders, including the President of the Chamber, have either resigned or been expelled and have formed a new party which, under the name of the Saadist Wafd, claims to be the true inheritor of the tradition. But these dissidents appear to have little support and the ranks of the Wafd are, in the main, unbroken. It is a bad lookout, both for Egypt herself and for her British ally, if there is to be a long and serious political struggle. What Egypt needs above all things is a united national front in the matter of foreign policy. It was just such a national union that was instrumental in securing the present treaty, which is as satisfactory to Egypt as it is to the British contracting party. It would be profoundly unfortunate if a political split in Egypt on an Egyptian domestic issue were to be reflected in a divergence of policy on the question of Egypt's foreign relations, or in an attempt by either party to open the door to European powers who might be much less solicitous of Egyptian independence than Great Britain.

Japanese Peace Terms.—The chief interest in the Far Eastern War during the past week has shifted from the military to the diplomatic field. This does not mean that there have been no military operations; on the con-

trary, the Japanese forces have made rapid progress along the Tientsin-Pukow railway, advancing both south from Tsinan and north from Pukow, so that their two armies are now only 250 miles apart. On the extreme left wing of the Yangtze army, on the other hand, there have been Chinese counter-attacks, and the Japanese hold on the city of Hangchow is apparently not yet fully established. But these operations have been overshadowed by the first definite peace overture made by Japan to the Chinese National Government. The Japanese terms, which were presented to General Chiang Kai-shek through the German Ambassador to China, were immediately rejected by the Chinese. They included the substitution of an anti-Russian for the anti-Japanese policy of China; economic co-operation; an indemnity; recognition of Manchukuo; the creation of a demilitarised zone around Shanghai and possibly at other places; and the acceptance by China of Japanese advisers and Japanese troops of occupation. It is hardly surprising that terms as severe as these were rejected without consideration, but it is perhaps significant that Japan, in spite of her protestations to the contrary, is apparently prepared to negotiate with the Chinese National Government. General Chiang Kai-shek has this week resigned the Premiership, but he has been succeeded by Mr H. H. Kung, the Minister of Finance, and the change does not signify any weakening in the resolute policy hitherto pursued by the Government. The Japanese have also been pressing their advantage in Shanghai. Under the pretext that the efforts made by the Municipal Council of the International Settlement to check anti-Japanese incidents were inadequate and lacking in earnestness, the Japanese authorities made a request, which in the circumstances virtually amounts to a command, for an increase in the number of Japanese in the police force and in the highest administrative appointments in the Settlement. Almost every day brings fresh news of further Japanese encroachments in Shanghai, and it cannot be long now before the whole Settlement is completely under their control.

A Chief Diplomatic Adviser.—It was announced on December 31st that Sir Robert Vansittart, who has held the Permanent Under-Secretaryship of State for Foreign Affairs for the last eight years, had been appointed to the newly-created post of Chief Diplomatic Adviser to the Government, and that he was to be succeeded by the present Deputy Under-Secretary, Sir Alexander Cadogan. In countries unfriendly to Britain, this announcement has promptly produced a crop of speculations which agree only in assuming that the grounds for the change have been personal. An explanation in such terms is quite uncalled for, seeing that the change explains itself on grounds of convenience and efficiency that are not very abstruse. There was, perhaps, a time in the nineteenth century when the Permanent Under-Secretary at the Foreign Office was almost as free from day-to-day

administrative preoccupations as the Government now hope to make their Chief Diplomatic Adviser. There are still legends of an age in which the flow of *paperasses* through the Foreign Office was so steady a trickle that the clerks used to keep what papers they needed for reference in red boxes which lay about on the floors of their rooms between the coal-scuttle and the waste-paper basket. But if that age of innocence ever really existed, it was brought to an end by the energy of Sir Eyre Crowe, who equipped the Foreign Office with a registry and the other circulatory, digestive and respiratory organs which are vital to a great department of State in the world as it now is. When the outbreak of the war produced a sudden vast increase in the volume of foreign affairs, the Foreign Office was thus already organised for dealing with the emergency. It is easy to guess that, in these last few years of chronic crisis, the flow of business has doubled or trebled again. The efficient administrator may succeed in keeping afloat on the rising flood, but it becomes difficult for him to crane up his neck and look about him, and almost impossible for him to lift an arm out of the swirling current in order to signal what he has seen to his colleagues on shore. The division of labour which has now been carried out is no doubt as conducive to the efficiency of the public service as it is complimentary to both the eminent men concerned.

* * *

Unemployment in America.—An attempt was made in November to fill the most obvious gap in the otherwise remarkably complete range of American economic and industrial statistics. This gap was the absence of any reliable figure of unemployment. Hitherto there have only been estimates made by the American Federation of Labour and by the Department of Labour, based in each case on a totally inadequate sample. Between November 16th and 23rd a special count of the unemployed was taken by the census method of leaving forms to be filled in at every house. The number of people who recorded themselves as being unemployed in this purely voluntary census was 7,882,912. The census was supplemented by a house-to-house canvass in selected areas, which suggested that the true figure should be 10,870,000. Either of these figures is sufficiently enormous, and it is obvious that no very precise definition of unemployment underlies them. Even the smaller figure includes just less than 2,000,000 women and just more than 2,000,000 workers on emergency relief, and it is questionable how far these people can strictly be regarded as unemployed in the usual sense of the word. The plain but unfortunate fact is that the total of unemployment in the United States is hardly more precisely known after the census than before. The population of the United States is less than three times that of the

United Kingdom, and there is a considerably larger proportion of agricultural workers, who are not nearly so subject to total unemployment, so that an equal proportionate incidence of unemployment in the two countries could be expected to give an American total figure less than three times that of the United Kingdom. As it is, the smaller figure resulting from the census is more than five times, and the higher figure more than seven times, the British total. It is impossible to believe that the disparity between British and American experience is so very wide.

* * *

The U.S. Budget.—President Roosevelt's annual message to Congress on the state of the Union, which is discussed in a Leading Article on page 54, was followed on Wednesday by his Budget message. The American fiscal year runs from July 1st to June 30th, so that one financial year is only halfway through and the beginning of the next is still nearly six months away. For this reason, the figures given in the Budget message are necessarily approximate. Last year at this time the President foresaw for 1937-38 a revenue of \$7,294 millions and an expenditure (exclusive of debt retirement) of \$7,293 millions. These figures have now had to be revised in an unfavourable sense, and the revised estimates for the current year are now \$6,320,500,000 in revenue and \$7,408,600,000 in expenditure, giving a net deficit of \$1,088,100,000. The hope of a balanced Budget has thus been abandoned, though the deficit is the smallest for several years. The estimation of revenue for 1938-39 depends upon a forecast of economic conditions. "The Treasury, leaning to the conservative side," said the President, "predicts some improvement over the present level but does not assume in its figures that business in the calendar year 1938 will reach as high a level as in the year 1937." The revenue is accordingly put at \$5,919,400,000. The estimate of expenditure, at \$6,869,000,000, is \$539,000,000 less than the estimate for the current year. Reductions have been made in war pensions, in public works and in unemployment relief. But the President added a warning that events may compel him to spend more both for relief and for armaments. The deficit of \$949,600,000 is thus a very provisional figure. But the task of the Treasury is in any case comparatively simple, since there will be a net sum of about \$1.163 millions available for investment in Government obligations out of the income of various funds, of which the social security funds are the largest. From the economic point of view, the Budget is consequently balanced, since the income of the Government as a whole will be equal to its outgo. This is a considerable administrative achievement. Unfortunately, it looks like being accomplished just at the time when the onset of industrial recession makes Budget balancing a policy of questionable value.

DWELLING HOUSES BUILT IN ENGLAND AND WALES, 1921-37

Battle for Teruel.—The fight for Teruel still continues. Earlier in the week it looked as if the initial success of the Spanish Government in capturing the town would be converted by the furious insurgent counter-attack into at least a moral setback. General Franco had sent to the rescue of the remnants of the garrison a considerable body of troops, well equipped with artillery, aviation and mechanical transport, and with orders to press the attack by every possible means. Their onslaught converted the Government army from attackers to defenders. Fortunately for the Government, the bitterest winter weather descended, and though the rebel attack continued for several days in very low temperatures, it seems now to have been brought to a standstill in the snow. The communiqués of the two sides contradict each other with monotonous regularity, and it is consequently difficult to ascertain the exact position, but it seems to be clear that the repeated insurgent claims to have retaken the town are untrue, and that the Government forces still hold a large part of the ground they gained last month, including the town of Teruel itself. It is not yet possible to assess the final result of the battle, and it is always possible that the insurgent counter-attack may be resumed, but the Republicans have at least succeeded in disrupting General Franco's strategical plans, and he is hardly now in a position to begin a great offensive at a time and on ground chosen by himself. This in itself, apart from territory gained or lost, may prove to be a substantial advantage to the Barcelona Government.

* * *

Polish-Roumanian Rapprochement?—M. Goga has exchanged so many effusive telegraphic greetings with older members of the happy family of heads of States that, if one took all these effusions *au pied de la lettre*, it might be difficult to forecast a demi-Fascist Roumania's future political affiliation. Even the Soviet Union has come in for a friendly message from the new master of the adjoining Roumanian house; but, on the whole, it looks as though M. Goga were inclined to join forces with Colonel Beck in an attempt to form an East European front that shall be anti-Russian without being pro-German. On the face of it there is no very pressing reason to form any front at all against a Power which has not shown itself militarily aggressive at any time since the earliest years of the Soviet regime. An assault by Russia upon her European neighbours is about the most unlikely contingency of any that could well be imagined in the present constellation of international affairs. We may infer that "the Red menace" against which MM. Goga and Beck are putting their heads together is an internal one, and that what they really fear is an uprising, within their own frontiers, of submerged classes and suppressed nationalities. Whether they will really be assisting one another to keep in the saddle by adopting a common attitude of unfriendliness towards their great Eastern neighbour is a question which Western observers may be inclined to answer in the negative. And it seems still more unlikely that the buffer States can assume an anti-Russian orientation without finding themselves drawn into the orbit of Germany. It has long been a dream of Polish statesmanship to establish, in conjunction with the Roumanians, a zone of insulation between the Nazi and the Communist Great Powers; and there is now some talk of enlisting Yugoslavia, too, in the same cause. But, in plain language, this would mean the abandonment of Czechoslovakia by the two other members of the Little Entente; and that would open the way for Germany to make herself mistress of Czechoslovakia and Austria, and to convert Hungary too, willy-nilly, into a pawn in the Nazi game. In such circumstances, the ability of the remaining East European successor States to pursue an independent policy would become even smaller than it is to-day.

* * *

Housing Progress.—It is not an easy matter to record precisely the activity of the building industry. The figures of building plans approved by the local authorities

are seriously incomplete, since they omit many parts of the country and all Government work. So far as concerns the building of dwelling houses alone, however, the Ministry of Health publishes comprehensive returns, though only at six-month intervals and after some delay. The diagram on the preceding page, which shows the number of houses built in England and Wales since shortly after the Armistice, has been based upon these returns. The diagram brings out very clearly the fact that the building boom of the last five years has been almost entirely a matter of increased private enterprise building without any subsidy from the State. Subsidised building by private enterprise, which was quite important between 1923 and 1930, has now virtually disappeared. On the other hand, building by local authorities has been comparatively steady during the past decade.

* * *

The latest return, issued on New Year's Day, relating to the half-year ended September 30th last, will be closely examined for evidence of the probable trend of house-building in the immediate future. The total number of houses built in the year ended September 30th was only very slightly lower than in the previous year, which was the highest ever recorded. But there was a considerable difference between the first and second halves of the year. In the six months up to the end of March, the total number of houses built was over 181,000, which was considerably in excess of the highest previous half-year. In the second half-year, however, the total had fallen to less than 156,000 and was noticeably below recent periods. Moreover, close inspection of the figures shows that private enterprise building has been declining for the past two, if not three years, and the total figures have only been kept up by a distinct spurt in building by local authorities. This, of course, is connected with the slum clearance programme, which is now going ahead very rapidly.

* * *

The trends of the two varieties of house building, private and public, thus seem to be fairly clearly established: there is good reason to believe that the slow decline in private enterprise building will continue—if, indeed, the rate of decline does not accelerate; on the other hand, local authority building can be expected to continue at a high rate until the current slum clearance programme is completed. Unfortunately, the number of houses built by local authorities is so small relatively to those built by private enterprise that a proportionately small decline in the latter may be sufficient to wipe out a proportionately large increase in the former. It thus seems highly probable that the peak in total house building reached in the half-year ended March 31, 1937, will prove to be the highest of the present boom.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

Precipitous Decline in Steel

NEW YORK, December 24.—In the current week, steel operations are estimated at 23.5 per cent. of capacity; in late August the figure was above 80, and each subsequent week has shown a decline. In 1929, August operations were 95 per cent. of capacity and December 56 per cent. The current level of operations is barely above that of February, 1933. The extent and rapidity of the curtailment are without precedent.

Because this index is familiar and available weekly, it is watched with rapt attention. Actually, it gives an exaggerated impression. If the index were representative it would indicate that business was running some 75 per cent. below the summer level, and that practically the whole recovery of five years had been erased in four months.

The latest official index of industrial production is that of November, which at 90 was 13 points down from October and 35 down from August. The decline, as usual, was concentrated in the heavy or capital goods industries. Speculation about the amount of unemployment is uncertain, since many employers are working their entire force on part time, rather than a part on whole time.

So precipitous and deep a decline must have had a considerable but varied effect on corporate earnings. In some cases earnings will be well sustained; while in others they will not merely vanish in the fourth quarter, but the losses of the fourth quarter may also eat up a substantial fraction of the earnings of the three previous quarters. It would not be surprising if total corporate earnings in the fourth quarter were only half those of the first quarter of 1937. While the decline in steel operations gives an exaggerated impression of the decline in general activity, the slump is of major proportions, whether measured by production, employment or earnings.

A Campaign of Fear?

Sabotage has been given a leading place in the list of causes for the decline. To quote from the *Journal of Commerce* reporting the weekly Press conference on December 21st: "President Roosevelt to-day charged a majority of the newspapers and a minority of industry with instigating and fostering a campaign of fear." One often hears this charge in a more extreme form, from both high and low quarters—that the depression is the consequence of a great conspiracy to discredit the Administration, to disrupt labour organisation, and to reduce wages.

Another thesis presented by a number of persons of the highest official position argues that the depression has been caused by a stiff increase in the price of manufactured products at a time when primary commodities were falling. One of the commonest non-official explanations, on the other hand, ascribes the collapse to the deflationary policy of the Reserve System in increasing reserve requirements and sterilising gold imports.

The facts are that in the autumn the stock market collapsed, and almost simultaneously the heavy industries collapsed. Even if recovery comes promptly and rapidly, this winter finds the country in depression. The collapse was not preceded by any of the text-book phenomena supposed to be the antecedents of depression. The boomlet of last winter was a minor three-month affair; and there had been no perceptible

over-speculation in shares or building. Indeed, the recovery was then rated as being far from complete. About inventories, on which so much stress is now laid, apprehensions were expressed as late as the end of August that inventories were so low that autumn might see a scramble for goods, and another sellers' market. Yet, in September, Wall Street found itself in a stock market panic which it could not explain, and by October industry was in a panic which it in turn could not explain—except in terms of the stock market.

The Rôle of Panic

Since the end of the summer fear has been an increasing factor in the course of events. This is quite different from the emotion designated by the hackneyed phrase "lack of confidence." Nor does fear require any very tangible origin. A whiff of smoke has started many a theatre panic.

No one can understand the phenomena of the American economy this autumn unless he is willing to recognise the part thus played by panic. Fear is not confined to speculators in Wall Street, or to magnates in industry. It runs through the whole of the population—or at least through that fraction of the population represented by Your Correspondent's contact. The worker is afraid of his employer, and the employer is afraid of his workmen. The capitalist is afraid, not only of the value of his investments, but also of individual persecution. The newspapers are afraid of censorship. It is characteristic of panic that the cause need not be valid to be effective; and one may describe this state of mind as a psychosis, or as positively psychopathic. Even so, this description does not throw any light whatever on its duration.

Disequilibrium in Prices

The argument that our price structure is in disequilibrium is familiar to readers of *The Economist*. It is not easy to demonstrate from the available composite indexes, which show only a comparatively small change from a year ago. Specific instances can always be disputed as unrepresentative, local or exceptional. This was true, for example, of certain building data, by which over-all costs were alleged to have risen as much as 40 per cent. between the autumn of 1935 and the spring of 1937.

The *Railway Age* has published an article on the increase in costs of a long list of typical articles bought by a railroad—the list ranging from electric light bulbs to steel billets, track bolts and coal. Mostly they were manufactured or semi-manufactured articles. The average increase was estimated at 17 per cent. from September, 1936, to September, 1937, roughly representing an increase in annual costs to all railways of something like \$150 millions. This was approximately equal to the estimated cost to the railways of the increases in wages granted to their own employees in the summer of 1937.

These figures are cited as illustrative of disequilibrium, since in the same period railway rates were reduced, and while there was an increase of traffic it was not a compensating increase. Officially the reason for these increased prices is now given as "monopoly practices," and action is indicated under the Anti-Trust Acts. Outside of official circles, two other reasons are given; the higher cost of primary commodities last winter—a factor which has now changed—and a steep increase in unit labour costs, arising from higher hourly wages, a short working week and, in some cases, reduced efficiency.

Since early September this Correspondence has emphasised fear as a significant element in the American economy. Economic factors of moderate force, which under other conditions would account for some sort of moderate recession, take on a deeper significance against a background of panic. No two persons seem to be afraid of exactly the same thing; but to ignore fear because it cannot be defined, or to ignore mass fear as an economic factor because it sounds fantastic, like the opening chapters of Mr H. G. Wells' "Croquet Player," is to overlook a force that this autumn has been decisive in the thinking of numberless American individuals in all walks of life.

Germany

New Year Optimism

BERLIN, January 4.—Official and Press statements about the domestic outlook for the New Year are consistently optimistic. About the international outlook they are complacent, though here more stress is laid on the Reich's new military power than on prospects of conciliation in the outside world. The international position is considered to have improved compared with a year ago, in ways more advantageous to German policy than to the policies of Great Britain and other democratic countries.

Of the three issues that seemed to threaten world peace—Abyssinia, Spain, and the Far East—the first is dead. In Spain the alleged failure of the Valencia Government is regarded as making for peace, since it seems to bring nearer the end of the civil war. The peace alleged to be in sight is regarded as a success for German and Italian policy and a defeat for British and French.

In the Far Eastern conflict, Germany, after a certain show of neutrality or indifference, has been steadily drawn to favour Japan. So long as China was resisting with comparative success there were strong reasons, mainly commercial, for not alienating her by open pro-Japanese manifestations. But if Japan, as it seems the case, is destined to control Chinese commerce, these reasons no longer apply.

Hence the Press is increasingly pro-Japanese. Japan is sometimes painted as one of the unlucky Have-Nots who bravely exercise their right to look after themselves; sometimes as the unselfish defender of China—and even of the world—against Communism. The past year, it is realised with satisfaction, brought about an unavowed but genuine alliance between Germany, Italy and Japan.

In its relations with London, Berlin sees that it attained an initial success when, after the Chautemps-Delbos visit, the existence of a Colonial question, which might on conditions be negotiated, was admitted. Towards the United States, German utterances are hostile and contemptuous, offence being taken at President Roosevelt's now habitual division of the world into peaceful and aggressive nations.

Trade Cycle Gleichgeschaltet

The business year opened with a strong and relatively active Bourse, which reflected a general belief that 1938 would witness further industrial and trade expansion. The signs of trade decline in some European countries and the serious setback in the United States have not had any influence on German business sentiment. It is proclaimed that, in contrast to democratic countries where the State does not "lead" or control industry, the Reich is proof against cyclical fluctuations. The same theory is held about Italy and (though this is not publicly mentioned) Russia.

The only German fear is that exports, which increased considerably in 1937, may suffer from decreased purchasing power in raw material producing countries, because of the fall in commodity prices, and the reduced consumption of industry in the United States. The recent movement of German bourses is sometimes given as a reason for concluding that approximate stability has been reached in national business.

In the years preceding the Nazi Revolution, German shares fluctuated violently in times when the currency was stable on a gold basis. Since 1933 share prices have risen, but at a slower rate, and there has been no material recession. In 1936, the index of share values rose from 89.32 to 105.40, and in 1937 to 111 (provisional).

It is significant that leading steel shares moved down, against the general movement. Bonds in 1937 rose in every month with only one exception. The index of bonds rose by about 3½ per cent. to nearly 100.

Back to Gold?

Since his retirement from the Ministry of Economy Dr Schacht has been expressing his political and economic opinions in print. This month he writes at length on international currency questions. Dr Schacht predicts that any international currency reform must re-establish the pre-war gold standard, and condemns the gold-exchange system recommended by the Genoa Conference in 1923. He rejects altogether index currencies, silver currencies and bimetalism.

Herr Wagner, Commissar of Prices, has announced the exceptions that have had to be made to the price-fixing decree of late 1936. He states that where exceptions for certain goods have been made, he has attempted to enforce equivalent reductions in the prices of other goods. Summaris-

ing the industrial situation, the Institute for Trade Research remarks that since 1934, the various branches of industry have developed unevenly and some are not yet working to full capacity.

The Labour Minister, Herr Seldte, has published an appreciation of Government wages policy. He emphasises that, though wage-rates have been compulsorily stabilised, average earnings have substantially increased owing to higher productivity in piece-work (and to the lengthening of working hours). Policy in future will be to keep wage-rates stable but to let earnings rise *pari passu* with productivity.

Increased Investment

Investment in industry, communications, building, etc., in 1937 is officially estimated at Rm. 15,000-16,000 millions, against Rm. 13,800 millions in 1936, Rm. 3,500 millions in 1932, and Rm. 13,800 millions in 1929. The pre-depression figure has thus been exceeded. Of the 1937 total, Rm. 9,000 to 9,500 millions were spent on new undertakings or expansion, and the remainder on renovations.

The total number of hours worked in all industries in November was 16.9 per cent. higher than in November, 1936. The machine-manufacturing branch shows a rise of 21.8 per cent., and metal and associated goods one of 28.0 per cent. The veto on the expansion of capacity in several industries has been extended for another year or two, but in the case of the iron industry it has been relaxed on condition that production capacity is not increased by more than 15 per cent.

Ingot steel production in November was 1,791,000 tons, and in eleven months of 1937 was 18,083,000 tons against 17,733,500 tons in the same period of 1936. Steel output for the whole year will be about 19,800,000 tons compared with 18,500,000 tons in 1929, the best post-war year, when 2,200,000 tons were obtained from the Saar district.

Subscriptions to the New Reich Rm. 1,000 million loan opened on January 3. The banks provided themselves liberally with cash for taking up the loan which they will later market among their customers. The tax revenue returns continue to be satisfactory. Receipts in November were Rm. 1,023 millions, against Rm. 875 millions in November, 1936; and in the first eight months of the financial year they were Rm. 8,956 millions, against Rm. 7,369 millions in the same months of 1936. Of the increase all except Rm. 320 millions came from direct taxes and taxes on business. The yield for the whole financial year will probably reach the Rm. 14,000 millions officially forecast, against Rm. 11,492 millions in 1936-37, and a recent lowest of Rm. 6,647 millions in 1932-33.

The Reichsbank Return

The new credits and investments of the Reichsbank in the last week of 1937 reached the very large sum of Rm. 896 millions, which is Rm. 140 millions more than in the corresponding week of 1936; but deposits also increased by more than last year. In the twelve months the Reichsbank's position has changed as follows:—

(Millions of Marks)		
	December 31, 1936	1937
Gold	66	71
Foreign Exchange	6	6
Reich Treasury Bills	62	119
Other bills	5,448	6,013
Note circulation	4,980	5,493
Deposits	1,012	1,058

The circulation of all currencies at the end of 1937 was Rm. 7,478 millions, against Rm. 6,972 millions at the end of 1936. The money market opened in the New Year with the usual abundance of cash, derived from December repayments of credits. The credit banks' returns for November showed an increase in liquidity.

France

The Budget Approved

PARIS, January 6.—Parliament has gone into recess, January 11th, after voting the Budget. Estimated revenue in 1938 is 54,776 million francs, and estimated expenditure 54,739 millions. The surplus anticipated is thus 37 millions. The Senate rejected the proposal to reopen the Paris Exhibition this year. They also decided to rescind the Laval decree reducing rents by 10 per cent., and authorised their increase.

This decision, and the increase of minor taxes, will not make this Budget very popular. It will encourage the rise in prices, and thus lead to new claims for increased wages and fresh social conflicts—as recently witnessed in the case of the Paris municipal employees. The advantages obtained from the Paris strike by the concessions of the Socialist Ministers in face of the resistance of the Prime Minister are not very good omens for the future.

The issue of 3, 6 and 9 years 5 per cent. Treasury Bonds, which was closed on Wednesday, realised 4,200 million francs, a further proof of confidence in financial recovery. This yield entails only 270 million francs of bonds, the rest having been subscribed in cash. The Press is now able to lay stress upon the favourable results of the courageous efforts of M. Bonnet who, aided by the turn of events in America, has effected in six months an undoubted recovery in the public finances.

The Stock Exchange in 1937

The following table shows that, after two devaluations of the franc, the parity of which (against the pound) is now 145 against 75 two years ago, the level of stocks is generally lower than in 1935, though the distributed dividends have in some cases been increased by 25 per cent. This increase of distributed dividends is mainly due to the new tax on reserves:—

	1913 = 100	End of 1935	End of 1936	End of 1937
Shares:—				
300 French values	180	213	204	
20 Foreign values	197	369	402	
Rentes and debentures (36 French values)	79.1	78.4	75.6	
3% perpetual	73.2	75	69.6	
4%, 1918	75.8	73.9	67.2	
4%, 1925	81.6	92.9	104.5	
4%, 1932	83	79.1	75.2	
Banks	129	133	121	
Insurance	456	386	349	
Coal mines of the North	165	131	129	
Iron and steel	61	71	78	
Chemical industries	176	229	253	
Textiles	134	226	210	
Electric light and power	292	259	244	
Foodstuffs	439	450	364	
Big stores	89	91	75	
Colonial	175	301	281	

Turnover on the Stock Exchange is negligible. This inactivity is put down to many causes: excessive taxation, the fear of Socialist measures, the slump in Wall Street, international disquiet, and the rising needs of the Treasury.

Unemployment last week registered a further increase of 6,727 to 357,856, against 351,129 in the preceding week. The figures of the latest seasonal increase in unemployment compare with those in the same periods of preceding years as follows:—

	1935	1936	1937
September 25th ...	371,865	407,733	305,341
December 24th	439,782	410,785	357,856
	67,917	2,952	52,515

The stability of the 1936 figures was explained by the exceptional recovery of business which followed the monetary depreciation of September, 1936.

Production Problems

Economic activity remains stable, though orders show a slight falling off. The prices of domestic products, and notably of meat, are firm, and the cost of living, after being steadied by the decline in wholesale prices, will now rise again with the increase in wages and transport charges. The gap between distributed expenditure and realised revenue is unchanged, and this somewhat lessens the satisfaction derived from recent events. The revision of the 40-hour week, which has been decided for a few key industries, probably comes too late to have any considerable effect on production. The problem of the future will probably be to organise work to the maximum effect during the full 40 hours every week.

Coal production in November was 4,165,452 tons for 22.8 working days, against 4,142,100 tons in October for 23.16 working days and 3,536,912 tons in November, 1936. The average daily production was thus 182,394 tons in November, compared with 178,561 tons in October. The number of men employed was 243,468 at the end of November, against 241,621 at the end of October and 228,792 at the end of November, 1936. The production of coke in the coke plants of the mines was 372,390 tons, compared with 375,181 tons in October and 304,120 tons in November, 1936.

Norway

Easy Money

OSLO, December 28.—Conditions in the money market have not materially changed in the course of the last month or so. The only thing that can be said is that the previous easy tendency has been further stressed by the almost unprecedented rapidity with which new issues have been absorbed by the public. A striking instance was the City of Oslo new 4½ per cent. loan of 20 million kroner at 98 per cent., which was over-subscribed in about half an hour.

Apart from the seasonal increase in the note circulation and the reduction of deposits at call due to Christmas trade requirements, the returns of the Norges Bank continue to show great liquidity. Although, for various reasons, it does not seem likely that an immediate reduction of the official rate of discount is imminent, such a step would find adequate support in the present market situation.

Negotiations with a consortium of Norwegian banks have been concluded by the Government for the conversion of the 4½ per cent. internal Government loan of 1931 into a new 4 per cent. loan amounting to 115 million kroner. The rate of subscription has not yet been published, but will probably be in the neighbourhood of 99 per cent., judging by market indications.

The index of industrial production for October (which is the latest available) indicates slightly decreased industrial activity compared with September, the figures being 121.9 and 122.7 respectively (1935=100). The index is still somewhat higher than in October last year.

Increased Foreign Trade

According to the figures of the Central Bureau of Statistics the value of imports during November amounted to 132.2 million kroner against 93.4 million in October and 95 million in November last year. The value of exports amounted to 52 million compared with 23 million kroner in October and 25.8 million kroner in November last year. Imports during the eleven first months of the year were valued at 1,186 million kroner, and exports at 737 million kroner compared with 832.1 million kroner and 610.7 million kroner respectively in the same period last year. In spite of an increase in exports during the period of 126 million kroner, there is a surplus of imports of 449 million kroner against 221 million kroner last year.

Christmas trade this year has been considerably better than last year, in spite of increased prices, and mail and railway traffic figures have even surpassed the record peaks of last year. Share values on the Oslo bourse during recent weeks have in general been running parallel to those in foreign centres. This is especially true of shipping shares, while industrials and bonds have shown less fluctuation.

Argentina

Fall in Exports

BUENOS AIRES, December 22.—On November 25th Dr Ortiz and Dr Castillo were proclaimed President and Vice-President of the Republic respectively by both Chambers of Congress. The Opposition adopted a policy of obstruction as a protest against the conduct of the recent Presidential election and refused to attend the session, thus preventing the attendance of the three-quarters of the members declared by some authorities to be the minimum required by the Constitution. It was decided, however, that a simple majority was sufficient.

Exports in November showed a sharp fall both in volume and value. This was fully expected, since the quantity of cereals available for export was very small, owing to the exceptionally large shipments made earlier in the year. The volume of exports amounted to only 992,766 tons and the value to 132,769,829 pesos, against 1,528,651 tons and 159,425,816 pesos in November last year. The same downward tendency is likely to continue until the new crops have been harvested. Exports for the first eleven months of 1937 are nevertheless comparable with those of the boom years 1928 and 1929. The following chart of imports and exports shows the remarkable rise in the value of Argentine exports during the recent recovery period and the subsequent decline:

VALUE OF FOREIGN TRADE
(Monthly Averages: Annual figures prior to 1933)

The value of mining exports has risen by 80 per cent. compared with the first eleven months of 1936, and of agricultural products by 68.1 per cent. The latter would have shown an even bigger increase in 1937 had there not been a sharp fall in shipments of cotton owing to last year's drought in the Northern provinces.

Rise in Imports

Imports into Argentina in October were valued at 149,998,461 pesos, against 96,902,297 pesos in the same month of 1936. In consequence of the rise in imports and the falling off in exports (shown in the chart above) the export surplus for the year is scarcely higher than it was at the end of the first half-year. The value of foreign trade during the first ten months of this year and last year has been as follows:—

(In pesos)			
	Imports	Exports	Export Surplus
1936	921,360,073	1,288,671,047	367,310,974
1937	1,270,109,176	2,032,166,913	762,057,737

Domestic trade in Argentina during the past few weeks has been very slack, especially in textiles. The wave of prosperity which began a year ago found traders short of stocks. Some difficulty is now being experienced in disposing of supplies ordered under the influence of the sudden recovery. Falling exports, reports of damage to crops by frost and the downward tendency of world commodity markets have had a somewhat depressing effect. This may be only a temporary phenomenon, and confidence may return when the new crops begin moving.

Labour trouble on the railways has disappeared. On November 15th the Government ordered the men on the Entre Rios and Argentine North-Eastern Railways to resume work, and announced concessions for the workers. The cuts in wages for July and August will not be put into effect, and in the remaining ten months of the financial year ending June 30, 1938, cuts will be only 6 per cent. It is stated that the economic state of these two railways is even more critical than in 1931, when reductions in wages were first made.

The weather has recently been favourable for the coming crops. Rain has fallen over a great part of the country, including the drought-laden zones in the North. The damage done by the frosts of October and November will only be known when the wheat and linseed have been actually harvested.

Australia

Australia and Ottawa

MELBOURNE, December 18.—The Australian position with respect to the proposed tariff agreements with Great Britain and the United States to replace the existing Ottawa arrangements has been under discussion. Protectionist interests have been active. Criticism of the Ottawa Agreement has been going on for some years; and now the object is to maintain the Australian tariff at a high level under whatever fresh arrangements may be made. Exception has been taken to the idea of placing the leader of the Commonwealth Country Party, Dr Earle Page, at the head of the Australian delegation. He is not regarded as sufficiently protectionist to represent the vested interests.

In a statement in the Commonwealth House of Representatives on December 7th the Attorney-General, Mr Menzies, said that it was impossible to believe that Great Britain could go on indefinitely absorbing more and more surplus production from Australia. As a young country, on the threshold of development, Australia must look to the whole world for markets. He disclaimed, however, any desire to abandon the principle of Imperial Preference, but added that preferences must not be so rigid as to constitute an unnecessary challenge to the rest of the world.

Tariff Changes

On the same day the Minister of Customs, Mr White, announced that the Government intended to abandon its trade diversion policy. Import licences would be replaced by duties. This cannot be done until after the Parliamentary recess, and in appropriate cases reference will be made to the Tariff Board. Meanwhile the licensing system will be administered on the following lines. In the case of goods not competitive with Australian industry licences will be granted for importation irrespective of the country of origin. In the case of goods competitive with Australian industry, the licensing restrictions at present in force will operate until duties "adequate to protect" the industries concerned have been determined and applied. In the case of motor chassis, importation will continue as at present. That is, imports will be equal to the number imported in the twelve months ended April 30, 1936.

In general, the tariff schedule introduced into the House of Representatives will raise the duties on 39 items and lower them on 36. Some categories of the Canadian tariff have been amended, and an Excise duty of 6d. per cwt. has been placed on Australian tobacco to finance the Federal Tobacco Advisory Committee. The new Customs proposals operated from December 9th, and the Excise provisions will take effect from January 1, 1938.

The whole question of the tariff was introduced and debated in the light of the Anglo-American trade treaty which is now being negotiated. Government spokesmen laid stress upon the fact that, all over the English-speaking world, there was a feeling that the present opportunities for co-operation if allowed to slip now might not recur for many years. Revision of the Ottawa Agreement could not be long delayed.

India

Improved Central Receipts

BOMBAY, December 22.—People are already speculating about Budget prospects. There is a suggestion that the Finance Department may receive Rs. 3 crores (a crore equals £750,000) more than was estimated for the current financial year and that Rs. 3 or 4 crores will be made available by the improvement in railway earnings. There has been a steady improvement in Customs and Excise receipts, and income tax is expected to yield more than was estimated. Against this will have to be set the cost of the North-West Frontier operations, which may amount to Rs. 2 crores.

The new Provincial Governments have now been in power long enough to bring forward certain economic proposals.

Their prohibition proposals mean a considerable loss of revenue, since in some of the Provinces at least a third of Government's income comes from excise duties on liquor. All the Congress Governments are concerned with the possibilities of reducing rural debt, with Madras in the forefront.

Debts in Madras

The Madras Agriculturists' Relief Bill deals in the main with the interest on accumulated debts. All arrears of interest outstanding on October 1st are cancelled; debts bearing interest over 9 per cent. are adjudged discharged if twice the principal has been paid; and from October 1st debts of agriculturists are to bear no more than 6 per cent. interest. Agricultural rents in arrears for more than two years will be wiped out on the tenant's paying two years' dues. As a concession to Hindu sentiment, there is no attempt to touch the principal of the debts. Agriculturists unable to meet their liabilities, even with the scaled down interest, will derive no relief from the new Bill.

The Bill is silent about facilities to enable the ryot to pay the reduced debt. Nor has it any answer to the valid criticism that such restrictive legislation is bound to affect short-term accommodation facilities, which are essential to the cultivator. Proceeding on the assumption that "conciliation and other voluntary methods have failed and the adoption of the principle of compulsion has become necessary," the Government propose to deal with agricultural debts without reference to the peculiarities of individual cases. Debtors who can but will not pay have been placed on a level with those who cannot even if they wish. Similarly, considerate creditors who have allowed interest to accumulate are penalised, while the exacting variety are in a comparatively comfortable position. By looking at all debts from the narrow angle of interest, the Madras Bill not only does injustice to the honest debtor and the generous creditor, but shuts its eyes to other avenues of solving the problem in a satisfactory manner. The problem of rural indebtedness, important though it may be, is really a side issue. Merely to reduce the ryot's liabilities may even encourage him to engage in fresh commitments.

Employers' Fears

In the industrial sphere, as Sir H. P. Mody pointed out at the annual meeting of the Employers' Federation of India at Calcutta this week, the inspiration for labour legislation has practically passed to the Provincial Governments.

"In the provinces governed by Congress Ministries ambitious programmes have been outlined, and are already being implemented. In the province to which I belong (Bombay)—usually singled out for the doubtful honour of becoming a pioneer in progress—legislation seems to be contemplated, particularly on the question of holidays with pay and sickness insurance. A Committee of Inquiry has also been set up dealing with wages and conditions of work in the textile industry. Employers in this country... cannot possibly look on what is happening without a feeling of considerable apprehension. We must insist on certain well-defined limitations in our capacity to pay. While conceding to Labour its rights, we cannot be expected to abrogate our own."

Sir H. P. Mody also drew attention to the fact that the pace of legislation was likely to vary from Province to Province. This would accentuate the inequality of conditions already prevailing. He therefore appealed for co-ordinating machinery to deal with labour legislation in the different provinces and noted that when Federation is inaugurated the problem of labour conditions in the Indian States will also have to be dealt with.

Canada

Western Provinces' Demands

OTTAWA, December 18.—Presenting the case for Saskatchewan before the Royal Commission on Dominion Relations with the Provinces, Mr Davis, the Provincial Attorney-General, told an even more doleful tale than Manitoba's spokesman had done. It was a story of mounting debts; taxation rising to intolerable heights; thousands of families living on meagre relief allowances; constant financial embarrassments; and recurring threats of default, only averted by substantial loans from the Federal Treasury.

The woes and troubles of Saskatchewan were partly due to the ravages of the drought and partly to the collapse of agricultural prices; but Mr Davis supported the contention that the Western Provinces were being unfairly penalised by a protectionist fiscal policy, framed and maintained primarily in the interests of the two Central Provinces of

Ontario and Quebec. If Confederation was to survive, he declared, there must be some drastic readjustment of burdens and responsibilities and some reduction of the debts of the Western Provinces.

Many of the citizens of Ontario and Quebec believe that they have already paid heavily for the Western Provinces' extravagant mismanagement of their affairs. The Prime Ministers of Ontario and Quebec hastily organised a conference at Montreal on December 13th. They committed themselves to fight to the last ditch against any extreme demands on the part of the West, and to resist any proposals for the surrender of existing provincial jurisdiction or taxation powers to the Federal Government. Acute sectional differences have been stirred.

New Power Bargains

The war between the Government of Ontario and the power companies of Quebec, whose contracts with the Hydro-Electric Commission of Ontario were arbitrarily cancelled three years ago, has been terminated. New agreements have now been concluded with three of the power companies, the Beauharnois Corporation, the Gatineau Power Company and the MacLaren-Quebec Company. The price paid per horse-power is now reduced; the total cost of the power contracted for is reduced from 326½ to 247½ million dollars; and there will be a saving of 79 million dollars to the power consumers of Ontario.

Another feature of the agreement is that the costly litigation in which the Commission has been involved with the power companies, and which is now the subject of an appeal to the Privy Council, is to be carried no further. Mr Hepburn claims that a very good bargain has been made with the power companies, but the *Ottawa Citizen*, an independent paper, doubts whether he would have won the recent provincial election if he had disclosed to the voters that he was contemplating a new deal with the private power companies of Quebec.

The new bargain has been endorsed by the Ontario Cabinet, but when it is submitted for ratification to the provincial legislature severe criticism is expected. The Hydro Commission will for the time being have a surplus on its hands, but the Federal Government has refused to accede to Mr Hepburn's request for permission to export this surplus to the United States. Mr Hepburn has now announced that he proposes to challenge in the courts the validity of the legislation which imposes the ban, and Mr Duplessis, Prime Minister of Quebec, has undertaken to support him.

Active Business

Business activity is more satisfactory than was expected a month ago in view of the industrial slump in the United States. The general economic index of the Bureau of Statistics has continued to fluctuate week by week:—

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Dec. 12, 1936 ...	71.0	77.9	95.7	112.9
Nov. 27, 1937 ...	71.1	82.6	87.0	103.6
Dec. 4, 1937 ...	72.8	82.5	100.6	106.1
Dec. 11, 1937 ...	72.4	82.7	84.6	104.2

A business survey, made by the Bureau of Statistics and covering the first ten months of 1937, shows that in this period industrial operations showed a gain of 11.8 per cent. compared with the same period of 1936. The total physical volume of business was up by 10.5 per cent.

Cold weather and a widespread heavy snowfall have given a fillip to the sales of seasonal goods, such as warm clothing and footwear and equipment for winter sports. Retail merchants believe that the volume of Christmas trade will be as large as a year ago, when it was the best since 1930. Both manufacturers and distributors, however, are having to face a downward readjustment of prices; and this process is accelerated by an inflow of various goods from the United States.

Canadian importers, owing to the slump in demand south of the border, have been able to make purchases at bargain prices. Pressure is being brought to bear on the Federal Government to check these imports by special measures.

Letters to the Editor

Cotton Reorganisation

TO THE EDITOR OF THE ECONOMIST

SIR,—According to the Note on "Cotton Reorganisation" in your issue of January 1st, the President of the Board of Trade "bluntly informed the Joint Committee of Cotton Trade Organisations that the Government is not prepared to initiate legislation on the basis of the proposals for an Enabling Bill." That is not my interpretation of the following passages in Mr Stanley's letter:—

My colleagues and I have been glad to observe that certain features of the sectional schemes previously submitted, to which the Government felt obliged to take exception, have been excluded from the present scheme. At the same time they are conscious that certain major questions of policy still remain unsettled. I know that you are fully alive to the importance of these questions, and are already considering them. If I recapitulate them here it is only to ask that you and your Committee will continue to give them their earliest and most urgent attention. . . .

In conclusion, I should like to assure you that the Government have given to these proposals most sympathetic consideration and recognise in them a genuine endeavour to meet the criticisms and suggestions that have been made in the past. The Government hope that the Committee will continue with all possible speed the consultations with the various sections of the industry on the important questions of policy to which I have referred, in order that (provided the questions are settled to the satisfaction of the Government) they may be able to proceed with the drafting of a Bill to give effect to the proposals.

In submitting our proposals to the President of the Board of Trade last November, we made it clear that we regarded them as an outline which would have to be filled in when the Government had decided on the general principles involved. A considerable amount of thought has, however, as Mr Stanley's letter indicates, been given to the demarcation of the industry, to export trade policy, and to the definition of the powers likely to be required under the Bill. The Joint Committee and its constituent organisations are still working on these problems, and we hope to be able in the near future to satisfy the Government on all of them.

The reorganisation of the cotton industry is, as you rightly suggested in your original review of our proposals, a matter of interest to the community, as well as to Lancashire. It is obviously desirable, therefore, that the proposals should be presented to the public as fairly and accurately as possible. In your issue of October 23rd your comment was:—

From the technical point of view, the plan has many merits. It leaves plenty of room for elasticity, and at the same time faces the central point that if Lancashire is to be reorganised, compulsion will have to be applied to recalcitrant minorities. There can be little doubt that if some form of central control such as that adumbrated in the Joint Committee's proposals had been in force in the post-war years, Lancashire would be far more prosperous than she is.

You then referred to the safeguards provided for the public interest, apparently with some degree of approval. It is true that you concluded:—

The cotton scheme, even without these provisions, might well be innocuous, and even beneficial, but it would be a bad precedent for other industries where the same natural safeguards are not present.

Sir John Grey, in a letter which appeared in *The Economist* of October 30th, pointed out that "a precedent, after all, comes at the head, not the tail, of a procession," and the cotton industry can certainly not be accused of having thrust itself prematurely upon the attention of the Government and the country.

Now that all sections of the industry have combined, not to ask for such financial help or tariff protection as other British industries have received, but to obtain power to carry out policies approved by a majority, I feel sure we can rely on the sympathy and understanding of all who are concerned about the future of Britain's greatest export trade, and of the two or three million people who are dependent on it.

I have already taken up so much of your space that little remains to deal with Mr S. B. L. Jacks's letter to your issue of January 1st. The only point I would wish to make is that Mr Jacks has less excuse than anyone outside Lancashire for misconstruing the principles and objects of "Lancashire's Remedy." He gives what purports to be a summary of our proposals, but unlike you, Sir, he does not mention the safeguards and conditions which are an integral part of them.

The need for increased export trade, and for new uses of cotton, calls for something more concrete than platitudes. Both these aims have been sufficiently stressed by the Joint Committee of Cotton Trade Organisations during the last few years, and Lancashire is now engaged in finding a practical means of achieving them. Mr Jacks suggests cheap capital to buy new machinery, and a conference on wages to reduce labour costs. It will be cheaper to buy our new machinery out of the savings which will follow concentration of production and rationalisation of the present extravagant system of small and needlessly varied orders. As for wages, "Lancashire's Remedy" provides for the legalisation of wage or other agreements entered into by employers' and operatives' organisations. I have no doubt that both operatives' and employers' representatives would welcome Mr Jacks's co-operation in such discussions.

Yours faithfully,

FORREST HEWIT,
Chairman.

Joint Committee of Cotton Trade
Organisations,
Manchester.

New Zealand's Budget

TO THE EDITOR OF THE ECONOMIST

SIR,—Your issue of October 2, 1937, contains a comment on the Budget of the New Zealand Labour Government. I was astonished that a paper of the integrity of *The Economist* should permit the loose statements made. And it is precisely because of the standing of *The Economist* that I wish to correct the impression given.

Your writer in commenting on the increased estimates for public works expenditure says: "They are to be financed largely from capital resources under Government control, such as Post Office Savings Bank reserves—an instalment of what has come to be known in New Zealand as 'costless credit' of which Mr Nash hints at further and stronger doses, if necessary."

Presumably by savings bank reserves your writer means savings bank investments. Whatever is meant, the facts are that the procedure that the New Zealand Labour Government has adopted with the investments of the Post Office Savings Bank, and for that matter of all Government Departments, is in every respect similar to the practice of past Governments in New Zealand; furthermore it is exactly the same practice as obtains in the United Kingdom.

I am unable to understand the reference to "costless credit" nor to any hint of mine of further "doses" of it. The resources of the Reserve Bank have been used to finance the purchase and sale of New Zealand's dairy produce exports, and a small sum has been advanced in connection with the State housing scheme; in each case the advances bear interest.

In my Budget speech the statements were made that "the Government will not allow any necessary job to be held up for want of money," and that "the Government's policy is to obtain the maximum utilisation of the available production resources of the Dominion, and if the existing volume of credit is insufficient or not utilised to this end, further credit will be made available." These are the only statements in the Budget upon which your writer could possibly base his opinion. You will, I am sure, grant that his comment was hardly in accord with that scientific objectivity for which *The Economist* has established a reputation.

Yours sincerely,

W. NASH.

Office of Minister of Finance,
Wellington, New Zealand.

[We regret any misinterpretation of Mr Nash's words or policy of which we may unwittingly have been guilty, through the fact that when our Note was written only cabled summaries of his Budget speech were available. There was no suggestion in our Note that the financing of works from Savings Bank reserves (i.e. investments) or from other capital resources under Government control was an exceptional process. We did, however, point out that, while the Budget was balanced, its total was increased by over 10 per cent.—thanks mainly to the expansion of the social services and the increase of public works expenditure by over two-thirds of the former provision.—Ed., *Econ.*]

Books and Publications

Pan-Germanism

History may not repeat itself, but historians often try to make it do so. Not least important in the records of the recent past are the bogies erected by statesmen and laymen alike to embody their fears and hates. Before the war, books, pamphlets and speeches, not to say chancelleries, called again and again on the names of fearful visions believed to be balefully brooding over the diplomatic scene. In Germany the ghosts of danger were Pan-Slavism and Encirclement. To Britain, France and Russia the menace was Pan-Germanism; nor were there lacking Teutonic authors to state the case for the fears of other peoples.

Dr Schacher here* brings to life again the bogey of Pan-Germanism with its threefold objective: *Mittleuropa*, Berlin to Bagdad, and world power. German interests really lie in the *Drang nach Süd-Osten* and not in the West, but Britain and France cannot be left out of account. They will not lightly permit the German hegemony of the rich raw material regions between Berlin and Constantinople, says Dr Schacher—with perhaps an undue faith in Britain's willingness or France's ability to fight for Czechoslovakia.

Central Europe holds the key to the future. The gates to the South-East are Vienna and Prague. In Austria, Italy bars the way—and Dr Schacher believes, again rather optimistically, that this clash is more fundamental than the proclamations of ideological kinship which have made the Rome-Berlin axis. Through Czechoslovakia are the ancient routes to the Danube; and Prague's understandings with France and Russia, Dr Schacher maintains, are evidence neither of Bolshevism nor Pan-Slavism recrudescing, but simply of self-defence.

The old enemy, Pan-Germanism, in its new National Socialist guise, has *Mein Kampf* for its Bible and bilateral treaties for its technique; its aim, this book contends, is to eliminate international co-operation at the expense of the security of small nations. Dr Schacher calls for an end of "the dangerous delusion that peace is divisible," lest the traditional Prussian policy of settling with one adversary after another be successful.

Above all, the author welcomes Western re-armament, and finds there his greatest hope. "A slackening in the pace of re-armament in the West or tacit support of the false belief that peace is divisible . . . would lead finally to a threat to the peace of all Europe." The great pacific gesture is British re-armament.

The protagonists of peace seem surprisingly to have stolen the thunder of the aggressors and militarists by adopting *si pacem vis para bellum* as their watchword. According to this thesis, British re-armament is a moral act, while the arms of the Triangle powers are potent for evil-doing. The cynic might detect mere opportunism here no less than in the manoeuvres of the Central Powers; but Dr Schacher and the British people are at least realistic. And, were collective security honestly pursued and effectively applied, right and might could possibly be harnessed in the same yoke—though experience may belie hope in this matter.

Dr Schacher's argument is over simplified. His view is frequently one-sided, but his knowledge and acumen are considerable, and his book is an arresting and informed statement of the fears—and hopes—of Central Europe.

Shorter Notices

"The Economics of Rail Transport in Great Britain." Volume II. (Second and Revised Edition). By C. E. R. Sherrington. Arnold. 336 pages. 12s. 6d.

The first edition of Mr Sherrington's well-known book appeared in 1928. Volume II, which deals with Rates and Service, is now republished with the figures brought up to date and a few references to recent developments inserted. The word "economics" in the title no doubt seemed less

inappropriate in 1928 than it does to-day; but it was at no time an adequate guide to the contents of this book, which deals with the problems of finance, organisation and operation on general lines. Neither the subject matter nor the method are specifically economic. The function of rail transport is outlined; the methods of rate-charging are described; and a number of controversial subjects are touched upon—for example, the relative merits of the Departmental and Divisional systems and the question of State ownership. By stating these questions, sometimes with excellent clarity, Mr Sherrington has done a service to railwaymen who wish to examine their business objectively, and to outsiders who are insufficiently informed about the complexities of railway organisation. But there are few constructive suggestions and some lapses in exposition. A large part of the book is devoted to Operation, Traffic Control and Electric Traction, showing how many complex technical problems must be overcome before the regular routine work of a railway is possible. This is a valuable book.

THE BUSINESS WORLD

Property Societies and the Investor

LAST month, the Parliamentary Secretary to the Board of Trade announced that the Government had under consideration the question of legislation to cover, *inter alia*, certain abuses which had arisen under the Industrial and Provident Societies Acts. The public response to this statement was in itself proof of a feeling of uneasiness regarding the rapid development of the property society movement. At first sight the scope for reform in this matter may appear to be of secondary importance in relation to the broader question of company law reform. But the developments of the past two years have shown that the shackles of the Companies Act are already effective enough to induce ingenious financial minds to avoid them altogether, whenever they can. And it is beyond question that, in unscrupulous hands, the machinery of the Industrial and Provident Societies Acts is capable of being so used. On no account, incidentally, should the building societies be confused with the property societies. The former have performed valuable social service for fifty years; the growth of the latter has been rapid and exotic.

What are the characteristic methods and practices of the property societies? The function of the present article is to describe, in general terms, some instances culled from contemporary practice; and we shall reserve for a second article certain suggestions for legislative revision to check abuses. Our inquiry is timely, for in recent weeks two property societies—the General Mortgage and the London and Provincial—have gone into receivership, in circumstances described in *The Economist* of October 30 and December 25, 1937. Last week, a summons, issued against the English and Scottish Co-operative Property Mortgage and Investment Society, alleging that a false return had been made in respect of 1936, was adjourned and is now *sub judice*. The examples which follow are based upon documents issued by certain societies themselves, upon our own investigations of returns filed at the office of the Registrar of Friendly Societies, and upon a report made by an expert committee appointed by the Advertising Association, under the chairmanship of Sir Josiah Stamp, which examined property society advertising some time ago.

We may first examine some examples of publicity methods—a matter to which the Advertising Association's report devoted detailed attention. In more than one instance the Association recorded that the prospective investor had not been accorded information about existing prior charges, such as first mortgages, to which his own security would rank subordinate. That omission is repeated in a recent booklet issued by one of the societies in question, which contains some fifteen pages of illustrations of properties "actually owned by this society." The words "actually owned" are underlined. Yet the report of this particular society for December 31, 1936, showed that loans from non-members totalled £203,165, against properties valued at £331,341. The fact that members' claims rank as a second charge is thus obvious, though it is not specifically mentioned in the booklet issued by the society.

It is equally rare to find explicit reference in advertisements to the question of earnings. In some cases the methods adopted in striking profits would be regarded as unconventional, to say the least, by strict accounting canons. Once again we may venture to draw on the published report of the Advertising Association, which pointed out, for example, that in one instance a society had shown a profit of £2,528 for a given year. In this instance, however, the auditor had qualified his report in order to emphasise that an amount of £4,686, representing a surplus on re-

valuation of one of the society's properties, which had been credited to profit and loss account, was not in the nature of a realised profit. Our investigations at the Registrar's office have revealed that further qualifications were made by the auditor on the subsequent return of this society. It appears that two of the society's directors, or companies in which they were solely or largely interested, had been parties to all the society's transactions during the period, either as vendors or purchasers in property transactions, or as parties to leases granted to or by the society.

The auditor pointed out that this procedure is permissible under the rules, provided that the directors concerned disclose their interest and refrain from voting. The minutes, it appears, stated that these requirements had been met, except that the precise nature of the directors' interests had not in all cases been disclosed. The auditor further recorded that the surplus of £4,686 (for which credit was taken in the previous year) was still unrealised, and that the profit for the latest period included a sum of £2,936, representing the surplus on the sale of a property to another company, the shares of which were held by two directors of the society. The statement of investments, finally, showed that this property was sold to the company for £8,500, and that the society had made a loan of £6,000 to the company.

From this record, three particular features may be selected for criticism. The first is the crediting of surpluses on revaluation of capital assets to revenue. The second is that, although the rules of the society were observed, the directors were able to determine, in part at any rate, the capital values to be attributed to the society's assets, both on their purchase and sale. And the third point is that, through the medium of a company controlled by the directors, profits on sales of properties could be recorded, although adequate information regarding the security offered by the purchasing company was not available.

We may cite another example which illustrates two points already made—the question of true profits and the question of security for publicly-issued second-charge securities. For its first period, a certain society showed a loss of £2,344. Preliminary expenses, advertising and other fees totalling £3,712 were not charged against revenue, but credit was taken for a surplus of £2,354 arising from the revaluation of a property. The following year's operations increased the debit balance to £3,782, although the "asset" item for preliminary expenses had increased to £5,271. Moreover, the auditor's report referred to a sale of leasehold properties during the year for £21,550. It appears that some £21,525, including interest, of the purchase consideration had been left on mortgage with the purchaser, and the auditor signed his certificate "subject to the adequacy of this security." Its adequacy, indeed, had an important bearing for the holders of £47,840 6 per cent. redeemable debenture stock then in issue. Dissection of the balance sheet revealed, in fact, that less than half of the debenture stock was covered by the reversionary interest in freehold properties (after deducting prior charges), leaving the balance to be covered in part by the mortgages amounting to £21,525, to which the auditor had specifically drawn attention. To this extent, in short, the debenture issue was backed by an asset upon whose value the investor was not in a position to form an opinion.

It may be doubted whether the legislature, when the Industrial and Provident Societies Acts were passed, contemplated the possibility that these bodies might, in part, become holding societies. That, however, is a recent

development. One society issued a balance sheet totalling no more than £49,996 at the end of January, 1935. The position two years later is set out below:—

Deferred shares	3,490	Freehold and leasehold prop.	1,071,834
Preferred ord. shares	589,317	Deposits on purchases in course of completion	18,318
Creditors	32,027	Interests in subsidiary and associated concerns	68,593
Mortgages	648,280	Office machinery, etc.	2,505
Loan from subsidiary	8,500	Stationery	3,210
Tax reserve	3,770	Sundry debtors	17,909
P. & L. balance	12,616	Deposits and deferred charges	5,676
		Cash	86,730
		Advertising and publicity	23,114
		Preliminary expenses	1
	1,298,010		1,298,010

A first point of interest is the prodigious growth in the society's business in the short space of two years. When the balance sheet is dissected, other significant facts emerge. Freehold and leasehold properties are valued at £1,071,834. The first charge against these properties is represented by mortgages, totalling £648,280. The resulting difference of £423,554 should therefore be available towards the cover for the £589,317 of preferred ordinary shares issued to the public. To find the cover for the balance of £165,763 the preferred ordinary shareholder must look: first, to interests in subsidiary and associated concerns (whose precise value cannot readily be assessed); secondly, to net cash holdings (which necessarily fluctuate from day to day); and, finally, to part of the item for advertising and publicity.

In relation to these facts the society's literature, although well-produced, is not always explicit. It has been stated, for example, that "subject only to certain specific mortgages, the society now controls, with its associated interests, property to the value exceeding £1,400,000." Such a statement is formally correct, but it does not suggest that, according to the latest information officially filed, specific mortgages amounted to £648,280 at the end of last January. Nor does it reveal the actual equity interest of the parent society in the subsidiaries, since the latter's prior charges are not disclosed. In such circumstances, the statement that the subsidiary concerns "own property to a value of over £250,000" is not entirely relevant to calculations of capital cover.

Much is made in property society advertising of the intrinsic security of land and property. The Advertising Association had no difficulty in rebutting this claim in its more extreme forms. For instance, the Association criticised the statement of one society that, although a factory might become bankrupt, the factory buildings could not

become a total loss. Such a statement, clearly, ignored the possibility that the buildings might be subject to mortgage, and therefore in the event of a forced sale might involve a loss to the members of a society interested only in the reversionary equity. Faith in "bricks and mortar" is a good Victorian investment axiom, which has not lost its appeal, or the whole of its sub-stratum of truth, to-day. How, otherwise, could the building societies have made such immense strides during the past decade?

Experience teaches, however, that while faith may be reasonable, blind faith may not always be wise. Some property societies, indeed, outdo Ricardo in advancing the claims of "bricks and mortar." There is an obvious suggestion of the "original and indestructible powers of the soil" in such extracts as these from property society publicity:—

"Everything springs from the land and therefore no investment has such a solid foundation as an investment based on the land itself. . . . Short of the world coming to an end, nothing can entirely destroy an investment in land and buildings and a mortgage based on such is the safest of all. . . . In short, your security is the solidity of the land and buildings of Great Britain."

This type of advertising appeal rightly incurred the criticism of Sir Josiah Stamp's committee. Modern investment thought has long since agreed that mere physical fixity of assets does not imply fixity of capital values. In every type of fixed property there is an element of "going-concern" value, and balance sheet figures, even when cautiously written down, do not necessarily represent actual realisable values if the concern ceases to trade. And, in the instance quoted above, the society's rules gave the directors very wide powers of investment. The society had, in fact, held shares in companies for which no Stock Exchange quotation was available.

At this stage of our review we need draw only provisional conclusions regarding property society operations. These operations are conducted under conditions which would be unavailable, say, to a new company incorporated under the Companies Act. In their advertising methods, certain societies have carried an appeal to the small investor, couched in generalised terms, into one of the most specialised branches of investment—real property. And the accountancy methods which have been adopted by some societies do not seem to accord with the strictest canons of contemporary practice. These facts afford a *prima facie* case for the desirability of new legislation, which we propose to examine in a succeeding article.

Britain's Gold Holdings

THE return of the Exchange Equalisation Account's gold holdings for September 30th last was duly issued on December 31st, and for the first time since the establishment of the Account it is possible to make a comparison of the position at two different dates. The intervening period, certainly, is only six months and a single comparison reveals little as to trend. Nevertheless, a beginning has been made with the task of building up a continuous record of our total monetary gold holdings and filling a gap in our essential economic statistics.

The actual returns for March 31 and September 30, 1937, are shown below:—

BRITISH MONETARY GOLD STOCKS			
	Mar. 31	Sept. 30	Intervening Change
Quantity (million fine ounces)—			
Bank of England	73.8	76.8	+ 3.0
Exchange Account	26.7	39.9	+13.2
Total	100.5	116.7	+16.2
Value (£ millions: at 140s. per fine ounce)—			
Bank of England	516.9	537.6	+ 20.7
Exchange Account	186.7	279.3	+ 92.6
Total	703.6	816.9	+113.3
Bank of England (£ millions: valued at statutory price)...	313.7	326.4	+ 12.7

These totals appear stupendous at the first glance, both absolutely and relatively. In the summer of 1931, shortly before we left gold, we held some £160 millions of gold, valued at 85s. per ounce. To-day, at a valuation of 140s. per ounce, we hold £817 millions, and even at the old valuation we would hold nearly £500 millions. How has this enormous expansion come about; and to what extent does it represent a permanent addition to our gold stocks?

The first question can best be answered by a process of elimination. Our gold acquisitions since 1931 have not been due to an active balance of payments, for the official calculations for the intervening years suggest that, on the whole, the balance has been passive. They have not been due to any large-scale repayment of British money lent or invested overseas, for these have been years in which most debtors have had unusual difficulty in meeting their engagements. They are due, in fact, to two main causes. The first is the growth of the sterling area, and the second is flight of capital from the Continent to England. We may add a third and subsidiary cause, which was in evidence during part of last year—namely, a temporary lack of faith in the stability of gold itself against the pound and dollar, commonly called the gold scare.

The development of the sterling area has had a very important consequence. Part of the gold stocks of countries within that area are now concentrated in London, and their central banks regard these sterling balances as part of

ly with their own gold. The most striking example of movement of several years ago brought gold dishoarding in gold to London. Much of the proceeds of this gold was used by India to reduce her external indebtedness and to set against the Reserve Bank of India's "balances abroad" and incidentally against its "sterling securities"; for the Reserve Bank's will. The same applies to the Australian Commonwealth Bank's sterling balances, bills and securities. Indeed, it may be recalled that, several years ago, the Commonwealth Bank exchanged part of its gold for sterling. Outside the Empire, the Scandinavian banks show large foreign balances and bill holdings, again consisting largely of sterling.

It is that Britain's gold reserves to-day are, to a great extent, the ultimate reserves of the whole sterling area. They are not affected by trade or other inequalities within the area, but should the area as a whole have a net passive balance *vis-à-vis* the outside world, the British gold reserves would quickly find themselves in the front line of fire. The possibility of a serious or prolonged depletion of our reserves through this cause may well be remote, but we cannot wholly ignore it.

Next, the question of the influx of fugitive foreign capital into London since 1932 needs consideration. Experience has shown again and again how volatile this capital is. If and when it leaves this country it will (and should) bear away the gold it brought. No estimate is available of the amount of the fugitive money in London last September, but the magnitude of our gold reserves at that date is itself an indication that the amount of foreign money in London was large. And there is no doubt that since September 30th some of the French money in London has returned to France.

The late spring, which falls within the period covered by the two Exchange Account returns, witnessed the gold scare, during the erratic and irrational course of which gold was offered in large quantities in the London bullion market from the United States and other foreign sources. The Bank of England also handles, as part of its normal routine, all the newly-mined gold from the Transvaal and later from Russia, which cannot always be placed quickly and completely. Altogether, the British authorities had, last April and May in particular, to absorb large quantities of gold, and the published figures suggest that most of it was taken by the Exchange Account.

There is thus reason to believe that our recent gold acquisitions have been due to causes quite unconnected with the ebb and flow of our current transactions with the rest of the world, and that much of our present gold stocks are held at the will of others. Available evidence suggests, indeed, that part of this gold has gone during the past three months. During that period there has occurred the November recovery in France, the repatriation of French capital and the replenishment of the French gold reserves. Next, there has been a recent change in the sterling assets

of the Exchange Account. Comparison between March 31st and September 30th is vitiated by the April Defence Loan issue, which was taken largely by the departments, and the June enlargement of the Exchange Account itself. On September 25th the floating assets of all public departments, including the Exchange Account's *sterling* assets, were £332 millions. By the end of December they had risen to about £360 millions. It is difficult, consequently, not to believe that to-day the Exchange Account is holding more sterling and therefore *less* gold.

On general grounds, such a movement deserves to be welcomed. The sooner fugitive capital is repatriated, the better for the whole world. And its presence makes our own position equivocal. We may be in danger of living in a fool's paradise while other countries accuse us of helping to corner available supplies of monetary gold. This question of public opinion brings us to our final point—namely, the advisability of more detailed information. In these days when many Exchange Accounts work in co-operation, all the arguments which formerly favoured secrecy have been reversed. Six years ago secrecy may have handicapped would-be speculators in sterling; to-day it handicaps legitimate business. No one now knows the true size of the various national gold reserves, and no one knows whether or not a particular country is nearing the end of its tether. So far from creating confidence, this lack of knowledge destroys it. There is a strong case to-day for issuing returns of Exchange Accounts as frequently and as expeditiously as those of central banks.

Furthermore, co-ordination is needed between the multitude of financial returns now published in this country. First, the gold of the Bank of England and the Exchange Equalisation Account might be valued on the same basis, i.e. in accordance with the current market price of gold. Next, the various returns relating to our financial position might relate to the same day of the week. At present the Bank return relates to Wednesday, the Floating Debt return to Saturday and the Exchange Equalisation Account return to the last day of March or September, on whatever day of the week it falls.

Finally, information about the other assets of the Exchange Equalisation Account would be highly welcome. It is announced each half-year that only a small quantity of foreign exchange, as distinct from gold, is held, but we are not told how much, nor do we know anything about the Account's sterling assets. How much of these are Treasury bills, how much Ways and Means Advances to the Government, how much (if any) are balances at the Bank of England and how much (if any) is invested in other ways? Finally, how great are the Account's accrued losses arising out of the Bank of England's gold purchases since 1932? Are these losses shown as actual losses or as a debt ultimately recoverable from the Treasury?

In short, while our gold position is reasonably strong, the current position tempts the world to form an exaggerated idea of its strength. And we are still in need of much more information before we can see the complete picture.

Tungsten and Antimony

WHEN Bessemer and Siemens perfected their processes the civilised world passed from the Iron Age to the Steel Age. To-day, with the continuance of scientific discovery, the Steel Age may be said to have evolved, in turn, into the Era of Special Steels. Alloy steels are superior in many respects to their precursors, the simple carbon steels; they have an extended range of mechanical properties and also certain new physical properties. And among the many ferro-alloy metals now in use the position of tungsten—used mainly to give finished steel a hardness and toughness to withstand the effects of the highest temperatures—is more or less unique.

Eighty years ago Robert Mushet of Sheffield introduced a steel containing two to six per cent. of tungsten. To-day the best grades of "high-speed" steel contain 18 to 22 per cent. of tungsten, 3 to 4 per cent. of chromium, and 0.5 to 1.5 per cent. of vanadium. Tungsten has become

an indispensable material in the production of high-class cutting, grinding and crushing tools, and it is widely employed in the armaments industry. The development of "tipped" tools—i.e. those in which high-speed steel is used only for the cutting edges—has enabled considerable economies to be made in the use of tungsten. New uses, however, have been opened up in the manufacture of filaments for electric lamps and wireless valves; for contact points in electrical apparatus; and as an occasional substitute for platinum in the chemical industry.

The principal source of the metal is wolfram ore, a tungstate of iron and manganese. Certain qualities, however, are obtained from scheelite, a tungstate of calcium. The world's production of wolfram, which occurs in veins and lodes, amounted to 1,700 metric tons in 1900 and had risen to 32,000 metric tons in 1918. It slumped, however, to a mere 6,000 tons in 1932. Since the tungsten con-

tained in high-speed steel scrap can be recovered in its entirety, a period of high consumption carries the seeds of a subsequent slump in demand. Moreover, in periods of rising prices the competition of molybdenum may be severe. Satisfactory qualities of high-speed steel can be made from the latter metal, and in the United States home-produced molybdenum is tending to displace foreign tungsten.

In pre-war times the price of tungsten fluctuated between 25s. and 35s. per unit. In January, 1933, the price had fallen to 10s., but at the end of March, 1937, the London quotation had risen to 59s. After climbing to about 130s. it has now fallen back to approximately 80s. per unit. At the beginning of this century the United States was the principal producer, but, as the following table shows, the premier position is now occupied by China.

PRODUCTION OF TUNGSTEN ORE AND CONCENTRATES
(Long tons, estimated WO₃ content)

	1930	1932	1934	1935	1936
India, concentrates	1,594	1,315	2,164	2,494	2,959
Federated Malay States, scheelite ..	580	223	1,085	983	982
Federated Malay States, wolfram ..	127	100	51	178	183
Australia, wolfram	131	29	207	287	216
Portugal, concentrates	302	158	360	666	812
U.S.A., concentrates	376	212	1,097	1,283	1,399
Bolivia, concentrates	524	405	469*	840*	1,296*
China, ore	4,378	1,308	3,723	4,360*	4,163*
French Indo-China, concentrates ...	130	148	179	246	297

* Exports.

The Southern provinces of China are the most important potential source of tungsten in the world. Chinese exports go to Germany, Hongkong (whence they are largely reexported to the United Kingdom), the United States, the United Kingdom, France and Belgium—in that order. Imports into the principal consuming countries in recent years have been as follows:—

RETAINED IMPORTS OF TUNGSTEN ORE
(Long tons)

	1930	1932	1934	1935	1936
United Kingdom	3,190	3,331	5,194	7,865	8,813
Hongkong (i)	1,944*	612	699	2,293	1,676
Germany	3,950	1,687	4,316	7,757	8,588
Russia	1,617	2,109	1,682	1,878	848
U.S.A. (WO ₃ content)	†	†	826	1,039	1,499
			680	916	2,345

* April to December only. † Not available. (a) Ferro-tungsten. (b) Tungsten ore. (c) Total imports.

In the absence of any early increase in wolfram shipments the stringent supply position now existing seems likely to continue. But the present price is sufficiently high to encourage the reworking of deposits which have long been idle, and technical progress in the extraction of the metal is still being made. In the long run, therefore, supplies are likely to be more than adequate to satisfy demand—especially when the armaments boom is over.

So much for tungsten. We may now examine the position of antimony, which is an essential constituent of many useful alloys, although it is not, strictly speaking, a ferro-alloy metal. It is used in the production of "hard" lead, type metal, anti-friction metals and Britannia metal. Antimony is an essential constituent of the ordinary shrapnel bullet, its effect being to harden the lead and prevent the bullets from losing shape on the bursting of the shell which contains them. Finally, the oxides and sulphides of antimony are used in paints, in vulcanising rubber, in enamelling, and in the manufacture of matches.

Before 1914, world production of antimony averaged some 20,000 metric tons annually, but this figure was trebled during the Great War. On the cessation of hostilities supplies of scrap were sufficiently abundant to avert drastic curtailment of the production of new antimony. The output of the principal producers in recent years is shown in the next column.

China easily takes pride of place in the list of producers. The table also reveals the declining importance of France and the growth of Yugoslavia as a source of antimony supplies. The United States, the United Kingdom and Germany—in that order—are the principal consuming countries, the United Kingdom being China's best customer

PRODUCTION OF ANTIMONY ORE
(Long tons, in terms of the metal)

	1929	1932	1934	1935	1936
Czechoslovakia	684	587	1,142	2,391	1,020
France	1,909	630	261	446	526
Italy	378	405	355	200	1,600
Jugoslavia	156	...	...	498	7,188
Mexico	2,667	1,317	2,626	4,498	6,421
Bolivia*	3,719	1,446	1,182	3,348	17,000
China	18,457	13,675	15,200	18,000	17,000
U.S.A.	...	374	361	499	674

* Exports.

for antimony. American importers have lately been taking larger tonnages from Mexico and Bolivia, and a substantial proportion of the United States' demand is met from secondary sources, including the treatment of scrap.

Nearly 95 per cent. of China's production comes from the Hunan Province, south of the Yangtze, the bulk being shipped from Shanghai. In January, 1936, the Antimony Administration, under the control of the Central Government, superseded the provincial syndicate and assumed control of production. During the past year Customs permits have been issued only for cargoes owned by the Administration itself. The recent steep rise in the price of the English regulus to a present figure of £81 to £82 per ton is the direct result of the shortage of Chinese supplies. In face of the Japanese blockade, fresh shipments of the regulus, oxide or ochre, can be made only with great difficulty, and most of the material afloat has already been absorbed or is being resold at high prices. A permanent shortage, however, seems most unlikely, for the world's available deposits show no signs of exhaustion.

The use of both tungsten and antimony is probably destined to increase still further. And, in that connection, the course of political events in China may be a matter of some concern in the future. In neither instance is China the only producer, but in both her rôle is indispensable.

THE STANDARD BANK OF SOUTH AFRICA LIMITED

Bankers to the Imperial Government in South Africa; and to the Governments of Northern Rhodesia, Southern Rhodesia, Nyasaland and Tanganyika

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Finance and Banking

The Turn of the Year.—With the exception of the abnormal war years, the money market avoided borrowing from the Bank of England over the turn of the year for the first time within the memory of almost, if not quite all, its members. Possibly because of the repayment of the French credit, some of the banks broke their usual practice of not buying bills during December, and instead continued buying bills right up to the end of the month. This helped to keep the money market supplied with funds, and then during the last week of the month the market adopted its usual practice of timing its Treasury bill payments and maturities so as to throw the whole onus of borrowing upon the Government. The market's holdings of commercial bills and bonds were carried without resort to the Bank. Meanwhile, the floating debt return for December 31st reveals the Government's plight:—

	FLOATING DEBT			
	(£ millions)			
	Dec. 25th	Dec. 31st	Change	
Treasury bills	942	890	— 52	
Ways and Means Advances—				
Public Depts	41	39	— 2	
Bank of England	Nil	56	+ 56	
Total	983	985	+ 2	

Thus once more the market has made the Government do the market's borrowing with considerable success. There may, however, be a day of reckoning on March 31st, for the market will then have no maturities and will have to pay for the new bills maturing at the end of June.

The President Helps Silver.—President Roosevelt after all, has not let the silver market down. The bears who had opened up their positions on the expectation that he would, have this week been scuttling to cover. As a result of the declaration on United States silver policy, the position in the silver market remains substantially unchanged. The one alteration announced is the reduction from 77.57 cents to 64.64 cents in the price paid by the United States Treasury for newly-mined domestic silver. The cut in the price offered for domestic silver is a development of no importance to the world price for the metal. It still leaves the figure paid to United States producers at a premium of 44 per cent., and though it may cause protests among the politically important silver interests, their resentment cannot translate itself into offerings of silver on the external markets.

Of much greater importance from the point of view of the international silver market is the fact that the United States Treasury has renewed its bilateral agreements with Mexico and Canada for the purchase of silver until the end of 1938. If these agreements and that relating to domestic silver account for the whole of the production in the countries concerned they will cover as much as 65 per cent. of the output of silver on the basis of the 1936 figures. They will probably apply to a much larger proportion of the 1937 output, since American domestic production has been going ahead by leaps and bounds under the stimulus of the subsidy. Moreover, the agreement between the United States and China for the exchange of silver for gold or dollars has been renewed until the beginning of next July. Of even greater significance than the renewal of these agreements is the fact that the United States Treasury has left unchanged at 44½ cents the price which it will pay for imported silver—whether it falls within or without the scope of the bilateral agreements. It is reasonable to assume that if the American authorities had decided to reduce their price for imported metal they would have done so at the beginning of the year, and thus made the step coincide with the lapsing of the International Silver Agreement and with

the reduction in the price for domestic metal. And so the position is "As you were" for the silver market. There is still the anchor of an American price for imported silver on which to depend. Though that price may be shifted without notice, the strong probability is that it will not move for some months to come.

Bankers' Clearings in 1937.—Superficially, the total of bank clearings for 1937 suggests a further general increase in activity. All four totals are higher than in 1936, and carry on the upward trend of previous years. Further examination shows, however, that the past year's increase was in every case proportionately less than that registered a year ago:—

	1935	1936	1937
(£ millions)			
London clearings:—			
Town clearings	32,444	35,039	36,719
Metropolitan clearings	1,887	2,040	2,162
Country clearings	3,229	3,538	3,805
Total	37,560	40,617	42,686

To obtain a true picture, it may be well to compare the changes quarter by quarter. Taking London clearings first, the following is the record of 1937 compared with the previous year.

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Town	+ 1,349	+ 1,064	+ 201	— 934
Metropolitan	+ 16.0	+ 12.9	+ 2.3	— 9.5
Country	+ 6.9	+ 10.6	+ 6.2	— 0.5
Total	+ 1,453	+ 1,219	+ 298	— 899

The fourth quarter's decline in Town and Metropolitan clearings brings to light very clearly the marked falling-off in Stock Exchange business and the reaction of the recession in security prices upon spending in London. To the extent that Metropolitan clearings reflect the volume of retail trade, the real shrinkage may be greater if allowance were made for the year's rise in retail prices. On the other hand, Country clearings have kept up reasonably well, and their resilience suggests that no general trade recession has occurred. The movement of Provincial clearings, however, is less reassuring. Comparisons with 1936 were good up to the end of September, but the fourth quarter shows declines ranging from 2.3 per cent. for Leeds to 19.8 per cent. for Bradford. Increases over the last quarter of 1936 were recorded by Sheffield, Hull and Newcastle-upon-Tyne.

Bank Clearings Since 1900.—We publish this week on page 96 of our Statistical Appendix a record of the annual totals of London and Provincial clearings from 1900 to 1937. The main feature of the table is the enormous growth in the three London clearing totals. Between 1902 and 1937 Town clearings have increased in the proportion of 100 to 402, Metropolitan clearings since 1908 from 100 to 334, and Country clearings since 1902 from 100 to 437. Complete totals for Provincial clearings have only been available since 1922, and have fallen, proportionately, since that year from 100 to 82. The rise in prices since pre-war days is partly responsible for the big increases in the London clearings, while, conversely, the post-war fall in Provincial clearings reflects the decline in prices since the early 'twenties. Other factors than that of changing prices, however, are needed to explain the London expansion. These factors include the growth in investment and financial business and the spread of the banking habit to a much wider section of the population than a generation ago.

MONEY MARKET NOTES

Foreign Exchanges

Francs were inclined to be weak, and the French Control has had to give some support to keep the spot rate down to Frs. 147.30 and to bring the three months' rate back from Frs. 4½ to Frs. 4 discount. The continuance of labour troubles is one cause of weakness, while the Banque de France return dated December 30th, published on January 6th, shows a further Frs. 5,000 millions of loans from the Banque de France to the Government. There are apparently certain offsets against this new borrowing, but the margin available for further borrowing must be getting low. The New York rate weakened suddenly on Tuesday to \$5.0140, largely on silver rumours, but this was a very temporary movement, for the rate has now come back to \$4.99½. Belgas, guilders, and Swiss francs moved with the dollar in relation to sterling.

The Money Market

The fact that there were no loans from the Bank to be repaid has made money exceptionally easy for the opening week of the year. The heavy payments due for Treasury bills on January 1st were easily arranged, the more so as many of the bills had already been

sold forward to the banks. All this week bills have been in keen demand by the banks, but bill-brokers have so much money available that they are reluctant to sell. Minimum rates are once more in force.

	Jan. 7, 1937	Dec. 30, 1937	Jan. 6, 1938
Bank Rate	2½	2½	2½
London Deposit Rate	2½	2½	2½
Short Loan Rates:—			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	1½	1½	1½
Discount Rates:—			
Treasury bills	17½	17½	17½
Three months' bank bills	9½	9½	9½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The seasonal contraction in tender issues of Treasury bills is now beginning. On January 7th only £40 millions of bills are being offered, against maturities of £50 millions. At the moment the total tender issue stands at £622 millions, and this will probably be the peak figure for the current financial year.

The Bank Return

This week's drop in the note circulation is £12.7 millions, which is an un-

usually big contraction for a single week, even just after Christmas. There are only another £12 millions of the Christmas notes still outstanding, and once these have returned the fiduciary note issue will presumably be reduced to £200 millions.

	Jan. 6, 1937	Dec. 22, 1937	Dec. 29, 1937	Jan. 5, 1938
(£ mill.)				
Issue Dept.:				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	462.7	509.3	505.3	492.6
Banking Dept.:				
Reserve	51.4	38.0	41.9	54.5
Public Depts.	13.5	10.8	11.4	14.4
Bankers' Depts.	110.2	98.2	120.6	129.2
Other Depts.	38.4	36.5	36.6	37.4
Govt. Secs.	93.3	96.5	114.6	108.3
Discounts and Advances	14.4	7.5	9.2	15.1
Other Secs.	21.1	21.5	20.9	21.1
Proportion	31.7%	26.1%	24.8%	30.1%

The return of notes from circulation has raised the Reserve by £12.6 millions and also replenished bankers' deposits. £3.0 millions, however, have been diverted by motor vehicle duty and other tax payments into public deposits. The repayment on January 1st of the money borrowed by the Treasury from the Bank over the turn of the year explains the drop in Government securities. In spite of the absence of market borrowing, discounts and advances are £5.9 millions higher.

Guaranty Trust Company of New York

Incorporated with limited liability in the State of New York, U.S.A.

Condensed Statement, December 31, 1937

Industrial Profits in December.—After a succession of three months, in which the percentage advance in profits exceeded 20 per cent., the improvement registered by the 152 companies reporting during December, 1937, was reduced to 14.69 per cent. The absolute total of net profits for these companies amounted to £18,101,112, compared with £15,781,428 for the previous year. Hitherto we have recorded, month by month, the percentage advances in industrial profits as each month's reports have been received. In the annexed diagram we have endeavoured to present a comparison which will take account both of percentage and absolute changes in each month in the year:—

A few words of explanation regarding the composition of this chart may clarify its potential uses. On the vertical scale, percentages are plotted, corresponding to the rate of increase shown by the total profits, declared in any one month, over the profits of the same companies for the preceding financial year. Movements in the height of the blocks, in other words, correspond to movements in the monthly percentages which we have presented hitherto. It will be noticed, however, that the base line of each monthly block is of varying width. The width, in fact, is determined by the absolute amount (in £'s) of the total profits shown in any given month. For example, in September, 1937, the rate of increase was the highest of any month; for the advance was as much as 27.80 per cent. In December, 1937, the rate of increase was less than 15 per cent. But the sum total of profits in September was only £7,269,607, whereas in December it was £18,101,112. The base line for December, therefore, is two-and-a-half times as large as that for September. The varying base line is, of course, designed as a safeguard against the danger of drawing unreliable conclusions from percentages which must be based on a fluctuating sample of results. As the chart shows clearly, the size of the actual sample varies very considerably at different periods of the year. The areas of the rectangles have, of course, no significance in themselves.

Foreign Bonds in 1937.—The latest calculations of the index of foreign bond prices, computed by Municipal and General Securities Company, Limited, refer to the last day of 1937, and thus provide material for a year's retrospect. The total index (January-June, 1934 = 100) fell in 1937 by 22.2 per cent. from 110.3 at the end of December, 1936, to 85.8 on Friday last. Both the defaulted and undefaulted indices now stand very close to the latter figure, although the former, of course, suffered the heavier fall last year. European issues have risen fractionally, and Egyptian issues have varied but little

on balance. These movements, however, have been totally submerged by the headlong falls in Far Eastern and South American bonds. Details of the total and component indices covering the past thirteen months are given below:—

AVERAGE JANUARY-JUNE, 1934 = 100

End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	Undefaulted Bonds	Defaulted Bonds
				States	Provinces	Total			
1936 December	(31) 97.7	(31) 114.0	(4) 99.7	(36) 120.2	(11) 110.0	(47) 117.8	(113) 110.3	(59) 105.8	(54) 110.3
1937 January	103.6	116.2	100.6	128.5	131.7	129.3	117.0	107.3	128.5
February	(30) 102.9	120.0	99.6	131.8	131.8	131.8	119.0	108.1	131.4
March	(29) 100.3	120.8	97.8	126.2	120.1	124.7	115.7	106.7	126.0
April	100.9	120.2	97.1	124.7	122.7	124.3	115.4	106.6	125.4
May	101.6	123.1	98.3	124.3	120.7	123.4	114.2	108.0	125.3
June	101.3	125.5	98.1	124.8	118.2	123.2	114.4	109.0	125.1
July	105.9	117.6	97.9	127.8	117.5	125.3	116.7	106.3	128.6
August	103.1	95.3	98.5	122.4	118.4	121.4	107.7	99.1	117.4
September	101.9	87.2	99.5	116.1	111.8	115.0	102.4	95.9	109.7
October	(28) 99.0	88.1	98.3	105.1	108.2	105.8	(109) 98.5	(54) 95.5	(55) 101.5
November	97.7	81.6	97.9	82.4	74.2	80.4	95.5	88.6	82.5
December	98.4	81.6	98.6	82.6	75.0	80.7	85.8	86.6	85.0

N.B.—Figures in brackets denote number of bonds included.

It is perhaps some slight consolation that no single geographical division of the index recorded a fall last month, although there was a striking divergence between defaulted and undefaulted bond movements. Altogether, 1937, which started as a promising year for the foreign bondholder, ended miserably in circumstances of war and default.

Railway Receipts in 1937.—The railways' "traffic year" has closed with a gross gain of £7,106,000 for the fifty-two weeks ending January 2, 1938. The figures, of course, exclude three days of 1937 (two days for L.N.E.R.) and include two days of 1938 (one day for L.N.E.R.). It is scarcely necessary, however, to take account of such refinements in estimating potential earnings on the marginal stocks in respect of a year which has seen such substantial changes in operating conditions. We may first, however, set out the changes in receipts by classes, separating the first thirty-nine weeks and the last thirteen in order to show the result of increased charges. The analysis is made in the following table:—

HOME RAIL TRAFFIC INCREASES
(in £'000's)

	Pass.	Merch.	Coal	Total Goods	Total Receipts
Weeks 1-39 L.M.S.	786	542	564	1,106	1,892
Weeks 40-52	263	302	315	617	880
Total inc. L.M.S.	1,049	844	879	1,723	2,772
Inc. % L.M.S.	4.1	3.4	7.0	4.6	4.4
Weeks 1-39 L.N.E.R.	589	464	600	1,064	1,453
Weeks 40-52	174	164	295	459	633
Total inc. L.N.E.R.	763	628	895	1,523	2,286
Inc. % L.N.E.R.	4.5	3.7	7.3	5.2	4.9
Weeks 1-39 G.W.R.	250	316	454	770	1,020
Weeks 40-52	46	121	130	251	297
Total inc. G.W.R.	296	437	584	1,021	1,317
Inc. % G.W.R.	2.7	4.4	11.0	6.7	4.3
Weeks 1-39 Southern	656	— 57	— 27	— 84	572
Weeks 40-52	109	+ 30	+ 20	+ 50	159
Total inc. Southern	765	— 27	— 7	— 34	731
Inc. % Southern	4.8	— 0.8	— 0.7	— 0.7	3.5
Weeks 1-39 Four Cos.	2,281	1,265	1,591	2,856	5,137
Weeks 40-52	592	617	760	1,377	1,949
Total inc. Four Cos.	2,873	1,882	2,351	4,233	7,106
Inc. % Four Cos.	3.9	3.4	7.4	4.8	4.5

It will be seen that traffics as a whole increased by 4.5 per cent. compared with an average increase of *The Economist's* index of business activity of slightly over 5 per cent. for the first 11 months of 1937. Coal led the field, but the general merchandise figures appear a little disappointing. Moreover, it is difficult to explain an advance of no more than £20,000 per week in the average increase for weeks 40-52, compared with weeks 1-39. According to authoritative estimates of the effective increase in receipts which should have resulted from the basic 5 per cent. increase in fares and freight rates from October 1st last, an increase of as much as £108,000 weekly was to be expected. As a source of massive increases in traffics, the rate increases have proved comparatively disappointing.

And Earnings Estimates.—Earnings estimates, further, must take into account the substantial increases in costs arising in 1937. An estimated increase of £1,300,000 in wages may have been involved in the wages award. Increased costs of coal and stores are more difficult to estimate, since the companies have forward contracts for supplies. Sir William Wood's estimate that 1936 quantities at the prices prevailing last June would involve an annual increase in expenditure of £5 millions is thus more relevant for 1938 than for 1937. Finally, increased operations have involved increased direct running costs. The task of estimating potential earnings is thus difficult enough, even if the ancillaries (which should have done much better in 1937) are left out of account. Provisional estimates, however, appear to suggest that L.M.S. ordinary may be covered to the extent of 1½ per cent.—a slight increase on last year's 1¼ per cent. dividend is an evident possibility. L.N.E.R. second preference stock received ½ per cent. in 1936, and may have earned 1 per cent. Precise estimates in the case of this undertaking, however, are impossible, owing to fluctuations in renewals provisions. Some sections of the market expect an increase in the Great Western ordinary dividend. As much as 4 per cent. may well have been earned, but its full distribution is a matter, in the last resort, for directorial decision, in the light of dividend policy during the depression. Little change, finally, is apparent in the potential earnings position of Southern deferred, on which the preceding year's ½ per cent. dividend should be maintained.

Bank and Discount Company Dividends.—The bank share market has been stimulated, and the discount companies shares have at least been encouraged by this week's dividend statements. A year ago, higher profits but stable dividends were the rule. After a year in which bank advances have been increasing—the November totals were some 11 per cent. higher than the figures for the same month in 1936—a sizable increase in profits was virtually assured. It has been achieved by all the banks which have issued their statements as we go to press. These will be found in summarised form on page 97. The Martins Bank profits have increased from £769,988 to £853,566, the latter figure being struck after provision for a staff bonus in celebration of the Bank's centenary in 1931. It covers, however, an increased distribution of 16 per cent., of which 2 per cent. represents a similar bonus to shareholders. A 16 per cent. increase in advances during the year to November plainly accounts for a significant rise in profits. For yield calculations, however, the special nature of the bonus suggests that it should not be taken into account. For Westminster Bank £4 shares, £1 paid, the case is different. The distribution of 18 per cent. paid regularly since 1931 has been augmented by a bonus of 2 per cent., thus restoring the pre-depression rate of payment. Net profits in this instance are struck after tax (at the higher standard rate) and have increased from £1,731,955 to £1,750,589. Premises

reserve again receives £200,000, and provision for pensions is raised from £200,000 to £300,000, at some small expense to the balance carried forward.

To Barclays Bank belongs the proud record of maintaining distributions unchanged throughout the depression, and no increase in the 14 per cent. rate on the "B" and "C" shares was anticipated. A sharp advance in profits, however, is recorded. The net figures, after providing in full for taxation, have increased by £239,464 to £2,133,825. Taking a rough calculation for N.D.C., and adjusting for the change in the standard rate of tax, it would appear that profits have increased by the quite exceptional rate of 19 per cent. before taxation. Premises account receives £50,000 less at £200,000, but reserve is credited with £500,000—raising the total to £10,750,000, compared with an issued capital of £15,858,217. The experience of Barclays Bank, indeed, typifies the banking record of 1937, for this institution enjoyed a very substantial increase in advances, amounting to £21 millions to November, and had reduced its less remunerative bills and investment holdings by a total of £18½ millions. Comparison of the Midland Bank figures is complicated by the issue of £917,261 of new capital to shareholders and staff in the early winter. This capital ranks for the final payment of 8 per cent. actual, the total for the year being maintained at 16 per cent. Net profits show an actual increase from £2,467,894 to £2,508,009, but adjustment for higher taxation and N.D.C. suggests that the "true" advance is of the order of 7½ per cent. The National Discount dividend, which is maintained at 26 per cent. on the "B" shares, was well received, while Alexanders Discount, after reducing the interim payment from 9 to 7½ per cent., has maintained the final payment of 10 per cent. The difficulties in the market for "shorts" are thus reflected in the reduction of this long standing 19 per cent. distribution to 17½ per cent., although the maintenance of the final payment may have some significance.

Lancashire Cotton Progress.—An estimate which appeared in *The Economist* of December 19, 1936, relating to the prospective profits of the Lancashire Cotton Corporation was criticised in the trade as being unduly high. Compared, however, with the Corporation's actual achievement for the year to October last, now published, it stands convicted of modesty rather than extravagance. Appreciable progress had been recorded during the first half of the year, for a statement issued in June showed that profits had amounted to £176,052 (before debenture interest) for the six months to April, 1937, compared with £63,287 for the previous six months. These figures, however, are themselves moderate compared with a trading profit of £593,194 for the full year, against £127,899 for 1935-36. A comparison of total income during the past four years is given below:—

Years to October 31st	Total Income £
1934	44,867
1935	65,244
1936	136,465
1937	608,830

50 per cent. capital bonus. Yield at 25 per cent. = £6 6s. 0d. at 16 per cent. = £4 0s. 0d. (w) Paid on £300,000 more capital than in preceding year.
(d) 17½ per cent. cash dividend and 7½ per cent. in deferred ordinary stock. (y) Dividend before the 200% capital bonus 4s. per share.

(Continued from page 77)

Thus, at a single stride, the Corporation has stepped into the zone of high profits. Lancashire will have every satisfaction with these figures.

* * *

In their distribution policy, however, the directors have followed the cautious line indicated by the chairman last April. Before allowing for £78,783 brought forward, but after providing £3,960 in respect of fees, the distributable profit for the year amounts to £604,870. Debenture interest absorbs £75,000 gross. The directors then provide £155,000 for depreciation reserve—the first appropriation in the history of the Corporation—which closely corresponds to the figure suggested in our article thirteen months ago. After provision for the 5 per cent. preference dividend, a balance of £305,995 is available for the ordinary stock—equivalent to earnings of 18.4 per cent. The general expectation that no ordinary dividend would be paid, however, has proved correct. Some £150,000 of this surplus is transferred to general reserve, and the balance carried forward is increased from £78,783 to £234,778. The results testify to the success of the price agreements in the cotton spinning industry, but the directors' caution will be generally approved. The revised balance sheet was much strengthened after the reconstruction last January, but ordinary stockholders should not begrudge further addition to its strength. The latest balance sheet shows a substantial increase in stocks, from £770,928 to £1,096,469, and an improvement in the cash position from £260,736 to £398,292. Altogether, net current assets have increased from £1,356,000 to £1,858,000. The Corporation's finances, in short, have been put in a much more healthy position. Whether the current year's earnings will match those of 1936-37 is, perhaps, open to argument. New business has declined since the end of the financial year, though spinning

margins remain satisfactory. This element of doubt has been reflected in the movements of the preference and ordinary stocks which after this week's rise stand at 19s. 6d. and 13s. 9d., respectively, compared with last year's "highs" of 20s. 10½d. and 16s. 9d.

* * *

The Week's Capital Schemes.—The two reorganisation schemes published this week leave very mixed impressions. The Oswald Tillotson scheme has little to commend it. A loss of some £234,887 is to be made good by the cancellation of 25 per cent. of the existing £100,000 7 per cent. cumulative preference shares, and the reduction of the £213,444 of ordinary capital (some 78 per cent. of which is held by directors) to £3,557. In consideration of this capital cut and of the cancellation of four years' arrears, preference shareholders are to receive a 5 per cent. cumulative preferential dividend and three-fifths of the remaining surplus of profits up to a further 5 per cent., while capital rights are adjusted so that original payments on winding-up are retained. Thus preference shareholders are to receive, in effect, a 3½ per cent. cumulative dividend and a further 3½ per cent. contingent upon profits. Ordinary shareholders lose nothing except, at the worst, the cession of an extra ½ per cent. to preference shareholders, who, at best, receive only this ½ per cent. in return for the sacrifice of arrears and a reduction in cumulative dividend. Preference shareholders should clearly demand the reconsideration of so ungenerous a scheme and a satisfactory share in the equity as compensation for their sacrifice. The reconstruction plan of W. H. Dorman and Company is not the first to be carried through by this engineering concern. The trend of profits, if not their absolute amount, is fairly satisfactory, and provided one obscure point is cleared up there can be no objection on the part of shareholders to tidying the balance sheet. A deficiency of £169,548 is to be met by reducing the £73,750 5s. ordinary shares by 60 per cent. to £29,500, and the £250,000 5½ per cent. non-cumulative preference shares by one-half to £125,000. But preference capital rights are unchanged, and the nominal rate of dividend is doubled. The only real change is the proposal to ask second debenture stockholders to agree to a reduction in interest from 10 per cent. to 6 per cent. and to the postponement of redemption. The inducement to debenture holders to agree to this amendment of their rights is not disclosed. There is no reason, however, for preference shareholders to take exception to the plan.

* * *

Other Company Results.—The seasonal drop in the number of reports published continues, and our usual analysis of profit and loss accounts appearing on page 98 comprises only twenty further companies. Our table now also shows cumulative totals since the beginning of the year. The week's results are discussed on pages 82 and 97 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—At the *Bank of Montreal* meeting, held in Montreal recently, Sir Charles Gordon reviewed the improving conditions in Canada in the past year. In certain districts the wheat crop had failed through drought, but various factors, such as industrial development, had offset this failure. It was explained by Mr B. G. Tarran to the members of *Tarran Industries* that no dividend had been recommended, since it was desired to conserve resources to finance the extensions of the business. Mr Gerald W. P. Portman, addressing *Chosen Corporation* proprietors, discussed the liquidation of Nurupi K.K.K., of whose net assets the company would receive 65 per cent. Mr P. E. Marmion, addressing *Burma Corporation* shareholders at Rangoon, reviewed the market movements of each of the metals produced by the Corporation. Price changes of lead, spelter and copper had never been more beneficial to the company.

Stock Exchange Bank Clearings.—We give below our customary annual table showing the average excess of Bank Clearings on Settlement Days over non-Settlement Days. The "non-settling day" average figures are obtained by deducting the total clearings on settlement days from the total clearings for the year and dividing the difference by the number of non-settlement working days—counting Saturday as three-quarters of a full working day.

	1935	1936	1937
	£	£	£
Grand total of clearings on non-settlement days	33,863	36,463	38,442
Daily average	125.9	134.4	142.9
Daily average on settlement days ...	154.0	173.0	176.8
Increase on settlement days	28.1	38.6	33.9
Proportionate Increase	22.3%	28.6%	23.7%

The proportion of the total clearing directly connected with Stock Exchange business is, of course, higher than the percentage increase shown on settlement days,

since there is a substantial Stock Exchange clearing turnover on all working days especially on those immediately following the settlement. As compared with 1936, the grand total of clearings on settlement days showed an increase of 2.2 per cent. This is the smallest increase shown in any year since 1933, and it clearly reflects the net result of a fall in Stock Exchange dealings and a rise in other clearing turnover. The grand total of £4,244,344,000 was actually the best on record, apart from the figures for 1928 and 1929. The average increase on settlement days showed a marked decline, however, as compared with the average for the preceding year. This is a reversal of the experience of each of the four years from 1933 to 1936. The amount of the increase on settlement days in 1937 was less than in 1936 by £4.7 millions but was actually £5.8 millions higher than in 1935. On the whole these figures tend to confirm the impression that the monetary value of Stock Exchange transactions fell off in advance of most other economic and financial indicators last year. But the fall was not nearly as severe as the decline in Stock Exchange prices would have suggested.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET: ACCOUNT:
JANUARY 18 JANUARY 20

THE first Account of the New Year has opened without any obvious movement in trend. The two features of prime investment interest—the President's message to Congress on the one hand, and the December unemployment return on the other hand—have roughly cancelled out. Movements in the indices have thus been small. Bank shares have responded—in the case of Westminster £4, £1 paid, vigorously—to the week's dividend and profits announcements (which are discussed on page 77), and the tone in the gilt-edged market has remained firm. But among industrial shares generally, features have been rare. Investors are still making reservations regarding potential trade movements.

A small volume of trading in gilt-edged at first paved the way for increased turnover, and the advance in prices was accompanied by reports of "preparation" for new Government borrowing, though such reports, naturally, obtained no confirmation. In mid-week conditions were quieter, although Local Loans made further progress. An increased demand for home corporation scrips found the market rather short of stock, and prices responded smartly.

Foreign bonds were rather neglected and depressed. Brazilian issues were affected by the absence of any declaration regarding the coupons due on January 1st, and continued heavy throughout the week. Japanese bonds opened slightly higher, but the movements apparently reflected were anticipations of the sinking fund purchases, and were not held. Roumanian issues lost ground at first, owing to political influences.

* * *

At first, home rail issues were neglected, but support gradually increased, until the appearance of the traffics. These were considerably better than the market's estimate, and stimulated prices considerably. These advances, however, were not fully maintained, as emphasis upon increasing costs appeared

to impress the market on Thursday. Earnings possibilities are examined on page 76. Argentine rail stocks declined in the absence of interest, but were maintained at the lower levels.

Rhodesian coppers were irregular, and base metals dull.

New York

THE Old Year closed on Wall Street in subdued mood, and markets reopened in the New Year expecting shocks from the President in his message to Congress. Compared with the previous attacks from Messrs Ickes, Jackson and Cummings, the President's references to business appeared restrained, and markets improved; but on second thoughts Wall Street found little basis for increased confidence, and practically all the day's gains were lost in the last hour. This poor ending was marked by the news that the Erie Railroad had defaulted on its bonds. On Tuesday a substantial all-round improvement occurred, based on a further revision of views regarding the President's intentions; it was hoped that the absence of menaces in his speech implied a desire to conciliate business. Steel and aircraft issues were prominent in a rise which pushed the Dow Jones index up by over 4 points. The firmer sentiment was not long maintained in mid-week, since the Budget message, a compromise between the balance and the priming theories, was a weakening influence, and the retirement of a conservative justice of the Supreme Court was not welcomed. Railroad issues were weak, and particularly Baltimore and Ohio. Steel mill activity for the current week is estimated by *Iron Age* at 25.5 per cent. of capacity against 20 per cent. for last week, but the outlook is still very uncertain.

Canada

An upward tendency early in December did not persist, but prices were well maintained on the whole, and stocks fluctuated within narrow limits. One session early in the month brought a larger volume of trading in Toronto than for some time past, though activity naturally subsided towards Christmas. A marked feature of the month's trading was the interest taken in western oil issues. Base metal shares, led by International Nickel and Consolidated Smelters, responded to fluctuations in the commodity markets. Gold shares were in fairly consistent demand, and in the latter part of the month provided the most active section of the market. Utilities were temporarily stimulated by news of the Beauharnois contract with Ontario Hydro-Power. A feature of some listless sessions before Christmas was an improvement in rail equipment issues. Markets were weaker after the holiday, and the Tuesday after Christmas saw the biggest break of the month—though actual falls in quotations were not serious—due to setbacks in other markets and in base metals.

BY STOCK EXCHANGE INTRODUCTION

Dene Shipping Company, Ltd.—Issued capital 400,513 10s. shares. Acquires share capital (£163,550) for which 426,500

of the company's 10s. shares will be allotted in exchange for seven shipping, etc., companies. Fleet comprises six tramp steamers (aggregate deadweight tonnage, 45,060 tons). Profits for five months to December 31, 1937, estimated at £49,000 after £6,260 depreciation. I. Albery and Company take 40,000 shares at 12s. premium, with an option to March 1, 1938, on a further 33,487 at 12s. 6d. premium.

CONVERSIONS AND REPAYMENTS

National Provincial Bank.—It is proposed to sub-divide the existing £25 (£3 10s. paid) shares into five "A" shares of £5 each with 14s. paid. The £20 (£4 paid) shares are to be sub-divided into four "B" shares of £5 each, £1 paid. The present £5, fully paid, shares will be sub-divided into five shares of £1 each fully paid. Meeting January 27th.

PRIVATE PLACINGS

Central London Electricity.—This company has placed privately £500,000 3 1/2 per cent. debenture stock.

BONUS SHARES

Price and Pierce.—As last year this company is distributing a 10 per cent. capital bonus of one 6 per cent. preference share for every 10 ordinary shares held.

ISSUES TO SHAREHOLDERS ONLY

Second British Steamship Trust, Ltd.—Issue to ordinary stockholders of 250,000 £1 shares at 21s. in the proportion of one share for every £1 of stock held on December 15. The new shares will be converted into equal amounts of preference and ordinary stock.

SHORTER COMMENTS

Company Results of the Week.—The trading loss of ALVIS, LTD., amounting to £29,980 for the 19 months to July last, is attributed, not to lack of orders, but inability to execute them owing to delays in deliveries of materials. Rubber companies, whose accounts are made up to September 30th, show satisfactory progress. TAMIANG profits, for instance, are more than doubled, at £58,886. The week's textile results include those of HOLLINS MILL, whose dividend is doubled. Net profits have increased from £48,740 to £58,429. Labour shortage, rather than higher costs, is responsible for the reduction in the dividend of BARRATT AND COMPANY from 38 per cent. to 26 per cent. HENEKEYS, LTD., net earnings of £54,218 show a small decline, owing to increased expenses; a West End site has been acquired, and trading will commence there early in the summer. LIEBIG'S EXTRACT OF MEAT profits have increased from £262,839 to £271,009. An excellent increase in earnings is reported by PHARAOH, GANE AND COMPANY, the timber merchants, whose net profits amount to £46,375 against £28,546. The balance sheet reveals an unusually strong cash position. Profits of ASSOCIATED PAPER MILLS are more than doubled, at £99,938, but are distributed conservatively, reserve allocations exceeding the amount of ordinary dividends. Favourable trading in 1937 has offset the increasing operating cost ratio of HOULDER LINE, and profits have increased by £10,400 to £140,193. The 7 1/2 per cent. dividend is unchanged.

Chase National Bank of The City of New York.—Deposits on December 31, 1937, were \$2,069,990,000 against \$2,286,209,000 a year ago. Total resources \$2,375,379,000 (\$2,562,182,000); total cash, \$708,040,000 (\$669,418,000); U.S. Government securities, \$603,362,000 (\$780,030,000); loans and discounts, \$728,522,000 (\$772,031,000).

Industry and Trade

Wholesale Prices in 1937.—The steady upward trend of commodity prices which began in 1933 developed into a steep advance between the middle of 1936 and March, 1937, which carried primary products to the level of January, 1930. But the precipitous advance during the nine months ended March, 1937, was followed by an equally sharp decline, though the current level of prices is still somewhat higher than in the middle of 1936. Compared with December 30, 1936, *The Economist's* index of the prices of primary products closed last year with a decline of 12 per cent. The fall of our index of quotations for primary products in the United States was even more marked, for it amounted to 27.8 per cent. during the past year. On the other hand, *The Economist's* complete index, which, in addition to primary products, contains a number of semi-finished materials, showed a decline of 2.7 per cent. The movement of prices in other countries showed divergent trends.

Although building was responsible for one-half of the increase in unemployment between November and December, the deterioration has been fairly general, both as regards its industrial and geographical incidence. The trend of employment in Great Britain during the past eleven years is shown in the accompanying diagram. The break in the line last September marks a change in the method of enumeration.

The implications of the recent trends in employment and unemployment are analysed on page 58.

Sharp Fall in Shipping Rates.—Like the prices of primary products, shipping freight rates were subject to violent fluctuations during the past year. The coincidence of a revival of world trade with a reduction in the world's merchant shipping tonnage produced a meteoric increase in freight rates between the summer of 1936 and the autumn of last year. As the accompanying chart shows, *The Economist's* index of shipping freight rates rose far above the pre-depression level, and reached a peak in September. As a result, however, of the deterioration of the world economic situation, freight rates took a downward turn in October, and during the last three months of the past year the whole of the advance of the previous nine months was lost. The index for December was actually 1.4 per cent. below that of the corresponding month a year earlier. It is interesting to note, incidentally, that the turning point of the trend of the prices of primary products preceded the downturn of shipping rates by six months.

The Economist's INDEX OF FREIGHT RATES
(1898-1913=100)

As the next table shows, last month saw a further substantial decline in rates on the majority of the leading trade routes:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	126.0	- 2.3	South America:—	65.9	-11.9
Bay—outwards	148.6	-38.6	Outwards	153.0	-19.3
Bay—homewards	198.4	-53.2	Homewards	122.1	-12.6
Mediterranean:—			India—outwards	160.3	-28.8
Outwards	85.5	-17.5	India—homewards	127.1	-22.0
Homewards	160.5	-26.1	Far East, etc.	121.7	-24.6
North America	118.0	-12.2	Australia		

The movement of freight rates during the past ten years is shown in perspective by the accompanying chart:—

Since the beginning of the year freight rates have shown a steadier tendency. The future course of rates, however, depends on the trend of prices of primary products and world trade, which at the moment cannot be clearly foreseen.

Shipbuilding Activity.—In view of the collapse of freight rates since last October, the severe curtailment of new contracts for merchant vessels placed with shipbuilders is scarcely surprising. Not long ago the abrupt decline of new orders was ascribed mainly to the rise in the cost of new vessels. It now appears, however, that the reduction in orders was due not so much to the rise in costs as to the force of a downward movement in freight rates which prompted shipowners to refrain from placing further orders on a large scale. The fall in new contracts, incidentally, was not confined to this country. Although the volume of work on hand for merchant vessels remains substantial, shipbuilding activity in connection with commercial work is likely to decline unless new orders show an early improvement. On the other hand, the decline in new orders for merchant vessels has been offset to some extent by an increase in naval construction in private shipbuilding yards. Thus, according to the latest statistical returns of the Shipbuilders Employers Federation, the volume of naval vessels under construction or ordered at the end of last September was 499,000 tons against 342,000 tons at the end of 1936 and 141,000 tons a year earlier.

Analysis of Steel Consumption in 1935.—Despite the importance of the iron and steel industry in this country, precise information concerning the distribution of consumption has not hitherto been available. To some extent this gap in our knowledge has now been filled. In the course of the 1935 Census of Production considerably more information was obtained on the distribution of steel consumption than in any earlier year. The results of the investigation have been published with the preliminary results of the 1935 Census of Production, and they are given on page 99. Although the table is in many respects incomplete, it serves as a rough guide to the relative importance of the principal steel-consuming trades in 1935. In the absence of a similar analysis for previous years it is unfortunately impossible to show changes in the relative importance of the various steel-consuming trades. As detailed information concerning changes in steel consumption by industries is essential, it is to be hoped that similar investigations will in future be made more frequently.

† These prices are for fuel oil for inland consumption—other than for use in Diesel-engined road vehicles—and do not include the Government tax.

INDUSTRIAL REPORTS

THE latest reports from industrial centres indicate that operations have been resumed in most branches of activity. Owing to the continued pressure for delivery, the interruption of work in the iron and steel industry had to be curtailed as far as the urgency of repairs allowed. New business was small, but most producers have a substantial volume of work still on hand. The coal industry is benefiting from the sustained home demand, but export business remains disappointing. The improvement noticeable in the wool textile industry in December has been short-lived and much machinery is now on short-time or idle. Business in cotton goods has improved a little with the firmer trend of raw cotton prices.

Coal

Cardiff.—The supply of shipping tonnage is smaller at the South Wales docks. During the earlier part of the week many loading appliances were idle and on January 5th the actual number in operation was 54, compared with the peak number of 75 during the pre-holiday pressure. There is consequently a larger supply of free coal, particularly among the large steam grades, but the only change in the position of washed smalls and sized grades is that the scarcity is not so great as it was during December. Prices are nominally unchanged.

The returns of the Great Western Railway Company showed that total coal and coke shipments in the foreign and coastwise trades in 1937 were 21.4 million tons, compared with 17.3 million tons in 1936—an increase of over 4 million tons, or 23 per cent. The statistics of the Executive Board under the South Wales Coal Mines Scheme show an increase in output of about 4.7 million tons, or 13.3 per cent., between 1936 and 1937; an increase in export supplies of about 3½ million tons, or 22 per cent.; and in inland supply of nearly 1½ million tons, or about 8 per cent. The district thus fared relatively better than the country as a whole, for which the provisional returns show an increase of 5½ per cent. in output, of 12.6 per cent. in export supply, and of 3.7 per cent. in inland supply. Collieries have sold heavily under contracts for the new year, but there is anxiety concerning the trend of new business.

Sheffield.—The year has opened well so far as domestic demand is concerned, but export inquiry is feeble, and prospects are regarded as being none too satisfactory. There are ample supplies as a result of the full working at pits before the holidays. Inland prices

are firm, and are likely to continue so for some time. Industrial fuel is in strong request and household requirements are good. A shortage of small coal is reported. All grades of coke are in good demand, for bigger supplies are now coming to the market with the operation of new batteries of coke ovens. Arrangements were concluded last week between Midland ironmasters and South Yorkshire coke producers under which the latter will supply blast furnace coke for twelve months from January 1st at 30s. per ton on rail at ovens. This is an advance of half a crown upon the price which was recently current under the sliding scale agreement.

Newcastle-on-Tyne.—The North-East coal market opened the year with a feeling of optimism encouraged by a firm prompt position. The Durham section is very steady and is likely to remain so, for all collieries are well sold ahead and prices are firmly held. Northumberland is not experiencing quite as keen a demand for large screened coal from the home market, but other grades are firm and collieries are working fairly regularly. Demand for patent oven coke is fully maintained.

Glasgow.—The market opened on a firm note, but with the resumption somewhat slow at the pits, and production therefore sub-normal, it was only towards the close of the week that any signs of activity developed. The collieries are well supplied with home orders, and the outlook in this respect is good. A fair amount of contract business is also on hand for shipment, but here prospects are less certain. The heavy accumulations of fuel

COAL OUTPUT AND EMPLOYMENT

District	Week ended December 18		Week ended December 25

Total	5,280.9	790.2	4,629.3	790.6

* Including Cumberland, Westmorland, Gloucester, Somerset and Kent.

at Continental depots, however, are gradually being dispersed, and inquiry is on a rather larger scale. Between 1936 and 1937, total shipments declined by fully 400,000 tons to 12,200,000 tons. The loss was mainly in the coastwise and bunkering trades, for increased takings by Italy offset a decline in cargo business with other countries.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that the iron and steel markets have been under the influence of holiday conditions and that little new business has been transacted. In most districts the interruption of work was curtailed in order to meet the heavy pressure exerted by consumers to obtain delivery. In a number of cases, however, repairs to plant had become urgent.

The stringency in pig iron supplies has passed and both producers and consumers are in a comfortable position. New purchases were limited, but heavy tonnages are passing into consumption, and producers have sufficient orders on their books to dispose of their output for some months to come.

Supplies of semi-finished steel are increasing, but the position is still tight. Domestic production continues at a high level, but remains insufficient to meet the market's requirements. Lately, however, increased imports have eased the situation.

The pressure to obtain deliveries of finished steel was maintained up to the commencement of the holidays and resumed immediately afterwards. Accumulations of orders are heavy and the greater part of the output during the first quarter of this year appears to have been sold. There has been some inquiry for delivery far ahead; but most producers and consumers are reluctant to undertake such commitments.

Sheffield.—There has been no great volume of business this week. The undertone, however, is very firm, and a sharp revival of activity is certain in the course of a week or two. Owing to the stabilisation of pig-iron prices for some time ahead and the improvement in supplies there is less anxiety among consumers than a year ago. Users of forge and foundry iron are well covered by contract, but any small parcels coming on offer are speedily taken up. These are not numerous, producers preferring to hold in stock against emergencies as much as is possible. Buyers are finding it less easy fully to cover

their requirements of hematite makers of both East and West Coast mixed numbers hesitating to add substantially to existing commitments. As supplies of forge iron are more adequate, makers of finished iron are showing more willingness to add to their order books. Demand for marked and common bars is especially active.

There is no relaxation of the pressure for basic and acid steel billets, and buyers are unable to secure acceptance of all the business they are prepared to offer. Wire rods are very active, and business in strip, bright drawn steel and stainless sheets is on a big scale.

Scrap iron and steel dealings are rather quiet, consumers being fairly well supplied for the present. In the case of the majority of grades prices are fixed, and in materials subject to bargaining there are only fractional alterations in prices.

Cardiff.—During the Christmas holiday week the production of the South Wales tinplate industry dropped to 61.42 per cent. of capacity, but exports during the week ended December 30th totalled 6,040 tons, compared with 5,201 tons in the previous week and 6,995 tons in the corresponding week of 1936. Consignments were heavier than production, and stocks were reduced by about 300 tons. Prices are nominally unchanged at the scheduled minimum of 22s. 6d. per basis box. The heavier branches of the iron and steel industry are as busy as ever, and so heavily committed are makers under contracts and arrears that they are reckoning on the present steel output being maintained, if not further increased, during the next few months.

Glasgow.—Business was quiet in Scotland this week owing to the New Year holidays. The holiday was general during the early part of the week and although a start has now been made in many establishments, a longer stoppage has been necessitated at plants where extensive repairs had to be carried out. However, it is expected that before the end of next week most of the West of Scotland plants will be in operation and running to capacity.

Textiles

Cotton (Manchester).—The general tone of the market has shown some improvement, there being a larger inquiry in certain quarters. The firmer tendency of raw cotton prices has, to some extent, stimulated demand for yarn and piece-goods, but there is still uncertainty about the American Government's policy concerning acreage restriction for next season. Supplies are not being offered very freely and a shortage of futures contracts has been experienced in the Liverpool market. In certain quarters there is a disposition to reduce estimates of world consumption this season.

The yarn market has been steady but quiet. In both American and Egyptian sections, curtailment of production is now on a very fair scale. There are no indications of spinners being prepared to reduce minimum prices. Cloth inquiry has increased, and some manufacturers have secured more orders. Demand for India has been more encouraging and useful orders have been

booked in dhooties, light bleachers and prints. A miscellaneous business has been done for several minor outlets, mostly in printed and dyed sorts. Home trade buyers have been cautious in placing orders. Looms continue to be stopped for lack of orders. Makers and distributors are harassed by heavy stocks.

