Defence Policy.—The way of defence is a rock-trewn path for the Government. In the last three years over 30,000 acres of agricultural land have been acquired for service purposes, frequently, it has been alleged, to the possible detriment of food production and rural amenities. As yet there has been no overt subordination of all other interests in this country to the needs of defence. It was accordingly necessary for the Prime Minister to soothe the growing alarm of the Council for the Preservation of Rural England and other peacefully interested bodies and persons by announcing in a letter to Lord Herbert a new procedure, whereby each Defence Department would consider all interests of national importance, aesthetic no less than economic, before selecting sites. Less satisfactory in the context of defence policy was the statement made by Sir Thomas Inskip in the House of Commons on February 1st about the storage of food. His reply to questioning left the impression that no decision concerning the storage of wheat and flour against war-time needs was immediately likely,

and a suspicion that the storage issue might in fact be relegated to a position of dangerous subordination to other parts of Government policy.

In addition, opinion (informed and otherwise) has yet to be persuaded that even if criticisms of the progress of the air programme are exaggerated, they are wholly without foundation. Regulations for local air raid precautions, including evacuation proposals but no general guidance about food supplies, have meanwhile been issued by the Home Office. Although substantial doubt remains about their efficacy in attacks where explosive, incendiary and gas bombs are used together, the regulations seem reasonably adequate in detail, within the limits of declared policy, which exclude the public provision of shelters on the ground that they are prohibitively expensive.

Films and the Bill.—The Parliamentary recess has brought no relief to the situation in the British film industry. When Standing Committee "A" adjourned on Christmas Eve considerable progress had been made with the Government's Film Bill, but the conviction was growing among members of Parliament, the trade and the public that the disease was far more serious than the doctors in attendance had diagnosed. The most important change in the new Bill, by comparison with the existing law, is the introduction of the minimum cost principle for British films intended to satisfy renters' quota. For exhibitors' quota, however, exhibitors are to be able to draw not merely on these films but also on a number of others made regardless of price—some being above and others below the minimum cost standard. It is generally agreed that the future of a film-production industry in this country will be determined by the inducement offered for the making of these "voluntary" films. Primarily, that inducement will be the profit-earning capacity of British pictures, and any other motive can, for all practical purposes, be ignored. "Compulsory" films will not amount to many more than eighty subjects during the next year or two, whereas the actual output of British films in the last full year was over 200 subjects, and the present capacity of the studios and personnel is much nearer 300 subjects. What commercial advantage can be expected from investment in the making of "voluntary" films in the near future?

If the results of the new measure prove disappointing, the Government will not be free from blame. The appointment of the Moyne Committee was generally and justifiably applauded. But why were the Committee's principal recommendations, on the subject of a Films Commission and on finance, rejected or ignored? Nearly a year ago Dr Burgin, speaking for the Board of Trade, exhorted the trade to get together and produce an agreed scheme for the future conduct of the British film industry. "Unless you can prove your capacity to manage yourselves," said the Minister, in effect, "you will be managed from without." Perfunctory efforts were made to align exhibitors, American and British renters, and producers, on a common policy, but without success. If the Government's scheme is the outcome, it would seem that the sword flourished by Dr Burgin last March was never more than a painted lath. There is still time, however, to revive, on the Report stage of the Bill, the principal recommendation of the Moyne Committee for a Films Commission—small in number and having wide powers of inquiry and investigation on its own initiative, but operating in close collaboration with the Board of Trade. It might make some effective effort to reduce the number of imported films which, more than any other cause, is responsible for the failure of the protection which the special quota system was designed to give to British films. There is increasing support, both in the trade and outside, for the view that reciprocity is a fundamental requirement for a British film industry seeking to expand to competitive dimensions. Several schemes designed to achieve this object are known to the authorities.

A Films Commission would be a suitable body for selecting the scheme likely to be most effective in realising this object and the measures for bringing it into force. The same body might then take steps to remove the hostility which now exists in the City to the provision of new financial assistance for film production.