Other countries	4.8	2.5	109	88
Total	46.0	41.4	1,184	1,183

Wool (Bradford).—New Year raw wool markets have not opened favourably, prices overseas showing a downward tendency. Much machinery is now either running short time or standing idle.

Spinners are bidding less for tops, and it is quite easy to buy good average 64's at 29d. per lb. If anything, crossbred prices are a shade in buyers' favour. There is considerable irregularity in prices of B.A. low crossbred wools, but a better demand for preparing crossbreds than any other class of raw material. The entry of Japan into Australian markets as an active buyer would no doubt be beneficial.

The returns showing the business done at the Bradford Conditioning House during 1937 are significant. They show that export trade has been seriously affected, particularly with the Far East. The net result of the falling off in activity during the year was that the weight of material which was sent in for testing purposes in 1937, at 72,536,666 lbs., was 16,458,473 lbs. less than in 1936. These figures can be regarded as a very reliable barometer of the deterioration in the wool textile industry of the West Riding.

THE COMMODITY MARKETS

Mainly as a result of an improvement in sentiment across the Atlantic, the majority of commodity markets showed a firmer tendency this week. Non-ferrous metal prices, a good indicator of market psychology, were decidedly firmer. Wheat spurred on an improved demand, raw sugar remained steady, and competition at the London tea auctions was keener. Raw cotton was also slightly dearer, but wool suffered a relapse, and quotations for rubber remained unchanged on the week. In general, the market in provisions and meat was steady.

The improvement in the United States is reflected by the advance of Moody's daily index of staple commodity prices, from 148.3 (December 31, 1931 = 100) on December 29, 1936, to 149.3 last Wednesday. A month ago the index stood at 149.2, and a year ago at 207.1.

Metals

Copper.—Improved sentiment on Wall Street and rather better business news in the United States were responsible for a sharp recovery in copper, the standard cash quotation, shown in the table of British Wholesale Prices, being over £2 higher on the week. Turnover on the London Metal Exchange expanded with the improvement in the undertone. There are substantial buying requirements accumulating, but it appears that consumers will re-enter the market only when the general outlook takes a turn for the better. On a consideration of the statistical and technical position of the market prices must be regarded as low. Nevertheless, the maintenance of this week's improvement—and *a fortiori* the chance of any further advance—appears to depend on the business outlook in the United States and the tone of Wall Street.

Tin.—After a comparatively steady spell, prices spurted in midweek and closed on Wednesday showing a gain of £5 10s. per ton on the week. This advance, attributable to the improvement on Wall Street, was the more encouraging in view of the fact that the December statistics were rather bearish.

New supplies in December, according to A. Strauss and Company, were 10,636 tons, against 10,321 tons in November, whereas deliveries fell from 10,610 tons to 9,015 tons. The visible supply rose from 21,908 tons to 24,241 tons, while the Arnhem carry-over was 125 tons higher at 1,709 tons. The total visible supply has risen by almost 2,500 tons last month and as carry-overs from the old year will probably keep up exports in January, stocks must continue to rise unless deliveries show a substantial increase in the next few weeks.

Lead and Spelter.—After dipping to the lowest prices for over eighteen months, both metals recovered in sympathy with copper and tin and closed on Wednesday showing a slight net gain on the week. Buying interest was limited, but there was no selling pressure despite the recent deterioration in the statistical position.

The production of lead, according to the American Bureau of Metal Statistics, advanced from 166,200 short tons in October to 172,200 short tons in November, while the spelter output declined from 162,300 short tons to 157,900 short tons. In both cases the November output was well in excess of current consumption. Thus, although the present statistical position gives no grounds for concern, a rise in consumption will be necessary before long if the equilibrium of the market is to be maintained.

Grains

Following a rather quiet spell, the wheat markets registered a sharp advance on Tuesday and Wednesday in response to an active demand for Australian and in sympathy with North American firmness. Prices will be found in the table of British Wholesale Prices.

Home milled flour was steady at unchanged rates and imported descriptions were quiet. Meanwhile, maize prices continue to rise—especially in the case of Plate—in sympathy with the firmness in Argentina. This has imparted a firmer tone to the market in feeding barley, while fine malting barley is now very scarce in this country.

Other Foods

Provisions and Meat.—The official quotations for bacon on the London Provision Exchange were maintained unaltered last Friday, but the market has since turned dull. Butter was in quiet demand this week and was again slightly easier. New Zealand cheese was firmer, with other sorts steady. Meanwhile, new-laid eggs suffered a further seasonal price decline, but imported descriptions showed little change. Business in meat at Smithfield market was active on Monday—except for fresh beef—but in midweek the tendency became slow in all sections.

★

Colonial Produce.—The London spot market in raw sugar was quiet this

week, but prices remained firm. Accra cocoa was also in rather slight request, but prices showed a firmer tendency on Wednesday. The spot market in coffee was quiet. At the first public auctions after the holidays, on Tuesday, the Costa Rica coffee on offer was generally of poor quality and was consequently neglected, but best Kenya sorts were in active demand. The tea auctions were also resumed this week. There was a good general demand for Indian sorts and prices were firm; occasional advances were recorded at Tuesday's Ceylon sales.

★

Fruit.—At Covent Garden during the past week, according to *The Fruit-grower*, business was rather more active than had been expected and prices were generally well maintained. Apples were in steady demand, with English in limited supply, while a moderate trade was done in pears. South African produce, on the other hand, did not sell quite so well, the larger quantities of out-of-season fruits being rather difficult to clear. Prices were consequently easier. Hothouse grapes, in shorter supply, met an active demand at firm prices. Oranges and grapefruit were rather slow items, but lemons were in request at higher rates.

★

Vegetables.—There was a steady inquiry for all lines of kitchen vegetables at Covent Garden this week, states *The Fruit-grower*. Forced asparagus was in demand, but house-grown beans were easier. Canary Island toma-

atoes have advanced in price on a more active demand coupled with smaller arrivals. Cucumbers are now very scarce. Mushrooms showed little price improvement and forced rhubarb was easy. Sprouts, savoy and cabbage were dearer, but cauliflowers were plentiful and cheaper. Celery sold well and onions were firmer. Meanwhile, potatoes were in rather more active demand at the various London markets, though prices showed little alteration. At the Borough on Tuesday best silt-land King Edward were again quoted at 6s. 6d. to 7s. per cwt., ex market.

Miscellaneous Commodities

Rubber.—The market has been dull and idle during the past week, but at 6½d. per lb., the price of standard ribbed smoked sheet on Wednesday showed little alteration on the week. There appears to be a growing conviction in trade circles that the weakness of the market will cause the International Committee to cut the second quarter's quota at its meeting on January 25th. Whether the anticipation will prove correct, however, remains to be seen.

Oilseeds and Oils.—Business has only slowly recovered from the holiday and markets generally are quiet. Although there is rather more linseed afloat for Europe, supplies and stocks are short and must continue so until the first arrivals of the new Plate seed, shipment of which is only now beginning in volume. The crop is being harvested under favourable conditions and arrivals at ports are steadily increasing. Shipments last week were 42,200 tons.

River Plate shipments in 1937 were 1,879,200 tons, compared with 1,542,000 tons in the previous year, and Indian exports were 230,000 tons, against 307,000 tons. Very little was forthcoming from Russia and the Baltic States. World shipments aggregated 2,113,000 tons, compared with 1,855,500 tons in 1936. Only a small business is transacted in linseed afloat, but crushers have already bought freely for early shipment. The quantity now on passage to Europe is 76,600 tons, against 148,400 tons a year ago. Trade in linseed oil is of a hand-to-mouth character, but the market is steady, fluctuations slight, and prices about unchanged on the week.

Cottonseed is firmer after an easier period. Black Egyptian, February loading for Hull, has been sold at £5 16s. 3d. per ton, but rather more than this is now demanded by sellers. Trade in cotton oil is fair and Egyptian crude oil, ex Hull, is held for £19 10s. per ton, and refined for £22 10s., prompt. The demand for oilcakes continues satisfactory and prices are well maintained.

COMPANY MEETINGS

BANK OF MONTREAL

IMPROVED CONDITIONS IN CANADA

SIR CHARLES GORDON'S SPEECH

The one hundred and twentieth annual general meeting of the shareholders of the Bank of Montreal was held, on December 6th last, in Montreal.

Sir Charles Gordon, G.B.E. (the president of the bank), who presided, in the course of his address, said:—Taken as a whole, business conditions throughout Canada during the past year have been much improved and a happy contrast with the conditions of but two years ago, the one really serious setback being in those portions of the Prairie Provinces where drought caused total or partial failure of the crops.

As matters stand, however, this partial failure of our greatest cash crop is partly offset from the national standpoint by the higher price for this year's crop and by the fact that the general crops in every other part of Canada have been, on the whole, remarkably good. Also, perhaps even more important is the fact that Canada has been demonstrating in the past year a remarkable resiliency in productive enterprise.

In employment the upturn which took place last year has continued at a rapidly accelerating rate; in fact, the level of the Dominion Bureau of Statistics wage-earning employment index on October 1st last reached practically the point at which it stood on the same date in 1929. The physical volume of production is also almost up to the 1929 level.

The decided betterment which has taken place in Canadian business during the past year is undoubtedly due to the revival of our foreign trade, which has been growing by leaps and bounds. For the first seven months of the present fiscal year, April to October inclusive, the total of this trade amounted to \$1,183,000,000, with a favourable balance of \$176,000,000. This total of trade showed an increase of \$199,000,000 as compared with the similar period of 1936.

The latest figures available indicate that for the calendar year exports and imports will attain a total approaching two billion dollars, of which some \$320,000,000, or practically one million dollars for every working day, will represent a balance favourable to Canada, and, I may say, necessary to Canada as a debtor country.

In connection with our export trade it is well to remember that while during the past year this country has benefited by the export, at good prices, of the bulk of the large surplus of wheat that had been held in storage, our export figures until the next harvest will reflect but a comparatively small movement of grain. Furthermore, the past year has seen metal prices on a higher level than at present prevails and, should present prices continue, this again must have its influence upon export figures for the coming year. In regard to newsprint, the United States provide, of course, our largest market, and, while the demand in that market has grown in the past year, the present outlook is not clear. I might add in this latter connection that companies contemplating an increase in the number of producing machines would do well to bear this fact in mind.

Within the past two years formal trade arrangements have been concluded by the Government with not less than 15 countries, and negotiations are proceeding for similar trade expansion agreements with others. To-day Canada claims the distinction of being one of the few countries in the world which employ no trade quotas, no exchange restrictions, and no embargoes other than those associated with the traffic in arms. If the remedy for world-wide civil and international strife lies in international economic co-operation, as I believe it does, then Canada, I think it can be said, is doing its full share in leadership along that line.

There is accumulating evidence of a more widespread understanding that a sound solution of the railway problem is required to create confidence in the future of Canada. This is a hopeful feature, for with understanding of the serious implications of the present situation should come determination to put into effect those remedial measures which are necessary and indeed in the long run inevitable.

Happily in the year under review Canada has demonstrated a remarkable capacity for recovery. As to what the future may hold for us, he would be a brave man who would attempt a forecast in regard to the outlook for this or any other country.

In the international field the year now closing has been one of numerous alarms, but, on the other hand, there are many who feel, as I do, that order will be brought out of the present international chaos, and that major disturbances such as have been threatened from time to time will be avoided.

Given an absence of international disturbances, with the natural accompaniment of a fair demand from foreign sources for the products arising from its abundant natural resources, Canada has good reason to expect a continuance of the better times which we have witnessed during the past 12 months.

GENERAL MANAGER'S ADDRESS

Mr Jackson Dodds, as joint general manager, read the address of the joint general managers, in part, as follows:—

Important changes in the balance sheet figures are as follows:—Our total assets amount to \$829,600,000, as compared with \$805,100,000 a year ago.

Quick assets, including cash, total \$599,000,000, representing 79.58 per cent. of all liabilities to the public. This extremely strong position is beyond ordinary needs and reflects the fact that the demand of our customers for loans for commercial purposes is still considerably below normal.

Current loans and discounts in Canada and loans to Provincial Governments, municipalities, and school districts amount to \$182,500,000, an increase of \$23,200,000.

During the past 120 years the Bank of Montreal has kept abreast of the changing times, consistently taking its full part in aiding basic productive pursuits, old and new industries, trade and commerce.

Deposits by the public amount to \$681,000,000, an increase of \$28,000,000.

Profits, after deducting Dominion and Provincial taxes, amount to \$3,408,328, as compared with \$3,181,501 in 1936—an increase of \$226,827.

Business activity continued to show during the first eight months of 1937 striking increases over the respective parallel periods in 1936. Nevertheless, recession appeared this year three months earlier than it did last year. This earlier decline was due to various factors, including lower exports of wheat, of which Canada has relatively little to sell this year, and lower prices latterly for basic exports. Both exports and imports exceed last year's figures, but the rise in imports has been more rapid than the rise in exports—and exports have recently fallen off from preceding months—with the result that for several months the excess of exports over imports has been substantially less than in the comparable months of 1936, although the increase this year in revenues from tourist traffic may have restored the balance.

Observers at a distance are apt to misjudge Alberta and its citizens by the present state of affairs there. It is one of the most richly endowed provinces, but in the midst of its vast natural resources there has been in some districts virtual destitution and despair. Efforts made to cope with such a situation on practical lines are necessarily slow in producing noticeable results, and distracted people fall easy prey to promises of quick relief from their trouble. In the case of Alberta, before the disorganised sound majority of electors realised it, the province was committed to a quixotic adventure.

Our confidence in the ultimate return of normal conditions in Alberta cannot be better expressed than by saying that we have endeavoured to continue doing business as usual at our branches in that province, where we have thousands of valued customers.

The recent appointment of a Royal Commission on Dominion-Provincial Relations affords an opportunity to all qualified bodies and individuals to assist by submitting carefully prepared contributions for study and consideration by the Royal Commission in the hope that a way may be found to arrest the growth of government debt, the duplication of functions of governments, and the overlapping of taxation.

Notwithstanding Canada's favourable international settlements balance in 1936 of some \$300,000,000, followed this year by another favourable balance estimated at better than \$250,000,000, the Canadian dollar has not appreciated materially but has been held in close parity with the United States dollar with infrequent fractional variations.

It is not possible to estimate to what extent this steadiness may be attributable to undisclosed operations of various stabilisation funds, but it is evident that capital movements between countries are increasingly important in their influence on the trend of foreign exchange. In this respect a conspicuous part has been played by the repatriation of a sizable amount of our foreign indebtedness.

BURMA CORPORATION, LIMITED

(INCORPORATED IN INDIA)

INCREASED PROFIT—RECORD DIVIDENDS

MR. P. E. MARMION'S SURVEY

The annual general meeting of shareholders of the Burma Corporation, Limited, was held in the registered office of the company at No. 44 Phayre Street, Rangoon (new address), on Tuesday, December 21st last. In the absence of Viscount Horne, Mr P. E. Marmion (vice-chairman) presided.

The Chairman said:—I welcome my good fortune on this occasion in that it falls to my lot to review the operations of the most successful period of our history, the results for which surpass by a very substantial margin the records established in 1929. Net profit at Rs. 1,64,90,590 exceeds the net profit of that year by Rs. 24,26,023 and enabled us to pay dividends aggregating 18½ annas, as against the 16 annas then paid. The declaration of dividends is always our most pleasurable duty and was doubly so on this occasion, since the payments were the largest in our long series of dividends which, as usual, are set out in the report of the directors.

These happy results were due to the expansion in our revenue from metal sales by no less than 33 per cent. as compared with last year, following the increase in the prices realised for all metals, except silver, where the sharp decline of 4d. per oz. resulted in a decreased revenue of Rs. 5,79,718 from that source.

The tonnage of ore mined at 478,806 increased by 9,908 tons and has only once before been exceeded, in the year ending June 30, 1930. Grade was again reduced for all metals to a level at which it is approximately in balance with our current production. The total expenditure on development and ore extraction at the mine and on transporting the ore to the mill increased by Rs. 2,53,169.

METAL PRICES

The Chairman then dealt with the figures of the year's production as set out in the report, and proceeded:—

The price movements of lead, spelter and copper have never been more spectacular or more beneficent to shareholders since the incorporation of your company than during the period under review. Movements followed two distinct and opposite trends, firstly from July to March and secondly from April to June. In the former period prices moved upwards continuously at a progressively increasing rate, culminating in March with a rise that can only be called stupendous—the result of exceptional demand on a market that had been subject to such unusually heavy dealing in the previous months that its stock position was believed to be more vulnerable than actually proved to be the case.

From July to March the price of lead rose from £15 to £36, spelter from £14 to £37, and electrolytic copper from £41 to £81. After such spectacular activity a reaction was inevitable, and from April to June the trend was reversed with a suddenness and severity that threatened metal markets with serious financial consequences. The recession in these three months brought the price of lead from a peak of £36 in March to an average of £22 16s. 4d. for June; spelter from £37 to an average of £21 9s. 4d.; and copper from £81 to a June average of £62 5s. 10d.

At our last two meetings I have dealt at great length with the position of silver since the passing of the Silver Purchase Act by the United States Congress in May, 1934, and there is little that I can usefully add to-day except to state that the Act has failed to accomplish any of the purposes for which it was intended.

The year has been notable for the heavy purchases made by India to which I have already referred. This is all the more important when it is appreciated that at present, apart from trade requirements, practically the only actual offtake is for India.

It is estimated that the United States Government purchased about 380,000,000 ounces during the year in pursuance of the dictates of the Silver Purchase Act. This accumulation raised their holding of the metal to the enormous total of over 1,900,000,000 ounces, which gives an idea of the magnitude of their stake in the metal.

Notwithstanding this enormous total, it is worthy of note that the Treasury holdings are still 1,000,000,000 ounces short of the objective of the Silver Purchase Act. As it is doubtful whether this large shortage is likely to be available within a reasonable period of time, some change in policy cannot be ruled out of the range of probability.

DEVELOPMENT WORK

The chairman then dealt in detail with the profit and loss account and the balance sheet, and continued:

Development work, with which the general manager's report, as usual, deals very fully, added 428,172 tons to the reserves, of which 29,469 tons came from current work on No. 10 Level Meingtha Lode now completed, and the balance came from a continuation of lateral exploration in the favourable zones on the upper levels.

The result of our policy of intensive lateral development has been very successful indeed, exceeding our expectations in the large tonnage of ore it has brought to light. Since it was initiated in the year beginning July 1, 1934, it has yielded 631,719 tons from the Chinaman Section, 309,430 tons from the Shan Section, and 20,500 tons from the Chin, which with 232,382 tons from normal development work in the Meingtha makes a total of 1,194,031 tons added to the ore reserves during the last three years. This handsomely confirms the opinion I ventured in December, 1934, that our development policy would result in a substantial addition to our reserves.

During the same period 1,392,994 tons of ore have been extracted from the mine and treated, so that the ore reserve position has only deteriorated to the extent of 198,963 tons, that is from 4,062,511 tons at July 1, 1934, to 3,863,548 tons at July 1, 1937.

Development work in the favourable zones of the Chinaman, Shan and Chin sections are now nearing completion, only a comparatively small area remaining to be explored in the upper levels of the Chinaman section to finish work on the far eastern footwall veins, whilst some further work remains to be done in the Meingtha below No. 10 and above No. 1 level.

ORE RESERVES

I have informed you on previous occasions that we confidently expected our original estimate of ore reserves to prove conservative and that we were taking steps to ascertain the extent of the excess tonnage that might reasonably be expected from this satisfactory feature. We have found that it is technically impracticable to determine this excess tonnage, except when certain definite sections of the mine are completely stoped out.

Our calculations, comparing the actual extraction of ore with the original estimate, now cover a sufficiently extensive area of completely worked out ground to assure us that there is a considerable tonnage in excess of the original estimate. This is due to mining outside the ore reserves, mining Chinese fill originally deducted from the reserves, and mining marginal ore and narrow veins not included in the reserves.

While, as I have just stated, it is technically impracticable to put a definite figure on the probable total of this excess tonnage, yet the calculations for areas so far completely worked out leave little ground for doubting that it will be considerable and warrant my hazarding the guess that it might ultimately reach 750,000 to 1,000,000 tons, depending on metal prices and production and transportation costs ruling at the time of extraction.

Our intention is to bring our calculations up to date every year as further sections of the mine are completely exhausted, and from the estimated excess thus found definite tonnages will be added to the balance of ore reserves remaining from the original estimate as shown at present in the general manager's annual report. This procedure will be initiated in the general manager's report for the current year, and thenceforward you will be able to keep in regular touch with the actual tonnage of excess ore that is added every year to the original ore reserve estimate.

From this explanation you will gather that there is every prospect that the ultimate tonnage of ore remaining to be extracted at July 1, 1937, is not likely to be less than 4,750,000 tons, made up as to 3,863,548 tons, being the balance of the original estimate of ore reserves plus, say, 750,000 to 1,000,000 tons, being the present estimate of the ultimate excess by which extraction is likely to exceed the original estimate of ore reserves, plus a further accretion from normal development work that should be completed this year.

LEAD

The demand for lead throughout 1936 expanded in almost every country beyond the most sanguine expectations, and requirements were only met by a heavy incursion on stocks.

At the end of November, stocks in the hands of the principal producers showed an increase of only 34,000 tons over the record low level to which they were reduced in January, 1937. The statistical position, therefore, remained strong.

In consequence, however, of the recession in trade that developed in the United States from political rather than from economic reasons, and of the increasing uncertainty in the international outlook caused by the Sino-Japanese war and a number of other disturbing factors, demand in the rest of the world also fell away in October, and remains somewhat uncertain. Should this change in trend persist it will naturally cause an increase in the stock position.

TARRAN INDUSTRIES, LIMITED

RECORD PROFITS

The third annual meeting of Tarran Industries, Limited, was held at Hull, on the 31st ultimo, Mr R. G. Tarran presiding.

The Chairman, in the course of his speech, said: I am glad to say that we have had the best year's trading since the company was established nearly twenty years ago; the profits at £41,075 constitute a record, and compare with £27,535 earned in 1935-36. I would mention that the figure of £41,075 includes a dividend of 20 per cent. from your wholly owned subsidiary, the Brandesburton Gravel and Concrete Company, Limited, as against 10 per cent. for last year.

As to the company's liabilities, there has been an increase of £43,975 in the bank overdraft, which at September 30, 1937, amounted to £119,707. This bank finance has been required by the very substantial contracts at present in hand, which we intended to finance by raising additional capital in some more permanent form. The directors, however, acting on the advice of financial experts in London, decided that it was in the best interests of the shareholders to postpone making any issue of shares until more favourable conditions prevailed in the stock market. It is with this in mind, as well as with the knowledge that further temporary finance will be required as the contracts in hand develop, that your directors have decided to recommend that no dividend shall be paid at present. They feel that the prudent course, particularly when results indicate boom rather than slump conditions, is to retain profits in the business and to conserve financial resources.

With regard to the work at present in progress and also with reference to the future, I should like to say that we can report increased activities in all sections of the business, especially in civil engineering and manufactured joinery; we have recently secured important public works contracts, such as the quarter-million pound technical college at Bolton; roads, sewers and houses for the Hull Corporation and the construction of a new wharf for the London, Midland and Scottish Railway Company. It is most encouraging to find that the quality of our work is building up an important and valuable goodwill throughout the country; indicative of this and of the future outlook for the industry, we have recently received special invitations to tender for new contracts aggregating over £3,000,000. The report and accounts were unanimously adopted.

CHOSEN CORPORATION, LIMITED

LIQUIDATION OF NURUPI

The annual meeting of this company was held, on the 31st ultimo, in London.

Mr Gerald W. B. Portman, who presided, said that as a result of negotiations in London with a director of a Japanese corporation, the Chosen Union of Mines, an agreement had just been signed relating to the liquidation of Nurupi and matters connected therewith. The agreement provided that in consideration of the Chosen Union of Mines being released from their guarantee as from July 1, 1937, the company became allowed to take as part of its share in the liquidation of Nurupi the whole of the sterling which had been remitted to London, less expenses incurred in London by Nurupi. The company would receive just over 65 per cent. of the net assets of Nurupi K.K.K. available for distribution to shareholders in the liquidation. That agreement had been signed subject to ratification by the board of the Chosen Union of Mines and it had been provided that unless by February 28th they had refused to ratify the agreement it entered into full force.

Thereupon the necessary formalities would have to be carried out in Japan and under Japanese law the company would not become entitled to receive its share of the assets before, at the earliest, May next. The company had been fortunate at this difficult time to have had the advantage of the energy and work of Mr Rubinstein to enable the present satisfactory position to be realised; his courage, ability and resourcefulness throughout the negotiations had been of inestimable value to the company.

The most important question was the remittance of the balance of the money which would accrue to the company and which was at present in Japan. They were endeavouring to convince the Japanese Government that they should, in spite of the stringent restrictions existing in Japan, permit the immediate remittance of the balance of the money to this country. They had good hopes that the Government would accede to their request in the near future, as they understood that the Japanese authorities were desirous of giving all facilities to a house in London which could be instrumental in assisting Anglo-Japanese financial co-operation in the future.

The report was adopted and a dividend of 1s. per share approved. A resolution of confidence in the board and managing director was passed with acclamation.

World production of lead for 1937 is estimated at 1,680,000 tons, or about 210,000 tons more than for 1936, and 110,000 more than actual consumption for that year. World consumption is still expanding outside the United States, and the strong statistical position of the metal remains unimpaired.

SPELTER

World production of spelter for 1936 was 1,473,412 tons, the highest ever attained, and almost 150,000 tons more than for 1935. Concurrently consumption advanced to the still higher record of 1,505,000 tons, or 175,000 tons in advance of the previous year.

The estimated production for 1937 is 1,630,000 tons, or about 160,000 tons in excess of 1936. As far as can be ascertained, consumption kept pace with this substantial advance in production up to September, after which demand became uncertain, particularly in America.

Production of spelter in the United States made good progress during 1936, although it was only 82.8 per cent. of the 1929 figure. Consumption made a better showing at 96.2 per cent. For the rest of the world the similar percentages were 113.6 and 109.1.

Notwithstanding the increasing importance of spelter in the field of industry, the production of both the metal and its raw material, zinc concentrates, remains the least satisfactory of all non-ferrous metals to the producer, and affords the lowest margin of profit. In our particular case, this is forcibly illustrated by the fact that whilst zinc concentrates constitutes 42 per cent. of our total tonnage of saleable products over the last seven years, they contributed only 10 per cent. of the revenue realised by these products. But when we come to profit, which concerns us most immediately, we find that for three years production actually resulted in a loss, whilst for the whole seven it contributed only 4.67 per cent. of our working profit, of which 3.88 per cent. is attributable to the year under review, when sensational metal prices prevailed, and 0.79 per cent. to the remaining six years.

COPPER

Production of copper for 1936 was 1,639,714 tons, more than 200,000 tons in excess of 1935. Consumption at 1,850,000 tons advanced by 250,000 tons.

This expansion in consumption naturally caused a recession in stocks, which was corrected by a progressive increase in the quotas by which producers were restricting their output.

The relaxation in restriction started in August, when an advance from 70 per cent. to 75 per cent. in agreed production was permitted and progressed rapidly until it reached 105 per cent. in November, at which equilibrium with consumption was established. World stocks, which in 1933 approximated to 725,000 tons, were reduced to 400,000 tons at the end of 1936 and to 340,000 tons in October, 1937—less than three months' supply.

SILVER

World production of silver for 1936 was 250,817,957 ounces, or 36,000,000 ounces greater than for the previous year, of which 28,000,000 ounces came from North America and 5,000,000 ounces from South America, following the large increase in the production of non-ferrous metals.

Production of silver in the two Americas continues to expand with the increasing production of non-ferrous metals, and world production of 1937 threatens to exceed 270,000,000 ounces, and thus establish an all-time record.

SUMMARY

In my view the centre of the economic problem at the moment lies in the United States, where, as I have shown, recovery has lagged consistently behind the rest of the world and recently has suffered a further conspicuous recession. Industrial capacity and activity have attained such dimensions that only if the major consuming markets, of which the United States is among the foremost, are attuned to absorb their full share of the commodities and goods produced, can the world maintain its economic health. It is my belief that measures are being and will be taken to correct the position there, and that when this is accomplished the foundations of international trade will be so broadened as to enable full use to be made of the high degree of productive and industrial capacity which now only waits to be applied to the benefit of the peoples of the world.

On the score of considerably lower metal prices, particularly in the case of lead, increasing costs of production and the advance in freight rates, I am bound to counsel caution, although, in my belief, we, with so much experience of the vagaries of our particular trade, can envisage the immediate future as likely to be a period of continued activity with, I hope, a reasonable degree of prosperity.

The report and accounts were unanimously adopted.

Investment Trends and Industrial Production—1929-1937

In the following charts, movements in industrial share prices (*Actuaries' Index*) and industrial production are illustrated over a trade cycle. The first chart compares ordinary share prices with *The Economist's* Index of Business Activity. Charts III, IV and V compare ordinary share movements and production in particular industries. The Board of Trade indices of production employed in Chart III, cover production of mines and quarries and, in Chart V, building and building materials production. The share index in this latter chart refers only to building materials shares. In Chart II, equity share movements are related to the only available index of Stock Exchange turnover, the *Financial News* daily record of Stock Exchange bargains. All index numbers have been based on 1935=100.

GOVERNMENT FINANCE

For the six days ended December 31, 1937, the total ordinary revenue was £8,800,000, against ordinary expenditure of £13,853,000. The deficit accrued since April 1st last is thus £172,603,000, against a deficit of £138,854,000 a year ago.

A Tangled Skein

THE long-awaited report of M. VAN ZEELAND is to be made public within the next few days. It will be remembered that the ex-Premier of Belgium was invited by the Governments of Britain and France to suggest a way of unravelling the complicated tangle in which the world's economic affairs have in recent years become involved. While some nations are unable to sell their raw products, others are racking their brains to find substitute materials, to develop their own agricultural and mineral resources at enormous cost and to live in economic isolation. The result is that the expansion of world consumption is hampered, trade and credit are strait-jacketed in quotas and exchange controls, and only the boom in armaments remains to give the appearance of prosperity to world trade. Clearly there is no task more important than to find a way of reversing these suicidal follies.

This is not the moment to attempt to forecast what M. VAN ZEELAND may have to say; but we must not imagine that he is possessed of some magician's wand, or that the psychology of the world will be changed by any new proposal, however ingenious it may be. If, therefore, his report is to have serious consideration, it is useful to remind ourselves of some of the dilemmas that underlie the problem that he has been asked to solve.

In the first place, is it wise to attempt to break the vicious circle of political and economic disharmony by measures of economic appeasement, or will all such attempts be doomed to failure until political suspicions have been allayed? There is no doubt that, if a great

increase of prosperity could be brought about, it would help immensely to allay political animosities. There have undoubtedly been moments in the past 15 years—as, for example, in 1927—when a really serious effort to open up the channels of trade would have been most helpful in encouraging peaceful relations; but, unfortunately, at the present moment political distrust is so rife that suggestions for economic change will largely be judged not on their economic merits, but from the angle of war psychology. Each nation will look at every scheme put forward from the point of view of its war chest, its supply of steel and explosives or its food resources in the event of a blockade. In such an atmosphere tariffs are of minor importance compared with exchange controls, quotas and the demand for colonies. Clearly the politicians have a task to accomplish before M. VAN ZEELAND's work can be effective.

These reflections raise a second question. Is it wise to attempt in the first instance to bring into closer economic relations the nations which are furthest apart politically, or should a more hopeful effort first be made to improve the intercourse between nations which have so far rejected the doctrine of autarky? It may well be argued that a plan for increasing international trade acceptable to Germany and Italy in their present frame of mind would necessarily be so mild that it would do very little good. Would it be better to demonstrate by the example of countries who are ready to be more thoroughgoing in the relaxation of trade restrictions that a liberal commercial policy pays? Trade agreements among an internationally-minded group of

nations need not be anti-German or anti-anyone else. Some small steps have already been taken in this direction. But much still remains to be done. If further progress even in this more limited sphere should prove difficult, how much prospect is there of securing radical change in countries where the opposition of vested interests is reinforced by political considerations and the philosophy of isolationist enthusiasts? Without, therefore, depreciating in advance the possibility of more general plans for Europe, it is evident that the most urgent matter both in time and in importance is the successful conclusion of an Anglo-American agreement, for the preparation of which delegates are shortly assembling in Washington.

Nevertheless, no one would wish to postpone for one moment longer than is inevitable the re-establishment of freer economic relations with the dictatorship powers. The democracies have no quarrel with the German or Italian people, and nothing is to be gained by keeping them in a condition of penury or economic strain. On the contrary, liberty is much more likely to re-emerge if life becomes more normal.

Any scheme for restoring more normal relations between the authoritarian States and the democracies, however, must seek first to relax the rigours of the exchange controls, and in particular that of Germany. It is difficult to see how this could be done without making a loan or credit in some form or other to Germany. This is a formidable obstacle. Apart altogether from the unfortunate experience of Germany's creditors since 1931, the past history of

foreign investment shows that dictatorships are a bad bet; and on purely commercial grounds it would be well-nigh impossible in present conditions to float on any free market a German loan. Secondly, any German loan in London, Paris or New York would give the impression that British, French or American capital was being used to bolster up the Nazi regime in Germany, and this would raise a storm of political opposition. Finally, it would be impossible to allay the universal suspicion that such loans would, in fact, be used indirectly—whatever safeguards might be put on paper—to assist the re-armament of a possible enemy. How, then, are we to build up again freer conditions of international trading and of credit in a setting of political tension and competitive re-armament?

These are hard nuts for M. VAN ZEELAND to crack. But if he cannot make much headway without a political *detente* it is equally true that political solutions will not carry us very far or be of lasting value without the strengthening of economic contacts. The forthcoming report must, therefore, be regarded as dealing with a part—though a very essential one—of a general programme of pacification, and its most useful contribution may well be the light which the author is able to throw on the ultimate economic objectives of the authoritarian States. If, as a result of his inquiries in Germany and Italy, he can show that the ideological division between the autarkist States and the international trading nations is not as complete or as sharply defined as is sometimes assumed, the future of Europe and the world may after all not be past praying for.

Will Dictatorship Endure?

DICTATORSHIP is a form of government—or, rather, a whole way of political life, feeling and thought—which is unmistakably recognisable when one sees it on the war-path, though it is not so easy to frame a verbal definition of it. For our present purpose, it will be enough to recall that on the eve of the Great War there was not a single dictatorship in Europe. There were dictatorial regimes in some Latin-American countries (as there had been, off and on, for a hundred years past), but the European States were at that time all living under one or other of two political dispensations which, notwithstanding their mutual antagonism, had this in common, that they were both equally remote from the dictatorial type.

The dynastic absolutism which was the older of these two pre-war European systems of government differed radically from dictatorship in being based on principles of heredity and legitimacy which, between them, bridled absolutism with the curb of tradition. On the other hand, the parliamentary democracy which divided the allegiance of Europe with dynastic absolutism at that date was itself a child of tradition—as was attested by its origin in England, where the principle of hereditary monarchy had been deliberately restored and carefully preserved after a short experiment in an anti-traditional dictatorship in the seventeenth century. By the end of the nineteenth century the absolute monarchies of Central and Eastern Europe were moving, on their side, towards parliamentarianism. By 1914 the Reichstag at Berlin and the Reichsrath at Vienna were manifestly on the way towards acquiring broader constitutional powers; and even in Russia it seemed to be only a matter of time for the Duma at St. Petersburg to set its feet on the same path. Thus in 1914 it seemed as though the constitutions of the States of Europe were converging towards the uniform pattern of a moderate parliamentary regime in which democracy would be tempered by tradition in various degrees in different countries. Dictatorships had been known in the past, but they had been transitory phenomena—as in England after the Crom-

wellian dictatorship and in France after the Napoleonic—and dictatorship neither loomed very large in pre-war eyes nor wore a very formidable aspect.

What a change has come over the political face of Europe in less than a quarter of a century! The great Central and East European dynasties, instead of completing their metamorphosis into constitutional monarchies, have been swept away by military defeat; and the regime that now reigns in their stead is not democracy but dictatorship in the Latin-American, Napoleonic, Cromwellian sense. And Italy, which till after the Armistice of 1918, was in name, if not altogether in fact, a parliamentary democracy of the Anglo-French pattern, has not only gone the same way as the dynastic empires, but has actually led them on this path. In January, 1938, democracy is virtually non-existent east of the Alps and the Rhine. Even on the left bank of that river dictatorship now holds a German bridgehead; and at the opposite extremity of Eurasia, across the sea of Japan, a government that is carried on in the name of an Emperor-God is in reality nowadays a dictatorship in commission—a leviathan composed of the junior officers of the Imperial Japanese Army and Navy.

This sweeping change has been so rapid and so violent that its effects dominate the affairs of the world. PRESIDENT ROOSEVELT, the other day, not only declared that "peace is most greatly jeopardised" by the dictator States, but also boldly prophesied that in the end democracy would take the place of dictation. We may agree with his prediction; we may support his belief that such a change represents the ultimate hope for mankind. But we may still ask with some apprehension by what means democracy is to oust dictatorship. Will the dictators perish in a fresh bout of the warfare and revolution in which they came to birth? The Cromwellian dictatorship died quietly. On the other hand, it took the Retreat from Moscow and the Battle of Leipzig to overthrow NAPOLEON I; and, even then, the lessons of Moscow and Leipzig had to be repeated

at Waterloo, and finally at Sedan, before the Bonapartist snake was finally crushed. Will the present European dictatorships die as quietly as their Cromwellian or as hard as their Napoleonic forerunners? Some light on this question may be thrown by a brief analysis of our post-war dictatorships' *raison d'être*.

All these post-war dictatorships have been resorted to as expedients for escaping from some serious emergency. In Turkey, for example, PRESIDENT KEMAL ATATURK was allowed by his countrymen to assume dictatorial powers in order to save his country from the literal annihilation with which she was threatened by the terms of the abortive Peace Treaty of Sévres. We may place DR VON SCHUSCHNIGG's dictatorship in the same category; he rules by the will of those Catholic and dynastic elements in Austria that are unwilling to see the relict of the Habsburg monarchy drowned by the brown tide of the Third Reich. The emergency that has brought the Nazis into power in Germany and the Bolsheviks in Russia is not a threat of actual annihilation but an experience of shattering defeat. And, if HERREN HITLER and STALIN are the beneficiaries of national overthrows, SIGNOR MUSSOLINI and the youthful members of the Japanese leviathan are drawing the profits of bitter national disappointments; for Italy and Japan are nominal victors in the Great War, who both believe themselves to have been cheated of their fair share of the spoils.

Another kind of emergency which has called post-war dictatorships into existence is some urgent demand for social reconstruction. The welding of the three fragments into which Poland had been divided for 150 years was the *raison d'être* of the dictatorship of MARSHAL PILSUDSKI; and the urgency of a corresponding problem perhaps at least partly explains the present trend towards dictatorship in Roumania. In China, again, the secret of PRESIDENT CHIANG KAI-SHEK's quasi-dictatorial power has been the necessity for transforming a Confucian equivalent of the Roman Empire into a modern Western national State at short notice; and this is also obviously part of ATATURK'S and STALIN'S task. Yet another kind of emergency is the strain of trying to maintain a status which is beyond a country's strength. One reason why SIGNOR MUSSOLINI is in the saddle at Rome is because Italy finds it difficult to be a Great Power; and one reason why

SENHOR SELAZAR is in the saddle at Lisbon is because Portugal is afraid of ceasing to be a colonial power.

Obviously these dictatorial expedients have not been resorted to without strong pressure of circumstances. But have they been resorted to with impunity? Expediency, like everything in this world, has to be paid for; and the dictatorial method of dealing with present emergencies is manifestly being paid for by drafts upon the future. Can the drafts be met when a settlement of accounts can no longer be staved off by tricks of dictatorial ingenuity?

In all the countries that are at present living under totalitarian regimes, the future is being mortgaged in order to keep the decks cleared for instantaneous action. The boasted strength of the dictatorships lies in their *Aktionsfähigkeit*; under a unity of command that is achieved by a militarisation of every walk of life. But this undoubtedly considerable enhancement of immediate striking power involves, on the debit side of the account, not only a steady draft on the national economic stamina but a suppression of the liberty of the subject in every field of human activity from commerce to theology; and repression of all private initiative is surely bound to be paid for by a sterilisation of the spiritual vitamins of spontaneity and originality.

Nor is this the worst; for the dictator's tampering with human nature does not stop short at repression. His problem is to extract horse-power for his war-machine from the very wills that he is deliberately paralysing; and he is tempted to compensate for this artificial mortification of the personalities of his subjects by a still more deadly stimulation of their nerves. The spontaneous forcefulness of free spirits has to be replaced in the totalitarian States by the maintenance of a "crisis mentality" through the arts of propaganda. This perpetual state of nervous tension increases the likelihood that the patient will fall into some abyss of revolution or war.

Thus, spiritually, as well as economically, the dictators are compelling their countries to live on their steadily diminishing reserves. If, when the drafts are presented, the totalitarian bank is broke, the end of the dictatorships will be violent bankruptcy rather than slow metamorphosis. Unless the reserves of individual resource and initiative are renewed, the *dénouement* we have to expect is not RICHARD CROMWELL'S abdication but LOUIS NAPOLEON'S *débâcle*.

Profits Still Rising

IF any one feature of *The Economist* is calculated, more than another, to arouse keen interest at His Majesty's Treasury it is our analysis of industrial profits. Every year we receive the reports of well over 2,000 companies, whose profits represent about 5 per cent. of the net national income and something like one-fourth of the total profits assessed for income tax under Schedule D. As the profits reported by our sample of companies for 1937 are those on which, for the most part, income tax will be assessed in the Government's financial year ending March 31, 1939, they are one of the earliest available pointers to probable changes in national revenue.

The latest figures, we are glad to say, assure THE CHANCELLOR of good hunting next April. Reference to Table I, at the foot of this page, shows that 2,279 companies reported an average increase of 17 per cent. in profits (after paying debenture interest) in 1937. Our index of profits (1929=100) fell as low as 63.1 in 1932, but last year reached a new record level of 113.2. That some increase would be achieved last year was a foregone conclusion, but the extent of the rise is certainly noteworthy. The recovery in earning power began as long as five years ago, and some slackening of tempo might have been expected in its later phases. Actually, the pace of recovery

was quickened last year, for reasons which deserve close examination. Nearly 70 per cent. of the profits in last year's sample were, in fact, reported before June 30th and were largely earned before March 31, 1937. In the twelve months to March 31st last *The Economist's* index of business activity was 7 per cent. higher, on the average, than in the preceding twelve months. Further, our index of wholesale commodity prices during that period was 9 per cent. higher than during the preceding year. At the end of 1937 our business activity index was still slightly higher than at the end of March, but the index of commodity prices had fallen by 11 per cent. In other words, the time-lag

TABLE I.—PROFITS IN CALENDAR YEARS

Reports received during Calendar Years	Number of Companies	Profits (after debenture interest) £	Profits, same Companies, preceding year £	Chain Index Number (1929 = 100)
1929	1,770	194,661,216	194,616,731	100.0
1930	1,932	197,539,909	198,817,771	99.4
1931	2,009	160,076,906	206,561,219	77.1

nat
srBUSINESS ACTIVITY AND COMPANY PROFITS
(Calendar years; 1928=100)

between the earning of profits and their inclusion in our returns has given the 1937 figures the benefit both of higher industrial activity and higher prices. The first of the charts we have reproduced on this page, however, suggests that investors and the Exchequer may be fairly safe in reckoning on at least another year of rising earnings, despite the setback to prices in the later months of last year and the possibility of a moderate check to business activity in 1938; for changes in profits fall at least a year behind changes in business.

Nor do the latest available company returns, published in the last quarter of 1937, convey any suggestion of a setback to the growth of earnings. The 549 companies reporting in that quarter, which contributed 20.4 per cent. of the total profits in our sample for the year, increased their earnings by 20.2 per cent. Tables II and III (with the supplementary tables given on page 152) set out the profits history of the "fourth quarter" companies from 1929 onwards. It will be seen that total earnings fell from 10½ per cent. of total share capital (preference and ordinary) in 1929 to 3½ per cent. in 1931. Last year the ratio was as high as 13½ per cent. In the meantime, however (as Table III suggests), there had been significant changes in the division as well as in the total of each year's earnings. In the first place, the steady decline in the effective rate of interest on debentures (from 5.29 per cent. in 1929 to 4.59 per cent. in 1937) has released a somewhat larger proportion of earnings for preference and ordinary shareholders. Secondly, although the percentages actually paid on preference shares have varied significantly between good and bad times, they have not varied to anything like the same extent as total earnings, and fluctuations in the residual profits available for ordinary shareholders have consequently been wider than in profits as a whole. The percentage earned on ordinary capital fell between 1929 and 1931 from 13½ per cent. to under 3 per cent., while by 1937 it had risen to over 18 per cent.

An approximate idea of the rôle of directorial policy in

PROFITS AND THEIR DISTRIBUTION

(Based on reports published in the fourth quarter of each year. All figures are percentages of total subscribed capital, including debentures).

profits distribution may be gathered from the second chart on this page, in which the amounts allocated each year for debenture interest and preference and ordinary dividends by "fourth quarter" companies have been expressed as cumulative percentages of their total capital (including debentures). The 549 companies which reported in 1937 had a total capital, so defined, of £553 millions, on which aggregate profits were earned at the rate of 11.4 per cent. Payments for debenture interest were equivalent to just under 1 per cent. on the total capital. The addition of preference dividend raised the total paid-out percentage to 2.61 and the payment of ordinary dividends raised it further to 7.98. The balance was ploughed back into the different businesses and formed an effective addition to their working capital.

The implications of the figures deserve most careful consideration. These representative companies, taken as a whole, held back about one-third of their entire profits in 1937. For every £100 these companies paid out in debenture interest and preference dividend they put £130 back into their reserves. The sums ploughed back last year were equal almost to the entire profits of the depressed year, 1931. The growth of this species of corporate saving is not wholly a function of increasing prosperity; for in 1929 directorial conservatism in the distribution of profits was less conspicuous than it is to-day.

The tendency of finance towards increasing self-sufficiency is one whose implications need careful thought by economists and investors alike. In America recent taxation has sought deliberately to hamper it, for reasons whose economic validity is at least questionable; in Great Britain no difficulties have been put in its way and its latter-day development has been significantly rapid. For the capital market its repercussions may be far-reaching. To the investor it offers a reservoir of earning power for dividends in any future recession. But shareholders may be well advised to view recent trends in directorial policy as likely to persist—within obvious limits—in bad times or in good.

TABLE II.—PROFITS OF "FOURTH QUARTER" COMPANIES, 1929-37

Reports Issued during Fourth Quarter	No. of Companies	Total Profits (after deb. interest)	Change since preceding year (same companies)	Total Preference and Ordinary Capital	Ratio of Profits to Capital
1929	420	£33,404,593	+ 1.4	£223,120,955	10.3
1930	509	32,174,677	- 18.1	302,547,000	8.2
1931	474	12,292,859	- 53.8	383,451,625	3.2
1932	472	17,443,104	- 2.9	425,066,882	4.1
1933	464	21,116,780	+ 30.3	410,816,381	5.1
1934	468	28,611,449	+ 32.9	401,504,146	7.1
1935	485	33,561,979	+ 16.9	377,470,062	8.9
1936	406	42,134,767	+ 15.2	395,408,899	10.6
1937	549	57,436,059	+ 20.2	434,822,726	13.2

Anthropology in the City

Diligent experiment with the space-time theory has disclosed the following article from THE ECONOMIST of January 15, 1938, under the title "The Anthropology of the West European Tribes in the Early Autarkic Age."

IT is one of the first principles of anthropological science that the soul of a primitive people can be seen most clearly in its religion. This is certainly true of a tribe which inhabited at this period a large island off the western coast of Europe. There has been some dispute about the identity of the chief religion of the country. Many eminent authorities have argued, with an impressive array of evidence, that the sporting events, which occurred with the utmost regularity and attracted the devout respect of the people, were its religious observances. There is much to be said for this supposition, since these athletic ceremonies had many religious characteristics. They changed with the seasons, symbolising the worship of Nature, and the actual observances, though witnessed by vast crowds, were reserved to a separate and highly revered sacerdotal caste.

Without definitely discarding this theory, we think it more probable that the real religion of this somewhat peculiar people centred in a special district known as the City which, from the number of its churches, was clearly entirely devoted to piety and religion. Many of the features of this cult closely resemble those of other primitive religions. There was a complicated hierarchy of priests, of whom the most numerous appear to have been called brokers and jobbers. As is usual with savage peoples, access to the innermost temple of the cult was denied to all save the priests, and the most dreadful fate awaited any adventurous layman who defied this taboo. The High Priestess was a being referred to as the Old Lady of Threadneedle Street. (The "Old Lady" motif frequently occurs in the legends of the tribe; it seems probable that the Old Lady's real name was Queen Victoria. "Threadneedle" was presumably symbolic of skill in the textile arts, on which the people particularly prided themselves.)

This religion of the City had its darker side. For example, it apparently required living sacrifices, and there is even a suspicion of human lives being offered to the gods. There are references to widows and orphans being "put into oils," and there is one mention of a priest being "hammered," which seems to have been a sort of purification ceremony. Whether human blood was spilled or not, that of animals certainly was. Bull fights, bear baiting and stag hunts were the chief amusements of the priestly caste. Apparently little mercy was shown, and the grisly collection of instruments of torture found in a nearby building known as the Tower were doubtless used upon the wretched animals. The rack was the favourite instrument for use on the bulls, who are often referred to as being "extended." But their fate was hardly worse than that of the other beasts, for the "squeezing" of the bears is the subject of many reports. The bears appear to have been hunted before their torture began, for they are often spoken of as "rushing to cover," and the many twisting alleys of the City were doubtless used to add to the excitement of the chase. (The alternative suggestion that these alleys were kept to assist fraudulent bankrupts in making a quick get-away is obviously the merest guesswork.) Not even the young animals were spared, for there was a large number of institutions known as "bucket shops" which were devoted to the fleecing of lambs; the buckets were obviously used to collect the blood of the sacrificed animals.

In this tale of cruelty to the animal world there is one outstanding exception. The guinea-pig seems to have been the recipient of special favours. We know that at a slightly

earlier period Caligula, Emperor of the neighbouring Roman tribe, made his horse a Senator. In the same spirit guinea-pigs were so cherished in the City that they were frequently nominated to the rank of director. Many were also given titles of nobility, and it is amusing to picture these unattractive animals solemnly attending a directors' meeting and sitting in their appointed places, well-fed, sleekly-groomed and completely uncomprehending.

The rank of director just mentioned serves as an introduction to one of the unique features of this religion. The whole populace seems to have been organised in so-called "companies." Some of these were known as "limited companies" and these were doubtless the most exclusive, to which it was an honour to belong. Each company had a central nucleus of priests, the chief being known as the Chairman and the others as Directors. We also come across the title of "Managing Director," applied probably to certain individuals who showed particular skill in managing to become directors. To each group (or "Board") of priests were attached a number of lay individuals known as "shareholders" or "investors." The functions, and, indeed, the identities, of these shadowy persons are obscure. One possibility is that they were ordinary citizens placed at the disposal of the directors for money-raising purposes. It seems to have been the convention to treat them with the utmost verbal deference, but rarely, if ever, to consult their wishes. This suggests that the investor may not have been an actual person, but some sort of stuffed image or idol. A number of mummified figures found in the ruins of a large building a mile or two from the City may have been kept to represent the investor on formal occasions.

Each company had an annual ceremonial known as a meeting. The chief event at a meeting was the exposure of the balance sheet, a sacred text placed under the care of a special caste of medicine men known as accountants, who appear to have spoken a language of their own. The balance sheet was a recital of the prowess of the company and it may be assumed that, as with other boastful epics, its items, though doubtless based on some reality, were translated by the recitative skill of the accountants into a form in which they conveyed little to the assembled multitude. Most primitive religions are a mixture of boasting and humility, and the balance sheet was no exception. Indeed, its name was derived from the extraordinary convention that the good and bad qualities of the company (assets and liabilities, as they were called) should be represented as being exactly equal. The accountant showed his greatest skill in attaining this objective and excited so much admiration by his performance that "making both ends meet" was proverbially reckoned an extremely difficult operation.

It may be supposed that many of the priests of the cult saw through its pretences, but fully realised their value in maintaining the high status of the priesthood. They were no ascetic caste of hermits. On the contrary, there are many mentions of banquets held by City companies. But it is doubtful whether the investor partook of these feasts. On the contrary, we have the record of a speech in which the Chairman of one of the largest companies refused his shareholders even the consolation of a ham sandwich. Other shareholders were apparently more fortunate, for there were occasions on which the directors of a company were known to slice a melon for the shareholders, and some of them even appear, though rarely, to have been granted a "dividend," a word from the Latin dialect, meaning "meat to be divided" . . .

At this point the article, perhaps fittingly, comes to an abrupt conclusion.

Topics of the Week

Negotiations with Eire.—It was announced in London and Dublin on Wednesday that Mr De Valera and three of his Cabinet colleagues are coming to London next week to initiate conversations with the Prime Minister, the Secretary of State for the Dominions and other members of the British Cabinet on "outstanding questions which affect relations between the two countries." This surprise announcement has met with general approval in both countries. Hitherto, since the inception of the unfortunate dispute between the two Governments in 1932, the prospects of a settlement have never seemed encouraging enough to the two Governments to warrant direct conversations. Moreover, since there has been least yielding in the past on the Irish side, it is encouraging to learn that the initiative for these conversations came from Mr De Valera—though a great deal of credit doubtless also belongs to Mr Malcolm MacDonald who has had several informal conversations with Mr De Valera in London and Geneva. In spite of these good reasons for hopefulness, the whole history of Anglo-Irish relations emphasises the foolishness of making any assumptions about the possibility of a settlement until it is an accomplished and very securely ratified fact. The passive British acceptance of the new constitution of Eire has removed one of the chief stumbling-blocks. The original dispute over the land annuities should not be impossible to compose after this lapse of time, and the Irish representatives may be correct in their belief that British anxiety to bring Ireland fully within the orbit of British defence plans will smooth the path to agreement. But the problem of Ulster still defies a give-and-take solution. The British attitude is that whatever may or may not be done about Northern Ireland, the wishes of the inhabitants of the province must be the deciding factor. The new Irish constitution, on the other hand, treats Northern Ireland as a rightful part of Eire. Since agreement on the question seems so remote, it would be wiser not to raise it. But Mr De Valera is not a man to refrain from raising awkward issues merely because they are of no practical urgency.

Anglo-American Trade.—The second stage in the laboured formalities which have to be gone through before it is possible for the President of the United States to conclude a trade treaty was reached on January 7th, when Mr Cordell Hull, the Secretary of State, issued formal notice of the American Government's intention to negotiate a trade agreement with the United Kingdom and with its Government on behalf of Newfoundland and the British Colonial Empire. At the same time February 19th was fixed as the closing date for the submission of briefs by interested parties, and March 14th as the opening day of the public hearings. To this notice was appended a list of products in regard to which the United States would consider the granting of concessions. This list, which is very lengthy, is not a precise guide to the commodities which will eventually be included in the agreement, but it may be assumed that the Secretary of State would not include any commodity on the list, thereby inviting protests from interested trade associations, unless there were at least a reasonable possibility of some concession on that commodity being actively considered. For this reason the length of the list has been taken as an indication that the agreement, when it is finally concluded, will be of a considerably wider scope than at one time seemed possible. It has been announced in London that Sir Ronald Lindsay, the Ambassador in Washington, and Mr A. E. Overton, of the Board of Trade, are to be the British representatives in the formal negotiations. It is certainly not without significance that, almost simultaneously with this announcement, President Roosevelt nominated Mr Joseph P. Kennedy to be American Ambassador to Great Britain. Mr Kennedy has a high and

deserved reputation both as a successful business man and as a gifted negotiator. He was the first Chairman of the Securities and Exchange Commission, and deserves a great deal of the credit for the fact that that body has, at least until recently, been regarded with favour by both sides of the great Government v. Business controversy in the United States. His appointment, together with the formal inception of preparations for a trade agreement, hold out the greatest hope that the recent substantial improvement in the relations between the two Governments may be not merely maintained but further extended.

Dissension and Unity in America.—President Roosevelt has made haste to correct the false impression that he was relaxing the hostility of the New Deal towards what he regards as the malpractices of some of the large corporations. At the annual Andrew Jackson dinner, on January 8th, he returned to the theme of these malpractices with a noticeably sharper intonation. He once more declared war against "abuses of power and privilege" by a "mere handful of the total of business men and bankers and industrialists" who fight to retain "such autocratic control over the industry and finances of the country as they now possess." Strangely, these bitter words have had very little effect upon Wall Street, for the belief is growing that the President intends to spend his way out of the current business recession, and Wall Street has a soft spot in its heart for heavy expenditures, even when they are undertaken by a President whose political philosophy is so antipathetic to its own. The domestic controversy is thus sharpened, but at the same time there is growing evidence of substantial unity of support in the country for the foreign policy of the Administration. The Ludlow resolution, the object of which is to amend the constitution in such a way that war could only be declared after a referendum of the people, came up in the House of Representatives on January 10th. The vote was taken on the question whether the resolution should be discussed, and it was turned down by 209 votes to 188. Even if the resolution had come to a discussion it would have been very far from enactment, but the vote is symptomatic both of the considerable body of opinion which still believes that peace can be assured by the legal enactment of isolation, and also of the growing realisation that such legislation in fact embarrasses the Administration in its conduct of foreign affairs. American public opinion on the question of war and peace is changing rapidly. Hitherto the President has contrived with great skill to retain the external leadership of the nation. It is greatly to be hoped that, in spite of the bitterness of domestic controversy, foreign policy will be left out of the arena of party hostility.

Crisis in France.—Since the irresponsible but happily short-lived strike in Paris at Christmas, stay-in strikes have been sporadic in France. The workers have tended to distrust the Government's policy of retrenchment. They resent the rising cost of living and suspect—not without cause—that certain employers are not willing to play fair with them in the observance of collective agreements. Accordingly, M. Chautemps called a conference of employers' and employees' representatives for last Wednesday to discuss the improvement of the working of the labour laws. The largest association of employers refused to attend unless, amongst others, the National Federation of Labour, regarded by the unions as little more than a Fascist body of strike-breakers, was invited on the workers' side. The employers also demanded that no control of the enlistment and dismissal of personnel should be contemplated. Without the fullest co-operation from both capital

and labour, however, the Government must fail to restore peace in industry. If a serious crisis results, the responsibility of the recalcitrant employers will be great indeed.

At the time of going to press, the troubles occasioned by the strikes and the employers' intransigence have deepened. Doubt has been expressed whether the Chautemps Cabinet is capable of averting a further collapse of the franc. On Thursday, the franc weakened seriously on the foreign exchanges, and a Cabinet meeting was called, at which the fate of M. Chautemps' administration was alleged to be in the balance. The formation of a third Popular Front Government, inclined still more to the Right, and including as Finance Minister M. Reynaud, M. Bonnet's vehement critic, was freely canvassed; but the meeting ended in complete unity without any resignations. After the Chamber's almost unanimous vote of confidence in M. Chautemps and M. Bonnet's successful piloting of his Budget, it is difficult to see why confidence in the franc should have broken. The upshot of any considerable change in the Popular Front administration is likely to be grave, and the obduracy of French industrialists no less than the restlessness of French workers is to be blamed for a situation which threatens the balance of forces in Europe as well as peace and order in France.

Japan Fights On.—The progress of the Japanese aggression in the Far East has to be watched on three separate fronts. The chief centre of actual fighting is now in the province of Shantung, where the Japanese have occupied the important port of Tsingtao, and are pressing southwards towards the Lunghai railway, which is of particular importance to the Chinese, as it is the chief railway running east and west and providing lateral communications for their armies. On the Shanghai front, where the Japanese enemy is ever more avowedly the Municipal Council of the International Settlement, and indeed foreigners in general, equally rapid progress is being made. There have been two flagrant cases in the last few days of manhandling of British police officers by the Japanese soldiery, and the growing confidence of the Japanese in their mastery of the city can be judged from the fact that the British protests about these incidents are apparently to go unanswered. An attempt has now been made to deny the Yangtze river to all save Japanese merchant shipping. This claim has been disputed by the British Government, but in fact British ships are prevented from going up the Yangtze because of the impossibility of providing protection for them, so that the Japanese attain their end *de facto* if not *de jure*. For the moment Tokyo is a more important centre of conflict than either Shantung or Shanghai. Since the fall of Nanking the latent conflict between the extremists and the moderates among the Japanese ruling authorities has come to the surface. The Imperial Council—the first since 1914—was held on Tuesday to solemnise the compromise that had been arrived at between the armed forces, who want to continue with the war until China is fully conquered, and the civilians, who realise far more clearly the enormous risks to Japan of any such far-reaching enterprise. Some mystery surrounds the precise nature of the Imperial Council's decision. A last chance is apparently to be granted to General Chiang Kai-Shek's Government to negotiate peace on the Japanese terms. The alternative, which provides the threat in the ultimatum, is the intensification of the conflict. A declaration of war would enable the Japanese Navy to blockade China, but it would also almost certainly bring into operation the American Neutrality Act, of which the Japanese are still afraid. But whether the conflict becomes a war or remains an "incident," it is apparent that the Japanese sword is to be pressed further and further into the body of China. There is apparently no equivalent for *hubris* in the Japanese vocabulary.

Italian Naval Building.—On the eve of the Budget meeting a new naval building programme was announced in Rome. The two Italian 35,000-ton battle-

ships that were launched the other day are to be reinforced by the laying down of another two capital ships of the same tonnage, as well as twelve "scouts" (i.e. large destroyers) and an unstated number of submarines. The publication of these plans at this moment was presumably intended as a reminder of Italy's determination to be a Great Power; but it may be doubted whether the actual impression made is the one that Signor Mussolini intended. The economic effort of constructing the two new monster ships will mean so much less Italian economic support for Austria and Hungary and so much less Italian land-power to balance that of Germany on the Continent. Nor, even from the technical standpoint of sea-power in the Mediterranean, is the construction of a grand fleet likely to be the best investment of Italy's straitened residual resources. We may conjecture that the British and French Admiralties would have taken the Italian naval programme more to heart if the whole of it had been devoted to lighter surface and submarine craft. The capital ships will only pull their weight if they can secure for Italy a definite naval preponderance; and it seems most improbable that this Italian ambition can be realised in competition with an evermore closely united Great Britain and France. As it is, these capital ships would appear to be a costly Mussolinian sacrifice on the altar of Italian prestige. What will be the end thereof? If the frog burst when he tried to puff himself out to the size of a single ox, what is likely to happen to him if he has taken two oxen, and not just a single behemoth, for his standard of emulation? No doubt a totalitarian batrachian can last longer than a democratic one before he bursts. The end of Signor Mussolini's adventure is not yet in sight.

Naval Strengths.—Nevertheless, the Italian naval building programme is, unfortunately, likely to cause a fresh spurt in the race for supremacy on the sea. Before it begins it may be of interest to record the state of the chief navies of the world. The following table gives figures for December 31, 1937, in which the new Italian programme (parts of which are believed to have been begun before the end of the year) is included. The second and italicised figure of each pair refers to ships building or authorised for early construction.

Country	Battleships and Battle Cruisers	Aircraft Carriers	Cruisers	Destroyers	Submarines
British Empire ...	15 5	5 5	59* 17	161 40	52 18
U.S.A.	15 4	3 3	29 10	196 38	84 22
Japan	9 3	5 2	35 2	102 10	60 2
France	6 3	1 2	19 2	60 16	75 16
Italy	4 4	Nil	22	64 24	86 30†
Germany	3† 5	2	6 7	22 12	36 25
Russia	3 2	1	4 2	20 5	112 37

* Including 2 fitted as anti-aircraft ships and 5 that may be so fitted.
† Of 10,000 tons each. ‡ May be slightly inexact.

SKANDINAVISKA KREDITAKTIEBOLAGET

The Russian figures are necessarily unofficial, and those for Japanese ships building may well be less than the real total. There are, moreover, very great differences between individual ships of the same category in age, armament and speed. The figures serve only to illustrate the enormous superiority enjoyed in the naval arm by the democratic countries. The margin of superiority in the capacity to build is even greater. Study of the table makes it even more difficult than before to imagine what ultimate gain Signor Mussolini thinks he can derive from an intensification of the competition.

Talk in Budapest and Prague.—The outcome of the Italo-Austro-Hungarian talks at Budapest this week may throw light on the prospects of Signor Mussolini's Central European policy of running with the hare and hunting with the hounds. Central Europe has been the first point at which Italy has been forced to reveal the weakness that is the price of her unprofitable adventures in Africa and Spain. *Vis-à-vis* Austria, Italian diplomacy has been compelled to give ground steadily during the past year to the Third Reich's *Drang nach Südosten*. *Vis-à-vis* Hungary, Italy has felt herself constrained to conciliate two out of Hungary's three successor-States—partly in order not to be out-bidden by Germany in a competition for Yugoslavian and Rumanian good graces, and partly in order to cover her continental rear while she is girding herself for maritime trials of strength in the Mediterranean. At the same time, the economic support with which Italy has hitherto purchased Hungarian and Austrian clientage has been diminishing perforce on account of Italy's growing economic and financial difficulties. In these circumstances the Italian connection has come to seem distinctly less valuable to-day in the eyes of Italy's two Danubian *protégés*. Count Ciano succeeded in persuading Austria and Hungary to recognise General Franco, but the two smaller states are neither to leave the League of Nations nor formally to adhere to the anti-communist "Triangle."

Meanwhile talks have also been proceeding between three other Central European states whose relations seem to be less close than they have been in the past. M. Micescu, the new Roumanian Foreign Minister, has been to Prague in an attempt to convince the Czechoslovaks that in spite of the speeches made by the National Christians before the elections in favour of a Germanophil and Italophil policy, in spite of the fulsome exchange of telegrams with Signor Mussolini, in spite of the forthcoming visit to Berlin, Roumania, nevertheless, remains true to her alliances. There are three potent reasons urging Roumania to remain in the Little Entente: her fear of Hungarian irredentism; her fear for the Bessarabian frontier if Russia is too strongly antagonised; and her need of Czechoslovak and French armaments. But it may be supposed that M. Hodza, M. Krofta and President Benesh knew what discount to put on M. Micescu's protestations of friendship and that they are waiting to watch events, both in and outside Roumania. The situation in Central Europe is, indeed, in complete flux and none of the small countries is likely to commit itself beyond recall to any of the Great Powers.

Co-ordination in Aircraft Manufacture.—The British aircraft industry has decided to follow the example of a lengthening list of other industries whose business brings them into close contact with the Government in appointing an eminent full-time chairman from outside the ranks of the industry itself. The Society of British Aircraft Constructors was born of the war-time necessity for co-ordination in production and for united representation before the Government. The Society's Chairman has hitherto been chosen from the heads of firms who composed its council, but the increasing stress of business associated with the R.A.F. expansion programme has made it difficult for any one man to represent both the industry as a whole and his own firm. Accordingly, Mr Charles Bruce-Gardner (on whom a knighthood was conferred in the New Year Honours) has been appointed Chairman of the reorganised Society. The announcement states that he will be "particularly concerned in interpreting to the Air Ministry and to the industry the views and wishes of one and the other." Mr Bruce-Gardner has been closely associated with the various schemes of industrial reorganisation which have been undertaken under the ægis of the Bank of England in recent years, and he has the useful combination of industrial and financial experience which will be necessary for this new post. There have been many disquieting rumours in recent weeks of a lack of co-ordination on the production side of the vast programme of re-armament in the air. The industry has done well to provide itself with a means of securing the smoothest efficiency in manufacture. But it is only one of the two partners in the enterprise, and it may be that the Air Ministry would be well advised to inquire whether its own established methods are not equally in need of renovation, if the very necessary speed in production is to be combined with the highest technical excellence.

London Traffic.—The annual report of the London and Home Counties Traffic Advisory Committee, which has been published during the past week, serves to call attention once again to the enormous difficulties in finding a satisfactory solution for the problem of passenger transport in a huge and crowded metropolitan area such as London. The crux of the problem is the rush hour, when every form of transport in the area tends to be crowded to much beyond its capacity, and almost to the limit of toleration by the passengers. To provide facilities—which would necessarily take the expensive form of new tubes—adequate to carry in comfort all the traffic which offers itself at the rush hour would be an extremely uneconomic proposition, since even the present equipment is inadequately used in the off hours—a state of affairs characterised by the Advisory Committee as "gross waste." A transport system which, like the L.P.T.B., is under statutory obligation to cover all its costs, including taxes and interest on capital, is thus incapable of solving the rush-hour problem. Within the limits of the problem laid down by Parliament, all that can be done is to suggest small alleviations in one part or another of the area. London Transport and the main-line railways are at present engaged on a programme which is to cost £40-£45 millions (of which perhaps 12 millions is to be spent this year) on the boring of ten new miles of tube, the rebuilding of stations, the provision of new rolling stock, and so forth. But these improvements will only affect comparatively small sections of the total area. There are only two complete solutions of the problem of metropolitan transport. One is such thorough "staggering" of working hours that the rush hour would be largely eliminated, and its burden of traffic spread evenly throughout the day. The other would be for the State frankly to accord a large subsidy to London Transport to enable it to institute new services which will never be fully remunerative. Either course involves the abandonment of tenacious social customs or political beliefs, but until one or the other is adopted the rush hour, with all its attendant discomfort, will remain.

Steel in Re-armament.—A striking feature of the past year has been the enormous expansion of British steel consumption. This development is emphasised by the accompanying chart, which compares the course of general business activity since 1928 with the trend of domestic iron and steel consumption on the basis of *The Economist* indices:—

BUSINESS ACTIVITY AND STEEL CONSUMPTION

(1935=100)

As the demand for capital equipment and therefore for steel fluctuates more than that for consumption goods, a marked increase in domestic steel consumption was to be expected during a period of industrial recovery. Since last April, however, when re-armament was expedited, domestic steel consumption has shown an enormous increase. Nor are there any indications of an early decline in consumption. The latest developments in the iron and steel industry are discussed on page 132.

An Institute of Economic Research.—The recent announcement that a National Institute of Economic and Social Research has been formed, and will shortly begin its activities, has received a very general welcome. Funds for the Institute have been provided by the Sir Halley Stewart Trust, the Trustees of the late Lord Leverhulme, the Pilgrim Trust and the Rockefeller Foundation. Sir Josiah Stamp has agreed to act as President of the Institute, and its organisation has been entrusted to a sub-committee of which Sir William Beveridge is chairman, the other members being Sir Percy Alden, Professor A. L. Bowley, Mr Henry Clay, Professor A. M. Carr-Saunders, Professor N. F. Hall, Mr H. D. Henderson, Mr D. H. Robertson and Sir Ernest Simon. Professor N. F. Hall, of University College, London, has been appointed full-time Director of the Institute, and will take up his duties on April 1st. It need not be said that the formation of such an institute, under such distinguished auspices, is a very welcome event of the greatest importance to all who are interested in the progress of the social sciences. It has long been recognised that the facilities for research in the social sciences are ridiculously inadequate compared with those for the natural sciences. At the Universities it has proved very difficult to free economic research from the heavy demands of teaching, and there is undoubted scope for a new national body whose energies can be single-mindedly devoted to research alone. The Institute is intended not only to serve as an independent centre of research, but to provide assistance and to collaborate in work of this character being carried on by other bodies both at home and abroad. From the terms of the announcement it appears that the new body will devote itself to what, without any hint of derogation, can be called the academic side of the social sciences. It is

to be hoped that its excellent example may lead to a similar improvement of the present deplorable state of knowledge on the more practical side of our economic affairs.

Trade Treaty-Making.—In a paper read to the Manchester Statistical Society on January 12th Mr Owe Jones expounded the principles and practice of commercial agreements between nations. Mr Jones defined and described the notions of reciprocity and most-favoured-nation treatment. Mr Jones found himself unable to support any serious modification of the most-favoured-nation clause, and urged that only by its general application could equal treatment in commercial matters be ensured. Mr Jones admitted that the prevalence of protectionist policies and the multiplication of extra-tariff restrictions, especially quotas and currency devices, had increased the difficulties and altered the implications of most-favoured-nation arrangements. Yet, in his view, discrimination was more dangerous than high tariffs, and the formation of low tariff groups of countries by the modification of the most-favoured-nation clause, would invite more loss in retaliation and fiscal conflict than would be gained in freer trade. In general, Mr Jones's survey was a plea for order, principle and stability in trade relations. In particular, it may have seemed to some who heard it an apologia for the British Government's policy since 1932. It remains true, however, that the strangulation of world trade by restrictive devices is harmful, and the modification of the most-favoured-nation clause by the British Government, which occupies a key position, may be clearly the lesser of two evils—if, as may well be the case, it proves to be the only means by which substantially freer trade can be achieved.

Accidents on the Road.—The monthly return of road accidents for December enables the complete figures for the year to be made up. The number of deaths in December, 1937, was 594, which was as much as 100 below the figure for December, 1936, although it showed the usual increase as compared with November. The number of injuries was also smaller than a year ago, though the proportionate reduction in this case is not so encouragingly high. During the year as a whole the total of casualties on the roads was 6,591 killed and 226,339 injured, against 6,551 killed and 227,813 injured in 1936. The deaths have thus increased by 0.46 per cent., while the number of injuries has diminished by 0.65 per cent. Since the number of vehicles on the roads has increased in the same period by over 13 per cent., the fact that the casualty roll has not shown a sharp increase is in itself a considerable achievement. But the figures are nevertheless enormously greater than any community can contemplate with equanimity.

Recession Continues

NEW YORK, January 4.—The business indices of the Federal Reserve Board for November confirmed the more pessimistic forecasts.

BUSINESS INDICES

1923-25 = 100 (Adjusted for Seasonal)

	Nov., 1936	Aug., 1937	Oct., 1937	Nov., 1937
Industrial production total	114	117	103	90
Manufactures	115	118	101	87
Minerals	112	112	113	108
Construction contracts total	58	63	52	53
Residential	40	40	36	34
All other	72	81	65	69
Factory employment total	96.2	102.4	98.4	94.1
Durable goods	89.9	...	96.7	91.3
Non-durable goods	102.9	...	100.2	97.0
Factory payrolls total	90.7	103.8	100.1	89.3
Durable goods	88.9	...	101.7	89.6
Non-durable goods	92.9	...	98.2	88.9
Freight car loadings	82	79	76	71
Department store sales	94	92	93	91
Department store stocks	71	...	77	77

In November, manufacturing output was about 25 per cent. below the level of August, 1937, or of November, 1936. Mineral production was scarcely down at all; and the indices of retail trade were practically unchanged.

The most surprising discrepancy is found in the contrast between manufacturing output on the one hand, and employment and pay-rolls on the other. Factory employment is about 2 per cent. below the level of November, 1936, and pay-rolls are about the same as last year, while there has been a 25 per cent. drop in factory output. There is some evidence that the available work is being spread out among the workmen. Actually, the greater decline was in the non-durable goods, although the contraction had seemed most severe in heavy industries. There is reason to believe that the December index of production will be below that of November.

The default of the Erie Railroad is a vivid reminder of the desperate condition of the railroads. Caught between falling rates and rising costs, their position was not happy before last summer's increase in wages. In the recovery between 1932 and 1937, no railroad that had gone into bankruptcy in the depression was able to emerge from receivership. With the latest recruits, a large proportion of the railroad mileage of the country is now in bankruptcy.

Since October 19th, the share market has passed through a number of brief but violent swings, without much that could be called a trend. The panic that characterised the

period between Labour Day and October 19th has slowly ebbed, and although liquidation has persisted, the markets have on the whole been inactive. The waning of the manifest panic in the stock market has been accompanied by some evidence that business itself is less nervous.

Counting the Unemployed

The figures of the unemployment census were given out on New Year's Day. This voluntary census was taken between November 16th and 20th, through the Post Office, and was then checked by a canvass of about 1½ per cent. of the population at the end of November. The census gave the following results:—

Employed on emergency public work	Total	2,001,877
of which : Male		1,662,444
Female		339,433
Unemployed, able to work and wanting work ...	Total	5,821,035
of which : Male		4,163,769
Female		1,657,266
Grand total		7,822,912
of which : Male		5,826,213
Female		1,996,699

The canvass suggested that the census was approximately 72 per cent. effective; and on this basis the total number of unemployed is estimated at 10,870,000. A large but uncertain number of persons who are at most only occasionally employed are, however, enumerated as unemployed. And this result does not compare readily with the census of employment taken in 1930, which showed 48,829,920 employed and resulted in an estimate of 3,000,000 unemployed employables.

The postal census figure is, however, remarkably close to the estimate of 7,585,000 made by the National Industrial Conference Board. The upper figure of over 10 millions is closer to the estimate of the American Federation of Labour. Considering the very limited appropriation made for the count, these figures are as good as could be hoped for. No provision was made for regular counts, and in all probability the number of unemployed is now materially greater than when the census was taken in November. Subsequent reports will throw some light on the age and occupational grouping of the November unemployed.

Silver and Currency

Portions of the silver programme expired at the end of the year, and were replaced by new arrangements. The Government has now accumulated about 2,000 million ounces of silver, of which about 1,400 millions were bought under the recent policy at a cost of about \$800 millions. Under the current arrangement, the Treasury will pay \$6464 per ounce for domestically mined silver, compared with the recent price of \$7757; but this price is subject to change by the President.

The Treasury will continue to buy silver under special arrangement from China, Mexico, Canada, etc., at a price in the vicinity of 45 cents; but this arrangement does not apparently cover the entire output. The silver bought has been and presumably will continue to be monetised at cost, although the law authorises monetisation at \$1.28, which is the so-called "monetary value."

The American currency system has always been complicated, but it has become somewhat simplified in recent years.

PRINCIPAL TYPES OF CURRENCY (\$000,000)

	Total Currency	Fed. Res. Notes	Natl. Bk. Notes	Gold Ctfs.	Silver Ctfs.
Dec. 31, 1929 ...	4,025	1,862	597	880	417
Dec. 31, 1932 ...	4,806	2,716	820	601	371
Nov. 30, 1937 ...	6,027	4,232	243	89	1,144

The most notable fact is the increase in total currency. During the depression, it was attributed to hoarding, and the increase was mostly in notes of large denomination. The more recent increase has been in notes of the hand-to-hand denominations. But it is not clear why so much more currency is in use than in the '20's.

France

New Social Conflicts

PARIS, January 12.—Endless social conflicts still hinder the revival of industrial production and business, which is needed to consolidate financial recovery. The Prime Minister has drawn up a new "social code" which he intends to put before Parliament after it has been approved by the representatives of employers and labour. The Trade Unions accepted the invitation to a conference on the labour proposals, but the employers refused.

The original Matignon Labour agreement of June, 1936, was accepted by both organisations before being voted by Parliament. Will the same dual approval be denied to the new proposals, which are designed to facilitate arbitration and smooth labour relations, to regulate recruitment and fix the status of strikes? If so, the new code would hardly be likely to promote collaboration between capital and labour. And it remains to be seen whether the Government would dare to enforce the code in the event of further troubles and the absence of the employers' consent.

Changes in Opinion

Public opinion has changed a great deal since June, 1936. Workers have been suffering from the steady rise in prices which the new social laws have encouraged and which the rise in wages does not cover. The policy of the Popular Front has been arrested, and the recent strikes were not very popular. Employers are discouraged by the perpetual social conflicts and by the diminution of profit due to the declining purchasing power of the public.

The key to the situation is held by the middle classes. In June, 1936, they voted against the deflation policy and for the Popular Front. To-day, like the peasants who are also friends of liberty, they think somewhat differently. The New Deal has indeed corrected many injustices, especially in the sphere of wages. But it has created new difficulties. Measures such as the introduction of the 40-hour week have led to continual disputes and a diminution in the yield of production.

The French people are still opposed to dictatorship, but there is now an opportunity for a strong National Government to take vigorous steps to restore order. For the time being, however, the political situation is too uncertain for the parties to adopt a definite line of action.

Increased Fiscal Receipts

Fiscal receipts in December, 1937, were 567 million francs in excess of the yield in December, 1936, and were 409 millions above the original estimates. In fact, the yield exceeds by 116 million francs the corrected estimates, after the increase in taxation made in the summer has been allowed for. In November receipts were still 70 million francs lower than the corrected estimates.

The monthly figures published by the Statistique Générale de la France and showing industrial production in France are as follows:—

	(1928 = 100)	Nov., 1936	Sept., 1937	Oct., 1937	Nov., 1937
General index	88	84	88	90	
Mines	84	87	94	100	
Chemical industries	103	96	100	105	
Paper	185	178	177	189	
Textiles	94	81	88	90	
Leather	77	70	78	68	
Iron and steel	76	83	88	91	
Engineering	83	83	86	88	
Automobile	96	81	82	86	
Building	65	58	56	55	
Gas and electricity	120	124	126	126	
Miscellaneous	115	110	112	110	

The index of production has previously been based on 1913 = 100, but for November it was calculated on the base 1928 = 100. On the former base of 1913 the index of production would have been 101 in November against 100 in October and 97 in September.

Unemployment on December 31st was 365,452 against 357,856 in the preceding week and 413,450 a year ago. In November, 12,414 motor vehicles were put on the road, compared with 11,439 in October and 9,417 in September.

Financial Difficulties

The financial situation is serious. After two devaluations, there is still no appreciable improvement in the national accounts. Between 1936 and 1938, total budgetary expendi-

ture has increased from 46,000 to 68,000 million francs. Of this, payments to the creditors of the State, that is to pensioners and holders of rentes, now represent only 32 per cent., against 40 per cent. two years ago. The expenses of the administration, however, swollen by increased wages and additional social credits, now represent 51 per cent. compared with 25; and the share of military expenditure has risen from 26 per cent. to 32.

Thus, the share of this increasing Budget which goes to the habitual subscribers of State loans is falling, while unproductive charges are rising. This redistribution of money is not expedient in the case of a State which is under the obligation of issuing huge loans and increasing the profitability of production. Indeed, the consequence of this renewed economic deflation is the same as it was before: a progressive paralysis of activity and savings which, if no change occurs, will lead the country to adopt drastic remedies. Yet France's attachment to liberty has been rendered more firm than ever by the sight of neighbouring dictatorships.

Germany

Transport Activity

BERLIN, January 11.—The first business week of the New Year witnessed an extraordinarily strong Bourse for both shares and fixed-interest securities. Money was plentiful; the Reich Loan so far as is known was well subscribed; and some of the provisional business reports for 1937—in particular for communications—were extremely good. The Reich Railway Company's return shows that traffic exceeded that of the best earlier year, 1929. The number of passenger-kilometres increased compared with 1936 by 16 per cent., and of ton-kilometres by 15 per cent.

Judged by earlier reports, the Four Year Plan is responsible for a good deal of the increase in goods traffic. Receipts from passengers rose by 8 per cent. to Rm.1,160 millions; from goods by 12 per cent. to Rm.2,960 millions; and the total operating receipts were Rm.415 millions more than in 1936. The average receipt per ton-kilometre, in spite of the increase of 5 per cent. in rates made in January, 1936, was lower than in 1935. Traffic on internal waterways in 1937 was also larger than that of the best previous post-war year, and exceeded that of 1936 by about 13 per cent.

The Plight of Farming

Considerable stir and controversy have been caused by an intimation from quarters closely in touch with the Food Ministry and the Reich Nutrition Corporation that agriculture is again in a bad way. The official food campaign, usually called the "Production Battle" (*Erzeugungsschlacht*), is as a rule represented to have been successful; and certainly both the absolute production (other than of grain and a few commodities) and the share of home-produced foods in total consumption has risen between 1932 and 1935, the latter from 75 to 84 per cent.

According to the authorities mentioned, however, this success has required a disproportionate expenditure of money and labour, which, since prices may not be raised, has hit farmers financially. As described by the Food Ministry, the law of diminishing returns has begun to operate. More has been produced but much more has been expended to produce it.

Since 1933-34 the total of agricultural wages has risen 18 per cent. This has fallen largely upon the farms producing cereals, which have not been able to increase their crops at all. At present, it seems, the cost of producing an additional

quantity of food is double the selling value of the additional quantity. Thus, in 1937, the yield of farmers' sales rose by Rm.163 millions, but the operating expenditure of the farmers rose by Rm.335 millions.

Agricultural and Industrial Prices

Agricultural indebtedness, which had been declining, has again begun to increase, though so far only locally and on certain kinds of farms. The gross receipts of farmers have lately risen much less than the national income. In general, Herr Backe of the Ministry concludes that agricultural prices are too low, or, what is the same thing, industrial prices too high. This is the old question of the price "scissors"; and the scissors, it is alleged, have been opening to the disadvantage of farmers. As Herr Backe sees things, the evil is that while agriculture is a controlled industry—in the sense that not only are prices fixed by the State, but marketing is also in general conducted by state-created organs—industry is not.

"The simultaneous existence of two different economic systems," says Herr Backe, "is possible only in a time of transition. The question of adopting the controlled system for industry as well must therefore become ever more urgent." This is probably a Left Party point of view. The "binding" of industry would please the Socialist element in the Party. It would, however, create difficulties not met with in the regulation of agricultural products, which are limited in variety and quality.

Policy and Practice

The trouble could, no doubt, be temporarily overcome by changing the relation between agricultural and industrial prices; but the fact is that forcing crops to grow where they are not fitted to grow is fundamentally unprofitable. The facts about the "price-scissors" are, however, in dispute. Indeed, prices in the past twelve months have probably moved rather to the advantage of farmers, according to the Institute for Trade Research. Since October, 1932, the index of the prices of farm products has risen from 78 to 100 in October, 1937; and the prices of farm materials (other than oils and building) have remained stable or, in some cases, have fallen slightly.

The personal expenditure of farmers, apart from working expenses, has, however, risen more than food prices. In the index of wholesale prices for 1937, which as a whole rose only by about $\frac{1}{2}$ per cent., the agricultural component advanced from 103.6 to 104.6, while the index for "manufactured consumption goods" advanced from 130.5 to 135.8. The Reich Nutrition Corporation supports Herr Backe's theory that the movement of prices has been against the farmers.

It seems that either food prices will have to be raised, or reductions in price decreed for commodities required by farmers. The last such reduction was the enforced cut of potash and nitrate prices in 1936. The Nazi Government has been obliged several times to reverse its policy in regard to the relations between agriculture and the urban food-consumer. It began with the assumption that only measures to raise food prices were required; later it was compelled to take measures to check the increase; and now the problem has again arisen of securing to the farmer remunerative prices. The Party ideal of stable prices satisfactory to all interests has not been realised.

Industrial Activity

A veto has been imposed on the establishment of industrial undertakings that consume light metals. The Steel Trust (Vereinigte Stahlwerke A.G.) reports an output of pig iron in the October-December quarter of 1,627,000 tons, against 1,519,000 tons in the preceding quarter; and of ingot steel an output of 1,766,000 tons against 1,611,000 tons. The demand for bars and thick and medium sheets is still large; but it is stated that the different classes of consumers have recently received their full rations.

The rise in steel production in recent months was brought about by increased consumption of imported scrap iron. In November 37,770 tons of machinery were exported against 31,100 tons in October. Reports about the present state of orders in the exporting industries are rather less favourable, apparently as a result of the partial depression in some overseas countries. The cutlery branch, which is particularly sensitive, reports a decline in foreign business and an undesirable accumulation of stocks.

It is clear that exports in many industries are being hampered by the expansion of the home market and by the diversion of capital and energy to a few State-fostered trades. Since 1930 the German share in total world exports has fallen very considerably.

Switzerland

The Federal Budget

GENEVA, December 26th.—The Swiss Parliament recently approved the Budget of the Confederation for 1938. Expenditure is estimated at 542.8 million francs and revenue at 519.8 million francs, leaving an estimated deficit of 23 million francs. The Federal Government has been authorised to levy for another three years the Extraordinary Crisis Tax, introduced three years ago, and to increase slightly the rates of tax on high incomes.

These taxes will yield about 30 million francs in 1938. Customs duties are estimated to yield 209 million francs, the duty on petrol 53 millions, the duty and tax on tobacco 40 millions and the tax on drinks 12 millions. The yield of the stamp duty is forecast at 60 millions and of the military tax (paid by those who do not serve in the Army) at 4 millions. Another 6 million francs will be produced by the rise in the price of oils and fats.

Interest payments will absorb 97 million francs in 1938, while 83 millions will be used either for debt repayments or for increasing the various reserve funds. Unemployment insurance and public works will require an expenditure of over 61 million francs, while 96 millions will be devoted to national defence.

To the Budget deficit of 23 million francs should be added the deficit of the Federal railways, making 54 millions in all. Since, however, the Budget includes a payment of 43 million francs to adjust the finances of the Federal railways the real deficit is some 11 millions.

The Budget has not been received with much satisfaction in industrial and commercial circles. Despite the Government's promises, expenditure is still rising. It was, however, stated in Parliament that expenditure has not increased very much, since some 20 per cent. of expenditure during recent years has been devoted to the redemption of debt.

It was to repay debt that taxation had to be increased and new duties set up. Taxation is actually very heavy. In 1935 the total yield of Federal, cantonal and municipal taxes was 948 million francs, a rise of 200 millions since 1920. It now represents about 237 francs annually per head of population. And Customs duties bring in an annual total of nearly 200 million francs.

Public opinion has repeatedly pronounced against the steady increase in State subsidies. In 1938 they will reach about 200 million francs, against 105 millions in 1930, 245 millions in 1934 and about 220 millions in 1936.

"Hot Money" Measures

Meanwhile foreign funds, mostly French, continue to pour into Swiss banks, and the measures taken by the National Bank to check the influx have so far had little effect. These measures are intended to restrict sight deposits as much as possible. No interest can be paid in Swiss currency on sight deposits made by foreigners residing abroad unless the money is deposited for at least nine months. Deposits at sight will not be accepted, but only deposits repayable at three months' notice. These measures do not affect deposits up to 5,000 francs, or up to 20,000 francs when the depositor has securities in the bank.

The same restrictions apply to the accounts of foreign industries and companies, unless they are used for commercial operations in Switzerland or for meeting interest or repaying loans in Switzerland. This will help to reduce the enormous amount of foreign deposits at sight and minimise the risk of the National Bank in case these funds are recalled suddenly.

Committees at Geneva

The League of Nations Financial Committee, in its last session, considered the question of commercial credit. International credit operations have practically disappeared from banking practice, principally because lenders fear that repayment may be prevented by exchange restrictions. Security in that domain, it was argued, might be given in the form of an undertaking given by the authorities concerned that sums required for liquidating the credits would not be subject to exchange control.

The Economic Committee of the League has been asked by the Assembly to advise as to the best way of giving practical effect to the recommendations of the Raw Materials Committee. The Economic Committee dealt with the question of access and considered that there was no insuperable difficulty concerning access to raw materials. The Committee condemned the policy of the countries striving to be self-sufficing.

In the end the Committee recommended that raw materials should not be subject to any export prohibition or restriction, except in pursuance of an international restriction scheme or some other agreement between exporting and importing countries; that raw materials should not be subject to any export duties except those imposed at a uniform rate irrespective of country for revenue purposes, or to finance the improvement or marketing of raw materials; that foreigners should have the same rights and facilities as nationals for developing the natural resources of both sovereign countries and colonial territories; and that international regulation schemes should be framed to admit the effective association of consuming interests and should be administered to provide consumers with adequate supplies, while preventing excessive rises in prices and keeping prices as stable as possible. The Committee came to the conclusion that the League Council should leave it to the different Governments to consider whether the situation is favourable for taking international action.

Spain

Teruel and the Volunteers

ON THE SPANISH FRONTIER (UNCENSORED), January 7.—The surprise attack on Teruel has greatly encouraged the Government ranks, whose morale has never been low. Extreme mobility and surprise are the factors which the experts have deemed necessary for the defence of the Eastern front and for the advance into rebel territory. These are now considered to have been achieved. Within recent months great quantities of motor transport vehicles have been received; but the lack of heavy artillery continues to be the Achilles heel of the Government.

Just how far Germany will continue to support Franco seems in doubt. The withdrawal of Germany, with its 10,000 or so technicians, would be far more disastrous for Franco than the withdrawal of the 100,000 or so Italians, who have shown themselves poor fighting material. There is, moreover, considerable ill-feeling toward the Italians because of their arrogant attitude.

The Italians now seem to be furious with Franco for his more recently adopted attitude of complacency towards England, and the appointment of the Duke of Alba as the Franco representative in London. Italy's intervention in Spain has had as its object the domination of the Mediterranean, and Franco's new policy of trying to impress England with his friendliness towards her means a setback for Italy. The Italians are supporting the Spanish Fascist Party, the Falangistas, who are also angry with Franco because he is trying to absorb and so to suppress their organisation.

Government's Swing to the Centre

The firm policy which the Republican Government have pursued since May has attenuated that bitter dissension on their side which obtained until then. The Anarchists have been thrown out of both the Central Government and the Catalan Cabinet. They have been given to understand, even though they have considerable liberty of speech, personally and through their Press, they must toe the line.

The ex-Premier, Largo Caballero, whose alliance with the Anarcho-Syndicalists is well known, has likewise been "nullified" as a political factor. He and his followers may be considered to have only a certain "nuisance value."

The P.O.U.M., the Trotskyist Party, has been suppressed. The Republican Government is pursuing a new policy. The Communist Party is given its proper niche in the Popular Front Government, and not accorded undue prominence or licence. The Anarchists have no niche, because they never were of the Popular Front. It is General Rojo, hand-picked by the new Government, and not the Communist-backed General Miaja of Madrid, who is chief of the united Republican armies.

The aim of the Government is the preservation of the Republic. Certain "advanced legislation of the social order" may have to be conceded in the future because of the strong support which the opposition to Franco received from the Socialists and the minority Communist Party and because of the demand for such legislation by the workers and peasants. But the swing is towards what might be described as "an advanced bourgeois regime." This would mean the undoing of much of the "collectivisation" and even confiscation of property which the force of circumstances imposed in the early days of the revolution.

Courting the Right in Catalonia

It is interesting to note the real purpose of the recent visit to Brussels of Companys, the Catalan President. It was not, as was reported, to enter into peace negotiations with representatives of Franco, but to get into touch with "economic elements" who fled from Catalonia in the early days of the revolution and whose property was seized and collectivised. The Catalan Government would like to have an understanding with them for the salvaging of Catalonia's economic interests, chief among which are her industries.

Collectivisation has been disastrous, and detested by the majority of the workers, as well as by the middle class. This tendency of the Catalan Government, whose collectivisation decrees were the most extreme of any promulgated in Spain, bears out the charge made against them by the Anarchists and other extremists before the street fighting of last May, that the Catalan Government would really like to see the return of a bourgeois regime. The fact is that Catalonia, despite its working-class population, is essentially bourgeois.

The Catalan Government has maintained good relations with many leaders of the Catalan Right, and saved the lives of many of them who are now living in France or elsewhere. Indeed, some have now returned and walk the streets of Barcelona in perfect security.

The Role of Azaña

Several other important figures have recently returned to the Government side, among them Portela Valladares, who was the Prime Minister at the time of the 1936 elections and who was compelled to flee from Barcelona to save his life. The rôle played by President Manuel Azaña in this policy of regeneration is wholly underestimated. He has been pictured in the foreign Press as a figurehead, a nonentity, a virtual prisoner of the "Reds." Nothing could be farther from the truth. Azaña has been very much the power behind the scenes in the shaping of Governmental policy, working constantly with such leaders in the Cabinet as Negrin, the Premier, and Prieto, the War Minister. Azaña would like to see peace—to see an understanding with those on the other side except those like Franco, who are considered to be the criminal leaders of revolt. Azaña's viewpoint was expressed last July, when he said, "24,000,000 Spaniards must go on living together, and Republican Spain must know how to be generous to those who had erred."

It is doubtful, however, whether any reconciliation is possible with certain elements, which in Spain may be described as castes rather than classes, namely, the military the land-owning aristocracy and the clergy. The Government seems to recognise that dragging out the war to a stalemate would favour peace and preserve the Republic. It would probably welcome peace proposals from some friendly foreign Power. President Azaña would particularly welcome such proposals from President Roosevelt.

Food and Censorship

The food problem has not improved in recent months. Lack of organisation seems to be the principal difficulty. British relief organisations have been handicapped by the fact that the Government has insisted upon collecting duties on food sent into Spain for relief.

The censorship continues to be unduly severe and only

results in harm to the Government cause. Newspapers, feeling they cannot obtain the truth from Spain, turn to other sources of information. The resultant picture is usually exaggerated and most unfavourable to the Government.

About the Government's financial position, little or nothing can be deduced from the Government's official or inspired statement. The Government's spokesmen are too prone to assume that foreigners are simpletons. Spanish mentality, whether governmental or insurgent, does not yet seem to have grasped the idea that the only way to establish confidence abroad is to lay its cards on the table.

Japan

War and the Budget

TOKYO, December 27.—The Budget estimates for the fiscal year, which begins on April 1, 1938, were approved by the Cabinet Council on November 30th. Expenditure in the new Budget was fixed at 2,868 million yen, compared with the current year's original estimates of 2,815 million yen. The increase is principally due to the growing debt services and the new Ministry of Health to be established next year.

The Army and Navy estimates amount to 1,241 million yen in the aggregate, or 43.3 per cent. of the total national expenditure, compared with 1,410 million yen, or 50 per cent., in the current year. The smaller defence votes, however, are merely a matter of book-keeping, since expenditure on the garrisons in North China, etc., is brought into the China Campaign Accounts, leaving the ordinary defence expenditure practically unchanged.

The revenue for the fiscal year 1938-39 was estimated at 2,174 million yen, an increase of 131 million yen, compared with the current year. There is again a huge deficit of 694 million yen compared with approved expenditure. The gap will have to be filled almost entirely by a new loan.

Any comparison of the Budget estimates for next year with the accounts of the current year, however, is practically useless, because expenditure on the China campaign is separately budgeted for. War estimates to date have totalled 2,566 million yen, and will have to be further supplemented during the remainder of the current year. Some 450 million yen per month will be needed as long as armed conflict continues.

Balance of Payments

According to tentative estimates of the balance of international payments in 1936, Japan had a credit balance of 59.3 million yen on her international transactions (excluding capital movements), compared with 136.5 million yen in 1935. While the visible trade balance and net Government payments made abroad totalled 363 million yen, or 160 million yen larger than in 1935, the official estimates of invisible exports were put at 422.3 million yen, or 26.5 million yen larger.

OFFICIAL CALCULATIONS OF BALANCE OF PAYMENTS (in thousand yen)

	1935	1936	Inc. or Dec. in 1936
Excess of imports of merchandise ...	14,758	130,176	115,418
Net Government's payments abroad...	188,203	232,855	44,652
Debit total	202,961	363,031	160,070
Estimated net income from overseas investments and business	159,815	170,261	10,446
Estimated net shipping and insurance premium income	188,057	209,367	21,310
Estimated net tourists' income, etc. ...	36,324	37,181	857
Estimated net income from other sources	11,602	5,556	-6,046
Credit total	395,798	422,365	26,567

As for capital movements, the net outflow in 1936 was placed at 269.3 million yen, compared with 371.6 million yen in 1935. The heavy decrease is accounted for mainly by smaller investments in Manchukuo.

Contracting Imports

Import figures for November show a continued contraction under the restriction scheme. Imports, valued at 210 million yen, decreased by 8 million yen, or 3.7 per cent., compared with the corresponding month of last year, while exports,

valued at 253 million yen, increased by 16 million yen, or 6.8 per cent. There was an export surplus of 42 million yen during the month. For the eleven months ended November, however, imports show an increase of 1,046 million yen (42.2 per cent.) to 3,525 million yen, and exports an advance of 506.6 million yen (21.1 per cent.) to 2,902.8 million yen. Thus the import surplus amounted to 622.6 million yen, compared with 82.9 million yen last year.

Wholesale prices have risen and the Bank of Japan's index for November recorded a rise of $\frac{1}{2}$ per cent. on the month. The price index of all shares listed on the Tokyo Stock Exchange advanced by 3.4 points during November. On the other hand, the output of textile yarns fell owing primarily to a shortage of raw materials. Most branches of the textile trades have drastically curtailed operations from the beginning of December.

The influence of the large-scale operations now being conducted in China has now been felt in all departments of the Japanese economy. Production, trade and finance have all been affected by the demands of war, and the determination of those in authority to prosecute the campaign until their objects have been achieved means that economic life will increasingly take on a war-time character.

Bulgaria

Favourable Economic Outlook

SOFIA, January 8.—The recorded improvement in the past twelve months, and the increased turnover in business at the end of the year suggest good prospects for 1938. The higher level of wholesale prices, which at the end of November was 13 per cent. above the level of the preceding year, is stimulating both industrial production and the export of agricultural products.

Stocks of tobacco and cereals for export, and the increase in animal products should guarantee a favourable development of foreign trade. The prices obtained for Bulgarian exports are high enough to justify hopeful forecasts. While the index of export prices was 15 per cent. more in November, 1937, than in November, 1936, that of imports was only 11 per cent. higher.

Higher Expenditure

The ordinary Budget for 1938 estimates revenue and expenditure at 7,200 million leva. This is 288 million leva or 5 per cent., more than last year. Revenue for eleven months of 1937 was 6,679 million leva, or 16 per cent. more than in the same period of 1936. The deficit for the eleven months was only about 50 million leva.

The accounts of the State railways have also been balanced, and receipts and expenses are estimated at 1,700 million leva. According to the provisions of the Budget, the biggest increases are for the War Ministry, the Ministries of Agriculture and Commerce, for Roads and the Home Department.

At the same time, expenditure on the Public Debt shows an increase to meet part of the cost of armaments which has been covered by borrowing. Armaments are paid for mainly through the ordinary Budget because of the lack of other extraordinary sources of revenue.

Surplus of Imports

The commercial agreements made in December with Germany, Italy and Austria are expected to improve the trade with these countries. The figures of foreign trade for 1936 and for eleven months of 1937 are as follows:—

	1936	1937 11 months
In million leva		
Imports	2,804	4,486
Exports	3,663	4,447
Surplus (+ = exports — = imports)	+459	— 39

The import surplus for nine months at the end of September was 326 million leva. This markedly decreased in October and November because of very large exports. The contrast between the figures of 1936 and those of last year is most marked. A quite considerable surplus of exports has been converted into a small surplus of imports.

Imports in the eleven months rose by about 60 per cent. compared with the figures of 1936. Exports showed only a rise of 37 per cent. An analysis of imports suggests that, of the increase of 1,682 millions compared with last year only about one-third is due to imports of armaments.

Eire

Depression in Agriculture

DUBLIN, January 8.—Agricultural prices have risen in recent months, but farming profits have not risen proportionately, if at all, because costs of production have advanced at least as rapidly. In spite of the rising price level, therefore, agriculture remains depressed; complaints are heard from farmers in all parts of the country; and the numbers employed on the land continue to fall. This rural unemployment is only partly reflected in the official unemployment statistics, for many of the displaced workers emigrate to Great Britain, where they have no difficulty in finding employment.

The area under tillage has decreased in spite of the subsidies on wheat and beet. Indeed, were it not for these subsidies, the tilled area would have declined much more. Unfortunately, the reduction in tillage has not been accompanied by an increase in the number of livestock, for both cattle and pigs have shown a decrease.

The Value of Livestock

The simultaneous decline of both branches of agriculture demonstrates the truth of the argument of Irish agricultural experts that tillage and livestock are mutually dependent. The presence of a large animal population helps to maintain the fertility of the soil, and tillage products are most profitably marketed by being fed to livestock.

Our new industrialists do not realise that every cow and every pig is a little "factory" which converts raw material into a finished product very efficiently and economically. These "factories" are superior to the newly erected factories in the protected industries in two respects: they are home-produced and do not necessitate capital imports, and they utilise home-produced raw materials. Their activities, there-

fore, do not upset the country's balance of payments, as many of the new industrial factories do, and may even add to the volume of exports, as the new factories certainly do not. It is regrettable that our most productive and efficient industry should be declining, with adverse reactions on the area of tillage, the volume of employment and the size of the national income.

The agricultural depression naturally increases the difficulties of the new industries, which depend almost exclusively on the home market. Owing to rising costs of production in the towns, caused in turn by the rising cost of living and the new industrial regulations, Irish manufacturers find it increasingly difficult to sell except in the sheltered home market, which depends for its purchasing power upon agricultural prosperity and, above all, on a flourishing export trade in agricultural products.

The New Tribute

The smaller the domestic purchasing power, the more slender will be the possibilities of realising those economies of large scale production on which industrial efficiency depends, and the greater will be the danger that Irish consumers, who are for the most part farmers, will be asked to pay unreasonably high prices for native manufactures. It has been said that the new industrialists may prove in time to be as great a burden on the Irish farmer as the old landlords were, and that the tribute that used to be taken in rack rents may be taken in future in artificially high prices for urban products.

The depression in agriculture has also produced a deterioration in the balance of payments, which has become increasingly passive. There is no doubt that external investments were liquidated during 1937 to pay for part of the imports. In a country whose standard of living depends to so large an extent on its creditor status it is most desirable that new investment should be financed by current domestic savings.

Letters to the Editor

Tariffs and Prosperity

TO THE EDITOR OF THE ECONOMIST

SIR,—The letter under the above heading by Mr T. W. M. Whitson made a number of suggestions as to the causes which led to the accumulation of gold in the United States.

The initial great accumulation took place during the war when the capacity of the Allied countries to export goods was extremely limited and when the necessity to import many things was accentuated. The only means of payment were by borrowing from the United States or by the shipment of gold, and both took place to a great extent. The gold accumulation reached in the United States in 1923 was the heaviest for many years.

It was not until the beginning of 1931 that the 1923 level of gold stocks in the United States was again reached. Accordingly during that period she was, on balance, not an importer of gold. During the next few years there was only a moderate increase in the gold stock, and it has been since the end of 1933 that the really large increase has taken place. Yet, during that period, the imports of goods into the United States have increased more rapidly than the exports of goods from that country, and in 1936 her imports slightly exceeded her exports. Clearly the movement of gold to the United States is not due to payment instead of goods but is almost entirely the result of financial operations.

Yours truly,
HERBERT G. WILLIAMS.

Victoria Street, S.W.1.

France: Re-armament and Democracy

TO THE EDITOR OF THE ECONOMIST

SIR,—In the Fascist States the cost of re-armament has been met by inflationary financing and a policy of self-sufficiency. Political and economic dictatorship has enabled their programme so far to be successful. The non-Fascist States cannot wait for the collapse of autarky. They must re-arm in their turn. Already the balancing of Budgets has become difficult, and expenditure on armaments has had to be covered by loans.

Which system can more readily cope with excessive spending on armaments: Liberal or Fascist? Fascism has shown certain advantages. Rigid foreign exchange control has so far averted monetary breakdown and internal purchasing power has been kept more or less stable. Fascist States can lower the standard of living without encountering any opposition. Even capital is regimented.

Democratic States cannot enforce a lowering of the standard of living to pay for armaments, or ignore social unrest. Exaggerated state interference is contrary to liberal principles. Confidence plays an important part in democracies, and is undermined by inflationary finance and state control. The results—the flight of capital and currency deterioration—are illustrated by France's experience.

In this light, the proposals of French Socialists and Communists for exchange control seem not ill-founded. Monetary control and Fascism do not necessarily go together, but in France, once exchange control were applied, an authoritarian regulation of the whole economic and political life would have to be adopted. But this would be no solution, for it would violate the Tripartite Agreement and alienate France politically from her friends. Internally, it would probably lead to revolution.

Only immediate help can save France from an inflationary breakdown. Would not the best way for Great Britain's own protection be to give France sufficient economic help to enable her to keep pace in the armaments race? France herself has helped her allies in Central Europe to re-arm by credits and long-term loans, and it was not easy for her to do so. How could Great Britain and/or the United States help France in turn?

Sir Robert Kindersley has shown that Great Britain needs foreign investments. Here would seem to be an opportunity. A large long-term loan on a purely commercial basis would not be practicable in France's present position, and small short-term loans on onerous conditions would do more harm than good. Help would have to be generous and on a large

scale; but the millions spent on British re-armament would be wasted if France were to break down.

Any loan to France would have to be guaranteed by the British and American Governments, and would be a gilt-edged investment for subscribers. It would then be the duty of France to set her house in order. The loan need not be fantastically large. The net deficit on the French balance of payments in 1937 has been estimated at £35 to £40 millions. If we suppose that France needs a breathing space of two years, a loan of £100-£200 millions would be sufficient to meet the deficit during that period and provide a margin to cover any further outflow of capital. A return of refugee capital might be expected to set in, and the danger of currency depreciation would vanish. Such a loan could easily be floated in London and New York, and the future of all democracies, no less than France, would be safeguarded.

Zurich.

Yours faithfully,
WERNER BAR.

Gas and Electricity

TO THE EDITOR OF THE ECONOMIST

SIR,—In your second article on "Gas and Electricity," you make a perfectly fair comparison of the consumer's choice between two kinds of "fuel-on-tap." You consider also the national interest—"which fuel makes the more economical use of the country's coal resources?" In this comparison electricity is balanced against gas alone, with a rider that "many valuable by-products" must be thrown into the scale for gas. I think your argument here loses reality for the reason that one of these by-products is of far too great importance to be included in any such rider. Coke represents up to 50 per cent. of the original potential energy in the coal from which it is made.

In considering the efficiency of coal treatment this recovery of heat in the form of coke must be included, bringing the relation of the two industries at the production point to 20 per cent. for electrical and (at a conservative estimate) 75 per cent. for gas works treatment. Moreover, this advantage in potential heat is carried through to the final stage of useful heat. Taking coke as about 25 per cent. efficient in use, it will provide from one ton of coal a quantity of useful heat equal to that given by gas obtained from the same ton.

While, on your argument, after the three stages of production, distribution and utilisation efficiency have been taken into account "from the general economic standpoint . . . the balance may incline slightly on the side of gas," the scale will sink with a crash if coke is thrown in. The community not only has the extra supply of heat. It is given what may prove of inestimable value, a smokeless domestic solid fuel as a substitute for the burning of raw coal in the domestic grate with its attendant clouds of smoke.

The short point is this. From the consumer's standpoint it is perfectly fair to compare two types of fuel on tap. When the interests of the community are considered, i.e., when the efficiency of two industries is compared as producers of domestic fuel, coke cannot be omitted.

One small point is worth noticing. Your article says: "From the purely technical point of view, the consumer is better served by electrical equipment for these purposes" (space heating, water heating, hot-plate cooking). If this sentence means that electric appliances have a higher conversion efficiency from potential to useful heat, this superiority has already been taken into account. If it means that electricity is a better technical instrument for these jobs, no three less favourable instances could have been chosen. Instantaneous water heating by electricity is not practicable; hot-plate cooking is the outstanding weakness of the electric cooker; space heating is efficient, but without the advantage of ventilation which gas can give. These are no less "technical" points than questions of thermal efficiency, the first two being a reflection of the difficulty of giving intense heat quickly by electricity without disproportionate loading. Technique includes speed and form as well as simple heat output.

Yours faithfully,
D. MILNE-WATSON.

The Royal Mint

THERE is more in the Mint than money. Ever since Sir Isaac Newton, theologian, scientist and mathematician, superintended its operations, the interests of the Royal Mint have gone beyond mere coins and their content. The grateful receipt by the Departmental Library of the Newton Papers, sold at Sotheby's in 1936 and presented to the Mint by Lord Wakefield, was no mere gesture of institutional loyalty.

The latest report of the Deputy Master and Comptroller for the years 1935 and 1936* is in an appropriate vein, traversing artistic and sociological no less than statistical themes. The review of coinage designs occasioned by the advent of two new Kings set the Mint and its advisers by the ears. Argument arose between the sponsors of heraldic and pictorial art, but the advocates of British fauna on British coins were chastened to find only the Red Grouse peculiar to Britain. A series of Royal Animals was projected, but only the Wren survived, represented on the new farthing, the companion to Drake's "Golden Hind" now enshrined on the halfpenny.

Heraldry thus survived the movement to bestrew British coinage with cattle or corn or aeroplanes, and the Secretary of the Treasury was left to ruminate on the mysterious dispensation which has ordained that it should be "only the extreme poles of political thought that can afford to express these through the vehicle of Art." A lively and sympathetic conservatism triumphed in the designing of the new coins, with only the grossly thickened and twelve-sided threepence to excite by its novelty.

Speculations about ornithology and the origins of myth and legend jostle in this report with astronomical figures of coins struck and in circulation. Here, it is explained why the Wren is a Royal bird of undoubtedly Nordic origin; and why the Scotsman cleaves with affection to the elusive silver threepence. There, it is stated that 244 million coins were struck in 1935 and a record number of 334 millions in 1936.

Yet even these figures are more than mere statistics. In 1936 they included 150,000 Maria Theresa thalers, dated 1780, inscribed *Justitia et Clementia* and destined for the Sudan and Arabia. Even where the writ of the Duce now runs the effigy of Maria Theresa is still sought in trading transactions, and the Roman Mint is doing for Abyssinia what London has done for the Red Sea region.

The coins struck for foreign countries tend to decline in number, as economic nationalism throws up Mints in the new post-war countries. But in 1935 and 1936 the Royal Mint was working overtime. A Silver Jubilee, two Accessions and one Coronation taxed its men and machines to the utmost, and raised acute problems of personnel.

In all the Mint's output, however, year after year, Coronation or no Coronation, bronze coins predominate. In January, 1936, some £9,500,000 of bronze coin was in circulation, representing some four shillings' worth for every man, woman and child. About 1,355 tons of bronze coin were issued in 1936; and the traffic receipts of the London Passenger Transport Board for a single year included 6,000 tons of bronze.

These bronze coins, as the report admits, are needlessly large and heavy. They were first introduced in 1860 after the style had been set sixty-nine years before in France when the brazen spoils of church belfries were melted and coined. The British examples are now obsolete and the heaviest in Europe. But to recoin between two and three thousand million pieces would take ten years, be prohibitively expensive and dislocate all the automatic machines in the country.

The thin end of the reform wedge is the new bronze threepence. Over thirty millions of these coins have left the Mint—only to vanish from sight under a new species of Gresham's Law for hoarding "as novelties in waistcoat pockets and money boxes."

Shorter Notice

Survey of International Affairs, 1936. By Arnold J. Toynbee. Assisted by V. M. Boulter. Oxford University Press (Milford). 1006 pages. 38s.

Dr Toynbee is an idealist, and his view of history is dramatic. Now and then, in consequence, the customarily keen edge of his judgment is blunted by his fervour. Far more often, however, in his story of 1936 as in all his other writings, he speaks with insight no less than with authority and lucid elegance. This Survey is the authentic tragedy of 1936 classically narrated: from "the crowded and confusing tale of diplomacy and propaganda and re-armament" there emerges the failure of law-abidingness. The state of war has returned, though the major sorrows of Spain and China have yet to come. Dr Toynbee shows the smaller powers of Europe running to cover, sceptical now of collective security and afraid of commitments, ready to commend their services to a patron in return for protection but anxious, as in the case of Belgium, merely to stand aside from the hurly-burly. So the powers, great and small, jockey for places. Germany presses upon the Danube; and in the Baltic the diplomacy of the Reich and the Russian Soviets meet. Germany reoccupies the Rhineland with troops; and the future of Austria becomes a problem of central importance for the peace of Europe. Over all broods the shadow of re-armament; but, against its menace, there is the beacon of world economic recovery. Mr Hodson, with balance and knowledge, depicts the economic scene—the alignment of currencies, the rise in prices and the boom—while Miss Duff, Mr Hubbard, Mr Routh and Mr Beeley round off a notable work of record and comment by their contributions on America, the Far East, the Straits Convention and on Palestine. Dr Toynbee's Surveys, shot through with learning and high principle, are still unique—and indispensable.

The First Authoritative
Textbook on this Subject

UNIT TRUSTS

AND HOW THEY WORK

By C. L. ROSENHEIM, M.A., and C. O. MERRIMAN, A.C.A.

Here, for the first time, are set out the essential details of the organization and operation of Unit Trusts. The subject is approached from a solely practical viewpoint, and the book will prove of great value and interest to accountants, stockbrokers, and the investing public. 100 pp. 7/6 net (by post 7/10).

THE BUSINESS WORLD

English Bank Profits

BANK profits are dependent upon so many factors that it is always difficult to forecast them. Fundamentally, they depend on what the banks can earn on their various classes of assets, less the interest payable on their deposits and their general working costs. They are struck, however, after various adjustments for bad and doubtful debts, and for changes in the value of securities, and after making undisclosed allocations to (or from) contingencies account. These adjustments are mainly a matter for judgment, and as they necessarily vary with changing circumstances they preclude exact comparisons between the disclosed earnings of one year and of another. Nevertheless, certain well-marked trends can usually be discerned, and in the following article we propose to consider some of the tendencies disclosed, or confirmed, by the figures of the great English joint stock banks for the year 1937.

Our first table shows the profits and dividends of the "Big Five," together with those of three banks located mainly in Lancashire:—

ENGLISH BANK PROFITS AND DIVIDENDS

	1929	1931	1932	1934	1935	1936	1937
Barclays:—							
Net profit (£ thous.)	2,332	1,795	1,574	1,708	1,784	1,894	2,134
Dividends { "A" & "B" & "C" }	10% 14%	10% 14%	10% 14%	10% 14%	10% 14%	10% 14%	10% 14%

Dividends { "A" & "B" }	13% 12%	12% 12%	12% 12%	12% 12%	12% 12%	12% 12%	12% 12%

* Includes special centenary bonus of 2 per cent. † After providing for the centenary bonus to staff, pensioners and widows. ‡ Before 1935, net profits were shown after deducting income tax other than income tax on dividend. The 1935 net profits are shown after making provision for all income tax, including that on dividends. In actual fact there was an increase in net profits. § Includes cash bonus of 2 per cent.

Note.—The profit figures are given in the forms in which they have been published by the banks. In the majority of cases, they are struck after allowing for income tax, and as rates of tax have varied during the period under review, the comparability of the figures is affected. In round figures, the 1937 profits of individual banks before income tax (but after N.D.C.) may be put as follows: (in thousand £s)—Barclays, 2,840; Lloyds, 2,440; Midland, 3,340; National Provincial, 2,030; Westminster, 2,330; District, 690; Martins, 920; and Williams Deacon's, 340.

The past year's profits are the best since the depression, and earnings have at last reached the point where in some cases shareholders are being allowed to reap the benefit. The Westminster Bank is paying a cash bonus of 2 per cent. on the £4 shares. In effect, this restores the 1929 dividend of 20 per cent., but the expression "cash bonus" carries the implication that the restoration is not necessarily permanent. The District Bank has raised the dividends on its "A" and "C" shares from 16½ to 17½ per cent. Martins is paying a centenary cash bonus

of 2 per cent. The centenary actually fell in the troubled year 1931, and its financial commemoration has had to be deferred until more spacious times. Bank dividends are still in most cases below their 1929 level, but their incipient recovery is welcome, nevertheless.

Apart from dividends, Barclays, Lloyds and the National Provincial have all restored a further £500,000 to their disclosed reserve fund. The heavy depreciation of the banks' investments in 1931 forced many of them to draw upon their disclosed reserves, and these withdrawals have during the past few years been partially made good. Barclays and the National Provincial Banks have found this year's allocation out of current profits, though to some extent at the expense of the amount carried forward. Lloyds Bank has drawn upon internal reserves, but has simultaneously increased its disclosed allocation to contingencies from £250,000 to £400,000. There is not necessarily any connection between the two operations. The general impression left by these decisions is that the banks had ample inner reserves in hand out of which to meet the past year's moderate fall in gilt-edged prices. Other allocations out of the year's profits take a familiar form. In some cases rather more is placed to premises account and in others there are increases in the appropriations to the banks' pension funds.

How has the further improvement in bank profits come about, at a time when certain assets, such as call and short loans and Treasury bills, are hardly earning their keep? The following table throws some light on the answer to this question:—

PERCENTAGE RATIO OF NET PROFITS—(a) TO CAPITAL AND RESERVES. (b) TO TOTAL LIABILITIES. (c) TO ADVANCES.

	1929	1931	1932	1933	1934	1935	1936	1937†
Barclays	(a) 8.9 (b) 0.61 (c) 1.33	6.9 0.48 1.04	6.0 0.38 1.03	6.1 0.39 1.08	6.5 0.41 1.09	6.8 0.40 1.11	7.3 0.41 1.06	8.2 0.46 1.07

* See footnotes to previous table † Percentages calculated from November averages.

The table suggests that, broadly speaking, net profits have borne during recent years a fairly steady ratio to total resources, whose upward trend has had a helpful effect on earnings. The ratio itself, however, has improved during the past year, mainly because of the rise in the proportion borne by advances to total resources. Advances are the most remunerative of assets; the more the banks lend, the more they earn. The ratio of advances to deposits, however, is still well below that of 1929, and in the meantime general interest rates have fallen.

While resources have been steadily expanding in recent years, capital and reserves have on the whole remained stationary. There has, it is true, been restoration to disclosed reserves, and last year the Midland Bank increased its capital. These increases, however, have been far from proportionate to the expansion either in total resources or in net profits. Consequently, the banks are earning more to-day, in proportion to their capital and reserves, than they were a few years ago, which is an encouraging feature from the shareholders' point of view.

Inspection of the ratio of profits to advances, shown in our table, conveys a somewhat indeterminate impression. As a result, mainly, of the fall in interest rates (including those on advances), the present ratio, outside Lancashire, is still well below its 1929 level, though it is higher than in 1931–32, when provisions for bad and doubtful debts, etc., made large inroads upon bank earnings. The ratio

was actually lower in 1937 than in 1936, and last year's big increase in advances appears, for the time being at least, to have outstripped the expansion in profits.

Taking the year as a whole, however, the banks have once more shown that they can earn profits sufficient to satisfy the reasonable expectations of their shareholders and to provide an adequate cushion to protect their customers. It is reasonable also to assume that full provision has been made against the consequences of a possible trade recession. The majority of the Big Five banks have still some way to go before regaining the level of profits in 1929. Few commentators, however, would contend that banking profits were unduly low, to-day, from the viewpoint either of proprietors or of depositors. We hope to discuss, in a subsequent article, the nature and import of recent changes in the banks' assets and liabilities, as shown by their published balance sheets.

Prices and Costs

THE course of commodity prices intimately affects the trend of industrial profits and production, and the violent movements in prices during 1937 have naturally aroused much concern. Recent discussion has, for the most part, concerned itself with changes in the prices of primary products, such as copper, rubber and wheat. Changes in the relationship between domestic and import prices in Britain's cost and price structure have thus received less intensive study than they deserve. To some extent, neglect of this aspect of price movements is due to lack of precise information. For example, most of the well-known indices of wholesale prices are based mainly on raw materials and semi-manufactured products, and contain few quotations for manufactured goods. But in view of the recent hesitancy of business activity an examination of past and probable changes in the British price structure is of particular interest.

The United Kingdom derives a large proportion of its requirements of raw materials and crude foodstuffs from other countries. British costs, therefore, are more sensitive than those of many other industrial countries to changes in world prices. Essential features in the trend of prices of primary products are shown graphically in the first of the two charts reproduced on the next page. The annual indices of world production of primary products are those of the League of Nations. The quarterly changes in world stocks of primary products are shown on the basis of the League's index, which includes 12 raw materials and 12 foodstuffs. *The Economist* index of the prices of primary products, recalculated to January, 1930, indicates the trend of prices.

The diagram clearly brings out the nature of the relationship between the prices and production of primary products. It reveals the comparative inelasticity of output in the face of changes in demand (which was discussed in detail in *The Economist* of December 4th, pages 459 to 462). Consequently, heavy stocks accumulated between 1929 and 1932, with disastrous effects on prices. As a result of the improvement in demand and the inception of restriction schemes, stocks showed a downward trend, and prices took an upward course, between 1932 and 1937. By the middle of last year the ratio of stocks to the current level of demand again approximated to that of 1929. And, as demand between the middle of 1936 and March, 1937, was expanding more quickly than production, prices rose with great rapidity. Production, however, was stimulated, and, when it became evident that a shortage of supplies was unlikely, prices took a sharp downward turn. This downturn was subsequently accelerated by a check to international industrial recovery, which appears to have originated in the United States. Thus, *The Economist* index of primary products fell as fast between March and December, 1937, as it had risen in the earlier months and finished at a considerably lower level than at the beginning of the year. Moreover, after reaching their nadir in the middle of 1937, stocks of primary products resumed their upward trend, and, at the end of last September, were

slightly higher than at the corresponding date in 1936. It is impossible to obtain a clear view of the future trend of the prices of primary products at the present moment. So far, the position of most primary products remains fairly strong. Most of the advance between the middle of 1936 and March, 1937, due partly to fears of a coming shortage of supplies, has since been cancelled. Moreover, the level of stocks, though slightly higher than a year ago, is still comparatively low. With the exception of a few commodities, such as coffee and cotton, the current level of output is little higher than that of current demand. In the case of many raw materials, output is now fairly effectively controlled and has already been brought more or less into line with current consumption. In general, therefore, any improvement in demand should find a fairly ready response in a resumption of the upward trend of prices. In the last analysis, the future course of demand may well be determined by the trend of business activity in the United

FINANCIAL INDEPENDENCE can be every widow's INHERITANCE

Make certain that *your* widow would be free from financial anxiety. A "Widow's Income" Policy will not only ensure your own peace of mind, but will provide the comfort and security of a guaranteed income for the lifetime of your wife if she is left to face the world alone.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

security offered publicly by a society should not be limited to a similar amount? Such restrictions would tend to curtail opportunities for making large profits, and thus to limit resort to industrial societies for the floating of large-scale ventures.

Again, extensive reforms relating to advertisements and accounts seem desirable in the case of property societies. On the first matter we may borrow a principle enunciated by the Anderson Committee, which distinguished between unit trust advertising intended to interest the reader in a general way by "describing and commending" a particular class of investment, and advertisements purporting to give adequate information as a basis for subscribing for such investments. It recommended that the first type of advertisement should be strictly limited in scope, and should state that full information could be obtained at a given address. The second type, however, was to contain the fullest information regarding the composition of the trust, its managers and trustees. The parallel is clear. If similar rules were made for industrial and provident societies, they would only affect the small number which issue securities to the public. Their advertising would either be limited to a strictly factual summary or it would represent the equivalent of a company prospectus. And no application for securities would be valid without the fullest prior disclosure of these facts—with suitable penalties for suppression.

The prompt filing and circulation of accounts, moreover, is essential. But an appreciable improvement in the treatment of asset values of property societies seems desirable. In general, the investment of 80 per cent. of a society's funds in properties should be regarded as decidedly an outside figure. But on what basis are the properties to be valued? Our article last week showed that they could, to a certain extent, be arbitrarily determined. The security of the investor would be strengthened if a regular valuation were to be carried out, and certified by a valuer on the same lines as the corresponding statement in a

company prospectus. Much is made, in property society publicity, of the fact that audits are conducted by a public auditor appointed by the Treasury. The function of the public auditor to-day, however, has lost much of its former relevance. His inspection was designed to protect the members against unqualified accountants; it is in danger of becoming a snare for those who wrongly assume that the Treasury has a direct control over a society's affairs.

There remains, finally, the question of the Chief Registrar's powers. As matters stand, official supervision of industrial and provident societies is confined to examination of their rules and their annual returns. In both respects a society's standing could be impeccable, and yet its securities might be a highly undesirable holding for the small investor. Experience has shown that elasticity in regulation is essential if the over-ambitious financial mind is to be checked, for methods are almost invariably found to avoid the most carefully drawn statute. At present the unique experience of the Registrar cannot be used in time to prevent abuse, owing to limitation of powers and to the inevitable delays of legislation. New legislation, therefore, could achieve two ends. It could give the Registrar increased powers on the lines we have indicated to ensure that the requirements of the Industrial and Provident Societies Acts are brought into line with the Companies Act. And, secondly, it might well make possible an experiment in financial legislation, through the appointment of a small permanent commission, whose personnel might include the Chief Registrar and various representatives of the legal, financial and accounting professions. Such a body could make administrative regulations from time to time as soon as abuses began to show themselves. Subject to proper safeguards, delegated legislation on these lines would provide the essential weapon of flexibility. And this is the one thing lacking in the fight against the small minority of unscrupulous persons who abuse facilities whose continued existence is indispensable in the interests of the community generally.

Finance and Banking

The Franc's New Relapse.—Once more the pendulum has swung against the franc. The trouble began this time with the Goodrich strike and subsequent developments, which made the foreign exchange market think that the Government was not prepared or able to enforce the law against sit-down strikers. Then came the revelation on January 6th that the Government had borrowed in the last week of the year a further Frs. 5,000 millions from the Banque de France. The position here is that under the Vincent Auriol convention of June, 1936, the previous concealed Government borrowings of Frs. 12,098 millions from the Banque de France were regularised as provisional advances, while further borrowing facilities of Frs. 10,000 millions were arranged. These were exhausted, and the convention of June, 1937, arranged fresh facilities up to Frs. 15,000 millions, making a total limit of Frs. 37,098 millions. The latest borrowing raised the Government's actual borrowings to Frs. 31,909 millions, leaving a margin in hand of only Frs. 5,000 millions. Actually the margin is believed to be about Frs. 7,000 millions, as the Minister of Finance is thought to have about Frs. 2,000 millions in hand. Anyhow, the narrowness of this margin has shaken the market. During the closing months of the year the French Exchange Account is believed to have recovered the equivalent of £100 millions in gold, but rather optimistically some £40 millions of this was transferred to the Banque de France and cannot be withdrawn again without a serious shock to public confidence. Thus the Exchange Fund only retained some £60 millions, and it is calculated that up to the evening of January 12th it had lost £25 millions during the present adverse swing of the pendulum. Thus on this side too the margin is very narrow. Movements in rates are discussed in the Foreign Exchange Note, but while the initial causes of the weakness were the labour troubles, at present the market is influenced mainly by the precarious financial position.

American Banking Trends.—Recent American banking statistics suggest that the autumn business recession has been accompanied by a shrinkage in bank resources. As recently as last October, total deposits at the reporting member banks showed an increase of \$46 millions over the preceding year, but the returns for December 15th show a decrease of \$789 millions. This contraction has been accompanied by a switch from demand to time deposits. Thus, during the year to December 15th time deposits rose by \$161 millions. These returns cover the whole of the country. The change in the position of four leading New York banks during the year to December 31st, 1937, is shown below:—

	Deposits	Cash	Government Securities	Loans
			(\$ millions)	
National City ...	— 2	+ 53	— 44	+ 21
Guaranty Trust ...	— 285	— 182	— 50	— 46
Chase	— 217	+ 39	— 177	— 44
Bankers Trust ...	— 91	+ 37	— 105	— 7

The drop in deposits is not wholly due to any decrease in the cash held by these banks either in their own vaults or with the Federal Reserve system. It has, of course, forced them to reduce their earning assets, and all four banks show a contraction in their holdings of "Governments." On the other hand, the Bank of Manhattan's holdings of "Governments" are unchanged, while its cash and deposits are higher than a year ago. Loans are lower in three cases in the above table, in contrast to the general position of all reporting member banks last October, when "Governments" showed a decrease of \$1,519 millions and loans an increase of \$1,172 millions. As recently as December 15th loans showed an increase of \$431 millions, but it looks as if the business recession has upset the previous tendency for loans to expand at the expense of "Governments." Both are now contracting under the influence of the recession.

Gold Output in 1937.—Sufficient data are now available to make it possible to arrive at a rough estimate of gold production in 1937. The exact figure for the Rand was announced this week, and at 11,741,000 fine ounces creates a new high record. It shows an increase of 401,500 ounces, or 3.5 per cent., on the 1936 figure. Substantially accurate data are also available for Canada, where the 1937 output of gold amounted to 4,055,000 ounces, against 3,735,000 ounces in 1936, and for Australia, where the respective figures are 1,290,000 ounces and 1,160,000 ounces. As usual in estimates of this kind Soviet Russia provides the main difficulty. The only official statistics on gold production in the U.S.S.R. are indications of percentage increases which look magnificent in the form of a graph, but which without absolute data regarding the base year mean extremely little. The best that can be done therefore is to take the careful estimates of the Union Corporation for 1936, and to adjust them to the 25 per cent. increase in output which official Soviet sources give as a reasonable measure of the 1937 expansion in gold production. This would give a figure of 9,200,000 ounces for the past year, against 7,350,000 for 1936. In the United States output has been expanding with great regularity for the past four years, and it is estimated that for 1937 the total will closely approach the Canadian figure.

For the miscellaneous section of small producing countries the best that can at present be done is to assume that the rate of increase, which for this group has been extraordinarily consistent over a period of five years, will have retained that consistency during 1937. The resulting estimates may be summarised thus:—

	(Thousand fine ounces)	
	1936	1937
South Africa	11,339	11,741
U.S.S.R.	7,350	9,200
Canada	3,735	4,055
U.S.A.	3,714	4,000
Australia	1,160	1,290
Other Countries	7,650	8,200
Total	34,948	(say) 39,500
Value at £7 an ounce	£244,636,000	£276,500,000

It will be seen that while, on this showing, the output of South Africa rose by a further 3½ per cent. in 1937, that of the world as a whole rose by something like 13 per cent.

Gold and Silver in the United States.—During 1937 the United States Treasury increased its silver reserve by 317 million fine ounces, thus bringing its total stock of silver to 2,177 million ounces. At the Mint parity of \$1.2928 per ounce, this holding was valued at \$2,815 millions. The gold reserve at the end of last year stood at \$12,760 millions. In order, therefore, to attain the 3:1 ratio of gold to silver aimed at in the Silver Purchase Act, the gap to be bridged by further acquisitions of silver (or by losses of gold) at the end of the year was \$1,438 millions, equivalent to 1,115 million ounces of silver. At the present moment the gap is being narrowed both from the gold and the silver sides of the equation.

A Bank for Ceylon.—Ceylon will soon have its own indigenous bank. Satisfaction will thus be given to a demand which in recent years has been acquiring the stature of a major issue in local politics. The demand for the creation of a bank serving solely the interests of the island was pressed by a trade delegation which visited this country at the time of the Coronation. The matter was referred by the Secretary of State for the Colonies to an expert committee presided over by Sir John Caulcutt, and after considerable hesitation the required permission was given. The legislation which will bring the Bank of Ceylon into existence is now being passed by the State Council of Ceylon. The new bank is likely to be a somewhat hybrid

institution combining certain of the functions of a central and a commercial bank. In conjunction with the creation of the new bank proposals are now being considered for the amendment of the existing currency regulations in Ceylon. These proposals would involve the sale to the Reserve Bank of India of the silver reserve of 14,158,063 rupees now held at the Treasury in Colombo and the investment of the proceeds in sterling and other securities. For the time being, however, the Ceylon currency would continue to be based on the Indian rupee.

New Life Assurance in 1937.—The amount of new life assurance business, excluding industrial assurances, transacted by British Offices in 1937 (as published in their preliminary, and in certain cases approximate, statements) is given in the following table:—

Office	1936	1937	Increase
Alliance	3,526,000	3,835,000	309,000
Atlas	4,315,000	4,375,000	60,000
Britannic	3,865,000	3,594,000	— 271,000
British Equitable	829,000	835,000	6,000
British General	871,000	897,000	26,000
Caledonian	2,039,000	2,167,000	128,000
Clerical Medical and General	2,843,000	2,845,000	2,000
Commercial Union	5,533,000	6,077,000	544,000
Co-operative	3,459,000	3,460,000	1,000
Eagle Star	5,734,000	10,465,000	4,731,000
Equitable	1,708,000	1,930,000	222,000
Equity and Law	4,659,000	4,661,000	2,000
Friends' Provident	2,718,000	2,825,000	107,000
General	2,854,000	2,844,000	— 10,000
Gresham	3,759,000	3,526,000	— 233,000
Guardian	1,760,000	1,890,000	130,000
Legal and General	2,746,000	2,606,000	— 140,000
Law Union and Rock	16,898,000	18,517,000	1,619,000
Liverpool and London and Globe	3,211,000	2,880,000	— 331,000
London	2,824,000	2,956,000	132,000
London and Scottish	1,933,000	1,892,000	— 41,000
National Mutual	903,000	1,038,000	135,000
National Provident	1,882,000	2,116,000	234,000
Norfolk	5,635,000	5,635,000	—
North British and Mercantile	11,091,000	11,500,000	409,000
Norwich Union	8,802,000	8,664,000	— 138,000
Pearl	4,859,000	4,900,000	41,000
Prudential	30,761,000	29,500,000	— 1,261,000
Refuge	8,766,000	8,685,000	— 81,000
Royal Exchange	4,323,000	4,660,000	337,000
Royal	4,924,000	5,157,000	233,000
Scottish Amicable	2,073,000	2,122,000	49,000
Scottish Equitable	1,595,000	1,920,000	325,000
Scottish Life	2,389,000	2,214,000	— 175,000
Scottish Provident	3,166,000	3,313,000	147,000
Scottish Temperance	1,524,000	1,604,000	80,000
Scottish Widows	4,849,000	5,047,000	198,000
Standard	4,576,000	5,134,000	558,000
United Kingdom	4,621,000	5,021,000	402,000
University	289,000	284,000	— 5,000
Wesleyan and General	1,714,000	1,650,000	— 64,000
Yorkshire	2,780,000	2,840,000	60,000
Total	189,616,000	197,978,000	8,362,000

* Includes decreasing term and group assurances.
† Ten months only.

The aggregate new business of these offices shows further increase, and almost exactly one-half of the offices succeeded in obtaining new record figures. It will be noticed that in the case of the offices which also transact industrial assurance, namely, the Prudential, Pearl, Refuge, Britannic, Wesleyan and General, and Co-operative, the new business in every case, except the Co-operative, was smaller than in the previous year. Too much importance should not be attached to the comparison of figures for different offices as, apart from variation in the type of business transacted, different methods are followed in computing the sum assured under certain special low-rated plans.

Brazilian Exchange Control.—After abolishing the official quota of 35 per cent. of export exchange in the middle of November, the Brazilian Government has recently announced a new system of control. All foreign exchange has now to be sold compulsorily to the Bank of Brazil, which now becomes the sole authority empowered to provide exchange. Public requirements, presumably meaning Government and other official remittances, have the first claim, and foreign exchange will then be issued to importers and other remitters on payment of a tax of 3 per cent. In allotting foreign exchange, payments for goods imported and export freights will have first preference, then remittances by public utility companies, then dividends and profits generally, and finally other remit-

tances. Initial cables hinted at the canalisation of exchange allotments country by country, according to the size of Brazil's exports to each country. If so, the United States, as the chief buyer of Brazilian coffee, would gain an obvious advantage. Under the new system the Bank of Brazil has announced buying rates of Rs. 17\$300 per dollar and Rs. 86\$460 per pound sterling, but it has not yet announced the rates at which it is prepared to sell foreign exchange. On the contrary, a new decree has been issued blocking foreign-owned milreis balances for the time being. The only exception is the minor concession that exchange

will be provided within sixty days to cover milreis deposited against bills for collection in Brazilian banks prior to December 31st. A good deal depends upon how much exchange the Brazilian authorities think they may require for the external debt service and other official needs, and also upon the amount of foreign exchange available. Coffee shipments in December showed signs of recovery, following the decision to place the coffee export trade upon a competitive basis, but those for the six months to December 31st compare badly with those of the previous season.

MONEY MARKET NOTES

Foreign Exchanges

FOR reasons given in a Financial Note, the franc has developed extreme weakness. Dealings became very active in the middle of the week, and on Thursday the spot rate depreciated from under Frs. 148 to Frs. 151½. Three months' francs widened to Frs. 10 discount, and one month's francs to Frs. 7½ discount. The wider margin on the shorter date indicated the nervousness felt as to the immediate outlook. On Thursday the French Control only intervened intermittently, but is estimated to have lost in gold a further £5 millions. There has been some French demand for Consols, but not much demand for British currency. The latest Banque de France return shows that none of the further Frs. 5,000 millions borrowed by the Government during the previous week has yet been repaid. Belgas weakened in sympathy with the franc, the spot rate rising from Bel. 29.47½ to Bel. 29.55 (offered), and the three months' rate from 7 to 11 cents discount. The Swiss franc was in demand on Tuesday, as a result of the new flight of funds from France, but has since come on offer at Frs. 21.63. There is a profit to be made on sales of Swiss francs against gold purchases in London, provided that the gold can be re-sold to the Swiss National Bank. Guilders and dollars have been very quiet, with the New York rate under control at \$5.0075 to the pound.

The Money Market

As was to be expected from the unusual size of bankers' deposits, money has been exceptionally easy, and some houses have been able to obtain night money from lenders other than the clearing banks at ½ per cent. The plethora of funds has made the market reluctant to sell bills, but the banks bought a few March and early April Treasury bills at ½ per cent. Three months' bank bills are unobtainable at anything better than 1½ per cent.

	Jan. 14, 1937	Jan. 6, 1938	Jan. 13, 1938
Bank Rate	2	2	2
London Deposit Rate...	½	½	½
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	½	½	½
Discount Rates:			
Treasury bills	17½	17	17
Three months' bank bills	18	17½-18	17½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. 1½ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The seasonal contraction in the quantity of Treasury bills issued by tender has now begun, and this week the tender issue has fallen from £622 to £612 millions. Treasury bills paid for on January 15th mature on Good Friday, and as they are repaid the day before, they are a 89-day bill. For this reason they went at 1d. over the minimum rate, and so were not taken by the market. Easter also means that bills paid for on Monday and Tuesday of next week are odd maturities, which are not likely to appeal to the market. Thus, with no bills to be paid for, money is likely on those days to be even more plentiful than it is at present.

The Bank Return

A further large quantity of notes have returned from the public, and the circulation is now back to the level ruling prior to the Christmas expansion. It is, therefore, reasonable to expect the fiduciary note circulation to be reduced from £220 to £200 millions at an early date.

	Jan. 13, 1937	Dec. 29, 1937	Jan. 5, 1938	Jan. 12, 1938
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Dept.				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	455.0	505.3	492.6	482.1
Banking Dept.				
Reserve	59.0	41.9	54.5	64.9
Public Depts.	12.4	11.4	14.4	13.2
Bankers' Depts.	106.7	120.6	129.2	123.4
Other Depts.	38.3	36.6	37.4	36.8
Govt. Secs.	83.2	114.6	108.3	90.2
Discounts and Advances	12.5	9.2	15.1	15.8
Other Secs.	20.8	20.9	21.1	20.5
Proportion	37.4%	24.8%	30.1%	37.4%

In the banking department, the return of currency has added £10.4 millions to the Reserve. This increase, however, has been more than neutralised by a reduction of £18.1 millions in Government securities, so that there has been a net contraction in the banking department's total resources. The current excess of Treasury bill maturities over payments explains the small drop in public deposits, but the main brunt of the reduction in the Bank's resources has fallen on bankers' deposits, which are 5.8 millions lower than a week ago. Nevertheless, they remain at a very high level.

The Bullion Market

Last week's dealings in gold were limited, and on January 4th the premium over the American shipping price rose to 9½d. per ounce. As the supply of gold is entirely in official hands, it is suggested that for the moment the authorities wished to discourage any new demand for gold. During the past few

days, however, more gold has been released, and the premium has narrowed to 5½d. One possibility is that the authorities found that the existence of a high premium would suggest that there was a big hoarding demand from France, which might have an unfortunate psychological effect upon the franc.

* Above or below American shipping price.
The New York price of silver remained at 45 cents per ounce -999 fine during the week.

The negotiations between the United States and Mexico caused some temporary nervousness in the silver market. Mr Morgenthau's statement, however, shows that in buying 35 million ounces from the Bank of Mexico, the United States is only relieving Mexico of past accumulations of silver, which otherwise might have been offered elsewhere. Moreover, the further decision to buy 5,000,000 ounces from Mexico during January is not intended to set the pace for future months, and this disposes of the fears that the United States intended to buy over the current year an inadequate quantity of Mexican silver. These explanations have stiffened the market during the past few days, especially as Mr Morgenthau added that it was the intention of the American Government to keep the world silver price on an even keel. There are still a number of uncovered bears about, and the price may stiffen still further.

APPOINTMENTS AND PERSONAL

Sir John F. R. Reynolds has been elected to the general board of Martins Bank.

The Hon Evelyn Baring has been appointed a director of The London Life Association.

The London Assurance announce that Mr Richard Evelyn Fleming has been appointed a director.

The directors of the Atlas Assurance Company, Ltd., announce the retirement on December 31st of Mr Percy E. Walsh, secretary and assistant manager. The following appointments took effect on January 1, 1938: Mr J. W. J. Leven to be secretary, and Mr F. E. Huggins to be assistant secretary.

Investment

President and Wall Street.—Since the beginning of the year American stock prices have risen, on the average, by over 10 per cent. Operators have apparently concentrated their attention upon news of actual and potential industrial improvement, and have largely ignored Washington, whose celebration of the opening fortnight of another New Deal year was not conspicuously friendly to Wall Street. The President's Message to Congress granted the honesty of most business men, but offered no quarter to the plutocratic few—a sentiment which, expressed without the epithets of Messrs Ickes, Jackson and Cummings, was therefore found temperate and reasonable by a large part of the Press. The Budget Message, again, reached a difficult compromise between determination to balance expenditure and revenue, and equal determination to maintain relief expenditure, if necessary, and to increase armament appropriations. The Administration hopes that this dilemma will be solved by a rise in the national income, but its inflationary implications are apparently welcome to business, which was fully in favour of balancing the budget until recently. At the Jackson Day celebrations, Mr Roosevelt drove home his perpetual devotion to the New Deal principles, and gave little hope of any softening of the pressure against economic royalism. Yet three days later he had conferred, to Wall Street's satisfaction, with five prominent business leaders.

Despite this equivocal attitude of the Administration regarding business conditions and economic co-operation with its leaders, market operators have again put up prices, encouraged by a slight improvement in steel mill activity and more particularly by signs of rising employment in the automobile industry. The prospect of increased naval expenditure in the distance is used as a pretext for speculative buying of common stocks and essential war commodities. The railroads, now in chronic difficulties, are hoping for friendly help from the I.C.C. There is evidence of some criticism of the deflationary measures adopted last year by the Federal Reserve Board, and in a Congressional election year it is anticipated that inflationary steps will be found politically expedient. Such are the bases for Wall Street's improvement, but there is not yet sufficient evidence to prove that a substantial industrial recovery is on the threshold. It might easily be generated by a national change in sentiment, but for the time being the outlook is still uncertain, and caution should be the rule.

Sino-Japanese Credit.—A statement was made this week by Dr Ho, Chinese Minister of Economics, that the Chinese Customs revenue had almost gone, and that, although China would do her best to maintain the debt service, she might be forced to discontinue payment. Though the announcement was a blow to the foreign bond market, it is difficult to imagine what alternative the investor could envisage, short of an arrangement, under Japanese direction, for the service of the external debt, in return for some political *quid pro quo*. If that was the market's main calculation, it has been frustrated by China's evident determination to fight on. Comment in London, however, still appears to attach importance to the view that the existing returns from the Customs are sufficient to serve the debt. The 1937 report of Sir William Maze, Inspector-General of the Maritime Customs, shows that revenue collections under all categories amounted to 342.9 millions of Chinese dollars, equivalent to approximately £20,716,875 at the official rate of exchange. But receipts during the first seven months of the year (before hostilities became widespread) represented some 76 per cent. of the year's total. On the basis of the remaining five months' figures, the maximum

annual total to be anticipated during the first twelve months of war conditions would be 197 million dollars. This total would barely suffice for both the internal and external debt secured on the Customs, although the latter alone would, on paper, be covered 2½ times.

The disturbing effect of Dr Ho's statement is shown in the following table, which also gives a record of the fall in Japanese issues, following the decisions reached at the Imperial Conference on Monday:—

	1937				1938		
	High	Low	June 30	Sep. 30	Jan. 7	Jan. 12	Jan. 13
Chinese Customs							
4½%, 1898	104½	82½	103	91	84½	75	76
5%, 1913	101½	59	101½	64	60	48½	50
Japanese							
4%, 1899	66½	38	64½	48	38½	32	31
5%, 1907	84½	48½	83	60	50	42	43½
4%, 1910	61½	38	61	47	38	32	32½
6%, 1924	94½	57½	94	71	59½	47	51
5½%, 1930	88½	53	88	66	56½	44	46

Mid-week dealings in the best Chinese issues were extremely difficult. The further fall in Japanese issues has brought the bonds, which still receive interest in full, close to the quotations for Brazilian issues, which are in complete default. We can only repeat our view, expressed early in December, that China's ability to pay, under conditions of war, has been jeopardised. China's trade in October was 60 per cent. lower than in July. Shanghai's trade during the same period fell by 82 per cent., Tientsin's by 60 per cent. and Swatow's by 47 per cent. The southern ports showed relatively large increases, but their communications have recently been severely attacked. It is difficult, therefore, to argue that the downward adjustment of Chinese bond prices is necessarily complete.

London Transport Traffic.—This week's traffic return from Broadway House has given welcome firmness to London Transport "C" stock. An increase of no less than £21,200 has been recorded for the week to January 8th—some £5,300 more, in itself, than the gross advance for the first twenty-six weeks of the current financial year. At present, there is no clue to the source from which additional revenue must come if the Board is to fulfil its obligation to pay a 5½ per cent. "C" stock dividend for 1937-38, and so avoid the possibility of an application for receivership. Total traffic for the period amounted to £14,622,110—an increase of no more than £15,900 for the half-year. By the end of December, 1936, it will be recalled, an aggregate increase of £460,200 had been registered during the preceding twenty-six weeks. It is plain, in fact, that London Transport traffic is no longer showing a satisfactory trend. The bus strike interrupted the progress in weekly receipts and it has not yet been resumed. So far as this trend results from a diversion of traffic to other undertakings in the London pool, the "C" stockholder will obtain some indirect benefit. But he will not be able to count on such substantial but fortuitous advantages which the pool provided last year as a result of the bus strike. Indeed, he must recognise the effect of

increasing costs, and in particular, increases in wage costs, to which the bus settlement has brought its due quota. Lord Ashfield last week referred to the complex problems which face the Board in 1938. Some of them are profound operating problems, which we discuss on page 108. But the short-term revenue problem is no less intractable.

* * *

Bank Capital Reorganisation.—The directors of the National Provincial Bank are submitting to the forthcoming annual meeting proposals for the splitting of all classes of the bank's shares into units of a smaller denomination. To-day, the issued capital of the bank is as follows:—

	Number issued	Amount per share		
		Paid-up	Callable	Reserve liability
£25 shares...	120,000	£3 10s.	£4 16s. 8d.	£16 13s. 4d.
£20 shares...	1,972,354	£4	£2 13s. 4d.	£13 6s. 8d.
£5 shares...	234,000	£5	Nil	Nil

The proposal is to split the £25 shares each into five "A" shares of £5 each, 14s. paid-up; the £20 shares each into four "B" shares of £5 each, £1 paid-up; and the £5 shares each into five £1 shares, fully-paid. The amount callable and the reserve liability (the latter only exercisable in the event of the winding-up of the bank) will be reduced in proportion. The proposal is of interest for two reasons. First, it will make the bank's shares more marketable. This point will be appreciated, in view of the fact that the current quotations are 13½ for the £25 shares, 15½ for the £20 shares, and 20½ for the £5 shares. Secondly, the proposal marks a further movement in the general trend towards the popularisation of bank shares. Only as recently as 1919, the original £75 and £60 shares were split, respectively, into the present £25 and £20 shares, and the National Provincial is not the only bank to have taken a similar step since the war. Two generations ago only the rich man could invest in bank shares, but to-day they are within the reach of even the smallest investor. The one anachronism which remains is the liability to a further call. This was a real protection to depositors in the early days of joint-stock banking, especially when bank shares were in wealthy hands. To-day this "protection" has become largely an anachronism.

Company Notes

New Woolworth Record.—A year ago there were two reservations in the mind of the Woolworth shareholder. Would rising food and commodity prices affect the demand of the average purchaser? And would the company's range of merchandise be curtailed for the same reason? The latest accounts for 1937 provide a brilliantly reassuring answer on both counts. Net profits, after charging £291,189 for depreciation, and £100,000 each to Staff Fund and Buildings Reserve, but before taxation, have reached the new record figure of £6,490,014, compared with £5,854,335 in the previous year. The fears, which the chairman expressed at the last meeting, that the company might be compelled to raise its traditional selling price limit owing to rising costs of merchandise are thus dispelled. The amount earned for the ordinary capital is equivalent to 81.2 per cent., compared with 76.4 per cent. in 1936. The balance sheet gains in strength each year. It now shows cash holdings of £7,214,930, compared with £6,710,349 at the end of 1936, while freehold properties have been substantially increased. Indeed, the company's record during the past seven years since its formation is an object lesson in steady expansion. In the accompanying chart—the first of a new series for important industrial concerns—we show the course of net profits, after all

WOOLWORTH PROFITS SINCE 1931

charges, and their division between preference and ordinary dividends and free reserves. Since profits in this instance are struck after full tax provision, the dividends are shown net, and appear to be slightly reduced. In fact, the gross amount, both for preference and ordinary dividends, has remained unchanged during the past year. The actual rate declared on the ordinary capital is 60 per cent.—effectively the same rate as in 1936, when adjustment is made for the 100 per cent. capital bonus. The 5s. ordinary shares offer a return of £4 10s. 9d. per cent. on dividend and £6 2s. 9d. on earnings at the present price of 68s. 6d.

* * *

Leyland Motors' Profits.—The latest results of Leyland Motors show that even greater progress has been achieved than in 1935-36. The preliminary statement discloses gross profits for the year ended September 30th last of £746,951, against £557,390, while net profits, before tax and contingencies, are some £168,500 higher at £631,597. Gross earnings are thus only a little below the record level of 1928-29. The dividend has again been increased to 25 per cent., compared with 20 per cent. for 1935-36 and 17½ per cent. for the previous year. But it would appear that this distribution is still conservative, for, although the reserve allocation has been maintained at £150,000, the balance carried forward is raised by the substantial amount of £35,288 to £86,819. The commercial vehicle industry has been faced in recent years with problems which may, in part, have checked the natural growth of commercial motor transport. The imposition of speed limits and other restrictions under the Road Traffic Acts and the increased heavy oil duty have affected the demand for particular classes of vehicles. Moreover, the stationary tendency of "A" and "B" licences, as distinct from the "C" category, is, on the whole, unfavourable to makers of heavy vehicles. Such a background only emphasises the excellence of the Leyland results. They suggest that the company has enhanced its competitive position during a period when costs were rising and the field of competition was tending to narrow. The industry has profited by the replacement of trams by trolley buses, whose importance for Leyland was stressed at last year's meeting. Quite recently it was announced that orders for 300 vehicles had been received from London Transport. Whether last year's excellent results will be followed by a similar advance this year is open to debate. At the moment, the commercial motor industry appears to be maintaining a position of equilibrium—rather uneasily, perhaps. Leyland shares, at the current price of 86s. 3d., to yield £6 3s. per cent., are probably fairly valued, even if the earnings yield is double this figure.

British-American Tobacco Meeting.—Shareholders in B.A.T. must look to the annual meeting rather than to the published accounts for guidance upon the development of their undertaking. But Sir Hugo Cunliffe-Owen, in his address last Monday, was compelled to be somewhat inconclusive in his review, for his confidence in the company's prospects and in its increasing efficiency was subject to the important proviso of "reasonable stability in world affairs." The satisfactory profits for the latest year had, in fact, been achieved in the face of considerable difficulties. Floods in the United States had caused indirect losses to certain subsidiaries of roughly half a million dollars, while losses in China had been quite substantial. Damage in China, however, had been less than was feared, and losses had so far been provided out of the income of the companies affected. Apart from these material consequences of war, the volume of sales had suffered owing to transport and other difficulties. The situation in China is so uncertain that problems must be tackled *ad hoc*. The accounts for the year to September 30th last, which Sir Hugo discussed in some detail, give no hint of the consequences of a prolonged war in China for the company. Shareholders may find due consolation in the widespread nature of the company's interests and in the chairman's reiterated belief that the company's increasing efficiency should, under normal conditions, maintain the satisfactory record of the past.

Oil Company Results.—For a time last week the oil share market seemed to gain increased confidence. The Royal Dutch and Shell interim dividends, somewhat despaired at first, obtained a more favourable second reading. The effective increase in each distribution by one-fifth—the Shell interim, formally maintained at 7½ per cent., tax free, is payable on a capital increased by last year's 20 per cent. scrip bonus—must be associated with the fact that the most conservative estimates for the total dividends put the shares on a satisfactory yield basis. Meanwhile, it has been left to a comparative newcomer—Petroleum Storage and Finance—really to impress the market this week. This company's profits for the year to October 31st last are spectacular. After charging N.D.C. and two years' income tax, profits amount to £574,817, compared with £266,152 for the previous year. The amounts earned for ordinary and deferred dividends have jumped from £211,910 to £551,726. The company has an unusual capital structure. The £400,000 of preferred ordinary shares receive 50 per cent. and the deferred capital (£75,000 in 1s. shares) receives 344 per cent., compared with 72 per cent. for 1935-36. Here is an instance of the shilling ordinary share which has made good. The company's recent strides follow the successful establishment of Cleveland Discol in the British market. Whether British petrol prices will be maintained in the long run is perhaps more questionable than their present

stability, although, behind the façade of an unchanged retail price, the distributors have recently conceded an increased profit margin to the retailers. An 8 per cent. dividend yield on so highly geared a share as Petroleum Storage ls. deferred, now standing at 42s. 6d., is thus readily explainable.

Other Company Results.—Our usual analysis of profit and loss accounts which appears on page 151 gives the results of 25 companies in all, including six bank and discount reports, and a number of substantial miscellaneous industrial companies. The banking results are discussed in a leading article on page 118. Industrial results are discussed on page 150 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings commence in this issue on page 139. The favoured position of Canada to withstand any temporary recession of trade was emphasised by Mr A. E.

THE STOCK EXCHANGES

London

SETTLING DAYS
TICKET ACCOUNT
JANUARY 18 JANUARY 20

THIS week's market record is an essay in personalities—Mr Roosevelt, as always, Dr Ho, the Chinese Minister of Economics, and MM. Chautemps and Bonnet in Paris. At first, Mr Roosevelt having levelled Wall Street's difficult patch, helped London too, for the new wavelet of inflationary sentiment which followed the re-armament reports in the United States also helped commodity prices and equity shares in London. Later, however, the Far Eastern and French troubles made for market caution, and the first Account of 1938 closed quietly on the defensive.

Gilt-edged stocks opened firm, though the prospect of new borrowing tended to reduce activity. On Tuesday, new reports of Government operations coincided with a general setback, partly due to profit-taking. Business continued on a reduced scale, though conditions became steadier. *Home corporation scrips* were dull, in sympathy with gilt-edged, and New Zealand issues continued depressed.

The feature of the *foreign bond market* was a collapse in Japanese and Chinese issues. In both groups, dealing became a matter of considerable difficulty in mid-week. A review of possibilities which the bondholder must face in connection with the Far Eastern hostilities appears on page 125. Brazilian issues also registered disappointment at the absence of a definite offer of payment, while the increase in the Chilean debt service was accounted modest.

Home rail stocks were dominated by fears of the effect of rising costs, although this is by no means a new factor. It was reflected, however, in revised estimates of dividend possibilities and the indifferent traffics—well short of the nominal increase due to the 5 per cent. freight advance—further depressed the market. Argentine and Brazilian rails were also weak.

Business tended to fall off in the *industrial market*, and the price record thus appears irregular, though without

any special changes. Shipping shares and certain motor issues provided some early features, but their gains were not entirely held. Few price changes were recorded in the steel list, although Indian Iron fell rather sharply. Mid-week prices were slightly firmer. Improving coal conditions did not assist the shares. Electricity supply shares enjoyed little business, and there was no real trend in the equipment section.

The motor registration figures checked the improvement in selected motor issues, but aircraft issues continued reasonably firm, with Rolls Royce tending slightly to improve. Investment support for brewery shares maintained an appearance of steadiness, but tobacco issues were less certain. In the shipping group, good support followed the further rise in freights, and although the best prices were not held, many shares made net progress on Wednesday. The course of miscellaneous leading industrials was easier at first, but fractional improvements were recorded in mid-week. Building shares were quiet, and both Westinghouse and Consolidated Signal fell on the former's dividend.

Oil shares remained quiet, the little business that was reported being dominated by American and Continental influences. On Monday one of the few active spots was the Royal Dutch-Shell group, but a firm start on Tuesday was followed by a duller tendency under the lead of New York and when the Continent turned sellers. Business continued quiet later in the week.

In the *rubber shares* market, the tendency was more cheerful than of late, though the volume of business scarcely expanded. Quotations were stimulated by a rally in the commodity on news of higher employment in the American automobile industry, and many shares remained firm despite the later reaction in Mincing Lane. *Tea* shares were a disappointing market, business if anything shrinking still further.

While the behaviour of different sections varied, the mining markets passed a satisfactory week. *Kafirs* started rather more brightly, professional support for the developing mines being

Arscott, at the *Canadian Bank of Commerce* meeting. The company's decision to pursue a more active development of the pharmaceutical section was announced by the chairman of *Joseph Nathan and Company*. Sir Hugo Cunliffe-Owen's address to *British-American Tobacco* members is discussed in a note on page 126. Mr Horace Boot, at the *Central and District Properties* meeting, referred to increasing competition from many new blocks of flats recently built. Sir Edmund Davis informed members of *Fanti Consolidated Investment* that the market value of investments at the end of December exceeded book cost by £70,452. Mr Walter MacLachlan reported at the *Apex (Trinidad) Oilfields* meeting that they were extending operations in the southern area. Mr H. Eric Miller disclosed that *Langen (Java) Rubber Estates* had sold 385,880 lbs. of the current year's crop at an average price of approximately 9½d. per lb. At the *Turner and Newall* meeting Mr G. S. Newall declared that the increased profits were attributable to the larger volume of business obtained. Mr S. C. Black reported to *Transvaal and Delagoa Bay Investment* shareholders that the collieries were being actively developed.

evident. The market became easier as the week progressed—not through any weakness, but rather from a little profit-taking and, more particularly, the diversion of attention to other sections. After many dull weeks, *base metals* became the centre of interest on rallies in metal prices. Continental support was transferred from Kafirs to Rhodesia copper shares, which gained on American influences and, after some recession, continued in active demand. Tin and lead-zinc shares started poorly, but provided interest later.

ACTUARIES' INVESTMENT INDEX

Changes in the composition of the Actuaries' Investment Index prevented its publication in last week's issue of *The Economist*. In the table on page 129, we give usual extracts from the index, together with a comparison of the yield figures referring to January 4th, both before and after revision of the index. This comparison will provide an indication of the extent of discontinuity in the yield figures arising from revision. The price indices, of course, are fully continuous. On Tuesday last, January 11th, the total index, now reduced to 151 industrial shares, stood at 74.2, compared with 73.4 for January 4th, and 73.0 on December 14th, when it contained 177 securities. The yield figures are 4.81 per cent. for the latest week, 4.86 per cent. last week on the revised index, 4.94 per cent. last week before revision, and 4.96 per cent. on December 14th.

New York

The marked rise which began last week-end continued during the first half of the current week, until a very slight setback occurred on Wednesday. Automobile shares, and Chrysler in particular, led the recovery, on plans for increasing output; the industry has found higher prices a failure, and Hudson and Packard are planning production of

cheap-priced cars. It had been anticipated that steel mill activity might step back slightly, but *Iron Age* estimates the current week's level at 28 per cent. of capacity against 25.5 per cent. for last week. Steel shares consequently gained some slight benefit. Utilities recorded temporary gains on the ruling of the Wisconsin Supreme Court that the Wisconsin Act setting up a regional T.V.A. scheme was unconstitutional. Armament shares were better in anticipation of a big navy programme, and railroads improved slightly. There is renewed talk of inflationary expenditures during the year, and some market value was put on the talks between business leaders and the Administration. Technical encouragement was given by the shrinkage in dealings whenever prices turned down, and by the higher turnovers on rising prices during the past two weeks.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100):—

Capital Issues

THE first public issue of 1938 comprised the 6 per cent. £1 preference and 5s. ordinary shares (offered at 7s. 6d.) of *Bullin's, Limited*, and it enjoyed a good response. This amusement catering and "holiday camp" business has shown a steep rise in profits during the past three years. Whether the character of its business, which has scarcely had time to claim immunity from changing tastes, justifies an earnings yield of "over 10 per cent." on the ordinary shares, taking account of their 50 per cent. premium, may be open to argument. This return, it will be noted, requires adjustment for the incidence of N.D.C. Particulars "for information only" have been published by *Alexander Shipping Company*, which has in issue 120,000 of £1 6 per cent. preference shares and £300,000 in 10s. ordinary shares.

PUBLIC OFFERS
Butlin's, Ltd.—Issue of 100,000 6 per cent. cumulative £1 preference shares at par and 180,000 5s. ordinary shares at 7s. 6d. Operates amusement parks, etc.; proceeds for extending holiday camps. Profits, before directors' salaries, leasehold amortisation, depreciation, interest, etc., years to end September: 1935, £39,508; 1936, £55,785; 1937, £70,259 (or £52,011 net). Net assets, £255,263 (after £100,482 5½ per cent. debenture stock and interest). Lists closed 9-5 a.m., January 12th. Ordinary shares heavily oversubscribed. Preference shares just oversubscribed.

Alexander Shipping Company.—Particulars of 600,000 10s. ordinary shares. Incorporated 1914; made public end 1937; works in co-operation with Houlder Brothers and Company. Profits, after depreciation, years to March 31: 1935, £19,178; 1936, £24,528; 1937, £67,517; these include subsidies of £4,255, £19,434 and £15,108. A total of £120,000 6 per cent. cumulative redeemable £1 preference shares are in issue. Total assets, £828,083 (steamships, £404,527). Valuation of steamships, £750,000.

ISSUES TO SHAREHOLDERS ONLY
Edmundsons' Electricity.—Issue of 750,000 £1 ordinary shares at 30s. (one new share for every £5 stock held on January 1st).

UNIT TRUST CONVERSION
Fifth Conversion Investment Trust.—Offer to sub-unit holders of Selective Fixed Trust Units "A" and "B" to exchange into 3 5s. ordinary shares (maximum 2,700,000) per sub-unit. Every 3 shares represents assets of 16s. 7½d. (Unit A) and 16s. 9d. (Unit B). In adjustment, "B" unit holders to receive 1½d. per share on allotment. Investment Managers and Secretaries, Ltd., provide management services to 1950, for proportion of escrow fund; they receive usual return commission from stockbrokers to agents. Directors' remuneration limited to ½ per cent. of capital, etc. (or ½ per cent. if over £1,000,000).

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest securities allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

Overseas Trade in December.—Both imports and exports declined between November and December last year. The value of imports fell by £3.0 millions and domestic exports declined by £1.3 millions. The trend of total British imports and domestic exports from January, 1927, is shown in the accompanying diagram:—

TOTAL IMPORTS AND DOMESTIC EXPORTS

The diagram clearly indicates that the improvement in exports during the first half of 1937 has not been maintained in the second half of the year, though imports continued to advance steeply until November. The downward trend of exports since last summer is reflected in the returns for the year as a whole. Thus, while total imports in

(£ thousands)				
	1935	1936	1937	Change between 1936 and 1937
December				
Total imports	74,412	83,543	94,328	+ 10,785
British exports	34,917	40,516	43,892	+ 3,376
Re-exports	5,432	6,200	4,979	- 1,221
Total exports	40,349	46,716	48,871	+ 2,155
Excess of imports over exports	34,063	36,827	45,457	+ 8,630
Transshipments under bond	2,482	2,906	2,911	+ 5
Twelve Months				
Total imports	756,041	847,752	1,029,065	+ 181,313
British exports	425,814	440,605	521,594	+ 80,989
Re-exports	55,303	60,769	75,167	+ 14,398
Total exports	481,117	501,374	596,761	+ 95,387
Excess of imports over exports	274,924	346,378	432,304	+ 85,926
Transshipments under bond	25,471	28,960	37,295	+ 8,335

1937 were 21.4 per cent. higher than in 1936, British exports showed an increase of only 18.3 per cent. As a result, the excess of imports over exports rose by £85.9 millions to £432.3 millions during the past year.

Falling Automobile Sales.—The November motor registration figures issued this week cannot be viewed complacently. For some months past, falling security prices, rising costs of living and uneasiness about the business outlook have been unfavourably affecting demand for motor vehicles. Home sales of private cars in September and October were 5.7 per cent. and 12.4 per cent. respectively below the comparable totals for 1936. The November figures—20,645, against 23,801—show a drop of 13.3 per cent. Meanwhile, sales of goods vehicles, which were down by 4 per cent. and 11 per cent. in September and October, suffered a reduction of over 17 per cent. in November, the total being 5,224, against 6,312. The detailed figures for November show that registrations in the 8-horse power class have risen from 5,619 to 6,715, but that this gain has been outweighed by losses in most of the remaining categories—especially in cars of 10, 12 and 14 horse power. Demand, in fact, has shifted from the more to the less expensive type of car. The tendency in the trade circles to attribute the decline in total sales to temporary factors thus seems unconvincing.

Textiles and the Forty-Hour Week.—Two International congresses, one of employers and the other of operatives, will discuss the 40-hour week in the textile industry at the last of this month. The employers will be attending the World Cotton Congress which opens at Cairo on Wednesday, January 26th, and a paper by M. R. A. De la Beaumelle, managing director of the French Cotton Spinners and Manufacturers' Association, will explain the effect of the 40-hour week on output and cost of production in the French cotton industry. On the following day, at Blackpool, a meeting of the Council of the International Federation of Textile Workers, will discuss steps to secure the ratification of the 40-hour week Convention secured at Geneva last June. Germany, France and Italy already work a 40-hour week in their textile industries, but in France a double shift system is permitted which the Lancashire operatives will not countenance. The English employers are strongly opposed to any shortening of working hours, on the grounds that it would increase costs of production and therefore impair Lancashire's competitive position in world markets.

Steel Developments in 1937.—The expansion of the iron and steel industry proceeded apace during the past year. According to the latest returns of the British Iron and Steel Federation, the output of crude steel in 1937 was 13.0 million tons, against 11.7 million tons in 1936 and 9.6 million tons in 1929. The trend of pig iron and steel production since 1927 is shown graphically in the accompanying diagram. The output of pig iron continued to increase in December, when it was 783,800 tons, against 762,300 tons in November. The decline in the output of crude steel, from 1,178,300 tons in November to 1,103,800 tons in December, is a seasonal phenomenon. Despite the rise in output last year, domestic supplies were insufficient to meet the expanding demand, due partly to the speeding-up of re-armament last spring. The extent of the expansion of domestic requirements is revealed by our index of home consumption of iron and steel, which rose by no less than 33 per cent. during the twelve months ended November, 1937. The extension of

IRON AND STEEL PRODUCTION

the capacity of the British iron and steel industry necessitated by the unprecedented expansion in demand involved heavy expenditure on plant. The British iron and steel industry has estimated that its capital expenditure amounted to £20 millions during the past two years, compared with £2.3 millions in 1929. Moreover, the process of re-equipment and extension of capacity is by no means finished; on the contrary, it will involve expenditure exceeding £10 millions during the current year. As a result of these extensions the steel-making capacity of the industry at the end of this year will exceed 14 million tons, compared with 13.5 millions at the end of 1937 and 11.0 millions at the end of 1929. Despite the recent shortage of materials, however, it remains to be seen whether demand at the end of this year will be sufficient to absorb the full output of the enlarged capacity of the industry.

Electricity Consumption in 1937.—The official returns of the Electricity Commissioners show that the amount of electricity generated by authorised undertakers last year was 22,905 million units, against 20,221 million units in 1936. This represents an impressive increase of 2,684 million units, or 13.3 per cent. There is, moreover, no evidence that the peak of consumption has yet been passed, for 2,500 million units were generated last month, against 2,180 million units in December, 1936, the increase of 14.7 per cent. thus appreciably exceeding the year's average. These movements are reflected in *The Economist* index of the daily consumption of electric power by industry. This is adjusted to eliminate the effect of seasonal fluctuations and of changes from private to public generation and excludes the current used for traction, public lighting and domestic purposes. The index, which is one of the constituent series of our index of business activity, rose from 117½ in December, 1936 (1935 = 100) to 128½ in November, and to 131½ (a new high record) in December, 1937.

Decline in Shipbuilding Contracts.—In view of the collapse of freight rates during the last quarter of 1937 the decline in the volume of new orders for mercantile shipping tonnage, revealed by the returns issued by *Lloyd's Register* this week, is scarcely surprising. The tonnage commenced during October-December was 217,500 gross, against 218,600 gross in the preceding quarter and 272,500 gross during the corresponding quarter last year. As a result of the downward trend of new contracts since last June, the volume of work on hand has declined from 1,184,600 gross tons at the end of September to 1,125,400 gross tons at the end of last year.

MERCHANT SHIPPING COMMENCED AT HOME AND ABROAD

The chart reveals a steady decline in the relative importance of the shipbuilding industry in this country. This unsatisfactory tendency was continued during the last quarter of 1937, when a fall in the volume of tonnage commenced in this country was accompanied by an increase abroad.

Agricultural Production in 1937.—Revised estimates of agricultural output in England and Wales last year have now been issued by the Ministry of Agriculture. The latest figures, which differ materially from earlier forecasts, are as follows:—

	Total Production ('000 tons)		Yield per Acre (Cwt.)		Average 1927-36
Wheat	1,378	1,393	16.2	16.1	17.7
Barley	663	576	16.2	14.0	16.3
Oats	1,080	938	15.2	15.3	15.8
Mixed corn	75	75	15.4	16.2	15.6
Seeds hay	1,674	2,141	25.0	29.2	26.4
Meadow hay	4,733	4,967	20.3	21.2	19.5
Beans*	93	83	15.3	17.2	16.3
Peas*	31	25	13.4	14.6	14.7
Potatoes	2,814	3,126	6.2	6.9	6.5
Turnips and swedes	5,579	4,739	12.5	10.9	11.5
Mangolds	4,684	3,668	19.1	17.8	18.5

* For stockfeeding or seed.

The area under wheat, barley, seeds and meadow hay showed a rise between 1936 and 1937, but the area under other crops was reduced. Total production was larger in the case of wheat, potatoes and hay, but lower in the case of all other items shown in the table.

Wheat Prospects.—Following a period of quietude, the wheat markets have recently been firmer. The rise began on Tuesday of last week, when a sudden improvement in the demand for Australian wheat, coupled with a temporary shortage of contracts, caused the March future in Liverpool to advance by 3½d. to 7s. 6½d. per cwt. Is there any prospect of a further sustained advance? On the supply side, the Argentine crop has been officially estimated at 192 million bushels and the Australian at 162 millions, against 245 millions and 150 millions, respectively, last season. On the demand side, Italian requirements are estimated by Broomhall at 16 million bushels for the whole season, against 64 millions last season—a reduction which will approximately counterbalance the smaller crop in the Southern Hemisphere. Oriental demand for Australian wheat, however, has recently been disappointing, and it is suggested that the British market may be called upon to handle larger quantities than usual. The possibility of an unforeseen improvement on the demand side—e.g. from Germany—cannot be ruled out of account; but adequate supplies are assured and a new price advance seems unlikely.

Slump in Platinum.—Platinum has opened 1938 with a new reduction in the official price from £7 12s. 6d. to £7 per ounce. Within the last three months the price has declined by £3 5s. per ounce and since February last its price has been exactly halved. The official platinum price has now fallen to the gold price level, and as the wholesale price is about £1 below the official quotation, platinum is now some 14 per cent. cheaper than gold. The serious decline in platinum in the past ten months was largely due to the fact that the unfavourable relation between the prices of gold and platinum had adversely affected the industrial consumption of the latter metal. At the same time, the high platinum prices have increased the offer of old platinum substantially. The change in the relation between gold and platinum prices is likely to stimulate the industrial use of platinum, but in view of the recent decline in the world's industrial activity, it is doubtful whether any absolute increase in consumption will take place within the next few months. In 1937 the world's platinum output exceeded consumption by 500,000 oz., while consumption has probably not been much above 400,000 oz. Under these conditions the uncertain prospects of consumption may well enforce a new reduction in the price of the metal, although even to-day's level represents only one-fourth of the platinum price ruling until twelve years ago.

INDUSTRIAL REPORTS

ACTIVITY in the heavy industries is well maintained. The pressure of the delivery of steel, a good indicator of activity in these trades, remains as strong as ever, but new business remains small in volume. Despite the heavy intake of coal by domestic consumers before the holidays, demand remains as strong as ever and exceeded anticipations, especially in Wales. New export business, however, remains small, partly owing to the high level of prices. The firmer tendency of raw material prices has given a fillip to the cotton industry, but business in jute goods and wool textiles remains at a low ebb.

Coal

Cardiff.—The Cardiff coal market was exceptionally firm this week. The collieries are so heavily committed under long-period contracts that buyers have found it extremely difficult to obtain prompt supplies of any class of coal, and for all grades quotations are very firm. The strength of the market has surprised many buyers, who had been anticipating a renewal of the easiness in the prompt market which was so marked a feature prior to the pre-Christmas holiday pressure. Shipments during the first week of the New Year, however, were below the autumn weekly average, but, at 382,000 tons, they were 24,000 tons greater than in the first week of 1937.

*

Sheffield.—The domestic demand for coal is strong and prices are steady. Collieries are working full time and have relatively heavy order books. Household coal is in good request, and there is a steady call for gas fuel. Industrial steam coal is moving freely. Small coal enjoys a good market, the requirements for electricity generation and coke-making being unusually heavy. A slight improvement in the export section has taken place, but forward inquiries are not numerous. The chief interest of shippers is delivery under old contracts. The prosperity of the inland trade hampers foreign business, prices being the chief obstacle. Washed nuts and small coals are the best feature in the export market, but bunker trade is limited. Prices remain unchanged.

*

Newcastle-on-Tyne.—The Northumberland steam coal market for prompt delivery is steady, with a better home inquiry for large coals, but the forward position is quiet, there being little inquiry from abroad. The Durham market is firm under a steady export trade and a brisk home demand. The market in gas coals is very active, whilst coking and steam coals are cleared without difficulty. Patent oven coke is enjoying a steady sale in the home market, but overseas business is quiet and prices are inclined to ease.

*

Glasgow.—With normal business conditions now restored it is found that home demand is no less brisk than before the holidays. If anything, the stoppage has accentuated the rush for supplies in certain directions, house coal

and washed smalls for public utility and industrial use being in heavy request. In some cases delivery dates for house coal have lengthened to about three weeks. In the circumstances there is little in the way of floating supplies available for new export business. The latter is not very active, but the stringency is so pronounced that exporters find difficulty on occasion in securing fuel for delivery under contracts.

COAL OUTPUT AND EMPLOYMENT

District	Week ended December 25 1937		Week ended January 1 1938

* Including Cumberland, Westmorland, Gloucester, Somerset and Kent.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that activity in the iron and steel industry has been well maintained since operations were resumed after the holidays. Users are pressing to obtain deliveries against existing contracts. New business, however, is quiet in most departments, for consumers appear to have covered the bulk of their requirements for the next few months and producers are well sold for the first half of this year.

Supplies of pig iron are now adequate to meet the demands of the consuming industries, although in most descriptions of iron there is little surplus for export. Deliveries are being made with greater regularity than for some time.

In the semi-finished steel section of the market conditions are much better than a month or two ago, and there are prospects that the supply position will become progressively easier. Consumers, however, are still receiving somewhat limited supplies, but fewer complaints are now heard regarding the difficulty of maintaining full operations owing to the scarcity of raw materials.

Business in the finished steel market has been rather restricted, as producers are only able to accept orders for far forward delivery owing to the congested state of their order books. Consumers seem to have largely covered their future requirements and neither they nor the makers seem anxious to commit themselves to distant delivery dates.

*

Sheffield.—Although business has been only moderate this week, the undertone of the iron and steel market is firm, and there is quiet buying in most sections. Consumers of forge and foundry pig iron are well contracted

over the first quarter, but are ready to take up any odd parcels which come on offer. Generally speaking, supplies of iron from home sources are more in accord with users' requirements than for a long time past, and there is not much demand for the imported material now available. Deliveries of finished iron show improvement and bar makers are more disposed to accept new business.

The pressure for supplies of basic and acid steel billets is unrelieved, and despite constantly expanding output it is impossible to meet users' requirements to the full. There is a heavy call for stainless steel sheets, wire rods, bars and strip. Orders for special steels are a feature. It is reported that a Norwegian firm is contemplating the establishment of an electric steel-making works in this district.

*

Middlesbrough.—Foreign ore continues to arrive on the same scale as during the last two months. Odd cargoes of North Spanish ore continue to change hands, the last freight Bilbao/Middlesbrough having been fixed at 9s. There is a steady demand for heavy steel scrap, and no difficulty arises in disposing of any local supplies.

Cleveland foundry pig iron is less scarce than for some time. The demand for foundry iron is being met to some extent by deliveries from the Midlands. East Coast hematite is now sufficient to meet the heavy needs of home consumers at the stabilised prices. Small quantities are being released for export, the prices for foreign trade being uncontrolled.

Imports of Continental semi-finished steel and locally-produced supplies are enabling re-rollers to operate almost at capacity. Finished steel makers are heavily booked over the first half of 1938.

*

Glasgow.—A good start has been made, with prospects of continuous employment for many months in most branches of the iron and steel trades. Supplies of raw materials are now satisfactory. Users of semis, while not quite so happily placed as the steelmakers in this respect, have supplies on hand to enable them to put a good proportion of plant into operation, and they anticipate that regular supplies are likely to be available to meet their requirements. At the Clyde shipyards and marine engineering shops work is proceeding on a large number of vessels, and it is understood that work will commence shortly on a number of recently-placed contracts. Not a great deal of new business has been placed locally since the beginning of the year.

*

Cardiff.—Normal working conditions have now been restored in the tinplate industry, and prices have been ruling steadily at from 22s. 6d. to 23s. per basis box f.o.b. In the last week of December many mills were idle, and production amounted to only 47.9 per cent. of capacity. Shipments in the week ending January 6th totalled 8,532 tons, compared with 3,861 tons in the corresponding period last year, and stocks have been reduced to 4,859 tons.

Black sheets are also a good market for inland supply, but galvanised sheets are quiet at £17 15s. per ton f.o.b. Pig iron, ingot steel, and bars are in very active demand and firm at the fixed prices.

Textiles

Cotton (Manchester).—Inquiry has increased and some spinners and manufacturers have booked more orders. The improvement is due to the rise in raw cotton prices, quotations for the American staple now being $\frac{1}{4}$ d. a lb. above the lowest point reached this season. It is reported that the Washington Government is aiming at a reduction in the area under cultivation from 33,930,000 acres last year to 26,000,000 acres this season. It is being suggested that the maximum yield may be about 10½ million bales, compared with nearly 19 million bales in 1937.

The yarn market has been firm. Sales of American counts have shown a slight improvement. Conditions in the Egyptian branch remain unsatisfactory, especially for spinners of the finer numbers. In all directions there is determination to maintain minimum prices under the legalised agreements. Cloth inquiry has shown some expansion. Most manufacturers have been tested in price on a freer scale than for some little time back. A development of interest has been the increased demand for India.

RAW COTTON delivered to Spinners (Million bales)

Variety	Week ended		Total Deliveries	
	Dec. 31, 1937	Jan. 7, 1938	Aug. 1, 1936-7, 1937	Aug. 1, 1937-7, 1938

Total	41.4	56.3	1,249.0	1,239.6

*

Jute (Dundee).—The accumulation of orders for jute yarns and cloth over the New Year holidays has been disappointing, and spinners and manufacturers have returned to find conditions as depressed as they were in December. There may be a little more interest shown by buyers, but purchases are confined to trifling lots at unsatisfactory prices. Raw jute recently declined to some extent, but a good recovery has been made, and spinners have lost their opportunity, at least for the time being, of purchasing slightly cheaper than earlier this season.

Calcutta goods have remained quiet, with little change in prices during the past fortnight, and the Indian mills go on producing on the same basis, in spite of the fact that they are losing money. Competition for the disposal of their output is very keen, and the unsatisfactory situation in India is reflected on other producing centres. Dundee manufacturers cannot compete with Calcutta, and large quantities of goods from India are still being imported into the United Kingdom, being sold at about $\frac{1}{4}$ d. per yard cheaper than Dundee manufacturers can accept. The latter are bound to pay certain rates of

wages under the Jute Trade Board. No further progress has been made by those who have vigorously protested against these goods coming in free of duty, requesting a quota system or tariff to protect the home industry.

THE COMMODITY MARKETS

THE upward trend of the prices of primary products at home and in the United States, which began after the turn of the year, has since gathered momentum, largely as a result of the more optimistic view prevalent in the United States concerning the future of business activity in that country. The firmer tendency of the commodity markets was reflected in an improvement of shipping freight rates.

Commodities sensitive to changes in market psychology, such as non-ferrous metals and rubber, all registered substantial rises in price during the past week. Moreover, the rise in prices was accompanied by a marked expansion of turnover, especially in the case of metals.

The upward movement of prices in the United States is reflected in the advance of Moody's daily index of staple commodity prices, from 149.3 (December 31, 1931 = 100) on January 5th to 152.1 on January 12th. A month ago the index stood at 148.4, and a year ago at 209.8.

Metals

Copper.—The market was strong and the standard cash quotation put on £3 3s. 9d. per ton, to close at £44 2s. 6d. on Wednesday. There was a substantial demand from both consumers and speculators, and turnovers were consequently higher than at any time since last spring. In anticipation of a larger re-armament programme, American demand was more active and the United States domestic price was advanced from 10.25 to 11 cents per lb. Since American consumers' stocks are low the possibility of a major buying movement in that country must be reckoned with if the general improvement in sentiment is maintained. Any rally in New York would certainly be reflected on the London market.

*

Tin.—Tin rose by £4 10s. per ton in the week ended Wednesday and turnovers in the latter part of the period were substantial. The improvement was enhanced by the resumption of buying on United States account; but since American consumers are fairly well stocked the maintenance of their demand is dependent on a genuine improvement in business activity across the Atlantic.

*

Lead and Spelter.—In response to a substantial demand by consumers, lead rose by £1 16s. 3d. to £17 11s. 3d. per ton. Spelter improved by 18s. 9d., mainly owing to reports that the Belgian Vielle-Montagne concern is restricting sales in consequence of the low level of prices. Meanwhile, American lead markets have benefited somewhat from an announcement that the St.

Joseph Lead Company will restrict its output. In response to the general improvement, American spelter prices also advanced, although the December statistics of the Zinc Institute were bearish.

Deliveries in America fell from 32,221 short tons to 29,545 short tons, the lowest since June, 1935. Meanwhile, production advanced from 49,388 to 51,787 short tons, while stocks consequently rose from 42,984 to 65,226 short tons. Since the end of August, United States zinc stocks have risen nearly sixfold and are now over 20,000 short tons larger than at the end of 1936.

*

Nickel.—World consumption of nickel, according to a statement of the President of the International Nickel Co., amounted to 100,500 short tons in the first ten months of 1937. Consumption during the whole of last year probably amounted to as much as 125,000 short tons—25 per cent. more than in 1936 and the highest level ever attained. The price of the metal was reduced from £200 to £180 per ton on January 1, 1937, which greatly stimulated consumption; and the metal therefore suffered little from the general slump in commodities last year.

Wednesday, and prices are practically unchanged. Wheat prospects are discussed in a Note in the Industry and Trade Section.

Meanwhile, demand for home-milled and imported flour for future delivery has been active, though prices have been below spot quotations. In sympathy with Argentina and in response to a sharp drop in shipments, maize was firm. The reserve of Argentine sellers is attributable to the uncertain prospects for the new crop. Imported feeding barley also remained a firm market. Better qualities of English remain exceptionally scarce and dear.

Other Foods

Provisions and Meat.—On the London Provision Exchange bacon prices were reduced and the market was quiet; butter, however, was firm, with Colonial makes dearer and Danish rather cheaper on the week; Colonial cheeses were also slightly higher in price. Eggs were a seasonably weak market, but a better demand has been experienced at the lower level. Most classes of meat were cheaper at Smithfield Market and trading was on quiet lines generally.

Colonial Produce.—The London spot market in raw sugar was quiet to dull, with prices showing an easier tendency. The spot market in coffee was quiet but steady. Accra cocoas were a firm market, with other sorts almost unchanged in price. At the week's tea auctions Indian grades were in active demand and prices were generally steady at last week's level. Ceylon teas up to 1s. 3d. per lb. were fully firm to occasionally dearer; other grades were generally higher in price.

Fruit.—At Covent Garden, according to *The Fruitgrower*, trade was rather quieter, but the market was generally steady. Apples sold steadily in response to a regular inquiry, with supplies of home-grown rather short. Pears also continued in demand. Demand for South African fruit improved, but prices for plums remained moderate owing to the large supplies available. Hothouse grapes were firm on a shorter supply. Oranges were a more active market, but grapefruit was plentiful and cheap. Lemons, however, were generally firmer.

Vegetables.—At Covent Garden during the past week forced asparagus was in demand according to *The Fruitgrower*. House-grown beans were steady, while cucumbers, endive and lettuce were firmer. Mushrooms, however, were easy. All lines of kitchen vegetables sold well, with cauliflowers and sprouts dearer. Celery encountered a good demand, while onions and leeks were dearer. Meanwhile, the potato trade at London markets remained active, with quotations showing little alteration. At the Borough on Tuesday best siltland and light soil King Edward again realised from 6s. 6d. to 7s. per cwt., ex market.

* Week ended January 6.

Miscellaneous Commodities

Furs.—An important silver fox sale of the Hudson's Bay Company opened on Monday and will probably last until well into next week; some 120,000 skins are to be offered. The sale is well

attended and buying on foreign account is much better than of late. Prices at the opening were from 5 to 10 per cent. higher than those of December, which had, in turn, exceeded the low levels touched in November by some 10 per cent. If the tone of other markets remains cheerful, a further advance in silver fox prices may well occur. The tendency established at the present sale will doubtless have an important influence on the Australian auctions, which open in London on January 27th, and on the general London fur sales which begin on January 31st.

Oilseeds and Oils.—A steady to firm tone rules in most sections, though trade is not particularly brisk. Linseed on spot and near at hand is scarce, owing to the late commencement of the shipment of the new Argentine crop, but this should soon be remedied. Shipments from the River Plate last week were 44,200 tons, and the quantity afloat for Europe has increased to 110,000 tons (including 3,100 tons from India). A year ago the total quantity afloat was 155,500 tons. Shipments from India continue very small, and last week were no more than 500 tons. The first official estimate of the area under linseed in Argentina puts the total at 2,948,000 acres, which is less than the first forecast last year, and only 46,000 acres short of the final estimate. The Argentine crop is reported to be in fairly good condition, but it seems unlikely that India will have more or even as much available for export than in the season now drawing to a close. The reduced crop in Argentina gives strength to the market, which is looking to the United States being a buyer on a larger scale even than last year. New crop Plate January shipment to Hull has been sold at £12 15s. plus duty, and continues in good demand both here and on the Continent.

Egyptian cottonseed is firm and in good request at advancing prices. A substantial trade is reported, £6 7s. 6d. having been paid for seed afloat and £6 5s. in all positions to April, though prices have since eased a little.

Linseed oil is difficult to obtain for early delivery, and supplies are being supplemented by imports. Quotations have hardened and raw oil ex Hull is 20s. per ton higher than at the beginning of the month.

Rubber.—The tone of the market has improved in sympathy with Wall Street, and in response to the news that certain motor manufacturers in the United States were increasing their labour force; prices consequently advanced. Meanwhile, the view is apparently gaining ground in the market that the International Committee will take

no action regarding the quota at its meeting on January 25th, but will postpone the decision until its February meeting.

SHORTER COMMENTS

Alvis, Ltd.—Loss on motor-car trading for 19 months to July 31, 1937, was £28,303 (against profit of £27,377 for year 1935). Net loss is £29,970, or £47,741 after £11,285 to development and £6,477 for subsidiary's loss. After transferring £50,000 from reserve and adding credit balance brought in of £13,380, balance is £15,639; 18 months' preference dividend absorbs £8,531, leaving £7,107 to go forward.

Henkeys, Ltd.—Net profits for the year to October 18, 1937, £54,218, against £54,420. Allocations of £7,500 (against £10,000) to general reserve, £2,632 (against nil) to Debenture sinking fund, £1,000 (unchanged) to pension fund, and £2,250

tax and N.D.C. Final dividend, 8 per cent. and a bonus of 4 per cent. on the "A" ordinary and ordinary shares (again making for year, 19 per cent.); balance forward reduced £12,082 to £10,218.

William Timpson, Ltd.—Trading profit for 1937 £160,310, against £146,438. To taxation provision, £50,000, against £35,000; reserve £37,500, against £50,447. Ordinary dividend 15 per cent. absorbing £56,250, against £55,419. Carry forward raised from £1,632 to £4,670.

Michael Nairn and Greenwich.—Revenue for 1937 was £259,208, a decrease of £26,402. Ordinary dividend and bonus 15 per cent., as before. Carry forward reduced from £66,371 to £64,478.

NOTE.—The Royal Bank of Canada (France) has been incorporated under the laws of France to conduct the business of the Bank in Paris, and the assets and liabilities of The Royal Bank of Canada (France) are included in the above General Statement.

M. W. WILSON, President and Managing Director.

S. G. DOBSON, General Manager.

AUDITORS' REPORT

TO THE SHAREHOLDERS, THE ROYAL BANK OF CANADA: We have examined the above Statement of Liabilities and Assets as at 30th November, 1937, with the books and accounts of The Royal Bank of Canada at Head Office and with the certified returns from the branches. We have checked the cash and the securities representing the Bank's investments held at the Head Office at the close of the fiscal year, and at various dates during the year have also checked the cash and investment securities at several of the important branches. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank, which have come under our notice, have been within the powers of the Bank. The above statement is in our opinion properly drawn up so as to disclose the true condition of the Bank as at 30th November, 1937, and it is as shown by the books of the Bank.

Montreal, Canada, December 22, 1937.

COMPANY MEETINGS

TURNER AND NEWALL LIMITED

YEAR OF EXPANSION AND PROGRESS

INCREASED SALES—HIGHER PROFITS

MR SAMUEL TURNER'S REVIEW

The annual general meeting of the members of Turner and Newall, Limited, was held, on the 13th instant, at the Royal Station Hotel, York.

Mr G. S. Newall presided in the absence of the chairman, Mr Samuel Turner.

The Secretary, Mr John L. Collins, read the notice convening the meeting, and the report of the auditors, Messrs Deloitte, Plender, Griffiths and Company, was read by Sir Alan Rae Smith.

Mr Newall read Mr Turner's speech, which, after dealing with the accounts, was as follows:—

Before proceeding to a survey of our activities, I would like to say a few words on the schemes which we have instituted during the last few years for the benefit of the employees of the group. You may recollect that in my speech at the last annual general meeting I told you that we had established a pension scheme for the benefit of the staff, and of the works employees, and had also decided to grant in future to the works employees their summer holiday with pay.

THE PENSION SCHEME

The pension scheme—which is administered by our own staff—provides pensions and/or life assurance benefits for the men and women in the service of the group companies operating in this country, and was most enthusiastically received by the employees. The scheme has now completed the first year of its existence, and, as a consequence, I am in a position to give you somewhat more definite facts than could be provided at this time last year. In addition to the company's contributions to the established scheme, and the contribution of £10,000 which we have recommended you to make to Turner and Newall Welfare Trust Limited for account of the trustees of the Robert Turner Fund, the company is also providing pensions on an ex-gratia basis to employees of long service who retired before the scheme came into operation; the total cost of these benefits, including the cost of providing the summer holiday with pay for the works' employees, is over £60,000 per annum. These figures relate only to the schemes benefiting employees of group companies operating in this country; appropriate schemes have also been established by the principal companies operating abroad, and the total cost to the group under all these schemes is now over £80,000 per annum.

MINING PROPERTIES

Turning now to a brief review of the state of our various activities, and dealing first with the mining companies, I am glad to be able to tell you that the development and equipment by New Amianthus Mines, Limited, of the Havelock mine in Swaziland is proceeding satisfactorily, and it is hoped that production will begin in 1939. The mines in Southern Rhodesia are at present producing to capacity and have obtained their full share of the increased world demand for raw asbestos.

The Bell mine in Canada is also experiencing a very satisfactory demand for its product which meets with a ready acceptance from manufacturers all over the world. Our investment in this mine is a satisfactory one, and one which in my view ranks equally with the best of our African mining investments.

ASBESTOS TEXTILE MANUFACTURING UNITS

The asbestos textile manufacturing units, Turner Brothers Asbestos Company, Limited, Rochdale, and J. W. Roberts, Limited, Leeds, have had a satisfactory year and have increased the volume of their business. At the Rochdale factory further extensions are nearly completed, and our new Asbestos Textiles Research Department is beginning to make itself felt in the development of new lines and the improvement of existing products. Stockholders will be interested to know that Turner Brothers Asbestos Company, Limited, have established themselves as leaders in the amelioration of working conditions in the asbestos textile industry, and in this

connection I would like to say a few words on the subject of asbestosis, which has received a certain amount of publicity during the last year or two.

ASBESTOSIS ELIMINATED

It is only within comparatively recent years that the directors have become aware of the danger to health which arises from continuous contact with asbestos dust, but from the first date when scientists brought this danger to our notice, unremitting efforts have been made to overcome the difficulty. Our efforts have been so completely successful that I can with confidence state that new cases of asbestosis in your companies' factories are extremely unlikely, the cases with which we have to deal at present being simply the inheritance of the days when, unfortunately, this danger was not realised. When our plans are completed, the working conditions in our asbestos factories will be second to none, and there will be no special risk of any kind attached to working in them. The unit ventilating system evolved at Rochdale has been the subject of congratulation by the Home Office, and will, we hope, in due course become standard in the asbestos textile industry.

FERODO LIMITED

Ferodo Limited, our company which, we think, leads the world in brake-lining and friction materials, has again increased the volume of its business, and is enjoying an ever-increasing popularity and a growing demand for its products. Recent legislation has undoubtedly contributed to the development of "brake consciousness" in the minds of road users, and this is reflected in the increased reputation of Ferodo Limited. World prestige of Ferodo products has also been enhanced by their continued use on cars specially designed for the setting-up of new world's land speed records, the latest being the speed of 311.42 miles per hour established by Captain G. E. T. Eyston with his 4,700 h.p. car Thunderbolt, equipped, of course, with Ferodo linings.

Following a decision that Ferodo Limited should widen the scope of its activities, a further addition has been made to the extensive factory at Chapel-en-le-Frith. The new building has been equipped with the latest machinery for the manufacture of Motor Vehicle fan belts, and production will shortly begin.

TURNERS ASBESTOS CEMENT

Turners Asbestos Cement Company, which is primarily concerned with the manufacture and sale of asbestos cement building products, and also electrical insulation products, has again experienced a considerable expansion of its activities. During the past year the demand for "Everite" asbestos cement pressure pipes and other "Everite" materials has grown so substantially that in spite of several extensions at the Widnes works we are still not able to give delivery of these materials as promptly as we should wish. Further extensions are, however, well advanced at Widnes, and in addition steps have been taken towards the establishment of a new plant for the manufacture of "Everite" pressure pipes at the Erith works, and production at this new plant will begin as early as possible. This company has also acquired additional land adjoining its works at Trafford Park, Manchester, and extensive additions to the plant are now in course of being made. Further, it is proposed to establish an asbestos cement works in Scotland, and for this purpose we have acquired the site of the former well-known Beardmore shipyard on the Clyde; this particular undertaking will be carried out in conjunction with the trustees of the fund established by Lord Nuffield for increasing employment in the Special Areas. In addition to the developments in this country, we have also taken the preliminary steps towards the establishment of a manufacturing centre for asbestos cement products in South Africa; a new company, Turners Asbestos Products (Proprietary) Limited, has already been formed, and a site for the proposed factory has been acquired at Krugersdorp, near Johannesburg.

COMPANY'S ASBESTOS CEMENT FOR EMPIRE EXHIBITION

I think that one of the most fitting tributes which has been paid to the expansion of the uses of asbestos cement in the building industry is the extent to which our asbestos cement products will be used in the construction and equipment of the buildings erected for the Empire Exhibition to be held in Scotland next year. I am certain that visitors to the Exhibition will agree that the use which has been made of this product in the construction of walls, floors, ceilings and roofings, will be a unique example of the versatile nature of asbestos cement. Turners Asbestos Cement Company have from the outset co-operated fully with the architects of the Exhibition, Sir John Burnet Tait and Lorne, and we are always willing to co-operate similarly with all architects who are seeking a material capable of being used in conformity with their own ideas for the internal and external facing of buildings of all kinds.

DEVELOPMENT IN ELECTRICAL PRODUCTS DEPARTMENT

In addition to the building materials section, there has been an outstanding development in the electrical products department of Turners Asbestos Cement Company during the past year. "Everite" asbestos cement cable conduits are now being extensively used, not only by various municipalities for underground power cables but, on an even larger scale, by the General Post Office for underground telephone cables. The lightness of the material, the ease of handling and the simplicity of jointing, have combined to further the popularity of this newest development, and during the past twelve months the Widnes works of this branch have manufactured, for the G.P.O. alone, conduits totalling in length nearly 500 miles. The use of our products in the electrical insulation field has also extended considerably during the past year. An increasing number of actual users of electrical equipment are demanding the incorporation of "Sindanyo" and "Siluminite" products in their gear; further, although these products were primarily produced to meet the demands of the electrical industry, they are now being used to an increasing extent in the steel and iron industries. In fact, the expansion in the electrical products section of Turners Asbestos Cement Company has been quite exceptional during the past year; this is a particularly gratifying development, as these materials are sold entirely on quality.

As regards the insulation and chemical section of our activities, The Washington Chemical Company has experienced, during the year under review, a very definite development in its chemical sales. One of the new fine chemicals, i.e. translucent magnesia, has been accepted by the rubber industry as being of very considerable value, in that it gives them a greater transparency in their rubber products, as well as greater durability.

The Western Chemical Company (Paisley), Limited, has during the year introduced a new moulding powder for use in foundries, and for the manufacture of light casting patterns, and the acceptance of this material has been very satisfactory.

It is pleasing to record that in association with the Distillers Company, Limited, through the Carbon Dioxide Company, Limited, business in dry ice shows definite and steady expansion. Technique is being developed and a number of new uses have been found.

NEWALLS INSULATION COMPANY

During the past twelve months insulation contractors have been extremely busy, due largely to the great increase in industrial work of all types and the very big naval programme of new construction and reconditioning. Newalls Insulation Company have continued to maintain their leading position in the trade and have secured a full share of the orders available.

On the marine side of their insulation business, the development of acoustic treatment on ships propelled by internal combustion engines, whether of the ocean liner or cross-Channel size, has been remarkable, and Newalls Insulation Company have successfully carried out contracts on both types of ship, adding materially to the comfort of passengers and crew by the treatment of engine rooms, ventilating fan rooms, and passenger accommodation. It is expected that succeeding years will show still further development of this acoustic treatment in which our material, based on asbestos, which is non-inflammable and non-organic, has such outstanding merit.

Business in insulating bricks shows steady growth, and we are now manufacturing at Washington, and marketing, five distinct grades of insulating brick, each manufactured for a particular temperature, crushing strain, and special working conditions.

During the year we have also perfected a process of manufacture for the production of moulded asbestos for the first protection of steel work generally in electric power stations, sub-stations and distribution centres, the protection of electric cables and oil-immersed switch gear. It is anticipated that this new product will show

definite development, and it has been well received by electrical consultants, power station engineers, and representatives of the Central Electricity Board.

PROGRESS OF INDIAN COMPANY

Turning now to manufacturing companies operating abroad, Asbestos Cement, Limited, our Indian company, is making steady progress towards the completion of its two new works in Bombay and Calcutta respectively, and we expect that gradually it will be able to build up a satisfactory volume of business in asbestos cement building materials in India. Meantime, sales from the original plant established in India at Kymore, Central Provinces, continue to grow, and the fact that in the near future supplies will be available also from Bombay and Calcutta will be of considerable assistance to Asbestos Cement, Limited, in building up the market.

AMERICAN COMPANIES

The Keasbey and Mattison Company continues to make progress. Plants for the manufacture of asbestos cement pressure pipes are in course of erection adjacent to the company's existing works at Ambler, Pennsylvania, and at St. Louis, Missouri, and it is anticipated that the Ambler pipe plant will be in production on a small scale very shortly. The Keasbey and Mattison Company received its full share of increased business in its general line of products as a result of improved conditions in the United States during the past eighteen months, and although, of course, it has shared also in the recession in trade which has been obvious in that country during the past three months and consequently will probably show rather lower profits during the current year, your board are satisfied with this company's prospects, and are confident that, when taxation conditions in the United States become more normal, it will be able to make its full contribution to the profits of the Turner and Newall, Limited, organisation as a whole.

Ferodo and Asbestos Incorporated, which has a brake lining and friction material factory at New Brunswick, New Jersey, U.S.A., has also made progress during the past year, and brake lining produced at New Brunswick is now being fitted as standard equipment by the manufacturers of the Buick, Hudson and Lincoln Zephyr passenger cars, and of Ford and other commercial vehicles.

Members of your board have recently paid visits to our companies operating overseas. Our African companies have been visited once, and all our other companies operating outside the United Kingdom have been visited twice during the year; this has been possible without inconvenience, owing to the very adequate and speedy facilities for travel which now exist between the principal countries of the world.

BOARD'S SOUND PRODUCTION POLICY

To sum up, I am sure that stockholders will agree that our company has had a very satisfactory year. Our profits have increased by a substantial sum, but I would like to make it clear that the reason for this increase is mainly the larger volume of business obtained, as increased selling prices, where these have been found possible, have been offset to a very large extent by increased costs. As you are aware, it is our policy to try to keep our production capacity always ahead of immediate market requirements, so that we may be in a position at any moment to take advantage of an improvement in demand, and it is very largely through this policy that we have been able during the past year to accept the larger volume of business which has resulted in increased profits.

The general condition of our organisation has never been better than it is to-day, and I can give no clearer illustration of our confidence in the future than to tell you that extensions are proceeding at every factory which we, or any of our associated companies, own, whether at home or abroad.

We cannot hope that world conditions will always operate to our advantage, and many times in the past the contrary has been the case, but for years past we have pursued, and we propose to pursue in the future, a policy of looking forward beyond the immediate demands and difficulties of the moment, and, by planning some years ahead, keep ourselves always in a position to take advantage of such opportunities as are, or can be made, available to us.

In conclusion, on behalf of the Board and on your behalf, I should like to express our thanks to our officials and employees at home and abroad for their continued loyalty and conscientious effort during the year under review.

Mr Newall then moved the following resolution:—

"That the directors' report and accounts of the company in respect of the year ended September 30, 1937, and the balance sheet of the company as at September 30, 1937, as printed and

circulated to the members, be and are hereby received, approved and adopted."

The resolution was seconded by Mr B. E. Williams and carried unanimously.

The usual resolution was then passed authorising payment of the ordinary dividend of 16½ per cent., making 20 per cent. for the year, subject to income tax, following which Mr R. H. Turner, Mr W. N. Roberts, Mr C. S. Bell and Mr R. Starkey, the retiring directors, were re-elected directors of the company.

Messrs. Deloitte, Plender, Griffiths and Company, Chartered Accountants, were re-appointed as auditors for the current year.

A vote of thanks to the chairman terminated the proceedings of the meeting.

CANADIAN BANK OF COMMERCE

YEAR OF PROGRESSIVE ADJUSTMENT

EXPANSION IN MINING AND HEAVY INDUSTRIES

At the annual meeting of the Canadian Bank of Commerce held on the 11th instant, in Toronto, the general manager, Mr A. E. Arcott, said: "For Canada, 1937, like intervening years from 1933, was mainly one of progressive adjustment. In several branches of national economy a record level of productivity and employment was attained, notwithstanding the influence of the sharp recession in the United States upon certain industries as well as upon stock and commodity prices. Canada's business volume as a whole was 10 per cent. greater than in 1936, one of the outstanding features of the year being the expansion in heavy industries. Mining has been in the vanguard of Canada's economic advance and production value in 1937 reached a record of \$450,000,000."

AGRICULTURAL PROSPECTS

After reviewing agricultural conditions during the year he described the pre-season moisture conditions in Prairie Provinces as the most promising since 1933. In about 70 per cent. of the total wheat area autumn precipitation was either above average or nearly normal, some of the heaviest rains falling in districts which reaped short crops in recent years. This provided a much more cheerful outlook for 1938.

The recovery in business, commencing in 1933, gained impetus until the peak was reached about the middle of the past year, but the banks had not benefited to the same extent as trade and industry. Instead of the rise in interest rates which followed previous depressions these had remained low or fallen further. Canada with her vast natural resources, her wide range and variety of products which the world so greatly needed and the industry, capability and enterprise of her people was in a more favoured position than almost any other country to withstand any temporary recession in general trade and to participate fully in the advance which would inevitably occur when the necessary adjustments were made and confidence again restored.

MR S. H. LOGAN'S ADDRESS

The President, Mr S. H. Logan, said: "It is quite apparent that economic progress in Canada during 1937 was due largely to a series of favourable developments affecting the country's export trade. This trade, though recently on a declining scale from the record volume of the preceding year, had a value above one billion dollars and, like that of 1936, was on a comparable price basis actually greater than in 1929.

"Probably never had international trade shown such divergent trends as in the recent years of intense economic nationalism. Canada's export trade had conformed to the abnormal change in the character of world commerce; the volume of agricultural exports in 1937 was slightly less than in 1932, but notwithstanding a continued narrow American market for our lumber, exports of all wood materials rose by about 70 per cent. over 1932 to account for about one-fifth of all exports. The most striking development was, however, in mineral exports, which gained by 170 per cent.

"The greatest problem of the world to-day is the settlement of European affairs upon a basis that will remove the constant threat of another world conflagration and the termination without Western entanglement of the disastrous war now going on between Japan and China."

He said that in Canada they had faith not only in the might but also in the good sense, calm judgment and wise forbearance, even in the face of grave and wilful provocation, of the British people and their Government. They had also confidence in the power, influence and right intentions of their great neighbour

and kindred democracy to the south. The chief interest of both the British Empire and United States was world peace. By their joint or co-operative action it was most likely to be achieved and made permanent. To the extent that Canada was able to assist in the realisation of this great ideal their Government should be able to depend upon the support and encouragement of the Canadian people.

TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY, LIMITED
(INCORPORATED IN THE UNION OF SOUTH AFRICA)

ANOTHER SUCCESSFUL YEAR

The ordinary annual general meeting of the Transvaal and Delagoa Bay Investment Company, Limited (Incorporated in the Union of South Africa), was held, on December 2nd, in Johannesburg.

Mr S. C. Black presided, and, in the course of his speech, said:—Our net profit, after making the usual provision for taxation and depreciation, amounts to £120,140 19s. 5d., as compared with £119,041 9s. 5d. for the preceding year. We now recommend payment of a final dividend of 4s. per share, which will bring the total distribution for the year to 6s. 6d. per share = 32½ per cent., free of Union of South Africa ordinary income tax, the same as the previous year.

Our two collieries, the Transvaal and Delagoa Bay Collieries and Douglas Colliery, Limited, produced jointly 998,458 tons of coal, compared with 989,330 tons in 1936. This increase would certainly have been much larger if the Railways Administration had been able to supply transport facilities for all the coal we were in a position to produce and sell.

You will, I feel sure, be interested to learn some facts about the reserve deposits of coal we have acquired during the past twenty-five years and tested by careful borings. Quite apart from the 12,211 acres comprising our two present working collieries in the Witbank District, and the 16,679 acres of freehold coal-bearing ground in the Wakkerstroom District, we have freehold or mineral rights over four farms in the Middelburg and Witbank Districts, which we estimate to contain no less than two hundred million tons of saleable coal of high calorific value.

The Transvaal Coal Owners Association (1923), Limited, of which both our collieries are members, carried out the sale and distribution of its members' product with the greatest efficiency and in the face of exceptional difficulties arising from the shortage of railway trucks, to which I have already referred.

THE NIGEL GOLD MINING COMPANY, LIMITED

We have a very substantial interest in this company, and we are well pleased with it.

Development is being pressed forward and continues to give excellent results, especially in the lowest levels of the mine. In October, the latest month for which figures are available, 2,660 feet were sampled, of which 1,340 feet, equivalent to 50.38 per cent., proved payable, of an estimated average value of 11.6 dwt. over stopping width.

Owing to delay in the delivery of machinery and plant, it was not possible to increase the milling tonnage as soon as was originally hoped. The erection of this new plant was, however, completed in November, and although the incorporation of the new unit into the existing plant necessitated a complete stoppage of the reduction works for over twenty-four hours, the tonnage milled in that month nevertheless reached a total of 27,500 tons, against 28,000 tons for the longer month of October. These figures should soon be exceeded, as the reduction works now have a capacity sufficient to treat the maximum tonnages expected during the next few years.

SABIE DISTRICT, TRANSVAAL

The Nestor Gold Mining Company (Proprietary), Limited, in which we own all the issued capital, was formed in January last to acquire from our company all the assets of the Buchanan Gold Mine. The property is at present being developed, and a small amount of gold is being won with the very primitive plant taken over with the property. It is intended to replace this plant with a modern one when development has reached a more advanced stage.

We are still occupied in testing the adjoining ground, under the rights granted by Government prospecting leases. Since the close of our financial year, we have been granted a prospecting lease over a further area equivalent to 1,468 claims. Sufficient encouragement has been afforded us to continue our work, but it is not yet possible to reach any definite conclusion as to the value of the ground.

LOURENCO MARQUES

There is a slight improvement in business here, and our buildings are all let at satisfactory rentals. The receipts at our Scala Cinema, which are to a certain extent an indication of the prosperity of the town, have shown a definite improvement, especially in the last few months of the year, but the spending power of the population is still lower than it was before the recent depression, whilst the cost of living remains high.

On the other hand, the state of Government finances is very sound, and it is gratifying to know that it is intended to spend large sums in the colony on the extension of railways and other public works, which should increase the circulation of money and enhance the value of the outside districts.

The year under review has not been free from anxiety, and the state of uncertainty, engendered by the critical international situation, was accentuated in April by apprehensions regarding the future of gold, and prices of shares fell heavily. It is satisfactory to record that this uneasiness has died down, and that gold is fully retaining its value, although share prices have not yet reverted to previous levels.

The Union of South Africa has every reason to feel confident of the future. Its financial stability, the sound position of gold mining and the prosperous condition of its other varied and growing industries lend support to the view that, once international harmony is restored, the progress of the Union should be rapid and continuous.

The report and accounts were unanimously adopted.

FANTI CONSOLIDATED INVESTMENT COMPANY, LIMITED

DIVIDEND OF 12½ PER CENT.

The ordinary general meeting of the Fanti Consolidated Investment Company, Limited, was held, on the 10th instant, at Southern House, Cannon Street, London.

Sir Edmund Davis (chairman and managing director), in moving the adoption of the report and accounts, said that interest, dividends, and sundry receipts amounted to £46,253, against £49,048, the decrease being due to a reduction in sundry receipts, as the amount received for interest and dividends was £2,407 more than for the previous period. Net profit on realisation of investments, £35,918, compared with £45,122, a decrease of £9,204, as they had preferred to retain certain investments which showed, and still showed, considerable appreciation instead of disposing of them and in that way adding to the net profit. The total revenue amounted to £82,171, and deducting expenses there was a credit balance of £76,539.

The depreciation on investments for the year on their usual basis of valuation of each investment at market price or cost, whichever the lower, amounted to £53,633, whereas for the previous period they had £23,892 to write back. They had, therefore, made full provision for that depreciation out of reserve account, after which there remained a balance thereon of £6,992. At the same time, he would point out that the aggregate market value of the investments at December 31, 1937, was £731,582, showing an appreciation above cost of £70,452, and in respect of that surplus no credit had been taken in the accounts.

Despite the fall in commodity and investment values, there did not appear as yet to be any serious trade recession in this country, and it was reasonable to expect a recovery in markets on any improvement in the international situation. Under the present circumstances the directors were pleased to be able again to recommend the payment of a dividend at the rate of 12½ per cent. per annum, and to maintain, with the exception of the slump year, 1931, their unbroken dividend record since 1918. The average annual rate of dividend over that period of twenty years, including 1931, was 10.67 per cent.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

London, E.C.4.

Telephone: Central 8631

CENTRAL AND DISTRICT PROPERTIES, LIMITED

DIFFICULT CONDITIONS

The fourth ordinary general meeting of the Central and District Properties, Limited, was held, on the 12th instant, at River Plate House, London.

Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E., the chairman, said that the completion of many new blocks of flats in and around London had made the management of a property-owning company a very onerous task, for, with that additional competition, it was more difficult than ever to maintain the income. In spite of every effort having been made to let the premises becoming vacant by means of additional expenditure on advertising and circularising, and by very carefully following every means of approach to prospective tenants, no matter how novel, the loss of rent through vacant premises had considerably increased. Those efforts were being intensified, and with the cessation of new building it was hoped that the present year would show a considerable improvement.

Expenditure had been very carefully and strictly controlled, so that the company was managed at the minimum cost.

The balance of undivided profits on revenue account amounted to £10,123, and, after providing for the three months' preference dividend from July 31 to October 31, 1937, less income tax, there was a balance to carry forward of £8,042, which compared with £6,864 for the preceding year.

No dividend on the ordinary shares was recommended for the year, as it was the directors' desire to conserve the financial position of the company. In spite of the reduction in earnings, the company's financial position was very strong, and the capital appropriations from revenue, while reducing the profit available for dividend, increased the capital value of the ordinary shares by reducing the prior charges. The directors were confident that the present difficulties of property-owning companies were only of a temporary character, and they were satisfied as to the future prospects of their company.

It must not be forgotten that owing to the heavy increases in the price of raw materials and labour for building, the company's properties to-day would cost probably 25 per cent. more than they had done when they were acquired.

After discussion, the report and accounts were adopted.

APEX (TRINIDAD) OILFIELDS, LIMITED

YEAR'S RECORD PRODUCTION

The eighteenth ordinary general meeting of Apex (Trinidad) Oilfields, Limited, was held on the 12th instant, at Winchester House, London, Mr Walter MacLachlan (chairman and joint managing director) presiding.

The Chairman, in submitting the accounts for the year ended September 30, 1937, said the net profit amounted to £339,841, and the board recommended the payment of a final dividend of 32½ per cent., making 45 per cent. for the year, less tax at 2s. 6d. in the pound, which was equivalent to a total of 52½ per cent. if subject to full tax of 5s. in the pound. The production of crude oil amounted to a record of 550,026 tons, and the total from the commencement up to the end of last month was nearly 6,000,000 tons. The casing-head gasoline plant produced 8,552 tons of high-grade petrol spirit. The average price per ton realised from the sale of production materially improved upon that for the previous year, and the effect of this, combined with the increase in production, was reflected in the satisfactory results disclosed.

A striking feature in connection with the production during the year had been the very satisfactory results obtained in the main oilfield and the excellent yield from the deeper sands, more particularly from Sand "G." The evidence of the persistence and productivity of these sands which thus continued to be afforded was most satisfactory. Operations on the southern portion of the property had been confined to the western section of that area. Well No. 242, which had yielded very good production, was in that section, and drilling had been carried out to the east of that well, but owing to faults which had been found to exist in the geological structure at that point, these operations had not resulted in any increase in the proved area of that section. They were extending operations in other sections of the southern area to the south and east, and investigation would also be made of blocks of land which they held still further to the south, in the vicinity of which important developments had recently taken place.

The general outlook of the oil industry was sound. The board anticipated a continuance of the very satisfactory results which had attended the operations during the past year.

The report and accounts were unanimously agreed to.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED

INCREASED SALES AND PROFITS

SIR HUGO CUNLIFFE-OWEN'S SPEECH

COMPANY'S ACTIVITIES

At various times and on various occasions, I have endeavoured, at these meetings, to give the stockholders some idea of the operations of the company, and perhaps you will allow me again to say a few words on this subject.

Your company carries on business by way of manufacture in this country and export to foreign markets, and is interested as a shareholder in companies engaged in local manufacture in foreign countries. The export of goods from this country to foreign markets has, over a course of years, diminished in volume owing to the incidence of protective duties in foreign countries. In order, as far as possible, to minimise the effect of these protective duties, your company has become interested as a shareholder in a large number of subsidiary and associated companies trading all over the world, in many different currencies and under the laws of many countries. The dividends received from shareholdings in these companies form a very substantial part of your company's revenue. While the majority of these companies are engaged in the manufacture and sale of tobacco goods, your company is also interested in companies engaged in other ancillary trades and industries, as, for example, printing and cigarette paper manufacturing. Your company, however, is only interested in such businesses when it is necessary to ensure the uninterrupted supply of materials required in connection with your company's world-wide operations.

VALUE OF THE INVESTMENTS

In connection with the foregoing, I should like to refer you to the auditors' note on the balance sheet, to the effect that, in the aggregate, the value of your company's investments in subsidiary and associated companies is greatly in excess of the amount at which they stand in your company's balance sheet.

Stockholders will readily understand that an exact valuation of these investments is an impossibility. Their value varies in sterling from day to day, in accordance with the fluctuations of the exchanges governing the currencies of the countries in which these companies operate. We do know that, in the few cases where the shares of our subsidiary and associated companies have market quotations, the book value of your company's holdings of those shares is appreciably below their quoted value. Where there is no market quotation, it is impossible to arrive at anything but an arbitrary value based on interest rates prevailing in those countries.

Your board's view is that, if it gave you its opinion of the value of your company's investments in subsidiary and associated companies, this opinion would in all probability prove deceptive, and, therefore, your board does not consider it in your interests that any opinion should be expressed other than that of the auditors.

CONFIDENCE IN THE FUTURE

Now, as to the future—what can I tell you? Provided that we are spared a serious world catastrophe, I look with confidence to the future. Your business over a course of years has been steadily strengthening and improving, and while, as I have said before, the margin of profit throughout the world is small, still, the constantly increasing efficiency of your company's operations has enabled the company to show satisfactory results hitherto, which should, in my opinion, continue, provided that we enjoy reasonable stability in world affairs.

I may here say that the bonus of threepence per £1 of stock which your directors recommend should be paid this year should not be considered by you as a continuing bonus. World conditions are difficult and uncertain, and your directors have felt that it is better, under such conditions, to deal with the increased profits by way of a bonus rather than by way of an increased dividend.

I now beg formally to move the adoption of the report and balance sheet for the year ended September 30, 1937, including the allocation to the employees' benevolent fund of a sum of £100,000 and the payment on January 17th instant of a final dividend (free of United Kingdom income tax) on the issued ordinary stock of 8d. per £1 of stock, and a bonus (free of United Kingdom income tax) on the issued ordinary stock of 3d. per £1 of stock.

I may also mention that the directors have declared for the year 1937-38 an interim dividend of 10d. per £1 of stock (free of United Kingdom income tax), also payable on January 17th, so that the ordinary stockholders will receive on that date 1s. 9d. per £1 of stock.

The report and accounts were adopted.

The thirty-fifth annual general meeting of British-American Tobacco Company, Limited, was held, on the 10th instant, at 7 Millbank, London, S.W., Sir Hugo Cunliffe-Owen, Bart. (the Chairman), presiding.

The Assistant Secretary (Mr E. A. Blockley) having read the report of Messrs Deloitte, Plender, Griffiths and Company, chartered accountants, appended to the accounts,

The Chairman, in the course of his speech, said: The accounts show a net profit for the year, after deducting all charges and expenses and providing for taxation, of £5,760,449, an increase of £218,694, which, under present conditions, I trust you will find satisfactory.

Last year we carried forward a balance of £2,428,280 15s. 6d. To this must be added the profits for the year as previously mentioned £5,760,449 13s. 5d., less the dividend on the 5 per cent. preference stock of £225,000; on the six per cent. second preference stock of £360,000; and the four interim dividends paid on the ordinary stock for the year, amounting to £3,947,710 3s. 4d., leaving a disposable balance of £3,656,020 5s. 7d., out of which the directors recommend the allocation of a sum of £100,000 to the employees' benevolent fund, bringing that fund up to £362,965 11s., the distribution on January 17th of a final dividend (free of United Kingdom income tax) on the issued ordinary stock of 8d. per £1 of stock, amounting to £789,592 0s. 8d., and a bonus (free of United Kingdom income tax) on the issued ordinary stock of 3d. per £1 of stock, amounting to £296,097 0s. 3d., leaving £2,470,331 4s. 8d. to be carried forward.

The only other item I need refer to is the note with regard to a contingent liability of £141,086. This figure has been reduced from £725,785 by the reorganisation of the capital of a subsidiary company on which substantial calls were outstanding. I do not think the £141,086 will ever be called up. One of the companies in respect of which there is a contingent liability is Tobacco Insurance Company, Limited. That company's financial year ended on December 31st and I am glad to be able to tell you that the company has again had a very satisfactory year.

We have had a difficult year. Our sales and those of our subsidiary and associated companies show a satisfactory increase over the previous year, but there have been many difficulties to overcome.

For example—the disastrous floods in the United States, while they did not invade our subsidiary company's factories, did cause that company losses amounting to, approximately, half a million dollars.

The unfortunate conditions existing in China have also caused losses to our companies there, and, although we have reason to congratulate ourselves on the limited extent of these losses up to date, still they have been quite substantial. All these losses have been provided for by the companies concerned out of their income.

There is also the incidence of the N.D.C. for six months and increasing taxation in many parts of the world, so that we feel that the results obtained, in view of all these difficulties, are satisfactory.

CONDITIONS IN CHINA

You would, no doubt, like me to make some further reference to the business of our companies in China. In the first place, I am sure you will be pleased to hear that there have been no serious casualties among the personnel of the companies there. While, as I have said before, our companies have suffered some substantial losses, we can regard ourselves as fortunate that the material damage to property has, so far, been less than we feared.

Since the outbreak of hostilities the volume of sales of our companies in China has been curtailed, owing to transport and many other difficulties, but whether this curtailment will increase or diminish in the future it is impossible to forecast. Still, the fact that business has been possible—even although on a reduced scale—is, I think, a tribute to the organisation of our companies in China. It is, of course, impossible to tell what the outcome of these disturbances will be, and we can only continue to support, as far as we can, the efforts of our companies in China, in meeting day to day difficulties as they arise. I may add, before leaving this subject, that two of your directors have been continuously in China from a date before the commencement of the troubles, and they are still there, supporting the loyalty and courage of the local organisation, which I am sure you will appreciate.

JOSEPH NATHAN AND COMPANY, LIMITED

BRITISH DRIED MILK FACTORY

The thirty-ninth ordinary general meeting of Joseph Nathan and Company, Limited, was held, on the 11th instant, in London.

Mr Alec Nathan (chairman of the company), who presided, said that he was pleased to be able to report an increase of profit for the year. The balance to appropriation account at £91,298 had improved by £6,232, and after transferring £35,875 to the reserves and paying an ordinary dividend of 10 per cent., the carry-forward was £1,338 higher than that brought in. The consolidated statement showed that the issued capital, including the interest of outside shareholders, was more than covered by the fixed assets. Investments and floating assets alone exceeded the total liabilities by nearly £47,000.

For the benefit of those shareholders who had only become initiated in the company of recent years, he would briefly state that the roots of Joseph Nathan and Company had been planted in New Zealand in 1857, and the business was at its inception purely a merchandise business. About 1886 dairying became a commercial industry, and the company became closely associated with it. At a later stage, as the manufacture of butter and cheese in New Zealand developed upon a co-operative basis, the company itself had ceased to manufacture, but had continued to handle those commodities upon a large scale. At the same time, it introduced the drying of milk into New Zealand, a step which had eventually caused them to introduce "Glaxo"—"the Food that Builds Bonnie Babies."

RESOLUTE PHARMACEUTICAL POLICY

That venture had materially altered the character of the business. On the one hand, the marketing of butter and cheese had led to the desirability of securing an easier outlet for a substantial proportion of its supplies by association with, and latterly by control of, wholesale provision and grocery businesses.

On the other hand, the disposal of its dried milk, in the first instance as an infant food under the proprietary name of "Glaxo," had led up to the elaboration of a very considerable organisation for the manufacture and sale of pharmaceutical products, both in this country and abroad, the use of which was recommended by the medical profession, and the distribution of which took place through the wholesale and retail chemist. It was the policy of the directors to promote and develop the pharmaceutical section more actively in the future, and as the company had available the necessary technical knowledge and organisation, the directors were confident that that policy was both sound and wise, even if it caused a material alteration in the structure of the business compared with the past. Circumstances necessitated the production of some of their milk powder in Great Britain, so they had erected a factory in Yorkshire, equipped with the latest machinery for the drying of milk. This was in full production on October 1st last.

He might add that the buoyancy of the company's turnover throughout the world had been maintained with an increase of sales in every territory, due to the far-sighted policy of development. The policy of the directors of the Glaxo Laboratories was to make themselves self-contained from the production angle, so as to provide greater powers of resistance to meet any future recession. They had to be in a financial position to scrap a process and replace it with something more modern or up to date at whatever cost if the company were to retain the goodwill of members of the medical profession and the general public. To carry out that settled and planned policy, a share of profits year by year must be held in reserve.

BANK PROFITS AND DIVIDENDS

Munster and Leinster Bank.—Final dividend 6 per cent. tax free, making 12 per cent. tax free for 1937 (the same). To contingencies for latter half of 1937, £15,000 (same as for corresponding half of 1936). To staff pensions £5,000, as before. To reduction of premises account, £5,000, as before. Carry forward £44,339.

Provincial Bank of Ireland.—Dividend maintained at rate of 12½ per cent. per annum, less tax, for half-year to December 31 1937.

Clydesdale Bank.—Net profit for 1937, £320,500, compared with £315,518. Dividend maintained at 16 per cent. To premises £20,000, as before. To pensions £35,000, same. To reserve £50,000, as before.

Centenary staff bonus £21,000. Carry forward reduced from £104,924 to £91,174.

North of Scotland Bank.—Net profits for 1937, £246,148, a decrease of £15,638. Dividend maintained at 16 per cent., less tax. To reserve £35,000 (against £50,000), raising that fund to £1,300,000. Carry-forward is £99,326, or £8,588 more. Total assets at December 31st were £34,366,639.

Royal Bank of Ireland.—Final dividend at rate of 10 per cent. per annum, less tax, again making 9 per cent. for 1937. To reserve, superannuation and other contingencies, £20,000 (against £22,000). Carry-forward, £11,014, against £11,660.

Glyn Mills and Company.—Balance sheet total, December 31, 1937, £42,477,634, a decline of £3,635,478. Deposits show a reduction of £3,663,704 at £37,375,503.

Having dealt with the other subsidiary companies, he went on to say that shareholders would expect him to say something about the modest amount of dividend proposed on the ordinary shares. He would remind them that the directors were consistent and persistent in their policy of building up reserves to ensure the safety and progress of the company and the permanency of payments of dividends. That policy had been proved to be sound and the board intended to adhere to it. Moreover, it had been reflected in the value of the company's shares. As compared with the substantial fall in many other industrial shares, that was valuable confirmation of the directors' progressive yet conservative policy. Broadly, the directors' policy was one of consolidation and the direction of the company's financial resources into the most profitable avenues within their business.

As to the future, to date the current financial year was at any rate equal to last, and they felt justified in reverting to the original practice with regard to the 8 per cent. preferred ordinary shares, the dividend upon which would, in future, be paid half-yearly—in April and October.

The report and accounts were unanimously adopted and a vote of thanks was passed to the chairman, directors and staff.

LANGEN (JAVA) RUBBER ESTATES COMPANY, LIMITED

DIVIDEND OF 12 PER CENT.

The twenty-eighth ordinary general meeting of this company was held, on the 7th instant, in London.

Mr H. Eric Miller (the chairman), in the course of his speech, said:—

Turning to the English company's profit and loss account, we show a net credit figure for the year of £17,723 1s. 2d. We paid an interim dividend of 5 per cent. last October, and we have, with the carry-forward of £12,105 12s. 2d. from the previous year, £23,583 13s. 4d. to deal with to-day.

We have had to provide in the accounts £650 for National Defence Contribution, and we require to set aside £2,250 in order that our liability for income tax on the profits earned up to 31 August, 1937, may be fully provided for. We recommend the payment of a final dividend of 7 per cent., which, with the interim dividend of 5 per cent., makes the distribution for the year 12 per cent., subject to income tax at 5s. in the £. Under the articles of association the directors are entitled to 2½ per cent. on the amount "available for distribution in respect of dividend." We have always interpreted this as being the amount actually paid as dividend; the extra remuneration this year, therefore, amounts to £375. If these recommendations are approved £12,208 13s. 4d. will be left to be carried forward to the current year.

As you know, the International Rubber Regulation Committee has reduced the exportable percentage of the basic quota from 90 per cent. to 70 per cent. as from January 1, 1938. Even this percentage may prove to be too high, but supposing that rate were maintained until August, 1938, the quantity of crop to be accounted for in the current year should not differ greatly from that in the accounts now before you.

Including contracts for forward delivery, we have sold 385,880 lb. of the current year's crop at an average equivalent to approximately 9½d. per pound London landed terms. Out of the 1938-39 crop we have sold 31,360 lb. at about 11d. per pound London landed terms.

The report and accounts were unanimously adopted, and a resolution converting the shares of the company into stock was approved.

MISCELLANEOUS

Henri Selmer and Company.—Net profit for year to August 31, 1937, is £17,688. After transferring to goodwill account £10,115 (being profits earned before incorporation) and to income tax and N.D.C. reserve £3,366, and before carrying £457 forward, balance is £4,207. (The latter figure appeared as the net profit on page 619 of *The Economist* of December 18, 1937, but it comprises net profits earned only since incorporation).

GOVERNMENT FINANCE

For the eight days ended January 8, 1938, the total ordinary revenue was £29,852,000, against ordinary expenditure of £27,586,000. The deficit accrued since April 1st last is thus £170,336,000, against a deficit of £134,193,000 a year ago.

SHORTER COMMENTS

Company Results of the Week.—The stable record of DEBENTURE CORPORATION is well maintained, the latest net profits of £132,647 being slightly higher. All but 19 per cent. of the portfolio is in fixed-interest securities, and the current valuation of all investments exceeds book figures. The directors of BRITISH TIN INVESTMENT draw attention to the exceptionally favourable experience of tin-mining companies in 1937, since they enjoyed high prices and a high quota. In consequence, the company's net revenue is doubled at £337,557. WILLIAM TIMPSON, the boot and shoe manufacturers (whose accounts are now presented in improved form), record that increased turnover has offset rising material prices and expenses, so that net earnings of £151,334 are £15,200 higher. Good progress has been made by ENGLISH CLAYS LOVERING POCHIN AND COMPANY, whose net profits have advanced from £127,743 to £188,648. The sum of £75,000 has been transferred from share premium account to write off obsolete plant. All sections of the INTERNATIONAL COMBUSTION undertaking have progressed, and net profits of £177,655 are 8 per cent. higher, though the 30 per cent. dividend is unchanged. MICHAEL NAIRN AND GREENWICH, the linoleum holding company, maintain the 15 per cent. dividend; it is, however, barely

covered by earnings, net profits being £26,000 lower at £255,592. Difficulties from competition and exchange restrictions have been experienced in the flour milling section of RIO DE JANEIRO FLOUR MILLS AND GRANARIES, despite good trading conditions in Brazil; for this reason, net profits, at £85,000 are some £7,000 lower.

BANKING RESULTS

Midland Bank.—The amount of £300,000 stated on page 97 of our issue of January 8 as being placed "to reserve" is allocated to "reserve for future contingencies."

Union Discount Company of London.—Final dividend 6½ per cent. per £1 stock unit making 10 per cent. for 1937. In July, 1936, the paid-up capital was raised to £2,750,000 by a 100 per cent. bonus; allowing for the increase, the cash distribution for 1937 is the same as for 1936. A sum of £15,000, as before, is placed to staff provident fund and the carry-forward is increased from £173,000 to £203,000.

District Bank, Ltd.—Final dividend 1s. 10d. (against 1s. 8d.) per share less tax on the "A" and "C" shares, making total for 1937 of 17½ against 16½ per cent. Net profits £28,931 higher at £519,255, after bad, etc., debts, contingencies, tax and

N.D.C. Dividends, including the maximum 10 per cent. on the "B" shares, absorbed £372,881, against £362,191. To pensions £70,000, as before. To bank property £60,000, against £50,000. Carry forward increased from £269,236 to £285,610.

Williams Deacon's Bank.—Net profit for 1937, after rebate, expenses (including £45,000 to pensions) and contingencies account (out of which provision for bad, etc., debts is made), £310,921, against £293,636. Dividend on "A" and "B" shares maintained at 12½ per cent. To premises account £30,000, as before. Carry forward raised from £102,045 to £148,592.

Lloyds Bank, Ltd.—Profit for 1937, £1,832,501, compared with £1,743,955. Dividends, 12 per cent. for year on "A" shares and 5 per cent. on "B" shares as before, absorbing £1,347,464, against £1,369,922. To contingencies account £100,000, against £250,000. To bank premises account £100,000, as before. Carry-forward reduced from £539,668 to £524,705.

National Provincial Bank.—Net profit for 1937, £1,874,960 compared with £1,770,173. Dividends 15 per cent. for year, as before, absorbing £1,421,912. To bank premises account £100,000, as before. To pension fund £250,000, against £200,000. To reserve fund £500,000, against nil. Carry-forward reduced from £970,667 to £573,715.

Mar. 31, 1935	14,143	4,973	202	149,109	168,727
Sept. 30, 1935	18,512	5,687	28	125,660	149,917
Mar. 31, 1936	27,220*	908†	194	146,621	174,943
Sept. 30, 1936	36,529*	217†	112	127,727	164,585
Mar. 31, 1937	34,644*	350†	645	145,789	181,468
Sept. 30, 1937	36,098*	359†	879	118,392	155,728

* Houses built by Local Authorities.

† Other houses built by Local Authorities.

The second table shows, for the last four half-years, the number of houses provided by private enterprise in the two smallest classes, and also the numbers of these houses which were occupied by persons other than the owner, and can therefore be presumed to have been built to let:—

SMALL HOUSES BUILT BY PRIVATE ENTERPRISE

	Number of houses provided during the half-year ending			
	March 31, 1936	September 30, 1936	March 31, 1937	September 30, 1937
Rateable value not above £13*				
(a) Total	53,530	45,676	52,548	43,335
(b) Not owner-occupied	18,913	17,773	22,099	18,383
Rateable value between £13* and £20†				
(a) Total	74,771	66,433	74,500	60,963
(b) Not owner-occupied	14,990	14,872	16,404	13,824

* £20 in Greater London. † £35 in Greater London.

The next table gives details of the progress of the programmes for slum clearance and the abatement of over-crowding:—

PROGRESS OF SLUM CLEARANCE

	Half-year ending			
	March 31, 1936	September 30, 1936	March 31, 1937	September 30, 1937
Houses provided for:—				
Slum clearance	20,588	28,333	26,340	26,367
Abatement of over-crowding	18	723	1,231	2,379
Cumulative total to date of houses built for slum clearance	80,611	109,067	136,044	163,274
Persons accommodated	380,042	512,941	619,612	704,669
Houses under construction at end of half-year	53,929	57,506	56,922	68,391

It will be noticed that these programmes are still rising towards their peak, and that the number of houses under construction by local authorities on September 30, 1937, was considerably higher than on previous dates. The final table gives particulars of the number of houses built in different parts of the country in the last two years:—

BUILDING BY AREAS

	Half-year ending			
	March 31, 1936	September 30, 1936	March 31, 1937	September 30, 1937
Administrative Counties	128,107	117,110	112,146	108,759
County Boroughs	45,902	47,485	49,016	46,969
Total England and Wales	174,009	164,595	161,162	155,728
Greater London	40,302	36,462	41,406	31,520
Wales (inc. Monmouth)	4,957	4,747	5,867	4,764

The amount of building in the large towns seems to be continuing, with the significant exception of Greater London, but the administrative counties, which include the smaller towns and the rural areas, show quite a considerable decline.

INDUSTRIAL PROFITS

SUPPLEMENTARY TABLES

(See Leading Article on page 103)

TABLE (A).—PROFITS BY INDUSTRIAL GROUPS
(Quarter ended December 31, 1937)

Group	No of Companies	Total Profits (after deb. interest)	Change since preceding year (same Companies)	Division of Total Profits (= 100)		
				Pref. Div.	Ord. Div.	To Reserve, etc.
Breweries	52	£ 7,814,014	+ 9.9	12.5	54.0	33.5
Electric lighting and power	3	712,790	+15.9	32.0	27.3	40.7
Financial land and investment	55	3,963,557	+14.3	17.7	61.1	21.2
Gas	1	7,629	+ 1.8	8.6	39.2	52.2

Tobacco	...	...	11,300,000	5.7	26,087,761	22.5	21.7
Warehouse and trading	568,700	4.8	3,331,985	5.1	3,502,582	5.7	6.4
Miscellaneous	10,369,538	4.8	20,357,205	5.2	37,246,000	8.6	6.5
Total	118,237,518	4.6	169,130,409	5.4	265,692,317	11.2	9.2

* 549 Companies.

† 496 Companies.

Imperial Bank of India.—Net profits for half-year to December 31, 1937, were Rs. 36,90,100 (£276,757), compared with Rs. 35,60,216 (£267,016) in same period of 1936. Dividend maintained at 6 per cent., tax free and requires Rs. 33,75,000. Sum of Rs. 38,600 (Rs. 68,000) to pensions fund and Rs. 2,50,000 (same) to premises account, leaving Rs. 30,41,600 to carry forward (Rs. 28,02,642).

Union Bank of Australia.—Final dividend 4s. per share, making 7 per cent. for year, less British income tax, against 5½ per cent. tax free. Dominion income-tax relief on final is 1s. 11d. Also a bonus of 2 per cent., less tax at 3s. 1d., has been declared from the special centenary fund. The carry-forward is £145,914, against £146,864. For 1936 the final distribution was 3s. per share, making, with the interim, 5½ per cent., free of United Kingdom income tax.

COMPANY MEETINGS

CURRENT STATISTICS

England and Eire

THE sudden announcement a week ago that the Ministers of Britain and the Ministers of Eire were to confer on matters at issue between the two countries raised the hope that at long last the time had come to bury the hatchet. The result of the conversations has not yet been officially made public, and in view of the known difficulties we cannot jump to conclusions; but the fact that the talks are to be continued encourages the belief that these new hopes may in due course be fulfilled.

It was something of a surprise to many Englishmen, who have not kept closely in touch with Irish opinion but have become accustomed to the *status quo*, to find that the partition of Ireland was still a prominent issue which ranked in the minds of MR DE VALERA and his colleagues and that it would be raised at the outset. And when LORD CRAIGAVON promptly took up the challenge by obtaining a dissolution of the Northern Ireland Parliament on this issue, it seemed that the conversations might speedily come to shipwreck on this rock. But Ulster's retort has apparently done little to undermine goodwill or interrupt the progress of the negotiations. Dublin opinion regards the forthcoming election as capable of proving nothing that is not already well known. MR DE VALERA, it is true, insisted at the very start of the Downing Street talks that until the partition question was disposed of real friendship was impos-

sible between Great Britain and Ireland. But he can have had no illusion that the British Government would amend their attitude so far as to contemplate taking any steps towards the reunion of Ireland without Ulster's assent. The fact that the talks are to be resumed, and that meanwhile the departmental experts are to work on the details of an agreement, proves that MR DE VALERA does not intend to let agreement on other matters wait upon complete agreement on the partition issue.

The problem of the Protestant and Imperialist minority in Ireland was neither originally created nor permanently solved by the Treaty of 1921. It is centuries old, a relic of conquests and rebellions, bigotries and counter-bigotries, whose effects it may need more centuries to undo. Time as well as mutual understanding is needed for its solution. For the moment, all that can be done, and all that these conversations may succeed in doing, is for each side to recognise and respect the outlook of the other. If MR DE VALERA and MR CHAMBERLAIN can agree that in essence the unity or partition of Ireland is a problem for Irishmen themselves to solve, that will be a valuable step forward in Anglo-Irish relations.

Those relations are to-day disturbed by two main practical difficulties, the one financial and economic, the other defensive and political. Constitutional differences are not

on the same practical plane; for while MR DE VALERA has enacted the constitution of his own free choosing, embodying in effect his cherished principle of "external association" with the Empire, the British and the other Dominion Governments regard that constitution as not effecting any fundamental change in Ireland's position as a member of the British Commonwealth. Had MR CHAMBERLAIN intended to challenge the new Irish constitution he would have done so at the time of its enactment, and not have left the matter to be raised in this week's conversations.

The economic dispute arose out of MR DE VALERA'S decision in 1932 to withhold the land annuities and other payments formerly made by the Free State to the British Exchequer under agreements signed by his predecessor in office. Not only did he deny the validity of the agreements and of the financial understandings on which they were based; he counter-claimed for excess taxation alleged to have been paid by Ireland, and for losses caused by the devaluation of the pound. A British proposal to arbitrate under the optional procedure mapped out by the 1930 Imperial Conference fell to the ground through MR DE VALERA'S refusal to limit the choice of a chairman to British subjects. The British Government, under a special Act of July, 1932, thereupon imposed extra duties on certain goods imported from the Irish Free State, in order to recoup the loss of revenue from the annuities. Furthermore, no Ottawa Agreement was made with the Free State, whose goods have therefore been charged under the general tariff, in addition to the special duties. The Free State Government, having remitted half the land annuities to the farmers, used the other half to help pay for subsidies on exports in order to countervail the British duties. They also imposed retaliatory duties on certain British goods, and vigorously advanced the system of protection by tariff and licence for Irish industry. The destructiveness of this dispute has been implicitly recognised and has been somewhat qualified in the series of so-called "coal-cattle pacts," whereby the United Kingdom agreed to import more Irish cattle, bacon and horses, in return for Irish concessions on coal, sugar and other imports from the United Kingdom. The special duties now lie only on Irish live cattle and

pigs, meat, poultry and game, butter, eggs and cream. Their yield, with that of the general tariff on Irish goods, was £5,423,397 in 1935-36 and £4,712,171 last year.

That is the outline of a dispute of peculiar futility. Severe injury has been done to a complementary trade of great economic and strategic value, as a result of a financial dispute of relatively minor importance which could, one would think, have been settled by compromise.

The trouble was partly due to entanglement with constitutional issues which are now almost forgotten. MR DE VALERA, however, has certainly not forgotten his main thesis that, on balance, it is Great Britain that is heavily in debt to Ireland. This aspect of the dispute is linked with the partition issue, for the southern Irish claim that Great Britain effectively tempts Ulster away from reunion by means of financial subsidies.

The defence issue, taken by itself, is comparatively simple and specific. The Anglo-Irish Treaty of 1921 gave Great Britain the right to occupy and defend certain Irish harbours, both in peace and in war, which Government and Opposition in Eire alike regard as an intolerable encroachment on Irish sovereignty. The British Government, on the other hand, have hitherto regarded it as essential to our naval security. There are signs, however, that the Government to-day recognise such formal rights to be of greatly diminished value in face of a hostile Ireland, and to be scarcely necessary in face of a friendly Ireland co-operating in the defence of the British Isles and of their overseas trade.

This prospect of friendly co-operation is, indeed, one for which many points of detail can rightly be waived. The constitutional issue has been settled by the passage of events. The financial and economic quarrel should yield without difficulty to genuine goodwill. In the matter of defence, both countries have increasingly come to realise their common interest. Even partition may be brought down from the inaccessible heights of doctrine to more practical and adjustable matters such as the treatment of the Catholic minority in Northern Ireland. With all these matters under active discussion, hopes still run high for genuine and complete agreement.

Crisis in Paris

SINCE the last appearance of *The Economist*, France has both lost and regained a Government. The crisis was already latent before M. CHAUMPS kicked himself out of office in the small hours of Friday, last week; and it is to be feared that the crisis has not really been brought to an end by his almost equally unexpected feat of hoisting himself back into the saddle this week; for the one judgment in which all observers agree is that the new *Ministère Chaumps* is likely to be short-lived.

M. CHAUMPS' action last week is so inexplicable on the surface that it has been attributed alternatively to the PRIME MINISTER'S own nervous exhaustion or to somebody else's hidden hand. The partisans of this second hypothesis incline to cast M. BONNET for the rôle of the villain of the piece. Who knows? It is only certain that, if M. BONNET does bear a heavy share of responsibility for the upset, he must now be a disappointed man; for he has not profited by the general post. Instead of ascending from the Ministry of Finance to the Presidency of the Council he has exchanged a portfolio for the nebulous mandate of co-ordinating the financial and economic sides of the Government's activity—and in this unprofitable process he has certainly not added to his personal popularity.

The new Ministry is virtually a single-party affair, for out of its twenty members all but two are Radical-

Socialists, and neither of the two recruits from the Right-Centre is a statesman of outstanding eminence. Their inclusion mainly serves to mark a shift towards the Right, and the same trend is also perhaps indicated by the transfer of the Left-wing Radical-Socialist M. PIERRE COT from the Ministry of Air to that of Justice—though there may be nothing in this change beyond the official explanation that M. COT has consented to vacate the Air Ministry, and M. CAMPINCHI the Ministry of Marine, in order to give M. DALADIER—who has picked up his old portfolio of Defence—a free hand for co-ordinating all the fighting services.

The new Government's prospects depend, no doubt, on the policy of the Socialists. This is the first Ministry since the General Election of May, 1936, in which the Socialists have not participated. And with the present composition of the Chamber—which still, to all appearance, remains an accurate reflexion of the will of the electorate—it would be difficult to imagine any Ministry remaining in power for a day without enjoying at least the passive support of the Socialist group. It was only when he was assured that this support would be forthcoming that M. CHAUMPS was able to form his present Government. The new Government's programme, he has announced, is to be "such as would be incapable of creating a breach between the parties of the Front Populaire." But to sceptical ears this

sounds less like a Government programme than like a counsel of perfection; for breaches are yawning already on all hands.

The immediate antecedent of M. CHAUMPS' new Ministry on Tuesday was an all-night meeting of the Socialist National Council, in which a sharp rift appeared between a wing, led by M. BLUM, which was in favour of participating once again in a Ministry in which the Radicals would have the hegemony, and an opposing wing which was in favour of standing out—without yet going to the length of refusing to a new Radical Government the Socialist group's support in the Chamber. M. BLUM usually has a wonderful way of persuading his party to do things that are unpalatable but expedient; but this time he just missed success. By the narrow margin of about twenty votes on a total poll of nearly 8,200, his motion was defeated in the small hours of Tuesday morning by a pair of opposing motions which agreed with one another in rejecting participation. This was not a very auspicious overture to M. CHAUMPS' new Cabinet-making activities. Since M. BLUM had already failed to form a new Ministry, while M. HERRIOT had refrained from trying his hand and M. BONNET had been virtually hissed off the stage, it is difficult to see any practicable alternative to M. CHAUMPS' stop-gap work. But this does not mean that the stop-gap is going to hold for long.

What are the omens for greater stability in the Ministry that will follow next? To answer this question (if any answer is possible) we must consult the Socialist Party oracle. At the Council meeting on the night of Monday to Tuesday two distinct—and, at the present stage, conflicting—states of mind were plainly discernible. M. BLUM and those who think with him now manifestly put before everything else the claims of national security; and on this consideration they are willing to join the parties to the right of them in forming a Government—even if in such a Government the Socialists do not command as much influence over policy as their numerical strength entitles them to exercise. On the other side there is a section of the Socialist Party which is bitterly conscious that an old game of French domestic politics is being played once again, and is determined to stop it this time at almost all costs. The bitterness is easy to understand; for it is indeed an old story in France that a Chamber elected with a

Leftward majority should sooner or later find itself cajoled or manoeuvred into tolerating a Government of the Right. The recurrence of this only too familiar situation to-day certainly lends colour to the accusation that, in France, the Right disposes of occult forces which enable a virtual oligarchy to outwit a democratically-framed constitution and thwart the electorate's express wishes. Each time this comedy is played its victims resent it more fiercely; and they are particularly incensed when they find the same old trick being played in the sequel to a General Election in which the country declared, more emphatically than at any other time since the War, its desire to see the ideas of the Left carried out.

Which wing—or mood—of the Socialist Party is going to prevail? If M. BLUM has his way, we may perhaps see the present Chaumps' Government succeeded before very long by one in which the Radicals will be reinforced by the Socialists on the one hand and the Right-Centre on the other, leaving outside only the irreconcilable extremists on either side.

M. BLUM attempted at the week-end to form such an "audacious combination," which was to have reached from the Communists to M. PAUL REYNAUD. He failed; but until he or some other statesman of vision succeeds in building such a National Government of the Left, and keeping it together, there will be little prospect of political stability in France. The great need of the country at present is to pursue an economic policy based upon realities, without betraying the mandate given to the parties of the Left in 1936 or encouraging the trade unions to believe that democracy can be more effectively defended by the strike weapon than by Parliamentary action. Such a policy is fully possible, but only on the basis of a tolerant unity among all the sections of opinion that are prepared to co-operate. How much longer have France and Europe to wait for this elementary co-operation among parties whose practical aims are hardly divergent? An external attack—if some other Great Power were mistaken enough to see an opportunity for aggression in French political squabbles—would galvanise not merely the Left but the whole nation into solidarity. But must we wait for the ultimate disaster before the politicians of the Chamber are ready to lead France in the effort to play a proper and necessary part in European reconstruction?

Overseas Trade Prospects

THE course of Britain's overseas trade is at all times closely affected by the interplay of domestic and international developments. During the past year there have been significant changes in the trend of prices and of production, both at home and abroad. Throughout 1936, economic recovery was fairly general, and the past year opened with world production and trade in the course of a process of rapid expansion, stimulated by a strong upward trend of commodity prices. The upward movement reached a peak in the second quarter of 1937, when the League of Nations' index of the volume of world trade equalled, and the index of industrial production surpassed, the pre-depression level of 1929. In the early summer, however, there were signs of hesitancy. The prices of primary products had been falling rapidly from the end of March onwards, and a downward turn in world production and trade had occurred before the end of the year.

In contrast to the first half of 1937, when international production and trade showed a strong upward trend, the second half witnessed a steady deterioration on the world economic front. At home, business activity, stimulated in the early spring by the speeding-up of re-armament, continued to expand until the autumn, but then turned down-

wards. Moreover, the comparative stability of domestic manufacturing costs between 1932 and 1936 was followed by a fairly rapid advance in the past year. The Board of Trade index of the average price of domestic exports of finished goods showed, in fact, an increase of 10 per cent. between the last quarter of 1936 and the third quarter of 1937.

How did the interplay of domestic and international developments influence the course of Britain's overseas trade in 1937? The principal changes are shown graphically on page 201 and in tabular form overleaf. The trend of retained imports and domestic exports in recent years by value and volume is shown by the first two charts on page 201. The sustained expansion of domestic activity and purchasing power necessitated an increase in imports during the past year. In particular, home production of iron and steel and metal goods, on which armament expenditure is largely concentrated, needed to be supplemented by heavier purchases abroad, for domestic manufacturing capacity was insufficient to meet the rapidly expanding requirements. The extent of the increase in imports of iron and steel and machinery is revealed by Table I. Moreover, as a result of the rising

trend of prices on the world market, the average price of our imports rose steeply, despite the fall in the c.i.f. prices of certain raw materials towards the end of the year, shown by Table III. Thus, the Board of Trade index of the average price of total imports increased by 14 per cent. between the last quarter of 1936 and the third quarter of 1937. The effect of the rise in prices is revealed by the Board of Trade index of the volume of retained imports, which showed an increase of only 5.5 per cent. between the first nine months of 1936 and 1937, compared with an increase of 21.2 per cent. in their value between the two complete years.

While imports continued to increase in volume with the expansion of domestic activity, and relatively more in value as the result of the advance in world prices, the rising tide of world production, trade, and prices during the first half of 1937 gave a strong stimulus to the overseas demand for British goods. But many manufacturers, especially in the iron and steel and metal industries, were unable to take full advantage of the improvement in world trade owing to the exigencies of the re-armament programme. Nevertheless, the increase of 12.1 per cent. in the volume of domestic exports between the first nine months of 1936 and 1937 was considerably more marked than that of imports. As Table II indicates, exports of coal, iron and steel and machinery registered notable increases, but the leading textile trades made little headway. But the increase of 10 per cent. in the average price of domestic exports between the last quarter of 1936 and the

third quarter of 1937 was less marked than that of imports. Hence, the rise in the total value of domestic exports between 1936 and 1937, amounting to 18.3 per cent., was slightly smaller than the percentage advance in imports. Consequently, as Table V shows, the past year witnessed a further substantial increase in the excess of imports over exports.

During the past year, the value of both imports and exports still fell short of the 1929 level. The volume of our purchases abroad was substantially higher than in 1929, but that of domestic exports, despite a marked improvement, failed to reach that level. Although the improvement in the value of both imports and exports was fairly well maintained during the second half of 1937, a closer analysis of the figures reveals that this apparently satisfactory trend was due to the substantial advance in prices.

The general impression left by last year's overseas trade figures is thus, on the whole, disappointing. The returns relate to a year when the world's economic activity was undoubtedly greater than in 1936. But the recovery in Britain's exports suffered an apparent check before the end of the year, and prospects of its early resumption appear uncertain, especially as the prices of many important commodities, listed in Table IV, have risen substantially during the past twelve months. A downward trend in domestic activity in 1938 would free resources for the export trade. But if deterioration were simultaneously to be recorded on the world economic front, their utilisation for that highly desirable purpose would be seriously retarded.

Britain's War Chest

WHERE should we stand financially in the event of another war? And how would our position compare with that of 1914? Though we may pray that questions of this sort will never need an answer, they are sufficiently serious at present to deserve careful attention. If war came we should largely be dependent on being able to sell certain assets abroad in order to make up the inevitable deficit in our own balance of payments, and also, probably, in those of some of our allies. Our assets would consist, first, of gold; secondly, of such securities as would be saleable abroad; and thirdly, of the goodwill mainly represented by our borrowing power in foreign countries—which in practice would probably mean in New York. The last asset is hypothetical and difficult to value in advance, but there is sufficient statistical information available about the other two to allow approximate estimates to be made.

In the first place, our gold holdings are larger to-day than they have ever been before. In September, 1931, when Britain left the gold standard, the Bank of England's gold holding amounted to £136.1 millions—equivalent, at 140s. per fine ounce, to £218.3 millions. On September 30th last the total holding of the Bank of England was 76.8 million fine ounces, worth (at 140s. per ounce) £537.6, and that of the Exchange Equalisation Account some 39.9 million fine ounces, equivalent to £279.3 millions. The two holdings together were thus worth £816.9 millions.

A significant part of this impressive total is (as we showed in an article on page 71 of *The Economist* of January 8th) merely held in London on a species of cloak-room ticket, and its foreign beneficial owners would doubtless make haste to withdraw a good deal of it if the period of alarm before the outbreak of actual hostilities were at all prolonged. On the other hand, the official figures take no account of private gold holdings, or of jewellery, etc., some, at least, of which could be made available, by the provision of suitable inducements, in an emergency. Obviously, after all allowances for net losses, the position would be very satisfactory compared with that which prevailed in the early part of 1914. In the quarter ended in June of that year

the Bank of England held some £36 millions in gold coin and bullion, and the banks of Scotland and Ireland another £9 millions. It was estimated that gold coin to the extent of £130 millions was in circulation in the hands of the public or in the tills of the banks. The indicated total was thus only £175 millions, a large part of which was not available in official hands. Allowing for the fact that our present-day gold stocks are expressed at a "written-up" figure, there has clearly been a very considerable increase in our total holdings in the meantime. To-day, indeed, we probably hold from 12 to 15 per cent. of the world's monetary gold reserves.

In the event of war we could thus immediately lay our hands on as much gold as we should be likely to require for some time—though we should need to allow for heavy withdrawals in the disturbed period which preceded an outbreak of war. But could we dispose of our gold abroad without difficulty? For practical purposes the one country to which we should be likely to ship gold in any large quantity would be the United States. Would America be prepared, not only to continue to absorb a large share of the world's output of new gold, but also to buy a substantial part of Britain's gold stock? Much would probably depend on America's attitude towards the war itself. If she were coldly neutral she might be loath to take in unlimited quantities of gold, though she would doubtless accept the metal if no other means of payment for our purchases was available. But if American opinion were more sympathetic, the purchase of gold would probably

not be regarded as falling under the ban of any definition of neutrality.

Next, we may ask what would be the extent of our realisable foreign investments. Here, as a basis to work on, we have SIR ROBERT KINDERSLEY'S analysis of the nominal value of, and the income from, certain classes of our investments during 1936. No estimate has been made of the current market value of these investments, still less of their probable realisable value under war-time conditions. The following table makes no claim to even approximate estimate under either head; it merely capitalises the income under the different headings at certain rather arbitrarily chosen rates, in order to provide a rough and ready check on "real" as opposed to nominal values:—

VALUE OF BRITISH OVERSEAS INVESTMENTS, 1936

	Nominal Value	Income at 4%	Income Capitalised at 4%	Estimated "Real" Value
(Million £)				
Government and Municipal:				
Empire	1,100	46.4	4	1,160
Foreign	341	12.6	7	180
British Companies Abroad:				
Loan capital	379	13.6	5	272
Share capital	840	43.4	7	620
Holdings in Companies registered Abroad:				
Loan capital	326	13.4	6	223
Share capital	377	35.1	7	501
Unquoted Investments	400	19.6	7	280
TOTAL	3,764	184.0	...	3,236

A further analysis of the non-governmental securities by classes provides the following tables:—

NON-GOVERNMENTAL SECURITIES (NOMINAL VALUES)

	Empire	Foreign	Total
(Million £)			
Railways	327	499	826
Public Utilities	56	103	159
Mines	141	28	169
Miscellaneous	357	288	645
Total	881	918	1,799

The striking conclusion which emerges from these figures is that our really valuable investments are chiefly in the British Empire. On the roughest test of marketability, the Empire's share in our Government and Municipal loan holdings is six or seven times as great as that of foreign countries. In the case of non-governmental securities, Empire and foreign holdings are roughly equal in nominal values, but the heaviest losses of recent years have come under the foreign category. Taken by and large, the most important holdings in time of war would be our Empire holdings. We cannot even guess at the market values likely to prevail under war-time conditions, but we can be reasonably certain our Empire holdings would be our chief source of strength.

How far, however, would these securities be marketable? If Australia were making large profits, she would be glad to buy back Australian bonds from us. The same argument would apply in greater or less degree to the other Dominions and to India. But only a fraction of our necessary payments would be within the Empire; our pressing liabilities, which would need to be met at all costs, would mainly have to be met in New York. What have we to sell there? According to American figures, the long-term investments of the United Kingdom in the United States at the end of 1934 amounted to \$1,297 millions (£260 millions), of which \$678 millions were direct investments (some of which might not be realisable), \$455 millions were marketable securities, and \$164 millions

were "other investments." At the same date Canadian investments in the United States amounted to \$1,007 millions (£201 millions). Moreover, according to the reports of the United States Treasury there was an inflow of capital from Great Britain into American securities and brokerage accounts between the beginning of 1935 and June 30, 1937, amounting to \$406 millions, and from Canada amounting to \$25 millions. The total assets of the United Kingdom in the United States in these forms would therefore appear to be \$1,703 millions (£340 millions), and those of Canada \$1,032 millions (£206 millions). The American estimates of our holdings in the United States are higher than those of SIR ROBERT KINDERSLEY, but it is clear that, on the most favourable estimate, our position would not be really comfortable. We might try to sell a few undefaulted South American bonds and other South American securities at knock-down prices, but the outlook in that direction would not be over-promising. European and Far Eastern holdings would automatically fall to default levels, or near them, on the outbreak of an international conflagration. We should, in fact, be quickly driven to selling Empire securities in New York. Our Canadian securities, which have a nominal value of £443 millions, might be offered first, and once we had exhausted the most promising, we should be forced to bring other Empire securities under the hammer. These would certainly include gold-mining shares, which of all Empire commercial investments probably have the widest international currency. Nevertheless, it is improbable that their price would be well maintained, for the appetite of the American public for Dominion securities is not unlimited.

In this respect, our position would contrast unfavourably with our experience in the last war, when the British Treasury was able to mobilise, either for sale outright or in order to provide collateral security for loans and credits, over £1,000 millions of foreign securities—mainly dollar securities. Some £600 millions of American railroad securities were sold back by Britain to the United States in one way or another. These, indeed, were the bottom drawer of our war chest in 1914-18, and the drawer is not nearly so well filled with similar securities to-day. Even our

short-term balances in New York would not carry us very far. On June 30, 1937, British short-term funds in New York totalled \$366 millions, against which were short-term liabilities of \$81 millions. Even if the greater part of these balances were available, which may be questioned, they would put us in funds to only a little more than £50 millions. Our short-term assets in many other parts of the world would probably become frozen at the outset of the war, and would remain frozen, although there might be exceptions in some centres.

This analysis leads to a conclusion which deserves special emphasis at a moment when the beginning of official negotiations for an Anglo-American trade treaty may have the result of an increasing part in our international commerce being played by Anglo-American trade. It is arguable whether or not Britain's programme for re-armament, in the widest sense of the term, should include the building up of balances—by way of marketable bonds or otherwise—in New York, and whether some of the resources of the Exchange Equalisation Account might be advantageously used in that way. But what is beyond all question is that the attitude of America will be a vital factor in our financial position in the event of another war. With America on our side our position would be secure. If America, though not a belligerent, were sympathetic to our cause, our position might be tolerable. But it would be highly unsatisfactory if opinion in the United States were critical, and the authorities in Washington were constrained to render difficult—in the name of neutrality—the free mobilisation of such resources as we possess overseas. More than most nations, we remain dependent on our purchases from abroad. While we continue to hope that the occasion for opening our war chest may never occur, we should at least lose no opportunity of seeing to it that our relations with America are so harmonious and our ideas in relation to the great issue of peace and war are so akin that we may be certain that her attitude—even if neutral—is at least beneficial. For the defence of peace Anglo-American relations are not merely important; they are vital.

Topics of the Week

The Chancellor Reflects.—Speaking at Swansea on January 13th Sir John Simon addressed himself rather more soberly to the current economic situation than has been the recent custom of Ministers. "Parliaments and Governments cannot claim all the credit for economic progress any more than they can be held to blame for every economic setback." Sir John refused, however, to accept the charge that the cost of living was now pressing harshly upon the incomes of working people. Since its lowest point in 1933 the cost of living had indeed risen 11 per cent., but in the same period average weekly wages had risen 9 per cent.; and in the preceding period, between 1929 and 1933, while the cost of living had fallen 14 per cent., wages had been reduced by only 5 per cent. The worker was incontestably better off in 1937 than in 1933; indeed, the economic limit to further extensive increases in wages had now been reached. The immediate outlook for British business depended upon the maintenance of remunerative prices. There is wisdom in some of Sir John's contentions. The present slight recession in business activity was, in fact, preceded by falling primary prices. The index of the cost of living has ceased to soar, and in December it actually fell by one point. In any list of measures by the Government to minimise the consequences of a setback, the preservation of stable and remunerative prices would not be the least important element.

Progress of Air Defence.—Doubts about the efficiency and co-ordination of production for air defence have grown in recent weeks. The announcement just over a week ago that the aircraft industry had chosen a new chairman to be especially a link between the Air Ministry and the manufacturing firms was generally welcomed, but scepticism lingered about the adequacy of the Ministry's own methods. Speaking at Havant on January 14th, Sir Thomas Inskip admitted that the air programme had fallen below expectations in production, but urged that this was due, not to inefficiency or lack of foresight, but to obstacles which could not readily have been overcome even with the maximum of skill and co-ordination. Changes in design and difficulties of delivery had been notable hindrances. A few years ago the aircraft industry was small and dependent on a few Government orders. It was impossible to induce a spate of production at short notice. As it was, the shadow factories had now been substantially completed, and the production of air engines was ahead of estimates. To a point, the apologia of the Minister for Co-ordination of Defence was plausible. Nevertheless, the purpose of the air re-armament programme and the rationale of Sir Thomas's own appointment was to surmount precisely the sort of difficulties which the Minister cited. Obstacles are inevitable, but unusual methods are imperative to solve a problem of unusual urgency.

Egypt's Political Crisis.—Events in Egypt since the beginning of the crisis rather confirm our fears that King Farouk has raised a storm which it may be beyond his powers to quell. It is not that the King had no case against the Wafd. The case was rather a strong one. Here is a party which has retained its monopoly of power after the disappearance of its *raison d'être*, the Anglo-Egyptian conflict. But it has not succeeded in turning itself from an organisation for agitating against the intrusion of a foreign Power into a party with a practical programme on concrete social and economic questions in the life of Egypt herself. And meanwhile the political monopoly has not merely been retained; it has been aggravated by the behaviour of the Blueshirts, who are the Wafd's "private army." If the King has made a mistake, it has lain not in his trying to modify a manifestly unsatisfactory situation, but in his declaring open war on the Wafd without having any serious prospect of being able to deliver a knock-out blow or any alternative party to carry on the King's government, supposing that by chance the blow at the Wafd did prove a mortal one. The secessions from the Wafd do not seem likely to go to serious lengths; and we may expect a general election in which Nahas Pasha and his friends will be returned once more in overwhelming strength. In that event the King may be faced with a choice between looking foolish and attempting a revolution which he could scarcely hope to carry through. It is to be feared that the first-class political crisis which the King has precipitated may seriously retard Egypt's political development by keeping politics in the two ruts of abstract constitutional issues and concrete personal rivalries.

Japan Goes Deeper In.—Last Sunday, January 16th, the Japanese Government issued a statement on their policy towards China which, if taken at its face value, would imply that the travail of the Imperial Council had brought forth nothing but a *ridiculus mus*. There is to be no declaration of war; there is not a word about future military operations; all that we are told is that Japan has decided sorrowfully to "dis-recognise" the legitimate Government of China, after having given Marshal Chiang Kai-shek and his colleagues the longest possible period of grace in which to repent of their sins and to mend their ways. The Japanese Government now "look forward to the establishment and growth of a new Chinese regime, harmonious co-ordination with which can really be counted on." To non-Japanese minds it is neither surprising nor reprehensible that President Chiang Kai-shek should have refused to play the Japanese game by handing over his country, body and soul, to Japan and thereby saving the Japanese Government the effort and expense of a conquest of China. Indeed, we may guess that, in the unlikely event of his having acquiesced, it would have been still more unlikely that he would have ever been able to deliver the promised goods. A capitulation to Japan would have been the signal

for the President's downfall and replacement by other leaders with the will to carry on the national resistance to the Japanese invader. Japan has now lost all hope of being able to make herself mistress of China with the help of Chinese hands. If Japan means to rule China in the name of some collection of puppets, she will have to do all the dirty work herself. And so it turns out that the decisions taken at the Tokyo Imperial Council have been, after all, not trivial but momentous. The Island Empire has taken on an unlimited continental liability.

Flux and Reflux on the Danube.—High stakes are being played for in Central Europe, and the position changes almost from week to week. At the New Year it seemed, with the appointment of a semi-Fascist Cabinet in Roumania and with M. Stoyadinovic's open coquetry with Rome, that the Rome-Berlin axis was securing a decisive advantage. Now it is by no means so sure. M. Stoyadinovic has just been to Berlin. He walked into the spider's parlour just as the Foreign Minister of Poland was walking out. Do the flies escape scot free? Or do they emerge with their wings festooned in invisible but unbreakable gossamer threads? From all that has appeared, it seems that M. Stoyadinovic has disappointed the Germans. He was as friendly with them as could be expected, but there was rather an ostentatious emphasis on the fact that Yugoslavia did not intend, because of her new-found friendship with Germany, to retreat from her alliance with Czechoslovakia. The royal appointee in Roumania has also been a disappointment to Berlin. His first journey was to Prague, and then to Belgrade, preparatory to going to Geneva. It has been made clear that the policy of Roumania in external matters, and in some internal affairs, is the policy of the King and not that expressed in M. Goga's electoral speeches. Lastly, one result of the meeting of Italy, Austria and Hungary in Budapest has been a revival of the idea of a closer approximation between the two latter countries and Czechoslovakia. Italy's efforts to be on good terms with Yugoslavia and Roumania have naturally weakened the exclusive privileges which the Rome Protocols were supposed to guarantee to Austria and Hungary, who are naturally looking elsewhere. Germany will doubtless bring great pressure to bear to prevent any such "Little Triangle," but the small countries concerned have their livelihoods to consider. Thus the situation is in constant flux. The truth is that the market for small Powers is at present a seller's market. None of these small countries is definitely committed to one side or the other, except Czechoslovakia, and there are doubters even there. They are all consequently anxious to accept as many as possible of the inducements held out by the Great Powers without engaging themselves in irrevocable commitments.

Anglo-American Trade Negotiations.—As the date for the formal opening of negotiations for a reciprocal trade agreement between the American and British Governments approaches, the attitude of several of the organisations representing British industry is hardening in opposition. The reasons adduced in their protests shed a very clear light on the nature of the economic system which is slowly being built up in this country under the protective tariff. The National Union of Manufacturers, for example, say "we regard the present negotiations with grave anxiety, because we think they were not initiated for purely business reasons, and because we are unable at present to see the material for a sound business deal." When this rather peculiar statement is analysed it appears to mean that the National Union of Manufacturers has reason to fear that the Government is acting with a view to the interests of persons other than their own members. "Business reasons," which are commendable, apparently mean an increase of profits to British manufacturers; "political reasons" must be taken as meaning the advancement of the interests of the community as a whole.

A similar assumption appears to underlie a letter which the President of the Federation of British Industries has dispatched to the President of the Board of Trade. The F.B.I. had previously requested the Government to notify those industries at whose expense the United States might ask for concessions in the British market, and allow them to submit their views as to the repercussions which such concessions would have. Mr Stanley's reply was that the publication of such information while the negotiations were in progress would embarrass the Government's freedom of action. The F.B.I. then pointed out that they had never intended to ask for the publication of such information, but merely that it should be confidentially communicated to the industries affected. This comes very close to a suggestion that details of tariff protection should be settled in conjunction with the industry affected, but without any reference to public opinion. This is, unfortunately, the spirit which has become widespread during the last six years, to such an extent that the ordinary consumer, who in the long run has to bear the economic burden of protection, is considered to be interfering if he merely asks to be informed what is being done in his name and at his expense. Not the least of the merits of the projected Anglo-American agreement is that it would break through this narrow conception of economic policy. If the decision to conclude the agreement is based upon mature consideration of the best interests of the community as a whole, it matters very little whether those interests can be classified as political or economic, provided only that they are shared by the nation at large. Fortunately, the Government is showing no sign of yielding to the pressure of partial interests.

Mr. Roosevelt on Holding Companies.—It is still impossible to see any clear outline of the American Administration's policy for the relief of the recession of trade with which it has found itself burdened. At one moment in the past week the President seemed anxious to carry his attack on the abuses of Big Business into a new field, for he declared himself opposed to all forms of holding companies. Hitherto, the New Deal has declared its hostility to holding companies only in the public utility field, and even there exceptions have been made for holding companies whose subsidiaries operate in a single contiguous and co-ordinated area. But on Friday last the President made no such distinctions. He

BRITANNIC ASSURANCE COMPANY LIMITED

Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

was apparently prepared to envisage the disappearance of holding companies wherever they are now present, and he was not willing to exempt from his condemnation even the so-called "first degree" holding company, i.e., one which is not separated from its operating subsidiaries by any intermediate tiers of sub-holding companies. This attack on the favourite device of the American corporate lawyer might have been expected to provoke some alarm in Wall Street. But in fact it seems to have been assumed either that the President had no intention of putting his words into acts, or that, if he did so intend, Congress would stand in his way. The former assumption seems to be supported by the fact that the President is currently engaged in a series of talks with business leaders designed to restore "confidence," and there has even been a suggestion that a compromise will be reached at the most bitterly-fought point of the war between the Government and the utilities, namely, the conflict of interests between the Tennessee Valley Authority and the Commonwealth and Southern Corporation. Very slowly, signs of some improvement in American business seem to be appearing. There has been a slight increase in the activity of some of the heavy industries, and business men are showing a tendency to remember that they have, after all, contrived in the recent past to make quite attractive profits even with Mr Roosevelt in the White House. The noticeably less ferocious tone of organised Labour has contributed to the slightly better sentiment, but the major reason is probably to be found in the prospect of a resumption of heavy Government expenditures. The recommendations for new naval construction, which are expected to be the largest instalment in the programme, have not yet been sent to Congress, but they are still in immediate prospect, and their appearance can be expected to exercise a considerable stimulating effect upon the heavy steel industry.

Irish Economics.—The past week's Anglo-Irish conversations lend interest to Mr J. P. Colbert's survey, in the current issue of *Lloyds Bank Review*, of the economic and financial position of the Irish Free State. A creditor with external investments to the value of perhaps £300 millions, Eire is displayed by Mr Colbert in the best possible light. He lays stress upon Irish stability, in politics no less than in finance; upon the relative lowness of Eire's public debt, despite recent free borrowing; upon the banks' £125 millions of sterling assets; and upon the flexibility of Irish agriculture. The reverse side of the medal Mr Colbert does not paint so willingly. He is, for instance, at pains to prove that the net decrease of over £10 millions in the banks' external assets since 1932 has not involved any eating into capital, since the sterling assets of Departmental Funds, the Currency Commission and the National Hospital Trustees rose by over £12 millions in the same period. Not all observers would wholly accept his arguments in this matter, though no one could deny his premise that a creditor nation must anticipate a surplus of imports in trade. More dissent is likely to Mr Colbert's emphatic statement that Irish farming is notably prosperous, having negotiated a considerable change-over from pasture to tillage with conspicuous success. Actually, the area under tillage in Eire has diminished at the same time as the numbers of cattle and pigs have fallen. Agricultural prices are high, but farming profits are not. There is some rural unemployment, and country workers have swollen the serious drift of Irish men and women into prosperous Britain. It may be argued that the new protected Irish industries will be capable ultimately of producing goods as cheaply as in industrial countries; but there are small signs of this as yet.

Anglo-Irish Trade.—Since 1932, when the economic war between Britain and the Free State grew out of the dispute over the land annuities, the trade between the two countries has been seriously curtailed. The world slump in prices and commerce intensified the results of quotas, tariffs and counter-tariffs, which were modified

only in the spring of 1935 by the so-called coal-cattle pact. The following tables show Anglo-Irish trade: (a) before depression and economic conflict deepened; (b) before the 1935 pact; and (c) in 1937:—

BRITISH IMPORTS FROM EIRE			
	1930	1934	1937
Bulls and bullocks	£ 8,138,489	£ 2,750,253	£ ...
Cows (including heifers) ...	5,220,418	762,541	...
Cattle	...	...	6,114,699
Swine	2,619,366	384,774	179,944
Butter	3,275,412	1,158,190	1,311,304
Eggs	2,711,038	894,647	667,816
Pig products (bacon & ham) ...	1,837,362	1,188,356	1,568,619
Pork (fresh)	1,241,972	378,700	148,835
Animals (not for food) ...	3,124,463	888,396	2,109,997
Total value of all imports	42,955,118	17,199,774	...
Nine months' figures	31,218,833	12,216,984	15,530,026

BRITISH EXPORTS TO EIRE			
	1930	1934	1937
Grain and flour	£ 2,762,968	£ 266,698	£ 266,778
Coal	2,418,971	925,422	2,660,505
Articles wholly or mainly manufactured	21,775,760	15,157,007	...
Total value of exports	34,496,909	19,525,254	...
Nine months' figures	26,186,967	14,316,533	16,139,365

The recovery in the coal and cattle trade since 1934 is striking, but the total value of trade is still far below the level of 1930. Clearly, both countries have much to gain by the conclusion of a comprehensive commercial agreement.

French Canada and Defence.—Two recent by-elections in Quebec have afforded encouragement to Mr Mackenzie King's Government. Both were fought on the re-armament issue. The Liberal Party held both the Lotbinière and St. Henri (Montreal) seats against Independents, who stood on platforms of isolationism, anti-imperialism, and French-Canadian nationalism. In the latter constituency, however, the Government majority was greatly reduced, and it is evident that the attempt to maintain internal Canadian unity is not made easier by the necessities of an uncertain international situation. The spread of the crypto-Fascist nationalism, which to-day has a home in Quebec, would be of dangerous import for Canada.

Re-armament and the German Railways.—The provisional report for 1937 of the German State Railways attributes increases during the first nine months of last year of 39 per cent. in derailments, 33 per cent. in collisions, and 189 per cent. in passengers killed and injured to a shortage of raw materials and labour, which has prevented the carrying out of even urgent repairs. The replacement of rails during 1937 fell short by 40 per cent. of a reduced schedule, the demand for sleepers could only be partly met, and the additions of new rolling stock were "entirely insufficient." Since 1933, traffic has risen by 70 per cent., but the number of trucks and carriages has fallen by 10 per cent. And the capital expenditure estimates for 1938 show a further reduction. The German railways demonstrate only too clearly the effect of re-armament and the Four Year Plan on many sections of German industry, whose urgent need for extension of plant and replacement of machinery cannot be satisfied—or can be met only by the use of inferior substitutes.

World Consumption of Fertilisers.—The accompanying diagram, based on the estimates of the British Sulphate of Ammonia Federation, shows the trend of the world's consumption of fertilisers in terms of pure nitrogen during the past ten years. Since the bulk of these fertilisers are consumed by agriculture, the diagram gives a good indication of the fortunes of the world's farming community. World consumption has risen far above its pre-depression level. This fact is an indication both of

DISTRIBUTION OF WORLD FERTILISER CONSUMPTION

the improvement of the position of the farmer and of the growth of intensive methods of production. The bulk of the world's consumption of fertilisers consists of synthetic materials, Chile nitrate representing only about 9 per cent. of the total absorption in the year ended June, 1937. Despite the remarkable increase in the use of fertilisers in recent years, however, synthetic nitrogen plants, which had been considerably extended, operated at only about 50 per cent. of capacity during 1936-37.

The Disappearing Tram.—The Ministry of Transport return of street tramways and trolleybuses for 1936-37 gives further evidence of the steady disappearance of the tram from British streets. During the year, the number of undertakings in operation declined from 86 to 77, and the route mileage, which reached a figure of 2,624 in 1923-24, was further reduced to 1,340. The following table gives significant figures for 1913-14, 1923-24, and 1936-37:—

Year	No. of Electric Trams	Route Miles Open	Passenger Journeys (Millions)	Passenger Receipts (Million £)	Vehicle Miles (Millions)
1913-14	12,518	2,530	3,301.8	14.4	338.9
1923-24	14,186	2,624	4,413.3	28.3	363.1
1936-37	9,769	1,340	3,379.6	18.6	301.1

According to *Modern Transport*, 60 private tramway and 94 local authorities' undertakings have been entirely replaced by newer methods of traction. The total number of trolleybuses now licensed amounts to 1,950. These buses, in 1936-37 covered 538 miles of route and carried 632.5 million passengers. This figure, however, is still only one-fifth of the number carried by trams, and one-tenth of the number carried by buses.

The Budget Message

NEW YORK, January 11th.—The Budget Message was received in New York with less attention than it merited, because on this occasion, as on the last, it was hardly more than a tentative outline. The question of relief expenditures was left open, and the subject of the armament programme was reserved for a special message.

The estimates of revenues were necessarily sketchy. For the four quarters ended September, 1937, the national income may have been \$70,000–75,000 million; in the fourth quarter of 1937 it was equivalent to an annual figure of probably not over \$60,000 million and possibly not much more than \$50,000–\$55,000 million. In estimating revenue under such circumstances, the Treasury cannot do much better than guess.

To quote from the Message:—

The Treasury, leaning to the conservative side, predicts some improvement over the present level, but does not assume in its figures that business in the calendar year will reach as high a level as in the calendar year 1937.

The official forecast is that revenue in the fiscal year 1939 will be \$401 million less than in the fiscal year 1938, estimated at \$6,321 million, with half the year still to go. Up to a very short time ago, there was no hint that in addition to our large regular military appropriations, we were about to have a special armament Budget. The President, however, suggested that:—

... due to world conditions over which this nation has no control I may find it necessary to request additional appropriations for national defence.

The following tables are based on the Message; the years are fiscal years, ended June 30th:

UNITED STATES' BUDGETS: 1934–1939
(\$000,000)

	Actual				Estimated	
	1934	1935	1936	1937	1938	1939
Income						
Income tax	818	1,099	1,427	2,158	2,692	2,414
Misc. internal revenue	1,470	1,657	2,010	2,181	2,280	2,190
Social security tax	554	606	734	815	827	760
Processing taxes	353	521	77	252	571	599
Customs	313	343	387	486	415	390
Total Receipts	3,116	3,601	4,116	5,294	6,321	5,919
Expenditure						
Regular oper. exp.	475	555	734	815	827	760
National defence	500	657	871	889	957	901
Veterans	554	606	734	815	827	760
Interest on publ. debt	757	820	749	866	927	976
Public works	613	763	913	1,079	878	620
Unemployment relief	1,853	2,361	2,342	2,467	1,759	1,266
Agric. programme	290	743	542	516	443	586
Social security	...	...	28	448	659	813
Total expend. excl. debt, retirement	4,745	6,802	8,477	8,001	7,409	6,869
Net deficit	3,630	3,192	4,361	2,707	1,088	950
Gross public debt at end of fiscal year	27,053	28,701	33,779	36,425	37,604	38,528

Incorporated with
Limited Liability
in the U.S.A.

The totals are greater than the sum of the items listed, as only the more important items are enumerated.

It is expected that the income tax will yield more in 1938 and 1939 than in the fiscal year 1937, and approximately three times the actual yield of 1934, which was, however, over \$1,000 million less than in 1931. Customs are expected to show a substantial decline below the yield of 1937—which was a year of very large imports.

Reduced Expenditure

The first item of expenditure to be noted is that of national defence, which is liable to revision upward. Although the 1939 figure is double that of 1934, the 1934 figure was exceptionally low—in 1931 and 1932, for example, national defence cost over \$660 million. Veterans' pensions and benefits in 1936 and 1937 reflected the Bonus payment; but the 1939 figure is lower than 1934, and far lower than 1931 or 1932, when the payment was just under \$1,000 million. The deficit projected for 1938 is smaller than actually realised in any year since 1931.

The total receipts are expected to be about \$1,000 million higher in 1938 and \$600 million higher in 1939, the increase to come principally from income and Social Security Taxes. Total expenditure, which was reduced by about \$500 million in 1937, is expected to fall another \$600 million in 1938, and a further \$500 million in 1939. It is expected that in 1939, receipts will be \$600 million higher and expenditure \$1,100 million lower than the realisations of 1937, which would reduce the deficit from the \$2,700 million of 1937 to under \$1,000 million in 1939.

The increase in the gross public debt will not necessarily mean an equal increase in the public debt in the hands of the public, as such accounts as the Old Age Reserve account, etc., are expected to run over \$1,100 million. Moreover, the figures take no account of the Inactive Gold Fund, except in the increase in the public debt.

Hopes of Recovery

The revenue figures, combined with the proposed expenditure on public works, indicate a definite (if provisional) expectation of a prompt recovery in the national income. The proposed Federal Budget of \$7,000 million may be taken as roughly half of the total cost of government in the United States, as the cost of local government is estimated at about an equal figure.

The present estimates for expenditure for the fiscal year 1938 are not far from the original estimates, although they are subject to revision in the event of heavy demands for relief. The estimates of receipts, however, went wide astray, largely by reason of the over-estimate of the income tax. The disappointment about the yield of the income tax was one of the reasons for the passing of the so-called Loophole Tax Act of last summer.

The atmosphere of panic, so marked in Wall Street in the early autumn, ebbed away in the closing days of 1937. The decline in industrial activity, however, lasted into December, when it was exaggerated by purely seasonal factors. The share market, however, continued nervous, and fluctuated widely through November and December.

The New Year opens with hysteria replaced by hope, and with the perennial inflation talk reminiscent of a year ago. No part of the President's Budget Message attracted so much attention in Wall Street as the statement of the new objective—not the 1926 price level, but a national income of \$90,000–\$100,000 million. As the national income in 1929 was only \$80,000–\$85,000 million, in 1937 about \$70,000 million, and the current level not above \$60,000 million, this statement exerted a profound influence.

Against this optimistic background some qualifications should still be made. The actual realities of the railroad situation are extremely bad—by some standards worse than in 1932. The level of production in December was evidently below November, about 30 per cent. below December of 1936, and perhaps not far from the average of the year 1931.

The President and the Recession

WASHINGTON, January 6.—The coming of the New Year has emphasised again that the United States is the world's gullest country. Nowhere else can the winds blow up so unexpectedly, and with such frightening force. A year ago all was well with America. The election had been decisive; the country was enjoying a rising prosperity; and only two dangers were to be seen on the horizon—the possibility of war in Europe and of inflation at home.

To-day, the country is experiencing the sharpest business decline in its history; the President has been thrown on to the defensive; and the danger of war in Europe has been superseded by the Chinese war with its immediate threat to American interests. Unemployment has postponed once more the early balancing of the Budget. Everyone, from the President down, has been caught off guard. The whole nation is dismayed.

Ever since the stock market collapse, uneasiness has been apparent in Government and business circles. Before the full force of the new depression was felt, the President began feeling for a fresh meeting ground with business. The first tentative negotiations for peace with the public utilities revealed the President's "prudent investment" theory of cost in determining fair rates. But peace on terms that would lead to normal expenditure for expansion has not come into view. And since this expenditure depends first of all on investment, and that in turn upon confidence, it could hardly emerge from a few talks between the President and utility officials.

Business Attacked

As the depression intensified, both the President and business men hardened towards each other. Certainly the business community saw within grasp the defeat of all the President's reforms which they held responsible for the upset in business. The President, resenting their attitude and the stubborn opposition in Congress, began a preparation of Jovian thunderbolts, and seemed to be getting ready to attack business practices with a new fire.

The week before Congress was to meet, Robert Jackson, Assistant Attorney-General, made two radically anti-business speeches, seconded by Secretary Ickes in his most vituperative manner. Both attacked the concentration of economic power, and Mr Jackson set out to demonstrate that the business decline had been due to monopolistic practices which forced up prices too quickly. The three speeches, coming in a single week, sent tremors throughout the country.

The New Year came with everyone feeling that nothing less than economic civil war was imminent, and might be proclaimed by the President himself in his opening Message to Congress. But the President was astute. The speech he made—one of his best—was not bellicose. In it he defined the business interests he was against and the practices he believed to need curbing, and made a real bid for national leadership.

Speaking within a few days of the Jackson and Ickes outbursts, the President sounded positively gentle and persuasively sane. If, however, the President's speech had been made without the benefit of contrast, and with business men feeling as they had felt a fortnight before, it would have been damned for its hostility. It took only a simple technique to produce a favourable response, and to bring back to the President some of the prestige he had lost in the previous year.

Roosevelt's Dilemma

When it comes to discovering a programme on which the President will succeed in leading Congress and the business community, the story is much harder to write. Here, again, the President does not seem to know which of two roads to follow. Mr Jackson's anti-monopolist thesis is one which would undoubtedly win back most of the Liberals of both parties who have been disturbed by some aspects of the New Deal. No doubt, too, the thesis is sound, if monopoly is not defined too closely.

The basic problem in America for nearly a generation has been the concentration of economic power. The Roosevelt remedy has not been to break it up, enforce anti-trust laws or introduce better ones, but to control it through the Government's intervention. The National Recovery Administration fostered monopoly. The technique of agricultural control introduces rigidity and control of prices. The advance of labour adds another rigid factor to prices. If the New Deal were to retreat from this position and take up the orthodox Liberal line of reintroducing genuine competition, it might count on capturing all the progressive forces in the country. But the President is not sure. His Message spoke of

monopolistic practices. Two days later, however, in a Press conference, he talked informally about the possibility of business men sitting down with the Government to plan production. The fact that the Government would be at this table, he said, would of itself make suspension of the anti-trust laws safe. This, of course, is the N.R.A. all over again. With these conflicting ideas in his mind it is difficult to see how the President can find a programme which at this moment will appeal to Congress, business and the country.

Federal Spending

Mr Eccles, of the Federal Reserve Board, was more realistic in his testimony before the Congressional committee now inquiring into the business recession. He said that the tide of business could be turned if the Government spent two hundred million pounds quickly enough. But to spend such a vast amount without a definition of the final relationship between business and Government would be politically difficult.

The utilities might spend a quarter of this amount in 1938 if they could borrow the money from investors. The whole amount could go into housing, if it were possible by planning to guarantee annual instead of hourly wage rates in the building trades. But housing by private contractors is still a local industry in America, and local and State authorities cannot quickly plan housing on an annual basis, even with Federal help.

Of one thing the President is assured—there will be no pressure, such as he was under last year, to balance the Budget. Even business men now admit that one of the causes of the recession was deflation, in which the curtailment of Federal expenditure was one element.

The Opposition electioneered in November with the charge that the President's financial policy was reckless and dishonest. The President, perhaps dangerously, met the charge by promising to balance the Budget before the time for it had arrived. At that time the slowing down of Government spending seemed safe. Business men now know, not only that the Government should not balance the Budget, but that increased unemployment makes a balance impossible.

France

Breach in the Popular Front

PARIS, January 20.—After a rupture between the Radical Socialists and the Communists, the second Popular Front Cabinet has fallen. Though the situation is very strained between the Communists and Socialists, the latter in their Congress refused to participate in a new Chautemps Cabinet, although they were invited to do so by their leader, M. Blum. They will merely support the Cabinet with their votes.

M. Chautemps constituted his new Cabinet with a majority of Radical Socialist members. M. Daladier, who was Minister of War, becomes Vice-President, responsible for National Security, with the army, navy and air force in his hands. M. Bonnet, former Minister of Finance, whom the Socialists hindered from forming a Cabinet, becomes Minister of State.

H. O. LEACH
(General Manager for Gt. Britain)

2, 3 & 4 Cockspur Street, London, S.W.1

The Ministry of Finance has gone to M. Marchandeu, the man of the financial recovery of 1931. M. Delbos, whose foreign policy was attacked by the Communists as being "for London against Moscow," remains at his post.

This is a strong Cabinet, formed with a view to impress the extremists with that authority for which the country hopes after months of disorder. Its life, however, will depend upon economic facts. It will be confronted with an Opposition ranging "from Thorez to Reynaud." This Opposition will be encouraged by unfavourable economic developments. If the Popular Front is dead on the political field, it still lives on the electoral field.

But if the new Government is able by a wise and discreet policy to obtain assistance from London and Washington and from the Stock Exchange, its adversaries will probably become less audacious. The main obstacle will be the new Labour Code. M. Chaumets probably intends, with the aid of the Senate, to carry out a Popular Front policy in social matters. Briefly, this Cabinet, composed of Moderates and committed to a Left policy, has a chance.

The Fundamental Difficulties

The root problem remains unchanged. The debts arising out of the last war and current military expenses represent huge charges which can be met in only two ways. Either the country must work, produce and sell more, so that individual incomes and fiscal receipts will increase. Or production and individual incomes will remain the same or even fall, in which case the necessary increase in taxes and transport charges will result in a lower standard of living.

The first way has up to now been rejected. The second alternative arises automatically from the effort to improve public and railway finance, while production does not increase. People are alarmed at the rise in the cost of living, the decline in their purchasing power and the increasing failures and bankruptcies in business. There follow demands for higher wages and social conflicts; the franc weakens and the first Chaumets Cabinet falls.

The new Government's policy is clearly stated: "There will be no control of the exchanges." But former Governments said the same about devaluation. Exchange control has been once more rejected, but the French economy still waits for the introduction of positive measures to rehabilitate the franc, to redress the commercial deficit and to restore the confidence of investors.

The import surplus in December, 1937, was the highest monthly surplus of the year at 2,193 million francs:—

FOREIGN TRADE IN DECEMBER
(In millions of francs)

	Dec., 1936	Nov., 1937	Dec., 1937
Imports:			
Foodstuffs	892	1,010	1,248
Raw materials	1,715	2,338	2,699
Manufactured goods	432	583	591
Totals	3,039	3,931	4,538
Exports:			
Foodstuffs	300	352	368
Raw materials	498	801	791
Manufactured goods	853	1,229	1,186
Totals	1,651	2,382	2,345
Import Surplus	1,388	1,549	2,193

NATIONAL BANK OF GREECE Established in 1841

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

Once more the surplus is due to the increase in imports of raw materials and foodstuffs. Exports of manufactured goods are unchanged.

Foreign Trade in 1937

The course of foreign trade in 1937 was characterised by two features: a marked increase in the volume of trade, and a similarly striking advance in the import surplus. The total volume of trading transactions rose 14 per cent. compared with 1936: imports increased from 47,960 million tons to 57,388 million tons, while exports rose from 28,957 million tons to 30,368 million tons. Coal imports were higher than in 1936, because of recovery and the fall in domestic coal production consequent upon the introduction of the forty-hour week. Exports of manufactured goods increased from 29 million tons to 30 million tons.

The import surplus is higher than ever: in 1937 it was 18,381 million francs, against 9,922 millions in 1936. The ratio of the surplus to total trade is increasing ominously. In 1937 it was 28 per cent., against 24 per cent. in 1936, 15 per cent. in 1935, and 13 per cent. in 1934.

Railway receipts from passenger fares in 1937 were 3,378 million francs against 2,705 million francs in 1936, an increase of 25 per cent. Receipts from goods traffic were 8,941 million francs, against 7,332 million francs in 1936, an increase of 22 per cent. Unemployment on January 8th was 380,938, against 365,452 in the preceding week and 420,448 a year ago.

Germany

Berlin and the Franc

BERLIN, January 18.—The Bourse last week was affected by the new franc crisis, and share values fell. In banking circles the belief seems to predominate that in the end France will be forced to institute exchange control. There is a tendency to represent the free franc as more an Anglo-American than a French interest. The alternative, a revaluation of Bank of France gold on a new depreciation basis, would not appreciably affect any German interest directly; but there is apprehension about the result of such a move for the other two partners in the Tripartite Agreement, and for the international currency position in general.

The Four Year Plan

Official utterances imply that there is no technical limit to the possibilities of the Four Year Plan; and that the pace at which complete independence of foreign supplies will be approached depends only upon the supply of capital, construction materials, and labour. Complaints are heard about the quality of the finished goods made out of new materials; but owing to the suppression of publicity it is difficult to ascertain whether goods are everywhere so unsatisfactory as individual complaints represent them to be.

The Office for Raw and Workshop Materials has issued elaborate regulations for the washing of the different kinds of textiles. The use of the substitute "cell-wool" has been prescribed in certain minor industries; and the use of wood in construction has been again restricted. The cultivation of soya beans is planned. According to the Institute for Trade Research, some 47 per cent. of the consumption of agricultural raw materials was home-produced in 1936, compared with 29 per cent. in 1927.

Finance and Forced Saving

Official and private analyses of the statistics for 1937 contain some instructive references to taxation, investment, and consumption. In 1932-33 receipts from Reich, State, and municipal taxes brought in Rm. 10,200 millions, out of which Rm. 2,800 millions was expended on unemployment relief, leaving only Rm. 7,400 millions for other expenditure.

After 1932-33 tax revenue rose steadily, and unemployment expenditure fell. In 1937-38, the present financial year, only Rm. 400 millions has been spent on unemployment relief out of revenue amounting to Rm. 18,000 millions. Thus, there was available for expenditure Rm. 17,600 millions, or Rm. 10,200 millions more than in 1932-33. As the civil expenditure of the Reich (which is kept secret) probably has not increased much in the last four years, and as local expenditure also has not increased, the Reich had most of the gains due to this progressive increase in receipts and decrease in relief, amounting in all to perhaps Rm. 25,700 millions in four years, for re-armament and public works.

The annual business survey of the *Frankfurter Zeitung* deals in particular with the way in which this vast sum and the other funds publicly invested, were extracted from the public. The main point made is that:

Germany provided for her increased investment by abstaining from a part of the consumption that would have corresponded to her increased production; or, put otherwise, provided (for the investment) by way of taxation and out of savings.

This, it is claimed, is the conclusion reached whether comparison is made with the depression year 1932 or with the prosperous year 1929.

In 1929 taxes took 18.8 per cent. of a national income of Rm. 76,000 millions. In 1937, they took 26.5 per cent. of a smaller national income of Rm. 68,000 millions. In 1929, investment in public and private undertakings amounted to 16.9 per cent. of the national income; in 1937, to 23.5 per cent. of income. In 1929, the retail trade turnover was 48.9 per cent. of the larger national income; in 1937, 45.6 per cent. of the smaller.

In 1929 the turnover of retail trade was Rm. 36,600 millions; in 1937 it was Rm. 31,000 millions. It should be noticed that the level of the prices of consumption goods is usually reckoned to be 15 per cent. lower than in 1929—though this is a doubtful calculation in view of the method of computation. On the other hand, in 1929 and previous years, investment was largely supplied by foreign credits, which came in substantially in excess of the Reparations payments. To-day, all investment must be financed out of domestic savings, whether taken in the form of taxes or otherwise.

Higher Cost of Living

The only marked change in the cost of living between January 9th and January 12th has been the advance of the clothing index from 124.2 to 127.9. The continual enforced changes in sorts and qualities of goods; the impossibility of getting certain goods at any price; and the exclusion of numerous commodities which have risen enormously in price; all these things make the index of the cost of living very imperfect as a picture of the actual living cost. The observed cost of living rose very considerably last year.

Owing to unfavourable weather, the number of unemployed increased considerably in December, and was 422,000 higher than in November, the total being 995,000 against 1,478,000 in December, 1936. Of the increase in December, some 222,000 were in building, and many of the others were in trades connected with building or in agriculture. The number of women gainfully occupied is returned at 11,500,000, and among them 4,700,000 are married.

According to the President of the Unemployment Insurance Bureau, about 200,000 foreign workers will be required this year in agriculture, against 58,000 in 1936. The foreign workers will come from Italy, Hungary, Poland, Czechoslovakia, Austria, and Holland. As they will take home foreign exchange averaging 350 marks per person, the Reichsbank will be faced with a new problem.

Railway car loadings in November were 6.9 per cent. higher than in November, 1936. Pig iron output in December was 1,400,400 tons; in all 1937 it was 15,957,400 tons against 15,303,100 tons in 1936, and a recent lowest of 3,932,400 tons in 1932. The steel Press deals in detail with American competition, which, it seems, comes only from firms outside the group with which the International Cartel recently came to a loose agreement. It is declared that, in view of the rising production costs of member countries, any general reduction of Cartel prices is out of the question; and that importing countries, which have already used up much of their stocks, will not long be able to remain out of the market.

Capital and Credit

The question of the so-called "new-owned" public loans has at last been settled. These were pre-inflation loans which changed hands later than June, 1920, and after the stabilisation were valued at 2½ per cent. of the nominal value, without, however, any right to interest or redemption "as long as Reparations are being paid." The more valuable "old-owned" loans were valued at 12½ per cent.

The Reich in 1934, by means of a somewhat complicated transaction, got rid of nearly all its "new-owned" liability, but the fate of State and municipal "new-owned" loans remained in doubt, and these were the object of considerable Bourse speculation. The Reich government has now decreed that these "new-owned" bonds shall either be redeemed in 1970, meantime bearing no interest, or shall be bought back before June, 1938, at 28½ per cent. of the nominal value. This offer roughly agrees with the recent Bourse quotations. Money last week became dearer, apparently as a consequence of the flotation of the new Reich loan.

Italy

State Expenditure

TURIN, December 26.—Recent debates in Parliament have thrown interesting sidelights on the condition of Italian finances. The general accounts for the financial year from July 1, 1935, to June 30, 1936, the accounts for 1936-37 and the estimates for 1938-39 have been discussed.

Effective revenue (not including debt items) and expenditure have been as follows in recent years:—

	Revenue	Expenditure	Deficits or Surpluses Total
	(Millions of lire)		
	Total budget*		
1930-31	20,387	20,891	— 504
1931-32	19,324	23,191	— 3,867
1932-33	18,217	21,766	— 3,549
1933-34	18,057	24,434	— 6,377
1934-35	18,817	20,847	— 2,030
1935-36	20,371	33,057	— 12,686
	Normal budget†		
1936-37 realised ...	24,702	23,413	+ 1,289
1938-39 estimate ...	25,035	25,072	+ 37

* Including all revenue and expenditure. † Excluding abnormal items, mainly East African.

In the effective revenue for 1936-37 were included the gain obtained from the alignment of the lira in October, 1936, part of the gold offered to the Treasury in December, 1935, and the yield of the redemption-price of the compulsory land and real estate loan of 1937. The amount of these three items was not stated; but from previous ministerial statements they can be estimated at about 3,000 million lire. The estimated revenue for 1938-39 also includes a non-recurrent item, i.e. the yield of the extraordinary 10 per cent. tax on the capital of joint stock companies.

These non-recurrent items can be regarded as temporary devices to smooth over the transition from past Budgets balanced at or about 21,000 million lire to future Budgets which will be balanced at from 25,000 millions to 28,000 millions, including all expenditure, normal and not recurrent.

The alignment of the lira involved a reduction in the purchasing power of the lira of about 41 per cent., which is equivalent to a rise in the general level of prices of 69 per cent. Thus a Budget of 21,000 million 1927 (Volpi) lire should be reckoned as equivalent to a Budget of about 35,000 million 1936 (Thaon di Revel) lire. Taxpayers will bear no greater burden under the Budget of 35,000 million new lire than under a Budget of 21,000 million old lire—though there are bound to be many frictions in the process of transition.

The level of prices in October, 1936, was probably higher than was warranted by the legal level of the lira; and in so far as the alignment legalised only facts already in being, the increase in the price level and therefore in the national income will not come up to the hypothetical 69 per cent. On the other hand, State expenditure is largely fixed, as in the case of interest on public debts, contractual payments and subsidies, or only partially variable, as in the case of pensions and salaries. The future Budget level can thus be estimated at half-way between the old 21,000 millions and the hypothetical 35,000 million levels.

National Income

Before the war, when total taxation amounted to about 3,000 million lire, statisticians used to estimate the national income at 20,000 millions; the share of taxation was thus about 15 per cent. Present estimates of the national income are very uncertain. In the prosperity years, from 1922 to 1926, a figure of 120,000 millions was quoted. At the bottom of the depression, round about 1931-32, pessimists reduced their computation to 60,000 millions—which was unduly low. Probably the total national income is not less than the higher figure of 120,000 millions. How otherwise could the Italian people have paid about 30,000 million lire in taxes to the State and other public bodies in 1936-37, and at the same time have increased their savings?

OVER ONE HUNDRED AND TEN YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS EXCEED £16,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Watbrook, E.C.4, and 45 Pall Mall, S.W.1.

Total time and current account deposits of all banks, including postal and ordinary saving banks and other deposit-receiving bodies amounted to 78,153 million lire at the end of 1933, and decreased to 74,245 millions at the end of 1935; they have now signally recovered to about 84,000 millions at the end of August, 1937. If we add in sums subscribed to State loans, Treasury bills (amounting now to 7,800,000 millions) and other loans, we reach a figure of from 25,000 millions to 27,000 millions as the estimate of total savings between January 1, 1936, and August 31, 1937.

Even if we deduct sums which are not properly new savings but merely reductions of trade stocks, there remains a substantial residuum of new savings. To this should be added the unknown sum of *private* investments in land improvements, new houses, new industrial plants and their enlargement. Even the hard-working and thrifty Italian small land-holders and artisans could not pay taxes up to 30,000 million lire in a year, and at the same time save not less than 15,000 to 20,000 million lire, if the total national income were less than 120,000 millions.

The Capital Levy

The Stock Exchanges do not appear to be unduly anxious about the extraordinary levy of 10 per cent. on joint-stock companies' capital. Land and real estate companies, already hit by the compulsory 5 per cent. loan, will be able to deduct from their capital the whole value of the land and houses possessed. All companies are authorised to deduct the sums invested in State loans and also up to 75 per cent. of other companies' shares which they happen to possess. Banks and companies receiving deposits are not subject to the capital levy, since their assets are fixed-interest bearing securities and did not benefit from the devaluation of the lira.

Joint-stock companies were authorised to issue new shares to raise the money to pay the levy. They are also authorised to transfer from reserves (even if hidden) to capital account a sum double that raised by shares issued against cash, giving to shareholders an equivalent number of free shares.

Estonia

Trade and Clearing Agreements

TALLINN, January 5.—Within the last few months Estonia has undertaken a revision of her trade relations with certain other countries, in order to increase the market for Estonian products and to ensure the importation of necessary raw materials. By an agreement concluded in October, German imports of Estonian agricultural products have been increased for this year, and the import of certain German industrial products into Estonia has been facilitated.

At the same time, a new clearing agreement was concluded with Germany, replacing the old clearing agreement between the note-issuing banks. Provision is made for settlement in full for exports and imports so that clearing balances can only be liquidated by the delivery of goods. One of the differences between this and the old clearing agreement is that now payments to the contractors are made at par. Previously there were difficulties in so far as the Bank of Estonia raised or lowered the clearing Reichsmark rate according to the state of the balance of payments.

On December 1st the new trade agreement with France came into force which represents a codification of the agreements concluded since the year 1929. At the same time, the clearing agreement with France has been abolished, so that payments are now made in free exchange.

Since the procuring of iron from Belgium met with difficulties owing to the clearing arrangements, this clearing agreement has been denounced by the Estonians and has been substituted by a mutual agreement to regulate trade between the two countries. In addition to a new agreement with Greece, trade agreements are soon to be concluded with Latvia, Poland, the Soviet Union and the United States.

Hopeful Outlook for Business

In the last quarter of 1937 economic activity has not declined, and even the seasonal set-back in employment was comparatively small. Industry was very active, although there has been a certain reserve in the launching of new enterprises due to fear of a world depression.

In the timber industry, which works mainly for export, prices for sawn timber, cellulose, etc., have fallen, and there is uncertainty about their future trend. Stocks in the textile industry are comparatively large, so that in spite of the increased purchasing power of the population, some curtailment of production is likely. On the whole, however, the

industrial position is healthy, and there are no grounds for any particular anxiety.

Foreign trade has moved favourably in the last few months and shown increased turnover. In the period from January 1st to December 1, 1937, imports into Estonia were valued at 102.7 million kronas, against 78.5 million kronas in the corresponding period of 1936. Exports amounted to a value of 96.4 million kronas, against 75.8 million kronas. Thus there was an import surplus of 6.3 million kronas.

Imports during the last few months have consisted chiefly of raw materials for industry (cotton, iron), industrial machinery, metal goods, and chemicals. Among exports, shipments of butter, shale oil, textile goods and timber represent the most important items.

Large Exports to Germany

Exports to Germany were particularly heavy, where prices in clearing Reichsmarks were considerably higher than in England. Mainly because of the shipments of timber to Germany, there has accumulated quite a large balance of Reichsmarks in the clearing, which is to be liquidated in 1938 by importing goods from Germany. During eleven months in 1937 goods were imported from Germany to the value of 26.8 million kronas and from England to the value of 17.0 million kronas, while the value of exports to Germany amounted to 29.0 million kronas and to England to 33.6 million kronas.

Brazil

Balanced Budget

RIO DE JANEIRO, January 10.—The political situation is still quiet, and no major change has taken place since the Senate and Chamber were dissolved when the new Constitution was promulgated on November 10th. When the Federal Budget for 1938 was published, it was revealed that, for the first time for several years, only a comparatively small deficit—of £590,000—was anticipated.

Indeed, it is forecast that further economies and an increased yield of taxation above the estimates may eliminate the Budget deficit entirely. Estimated expenditure is 3,875,132 contos (about £44,564,000) and estimated revenue 3,823,623 contos (about £43,972,000).

The largest appropriation is for the Secretariat of Finance which will take 1,228,100 contos, compared with 931,100 contos for Public Works and Transport and 738,500 contos for the Secretariat of War. Education and Public Health will absorb 280,900 contos, the Secretariat of Marine 300,300 contos and Agriculture 122,700 contos. Although the foreign loan service was temporarily suspended in November, pending new agreements with the bondholders, a sum of 240,000 contos (about £2,760,000) was included for this purpose.

New Exchange Regulations

On Christmas Day new exchange regulations were published to replace those which have been in force for the last two years. By these, the sale of export bills or of values transferred from foreign countries can only be made to the Banco do Brasil.

Each day, after the requirements of the Government have been met, the balance of the foreign exchange will be distributed in the following order of preference: to cover the importation of merchandise and export freights to meet the expenses of public utility concerns in foreign countries; to defray dividends and profits; to cover other remittances. All buyers of bills, except the Government and in the case of operations between duly authorised banks, must pay a tax of 3 per cent. in milreis on the value of the bills purchased.

The purchase and sales contracts for export bills can only be realised within a maximum time limit of six months. Exchange contracts not liquidated within six months will be subject to a further tax double the first one paid.

The proceeds of these taxes and exchange operations will be credited to the Treasury in a special account. This will constitute an exchange fund, and in due time the Government will decide how this fund is to be used.

The Secretary of Finance has met representatives of the coffee-producing States in conference. It was decided to abolish all inter-state taxes in stages—20 per cent. in 1938, 30 per cent. in 1939, and the balance in 1940. In addition it was decided to make the internal sales tax uniform all over the country at 1.25 per cent. Hitherto this tax has varied in the various States from 0.3 per cent. to 4 per cent.

Canada

Promising Outlook

OTTAWA, January 3.—Canada at the close of 1937 can look back upon a very satisfactory economic record. The first three quarters of the year witnessed a progressive continuance of economic recovery; and the recession in business in the last quarter was much smaller than the setback in the United States. Statements issued at the close of the year by various Ministers and business leaders struck a note of cautious optimism about the outlook for 1938. While holding that the basic soundness of the Dominion's economic structure justified confidence, they admitted doubts about the possibly adverse effects of the international situation and the American business recession.

Mr Dunning, the Minister of Finance, declared that the gain in revenue and the decrease in the cost of urban unemployment relief would have made possible a balanced Budget for 1937-38, if a serious recurrence of drought in the prairie provinces had not been responsible for a heavy addition to the relief appropriations for indigent farmers. Mr Euler, the Minister of Trade and Commerce, in his review, laid stress upon the fact that, despite a heavy decline in grain exports, Canada's total exports during 1937 were greater than in any other year since 1929, and had shown a larger percentage gain than that of world trade as a whole. He also, however, pointed to a slackening in the rate of increase in Canada's trade with the British Commonwealth which, in 1937, only rose 13 per cent., compared with an increase of 21 per cent. in 1936. The total trade of Canada with foreign countries, however, showed an increase in 1937 of about 27 per cent., compared with a gain of 16 per cent. in 1936.

Rising Business Activity

There is general satisfaction at the resistance of Canadian business to the recessionary influences emanating from the United States. In December, the general economic index of the Bureau of Statistics rose from 104.2 in the week ended December 11th to 104.9 in the following week and 105.9 in the week ended December 25th. Given below are data about three of the major components, with comparative figures.

Week ended—	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Dec. 26, 1936	79.9	80.2	101.5	116.6
Dec. 11, 1937	72.4	82.7	84.6	104.2
" 18, 1937	71.8	82.8	90.0	104.9
" 25, 1937	76.6	82.8	86.8	105.9

While car-loadings seem to have fallen for some weeks compared with last year, this is because necessary adjustments in the weekly index have led to each week in 1937 being compared with the preceding and not the corresponding week in 1936; if the comparison is straightened out, then the second week in December was the first in which the movement of goods traffic on the railways fell below the corresponding level of last year. In the United States, on the other hand, car-loadings have been registering real declines of about 15 per cent. in recent weeks. Merchants in almost all parts of the country reported that their Christmas trade was slightly better than a year ago, when it was the largest in volume since 1930.

Unfavourable Factors

Certain adverse symptoms must, however, be recognised. Exports have begun to increase more slowly, and are now likely to feel the effects of a fall in the prices of raw materials like base metals. The heavy industries report a falling-off in new orders, and textile factories are planning to curtail operations unless there is a sudden improvement in demand.

The winter cut of the lumber industry will be substantially smaller than a year ago; and the moderate curtailment of newsprint production in the fourth quarter of 1937 has not been drastic enough to offset the shrinkage in consumption, with the result that surplus stocks of publishers have continued to accumulate and are estimated to have reached 500,000 tons at the end of 1937, or double the normal volume at this time of year. Once the \$7.50 per ton increase in the price of newsprint becomes effective, the excess stocks may be speedily consumed, but it is still predicted that in the early part of 1938 newsprint plants will only be operated at 60 per cent. or less of their activity.

Provisional estimates by the Mining, Metallurgical and Chemical Branch of the Bureau of Statistics value Canada's mineral production in 1937 at \$452,054,000, compared with

\$361,919,372 in 1936, an increase of more than 25 per cent. The largest single advance was in copper, whose output rose in value to nearly 70 million dollars compared with 39.5 million dollars in 1936.

An Ontario-Quebec "Axis"

The King Ministry has derived great encouragement from the result of a by-election in a rural division of Quebec, where the main issue was the Government's re-armament programme and the Ministerial candidate was returned by a majority of 4,671, a slight increase on the Liberal majority at the general election of 1935. But Ministers have reason to be worried about signs of the formation of an Ontario-Quebec axis with Messrs Hepburn and Duplessis as its guiding spirits. As the result of conferences at Montreal and Toronto, these two Prime Ministers have entered into a firm alliance to present a common front against Western demands before the Royal Commission on Dominion and provincial relations, and to resist vigorously any proposals for the surrender of existing provincial rights or powers of taxation.

Mr Hepburn, after a series of sharply controversial exchanges with Mr Mackenzie King about the export of power to the United States, for which he wants a special permit, has once more broken with his leader. He intends to challenge in the courts the validity of the Federal ban upon the export of power. Meanwhile, Mr Duplessis has caused the promulgation of minimum wage scales for practically every class of worker in Quebec; the increases decreed average about 5 per cent. and will, it is estimated, raise the annual wage bill of employers in the province by 26 million dollars. The *Ottawa Citizen*, however, quotes figures to show that wages in Quebec still will remain deplorably low.

Letter to the Editor

Italy in the World War

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of January 1, 1938, (on page 3) you say:

The Reichswehr have forgotten neither July, 1914, nor those months in the following year in which the Italian member of the Triple Alliance abandoned even neutrality in order to stab her old allies in the back.

To a reader ignorant of modern history, this would suggest that Italy, suddenly and without any legitimate reason, fell treacherously upon her allies. The facts are quite different.

The Triple Alliance had merely a defensive purpose. Moreover, the Treaty of Alliance imposed upon the three allies the obvious duty of communicating to each other their political and economic plans. In defiance of this article, the Austro-Hungarian Empire, in concert with Germany, declared an aggressive war on Serbia, without consulting Italy, who therefore very properly proclaimed her neutrality.

The Treaty also laid down that the political equilibrium of the Balkans should not be upset without compensation to Italy. Italy opened negotiations with Austria on this point, but they proved futile. When it was clear that Italy had no alternative, she joined the Triple Entente.

While she remained neutral, Italy was strongly pressed by England and France to make war upon her previous allies. It was even rumoured, probably without any real grounds, that England threatened to close the Straits of Gibraltar against trade to Italy, if she persisted in her neutrality.

The Treaty of London was signed on April 26, 1915. England did not surely endorse an act authorising Italy to stab her allies in the back. To hear England, or an important English paper, blame and despise Italy for deciding to fight on England's side raises my astonishment to the pitch of amazement.

Yours very truly,

Giza.

UMBERTO RICCI.

[The *Economist* did not suggest that the Germans resented Italy's refusal to enter the war on their side, which would not be reasonable, in view of the terms of the Triple Alliance. What they do, however, both remember and resent is Italy's having abandoned her neutrality to intervene *against* her allies. This was certainly a breach of the Triple Alliance. The truth is that Italy negotiated simultaneously with both parties and found the price offered by the Entente for her intervention more attractive than that offered by her own allies for her neutrality.—ED., *Econ.*]

Books and Publications

The Wandering Jew

AN important economic problem, growing in gravity, is the distressful condition of the Jews in Central and Eastern Europe. The position of the Jews in Germany, which has attracted the attention of the world since 1933, is most dramatic; but their position in Poland and Roumania is most desperate. The World Jewish Congress has established an Economic Department to provide reliable information about these difficulties, and this book* is the first-fruit of its studies.

Here is recorded the economic situation of the Jewish communities in Austria, Bulgaria, Hungary, Poland, Jugoslavia, and a number of smaller countries; and a review of the position in Germany and in Roumania is to follow in a second volume. A valuable collection of material which is not readily to be found elsewhere is provided; and the picture which it presents is one of almost unrelieved gloom.

The writer of the preface alleges the complete failure of the provisions of the Minority Treaties made at the end of the World War, with a view to securing equality of opportunity and cultural autonomy for the millions in Europe who belonged to minority peoples. The Governments, it is true, do permit these peoples to speak their own language and to worship according to their religion: but they take away from them work and bread.

Everywhere the Jewish minority, which in Poland amounts to nearly 10 per cent. of the population, but is elsewhere a smaller fraction, is the victim of the struggle of the majority against all minorities. Their position is particularly desperate because only a tiny proportion is rooted in the soil. For centuries harsh repression has compelled the Jews to become and remain largely an urban people, mainly, and maybe unduly, engaged in commerce and the professions. To-day, in all the new national States there is pressure from the majority to control these very callings.

The Jew provides the readiest scapegoat for economic troubles. The practice of the "dry pogrom" is generally adopted. The Jew is squeezed out from his former avocation, and denied admission into others. He receives no help from the State, and scarcely any work in economies more and more brought under the State's control. Thus, he is crushed between the upper and nether millstones of national economy and economic nationalism.

Before the war, though bitterly persecuted in the Russian Empire, and denied equality of opportunity in the Austro-Hungarian Empire, the Jew played a definite and important part in economic life, particularly in foreign commerce, and in manufacture for export. To-day, though given political equality by law, he can no longer perform those functions freely in the new dissected Europe with its ruinous gospel of autarky, and its endless tariff barriers.

The scheme of this book is well planned. For each country it gives a short and lucid sketch of the general economic position; a survey of the Jewish population, its economic distribution and its place in agriculture, industry and trade; the effect of the State's economic policy; Jewish participation in the liberal callings; the movement of emigration before and since the war; and the efforts being made to train Jews for manual occupations. The information is most complete for Poland, as is proper, because Poland is the principal Jewish reservoir in Europe.

Certain features are shown to be common to all countries: the rapid deterioration of the Jewish position since the economic depression; the squeezing out of the Jew from the commercial callings in which he was so strongly represented; the resistance of Governments to Jewish efforts to expand in agriculture and industry; and the reduction of the percentage of Jews in the professions and in the universities. Not least important in this context has been the slackening rate of emigration overseas, due to fresh barriers in the countries of the New World.

* "La Situation Economique des Juifs dans le Monde." Vol. I. Congrès Juif Mondial. Paris. 1938.

This book does not propose remedies; it merely tabulates the facts, and the facts are terribly impressive. Recent events in Germany, Poland and Roumania show how urgent the problem is; and this study is timely, because it provides a great deal of the material on which any serious treatment of the problem must be based. It is not a comprehensive analysis of the Jewish problem; but it is a just and persuasive statement of the Jewish case.

Shorter Notices

"The Charity School Movement." By M. G. Jones. Cambridge University Press. 446 pages. 21s.

The Puritanism which begat Victorianism has been too much decried in this sophisticated age, just as the personal virtues of voluntary philanthropy have been forgotten in the light of greater material advantages derived from action by the State. Miss Jones here tells the story of the charity schools of the eighteenth century to refute these popular errors, and to demonstrate that general education by no means began in 1870 or even in 1833. Her book is a model of careful research and clear statement. She describes the organisation of charity and the work of the S.P.C.K.; the local schools of London, the towns and the country; the influence of religious revival and Methodism; and "the triumph of the voluntary principle." The bias of the book is evident. The eighteenth century is the Age of Benevolence and Hannah More is its prophet. "Joint stock" philanthropy produced the charity school, just as regulated liability created the railway. There is a gloomier side than this to the story of youth and poverty in the Industrial Revolution, but, within its premises, Miss Jones' scholarship is admirably sound, and she has made a real and valuable contribution to social and educational history.

"The Economics of Co-operative Marketing." By H. H. Bakken and Marion A. Schaars. McGraw-Hill Publishing Company. 583 pages. 24s.

We in England are sometimes apt to forget that the consumers' co-operative society, which has become such a common feature of our urban life, is but one medium through which the co-operative ideal can find expression. This substantial volume comes as a reminder that in the United States the most characteristic form of co-operation is the co-operative marketing organisation. Since some 85 per cent. of the co-operative business of America is done by the farmers' co-operative sales associations, chief consideration has been given to this phase of the subject; and, designed primarily as "a college text," this volume is comprehensive and detailed. The historical development of the co-operative method of buying and selling is sketched against the world background, and its present working in the United States is discussed in all its aspects. The authors are generally optimistic about the future and believe that new types of co-operative organisation will continue to appear.

"The Labour Spy Racket." By L. Huberman. Gollancz. 287 pages. 7s. 6d.

Vividly and with documents Mr Huberman describes the primitive conduct of labour relations in the United States. There is clearly more to be said on both sides of the industrial equation than Mr Huberman is inclined to allow, but his shocking picture of employers' methods is a convincing representation of capitalism in the raw.

THE BUSINESS WORLD

Are British Cars Too Dear?

In the following article a trade correspondent contends that differences between the home market prices of British and American motor-cars are too wide to be adequately explainable by varying costs of materials or by any inevitable economic advantage of the American manufacturers.

A study of the trend of new private car sales in Great Britain during the past ten years suggests that they are much more sensitive to variations in industrial prosperity than is generally realised. Since 1929, particularly, they have closely followed the curve of the trade cycle. They fell during the period from the late summer of 1929 until the spring of 1932; from August of that year they showed improvement in every month compared with the corresponding month of the preceding year, right up to the autumn of 1937. Since last September they have been falling perceptibly, though not abruptly. The figures for the eight months to August, 1937, were 8.4 per cent. higher than those of 1936; those of the three months September to November, 1937, were 11.9 per cent. below their opposite numbers of the preceding year.

The falling off in new car sales has, however, been even more marked in the United States. This is partly due to the deterioration of the whole American business position; but even in normal times fluctuations are far greater than in this country. New car sales in Great Britain in 1931, the worst year of the slump, were 84 per cent. of those of 1929; in the United States, in the worst depression year, 1932, they fell to 26 per cent. of their 1929 level.

Actually, both in the United States and in Great Britain, the first setback suffered by new car sales coincided with the first increase in their price after a long series of reductions. The amount of the increase averaged about £10 per vehicle in Great Britain and \$100 in the United States. Undoubtedly, the rôle of selling prices is crucial in both markets, and a comparison of prices in the two countries reveals several surprisingly wide contrasts. Exact comparison is difficult, since various accessories, which are included in the standard equipment and standard price of British cars, are charged as extras in the United States, where the average cost is about \$50 per car. In addition, the cost of delivery of a car after leaving the works is negligible in this country, but in America it averages about \$75 on the Atlantic Coast and up to \$150 on the Pacific. Broadly, something like £30 per car should be added to the American prices to make them truly comparable with the British figures. Exclusive of this addition, and taking \$5 to £1, the following are the American prices of certain cars sold also in this country: Ford V8, £119 to £180, according to the model (British price £240 to £260); Chevrolet, £130 to £151 (British price £268 to £348); Buick Special 40, £196 to £221 (British price £510 to £625); and Chrysler Imperial Eight, £225 to £240 (British price £520 to £590). In spite of these great differences, it is estimated that American and Canadian cars (excluding Ford V8's which are made in Britain) account for over half the British domestic sales of cars of over 21 horse-power.

It is not quite fair, however, to compare American car prices with those of British cars of corresponding size; the higher-powered cars have a limited market. Their adjusted home prices, however, do not compare unfavourably with those of the smaller British cars, such as 8 h.p. Ford at £117 10s. to £127 10s., 10 h.p. Hillman Minx at £169 to £184, 12 h.p. Morris at £205 to £215, 14 h.p. Standard at £255, or 16 h.p. Austin at £250 to £260. Admittedly, the output of the biggest producers in the United States—General Motors, Ford, and Chrysler—is on a much

greater scale than that of any firm in the Old World. But some other American manufacturers have outputs roughly comparable with those of the larger European manufacturers, though they have, of course, a far bigger component manufacturing industry to draw on. Conversely, three British manufacturers have private car outputs of over 70,000 units a year, and extensive sales of commercial vehicles as well.

Are the profits of British producers inordinately high? The answer is a decided negative. The net profits of the larger manufacturers, calculated by dividing trading profits by output, average about £12 per car. Are wages higher in Great Britain than in the United States? On the contrary, they are lower, since they average 84s. 3d. a week for adult male labour in the British industry, against 110s. 3d. a week for all wage-earners in the American; though employment is the more regular in this country. Retailers' margins, again, expressed as a percentage of the price paid, are as high in the United States as in Britain—if anything, they are higher. They vary from 22 per cent. for Ford up to 35 per cent. for some other American cars. British producers frequently complain, and not without reason, of the rise in steel prices during the past five years. But the average car contains not much over a ton of steel, and the cost of the metal is certainly not a major element in the price of a product which sells, retail, at something like £200, on the average.

HEAD OFFICE:

WATER STREET, LIVERPOOL, 2

The explanation seems to lie rather in differences between the two classes of product. By American standards, for example, British cars are heavy. A popular British model of 14 h.p. weighs 26 cwt., while the 30 h.p. Chevrolet, a much larger vehicle both in size and power, weighs no more than 27 cwt. Above all, there is in Great Britain a multiplicity of models and, consequently, of parts and of equipment items like batteries and tyres. The six largest British manufacturing groups sell no fewer than 40 different types of engine for private cars, and there are numerous types of body available for every chassis. Only one or two of each set of models are normally successful, and they must bear the others' burdens. There are, in fact, too many sub-divisions of the market which are determined, not by price, but by size and horse-power. The British system of taxation has tended to make horse-power the

datum for important items in running costs, such as insurance, garaging and, often, repairs. A high petrol tax, which has been raised considerably since its inception, has also stimulated demand for low-powered cars.

Whatever the explanation, British cars are expensive by American standards. The last depression set British manufacturers the task of reducing their costs, and even a moderate trade depression would resuscitate the problem. Many constituents in total running costs are outside the industry's control, and there might be something to be said, for example, for a revision of taxation which would substitute a flat rate for the existing horse-power tax. The fact remains, however, that the popularity of the private car in Great Britain dates from the period of extensive price reduction after the war. The moral should not be lost on the industry to-day.

British Bank Accounts

THE issue of the balance sheets of the leading British banks for December 31, 1937, shows that the main feature of the year 1937 was a new and rapid increase in bank advances. The total advances of the "big five" banks alone increased during the year by £86.3 millions against £59.9 millions in 1936. On the other hand, 1937 witnessed a slight decrease in bank cash, and so the year's growth in deposits was perforce very limited. In the year 1936, the "big five's" cash increased by £9.5 millions, and their deposits by £137.1 millions. In 1937, their cash fell by £1.8 millions, and their deposits rose by only £18.4 millions. Thus, the banks last year did not add greatly to their total resources, but lent more to their customers, and, consequently, reduced other, and less remunerative, assets, including their investments in gilt-edged securities.

The absence of any appreciable increase in clearing bank cash follows upon the general trend of monetary policy during the year. This may be described by the single word "neutralisation." Since January 1, 1937, the Bank of England has acquired little new gold; for most of

the gold bought by the authorities has gone into the Exchange Equalisation Account. Meanwhile, fluctuations in the note circulation have been consistently offset by changes in the Bank's holding of Government securities. As notes have gone into circulation, fresh securities have been taken up by the Bank to make good the depletion of clearing bank cash. As the notes have returned, subsequently, the securities have been disposed of. The past year's expansion in the note circulation has thus been equally offset by the year's increase in gold and Government securities, the last-named increase preponderating.

Thus, while the official cheap money policy has been maintained, the evidence goes to show that the authorities have resisted the temptation to expand the credit base in order to facilitate the absorption by the banking system of the year's quota of defence borrowing. Instead, they have left the gilt-edged market to find its own level under conditions which entailed bank realisation of securities. The very limited extent of the fall in gilt-edged prices can only be ascribed to the autumn tendency, inspired by the market

set-back, to switch out of equities into gilt-edged, and also to heavy purchases of Government securities by public departments. On this last point Mr Edwin Fisher had some pertinent remarks to make at the Barclays Bank meeting. His comments are referred to in a Financial Note on page 174.

The growth in advances is a familiar symptom of the later stages of recovery, for in the earlier stages new borrowing is usually offset by repayments of outstanding loans. It is tempting to ascribe the 1937 increase in advances to re-armament, but there is little in the way of actual support for this theory. The analysis of advances given by Lord Wardington a year ago, and repeated last month, shows that the new demand for loans has been very well spread. New borrowing by the heavy industries, and perhaps some of the year's borrowing by the building trades, may be traceable, directly or indirectly, to re-armament, but much of the borrowing is obviously due to the general requirements of trade. This particularly applies to the increase of £41.9 millions in unclassified loans, which, apparently, include a large amount of individual (i.e. "consumer") borrowing. This supposition was, in fact, confirmed by Sir Richard Holt at Martins Bank meeting.

The year's increase in advances has brought about the following changes in the position of the banks:—

	Dec. 31, 1936		Dec. 31, 1937	
	£ mill.	Per cent. of Deposits	£ mill.	Per cent. of Deposits
Deposits	2,016.1	100	2,034.5	100

* Viz., balances with other banks and cheques in course of collection, call and short loans and discounts.

Company Charts for Investors

THE British investor is reputedly less "chart conscious" than his prototype in America, where elaborate diagrams, on which the mysteries of "resistance points" and "conjunctural bottoms" can be traced, are an essential part of the market operator's equipment. The British investor's preference is for substantial and detailed numerical records of earnings and assets, and his instinct in this respect is perfectly sound; for the best chart can never be a satisfactory substitute for statistical analysis. The rôle of pictorial illustration in investment, as in other branches of economic study, is auxiliary. Its main purpose is to reinforce an intellectual by a visual approach; to appeal to the inward through the outward eye.

A well-constructed chart has one inestimable advantage:

it is capable of assimilating a long series of figures whose sheer mass would normally overtax the mind even of a senior wrangler. Every investor can follow, with ease, the ups and downs of a chart line for a period of many years, or the main features in the relationship of one line with another; whereas the corresponding movements, expressed only in terms of the original numerical data, may be ascertainable only after lengthy arithmetical calculation. For the convenience of its readers, therefore, *The Economist* has decided to include, among its regular features, a number of charts showing the total earnings and dividends of many of the leading British companies whose shares have a wide market on the Stock Exchange. The method of presentation adopted is new, so far as British practice is concerned,

FUNDS EXCEED £46,000,000

and we trust that it will be found both convenient and useful to shareholders. An initial chart on these lines, relating to the results of F. W. Woolworth, appeared on page 126 of our last week's issue. A similar chart, for Imperial Tobacco, will be found this week on page 177.

In order to explain the potential uses of the charts more fully, we have selected two examples—Watney Combe Reid and Marks and Spencer—which illustrate their uses and construction in a particularly clear way. The accompanying charts show the earnings and distribution record of each company since 1929. Normally, a ten-year span will be given; and in the two charts below investors may test their prophetic judgment by extending the curves into the spaces which now await the 1938 results. In principle, the total net profits represented by the top line of each chart will be struck after deduction of all trading and management expenses, all reserves of a "tied" character (such as depreciation and reserves against investments) and income tax, whether charged on total profits, or on the company's share of "ploughed-back" profits. The profits total, further, will normally exclude all special items of revenue which are not related to the trading circumstances of the year. Thus, a credit item representing "past provision for income tax, no longer required," would not be included in the current year's revenue.

So much for the point at which total profits are struck. The next problem concerns their distribution. According to

WATNEY COMBE REID

our definition of profits, four distinct groups of capitalists share in the rewards of successful trading. First come debenture holders, who are legally entitled to interest whether profits have been earned or not, but in practice must rely on profit-earning power for their regular payments. Next come preference shareholders, whose "fixed" area is separately shaded on each chart. All profits above the "preference line" are equity earnings, and their annual fluctuations and current trend can be seen at a glance. Finally, the charts show how these earnings are distributed between ordinary dividends and allocations to "free" reserves and adjustments in the credit balance carried forward. Special features in the trading position which the charts do not reveal will be discussed in the text accompanying each chart, and we shall continue, as before, to give a complete table of earnings and dividend figures for the three most recent years of each company's history.

To illustrate the points which our charts are designed to bring out, we may discuss in detail each of the companies whose charts accompany this article. Watney Combe Reid is a brewery concern of proved earning power, yet its fluctuations in net trading profits, during the span of a trade cycle, have been substantial. Total profits for the year to June 30, 1937, were still £195,000 below those of the peak year, 1929-30. Except in 1933, the directors,

had they so chosen, could have maintained dividends at their pre-depression levels without drawing upon past profits. In fact, they have made steady appropriations for property improvement and contingencies reserve, and these, so far as the ordinary shareholder is concerned, can appropriately be regarded as a species of fixed charge. Consequently ordinary dividends have fluctuated in close correlation with total profits, and have yet to regain their pre-depression level. Moreover, the rate of recovery in total profits has in recent years shown a slight tendency to slow down. On the whole, the chart suggests that the long-term potentialities of Watney deferred stock units are steady rather than geometric.

For contrast, the chart showing the profits of Marks and Spencer since 1929 (years to March 31st) opens out like a fan from the earliest year to the latest. For a period of four years lasting from 1932 to 1936, indeed, profits were rising at an increasing pace each year. Now, this feature is crucially important for the ordinary shareholder, since Marks and Spencer is a company which distributes regular capital bonuses. If the rate of dividend on a steadily increasing capital is to be maintained, earnings must increase in geometric progression. Are the profits of Marks and Spencer so increasing? The chart shows that the answer is affirmative. Actually, the rate of growth in net trading profits between 1929 and 1936 was of the order of 25 per cent. compound. A regular capital bonus policy, stabilised (except for one year) at 10 per cent., has thus

MARKS AND SPENCER

been well within the company's power.

The chart, however, suggests one question concerning the future course of profits. The 1936-37 total showed an advance at a somewhat lower rate than at any time since 1929. Does this check indicate a turning point in earning power? Will the advance in profits at some future time become "arithmetic" instead of "geometric"? Saturation point comes after a time to all new industries and to most companies. No chart, of course, can answer such a question, though the present chart does, in fact, show that a similar—though slighter—check to the rate of advance in profits occurred between 1932 and 1933, and had only a temporary significance.

A chart, in short, offers no short-cut solution of the investor's ultimate problem—the valuation of future profits in terms of current share prices. But the experience of different companies and different industries tends to run to varying but characteristic patterns during the phases of the trade cycle. The function of our new chart "service" is to illustrate these patterns and thus to place current investment questions in some sort of perspective. Memories are short, but history, in finance as in politics, is a continuous process; and what happened nine or ten years ago may have undoubted relevance this year, or the next . . . or the next

Finance and Banking

The Discount Houses.—In these days of very cheap money bill-broking is an unremunerative pursuit. Nevertheless, two out of the three leading discount houses have increased their profits since a year ago. Broadly, bills today hardly earn their keep, and profits are derived mainly from interest upon securities. Alexanders, with slightly lower profits, has reduced its dividend from 19 to 17½ per cent. for the year, but, as was explained at the general meeting, this was a reduction purely in the interim dividend, and was due to the fall in gilt-edged prices in the early part of the year. Latterly conditions have improved, and last year's final dividend has been repeated. The National dividends and bonus are unchanged. The Union is paying a dividend of 10 per cent., equal to last year's dividend and bonus combined.

* £'000.

The balance sheets show few big changes from a year ago. Alexanders has slightly increased its securities, while the Union has apparently switched over a small part of its resources from securities to bills. After allowing for bills rediscounted, the National figures show little change.

Credit Ease Accentuated.—The course of events in the short-loan market since the turn of the year has not been in accordance with precedent. It has been customary in past years for the expansion of credit which normally takes place at the end of the year to disappear rapidly under the combined influence of repayment of market borrowing at the Bank of England and open market sales of securities by the Bank. The former has cancelled the inflation of bank cash caused by year-end accommodation granted by the Bank, while the latter has neutralised the expansionist

effect on bank cash of the return of notes from circulation. This year there was no market borrowing at the Bank. The burden of the year-end pressure was, in fact, shifted to the Treasury, which was forced to borrow £55,750,000 on Ways and Means Advances from the Bank at the end of December. These advances have been repaid and the expansion of credit arising from them has been cancelled. Of open market operations designed to neutralise the effect of the contracting circulation there has been no evidence whatsoever. On the contrary, the quarters which operate for the Bank of England and the Treasury in the discount market have been buyers rather than sellers of bills since the beginning of the year.

The result has been the maintenance of the volume of bank cash at a level approaching the inflated year-end peak for a more extended period than is usual. The position can best be illustrated by the following table, which shows changes in the essential Bank return items—bankers' deposits, total securities in the banking department and active circulation—from the turn of the year and for the subsequent three weeks in the years 1936 to 1938:—

Million £			
	Bankers' Deposits	Securities in Banking dept.	Circulation
1936 :—			
January 1st	130.5	147.0	411.7
January 8th	107.8	118.7	405.6
January 15th	110.1	116.4	397.7
January 22nd	118.9	120.5	394.9
1936-37 :—			
December 30th	150.6	173.1	476.1
January 6th	110.2	128.8	462.7
January 13th	106.7	116.5	455.0
January 20th	100.3	105.9	450.5
1937-38 :—			
December 29th	120.6	144.6	505.3
January 5th	129.2	144.6	492.6
January 12th	123.4	126.5	482.1
January 19th	124.3	139.1	475.7

These figures confirm the day-to-day experience of the market, both as regards open market operations by the authorities and the abnormal glut of short-term credit. They suggest strongly that the accentuation of ease in the money market in the early weeks of 1938 has been the product of conscious policy. It has been suggested in the market that the position would be rectified with the return of the fiduciary circulation to the figure of £200 millions. This step, however, can have no effect on the

credit position since it has been taken by exactly reversing the procedure adopted when the fiduciary circulation was raised in November. By this reversal, some £20 millions of Government securities have this week been re-transferred from the Issue to the Banking Department and the £20 millions of cancelled notes deducted from the reserve of unissued notes in the Banking Department. This, other things being equal, has left the total of bankers' and other deposits quite unaffected.

Bank Loans and Investments.—An interesting analysis of current banking trends was given by Mr Edwin Fisher at the Barclays Bank general meeting this week. Beginning with deposits, he showed that the total amount lodged on deposit account had fallen since 1932 from 45 to 37 per cent. of total deposits. This is one consequence of recovery, which tends to bring more money into active use. On the assets side of the bank's accounts there had been some expansion in the volume of commercial bills available for discount, but there was still room for improvement. The chairman explained that the growing (and welcome) demand for advances had been provided for in part by a reduction in the bank's investments. Of the total advances, loans to productive industry accounted for 32.2 per cent. Advances to farmers had increased since last year. The amount of the average advance had increased from £854 to £887, and the number of borrowers from 202,228 to 215,688. Discussing the bank's profit and loss account, Mr Fisher described the addition of £500,000 to the published reserve fund as a prudent step in view of the continued increase in the bank's business.

Bankers and Exports.—Both Mr Fisher and Sir Richard Holt, the new chairman of Martins Bank, made cogent remarks at this week's meeting on the importance of export trade. Sir Richard Holt described 1937 as another year of prosperous internal trade, in which industrialists again showed a disposition to neglect the export side of their business. He welcomed the Anglo-American trade negotiations, and roundly condemned the present system of standstill and debt clearing arrangements, exchange controls and other Government measures. Mr

Fisher described overseas trade as a vital necessity, and in a late passage of his speech discussed the whole question of the resumption of overseas lending. He agreed that for the moment the expansion in imports had reduced our ability to lend abroad. Nevertheless, he described the revival of overseas lending as constituting, with freer trade and the stabilisation of currencies, the three interlocking measures necessary to a return to more satisfactory world conditions.

December Clearing Bank Averages.—The War Loan dividend payment at the beginning of December replenished joint-stock bank cash, and so the December returns of the English clearing banks show an increase in cash of nearly £10 millions since November. Deposits have risen by just over £20 millions, but the aggregate cash ratio has improved from 10.2 to 10.5 per cent.

(In £ millions)

	Dec., 1936	Aug., 1937	Sept., 1937	Oct., 1937	Nov., 1937	Dec., 1937

Investments	644.4	630.4	626.0	624.6	619.4	620.4
Loans and advances	869.0	952.6	957.5	967.3	969.8	962.5
Investments in affiliated banks	24.9	23.5	23.5	23.5	23.6	23.7
Cover for acceptances, etc., premises, etc.	153.5	159.9	158.5	160.0	159.3	158.1
Total assets	2,517.6	2,494.5	2,496.5	2,523.3	2,520.3	2,540.6

Among earning assets, discounts rose only slightly. As the banks did not buy many bills in December the market had to take cover, so call and short loans correspondingly rose by £3.7 millions. Advances have fallen by £7.3 millions, but this decrease may be entirely due to the gradual repayment during December of the French railways' sterling credit of £40 millions. The downward trend of investments has, for the present, been checked.

MONEY MARKET NOTES

The Money Market

With bankers' deposits running at a high level, money remains extremely abundant. The plethora was accentuated early this week, as the market had refused to apply for Treasury bills maturing on Easter Sunday or Monday.

	Jan. 21, 1937	Jan. 13, 1938	Jan. 20, 1938
Bank Rate	2	2	2
London Deposit Rate	12	12	12
Short Loan Rates:			
Clearing Banks	12-1*	12-1*	12-1*
Others	12	14 1/2	12-6 1/2
Discount Rates:			
Treasury bills	12	12	12
Three months' bank bills	17 1/2-9 1/8	17 1/2	17 1/2

* Viz. 1 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. 3/4 per cent. from loans against 1 per cent. Treasury bills and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Outside loans were freely obtainable at 1/2 per cent, but there was no report of lower rates this week. The banks bought a few March and early April Treasury bills, but the market were not keen sellers. The volume of Treasury bills issued by tender is diminishing, and has already fallen from a peak figure of £622 millions at the New Year to £597 millions for the current week.

The Bank Return

This week there has been a further reduction of £6.4 millions in the note circulation, making the total contraction since Christmas £33.6 millions. This is considerably greater than last year's contraction of £23.6 millions. As we anticipated last week, the fiduciary note issue has been reduced from £220 to £200 millions.

	Jan. 20, 1937	Jan. 5, 1938	Jan. 12, 1938	Jan. 19, 1938
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.

Issue Dept.	313.7	326.4	326.4	326.4
Gold	450.5	492.6	482.1	475.7
Notes in circulation	63.6	54.5	64.9	51.3
Public Depts.	13.6	14.4	13.2	11.0
Bankers' Depts.	100.3	129.2	123.4	124.4
Other Depts.	37.6	37.4	36.8	36.9
Govt. Secs.	74.9	108.3	90.2	104.4
Discounts and Advances	8.9	15.1	15.8	13.0
Other Secs.	22.1	21.1	20.5	21.8
Proportion	42.0%	36.1%	37.4%	29.7%

In the banking department, the change of £20 millions in the fiduciary note issue explains both the increase of £14.2 millions in Government securities and the reduction of £13.6 millions in the Reserve. Had it not been for this change, Government securities would have fallen by £5.8 millions, while the Reserve would have risen by £6.4

millions. Public deposits are on the low side, owing to the absence of market payments for new Treasury bills during the first two days of this week. Bankers' deposits remain unusually high.

Foreign Exchanges

The market has been mainly under the influence of French politics. On Friday of last week, following the Government's resignation, dealings in Paris were suspended. In London the spot rate for sterling rose to Frs. 154, while one month's francs widened to Frs. 8 discount, and three months' to Frs. 11 discount. This week, however, there was a definite rally. Forward francs narrowed on Thursday morning to Frs. 1 and Frs. 4 for the two positions, going out later in the day to Frs. 1 1/2 and Frs. 5 discount. The spot rate also came back to Frs. 148 1/2, moving out later to Frs. 149 1/2. The French Control was also able to recover some of its previous heavy gold and foreign exchange losses. Several factors contributed to this recovery. First, several earlier forward sales of francs fell due to be covered. There was a fear that the trend of political events might end in the imposition of exchange control, and this encouraged further cover-

ing. Finally, while the market does not regard the new Chautemps Government as either strong or permanent, it was encouraged by M. Blum's approach to M. Reynaud earlier in the week. Other foreign exchange rates have been featureless, with practically no change in rates.

The Bullion Market

The Continental demand for gold persists, but has been on the whole met out of official sales and also out of some re-sales from the Continent. On

Thursday, however, only a limited quantity was in the market, and buyers had to be rationed. Nervousness over future American monetary policy gave rise to a slight demand for gold against dollars, but this was not a serious movement.

As we anticipated last week, further bear covering in a poorly supplied market has driven the price of silver still higher. On Thursday, however, there was a slight reaction, but the spot price remained above 20d. per ounce. The short-term view is that there may be further advances, as many bear positions still remain open. Current prices, however, are above the American ship-

ping parity, and so they cannot be regarded as having any permanency.

Investment

Markets Stand Steady.—Since the end of November, the London stock markets have had time to take breath after nearly a year of falling prices. The result has been an unexciting but perceptible rise in *The Financial News* ordinary share index from 93.1 to 96.3. The volume of business is well below the level of a year ago, but this is not necessarily an unfavourable sign, since a falling-off in dealings, combined with increased stability of prices, is usually reckoned of good augury after a falling market. There have even been tentative professional endeavours to resurrect speculative interest in gold mining shares, but they have not gone very far. For the most part, the market has taken the impact of disturbed conditions overseas with a stoicism which, again, is itself a favourable sign. On the whole, investors are not over-sanguine of a spectacular recovery in America this year. They argue that recession may even have to go further before President Roosevelt abandons, or even suspends, his re-affirmed intention of pursuing his campaign against holding companies and the big business battalions. The French Cabinet crisis has had no striking effect on sentiment in London, though French demand was a factor in the firmness of gilt-edged stocks at the beginning of the week. The market still thinks that the franc will go worse before it goes better, and is inclined to believe that the formation of the new Cabinet has settled none of France's immediate problems, either financial or political. Meanwhile, there is hope of an ultimate commercial agreement with Eire as a result of this week's conversations, but a disposition to assume that its beneficial effects, so far as Stock Exchange securities are concerned, will be a matter for Irish rather than for English investors—apart from a select number of stocks of which L.M.S. ordinary is, perhaps, the most noteworthy. As a whole, the market has reached an indeterminate state, without any decided upward or downward trend, which may well endure for some time and is inconducive to speculative activity on either tack. The process of discounting the possible industrial recession was carried so far last year that investors can well afford to wait and see how far trade in 1938 confirms or belies their fears.

Canada Converts.—Until the lists opened on Wednesday morning, the strength of the Funds was a favourable omen for the Canadian Conversion issue. This consists of £10,000,000 3½ per cent. stock, redeemable 1958-63, and issued at £98 10s. per cent. It replaces £7,658,472 Canada 3 per cent. stock (of which £2,054,041 is held by the sinking fund trustees) and £3,093,700 C.P.R. 3½ per cent. Land Bonds, both of which mature on July 1st, and are convertible into the new stock. The conversion lists remain open until next Wednesday, and cash applicants consequently enjoy a free option on the gilt-edged market for seven days. Some observers regard the price as favourable to the borrower. Events in Ontario and Alberta, and even the defaults of certain western cities, may have only an indirect connection with the credit of the Dominion authorities in London. But last year's serious drought has somewhat set back the fiscal improvement which Mr. Dunning has creditably achieved. And provincial opposition and constitutional problems stand in the way of his ambition to form a loan council for the Dominion.

Hungarian Bond Position.—Last June the League Loans Committee published an agreement for a "permanent settlement of debt payments" by the Hungarian Government. Under the scheme (which has been accepted by some 80 per cent. of holders in this country) there was

a permanent reduction in the service of the 7½ per cent. sterling bonds of 1924 to 4½ per cent. and an extension of the redemption period. The trustees for the bondholders, however, registered an immediate protest on the ground that the agreement infringed the general terms of the bond governing the debt, which alone they were able to recognise. Hitherto the Hungarian Government have provided 50 per cent. of the service in currency, and the remaining 50 per cent. has been deposited in the form of pengő cash and bills, to cover the untransferred portion, with the National Bank. These bills, it appears, have been renewed regularly, until recent months. It is now reported, however, that the Hungarian Government have requested the return of untransferred balances in respect of coupons which have been partly paid in the past. At present, therefore, an *impasse* has arisen, since the trustees control these substantial untransferred balances at the National Bank. The situation has become the more complex since the paying agents announce that the coupon due on February 1st may be presented for payment on the basis agreed by the League Loans Committee. The precise value of the untransferred funds, and the question of a permanent alteration of the terms of the bond, are no doubt receiving the attention of the trustees, whose advice to bondholders would be authoritative and valuable.

Building Societies in 1937.—Although the majority of building societies have yet to issue their reports for 1937, results published recently suggest a number of pointers to the general tendency of business last year. In the main, these accounts confirm the impression made by the housing statistics, and the admissions of authorities, such as Sir Harold Bellman, who has suggested that the housing boom is on the wane, and that house building at so high a rate as 300,000 a year cannot always be maintained. The expected has happened, and the amount of new business is, in most cases, somewhat below that of 1936. Thus the National Building Society, whose results to October 31st were reviewed in some detail by Mr W. F. Foster at last week's meeting, made advances of £4,496,900 in 1936-37, compared with £7,022,000 in 1935-36. Advances by Temperance Permanent are about 25 per cent. lower at £961,748. Comparison with a peak year, however, is not wholly reliable, and it seems that in the main 1937 has been a reasonably satisfactory year. The serious threat of N.D.C. in its original form was averted, and the Building Societies Association played a considerable part in its amendment. Following the internal dissensions of the movement a year ago, greater uniformity of view seems to have been achieved. The Building Society's Association, whose membership in June comprised 210 societies with assets of £475 millions, is effecting a revision and simplification of the earlier Code of Ethics and Procedure. A draft Code of Practice was approved by the Council of the Association last month, and will be discussed shortly. The outlook for business during the current year is somewhat obscure. There is no apparent reason to expect a resumption of the upward trend in advances, though the present decline in the demand for housing and rising building costs may be offset in part by a demand for better and not merely more houses. In this connection the formation of the National House-Builders' Registration Council is of interest, though there has not been time for the scheme to get into full working order.

Imperial Tobacco Record.—For some days before Tuesday's dividend announcement, the market had been revising its earlier bullishness. The dividend, as finally

expected, has been maintained at 25 per cent. tax free for the year to October last. From the form of the statement, it is possible to infer that profits have reached the new record level of £10,750,204, compared with the 1935-36 total of £10,636,316.

	Years to October 31st		
	1935	1936	1937
Profit	£10,268,210	£10,636,316	£10,750,204†

Paid %	24	25	25
General reserve	500,000	250,000	250,000
Carried forward	1,040,422	1,183,767	1,441,000
	† Computed.		

The annexed chart shows Imperial Tobacco profits and their distribution since 1929:—

IMPERIAL TOBACCO PROFITS—1929-37

Imperial Tobacco ordinary, at 7½, yield £3 9s. net and £4 12s. gross. This return appears to be broadly in keeping with their essentially stable character. The lesson of Imperial Tobacco distribution policy in recent years is that large, well-established companies do not change their dividend payments substantially, nor without good reason. Yet the market still cherishes the hope that a large capital bonus may be paid, some time or other, from reserves. The published reserves do not support this view. A sounder long-term investment argument for Imperial Tobacco ordinary is the relative stability of dividend payments during periods of recession, and their moderate increase during recovery.

Cable and Wireless Estimates.—The publication of the December traffic index number of Cable and Wireless—which, at 82.5, shows a satisfactory increase of 10 points on the November figure—makes possible approximate estimates of net profits for 1937. For the year as a whole, the average monthly traffic index was 78.9, compared with 74.4 for 1936. As an indication of the movement in total message receipts this figure is not wholly accurate, since new sources of revenue have been tapped since 1929, the basis-year of the index. As it stands, however, the figure suggests that message receipts, after provision for Government taxes, have increased by something like £275,000. Changes on the operating side are difficult to forecast, but it may be fair to assume that further operating economies have been roughly offset by the additional expense of handling a larger volume of traffic. Maintenance is an elastic item, which increased by

nearly £50,000 in 1936. In that year, again, the operating concern showed a somewhat unexpected fall in income from shares in subsidiary and traffic companies. In default of any indication of probable experience under either head in 1937, it may be safest to make no guess at all, and assume no change in the total. But a further saving in pensions and payments to retired staff—perhaps of the order of £30,000—may be expected.

So far, we have estimated for an increase of some £300,000 in the net receipts of the operating company. If it distributed its income fully to the four constituent cable companies, and they, in turn, maintained their income from other sources, that sum would be ultimately available for the Holding company. The latter might also benefit from a further increase in the Marconi Wireless Telegraph dividend in respect of 1937, and from increased receipts from its moiety in the equity of Cables Investment Trust. The sum of £35,000 under both these latter headings represents, perhaps, a maximum potential increase. Altogether, the net surplus of the Holding company would then be increased from £942,737 to, say, £1,277,000. After gross preference dividends of £922,000, the balance of £355,000 would represent earnings of 5½ per cent. gross on the ordinary. These calculations assume that group earnings are distributed on the same basis as in 1936. Last April, the directors suggested that a 4 per cent. ordinary dividend might be paid for the year—at a time when it seemed that earnings might run appreciably higher than they have run in fact. The traffics in recent months have not maintained their earlier rate of increase and on the whole it might be wise not to expect a higher dividend than the directors suggested last year. The market, indeed, has adjusted the price of the ordinary from a high level of 83½ in 1937 to a present quotation of 64½.

Platts' Revised Capital Scheme.—Of the making of capital schemes there is no end. Yet those responsible for their formulation are still occasionally unsuccessful in bringing sacrifice and recompense into line. This week has produced three schemes. The directors of Platt Brothers and Company (Holdings) introduced a scheme in August last year, re-affirmed their intention of proceeding with it in September, and then withdrew it. Now, a new scheme has been prepared. It goes some way towards meeting the objections of the second preference shareholders to the first scheme, but it is doubtful even now, if it goes far enough. Briefly, the second preference shareholders are to receive a cash payment in respect of net dividend arrears from March, 1930, to September, 1933—less than half the payments now due, which amount to approximately 10s. 6d. per share gross. Arrears from September, 1933, to date are to be cancelled. In compensation, new ordinary capital is to be created to the extent of 205,202 shares of 6s. 8d. It is proposed to distribute these shares to the second preference shareholders at the rate of one new ordinary for every three preference held. Finally, the preference shares will remain entitled to a 7 per cent. dividend, but of this rate only 5 per cent. will be cumulative. In terms of cash recompense the scheme is far from generous, for even if the payments are related to net arrears there remains a gap of about 2s. 6d. between the values of cash arrears and new ordinary share rights and the net worth of 7½ years' arrears. The clean-up of the balance sheet, which entails a reduction in the ordinary capital from £1,855,000 to £618,360 and appropriations from reserves, calls for a sum of £1,745,497. The ordinary shareholders, in effect, give up only one-tenth of their equity—a rather nominal sacrifice in relation to the permanent alienation of rights which is demanded of the second preference shareholders. Further consideration of the revised scheme appears to be called for.

Two Other Schemes.—The Greyhound Racing Association are endeavouring to persuade their second preference shareholders to release their participating rights.

At present these shares are entitled to an 8 per cent. cumulative dividend and to 25 per cent. of remaining profits. It is proposed, in substitution for these rights, to distribute five 1s. ordinary shares, by capitalising reserves, in respect of every three participating shares. It has been pointed out, however, that there already exists a general reserve of £110,000 which has been built up from profits. Before the question of compensation for future loss of rights is considered, therefore, it is suggested that the participating preference shares should be entitled to their equitable share in this reserve, whose accumulation reduced, *pro tanto*, their distribution during the years in which it was set aside. In other respects, however, the scheme appears fair. Of the proposals of Maple and Company it is possible to say little on the basis of information supplied to shareholders. Ultimate control has always rested with the holders of management shares, which carry special dividend rights. Briefly summarised, the scheme appears to contemplate an arrangement whereby the holders of these shares may transfer their existing equity rights into a species of prior charge, but with a minimum sum payable when profits fall below a given figure and full maintenance of their existing rights during years of prosperity. The directors, however, have not stated what this minimum sum would be, nor do they explore the accounting effect of the proposed changes upon the position of the public shareholders.

Rhokana Earnings.—Rhokana Corporation has announced this week that profits for the half-year to December 31st, after provision for debenture interest, depreciation and development, but before income tax, amount to £1,136,000. During the half-year the corporation's production of copper was 25,443 tons of blister and 16,241 tons of electrolytic. The total of 39,684 tons covered a period of five months of free production, and one month under renewed restriction at the rate of 105 per cent. of the standard quota. During the current half-year the investor must take two factors into account. The first is a reduction in output, assuming that production quotas are maintained at 105 per cent., of some 4,300 tons. Secondly, there is the question of price. During the six months to which these results refer the average price of standard copper was £48 10s., for rough purposes of calculation, compared with a present price of about £42 per ton. It is difficult to make any reliable forecast of the trend in prices during the remainder of the company's financial year, but an appreciable recovery has been recorded since the metal market depression in November. A conservative estimate, indeed, might assume that the average price for the whole year would lie between £42 10s. and £45 per ton for standard. On this basis, allowing for the premium on electro, for a higher return from the Mufulira holding, and for a full year's N.D.C., earnings for the ordinary capital might range between 82½ and 92½ per cent. Thus, the potential earnings would be little changed compared with 1936-37. The corresponding yield on Rhokana ordinary at their present price of £12 ranges between 7 and 8 per cent. If last year's dividend of 62½ per cent. were expected, the cash return would be no higher than 5½ per cent.—which is not high for a mining share, even of the status of Rhokana.

Other Company Results.—Owing largely to the publication of some 19 bank and discount company reports and of a considerable number of investment trust results for 1937, our usual analysis of profit and loss accounts appearing on page 207 covers roughly 60 companies in all. The number of industrial reports is, however, not unusually large. On page 182 we discuss the results under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of this week's company meetings will be found in this issue commencing on page 190. The chairmen's speeches at the

Martins Bank and *Barclays Bank* meetings are discussed on page 174. The trend of money rates in 1937 was surveyed by Sir Sigismund F. Mendl at the *National Discount* meeting. The year had been like its predecessors, for the course of events had reinforced the Treasury's determination to keep money easy. The resemblance between 1937 and 1936 and the importance of Treasury policy were also stressed in Mr Colin Campbell's address at the *Alexanders Discount* meeting. Addressing shareholders of *Rio de Janeiro Flour Mills and Granaries*, Mr S. C. Sheppard discussed the effect of the new Brazilian exchange decree, which allocates exchange according to the trade surpluses with each country and to the 3 per cent. tax on all remittances. The continued success of

"Cleveland Driscoll" and "Cleveland Guaranteed" motor spirit was emphasised by Mr E. A. Radford at the *Petroleum Storage and Finance* meeting. Sir Michael Naim informed the shareholders of *Michael Naim and Greenwich* that the apparent reduction in profits was due almost entirely to a fall in Dominion Income Tax relief received during 1937. Mr W. F. Foster disclosed that the *National Building Society's* average mortgage advance last year was only £622. Mr H. Eric Miller announced that *United Serdang (Sumatra) Rubber Plantations* had already sold 3¼ million lbs. of the 1937-38 crop at an average price of 10.1d. per lb. Mr Kenneth M. Carlisle reported to *Liebig's Extract of Meat* shareholders that better pastoral conditions had restored profits to the ranching subsidiaries.

THE STOCK EXCHANGES

London

SETTLING DAYS
TICKET ACCOUNT
FEBRUARY 8 FEBRUARY 10

Rather colourless conditions prevailed during the first stage of the three-week Account. In the absence of a clearly defined lead from New York and, for the first part of the week, of a French Government, business subsided. Recent speculative activity in the Kaffir markets was reduced, and the gains which gilt-edged had recorded during the preceding Account were not fully held. It has been left, indeed, to Brazilian issues to provide one of the few features.

The *Funds* gained initial support from the continued influx of refugee money from Paris on Monday, but lost their impetus on later days, when confidence returned to the Bourse. Business, however, remained very restricted. The movement affected home corporations' scrips and Dominion issues, though New Zealand stocks showed a slight initial recovery.

In the *foreign bond* market Brazilian issues were the feature, on buying which the market regarded as well-informed. No new developments in the debt situation, however, were reported. Further weakness in Far Eastern bonds developed, and Chinese issues lost part of the previous week's recovery.

No new business was reported in *home rails*, and after the publication of rather indifferent traffics, except for L.M.S., the stocks receded further. Selling also affected the junior preference issues. After a prolonged spell of dullness, Argentine rail stocks improved somewhat in mid-week.

Although the undertone in the *industrial market* was fairly satisfactory, conditions became dull after a fairly firm start on Monday and the volume of business remained small. There was little activity in iron and steel shares; the listlessness of the market prevented any response to good trade reports or to specific news concerning such companies as Babcock and Wilcox and Thornycroft. Motors made a mixed showing, with small price changes, and colliery shares were somewhat neglected. Electrical equipment issues remained fairly firm, but little business was passing. Although dealings in aircraft shares were no more numerous than in other sections, prices were well maintained, despite some profit-taking in mid-week.

Among textiles, Lancashire Cotton were well supported at first, while rayon

issues reacted on a reduction of American yarn prices. Brewery shares were undecided and uninteresting. Attention in the tobacco section turned chiefly to Imperial Tobacco; the unchanged dividend caused a small setback in the ordinary shares, which had been gradually lowered before the announcement. The miscellaneous group was featureless. Shipping shares received more attention on the improved freight outlook, but became easier later. Transatlantic issues were irregular, for good opening prices were not maintained as the week proceeded.

Oil shares were quiet and conditions proved unsatisfactory. Early in the week business was dominated by the Ecuadorian situation. The Continent kept aloof, while the Burmah Oil strike and further threats to Mexican Eagle disturbed the market.

The tone in the *rubber shares* market was thoroughly flat. On Monday prices remained firm, but there was little business. Prices sagged later, though the volume of dealings was insignificant. *Tea shares*, however, followed their uncertain start by a distinct improvement in mid-week.

Mining shares began well, but failed to maintain their first pace, moderate though it was. Among Kaffirs interest in developing mines was shown at first, but prices turned easier, though there was no selling pressure. Paris and the Cape showed no initiative. West Africans continued one of the brightest features of the market, public as well as professional support being evident. The comparative cheerfulness of Monday was not maintained, but Bibiani in particular made further headway. Rhodesian copper issues were neglected, and Rhokana made no response to the profits statement.

New York

Wall Street reassembled this week in the after-glow of a sizeable week-end rally, in which turnover rivalled that of a full working day—by recent standards—and stocks rose as much as \$3. The business talks and the imminence of a defence message fed the rise, but it was not maintained when the market reopened. The cloud which hovered over the market for the first part of the week was the Administration's policy towards the utilities and the holding companies. Operators held off the market, despite the rise in steel activity, according to *Iron Age*, from 27.8 to 29.8 of capacity. On Tuesday, conditions were unsettled by the Erie reorganisation scheme, which affected the whole rail list. Wet stocks were also affected by the fear of imminent price-cutting. In mid-week, a late rally attended the news that a settlement of the T.V.A.-Commonwealth and Southern dispute seemed hopeful. Utilities rose somewhat, but the further fall in the

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

13. British Exports 24 1/2 24 1/2 20 1/2 20 1/2

14. Exports were generally higher last month than in December, 1936, though a number of important items, such as automobiles, railway materials, cotton yarn and piece goods, wool tops, yarns and tissues, linen piece goods and leather goods, showed a decline.

15. Wages and Living Costs.—The accompanying chart shows the trend of wage rates and the cost of living since 1927 on the basis of the Ministry of Labour's indices. Although real wages remain substantially higher than in 1929, the diagram shows that the cost of living has tended to increase relatively faster than weekly wage rates during the past year.

16. COST OF LIVING AND WAGE RATES (1927 = 100)

17. Returns from industries and services for which information is available show that the increase in weekly wage rates during 1937 amounted to £780,000, against £492,900 in 1936 and £192,100 in 1935. The tendency of the cost of living to rise faster than wage rates is reflected in the increase in the number of working days lost through industrial disputes, from 1,830,000 in 1936 to 3,420,000 in the past year. Had not the increase in business activity and industrial profits enabled industry to concede higher wages, a more serious deterioration in industrial relations might well have occurred.

18. Co-operative Trading.—The eight divisional meetings of the Co-operative Wholesale Society were held on January 15th to consider the directors' report for the weeks ended October 9, 1937. The sales for the period

* Two hour session

Capital Issues

APART from Canada's conversion offer (discussed in a Note on page 176), the only public issue of the week is of *Associated Paper Mills*, who are issuing 150,000 5 per cent. cumulative £1 preference shares (at par) and 425,000 5s. ordinary shares (at 55 per cent. premium). This concern owns two subsidiaries, and is making the issue to acquire the capital of a third, with net assets of £144,376, for £204,110. The combined profits rose sharply in 1936-37. The preference shares are covered twice as to capital by combined net assets, after deducting the excess of £198,322 of book value of investments in subsidiaries over their net assets. The ordinary shares offer a high earnings yield, but will appeal chiefly to the specialist investor. A statement for information only has been published this week by *Second British Steamship Trust*.

PUBLIC OFFERS

Associated Paper Mills.—Issue of 150,000 5 per cent. cumulative first £1 preference shares at par, and 425,000 5s. ordinary shares at 7s. 9d. (Total issued capital is £161,660 5 per cent. debenture stock, 300,000 5 per cent. first preference, 331,993 8 per cent. non-cumulative 10s. preference shares, and 1,480,000 5s. ordinary shares.) Proceeds to acquire Cooke and Nuttall capital. Company's net assets £656,778 (investments, etc., in subsidiaries,

£333,675); profits, including dividends, after depreciation and interest, years to September 30: 1935, £29,682; 1936, £39,270; 1937, £113,622. Combined profits: 1935, £69,822; 1936, £80,007; 1937, £164,124. Cooke and Nuttall: net assets, £144,376; capital acquired for £182,110 and £22,000 adjustments.

CONVERSIONS AND REPAYMENTS

Dominion of Canada.—Offer, in conversion, of £10,000,000 3½ per cent. stock at 98½, to holders of £7,658,472 3 per cent. inscribed stock, etc., and £3,093,700 C.P.R. 3½ per cent. land grant stock, etc. (both due July, 1938). New stock redeemable July, 1963, or from 1958 on notice. Holders converting to receive £1 10s. cash per £100. Estimated population, 11,120,000. Funded debt and bills \$3,275,544,000; bonds guaranteed, \$1,003,336,000. Total exports 1936-37, \$1,074,244,000; imports, \$671,876,000. Cash Lists closed at 3.30 p.m. January 19th. Conversion Lists will close at 3.30 p.m. on January 26th.

STOCK EXCHANGE INTRODUCTIONS

Second British Steamship Trust, Ltd.—Particulars of issue of £250,000 4 per cent. debenture stock, redeemable at par February, 1968, or from August, 1962, on notice. Ranks with existing £200,000 4½ per cent. and £300,000 3½ per cent. debenture stocks. Stock being issued for cash at 101.

PRIVATE PLACING

Star Brewery, Eastbourne.—This company has placed privately 10,000 5 per cent. cumulative £1 preference shares. This raises total to £150,000, the authorised amount.

ISSUES TO SHAREHOLDERS ONLY

Steel Ceilings.—Issue of 775,000 2s. shares at par (two new shares for five held).

Associated British Picture Corporation.—Issue of 1,500,000 5s. ordinary shares at 14s. Proceeds to pay off advances and for general purposes.

SHORTER COMMENTS

Company Results of the Week.—Net earnings of LAW DEBENTURE CORPORATION are a little lower at £61,045, but the balance-sheet figure for investments (which are chiefly in bonds, etc.) is exceeded by the valuation at the end of 1937. Investment trusts, generally, continue to show increased profits but, in the main, market values are below the book cost of investments. Good advances have been made, for instance, by GENERAL CONSOLIDATED, RIVER PLATE AND GENERAL and LONDON STOCKHOLDERS, the latter company now returning to the dividend list. The full report of LEYLAND MOTORS shows that the depreciation allocation was £7,000 higher at £78,055, while tax and contingencies provision was as high as £224,075, against £119,677. The balance sheet does not reveal any notable changes, though expanding trade is illustrated by a substantial rise in debtors. Continued improvement is shown by rubber companies. Among the larger companies, the SEDENAK dividend is doubled at 12 per cent. Extension of the associated companies' interests has resulted in a rise from £88,964 to £109,566 in NATIONAL OMNIBUS AND TRANSPORT COMPANY net

(Continued on page 200)

Industry and Trade

Wholesale Price Movement.—In Great Britain *The Economist* complete index of wholesale prices has now fallen back slightly to the level of three weeks ago. The past fortnight witnessed a drop of 1.1 per cent. in the sterling prices of primary products. American prices are firmer. Primary products have risen by 0.7 per cent. and the complete Irving Fisher index number by 0.8 per cent.

* These figures relate to January 12th. † Monthly averages.

The index numbers for the groups composing the index are given below, with comparative figures for a fortnight ago, a year ago and also for September 18, 1931.

The Economist INDEX (1927 = 100)

	Sept. 18, 1931	Jan. 13, 1937	Jan. 5, 1938	Jan. 19, 1938
Cereals and meat...	64.5	88.2	93.1	90.9
Other foods...	62.2	65.2	63.7	62.4
Textiles...	43.7	69.4	58.8	58.4
Minerals...	67.4	98.0	95.6	95.8
Miscellaneous...	65.8	82.3	79.6	79.8
Complete index	60.4	80.7	77.8	77.2
1913 = 100	83.1	111.0	107.1	106.2
1924 = 100	52.2	69.7	67.3	66.7

Food prices are mostly lower than a fortnight ago. Textiles moved irregularly. Metal prices were slightly firmer. In the miscellaneous group, there was a small recovery in the price of rubber.

Overseas Trade by Commodities.—As a footnote to our leading article on overseas trade (see page 155), we give below an analysis of quantitative changes in the imports and exports of important commodities between December, 1935, 1936 and 1937:—

RETAINED IMPORTS—MONTH OF DECEMBER

Item and Measure	1935	1936	1937
Wheat.....	9,107	8,886	7,986
Beef and veal.....	898	1,011	1,135
Mutton and lamb.....	587	584	603
Sugar (unrefined).....	2,816	3,857	4,338
Iron ore and scrap.....	423	544	881
Raw cotton.....	2,130	1,704	2,018
Sheep and lambs wool.....	567	658	449
Flax, hemp and jute.....	44,101	46,504	30,595
Crude petroleum.....	33,820	35,558	31,319
Hides, wet and dry.....	159	179	190
Wood pulp.....	235	206	178
Rubber.....	108	110	239
Unwrought copper.....	24,738	26,842	28,031
Pig lead.....	17,395	35,951	46,328
Tin: Ore and concentrates.....	5,665	5,403	4,850
Blocks, ingots, slabs and bars.....	57	292	797
Iron and steel manufactures.....	113	95	288
Machinery.....	5,615	9,991	11,386

Retained imports show no uniform trend. Purchases abroad of iron and steel and machinery, and of a number of raw materials, such as rubber, cotton, unwrought copper and pig lead, were substantially greater in December, 1937, than a year earlier. On the other hand, wheat, wool, flax, hemp and jute, crude oil and wood pulp were imported in smaller quantities than in December, 1936.

BRITISH EXPORTS—MONTH OF DECEMBER

Item and Measure	1935	1936	1937
Coal.....	2,867	2,970	3,088
Iron and steel scrap.....	9,482	15,457	7,652
Pig-iron and ferro-alloys.....	10,162	11,032	10,895
Railway materials.....	11,792	25,077	23,220
Total, iron and steel manufactures.....	188,417	204,829	196,807
Textile machinery.....	4,641	4,783	8,118
Cotton piece-goods.....	30,320	32,257	40,796
Cotton yarns.....	11,848	12,292	11,018
Cotton piece-goods.....	147,629	170,084	141,038
Wool tops.....	4,249	5,214	2,356
Woolen yarns.....	2,814	2,644	1,931
Woolen tissues.....	5,407	6,159	5,990
Woolen tissues.....	3,282	3,802	3,438
Linen piece-goods.....	5,582	8,240	5,561
Leather boots and shoes.....	26,756	28,910	27,063
Leather.....	21,110	26,036	15,619
Paper and cardboard.....	320,328	371,795	381,590
Locomotives and parts.....	2,796	1,406	3,221
Motor vehicles and chassis.....	6,542	10,174	9,697

Exports were generally higher last month than in December, 1936, though a number of important items, such as automobiles, railway materials, cotton yarn and piece goods, wool tops, yarns and tissues, linen piece goods and leather goods, showed a decline.

Wages and Living Costs.—The accompanying chart shows the trend of wage rates and the cost of living since 1927 on the basis of the Ministry of Labour's indices. Although real wages remain substantially higher than in 1929, the diagram shows that the cost of living has tended to increase relatively faster than weekly wage rates during the past year.

COST OF LIVING AND WAGE RATES (1927 = 100)

Returns from industries and services for which information is available show that the increase in weekly wage rates during 1937 amounted to £780,000, against £492,900 in 1936 and £192,100 in 1935. The tendency of the cost of living to rise faster than wage rates is reflected in the increase in the number of working days lost through industrial disputes, from 1,830,000 in 1936 to 3,420,000 in the past year. Had not the increase in business activity and industrial profits enabled industry to concede higher wages, a more serious deterioration in industrial relations might well have occurred.

Co-operative Trading.—The eight divisional meetings of the Co-operative Wholesale Society were held on January 15th to consider the directors' report for the weeks ended October 9, 1937. The sales for the period

were £85,969,307, an increase of £9,142,659, or nearly 12 per cent. Of these the Society's own productions accounted for £30,395,406. The turnover of the grocery department was £64,634,197, or almost three-fourths of the total business. The export trade was £371,476, an increase of £152,804 compared with the corresponding 39 weeks of 1936. Higher prices were reflected in the 8 per cent. advance in margarine sales and the 7½ per cent. increase in the output of the three butter factories. In view of the very great difficulty in securing an economic return on the surplus funds invested with the C.W.S. by the distributive societies the directors have recommended a reduction of the interest on share capital from 4½ per cent. to 3¼ per cent., to become operative on April 9th. Until January 12, 1935, the rate of interest was 5 per cent.

* * *

Wages in the Building Industry.—On February 1st the standard wage of craftsmen in the building trades will be advanced by ½d. per hour, in consequence of the recent increase in the cost of living. In 1924 it was agreed that when the Ministry of Labour's cost of living index (July, 1914=100) stood at 178, the standard wage for craftsmen should be 1s. 8d. per hour. For every variation of 6½ points in the annual average of the cost of living the craftsmen's standard wage was to vary by ½d. per hour. It was further agreed that the labourers' standard wage should not be less than 75 per cent. of the craftsmen's. These standard rates are not of universal application, for the country is divided into districts, graded in accordance with local conditions. In the lowest grade the craftsmen's wage is 4d. per hour less than the standard rate, while in London it is 1½d. per hour above the standard. Alterations in the standard rates (per hour) during the currency of the agreement have been as follows:—

Crafts- men		Labour- ers		Crafts- men		Labour- ers	
Aug. 1, 1924	1s. 8d.	1s. 3d.		Feb. 1, 1933	1s. 5½d.	1s. 1½d.	
Feb. 1, 1928	1s. 7½d.	1s. 2½d.		July 1, 1935	1s. 6d.	1s. 1½d.	
Feb. 1, 1930	1s. 7d.	1s. 2½d.		Jan. 1, 1936	1s. 6½d.	1s. 2d.	
Feb. 1, 1931	1s. 6½d.	1s. 2d.		Feb. 1, 1937	1s. 7d.	1s. 2½d.	
Feb. 1, 1932	1s. 6d.	1s. 1½d.		Feb. 1, 1938	1s. 7½d.	1s. 2½d.	

(Source: Building Industries National Council)

In April, 1935, a reduction of the datum cost-of-living figure from 178 to 165 raised the craftsmen's wage by 1d. per hour. The three-year respite from re-grading, which was simultaneously agreed on, expires in May, 1938. There is no reason to suppose, however, that the long period of peace in the building industry will be interrupted by any untoward incident.

* * *

Rise in Coal-Mining Profits.—The accompanying chart reveals the remarkable change in the profit-earning capacity of the coal-mining industry during the past two years.

COSTS AND PROCEEDS PER TON AND OUTPUT PER MAN-SHIFT

After many years of losses or slender profits, the gap between costs and proceeds per ton, as ascertained in 1938.

quarterly, has widened considerably during the past two years, although production failed to recover to the pre-depression level. To some extent, the improvement is due to the increased efficiency of the industry, reflected, for example, in the steady rise in the output per man-shift during recent years. But the increase in profits per ton during the past two years has been achieved, despite a sharp rise in costs as a result of the virtual elimination of price-cutting in the industry. Both wage-earners and shareholders have thus been able to draw bigger incomes, though exports, where competition remains keen, have not risen as fast as those of other countries, especially Germany.

* * *

Lancashire and India.—Exports of British cotton piece-goods to British India in 1937 were 355.8 million square yards, valued at £5.7 millions. In 1929, some 1,374 million square yards, valued at £26.1 millions, were exported, and in 1933, during the world depression, 485.7 million square yards to a value of £6.7 millions. This continued decline of manufactured exports to a major market is causing grave concern in Lancashire. Simultaneously, exports of Indian-made cotton goods to the Dominions and Colonies have advanced relative to British exports; and the failure of the commercial negotiations between India and the United Kingdom during 1937 lends point to the allegation of British exporters that, while the agreements of 1932 facilitated the sale of Indian cottons throughout the Empire, no commensurate reciprocal concessions have been accorded by India to Lancashire. The inclination of the Lancashire cotton interests is to press for discrimination by quotas and other means against Indian cotton goods in the colonies and dependencies. Such reprisals would be inexpedient and regrettable in every way. But some agreed basis of co-operation between Lancashire and British India is none the less imperative.

* * *

Home Margarine Production.—An estimate of the output of margarine in the United Kingdom is published monthly in the Imperial Economic Committee's *Weekly Dairy Produce Notes*. The figures, which are published in the form of weekly average invoiced deliveries, are believed to cover practically all the margarine produced in this country and are now available on a comparable basis for a period of three years:—

Period ended:—	Weekly Average		
	1935 Tons	1936 Tons	1937 Tons
January 30th	2,784	3,009	2,815
February 27th	3,406	3,580	3,224
April 2nd	3,502	3,590	3,528
May 1st	3,340	3,456	3,387
May 29th	3,163	3,430	3,349
July 3rd	3,133	3,335	3,345
July 31st	3,130	3,415	3,431
August 28th	3,140	3,264	3,245
October 2nd	3,536	3,459	3,577
October 30th	3,772	3,477	3,798
November 27th	3,624	3,465	4,285
December 31st	3,793	3,779	4,165
Annual average	3,370	3,458	3,527

Total production rose by 2 per cent., from 179,800 tons in 1936 to 183,400 tons in 1937, though the improvement was not evenly spread throughout the year. Deliveries in the first five months of last year actually fell below the previous year's corresponding figures, but during the last seven months (excluding August) production exceeded the 1936 level. These figures support the view that the demand for butter is highly elastic. During the past three years, when butter prices have been gradually advancing, the consumption of butter has been stationary at around 25 lb. per head; whereas the demand for margarine, the price of which has shown little alteration, has increased. The sharp advance in butter prices last autumn was followed by an appreciable expansion in margarine output. In short, when butter prices rise the consumer looks for a substitute—and the margarine manufacturer reaps the benefit.

London's Meat Supplies.—The Central Markets, Smithfield, form the largest meat market in the world. Covering an area of about ten acres, and handling produce to the value of £35 millions annually, the Central Markets serve the teeming millions of Greater London. The volume of produce passing through Smithfield, after declining by 1.6 per cent. in 1936, showed a slight recovery last year. But supplies remained below the 1935 level, as the following figures show:—

	VOLUME OF SUPPLIES (TONS)		
	1935	1936	1937
Beef and veal	248,269	248,738	248,820
Mutton and lamb	142,846	134,927	137,386
Pork and bacon	50,273	50,088	45,838
Poultry and game	23,312	23,169	24,694
Miscellaneous	12,077	12,320	13,179
Total	476,777	469,242	469,917

The most striking feature brought out by these figures is the stability of London's beef consumption. Mutton and lamb, after declining in popularity, were in greater demand last year, but pork and bacon showed a sharp decline. In the miscellaneous category, the consumption of rabbits rose from 7,724 to 8,764 tons.

* * *

Dutch Tin Amalgamation.—The chief interest in the tin-mining industry of the Netherlands East Indies is that of the East Indies Government. The largest concern, at Banka, is a Government enterprise. The other com-

panies, at Billiton and Singkep, are controlled by a limited company in which the Government holds five-eighths of the shares. The remaining three-eighths are held by the Billiton Maatschappij. A Bill was introduced into the Dutch Parliament to end the competition between these separate undertakings by amalgamating them. It was proposed to organise the new company on similar lines to Billiton and Singkep, with the Government holding 90 per cent. of the shares and the Billiton Maatschappij the remainder. Early in 1937, however, the People's Council of the Netherlands East Indies, by 43 votes to 7, advised against the scheme. They objected to the transfer of the control of the Banka concern from the East Indies to Europe—although the management of the tin enterprises of Malaya, Bolivia, Siam and the Belgian Congo has been similarly shifted, largely because the tin market is in Europe, and the international restriction schemes call for continuous contact between producers. In addition, the People's Council feared that the Billiton Maatschappij, provisionally given management of the joint undertaking for ten years, would have too much influence, despite the safeguard that the management would be controlled by a board on which the Government would have a majority. Nevertheless, the Council admitted that the Billiton concern was better run than the Government enterprise at Banka, and their only alternative to the amalgamation was to suggest the reorganisation of Banka. The Dutch Parliament will now have to decide. If the amalgamation is effected, the new company producing nearly one-fifth of the world output will be the largest single producer—and, possibly, the lowest cost producer—in the world.

INDUSTRIAL REPORTS

STEEL consumption remains at a high level and output, which is tending to expand, is easily absorbed. The relation between demand and supply is steadily improving and there is less of a scramble for materials. As a result of the slackening of demand in other countries, the pressure on prices abroad is now tending to increase, reflected in the Continental Cartel's decision to abolish the premium on early delivery. Despite the understanding between the Cartel and the leading United States producers, any further fall in demand abroad may render difficult the maintenance of current quotations. Domestic consumption of coal remains heavy, but export business failed to improve. Rather surprisingly, the December returns of the value of building plans passed by 140 local authorities showed an increase of 12½ per cent. over the corresponding month a year earlier. The improvement was due to an increase in plans passed for dwelling houses, all other categories of construction showing a decline. Some cotton spinners and manufacturers have received more inquiries, and useful orders have been booked, but there have been no signs of any general buying movement.

Coal

Sheffield.—On inland account the demand is active, and collieries are working full time. Industrial requirements are of a nature to leave little spare fuel on offer. Gas coal requirements are very heavy, and house coal moves freely. Small coal is in demand for electricity works and boiler purposes. Coke business is on a big scale. Blast furnace quality is quoted 30s. per ton on rail at ovens for inland, while large selected patent oven coke is 30s. on rail at ovens in the Rotherham area and about 34s. at Sheffield.

Newcastle-on-Tyne.—North-East collieries, particularly those situated in Durham, are meeting a strong demand from home consumers for prompt supplies, but foreign demand shows no marked extension, and is limited to a few odd cargoes. The Northumberland steam coal section is steady, prices being unchanged. In Durham an improved forward inquiry from foreign consumers would be appreciated, though the position remains firm. Patent oven coke is a quiet market; domestic consumers now appear

to be able to obtain full supplies of this fuel without any difficulty.

*

Glasgow.—Market conditions are not greatly changed. A strong inland demand remains the outstanding feature, industrial, public utility and domestic requirements being at peak levels. On occasion producers find difficulty in satisfying consumers' needs, and in the case of house coal, delivery delays of about a fortnight have been mentioned. In these circumstances there is little surplus seeking an outlet in the shipping market, and it is considered a relief that foreign inquiry remains limited. That must, however, be regarded as a short-term factor, for while home industrial needs should be on a brisk scale for some considerable time, inland consumption will tend to fall off with the advance of the season, and the lack of foreign business may then be of greater significance in the colliery position.

*

Cardiff.—Spot prices for all classes of coal continue very firm on the Cardiff market. Production is being well maintained, but the tonnage position is not quite as good as it was a few weeks ago, and shipments in the foreign and coastwise trades have declined. In the week ended January 16th, shipments totalled 375,600 tons, compared with 425,284 tons in the corresponding week of 1937, and for the first fortnight of the year they show a decrease of about 25,000 tons.

No new contracts have been reported, but those to which the collieries are already committed are absorbing practically the whole of their current output, and stocks are very small. Arrangements have been made with the Portuguese authorities for the supply

of about 200,000 tons of pitwood for delivery during 1938, and representations have been made to the Portuguese Government against the recent diversion of coal orders from South Wales to Germany. The coke market is as strong as ever, while for patent fuel demand is restricted, with prices steady.

COAL OUTPUT AND EMPLOYMENT

District	Week ended January 1 1938		Week ended January 8 1938	
	Output	Wage-earners	Output	Wage-earners
Northumberland	261.2	45.4	261.3	45.4
Durham	598.1	117.2	662.7	117.4
Yorkshire	502.6	142.0	964.1	142.3
Lancs, Cheshire and N. Wales	248.0	69.2	334.3	69.2
Derby, Nottingham & Leicester	467.0	98.2	766.3	97.9
Staffs, Worcs, Salop & Warwick	243.0	67.5	426.2	67.5
South Wales and Monmouths	471.3	136.4	820.2	136.7
Other English districts*	75.3	22.5	123.9	22.5
Scotland	594.2	91.4	428.1	91.3
Total	3,430.7	789.8	4,790.1	790.2

* Including Cumberland, Westmorland, Gloucester, Somerset and Kent.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that current production may be readily consumed. In one or two departments conditions are slightly easier, giving the makers an opportunity of reducing their arrears of deliveries. In most departments of the steel trade, however, manufacturers still find it necessary to ration deliveries to consumers on the basis of their requirements in 1936.

In the pig iron market, however, there is now no stringency in any branch. This is due chiefly to increased home production, for purchases of foreign iron are now seldom reported. The consuming trades seem well employed and lately fresh sales have been made for delivery during the first half of the year.

There has been a considerable improvement in the semi-finished steel market. Most re-rollers are now receiving adequate supplies, partly as a result of the rising home production and partly owing to larger imports of Continental material. Most of the consuming works using this class of steel are now operating at capacity.

New domestic business in finished steel has become more active, although there is little inclination to enter into far forward commitments. Export demand is somewhat irregular, but lately there has been an increase in the volume of inquiry for several overseas markets.

Sheffield.—Business in the iron and steel market is at a good level, but consumers show no great eagerness. The majority are well covered by contract over the first quarter for forge and foundry iron. Supplies appear to be coming nearer to requirements, and delivery delays are much less pronounced. Business in East and West Coast hematite is easier to transact, and bar iron demand is more amply met. There is no easing of the pressure for basic and acid steel billets. Wire rod demand is at a high level, and require-

ments of structural steel cannot be met in full. There is a steady demand for iron and steel scrap. Supplies of most qualities are adequate, and imported material is neglected. Business in high-speed steel scrap has declined, and the price has fallen to £60-£80 per ton, according to specification. Basic steel for melting is freely offered at the controlled price.

Middlesbrough.—Supplies of heavy melting steel scrap are being readily absorbed at the official list price. The relation between demand and supply of pig iron is now more satisfactory. Larger quantities of foundry iron from the Midlands have been available recently for users in this district. Continental iron is still offered, but there has been a lull in sales owing to the loyalty rebate which is offered to consumers of British iron. East Coast hematite is well sold ahead, but makers would welcome increased delivery instructions against contracts. Small quantities are becoming available for export. Prices remain unchanged.

Steelmakers are exceptionally busy on the production of both semi-finished and finished steel. Sheets are in good demand at home, but the export trade is almost at a standstill.

Glasgow.—Output is passing rapidly into the hands of consumers, but so far little impression has been made on arrears of orders on makers' books. Many of the re-rolling industries are now receiving adequate supplies of semis, and generally plants are running near capacity. Demand for finished steel is good. New business has been fairly plentiful for manufacturing concerns in Glasgow and district during the past week and several important contracts have been received, including a considerable tonnage of sheet metal work. A number of shipbuilding tenders are under consideration, and it is confidently expected that further contracts will shortly be placed at several Clyde yards.

Cardiff.—The heavy branches of the iron and steel industry are very active. But quieter conditions are ruling in the tinplate section, and during the week ended January 8th output was at only about 60 per cent. of capacity, against an average weekly output last year at over 73 per cent. of capacity. The output of the members of the Pool last year was 955,034 tons, the largest in the records of the industry, and 130,000 tons greater than in 1936. In spite of the quieter conditions, however, it has been decided to maintain the minimum price of 22s. 6d. per box f.o.b. Quotations for sheets and steel bars are also unchanged. Shipments of tin-plates at Swansea last week totalled 5,716 tons, compared with 8,532 tons the previous week and 3,685 tons in the corresponding week last year.

Textiles

Cotton (Manchester).—A fairly steady tone has prevailed in the raw cotton markets, partly because substantial amounts are being "sterilised" in the United States under the loan scheme.

The yarn market has been steady. An increased turnover has taken place in American yarns which are not under any price agreement. No relief is in sight for producers of medium ring beams and curtailment of output continues. More inquiry has been met with in Egyptian qualities.

The larger inquiry in the cloth section has been maintained. The most active foreign outlet has been India and encouraging orders have again been booked in dhooties, light whites and printed and dyed cloths. Some manufacturers have obtained a little relief and the stoppage of further looms has been prevented. Only occasional transactions have been mentioned for Egypt and the Near East. Any improvement in West African trade is dependent upon a rise in the price of cocoa. Irregular operations have taken place for South America and the Continent, without individual contracts being at all important. A little more activity has shown itself in standard makes for the home trade.

RAW COTTON delivered to Spinners (Million bales)

Variety	Week ended		Total Deliveries	
	Jan. 7, 1938	Jan. 14, 1938	Aug. 1, 1936-1937	Aug. 1, 1937-1938
American	30.0	33.3	562	612.9
Brazilian	4.3	4.6	168	158.9
Peruvian, etc.	2.3	2.7	75	65.8
Egyptian	9.4	12.0	170	164.1

East Indian	5.0	7.6	150	129.9
Other countries	2.5	4.2	99	95.6
Total	56.3	67.6	1,325	1,307.2

THE COMMODITY MARKETS

The rising tendency of the prices of primary products during the first fortnight of this month, accompanied by a recrudescence of speculative activity, gave way to a slight reaction this week, both in this country and in the United States.

The easier tendency on Wall Street, the political crisis in France, and the publication of the copper statistics for December, for example, led to profit-taking in non-ferrous metals. Similarly, the prices of rubber and American raw cotton were marked down a little. On the rubber market interest is now focused on the outcome of next week's meeting of the International Rubber Regulation Committee. Exceptionally, the prices realised at the London wool auctions showed an increase of between 5 and 10 per cent. over those obtained at the close of the preceding sales, partly owing to keen competition of buyers from the U.S.S.R. The market in wheat was steady, but cocoa prices underwent wide fluctuations.

The easier tendency of prices in the United States is reflected in the decline of Moody's daily index of staple commodities, from 152.1 on January 12th to 150.8 on January 19th. A month ago the index stood at 148.2, and a year earlier at 207.3

Metals

Copper.—The rather disappointing nature of the December statistics and the reactionary tendency on American markets caused a setback, the standard cash quotation showing a loss of £1 16s. 3d. per ton on the week at the close on Wednesday. But, while demand was smaller, offerings were also curtailed, and there was no serious loss in confidence. World copper stocks rose from 413,840 short tons on November 30th to 471,750 short tons on December 31st, the bulk of the increase being due to the fall in United States apparent consumption from 33,890 to 18,100 short tons—the lowest since the slump. But the latter figure should not be taken as a true indication of the country's genuine requirements.

Despite the recent decline in American demand, total consumption in the United States during 1937 amounted to 808,272 short tons, against 769,250 short tons in 1936. Meanwhile, outside the United States, consumption fell from 120,690 to 103,860 short tons between November and December. This, however, is a purely seasonal movement, the decline actually being smaller than in the previous year when the trend of demand was strongly upwards. In short, the December statistics are less unsatisfactory than might at first appear, and the outlook may still be regarded as favourable. Sharp advances, such as that recently witnessed, will, however, do the market no good.

Tin.—Prices fluctuated within fairly wide limits and closed on Wednesday at the week's lowest—£6 15s. down on the week. After the stoppage of American buying, there was little demand. Although the statistical position can be regarded as satisfactory, the immediate outlook is almost entirely dependent on the trend of demand in the United States.

Lead and Spelter.—The market showed no new features, but both metals declined in sympathy with copper and tin. Lead lost £1 10s., and spelter 16s. 3d. per ton, compared with a week earlier. Meanwhile, reports from consuming centres, both in this country and on the Continent, speak of increased activity. Demand may therefore show an improvement shortly; but since production continues to increase it is doubtful whether prices will show a sustained improvement.

SALES OF BRITISH CEREALS

	Week ended	
	Jan. 8, 1938	Jan. 15, 1938
Wheat	181,016 cwt.	219,664 cwt.
Barley	115,779 cwt.	177,855 cwt.
Oats	26,822 cwt.	59,724 cwt.

Demand has slackened, but prices are about unchanged on the week. Meanwhile, the official estimate of the Australian crop has been reduced from 163,000,000 to 161,781,000 bushels, against 150,500,000 bushels actually harvested last season; but a warning is added that an upward revision may have to be made at a later date. Broom-hall states that heavy shipments of Australian wheat are expected in January and February.

The flour market has been exceptionally quiet. Bakers are taking delivery slowly on their recent forward purchases and spot demand remains small. Demand for maize has contracted and, as there has been some pressure to sell, prices have eased. Imported feeding barley has been an irregular market.

Other Foods

Provisions and Meat.—Demand for bacon on the London Provision Exchange was active and the market had a firmer tone. Butter was in quiet request with Colonial grades rather cheaper. New Zealand and Australian cheese, on the other hand, were firm on short supplies, other sorts being a steady market. The seasonal decline in egg prices was continued, although there was little change in new laid. Meanwhile, at Smithfield Market, business was on quiet lines; prices were about unchanged, except for beef, which scored a slight recovery.

Colonial Produce.—The feature of the week was the sharp fluctuations in cocoa prices. A rumour that some farmers on the Gold Coast were being forced at last to sell their crops owing to a shortage of cash caused a sharp break in cocoa prices in London on Tuesday. The denial of the rumour caused an equally sharp recovery on Wednesday, though the New York market refused to follow London's lead. It is now reported that delegates from the Nigerian cocoa-producing industry have pledged their support to the Gold Coast and Ashanti chiefs and cocoa producers to fight the cocoa-buying pool. The end of the dispute is apparently not yet in sight. Meanwhile, the London spot market in coffee has been quiet; raw sugar was also quiet and slightly easier in price. At the tea auctions, however, Indian sorts were firm on a strong demand while Ceylon descriptions were generally dearer.

Fruit.—Business at Covent Garden continued steady with prices generally well maintained, states *The Fruitgrower's* report. Demand for apples remained good and, despite heavy imports, prices showed little alteration. Californian pears were a consistent trade and there was a steady inquiry for hothouse grapes at firm prices. South African plums, peaches and nectarines met a better demand. Supplies of oranges were moderate for the time of year, but demand was more active. Business in grape fruit improved and lemons were steady.

Milk.—The appended statistics relative to the operation of the Milk

	Dec. 1936	Oct. 1937	Nov. 1937	Dec. 1937
Prices (per gall.)	d.	d.	d.	d.
Liquid	17	17	18	20
Av. manufacturing	6.254	7.237	7.525	7.673

Liquid	47.30	52.25	50.38	51.26
Manufacturing	16.11	15.32	12.08	12.85
Total contract	63.41	67.57	62.46	64.11
Used by farmhouse cheesemakers	0.43	2.08	0.94	0.66

Marketing Scheme in recent months is issued by the Milk Marketing Board.

Vegetables.—According to *The Fruitgrower*, trade in vegetables at Covent Garden has been active at fair prices. Increased supplies of forced asparagus caused prices to decline slightly, but house-grown beans remained firm. Some green peas from Madeira and English frame lettuce have been on the market, while there was also a moderate showing of forced marrows and new potatoes. Sprouts, savoy and cauliflowers did well, but cabbage was a poor trade. Celery sold well and onions were firmer, despite abundant supplies. Parsnips were in rather short supply, carrots were easier and turnips were in dull demand. Meanwhile business in old potatoes at London markets showed no new features and prices were unaltered.

Miscellaneous Commodities

Oilseeds and Oils.—Markets are steady with a fair business passing. The scarcity of linseed on spot and close at hand is pronounced, and seed recently shipped is in good demand. The new Plate crop is reaching the seaboard in larger volume, and shipments are improving. The quantity shipped last week was 55,200 tons or 11,000 tons more than in the preceding week, but India was represented by only 300 tons. The quantity now on passage to Europe is 131,000 tons, including 3,300 tons from India, compared with 177,500 tons at the corresponding date last year. Some part of this may be expected in this country in three or four weeks' time. Prices have tended to fluctuate, and opened this week on an easier note, though intrinsically the position is sound, for world supplies are short, and the United States is a probable large importer in coming months.

Furs.—The improved tendency noted at the opening of the silver fox auctions in London last week has not since been maintained. French manufacturers—normally the largest purchasers of silver foxes—became very reserved on account of the uncertain future of the franc, and the bulk of the offerings was consequently withdrawn. This prevented prices from losing much ground.

Meanwhile, the results of a census which have first come to hand reveal that there are now some 132,000 silver foxes on Swedish farms. For Norway the latest figure relates to September, 1936, when there were about 390,000 silver foxes in that country; the number is believed to have shown little change since that date. Breeding of silver foxes was not begun in Scandinavia until shortly before the war, and by 1929 the number of animals was still below 40,000. Since then, progress has been rapid and Scandinavian silver foxes are now more numerous, though still lower in quality, than Canadian at the London auctions.

Rubber.—Price fluctuations have been narrow and the market has been rather inactive. Both buyers and sellers have tended to refrain from operating until after next Tuesday's meeting of the International Committee.

SATISFACTORY ABSENCE OF WIDE FLUCTUATIONS

MR EDWIN FISHER'S REVIEW

The forty-third ordinary general meeting of the shareholders of Barclays Bank, Limited, was held, on the 20th instant, at Southern House, Cannon Street, London, E.C.

Mr Edwin Fisher (chairman of the bank) presided.

The Chairman, who was received with applause, said:—My Lords, Ladies and Gentlemen, I will call upon the secretary to read the notice of meeting and the certificate of the auditors which appears at the foot of the balance sheet that has been submitted to you.

The Secretary (Mr W. N. Seeley) then read the formal notice convening the meeting and the report of Messrs Kemp, Chatteris, Nichols, Sendell and Company, and Messrs Price, Waterhouse and Company, the auditors.

The Chairman:—My Lords, Ladies and Gentlemen,—Is it your pleasure that the report and accounts submitted be taken as read? (Agreed.)

Before dealing with the ordinary business of the meeting, I would refer to the great loss which we have suffered through the death of the Right Hon. the Earl Peel, P.C., G.C.S.I., G.B.E., whose association with the bank dates from the time of the amalgamation with the London Provincial and South Western Bank, of which he was a director. By his death the country has lost a great public servant, and we have been deprived of a colleague whose exceptional qualities and wide experience of affairs were most valuable to us.

RETIREMENT OF DIRECTORS

I also have to report that the Right Hon. the Viscount Wimborne, P.C., whose retirement from the board falls due by rotation this year, has intimated that, for reasons of health, he does not wish to seek re-election. Lord Wimborne has been a director of the bank since the year 1921, and I should like, on behalf of the board and of the shareholders, to take this opportunity of thanking him for his services and of wishing him complete restoration to health.

Mr Charles Henry Dent, another director who retires by rotation, has also decided that, on the ground of advancing years, he will not seek re-election. He has been associated with the bank for nearly half a century and for the last 24 years he has been a valued member of our board. For many years he was a local director at Darlington and more recently has held a similar position at Exeter. We desire to place on record our appreciation of his long service. Happily for us, he is retaining his local directorship at Exeter, so that we shall continue to have the benefit of his advice in relation to our business in that district.

It is with a deep sense of regret that we report the death of our staff manager, Mr Claude Douglas Carruthers. He had, in large measure, just those qualities of character, sympathy and sense of justice which fit a man for the important post that he filled so admirably, and we all deplore his untimely death.

I would also specially refer to the loss which we feel, in common with our Canadian associates, through the death of the Right Hon. Sir Robert Laird Borden, P.C., G.C.M.G., LL.D., K.C., who was president of Barclays Bank (Canada) since its inception in May, 1929. Sir Robert Borden's great experience and wise judgment were of the utmost value to Barclays Bank (Canada), and we counted ourselves fortunate in having associated with us a man of such distinction, character and personal charm. We recognise how deeply his

death has been felt in Canada and that, in him, the Empire has lost one of its outstanding personalities.

NEW LOCAL HEAD OFFICES

Before I pass to a review of our business, there is a point relating to the internal organisation of the Bank which should be of interest to shareholders. You are aware that, in order to maintain, as far as possible, that close personal touch between the bank and its customers, which was characteristic of the private banks from which Barclay and Company, Limited, was originally formed, we adopted a system of decentralised control of our country branches, through local boards. Subsequent amalgamations, which furnished us with branches in other parts of the country, did not in every case provide the means of establishing immediately this method of control, but we have gradually filled the gaps, by the creation of new local head offices, and I am pleased to say that, with the formation, a few weeks ago, of a local head office at Swansea to control the branches in West Wales, our network of local districts is now complete.

The system is also applied, in a limited degree, to London, where we have three local head offices, representing the old private banking firms of Barclay, Bevan, Tritton and Company, Ransom, Bouverie and Company, and Goslings and Sharpe, in Lombard Street, Pall Mall East, and Fleet Street respectively. This system provides for the administration of all but major matters by local directors and district managers possessing local knowledge and an understanding of the problems of their respective areas, and I am convinced that it is of great value both to the bank and to its customers. We enjoy the advantage of having members of our board who are also local directors and as such are in daily touch with the affairs of the bank in one or other of our local districts.

THE ECONOMIC SITUATION

The twelve months covered by our accounts—a year made memorable by the Coronation of our King and Queen—have been eventful in many respects. The year has seen industrial production in this country and the employment of insured workers raised to record high levels, an improvement in the position of the Special Areas, advancing wages and company profits, and rising internal and external trade. It has not been, however, without its anxieties, which, as the months have passed, may have served to cause some diminution in that confidence which has carried us through five years of recovery. The political outlook abroad has remained clouded, and the situation has been disturbed by the continuance of civil war in Spain and by the outbreak of hostilities in the Far East between China and Japan.

In the United States of America, there has been a definite decline in business activity, which, in view of the economic importance of that country, must be taken into account in considering the prospects for world trade. It would appear, however, that the reasons underlying much of the recession in business on the other side of the Atlantic have been domestic rather than international, and in so far as the remedy lies in the hands of the United States, it is to be hoped that lost confidence will soon be regained, and that private enterprise will be encouraged to exert its influence towards the betterment of trade in that country, which is so important a factor in world

prosperity. Nations may talk of the security of isolation, but the fact remains that we all are highly sensitive to what is going on elsewhere—such is the interlocking of our several interests. A prosperous America, with her great population, her wide territory, and her natural resources, could do much to promote a greater degree of well-being among the other countries of the world.

THE GOVERNMENT'S PART

That trade is good in the United Kingdom at the moment, no one will deny. All the evidence we have goes to show that this is indisputably the case. But the very existence of this satisfactory state of things causes some people, unwilling to count their blessings, to look with unwholesome persistence for the "slump" which they feel must of necessity be round the corner. We should have a proper sense of values. That bad times follow good is common knowledge, and trade charts, with their peaks and depressions, supply evidence of this: but, as the stage is set to-day—and it is a different setting from that of 1929—there is little justification for undue concern. We must count ourselves fortunate that we, in this country, have a measure of general prosperity which is by no means universal. But no country can prosper in isolation, and every effort should, therefore, be made to widen the circle of well-being, so that all nations may share in the improvement which scientific and technical developments have made possible. In accepting, with proper appreciation and thankfulness, the condition of affairs at home, we must not be unmindful of the part played by our Government, which, through its administration of our national finances, its trade negotiations, and its contacts with industry, has done much to restore confidence to the trading community: for confidence is the breath of life to business, and its absence produces that state of hesitation and half-heartedness, which lowers the general system, and has a paralysing effect on all enterprise. (Hear, hear.)

THE RE-ARMAMENT PROGRAMME

We cannot, however, ignore the fact that recently there has been some fall from the high levels of production and employment attained earlier in the year. This movement has been due in part to seasonal influences which appear to have been more marked in 1937 than in recent years, and in part to a setback in some industries which have been particularly affected by the severe decline in prices of their raw materials. The heavy industries, which include iron and steel, engineering and shipbuilding, may be expected to remain active, and although naturally the Government's re-armament programme has affected them favourably, there are other factors which have helped to make the heavy industries, as a whole, leaders in the general prosperity which is being enjoyed.

Inasmuch as the re-armament programme looms large in our minds and must necessarily have an important influence on our national expenditure, it is appropriate to make some special reference to it. For reasons which are well known and universally accepted, we have been forced to embark upon a re-armament programme of unprecedented dimensions in time of peace, involving a heavy burden upon the country—a burden which does not cease with the completion of the programme, since provision for maintenance must necessarily be large, if we are to retain that measure of strength which is so essential under present conditions. This expenditure involves a sacrifice on the part of the community as a whole and must, in the long run, tend to depress the standard of living. It is to be hoped, therefore, that a growth of goodwill and mutual understanding between the nations may make it possible to reduce expenditure on armaments and so lead to a lightening of national budgets.

OVERSEAS TRADE

The armaments programme, superimposed upon an already high level of industrial activity, naturally caused a certain degree of dislocation of production, until the necessary adjustments could be made. As the programme proceeds, however, it will provide, directly and indirectly, employment for a large number of persons for a considerable period, but it is clear, when all is said and done, that outlay on armaments must be classed as unproductive expenditure. Our aim must be to ensure that, as the work is completed, other work will be ready to take its place and that preoccupation with production for defence purposes does not cause us to neglect our overseas markets. Overseas trade is a vital necessity to this country and, although the substantial rise which took place in our exports last year is encouraging, it was overshadowed by a still greater increase in imports. The resulting rise in our unfavourable balance of merchandise trade will no doubt be partly made good by an expansion in "invisible" exports, and if in the future we are to avoid deficits on our balance of international payments, it seems

that we must endeavour to narrow the gap between imports and exports of merchandise. This should be brought about by an increase of exports rather than by a curtailment of imports, for the restriction of imports would press hardly upon those countries who, through their sales to us and to others, are enabled to buy those things which are requisite to their needs. At the same time, the high level of our import trade demands a flourishing export trade if we are to enjoy the continuance of our relatively high standard of living. In the architecture of our island economy the export trade might justly be regarded as a keystone, and, in appreciating the value of this keystone to the general structure, it is our duty to see that nothing is done to impair its strength. The need for exports has never been greater than it is to-day, and of all the problems facing us it ranks amongst the foremost in importance. (Hear, hear.) Our efforts to secure markets abroad should, therefore, be active and unceasing. Competition is very keen and we should be ever on the alert to sense the changing needs of our customers and be ready to adapt our productive organisation to meet them.

Whatever the future may hold, we may safely say that on balance we are in a stronger position to meet any changes which may cause fluctuations in the level of prosperity, than we were only a few years ago. Taking all the various factors into consideration, therefore, we may regard the year 1937 as one of further progress, and this is reflected in the accounts which have been submitted to you and to which I now propose to refer in some detail.

CURRENT AND DEPOSIT ACCOUNTS

The total of our current, deposit and other accounts on December 31st last, amounted to the record figure for this bank of £434,645,323 and showed an increase of about £5 millions compared with the figure twelve months earlier. The shareholders will be interested to know that the average of our deposits for 1937, as shown in our monthly statements, was greater by £12.6 millions than for the preceding year. Our monthly figures reveal a marked degree of steadiness, and while the tendency is upward, there is an absence of wide fluctuations—a feature which we consider most satisfactory.

The money deposited with us by our customers consists of the funds left with us on current account, which are withdrawable on demand, and of the sums held on deposit account, which are placed with us for varying periods. The total is very widely spread, both as to locality and industry. We have about 1,850,000 accounts, and the increase during the year has been well maintained. It will be seen, therefore, that the average amount held on current or deposit account is in the neighbourhood of £230. On December 31st, about 37 per cent. of the total was held on deposit account, and this proportion tends to fluctuate in accordance with variations in the rate of interest paid and the level of business activity in the country. In this connection, it is perhaps worth recording that, at the end of the year 1932, when trade was still backward, the proportion held on deposit account was 45 per cent. of the total.

The total of our cash in hand and with the Bank of England, at £54,839,825, is higher by nearly £3 millions than at the end of December, 1936, and the ratio of this item to the total of our current, deposit and other accounts, stands at 12.61 per cent., compared with 12.08 per cent. a year ago. Our money at call and short notice, at £27,068,850, is a little higher than at the end of December, 1936.

BILLS DISCOUNTED

At the close of 1937, the total of our bills discounted shown in our balance sheet was £50,362,681, of which over £25 millions were Treasury bills. The total is rather less than £9 millions below the level of a year ago. This movement was in accordance with the trend in evidence during most of the year, both for our own bank and for the London clearing banks as a whole, and it accompanied a reduction in the average allotment of Treasury bills at the weekly tenders throughout the past year, to £43.3 millions, against £44.7 millions in 1936. Discount rates have shown little change compared with the previous year, the average tender rate at which Treasury bills were allotted during 1937 having fallen slightly to the low level of 11s. 2d. per cent., against 11s. 7d. per cent. for the preceding twelve months.

The proportion of our funds employed in discounting bills rose considerably during the years when the demand for loans and overdrafts was declining, and the reduction which has since taken place in the item of bills discounted reflects a return to more normal conditions. There was evidence last year that the volume of commercial bills available for discount had shown some expansion on the previous twelve months, but there is still room for improvement in this direction.

INVESTMENTS

It will also be recalled that, when the demand for banking advances was falling off during the depression years, and for some time after recovery had set in, the banks bought investments and so found employment for the funds released and for the new deposits that were being accumulated. Now that the recovery in trade has brought about a welcome increase in the demand for loans and overdrafts, it would be natural to expect some decrease in their holdings of securities, and the figures for our own bank show that the funds required to satisfy the larger demands of our customers for accommodation have been provided in part by a reduction of our investments which, excluding our holdings in affiliated banks, have fallen to £102,423,395, compared with £109,367,473 at the end of 1936.

The London clearing banks as a whole are large investors in Government securities, but they are not the only large holders. It is not always appreciated that the holdings of Government securities by Government Departments and by public institutions and public funds, such as the Post Office Savings Bank, the National Health Insurance Fund, the Unemployment Insurance Fund, and the Trustee Savings Banks—whose investments are managed by the National Debt Commissioners—are greater than those of the clearing banks. There can be little doubt, therefore, that, with these large resources, dealings by the National Debt Commissioners, on behalf of these various funds, can and may at times appreciably influence the market for gilt-edged securities. During a period of prosperity, when certain of these funds are accumulating resources, investments made by the National Debt Commissioners would afford support for the gilt-edged market; but the fact has to be borne in mind that in bad times the movement might be in the other direction. On the other hand, as a counteracting factor, experience of the depression has shown that a decrease in business activity and a lack of opportunities for the employment of capital usually attract investors to the gilt-edged market.

ADVANCES

There has been a considerable expansion in our advances during the past twelve months, the total on December 31st last being £196,264,896, compared with £179,655,011 at the end of 1936. This rise, which has been well distributed, reflects the increased trading activity of the country and the higher level of prices. An analysis of our advances as at the end of November last, shows that the number of customers borrowing from the bank at that time had increased, compared with the end of November, 1936, from 202,228 to 215,688, and there had been a slight rise in the amount of the average advance, from £854 to £887. It is also notable that the increase in the number of borrowers occurred mainly amongst those having advances not exceeding £1,000.

Loans to productive industries accounted for no less than 32.2 per cent. of the total outstanding at the end of November, and only one case, namely, coalmining, was there a reduction, although that industry undoubtedly had a busier year. Of the increases, particular importance attaches to the rise in the accommodation granted to the heavy industries, the activity in which has been especially pronounced.

As an indication of the widespread nature of the growth in our advances last year, I would mention that amongst those to whom we lent more, were textile manufacturers, the clothing industries, merchants and wholesalers in both primary goods and manufactured articles, retailers, local authorities and public utility undertakings, builders—including building material manufacturers and public works contractors—and building societies.

BUILDING ACTIVITY

The expansion in building activity in recent years, of which evidence can be seen on every side, is important owing to the many other trades dependent upon it, in a greater or lesser degree, as suppliers of the materials used in construction. It is this characteristic of the industry which has no doubt prompted fears in certain directions as to the effect on the general level of prosperity should a substantial reversal of the trend take place. When we come to examine the position, however, we find notable omissions in the statistics available. For instance, there are no estimates of the cost of plans approved in the London County Council area, while the figures compiled by the Board of Trade for the purpose of the quarterly Index of Production relate to only 30 per cent. of the activity in the building industry, against 90 per cent. for all other groups.

Nevertheless, the statistics which are available, while they show some falling off compared with 1936, reflect the high level of con-

struction maintained. For the first eleven months of 1937 the building plans approved by 146 local authorities—which, by their nature, indicate at any one time the future rather than the current output—amounted to an estimated cost of £100.8 millions, and while this figure did not reach that for the same period of the preceding year, namely £108 millions, it greatly exceeded the totals of £63 millions and £73.1 millions for the whole twelve months of each of the years 1931 and 1929 respectively. Moreover, while the Board of Trade Index of Production for building materials and building in the third quarter of last year was slightly lower than in the same period of 1936, it was 61.6 per cent. greater than the quarterly average for 1930. Cheap money has undoubtedly assisted the building trades in recent years, and this factor is still operative.

ADVANCES TO FARMERS

Our advances to farmers were greater last year than a year earlier. The agricultural industry provides employment for about 1,350,000 persons in Great Britain, and in this respect ranks high among the great productive industries of the country. There has been a noticeable improvement in the condition of agriculture in this country in recent years, as indicated by the latest statistics of output and prices, and it is to be hoped that the new legislation passed last year will be successful in furthering the economic interests of the industry and, in particular, in securing greater productivity of the land. To Englishmen, the countryside is their heritage, and any steps taken to improve the lot of the farmer, so that he may be enabled to make a living and to pay fair wages, must make a direct appeal. Failing such steps, the depopulation of the countryside will continue, and land will tend to go out of cultivation, with the gradual disappearance of those "key men" who, by virtue of long tradition, know the land and the acts of husbandry. It is for this reason that the measures of assistance afforded by the Government to an industry vital to our needs, are to be welcomed. In the final analysis, there is no divergence between the respective interests of the agricultural and of the industrial communities of the country.

It is imperative that the nation should make the best possible use of its resources for economic food production. Nevertheless, in framing our policy, we must realise that we are dependent upon the rest of the world for a very large part of our essential foodstuffs, and that our ability to compete in international markets, and at the same time to maintain our standard of living, with a proper level of nutrition for the population, depends on the availability of an adequate volume of cheap food. (Hear, hear.)

NET PROFIT

The net profit for the year ended December 31st last, after payment of all charges and after making provision for all bad and doubtful debts and for contingencies, amounted to the sum of £2,133,825 3s. 11d. and showed an increase of £239,464 3s. 6d. compared with the previous year. The sum of £639,767 13s. 4d. was brought forward from December 31, 1936, making a total to be dealt with of £2,773,592 17s. 3d. The directors have decided to appropriate the sum of £500,000 as an addition to the published reserve of the bank, making that fund £10,750,000. In view of the continued increase in our business, we feel that this is a prudent step and one which will meet with the approval of the shareholders. A sum of £200,000 has been applied towards the reduction of premises account. Our premises now stand in the balance sheet at £7,381,855, which we regard as a conservative figure. After making these appropriations, the directors recommend the payment of dividends at the same rates as previously, namely, 10 per cent. per annum on the "A" shares, and 14 per cent. per annum on the "B" and "C" shares, less income tax, involving a total of £1,562,202 2s. for the year, leaving the sum of £511,390 15s. 3d. to be carried forward.

Year by year the transactions which the bank carries out on behalf of its customers show steady expansion, and this has been due in large measure to the growth in the facilities which we place at their disposal. There has again been an increase in the entries at the various branches of the bank passed to accounts of customers. Our turnover for 1937 was £9,780 millions, and shows a growth of over £900 millions compared with 1935—a two-year period of comparison.

THE INTERNATIONAL SITUATION

The experience of our affiliated banks operating overseas and of our foreign branches in London and the provinces confirms the indications, apparent in other directions, of the improvement in economic conditions which has been a feature in many parts of the world during 1937. The increase in internal trade in most countries in recent years has overflowed into external markets and, according to

NEED FOR INTERNATIONAL MONEY SYSTEM

The disturbance caused to commodity and financial markets in April last when rumours, which were subsequently denied, were circulating as to the possibility of a reduction in the United States buying price for gold, indicates the uncertainty that will always be present until it proves possible to revive an international monetary system. We should therefore not wait indefinitely before taking some steps in a direction which holds such great possibilities for the improvement of world trade. There must be a readiness in creditor and debtor countries alike to see beyond the present and, by an appreciation and understanding of each other's circumstances and difficulties, to do their utmost to resume more normal international relationships. The international financial machine has been impeded for too long, and there is a risk of the brake becoming rusted to the wheel.

A resumption of overseas lending, if and when it becomes possible and prudent, would supply a much-needed lubricant and would bring nearer the goal of stabilisation. Countries which have so ordered their national affairs to render themselves, at some sacrifice, largely independent of outside help, would come again upon the scene, and would be able to buy the raw material essential for their needs, if they are to increase their exports to the markets of the world. It cannot be too strongly emphasised, however, that the three interlocking measures necessary to a return to more satisfactory world conditions, namely, freer trade, a revival of overseas lending and the stabilisation of currencies, depend upon a revival of confidence.

Confidence must be based on something tangible. If countries are to pursue more liberal trade policies, they must have confidence in the international political situation. If investors in the creditor countries are to lend, they must have confidence in the ability of the borrowers to meet the charges for interest and redemption of their loans and in their determination to honour their obligations. If an international monetary system is to be restored, each country must ensure that its economic and financial policies are such as to inspire confidence in its own currency. Unfortunately in recent years, action by individual countries has not always been such as to contribute to that confidence without which real progress cannot be made. The effect of the war has been to disturb both material and moral values. If the world position is to be improved, as we should wish to see it improved, every country must be prepared to make its contribution in at least one of these directions. (Applause.)

I now beg to move: "That the report of the directors' produced, together with the annexed statement of the company's accounts as at December 31, 1937, duly audited, be received, approved and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares, and 14 per cent. per annum on the 'B' and 'C' shares, less income tax, be declared, payable on the 1st proximo, to the shareholders registered in the books of the company on December 31st last."

I will ask Mr Goodenough, the Deputy Chairman, to second the motion. (Applause.)

Mr W. M. Goodenough (Deputy Chairman):—My lords, ladies and gentlemen, I beg to second the motion.

SHAREHOLDERS' VIEWS

Mr A. J. Waley said that not only as a shareholder but also as one who had been a customer of the bank for many years he wished to thank the chairman for his interesting and comprehensive address. The system of decentralisation through the further extension of local boards of directors could not fail to be advantageous to the bank's customers and equally to the bank, giving, as it did, a wider power of initiative and responsibility so valuable in all branches of business.

The large increase in advances by all the banks showed how greatly the credits which the banks gave assisted in the expansion and development of trade, bringing with it an increase in employment and a higher scale of wages. He agreed that no real improvement in world trade could be looked for until confidence could be generally restored, the first essential, as the chairman had pointed out, being the removal of existing restrictions. When exchanges were freed, when capital could move freely from one business centre to another, when gold instead of being hoarded could circulate and perform its function of providing credit, then, perhaps, better times might be expected.

Mr Cecil Braithwaite said he was quite sure that all the shareholders would be thoroughly satisfied with the chairman's excellent speech and with the report and accounts. Never during its long and honourable history had Barclays Bank stood in a stronger position than it did at the present time. When he looked back over his fifty-eight years of City life and to the wonderful history of their

calculations made by the Economic Intelligence Service of the League of Nations, the volume of world trade has advanced and is only slightly below the level of the year 1929. Satisfactory as this progress may be in some respects, it only tends to show what could be accomplished if a substantial reduction could be made in the numerous restrictions which still hamper and obstruct international commerce; we are approaching a time when the raising of the standard of living will depend more and more upon the lessening of these restrictions.

This fact was publicly recognised over a year ago, in the declaration on Monetary policy made by the Governments of France, the United States and this country, which emphasised the necessity for the development of international trade and for early action to relax progressively the system of quotas and exchange controls, with a view to their abolition. This declaration and the adjustments which were made in the values of a number of Continental currencies—notably those of France, Switzerland, Holland and Italy—were followed by action on the part of certain of the countries concerned, in reducing tariffs and relaxing quota restrictions. In 1937 there have been other instances of the unilateral reduction of trade barriers, and some countries have also found it possible, in various ways, to lighten the restrictive effect of exchange regulations. But much remains to be done, and the method of bilateral agreement, slow as this must necessarily be, still seems to be the main practicable way of reducing trade barriers between countries. It is to be hoped that the negotiations for an agreement between this country and the United States will be brought to an early and successful conclusion. (Hear, hear.)

WIDESPREAD LACK OF CONFIDENCE

When we come to analyse the reasons underlying many of the restrictions at present in force and the inability to set in motion those measures which would help to increase the flow of goods between nations, one is struck by the widespread lack of confidence prevailing. The effect of this lack of confidence can be seen in the endeavours of countries to make themselves as far as possible self-sufficient, in the large hoarding of gold by individuals, and in the absence of any marked revival in foreign lending in the international capital markets. In the past this country has greatly assisted in the development of the resources of the world by the provision of long-term capital. In recent years the new money provided for this purpose by the creditor countries has suffered a drastic reduction—partly as a result of the restrictions imposed and partly owing to unsatisfactory world conditions as shown by the defaults that have taken place in respect of existing obligations. In fact, there are indications that the amount of new issues on foreign account in the important lending markets of the world has been less than the redemption, repayment and repatriation of old foreign loans.

The benefit of having a large volume of capital invested overseas as a reserve in times of emergency has been demonstrated in the past, and it is not always fully appreciated that a very large part of the imports which we need to maintain the standard of living of the country is paid for by the income received in respect of the savings of British investors. For example, in the year 1936, had we not been in receipt of this income, this country would have had to sell abroad an additional £195 millions of exports, or increase the value of the services rendered to countries and individuals abroad, or reduce her purchases from overseas, which would lead to a reduction in the standard of living. To argue that losses in the past have been made in respect of loans from this country for development abroad, takes us nowhere, and to refrain from foreign lending on that score alone would be unreasonable, although it is realised that at the present time the number of creditworthy borrowers in a position to approach the international capital markets for funds is limited. Care must of necessity be used in the selection of the project to be financed, and the test as to whether or not it will be remunerative should be applied in each case.

Owing to the Government's defence programme and the expansion in imports to form the basis of domestic consumption, there has been a large rise in the adverse balance of merchandise trade, and it might well be that a substantial proportion of any money lent abroad should be expended here upon the purchase of British goods. In 1936 it was estimated that this country had a small net deficit on her international balance of payments, and although during the past year there has no doubt been an expansion in our receipts from "invisible" exports, the large increase in the excess of imports of merchandise must tend to reduce our ability to lend abroad. We should, however, aim at least at maintaining our external capital and keep before us the desirability where possible of providing funds for sound development abroad, which in itself would do much to increase world trade.

bank, he was convinced that every shareholder was proud to be interested in it.

Their bank had been intimately connected with the Quaker banks all over the country, so many of which were now absorbed into the great bank of which they were all shareholders. It was gratifying to see so many old Quaker family names amongst the directors, for the Quaker banks were the solid foundation upon which had been built a bank second to none in this country and in the Dominions overseas.

Sir James E. Woods asked whether the change from the old pass-books to mechanised sheets had been a success.

The Chairman thanked Mr Waley and Mr Braithwaite for their appreciative remarks and in reply to the question put by Sir James Woods said that the directors had no doubt in their minds that the mechanisation employed in branches of a suitable size had been a decided benefit.

The resolution was then put to the meeting and was carried unanimously.

The Chairman then proposed the following resolution: "That Mr Francis Lawrence Bland, Lt.-Col. Edward Hoblyn Warren Bolitho, D.S.O., Mr Lionel Gurney Buxton, M.V.O., M.C., Mr Arthur Bevington Gillett, Mr Quinten Edward Gurney and Mr Walter Somerville Gurney, the retiring directors be re-elected directors of the company."

Mr W. M. Goodenough (deputy chairman) seconded the resolution and it was carried unanimously.

SERVICES OF JOINT STOCK BANKS

Mr H. Eric Miller then proposed: "That Messrs Kemp, Chatteris, Nichols, Sendell and Company, and Messrs Price, Waterhouse and Company, Chartered Accountants, be re-appointed auditors to the company, at the usual remuneration, to hold office until the next annual general meeting." In doing so he said he would like to take the opportunity of saying that, throughout the chairman's address, one theme had caught his notice, and that was how vital confidence was in the structure of the civilisation in which we live. The chairman, as the head of one of the great banks, could not very well refer to the part which the London Joint Stock banks were playing in maintaining confidence in this country and throughout the world, but his fellow shareholders would appreciate the services which the banks were rendering in that way. (Applause.)

Mr F. W. Raffety, in seconding the resolution, said he would like to join in the congratulations to the bank on the success of the past year's working and to the chairman on the speech to which they had listened with such satisfaction. He expressed agreement with the policy of instituting local head offices.

The resolution was unanimously adopted.

MR BLAND'S TRIBUTE TO THE STAFF

Mr F. L. Bland then proposed that the cordial appreciation and thanks of the shareholders be given to the general managers and the whole of the staff for the manner in which they had carried out their duties during the past year. The privilege of proposing this resolution, he said, was tempered on the present occasion by the sense of a great void in their staff organisation. The chairman had alluded to the death of Mr Claude Douglas Carruthers, a man whom they all loved and would miss more deeply than he could express.

The extent to which Barclays' system of decentralisation included the staff in its orbit might not be generally appreciated, nor probably would all shareholders realise that more than three-quarters of the board of directors were, or had been, executive officers, working side by side with members of the staff, sharing their aspirations, hopes and disappointments, accessible at all times for consultation or advice on problems, personal or otherwise, that might arise in their daily lives.

It would be realised that it was from first-hand experience of their organisation that a director who worked also as an executive officer could confidently ask the shareholders to pass this resolution with gratitude. Sympathy and co-operation between every section of the staff combined to give the service to the public for which Barclays was renowned, and by that service to secure such results as the chairman had been able to submit. (Applause.)

Sir Follett Holt, K.B.E., seconded the resolution, which was cordially approved.

MR A. W. TUKE'S RESPONSE

Mr A. W. Tuke (one of the general managers) said that the staff would very much appreciate the vote of thanks that had been so kindly accorded by the shareholders. The fact that they were doing

a larger business to-day than ever before naturally involved their having an increasing staff, and he thought he could fairly claim that not only was the staff increasing in numbers but also in keenness and efficiency. He thought that the shareholders and the board could rely upon the staff to continue to put forward their best efforts in the interests of the bank.

In responding to the vote of thanks he felt that the staff would wish him to add something on their behalf to what had already been said as to the great loss that the bank in general and the staff in particular had sustained in the death of Mr Carruthers. Something had been said, and much more might be said, about his qualities of character and intellect, but it might all be summed up by saying that both from the point of view of the management and from the point of view of the staff as a whole Mr Carruthers might be regarded as having been the ideal staff manager.

On the motion of Mr A. J. Waley, seconded by Mr C. Braithwaite, a hearty vote of thanks was accorded to the chairman and his colleagues for the successful way in which they had conducted the business of the bank during the past year.

The chairman having expressed his thanks on behalf of his colleagues and himself, the proceedings terminated.

THE NATIONAL BUILDING SOCIETY

PROGRESS AND CONSOLIDATION

The annual meeting of The National Building Society was held, on the 14th instant, at Southern House, London.

Mr W. F. Foster, F.R.I.B.A., F.S.I. (the chairman), said that it was a very great pleasure to refer to the satisfactory position of the Society's business in its 88th year. The National had consolidated its excellent position amongst the great building societies of the country.

At the end of the financial year total assets stood at £33,016,310 and members' share capital at £29,346,527. Mortgage assets at £30,131,602 were the greatest in the Society's history. During the year £4,496,897 had been advanced on mortgage. The policy of prudent lending had been maintained, and safety margins preserved. The average mortgage during the year was only £622, and 84 per cent. of mortgages granted were for less than £1,000 each. Reserve funds totalled £1,849,274, an increase of £271,469 during the year. These figures indicated the Society's financial strength.

The balance of profit was £1,240,047 of which share interest absorbed £922,681. The remainder was allocated as follows: (1) Writing down of premises by £14,817. Premises now stood at the round figure of £250,000. (2) Transferring £86,469 to reserve No. 2. (3) Transferring £185,000 to general reserve. (4) £31,078 carried forward.

The Chairman went on to say that the board had continued its policy of extending the Society's activities over a wider area. It was the board's intention to add to its local offices as and when opportunities occurred.

No change had occurred in the directorate. Mr R. Bruce Wycherley, appointed last year as a director, had been appointed managing director. They regarded the future with confidence. The Society's reputation and widening field of activities would enable them further to consolidate their position as one of the great building societies of the country.

The report and accounts were adopted and the retiring directors and members' auditor re-elected.

At the conclusion of the annual general meeting a special meeting was held at which a partial alteration of the rules was authorised.

The proceedings terminated with a cordial vote of thanks to the chairman.

MARTINS BANK LIMITED

EXTENDED ACTIVITIES

TRADE BORROWINGS REFLECT HOME PROSPERITY

INCREASED PROFITS AND DEPOSITS

NEED FOR WORLD CO-OPERATION

SIR RICHARD D. HOLT'S REVIEW

The one hundred and seventh annual general meeting of shareholders of Martins Bank, Limited, was held, on the 18th instant, at the Bank's Head Office, Liverpool.

Sir Richard D. Holt, Bart., LL.D., Chairman, who is suffering from eye strain, was prevented from attending, and his place in the chair was taken by Lord Colwyn, P.C., D.L., LL.D., one of the deputy chairmen, who read Sir Richard's speech as follows:—

My lords, ladies and gentlemen, I assume you will take the report and accounts as read.

During the year we have suffered severe losses by death. Mr Orme, our widely esteemed chairman, passed away in November to the profound sorrow of us all. He joined the board in 1924 and became chairman in 1934. The interest he took in the bank was intensified during his chairmanship. His clear judgment in difficult situations was invaluable, and his cheerfulness inspired confidence. Messages of sympathy from the public were all couched in terms of admiration of his high character. We shall miss him sorely from our councils.

By the death of the Right Honourable Sir Austen Chamberlain, K.G., a member of our London board, in March last year, we were deprived of a director with a world-wide reputation and great breadth of view. We deplore the loss we have sustained by his death.

With deep regret I also announce the death, ten days ago, of Sir J. H. B. Noble, Bart., a director on our North-Eastern board. His family have long been connected with the bank through the North-Eastern Banking Company, of which Sir John became a director in 1902. On the amalgamation in 1914 he joined our Newcastle board, and gave valuable service.

In May last Mr Peart Robinson, feeling that he could no longer give that close attention to the bank which he had so long maintained, resigned. He joined the board as far back as 1906 on the amalgamation with the Craven Bank, of which he was a director. The Board record their appreciation of his highly valued services.

THE NEW DIRECTORS

To fill vacancies upon the General and London boards we have elected the Honourable David Bowes-Lyon, a partner in the firm of Messrs Edward de Stein and Company, of London. His election will add strength to both boards. Sir John F. R. Reynolds, Bart., has also been elected to the General board. A partner in the firm of Messrs Reynolds and Gibson, who are among the oldest of the bank's customers, he is the third of his line to become a director of the bank, his father and grandfather having served respectively in the capacity of chairman and deputy chairman. Sir John's knowledge of the cotton industry will be of great value. We are pleased to have both these gentlemen with us to-day.

The board have honoured me by election to the post of chairman. I recognise its high distinction, and will do all in my power to further the interests of the bank.

LARGER PROFITS

Will you now please turn to the accounts. I hope you have found them of more than usual interest this year, and with this in mind I will refer to our profit and loss account first. Increasing business throughout the year has led to an increase of £83,578 in our net profit, which is £853,566. To this must be added £296,048 brought into profit and loss account from last year. We have, therefore, £1,149,614 available for distribution. In July a dividend of 7 per cent. was paid, and we propose to repeat that for the December half-year, making 14 per cent. for the year. This will require £582,406.

The bank's centenary took place in 1931 at a time of unexampled trade depression. The payment of a centenary bonus was discussed, but postponement to a more suitable time was deemed advisable. In our view that time has now arrived, and we propose to pay, in addition to the dividend, a centenary bonus of 2 per cent. to the

shareholders, subject to income tax. That will cost £83,201. We have also declared and paid a centenary bonus of 5 per cent., with a maximum of £100 and an appropriate minimum, subject to income tax, upon all salaries and pensions, including those to widows of deceased members of the staff, and also a suitable bonus to all wage-earners. It is a pleasure on these occasions to refer to the staff, but I am sure you will be especially pleased to hear of this recognition of their efficient services.

Seventy-five thousand pounds has been added to premises redemption account, £100,000 to pensions fund, and we have carried forward £309,007. Published reserve has been increased to £3,500,000 by a transfer of £200,000 from our investment reserve.

Turning to the balance sheet, you will notice the bank's customary liquid position. Cash in hand and at the Bank of England represents 10.6 per cent. of our liabilities to the public, while our total cash items are 22.7 per cent. of those liabilities. Investments have remained fairly constant during the greater part of the year and now stand at £31,223,000, some £1,590,000 less than twelve months ago. Bank premises and rentable properties show an increase of £50,000 at £2,646,000. The movement in foreign trade is indicated in the item of acceptances, endorsements, etc., which at £9,818,000 exceeds last year's figure by £1,967,000.

DEPOSITS—A RECORD

Deposits continue to expand and are at the high-water mark of £95,508,000, an increase of £2,033,000. Advances amount to £42,420,000. Last year we recorded the very large increase of almost £12,000,000 in this item, but, as the chairman said, certain of the new advances were temporary, and we might expect some decline. Repayment duly took place, but the expansion then indicated has developed, and the net increase to-day is £1,143,000. The character of our advances is closely watched, and it is interesting as showing the trend of various trades. The advances are widely spread, 86 per cent. of the total number being for amounts of £1,000 or less. The overdraft for personal and professional purposes is still the most important in our classification of advances, accounting for one-half the number of borrowers and one-fifth of the amount lent. Business has broadened out, but follows generally the course forecast in last year's speech. It is interesting to know in which industries increases have taken place. Food provides the largest increase indicating the greater spending power of the people and the betterment of conditions. This is followed by textiles—cotton, wool and silk all participating—another pointer to improving circumstances. The heavy industries, that is engineering, shipbuilding and iron and steel, together with agriculture, building, and general produce, have all been factors in the increase.

THE OUTLOOK FOR TRADE

The result of our year's operations may be regarded as satisfactory, but when we look into the immediate future we discern signs warning us against over-confidence. We notice some hesitancy in trade, but I deprecate untimely references to impending depression. This is due, no doubt, to an excess of fear or caution, prompted by recollection of previous recessions and the desire not to be caught unaware. Caution is desirable in business, but along with talk of coming depression it has caused holding off in various trades, as buyers hoped to purchase in cheaper markets, and the combined effect has been to accentuate the slowing down. Certainly in this country there should be little justification for pessimism, especially when we observe the results of the majority of trading concerns and the increased spending power of the wage-earners. We must, therefore, look elsewhere for the cause of this pessimism, and we find it in the grave political conditions prevailing in various parts of the world and the disturbed affairs of the United States. We cannot measure the effects of world political crises, except to realise that a major outbreak will mean universal disaster. As traders we must apply ourselves to our

problems, solving them by practical methods. We should be critical of new theories for lifting us out of our troubles, but ordinary caution suggests that we should examine practical proposals for the regulation of employment in the light of past experience. Man has proved himself capable of counteracting harmful causes in many directions.

BRITAIN AND AMERICA

If there are ways of passing from prosperity to periods of quieter times less violently than hitherto let us adopt them, if we can do so without interfering with fundamental principles, but the first essential requisite is a wider world collaboration than we possess at present. That is what we should aim at, but there is no reason to suppose that in this country the position is not closely watched and that wise steps are not being taken to deal with economic problems. We have proof of this in our national position to-day. Conditions in America have reacted upon this country, but as the United States are going through a period of trial we may see a new starting point there from which we may witness a recovery that will not only restore her own fortunes, but be felt internationally. The strife between American Government circles and financial interests—"Big Business," in the picturesque language of the day—has discouraged private enterprise. We hope that an early solution will be found so that capital in that country may flow once more into productive channels, create purchasing power in the hands of a vast population, and enable her great industries to function normally. When this is accomplished there is no doubt the effect will be beneficial to America and the rest of the world, whose affairs she widely influences.

A survey of the basic industries of this country provides cause for satisfaction, as I have indicated in dealing with the progress of our own business, but I emphasise that we must not lose sight of the dangers of over-production and over-development inherent in expansion, particularly during a period when some branches of trade are being stimulated by Government expenditure.

COTTON AND COAL PROBLEMS

The problems of two of our most important industries—cotton and coal mining—are at present receiving attention by the Government. Both are still organised on the basis of a large number of comparatively small competing units. In the cotton trade an approach to unanimity has been reached as to the type of reorganisation desired, and Government support for the trade's agreed proposals has been sought. This, subject to reasonable safeguards, will doubtless be forthcoming. The industry in general has had a more successful year than for some time. While the various agreements have contributed to this, normal causes have also come into play, and trade improvement has helped to solve the redundancy of spindles. Progress has been made towards stability of control, and with the operation of these constructive measures further recovery may be expected this year.

The position as regards the new Coal Bill at present before Parliament is not so satisfactory, for much of the criticism levelled at the Bill comes from the coal-owners themselves, many of them being unreconciled to the proposals for compulsory amalgamation of collieries contained in Part 2 of the Bill. Whatever may be the merits of rival opinions of this portion of the Bill, it is desirable that before it is passed in final form means should be found of securing the willing acquiescence of the more efficient owners, for it is clear that without their co-operation the task of the Coal Commission charged with giving effect to the Bill will be difficult. After a long period of depression, the past year has been one of progress, and there appears no reason why this should not continue if stability can be given to the industry by composing the differences to which I have referred.

IRON AND STEEL AND SHIPPING

The iron and steel industry has also had a busy year, due to activity in shipbuilding and general engineering and—we must not forget—increasing Government orders. The output of steel ingots was a record at 13,000,000 tons. Demands upon the industry are such that heavy expenditure on installation of new rolling mills and other plant has been needed. As this comes into operation the capacity to produce finished steel during the present year will be greatly increased.

Shipping, generally, has had an excellent year, particularly in the cargo-carrying class, and this, as in other industries, is due to co-operation. At the meeting a month ago of representatives of the International Shipping Conference continuance of the principle of co-operation was reaffirmed. By following that wise policy the best

results will be obtained, but as conditions are not so good as they were in the early part of last year, there can be no relaxation of the efforts which have rescued this vital industry from a position bordering on collapse. With improvement in shipping, shipbuilding has been active, but high costs and inability to obtain delivery of steel and other materials have created great difficulty. Those owners were fortunate who placed orders early in the trade recovery.

World supplies of wheat are not excessive and the trading position, therefore, is satisfactory. Conditions in some sections of agriculture have improved and prospects are good. In the wool textile industry a period of activity met with a set-back in the autumn. There appeared to be little reason for this except lack of confidence. Buying for home trade requirements has since adjusted matters to some extent, and the immediate outlook is good, but world complications are disturbing features.

HOME AND FOREIGN MARKETS

In the wide range over our various industries my remarks have necessarily been inadequate, but sufficient has been said to indicate that our home trade is still satisfactory. If a further upward swing is to come we may ask how it is to be achieved. In previous speeches from this chair emphasis has been laid on the necessity for the revival of international trade and the encouragement of our export trade. That continues to lag, but is improving. The year just ended has resembled its predecessor in that we have had a period of prosperous internal trade, with a disposition on the part of industrialists again to neglect the export side of their business owing to lucrative home markets. The danger of this is obvious; foreign markets once lost are not easily regained. I have stressed the point that we should aim at fostering a wider world collaboration. The problem has been engaging attention for some time, but little outward progress has been shown. Recently, however, we have seen a step forward in the approach to closer trade collaboration with America, and although this has not escaped criticism on both sides of the Atlantic, if it leads to better understanding between the two countries immense good should accrue. With extension of such agreements, followed by the freer flow of world trade, our Lancashire cotton industry, so dependent upon exports, should, for example, benefit materially. At present we live in a world whose trade is shackled by standstill and debt-clearing arrangements, exchange controls, and other measures set up by Governments, which have stifled the enterprise of the old trader. We have lived with these things long enough; let us hope that the coming agreement with America will be the beginning of a new era. It will take time and patience, but we must persevere, in a spirit of give and take.

Lord Colwyn concluded by moving the adoption of the report and the payment of the final dividend of 7 per cent. and the 1931 centenary bonus of 2 per cent.

Mr G. E. B. Bromley-Martin, one of the deputy-chairmen, seconded, and the motion was carried unanimously.

Mr F. R. Briggs moved the re-election of Mr E. R. Bowring, Mr G. E. B. Bromley-Martin, Mr J. J. Ritchie, and Mr H. Mancknols Walton, and confirmation of the election of the Hon. David Bowes-Lyon and Sir John F. R. Reynolds, Bart., as directors.

Mr W. Sutcliffe Rhodes seconded, and the motion was approved. On the proposal of Mr L. Ravenscroft, seconded by Mr W. E. Mounsey, the auditors, Messrs Harwood Banner and Son, Liverpool, Messrs Peat, Marwick, Mitchell and Company, London, and Messrs Thomas Bowden, Sons and Nephew, Newcastle-upon-Tyne, were re-appointed.

VOTE OF THANKS TO DIRECTORS AND STAFF

Mr P. G. Davies proposed a vote of thanks to the directors, the standing committee, the general manager, and other officers and staff of the bank for their services during the year.

He said that when he looked back over his half-century's connection with the bank and saw the enormous strides that had been made he could only say that he was amazed with its progress and proud of the balance-sheet submitted to that meeting. This was due to the care and attention given to the affairs of the bank by those named in the resolution, all of whom possessed the entire confidence of the shareholders. (Hear, hear.)

Mr C. P. Zochonis seconded, and the proposal was heartily carried.

Mr J. M. Furniss, general manager, expressed his appreciation of the help which the management received from the directors and standing committee, and thanked the meeting on behalf of the staff for the acknowledgment so readily given of their services.

On the motion of Colonel J. B. McKaig, a vote of thanks to Lord Colwyn for presiding was carried unanimously.

ALEXANDERS DISCOUNT COMPANY, LIMITED

REVIEW OF MONEY MARKET CONDITIONS

DIVIDEND OF 17½ PER CENT.

MR COLIN F. CAMPBELL'S ADDRESS

DISCOUNT MARKET OUTLOOK

The seventieth ordinary general meeting of shareholders of Alexanders Discount Company, Limited, was held, on the 19th instant, at Southern House, Cannon Street Station, London, E.C.

Mr Colin Frederick Campbell, the chairman of the company, presided.

The Secretary (Mr P. C. Tong), having read the notice convening the meeting and the auditors' report:

The Chairman: Ladies and gentlemen—I assume you will take the report as read as usual. (Agreed.)

The year under review bears a considerable degree of resemblance to that of 1936, inasmuch as the discount market has been contending with a similar set of adverse circumstances. It is no exaggeration to say that for several years past we, as a member of the London money market, have been unable to pull our weight in its affairs, not because we are unwilling to do so but because the conditions now prevailing do not permit of our doing so. We hear of sympathy for us and we hear of hopes expressed that we should exercise patience until times become more normal but, in the meantime, we are forced to a great extent into the position of a spectator.

You may ask why this is so, and the answer is that conditions in the money market are now determined to a considerable degree by the Government requirements. Their policy is to maintain cheap money; I do not wish you to think for a moment that I am questioning the wisdom of this policy, but the result for us is that our discount business consists in the main of obtaining money from the banks at ½ per cent. and employing it in the purchase of Treasury bills at a price which averaged in 1937 ⅞ of 1 per cent. Even this small margin was only secured through the banks lending us money at this low rate and subsequently making their purchase of Treasury bills through us. I need hardly tell you that a margin of about 1s. 3d. per cent. does not cover our working expenses, let alone provide a dividend for our shareholders.

HOLDING OF SHORT-DATED SECURITIES

We are therefore driven into holding large blocks of short-dated Government securities, which return to us a satisfactory margin of profit, always assuming that they do not fall in capital value. This investment of money derived from the banks, and other financial houses, has been a highly profitable business for a number of recent years and we have been able to provide from it no less a fund than £300,000, as I have told you on several occasions, constituting a reserve against a fall in capital value. There is no reason that this method of investment should not continue during the next few years with an annual profitable result, but the risk of capital loss continues, consequently only those possessed of substantial reserves can undertake it with any degree of safety.

What I am saying to you is elementary to those who are familiar with the affairs of the London money market, but I have to keep in mind those shareholders who have no access to this information and who may wish to have a clear understanding of the nature of the business in which their capital is invested.

THE DIVIDEND

You are all aware of the small reduction of 1½ per cent. in the interim dividend paid last July which was recommended by the board. The reason for this was that a material fall in the value of securities took place between December 31, 1936, and June 30, 1937, so that it was not improbable from the outlook at that time that it would be necessary to draw upon the reserve of £300,000. Happily a substantial recovery took place in the second half of the year, so that no such transfer was required, but, as your directors could not possibly foresee the future in June when considering the interim dividend, they decided to recommend a small reduction in the rate as a reminder to the shareholders of the nature of the business now being undertaken.

On this occasion the outlook seems sufficiently clear to justify final dividend of 10 per cent., being the same as a year ago, making return for the year of 17½ per cent., which I have no doubt will cause satisfaction in the minds of the shareholders.

I have dwelt a good deal so far on the abnormal conditions which now prevail so that you will perhaps expect me to say something as to the outlook for the discount market in the future. Neither I nor anyone else can prophesy what is going to happen, but I am one of those who believe that if we exercise patience we shall work our way through our present difficulties and that ultimately international trade will revive and with it the sterling bill on London. (Hear, hear.) There is already a slight improvement in the foreign trade of this country which should be encouraged and developed with all our power notwithstanding the fact that many of our important industries are actively employed in meeting the requirements for re-armament and the demands of the home trade. There is no solid foundation for the assumption that our manufacturers are too busily engaged to be able to deal with the needs of overseas markets.

The prosperity which has prevailed in this country generally is indicated in a striking manner from the figures issued by the London Clearing House running into thousands of millions of pounds which constitute a record. We must also keep in mind the negotiations which are about to take place with the object of securing an Anglo-American Trade Treaty. The benefits of such a Treaty would have a far-reaching effect of a favourable nature, not only for the British Commonwealth of Nations but for the whole world. We most earnestly hope, therefore, that some satisfactory solution of this difficult problem may be ultimately arrived at.

THE ACCOUNTS

Turning now to the accounts, which have been in your hands for several days, you will notice from the balance sheet that our holding of British and Indian Government securities amounts to £13,950,000, as against £13,439,000 a year ago. The bulk of the securities continue to be short-dated with only a few years to run. The bills discounted amounting to £15,387,000 consist almost entirely of Treasury bills, and there are no obligations outstanding relating to foreign governments or foreign municipalities. (Hear, hear.) The remaining figures in the balance sheet call for no special comment.

With regard to the profit and loss account, the current expenses at £37,195 are slightly higher than in the previous year, when they amounted to £34,762. Rebate has been increased from £140,249 to £152,748, and the gross profits amount to £350,319, as against £345,769 in 1936. It will be observed, however, that this year the gross profits are arrived at after provision for income tax, National Defence Contribution and transfer to contingency account, whereas on the last occasion provision for income tax had been charged to contingency account.

I have already referred to the interim dividend of 7½ per cent., which was paid in July, and the final dividend now recommended to the holders of the ordinary shares is 10 per cent., thus making 17½ per cent. for the year. The preference shareholders, of course, receive their usual dividend of 6 per cent. per annum.

It only remains for me to testify to the successful manner in which the affairs of the company have been conducted by Mr Newcomb once again, and to thank the sub-manager and those working with him for the loyal and excellent work carried on throughout the year. (Applause.)

The report and accounts were unanimously adopted.

Our Information Service

The Intelligence Branch of *The Economist* has been enlarged to meet the growing demand for economic and statistical information. The Department has been able to secure the services of a number of experts, and is prepared to supply information and reports on any branch of industry and finance as well as on international relations at a fee proportionate to the work involved.

A special feature of the Department is the preparation of regular or occasional reports, on request, for business men and industrialists anxious to keep abreast of all developments which may affect their branch of activity.

Enquiries should be addressed to the
Intelligence Branch, THE ECONOMIST

NATIONAL DISCOUNT COMPANY, LIMITED

GRATIFYING INCREASE IN PROFIT FEATURES OF THE MONEY MARKET

The annual general meeting of the National Discount Company, Limited, was held, on the 20th instant, in London.

Sir Sigismund F. Mendl, K.B.E., presided.

Mr Seymour S. Johnson (chief accountant and secretary) having read the notice convening the meeting and the report of the auditors,

Sir Sigismund Mendl said:—Ladies and gentlemen,—I regret that owing to medical orders our chairman, Sir Sidney Peel, is not able to be present to-day, and in his absence he has asked me to read the speech which he had prepared. It is as follows:—

Before we come to the business of the day, I wish to say something of the great loss which the company and the board have sustained by the death of Mr F. W. Green. Mr. Green had been a director of the company for nearly 35 years. He had a remarkable knowledge of business affairs, and he could always be relied upon for a sound and valuable opinion. He did a great deal of useful work in spheres beyond the scope of this company, but you would never have heard of it from his own lips. He was a most agreeable colleague, and, though he often held strong views, he knew how to put them forward without exciting opposition. He will be greatly missed by us all, and I am sure you will wish me to send a message of respectful condolence to his family.

I also regret to have to record the death of Sir Albert Wyon. Sir Albert was, for many years, one of the personal auditors of the company, in fact, until he was succeeded by the distinguished firm of auditors of which he was the head. I think I may say that he took a particular and personal interest in the affairs of this company, which extended beyond the range of his professional duties. He was, in addition, an outstanding figure in the world of business and finance. He, too, will be greatly missed.

RESULT OF YEAR'S OPERATIONS

I will take first the profit and loss account. The results of the year are briefly as follows: Gross profits amount to £234,814, an increase of £11,690 over the preceding year. This increase in our gross profits is a gratifying circumstance, more especially as it is arrived at after making due provision for payment of the National Defence contribution. To this has to be added a balance brought forward from last year of £232,001, making a total of £466,815. After deducting expenses, which are £1,944 up, on the year, we propose to put £10,000 to pensions fund, which will now stand at £165,000, to carry £50,000 to the reserve fund, to maintain the dividend and bonus at the same rate at which they have stood for the last two years, and to carry forward the sum of £216,762. This results in the carry-forward being reduced by the sum of £15,239, but it still stands at a sufficiently substantial figure. I think the fact that we have been able to maintain the dividend at the same figure as last year is satisfactory in itself, all the more so since we have been able at the same time to increase the reserve fund, a process of which few will question the wisdom in these tempestuous times.

The principal features of the balance sheet are an increase in our investments of about £1,200,000, and a decrease in bills discounted of £1,426,000. The increase in investments is due to an increase in our short-dated investments. The decrease in bills is due partly to a cause which I shall mention immediately. The total figures of the balance sheet are slightly down on last year's total. It is to be remembered that the comparison is with the figures of the previous year, which stood at a particularly high level.

The decrease in bills is largely due to the withdrawal from the market of all the Hungarian standstill bills, and of one-third of the German ones. The ease and smoothness with which this process has been effected speaks well for the strength of those who were responsible for the bills. It does not mean of course that the liabilities of the drawers of the bills have been liquidated as they ought to be, but at least, as far as it goes, it reduces the burden on the Bill market, and will, we hope, make room for a new set of bills, representing genuine and self-liquidating trade transactions.

MONEY RATES

In other respects, the year has been remarkably like its immediate predecessors. The Bank of England rate has continued to stand at 2 per cent., and the Treasury bill rate has been in the neighbourhood of 10s. per cent., excepting during short periods in June and December. Money has been extremely easy throughout the year. It is a remarkable fact that, for the first time for many years, the

money market did not have to resort to the Bank of England at the end of the year.

At the end of 1936 there were some indications, such as increase of prices, enhanced trade activities, etc., that the period of extreme ease in money was about to come to an end, but the course of external events has reinforced the determination of the Treasury to keep money easy if possible. It seems probable that London has continued to act as a sanctuary for floating capital, and when we regard the state of affairs, both in the East and in the West, it cannot be said that the owners of such credit are acting unwisely. It looks as though the same causes would continue to operate for some time to come. The London market has been like the space at the centre of a typhoon, surrounded by tempests, but itself calm and serene.

It is easy enough to describe in general terms the conditions of the past year, but that does not make it any easier for those who have to grapple with the problems and difficulties of the day-to-day transactions which make up the operations of a company such as ours. There are times when the average rates for money deposited with us exceed the interest which can be earned by bills and other instruments of credit. That these difficulties are not insuperable has been proved once again by Mr Goldsmith and his staff, and I think we can all congratulate them upon the special ability and unremitting industry which have produced the results we are laying before you to-day.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Charles D. Seligman seconded the motion, which was carried unanimously.

On the motion of the Chairman, seconded by Mr H. S. H. Guinness, the dividends as proposed were approved.

The directors retiring by rotation (Mr H. S. H. Guinness and Sir Sigismund Mendl, K.B.E.) and the auditors (Messrs Price, Waterhouse and Company) were re-elected.

Mr Charles Montefiore moved a very cordial vote of thanks to the chairman, directors, manager and staff, together with an expression of regret at the unavoidable absence of Sir Sidney Peel.

The vote, which was seconded by Mr W. G. Haill, was unanimously accorded, and the Chairman and Mr Francis Goldsmith having briefly acknowledged the compliment, the proceedings terminated.

MICHAEL NAIRN AND GREENWICH, LIMITED

ANOTHER SUCCESSFUL YEAR

The sixteenth annual general meeting of Michael Nairn and Greenwich, Limited, was held, on the 17th instant, at Winchester House, London, Sir Michael Nairn, Bt. (the chairman), presiding.

The Chairman, in the course of his speech, said that the report and accounts bore clear evidence of another year of successful trading on the part of their associated companies. The net revenue receivable from investments, etc., amounted to £255,591, which compared with £281,739 for the previous year, and the directors were again able to recommend a final dividend of 7½ per cent. and a bonus of 2½ per cent., making a total distribution of 15 per cent. for the year, the same as for 1936. He wished to state clearly that the apparent reduction in profits was almost entirely due to difference in the amount of Dominion income tax relief received during 1937 as compared with the much larger amount received in 1936.

The activities of their principal subsidiary, Michael Nairn and Company, Limited, had been fully sustained during the year, and there was abundant evidence that it continued to participate in generous measure in the welcome revival in the trade of the country.

There did not seem to him to be any sound reason for believing that a slump was soon to appear on the industrial horizon in this country, and he was glad to see that on a recent occasion the Prime Minister had given definite expression to that opinion. He was an ex-Chancellor of the Exchequer with the most intimate knowledge of the economic position and resources of the country, and they might take it that he spoke not only with authority, but with that caution that had always characterised his public utterances. He could assure the shareholders that the directors of their various companies were not taking a gloomy view of the future, but, on the contrary, were directing their whole energies towards the development and steady expansion of trade in the various floor coverings for the manufacture of which they were responsible. He was quite aware that they lived in a disturbed world, but he believed that just as they as a nation had overcome difficulties and dangers in the years that were gone, they would in the same spirit of wisdom, courage and goodwill successfully surmount those which faced them now.

The report was unanimously adopted.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR EVER-WIDENING CIRCLE OF CONSUMERS

The seventy-third annual general meeting of this company was held, on the 20th instant, in London.

Mr Kenneth M. Carlisle (chairman and managing director) said that on the whole the more favourable conditions which had characterised their previous year's operations had continued during the period under review, and the improvement then in evidence had been well maintained and even accentuated. On the production side of the business, although the price of raw materials, including cattle, fuel and practically all items employed in manufacturing and packing had shown a tendency to rise, the higher value for products, and more especially by-products, coupled with a greater volume of production, were factors which had combined to offset the increase of factory costs. Their various by-products had been sold at full market values, with an advancing tendency until towards the end of the year, when prices had again declined.

Pastoral conditions had been generally more propitious, and better physical returns, combined with improved prices for the output of their farms—cattle, sheep, wool, karakul skins and agricultural crops—had had the welcome effect of bringing their ranching subsidiaries into profit. Although all were not able to contribute dividends to their final results, profits earned had been materially helpful in reducing to a substantial degree the debit balances accrued during previous years of depressed values, which so heavily weighed upon all farmers and penalised the producers of primary and staple commodities.

DEMAND FOR COMPANY'S PRODUCTS

Trade in the standard proprietary articles of their allied companies had been buoyant, and turnover had responded in satisfactory measure to the improved conditions and greater activity experienced generally in this country. The patronage which their products, marketed under the well-known trade names of Oxo, Fray, Beefex, Lemco, etc., enjoyed at the hands of millions of customers connoted an ever-widening circle of consumers, and their high quality, coupled with their ready application for use in home and kitchen, offered strong recommendation for their further popularity. In their markets abroad there had also been a gratifying development of turnover which, however, in some countries continued to be hampered by the quantitative limitations on the importation of products.

Fluctuations in the values of currencies—invariably downwards in terms of sterling—Government controls by means of exchange regulations and other measures designed to counteract and postpone as long as possible the inevitable rise in the prices of imported commodities which a depreciation of currency must bring in its train, and the time lag which occurred before selling prices could be adjusted to the new cost of imported materials, were disturbing factors which adversely affected results in certain countries, and made their realisation in sterling a matter of uncertainty.

CURRENCY DIFFICULTIES

Their products, however, were so well known and in such good demand, and their trade marks were so firmly established, that they hesitated in following the policy of maintaining their prices in those markets, in the confidence that—when the barriers which at present restricted the flow of trade were lowered and stabilisation in the value of currencies was restored—would be permitted again to bring to this country a fair share of the profits earned.

In the meantime in all those cases in which funds were not freely transferable or convertible into any other readily negotiable currency they had followed the conservative practice of suspending profits altogether or of making full provision pending the time when some tangible value could be determined and assigned to them.

Subject to those reservations and to the provisions which it had been deemed expedient to make in respect of investments, stocks and other contingencies, the figure of profit was returned at £271,000, which was just over £8,000 above that of the previous year, and they proposed a final dividend of 7s., making 11s., free of tax, on the ordinary shares for the year.

The ranching activities in Southern Rhodesia had been reorganised and their ranches in South-West Africa had had a successful year. It was expected that the factory in Kenya would commence work during the coming month.

The company had just entered on its seventy-third year of existence, and the pioneering spirit which had prompted its formation had characterised its policy and guided its progress throughout.

The report and accounts were unanimously adopted.

PETROLEUM STORAGE AND FINANCE CORPORATION, LIMITED

CONTINUED SUCCESS OF

"CLEVELAND DISCOL" AND "CLEVELAND GUARANTEED" MOTOR SPIRIT

The annual general meeting of Petroleum Storage and Finance Corporation, Limited, was held, on the 19th instant, at the Friends' Meeting House, Euston Road, London.

Mr E. A. Radford, F.C.A., M.P., the chairman of the company, presided.

In the course of his speech the chairman said:—The profit for the past year, after charging all expenses, including depreciation and national defence contribution and after making provision for the income tax payable in January, 1938, and also that payable in January, 1939, has been £551,726.

POPULARITY OF THE COMPANY'S PRODUCTS

"Cleveland Discol," our alcohol blend motor spirit, has made continued progress, and unsolicited testimonials from enthusiastic users are continually being received. Practically every motor car manufacturer in Great Britain has now fully tested and approved the use of "Cleveland Discol," which is unsurpassed among motor fuels.

"Cleveland Guaranteed" motor spirit has retained its phenomenal popularity, and our sales of this grade still form the backbone of the company's business.

You will observe that no amount is included on the balance sheet for goodwill, which, in the case of a company such as ours, owning and marketing proprietary commodities which are well known and popular throughout the length and breadth of our country, is undoubtedly its most valuable asset.

With regard to the current year's prospects, the company's business continues to be, in every respect, satisfactory, and your directors are hopeful that it will continue to be so.

The report was unanimously adopted; £100,000 was transferred to general reserve, raising the same to £350,000; an amount of £8,000 set aside for staff pension scheme; and the final dividends recommended in the report were declared, payable on the 28th instant.

The retiring director, Sir William Alexander, was re-elected, and Messrs James Todd, Adams and Wilcock, chartered accountants, were re-appointed auditors for the current year.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED

INCREASED DELIVERIES

The fifty-second ordinary general meeting of this company was held, on the 18th instant, in London.

Mr S. C. Sheppard (the chairman) said that after the payment of the final dividend of 5 per cent. the amount to be carried forward to next year was £51,940, some £3,264 more than the amount brought in.

In reviewing the trade of the past year, he said it was at least satisfactory to note an increase in the aggregate deliveries of flour from the company's mills and those of its two subsidiaries. He emphasised this because of the reckless competition that had continued among the various mills in Brazil, and explained that the company, thanks to the consistency of the good quality of their marks, could invariably obtain preference at price for price.

He then referred to the question of wheat-growing in Brazil, and mentioned that legislation was passed last year making it compulsory for all Brazilian flour mills to use a certain proportion of home-grown wheats.

As to exchange, during the past year the company had obtained a fairly satisfactory amount of cover, although the position at the moment was somewhat obscure owing to a new decree limiting the exchange available for each country according to their surplus trade balance with Brazil. Similarly a tax of 3 per cent. on all remittances was, he reported, now being collected, and this was understood to be a universal charge, the proceeds of which were destined for the formation of an exchange equalisation fund with a view to avoiding wide oscillations in the rate.

The report was unanimously adopted, and resolutions converting the shares of the company into stock and increasing the borrowing powers to £750,000 were approved.

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED

GRATIFYING RESULTS

The thirtieth ordinary general meeting of the United Serdang (Sumatra) Rubber Plantations, Limited, was held, on the 19th instant, at 19 Fenchurch Street, London.

Mr H. Eric Miller (the chairman) said that last year he had ventured the hope that the year to August 31, 1937, would prove satisfactory, but the actual results had exceeded his expectations, and it was gratifying to present accounts showing a profit of £245,440, after providing the £25,000 written off mature areas, as compared with £142,911 for 1935-36, when £20,000 was written off mature areas. They proposed to transfer £20,000 to taxation reserve and to pay a final dividend of 10 per cent., making 15 per cent. for the year, as compared with a distribution of 10 per cent. for 1935-36.

They had been enabled in their financial year to ship 10,688,941 lbs., leaving them with a balance of 569,769 lbs. harvested prior to

August 31st last, which they carried forward at bare cost of collection, manufacture and distribution. The average net sale price of 9d. per lb. for the year showed an increase of almost 2d. per lb. over the previous year. Cost of production per lb. of rubber showed a small reduction.

As compared with rubber, their interest in gambier, palm oil and kernels was less important, but those subsidiary products had all contributed to the profits of the year. Their output of palm oil steadily expanded. Of the 1937-38 rubber crop they had sold to date, including contracts for forward delivery, 3,250,000 lbs. at an average price equivalent to over 10d. per lb. London landed terms.

The company was in a position of solid financial strength. They had even during periods of depression spent money judiciously to improve their estates, so that, although many of their trees had passed their prime, they could still give a good account of themselves and they had a fair proportion of high quality younger ones coming on. They had a considerable area of plantable reserve land and the money, too, so that, when new planting was again justified, United Serdang would be able to retain its position as one of the leaders of the industry.

The report was unanimously adopted.

SHORTER COMMENTS

(Continued from page 182)

profits. Thanks to a 68 per cent. rise in trading profit, net earnings of SMITH'S DOCK COMPANY are about doubled, at £148,852. BRITISH TOBACCO COMPANY (AUSTRALIA), associated with B.A.T., show the satisfactory increase of 30 per cent. in their net profits of £911,386. A consolidated balance sheet is to be supplied to ordinary shareholders, but will not be available till late this month. In the boot and shoe trade, L. AND J. WEBER AND PHILLIPS have reduced their dividend from 8½ to 6 per cent., but STEAD AND SIMPSON'S profits are practically unchanged at £38,958. WESTINGHOUSE BRAKE AND SIGNAL COMPANY has earned £275,632 against £200,765, and distribute 2½ per cent. more at 17½ per cent. JOHN CROSSLEY AND SONS, the carpet manufacturers, have earned £59,586 against £85,351, but as no allocation to reserve is made (against £30,000 in 1936) the dividend remains at 7½ per cent. The first report of HOUNDSDITCH WAREHOUSE COMPANY shows trading profits of £283,800, a consolidated balance sheet also being issued. Some £28,430 is written off goodwill, from profits earned before incorporation.

Borough Building Society.—The Sixty-Fourth Annual Report for year 1937 shows that the assets stand at £5,012,903. Share capital is £3,958,400, an increase of £231,928. Due to depositors £769,195, an increase of £174,926. The sum of £26,699 has been added to reserves. During the last four years the reserves have been increased by 89 per cent. The amount due from borrowers now stands at £4,656,055. During the year £885,473 was advanced on first mortgage.

Chilean Debt Service.—Revenues from the Nitrate and Iodine Sales Corporation totalled \$2,981,957.53 and income tax on copper undertakings \$3,124,795.88 during 1937. Fifty per cent. of these incomes will be used for payment of interest at the rate of 7.86 per mille. The balance has been used for redemption.

General Consolidated Investment Trust.—Net revenue during 1937 rose by £9,879 to £49,133 (after £16,300, against £9,880 for taxation). Ordinary dividend raised from 6 to 7 per cent. To general reserve £25,328, against nil. Carry forward reduced by £11,755 to £25,245.

Traction and General Investment Trust.—Net revenue for 1937, £66,987, against £65,958. Ordinary dividend raised from 12 to 12½ per cent. Dividend equalisation fund started with £30,000. Carry forward reduced from £55,950 to £32,214.

Law Debenture Corporation.—Net revenue for 1937 £61,045, against £57,113, after taxation. Ordinary dividend, 14 per

cent. for year, as before. Founders' shares receive tax free £70 17s. 4d., against £77 10s. 3d. per share. During 1937 reserve was increased by £19,542 to £214,337.

Smith's Dock Company.—Trading profits for year to September 30, 1937, increased by £70,226 to £172,118 (after tax and N.D.C.). To depreciation £50,000, against £30,000. Ordinary dividend raised from 4 to 7 per cent. To reserve £30,000, against £20,000. Carry forward raised from £20,048 to £27,025.

Bengal and North-Western Railway.—Company's share of net earnings for the year to September 30, 1937, is Rs.1,26,62,140 against Rs.1,20,02,508. Ordinary distribution, 18 per cent., as before. To provision for taxes £245,125, against £196,125. To sinking fund, £35,000, as before. Carry forward increased from £93,609 to £113,986. Number of passengers carried 33,008,248, against 30,928,959.

Trinidad Sugar Estates. Net profit for year to September 30, 1937, £20,448, against £21,279. Ordinary dividend 10 against 2½ per cent. Carry forward raised from £1,623 to £2,571.

National Omnibus and Transport.—Net profit in 1937 £109,566, an increase of £20,602. Ordinary dividend, 8 per cent., tax free, against 8 per cent., less tax. To general reserve £10,000. Carry forward increased from £28,377 to £30,443.

Petaling Tin.—Net earnings for year to October 31, 1937, were £282,604, an increase of £72,030. Ordinary dividend 85 against 70 per cent. To reserve £81,667, against £46,666. Carry forward £944 higher at £35,599.

Capital and Provincial News Theatres.—Mr S. Seeman, of the Classic Cinemas group, is to undertake the re-organisation of the affairs and theatres of this company. Mr Norman J. Hulbert, former chairman and managing director, and Mr V. C. Hardy, a director, have resigned from the Capital and Provincial board.

River Plate and General Investment Trust.—Net revenue for 1937, £49,840, against £43,930. Deferred dividend, 11 against 10 per cent. for year. To general reserve £5,000, raising it to £122,500. Carry forward £51,030. Trustees have applied £128,936 of capital reserve fund to writing down investments; valuation is considerably in excess of balance sheet figure of £1,224,109.

The Venezuelan Oil Concessions Limited.—Production for the week ended January 15, 1938, was: Bolivar District, 1,004,501 barrels; Maracaibo District, 38,872 barrels; Total, £1,043,373 barrels.

Old Silkstone Collieries.—At class meetings held on January 14 to consider the capital reconstruction, the scheme was passed by an overwhelming majority of both classes.

Westinghouse Brake and Signal Company.—Report and accounts for year to September 30, 1937, show net profit £275,632, against £260,765. To reserves: general, £75,000 (against £70,000); staff pensions, £10,000. Goodwill reduced to £1 by writing off £31,993. Ordinary dividend 10 per cent., also cash bonus 7½ per cent. (against 10 and 5 per cent.) absorbing £148,130. Carry forward increased from £60,060 to £70,569.

Scottish Stockholders Investment Trust.—Revenue for the year ended November 30, 1937 (not including surplus on realisations), £60,784, against £43,287. After debenture interest and administration expenses, net revenue of £33,667, against £18,500. This permits payment of the full dividend on the 5½ per cent. preference capital, against 5 per cent. last year, and also reduction of arrears from 11¼ to 6¼ per cent. Carry forward is reduced from £13,605 to £9,475.

Liebig's Extract of Meat Company.—A profit of £271,009 for the year to August 31, 1937 (against £262,839 for previous year). Ordinary dividend increased from 10 to 11 per cent., tax free, and £217,435 is carried forward (against £216,426).

APPOINTMENTS AND PERSONAL

Mr Clifford Henry Figg and Mr Randal Hugh Vivian Smith have been appointed directors of the Mercantile Bank of India.

Mr. John W. Hely-Hutchinson, owing to his absence in Australia, has resigned from the board of the Brazilian Warrant Agency and Finance Company, Ltd.

Sir Joseph Flavell has resigned as chairman and director of the Canadian Bank of Commerce. He is succeeded by Sir Thomas White.

Mr S. J. Ingram has resigned as chairman and technical director of the South-Western Gas and Water Corporation, but remains on the board. Mr R. B. H. Otley has been appointed director and chairman.

Sir Frederick Whyte, formerly President of the Legislative Assembly of India and later political adviser to the National Government of China, has been appointed director-general of the English Speaking Union.

Mr Philip E. Haldin, chairman of Lamport and Holt Line, has also been appointed joint managing director.

The Royal Insurance Company and Liverpool and London and Globe Insurance Company announce that Mr Frederic A. Bates has been elected a deputy-chairman.

Col. Lionel E. Pilkington has resigned his seat on the Manchester board of Martins Bank.

W. T. Henley's Telegraph Works Company announce that Sir Edward Crowe has been appointed a director as from January 1, 1938.

Britain's Overseas Trade

These charts illustrate the course of overseas trade since 1929 and should be read in conjunction with the leading article on page 155. Charts I and II show retained imports and domestic exports by value and volume, respectively. (The Board of Trade index numbers of volume, which are not available on the same basis for the whole period, have been linked to form a continuous series.) The remaining charts refer to individual commodities. The very small degree of recovery in the volume of exports of cotton piece-goods and iron and steel manufactures can be seen in Charts III and IV. In both these charts annual figures for 1929-31 are plotted; in every other case on the page quarterly figures are given. Charts V and VI demonstrate the increase in imports of raw cotton and wheat from Empire sources.

I.—OVERSEAS TRADE: VALUES

II.—OVERSEAS TRADE: VOLUME
(Index numbers: average 1927-9=100)

III.—EXPORTS OF COTTON PIECE-GOODS
(quantities)

IV.—EXPORTS OF IRON AND STEEL MANUFACTURES (quantities)

V.—IMPORTS OF RAW COTTON (quantities)

VI.—IMPORTS OF WHEAT (quantities)

included in returns
538,583,653 fcs.

The Van Zeeland Report

ONE bank chairman after another has been telling us this week that we must get rid of restrictions upon trade, do away with exchange regulations and restore the free movement of international capital if we are to make a fresh move forward and prevent the present halt in economic activity from developing into disaster. In his Report to the British and French Governments, which was published on Thursday, M. VAN ZEELAND expresses the same view. Indeed, in the course of his journeyings he found that everybody agrees in principle; but when it comes to taking practical action—they all with one consent begin to make excuse.

The Belgian ex-Premier's report, a full summary of which will be found on pages 218 to 221, has the unusual merit among international documents of frankly stating the difficulties, and as his enquiries have left him with few illusions, he has sought to adapt his proposals to the present complicated—not to say disorderly—state of affairs. The idea that any countries may be prepared to do anything for international collaboration may, in the prevailing atmosphere of pessimism, seem to be a vain hope. But, at the least, M. VAN ZEELAND's programme will compel those governments who profess a willingness to act in concert to implement their words or confess their insincerity.

Tariffs, in M. VAN ZEELAND's view, are not to-day such an insuperable obstruction as quotas and exchange control, and at the moment he does not hope to persuade

any country seriously to reduce the level of its import duties. But he does ask those countries who are prepared for collaboration to undertake to refrain from further increases against one another's trade, to reduce exceptional rates that are out of scale with their general tariff or have been imposed for crisis reasons, and to remove duties on the export of raw materials. He hopes that countries will continue to make bilateral tariff agreements, and in particular wishes success to the negotiations for an Anglo-American Trade Agreement. He is of the opinion that these agreements should be based upon a general application of the most-favoured-nation clause. But he frankly admits that the most-favoured-nation principle, rigidly applied, has been a hindrance rather than a help, and he therefore proposes that the nations who adopt his new international code should be free to exclude from M.F.N. treatment countries who adopt improper discriminations or refuse to participate in this new effort. The clause, moreover, should not be drawn up in such a way as to exclude regional agreements, provided they are open to all comers who will accept the obligations as well as the privileges of each agreement. These suggestions are by no means new, but M. VAN ZEELAND does well to put them forward at this moment; for the necessity of qualifying the pure nineteenth-century gospel has latterly been widely admitted, and there is to-day a much greater prospect of success on these terms than ten years ago.

M. VAN ZEELAND makes various suggestions regard-

ing indirect forms of protection such as dumping, and the restrictive use of sanitary regulations; but his most sweeping recommendations in this field relate to the use of quotas. He proposes that, in principle, all industrial quotas should be suppressed, though this would naturally have to take place over a period of time. The only exception made is of quotas which are used as an expedient for carrying out an international cartel whose rules and procedure are internationally approved and accepted as being in the general interest. He is less hopeful of the removal of agricultural quotas. Even here, however, he proposes that no new agricultural quotas should be imposed and that there should be no tightening of existing ones. On the contrary, bilateral negotiations should seek to modify or remove them.

On the financial side of his task, M. VAN ZEELAND accepts the position that the stabilisation of currencies on a fixed gold parity is not at present possible, and that even when it can be done, it will have to be on a new basis. But he desires to see the extension of the Tripartite Agreement of 1936 to other countries, who would be invited to indicate the limits within which they would seek to restrict the fluctuations of their currency for periods of, say, six or twelve months. This would lay the foundations of greater currency stability.

M. VAN ZEELAND proposes to revive international credit (the parlous condition of which he attributes to creditor nations which have closed their markets to foreign loans, as well as to the defaults of debtor countries) by removing exchange control from payments for the actual movement of goods. But even this cannot be done without liquidating the past—which means that debts must be adjusted to the debtor's ability to pay and existing arrears under clearing agreements consolidated. Any new securities to be created as part of these funding plans should be in the currency of the creditor and accompanied, if possible, by a plan for cashing them through some international institution. All new credit should be under the new free regime. In the initial stages, credit assistance would be required and, as had been forecast, M. VAN ZEELAND makes some tentative suggestions for the opening of credits between central banks at the B.I.S. He hopes to minimise the lack of balance that might emerge as a result of lifting control from payments arising out of current business by a system of multi-lateral clearing at Basle, and in the last resort proposes to set up a "common fund" from which credits may be granted. But his suggestions under this head are not worked out in detail, and until this is done, it is not possible to judge whether the scale of advances, if any, would be large.

No financial arrangement, however—as the report fully recognises—could be entered into without political guaran-

tees; for the lenders must be assured that any credits granted, even to finance current commodity movements, will not be used to assist re-armament. Clearly, such political suspicions overshadow the whole field of international activity. But there are also more definitely economic difficulties. Among the more purely economic conditions, M. VAN ZEELAND notes that some nations harbour resentment because they have no control over raw materials and believe they can only secure them by obtaining colonies; many are resentful of preference systems which have been set up between other nations; others complain of the closure of the former world capital markets; others again feel most keenly restrictions on the movement of population and the stopping of migration. The failure to settle debts is yet another cause of suspicion, while nearly everyone wonders what will be the effect upon employment when re-armament orders begin to fall off. It has even been suggested that a moment when the slow recovery of trade has been checked is not a suitable one for any new effort. In M. VAN ZEELAND'S view, however, this is one of the strongest reasons for acting now, for like the bank chairmen, he holds that if nothing is done, the present setback may easily develop into a major crisis.

He therefore concludes with the simple request that the Five Powers, Britain, the United States, France, Germany and Italy, should meet to consider whether they are prepared to make a new attempt at international economic collaboration, and to decide whether the recommendations of the present report, with such modifications as may be considered necessary, form a suitable starting point.

The Governments of France and Britain can hardly give an immediate answer to this question; for they must wait and see whether or not such suggestions awaken any response in Germany and Italy, and whether there is any desire on the part of authoritarian countries to depart from their present isolationist trend. At the same time a very early exchange of views is to be desired; for if England, France and America were prepared, in principle, to act on the lines suggested, Germany, Italy and other doubting countries would at least know the sort of economic conditions they could secure in return for political peace. It is for them to decide whether they find the prospect attractive.

But even if these countries are not yet ready for a programme of limited reconstruction such as this, M. VAN ZEELAND'S report remains a constructive plan on which other countries who are prepared for international collaboration may build up their mutual economic relations. The Five Power project may or may not materialise. But the general scheme should in any case be taken up by other countries as a serious attempt to restore the trade of the world, which is still suffering from the collapse of 1931.

Australia's Birthday

THIS week, in the corporeal presence of the LORD PRIVY SEAL, the former LORD MAYOR OF LONDON and many another notability, and in the mental presence of almost everyone within reach of Press or radio in the English-speaking world, Australia has been celebrating the 150th anniversary of the first British settlement on her shores. It was a humble beginning for a great nation. They were no Puritan fathers, no *conquistadores*, who landed at Sydney Cove from the brig "Supply" on January 26, 1788, but a squad of convicts whom a stern authority had transported from their country for their country's good. How truly it was for their country's good that it should hold and people that great continent in the South Pacific only the indomitable CAPTAIN ARTHUR PHILLIP realised,

and even he must often have lost heart when the first harvest failed, or the supplies from England did not arrive, or his motley colonists fought and rebelled. "We shall want some good characters whom these people might look up to," wrote home the first "Governor-in-Chief in and over Our Territory of New South Wales and its Dependencies"—which were to include in the early days the present Dominion of New Zealand. It is rightly CAPTAIN PHILLIP whom Australians and British people everywhere have been chiefly honouring this week; for without his humanity, his courage and his vision, that inauspicious experiment a century and a half ago might easily have come to naught.

Australia's first steps to nationhood were slow. The transportation of convicts to New South Wales was not

given up until 1840, and it lingered in Western Australia for another twenty-eight years. Though many of the convicts were stout men of the Tolpuddle Martyrs' breed, and though free colonists soon began to arrive, this far-away colony could not at first tempt mass migration from a mother country in the throes of the Industrial Revolution. In 1797, CAPTAIN JOHN MACARTHUR set Australia's feet on the path to her present prosperity by introducing the merino sheep, which thrives on the thin but extensive pasturage that is typical of the Australian hinterland. To-day, Australian merino wool ranks with Indian jute or Canadian hard wheat as a product, indispensable to the world, which comes predominantly from one land. But it was not the pastoral industry that brought the great rush of people to the empty spaces of Australia. In 1851 came the discovery of gold. Between 1850 and 1860 the population rose from 405,000 to 1,145,000. While the gold fever was at its height an annual average of over 40,000 immigrants entered Victoria alone. The present chief source of Australian gold, the Kalgoorlie area of Western Australia, was discovered in 1886, and brought a fresh "gold rush" to the country.

The gold boom was only a transitory phase; whereas in 1903 Australia produced nearly a quarter of the world's output of gold, in 1923 her share had fallen to a bare 4 per cent., and gold-mining is to-day but one among scores of Australian industries of comparable economic importance. But the gold phase left a legacy of a proletariat detached from the land, which has created many both of Australia's characteristic social problems and of her equally characteristic ways of meeting them. As PROFESSOR HANCOCK put it this week, "within ten years of the discovery of gold almost the whole Chartist programme had become law in the Australian colonies." The rise of the Labour Party to dominant power was a twentieth-century phenomenon, but by the time the six colonies were federated into the Commonwealth of Australia in 1901, they and New Zealand had pioneered for the world the path of social and economic democracy. The defence of labour standards behind erected barriers against undercutting imports and undercutting immigrants was indeed one of the most powerful reasons for federation.

Meanwhile, the character of the Australian economy had been radically altered since the days of the convict settlements, not only by exploration and immigration, but also by scientific discovery and invention. Dry-farming, irrigation, artificial manuring and the evolution of drought-resisting strains of wheat gave Australia the capacity to produce grain and other primary products that the Old World needed; the railway and the steamship brought them within the Old World's reach. More recently, developments in cold storage have deflected once more the path of Australian economic history. But the free exchange of Australia's raw products for Europe's manufactures was a partnership that irked the nationalism of both sides. Europe

sought to safeguard its peasants; Australia set its heart on a more balanced economy. Behind the fence of protection, secondary industries grew up, until to-day the net output of factories in the Commonwealth exceeds in value the total net output of the pastoral, agricultural and dairying industries, and approaches that of all primary industries.

To-day, the internal prosperity of Australia, which began to revive even before the start of recovery was visible in Great Britain, continues without pause. It has been helped by a building boom which has affected all the principal cities of the Commonwealth. The price of wool has been disappointing this season, and the general fall of prices since last April has been necessarily a bear point for Australia. But it has yet done little or nothing to abate the turnover of business within the country. A short while ago the proportion of unemployment touched a level lower than had ever been recorded before in Australia, though public works designed partly to relieve unemployment remain an active part of governmental policy. If times grow more difficult within the next few years, Australia faces them with many more advantages than in 1929. She has greatly increased both the volume and the variety of her exports; public finances are on a sound footing; a substantial sterling reserve has been accumulated from the trade balances of previous years; conversions and a rigid abstention from new borrowing have reduced the burden of interest on the external debt by upwards of four million pounds a year. Above all, Australia has behind her a record of achievements in active warfare against depression which will give her good heart and valuable experience, and in which Governments both of the Left and of the Right have co-operated.

Vital problems loom in the more distant future. Even in a country politically so homogeneous as Australia, the principle of federation has to run the gauntlet between the centralists and separatists, in these days of closer and closer state control of economic life. Problems of defence and foreign policy must bulk large for a period; for Australia, with her new status as a nation independent externally as well as internally, looks out upon a world whose dangers lie too close for comfort to her shores and her economic lifelines. And problems of population will come more and more to the front as the truth sinks into the public mind that Australia is certain to see a decline in the numbers of her people unless the reproduction rate rises or immigration is resumed, and that Great Britain has now few potential emigrants to spare. What will the next hundred and fifty years bring for that great Commonwealth, as large as the United States but with one-twentieth of its population? That they will see the consolidation of Australia's nationhood and the great furtherance of her economic progress we may be sure. But we may also feel certain that they will bring problems and developments very different from those Australia has experienced since that fateful day when the "First Fleet" landed.

A Transport Experiment in Ulster

THE Victorian era, that age of certainty, was never more sure of anything than that railways had a natural monopoly of inland transport. It was well that it was so, for without such an assured monopoly there might never have been the great development of railway construction whose fruits we now enjoy, and it is very doubtful whether the system of "charging what the traffic will bear," which alone made possible a large volume of heavy traffic, would have been adopted. For low rates can be charged on minerals only if relatively high rates can be charged on more valuable merchandise, and that is impossible if there is a competing form of transport ready to carry this

remunerative traffic at cut rates.

The railways' monopoly has, however, been brought to a decisive end by the invention of the internal-combustion engine, and in almost every country, as a consequence, there is the difficult problem of accommodating two competing transport systems, of which one is legally and technically organised as a monopoly, and bears the legal obligations of a common carrier, while the other has grown up in an atmosphere of fierce and largely unregulated competition not only with the railways but among its own members. Road transport naturally competes most strongly for the more remunerative traffic, with the result that the problem

usually emerges in the shape of complaints by the railways that they are unable to earn the full return on their capital to which they consider they are entitled. In Northern Ireland, however, where both roads and railways are numerous in relation to the population or the traffic to be carried, the problem was exceptionally severe. In the five years 1928-32 the working expenses of the three main line railways absorbed 91 per cent. of their total receipts. For the "Big Four" of Great Britain in the same period expenditure was 81 per cent. of receipts, and even the margin of 19 per cent. was insufficient to yield the "standard revenue" and make an adequate return on all the capital invested. In 1933 there was a railway strike in Ireland, and the expenditure of the three railways exceeded their receipts by 10 per cent. Moreover, it became obvious when work was resumed that some of the traffic was lost for good. The railways were thus in a parlous state. Various devices had been adopted in the 1920's to reduce the severity of competition. Northern Ireland was the first to develop the system of limiting road passenger services by licence that was later adopted in Great Britain. Minimum fares were prescribed; heavy taxation was imposed on road transport vehicles. But there are obvious limits to a policy of "co-ordination" that goes no further than the negative step of equalising the burden of public regulation on the two competing forms of transport. Road vehicles cannot be restricted to such an extent that the service does not meet the demand, without evoking an outcry both from the operators and the public. And if even with this amount of restriction there is still not a remunerative volume of traffic for the railways, the country is still faced with the possibility of the breakdown of its railway system. The position was reached in Ulster in 1934 that two of the three large railways in the province were threatening to close down completely.

In this emergency SIR FELIX POLE was invited by the Government of Northern Ireland to submit a Report on the whole problem. In his Report SIR FELIX gave it as his opinion that the most effective solution would be the complete amalgamation under a single body of all forms of public transport in the country—road and railway, goods and passenger alike. Several of the railways, however, are not confined to Northern Ireland. Six of them operate also across the border in what we must now learn to call Eire, and the lines of the Great Northern Railway cross the boundary between the two States no fewer than fifteen times. SIR FELIX POLE was reluctantly compelled to the conclusion that it would be impossible for this reason to amalgamate the railways with the rest of transport. Moreover, when the Northern Ireland Government came to draft a Bill to implement SIR FELIX'S Report, they found it necessary (contrary to his recommendation) to exclude also the passenger transport undertaking of the Belfast Corporation. This exclusion was presumably based on political rather than economic considerations, since the Act provides that the Belfast undertaking can be taken over subsequently if terms can be mutually agreed. The Northern Ireland Road Transport Board, as set up by the Act of 1935, consequently embodies only a part of the complete amalgamation which SIR FELIX POLE thought ideally desirable. By the terms of the Act, all road transport undertakings except that of the Belfast Corporation were to be purchased by the Board. Up to £5,000 of the compensation could be paid in cash, the remainder in capital stock of the Board. The railways sold their road undertakings (including collection and delivery work) to the Board, but they continue to work their railway lines. The Act provides that the net receipts of the railways and the Board are to be pooled and divided between them in proportion to the respective revenues of rail and road transport in a "standard year," which is defined as 1932 for road transport and the average of 1924 and 1932 for the railways. But the passenger traffic

of Belfast, which includes a third of the population of the province, is excluded both from the Board's administration and from the financial pool.

The Board, which came into formal existence on September 1, 1935, thus has a monopoly—save, of course, for traders' own vehicles and private cars—of the transport of goods and passengers by road outside the County Borough of Belfast, and it is also enjoined to work in close financial and technical co-operation with the railways. Limited though it is, the Board is probably the most radical experiment yet made in the co-ordination of transport. Northern Ireland's neighbour, Eire, runs it close, for the bulk of road passenger traffic there is in the hands of the Irish Omnibus Company, which is owned by the Great Southern Railway, itself an amalgamation of almost all the railways in the country. But the Northern Ireland Road Transport Board is unique in having a monopoly of the public transport of goods, as well as of passengers, by road. This fact also gives it a wider scope than the London Passenger Transport Board, upon whose structure it is obviously based. And naturally, the career of the Board is being very closely followed not only in Northern Ireland but in every country where a solution is being sought for the problem of transport co-ordination.

The circumstances in which the Board was born were not such as to guarantee it an entirely favourable reception. Many road transport operators, noticing that the emergency which gave birth to the Board was created by the difficulties of the railways, and also that the plan was based on the recommendations of a railway expert, were inclined to regard the whole experiment in the light of a mere rescue plan for the railways. Complaints were increased by the fact that it proved impossible to adhere to the timetable for the transition period laid down in the Act. An unexplained period elapsed before the appointment of the two tribunals envisaged in the Act, one to arbitrate on the terms of purchase of undertakings by the Board, the other to decide on fares and charges; and though it would be difficult to establish that harm was done by the delay, since there was no accumulation of cases waiting to be decided, criticism has naturally been stimulated. The scheme for pooling the receipts between the Board and the railways was not approved until December 24, 1937, the delay being due to the difficulty of ascertaining the net revenue, in the "standard year," 1932, of the many hundreds of road undertakings then existing; even now there are more than 200 undertakings acquired by the Board for which no accounts have been furnished.

The difficulties of the initial period have, indeed, proved to be very much greater than was foreseen. The road passenger services were taken over in a comparatively short time, but the tasks of purchasing large numbers of goods transport undertakings and of evolving the amalgamated service to take their place, have taken a long time to solve. It would consequently be unreasonable to place upon the Board the whole responsibility for the long delay in putting the full scheme into operation. The first year's accounts had to await the approval of the pooling scheme, and they have not yet appeared, although it is understood that they are in the hands of the Ministry of Home Affairs. The absence of established facts about the Board's undertaking has not been calculated to assist its critics in understanding the full immensity of the difficulties with which it is faced.

Delay is not the only complaint of the undertakers who were bought out by the Board. There has been a considerable volume of criticism of the amount and nature of the compensation paid. The Board at its inception inherited agreements that had been made by the Government with the three largest railway companies and the two largest road passenger undertakings, and it has been said (though the charge is denied by the Board) that these agreements were unduly favourable to the companies, leaving an insuffi-

cient margin of resources out of which the Board could compensate other undertakings. Compensation was paid partly in cash and partly in the Board's stock, of which the "A" stock is, broadly speaking, given in compensation for tangible assets and the "B" stock for goodwill or prospective future profits. It is one of the complaints of the former operators that though the "B" stock is reckoned at par for the purpose of compensation, it actually stands in the market at a discount of about 25 per cent. The complaint is natural enough, but is hardly well founded, seeing that the market value of the "B" stock is inevitably closely related to the surplus earning power of the Board after paying the moderate interest of 4 per cent. on the "A" stock. Given reasonable efficiency by the Board, the only

method of raising the market valuation of the "B" stock would have been to reduce the issue of "A" stock in payment for the fixed assets taken over from the operators. Those operators who were making substantial profits before the Act have some ground of complaint that they have been treated relatively worse than those who were not making profits; but there is no reason to believe that the compensation paid for fixed assets was not fair.

Complaints from the former operators alone might be overlooked if the public of Northern Ireland were pleased with the Board's operations. Unfortunately, the public has also had criticisms to make. These criticisms will be outlined, and an attempt will be made to assess their justification, in a second article.

"Stop Me and Buy One"

ON April 23, 1937, a man named TAYLOR was riding a tricycle. Attached to the tricycle was a receptacle containing ice-creams, which TAYLOR was offering for sale to the public. As his custom was, he arrived at a school in Clancarty Road, Fulham, at a moment when the children were leaving the premises, "in order that they might stop him if they wished to buy ice cream." It turned out that they did wish to buy ice cream, and he remained there for about 15 minutes, serving eight children from "a receptacle occupying a stationary position at a place in the carriage-way."

It will be obvious at once that TAYLOR, by selling from a stationary tricycle, put himself in jeopardy of being held to contravene Section 30 of the L.C.C. (General Powers) Act, 1927. A constable, approaching him and finding that he had no hawk's licence, charged him with the offence. TAYLOR cleverly came back on the constable by pointing out that Section 30 contains a proviso (which the constable, he claimed, had overlooked) authorising him to sell from a stationary receptacle if he ordinarily moved it from place to place in pursuance of his trade. The constable denied that TAYLOR'S action was covered by the proviso, and haled him before the Justices. The latter sided with the constable; held that the law had been outraged by the sale of ice-creams from a temporarily stationary receptacle; convicted the salesman; but, despite the gravity of the offence, tempered justice with mercy under the Probation of Offenders Act, 1907.

The finding of the Justices was broadly this: that it is in order to sell ice-creams to children from a tricycle so long as the man in charge of the tricycle is pedalling it along the road and his customers are keeping pace with him at a jog-trot along the pavement. If it is a running contract of sale and both parties are proceeding *pari passu* during the negotiations, the delivery of the goods and the payment therefor, then the *vendor* commits no crime. If the *vendor*, however, for one moment stays his progress, delays the venture and comes to a full stop, then, in the view of the Justices, the law is breached and the salesman is liable to whatever penalties are ordained by Section 30 of the L.C.C. (General Powers) Act, 1927.

If the matter had remained there, we Londoners would in future have had to buy our ice-creams on the run. Happily for all of us, however, TAYLOR was a man of spirit, who appealed to the High Court on the ground that the proviso which the constable had rejected was sufficient authority for his conduct. Happily, too, the Court before which the appeal came was strong, well-balanced and admirably suited to try a criminal action with a commercial background. THE LORD CHIEF JUSTICE presided and, with him on the bench were BRANSON, J. and HUMPHREYS, J. Of these two judges the former, who has spent almost the whole of his working life in the Commercial Courts, is supremely quali-

fied to hear a charge arising out of the purchase and delivery of a choc-bar or a fourpenny tub. The latter judge, who had a distinguished record at the Criminal Bar, has seen at close quarters most of the famous wrongdoers of the past thirty years, and well understands those dark instincts of the human soul which may tempt a desperate man to contravene Section 30 of the L.C.C. (General Powers) Act, 1927.

Counsel engaged in the appeal were also of excellent quality—two eminent silks and two busy and experienced juniors. TAYLOR won his appeal and the world has been made fit for school-children to buy ice-creams in. But the victory was not by any means a walk-over. THE LORD CHIEF JUSTICE, it is true, thought that the effect of the proviso to Section 30 was to protect certain vehicles notwithstanding that at certain times they did occupy stationary positions. But MR JUSTICE HUMPHREYS found considerable difficulty in holding that the section was intended to authorise in the proviso what it prohibited earlier.

Nevertheless, the appeal succeeded, and, as laymen, who look at these difficult points of law from a practical standpoint, we are glad of it. A contrary judgment might, in our view, have led to grave abuses. Even if we neglect the relevant passages in the Sale of Goods Act and the later judgments of LORD MANSFIELD, it is clear from the text books and from LORD HALSBURY'S *obiter dictum* in *Blackburn v. Vigors*, that a contract for the sale of ice-cream is not *uberrimæ fidei*. A vendor who insisted on payment before delivery might subsequently accelerate his tricycle, and, without making delivery of the goods paid for, cry *caveat emptor* derisively to his breathless and sobbing customer. If an infant were bound in law to buy his ice-creams, *currens*, so would the adult; and there are many of us who are ill-qualified physically to keep pace with a tricycle as we buy from a better placed and more athletic seller. And we have our adult dignity to consider, too. It would not do for THE CHANCELLOR OF THE EXCHEQUER or THE CHAIRMAN OF LLOYD'S to be seen running through the streets of London by the side of a tricycle, scattering pedestrians to right and left, as with one hand he fumbled in his pocket for the necessary fourpence and with the other received the familiar tub and cardboard spoon. No. The judgment of the Court of Appeal is undoubtedly sound.

And so the battle of Clancarty Road is settled—not without dust and heat. It has taken the time and services of the L.C.C. bureaucrats who framed the Act, of the M.P.s who passed it, of the police who tried to enforce it, of the solicitors who prepared the briefs, of the justices who convicted, of the four counsel who argued the case on appeal, and of the three eminent High Court judges who heard it. Is there in all this, do you think, something slightly out of proportion? Can it perhaps be that the world is just a little bit mad?

Topics of the Week

Bank Chairmen on the Trade Outlook.—Three of the Big Five banks have held their annual meetings this week, and particular interest has naturally been taken in what Mr Reginald McKenna, Mr Rupert Beckett, and Mr Colin Campbell had to say about the outlook for trade. As Mr Beckett remarked, on every hand the question is heard: "Are we heading for a slump?" And his sense of public psychology was entirely right when he declared that it was important that the question should receive an answer based on an examination of the available facts. Unfortunately, the question is peculiarly difficult to answer at the present juncture of affairs, and while all three chairmen were naturally and rightly at pains to emphasise the numerous and strong favourable factors in Great Britain's present position, it was also clear from their speeches that they are watching the development of events with a very careful watchfulness. Both Mr Beckett and Mr McKenna found the main explanation of the check to British recovery during the last quarter of 1937 in the sharp reversal of the upward trend in America, which they attributed in part to a loss of confidence owing to the political antagonism between the Government and business leaders in that country, and in part to the decline in the capital goods industries. This emphasis upon the responsibility of America for the current recession led logically to the conclusion that the course of events in 1938 must largely depend on whether it proves possible for recovery to be resumed in the United States. On this Mr McKenna was non-committal, but Mr Beckett thought that the recent news from the other side of the Atlantic had been more encouraging, and that the next few months would see a resumption of the recovery movement.

Another point on which Mr McKenna and Mr Beckett were in substantial agreement was the importance to be attached to the rising adverse balance of payments. Mr McKenna, it is true, once more repeated his doubts of the accuracy of the official estimate, and went so far as to question whether the final balance is against the United Kingdom. He warned his audience, however, that an adverse balance of payments, if it existed, would be a serious matter, since it would call for a restrictive monetary policy. Mr McKenna's speech, as is his custom, contained an interesting passage on matters rather wider than are usually the concern of bank chairmen. He has long been an advocate of a managed currency, and he took the occasion this year to compare the results of the six years 1925-31 under the gold standard, and the six years 1931-37 under a managed currency. The comparison is of course highly favourable to the latter period. Mr McKenna did not ignore the dangers of *post hoc ergo propter hoc*, but he proved his conclusion that "whatever other forces may have been in operation, a managed currency is at least consistent with flourishing trade." Of the three chairmen, Mr Campbell mixed most optimism with his caution. He was critical of the fears of a pronounced economic recession that have been repressed "in quarters where economics is an academic study" and expressed his own confidence in the "fundamental strength and soundness" of the position.

Parliamentary Prospects.—When Parliament re-assembles on February 1st, its main preoccupation is likely to be with arms and defence. Its first attention will be engaged by delivery and co-ordination in the equipment of the fighting services, the progress of air-raid precautions, and the task of footing the cost of re-armament in the Budget next April. The Chamberlain Ministry has also reached a crucial stage in the statutory definition of the proper and necessary relations between the State and industry. Vested interests are already lined up to oppose the Government's bills to regulate and control the coal, electricity and film industries. The Mining Association of

Great Britain is conducting a campaign of fierce hostility against the compulsory amalgamation proposals of the Coal Bill, which is on its way to the Statute Book; and organised labour, as in 1921, will not be content until the whole mining industry is owned by the State. Nor have any of the Government's alternative proposals for the guidance and protection of the film industry received general approval from the parties most closely concerned. It remains to be seen, finally, when the text of the Electricity Bill is made public, whether the interested opposition which attacked last year's proposals of the Government to rationalise electricity supply has been allowed to triumph.

Meanwhile, vitally important commercial negotiations are in hand with the United States and with Eire; and here, no less than in the field of industry, the Government may pray to be saved from its political friends. The official Opposition may be weak, but on the other side of the House there is an unofficial Opposition, and the real test of Mr Chamberlain's administration may be its success in restraining this Opposition in the interests of the community. Meanwhile, in the formulation of Sir Samuel Hoare's Bill to reform the prisons, in the compilation of family budgets to improve the measurement of the cost of living, and in the preparation of reports on safety in mines and the location of industry, the normal business of modern government will steadily proceed.

Church Unity.—By a striking coincidence in time, two important documents have recently been issued which illustrate the efforts being made to heal the schisms that for three centuries have divided the Protestant churches of England. The first of these documents was the report of a Commission appointed by the Archbishops of Canterbury and York as long ago as December, 1922, "to consider the nature and grounds of Christian Doctrine, with a view to demonstrating the extent of existing agreement within the Church of England, and with a view to investigating how far it is possible to remove or diminish existing differences." The report has been signed by all the members of the Commission without any minority report, but this does not mean that it has been found possible to reach agreement on all the disputed points, and in particular on those which chiefly arouse the controversies of Fundamentalists and Modernists. On one point after another the report is content to state that two opposing views are held, and can properly be held, within the single Church of England. The Church has always had a wide range of doctrine, as is inevitable in the State church of a people addicted to tolerance and compromise, but this new freedom of conscience applies to a number of matters which until very recent generations would have been considered fundamental in the doctrines of the Church. It clearly reflects the realisation within the Church that the temper of the modern age, though it may be religious, is certainly not theological. The second and more striking document expresses the same conviction. This consists of a series of heads of discussion for possible reunion between the Church of England and the Free Churches. It has been drawn up by a body consisting on the one hand of a number of bishops of the Established Church, and on the other hand of several of the leading representatives of the Methodist, Congregational, Baptist, Presbyterian and Moravian churches. Both sides in the discussions that have led up to this report have made concessions. The Anglican bishops have declared themselves willing to accept inter-communion, to admit the nonconformist clergy to an equality of status, and to recognise the right of congregations to have at least some say in the appointment of their religious ministers, while the Free Church

representatives, on their side, have accepted the principle of episcopacy, and of the ordination of "presbyters" (which is to be the new form of "parson" or "pastor" writ large) by the laying on of hands. The report is not a cut-and-dried and accepted scheme, but merely one for discussion by the various bodies concerned. It will take long and anxious consideration before all sections of Protestant opinion accept the scheme, which, as has been said in one comment, must appear to many of them to be "either betrayal or revolution."

A Newspaper Jubilee.—*The Economist* is so closely approaching its own centenary that it can take an almost paternal interest in the milestones passed by its younger contemporaries. A dinner held last Friday was notable not only as marking the jubilee of our close and lively neighbour *The Star*, but also for two speeches in particular that reflected a pair of traditions of which all Englishmen can well be proud. The Lord Mayor of London did not fail to recall the fact that his great predecessor, Brass Crosby, went to the Tower to defend (against the House of Commons, be it remembered) the freedom of the journalists of the City to edit their newspapers without control from above or any hindrance save the ordinary responsibility of every citizen to answer in the courts for any transgression of the law. There are those who hold that the full freedom of the Press is slowly being encroached upon by statutes, by administrative practices and by judicial interpretations of the law. But when the freedom of the British Press is compared with the dismal state of journalism in other lands, these complaints sink into insignificance. The interferences could be multiplied tenfold and the written word in Britain would still be free. Another graceful speech at the dinner was made by the chairman of the *Evening News*, a paper that is not only *The Star's* keenest commercial competitor, but is also about as diametrically opposed to it in political faith as two newspapers can well be. There are not many countries left where political bitterness and commercial jealousy can be so bounded by tolerance. Uncensored knowledge and tolerant judgment are an unbeatable combination.

Chautemps, Daladier, Gamelin.—Alice in Wonderland's "curiouser and curiouser" is the only comment that the astonished English observer can make upon the course of French politics during the past week. After having gone out of his way at the end of his last administration to break up the Popular Front, M. Chautemps has been inaugurating his new administration with an elaborately studied attempt to recreate it. He has been at pains to explain that the whole purpose of his Ministerial alarums and excursions has been to make sure of being able to carry out the Front Populaire policy. And a statesman has seldom been taken more ironically at his word. On Friday of last week the new French Government was greeted by the Chamber with a vote of confidence on the record scale of 501 to 1. And while there were 100 abstentions on the extreme Right, and M. Bergery, who cast the solitary adverse vote, did his best to play the *enfant terrible*, it is credibly reported that M. Chautemps would have welcomed a dozen Bergerys instead of one, and two hundred abstentions instead of a mere century. In politics, confidence rings hollow when it professes a virtual unanimity; and in well-informed French opinion M. Chautemps' plethoric 501 to 1 is worth not so very much more than a bare majority.

At the same time, there are other things besides mirages and drifting sands in the present French political landscape. If M. Chautemps' position looks rather more nebulous, on the other hand M. Daladier's looks decidedly more solid. Whatever may or may not be the political meaning of M. Daladier's victory over M. Cot, there can be no doubt about the reinforcement of France's means of defence through the concentration of administrative control of all defence forces in one hand. And the new Carnot has now been given a Napoleon and a Colbert to

minister to him. On the day on which M. Chautemps received his embarrassingly excessive vote of confidence, the President of the Republic signed a decree creating a Chief of General Staff of National Defence in the person of General Gamelin and a Secretary-General of National Defence in the person of M. Jacomet, who already holds the corresponding post in the Ministry of War. Co-ordination of defence is relatively easy to achieve in France, where the Army already possesses an uncontested preponderance over the other two fighting services. But it is interesting to observe how promptly this French portent has been noted in Germany. This is a good sign, considering that one of the chief dangers to European peace has been a German will to believe that France is not half so strong or so solid or so resolute as France has in fact never ceased to be—notwithstanding some curious antics in the political circus at Paris, which are, after all, no odder than things that happen in Berlin.

Mr Hirota's Apologia.—Most of the political pronouncements that are made by Japanese statesmen nowadays would be superbly witty if they were not meant to be taken seriously; and Mr Hirota's speech in the Imperial Diet last Saturday was no exception to the rule. When he said that "Japan has no territorial ambitions in China nor has she any intention of separating North China from the rest of the country," what he meant, without seeing his own joke, was that Japan intends to swallow China whole like a boa-constrictor instead of shearing off a leg or an arm like a shark. But we must forbear to exploit a vein of humour that can be so easily mined. It is more interesting to study the references in Mr Hirota's speech to Japan's relations with foreign countries other than the neighbouring one for whose sweet sake the Japanese are making their present titanic exertions. Here, too, there is a certain *naïveté* in the obviousness with which the doses of Japanese good-will talk doled out to different Powers are graduated. The medicine-glass tendered to Italy and Germany is all sugar and water. In the glasses proffered to Great Britain and the United States there is a double dose of honey to take out the nasty taste of the Japanese bombs that sunk an American warship and the Japanese machine-gun bullets that all but killed a British Ambassador. But here the fulsomeness is nicely differentiated. The Americans, Mr Hirota opines, have perfectly understood that "in conducting military operations in China Japan has been exercising special care lest the nationals and the rights and interests of third Powers should suffer." About our British perspicaciousness, Mr Hirota is not quite so sure, so he has shaken in a dash of bitterness. He hopes that the British "will endeavour to comprehend correctly Japan's position in East Asia and to co-operate with Japan" when they have fully grasped "the importance of Anglo-Japanese relations"—which is Mr Hirota's jolly way of saying that on the Far Eastern chess-board a larger number of British than American pawns are commanded

by Japanese pieces. But the most significant reference is that to Russia; for, while Mr Hirota deprecates the Sino-Russian non-aggression pact of last August, he underlines "the urgent need" of placing the relations between Japan and Russia "on a normal footing" for the sake of peace. It is obvious from this analysis of Mr Hirota's speech that the speaker is in a state of some discomfort—and so he may well be. The two indices of Japan's prospects in her present adventure are the misgivings about it in Germany and the will to resist it in China; and neither one is as encouraging to Japan as it might be.

The League Council's Hundredth Session.—This week's session of the Council of the League of Nations is at least numerically historic, and it is dealing with matters of great import. The Council's deliberations will reflect the Nemesis that is overtaking both the two groups of Great Powers. On the one hand, France and Great Britain are now reaping the whirlwind from the storm which they sowed when they let the Covenant go by default in face of flagrant acts of aggression by Japan in Manchuria and by Italy in Abyssinia. The surviving smaller States-members have evidently arrived at the conclusion that, if and when their turn comes to be selected as victims of fresh acts of aggression, Great Britain and France will abandon them as cold-bloodedly as they have abandoned Abyssinia and China. And with this prospect thrust under their noses by two gloomy precedents, the smaller States are to-day in a mood of not seeing why they should go out of their way to invite an attack against which they would perhaps not be defended. Hence a move among them to get it put on record that Articles 10 and 16 of the Covenant are now in abeyance *de facto*, and another move to re-regularise their diplomatic relations with Italy by recognising the style and title of Emperor of Ethiopia with which a dictator's self-glorification has saddled the reigning representative of the ancient House of Savoy. The second, as well as the first, of these two moves was only to be expected in present circumstances; and it would ill become British or French lips to utter a word of blame for Dutch and Swedish reactions to their own impolicy. Yet what is natural is not necessarily expedient. No doubt if, ten years hence, the Fascist regime in Italy is flourishing like a green bay tree, the Italian conquest of Abyssinia will by then have received, perforce, a diplomatic recognition from most other States in the world. But why anticipate to-day a possibility that is so far from being a certainty? The one thing that is certain to-day about both the Italian and the Japanese acts of aggression is that we have not seen the end of the story. Abyssinia under the Fasces is neither peaceful nor profitable. While Italy and Japan are both thus floundering into deeper difficulty and disgrace, Germany, for her part, is showing a more and more marked disinclination to follow them in their unremunerative adventures. The present international drama may end in once again discrediting all power politics, both positive and negative.

In the meanwhile, it seems best to wait and see. When we have already paid the bill for the waiting game, we might as well wait a little longer in order not to forfeit the possible profits.

Business and the New Deal.—Impressive efforts have been made during the past week to sweeten the atmosphere between President Roosevelt and the leaders of American business. Some part in the effort was played by the members of the Business Advisory Council, which has been in existence for some time for the purpose of representing the views of industry. The Council, at a meeting last week, found itself able to approve the Administration's Wages and Hours Bill, though the approval was tempered with a recommendation that it should be studied further. In return for this concession to his views the President radically modified the sweeping condemnation of holding companies which he had expressed the week previously, and he has now made it clear that his criticism applied only to those varieties of holding companies which are already under suspicion in the Public Utility Act. These mutual concessions of view-point, together with a proposal to appoint a new advisory group more fully representative than the existing Advisory Council of the President's political and economic opponents, have gone a long way towards convincing the timid businessman that the President does not intend to deprive him of his entire ability to earn profits.

The course of reconciliation, however, is a zig-zag rather than a steady progress, and three events of the week must be set on the other side as increasing the alarm of business interests. The first of these was the decision by a Federal Court that the Tennessee Valley Authority (and by implication, all similar authorities) was acting fully within its constitutional powers in selling electricity generated at flood-control dams, and in extending its business by "the allurements of customers by lawful but substantially lower prices." This decision clearly opens the way for a considerable intensification of the competition between public and private power projects. On the next day a Federal Court in Wisconsin convicted sixteen of the largest oil companies in the country and thirty of their officials, of criminal conspiracy to raise and fix prices of petrol. Thus two large industries have been faced with serious threats to their profit-earning capacity, and the fact that the blow was delivered in each case from the judicial bench will not prevent its being blamed upon the President. Finally, Mr Roosevelt on Tuesday went out of his way to make it clear that the *rapprochement* with Business did not include approval of any reductions in wages. The cumulative effect of these statements was to convince the financial community that the livelihood of the *entrepreneur* was no more assured after the President's conference with business men than it was before, and a sharp fall on the New York Stock Exchange marked the failure of another phase of the attempt to establish mutual confidence and esteem between the two parties whose co-operation is essential if prosperity is to be restored.

Air Reprisals in Spain.—The battle for Teruel seems to have lapsed into stalemate, with each side attacking alternately, but neither apparently succeeding in achieving any decisive gains. The struggle has now been transferred to the air. The insurgents started at the end of last week a series of intensive daylight raids on Barcelona and Valencia, which exacted a heavy toll of lives. The Government air force, acting confessedly as a reprisal, carried out a return raid on Salamanca which resulted in an almost equally large number of civilian deaths. Thus, to the other horrors of the Spanish Civil War, is added that of the unrestrained bombing of open towns, without even a pretence that the raids are confined to military objectives. The primary blame for this dreadful development, which has hitherto been largely avoided, must be laid upon the insurgents, who practised it first

and most intensively. But the episode shows once more only too clearly the fate that awaits attempts to humanise war when passions are aroused and policies are in jeopardy. The Spanish war has now arrived at a point when it would be reasonable to expect the first beginnings of negotiations for a truce between the two parties, since the Great Powers are, for the moment, to all appearances holding off, while the battle of Teruel has at least shown that neither side in Spain can aspire to a speedy victory through its own efforts. But so ferocious is the bitterness aroused by this conflict that an increase of bloodshed seems to be more likely than the inception of negotiations.

Defence in South Africa.—Mr Pirow, the Union Defence Minister, made important announcements last week about the future of South Africa's defence. The new small-ammunition factory in Pretoria, which is to have a peace-time capacity of 10 million cartridges a year and a war-time capacity of 30 millions, would, he said, be in full production in three months' time. Artillery equipment would in future be manufactured in the Union, instead of bought from Great Britain, and the mechanisation of the army would be pressed forward. The Burgher Forces would be increased. These developments fit logically into two complementary movements in Imperial defence during recent years, namely, the Union's increasing concern with the defence of the territories to the north of her, and the efforts of all the Dominions to render themselves less dependent on Great Britain or foreign countries for supplies of arms, aeroplanes and ammunition.

Canadian Federation in the Dock.—The Royal Commission on Dominion-Provincial relations in Canada is the focal point of political interest in the Dominion. The problems raised by Mr Hepburn in Ontario, Mr Duplessis in Quebec, and Mr Aberhart in Alberta—not to mention such Canadian perennials as the railway problem or the problem of unemployment relief—all turn more or less directly on the constitutional issue. Trouble was brought to a head by the decision of the Privy Council last year rejecting the Dominion's claim to legislative rights in the economic field, either under its treaty-making or under its emergency powers. Witnesses before the Commission have keenly criticised past Privy Council rulings, on the ground that they had frustrated the intention of the founders of confederation to create a strong central authority with all residuary power in its hands. Professor Norman Mackenzie pointed out that the Privy Council's interpretation of the treaty-making clause meant that Canada, by acquiring the right to make treaties on her own and to advise His Majesty separately, had lost legislative powers that she previously possessed. The apathy of Dominion Governments has also come in for vigorous and not wholly undeserved attack. The spokesman of the Trades and Labour Congress of Canada has urged before the Commission that the Federal Parliament should be given complete legislative and administrative authority over the whole social and labour field, and that the cost should be met by giving the Federal Parliament the monopoly of income and inheritance taxes. Mr Mackenzie King's Government has proposed to advance one step on this road by putting forward an amendment to the British North America Act, which would add unemployment insurance to the field of Federal power. This is to be incorporated in a joint Address to His Majesty from both Canadian Houses. If the Address is passed, the decision will lie with Parliament at Westminster. This is the most urgent of many necessary reforms.

Buoyant Revenue.—The latest weekly return of the revenue and expenditure of the Exchequer is more than usually interesting. For one thing, it contains the first item of defence expenditure to be met from borrowing. An amount of £3,250,000 is entered "below the line" as "Issues under Section 1 (1) of the Defence Loans Act, 1937," where it keeps company with issues under such Acts as the Tithe Act and the Exchange Equalisation

Act. Thus we pass, with hardly a glance of attention, another development in British public finance calculated to disturb the repose of Mr Gladstone. It would be interesting to know precisely what consideration determined the decision to make a start with deficit financing last week. It does not seem to have been a sudden rush of defence expenditure. The weekly returns do not separate defence issues from the rest of the Supply Services, but the total expenditure on all these services since the New Year has been £7.8 millions less than last year, even including the amount borrowed, although in the first three quarters of the year it was nearly £55 millions greater. Nor was the decision due to any shortage of revenue, which is coming in most encouragingly. The deficit on December 31st was £33.7 millions larger than in the previous year. But in the first three weeks of January—with one day less than last year—the margin has been reduced to £18.0 millions. Income tax, which already showed an increase of £13 millions at the turn of the year, has produced £6.3 millions more in the first three weeks of January. This rate of improvement is probably too good to last—it is due to a coincidence of real buoyancy of the revenue with somewhat greater promptness in paying. But the figures nevertheless encourage a hope that, if only the defence borrowings are banished from sight "below the line," the year may end with a surplus.

Trading Estates.—Improvement in the Special Areas has by no means removed their distress, and not even the overdue amelioration in the earnings and employment of coalminers has diminished their need for new industries. The attraction of manufacturers, even with the financial inducements offered by the Commissioners since the spring of last year, must necessarily be a long-term policy, making little prompt contribution to the alleviation of the Areas' immediate distresses. In the long run, however, the trading estates' harvest of new light undertakings will be of great importance to Tyneside, South Wales and South-West Scotland. The rapid advance of the Hillington Estate, near Glasgow, is as notable as the continued progress in the Team Valley, on Tyneside. On 700 acres at Gateshead, 29 factories have now been completed, 24 are being built, and 23 more have been let. Work for 9,000 persons is projected in these undertakings. The Scottish Estate covers 320 acres. Now that a number of initial difficulties have been overcome, tenants have been found for 40 factories, of whom over a quarter will come from over the Border. Hillington has jumped into the limelight, and the rumoured formation of a Scottish Finance Association to provide assistance on lines similar to the Special Areas Reconstruction Association and the Nuffield Trust will, if realised, make the latest of these Government-assisted estates potentially as useful as its older counterparts at Gateshead and Treforest.

Summary of the Van Zeeland Report

In April, 1937 Mr Paul van Zeeland was invited by the Governments of the United Kingdom and France to report on "the possibility of obtaining a general reduction in the obstacles to international trade." Mr van Zeeland, with the assistance of Mr Frère of the Belgian Foreign Office, has made investigation in several countries, including a visit to President Roosevelt. His Report, which is fully summarised below, was issued on Friday in French and English as a White Paper.

I.—COLLABORATION OR AUTARKY?

At the outset the Report poses the question whether international trade is really essential for prosperity. In my opinion, says Mr van Zeeland, there can be no doubt whatever as to the reply. It is the reply which follows from our experience of the crisis as well as from our experience of the period subsequent to the crisis.

The isolated, divergent and contradictory measures by which the nations, in the first period of the late crisis, attempted to protect themselves against it, and push off the burden on to their neighbours, have only served to precipitate it and to render it yet more grievous for all.

In certain large markets international trade only constitutes a small proportion—sometimes less than 10 per cent.—of their total economic activity. Yet these countries were just as sensitive as any other to the international movements, both of crisis and of recovery. This does not mean that a State has only to allow itself to drift with the general current in order to find prosperity. But it does mean that no country can avoid being influenced by general movements of the international economy, whether for good or for evil.

Must we conclude, then, that autarky is unattainable? Theoretically, no. It is evident that autarky is out of the question except in a large national market, dominated by an exceptionally powerful central authority. If a country, which fulfils these conditions, wished, at any price, to isolate itself from the rest of the world—economically, financially, monetarily—the existing technique would probably enable it to do so.

But that is not the question. It is rather a matter of knowing whether such a regime—theoretically possible—would, in fact, be better than the other; or, in other terms, what is the price which would have to be paid for its realisation?

Such a regime involves—as its definition almost implies—an increase in the real cost of living, that is to say, a lowering of the standard of life of the population. In several old countries with dense populations, it is even doubtful whether under autarky the present population could continue to live, to whatever level of existence it might resign itself; the regime, if it were pushed to extremes, would, in the long run, be liable to result automatically in a reduction in the number of the people.

What has been demonstrated by a whole series of attempts in the direction of greater economic independence, is the elasticity of the home market; but whatever may be the rôle of the home market, the fostering of international trade must remain an element of capital importance for economic prosperity within national frontiers.

Results of the First Tentative Enquiries

We must assume that these views are, in the long run, shared practically unanimously by all statesmen of the present day. In fact, the preliminary consultations which I undertook enabled me to take note that everywhere the mission with which I had been entrusted met with a most sympathetic reception.

But if this first reception was encouraging, the positive reactions, which I was able to record, were less so, and when once the first and eminently favourable stage had been passed, the attitude, almost everywhere, became qualified by a very marked reserve as soon as it became a question of actually embarking upon the stage of practical solutions.

However, initiatives have been taken by the Economic Committee of the League of Nations during its session of June-September, 1937; by the International Chamber of Commerce, in its congress at Berlin in June-July, 1937; by the committee appointed by the League of Nations to study the problem of raw materials in its report dated September, 1937; etc., etc. A whole series also of suggestions or of interesting and helpful ideas have been submitted to us in the course of our many conversations, both semi-official and private.

If one takes account of all these numerous elements, then

it seems possible, with some chance of success, to attempt to take action in the direction of international collaboration.

I have done my best, therefore, to collect a series of proposals or suggestions which, if applied as a whole, would, in my opinion, provide indubitable benefits to those who would accept the programme.

II.—OBSTACLES TO INTERNATIONAL TRADE AND THE MEANS OF REDUCING THEM

The factors which most seriously prejudice international trade are to be found, some in the economic sphere properly so-called, and some in the financial sphere.

Among the former, I shall concentrate on three, viz., tariffs, methods of indirect protection and quotas.

Among the latter, I shall refer to sudden and excessive exchange variations, hindrances to capital movements, and restrictions on payment.

Economic Sphere

Tariffs

(a) The existence of a customs tariff is not in itself to be included in a list of the most serious obstacles to international trade. The average incidence of a tariff, taken as a whole, has its repercussion on internal prices, and especially on the cost of production. At the end of a certain time, a sufficient degree of equality of competition is established between home and foreign producers.

But there are certain characteristics which produce in the case of customs duties such harmful effects that they constitute a serious, and in some cases an insurmountable, obstacle to international transactions.

We must observe, first of all, that the argument set out above applies only in cases where a tariff has existed long enough for its incidence to have become absorbed in internal prices. During the whole intermediate period, the duties undoubtedly act as a kind of brake which is liable to interrupt or disturb normal or regular commercial currents.

On the other hand, the diminution of the harmful effects of a tariff taken in its entirety does not extend to the damage caused by duties the amount of which is considerably more than the average incidence of the tariff.

For example, let us take the instance of a tariff the average incidence of which is 10 per cent.: products, in the case of which there is an import duty of 100 per cent., will be effectively and permanently protected to the extent of 90 per cent. It is clear that duties of this kind must be regarded as real obstacles to trade.

Finally, there are tariffs which are applied to such numerous categories of goods, or which have so heavy an effective incidence, or which are so complicated that they constitute, by their very nature, a real hindrance to international transactions.

(b) What means are there of improving this state of things?

There is no doubt that a general movement for the reduction of tariff duties would acquire a symbolic significance, and would thus have a powerful moral effect. Unfortunately, we are bound to recognise that a gesture of this kind, however desirable it might be, does not at present come within the range of possibility. But other measures could be applied which would suffice to achieve the object at which we are aiming within the limits of a more modest but more flexible plan.

(1) There are three general proposals that may be made in this connection: Governments might undertake (a) not to raise or widen the range of their tariffs; (b) to carry out a gradual reduction of such duties as are of an exceptional character, and the amount of which is notably greater than the average incidence of the tariff; (c) to suppress duties, taxes, prohibitions or restrictions affecting the export of raw materials.

Such undertakings are not of such a kind as to revolutionise

existing conditions. They could be spread over a certain number of years, while the suppression of restrictive measures with regard to exports need not imply the complete suppression of duties, so long as their effect did not in any way injure the general economic interest of importers.

(2) These proposals should be supplemented by bilateral agreements based on the most-favoured-nation clause. This method has already produced useful results; no one would under-estimate the effects which would be produced—either directly, in its reaction on the two national economies concerned, or indirectly in its repercussion on the whole world—by the conclusion of a commercial agreement between the two great Anglo-Saxon communities.

On the other hand, the most-favoured-nation clause, in the form in which it has been applied in the years following the War, has often acted, not as a factor in reducing tariff barriers, but as one which has prevented their modification. Hence, while the clause should remain, in principle, general and unconditional, there should be provided an exception, allowing its application to be suspended in the case of countries which employ inadmissible discrimination or which refuse to participate in a general effort aiming at the reduction of obstacles to international trade.

Finally, it ought to be drawn in such a way as not to obstruct the conclusion of group agreements or regional pacts, so long as these do not tend to constitute a discriminatory regime, but to lower tariff barriers, and so long as they are open to the accession of all those who are willing to accept the combined obligations and advantages.

Indirect Protection

Reference is then made to various practices, such as sanitary regulations, anti-dumping regulations and the undue complexity of Customs regulations, as ways of obstructing trade. It is suggested that they should be overcome mainly by bilateral agreements based on the various Conventions of the Economic Committee of the League of Nations and the International Chamber of Commerce.

Quotas

These have become one of the most formidable obstacles to the development of international trade. As the years go by, their arbitrary and artificial character becomes more and more evident.

(a) In the first place, I recommend the suppression of industrial quotas. This proposal does not exclude the possibility of spreading out the measures of suppression over a fairly long period, so that nobody should be taken by surprise. Neither does it exclude the possibility of replacing the quotas either by tariff duties, or even, if absolutely necessary and on a temporary basis, by "tariff quotas." This latter method consists of applying to one and the same product a reduced duty for a certain quantity first imported, and thereafter a higher rate of duty for quantities imported after the first quota is exhausted.

Further, the suppression of the quotas would not prevent the State concerned from maintaining or from re-establishing whatever measures it might consider effective in order to resist "dumping" methods.

On the other hand, the State which suppresses its quotas appears entitled to demand the reduction or suppression of any duties imposed by other States as a reprisal against such quotas.

Finally, the suppression of quotas by no means implies the suppression of international cartels. Cartel agreements proceed from entirely different conceptions and ought to be treated according to quite different rules. One might if necessary contemplate the maintenance of the quotas necessary to assure the working of such international cartels as conform to the general interest.

(b) Agricultural quotas often have a special character of their own. In times of crisis, agricultural production cannot adapt itself to the contraction of demand with the same elasticity as is possible with industrial production. Often, indeed, in order to meet the fall in prices, the agricultural community shows a tendency to increase the volume of its production. A considerable surplus has to find outlets abroad. The number of free markets diminishes. Those which remain then find that they are being swamped because upon them are concentrated all the efforts made to dispose of these products. The problem is therefore one of reciprocal and simultaneous action. But in the agricultural as in the industrial sphere, the tendency should be in the direction of the suppression or reduction of quotas. At any rate, agreement ought to be reached that no new quotas should be imposed, and that no existing quotas should be tightened up. At the same time certain reservations are required in the case of quotas affecting seasonal or perishable products.

Financial Sphere

Of all obstacles to international trade there are none more harmful and more formidable than those which arise either from monetary disturbances or from restrictions regarding the transfer of capital or of commercial payments.

Sudden or violent variations in the mutual relation of currencies are liable to interrupt the normal currents of trade and to cause financial movements along abnormal channels ("hot money"), while internal prices are adapting themselves to the new monetary parity. Uncertainty in this sphere is a very grave impediment to the conclusion of business or credit operations.

Restrictions also regarding the transfer of funds, even when they are limited to movements of a financial character, deprive international trade of the essential assistance of credit facilities whether on short, middle or long term.

But these difficulties, real and serious as they are, appear slight in comparison with those which arise from prohibitions and restrictions of commercial payments. These introduce into international economic relations an element of absolute rigidity and deprive commercial relations of their triangular or multilateral character.

Stabilisation

Let us consider first of all what can be done to reduce or to suppress the element of insecurity in monetary matters.

Admittedly the best policy would be to reach a definite solution of the problem of the international monetary standard. Such a solution would have to be sought in the re-establishment of the gold standard, though on a considerably altered basis. But as yet it is probably too early to make any such attempt. It would only succeed if we could find that a whole series of conditions had first been realised such as would permit the return of a sufficient degree of international equilibrium both in the economic and financial spheres. The final solution of this problem must therefore be placed not at the beginning but at the end of our effort of international co-operation.

There is, however, one interim solution which does not appear to raise insurmountable difficulty. This would consist in the revision and extension of the agreement reached in the form of a tripartite declaration by the United States of America, United Kingdom and France with the adherence of Belgium, the Netherlands and Switzerland. This agreement should be adapted to the new conditions and extended in such a way as to embrace all the countries participating in the effort of collaboration.

The parties interested would agree to define the reciprocal parities of their currencies, in relation to each other, and would pledge themselves to keep any eventual variations within certain limits. The undertaking should extend over a period long enough to free current commercial operations from any monetary risk; it should be for one year or at least for six months—proviso being made for quite exceptional circumstances of a character practically equivalent to that of *force majeure*.

The problem has, in fact, lost much of its difficulty. Most currencies, after the devaluation operations resulting from the crisis, have recovered a relative equilibrium as regards internal as well as external factors. On the other hand, there remain at present certain countries which have not yet reached this stage; but general agreement could be reached as to certain criteria which would enable us to determine the level of monetary equilibrium, internal and external factors being alike taken into account. All that is required is the existence of the will or the desire to arrive at a solution.

This will, however, is of capital importance. Each country must, above all, rely on itself; it is for each country to take the necessary action and pass the necessary measures which will make possible its participation in international action.

The Transfer of Funds

We now come to the disadvantages presented by the various types of restriction on the transfer of funds from one market to another.

As regards movements of a financial nature, it is not only the debtor markets which have adopted such measures but also the creditor markets. The latter by forbidding or restricting foreign lending—and particularly loans by means of public issues—have deprived international trade of a valuable support. It is exceedingly desirable that this policy should be altered in conformity with the other measures of international collaboration.

But the principal difficulty obviously arises from the imposition of exchange controls and from "clearing" systems. In this matter the only attitude which would enable a country to resume its normal place in the framework of the

international economy is the abolition of exchange controls and clearings. Such a measure must of course be introduced by stages.

The recourse to clearings is a consequence, direct or indirect, of the establishment of exchange controls. The latter are themselves the result of a state of disequilibrium between the national economy concerned and the international markets. To attempt to get rid of exchange controls while allowing this disequilibrium to persist would be a waste of labour. But the measures suggested to us, both in the economic and in the monetary sphere, are designed precisely to facilitate a return to equilibrium.

The first and most urgent step is to bring about the suppression of all restrictions on payments for merchandise.

Whether, however, it is to be carried out in one or in several stages, the suppression of exchange controls requires that the past should first be liquidated. This implies an agreed adjustment of external debts carried out in conditions, with regard to interest and amortisation, which should take into account modifications which may have arisen in the respective situations of creditor and debtor.

But the liquidation of the past, above all, implies the settlement of the clearing arrears. In this connection we must distinguish between the arrears which arise out of old credits completely immobilised and regarded as only payable little by little in the manner of a sinking fund on a long-term debt, and the balances on current trade and the current financial debts arising out of recent transactions.

For arrears of the first category I propose to recognise realities and to have recourse as far as possible to consolidation. Any other course must weigh unduly on the present by reducing the resources which the debtor country could use for imports of goods. Such consolidation should, however, be carried out in a form which would make it possible to guard, to some extent, against the difficulties which it might otherwise entail for the creditor firms. To this end, it would be desirable in particular that the bonds issued to the creditors by the debtor State should be expressed in the currency of the creditor at the parity fixed in the exchange agreement, and that some kind of extra facilities for mobilising the bonds for commercial purposes with the help, if necessary, of international institutions, should be envisaged.

As regards the other arrears of a current nature, these should be treated in the same way as the new debts, which will be incurred under the restored regime of freedom.

Credit Facilities

The past having been liquidated in this way, it would be desirable to ease the transition. For this purpose it would be necessary to provide those countries which have been freed from restrictions with credit facilities which would remain at their disposal during the period of adjustment.

It would seem possible to secure this object to a certain extent by an agreed extension of the method of reciprocal credits recently instituted by the Bank for International Settlements. The Banks of Issue would open through the Bank for International Settlements credits in favour of one another in the national currency of each of them. These credits would be used to finance the exchange of merchandise between the countries concerned. The exchange risks entailed by these credits can be set off against one another in so far as the trading operations balance. As regards the remainder, the risk might be in part covered by a multilateral clearing carried out by the Bank of International Settlements acting as clearing agent.

For the balances, that is to say, the amounts which the Bank for International Settlements could not cover by clearing, it would be advisable to have recourse to the forward exchange markets where these are active and broad. Elsewhere, it would seem advisable to attempt to set up forward exchange markets whose terms would not unduly burden commercial transactions.

For the final balances which could not be covered otherwise, it would be necessary to require a special obligation the payment of which would in the last analysis have to be made by the debtor State. This risk would, in any case, be slight and of a temporary nature. In practice it would be quite a negligible burden.

But apart from this system, in consideration of the general advantages which the freeing of commercial settlements would bring, and in consideration further of the fact that this freedom would be based on the measures adopted by the interested parties to re-establish the external equilibrium of their economy, it would be appropriate that a united effort should be made by all the States prepared to join in a programme of international co-operation.

Among the suggestions brought forward to give effect to this idea, there is one which appears to me to merit special consideration: this is, the possibility of establishing, through

co-operation of all these States, a common fund the resources of which might be applied, under appropriate conditions, to facilitate the financing of legitimate trade operations during the period of readjustment.

It seems to me that the international organisation designed to assume the direction of such a fund would be the Bank for International Settlements.

The activities of the fund should not in any case overlap or compete with those of existing institutions and organisations whose business in normal times covers the financing of commercial operations. It would come into play only in special cases, to fill permanent or temporary gaps, where normal methods prove insufficient.

III.—GENERAL CONDITIONS NECESSARY FOR SUCCESS

I am convinced that the loyal and general application of a plan composed of suggestions such as have just been outlined might result in giving a new and considerable impetus to international trade.

But if I were to conclude my Report at this point, I would not have fulfilled the essential part of my mission.

Indeed, the important matter is not to provide a theoretical definition of the difficulties, nor even to indicate the means by the application of which they could be solved. The main point is to suggest methods which have some chance of leading to concrete results. We must therefore seek to discover the conditions in which such measures will have a chance of being effectively applied by the great majority if not by the totality of the interested countries.

We must, at this point, admit the considerable difficulties which cumber the ground. If we consider the political plane, reasons to hope for a rapid and cordial *rapprochement* appear slighter than at any moment since 1918.

If we place ourselves on the economic plane, it seems at first sight as if the most favourable moment for strictly economic collaboration were past. The general check in the recovery movement, and the special economic difficulties of certain great countries, are once again bringing back on to the programme schemes of national protection, which bear a remarkable likeness to the efforts of the crisis period.

In the course of the last few months I have several times had to modify the provisional conclusions which I had reached. I have even asked myself whether it would not be preferable to await a serener atmosphere before publishing this Report.

But, taking all in all, it seemed to me that such an attitude would have been sterile, and even dangerous. The persistence of a general situation, which is very confused and bristles with contradictions, would incur the risk of very serious consequences, both in the political and in the economic order. More and more numerous are they who take account of this fact and draw the conclusion that a rapid and profound reaction is necessary. In such conditions, the moment is perhaps favourable, in spite of appearances, for a new attempt, based on reason and common interest.

Let us try, therefore, to find the way for a practical solution, without going beyond the limits of this mission, which is of an economic character, but without pretending that it can be artificially isolated from the political factors which surround it and which impose upon it their conditions.

Analysis of the Problem

The first reflection which occurs in this connection is that the difficulties which we have just been examining all interlock. One cannot hope really to solve them except by means of a comprehensive solution.

On the other hand, the attitude of a number of countries is dominated by the policy of certain Great Powers whose economic influence is a determining factor either for the world as a whole, or for certain parts of it. It is necessary then, in order that any solution should achieve its maximum efficacy, not only that it should cover the whole network of interlocking difficulties, but also that it should unite a very large majority, if not practically all of the nations concerned.

But international trade is not an end in itself, it is only a means directed towards an end. This end cannot be other than the improvement of the standard of life of the masses, the increase of the well-being of the population. Under our present organisation this end is pursued by national entities.

Here we reach the heart of the problem. In order to diminish the obstacles to international trade and to restore to it a degree of flexibility which will allow of its development, it is necessary to induce many countries to mitigate or to abandon the measures of protective self-sufficiency which they have adopted in different degrees and at different times, and to return to a more complete system based on the inter-

national division of labour. But these measures of national protection were not resorted to lightly or frivolously, and if the countries protected by them still retain to-day the armour which they felt bound to put on, it is not without serious reasons.

Review of the difficulties

There are those who see the origin of their difficulties in the unequal distribution of raw materials, or, more exactly, in the fact that certain great countries do not possess in the territory under their control the raw materials which they consider themselves to require.

At this point we cannot but record that certain States see no solution to the problem except in the redistribution of colonies.

There are others who attribute their difficulties to the exaggerated protectionism of countries or groups of countries which ought in their view to absorb a larger share of their production. Particularly numerous are those who protest loudly against systems of preference which distort the normal channels of trade.

Others again blame the unequal distribution of capital and the lack of adequate understanding on the part of the great markets which dispose of accumulated funds.

Certain States insist on the important influence on their economy of demographic problems, particularly those connected with emigration and immigration.

Intelligent judges do not fail to emphasise the depressing influence on financial markets—both in the moral and practical sphere—of the absence of a definite settlement of international political debts.

Many circles put the blame above all on the effects of the widespread policy of intensive re-armament. They express anxiety at the probable reaction which will take place when the orders due to re-armament will have reached saturation point; they emphasise the disastrous effects which the budgetary burden of re-armament imposes, or is liable to impose, on national economies, either directly or through its indirect repercussions.

Finally, there are many who maintain that political anxieties are a determining factor in the present retarding of trade, and that these anxieties are more of an obstacle to the development of international commercial relations than all other hindrances put together.

Some of the Suggestions elicited

Suggestions have been made in widely varying directions with a view to solving some of these different points.

With a view to assisting the solution of the colonial problem, it has been suggested that the regime of mandates should be revised, that the national element should be removed, and that the system should be made completely international, both from the economic and the political point of view.

In the case of colonies properly so called, it would perhaps be opportune to seek for the means of generalising the system of the Open Door which obtains in the Conventional Basin of the Congo, a system the general result of which it is impossible to criticise.

In those colonies where such a regime cannot be organised, certain circles have recommended that the possibility be examined of creating privileged companies, whose activities would be strictly limited to the economic sphere and whose capital would be divided internationally in such a way as to offer real guarantees of impartiality.

With regard to raw materials a most interesting proposal has been formulated tending to the supply of colonial goods in exchange for industrial products. An agreement would be concluded between a colony and an industrial State, and colonial goods supplied would be carried to an account and paid for by the execution in return of important public works—bridges, railways, ports, etc. The intermediate finance would be provided by the metropolitan State.

Lastly, the rules of international law might, in the opinion of many, be specified and re-enforced in such a way as to secure from seizure or confiscation in every case, even in time of war, private property held in colonial territories, whatever the nationality of the owner.

Guarantees of a Political Nature

The conclusion which emerges from these numerous complaints, demands and suggestions is that it is time to face them and submit them to serious discussion.

In this report I have deliberately debarred myself from touching on the strictly political aspects presented by a

number of questions with which we are faced. It is, however, impossible to ignore the fact that we are working in their shadow.

Thus one can understand the preoccupation of those who fear to see the financial assistance, the credit facilities, or the facilities for obtaining supplies which would be granted in the execution of the present programme of action diverted from their object to serve warlike ends. Guarantees would have to be provided in this respect, and such guarantees are necessarily political in their nature.

Again, is it possible to provide an economic solution for the difficulties with which certain national economies will be faced, when the point of saturation has been reached in their re-armament policy, without evoking the problem of the limitation of armaments?

Conversely, it also appears to be true that any concerted policy for the limitation of armaments would require, if its application were not to be obstructed, to be accompanied by economic measures which would also have to be internationally concerted.

A Pact of International Economic Collaboration

The moment has thus perhaps arrived to propose the conclusion of a "pact of economic collaboration" embracing the largest possible number of States, and in any case open to all.

This pact would contain two parts; one negative, by which the participating countries would bind themselves to abstain from a certain number of practices contrary to the interests of the community of participants; the other positive, but general in its nature, by which the participating countries would bind themselves one towards the other to take up and to examine in a spirit of understanding and mutual assistance the problems and difficulties arising in their economic relations.

Under the aegis of this general pact, and in accordance with its spirit, might be concluded separately other more detailed arrangements incorporating, in so far as they could be satisfactorily worked out, the numerous suggestions which I have made or referred to in this Report. On most of these points prolonged studies have already been undertaken; plans for putting them into effect could be quickly drawn up with the assistance of specialised organs such as the Economic and Financial Committees of the League of Nations, the Bank for International Settlements, the International Chamber of Commerce, the International Institute of Agriculture, etc.

An effort of this kind could only succeed with the support of the great countries which are leaders in economic activities and in the different political tendencies.

(1) It is desirable, then, to bring together as soon as possible representatives of the principal economic Powers; at least of France, the United Kingdom, the United States of America, Germany and Italy. The object of this meeting would be to take soundings and to prepare the ground. The agenda would contain four or five questions drawn up in some such terms as the following:—

1. Are you agreed to take part in an attempt at international economic collaboration?
2. Do you, with this object in view, accept as a basis for discussion the main lines of the present Report?
3. What are the points in this Report, if any, which you would wish to see either omitted or emphasised?
4. What points not mentioned in this Report do you think it desirable to include within the scope of the attempt to be undertaken?

The answers given in the course of this preliminary and informatory stage would clearly determine the future course of the whole undertaking.

(2) If the answers were constructive and helpful, we could then pass to a second stage. This stage would be entrusted to a bureau which would proceed as rapidly as possible to classify these answers. It would analyse their contents, extract from them such suggestions as seemed reasonable, and draw up a programme of constructive action based on the present Report.

(3) We should then pass to the third and final stage of the undertaking. It would be necessary to ensure through diplomatic channels that there was an agreement of principle among the interested parties on the main lines of the programme drawn up. If a sufficient number of States, including the great economic Powers, took up a favourable attitude, the bureau referred to above would be instructed to draw up texts for signature.

Improving Tax Incidence

NEW YORK, January 18.—The long-awaited Report of the Congressional Committee on tax revision disappointed the hopes but hardly the expectations of financial circles. Since last autumn there has been a tendency to hope for radical changes in the undistributed profits tax on corporations and in the capital gains tax on individual incomes. In view of the Treasury's need for maintained (or increased) revenues, the most that could be expected was some shifting of incidence.

Corporations are divided by the Committee into two main categories: those whose net incomes are under \$25,000, and those whose incomes are over \$50,000. In the case of the lower group a small reduction of tax is recommended, and they are entirely relieved of the tax on undistributed earnings. In the other group a rather varied change in the tax schedule is suggested, with the obvious intention of producing enough revenue to make up for the reduction in tax on the smaller concerns.

Non-Distributed Earnings Tolerated

The punishment of the non-distribution of earnings is considerably mitigated, as the highest rate applicable to large corporations making no distribution whatever is to be 20 per cent., whereas it was previously over 30 per cent. It was evidently assumed, and probably correctly, that a corporation would make no distribution, only if it was in rather serious need of cash.

A third category of corporations, those with net incomes between \$25,000 and \$50,000, is to be subject to a special equalising scale. So far as the bulk of corporations listed on the Stock Exchange is concerned, their tax rates will be, on an average, a little higher than under the present act, but the penalty on non-distribution is almost entirely removed. The tax position of the majority of large corporations will not be materially altered; but any alterations are in the direction of removing specific hardships.

The capital gains tax is to be slightly modified. Capital gains accruing to persons in the higher income grades on property held over a period of time will be subjected to a rate substantially lower than at present. This does not affect the speculator, but it does represent an improvement in the position of the genuine investor.

The Report does not provide for any increase in revenue. The Budget looks rather to reduced expenditure than to increased taxation. But supplementary proposals for expenditure on relief and armaments are expected.

Federal Competition in Utilities

Another chapter was added this week to the long utility controversy. The president of one of the largest utility companies (operating largely in the south-eastern States) offered his property to the Federal Government, at a price to be agreed on by three arbiters, two of whom would

represent the Government. The reason given was unwillingness to subject his security holders to further loss by Federal competition. This focussed attention upon the gravity of one phase of the utility problem.

A municipality desiring to enter the electricity business in competition with a privately-owned enterprise may obtain 45 per cent. of the cost as a free grant from the Federal Government, and the remainder as a long-term loan at low interest. While up to now the localities which have taken advantage of this opportunity have largely been in the area of the Tennessee Valley Authority, the pending legislation to divide the entire country up into Federal power regions promises to widen the range of such competition.

The President and Holding Companies

At the Press conference this week, the President advocated the abolition not merely of utility holding companies, but of holding companies of all kinds, and specifically in banking. The remark created no little confusion in Wall Street, since one or two utility holding companies have just recently been registered in conformity with the legislation of 1935, and have secured the approval of the Securities and Exchange Commission. The definition of a utility holding company is provided in the 1935 Act. But what is called the "holding company" is an extremely common form of American corporation structure. Indeed, in the colloquial use of the term, perhaps half of the corporations listed on the New York Stock Exchange are "holding companies."

The President's somewhat cryptic remark was amplified by a description of the holding company as a device by which a comparatively small amount of capital can secure control of a very large amount of capital, and introduce on a grand scale the features of absentee ownership. The holding company has provided such a mechanism, although that has not been its sole, or even its principal function.

Ownership and Management Divorced

The President did touch indirectly upon one important point. One of the outstanding developments of recent months has been the divorce of ownership and management. For some time the S.E.C. has published reports of purchases and sales by officers and directors of the shares of their own companies. Since the publication of these data, sales have far exceeded purchases.

This tendency has been known to exist for some years in the railways, whose ownership is now very widely diffused. A generation ago, almost every American railway was identified with the personality of an individual who, although not "the" owner, nevertheless exercised in person the functions and responsibilities of ownership. Now there is scarcely a railway in the United States that can be identified with any individual or group of individuals as owners. By and large, the equity in the American railroads has become what Justinian calls *res nullius*.

From the reports of the S.E.C., it is evident that American industrials are following the same road as the railways. There is now scarcely a corporation listed on the New York Stock Exchange of whose shares 10 per cent. are owned by one individual; and as the reports of the S.E.C. show, officers and directors are rapidly divesting themselves of ownership in any substantial sense of the word.

France

A Misleading Majority

PARIS, January 27.—The Ministry's pronouncement in favour of a liberal monetary policy and the need to increase industrial production were applauded by the Moderates. Their promises of further social progress were welcomed by the Left. Added together, these supporting votes made up a majority in the Chamber of 501 against 1.

The sole dissident, apart from a hundred who abstained, was M. Bergery, the enemy of the trusts. The majority was the largest in the history of the Third Republic.

The success of the Government's declaration of policy was less marked on the Stock Exchange, where a more definite line had been expected. Doubts were expressed about the ability of the Cabinet to obtain a further majority, less comfortable perhaps but more significant, on a constructive financial and social programme of action. The notable test of the validity of these doubts will be the Bill in preparation for the enactment of a labour charter.

At the last minute, however, the outline of the Labour Bill seems to have met with the approval of both the employers and trade unions. The measure will cover the recruitment and dismissal of employees, the status of trade union representatives, the legal definition of strike action, and procedure for conciliation and arbitration.

Opinion generally in both political and business circles is that the idea of a National and Popular Front Cabinet, which was recently conceived by M. Blum, is making headway. The main reason for the acceptance of this notion is the combined influence of external dangers and the country's lassitude after some twenty months of economic and social troubles.

Improved Fiscal Receipts

Fiscal receipts in December, 1937, were 4,160 million francs, of which 3,930 million francs were ordinary receipts, made up as follows:—

	(Millions of Francs)
Direct taxes	977
Indirect taxes	2,921
Estates	32

Indirect taxes show a surplus of 425 million francs on the estimates.

The turnover tax in December yielded 823 million francs, which was a surplus of 414 million francs on the estimates and an increase of 274 million francs on the yield realised in December, 1936. In the whole year indirect taxes realised 31,000 million francs, a surplus of 1,469 million francs on the estimates and an increase of 3,961 million francs on the actual yield in 1936. Direct taxes in 1937 yielded 6,814 million francs, which was an increase of 1,108 million francs on the receipts in 1936.

Coal Output Declines

Coal consumption increased with rising industrial activity from 69,629,000 tons in 1936 to 76,168,000 tons in 1937, an improvement of 6,539,000 tons, or 9.4 per cent., compared with an increase in consumption of only 1,817,000 tons in 1935-36. Only 31 per cent. of consumption was covered by French coal in the first six months of 1937 and 42 per cent. in the succeeding months.

Coal output in 1937 was again lower than in the previous year. It amounted to 45,326,000 tons, compared with 46,147,000 in 1936, a decline of 821,000 tons, or 1.8 per cent. In 1930, output was 55 million tons. Since the total number of working days was practically the same in 1937 as in 1936, this decrease in annual output is explained chiefly by the diminution of the daily yield, which was, however, progressively improved during the later part of the year from 170,000 tons to 183,000 tons a day, as the result of supplementary working days and additional staff.

It is significant that in the same period foreign countries markedly increased their coal production. In Germany the increase was 164 per cent.; in Poland, 22 per cent.; in Great Britain, 6 per cent.; in Belgium, 7 per cent.; and in Holland, 12 per cent. The average increase of 10 per cent. affords a notable contrast to the deterioration in France's output of coal.

Vast Imports of Coal

Since consumption of coal rose while domestic output fell, stocks have fallen and huge imports have been necessary. Imports of foreign coal have risen from 22 million tons in 1935 and 22.9 million tons in 1936 to 30.9 million tons in 1937, an increase of over 34 per cent. since 1936.

The value of imported coal rose 120 per cent. between 1936 and 1937; in 1935 it was 1,947 million francs, in 1936 it was 2,198 million francs, and last year 4,850 million francs. The average monthly value of coal imports was 162 million francs in 1935, 160 millions during the first six months of 1936, 476 million francs in October, 1937, 504 million francs in November and 519 million francs in December. The increase in the import surplus in 1937 was 8,458 million

francs, which means that the increase in the imports of coal alone represents 31 per cent. of the whole.

The average price of imported coal was 127 francs per ton in January, 1937, against 99 francs in 1936 and 93 francs in 1935; it was 205 francs in October and 211 in December, as a consequence of the increase in foreign gold prices and freights and the decline of the franc. Since June, 1936, average costs have risen between 75 and 80 per cent., due mainly to increased wages, shorter hours and diminished output. With the same daily yield as in 1935 France could increase annual production by between 3 and 4 million tons.

The number of persons employed at coal mines was 245,000 on December 31, 1937, compared with 231,900 on December 31, 1936, and 223,900 on the same date in 1935. Since June, 1936, some 23,100 persons have been taken on, which represents an increase in staff of more than 10 per cent.

Germany

Foreign Trade and Government Control

BERLIN, January 25.—The last month of 1937 witnessed a large increase in import trade and a slighter increase of exports, with the result that the export surplus was reduced to Rm. 21 millions, against Rm. 90 millions in December, 1936. Both imports, valued at Rm. 531 millions, and exports, valued at Rm. 552 millions, were the largest since the depression.

The whole year's trade closed with an export surplus of Rm. 443 millions, compared with Rm. 550 millions in 1936 and Rm. 111 millions in 1935. The trade balances of 1937 and the two preceding years were virtually determined by the Government. Under the Schacht New Plan the value of exports, which is itself influenced by Government measures, is taken as the basis for fixing the quantity of permitted imports, on the principle that no new debt shall be incurred. As exports increase, the quantity of permitted imports will also necessarily increase, at least so long as the Reich is short of foodstuffs and materials.

In other words, no attempt is made to replenish the Reichsbank's reserves. In fact, imported gold no longer goes to these reserves, but is kept on separate account. In 1937, Rm. 150 millions of gold was imported, mainly in the early months. But all of this, with some Rm. 8 millions in addition, was later exported.

Favourable "Price Scissors"

The values of foreign trade in 1937 and the two preceding years were as follows:—

	1935	1936	1937
	(Millions of Marks)		
Imports	4,159	4,218	5,468
Exports	4,270	4,768	5,911

The highest import figure before the depression was Rm. 14,228 millions in 1927. The highest export figure was Rm. 13,483 millions in 1929. Both these figures were, however, recorded at much higher prices than at present. In 1937 German import prices (despite the world decline after March) and export prices were higher than in 1936, and the volume of trade increased less than the value.

The value of imports increased by some 30 per cent., and perhaps one third of this increase was due to the rise in prices. The value of food imports rose 36 per cent. and the quantity 27 per cent.; the value of raw material imports 27 per cent. and the quantity 15 per cent. The value of exports

rose by Rm. 1,143 millions, or about a quarter, but the volume of exports increased only 19 per cent.

Export prices were 4.4 per cent. higher in 1937 than in 1936. The "price-scissors"—the relation between the prices of Germany's main imports and the prices of her chief exports—have been in the Reich's favour since March, 1937, and have also moved in her favour compared with the pre-depression period.

The Influence of Armaments

The increase in imports in 1937 was wholly in raw and semi-finished materials and foodstuffs. Among foodstuffs the chief increase was in wheat. Imports of wool, cotton, and raw materials required for the manufacture of consumers' goods increased only moderately, while imports of iron ore, non-ferrous metals, rubber, mineral oils and, in general, of commodities required for State enterprises, including re-armament, increased considerably.

Owing to re-armament and industrial expansion abroad, raw materials required for the manufacture of consumers' goods, such as textiles, furs, paper, glass, pottery, clocks, and manufactured chemicals (but not leather goods) increased substantially. But the increases in exports of coal, coke, iron, machinery, electrical plant, and some other non-consumption goods were very much greater.

It is officially estimated that between 2 and 2½ million persons were engaged in industrial production for export at the end of the year, against 1.4 millions in 1934. But the proportion of total industrial production that is exported has fallen since 1934. In several authoritative annual reports it is implied that domestic demand, and in particular the demand for Four-Year Plan and other State undertakings, has hampered the export trade. It is definitely stated that Germany was unable to deliver certain kinds of goods to Russia, although this involved an unwelcome decline in the import of raw materials from Russia.

In 1937 the distribution of trade underwent a reversal. In the preceding years import surpluses in trade with overseas countries declined sharply. This was a consequence of New Plan's policy. In 1937, on the contrary, the import surpluses increased considerably. The export surplus in trade with European countries also increased. The decline in deliveries from Russia, and the inability of European raw-material and food-producing countries to meet the suddenly increased German demand, were factors in this change.

From Russia, in the first eleven months of 1937, Germany took goods to the value of only Rm. 61 millions, of which half consisted of wood, oil and flax. Germany now desires an increase in her supplies from Russia, and is negotiating about trade relations in 1938. But Russia will only sell on condition that the proceeds are used to pay for German goods; and Germany's inability to deliver what Russia wants is therefore an obstacle.

Steel Price Policy Criticised

The industrial position is little changed. Retail trade turnover in 1937 is estimated to have increased 10 per cent. to Rm. 31,000 millions. Coal output in 1937 was 184.5 million tons, against 158.4 million tons in 1936; lignite production was 184.7 million tons, against 161.4 million tons; and coke output 40.9 million tons, against 35.8 million tons.

The *Deutsche Kohlenzeitung* holds that a setback in world industrial activity will not materially affect the international coal trade. The iron and steel boom, having been in the main confined to coal-producing countries, was not the cause of the increase in international coal deliveries; consequently a cessation of the boom would have relatively little effect on these deliveries.

The reduction of International Steel Cartel prices is being

unfavourably criticised. It is denied that cheaper steel will materially increase investment activity; and it is declared that the world demand for steel was already about to increase owing to depletion of stocks.

It is predicted that German iron and steel consumption will increase in coming years; so that there can be no question of harmful competition from the new Reich Ironworks Company. The Krupp A.G. of Essen has increased its dividend from 4 to 5 per cent. Net profits in 1937 were Rm. 16,277,000, against Rm. 14,354,000 in 1936, the year in which dividend payment was resumed. Of this net profit Rm. 9 millions has been booked to a special reserve for the execution of Four-Year Plan contracts, chief of which is the smelting of home low-grade iron ore. Iron ore production in the company's own fields has risen in two years from 721,000 to 1,113,000 tons.

Hungary

Foreign Relations

BUDAPEST, January 9.—The New Year began with unusual political activity. The Government's Bill to extend the secret ballot to all constituencies was introduced in Parliament, and its discussion will no doubt remain in the forefront of domestic politics for several months. In foreign affairs, interest is focussed on the development of Hungary's relations with Czechoslovakia and Roumania.

The treatment of nearly three million Hungarians in these two countries still leaves much to be desired, and the improvement of their lot must precede any *rapprochement* in the political and economic sphere between Hungary and her neighbours. Roumanian internal affairs are being closely watched, because the majority of the Hungarians transferred by the Trianon Treaty to foreign sovereignty live in Transylvania.

Political relations with Austria are excellent, and it is hoped that friendship with Italy and Germany will not interfere with good relations with the great democratic powers, Great Britain, United States and France.

The budgetary situation continues to be satisfactory. In the first five months of the financial year 1937-38, total expenditure, including extra budgetary items, such as the deficit of State undertakings and advances for public works, etc., amounted to 362.8 million pengő, and actual receipts aggregated 385.5 millions, leaving a surplus of 22.7 million pengő. Though the State railways still disclose a heavy deficit, their finances are improving.

Estimated Debt and Disbursements

There is little doubt that the budgetary equilibrium established last year will be fully maintained in the current financial year. It is true that in the Budget estimates a deficit of 67.9 million pengő was forecast, but these estimates provide for the full service of the State's foreign debt at the contractual rates. In practice, the State has in recent years either deposited Treasury bills or made other arrangements where the greater part of its debt service was concerned, with the result that actual disbursements were considerably less than the corresponding estimates.

Debt service accounted for 83.4 million pengő in the 1936-37 estimates and 80 million pengő in 1937-38. Actual disbursements, internal debt included, totalled 37.9 million pengő. There was thus no actual disbursement of some 45 million pengő, included in the Budget for service of debt.

On the assumption that the proposals made to the State's foreign creditors last summer are completely put into effect in the current fiscal year, actual disbursements in respect of State foreign debt will increase, compared with 1936-37, by an amount which cannot be exactly stated at present, but is unlikely to be less than 15 million pengő annually. Even so, the amounts to be disbursed for foreign debt service will be less than those entered in the Budget by some 32 million pengő. The recent report of the Financial Committee of the League of Nations dealing with Hungary's foreign debt settlements emphasises that it is highly satisfactory that the foreign creditors are among the first to benefit from the improvement of Hungary's financial position.

The total capital amount of Hungary's foreign debt, so far included in the debt settlement, is 1,288 million gold pengő, or approximately £75 millions. There remains a further amount of about 550 million gold pengő still under discussion, including the pre-war Caisse Commune debts, bringing the total amount of foreign debt included in the settlement or under negotiation to 1,838 million gold pengő, or £110 millions.

The total service, interest and sinking fund, on the portion of the debt already settled, amounts to 44 million gold pengő, that is approximately £2,500,000. The service on the amount under discussion might amount to between 2 and 4 million gold pengő, bringing the total service in convertible exchange up to a figure of about 45 million gold pengő. As from August 2, 1940, a further sum of 1.5 million gold pengő in convertible exchange will be added to this amount, in respect of the amortisation of 1 per cent. on the outstanding capital of the Reconstruction Loan.

Greece

Improved Exchange Position

ATHENS, January 20.—Reviewing the results of the past year, the Governor of the Bank of Greece stated that the Bank's reserve in gold and foreign exchange, through which, under the present foreign exchange regulations, the balance of this country's international receipts and payments is finally settled, had increased in 1937 by a net sum of 9,136,635 pre-war gold francs (about £595,000). In 1935, on the other hand, it decreased by 34,466,206 gold francs, and in 1936 by 21,400,639 gold francs.

Last year's increase was rendered possible, despite larger payments abroad for imports and other needs, because of important purchases of foreign exchange, derived especially from emigrants' remittances and shipping earnings. This favourable picture should not cause any undue optimism, for the state of international markets remains precarious. The disposal abroad of Greek exports is not assured.

The maximum amount of the note circulation in 1937 was Drs. 6,893 millions, or some Drs. 690 millions higher than the maximum in 1936. At the end of the year the note circulation was Drs. 6,776 millions, against Drs. 6,202 millions a year ago. Notwithstanding this increase the ratio of the cover to the note circulation rose from 51.15 to 51.49 per cent. The expansion of the circulation was, as the bank's Governor stated, a necessary consequence of the rise in the price level. The gross profits of the bank amounted to Drs. 302 millions, compared with Drs. 247 millions in 1936, and net profits to 81 millions against 63 millions.

Debt Settlement Fails

M. Tsouderos, Governor of the Bank of Greece, expressed regret that the negotiations with the Foreign Bondholders' Committee conducted last July in London had failed. The Bondholders' Committee were not satisfied by Greece's terms for a permanent settlement of the service of the foreign debt, which amounted to an offer of 50 per cent. of the original contractual interest on each loan. They argued that the improvement in economic conditions had made it possible for a higher percentage to be paid. When the Greek delegation disagreed with the bondholders' opinion of the financial and economic state of Greece, the latter asked for a two-year provisional arrangement on the same basis as that offered by Greece for a definitive arrangement.

The Government and the bank realised the advantages for this country of some final settlement of the debt question. They believed, on the other hand, that for such a settlement to prove permanent, it should not exceed Greece's capacity to pay. Any prolongation of the policy of provisional agreements, with possibly a progressive increase every year in the rate of interest payable, could not, they argued, be accepted.

The Budget for 1935-36 left a small surplus, while the Budget for 1936-37 will be closed with a deficit of some Drs. 80 millions.

Increasing Foreign Trade

Provisional foreign trade returns for the first eleven months of 1937 show an increase in the quantity and value of imports as well as exports. The import surplus has also increased compared with the corresponding period of 1936.

(In millions of drachmas)

	January- November, 1936	January- November, 1937
Imports	10,783	13,850
Exports	5,852	7,767
Excess of imports	4,931	6,083

Compared with November, 1936, imports last November showed an increase in value of Drs. 403 millions, while the value of exports rose by Drs. 129 millions. With the exception of wheat and Indian corn, imports of which were

smaller because of the good harvest, all the principal articles of import showed an increase.

Revised figures of production now put the quantity of wheat produced in 1937 at 800,000 tons, against an estimated annual consumption of about 1,200,000 tons. The balance of some 400,000 tons will have to be imported. Wheat imports in the first eleven months of 1937 totalled 481,000 tons, valued at Drs. 2,644 millions. Since September, however, when the new crop started to come on to the market, imports have been smaller compared with the corresponding months of 1936. Wheat is by far the most important article of import.

Higher Shipping Earnings

According to private statistics, the number and tonnage of merchant ships owned by Greeks, including those under foreign flags, increased in 1937.

	Number of Ships	Gross Tonnage
End of 1936	654	2,016,982
End of 1937	680	2,127,391
Increase in 1937	26	110,409

The number of persons engaged in shipping was higher, and the tonnage transported larger, than in 1936. Foreign exchange imported from shipping profits is estimated to have been between £2,000,000 and £2,500,000, against £1,750,000 in 1936. Allowing for receipts from the sale of ships, a net sum of £800,000 has been invested by Greek shipowners during 1937 in the construction or the purchase of new ships. The Greek merchant fleet comes ninth, as regards total tonnage, among the world's mercantile fleets; but in proportion to population it ranks fourth.

Palestine

Large Import Surplus

JERUSALEM, January 8.—Despite the unsettled state of Palestine throughout 1937, and the increasing economic depression from which the country was suffering, the figures of foreign trade for the year show a considerable improvement on those of 1936, the year of the general strike and rebellion. Indeed, they do not fall far short of those for 1935, when the boom was at its height in Palestine. Comparative figures of the value of foreign trade for the first eleven months of the three years are as follows:—

Year	Imports	Exports	Re- exports	Transit Trade
1935	16,382,774	3,709,916	...	...
1936	12,494,912	2,762,447	545,626	456,959
1937	14,625,418	4,972,475	613,277	764,286

Oil from Iraq, exported through Haifa, is not taken into consideration in these figures. Its value in 1937 was estimated arbitrarily at £1,421,164. The increase in exports consisted mainly of citrus fruit.

Despite the continuous increase in exports, and the decrease in imports compared with 1935, a great gap between the two, large enough to cause some misgiving, remains. Part of this gap of over £9 millions is filled by the importation of capital goods, estimated in 1935 at a value of about £2 millions.

Palestine has no invisible exports from shipping, insurance, etc. Some of the more recently arrived immigrants have investments abroad, but their income from these is covered, if not exceeded, by the dividends payable abroad by the few larger Palestinian companies, and the interest on mortgages recently taken up to an appreciable extent by foreigners.

Tourist Traffic

Nor does the tourist traffic, as was once thought, help to fill the gap. During the past year the Government Statistical Office has undertaken an inquiry into the amount of money spent in Palestine by foreign tourists and that spent abroad by Palestinians. The figures are necessarily incomplete, and some of the money spent abroad by Palestinians is derived from foreign sources; but the difference between the two figures is so considerable that the most that can be said is that Palestine does not lose on balance.

The most constant, and hitherto reliable, item of the invisible exports has been the money sent to Palestine for charitable, religious, educational and similar purposes. This comprises not only Zionist and missionary funds, but also the revenue of the Latin Church (the other churches now draw little from outside), and of Jewish charitable and religious and educational institutions. The total income in 1935 under this head has been estimated at £1,400,000.

To this figure could formerly be added the considerable amounts remitted by more prosperous Jews abroad to their relatives in Palestine, and also the not inappreciable sums sent by Arabs living in North and South America to their families. But the financial and economic difficulties that have beset the world during the past few years have dried up these sources. The Jews claim that in recent years they have sent more money to impoverished relatives in Europe and America than has been received from those sources. As for the Arabs, their golden period in North and South America ended nine years ago, and with Arab immigration to America closed there seems no prospect of its resumption.

Proceeds of Military Occupation

A new source of revenue has, however, arisen in the past two years: that is the enlarged British army. The cost of this army, so far as it exceeds the cost of maintenance at its home stations, is defrayed out of Palestine revenues, but there remains a considerable sum of British money which is spent in the country by or on behalf of the troops. A sum of £1 million under this head would be a generous estimate.

If all these figures are added together, there remains a considerable gap, which is partly filled by means of capital brought to Palestine by immigrants, or sent to the country by others for investment. This gap must have been somewhere in the neighbourhood of £8 millions in 1935, too large for the immigrants and investors to fill. The inevitable conclusion seems to be that it is also to some extent filled by credit, especially by long-term credit given by Continental firms. When a country is in this way living to some extent on the capital of its people, its economic state cannot be said to be entirely satisfactory.

Argentina

Crisis Duty Prolonged

BUENOS AIRES, January 15.—On December 20, 1937, the Budget and Finance Committee of the Chamber of Deputies recommended that last year's Budget be extended to cover the current year with minor modifications; and extraordinary sessions of Congress to pass the Budget have been called. The Government have decreed the continuance of the 10 per cent. additional import duty, which among other measures was started in 1931 as a means of meeting the economic crisis.

Despite the downward tendency of exports in the second half of the year, 1937 stands out as one of the most prosperous years in Argentine history. The volume of shipments amounted to 18,225,337 tons, the highest recorded in the last ten years with the exception of 1931, while the

value was 2,308,294,661 pesos—only once exceeded, in 1928. It must, however, be remembered that the external value of the peso was reduced by 20 per cent. in November, 1933, but in spite of this the recovery is remarkable.

Recession Possible

The newspaper *La Prensa*, after commenting on these satisfactory results, warns the country against undue optimism. It observes that the prospects for the current year without being positively bad, are less favourable than those of 1937, and urges public and private undertakings to avoid unnecessary expenditure. The wheat crop for this season is estimated at only 5,225,000 tons, against 6,782,000 tons last year, while owing to the drought of the last few weeks the production of maize is likely to be some 3,000,000 tons lower than in 1937. Similarly, a reduction of 150,000 tons is expected in linseed, 120,000 tons in barley, and 100,000 tons in oats. The newspaper calculates that the value of cereal exports in 1938 will be 500 million pesos lower than in 1937, though the difference may be partially compensated by increased prices.

Exports in December showed a further fall in volume, but owing to higher prices the value was higher than in the preceding month. Compared with last year's, the figures make a poor showing. The volume this December was 901,885 tons, against 1,719,015 tons in December, 1936, while the value fell from 207,615,533 pesos to 142,551,382 pesos.

The increase in the value of exports in 1937 compared with 1936 was due in part to better prices. Wheat, maize and linseed average prices rose by 15.9, 27 and 7.6 per cent., respectively. Washed wool rose 40.3 per cent., dry cowhides 42.1 per cent., frozen beef 31.8 per cent., and chilled beef 2.9 per cent.

Surplus of Imports

The following table shows the visible trade balance month by month in 1936 and 1937, and illustrates graphically the fluctuations to which the fortunes of an agricultural country are subject:—

	Value of Export Surplus	
	1936	1937
January	40,602,103	176,154,414
February	44,236,025	184,946,019
March	36,115,526	169,173,649
April	19,351,893	106,412,782
May	22,747,614	71,776,304
June	21,309,270	31,689,326
July	27,739,317	6,396,885
August	34,720,033	3,665,289
September	62,495,969	923,274
October	57,993,224	11,438,457
November	68,401,334	-11,067,681*
December	103,289,094	Not yet available

* Import surplus.

The chief cause of the recent shrinkage was the fact that, owing to heavy shipments early in the year, very few cereals were left for export, and when exports began to slow down imports were only starting to respond to the earlier export boom. Had this season's crops been normal, a renewed expansion of exports might have been expected, and there would have been no reason for anxiety. If the estimate of *La Prensa* (given above) is correct, exports in the present year will be about the same as in 1936, but as the rate of imports is now much higher than in 1936, there is a possibility of serious disequilibrium.

Drought Conditions

The present summer has been abnormally cold and dry, and nearly all crops have been adversely affected. Rains have fallen lately over a large part of the cereal zone, but have been much less than is usual at this season. The country as a whole is still suffering from semi-drought.

A report of the Administrator General of Internal Taxes shows that Inland Tax Revenue in 1937 was 303,946,429 pesos against 269,239,373 pesos in 1936. The value of cheques cleared in 1937 was 41,596,052,153 pesos, compared with 35,169,322,479 pesos in 1936. It is significant, however, that clearings for December last were lower than in the same month of the previous year at 3,542 million pesos against 4,077 millions.

An agreement was recently announced between the Province of Buenos Aires Water Works Company and the Municipalities of Avellaneda, Almirante Brown, and Lomas de Zamora, by which the three municipalities will take over the assets of the company for the sum of 20 million pesos.

The agreement will be effective when it has been ratified by the Federal Congress and the value has been paid to the concessionaire company.

The National Cotton Board reports that the area sown with cotton is 419,030 hectares (estimated), or 12 per cent. less than the area calculated at the beginning of December. It is, nevertheless, 45 per cent. higher than the area sown last year when the cotton zone was seriously affected by drought.

Hongkong

Reassuring Banking News

HONGKONG, January 15.—The Hongkong and Shanghai Bank's announcement of a final dividend of £3, the same as for some years past, has had a reassuring effect here. While there was no lack of confidence in the bank, the persistent marking down of the shares in London led some people to think that a lower dividend was inevitable.

The detailed results of the bank's working in 1937 are not yet available but, allowing for the payment of interim and final dividends and the usual transfer of \$1 million to the bank premises account, the net profits will be slightly higher than in the previous year, when they were \$15,430,000. The annual speech from the chair will be awaited with particular interest, and shareholders will no doubt learn that, despite the troubles of the past five months, the bank has been able to function on as profitable a basis as ever.

At the current price of £86 10s. the bank's shares now yield the remarkably high return of over 6½ per cent., a figure which hardly seems commensurate with the strength or the potentialities of the bank. Whatever the outcome of Japan's attempt to conquer China, the Hongkong and Shanghai Bank is likely to remain the predominant factor in financing the trade of the Far East. With the bank's huge reserves, its wide field of operations, and its record of prudent management there seems little reason to suspect its future profit-earning capabilities.

Canton Trade Continues

In response to a letter from the Hongkong General Chamber of Commerce, the Governor has expressed the opinion that many reports about the perilous state of Hongkong are entirely baseless.

The present hostilities between China and Japan impart no risk to persons or property in this Colony.

This reassurance is welcomed as a corrective to the pessimistic views prevailing abroad.

The daily bomb attacks in the neighbourhood of Canton and the persistent attempts to cut the railway lines out of Canton have had a considerable nuisance value, but have done little serious damage. Trade is still going on. Outside Hongkong waters Japanese naval craft have been in evidence; and from time to time landing parties have been sent ashore on various islands in the delta of the Canton River. So far, however, there has been no interference with shipping and if, as seems likely, Japan refrains from making an official declaration of war, trade between Hongkong and the hinterland should experience comparatively little interference.

Exporters Shun Japanese Ships

The Berlin-Rome-Tokyo axis has been slightly strained in Hongkong—judged by the attitude of German exporters. For the past few years freight space to Great Britain and European ports has been booked through a central office, and allotments spread over the shipping lines in the Homeward Conference. The Japanese line is insisting upon its full allotment, but exporters (including Germans) are disinclined to accept space on Japanese steamers, because of the inevitable reactions on the part of local Chinese and the possibility of labour objections at the port of destination.

A meeting of exporters called together by the Chamber of Commerce revealed that the German members were most vociferous and determined in their demand for the exclusion of the Japanese line, and they carried the other exporters with them. The matter has now been referred to London, but the feeling of exporters is so strong that, if the Conference is unable to give way, the present system of pooling space is bound to collapse.

Letters to the Editor

The Consumer's Choice

TO THE EDITOR OF THE ECONOMIST

SIR,—Sir David Milne-Watson in his letter in your issue of January 15th rightly drew attention to the necessity of allowing for coke in making a true balance between the value of electricity and gas to the community at large. I venture to suggest that there are more important factors still to be considered before any true balance can be struck.

In your articles on "The Consumer's Choice" brief reference only is made to "... processing costs and capital charges ..." and this reference is swept aside in the following sentence as being of only minor relevance. The problem you indicate is one solely of conservation of coal, but in the supply of electricity to the consumer, coal itself represents, on average, only 10 per cent. of the total cost.

Stated fully, the problem, as I see it, is to find the manner in which the total requirements of the community for lighting, heating, power, water heating, ventilation and other kindred services can be provided at a minimum cost to the consumer having due regard to his convenience. Conservation of capital in the electricity industry particularly is of far greater importance, in so far as ultimate cost to the consumer is concerned, than conservation of coal.

Charges on the capital invested in generation plant, transmission and distribution lines and cables, and the other equipment required for electricity supply, absorbs over 50 per cent. of the cost to the consumer. Much of this capital is to-day invested in electricity distribution systems planned to enable as many consumers as wish to use electricity fully for cooking, water heating and space heating as well as for lighting. These are services which it may be a gas industry can supply at a lower cost, and if that is so, part at least of the capital invested in the electricity supply industry at the present time is redundant and wasteful.

The urgency of tackling the problem is evident from the fact that the electricity supply industry alone is spending upwards of £25 millions per year on such capital development. The Electricity Distribution Bill promised for this session of Parliament is intended, in part, to speed up the rate of development of electricity undertakings, and will almost certainly increase the rate of capital expenditure in this partly wasteful competition with gas.

It is not reasonable to expect a solution to the problem from voluntary co-operation between electricity and gas interests. We must look, therefore, to some outside body, which might take the form of a Committee of Experts to formulate a programme of action to lead, as rapidly as possible, to the most suitable allocation of the various services between the two interests.

Major points which will require elucidation will include the following. To what extent should industry subscribe to the provision and maintenance of supplies of electricity and gas respectively, and, in consequence, what proportion of the standing charges should the domestic user of each commodity meet? To what extent is it essential to the future development of industry to have supplies of electricity available for power throughout the countryside, having in mind the possible ultimate necessity to provide some considerable decentralisation of industry?

Neither the whole problem nor its constituent parts are capable of exact solution. The conditions of life of millions, their spending power and their demands for these various services vary from year to year. New services such as wire-

less, air conditioning, etc., are put at the disposal of the community.

The programme of action, therefore, cannot be too rigid, and must make allowance for the variations which will take place in the future. What is important is, however, that this programme should be formulated immediately so as not only to conserve the country's fuel resources, but also to avoid waste in capital investment.

Yours faithfully,

PHILIP B. MAIR.

Edgbaston,
Birmingham.

Hungarian Bond Position

TO THE EDITOR OF THE ECONOMIST

SIR,—May I be allowed to comment on the paragraph headed "Hungarian Bond Position," which appeared on page 176 of the issue of *The Economist* dated January 22nd?

It would seem desirable to make clear that no new situation has been created in connection with the return to the Hungarian Government, under certain conditions, of the Treasury Bills and cash pengos held by the Trustee against untransferred arrears of service of the Hungarian League Loan accumulated from 1932 to 1937. This was proposed as an integral part of the compromise recommended to the bondholders last summer.

After describing in paragraph 2 (i) and (ii) of the League Loans Committee's announcement of June 29, 1937, their proposals for the future service of interest and sinking fund, the Hungarian Government continued, in paragraph 2 (iii)—

In return for the above conditions of future service the Hungarian Government ask that they may be released from further liability in respect of outstanding partly-paid coupons, which may thus be regarded as fully discharged by the payments already made upon them. As a consequence of this release the Hungarian Government ask that the pengos Treasury bills and cash pengos at present deposited in respect of untransferred service and accumulated interest thereon may be returned to them.

Paragraph 3 of the League Loans Committee's announcement of September 28, 1937, read as follows:—

Apart from the Treasury bills to be cancelled and the interest which has accumulated on them to be returned to the Hungarian Government under Para. 2 (iii) of the Committee's announcement of June 29, 1937, approximately 37 million pengos of service moneys accumulated in 1932 and 1933 remain untransferred. The Hungarian Government propose that part of this sum should be used to reconstitute a Reserve Fund, as provided in Para. 12 of the Memorandum of September 17, 1937; that a further part of this sum (i.e. 7½ million pengos) should be made available in foreign currencies within five years for the purpose of making purchases of bonds of the loan in excess of the ordinary amortisation requirements, and that the balance should be at the free disposal of the Hungarian Government. The League Loans Committee recommend the bondholders to accept these proposals as part of the settlement now proposed.

As stated above, these proposals are an essential part of the arrangements proposed by the Hungarian Government for the future service of the loan, and the League Loans Committee have recommended the bondholders to accept them as part of those arrangements. In fact the overwhelming majority of bondholders (practically 90 per cent. of the sterling holders) have already signified their acceptance.

With regard to the Trustees' position, it must be remembered that their responsibility is to see that the Hungarian Government's obligations to the bondholders under the General Bond are integrally fulfilled. They are not therefore legally in a position to condone any infraction of the original Bond or to take any part in negotiations for its modification. Thus, since 1932 they have been unable to recognise any of the League Loans Committee's temporary arrangements with the Hungarian Government for the partial service of the loan, and have regularly made formal protests against the infractions of the General Bond which the temporary measures involved. The protest of September 30, 1937, was of a similar legal nature and was fully anticipated when the League Loans Committee made their recommendations.

Yours faithfully,

A. S. G. HOAR.

Secretary,
League Loans Committee.

Economics in Use

Mrs Barbara Wootton would claim no novelty for her trenchant onslaught upon economists.* She rather sets down the clear impressions derived from the attempt to teach contemporary economic theory to people for whom common sense, not an examination syllabus or academic conformity, is the acid test of knowledge.

The indictment which Mrs Wootton, in her own superbly incisive way, draws up is in consequence broadly familiar. The economic theory of to-day is unintelligible and useless. The professors use their wits to examine states of affairs that never were on sea or land. When they do come to earth, neither their diagnoses nor the remedies they prescribe for actual disorders are compatible with one another or practical policy.

The disinclination of economists to check their thinking against the observed facts tends to conceal the unreality of their hypotheses. Mrs Wootton's criticisms of the market conditions which most economists take for granted are obviously cogent. While their analysis

"is necessarily dependent on the movements analysed being objectively determined, and not subject to interference by the caprice of arbitrary wills, the encroachment of monopoly, on the one hand, and of Government interference, on the other, is steadily restricting the scope of such markets in the contemporary world."

The Soviet Union, the Third Reich, the New Deal, and even the National Government have to that extent upset their apple-cart. In making their assumptions about conditions and behaviour, economists tend, despite their denial of any intention to pronounce judgment upon social and political issues, to lend their support to that form of society in which their hypotheses are most nearly realised. They are commonly accused, therefore, of making economics into an apologetic for capitalism.

Mrs Wootton justly admits that this concern of economists for the conditions and institutions under which they live and work is explicable. They study what they know, or think they know. Nor, although most of them refuse to concern themselves with the validity or justice of the ends of economic conduct, are they uniformly made by their methods into Tories of the deepest dye. Very many, indeed, have noted the distorting effect upon market processes of inequalities of income. And not a few, ranging from the dispassionate Professor Pigou (in a recent book) to the avowed Socialists, have deduced from their quite orthodox studies programmes of social change.

In fact, if Mrs Wootton's dextrous appraisal of the worth, or worthlessness, of current economics has any conspicuous failing, it is that, in an endeavour to state a case which, broadly, cannot possibly be contested, she seeks to prove too much. The outraged dons may justifiably ask her how she can fairly reproach them for not producing practicable programmes of action when she herself explicitly admits that

"practically every concrete economic problem is so complex as only to be covered by an almost infinite chain of hypotheses." Certainly her victims will politely point out that no better advertisement for the practical value of pure economic theory could be found than in Mrs Wootton's own logical style and brilliant manner.

When Mrs Wootton propounds a constructive policy for economists she is on rather safer ground. The professors must refer their assumptions to the observed facts. They must give concrete examples of their "ghostly theoretical terms." They must study existing social situations and trends as they exist. Here surely is a challenge and encouragement for Nuffield College and the new Institute of Economic Research, and a merited tribute to those individuals and groups of researchers at Manchester, Oxford, Birmingham, Cardiff, Southampton and elsewhere who have consistently sought their economics in the field.

* *Lament for Economics*. By Barbara Wootton. Allen and Unwin. 322 pages. 6s.

As if in answer to Mrs Wootton's plea for the study of real problems comes Mr Meade's programme to prevent the growth of unemployment by paying monthly credits to consumers in times of depression.† Mr Meade is assuredly himself a signal proof that the mastery of abstruse argument can, and should, enhance rather than diminish the economist's ability to formulate plans of social betterment.

It is heartening that an economist of Mr Meade's ability in abstract controversy, should feel it incumbent upon him to make practical proposals for the mitigation of unemployment. He even dares to depart from the general fastidiousness of his kind, and to tread in the path blazed by the fallacious heresies of Major Douglas. Mr Meade knows that Douglas is wrong, but he realises that Mrs Wootton is right. The economist must earn his keep.

Mr Meade's problem is to supplement banking policy and public works policy in the prevention of depression by stimulating consumers' expenditure on consumption goods without increasing producers' costs. He would solve it by creating new money during periods of general depression and giving it to consumers to spend on consumption goods.

This scheme is obviously open to quite considerable debate. Nevertheless, Mr Meade has worked out his plan realistically and shown in actual figures how it might have operated between 1929 and 1936. Mrs Wootton need not be unduly despairing. Even in academic cloisters, there is growing up a generation of economics students "who believe both in themselves and the practical possibilities of their work."

"Our Street." By J. Petersen. Gollancz. 287 pages. 10s. 6d.

There have been many books describing the cruelties attendant upon the extermination of Socialist opposition to the Nazi regime in Germany. Few have been so arresting and disturbing as this one, which relates in fictional form the true story of the struggles and death of a knot of young Marxists in Berlin.

"Balances of Payments, 1936." League of Nations Publications. Allen and Unwin. 236 pages. 6s.

The number of countries whose international accounts are analysed in this invaluable annual statement has been increased in this issue from 29 to 36. For all important commercial countries, with the exception of Italy, merchandise items, interest and dividend payments, other services, gold and capital movements (sorted into long and short term) are given. The effects of world recovery and rising prices are clearly revealed; and it is interesting to notice that the aggregate balance on current account of the United States, France and the United Kingdom, the main creditors, was in 1936 passive by 259 million gold dollars. The strain on the debtor countries has been correspondingly relaxed.

Lancashire's Problem

WHEN we reviewed Lancashire's position fourteen months ago, we stressed the point that, in the ten years after the issue of the Balfour Committee's report, the depressed American spinning section of the cotton textile industry had progressed far with its adjustment to changed conditions, and was capable of considerable revival. We showed also that Lancashire's share of the world cotton trade, though far below its pre-depression figure, had for some years been tending to expand rather than contract. We suggested that the shrinkage of Lancashire's exports was due rather to a reduced total trade than to losses to Japan; for while that country had undermined the old price structure and so deprived Lancashire of profits, her gains had been largely at the expense of other countries. Our survey thus led us to the reassuring—and, at that time, apparently, surprising—conclusion that Lancashire could count on her full share of any revival in the world's cotton trade.

During the past fourteen months much has happened to support that view. The spinners have been able materially to enlarge the "margin" which remunerates their activities in converting raw cotton into yarn. The dividends announced by spinning mills in 1937 amounted to £1,606,698, against £317,539 in 1936. The recently published profits of the Lancashire Cotton Corporation (not included in the above figures) have dwarfed even our forecast of November, 1936, which at the time was criticised as fantastically optimistic. Finally, British exports of cotton yarn and piece-goods have risen from £61,502,036 in 1936 to £68,532,271 in 1937. After a year of such progress, where does Lancashire now stand?

It would be unwise to read too much into the record of the past year, which included a brief but vigorous commodity boom, followed by a sharp recession in prices. The perspective is still too close to allow us to say confidently where the effects of the one or the other begin and end. Yet it is not too early to discern the direction of certain movements, and in particular the movement of Lancashire's own ideas on future policy. "Lancashire's Remedy," published last October by the Joint Committee of Cotton Trade Organisations in response to the suggestion by Mr Oliver Stanley, President of the Board of Trade, was inevitably drawn in broad outline, with no attempt to make detailed recommendations for reorganisation. Viewed, however, against the background of the year's movements in the

cotton trade, it was a valuable clue to the direction of Lancashire's thinking.

Briefly summarised, the scheme proposed the establishment of two bodies to supervise and co-ordinate the process of reorganisation. One was to be a Board representative of all sections of the industry, but appointed by the Board of Trade, and the other an Advisory Committee of three members not connected with the cotton trade at all. Reorganisation schemes were themselves to be devised by individual sections of the trade and submitted to the Board and the Advisory Committee. The latter's duty was to co-ordinate the sectional proposals of the individual section with the interests of the trade as a whole, and to ensure that national interest was duly observed. Schemes approved by both bodies were to be passed to the Board of Trade to be embodied in Draft Orders in due course. The new bodies were to have no power to initiate schemes, but the objects of various schemes, which were enumerated for their guidance, afford particularly valuable evidence of the drift of Lancashire's ideas. Out of eight suggested headings, seven were concerned with the elimination of internal price-cutting—reduction of surplus capacity, control of output, minimum prices, pools and quotas, and the like—and the eighth with legislation of wage agreements. Provisos were added that the Board and Advisory Committee should be satisfied that the schemes were in the general interest, and (a point repeatedly insisted on) would help the export trade. These conditions go far to suggest that Lancashire's first concern was, and still is, to exorcise the spectre of price-cutting by one mill against another.

The instinct to put profitable working first may well be sound, but its implications should be clearly understood. When the redundancy proposals were introduced the chief recommendation advanced for them was that, by permitting full-time working in the more efficient mills, they would re-establish profits by *reducing costs*. As events turned out, the first year's operation of the Cotton Spinning Industry Act has seen profits increased rather by a widening of the spinning margin than by a reduction in costs. In fact, the internal price-cutting which had narrowed margins so disastrously before the passing of the Act was ultimately a symptom of a diminishing total trade, rather than a prime cause of Lancashire's depression. For many years after the War, Lancashire implicitly accepted the belief that if only she could control her own internal competition her troubles would be at an end. History has shown the dangerous fallacy of that reasoning. To-day, when times have changed, it is just conceivable that she may be right in her instinct to restore profits before all else. Recent experience of reorganisation in other industries, particularly the heavy industries, has shown that real progress with re-equipment and re-planning is seldom made until industrialists feel the solid ground of profits beneath their feet. Lancashire indisputably stands in need of re-equipment, and if a widening of margins is required to lay the indispensable foundation of trading profits, the opportunity to secure it may perhaps be more favourable now than later.

That view obtains some support from an examination of Lancashire's markets. About half of her total output is now sold at home. Except in very specialised products, outside competition is negligible in the home market. At a time when many other trades have increased their prices, Lancashire will, possibly, be less criticised for increasing hers. Her demands are more moderate than those of some other trades, and her products are still cheap, even if they are not quite so cheap as before. Slightly higher prices, again, need not necessarily be fatal in the export market—for

the time being. Lancashire no longer competes significantly in the cheapest markets. The clothing of peoples with low standards of living has been largely taken over by Japan. Though Lancashire still does a substantial trade with India and certain Far Eastern markets (such as the Dutch East Indies), the bulk is in goods other than those of the cheapest quality. Our largest markets are in Europe, South America, Australia, South Africa, and New Zealand, and in those countries mere cheapness is not the paramount consideration. By force of events Lancashire has in some degree fallen back on her traditional quality appeal. Meanwhile the competition of Japan is temporarily held in check by Japan's own affairs, and, opportunely, raw cotton prices have receded sufficiently to offset higher manufacturing charges on simple products.

If, therefore, profitable working is an indispensable preliminary to true reconstruction and re-equipment—we are stating, not endorsing, Lancashire's case—the present may be as opportune a time as any to bring about an inevitable increase in charges. But Lancashire's leaders must be fully aware of the possible long-term consequences of their actions, and of the transient nature of their "opportunity." Ultimately, their most dangerous competitor is neither Japan nor the weak seller at home, but the newly established mill in a former market. The shrinkage of total international trade in cotton goods has hurt Lancashire most; and the recent check to the decline has been due mainly to the fact that the cheapness of cotton goods from Lancashire (and from other countries) has left importing countries

with a reduced incentive to make their own cotton goods. If the process be now reversed, higher prices may well encourage importing countries to instal modern machinery—more modern than most of Lancashire's own plant—to cater for their home markets. The tide of self-sufficiency has been checked in the cotton trade by the shallows of cut prices, but it is undoubtedly still flowing.

Lancashire has thus reached a transitional period of the utmost significance to her future development. A year ago she had, through the stress of events and by painful price-cutting, achieved a greater measure of readjustment than was generally appreciated. Cut prices were slowly being overhauled by falling costs; considerable progress had been made in eliminating redundancy; and markets were no longer being lost. Consequently, as soon as recovery began to open the "primary producer" markets, Lancashire was in a position to reap advantage and to reverse the long process of price reduction. So far she does not seem to have felt any ill-effects from higher prices—though recent increases have not yet spread widely outside the spinning section. Those who advocate still higher prices—which apparently are to be the foundation of Lancashire's plans for future recovery—may defend them as a temporary expedient, but only in so far as they open the way to re-equipment and reduced prices. The authors of "Lancashire's Remedy" declare, truthfully, that "Lancashire cannot afford to export at a loss indefinitely." But in the long run, unless she can eliminate her loss by lower costs, she will not export at all.

Balances of Payments

THE Balance of Payments is a comparatively recent invention of the statistician, but most countries in the world now make annual estimates of their national balance of payments, and the various international estimates are conveniently collected in the annual report on "Balances of Payments" issued by the Economic Intelligence Service of the League of Nations, of which the 1936 volume has recently been published.*

Not the least valuable item in this interesting and informative volume is the table in which all the available estimates are brought together in a single comparable form, and expressed in a single currency. These figures make it possible to classify countries according to their stage of development in the international financial community—an exercise of considerably more than mere academic interest since it sheds a very clear light on the present disorganised state of the international capital market. This has been attempted in the two tables that appear on the following page, one of them classifying twenty-two countries in the years immediately before the onset of the world depression, the other re-classifying the same twenty-two countries according to their position in the three latest available years.

The tables distinguish six different types of balances of payments. A word should, however, be said about the terminology that has been used to describe them; in particular, distinction must be made between debtors and borrowers, between creditors and lenders. A debtor country is one that has borrowed in the past and consequently has to make payment of interest; a creditor, conversely, is one that receives interest. A borrower is a country that is currently importing capital; a lender one that is exporting capital. Debtors are usually borrowers and creditors lenders, but not invariably so. A debtor-lender is a country that is still paying interest on its past borrowings, but has built up a sufficient net excess of exports to be able, in addition, to lend on its own account or—more probably—repay some of the principal of its debts. (Repayment, so far as the current balance of payments is concerned, has, of course, the same effect as lending.) Similarly, a creditor-borrower is a country which receives interest on its past lendings, but has so large a net excess of imports that it is compelled either

to borrow from abroad or to consume some of its capital previously invested abroad.

These distinctions provide four categories—Debtor-Borrowers, Debtor-Lenders, Creditor-Lenders and Creditor-Borrowers—which roughly correspond to the gradual progress of nations from undeveloped virginity through opulence to senile improvidence. But the Debtor-Borrowers and Creditor-Lenders can be further sub-divided

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

* "Balances of Payments, 1936." 236 pages. (London) Allen & Unwin. 6s. net.

into immature and mature stages. An Immature Debtor-Borrower is a country that is just beginning to borrow for its development. It is buying capital goods for the exploitation of its resources, and has, consequently, a net import of goods. Its borrowings need to be sufficient each year to cover not only a fresh instalment of railway material, mining machinery, etc., but also the interest on past borrowings. In the mature stage, the seeds thus sown have flowered; the country has begun to sell more than it buys, and thus to earn part of its interest payments. But borrowings are still needed to cover the remainder of the interest. When the export balance grows large enough to cover it all, the country becomes a Borrower-Lender or Borrower-Repayer. Similarly with Creditor-Lenders, the immature stage is that of a country which is beginning to draw interest on its investments, but still sells more than it buys. Maturity is reached when the country begins to consume part of its interest receipts—that is, to have an import balance.

Examples of the six classes are given in the tables. A glance at the names will be sufficient to show both the instability of the position existing in 1929 and the very considerable changes that have since occurred. In 1929 among the eight countries appearing as Immature Debtor-Borrowers there were some whose economic position in the world could not by any stretch of imagination be said to be that of undeveloped countries, which alone can afford to occupy that status. Germany, for example, was borrowing capital at a rate which could only be justified if she were a young country with enormous potentialities waiting to be exploited. The same remark applies in a lesser degree to some of the smaller European countries appearing in this category. Australia fits the description more exactly, though the amounts she was borrowing were almost certainly greater than could be economically employed.

In post-depression years these Immature Debtor-Borrowers have entirely disappeared. The two largest of them, Germany and Australia, still appear as Debtor-Borrowers, though they have passed to what we have defined as the mature stage, since their new borrowings are less than their current payments of interest. ("Borrowing" in the case of Germany in recent years would be more

accurately expressed as the forcible import of capital.) Of the fourteen countries which appeared as borrowers before the depression, ten are now in the third class, that of the Debtor-Repayers, while the three countries which were in that category before the depression have maintained their position. This is some measure of the adjustments that have had to be made in the international financial system. These nine countries, and many others for which estimates are not compiled, have been compelled to reconstruct their national economies in such a way that they can pay interest on their debts, not only without the assistance of fresh loans, but also with the additional burden of steady repayments of past borrowings.

The changes that have occurred among the Mature Creditor-Lenders are less clear-cut. In each of the three countries under that heading capital transactions have swamped the current account of the balance of payments. Thus, although Great Britain shows on the average of the three years 1934-35-36 a small export of capital on income account, there has been, in fact, a very large inflow of funds on capital account, mostly in the shape of gold. France's experience has been the reverse; she has had to draw on capital to balance her income account, but there has been a much larger outflow on capital account. The United States is the only one of the three countries in which the income account and the capital account have pulled in the same direction; but here again the latter has swamped the former.

The practical utility of an analysis such as this is not difficult to grasp. The category into which a country should be placed is determined by the state of its economic development. Only countries which can use foreign loans in ways that will eventually enable them both to pay interest and to retire the loans without continually incurring fresh indebtedness can afford to be Immature Debtor-Borrowers. Not even the richest land can afford to remain a Creditor-Borrower for long, as the slow consumption of capital will leave it without resources to which its economic structure has grown accustomed. No country in the world can be said to be in a healthy financial state until it finds itself in the appropriate category. The figures show how many countries, even after the searching readjustments of depression, are still far from financial health.

BALANCES OF PAYMENTS BEFORE AND AFTER THE DEPRESSION

THE following figures have been derived from the Synoptical Table in "Balances of Payments, 1936," published by the League of Nations. They are annual averages for the years stated, expressed in millions of gold dollars of the pre-1934 parity. In the customary notation, a plus sign denotes a net payment to the country concerned; a minus sign shows a net payment by the country. The column headed "Lending or Borrowing" is derived from the two preceding columns; independent estimates of lending or borrowing are ignored. The table excludes gold movements and all movements of capital except new lending and borrowing.

A. PRE-DEPRESSION (average of 1927, 1928 and 1929)				B. POST-DEPRESSION (average of 1934, 1935 and 1936)

(a) Year 1928-29 only. (b) Two years, October, 1927, to September, 1929, only. (c) Gold is exported from S. Africa as a commodity and not for monetary reasons. It is therefore included in the Balance of Trade. (d) Three years, April, 1927, to March, 1930. (e) Including Luxembourg and Belgian Congo. (f) Including French Colonies. (g) The French figures for these years do not separately distinguish the constituent items of the current account. (h) Two years, July, 1934, to June, 1936, only. (i) Three years, April, 1934, to March, 1937. (j) Two years, April, 1934, to March, 1936.

Canadian Gold Companies

ALTHOUGH Canada is the third largest of the world's gold-producing countries, with an output representing more than one-third of that of the Rand, and three times that of Australia, the British investor has only a modest stake in the Canadian gold-mining industry. From the outset, the industry has been developed largely by Canadian money, with some assistance from the United States. None of the leading gold shares has an active market in London, and in the past both mining and financial conditions have required closer and more specialised attention than the average British investor could devote to them.

Difficulties of this kind are common to all new industries, and it is not invidious to say that the Canadian gold-mining industry, in its present size and scope, falls almost wholly within that category. In 1911, a representative pre-war year, total production was no more than 473,159 fine ounces, valued at \$9,781,000. In the following decade, output almost doubled, the total production in 1921 being 926,329 fine ounces, valued at \$19,149,000. A decisive stimulus was given, however, in 1931, when the Canadian price of gold was raised, and in 1933-34, when a still steeper rise occurred. It then became profitable to develop low-grade ore-bodies, which had hitherto been unremunerative. The following record of output and values (together with an estimate for 1937) illustrates the rapid progress of the industry since 1930:—

CANADIAN GOLD PRODUCTION

	Quantity (fine ozs.)	Value \$
1930	2,102,068	43,453,601
1931	2,693,892	58,093,396
1932	3,044,387	71,479,373
1933	2,949,309	84,350,237
1934	2,972,074	102,536,553
1935	3,283,121	115,533,027
1936	3,748,028	129,293,421
1937 (estimated)	4,055,000	142,000,000

Three provinces accounted in 1936 for over 93 per cent. of Canada's total production, Ontario being responsible for 63.5 per cent., Quebec for 17.8 per cent., and British Columbia for 12.1 per cent. Quebec has shown the most rapid advance in recent years, her output of 666,905 ounces in 1936 contrasting with a mere 8,331 ounces in

1927. The Yukon Territory—the scene of the famous Klondike gold rush of the 'nineties—is now the only producing area where output is declining.

Ontario's leadership is based upon the Kirkland Lake and Porcupine deposits. On these fields a group of well-established mines with apparently ample ore reserves have paid satisfactory dividends for many years, and their shares form the chief media in the industry for the more staid type of investor. In our next table, we set out the dividend record of the more important members of the group, with estimates of their probable dividend payments for 1937:—

	Dividends paid, 1936 \$	1937 Dividends (Estimated) \$	Total Dividends paid to date Millions \$
Dome	3,893,336	3,893,336	34
Hollinger	5,412,000	4,228,000	87
Lake Shore	10,000,000	12,000,000	65
McIntyre-Porcupine	1,596,000	1,596,000	20
Teck-Hughes	2,403,572	2,163,216	28
Wright-Hargreaves	3,300,000	3,300,000	22

Various smaller undertakings, in these and other auriferous areas in Ontario, have now reached the dividend paying stage. From a long list, we may select Sylvanite, Buffalo Ankerite, Pickle Crow and Little Long Lac as representative. Most of these mines have increased their output recently. In addition, several new mines reached the production stage last year, when ten mills were started up, with an aggregate crushing capacity of 1,185 tons of ore each day. Seven other mines have mills under construction with a capacity of 1,425 tons per day, and should be in operation shortly. Much is expected from recent development work in Ontario—particularly around the mining camps of Little Long Lac and Patricia—but the most noteworthy developments of recent months have been at the Larder Lake camp, on the Porcupine field, which was the scene of a lively boom some thirty years ago. Last year's work appears to have revealed rich ore bodies, and high hopes are placed on the prospects of such new mines as Kerr-Addison, Raven River and Omega.

Until recently, the largest gold producer in Quebec was the Noranda mine—primarily a copper producer,

whose ores furnished gold as a by-product. The output of gold from quartz mines in the north-western district of Quebec is now, however, increasing year by year. In this area, Siscoe and Canadian Malartic have reached the dividend-paying stage. The same region provided the gold-mining sensation of 1936—the O'Brien mine. In June, 1936, O'Brien stock stood no higher than 70 cents. A few months later, the shares broke through \$15. Last summer saw a relapse to \$3, but the price has slightly recovered on new discoveries. The behaviour of this stock provides an object lesson in the inevitable risks of speculation in developing Canadian mines. In the same area to-day there are at least a dozen new mines in early stages of development.

The position in the remaining areas may be briefly reviewed. In Manitoba, gold has been principally obtained from the copper-zinc-gold ore deposits in the Flin Flon area, near by the Saskatchewan boundary, though some promising mines are now in operation in the God's Lake and Rice Lake areas. British Columbia's gold-mining history goes back to the late 'fifties, and the Cariboo gold rush of 1860. Placer mining has been stimulated by the higher price of gold, but has given place, for the most part, to large-scale lode mining. Discoveries in the Bridge River district (north-east of Vancouver) in 1931, and the growing production of companies such as Pioneer and Bralorne have considerably increased the output of British Columbia in recent years.

So much for the topographical location of Canada's main gold deposits. Before the investor can translate discoveries into terms of dividends, actual or potential, he must study three main factors: the Canadian gold market, mining taxation, and the trend of working costs. A figure of \$35 per ounce is conventionally accepted as the new datum level for the price of gold, under existing conditions. The Federal Government, acting through the Bank of Canada, accepts all gold produced at the ruling price, and disposes of any surplus which is not needed for backing the domestic currency. The United States has for some years provided the most convenient outlet for this gold, but the Canadian Government has taken the opportunity, recently, to sell gold in London when the price offered a premium over exchange parities.

The Canadian gold-mining industry is a fruitful source of revenue, both for the Federal and Provincial Governments, but it carries a far lighter burden than the South African industry. The Dominion budget of 1934 set up a special tax upon gold-mining profits, on the argument that the Treasury was entitled to a share of the additional profits derived from the gold premium, which was itself

a function of monetary policy. The impost, however, was bitterly opposed, and was withdrawn before it had been in operation for a full fiscal year. To-day, the mining industry pays only the ordinary Federal and Provincial corporation taxes. Moreover, by a concession granted in 1936, not even the 13 per cent. Federal tax is applied to the first three years' profits recorded by metalliferous mines coming into production between May, 1936, and January, 1940. This concession was definitely designed to stimulate new mining enterprise, and it seems to have succeeded handsomely in its purpose.

The question of mining costs must finally be considered. During the first half of 1937, the considerable increase in wages and the cost of stores threatened to reduce mining profits, but this problem has receded with the subsequent reduction of prices. Details of share prices, dividends and production in 1936 are given in our final table:—

	Pro- duction in 1936	Share Prices		Current	Earned per sh.	Paid per sh.	Current yield
		1937-38					
		High	Low				
	Fine ozs.	\$	\$	\$	\$	\$	%
Bralorne	63,829	9	6 1/4	8.85	0.60	0.60	6.8
Dome	208,528	5 7/16	3 3/8	5 5/8	4.26	4.00	7.2
Hollinger	420,331	15 1/2	10 1/4	13 1/8	1.18	1.05	7.7
Lake Shore	451,847	55 1/2	45 1/2	53 1/2	4.19	6.00	11.2
McIntyre-Porcu- pine	230,822	4 1/2	3 1/4	4 1/2	4.29	4.00	9.5
Teck-Hughes	135,262	6.05	4.30	5.30	0.46	0.45	8.5
Wright-Hargreaves	216,210	8.10	4.45	7.30	0.72	0.60	7.7

Current quotations are appreciably below the high prices recorded early last year. The Canadian gold share boom of 1937, indeed, carried share values to levels which exceeded even the optimistic valuation of developing Rand mines in the London market. The inevitable sequel was heavy loss to shareholders, both in reputable enterprises and wildcat flotations. Competent Canadian observers, however, have lately been buying seasoned gold stocks with the same discriminating optimism as recent purchasers of established Kaffir shares on this side of the water. There is, indeed, a certain justification for such buying, on considerations of yield. But to a British investor who desires to adventure his resources in developing Canadian mines, remoteness from the market and from sources of technical information is a grave disadvantage. The possibility of establishing a regular market in London, at all events for shares of the newer Canadian propositions, seems remote.

Finance and Banking

The Exchange Account and Gold.—The course of events in the gold market during the past week has provided an instructive commentary on the policy of the authorities operating for the Exchange Equalisation Account, so far as the sterling price of the metal is concerned. The open market in gold has been comparatively small, but the preponderance of buyers or sellers has fluctuated abruptly. Last Monday, for example, was a day on which sellers predominated at the fixing, mainly as a result of dishoarding, following the striking vote of confidence obtained by the new French Government. Consequently,

the Exchange Account had to absorb virtually the whole of the gold on offer. On subsequent days the tide had turned, and the Exchange Account was called upon to satisfy part or the whole of demand in the market. The significant aspect of this two-sided operation of the Exchange Account in the gold market is that it appears to be effected in the interests of stability in the sterling price of gold and not in the more immediate pecuniary interests of the Account itself. On Monday the Account was buying gold at a price which included a premium of 6 1/2 d. over the dollar parity. On Tuesday it was selling on the basis of a premium of 5 d. Admittedly, the dollar shipping parity no longer has the fundamental importance which it once held in the daily gold fixing. There are other parities—with Continental currencies—which for the time being provide a more effective anchor for the sterling price of gold. None the less, the dollar rate has this week been sufficiently stable to provide a standard by which to judge the trend of official policy in determining the daily price of gold in London. And it would seem that, in the interest of maintaining a reasonably stable price, those in charge of the Exchange Account are prepared to forgo jobbing profits which could readily be earned by a more commer-

REPORT OF THE AUDITORS TO THE MEMBERS OF THE MIDLAND BANK LIMITED

In accordance with the provisions of Sub-section 1 of Section 154 of the Companies Act, 1929, we report as follows:

We have examined the above Balance Sheet in detail with the Books at Head Office and with the certified Returns from the Branches. We have satisfied ourselves as to the correctness of the Coin, Bank Notes and Balances with the Bank of England, Balances with, and Cheques in course of Collection on other Banks in Great Britain and Ireland, Money at Call and Short Notice and Bills Discounted. We have verified the Securities representing the Investments of the Bank and the British Treasury Bill and have obtained all the information and explanations we have required. We are of opinion that such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

cial utilisation of the quasi-monopolistic powers which the Account wields in the bullion market. The fact that the gold operations of the Exchange Account in the open market represent only a small proportion of its total transactions in the metal in no way invalidates this conclusion.

Competition for Treasury Bills.—The discount market has again become aware in recent weeks of exceptionally keen outside competition for Treasury bills. At Friday's tender last week, allotments at the price at which the market syndicate applied were only 22 per cent. In the preceding week, the syndicate was altogether outbid for the Tuesday bills, on which its applications were largely concentrated. In all, the market is estimated to have obtained less than 10 per cent. of the amount for which it applied. These small allotments are a serious matter when the profit on turning over bills is already reduced to microscopic proportions and when the banks, anxious to buy bills, find to their annoyance that the discount market is unable to satisfy their requirements. There are two types of outside competition for bills. The first comes from the London branches of foreign and colonial banks and from financial houses outside the discount market, all of which tend to be drawn into the competition for Treasury bills whenever there is abnormal abundance of short term credit. Against this competition the market can be depended on to defend itself adequately, even if its defence means cutting the rate to a fraction of 1d. per cent. over the basic minimum of 10s. per cent. Much more ruthless, however, is the second type of outside competition for bills—that which emanates from central banks and issuing authorities within the sterling area. Such institutions—the South African Reserve Bank and the National Bank of Egypt, for example—hold substantial amounts of Treasury Bills as part of their currency reserve. These holdings have to be renewed as they mature, quite independently of the prevailing rate of discount. It is this type of competition which has been particularly marked in recent weeks; and last Friday it drove the average rate at which the Treasury bills were issued below the 10s. per cent. level. Against this competition the market is powerless, and its incidence is therefore a matter of primary importance.

PERCENTAGE OF TREASURY BILL ALLOTMENTS SECURED BY THE MARKET

In order to throw light on this question, we have drawn up the accompanying chart, which clearly illustrates the regular quarterly incidence of heavy maturities and renewals of "semi-official" holdings of Treasury Bills, and their effect on the allotment of bills secured by the discount market. The data for 1937 and for 1938, so far, show that this particular type of competition tends to be particularly severe during the first four or five weeks of each quarter. The ratio of allotment of bills to the market syndicate also depends, of course, on other influences—especially on the amount of Bills on offer. The lower average ratio of allotment in the first quarter of each year, when revenue normally exceeds expenditure and when floating debt is being repaid, is due to the latter factor.

Comparatively low allotments of bills to the market will, therefore, probably be the rule for some weeks to come. But experience in each of the last four quarters suggests that the market should, within a week or so, be freed from the impact of particularly heavy maturities of bills in special outside quarters.

* * *

French Exchange Policy.—This week, the spot rate for sterling in Paris rose to Frs. 154 on Tuesday, rallied to Frs. 151, and on Thursday afternoon rose to a new high record of Frs. 155. Forward francs wavered between limits of Frs. 2½ and Frs. 3½ discount for one month, and Frs. 7½ and Frs. 6½ for three months, but the widest rates were touched on Tuesday and not on Thursday. The Banque de France has been limiting its own deliveries of foreign exchange to purchases for genuine commercial transactions, and to some extent that has set the tone for the whole market. One consequence is that French importers are buying ahead, and this makes the dividing line between commerce and speculation somewhat tenuous. The market is convinced that the French authorities have no definite policy, but are simply waiting on events. This week they have been trying to replenish their resources by buying sterling spot and selling it forward, which is a method of borrowing sterling for the duration of their forward contracts. This probably explains the pronounced weakness of the spot rate and the relatively greater strength of the forward rates. The advantage of this procedure is not altogether obvious. The French authorities have had some reason to regret the transfer of Frs. 3,000 millions of gold made to the Banque de France last November, for it is now impossible to recover this gold for the exchange fund without a further serious shock to confidence. Indeed, the authorities may well decide to approach London shortly for a new sterling exchange credit, as the only remaining way of replenishing their resources. Meanwhile, the third transfer of Fl. 50 millions out of the Dutch loan of Fl. 150 millions to France arranged last autumn is only now being placed. It is not known, apparently, whether the whole of the Fl. 150 millions has already been paid over to the French authorities or whether France still has further exchange resources to come shortly from this source. Whatever the answer, it is clear that the French authorities have the un congenial task of making bricks with an inadequate supply of straw.

* * *

An American Banker on Taxation.—Mr Aldrich, in his report to the shareholders of the Chase National Bank, made caustic remarks on taxation as applied to capital. After insisting on the importance of capital and savings to economic progress, he enumerated and condemned many of the new taxes imposed by the Roosevelt Administration. High income tax, inheritance taxes, the capital gains tax, the undistributed profits tax—all provided him with an easy target. He summed up his condemnation of the Rooseveltian financial policy by saying that it had sought to substitute bank credit for real capital. Used with moderation, bank credit was a valuable auxiliary to savings, but the substitution of bank credit for investors' funds in long-term employment reduced the liquidity of the banking system, and if pushed too far might impair the safety of the banks. Mr Aldrich also touched upon recent legislation regarding new capital issues, which he described as fundamentally right, but much too drastic in its terms. The capital goods industries were seriously lagging behind other industries, and a prompt and adequate modification of Government policy affecting the capital market would make a major contribution to business revival.

* * *

World Gold Production.—The Union Corporation estimate world gold production for 1937 to have been 35,400,000 ounces—an increase of nearly 7½ per cent. on the revised 1936 figure of 32,960,000 ounces. The difference between this estimate and the total of

39,500,000 ounces which appeared in these columns recently is largely accounted for by the U.S.S.R. figures. The Union Corporation have decided to revise their 1936 estimates of Soviet gold production from 7,350,000 to 5,400,000 ounces and to substitute a 10 per cent. increase in 1937 for the official indications of a 25 per cent. increase. This action by a leading authority on the world's gold production suggests that the estimation of Soviet output must under existing conditions remain almost wholly a matter of guesswork. The recent liquidation of "Trotzkist wreckers" in the Soviet gold industry may, indeed, be as good a reason as any other for assuming that production has fallen well below earlier estimates.

* * *

Sun Life Assurance Accounts.—As usual, this Society is the first of the life offices to publish its accounts. The 1937 figures show further all-round expansion. Total sums assured amounted to £22,010,000, compared with £20,720,000 in 1936—the previous record year. Consideration moneys for immediate annuities were also larger,

at £145,000 against £125,000. The net rate of interest on the combined assurance and annuity funds fell by 2s. 6d. per cent. to 40s. 7d. per cent. Total assurance assets now amount to almost £43,000,000, and there were apparently considerable changes among the various investment classes during the year. Further expansion was shown in mortgages on property—due, no doubt, to a considerable extent to advances for house purchase in conjunction with assurance policies, from £3,959,000 to £4,725,000, and in loans on public rates from £3,326,000 to £4,057,000. Policy loans, however, fell from £2,726,000 to £2,643,000. An increase of £392,000 occurred in British Government Securities, which stand at £10,431,000. British Municipal securities, on the other hand, declined by £158,000 to £1,079,000. Last year the chairman drew attention to the policy of the board in reducing the amount invested abroad. This policy is reflected in a decline from £5,565,000 to £5,070,000 in Indian, Colonial and Foreign Government securities. Debentures show an increase of £556,000 to £10,175,000. The amount held in preference and ordinary stocks, however, is practically unchanged, and forms only about 3 per cent. of the total assets.

MONEY MARKET NOTES

The Bank Return

Contrary to market experience at this time last year, the note circulation has this week undergone a further small decrease. It is clear that the latest flight from the franc has not given rise to any new French hoarding of British currency.

	Jan. 27, 1937	Jan. 12, 1938	Jan. 19, 1938	Jan. 26, 1938
	£ mill.	£ mill.	£ mill.	£ mill.
Issue Dept.				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	452.3	482.1	475.7	473.2
Banking Dept.				
Reserve	61.8	64.9	51.3	53.8
Public Depts.	12.1	13.2	11.0	13.6
Bankers' Depts.	98.4	123.4	124.4	113.1
Other Depts.	38.4	36.8	36.9	37.3
Govt. Secs.	78.6	90.2	104.4	98.9
Discounts and Advances	8.0	15.8	13.0	10.4
Other Secs.	18.7	20.5	21.8	19.0
Proportion	41.4%	37.4%	29.7%	32.7%

In the banking department the Reserve is stronger as the result of the continued contraction in the note circulation. Government securities are reduced by £5.5 millions, possibly because the Bank, like other holders, is having to bear the brunt of the seasonal repayment of Treasury bills out of revenue. Discounts and advances and other securities are also lower than a week ago, and there was a slight increase in public deposits. The result of all these movements was a drop of £11.3 millions in bankers' deposits.

*

The Money Market

In the past few days, in spite of the week's reduction in bankers' deposits, money has remained easy; and bankers' deposits themselves are still at a high level. On January 21st the market's allotment of Treasury bills was only 22 per cent., and so the market had only a limited quantity of bills available for sale this week. The clearing banks were keen buyers, but were unable to secure as many bills as they required.

	Jan. 28, 1937	Jan. 20, 1938	Jan. 27, 1938
	%	%	%
Bank Rate	2	2	2
London Deposit Rate	1½	1½	1½
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	1½	1½-5g	1½-5g
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	1½-9½	1½-9½	1½-9½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Since the end of the year the volume of Treasury bills issued by tender has been reduced from £622 to £587 millions. This is less than the contraction in the floating debt, for the floating assets of the departments have also been reduced from £361 to £329 millions. This last contraction of £32 millions is very likely due to the Exchange Equalisation Account's recent gold acquisitions. If so, the normal seasonal reduction in tender issues of Treasury bills is being neutralised to some extent by fresh borrowing to cover the Exchange Account's gold purchases.

*

The Bullion Market

In the bullion market, the usual Continental demand for gold has continued, but it has been met partly out of the liquidation of forward contracts which have matured and also out of some sales from private hoards. Apart from this, official sales provide the sole source of supply. The belga has now weakened to the point where the Belgian authorities could sell at a profit any gold held by them in London, but there is no trace yet of their having done so. The rate has not depreciated enough to make it profitable to ship gold from Brussels for sale in London.

" 22 ...	139 7½	6½ pm	251	20	1915½
" 24 ...	139 7½	6½ pm	419	20	1915½
" 25 ...	139 7½	5 pm	314	20	1915½
" 26 ...	139 7½	5 pm	177	20½	1915½
" 27 ...	139 6	6½ pm	552	20¼	20

* Above or below American shipping price. The New York price of silver remained at 45 cents per ounce .999 fine during the week.

The London silver market remains firm. Supplies are very limited, and the continuance of bear covering on a moderate scale favours a further rise in prices as a short-term view. Looking further ahead, prospects are less certain as current prices are already above the American shipping parity. The opening of dealings in Bombay for February and March settlement has witnessed a jump in the price for the later date to 9 annas premium, whereas so long as February was the later of the two settlement dates, the premium was only one anna. It looks as if some dealers are anticipating a reduction in the import duty.

*

Foreign Exchanges

The latest fluctuations of the franc, and their bearing on "control" policy, are discussed in a Note above. Apart from them, the market has been very quiet. Dollars came on offer in the middle of the week at \$5.00½, this being due to the fresh weakness in Wall Street. Dutch interests are reported to have been selling American securities and buying guilders, but as the Netherlands Bank has been selling guilders to meet all demands, sterling remains unchanged in Amsterdam at Fl. 8.97. Belgas have come on offer, owing to the weakness of the franc, and the spot rate has moved up from bel. 29.54 to 29.63. The discount on forward belgas shows little change at 5 cents discount for three months' delivery. Swiss francs are unchanged at Frs. 21.63½.

Investment

Gilt-edged Possibilities.—This week's events suggest that in the equity share markets the public, playing the deaf adder's part, refuse to hear even the bank chairmen, charm they never so wisely. Prices have receded fractionally, and there has been a tendency to close professional commitments. Nor has New York's mid-week defeatism been helpful. Interest on this side has shifted still more to the gilt-edged market. Here, a firm trend, since the beginning of this year, has been associated with intimations that the authorities, having studied the year-end reports of the joint-stock banks, have decided that, if a further rise in advances is not to involve further sales of bank investments, the cash basis must be widened. Inevitably, these signs of the times have resuscitated market questionings about the second *tranche* of Defence borrowing. The consensus of opinion, however, is against the imminence of a major Treasury operation. It is only quite recently that the decks of the Government Departments were cleared of the residuum of last year's offer. New money will certainly not be required by the Government to meet defence commitments falling due for some months ahead, and the omens suggest that the market is hardly likely to turn against the Treasury in the meantime.

A consideration of only slightly less importance is that other borrowers have equitable claims to consideration before the beginning of a close season for new issues, which a Government loan would be only too likely to impose. Their numbers include more than one overseas Government and, more particularly, a fairly lengthy list of home municipalities which have stocks (issued for the most part in 1920 and carrying 6 per cent. interest) which become callable in June and November next, usually on notice given three months earlier:—

Corporation	Stock Rate %	Issued	Outstanding	Earliest date repayable 1938
Stoke-on-Trent	4½	1923	400,000	April 5
Coventry	6	1920	876,556	June 30
Lincoln	6	1920	750,000	June 30
Middlesbrough	6	1920	1,246,750	June 30
S. Shields	6	1920	1,000,000	June 30
Boole	6	1920	494,076	Nov. 30
Bournemouth	6	1920	650,000	Nov. 30
Ipswich	6	1920	300,000	Nov. 30
Northampton	6	1920	400,000	Nov. 30
Rotherham	6	1920	635,609	Nov. 30
Stoke-on-Trent	6	1920	900,000	Nov. 30
Wolverhampton	6	1920	499,300	Nov. 30

In these conditions, significance attaches to the price at which Bristol will be "advised" to issue her forthcoming £2,000,000 loan. If an endeavour to lever up the prevailing market basis by, say, half a point, is made and proves successful, the authorities will have scored a definite point in their policy of resuming "control" over the destinies of the gilt-edged issue market. And they will have scored it at a time when that resumption is particularly opportune.

The Bondholder's Guardian.—The sixty-fourth annual report of the Council of Foreign Bondholders deals with a year of world-wide economic improvement which, unfortunately, was not adequately reflected in the bank-books of bondholders. Greece defaulted last April, and has persistently repeated an unacceptable offer of permanent settlement, which takes no account of the rapid improvement in Greek economic affairs. To Brazil, however, goes the doubtful distinction of being the most important defaulter of 1937. The report shows that her decision interrupted negotiations for the future of the debt service after March this year, which were being conducted in accordance with the Aranha plan. But there are successes as well as failure in the record of 1937. Poland, Danzig and Nicaragua made acceptable permanent settlements, and other arrangements or offers have

continued to be carried out by a lengthy list of countries, including Chile, Germany, China and Yugoslavia. The bondholder has good reason to thank the Council, which is now seeking to enlarge its scope for effective action through close collaboration with other organisations. To that end, meetings were held last year in London, Paris and New York. But in one direction, alas! it can report no progress. Page 93 of the report records: "There have been no developments during the year 1937 of special interest to bondholders of the State of Mississippi."

Wall Street and Hot Money.—A five-point fall in the Dow Jones index on Wednesday illustrates the cumulative effect of the uneasiness which now pervades Wall Street. In part, the fall appears due to the activities of the Dow theoreticians, but it has a basis in such current realities as the Administration's campaign against "monopolies" (discussed on page 216), the threat to re-open the Chrysler inquiry, and the President's declaration against wage cuts. The question of a renewal of European interest in Wall Street is purely academic at the moment. The publication of the U.S. Treasury return of capital movements during the third quarter of 1937, however, reveals, surprisingly, that there was a net influx of funds from abroad into U.S. domestic securities, amounting in total to \$55½ millions. Thus the liquidation evident during the second quarter of 1937 was sharply reversed. The figures for European countries (which bring up to date previous returns published in *The Economist* of October 23, 1937, page 173) show an influx of \$20 millions from the United Kingdom, and of \$60½ millions from European countries as a whole. Switzerland is responsible for the larger part of the increase, the Netherlands occupying third place. Evidently, holders of American securities are willing to run heavy paper losses for a time, and even to "average."

Company Registrations in 1937.—The annual record of new company registrations effected in 1937, published with customary detail by Messrs Jordan and Sons, Ltd., shows a 7 per cent. drop to 12,722 new registrations, including 35 companies with capitals of £500,000 or more. This fall is neither surprising nor of special significance. And though a fall of 27 per cent., from £158,221,238 to £113,590,283, in the nominal capital involved appears more important, the growing practice of registering small initial capitals which are increased after registration makes the comparison undependable. Last year provided such examples as Odeon Theatres, Ltd., and Doncaster Amalgamated Collieries, whose combined original capital of £10,100 has since been increased to £13,750,000. The fall in the number of registrations is entirely due to private companies. The number of public companies with share capitals was actually 10 greater at 321, although a decline in companies limited by guarantee is responsible for the small fall in total public registrations. Totals for 1937 and the three preceding years are given below:—

Years	Public Companies		Private Companies		Totals	
	Number Registered	Capital	Number Registered	Capital	Number Registered	Capital
1934 ...	446	69,761,622	12,029	73,778,784	12,475	143,540,406
1935 ...	430	54,870,783	12,673	81,763,377	13,103	136,634,160
1936 ...	418	49,359,643	13,324	108,861,595	13,742	158,221,238
1937 ...	416*	37,619,099	12,306	75,971,184	12,722	113,590,283

* Includes 95 companies limited by guarantee and associations not for profit without share capital.

Messrs Jordan's computations for individual groups show that land and finance companies were again

prominent. Private land and building companies take first place with 1,153 registrations, but they rank second in respect of capital to private finance and investment companies, which provided no less than one-eighth of all registered capitals, both of public and private companies. Among public company registrations, land companies constitute nearly one-third in number, but occupy no special position in point of capital; the largest group, in fact, is mines and quarries. The year recorded comparatively few "freaks." But an inversion of a familiar rule is to be found in the Articles of Transfer Trust, Ltd., whose directors must not be residents of, and whose board meetings must not be held in, the United Kingdom. It is also recorded that the International Council for Non-Intervention in Spain still lives in the files at Bush House, registered as a company limited by guarantee.

Company Notes

U.S. Steel Earnings.—The December quarterly earnings statement of the United States Steel Corporation seems destined to be the precursor of a series of depressing American company announcements. Net earnings for the quarter were only \$4,577,983, compared with \$20,650,780 for the corresponding quarter of 1936, and \$30,618,000 for the September quarter of 1937. This rate of earnings is equivalent to no more than \$1.27 per preferred share, compared with a quarterly dividend payment of \$1.75. During the quarter, steel operations fell to an average of 41.3 per cent. of capacity, against 71.4 per cent. for the whole year and in December the rate was only 32.3 per cent. Clearly, during the latter part of the quarter, the Corporation was operating at a negligible profit or even a loss. The market had already discounted this result, and had been inclined to buy steel shares on hopes of recovery in the constructional industries and of large-scale naval building. But this week's reaction has taken Steel common to \$55¼, compared with last year's "high" of \$126½, and until America's politico-economic background is clarified, there can hardly be much recovery.

Amalgamated Cotton Results.—Last year's comprehensive capital reduction has proved well timed. It has coincided with a spectacular improvement in earnings which has put the ordinary capital—now a mere vestige of its former bulk—back into the dividend list. The total income received by the Trust during the year to August 28, 1937, was £219,181, compared with £48,833 for the previous ten months' accounting period. The aggregate trading profits of the company and subsidiaries, together with other income, amounted to £279,783, of which £43,458 was set aside for depreciation and £42,132 for taxation, leaving net profits available for the Trust of £194,193. After payment of £27,486 for debenture interest and £47,126 for preference and preferred ordinary dividends, some £119,581 is available for ordinary dividends and reserve appropriations. Only £16,732 of this amount, however, is absorbed by the dividend of 1d. per share, tax free (equivalent to 11.11 per cent. gross) on the ordinary capital. Of the balance, £70,000 is put to general reserve, £30,000 to stock reserve, and £2,849 is carried forward. Balance-sheet comparisons cannot be made with 1936, owing to the reorganisation, but the picture presented shows a healthy net assets position, both for the Trust and for the subsidiaries. Like the Lancashire Cotton Corporation figures, which appeared earlier this month, the Amalgamated Cotton profits should be read in conjunction with the Leading Article on "Lancashire's Problem," which appears on page 230 of this issue. The shares stand around 1s. 7½d. to yield £7 8s. per cent.

Woolworth Meeting.—Mr. W. L. Stephenson's address to the shareholders of F. W. Woolworth last week was of the cheerful tenor proper to the review of a record year. Shareholders, however, must base estimates for

the current year on inference, rather than on any definite statement from the chair. The company's success last year was due to an increased volume of turnover, and this more than offset the difficulties of rising costs and interrupted supplies. Increased turnover, it appears, resulted primarily from the general improvement in trade conditions, although a moderate proportion of it was due to expansion of selling space and new stores. After last year's building programme there are now some 711 stores in operation. Some £250,000 was set aside last year for the first N.D.C. assessment, which, in a full year, will exceed £300,000. Shareholders will probably conclude that, so long as the nation's purchasing power is maintained, the Woolworth organisation should make satisfactory profits. The year 1938 has opened without any extravagant dividend expectations, but the position, so far as costs are concerned, should be less difficult than last year.

A Gaumont - British Inquiry.—The completion and lodgment of application forms at the Board of Trade concludes the first stage in the endeavour of certain shareholders to secure an official inquiry into the affairs of Gaumont-British Picture Corporation, under section 135 of the Companies Act. The shareholders' committee obtained support to a total of 3,233 applications representing 1,160,934 shares, equivalent to 11.326 per cent. of the total number issued. The legal minimum of 10 per cent. was thus exceeded. As we explained in *The Economist* of January 1st (page 31), the Board's powers are permissive and not mandatory. The next stage presumably is for the Board to invite the directors of the Corporation to make a reasoned case that the application be not heard. If that case failed to satisfy the Board of Trade, the latter might decide to appoint an inspector to investigate the Corporation's affairs, armed with powers of discovery and examination upon oath.

Investment Trust Results.—Industrial profits published in 1937 in many cases reached record levels, and it is not surprising that investment trust profits, assisted by the "time lag," still show a rising trend. The recent publication of a considerable number of trust reports for 1937 discloses a combination of fully-maintained improvement in revenue, and a deterioration in the valuation of investments. In the following table we analyse the earnings, dividends and investment records of six representative trusts whose accounts have lately appeared:

Trust (years to Dec. 31)	Total Rev.	Ordinary Stk. earned		Div.	Portfolio distrib.		Appn. or Depn.	Ord. Stk.	
		Amt.	%		Ord. Shs.	Gt. Br.		Price	Yield

* Proportion by which valuation of investments exceeds (+) or falls short of (—) book values. † Years to November 30th. ‡ Years to following January. § Includes Dominions and Colonies. a From chairman's speech.

Despite the fall in security values which had... tered by the end of December, two show investment valuations in...

But the general inference remains that the relationship between market and book cost of investments has deteriorated, even when compared with the end-1935 position. Although this problem has little bearing on revenue results, it is true, in general, that investment trusts must now adapt themselves to the facts of a market recession before the damage of the last one had been fully repaired. On a provisional estimate, it does not seem on the whole that investment trusts reaped a rich harvest from the recovery years. Capital profits did not, apparently, provide sufficiently large hidden reserves to offset the recent decline in market values. While inferences from the percentage distribution of investments must be made with caution, there are so far no signs of any pronounced or consistent changes in investment policy. Compared with the depression years, the proportion of equity holdings has been markedly increased, but no sweeping changes have been disclosed during the past two years. As further reports become available, more light may be thrown on the question whether the trusts are now as well equipped to face the possibility of a recession as they were eight years ago.

Greyhound Racing Association Trust.—We commented last week upon the offer to G.R.A. Trust second preference shareholders to exchange their existing right to participate in 25 per cent. of residual profits (after payment of the fixed 8 per cent. dividend) for 5 new ordinary shares in respect of every three preference shares held. This week the Trust has issued its accounts for the year to December, 1937. Net profits, excluding surpluses on the sale of investments, have increased from £209,980 to £241,012, thanks mainly to an increase in dividends received from subsidiary companies from £172,825 to £212,381. The ordinary dividend is sharply increased from 30 per cent. to 40 per cent. and the participating preference shares receive an additional dividend of 3.3 per cent., compared with 2.49 per cent. for 1936. After these payments, an earned balance of £56,345 remains; the directors, however, propose to transfer £66,666 to general reserve, thus reducing the balance carried forward from £45,949 to £35,853 (the latter figure includes a credit of £225 from sales of investments.) The results testify to continued popularity of the "dogs," and to increased popular purchasing power.

The Trust is issuing 2,666,667 ordinary shares of 1s. each at 3s. per share, to existing ordinary shareholders, and to participating preference shareholders in respect of their exchange rights. At the existing price of 3s. 9d. for the ordinary shares, these rights are worth approximately 2d. per share. Hitherto, the participating preference shareholders have been entitled to 25 per cent. of surplus profits after their fixed dividend, irrespective of the dividend paid upon the ordinary capital. In future, under the scheme, in order to maintain their share in the distribution of total profits, they will need to apply *pro rata* for

all new ordinary shares issued for cash. This fact strengthens their claim to more generous treatment, particularly in the matter of the capitalisation of reserves built up in the past.

Boot and Shoe Profits.—The season's boot and shoe company results are mixed in character, but all reports bear witness to the sharp rise in costs which began in 1936. Offsetting factors, such as rising turnover and the ability to pass on price increases, however, have prevented, in most cases, a major setback in profits. It may be inferred, however, that retailers, or manufacturers owning retail shops, have experienced less difficulty than manufacturers which largely supply retailers. We give below a comparative table, showing a selection of the latest reports:—

Company (years to Dec. 31)	Total Profits	Earned for divs.	Ord. Shares			
			Earned	Paid	Price & Denom.	Yield
Lotus	1935 93,905 1936 110,866 1937 98,370	64,557 76,100 59,141	8.6 11.1 8.0	% 7 6	s. d. 22 6 (11)	% 5.33
L.J. Weber & Phillips	1935 15,987 1936 18,237 1937 12,185	14,633 16,837 10,785	8.0 9.2 5.8	7½ 8½ 6	8 9 (10s.)	6.85
Stead and Simpson	1935 44,866 1936 47,151 1937 49,146	32,054 35,254 36,958	17.6 20.7 22.5	10 10 10	N.Q.	---
William Timpson	1935 126,796 1936 152,162 1937 167,524	90,896 116,334 116,524	31.3 43.4 25.8	22½ 25 15	N.Q.	---
J. Darnell and Son	1935 33,372 1936 35,647 1937 34,530	24,288 26,011 22,521	15.7 17.1 15.0	15 15 15	15 7½ (8s.)	7.68

† After £2,207 (1935) and £1,133 (1937) to reserve for investments.
‡ After £5,000 to repairs and renewals reserve. * Also capital bonus of 66½ per cent. N.Q.—Not quoted.

A year ago, Lotus shareholders were informed that shoes would cost more in 1937, and instances were quoted of rises in material prices of as much as 50 per cent. But it was then disclosed that adjustment was retarded by the unwillingness of retailers to alter conventional retail prices or to pay higher prices which they felt unable to pass on. Presumably, the 11 per cent. drop in trading profits for 1937 reflects a continuation of these factors. Higher tax provision has reduced earnings of the ordinary shareholders to the lowest level for the past three years. Though the accounts are not yet available, John White (Impregnable Boots) have increased the dividend for 1937 from 10 per cent. to 12½ per cent. This concern is an outstanding example among new entrants in the smaller centres of the boot and shoe industry, whose competition appears to have affected the position of some old-established manufacturers. The results of L. J. Weber and Phillips, the Tottenham manufacturers and leather merchants, are disappointing, for the latest profits are lower even than in 1932, and the dividend, although reduced by 2½ per cent., is barely covered by earnings. Stead and Simpson, who own both factories and retail shops, have obtained a moderate but satisfactory increase in profits, and are paying 10 per cent. for the fourth successive year. Distribution policy on the privately-held ordinary shares remains as conservative as ever, the surplus of £13,164 being added to the carry-forward, which now amounts to the substantial sum of £109,775. William Timpson, Ltd., also manufacturers and retailers, report the highest profits since incorporation. Increased turnover more than counteracted rising costs, but higher tax provision absorbs the whole of the increase in profits, and the amount earned for the ordinary is practically unchanged at £96,788. The maintenance of the J. Darnell and Son dividend at 15 per cent. is justified by the steady earnings record. Since the rise in costs is not yet completed, the yields on typical boot and shoe shares shown in the table are probably not excessive.

Rubber Share Outlook.—Among the bright hopes which collapsed in 1937 none is more striking than rubber's reversal of fortune. Not only have rubber prices

fallen to half their peak reached in the March boom. The unexpected decline in American consumption towards the end of the year has also necessitated a cut in output from 90 per cent. to only 70 per cent. of standard quotas in the current quarter, and following this week's decision of the International Committee, to 60 per cent. in the second quarter of the year. Thus, both profit margins and output have been simultaneously curtailed. The attention of the industry is thus anxiously focussed on the prospect for the near future. United States absorption in December amounted to only 29,400 tons against 49,600 tons a year before, and the current rate of world demand is almost certainly less than 1,000,000 tons per annum, i.e. well below the rate of release with a 70 per cent. quota. By its action this week in drastically cutting the quota to only 60 per cent., the Rubber Committee has shown itself fully responsive to these market apprehensions. The immediate reaction, of course, was a moderate rise in prices. Second thoughts, however, have already narrowed the gain, while rubber shares have remained almost totally unmoved. Unfortunately, supporters of rubber restriction are faced with a dilemma, since rubber is a commodity with an elastic demand. Though prices may be kept up by curtailing supplies, the decline in demand may thereby be accentuated. The most that can be expected of this policy is that the accumulation of surplus stocks will be prevented until the forces of recovery reverse the trend of demand. The future, therefore, still rests primarily with the United States, the consumer of over 50 per cent. of the world's supply of rubber. If the current recession there is soon reversed by a new advance in business, rubber shareholders may look for a rapid improvement in their prospects. Otherwise the outlook is bleak.

Meanwhile, on what basis should rubber shares be valued? In the following table we present a rough estimate of potential profits for six well-known companies, assuming that output remains at 60 per cent. of standard assessments during the remainder of the year (that is, averaging 62½ per cent. over the whole year) and that prices average 7½d. a lb. This may be an over-estimate, but on the other hand no allowance is made for forward sales, if any. Costs of production are assumed to be ½d. a lb. higher than the latest available figure.

Company and Share Denomination	62½% of latest Standard Production	Latest All- in Costs	Profit margin with price 7½d. per lb. (a)	1d. per lb. at 62½% Quota, % on Ord. Capital	Est. ord. earnings with price 7½d. per lb. 62½% Quota	Current Price of Ord. Shares	Estimated Earnings Yield
Batu Tiga (£1).....	(000's lbs.) 1,925	d. per lb. 4.5	d. per lb. 2.5	% 3.5	8.7	29.4½	5.9
Bikam (2/-)	3,290	4.7	2.3	2.6	6.0	2.3	5.3
F.M.S. Planters (£1)	1,920	4.6	2.4	3.2	7.7	27.6	5.6
London Asiatic (2/-)	7,990	4.2	2.8	3.6	10.1	3.6½	5.6
North Malay (2/-)...	1,990	4.5	2.5	2.6	6.5	21.½	6.1
Pataing (£1)	2,705	5.0	2.0	3.7	7.4	35.½	4.2

(a) Assuming a rise in costs of ½d. per lb.

The estimated earnings yields, based on current share prices, shown in the last column, suggest that most rubber shares are by no means undervalued at present. Indeed, the figures indicate that, in the absence of some improvement in rubber prices fairly soon, a further decline in share prices would hardly be surprising.

Rhodesian Copper Profits.—Compared with the first quarter of the company's current financial year, Roan Antelope's earnings for the quarter to December 31st showed a sharp contraction. Gross revenue for the quarter amounted to £833,500. After charging working expenses, including London and mine administration costs totalling £424,500, and £50,000 for replacement and obsolescence, the quarter's estimated profit is reduced to £359,000, compared with £686,500 for the September quarter. For the first six months of the company's year,

therefore, total profits amount to £1,045,500. The December quarter's fall is due to reduced production under the restriction scheme and to the sharp fall in the average price of copper. If we assume (as for Rhokana in our last week's issue) that the average price for copper for the year to June next will be between £42 10s. and £45 per ton, and that production will remain at 105 per cent. of standard, and if we allow for N.D.C. for a full year, Roan's earnings should range from 24½ to 27½ per cent. on the ordinary capital. The 5s. shares, at 17s. 9d., offer a somewhat higher prospective yield than other issues in the Rhodesian group, but their return is not unduly high. The same conclusion applies to Rhodesian Selection Trust ordinary, whose return depends upon Mufulira's net profits. These were reduced from £324,000 for the September quarter to £240,500 for the December quarter. Gross revenues amounted to £600,500 for the quarter, compared with £688,000 for the preceding quarter. Reserve for replacements received £25,000, but no debenture redemption charge was required, since the issue was redeemed in September.

Other Company Results.—Since the majority of banking results have already been published, our usual analysis of profit and loss accounts appearing on page 276 includes only 35 companies in all. The number of important industrial results is small, but includes *De Havilland Aircraft*, *Tilling and British Automobile Traction*, and also *Southalls (Birmingham)*. A discussion of the reports appears on page 274 under the heading "Shorter Comments." The full report of *Gas Light and Coke Company*, published as we go to press, shows that gross revenues increased by £537,792 to £13,573,409. Net revenues, however, are reduced by approximately £43,000 to £2,050,174. The dividend is maintained at £5 12s. per cent., for the ninth successive year, but a draft of £110,801 is made on the balance carried forward, which is reduced to £102,376.

Company Meetings of the Week.—Reports of company meetings held this week appear in this issue on page 254 onwards. The chairmen's speeches at the *Midland Bank*, *National Provincial Bank* and *Westminster Bank* are discussed on page 214 of this issue. Similarly, the remarks of Mr W. L. Stephenson at the *F. W. Woolworth* meeting are referred to on page 239. Mr R. B. H. Otley declared at the *General Consolidated Investment Trust* meeting that 1937 had been perplexing, but he expressed the view that productive capacity was not at saturation point. Mr Philip C. Turnbull explained to *Sednak Rubber Estates* members that one cause of the rise in costs arose from charging to revenue certain replanting expenditure. At the *Williams Deacon's Bank* meeting, Mr Gerard Powys Dewhurst urged that great efforts should be made to stimulate export trade, and welcomed, for this reason, the Anglo-America trade negotiations. Turning to the cotton trade, with which the bank is particularly concerned, Mr Dewhurst declared that some co-ordinating authority is essential if the industry is to put its house in order. Similar views on the export trade position were expressed by Mr M. J. Cooke at the *National Bank* meeting. The chairman also anticipated the publication of the report of the Commission of Inquiry into currency and banking conditions in Eire in the near future. Discussing the difficult conditions in the bill market last year, Sir William Goschen pointed out to shareholders of *Union Discount Company* that some slight improvement in foreign bill supplies was evident.

FEBRUARY 8 FEBRUARY 10

Conditions have remained very quiet on the London market this week, and quotations, where changed, tend to be lower. The absence of an effective volume of business, however, has neither tested nor strengthened the underlying tone and while gilt-edged have tended to lose some of last week's brilliance, the strength of fixed-interest issues generally is the only outstanding feature of the week.

Gilt-edged were buoyant on Monday, reputedly on large-scale institutional buying, and National Defence Bonds reached par at one time. Some French support helped Old Consols further on Tuesday, but the general condition was already showing slight signs of ease, and the slackened mid-week support produced a mild reaction. Home corporation scrips were good at first, and not troubled by the prospect of renewed issue activity. Australian stocks celebrated the 150th anniversary of the Commonwealth with firmness.

In the *foreign bond market*, Brazilian issues were still on offer, and although Japanese bonds attracted some early support, mid-week anxiety regarding the Far Eastern situation and the Japanese Budget caused a setback. Some early buying of German issues was associated with vague discussion of a debt settlement, but the improvement was not sustained.

Home rail stocks were depressed at first by persistent selling, but the stocks held their lower levels on Tuesday. An excellent batch of traffics, however, stimulated the market, and London Transport "C" stock also showed improvement. Argentine rails continued dull and idle.

Subdued conditions prevailed in the *industrial market*. The feature, indeed, was provided by electricity supply shares, which advanced appreciably, on the view that the terms of the forthcoming electricity bill will be more favourable than the original proposals. Steel shares remained quiet, and showed declines of a few pence in most cases, while the coal industry's broadsides regarding the Coal Bill appeared to depress the shares. Motor shares revealed few interesting movements.

In the stores group, International Tea staged a recovery at first but did not maintain its gain. Investment issues in the brewery and tobacco markets showed little change, but received little attention. Shipping shares reacted slightly on the increase in the returns of idle tonnage. Bank and insurance shares received good support at first, in conformity with gilt-edged, and remained firm in mid-week.

Small business characterised the oil share market throughout the week. Conditions at home, on the Continent and in New York were mainly negative, and while there was occasional support for Mexican Eagle on supposedly good buying, and also for V.O.C. on the new issue announcement, changes in the leaders were small.

Rubber shares opened in the shadow of the International Committee's announcement, and dealers responded

slightly to the quota cut (discussed on page 240). Second thoughts, however, were much less favourable for the share market, and support was almost completely absent. A rather better demand for tea shares was reported.

Dealings in *Kapris* this week were much less animated, and prices showed a general fall in mid-week. There was some attempt to stimulate interest on Tuesday by professional operators, but the renewed stream of profit-taking brought a general set-back. The fall affected the dividend payers and also the developing mines, among which West Wits. showed a fall of 1/8 on Wednesday. Rhodesian copper issues remained dull, and were unmoved by the further profit estimates.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Investment Index of 151 industrial ordinary share prices, standing on Tuesday last (January 25th) at 73.5, showed only a slight fall compared with 73.8 a month ago, but remained appreciably below the level of 90.5 a year ago. The corresponding yields are 4.85, 4.91 and 3.71 per cent. We give below the usual monthly particulars of fixed interest securities, which illustrate the recent firmness in this section of the market, and a selection of the separate ordinary share indices :—

New York

Operators returned after the weekend hoping for news from Washington about the naval programme. Instead they heard much less palatable information regarding the drive against the "monopolists," and the President's declaration against wage-cuts. A snow-ball liquidation gradually developed. Trading began quietly, became dreary with losses of \$2 on Tuesday, and was extremely troubled on Wednesday, when stocks fell as much as \$6. The new short-selling rule formulated by the S.E.C. has been interpreted as a sign of greater wrath to come, while the market sees no immediate signs of hope in the industrial situation. The *Iron Age* estimate that steel activity has increased from 30 per cent. to 32½ per cent. of capacity was not received with any eagerness. Losses were generally distributed over the constructional trades, such stocks as Johns-Manville, Allied Chemical, Westinghouse Electric and steel shares being principally affected. Utilities showed a small improvement at first, but rails were scarcely less depressed than industrials. Government bonds became easier, and second-grade industrials weak.

- Two hour session

Capital Issues

THE absence of public offers this week has given the market an opportunity to discuss the prospect of renewed corporation borrowing, the significance of firmness in the funds, and the fate of the Canadian conversion. These questions are discussed on page 238 of this issue. Certain important offers to shareholders, however, have been reported. *Associated British Picture Corporation* is issuing 1,500,000 5s. ordinary shares, to share and debenture holders, at 14s. per share—a slightly

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Dividends for full year. (d) Paid in £N.Z. (e) Allowing for exchange. (f) Flat yield.
 (g) Yield on 3½% basis. (h) Yield on 2½% basis. (i) To redemption at par, February 1, 1957. (j) Yield based on 40% of coupon. (k) Paid in £A.
 (l) Yield on 15½% basis. (m) Yield worked on 45% of coupon. (n) Yield worked on 40% of coupon. † Free of Income Tax.
 (o) Yield based on 43% of coupon. (p) Yield worked on 41½% coupon.

STOCK EXCHANGE INTRODUCTIONS

Bradleys (Chester), Ltd.—Issued capital 250,000 £1 ordinary shares and 90,000 7 per cent. cumulative £1 preference shares. Wholesale, retail and manufacturing clothiers; founded 1878. Net profits after tax and depreciation: years to January 31, 1935, £11,744; 1936, £41,641; 1937, £45,639. Properties in balance sheet at £316,749. (Application to Manchester Stock Exchange.)

PRIVATE PLACING

Hellenic and General Trust.—This trust has placed privately £85,000 4 per cent. debenture stock 1950-60 at 98½.

TENDER

Brighton, Hove and Worthing Gas.—This Company is offering £40,000 of 4 per cent. preference stock for sale by tender. The minimum price is par.

ISSUES TO SHAREHOLDERS ONLY

Associated Portland Cement Manufacturers.—A provisional agreement has been made concerning the offer by this company to acquire 1,100,000 £1 ordinary shares in Alpha Cement. Tunnel Portland Cement will acquire from Associated a block of Alpha ordinary, but the offer (of 9 £1 ordinary in Associated against 20 £1 ordinary in Alpha) becomes binding only if by February 12th 90 per cent. of Alpha ordinary shareholders accept, or if Associated agree to modification. The shares will not rank for any dividend in respect of 1937. Alpha directors estimate net profit for 1937, before tax, at £187,000, against £172,659.

Associated British Picture Corporation.—Offer to share- and debenture-holders only, of 1,500,000 5s. ordinary shares at 14s. Proceeds to pay off advances. Total (consolidated) net assets, March, 1937, £5,119,692; trading profits, £1,265,829; net earnings (after pref. dividend, etc.), £738,051. Directors and friends will take up any shares not applied for.

Butler (W.) and Company.—Issue of 100,000 5 per cent. cumulative £1 preference shares at 20s. 6d. to holders of ordinary stock on January 14 (one share for £5 stock).

Pobjoy Airmotors.—Following negotiations with Short Brothers, White Drummond and Company, as issuing house to Pobjoy Airmotors and Aircraft, have been authorised to offer one 5s. share of Short Brothers for

every 12 Pobjoy shares, with strong recommendation for acceptance.

CONVERSIONS AND REPAYMENTS

Durham County Water Board.—The board is repaying the £300,000 4½ per cent. redeemable stock, 1938-48, on July 2nd at par, but holders to the extent of £250,000 may convert into 3½ per cent. redeemable stock, 1958-63. Existing holders may make cash applications at 100½.

UNIT TRUST CONVERSION

Selective Fixed Trust.—Selective Fixed Investments, Ltd., announce that the recent conversion offer to holders of Series "A" and "B" has not met with sufficient support to warrant allotment, and certificates will be returned.

FORTHCOMING ISSUES

Blackburn Aircraft.—It is proposed to create 150,000 5 per cent. cumulative redeemable £1 preference and 140,000 10s. ordinary shares. Of the latter, only 40,000 will be issued, and of those 33,333 are to be taken up by William Denny Bros. under the agreement to co-operate in managing a new factory at Dumbarton. Provisional arrangements have been made with Lazard Bros. for placing the 150,000 preference and the remaining 6,667 ordinary shares.

SHORTER COMMENTS

Company Results of the Week.—One of the outstanding results of the week is the improvement of £81,800 in DE HAVILLAND AIRCRAFT net profits to £213,958. Trading profits are, in fact, nearly 60 per cent. higher at £305,109, but the depreciation provision is substantially increased. Rubber company reports for financial years ending in September or October last continue to show good progress; among the larger companies whose results have lately been published are BAH LIAS (with net profits of £72,773, against £41,444) and KUALA-KANGSAR. The continued expansion of TILLING AND BRITISH AUTOMOBILE TRACTION has resulted in a rise in disclosed net profits from £367,423 to £442,099; and although the rate of dividend is nominally unchanged at 10 per cent., it is payable on a capital increased by last April's bonus. The first report of BIAN'S INDUSTRIES since the introduction of the shares to the public shows net profits of £84,300, and though the total distribution is 30 per cent., it is made on a conservative basis. BLUNDELL AND SPENCE, whose net profits of £27,921 are practically unchanged, report that owing to rising costs and more intensified competition, net profits did not advance in the same ratio as home and export sales. PAWSONS AND LEAFS have experienced a satisfactory improvement in profits, which amount to £16,448 net, against £11,477, and the dividend is raised by 1½ to 5 per cent. In the miscellaneous group, SOUTHALLS (BIRMINGHAM) net profits are fully maintained at £89,346. The dividend remains at 20 per cent., tax free, but a special distribution of 3d. per share is to be made in respect of profits from the sale of investments.

MISCELLANEOUS

Planet Building Society.—Total income 1937, £114,082. Balance of profit £74,494, against £77,368. Interest at rate of 3½ per cent. tax free on "A" and "B" shares. Reserve account No. 2 maintained at £5,000. To general reserve £14,588. Total reserves now exceed £150,000. Bank

overdraft of £41,370 has been paid off year closed with a credit balance of £53,583.

Roan Antelope Copper Mines.—Gross revenue for quarter to December 31, 1937, £833,500. Allowance for replacements, etc.; reserve again £50,000; estimated profit for the 3 months, subject to tax, is £359,000 (£52,000 above the December 1936 quarter, but £327,500 lower than the September quarter of 1937).

Dixor, Ltd.—The first report and accounts for year 1937 show profit £36,327. Dividend 37½ per cent. for 9 months, equal to 50 per cent. per annum. £8,350 is reserved for taxation, £900 to preference share redemption fund. Carry forward £1,530. Stock, debtors and cash total £47,469; creditors including taxation, £12,148.

Mexican Eagle Oil Company.—As a result of the appeal by the oil companies, the Mexican Supreme Court has granted suspension of the effects of the award of the Labour Board, but this suspension is subject to the provision of a bond, the terms of which are still under discussion. If an agreement is reached on this latter point, the award will then be a matter for decision by the Supreme Court.

Linen Thread Company.—Net profits (after tax and contingencies) for year to September 30, 1937, were £296,623 (a decrease of £28,815). To dividend reserve £50,000 (same). Final dividend 3 and bonus 2½ per cent., making 8½ per cent. (same). Carry forward £191,803 (£14,626 less).

Pass and Joyce, Ltd.—Accounts for 17 months to December 31, 1937, show a loss on trading (after all expenses) of £17,309; after directors' fees of £354, and a loss of £12,500 on special contract, total debit balance is £30,154. After deducting £6,428 brought in, Dr. 23,726 is carried forward. For year 1936 the net profit was £8,304.

Nestle and Anglo-Swiss Holding Company.—Preliminary figures show a net profit for 1937 of Fcs. 23,000,000. A meeting on January 26th approved the reduction of capital from Fcs. 116,000,000 to Fcs. 58,000,000 by repaying Fcs. 100 per share.

Mufulira Copper Mines.—Net profit, subject to taxation, of £240,500 for quarter to December 31, 1937, compared with £324,000 for the previous quarter and £99,500 for the same quarter a year ago. Thus for first six months of financial year, profit is £564,500, against £169,500 for corresponding period of previous year.

Thomas Owen Acquisition.—This company is acquiring controlling interest in Bury Paper Mills. It is proposed to create 100,000 6 per cent. redeemable cumulative 10s. preference shares and 1,000,000 1s. ordinary shares, the former to be offered to debenture holders and the latter to ordinary shareholders.

BANKS

Bank of Canada.—Profit in 1937 \$2,208,596 against \$2,008,124 in 1936, after contingencies and reserves. Total assets \$390,430,216 compared with \$356,985,905.

Bank of Nova Scotia.—Net profit for 1937 \$1,982,140 (an increase of \$55,454), after \$460,481 for bad debts, etc. To pension fund \$180,000, an increase of \$35,000. Written off bank premises \$250,000. Carry forward \$915,456, an increase of \$112,140. Total assets \$299,479,702. Deposits, \$242,417,185, an increase of \$3,905,624.

Dominion Bank.—Profits for 1937, after taxation, \$976,838 against \$951,277 for 1936. After \$75,000 (same) to officers' pension fund, writing \$100,000 (same) off bank premises, paying dividends of 10 per cent. amounting to \$700,000 (same), the sum of \$101,838 (\$76,278) was added to profit and loss carried forward. Deposits \$117,782,000 show an increase of \$5,300,000. Cash securities, etc., \$91,445,340 (72 per cent. of public liabilities). Total assets, \$144,000,000, an increase of \$5,000,000.

Industry and Trade

Uneasiness in the Steel Cartel.—The position of the Continental Steel Cartel has been weakened by the general decline of commodity prices. The Cartel's attempt to prevent major reductions in steel prices was met by a strike of consumers, which weakened the position of those producers who were particularly dependent on the export market. The loss of a great part of the Far Eastern trade intensified this dilemma. Finally, when cheap American products suddenly appeared in the market, several European works, especially in Belgium, France, Czechoslovakia and Poland, departed from the official prices in order to replenish order books. Some Belgian works are said to be contemplating withdrawal from the Cartel. While these differences may not seriously endanger the Cartel, a re-examination may be necessary of its recent price policy and of the possibility of a more comprehensive agreement with American producers. The present intensity of American competition will not, of course, last for ever, but well-informed observers have always been sceptical of successful collaboration with the American steel works, if only because the industry in the United States has no central market organisation. Fresh negotiations between Cartel and American representatives have recently taken place, but no definite result has yet emerged. The Cartel's task of regaining control over the world market is especially difficult during a period of falling consumption. Last week the Cartel, under pressure, permitted certain discretionary price reductions, and it is possible that part of the export trade recently lost to America will be recovered. In certain products, however, especially ship plates, competition is likely to remain keen.

Copper Control and Prices.—The London standard cash price for copper, which had risen from £39 8s. 9d. per ton on the first day of the New Year to £44 3s. 9d. on January 11th, has fallen again below £40 this week. The reaction has led to the demand for a reduction in the copper quota from its present level of 105 per cent. of assessed capacity. But such a reduction would not necessarily solve the problem, for it is not the situation on this side of the Atlantic, but the difficulties in the United States, which have kept the London copper market under pressure. Stocks of copper in the United States have increased from 99,576 short tons on April 30, 1937, to 259,900 short tons on December 31st. Nevertheless, the technical position of the United States copper market is not unsatisfactory, for consumers' stocks have fallen by about 305,000 short tons last year. In spite of high stocks and a small domestic demand in the United States, exports of domestic copper from that country have been small of late and are unlikely to rise in the immediate future. In the absence of United States selling pressure on this side of the Atlantic, the European market is likely to remain in a fairly strong position. Consumers' stocks are small and the total visible supply on December 31st, at 211,850 short tons, was but 6,500 tons larger than on August 31st, and only 19,000 tons higher than a year earlier. This rise is more than justified in view of the increased demand. Even at the higher level, copper stocks outside the United States are equivalent to only two months' consumption, which continues to run on very high levels.

Retail Trade Progress.—The retail trade returns for December, published in the *Board of Trade Journal*, make a better showing than had been expected. Though hesitancy among consumers was evident in the autumn, it now appears that Christmas trade was good. The value of retail sales in December was 8.3 per cent. higher in 1937 than in 1936—a figure appreciably above the annual

average gain of 7.7 per cent. An advance of no less than 10.0 per cent. was recorded in sales of food and perishables, but the turnover of other merchandise was only 6.8 per cent. higher. Developments in recent years are illustrated by the following indices of the Bank of England:—

INDICES OF RETAIL SALES
(Daily average, 1933 = 100)

	Food	Non-food	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1936	120	113	117
1937*	131	119	125
December, 1935	133	160	146
December, 1936	142	167	154
December, 1937	157	178	167

* Provisional

For the sixth successive month the gain, compared with 1936, was greatest (12.3 per cent.) in the Midlands and South Wales. Central and West-End London, on the other hand—which have been lagging behind other districts for some time—reported a decrease of 0.9 per cent. Retail prices are now almost 6 per cent. above the level of a year ago, and in terms of volume the expansion of retail trade is proceeding much more slowly than the value figures suggest.

Short Time in Lancashire.—In the light of the position discussed in a leading article on page 230, significance attaches to the news that during the last two or three months demand in the Lancashire cotton industry has been disappointing, and that some firms have been compelled to stop machinery. A definite move has now been taken to organise short time amongst spinners of medium werts in the American section. In this branch there are over fifty mills, containing about 5,000,000 spindles. At a meeting in Manchester last Monday, it was decided to ask all firms affected if they were prepared to close their mills for the weeks beginning, respectively, on February 7th and on February 21st. A further meeting will be held next Monday. Recession is in evidence also in the ring yarn section, and all the ring mills of the Lancashire Cotton Corporation have been closed this week. In the mills producing yarns from Egyptian cotton there has been a considerable increase in idle machinery.

London:

Jute Developments.—The report that the "Outside" mills in India have approached the Indian Jute Mills' Association with proposals for an agreement on working hours has caused a stir in Dundee. The Associated Indian Mills had curtailed their working hours to 40 per week, with 15 per cent. of their looms sealed, in order to prevent over-production. The erection of new mills in India by native owners, however, became a menace to the Associated Mills, especially as these mills worked 104 hours per week. After many attempts to obtain the adherence of the "outside" mills to the policy of the Associated Mills, the Association terminated the agreement and allowed its members to work independently—though none in fact is working more than 54 hours per week. Prices of cloth and bags consequently declined, though a considerable increase in demand synchronised with the rise in output. There are hopes that the latest move of the "outside" mills will lead to an amicable arrangement in India, for all other producing centres have felt the adverse effect of the fall in the prices of Indian goods. On Tuesday, the price of hessians advanced by 3d.-4d. per 100 yards, and that of heavy goods by 6d.-3s.

More Idle Shipping.—The lull in the expansion of international trade in the last quarter of 1937, revealed by a decline of 25 per cent. in our shipping freight rates index between September and December, is reflected in the Chamber of Shipping's returns of laid-up shipping on January 1st. In contrast to the normal seasonal movement, the volume of idle British merchant tonnage in home ports rose by 42,068 net tons (71,668 tons gross) between October 1st and the beginning of this month to 95,377 net tons. But, as the tonnage on the United Kingdom Register increased by 44,000 gross tons during last quarter of 1937, the decrease in the volume of British merchant vessels in commission was only 28,000 tons gross. Despite the recent deterioration, however, the volume of idle tonnage remains very small. For example, a year ago it still amounted to 192,800 net tons. The freight markets, unfortunately, have shown no improvement in recent weeks. Shipowners were the more relieved by the news that the members of the Greek Co-operation Committee had agreed to continue their support of the minimum freight rates scheme for "tramps."

Rubber Quota Cut Again.—Consumption of rubber has shown a rapid decline, following the recession in the United States, which normally consumes more than half of the world's output. Stocks amounted to 464,480 tons at the end of November, compared with 402,398 tons at the end of June, and the ratio of stocks to the current rate of consumption has tended to increase. On the basis of consumption during the twelve months ended last November, stocks were equivalent to more than five months' demand at the end of that month. In order to prevent further accumulation, the International Rubber Regulation Committee recently decided to reduce export quotas from 90 per cent. of assessed capacity during the second half of 1937 to 70 per cent. during the first quarter of 1938. Despite this drastic cut, however, prices failed to improve. Consequently, the Committee decided this week to reduce export quotas to 60 per cent. for the second quarter of this year. The Committee is evidently anxious to retain control over the position, but in the absence of an early expansion in demand in the United States an improvement in prices seems unlikely, in spite of the sharp turn of the restriction screw.

Increased Coal Production.—The accompanying diagram shows the trend of British coal production quarterly during the past eleven years. The coal industry is one of the few branches of activity in which the pre-depression level has not yet been regained. Despite an increase of 12.4 million tons in production between 1936 and 1937, last year's output, at 241 million tons, was still

BRITISH COAL PRODUCTION
(Quarterly figures)

16.9 million tons below the level of 1929. The decline is due entirely to the fall in exports, for our index of home consumption, published in the Trade Supplement accompanying this issue, actually showed an increase of about 5 per cent. between 1929 and 1937. Last year's increase in production was distributed almost equally between home and foreign consumers, exports and shipments for the use of steamers having risen by 5.9 million tons between 1936 and 1937. The outlook for the industry remains encouraging, for domestic consumption shows no signs of an early decline. While new export business remains small in most districts, partly owing to the unattractive level of prices, inquiries for Welsh coal have increased this week.

The Wheat Subsidy.—The Wheat Act of 1932 guaranteed to the British grower of millable wheat a standard price of 10s. per cwt. on 27 million cwt. of wheat. If home production rose above this figure (now raised to 36 million cwt.) the "deficiency payment" per cwt. would be proportionately reduced. The subsidy is financed by a levy on the flour millers and importers; and the Minister of Agriculture is empowered, in consultation with the Wheat Commission, to issue orders prescribing the "anticipated supply" of home-grown millable wheat each season. Two new Orders were issued by the Minister last week-end. One alters the quota payment on flour. Last April, in consequence of the sharp rise in the price of wheat, the flour quota payment was abolished altogether, only to be re-imposed (at the rate of 6d. per sack of 280 lbs.) in September, when wheat prices had suffered a sharp fall. The present Order, which fixes the quota at 1s. per sack (i.e. 4.8d. per cwt.), comes as a reminder that every fall in the price of wheat places an additional burden on the flour millers and thus on the consumers of bread. The second Order, which also modifies that of last September, reduces the estimates of home supplies from 26 to 25 million cwt. Since production will not exceed the prescribed maximum, the growers will receive the full standard price this season.

Fish Supplies.—An idea of the financial position of Britain's deep-sea fisheries last year may be gleaned from figures given in the latest Monthly Return of Sea Fisheries, published by the Ministry of Agriculture. While home supplies of the principal categories of white fish were

larger in 1937 than in 1936, average prices were lower and the aggregate value of the catch consequently showed a slight decline. This fall in prices occurred at a time when costs were rising; thus production became even

INDUSTRIAL REPORTS

The majority of metal-using industries remain very active, for the pressure for deliveries of iron and steel continues strong. New business, however, remains limited, partly because most consumers have already covered their requirements for some months ahead. And, as supplies are still increasing, it is now possible to reduce arrears and to begin building up stocks. The demand for coal remains at a high level, largely owing to the buoyancy of home demand. Our Cardiff correspondent also reports a substantial increase in export inquiry this week. Output during the week ended January 15th was 5,206,100 tons, against 4,887,500 tons during the corresponding period last year. In contrast, activity in the cotton and wool textile trades has failed to improve, but the possibility that an agreement may at last be reached between the Associated and independent mills in India has led to an advance in quotations for jute goods. The retail trade returns for December are more satisfactory than was generally anticipated. The latest developments in the principal branches of activity, as well as the general business outlook, are discussed in the *Trade Supplement* accompanying this issue.

Coal

Cardiff.—The market for South Wales coal continues very firm, and the volume of trade has slightly increased. Shipments in the week ended January 23rd totalled 404,400 tons, compared with 375,600 tons in the previous week and 356,221 tons in the corresponding week last year. Apparently the position of collieries is being strengthened by the weakness of freight rates in the outward market. There has been an exceptionally heavy crop of inquiries during the past week. In the aggregate they amounted to between 650,000 and 700,000 tons, and include tenders for over 300,000 tons for South American electricity works, 50,000 tons for the Paris Orleans Railways, and 200,000 tons for the London Metropolitan Water Board. They provide for future delivery, and in one or two cases extend to 1939. Collieries are now realising the new approved prices on the greater part of their output, and the

higher prices are being firmly maintained. The market in coke is strong with supplies scarce, while patent fuel is steady at about 26s. per ton f.o.b.

Newcastle-on-Tyne.—Home requirements in the North-East are brisk, but forward export trade is much below expectations. Northumberland steam collieries continue to work regularly, relying mostly on old contracts. Sized coals are particularly firm, but the market in screened coal is quiet and inclined to weaken. The Durham section is firm, supplies of coking and gas coals being limited, whilst bunkers are fairly steady. Patent oven coke is in steady demand in the home trade, but export business is quiet and, owing to Continental competition, prices are easier.

Sheffield.—Domestic demand for virtually all descriptions of coal continues strong, and output goes immediately into consumption. Industrial demand is undiminished, and contracts placed indicate a long period of good trade. Small coal is very firm, and steam-raising fuels are in good request. Demand for house coal has fallen away owing to the milder weather.

The strength of the home market continues to keep prices for export and bunkering fuel above the level which shippers and foreign users are prepared to pay. Shippers report that it is difficult to compete with subsidised foreign coal and with North-East and Scottish coal.

The market in coke is firm. Blast-furnace coke is strong for prompt loading, and inquiry for central heating coke is good. Additional production from new coke ovens is relieving the pressure for supplies.

Prices are unchanged.

Workington.—The increased output is inadequate to satisfy needs, and Ulster and the Free State are short of 3,000 to 4,000 tons per week. Industrial fuel requirements have increased in a few years by 10 per cent. All the smalls go to the coking plants, which are being worked at capacity for the iron smelters.

The domestic market is buoyant. Prices are steady.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that nearly all departments of the iron and steel industry continue to operate at capacity and that there is unrelaxed pressure on the part of consumers to secure delivery. The volume of new business, however, remains somewhat restricted, chiefly because the large consumers of steel have covered their requirements for the first half of the year, and neither they nor the producers are anxious to enter into commitments beyond that period.

Business in pig iron has in the main been confined to small supplementary parcels for prompt delivery. Consumers and producers are in a comfortable position and, whilst the former have covered their requirements for some time ahead, the latter have sold most of their output for several months.

The demand for semi-finished material remains strong, but is being met with greater regularity than at any time during last year. British production of this class of steel has been increased and good quantities are arriving from the Continent.

There is no relaxation in the pressure for delivery of finished steel against existing contracts, but makers' arrears are gradually being reduced. The recent slight improvement in the demand from overseas markets has not been maintained and overseas buyers appear to be following a cautious policy, although in several markets stocks are understood to be low.

Sheffield.—The position has undergone little change this week. There is a steady demand in most sections. Forward buying has eased to some extent, the majority of iron consumers being well covered over the next few months. Deliveries are now becoming more adequate and regular, and some users are able to make a beginning with the building up of reserves. There is but little inquiry for imported iron, home production being now about equal to requirements. Hematite business is easier to transact than for some time so far as mixed numbers are concerned, but there is still a dearth of special qualities for which there is a keen demand. Bar iron business is good, especially in common and marked.

Business in steel continues at a very high level and deliveries of basic and acid billets are still in arrears. Stainless steel sheets are in heavy request, and the pressure for wire rods is unrelieved. Structural steel requirements are still well in advance of makers' ability to supply.

Production of steel ingots and castings in 1937, at 1,722,600 tons, marked a record, and showed an increase of 115,300 tons over 1936.

The iron and steel scrap market remains steady, although, with fairly full supplies of the former coming along, there is less readiness to pay recent prices. Merchants, however, stand solidly against any reduction. Heavy foundry cast iron sells at 75s.-80s. per ton, according to quality, and steel-works heavy cast iron at about 65s. per ton. There is a ready market for heavy basic steel at up to 67s. 6d. per ton, according to quality.

Middlesbrough.—The position on the pig iron market is easier; foundries which had contracted for Continental and Midland iron are well supplied, and producers of Cleveland iron are now in a better position to carry out their contracts. Little new business in foundry iron is passing. There is a steady home trade to outside buyers in East Coast hematite, in addition to the requirements at producers' works. Small sales are reported for export. There are now 36 blast-furnaces in operation in the North-East Coast area, one on foundry pig iron, thirteen on hematite and the remainder on basic, ferro-manganese, etc.

Supplies of home produced semi-manufactured steel have increased, and all finished steel departments are working to capacity. There is a lack of demand for black and galvanised sheets for export, and prices have been reduced by £1 per ton. Black sheets, 24-gauge, are now quoted at £14 10s. per ton, and galvanised sheets, 24-gauge, at £16 15s. per ton.

No agreement has yet been ratified regarding the price at which new contracts for blast-furnace coke will be arranged; meantime, home consumers who have made contracts at the top

price of 42s. per ton will be obliged to carry these out before being able to take advantage of any new arrangement. Heavy steel melting scrap continues in good request, and is in good supply at the official prices.

Cardiff.—In the South Wales iron and steel industry there has been little, if any, abatement in the pressure of the demand for pig iron and ingot steel, but comparatively quiet conditions are ruling in the tinplate section, where the output in the week ended January 15th was only at 62.16 per cent. of capacity. The easiness is due principally to the contraction in the volume of exports. Shipments at Swansea during the week ended January 20th totalled only 5,596 tons, compared with 5,716 tons the previous week, and 10,028 tons a year ago. Prices are unchanged.

Glasgow.—The volume of new business is still somewhat restricted, largely, it is believed, because consumers have already contracted for the bulk of their requirements for some time ahead. Steelmakers still have an enormous amount of work on books and are being pressed for deliveries for all classes of material. There is a strong demand for semis. Fairly regular supplies are now available and many rollers are able to keep plant fully employed and to reduce the heavy arrears which had accumulated on their books while their raw material was not available in sufficient volume.

Workington.—A marked change has come over the North-East Coast hematite pig-iron market. Consumers, having bought from six to twelve months ahead, are not entering into further commitments, and are not taking delivery freely. Makers are puzzled by the cautious attitude of users, but the decline in business causes no anxiety. They are assured of the absorption of virtually their entire output during the rest of the year. Demand for special and semi-special iron has not slackened. Production of the three qualities of low-phosphorus iron is not large, and there is not, in fact, enough to go round. A furnace at Workington has been blown out to be relined. Part of its output will be supplied by a furnace at Ulverston which is to change over shortly from basic to hematite iron. Prices are firm.

The steel trade is quieter. Makers at both Workington and Barrow, however, are in a strong position, the orders on their books ensuring full-time working at the mills for a year to come. Native ore, at 24s. 6d. per ton, f.o.t., is in heavy local request. Production is expanding a little. The Beckermert Mining Company has been granted leave by the Railway and Canal Commission to work 1,400 acres of ground at Beckermert and to let downland where necessary.

Textiles

Cotton (Manchester).—Market conditions have shown practically no change. Business has not been at a standstill, but most buyers have exercised caution in giving out orders. There seems to be very little fear of any marked rise in prices in the near future.

Raw cotton prices show little change. Early advices concerning crop preparations in the United States state that farm work is rather late.

The position of the spinning section continues unsatisfactory. Sales of American yarns have been smaller than in the previous week. An attempt is being made to organise short time amongst spinners of medium welfs. Curtailment of output in the Egyptian branch is now on a considerable scale. Mixed reports have come to hand from manufacturers of piece-goods. Inquiry has been persistent, but there have been loud complaints of numerous offers being quite impracticable. Further buying has taken place for India in regular styles and some producers, chiefly in Blackburn and Preston, have extended their engagements. Only limited support has been met with from the smaller outlets of the Far East. The holidays in Egypt have interfered with trade. Some very fair orders have been booked in printing and finishing styles for South America. Not more than necessary buying has been experienced in home trade fabrics. Production in weaving districts remains irregular.

Total	67.6	51.4	1,384	1,358.6

THE COMMODITY MARKETS

THE majority of the leading markets in primary products, both in this country and in the United States, remained under the cloud of last week's reaction. Consumers have again become cautious and speculative activity has subsided.

The reaction of the market to the drastic cut in rubber export quotas provided a good indication of the psychological background, for Wednesday's price was only one-sixteenth of a penny per lb. higher than a week ago. Non-ferrous metals were marked down in price, but raw cotton is scarcely changed on the week. The markets in wheat and raw sugar remained steady.

In the United States, the weak tendency of prices is reflected in Moody's index of staple commodities which declined from 150.8 to 150.4 during the week ended last Wednesday. A month ago the index stood at 151.6, and a year earlier at 206.1.

Metals

Copper.—The market was again easier, and on Tuesday the standard cash quotation fell below £40 per ton for the first time since January 4th. Although there was a slight recovery on Wednesday, prices at the close

showed a net loss of £2 2s. 6d. on the week. The decline was largely due to influences emanating from the United States, where consumer buying has fallen to small dimensions. The reduction in the United States domestic price from 11 to 10.25 cents per lb. now appears to have been as mistaken as the earlier increase. Although the market position in this country is sound, a major improvement is unlikely until American markets recover. The outlook is further discussed in the preceding Industry and Trade Section.

Tin.—Mainly owing to lack of buying interest in the United States, tin prices fell to £181 per ton at the close on Wednesday. Statistics for the principal producers in December, now becoming available, show that exports in that month were generally in excess of the quotas. The quota arrears carried over into the New Year are thus smaller than had at one time seemed likely; hence exports should not be excessive during the present quarter. But without a resumption of buying in the United States, tin prices here are unlikely to show much recovery.

Lead and Spelter.—In response to general influences both lead and spelter fell by 7s. 6d. per ton. The relatively favourable building plan figures for December had no effect on the former metal. Meanwhile, according to the Bureau of Metal Statistics, American lead stocks rose from 113,573 short tons at the end of November to 129,131 tons a month later. The increase was smaller than had been expected, owing to the fact that deliveries increased from 33,853 to 34,020 short tons. For zinc the Metallgesellschaft reports a decline in world smelter output from 145,191 to 140,638 metric tons between October and November; this was due, however, to the fact that the latter month had one less working day than the former. The daily rate of production was actually about unchanged and remained well in excess of consumption.

The wheat markets have exhibited a notable stability recently. After a further week of rather quiet trading prices show practically no change. Crop news has been scarce, but there are reports of excellent crops of good quality wheat from some of the South American countries; on the other hand, there is a growing shortage of good red wheat. Meanwhile, demand for flour has been rather quiet. As mentioned in a Note in the Industry and Trade Section, the Government levy was raised from 6d. to 1s. per sack of flour as from Sunday last.

After declining last week, the maize market has since been quietly steady. Although some improvement in the Argentine crop has occurred as the result of recent rains, there appears to be little hope of a good Argentine crop this year. Demand for overseas feeding barley was quiet this week, but prices were maintained. English malting barley prices are steady, supplies being generally below the requirements of the trade.

	Jan. 15, 1938	Jan. 22, 1938
Wheat	cwt. 210,664	243,820
Barley	cwt. 177,855	156,049
Oats	cwt. 59,724	40,183

Other Foods

Provisions and Meat.—The official quotations for bacon were unchanged last week-end and the market this week has been firm. Hams were in demand and were slightly higher in price. The principal varieties of butter were all reduced in price, prices being generally steady at the lower level. Colonial makes of cheese were in fair demand, quotations for New Zealand showing a sharp fall; other sorts were a steady market. The seasonal decline in the price of imported eggs was continued, but new-laid were steady on an improved demand. Trade at the Smithfield meat market was rather quiet throughout the week. Quotations for lamb were rather lower, but other sorts of meat were about unchanged in price.

Colonial Produce.—At this week's tea auctions the tone was again satisfactory. Demand for Indian tea on Monday and Wednesday was strong and there was a slight improvement in the price of some grades. At Tuesday's Ceylon auctions there were irregular price movements, but prices were higher in some instances. Meanwhile, the market in raw sugar was steady, with prices about unchanged. Spot demand for coffee was quiet. Accra cocoas, after a steady opening, declined in price.

Fruit.—Business at Covent Garden was rather less active than formerly and prices were lower in some instances. According to *The Fruitgrower*, the demand for apples was not so good and prices were reduced. Pears were in moderate demand. With arrivals from South Africa now beginning, Californians have not done so well and prices showed an easier tendency. South African peaches, nectarines and plums sold steadily at moderate rates. Smaller supplies of hothouse grapes again made good prices, while good supplies of Californian were available at a moderate figure. Oranges advanced in price owing to smaller arrivals, while grapefruit sold rather better. Lemons were steady.

Vegetables.—At Covent Garden, according to *The Fruitgrower's* report,

* Week ended January 13 and 20 respectively.

asparagus was in demand at slightly higher prices, while house-grown beans were short and dear. Mushrooms were easier. Demand for forced rhubarb showed an improvement. Onions and parsnips remained dear, but carrots and turnips did not do quite so well. Greenstuff was lower in price for the week-end trade and has since shown little alteration. Meanwhile, at the various London markets, the potato trade showed few new features and prices were about unaltered.

Miscellaneous Commodities

Oilseeds and Oils.—The market is quiet. Linseed supplies from Argentina are expected to increase soon. The quantity afloat for Europe has increased to 162,400 tons (including 3,800 tons from India), compared with 177,700 tons a year ago. Some time, however, must elapse before deliveries at English ports assume substantial volume. In the circumstances trade in spot and near parcels is restricted, but crushers appear to have bought freely of Plate seed for early shipment. Prices have taken an easier turn, but generally are steady in view of the strong statistical position. Indian linseed has been in better demand, business having been stimulated by a reduction in freight rates. American crushers continue steady buyers of Plate. The first official estimate of the yield in Uruguay is 118,232 tons, of which 70,000 to 80,000 tons will be available for export. Egyptian cottonseed is easier with an improved inquiry for near positions, £5 17s. 6d. per ton having been

accepted for afloat and January loading to Hull.

Vegetable oil prices have an easier trend. Linseed oil has receded slightly in the face of the competition of foreign offers. Demand, however, is restricted and in view of short supplies mills are reserved in their offerings. Cotton oil is slow and ex Hull has been reduced by 25s. per ton. English refined is now offered at £20 10s. per ton. Demand for oilcakes continues satisfactory and prices are firm.

Rubber.—The event of the week was the decision of the Rubber Regulation Committee, discussed in a note in the Industry and Trade Section, to reduce the export quota from 70 per cent. of assessed capacity in the first quarter of 1938 to 60 per cent. in the second. During the last half of 1937 the quota was 90 per cent. The announcement was followed by an immediate spurt of prices; but the gain was subsequently lost on profit-taking, and prices are only fractionally higher on the week. The cut in the quota is unlikely to affect the stock position till after the end of April, unless there is a sharp rise in United States consumption.

features of THE SCOTTISH INDUSTRIAL ESTATE

No. 3 TRANSPORT

SEA. The site of the Scottish Industrial Estate is in itself a guarantee of efficient transport. It is close to the famous Glasgow Docks, from which ships of every description sail to all parts of the world.

AIR. Renfrew Aerodrome is "just across the street" from the Estate—a direct contact for air transport.

RAIL. The Glasgow-Paisley main railway line forms the southern boundary. From this, railway sidings are introduced and led through the Western portion of

the Estate, where are situated the larger manufacturers who require railway siding facilities.

Firms who do not require railway sidings have this great advantage—namely, that the Estate is within the free delivery and collection area of the railway companies.

ROAD. GOOD ROADS GIVE ACCESS TO ALL PARTS OF THE ESTATE.

For full information and particulars of the Estate apply to

COMPANY MEETINGS

MIDLAND BANK LIMITED

REVIEW OF PAST YEAR'S BUSINESS

EFFECT OF AMERICAN CONDITIONS

MANAGED CURRENCY NO LONGER A MAKESHIFT

NO GROUND FOR PESSIMISM IN THE OUTLOOK

FACTORS MAKING FOR WIDER INDUSTRIAL ACTIVITY

MR REGINALD McKENNA'S ADDRESS

The ordinary general meeting of shareholders of the Midland Bank Limited was held, on the 26th instant, at Southern House, Cannon Street, London, E.C.

The Rt. Hon. Reginald McKenna, the chairman, said: My Lords, Ladies and Gentlemen,—The year 1937 opened with a good prospect of sustained business improvement. The industrial outlook was so promising, indeed, that fears were expressed of a coming boom. There were signs of growing speculations on the Stock Exchange and in raw materials; some commodities, particularly metals, had made a disturbing jump. Speculation, however, was speedily checked by a reduction in the quantity of money, and a decline in prices followed. The decline went so far as to cause some anxiety, and, although the quantity of money was later restored, the closing months of the year that had opened buoyantly were marked by a more subdued outlook.

DEPRESSING AMERICAN INFLUENCES

Meanwhile depressing influences had been at work in the United States. In April President Roosevelt declared that some prices, particularly of the non-ferrous metals, were too high. At the same time the gold scare, based largely on unjustified inferences from that statement, gave rise to fears of a restrictive monetary policy and precipitated a general decline in Stock Exchange quotations and primary commodity prices. But what might have been no more than a temporary break developed in the United States into a real business recession. The confidence of industrialists, already disturbed by the policy of the Government, became seriously shaken, and capital construction was arrested. Happily, no similar obstacle to business enterprise is present in Great Britain, and there is no indication here that the drop in Stock Exchange quotations and commodity prices will lead to a comparable decline in general trade.

It is natural that a setback first in prices and then in trade should be taken to confirm the fears of people who are dubious about both the theory and practice of a managed currency. Management has meant cheap and abundant money, and in their view long-continued cheap money must lead to over-expansion of industry and trade, which has its inevitable reaction in a slump. The alleged benefits of cheap money, they tell us, have been exaggerated, while the danger of inflation is always present. Now they see that a fall in prices and a drop in employment have taken place while money is still cheap, and they regard this as definite condemnation of a managed currency.

CURRENCY AND CREDIT CONTROL

We shall all agree that the question of the right method of currency and credit control is of the greatest importance to the whole country. For banks in particular the subject has a special significance. Apart from the fact that their prosperity depends largely upon that of industry and trade, money is the stock in trade of their business, and they have a direct concern in monetary policy, which determines the quantity of money and through this the rates charged for its use.

We have now had a sufficiently long experience of a managed currency to enable us to form an opinion of the general effect of its operation. It must not be overlooked that deliberate currency management, particularly of a currency subject to such world-wide influences as sterling, is not an easy undertaking. A few years ago the very conception of a purely managed currency was something new; in no country were the conditions such as to make it practicable; it is only conceivable as being efficiently practised in a country with banking and credit highly centralised and with a Government

maintaining national credit unimpaired. Much had to be learnt and is being learnt, but, however difficult it may be to put on one side the ideas to which long usage of the gold standard has accustomed us, we find in practice that the system is working smoothly. In the light of our present knowledge a managed currency can no longer be regarded as a mere temporary makeshift while the gold standard is in abeyance.

COMPARISON OF EXPERIENCE 1925-31 AND 1931-37

To judge between the two systems the question we must ask is: How have we fared while our currency has been free to fluctuate without reference to any backing other than the country's credit? What have been the changes in our economic condition? Many causes contribute to such changes, and among these monetary policy is certainly one of the most important. Let me recall what has happened in recent years. It will be remembered that the gold standard, having been suspended on the outbreak of war, was brought into operation again in April 1925. It was maintained for over six years until September 1931, when once again it was suspended. For the first time we then set about controlling our currency without any active effort to restore the gold standard. We started a true experiment in management, and the experiment has now lasted for a period almost precisely as long as the restored gold standard was in operation, that is for rather over six years from September 1931 to the present time. In answering the question, then, how have we fared, we can compare our economic condition during two equal periods, one on gold and the other under management.

I take the Bank of England's stock of gold as the first subject for comparison, not only because it is usually regarded as the test of the strength of our international position, but because under any system of currency control it is an essential part of our equipment as bankers to the world. In April 1925 it stood at £154 millions; by September 1931 it had fallen to £135 millions; but by January 1938 it had risen to £326 millions at the statutory price. At the current price the value of the existing stock would be about £530 millions, quite apart from the gold held in the Exchange Equalisation Account. When we remember that gold is the universally accepted medium of international payments and that we, as a world centre of banking and finance, are liable to be called upon at any time to meet large external liabilities, it is clear that our position has been immensely strengthened by the great increase in our stock during the period of a managed currency. The Cunliffe Committee put our minimum need of gold reserve at £150 millions. The Macmillan Committee increased the requirement, whether in gold or foreign exchange, to a maximum of £225 millions. As events have developed it has become apparent that even these resources would not suffice to provide against capital movements on the scale that we now see. Including the amount held in the Exchange Equalisation Account, our present stock at the current value of gold is about £800 millions and if we set this against the probable total of our foreign liabilities, expanded though they may be, we must conclude that our position is far stronger than in 1931.

FLUCTUATIONS IN NATIONAL DEBT

Next we may note fluctuations in the burden of the national debt. There has been little change in the amount of the debt, but a great change in the interest paid. Excluding the American debt and interest on savings certificates, the national returns show that in the year ending March 1926, the first year of the return to the gold standard,

the charge was over £271 millions. In 1931-32 it had fallen by £13 millions. But in 1936-37 it was no more than £200 millions, a saving of nearly £60 millions a year since the introduction of a managed currency. Cheap and abundant money made possible the conversion of the old 5 per cent. War Loan into a 3½ per cent. stock, while on Treasury bills alone the saving is approximately £17 millions a year. When the demands upon the Exchequer are as heavy as they are to-day, both for national defence and social services, I cannot imagine any Chancellor of the Exchequer closing his eyes to the immense economy in the service of the debt that has been made as a result of monetary policy.

The relative degree of cheapness and abundance of money in the two periods is indicated by a comparison of the Bank rate and the quantity of bank deposits. From 1925 to 1931 the average Bank rate was approximately 4½ per cent. On the abandonment of the gold standard the rate was raised to 6 per cent. as a precautionary measure which was soon found to be unnecessary. It was lowered by stages until at the end of June 1932 it stood at 2 per cent., where it has remained ever since. There were no less than sixteen changes of Bank rate in the first period of six years, all of them consequent upon the obligation imposed on the Bank of England to protect its meagre gold stock. The subsequent stability at 2 per cent. has lasted over five-and-a-half years. No previous period of stability of so long duration can be found in the last hundred years, a fact which suggests that the frequent description of present money rates as abnormal is hardly justified. It is difficult to draw a line between the normal and the abnormal, but a rate which is now in its sixth year and shows no likelihood of variation in the early future might perhaps put in a claim to being no more abnormal than any other. The effect of freedom from the restrictions imposed by the gold standard is no less apparent in the quantity of money than in the rate paid for its use. Bank deposits, which were about £1,800 millions on the average for 1931, rose to nearly £2,300 millions in 1937.

TRADE AND EMPLOYMENT

The increase in purchasing power shown by this growth of deposits has been as beneficial to industry and trade as to the Treasury. If we resume our comparison and consider our condition at the beginning and end of each of the six-year periods, the conclusion is inescapable that, whatever other forces may have been in operation, a managed currency is at least consistent with flourishing trade. Let us look first at weekly wage rates, taking rates in 1924 as the basic figure of 100. In 1925 the corresponding figure was 102; by 1931 it had fallen below 97; but by last year it had risen again above 103. Taking the same year as the basis, profits, according to Sir Josiah Stamp's calculation, stood at 104 in 1925, dropped to 77 in 1931, but rose again to 120 in 1936, the last year for which this index is available. The figures of industrial production repeat the same story in another form—a decline over the first six years and a rise in the second by perhaps fifty per cent. Thus it is evident that, while business was on balance dropping away in the earlier period, it was steadily improving in the later.

Wages and profits are a measure of the incomes of the mass of the population. Production measures the degree in which our industrial capacity is being used; it governs the total of employment and unemployment, the returns for which make perhaps a more striking comparison than any others. Between 1925 and 1931 the total of our insured workers rose by 1,200,000, but the employed fell by 200,000, and the unemployed rose in consequence by 1,400,000. This was how we stood at the end of the first six-year period. In the second the insured workers increased by a further 800,000, but the number of those employed grew by as much as 2,100,000, thus reducing the unemployed by well over a million. What a contrast! a decline in employment of 200,000 in the first period; an increase of 2,100,000 in the second. No figures could be more convincing; no figures could exemplify more clearly the change in our economic condition in the two periods. We have still some way to go before we shall be utilising our full productive capacity, but the experience of the past six years indicates that in currency and credit policy we have not been led astray in using the opportunities for intelligent management which the departure from gold presented. I have not suggested, and I would not for a moment do so, that the pronounced improvement in our position as between the two periods is due solely to the change in the monetary system. But I do suggest that there is nothing in our present condition to indicate that the change has been other than for the better or that it is fraught with unknown perils in the future. (Applause.)

I have said nothing about wholesale price levels, since, as we have seen in the past year, these are subject to such rapid fluctuation that a comparison of index numbers for given dates is not a safe guide to a lasting trend. I may, however, remind you that over the period 1925 to 1931 there was in fact a downward trend which weighed

heavily upon primary producers and exercised a constant dragging effect upon business. Since 1931 some recovery has taken place, with beneficial effects apparent to everyone in the growth of world trade and the expansion of demand for the products of British industry.

BALANCE OF PAYMENTS

The data I have just quoted relate to our internal condition, but the picture would be incomplete without a reference to external trade. Last year, you may remember, I referred to the balance of current international payments and receipts as a test of safety in deciding whether an expansive monetary policy might be pursued further. Unfortunately, we have no certain knowledge of the true balance of payments. There can be no doubt that the requirements of re-armament and the growing volume of consumption due to greater employment necessitate additional purchases of goods from abroad in excess of our sales. The import surplus of merchandise is increasing. The other elements in the account are not so readily estimated, but when we consider the position as a whole it is difficult to believe, notwithstanding the official estimates, that the final balance is against us.

Here again it is helpful to take a longer view than is given by the figures for a single year. The official estimates of the balance of payments for 1932-36 show a net deficit for the five years approaching £50 millions. To this we must add at least an equal amount for last year, making an aggregate of over £100 millions. The figures prepared by Sir Robert Kindersley indicate that we have drawn to some extent upon our long-term capital abroad, a fact which would fit the supposition of a deficiency on current account. But in these six years we have spent on the purchase of gold now held in the Bank of England and the Exchange Equalisation Account an amount approximating £600 millions. If the official estimates be accepted, this expenditure could have been offset only by sales of British securities to foreigners and by an increase in our short-term liabilities. No evidence has been adduced of sales of securities on such a scale or of any vast increase in short-term liabilities, and it appears in consequence very doubtful whether our capital position has moved against us in any degree comparable with the addition to our gold reserves.

NOT LIVING ON CAPITAL

On the evidence of gold and capital movements, the contention that over the past six years we have been living upon capital does not appear to be well founded. The matter is of real importance, as we must not lose sight of the fact that any continued worsening of our current international account would call for a restrictive monetary policy.

I have now covered the ground which has to be surveyed in order to compare our experience in the two periods, characterised by radically different monetary arrangements. Everyone must recognise the dangers and difficulties of free monetary management—difficulties which have been greatly increased by the vast movements of funds from country to country for a variety of motives, economic, financial and political. But the fact that mankind is subject to innumerable physical disorders is no reason why medical research should cease or why the individual should not try to keep fit. The argument applies no less to financial than to bodily health. We have had far greater freedom under present conditions in adapting our policy to rapidly changing circumstances. The instruments with which trade can be stimulated or speculation checked are readily available for use. Already a great deal has been learnt about the principles and practice of a free monetary system, and I do not doubt that as fine a technique will be developed under the new system as we ever had when working on the gold standard. (Applause.)

POSITION AND PROGRESS OF THE BANK

In turning to the affairs of our own bank I deeply regret that my first task should be to record the death of two members of the board, Mr Henry Allan and Mr R. A. Murray. Both of these gentlemen came to us from the Clydesdale Bank, of which Mr Allan had been chairman for fourteen years. We mourn the loss of their personal friendship no less than we miss their collaboration in business. Their places on our board have been filled by two other distinguished directors of the Clydesdale Bank, Sir Harold Yarrow, who was appointed to the chairmanship of the Scottish Bank in succession to Mr Allan, and Sir George Mitchell. I take this opportunity to congratulate the Clydesdale Bank on having called to the chair one who has made his mark in business and is already showing a mastery of his new tasks. (Applause.) Our own board has been strengthened by the appointment of Sir John Anderson, who comes to us recommended by outstanding personal qualities

and a varied experience in administration both at home and abroad. He has a great record, culminating in his recent service to the Empire as Governor of Bengal. I am sure you will give him a cordial welcome. (Applause.)

I pass now to the accounts for the year. The profit and loss account shows that the recovery in earning power was maintained with the continuance of monetary expansion and trade improvement. Allowing for income tax and the new national defence contribution, both of which are provided for before the profit is struck, the 1937 net profit of £2,508,000 records an encouraging increase on the year and a restoration approximately to the pre-slump level. The improvement in the quality of our advances has reduced the amount we have had to reserve against possible bad debts.

ALLOCATION OF PROFIT

The profit for the year, added to the balance brought forward, makes the total sum available £3,055,000, and out of this we have already paid £855,000 by way of interim dividend at the rate of 16 per cent. per annum less income tax. We have allocated £300,000, the same amount as a year ago, to reserve for future contingencies, and £400,000, that is £50,000 more than last year, to reduction of bank premises account. The increased appropriation under this head is called for by the expenditure upon premises resulting from the continued growth of our business. In particular, our head office is nearing completion; one of the new wings is already occupied, and work on the other is proceeding rapidly. After these allocations there remains a sum of £1,500,000, out of which we propose to pay a final dividend again at the rate of sixteen per cent. per annum less income tax. In consequence of the recent increase in our capital this requires the larger sum of £909,000, and we are left with an addition of £44,000 to the carry forward, raising it to £591,000.

In the balance sheet the capital paid up and reserve fund show the effect of the recent new issue. As you know, in October last shareholders were given the right to subscribe for one fully-paid share of £1, at a price of £2, for every £20 of paid-up capital held. This offer entailed the issue of roughly 700,000 shares. Following our practice, we also offered new shares at the same price to members of the staff of the bank and its affiliations, in proportion to status and years of service. On this account about 200,000 shares have been issued. The aggregate addition to our paid-up capital is rather more than £900,000, and, the premium of £1 per share having been carried to the reserve fund, an equal addition is made to that item.

In deciding upon this increase of capital we were influenced by the growth of the volume of our business since the last issue, in 1930. Our deposit liabilities have expanded considerably over the period; last year, for example, they rose by nearly £10 millions, bringing the total to a new balance sheet record of £496 millions. It was felt in consequence that the proportion of shareholders' funds to liabilities had become unduly low. The favourable terms of the issue have given both shareholders and staff a participation in the bank's restored profits.

HIGH STANDARD OF LIQUIDITY

The assets side of the balance sheet shows the maintenance of a high standard of liquidity, the "quick" assets covering over 36 per cent. of deposit liabilities. Cash alone is a million higher. Balances with and cheques on other banks happen to be substantially lower, and money at call and short notice shows a decline of £3 millions, part of a much larger reduction in stock exchange loans, which are included under this heading. I mentioned a year ago that these loans are under constant review to ensure that the banking facilities we give are not being used to finance undue speculation. The change in conditions since last spring has removed any anxiety we might then have felt on this ground; Stock Exchange loans have in fact fallen to an unusually low level. On the other hand, borrowing by the money market has shown an increase, presumably to carry a larger volume of bills. Our own bill portfolio has risen by nearly £9 millions on the year, wholly under the heading of discounts as opposed to Treasury Bills. Although rates in the money market are still very low, they give us at least a modest return on funds which for reasons of liquidity we should otherwise have to retain in the unremunerative form of cash.

GROWTH OF ADVANCES

The largest movement on the balance sheet is to be found in advances, which have risen over the year by nearly £19 millions, a more rapid rate of growth than in 1936. Roughly one-half of the demand has been met out of the addition to deposits, and for the rest we have sold investments, which for want of better employment of our funds had risen to an exceptionally large total.

In commenting upon the movement in advances I may mention that the highest figure was reached in June 1929, when they stood at £224 millions. Hence we are now approaching the maximum, though the proportion of advances to deposits, as in all the banks, is lower than it was. Between the two dates there has been a severe fall and a slow recovery. The lowest point was reached in 1934, since when there has been a total increase of £44 millions. Of this amount a large part has been granted to borrowers not directly engaged in industry or trade, for instance the special fixed loans to local authorities, and advances for financial purposes, especially to facilitate permanent investment in real estate and other assets. But the tide has now turned; the demand for short-term industrial and trade advances has shown an appreciable revival during the past year. Our own internal figures give evidence of this revival most clearly in the engineering trades, some branches of the clothing industries, retail trade, entertainments and public services. It is seen also in building, a fact which indicates that the long-expected slackening in building activity as a whole has not yet become serious. Apart from these groups, the increase is widely spread.

The balance sheets and profit and loss accounts of our affiliated banks indicate the maintenance of a healthy condition. Very shortly it will be possible to say that all the four banks in our group have completed a hundred years of life, and happily all four show undiminished vitality. The Belfast Banking Company attained its hundredth anniversary in 1927, the North of Scotland Bank and ourselves in 1936, and now we offer our congratulations to the Clydesdale Bank upon the celebration of its centenary this year. Our remaining affiliation, the Executor and Trustee Company, continues to broaden its branch representation and to increase the volume of its business.

TRIBUTE TO THE STAFF

In considering the future of the bank I am happy to report that the spirit of good will and loyal service which characterises our staff is fully maintained. We have recently revised the application of our salary scale in order to give greater encouragement to younger members and new entrants into the bank's service. We have, moreover, introduced a new scale for women. These changes illustrate the benefits to be obtained, directly by the staff and indirectly by the shareholders, from the contact long since established and increasingly effective between the management and the elected representatives of the staff. Among other good work undertaken by the Staff Association is one purely disinterested service which I take special pleasure in mentioning. This is the collection from the staff of an annual amount running into several thousands of pounds for the purpose of giving financial support to various projects in distressed areas for relieving the ill-effects of long unemployment. It is a task in which all those participating may be proud to have their share. (Applause.)

I conclude my remarks on the position of the bank by observing that, with Mr Hyde's services as managing director, which must be counted among the bank's most valuable assets not enumerated in the balance sheet—though I regret deeply to say that indisposition has prevented him from being present among us today—and with our present team of general managers, ably supported by assistants who are constantly gaining in knowledge and experience, the prosperity of the bank is assured, as far as it is governed by factors within our control.

THE BUSINESS OUTLOOK

But what of the factors beyond our control? When we look to the future I see no ground for pessimism. We must not, it is true, under-rate the importance of American developments in their effect on other parts of the world. If the recent shrinkage in American business should for any reason persist, then it seems likely that the slow but substantial growth of world trade, which had been gathering strength until the middle of last year, may be definitely arrested. With a decline in total trade it becomes all the more important that we should neglect no opportunity of expanding our exports, whatever other pressure may be put upon our productive capacity. The special re-armament demand is temporary only; the maintenance of our export trade is a permanent necessity. (Hear, hear.)

Against the ill-effects of a possible recession in international trade must be set the fact that we are favoured by far healthier basic conditions than existed prior to the last slump. Our industry is financially and technically stronger. In addition, world markets are not generally overburdened by vast stocks of materials, and producers are better organised to adjust their output to demand. While, therefore, I do not minimise the importance of American influence on us, I think it would be wrong to deduce from recent commodity and Stock Exchange movements that we are necessarily on a lasting

downward curve. The clearing out of a speculative position, although accompanied by a severe fall in prices, is not in the long run bad for trade. Indeed, there are signs already that the depressing effect here of the American closing down of purchases of capital goods has spent its force, and that the underlying factors making for wider industrial activity are again coming into play. The great business of this country will still go on. (Applause.)

The Chairman then moved the adoption of the report and the audited statement of accounts.

This was seconded by Mr W. G. Bradshaw, C.B.E. (deputy-chairman), and carried.

A motion declaring payable a dividend at the rate of 16 per cent. per annum for the half-year to December 31st last was seconded by Mr Stanley Christopherson (deputy-chairman) and carried.

The Right Hon. Reginald McKenna and Mr Alexander Hall Wilson were re-elected as directors.

On the motion of Sir Ernest Bain, K.B.E., seconded by Sir William Nicholson, the auditors, Messrs Whinney, Smith and Whinney, were re-appointed.

VOTE OF THANKS TO DIRECTORS

Colonel G. Leathart Rae, D.S.O., in proposing that the thanks of the meeting be presented to the chairman and board of directors for their careful attention to the interests of the bank, said in part:—There is no doubt that the bonus issue granted a few months ago was a very satisfactory and pleasing thing for the shareholders. I wonder how many shareholders of this bank, especially those who come to these meetings regularly, realise what they owe to Mr McKenna for their instruction in what might be called modern financial methods. A great many years ago, it seems to me now, Mr McKenna used to talk about managed currency before anybody else seemed to know what it was all about.

I am confident that when the financial history of this very difficult time comes to be written shareholders of the Midland Bank will be very proud to find the position that Mr McKenna will occupy in that history. I would like to say something about the directors' work. The best testimonial I can give them is to draw your attention to the figure in the balance sheet. With such a chairman and board of directors I have no doubt that we shareholders of the Midland Bank have no cause whatsoever to be uneasy even in difficult times. (Applause.)

HON. ROWLAND BLADES' REMARKS

This resolution was seconded as follows by the Hon. Rowland R. Blades:—You have all had ample opportunity of judging for yourselves the great benefit we derive from the services of our chairman and the board of directors. It is a remarkable fact, as recorded in the notable speech to which we have just listened, that despite all the difficulties of the time, the net earnings of the bank have been restored practically to their pre-slump level. This very gratifying result must be due in no small degree to the assiduous attention to the interests of the bank which the chairman and all his colleagues on the board bring to their duties. May I say how much my father regrets his inability to be present at a meeting he has so seldom missed. He would have referred to the fact that very shortly Mr McKenna will "come of age" as a director of the bank, for it was in April, 1917, that he joined the board, and it is among the heaviest of the debts we owe to the late Sir Edward Holden that he should have shown such wisdom and foresight in selecting Mr McKenna to succeed him in the chair. (Applause.)

The resolution was then submitted to the meeting and carried.

SIR ALBERT STERN'S TRIBUTE TO STAFF

Lieut.-Colonel Sir Albert G. Stern, K.B.E., C.M.G. (director), in moving "That the thanks of the meeting be presented to the managing director, general managers, branch managers and all other officers of the bank for their continued devotion to their duties," said:—It is most pleasing for me to have the privilege of proposing this resolution. It gives a member of the board the opportunity of expressing appreciation of the tireless energy and devotion of all the officers of the bank. The success of the year's work is due in a large measure to those covered by this vote of thanks. Mr Hyde, our managing director, has steered the bank through another year with conspicuous success. He commands universal admiration, affection and respect. Behind his charm of manner, there subsists a remarkable constellation of qualities, gifts which have enabled him to attain the highest distinction in the field of banking. We offer him our grateful thanks for the valuable services he has rendered. (Hear, hear.)

Our institution, with its 2,000 branches and staff of some 13,000, cannot carry on its work successfully without a highly efficient

administration. In Mr Astbury, Mr Jackson and our other general managers, we have such an organisation, working in complete harmony with our managing director, devoting themselves without stint to their duties at the bank. The head office consists of many other departments whose chiefs render valuable services. The branch managers who deal directly with the public fill very responsible posts and hold the reputation and good name of the bank in their hands. To deal with a continuous stream of clients in search of sound advice, they must have experience, patience, tact and intelligence. To these and all other officers of the bank, we tender our warmest thanks. (Applause.)

Sir Harold Yarrow, Bt., C.B.E. (director), seconded the resolution, which was carried with acclamation.

MR ASTBURY'S RESPONSE

In the absence through indisposition of Mr Frederick Hyde (managing director), Mr H. A. Astbury (joint general manager) said in response:—In the very regrettable, but unavoidable, absence of our esteemed managing director, Mr Hyde, who is recovering from a short illness, I am deeply conscious of the privilege which falls to me to acknowledge the enthusiastic reception which has just been accorded to this vote of thanks, so charmingly submitted by Sir Albert Stern and supported by Sir Harold Yarrow. On behalf of every member of the staff, I wish, with very real sincerity, to thank our directors and shareholders for their generous appreciation of the services we have rendered during the past year. This resolution, with the encouraging remarks of the proposer, will be duly communicated to our staff and I can assure you, ladies and gentlemen, that it will give them the greatest satisfaction and, further, it will stimulate us all to go forward with renewed enthusiasm and fill us with determination to maintain and increase the high esteem in which the Midland Bank is held both at home and abroad.

In conclusion, I would like to take this opportunity to thank our board for allowing the staff to participate in the recent new issue of the bank's capital, which is yet another practical expression of the sympathetic consideration the staff is constantly receiving from our directors, for which we are profoundly grateful. (Applause.)

Mr James Fairbairn proposed and Mr H. O. Serpell seconded a vote of thanks to the chairman for presiding, and this was carried unanimously.

The proceedings then terminated.

F. W. WOOLWORTH AND COMPANY, LIMITED

PROFIT RECORD

The twenty-ninth annual general meeting of this company was held, on the 21st instant, in London.

Mr W. L. Stephenson (chairman) presiding, said: As anticipated a year ago, the prices generally hardened during last year, but the company followed a policy of liberal merchandising and continued to offer a greater variety of intrinsically sound values to its customers, all within the price limit of 6d. The wisdom of this policy is indicated by the result of the year's trading before you.

In a year of considerable difficulty as regards price and supplies, operating on a reduced ratio of profit and an increased ratio of expense, the company participated in the improved trade of the country to such good purpose as to enjoy sales of sufficient magnitude to more than offset the adverse factors just mentioned.

A moderate proportion of the increase in the company's turnover can be ascribed to new business, since there was a certain amount of expansion during the year. Thirty-four new branches were opened, four old stores were completely replaced by new and improved buildings on new sites, and forty of the old stores underwent alterations to provide extension of selling space. The year closed with 711 stores in operation.

The major part of the increase in turnover arose out of the improvement in the general trade conditions in the country, and it is particularly pleasing to note that the industrial centres showed the most marked recovery.

The profit shown is a new high record for the company, amounting to £6,490,013 13s. 4d., after charging all expenses and depreciation, but before tax deduction. This is an increase over the previous year of £657,571 7s. 2d.

The final dividend recommended is to pay 1s. 9d. per share, less income tax, on 30,000,000 ordinary shares of 5s. each, which will take £1,968,750, plus a cash bonus of 6d. per share, less income tax, which requires £562,500. This, together with the interim of 9d. per share already paid, gives 3s. per ordinary share, less tax. These recommendations, if accepted by you, will require a total sum of £2,731,250, leaving a balance to carry forward of £4,500,925 which is an increase of £992,947.

The report and accounts were unanimously adopted.

WESTMINSTER BANK LIMITED

FUNDAMENTAL STRENGTH OF BRITISH INDUSTRY

STEADY PROGRESS AND THEN A SLIGHT SETBACK

UNWARRANTED FEARS FOR THE FUTURE

BANK'S LARGEST PROFIT SINCE 1930

A 2% BONUS FOR SHAREHOLDERS

HON. RUPERT E. BECKETT'S REVIEW OF PAST YEAR'S ACTIVITIES

The annual general meeting of the Westminster Bank, Limited, was held, on the 26th instant, at the Head Office of the Bank, 41 Lothbury, London, E.C.2.

The Hon. Rupert E. Beckett (chairman of the bank) presided.

The notice convening the meeting and the auditors' report having been read by the secretary, the directors' report, the balance sheet and the profit and loss account were taken as read.

The Chairman said:—My lords, ladies and gentlemen, I have to record that since we last met in general meeting the bank has lost the services as a director of Sir Gervase Beckett, who died in August last. To me his passing is naturally of personal significance: to the bank he brought the tradition and experience gained during many years of private banking, and as president of the Westminster Bank Art Club he was able to further amongst the members the enthusiasm they shared with him for art and all that it implies.

In April last Lord Dudley joined the board. His position and influence in the neighbourhood of Birmingham, where he is this year the President of the Chamber of Commerce, should prove a great help to the Westminster Bank, which, compared with other banks, was rather a late-comer to that part of the country. Two months later Lord Runciman rejoined us on the conclusion of his tenure of office as President of the Board of Trade. We welcome him back to the bank, of which he had previously been a director from 1924 until 1931, when he entered the National Government.

BALANCE SHEET

The balance sheet figures for the past year are before you, and you will see that at December 31st last the current, deposit and other accounts showed an increase of close upon £1 million. This is not a very striking figure, but the averages throughout the year are more illuminating. During the past year the weekly average deposits of the eleven clearing banks have been £71 millions in excess of those of 1936, which in turn exceeded those of 1935 by some £140 millions. Of the £71 millions increase in 1937, the Westminster Bank average accounted for £22 millions. Inasmuch as the average figures, and not those on the balance sheet date, form the basis of the bank's earning power, I think we may regard with satisfaction the course of the year's trading. For some years past I have noted the fact that the broadening of the credit base and consequent increase in bank deposits was not accompanied by a corresponding demand for advances. It was therefore feasible to employ our augmented funds only for the purchase of investments or in the short-term market. The past year, however, has seen a substantial alteration in this respect, and our advances to customers and other accounts show a welcome increase during the year of something in excess of £11 millions. Almost the whole of this has been provided out of our short-term money, and the higher rate of interest thereby obtained has naturally improved the bank's earning capacity. In the other items of the balance sheet there has been little change to record—certainly nothing to which I need direct your attention.

Some of you may have noticed the rebuilding on the site at the junction of Old Broad Street and Threadneedle Street, now nearing completion. This will house the headquarters of our trustee and executor department, which organisation has for some years past badly needed increased accommodation.

PROFIT AND LOSS ACCOUNT

The profit for the year, at £1,750,589, is, you will be pleased to hear, the best declaration since 1930. After payment of the usual dividends, we have made an allocation to bank premises account of £200,000, as in 1936. Nothing was provided for this purpose in 1935, but in each of the three preceding years £100,000 was so

appropriated. The cumulative net effect of our transfers to this account over a period of years is to enable us to carry this item in our balance sheet at a figure little in excess of £5 millions.

You will notice that our allocation to officers' pension fund is £300,000—an increase of £100,000 over the corresponding figure for last year. This increase has been rendered desirable by facts brought out in the course of an actuarial revaluation of the fund. The report which accompanies it directs attention to the increase in the numbers of the staff; the lower average age of normal retirement; the higher average of the salaries emerging for pension purposes; the increased longevity of pensioners; and the difficulty of earning actuarially presumed rates of interest upon accumulating funds. These factors are common to all pension funds, and shareholders must look for the recurrence of appropriations for the increased amount for some long time to come.

With these results before them the directors have felt justified, without serious depletion of the carry-forward figure, in declaring on the partly-paid shares a bonus of 2 per cent. I wish to emphasise that this is a bonus, as its name implies, and not a restoration of the dividend to the 20 per cent. which was paid on these shares for some years before 1931.

OUR ASSOCIATED INSTITUTIONS

The results of the Ulster Bank appear on a separate print, and it is gratifying to be able to report that the bank continues its steady progress with profits last year slightly above those for 1936. Westminster Foreign Bank continues to trade satisfactorily and at a profit. Naturally, it still maintains a position of more than normal liquidity.

THE ECONOMIC SITUATION

It is more than usually difficult at the present time to define the exact stage in economic progress which we have reached in this country, and to attempt to forecast the future course of events would be futile, in view of the many imponderable factors, and of the rapidity with which changes come about in the modern world. Nevertheless, a study of the available data relating to the many spheres of activity does yield sufficient information on which to base a reasoned judgment. The history of 1937 was one of continued progress during the greater part of the year, succeeded by a slight but perceptible pause in the closing months. The peak of our progress was reached in the early autumn, up to which time almost all the generally accepted business indices had a favourable trend, reaching the highest points achieved since the depression, and in some cases the highest ever recorded.

Industrial production, as measured by the Board of Trade, continued to increase, being on the average 8 per cent. greater than in 1936, and it was particularly satisfactory that almost every branch of industry included in the calculation of this index shared in the expansion. Our overseas trade moved up steadily each month as compared with the corresponding month of the previous year, the year's imports showing a rise in value of 21 per cent. and exports one of 18 per cent. The relative expansion of the two sides of our overseas trade has, however, been obscured by the rise of prices, the import figures having been more strongly influenced in this respect than the export. It is an interesting point, not commonly appreciated, that whilst our imports increased in volume by 6 per cent. in the first nine months of last year (the twelve months' figures not yet being available), our exports were as much as 12 per cent. larger.

IMPROVED EMPLOYMENT POSITION

The employment situation continued to improve over most of the year, the decline in the number of unemployed from January to September exceeding 280,000, whilst every month until August saw

a fresh record created in the total number of persons in employment. The figures for the last three months showed a reversal of this favourable movement, but nevertheless, the final statistics for the year, with a total of 11,437,000 in employment, remained some 200,000 above the comparable figure for 1936. Railway traffics, which benefited only in the last three months by the 5 per cent. increase in passenger fares and freight rates, registered an advance in gross receipts for the year of £7 millions, or 4½ per cent. Retail trade, though showing some regional variation, was on the whole substantially larger, and industrial profits had a rising trend.

The experiences of the main industries of the country were varied. In agriculture, weather conditions were not very favourable, and nearly all crops were smaller than in 1936. Farmers were compensated to some extent, however, by the improved prices realised for their produce. The operation of the various marketing schemes was an important factor in helping to stabilise prices, but farmers were faced with the problem of meeting increased costs of both labour and feeding-stuffs, the latter having risen by some 30 per cent. in a period of eighteen months. There was a slight reduction, last year, in the number of men regularly employed on farms.

PROGRESS OF HEAVY INDUSTRY

It was in the heavy industries, and especially iron and steel, that progress achieved its greatest momentum. The total of pig-iron production, at 8½ million tons, was a record for post-war years, but it was nevertheless insufficient to meet in full the requirements of the steel industry, and purchases of pig-iron and scrap from abroad were necessary to make good the deficiency. The output of steel, at nearly 13 million tons, was the largest ever recorded, and showed an advance over the previous year of more than 1 million tons, about a third of which was absorbed in increased exports and the remainder used in the home market. The return of prosperity to the iron and steel industry has enabled it to overtake arrears of maintenance, to effect improvements, and to make large extensions.

The coal industry also continued its forward movement, the output rising by 5½ per cent., from 228½ million tons in 1936 to a total estimated at 241½ million tons in 1937. This improvement in output follows one of 3 per cent. in the previous year, and the continued expansion is remarkable in view of the extraordinary economies in the use of coal that have been effected by all classes of consumers. Exports of coal rose by 6 million tons last year, to 40½ million tons, the highest figure attained since 1931. The engineering trade was very busy, many sections working uninterruptedly at high pressure, and the reserve of work carried over into the new year ensured a further period of good activity.

SHIPBUILDING

Shipbuilding benefited considerably by the receipt of a large volume of mercantile orders early in the year, but later high costs tended to slow down the placing of contracts. Good orders in respect of the naval programme were given out during the year, and made a welcome addition to the work in hand, but still only two-thirds of the industry's total available berths were occupied at the close of the year. With the continuance of internal co-operation in the shipping industry, owners experienced a satisfactory year. Freight markets varied in activity month by month, but rates averaged about 50 per cent. higher than in 1936.

Both the cotton and the wool textile industries opened the year encouragingly, but did not maintain their early promise. Raw cotton prices had a rising trend in the opening months, and sales were then satisfactory, but reaction set in and business became dull and difficult, the export trade being seriously affected by the disturbed international situation. Further steps in the internal reorganisation of the industry were taken during the year. The wool industry was exceptionally busy for a time, with values rising rapidly, but buyers operated much more cautiously in the second half of the year, and business was more subdued.

THE RECENT RECESSION IN BUSINESS ACTIVITY

The recession in business activity in the closing months of last year, in conjunction with a similar but more severe experience in the United States, has occasioned fears that the process of recovery which had gone on without serious interruption in this country for almost exactly five years is coming to an end. On every hand the question is heard "Are we heading for a slump?" The doubts that give rise to this question have already caused some impairment of that confidence which is the essence of business prosperity. It is important, therefore, in order to dispel unwarranted fears, that it

should receive an answer, based on an examination of the available facts.

A feeling of uncertainty received its first apparent justification in the autumn in the publication of unemployment returns whose sharp increase came as a severe shock even to those who had foreseen some deterioration. The existence of a setback to our previously unchecked progress was confirmed by other statistical data which, after making due allowance for seasonal influences, were almost uniformly less favourable in the closing months of the year. That our recovery could continue indefinitely, without intermission, was not to be expected, and the movement recently perceptible is at present only a slowing-down of activity, liable to attract exaggerated attention when it succeeds a long period of unbroken progress.

BRITAIN'S STEADY RECOVERY

The steadiness of our recovery from the depression suggests that it is of a permanent and long-term character, much more likely to endure because of its gradual growth. The freeing of the pound sterling, and the adoption of a moderate tariff policy, have been major factors in our rehabilitation, but the growth of our trade has been mainly on natural lines, and the success achieved so far has been without recourse to extreme expedients such as those being tried out in other countries.

In no field of activity is sentiment more quickly translated into terms of prices than in the stock markets, and unfortunately movements of stocks and shares receive an altogether undue prominence in spheres where they have only a limited relevance. It is not always realised that stock and share prices indicate the market's assessment not of current or future business activity but of future profits, which, particularly at a time of rising costs, may be a very different thing. For this reason, a stock exchange decline is frequently given an unnecessarily pessimistic interpretation, and causes a restriction of enterprise in the commercial and industrial spheres.

CAUSE OF DECLINE IN CONFIDENCE

The decline of confidence, which made its first appearance in this country in the stock and commodity markets, owed its origin in a large measure to a similar development in the United States. Tariff systems have attained a very high degree of scientific development, but none has yet been evolved which is capable of preventing the infiltration of pessimism from one country to another. And sentiment throughout the mercantile world is affected more by developments in the United States than by those in any other country. It is obvious how tremendous an influence must be wielded by a nation of nearly 140 million people, which is at once the world's largest consumer of many commodities and the largest producer of many others. This is strikingly illustrated by the decline of commodity prices in recent months, which has been due largely, and in some cases almost entirely, to a cessation of American buying.

In America, business activity has suffered a much sharper and more severe recession than that seen in this country, and although there are certain superficial similarities in our situations, there are fundamental differences of great importance. Many factors have played their part in bringing about the change in American sentiment, from the optimism prevailing in the early part of the year to the apprehension that has so seriously restricted business enterprise in the past few months. A troubled political atmosphere, in which the administration and the legislature have not always appeared to be in complete harmony; an apparent indecision in Government policy; antagonism between the Government and "big business"; serious labour disturbances; an unbalanced budget, despite heavy taxation, which was not universally regarded as satisfying the canon of equity: all these were factors tending to undermine confidence.

Even for a country accustomed to sharp fluctuations, the present recession has come upon America with exceptional suddenness, for industrial output and trade activity had been greater in the first half of last year than in any similar period since 1929. The recovery, however, was over-dependent upon the stimulation afforded by Government expenditure on public works. When, through a change of policy, directing such expenditure towards the consumption goods industries, this stimulant to the capital goods industries was withdrawn, there ensued a sharp decline of activity. This decline was accentuated when Government retrenchment was followed by the abandonment by many business concerns of programmes for expansion. A collapse of the commodity markets, following on abnormal activity and inordinate rises in the spring, was another symptom of the complete change of sentiment.

MORE ENCOURAGING NEWS FROM AMERICA

Fortunately, recent news from the United States has been more encouraging, and the view is gaining ground that the next few months will see a resumption there of the recovery movement. More

important than any other single factor will be the relations between the American Government and business interests, and it is upon the resolving of their differences, and the growth of a spirit of co-operation between them, that the future prospects, not only of America, but of the whole world, largely depend.

It is natural to find the influence of economic variations in America most strongly marked in our own country, and in the sensitive security and commodity markets. It should be remarked, however, that although price movements in London and New York tend to run on parallel lines, the movement in London is usually within narrower limits. According to precedent, therefore, the present reaction should have no more than a partial reflection in our markets. Last year, except in the first two months, security prices in the two countries rose and fell with almost complete sympathy month by month, finishing the year with a steep decline from August onwards. Wholesale prices rose in the spring, moved within narrow limits in the summer, and fell away in the autumn. British markets, however, showed the greater resistance, wholesale prices finishing the year about 6 per cent. up, compared with a 4 per cent. fall in American prices, and prices of ordinary shares declining by about 15 per cent. here, as against about 35 per cent. in America.

INHERENT STRENGTH OF BRITISH ECONOMY

If American adverse influence is so powerful, much depends on the measure of resistance that can be opposed to it, and this in turn depends largely on the inherent strength of the established economy of this country. In this respect we are fortunately well placed. With each year of growth, recovery has taken a firmer hold, sending its roots deeper and wider. The improvement achieved during the past five years in every sphere of activity has been truly remarkable. The best measure of this is the official index of industrial production, which, based on 1929, has risen from an average of 83.5 in 1932 to one of 123.5 for the first three quarters of 1937. In other words, the volume of production has increased in this short period by nearly 50 per cent.; equally striking is the improvement of nearly 25 per cent. over the previous peak of 1929. This expanded production has naturally called for a larger army of workers, and industry has absorbed two million additional workpeople since 1932, the total having risen from an average of 9.4 millions in that year to one of 11.4 millions for the first nine months of 1937.

Our overseas trade, though still greatly handicapped on the export side by world-wide restrictions, has been on the up grade, and is now about 43 per cent. higher in value and about 17 cent. larger in volume than in 1932. Numerous other statistical data could be adduced in illustration of the very substantial progress made over these years. Only in the closing months of last year did signs of halting become apparent.

THE RE-ARMAMENT PROGRAMME

Fundamentally, British industry is still in robust strength, which has been attained largely without adventitious aids. Re-armament comes under the last heading, and it has been urged in some quarters that our present trade prosperity is due to this factor. This argument is not tenable, however, for two reasons: first, that a good measure of prosperity was established before the re-armament programme was embarked upon; and second, that the increased expenditure, though large in actual amount, represents but a fraction of the total output of industry. In the first eighteen months of re-armament expenditure, industrial production expanded at an average rate of 9 per cent. per annum, compared with an average rate of expansion in the previous three years of 7 per cent.

According to official statements, the supplementary expenditure on defence is at the rate of some £150 millions per annum. Although the work afforded by this expenditure forms a welcome addition to that already in hand, it is small when viewed in relation to the gross output of British industry, which, on the basis of official figures, amounted last year to between £3,500 millions and £4,000 millions. From these figures it would appear that for every twenty-four persons already in employment, the re-armament programme has so far provided work for an extra one.

Employment arising from re-armament is likely to continue, possibly on an increasing scale, for some long time ahead, and the big developments undertaken by the railways and other large employers of labour, in addition to their normal programmes, will assist in the same direction. Another factor making for stability is the relatively large purchasing power of the wage-earning section of the community. The marked rise in recent years in the numbers employed in industry has meant a considerably enhanced aggregate buying capacity, which remains largely intact in spite of the recent diminution in these numbers.

IMPROVED STANDARD OF LIVING

Moreover, participation in the enhanced prosperity of the past few years has not been confined to the wage-earning classes; the standard of living of the community as a whole has steadily improved. A very broad indication of this development is afforded in the returns of our overseas trade, which show that imports of food, drink, and tobacco rose from £355 millions in 1935 to £382 millions in 1936, and to £432 millions last year. To some extent, the increase in value of these imports has been due to higher prices, but, as I have already indicated, there has been an appreciable expansion in volume also. Imports of raw materials and of manufactured articles have undergone a still greater relative expansion, a considerable part of which must be the outcome of an enhanced standard of living, for the man with more money to spend does not limit his extra purchases to foodstuffs but uses his margin for additional expenditures in other spheres.

Another factor which has contributed in an important degree to the enlargement of our imports has been the demand arising out of armament needs. In the ordinary course, imports of raw materials are followed by exports of a proportion of the manufactured goods into which they are fashioned, thus helping to rectify the balance between the two sides of our trade. But imports for armament purposes do not give rise to such compensating exports.

A WELCOME DEVELOPMENT

From a social point of view, the improvement in the common welfare of the people is a development to be welcomed, and from the viewpoint of national safety re-armament is a necessity which we have been forced to adopt. Yet both, desirable or unavoidable in themselves, have far-reaching implications in the economic sphere. Our imports last year cost £181 millions more than in 1936, and the increase of £95 millions in our exports, satisfactory though it was, was sufficient to pay for little more than a half of the additional imports. The gap between imports and exports has thus widened by £86 millions. In 1936, when our receipts from "invisible" exports had been taken into account, our trade balance was estimated by the Board of Trade to be £19 millions on the wrong side. For last year, we have to find a further £86 millions, and although shipping, banking and insurance receipts, and income from overseas investments, will undoubtedly show improvement, the final figure will be on the debit side again and substantially higher than that for 1936.

In view of the obstacles encountered in many foreign countries, with two leading nations committed to closed economies, from which all but the most essential imports are rigidly excluded, and with armed conflicts proceeding in Europe and Asia, it is remarkable that so much progress, or indeed any progress at all, has been made by our export trade. Nevertheless, failure to pay for our imports for two years in succession emphasises anew that intensified efforts must be put forth still further to expand our overseas markets.

For many years now, the proportion of our total production absorbed by exports has been declining. To some extent, this is an inevitable process in the country which was first in the manufacturing field and has since taught the world to produce for itself, but it is one whose pace can and must be minimised. Our home market to-day is flourishing, but if it is prospering, even to a limited extent, at the expense of export trade, this is a price we can ill afford to pay. Our essential dependence upon imports for so large a part of our food and raw materials makes the further development of export trade an inescapable obligation, and the combined energies of government, manufacturer, merchant, and banker must be devoted to this end. British industry has been enabled through the years of prosperity to readjust its organisation and enhance its efficiency, but to widen its scope it will have to look increasingly abroad.

FAVOURABLE EXPORT TRADE OUTLOOK

The immediate outlook for export trade continues to be favourable within the limits still imposed by outside influences. Prices of primary products, though finishing the year below the highest points touched, were on the average substantially above those ruling in 1936. Primary producing countries have thus shared in the further recovery of the past year, and with their enhanced incomes, the prospects favour an expanding demand for manufactured goods, in the satisfaction of which we should participate.

In recent years, economic progress has everywhere been overshadowed by political developments, as has been forcibly brought home to us on more than one occasion during the past twelve months. We owe a debt of gratitude to those in charge of our destinies, who so far have preserved this country from active embroilment in the lamentable events that we see around us. It is the heartfelt wish of

every one of us that they may meet with continued success in the hard task to which they are devoting their energies.

I have put forward a plea for sober judgment of our economic position, and have endeavoured to show that to take alarm at this juncture is harmful and unwarranted. Our pace has slackened, but our reserve of strength and our stamina should sustain us through the present vicissitudes and enable us fully to play our part whatever the future may have in store for us. (Applause.)

The Chairman then moved the adoption of the report and accounts, and Sir Malcolm Hogg, deputy chairman, seconded the resolution, which was carried.

After brief comments by shareholders, the retiring directors were then re-elected and the auditors were reappointed for the year 1938. To a vote of thanks to the staff for their admirable work during the past year the chief general manager, Mr Charles Liddbury, responded, and a vote of thanks to the chairman terminated the proceedings.

GENERAL CONSOLIDATED INVESTMENT TRUST, LIMITED

GROUND FOR OPTIMISM

The forty-second ordinary general meeting of the General Consolidated Investment Trust, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London.

Mr R. B. H. Otley, the chairman, who presided, said that the year 1937 had been a perplexing one. Indeed, they were entitled, he thought, to congratulate themselves upon the fact that the company's earnings had in each of the past three years shown a steady increase over the previous one. While, however, their revenue position was excellent, they had suffered to some extent in the matter of the valuation of their holdings, which, instead of showing the substantial appreciation of a year ago, now showed a depreciation of 4.82 per cent. That was more than covered by the reserve and revenue account balances, but prudence demanded that they must conserve their resources, and that was why, although 11½ per cent. on the ordinary stock had been earned, the board were restricting the distribution of a final dividend to 5 per cent., making, with the interim dividend already paid, 7 per cent. for the year.

In tracing what seemed to him to have been the origin of the malaise that had so long affected the London markets, he would say that to attribute the responsibility for market fluctuations to City sentiment alone was inequitable. Markets were greatly influenced by forces outside the Stock Exchange, which, however, remained the only place where such changes of sentiment were registered and the City's reaction to such changes of sentiment were "infectious" inasmuch as they spread to markets essentially unaffected by the issue at stake, and "far-reaching" by reason of the unduly large amount of stock held at certain times for speculative and not investment purposes. With the experiences of the slump of 1931, City sentiment was on the watch for "a cloud as big as a man's hand." It was not to be observed in British industry, but the boiling over of commodity prices, Franklin Roosevelt's pronouncement that the price of durables was too high, and, finally, what was referred to as the gold scare, had created the conditions precedent to a first-class market depression.

He, however, would venture to express the belief that many observers laid too great a stress upon an anticipated all-round recession in British industries, but in that relation he had to confess that his views were the views of an optimist who had great confidence in British industry as a whole. The board had to follow the fortunes of a large number of companies and could not help being struck not only by the favourable results shown by British industry in the past year's working, but by the encouraging prospects for 1938. Were they not entitled to point to the figures of the country's export trade, which had amounted to no less than £596,761,000, as against £501,374,000 in 1936 and £481,137,000 in 1935, and that at a time when almost all the civilised world would appear to be at sixes and sevens and international commerce was still fettered by currency restrictions, tariffs, quotas, etc. He believed that examples could be multiplied to show that the calls upon production were by no means at saturation point, and that there did not appear to be any reason to contemplate any violent downward fluctuations in the industrial barometer in the United Kingdom at the present time, in regard to volume, at any rate. A trade agreement with the United States, if carried into effect with the goodwill of the Dominions and Colonies, must have a powerful effect for good. On the whole, he was inclined, as he had said, to take the optimistic view.

So far as their own company's prospects were concerned, they had made a good beginning to the current year, and signs were not wanting that their revenue might be at least as satisfactory in 1938 as in 1937.

The report and accounts were unanimously adopted.

THE NATIONAL BANK LIMITED

A SATISFACTORY HALF-YEAR

The annual general meeting of the National Bank, Limited, was held at 13 Old Broad Street, London, E.C., on the 27th instant.

Mr M. J. Cooke, the chairman, said that it was proposed to pay the usual dividend at the rate of 12 per cent. per annum, less income tax, to transfer £10,000 to reserve, which would then stand at £1,140,000, to reduce bank premises by a further £10,000 and to carry forward £38,813 8s. Full provision had been made for all bad and doubtful debts.

The foregoing figures gave evidence of the sound and liquid position of the bank, but remarked that with the very low rates prevailing in the money market it was not easy to employ funds as profitably as could be wished, and he was confident that the shareholders would approve of the continuance of the bank's prudent policy of liquidity.

ENCOURAGING FEATURES

Among the most encouraging features of the moment were the conversations between Great Britain and Eire and those between Great Britain and the U.S.A. Though it was premature to forecast what might be the ultimate results, the indications were more favourable towards trade agreements than they had been for some time, and all should wish for their success. A better understanding between nations would always lead to more favourable trade relations. At the previous annual meeting the outlook for 1937 had been considered promising, although details of the picture might be changing. Industrial activity was still well above the 1930 level and, though some trades, in particular building, had declined during 1937, others, such as coal, steel, rayon and electricity had very definitely improved. The five years' re-armament programme was having a good effect upon trade in general. Wholesale prices were well above last year's level.

The changes on the Stock Exchange in the last few months were the result of external influences. The difficulties in America with regard to the New Deal had been reflected in the highly nervous state of the New York Stock Exchange which had immediate repercussions in London. The tripartite agreement of September, 1936, had not been so efficacious as was hoped in sustaining the franc. The wars raging in Spain and China had played their part in disturbing the markets and upsetting normal conditions of trade. Though non-intervention had prevented the spread of the Spanish conflict to other countries, war was always a disorganising influence on trade. The very fact that such influences had so markedly affected internal conditions brought home the truth that the different countries of the world were interdependent in their economic interests.

TRADE RESTRICTIONS

The presence of restrictions on international trade, such as quotas, exchange controls, high tariffs and the like, inevitably hindered the free movement of goods and trading nations, both great or small, only prospered by the sale of goods and services. Intense economic nationalism which rejected the advantages of exchange, also adversely affected international trade. History showed that technical inventions and consequent increases in productivity provided necessities at least to increasing populations through more extended world trade. Trade pacts, wherever completed, had always had good results. Great attention should therefore be given to the balance of trade and to the balance of payments. It was natural that the prevailing note should be one of caution, but there was no justification for anticipating a slump, and the necessary confidence as regards the future should arise from the observation of current trends in the country.

With regard to Ireland, with which the bank was so vitally associated, the chairman mentioned that the Commission of Inquiry into Currency, Banking, Credit, etc., of which he was a member, had the assistance of several well-known economists both from Eire and outside. It would complete its Report within a very short period. As the terms of reference indicated, the Report would be based on a comprehensive survey of the economic background of Eire, and on that account would command great interest and attention. The improvement in trade and industrial conditions in Northern Ireland which had been reported in 1936 had been maintained in 1937. The unemployment problem still necessitated attention.

In concluding his remarks, the chairman expressed the appreciation of the board of the excellent work done by the staff, who, as usual, had given willing and valuable services to the bank, and had carried out their duties in a most efficient manner.

The report and statement of accounts were unanimously adopted and the retiring directors and auditors were re-elected.

NATIONAL PROVINCIAL BANK, LIMITED

MARKED INCREASE IN TURNOVER

DIVIDEND MAINTAINED AT 15 PER CENT.

GREAT BRITAIN'S HIGH ECONOMIC PRESTIGE

CONFIDENCE IN THE OUTLOOK

URGENT NEED FOR LARGER FOREIGN TRADE

MR COLIN F. CAMPBELL'S SURVEY

The annual general meeting of the shareholders of the National Provincial Bank Limited was held at the head office, 15 Bishopsgate, London, E.C., on Thursday, the 27th day of January, 1938, for the purpose of receiving the report and balance sheet, electing directors and auditors and transacting other ordinary business.

Mr Colin F. Campbell (the chairman) presided.

Mr R. H. Cutting (the secretary) read the notice convening the meeting and the report of the auditors.

The Chairman said:—My Lords, Ladies and Gentlemen,—The report and accounts have already been in your hands for some days so I will with your permission take them as read. Since we last met a year ago only one change has taken place on the board which requires the confirmation of the shareholders, and this is the appointment of Viscount Wolmer, P.C., M.P. Lord Wolmer has considerable business experience and I have no doubt that you will heartily approve of this appointment.

Two other changes which affect our procedure have, however, taken place. Mr Alexander Johnston expressed a wish in February to be relieved of the special duties which fall on a deputy chairman, and Sir Alfred Lewis has expressed a similar wish. I am glad to say these gentlemen retain their seats on the board, and I would like to take this opportunity of thanking them for the valuable and consistent support they always gave to me as chairman and to assure them that they have well earned the further degree of leisure which has now fallen to them.

To fill the vacancies which have thus arisen, the board has elected Captain Eric Smith and the Hon. Jasper Ridley, both of whom have a thorough knowledge of banking affairs and procedure.

Before passing to the general affairs of the bank, I should like to mention the honour that has been conferred on two members of the board since we met a year ago. Mr Denison-Pender received a peerage in July, so that we now know him as Lord Pender of Porthcurnow, and Sir Percival Perry received a peerage this month in the New Year honours. We warmly congratulate our two colleagues on the distinction which has been conferred upon them.

PROPOSED SPLITTING OF SHARES

After this meeting is over, we have called an extraordinary general meeting for the purpose of passing certain resolutions for splitting the shares of the bank. Possibly some shareholders may not wish or have time to stay for this further meeting; so I will refer to the matter now.

A sub-division of the shares of the bank took place in August, 1919, as it was thought at that time that they were rather unwieldy and consequently not a convenient denomination for investors. Since that time sentiment in the City has moved still further in the direction of shares of smaller values, so that the directors are of the opinion that a further sub-division would now be beneficial to the shareholders and more attractive to the public. Incidentally, a share of lesser denomination broadens the basis of the shareholders and, as far as the partly-paid shares are concerned, affords additional security to the depositor in the fact that the uncalled liability will be spread over a much larger proprietary.

COMPOSITION OF THE CAPITAL

There are now three classes of shares.

The authorised capital consists of:—

120,000 shares of £25 each,
2,400,000 shares of £20 each, and
1,800,000 shares of £5 each,

of which have been issued

120,000 shares of £25 each, £3 10s. paid,
1,972,354 shares of £20 each, £4 paid, and

234,000 shares of £5 each, fully paid.

When sub-divided the capital will stand at:—

Authorised:—

600,000 "A" shares of £5 each,
9,600,000 "B" shares of £5 each, and
9,000,000 shares of £1 each,

of which will be in issue

600,000 "A" shares of £5 each, 14s. paid,
7,889,416 "B" shares of £5 each, £1 paid, and
1,170,000 shares of £1 each, fully paid.

We should have liked to make the two denominations of partly-paid shares into one, but though we have instituted a careful inquiry this has not been found to be possible owing to legal and other difficulties.

THE ACCOUNTS

I will now deal with the statement of the accounts for the year ended December 31, 1937, but before referring to details of the position disclosed, I am glad to be able to report that the business of the bank continues to expand, and that the turnover for the past year shows a very marked increase when compared with 1936.

Current, deposit and other accounts stand at £320,246,414 17s. 7d., which is slightly less than last year's total. With regard to the small decrease shown in the deposits, the balance sheet of course represents our position on the last day in the year: actually the deposits throughout the year, judged by the monthly averages, were in excess of the average for 1936. The other figures on the liabilities side of the balance sheet call for no special comment, with the exception of the allocation to reserve to which I will refer later.

On the assets side, cash on hand and balances at the Bank of England amount to £32,448,577 1s. 5d., being 10.1 per cent. of the deposits. Bills discounted and money at call and short notice show a decline of approximately £16½ millions, which is due to the larger demand for advances. During the year the return on Treasury bills has been appreciably less than in 1936, the average rate of return for 1937 being a fraction over 11s. 2d., compared with 11s. 7d. for the year 1936. It has only been on rare occasions that banks have been able to utilise their money in the discount market at anything over one-half of 1 per cent.

WELCOME INCREASE IN ADVANCES

You will notice that there is a welcome increase in our chief earning asset, namely advances, which now stand at £140,445,454 6s. 11d. The increase is widely spread and every important industry which looks to us for assistance has contributed to the larger total.

Investments other than those in other banks stand at nearly £86 millions and are approximately £2½ millions lower than at the end of last year; but they still represent over 26.8 per cent. of the deposits.

We are glad to report a net profit of £1,874,959 18s. 6d., being an increase of £104,786 15s. 6d. over the previous year. The dividend continues at 15 per cent., and after allocating £100,000 to bank premises account and £250,000 to pension fund, against £200,000 a year ago, and making a transfer of £500,000 to reserve fund, there remains to be carried forward the sum of £573,714 11s. 8d.

Shareholders will remember that in 1931 we made a transfer of £1,479,416 from the reserve in consequence of the unprecedented fall in security values, and we have now made this substantial transfer of £500,000 towards restoring the position.

During 1937 the gilt-edged stock market proved to be very sensitive to economic and political influences, which are incalculable

factors. Consequently while these conditions continue we have to be prepared for sudden fluctuations in Stock Exchange prices.

The uncertainty of world conditions also demands that we should reinforce our reserves and preserve that degree of strength and liquidity which has enabled the British banking system to weather so many storms in the past.

SURVEY OF HOME AFFAIRS

The past year has not been free from events which have given rise to anxiety of one kind or another in the minds of those who take a thoughtful interest in world affairs; but in retrospect and in comparison with preceding years there can be no doubt that on balance substantial progress in economic recovery has been achieved in this country. Tests applied to all significant points indicate increased general prosperity.

INDICES

Taking the year as a whole, the volume of employment has never been higher and—more important—there has been a heavy reduction in unemployment in most industries and in all main districts. It is true that recently the gain in employment has not been fully maintained, but making allowance for the seasonal factor we are justified in looking upon this contraction as a pause rather than a general set-back. The official index of production shows an appreciable increase for 1937 compared with 1936; whilst the index of wage rates continues to rise. Retail sales and bank clearings have, generally speaking, increased throughout the country and furnish evidence of augmented consuming power.

REVIEW OF INDUSTRIES

DEFENCE PROGRAMME.—The great range of industries which are directly and indirectly concerned with the completion of the Defence programme are assured of some further years of great activity, and their prosperity must continue to have a favourable effect on many other trades.

BUILDING.—The slackening in some departments of building which has been foreshadowed for a long time would seem to have arrived, but there is still a considerable amount of construction to be achieved before the population is housed in accordance with modern standards. We may reasonably expect that projects for the improvement of housing of those who live in congested areas, together with the work connected with the erection of factories and workshops, will go a long way in compensating diminishing activity in other departments.

IRON AND STEEL.—It is a source of great satisfaction to us to know that the iron and steel and allied industries with which we have many old and valued connections have experienced a substantial increase in activity during the year; indeed, the production of both pig iron and steel has reached a level unequalled in the past.

COAL.—The increased output of the heavy manufacturing industries has been accompanied by a welcome increase in employment and in the production of coal, which industry seems now to be reaping the reward of many years of reorganisation and re-equipment.

WOOL.—The progress of the West Riding of Yorkshire, where we are closely concerned with the textile industries, has been handicapped during the latter part of the past year by instability in the world price of wool. There is reason to think that prices of wool are now on a sounder level, and we may therefore expect in due course a return of confidence to trade consumers with consequent benefit to all concerned.

SHIPPING AND SHIPBUILDING.—Shipping and shipbuilding and the areas which depend mainly upon them have been so long under the shadow of uncertainty and depression that it is especially gratifying to note the increased business they have experienced during the past year.

AGRICULTURE

The all-important agricultural industry with approximately three-quarters of a million employed workers in Great Britain (excluding occupiers, their wives and domestic servants) is from many points of view our most important single industry. We are able to say from our experience that, taking the country as a whole, the continuance of Government schemes has enabled agriculture to make further progress during the past year. Conditions in the industry differ widely as between different localities and different types of husbandry, and a great deal remains to be done before it can be said that the land in our country is in a state of high cultivation and efficiency. The farmer has maintained a grim struggle against adverse conditions for a considerable period and richly deserves any improvement that may take place in the future.

CONTINUED CONFIDENCE JUSTIFIED

General progress notwithstanding, doubts are now being expressed as to the likelihood of a continuance of the present level of activity; and indeed, fears of a further pronounced economic recession are by no means rare, particularly in quarters where economics is an academic study. From one aspect these fears indicate a caution due to the bitter experiences of the slump years. It is good that lessons of the past shall be kept in mind; but before we allow caution to outweigh confidence and degenerate into pessimism, we should be sure that existing circumstances warrant this.

The main sources of our weakness in the great depression of 1930-33 are now sufficiently well recognised to enable us to say that not one of them is in active operation to-day.

In spite of increased calls on the Exchequer, the Budget of ordinary expenditure is well balanced, and although there still remains a further two months to the end of the financial year, an enhanced level of incomes and profits should ensure that the Chancellor's estimates are reached.

COMPARISON WITH 1931

The case was very different seven years ago.

In 1931 we were firmly attached to the gold standard at a period when we were unable to resist sudden and heavy pressure for cash payments across the foreign exchanges. To-day we have in the Exchange Equalisation Account a means which should prove adequate in neutralising exchange pressure in meeting potential demands for repatriation of foreign-owned assets. In 1931 confidence in the position of this country was at a very low ebb abroad; whilst now our economic prestige stands high in the minds of foreigners.

To-day we are in a position, through the operation of tariffs and similar means, to negotiate in the assurance that we may secure equitable treatment in overseas trade; seven years ago our industries were largely unprotected at home and at a relative disadvantage in many export markets. Prior to the great depression credit was comparatively restricted; now we are assured of a continuance of cheap and plentiful credit.

In some quarters concern has been shown regarding the increase in 1937, compared with 1936, of £86 millions in the adverse balance of our foreign trade account, and comparisons have been drawn with the position in 1931. It should be borne in mind, however, that seven years ago the widening deficit on foreign trade account was due in appreciable measure to a decline in exports: during the last year our exports have steadily advanced.

TRADE BALANCE AND BALANCE OF PAYMENTS

A large part of the increased value of our imports during 1937 was due to the steep rise in world prices of a number of primary commodities which took place mainly in the first half of the year. In recent months there have been marked reductions in the prices of a considerable range of world commodities. If we take only eight of the more important descriptions, our imports for the first eight months of 1938 at present prices will, in comparison with the same period of 1937, cost us perhaps £20-£25 millions less, on the assumption that quantities are unchanged.

In any event, the balance of trade is only one ingredient—though the most important—in our net balance of payments abroad. We shall have to wait for some time for the official estimates of invisible items, but such information as we have readily available, for instance the rise in shipping activity and freights, supports the idea that net invisible exports will go a considerable way to counterbalance the increased deficit on trade account.

PRICES: RISING COSTS

The rise in primary product values to which I have just referred was principally due to unjustified fears on the part of industrial consumers of a shortage of future supplies, and the high levels reached in many instances were as much unwelcome to producers as they have proved to be to consumers. One of the effects of the increase in primary values was to stimulate the rising tendency both in the cost of living and the level of general industrial costs. These tendencies have caused some concern in all quarters, but we may expect that the reduced primary price levels now prevailing, which in the main offer only a reasonable margin to the average producer, will in due course exercise a moderating effect on the future course of retail prices and production costs.

CONSERVATION OF RESOURCES AND DEPRESSION

During the last few years standing charges in the shape of debenture interest, etc., have been greatly reduced and there has been a

considerable measure of capital reorganisation. Further, the proportion of industrial profits which has been placed to reserve during the last four years of growing prosperity has been, generally speaking, very greatly in excess of similar apportionments in the years of prosperity prior to 1931. We may, therefore, be tolerably sure that, providing reserves are maintained in a more or less liquid form, industry will be far better placed in dealing with any serious deterioration of the situation which the more distant future may have in store.

POSITION STRONG BASICALLY.—If I have dwelt at some length on the factors justifying confidence in our present position it is because I believe in its fundamental strength and soundness, and well know the mischief often worked by fears which have no foundation in fact.

SHORT AND LONG TERM CAPITAL

EXPORTS OF SHORT TERM CAPITAL.—Two items in our balance of external payments, namely, short and long term capital transfers, have in recent times been the subject of considerable comment. Modern movements of short term capital are due to a large extent to the state of political and economic uncertainty which prevails in a number of important countries and will diminish as these causes are remedied. In the meantime the exchange funds and central banks of the principal countries should be able to control the situation.

LONG TERM CAPITAL INVESTMENT.—The overseas movement of long term capital is from our point of view a much more important matter. The function of our overseas investment for many generations in the evolution of this country on the one hand, and of the Empire and relatively under-developed foreign countries on the other, is sufficiently well understood to enable us to discuss our future policy in this respect. Foreign investment should depend on two things—a surplus of income in the lending country and reasonable opportunities of capital construction which will show a return sufficient to provide the service of loans in the borrowing country. There is no doubt that potential avenues of capital improvement throughout the world do exist.

Of the main factors responsible for the slowing up of our overseas investment in recent years, some exhibit the features of permanence and some are clearly of a transient nature. If we exclude the teeming populations of the East, the increase of numbers in some countries, especially in the Empire, is progressing at a slower rate than hitherto and some of these countries have now accumulated considerable domestic capital. In a number of cases borrowers at long term took, especially in the post-war years, rather more than they could easily assimilate and found some difficulty in meeting their external obligations when the depression of 1930-31 set in; and further we in this country were compelled, for reasons connected with the crisis of 1931, to place an embargo on the export of capital.

BORROWERS' CREDIT IMPROVED

It cannot be seriously doubted that the position of many potential borrowers, especially within the Empire, has very greatly improved in the last few years.

It has been said that, having in mind the present trend of population in this country and elsewhere, we should not encourage primary producing areas to borrow further capital from us on the ground that they will encounter increased difficulty in marketing their products in payment of interest and sinking fund. This belief is surely without foundation. The potential increase in general consuming power of even a static population (and we have not reached this point yet) is very great. This is clearly true, for example, in the case of the world commodities with which we clothe ourselves. It is less obvious in the case of foodstuffs, but even here it is certain that we could consume a great deal more with benefit to the nation's health.

FOREIGN TRADE INCREASE URGENT

As an increase in our material welfare drawn from abroad is essentially a matter of the exchange of goods, I do not think it is possible to over-emphasise the desirability of pressing ahead with any measure designed to assist our export trades. In no other single direction, having particularly in mind that our great export and ancillary industries are among the worst affected by unemployment, can we expect such an abundant return for effort. It is true that some sections of industry are at present working at high pressure, but the importance of maintaining and increasing our export trade is so great that the need of markets overseas cannot be ignored. There is no solid foundation for the idea that our great industrial companies cannot handle the requirements of these markets overseas

in consequence of their commitments for re-armaments and for the home trade. In fact the great bulk of our industries are well able to deal with increased overseas inquiries.

The alternative to a vigorous policy of increasing our foreign trade implies a further period of waste of our domestic capital resources, both material and human, ameliorated by expensive readjustments in some of the areas worst affected.

PROGRESS IN PRIMARY PRODUCING COUNTRIES GENERALLY

When we look at the past year's history of the principal countries abroad we remark a further gratifying increase in the prosperity of members of the sterling group. Not only in Scandinavia and other Baltic States, but throughout the Empire, increased activity at levels of prices higher on the average than the preceding year has brought further substantial relief from depression.

The great primary producing areas of the world are reaping the reward of the fortitude with which they have faced long years of depression. Canada, Australia, New Zealand and South Africa have benefited by the enhanced prices of their main products and find increasing ease in meeting the service of their external dues. India and the majority of the South American States have also participated in prosperity due to better markets for their produce.

With their improved prosperity, the Empire countries evince a desire to add to their populations. We may be sure that wisely ordered schemes of emigration from this country will benefit the Dominions and the great Dependencies.

While we thus lay stress on the importance of foreign trade and contemplate the greater measure of prosperity prevailing in the primary producing countries, let us be constantly on our guard against the bureaucratic tendencies to interfere and meddle with commercial and industrial life. Such action can only result in stifling development and impeding enterprise.

DETERIORATION IN A FEW DIRECTIONS

In a few directions we have to recognise that conditions have worsened. The outbreak of a major war in China has gravely embarrassed trade with a valuable market and must seriously retard the economic progress of a great country. In spite of little relief for many years from internal dissension and warfare, China has made great strides in economic development, and we must hope for an early termination of the present wasteful hostilities.

The civil war in Spain continues to exercise a harmful influence on the commerce of nations.

There has recently been a serious slowing down of industry and trade in the United States, but the spirit of courage and enterprise which has already done so much in the last few years to lighten the burden of internal commercial indebtedness and stimulate recovery, will surely soon be successful in enabling a resumption of progress in that great country. In view of her position as an important consumer of world commodities the economic welfare of the vast population of the United States is of intimate concern to all other peoples. We may be sure that this aspect of affairs is well borne in mind by those who are charged with the responsibility of negotiating a commercial treaty between this country and the United States of America at the present time.

TRADE BARRIERS

The relaxing of international trade barriers which have been erected in recent years may prove a long and difficult matter; but if the problem is approached on all sides in the spirit of "what can we give" as well as "what can we take," difficulties will be surmounted. It is always easy to prevent the international exchange of goods, and if we are to make progress in the rehabilitation of international trade, it is essential that sectional interests in all countries shall be subordinated to wider considerations.

ANGLO-UNITED STATES OF AMERICA TREATY.—The harmful nature of most forms of interference with the natural course of trade are now more widely recognised, and it is to be hoped that a real beginning will be made in the concluding of the Anglo-American Trade Treaty in reducing the worst of the obstacles that have been set up in recent years. The benefits of such a Treaty—conceived on liberal lines—would not be confined to the immediate parties. It is certain that its fruit would induce many other countries, who either deliberately or under the compulsion of external forces have restricted their external trade, to take concrete steps in the direction of expanding both their imports and exports.

BUSINESS CONFIDENCE

There is no doubt that the past year has seen a marked improvement in economic conditions in many countries, and this improve-

ment may be expected gradually to lessen political tension which does so much to limit confidence and retard further recovery.

Business confidence is a delicate plant which, if it is to have any great degree of permanence, must be rooted in good soil. We can surely find this foundation if we contemplate the achievements of the last few years of recovery both here and abroad and view in their proper perspective both those factors which give rise to doubt and those which lend hope for the future.

I now beg to move:—"That the report and accounts, as presented, be received and adopted."

Captain E. C. Eric Smith, M.C. (a deputy-chairman), seconded the motion, and the Chairman having replied to shareholders' remarks, it was carried unanimously.

The Chairman then proposed the re-election of Mr Charles Gipps Hamilton, Sir John Buck Lloyd, the Right Hon. Lord Pender, Mr Eustace Abel Smith, and the Right Hon. the Viscount Wolmer, P.C., M.P., as directors.

Captain Smith seconded the motion, and it was unanimously adopted.

On the proposition of Mr C. P. Serocold, seconded by Lieut.-Colonel G. S. Eunson, Sir Nicholas Edwin Waterhouse, K.B.E. (of Messrs Price, Waterhouse and Company), and Sir William Henry Peat, K.B.E. (of Messrs Peat, Marwick, Mitchell and Company), were re-appointed auditors for the current year.

Mr Theodore Goddard moved a vote of thanks to the directors, general managers, branch managers and other officers of the bank for their efficient management and services.

Mr H. Carron Scrimgeour seconded the vote, which was cordially passed, and brief acknowledgments were made by the chairman and Mr Ernest Cornwall (chief general manager).

EXTRAORDINARY GENERAL MEETING

An extraordinary general meeting was then held for the purpose of passing the special resolutions (of which due notice had been given) for sub-dividing the bank's capital into shares of smaller denominations, to take effect as from March 7, 1938.

The special resolutions were formally moved by the Chairman, seconded by Captain Smith, and unanimously adopted.

A vote of thanks to Mr Colin Campbell for his able conduct in the chair, proposed by Mr Dudley H. Illingworth, and seconded by Mr John Cadogan, concluded the proceedings.

WILLIAMS DEACON'S BANK LIMITED

SUCCESSFUL YEAR—INCREASED PROFIT

NEED FOR STIMULATING EXPORT TRADE

POSITION OF COTTON TRADE

MR GERARD POWYS DEWHURST'S ADDRESS

The annual meeting of the shareholders of Williams Deacon's Bank, Limited, was held on Thursday, January 27, 1938, in the Board Room, Mosley Street, Manchester, Mr Gerard Powys Dewhurst (the Chairman) presiding.

The Secretary read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the directors' report and statement of accounts, said: Gentlemen,—I have received apologies for unavoidable absence from our meeting to-day from several members of the board.

You will have seen from the report that we have to deplore the death during the year of our colleague, Percy Ashworth, who for nineteen years had been a member of this board. Originally head of an old-established family concern in Bolton, his intimate knowledge of the cotton trade has been of great assistance to the bank, and we miss him sadly both as friend and director. Then, too, the sudden death of William Charles McGrath, an assistant general manager, was a loss the bank could ill afford. Prior to his last appointment Mr McGrath had been for many years associated with the branch department of the bank, and as manager of branches had earned the esteem and affection of all ranks of the staff.

BALANCE SHEET ITEMS

Taking the remainder of the report with your permission as read, and turning to the balance sheet, on the liabilities side our capital and reserve fund show no change.

SEDENAK RUBBER ESTATES, LIMITED

SATISFACTORY CONDITION OF ESTATES

The twenty-eighth ordinary general meeting of this company was held, on the 25th instant, in London.

Mr Philip C. Turnbull, O.B.E. (the chairman), who presided, said that whereas last year 1,262 acres were classed as immature, this figure has now been reduced to 365 acres, thus adding almost 900 acres to the mature area. As a partial offset to this, 200 acres of the oldest and poorest yielding rubber on the Sedenak Division were cut down and replanted during the financial year. The cost of this replanting has been charged to revenue and is one of the items responsible for costs having risen.

I would like to quote from the manager's annual report on this subject. He says:—"The cost of production was higher notwithstanding the increased output, but this can be explained to a large extent by there having been granted to the labour force a substantial increase in pay, charging of replanting to revenue, increasing duty, Tamil assessment, and opening up and bringing into tapping some 1,100 acres of young rubber."

The year's working has resulted in a profit of £43,000, which must be regarded as satisfactory, although when paying the interim dividend of 5 per cent., which was based on approximate profits of £25,000 for the first six months' working, we did not anticipate a further and continuous fall in market prices, and at that time anticipated that we would have over £50,000 to show for the full year's profits.

Before considering dividends your board felt it sound policy to increase the reserve to £45,000 by transferring a further £5,000 to that account, and investing it in Government securities, which stand at a corresponding figure.

The visiting agent expresses his satisfaction generally with the work, while the manager says there is not the slightest doubt that Sedenak, as a whole, is a very fine property, and, as a result of the decision to replant over a period of three years approximately 530 acres of the older rubber which has now passed its peak, the future, from the point of view of yields, can be faced with considerable confidence.

The report and accounts were unanimously adopted, and the payment of a final dividend of 7 per cent., less tax, at 5s. in the £, was approved.

Deposits which have been subject to considerable movements for the finance of trade show a net increase of £986,000 on the year.

Acceptances and credits for customers are lower by £162,000; on the other hand there is an increase of £327,000 in endorsements and other obligations.

Turning to the assets side of the sheet, our cash is slightly lower, representing just over 10 per cent. of our deposits.

Balances with other banks show little change, while we have some £430,000 more short money on the market than last year.

Bills discounted appear at £414,000 less; our reduced holding of Treasury bills more than accounts for this difference.

Increased demands for advances from our customers amounting to £2,400,000 have a definite bearing on the fall of £1,374,000 in our investments, a welcome reversal of our experience of the last few years.

These advances are extremely well spread, and while we note a diminution of demand from textile, shipping and transport quarters, the requirements of our customers in such heavy industries as iron, steel, engineering and shipbuilding, and in miscellaneous trades are distinctly larger.

Bank premises account, after an appropriation from this year's profits, show a net decrease of £15,000.

PROFIT AND DIVIDEND

Turning now to the figures of profit and loss, our net profit after making the usual provisions appears at a total of £310,921, as compared with £293,636 or an increase of £17,285. This profit, with

^a balance of £102,046 brought forward from last year, gives us a total of £412,967 now to be dealt with.

After transferring £30,000 to premises account we are in a position to pay a dividend at the rate of 12½ per cent. on both our "A" and "B" shares, and carry forward to next year's account £148,592, as against £102,046 brought in.

The balance sheet figures I have outlined give ample evidence of the liquid position of the bank, and after all bad and doubtful debts have been fully provided for, our increased net return is the result of steady progress throughout the system.

I should like to refer here to our trustee departments, whose activities are increasing in a very satisfactory manner. We find that the facilities they provide are recognised and utilised by an increasing number of our customers, and we look forward to further developments in this branch of the Bank's operations.

CONTINUED IMPROVEMENT IN TRADE

The improvement in trade, which was such a feature of 1936, has continued during the year under review, and in most of the heavy industries of the country, as far as output is concerned, new record levels of production have been attained, while the returns, both for unemployment and insured persons in employment, at all events for the first three quarters of the year, have been favourable.

Unfortunately, the effect of covering their requirements in raw materials on the part of consumers was accentuated by extensive speculative buying, and following President Roosevelt's pronouncement on the subject of high prices a reaction set in, and prices of all commodities fell precipitately. This, coupled with the uncertainty of the gold policy of the United States, had a most disturbing effect on the Stock Exchange, and values of gilt-edged securities and industrial equities alike experienced a heavy fall.

This interlude, though undoubtedly a check to business confidence, need not necessarily affect the position of the country's industries with their prospect of continued activity ahead, but it leads one to wonder how far domestic recovery can go without an improvement in international trade.

FORMIDABLE EXCESS OF IMPORTS

Imports and exports have both continued to rise, the former, partly owing to higher values, out of all proportion to the latter, with the result that the balance of trade has gone badly against the country during the year, so much so that the excess of imports has reached the formidable total of 432 millions, and after making all due allowance for an increase in invisible exports, such as shipping freights and investments abroad, this is a disparity we cannot afford to ignore.

Great efforts should be made to stimulate our export trade, and discourage superfluous imports, and, in spite of the attraction of domestic trade and Government orders, and the restrictions attached to dealing with foreign countries, every possible assistance should be afforded our manufacturers and merchants in the furtherance of such policy.

It is from this angle that we welcome the Anglo-American trade negotiations recently set on foot; any arrangements for the removal of restrictions and the improvement of trade between the United States of America and ourselves would appear to hold out infinite possibilities from the economic as well as the political point of view.

IMPROVED POSITION OF COTTON TRADE

If we turn to the area more directly served by this bank, we are glad to be able to report that the past twelve months, from a producer's point of view, was the best experienced in the cotton trade for some years past, and both spinners and manufacturers in the early part of the year were fortified with orders for a considerable time ahead. Demand, however, in the autumn, owing to the fall in the price of the raw material, showed signs of dropping off, and by the end of the year production had slowed down, and stocks of goods had begun to accumulate in the hands of distributors.

The home trade was responsible for most of this improvement, and, though most markets abroad increased their purchases from this country, this was largely offset by a further reduction of our trade in piece-goods with India.

The long drawn out negotiations for a new United Kingdom-India Trade Agreement to replace the Ottawa Agreement seem no nearer conclusion, and this delay in arranging new trade relations, which leaves untouched the existing prohibitive duties on exports from this country, has been a definite bar to business.

REORGANISATION OF COTTON TRADE

The question of working out a satisfactory plan of reorganisation for the cotton trade as a whole has for long now occupied the attention

of the Joint Committee of Cotton Trade Organisations, and their proposals to that effect have now been approved, with certain reservations with regard to the export side, by all sections of the trade.

Briefly, the Committee proposes that the Government be asked to introduce an Enabling Bill, under which a board representing the whole industry, and an independent advisory committee, would be set up to examine schemes put forward by the industry or its sections, and if satisfied that such proposals were in the general interests of the industry and in particular would tend to assist the export trade, to submit them to the President of the Board of Trade for Parliamentary approval, thereby obtaining statutory effect to such schemes.

Taking a view of the industry as a whole, with its vast diversity of interests and activities, it is impossible to resist the conclusion that some such co-ordinating authority is essential if the cotton trade is to put its house in order.

The problems which confront each section of the trade are similar in character. Each unit is faced with a surplus of productive capacity, with its inevitable consequence of price-cutting and depletion of capital, and it is desirable to ensure that any success which a particular section of the industry may reach in dealing with these problems should not be achieved to the detriment of other interests in the trade.

It would seem therefore that some form of comprehensive organisation which carries the support and confidence of the whole industry, and whose recommendations would carry weight with the Government, is a vital necessity if the trade is to maintain and improve its position in the markets of the world.

The difficulties confronting this Cotton Industry Board are many and obvious. It will not be easy for instance to reconcile the position of the manufacturer who must run his machinery, after allowing for replacements and improvements, on a profitable basis, with that of the merchant who must sell the goods in foreign markets at a competitive price, but a strong internal organisation does not necessarily stifle our competitive capacity, nor can we contemplate indefinitely subsidising exports at the expense of capital and wages.

It is to be hoped that the Government will grant facilities for the necessary Enabling Bill to be introduced to Parliament during the present Session.

IRON AND STEEL EXPANSION

We have continued good reports from our branches in the Sheffield area; iron and steel outputs show continued expansion, and have again reached record figures, while exports, which for some years have been a declining quantity, show a small but welcome increase.

The demand for specialities, such as stainless steel, has been well maintained, and both heavy and light sections of engineering are actively employed.

The output of coal in South Yorkshire continues at a high level, and, though there are signs that present prices are hindering the export movements, reports from Doncaster show a very active condition of trade.

We have better news from Bolton than for some years past; the cotton trade in that district has contributed largely to the general improvement, whilst engineers and ironfounders have done well. The building trade there also continues to be active.

Reports from Wigan, with its high percentage of unemployed show little improvement, and until some new industry is established there to take the place of dismantled collieries, engineering works and mills, there cannot be much hope of alleviation.

Such centres of the cotton and woollen industries as Oldham and Rochdale also give clear indications of better trade.

TRIBUTE TO STAFF

In conclusion, gentlemen, I should like on your behalf to send a special message of sympathy to our general manager.

Since the autumn Mr Bradburn has been laid low with a most distressing form of rheumatism, which has prevented him taking any active part in the business of the bank, and I feel sure we all wish him a speedy recovery.

In his absence the duties and responsibilities of general manager have fallen on the deputy general manager, Mr Thomson, and to him I feel we owe a special vote of thanks, while I should also like to convey to the assistant general manager, the officers and staff of the bank our very keen appreciation of the way in which the work of the bank has been conducted during the past year.

The Chairman then moved the adoption of the report and accounts, which was seconded and carried.

The retiring directors, Mr William Whyte, and Lieut.-Col. Sir Alan John Sykes, Bt., D.L., were re-elected, and the auditors, Messrs Ashworth Mosley and Company, were re-appointed.

DISTRICT BANK, LIMITED

FURTHER INCREASE IN EARNINGS

CONDITIONS IN COTTON TRADE

NEED TO ENCOURAGE EXPORTS

SIR R. NOTON BARCLAY'S SPEECH AT THE ANNUAL GENERAL MEETING

The one hundred and eighth annual meeting of shareholders of District Bank, Limited, was held on the 28th instant, at the Head Office, Spring Gardens, Manchester.

The chairman, Sir R. Noton Barclay, presided. He said:—

Ladies and gentlemen,—Before I say anything in regard to the accounts for the past year I should like to refer to Sir Nigel L. Campbell, who has joined the board since we last met. Sir Nigel has many important industrial and financial connections, and he is in addition one of the trustees of the fund provided by Lord Nuffield for the relief of the distressed areas. We count ourselves fortunate in welcoming him as a colleague whose counsel and assistance have already proved to be of much value.

BALANCE-SHEET

You all have copies of the accounts for the past year which, with your permission, I will take as read. There are, however, various items to which I would like to call your attention, and I will deal first with the balance-sheet.

The paid-up capital is unchanged at £2,976,428, while the amount of our reserve is equal to the capital. Current, deposit, and other accounts at more than £81,000,000 are nearly £3,000,000 up on last year; this is the highest figure we have ever shown. Acceptances, confirmed credits, endorsements and guarantees on behalf of customers at £9,346,000 show a £2,000,000 increase and are perhaps to some extent an indication of unsettled international conditions, as they include the increase in the forward exchange business done by our foreign department.

Turning to the assets, cash on hand and with the Bank of England is nearly £600,000 up at £8,675,379, while there is a slight reduction in our money at call and short notice and in the bills of exchange item, in the latter case due to our smaller holding of Treasury bills.

There is little change in the total of investments. The market value of our holdings is considerably in excess of the figures in the balance-sheet.

Advances at £30,834,000 show a substantial increase of nearly £3,500,000 over last year. This, you will agree, is a pleasing feature, following, as it does, the increase during 1936. The debts are well spread among a wide variety of industries and, of course, all necessary provision for loss has been deducted.

Bank property shows a small increase at £1,580,000. Sixty thousand pounds has been provided in this year's accounts to write down this item, and there have also been realisations of redundant offices due to the merging of certain of the District and County branches.

PROFIT AND LOSS ACCOUNT

If you will now turn to the profit and loss account you will see that the net profit for the year, after payment of expenses and all other charges, amounts to £519,255. This compares with £490,324 last year, and is particularly gratifying in view of the additional taxation which we have had to meet. With £209,236 brought forward there is £788,492 available.

As you will see from the report, your directors have appropriated to the pensions and annuities fund £70,000 and, as I have previously mentioned, to the bank property item £60,000. We propose to increase the dividend upon the A and C shares to 18½ per cent. for the past half-year, making 17½ per cent. for the full year. Upon the B shares we recommend the usual maximum dividend at the rate of 10 per cent. per annum. After provision has been made for these payments there remains to be carried forward to this current year's accounts the sum of £285,611.

The difficulty in finding employment for short moneys at remunerative rates has continued, and there is no immediate prospect of a change in these conditions. We have, however, increased our profit, and this can be attributed to our larger lendings and the increased business handled by the bank. There is a satisfactory growth in our business, and definite progress has been made.

We realise that the satisfactory figures we are able to place before you to-day are largely the result of the devoted attention of a most

able staff to the many calls made upon them by an expanding and ever-varying business. This has been recognised in the annual revision of their remuneration, with special consideration to young married men. I desire to place on record our cordial appreciation of the loyal and efficient services rendered by the chief general manager, officials, and the whole of the staff.

LANCASHIRE INDUSTRIAL SITES COMPANY, LIMITED

Before I leave the subject of our domestic affairs, it may be of interest to mention that we have supported, and have agreed to participate in, the recently formed Lancashire Industrial Sites Company, Limited, an enterprise formed under the auspices of the Lancashire Industrial Development Council for the purpose of enabling industrialists to acquire factories in this area upon easy terms. We hope that as a result of its activities new industries may be attracted in increasing numbers.

CLEARING FIGURES

Turning to mere general conditions affecting the country, it is worthy of note that the aggregate London clearings during the year showed an increase of more than £2,000,000,000, or 5 per cent. Whereas the town clearing showed a decrease of £934,000,000 during the final quarter, reflecting perhaps a falling off in Stock Exchange business, it is perhaps significant of the general maintenance of trade that the country clearing showed an increase during each quarter of 1937—although a smaller one during the last quarter. The Manchester figures are 6 per cent. better than a year ago.

THE COTTON TRADE

The cotton industry has been busier and business has been more profitable in 1937 than at any other time during the past ten years.

The larger demand for cotton goods which started in the late months of 1936 was maintained, with the result that much idle spinning and weaving machinery was restarted. By May of 1937 it was common to hear of producers having six to nine months' work on hand and at profitable prices. The larger trade resulted no doubt to some extent from the increase in world commodity prices, and, in the home market particularly, from better employment due in part to the re-armament programme. All markets with the exception of India and China bought on an unusually large scale for delivery extending months ahead. Merchants were apprehensive of still higher prices: manufacturers rushed in to buy yarns speculatively in order to secure delivery of goods and yarn, and there was produced the largest volume of demand that Lancashire had experienced for years. Order-books were filled and mills had the greatest difficulty in keeping their engagements.

In the first three to four months of the year prices were rising; middling American cotton was quoted at 8.14d. per pound on March 16, but by November the price had fallen to 4.53d. per pound. In the second half of the year the demand fell off substantially, and to-day the existence of unsold stocks and delayed deliveries of goods bought at high prices is causing a good deal of concern.

IMPROVED SELLING PRICES IN SPINNING SECTION

An important feature during the year has been the improvement in selling prices in the spinning section. This was largely due to the success of the legalised schemes of price-fixing in the American and Egyptian sections. This, coupled with the improved demand, has enabled many concerns to pay their first dividends for years.

Manufacturers, though acting individually, were also able to improve their margins, but unfortunately prices have now slipped back and at the moment there is the old cut-throat competition. Consideration is now being given by manufacturers to the setting up of some price-fixing scheme similar to that adopted by the spinners. While manufacturers might hope for steadier profits if

such a scheme were agreed upon the possible adverse effect of higher prices on the export trade must not be overlooked.

It is estimated that, helped by the general prosperity in Great Britain, no less than one half of Lancashire's output of 4,000,000,000 (four thousand million) yards of cotton and rayon fabrics is now absorbed by the home trade. Consumption of cotton and rayon goods in the United Kingdom is only about forty yards per head per annum, as compared with over sixty yards per head in the United States, and, though orders for the home trade have been on a much smaller scale since the autumn, it appears likely that Lancashire will retain its volume of output for the home trade.

As regards the future of export business, this will depend largely on the results of the Government's action to obtain satisfactory trade agreements and better organisation in the industry itself.

The Joint Committee of Cotton Trade Organisations is now considering a scheme which, it is claimed, will improve the organisation of the trade generally. The various sections are at present engaged in working out details with the object of making an early application on specific lines for an Enabling Bill to be presented to the Government.

The Spindles Board completed its first year's working on September 14, 1937, and the report showed that it had withdrawn from actual production 3,265,000 mule equivalent spindles. That the board has not accomplished all that it set out to do is principally due to the improvement which has taken place in the trade since the scheme was first mooted.

IRON AND STEEL

The year 1937 was remarkable in the history of the British iron and steel industry, for the output of steel reached a new high peak, at 12,964,000 tons. The average monthly output of pig iron showed an increase of 65,000 tons as compared with 1936, and the figures for December are the best since 1918, when the industry was keyed up to meet an unprecedented demand for munition production. It is noteworthy that the rise of 10 per cent. in steel output, as against 1936, was achieved notwithstanding the difficulty experienced in the early months of 1937 in obtaining adequate supplies of raw materials. This difficulty was occasioned partly by the effect of the Spanish civil war upon supplies of ore from that country, and partly by a more insistent demand for available ore from a number of countries where producers are enjoying greater activity. A further problem which faced the industry was the difficulty of securing the necessary supplies of scrap, due to a decline in home supplies from demolition schemes and to the increased demand from overseas.

An interesting commentary on the steel output last year is the rate of growth as compared with 1929, a year regarded as a record one in almost all countries. Britain surpassed this peak by one-third, yet in France, Belgium, Luxembourg, and the United States the 1937 production was less than that of 1929, while even the German output swollen as it was by armament demands, was less than 10 per cent. above the 1929 output.

In the achievement of such remarkable expansion much credit is due to the co-ordinating efforts of the British Iron and Steel Federation. Moreover, modernisation of existing plant and extension of capacity augurs well for an increased output in the current year. Nevertheless, it is to be hoped that in view of the setback which the industry experienced after the Great War, producers are alive to the danger of overproduction and are keeping fully in mind that the present demand for armaments will not continue indefinitely.

BUILDING ACTIVITY

It is widely appreciated that economic recovery in Britain since 1932 has been based to a great extent on a boom in building, including the rehousing schemes of the local authorities and the activities of the speculative builder in the construction and sale of dwelling-houses. An increase in the demand for houses, factories, and business premises has a stimulating effect on many industries, owing to the diversity of materials required for constructional purposes. The additional purchasing power released in the form of wages to building labour, and in associated industries, ultimately benefits practically every trade in the country. It is, therefore, not surprising that any pronounced movement in building plans approved is of the greatest significance.

Many people believed the building boom would be of short duration, but its continuance—aided, of course, by low money rates—has been an outstanding feature of recent years. Now, however, there is little room for doubt that the demand for dwelling-houses erected by the speculative builder is less active, and the note of caution, now characteristic of commercial enterprise, will make business men hesitate before deciding to construct new factories and other business premises. As against this the prosecution of the policy of slum clear-

ance ensures a continuance for some years of considerable activity in municipal housing, and the severity of any recession is likely to be mitigated thereby.

THE UNITED STATES

In the United States the business setback in 1937 has been of considerable magnitude, and the turn of the year has, unfortunately, brought no fundamental change in the position. The volume of business has fallen off in nearly all the principal branches of industry, and perhaps the seriousness of the position is most vividly depicted by the contraction of the iron and steel output, which is now less than 30 per cent. of capacity, as against 80 per cent. nearly six months ago.

As in the last depression, the authorities are taking active steps to try to remedy matters, but so far progress is impeded by the clash between the Administration and influential business interests. Industrialists are bewildered at the unexpected and unaccountable recession in business, and they seem to have little confidence in the ability of the Government to relieve the situation.

The bright side of the American position is the absence of high accumulated stocks and the non-existence of a mass of debt waiting to be liquidated by business houses and private individuals. These were among the worst features of the last depression. Many circumstances essential to recovery are present, and the proposed trade agreement with this country, if achieved, should prove beneficial.

THE BALANCE OF PAYMENTS

At home the growing deficit in our balance of international payments is a serious matter. Of recent years the unfavourable balance has been largely attributed to the replenishment of stocks, to the recovery of internal trade, and to imports which later would be translated into exports. These were explanations for a growing deficit which rightly caused little adverse comment, but the unfavourable balance for 1937, which, even when allowance is made for invisible exports, it is thought may amount to at least £50,000,000, as against £19,000,000 in 1936, gives rise to feelings of disquiet because of the attendant circumstances. The current deficit has largely resulted from our spending on armaments.

Admittedly, our adverse balance of payments will be somewhat reduced when rearmament programmes are completed, but in the meantime signs are not wanting that the deficit may increase. The steady upward movement in wholesale prices since 1932 has been put forward as a reason why we may expect an increase in the purchasing power of overseas producers of primary commodities. For some years our exporting industries have therefore been able to view the future hopefully. Since August, however, prices have sharply receded, and although this fall has at the moment been arrested the new year has brought no assurance of any quick recovery. This may entail an early setback to our exports, and, if so, to what proportions may we expect our adverse balance of trade to grow during the current year?

THE NEED FOR EXPORTS

Notwithstanding this evidence of some deterioration in our trading position, we can rightly feel pleased that orderliness and moderation in economic and political policy have brought a greater degree of prosperity to this country than to most of our competitors. Even though we may now be faced with some reaction from the prosperous trading conditions of the past year, we can at least feel satisfied that this country will be better prepared to cope with any setback than it was in the past.

But the maintenance and, if possible, increase of our exports is of paramount importance. Other things being equal, we might rely on British efficiency, shrewdness and determination to keep us in front of our competitors. Unfortunately, however, as yet there appears to be no indication of any reaction from the world-wide tendency towards national self-sufficiency, and so long as this persists world prosperity is unattainable. While one longs for a truer perception of the economic conditions under which alone by unhampered interchange of commodities nations may freely develop their resources and prosper once more, pending such a change of sentiment we have to make the best of things as they are in a restricted and crippled world. Meantime our dependence on exports presents an Achilles' heel to competitors. In these troubled times it seems essential that British exporters must receive help from the Government if they are to hold their own in foreign markets. Other nations wrest overseas business from us through exchange manipulation, through tariffs, and by other methods. The British market still remains attractive to many other countries, who try to come to terms in the matter of trading agreements. Pacts which have been approved are already

favourably reflected in our export figures, and further developments in this direction are essential if our exports are to be maintained. At the same time we must in fairness recognise that the Government in any action which it may take on these lines has to take into account political considerations outside the economic sphere.

INSURANCE AGAINST WAR RISKS

In connection with exports, I feel that reference should be made to the recent decision of underwriters to discontinue the acceptance of war risk on merchandise except whilst the goods remain actually at sea. This means that the sequence of cover in the transfer of goods from the British supplier to the ultimate buyer is interrupted. There is a gap during which cover does not exist and a serious difficulty is raised in maintaining our whole system of financing trade.

In the Great War Government action as regards the insurance of war risks was found to be indispensable, and incidentally the Government made a financial success of their operations.

It seems essential that the Government should take a lead at once in arranging with underwriters and the mercantile community some scheme by which this gap can be bridged.

There is the even larger question of the insurance of buildings and goods against risks of enemy action. So far the Government has shown reluctance to tackle the difficulties, but it is increasingly felt that it is one of the problems of safeguarding the community which the State cannot afford to neglect.

THE OUTLOOK

While the trade outlook for the coming year may indicate that some reduction in the general activity of the country is not unlikely, there is no adequate ground for the pessimistic views which one hears expressed in some quarters. "Slump" is an evil word—talk slump often enough and we do much to bring it about. Sentiment plays a large part in trade expansion and depression. At one time people buy and they overbuy, at another they refuse to buy and run short of supplies—thus boom begets slump and slump begets boom.

If we could control this sentimental factor the curve of trade would follow a far more even and natural course. This does not mean that we should close our eyes to unfavourable factors; it only means that we should take a sane view of factors unfavourable and favourable alike.

Looking to the future in this manner, I believe that while we may in the coming year witness some recession, a natural recession from the activity of the past year, the outlook is by no means unfavourable. Whilst certain industries may show some falling off, the curve is still likely to be well maintained or even upward in other industries. On the whole, employment is likely to continue good, and the consequent distribution of wages should ensure sustained activity in the home trade. The average trend, therefore, should, I think, be such that, apart from political disturbances, the result of which no one can foretell, we can envisage the immediate future with some degree of confidence.

The report and accounts were adopted, and the retiring directors were re-elected.

Messrs Halliday, Pearson and Co., and Mr Leslie Shaw, the retiring auditors, were reappointed.

The proceedings then terminated.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED

CONDITIONS IN DISCOUNT MARKET

LOW MONEY RATES

SIR WILLIAM GOSCHEN'S ADDRESS

The eightieth ordinary general meeting of the Union Discount Company of London, Limited, was held, on the 27th instant, at Southern House, Cannon Street, London, E.C.

The Hon. Sir William H. Goschen, K.B.E., the Chairman, presided.

The Secretary, Mr C. W. Holliday, having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—The accounts have been in your hands for some days, and I presume you will take them as read. It is the habit of people of middle age constantly to compare the times in which they are living with those of their youth,

and to contemplate the changes that have taken place. If this is true of life in general, how specially true is it of business life and of the discount market in particular?

As a result of the Great War and the difficulties arising from it, such as the introduction in many countries of national finance as opposed to international finance, the restriction in exchange and currency and other features of a similar nature, the total of foreign drawn bills for discount has very largely diminished, and this fact has naturally had its effect on the market. Fortunately, there are signs of slight improvement in this direction, and the inland drawn bill has at least held its own. But other opportunities for dealing have also arisen and have enabled us to more than maintain our figures, as you will have gathered from the annual reports that come before you, and I would urge that adaptability on conservative lines to changing conditions must always be the keynote of progressive business.

INTERNATIONAL POLITICS

As regards the past year, this country has been suffering from anxiety concerning international politics because not only did the Spanish War continue throughout the year but a new factor was added in the shape of the outbreak of hostilities between China and Japan. Another adverse factor was the reaction last autumn in trade and particularly on the activities in the United States followed by a severe fall in Wall Street quotations which have had a widespread effect. The fall in the prices of commodities in this country was very noticeable. For example, during 1937 copper had a fall of 48 per cent., cotton 40 per cent., rubber 37 per cent., tin 42 per cent., wheat 32 per cent.

Speculation has its place in all markets, and is stabilising and useful up to a point. In the examples I have quoted these heavy falls clearly indicate that the unhealthy speculative mania in commodities which existed for some months about a year ago was entirely unjustified. It is surely a great relief to the taxpayers that the nation should get the best value possible for its enormous expenditure on re-armaments and that the speculator's profits abroad and at home should be curtailed as much as possible.

COMMODITY PRICES

On the other hand, it may be that the present level of commodity prices has fallen below what it ought to be in order that the primary producing countries can make a reasonable profit and thus enable them to maintain and increase their imports from industrial countries such as our own. The effects of falling prices, however, were weathered without any real financial disturbance, and the strength of our banks has been demonstrated by the accounts which have already appeared.

As regards money rates, I ventured in my speech of last year to doubt the prophets who foreshadowed that we were on the eve of higher bank rates and dearer money. As a matter of fact, low rates have been maintained all through the year, and the Treasury bill allotment rate was actually lower in 1937 at 11s. 2d. compared with 11s. 7d. in 1936.

There has also been a pronounced factor in the prosperity of our own country, and people are hopeful of the negotiations which are about to take place in the direction of bringing about an Anglo-American treaty which might well have far-reaching effects.

UNRAVELLING OF EUROPEAN TANGLE

Other attempts, too, are being made to unravel the tangle of economic affairs in Europe. The great difficulty that lies in the path of those who are devoting their energies to this end is political suspicion. Every scheme that is brought forward is closely scrutinised from the angle of political benefit to any particular country. The only course whereby we can help those who are striving for our country's good is by showing our confidence in them and by doing our best to uphold this country's financial position as an example to the rest of the world, remembering always that it is the extension of legitimate trade with all nations and wise economy which lead to prosperity that will endure and benefit all.

The Chairman moved the adoption of the report and accounts, which was carried unanimously.

The Chairman, having paid a tribute to the work of the manager, his assistants and the staff, the proceedings terminated.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

Ireland

The following charts have been compiled to illustrate the relative economic and political positions of Eire and Northern Ireland. The dates for the figures used in Chart I are as follows: *Population*, Censuses of 1936 (Eire) and 1937 (N. Ireland); *Agriculture*, 1935–36; *Industry*, 1935 (N. Ireland), 1936 (Eire). In Chart II, which shows the religious minorities in the two countries, the area of each circle is proportionate to the total population. Charts III and IV relate to Eire alone and show the effects of the depression and the economic "war" with Great Britain. The last Chart shows the great decline in the population of Ireland since 1841 (which was the maximum point) and the part played by emigration (for which figures are not available before 1871–80).

I.—POPULATION, AGRICULTURE, INDUSTRY

II.—IRISH MINORITIES

Roman Catholic populations are indicated by unshaded areas

III and IV.—VALUE OF EXTERNAL TRADE OF EIRE

V.—POPULATION, 1841-1936

Finance

GOVERNMENT FINANCE

For the week ended January 22, 1938, the total ordinary revenue was £41,217,000, against ordinary expenditure of £8,400,000. The deficit accrued since April 1st last is thus £109,042,000, against a deficit of £90,989,000 a year ago.

* Revenue from gold based on a price of £6 19s. 6d. per fine ounce.

Transvaal Output, Employment and Working Profit.—Gold output, December, 1937: Witwatersrand, 965,814 fine ounces; outside districts, 28,879 fine ounces; total, 994,693 fine ounces. Value for purposes of declaration, £6 19s. 6d. Total output, November, 1937: 978,271 fine ounces. The number of natives employed at end of December was: Gold mines, 282,681; coal

mines, 16,474; total, 299,155. Total estimated working profit for December, 1937: Witwatersrand, £2,556,536; outside districts, £9,436; total, £2,565,972. Comparable figures for November, 1937: Witwatersrand, £2,612,307; outside districts, £9,605; total, £2,621,912.

SHORTER COMMENTS

(Continued from page 246)

RAILWAYS

Leopoldina Railway Company.—To meet the expense of establishing a minimum wage, the company has been authorised to increase rates for parcels and goods traffic by 10 per cent. as from January 15th.

Benguela Railway Company.—Gross railway receipts: 1937, £385,324; 1936, £254,819. Net railway receipts: 1937, £200,745; 1936, £77,723.

MISCELLANEOUS

John Bolding and Sons.—Net profit for 1937, after tax and N.D.C. (£9,000), depreciation, preference dividend and staff bonus, was £19,471 against £19,574 for 1936. Final dividend 12½ per cent., making 17½ per cent. for year, as before. Carry forward £23,447 against £18,710.

American Telephone and Telegraph.—Revenues for 1937 \$107,369,000, an increase over 1936 of \$448,216. Net operating revenue \$7,097,857 lower at \$18,212,000 but net balance of income showed increase of \$4,934,586 at \$179,761,000. Dividends absorbed

\$168,181,000 against \$168,081,179. Surplus for year \$11,580,000 against \$6,745,235. Net earnings \$9-62 against \$9-36 per share.

Leicester Permanent Building Society.—Total assets end of 1937, £14,658,924 against £13,983,901 at end of 1936. General reserve, £1,000,000 against £835,000. To mark the occasion of the general reserve fund reaching the sum of £1,000,000, special bonus has been declared to the holders of all paid-up shares.

English Clays, Lovering, Pochin and Company.—Profits advanced from £96,745 to £242,536 in year to September 30, 1937. Dividend for year raised from 3 to 4½ per cent. To tax and N.D.C., £53,887 (against £18,048); depreciation, £31,977 (22,007); leasehold, etc., reserve, £15,000 (same); general reserve, £20,000 to £31,604 (£10,000). Carry forward raised from £20,754.

Oswald Tillotson, Ltd.—The capital reorganisation scheme (see *The Economist* of January 8th, page 80) was withdrawn by the board at the general meeting on January 20th. It was stated that the board did not propose to submit an alternative, and a share in the equity would not be conceded to preference shareholders, but

that concrete proposals from the latter would receive consideration.

Southalls (Birmingham).—Net profits for 1937 after tax, fees, depreciation, bad debts, contingencies and staff funds, are £89,346, against £88,202. Final dividend 10 per cent., making 20 per cent., tax free; also 5 per cent. tax free distribution (absorbing £11,700) from profits on sales of investments. To reserve, £40,000 (same); carry forward, £26,439 (£2,546 more).

APPOINTMENTS AND PERSONAL

Mr Ellis Hunter has been appointed deputy chairman and an executive director of Dorman, Long and Company.

Mr F. J. K. Hull has joined the board of the Butterley Company.

Mr N. Yatsushiro has resigned as chief managing director of the Sumitomo Bank, Ltd., and hereafter will act solely as chairman. Mr K. Ohdaira has been appointed chief managing director.

Captain the Right Hon. Lord Cornwallis has been appointed a director of the Royal Insurance Company and also of the Liverpool and London and Globe Insurance Company.

Hungarian State Loan, 1924.—On January 25th the trustees for this loan announced that Treasury bills in respect of untransferred interest, etc., had been presented to the Hungarian Government, but not paid or renewed. The trustees informed the Secretary-General of the League of Nations of these developments. But it is understood that the Government's action was in accordance with the debt agreement proposals of June last which was recommended by the League Loans Committee.

Montenegro 5 per cent. Government Loan, and Serbian 4 per cent. Unified Bonds.—The Yugoslavian Government, finding it impossible to resume full service payments, offers the following terms to holders of these loans: (1) payment in sterling of 45 per cent. of nominal value of coupons; (2) contractual amortisation to be resumed; (3) proposals cover two years to December 31, 1939, in which time permanent settlement to be examined; (4) no more favourable arrangements than these to be made with other foreign holders, unless holders of above loans given right to participate. Council of Foreign Bondholders are of opinion holders would be well advised to accept.

Beans Industries, Ltd.—Profit for year to November 30, 1937, £84,300 (after depreciation, etc., but before tax and N.D.C.), or £59,300 net after setting aside £25,000 for tax and N.D.C. To pension account £5,000. To general reserve £15,000. Ordinary dividend 30 per cent. for year. Carry forward £13,257.

Tanganyika Concessions, Ltd.—A circular has been issued to shareholders stating that a reconstruction scheme entailing the reduction of the nominal value of all classes of shares is being prepared. It is hoped that the scheme will permit of a preference distribution towards the end of the current year. In the future any further improvement should permit of some eventual return to the ordinary shareholders.

(c) Includes 1 per cent. tax free from profit on realisation of investments.

COMMERCIAL BANKING OF SYDNEY.—Interim dividend raised from 6 to 7 per cent. per annum.

DIXOR, LTD.—Final ordinary dividend 22½ per cent., making 37½ per cent. for the first period from April 5th to December 31, 1937.

GAS LIGHT AND COKE COMPANY.—Ordinary dividend £5 12s per cent. per annum. This rate is paid for the ninth successive year. Carry forward reduced from £213,177 to £102,376.

GENATOSSAN, LTD.—Interim dividend reduced from 15 to 10 per cent.

JOHN WHITE (IMPREGNABLE BOOTS).—Final ordinary dividend 7½ per cent., making 12½ per cent., compared with 10 per cent. for 1936.

LOTUS, LTD.—Final dividend on ordinary shares 3½ per cent., making 6 per cent. for year, against 4½, making 7 per cent.

NEW YORK AND GENERAL TRUST.—Dividend of 6½ per cent. and 5 per cent. on the 5 per cent.

† Free of Income Tax.
cumulative preference stock are to be paid, representing arrears to January 3, 1937 and the normal dividend to January 3, 1938, respectively.

TILLING AND BRITISH AUTOMOBILE TRACTION.—Final ordinary dividend 5 per cent., making 10 per cent. for year, but payable on £4,000,000 against £3,333,333.

TOERANGIE RUBBER.—Final ordinary dividend 10 per cent., making 17½ per cent. for year to October 31, 1937, against 9 per cent.

Mineowners and the Public

PARLIAMENT re-assembled on Tuesday to face a programme of unusual length and interest. The overwhelming preoccupation of foreign affairs, with its swelling accompaniment of defence preparations, has re-asserted itself from the start. Finance, as always at this time of year, will take a large slice of Parliamentary time

inquiry has recommended the bringing about of desirable amalgamations by compulsion. The Samuel Commission in 1926, for example, decided to give the voluntary principle every opportunity to show that it could do what was necessary, and an Act was passed to facilitate the process. But SIR HERBERT (now LORD) SAMUEL was himself one of the most urgent supporters—it might also be said the author—of the compulsory amalgamation clauses of the 1930 Act, so disillusioned was he with the pitifully slow progress of voluntary co-operation. In any case, the principle of compulsory amalgamation was settled in 1930 by a Parliament composed of a Labour and Liberal House of Commons and a Conservative House of Lords. The present Bill does no more than make a second attempt to implement what was the manifest intention of Parliament eight years ago—surely not an excessively rash rate of progression. As for the so-called “safeguards,” they have merely been amended to prevent them from being, as they have been since 1930, absolute barriers in the way of any action being taken. When the mineowners in their published statement by implication bless the 1930 Act with its “safeguards,” they mean that they support the principle of compulsory amalgamation provided that, in practice, no compulsory amalgamations take place. It is an attitude to which, on the lips of less high-minded men, harsh descriptions might be applied.

The questions raised by the mineowners' opposition, however, extend beyond the bounds of the mining industry. The proposals for compulsory amalgamation, as has been pointed out, are only part of a wider whole. The remainder includes the nationalisation of royalties, which will meet a long-standing grievance of the mining industry and eventually reduce its burdens; the quota system, which has brought undoubted advantages to the shareholders in the industry; and the selling schemes, which have been instrumental in raising the price of coal. All these are matters in which the State is using its powers to put money in the pockets of the industry. There is no disposition on the mineowners' part to refuse the benefits of, say, the quotas. But while keeping the benefits of associa-

tion with the State, the industry wishes to repudiate that part of the bargain which is less to its liking. Moreover, coal is not the only industry to take this line. The steel industry, having been helped by tariffs, by Government assistance in negotiations with the international cartel, and by re-armament orders, showed the quality of its gratitude by its selfish refusal to assist in the erection of a steel plant at Jarrow, and by the high-handed attitude it has taken to complaints of excessive prices. The National Farmers' Union have gone even farther, for in addition to making no increased social contribution that can be detected in return for the benefits showered upon them in recent years, they have now taken to abusing the Government's milk policy, compounded as it is of subsidies, direct and concealed, because it does not go far enough for their taste.

It is high time that a stand was taken against a tendency which appears to aim at the conversion of Britain into a feudal baronage of vested interests. There is a serious danger that if a few industries are allowed too blatantly to win their battles against the community the reaction of the people may be a violent and socialistic one, in which the public-spirited industry may go down with the socially arrogant. Bourbonism of the type displayed by the mineowners invites a campaign to end “economic royalism” once and for all. Ever since the American Revolution, “No Taxation Without Representation” has been one of the cardinal principles of democratic government. It is time to evolve its latter-day equivalent in this new field of industrial organisation. No industry should be allowed to make use, for its own profit, of the State's compulsory powers without giving the State in return the right to insist that the industry shall serve not only its own interest but the wider interest of the commonwealth. Compulsory amalgamation of coal mines is a particular application of that broad cardinal principle of economic democracy. We trust that the Government will go no further than the concessions agreed to by MR STANLEY in Thursday's debate and will insist on keeping at least the main outline of the Bill intact.

Five Years of Hitler

THE fifth anniversary of HERR HITLER'S advent to power was celebrated on Sunday by all the performances that are dear to Nazi hearts, with the striking exception of a speech from the mouth of the FUEHRER himself. Preparations had been made to summon the Reichstag, but they were cancelled at the last moment. Why, on this historic occasion, has the oracle of Berchtesgaden been silent? Circumstantial report says that a severe internal crisis in the regime could not be resolved in time. The crisis appears to revolve round the person of the War Minister, FIELD-MARSHAL VON BLOMBERG, but much more important matters than personalities are involved. The constant struggle between the leaders of the Army and industry on the one hand and the Party extremists on the other, is coming once more to a head. The ultimate issue behind the immediate quarrels is, at home, between revolution and evolution; abroad, between peace and war. Which path is HERR HITLER going to choose? And how far may he now himself be at the mercy of forces which he has deliberately conjured up to serve his turn? The best approach to these questions is perhaps to be found in a glance at the first five years' balance sheet of the Third Reich.

In the economic field HERR HITLER had the same good fortune as PRESIDENT ROOSEVELT in the date of his advent to power. He took office at the depth of the depres-

sion; he has risen on the crest of the following wave of recurrent prosperity. There cannot be any question that Germany is far more prosperous than she was five years ago. In 1937 there were 48 per cent. more Germans at work than in 1932; savings banks deposits were 55 per cent. higher; the index of industrial production had more than doubled; steel output had increased by 173 per cent. All these are undeniable facts. But do they prove anything more than that Germany suffered a particularly severe depression? Is the boom HERR HITLER'S merit any more than the previous slump was DR BRUENING'S fault? For, if there is one thing that the figures do not prove, it is that dictatorial methods are preferable to democratic for securing economic progress. If the comparison be made, not with the bottom of the slump in 1932, but with the last year of comparative prosperity in 1929, the number of people employed in Germany has increased by rather less than 6 per cent., compared with over 12 per cent. in Great Britain. Similarly, the official index of industrial production three-quarters of the way through 1937 stood 24 per cent. above the 1929 level in Germany, but 26 per cent. higher in Great Britain. German steel output in 1937 was 6½ per cent. higher than in 1929; but British output was 34½ per cent. greater. Thus the figures establish little more than that Germany has shared in world recovery. The test of HERR HITLER'S economic claims may come if

and when in the world at large recovery is followed by a recession. On the Nazi theory and practice of political economy, the Reich, with her closed system and her artificially wide distribution of employment among her own people, ought at least to escape relatively lightly from another bout of commercial adversity. But this practical test of the Nazi theory has still to come.

The luck which has attended HERR HITLER up to now in the economic field has also smiled on him in politics. Events have proved that the edifice of the peace treaties contained a good deal of jerry-builder's work; and HERR HITLER has found quite a number of unbarred and unbolted doors to burst open, and lath-and-plaster walls to batter down with even an unmailed fist. But is the whole structure equally shoddy? Now that he has re-occupied the Rhineland and de-internationalised the German rivers, could the German bull in the Versailles china-shop go on to tilt at the territorial provisions of the treaty without incurring a grave risk of breaking his horns and perhaps even making acquaintance with the matador's sword? Here is another question with which HERR HITLER is confronted at the end of his first five years.

And then there is something that the Nazi firm's chartered accountants might not know whether to place to profit or to loss. When DR GOEBBELS sings out that “Germany has now recovered her honour,” a Western observer might prefer to put it that HERR HITLER'S Germany to-day is regarded abroad in the same way as KAISER WILHELM'S Germany or NAPOLEON III'S France. In shaking off the *Versailles Diktat* from the neck of the Reich, Nazidom has also shaken down our frail post-war attempt at constructing a just and peaceful international order. In their present frame of mind, the Nazis are glorying in this second act of destruction as lustily as in the first. But what next? The half-hearted imperfections, even the hypocrisies, that can be detected in “The Geneva Institution,” are a fine target for hostile propaganda. But the collapse of the League would not be the grand finale of our international history. A failure to achieve international order by rational and peaceful agreement would merely be the signal for another attempt at solving the international problem by the old—the very old—way of imposing peace by the force of a dominant nation. If the world's affairs are not managed constitutionally by the League—or by a code of international behaviour of which the Covenant is the only prototype—then they can only be governed tyrannically by one gang of Powers or another. And then everyone is bound to ask whether it will be by my gang or by yours. This brutal but unavoidable question is the spur that has goaded all the Powers to-day into a breakneck armaments race. Is this the road that HERR HITLER really wishes to follow to its dead end?

We wonder; because we believe—and here is our ray of hope—that the German people to-day have no more stomach for a great war against adversaries of their own calibre than have the French or the English or the Americans. The strength of this German wish to remain at peace must have been apparent to any Englishman who happened to be travelling in Germany last year at the time of the “Deutschland” affair. The Germans do not want to fight, and HERR HITLER certainly knows it. We believe that the FUEHRER has the will to peace. But a statesman who wills a certain end is perhaps not very likely to reach his goal if he persistently wills the means to that goal's opposite. This is the crux of HERR HITLER'S problem. He cannot secure for his people the inestimable boon of peace without paying the inevitable price for it. Peace cannot be had without sociability; and unhappily it must be said that the impalpable but potent bonds of sympathy that did subsist between the world and the Weimar Republic have been broken, one after another, by the impact of item after item in HERR HITLER'S policy: by his autarky, his militarism, his racialism, his anti-Semitism, his anti-liberalism, and his repressive campaign against both of the Christian Churches. The severance of the moral links with the outside world has been reckless, and it is a huge item to be set on the debit side of the account against HERR HITLER'S claims to have improved upon the position in which Germany found herself before he took the helm.

Is it still in the FUEHRER'S power to reverse the engines if he chooses? Could he, for example, modify his policy of autarky in the direction of the VAN ZEELAND report? Could he relax his persecution of Jews, Marxists, Catholics, Protestants and Liberals? Could he slow down the pace of his re-armament? If he could do at any rate some of these things to an appreciable extent, he could be sure of evoking in the Western countries so prompt and so warm a response that the broken moral links between Germany and the West would at once begin to re-form.

That way lies peace and happiness for all of us; and there are certain good omens. HERR HITLER'S instantaneous success in changing—vastly for the better—the atmosphere of German-Polish relations in 1934 surely shows that he could bring about the same beneficent change in German-Czech relations in 1938. Again, the vast new programme for the rebuilding of Berlin looks like an alternative to arms competition as a means of providing employment. Finally, we may guess that the present plight of Italy and Japan is no inducement to HERR HITLER to follow these associates of his—who are not yet quite his allies—along the treacherous path of aggressive military adventure. Which choice will the FUEHRER make? He can hardly much longer postpone the momentous decision.

Machinery in the Home

SINCE the War “commodious” has largely been displaced by “labour-saving” in the vocabulary of the house agent. Even the smallest modern house or flat has a relatively cheap, constant and reliable supply of gas or electric power, or both. An enormous impetus has consequently been given, in the home, to a process of mechanisation, which was applied to the operations of the workshop and the factory a century or more earlier. Domestic duties, such as the preparation of food, and the waging of war on dust and dirt, and the provision of domestic amenities, afford almost boundless scope for the replacement of human labour by the tireless energy of machines. No small part of the increased leisure enjoyed by housewives of all classes to-day, no less than by their breadwinners, is attributable

to the cheapening of the capital and running costs of a great variety of mechanical and domestic appliances, which has brought many of them within the reach of even the poorest classes of the community. In the present article we propose to examine some of the implications of the changes brought about by the widespread use of such appliances as the vacuum cleaner, the wringing machine, the sewing machine, and the growth of domestic amenities represented by the wireless set and the gramophone.

As early as 1854, a form of sewing machine was used in clothing factories, and mechanical carpet sweepers were fairly common by the end of last century. The domestic “Industrial Revolution,” however, dates largely from the early nineteen-hundreds. The Singer Sewing Machine

Company was marketing its machines for domestic use in 1905. The Gramophone Company, Limited, was registered (as the Gramophone and Typewriter Company, Limited) in 1900. In the earlier types of domestic machinery, motive power was supplied either by the user's hand or foot, or by a metal spring; the application of non-manual power has been largely a post-War development. Comprehensive figures of the output of domestic appliances are, unfortunately, unobtainable, but the statistics in the following table broadly suggest that, while sales of the older types of appliance, like the sewing-machine and the wringing-machine, have shown no sensational increase during the last few years, the output of mechanically operated appliances, such as the vacuum cleaner, the wireless set, the radiogramophone and the small domestic electric motor, has risen by leaps and bounds:—

OUTPUT OF PRINCIPAL HOUSEHOLD APPLIANCES

	(£'000)			
	1930	1933	1934	1935
Sewing machines (1)	3,524	2,693	2,684	2,735
Wringing machines (2)				
(domestic)	854	864	895	931
Refrigerating machinery				
(domestic)	(a)	(a)	397	(a)
Vacuum cleaners.....	524	2,112	2,540	3,119
Wireless sets	5,951	9,745	11,759	12,005
Radiogramophones and electrical reproducers	210	758	2,790	2,455
Fractional h.p. motors	331	575	736	770
Gramophones	2,364	(a)	340	278

(a) Not recorded separately.

(1) Includes boot and shoe-making machinery.

(2) For the most part hand-operated, no distinction being made between these and the electrically-driven types.

The increase in the number of mechanical aids adopted by the housewife in recent years is, in fact, closely associated with the increasing availability of electricity supplies. The number of electricity consumers rose from about 2.6 millions in 1927 to 7.76 millions in 1936. Domestic consumers account for 83 per cent. of the total, so that there is a market of some 6½ million households for the various electrical appliances which have been developed. The use of such appliances has been further stimulated by the introduction of the two-part electrical tariff (see *The Economist* of January 1, 1938, page 4), which makes the current charges of any additional electrical appliances adopted by the householder extremely low; and definitely encourages him to use electricity for as high a proportion as possible of his requirements of heat, light and power.

More particularly, the growth of mechanical aids has been expedited by great improvements in their technical efficiency and a rapid decrease in their prices. The original carpet-sweeper, for instance, cleaned only the surface of a carpet. The modern vacuum cleaner is far more flexible; it combines the functions of beating and sweeping, and it can be used to clean chair covers, furniture and curtains. Between 1930 and 1933, the production of vacuum cleaners rose from 37,550, valued at £524,000, to 247,333, valued at £2,112,000; and the average price fell from £13 19s. to £8 10s. In 1934, over 318,000 were produced at an average price of only £8; and in 1935 the output was 363,874 at an average price of £8 11s. The fall in price between 1930 and 1934 was due to a number of factors, but one of the most important was change in selling methods. In earlier years manufacturers relied almost wholly on door-to-door salesmen; to-day a fairly high proportion of sales is effected through dealers, and selling-costs have been considerably reduced—though there is still room for a good deal of further improvement in that respect.

Sales of refrigerators have advanced less rapidly than those of vacuum cleaners. Whereas vacuum cleaners are nearly all electrically operated, in the case of refrigerators the consumer usually takes a choice between electricity

and gas. In 1936, the total number of electric refrigerators in use was 140,000, of which perhaps 62,000 were installed in households and the remainder were used by commercial concerns, such as cafés, hotels and caterers. Total sales of electric refrigerators to domestic users in that year were about 15,000; but some 13,000 gas refrigerators were supplied to households in London alone, in the area covered by the Gas Light and Coke Company, working in conjunction with the Electrolux Company. Obviously the use of the refrigerator in Great Britain has not as yet passed very far beyond the embryonic stage. The total number of electric refrigerators in use represents less than 2 per cent. of the number of electricity consumers, whereas in the United States of America the proportion is 41.1 per cent. With one exception, however, the smallest refrigerator still costs about £29 to buy. Rapid progress in sales of refrigerators would seem to be contingent in the first place on a considerable cheapening of selling prices by mass production methods, and in the second on success in overcoming the popular misconception that refrigeration is a luxury for the summer months.

Many other novel and ingenious appliances have contributed to the development of the modern labour-saving home. Over 50,000 electric washing machines, for example, have been sold in this country. It is claimed that the purchase and running costs of the smaller models amount to no more than 5s. a week, which in many cases is less than a family's weekly laundry bill. None of these contrivances, however, is of such general importance in the modern household as the wireless set. The value of the output of gramophones fell from £2,364,000 in 1930 to £340,000 in 1934. In the same period, however, the value of radiogramophones produced rose from £210,000 to £2,790,000, and of wireless receiving sets from £5,951,000 to £11,759,000. The value of wireless sets produced in 1935 rose still further to £12,005,000, but there was a slight decline in radiogramophones to £2,455,000.

How near is the market for new radio sets, as distinct from replacements, to saturation point—that boggy of all new industries? This question is greatly agitating the wireless trade at the present time. Some pessimistic commentators have even estimated that, if the existing rate of increase in the number of current wireless licences is maintained, the total available market will have been supplied by the end of this year. On the other hand, experience shows that obsolescence of wireless sets is relatively rapid. In 1934, for example, sales for replacement appear to have exceeded "new" sales; for the estimated output of sets for the home market was 1,727,000, but the number of new wireless licences increased by only 807,000. The future effect on the market of the development of television is still largely an unknown quantity; but it can hardly be decisive until technical progress on the transmitting side has been accompanied by a cheapening of production sufficient to bring the price of televisions within the compass of the middle-class purse. Meanwhile, the industry is likely to remain sensitive at all times to fluctuations in general prosperity and popular purchasing power.

On the whole, there is little evidence that the mechanisation of the home is anywhere near the limit of its expansion. No sooner has one device become fairly general than another novelty appears. The number of households in Great Britain is unlikely to increase significantly, and may even begin to decline in the relatively near future; but all labour-saving appliances are susceptible of improvement in efficiency, design or price, and there is always room for new contrivances. As yet, none even of the most familiar machines has exhausted its market. Machinery in the home is an index of the standard of life no less than of man's inventive ingenuity. Only a marked setback in the national income could arrest its extension.

A Transport Experiment—II

Ulster's Road Monopoly

THE previous article which appeared in *The Economist* last week, described the origins of the Northern Ireland Road Transport Board. The Board does not possess a monopoly of all forms of public transport in Northern Ireland, as the railways continue to operate independently (though their receipts and those of the Board are pooled) and the passenger transport undertaking of the Belfast Corporation is entirely excluded from the scheme. But the Board is unique in that it operates a goods service as well as a passenger service and has a monopoly (except, of course, for private vehicles) in both forms of road transport outside the City of Belfast.

The last article detailed some of the criticisms brought by the superseded road transport operators against the terms on which, and the manner by which, their undertakings were taken over by the Board. One of the criticisms mentioned was that the long delay in publishing any accounts made it impossible to form an estimate of the Board's performance or of the prospects of the various classes of stock issued in compensation for undertakings purchased. The delay was due to the difficulties encountered in preparing the pooling scheme, which was not approved until Christmas Eve, 1937. This obstacle removed, the Board's accounts for its first year to September 30, 1936, have now been published in a most comprehensive form. The former operators, however, have not been alone in making complaints; the public has also made itself heard. What is more, some members of the public have taken action; the statistics both of private cars and of private lorries show increases during the Board's existence larger than can reasonably be explained by trade recovery. This ability to expand private transport is an invaluable check upon any monopoly of public transport, however complete. Indeed, the Board complain that their monopoly is being infringed "either by thinly veiled subterfuge or by defiance" of the Act. Even apart from attempts to evade the Act, it is questionable how far the decision of traders to buy their own vehicles was the product of actual experience of the Board's operation or of possibly exaggerated anticipation. The short time that the Board has been at work, and the still shorter time that its goods services have been in full operation, make the latter alternative the more probable. So far, at least, as passenger services are concerned, the Board can make out a strong reply to public criticism, for the existing services have been retained and the Board has reduced many more fares than it has increased. For example, of fares from Belfast to 590 points in Northern Ireland, 52 per cent. of the single fares and 61 per cent. of the return fares have been reduced, and only 11 per cent. and 13 per cent., respectively, increased.

The criticisms of the Board's goods services appear to have rather more substance. There is no doubt that the withdrawal of individual undertakings with whose managers the local trader or manufacturer was personally acquainted, and the substitution of an impersonal and remote Board, led at least to a belief in the trading community that the transport facilities available to them were being curtailed. These and other complaints led to the appointment by the Government of an Investigation Committee, which reported in September, 1937. The Committee found that there had been "grave deficiencies of administration in several rural areas" in the Board's freight services. They ascribed these deficiencies to "over-centralisation, the lack of knowledge shown by drivers and managers of local conditions and geography, the use of excessively large lorries, and to a general want of familiarity with rural and farming conditions and needs."

It will be noticed that excessive charges are not mentioned, and in spite of its severe strictures the Committee did not suggest that the experiment should be abandoned, but rather that the Board should be allowed a period of four months in which to remedy the defects that had been found to exist. This four-month period has barely yet expired.

The complaints that have been made against the Board seem in the main to be ascribable to its teething troubles. The organisation of a monopoly of road goods transport, in particular, was a matter on which there were no precedents for the Board to follow, and it was also handicapped by a lack of personnel experienced in handling this business on a large scale. It is only reasonable to estimate that with the passage of time, and under the pressure of watchful criticism, the Board will succeed in establishing order out of the chaos that existed at the time it took over.

It is of more fundamental importance to inquire whether the Board has succeeded in accomplishing the wider objects of economy and co-ordination for which it was brought into existence. In the matter of economy the Board has already achieved some results. Both in passenger and goods transport it has proved possible not only to standardise the design of vehicles but also considerably to reduce their numbers. In the passenger field the Board has succeeded in reducing the 700 buses it took over to 480 (of which 125 are new) without any reduction, on balance, in the services provided. The economies in goods transport have been even greater. The Board purchased some 1,420 lorries, and the number now being operated is 580. These economies mean, of course, that a considerably higher average payload is being carried in each vehicle. Since the present vehicles are probably larger, on the average, than those taken over, it does not automatically follow that the margin between costs and receipts has been increased. But the reduction in the number of vehicles is so large, and labour forms so considerable a portion of total expenses, that there is at the least a very strong presumption that efficiency has been increased.

The achievement of a good working ratio, however, would not be the end of the Board's task. Co-ordination implies more than technical efficiency. At present there are four transport services from Belfast to a great many places in Northern Ireland: rail passenger, rail goods, road passenger and road goods; each of these four services could be running with the highest efficiency and there might yet be gross waste in the transport system of the country as a whole. It is in respect of co-ordination that the Board has done—or has had time to do—least since its inception. In passenger traffic, return tickets have been made valid by both road and rail, and joint timetables have been issued. A consolidated scale of rates has also been issued for goods traffic by road. The Board has begun to make considerable use of railway premises for assembling its traffic, the central depot in Belfast, for example, being located at one of the railway stations. The Board also dispatches goods in sealed wagons by rail when this method shows a saving in cost to the Board without a loss of time to the consignor. But there has not yet been a general concerted attempt to direct traffic towards the services best suited to carry it. For example, there would seem to be a *prima facie* case for the abandonment of long-distance road services in exchange for the closing down of unremunerative short branch railways. Co-ordinated action of this sort has presumably been under consideration by the Board, but little of a definite

nature has been done; and, indeed, so long as the Board and the several railways continue their separate existences, with or without the pooling of receipts, it is to be expected that there will be strong resistance to any such complete co-ordination.

In addition to complaints from the public, it is now apparent that the Board's financial results have been unfavourable. Receipts in the first year, including a contribution of £5,850 from the railway companies under the pooling scheme, amounted to £676,731. Working expenses amounted to £717,569. Included in this total is an item of £117,969 for depreciation, against a total capital expenditure of £1,183,575. There was therefore a working loss of £40,838, which was increased to £71,583 by other items, of which the largest was interest on sums due for undertakings acquired but not yet paid for. Finally, the interest on the Board's stock, which has been paid out of capital in accordance with an Act passed for the purpose, brought the debit balance for the year up to £94,048. The issued capital of the Board at the end of the year was £807,278, but there were loans and creditors amounting to a further £462,769. It is therefore impossible to state with any precision the ratio of the loss to the capital of the Board, but the working loss cannot be reckoned, on the most favourable basis, at less than about 3½ per cent. It is rumoured in Belfast that the results of the second year, in which the transitional problems of taking over undertakings were still being encountered, were no more favourable than the first.

The first two years of this ambitious scheme of amalgamation have thus, on the financial as well as the technical side, illustrated the initial difficulties of organising a trans-

port monopoly far more clearly than the benefits claimed for it. It would, however, be very premature to say that the experiment has been a failure. Two years is a very short time to straighten out a position of the complexity of that with which the Board was faced, and it will be prudent to wait for another period at least as long before passing even a provisional judgment on the work of the Board.

The critic would also do well to remember the circumstances in which the Board took over. It is probable that, when the Act was passed, the transport system of Northern Ireland as a whole, road and rail together, was not earning a sufficient revenue to pay fair wages and fair interest and to maintain the capital invested. In the strictest sense it was running at a loss. If this is so, the Board must show not merely the same performance as its predecessors but a considerably greater efficiency if it is to keep up its depreciation and pay the prescribed interest on its capital stock.

In its first two years the Board has undoubtedly disappointed its sponsors. But the difficulties of organisation have been immensely greater than in other experiments of the sort and the Board's third year, which is now in progress, will be the first in which anything like a normal relation between revenue and expenditure can be expected. Given a reasonable mixture of good management and good luck the Board's chief difficulties are behind it and its main achievements ahead. The best service that the Board can now render to its friends both in Northern Ireland and in Great Britain is to put its finances in order and demonstrate the economies that are obtainable from an efficient and effectively co-ordinated transport system.

Topics of the Week

Limiting Air Warfare.—It was revealed by the Foreign Secretary, in the course of a debate in the House of Commons on Wednesday on a Labour motion, that the British Government were preparing to take the initiative in inviting the Powers to conclude an international agreement for the limitation of air warfare, particularly in relation to the bombing of civilian populations. The subject has been under thorough consideration by the different Departments of the Government for some months past, and though no approach has apparently yet been made to other Governments, Mr Eden mentioned that he was confident of French agreement, and that since Herr Hitler had also expressed himself in favour of such an endeavour, German support would also presumably be forthcoming. He added with some significance that although Germany was potentially the greatest military power in Europe, she was also in such a geographical position that she was perhaps more open than any other nation in Europe to air attack. Any such effort is, of course, entirely welcome. It is only realistic at this time of day to have doubts about the extent to which an agreement to outlaw the bombing of civilian populations would actually be observed under the strain of war. But that is no reason at all for failing to make the attempt, or for refraining from putting it on record that at least the democratic Powers realise the appalling consequences of unlimited aggression from the air against the non-combatants of a modern industrial nation, and are prepared to forswear this dreadful weapon.

The Government and the van Zeeland Report.—In the House of Commons, on February 1st, the Prime Minister stated that the time was not ripe for debating the Report of M. van Zeeland on international economic co-operation, or for acting upon it until its recommendations had been further studied and discussed among the Powers concerned. He agreed, however, that primary responsibility for implementing the Report rested with

the British and French Governments, who had initiated M. van Zeeland's world tour. Though he refused to commit the Cabinet to a veto on further import duties or loans to totalitarian States, he suggested that prolonged delay in working out specific lines of action was unlikely. Indeed, the relaxation of the Government's restrictions on foreign lending (discussed below), which was also announced on Tuesday, was claimed by Sir John Simon to be on the lines of M. van Zeeland's proposals.

The Chancellor had already expressed at Leeds on the previous Saturday his gratitude to the Belgian statesman for the recommendations of his Report, which were calculated in Sir John's view to further the British policy of economic appeasement. Whether in fact British policy has been consistently directed to the reduction of obstacles to world trade, as Sir John claimed, may fairly be questioned. There is no doubt, however, that the effect of the van Zeeland Report, coming when the Anglo-American commercial negotiations were in full swing, has been to cause the Government publicly to hoist the colours of freer trade. There may be delays and disappointments, because the world problem is obdurately difficult, but surely there ought not to be outright failure.

Freer Foreign Lending.—"The present position of our exchanges" was described by the Chancellor of the Exchequer last Tuesday as the compelling cause of his decision to widen the mesh of the strainer through which for the last five and a half years all public applications to export British capital have been required to pass. Clearly, this welcome development has taken place in part on political grounds. Indeed, the economic reasons put forward are weak, for the Treasury must be as cognizant as anyone else that the present strength of the sterling exchange is due not to a favourable British

ance of payments but chiefly to movements of more or "hot" money. On the other hand, the announcement was made on the first parliamentary day after the publication of the van Zeeland Report. Would-be capitalists are still "requested" to submit their plans to the Foreign Transactions Advisory Committee, and without Committee's *imprimatur* they will still discover that technical facilities of the market are unavailable. But Committee itself will allow greater latitude to all applications except those on behalf of foreign Governments, foreign local or public authorities or State-controlled organisations. In particular, the Committee will view more sympathetically applications for long-term loans to borrowers domiciled in any part of the British Empire to acquire assets or develop enterprise in foreign countries in transactions involving the purchase and repatriation of large blocks of foreign-owned securities. Subject to the Treasury's power to re-revise a policy which has never had a statutory basis, this week's decision largely spells the end of the "embargo" as a primarily financial and economic weapon. Henceforth, it will be effective mainly in the border-land between finance and politics. And in view of the change in the international scene since "control" was first imposed on June 30, 1932, there may now more to be said for a political than an economic restriction scheme in the capital market.

The Power of the Purse.—The House of Commons voted on Tuesday, as one of its first pieces of business after the recess, an amended Standing Order dealing with the procedure on Bills whose main object is to create a charge upon the public revenue. Hitherto a distinction has been drawn between such Bills, whose introduction has to be preceded by the passage of a money resolution, and Bills in which public expenditure is only subsidiary. The distinction has proved a difficult one to draw in particular cases, but the main objection to the procedure hitherto in force has been that the debate on a money Bill is necessarily confined within the limits defined by the money resolution, and even the most general criticisms of a measure have sometimes been ruled out of order, on the ground that they advocated public expenditure which was not authorised by the money resolution. Henceforth the second reading of such Bills is to be taken before the money resolution. This will preserve the vital principle—upon which the technical success of British parliamentary democracy very largely depends—that expenditure can be proposed only by the Crown. But money Bills nowadays cover so wide a range that a rigid application of the principle would prevent free discussion of many important aspects of the Government's policies, and the change will widen the scope for discussion without opening the door to a loose control of public funds. The reform is a small one, but one of considerable importance, which was rightly welcomed by representatives of all parties.