* * *

Piracy Again.—The battle of Teruel is neither lost nor won, but seems to have arrived at another stalemate. The insurgent forces have attempted an out-flanking movement round both sides of the town of Teruel, while the Government have been concentrating on an attempt to take the rebels in the rear and sever their communications with Saragossa. Neither side, however, seems to have been able to press its attack home. Disappointment and frustration on General Franco's part may be read into the continued intensification of air warfare, and especially into the murderous raids on Barcelona, Valencia and other Government towns. Two raids on Barcelona on Sunday morning exacted a heavy death toll among civilians, particularly children, and it is impossible not to draw the conclusion from this terrorism that General Franco is beginning to despair of ever having a friendly Spanish people to rule over. Meanwhile, there has been a recrudescence of submarine piracy. A Dutch steamer was reported sunk on January 12th, and a British steamer reported an unsuccessful attack on January 26th. On Monday of this week the British cargo vessel *Endymion* was torpedoed on the high seas 16 miles from the coast of Government Spain, and sank in four minutes, with the feared loss of eleven lives. The ship was engaged in carrying coal to Cartagena, and it had on board a Swedish control agent of the Non-Intervention Committee, who is one of those missing. This outrage has naturally once more brought to the forefront the whole question of piracy. It is now revealed that the three Nyon powers, Britain, France and Italy, mutually agreed to reduce their patrols at the New Year, but this step is now being reversed, and Mr Eden held a meeting with the French and Italian Ambassadors on Wednesday, at which British proposals for tightening up the measures against the pirates were put forward. It is not the least disturbing part of the whole matter that no explanation has ever been forthcoming of how it has proved possible for the insurgents, who have no Spanish submarines in their possession, to torpedo neutral shipping. Whatever the origin and present nationality of these predatory submarines, however, it is clearly essential both for the safety of commerce and for the prestige of British policy that they should be decisively suppressed. Drastic measures are the more necessary since there have been ominous signs in recent weeks of a recrudescence of the desire on the part of General Franco's Fascist ally to intervene more actively on his behalf. The only way to prevent such a disastrous development is to make it clear that any further interferences with the uneasy international equilibrium in the Western Mediterranean will be met by firm action on the part of the democratic Powers.

* * *

American Naval Re-armament.—President Roosevelt's long-awaited Message to Congress recommending increased naval armaments was delivered on Friday of last week. As Commander-in-Chief of the Army and Navy of the United States, the President declared it to be his duty to report that "our national defence is, in the light of the increasing armaments of other nations, inadequate for the purpose of national security, and requires increase for that reason." His main recommendation was that the naval building programme already authorised be increased by 20 per cent., and this general principle has subsequently been made specific by a Bill to authorise the construction of three battleships, two aircraft carriers, eight cruisers, twenty-five destroyers, nine submarines, one thousand aeroplanes and twenty-two auxiliary vessels. Under the American system, however, Congressional authorisation of a building programme is given for a term of years, and construction does not begin until later and more detailed Appropriation Acts have been passed. Out of this large new

programme the President has asked Congress to appropriate funds this year only for two additional battleships, two new cruisers, and certain experimental construction of new types of small vessels. One significant omission from the announcements was that of the tonnage of the new battleships. The omission is due to the lack of precise news about Japan's building plans. There is strong suspicion, both in Great Britain and in America, that Japan is building battleships of a tonnage in excess of the limit of 35,000 tons laid down in the Washington and London Treaties. For the poorest and weakest of the three large naval Powers to start a new competition in the size, armament and cost of capital ships might seem foolish. But the Japanese Navy had plans for such over-size battleships at the time of the Washington Conference in 1921, and it would be only in accordance with the ways of Admiralties if these old plans were now taken out of the pigeon-holes, dusted off and modernised. Moreover, there is always the possibility that the Japanese Navy may have the ambition to compel the United States to build capital ships larger than could be taken through the Panama Canal. It has proved impossible to obtain either confirmation or denial of these suspicions of Japanese intentions, and it is probable that the details of capital construction, both in Great Britain and in the United States, will be deferred until greater certainty emerges.

* * *

There has been little disagreement in the United States about the necessity for the increased building programme, but a lively debate has arisen on its political implications. It is no secret that there is close technical collaboration between the British and American Navies in the matter of their expansion and re-equipment, and an attempt is being made by the American isolationists to argue that this collaboration has reached a stage of definite commitments on naval support, or of a "tacit alliance." These claims have been roundly denied by the Administration, and there is no reason to believe that there is any substance in them. But the vehemence of the attack and the completeness of the denial that has had to be issued serve as a useful reminder of the strength of the opinion that would resist any attempt to tie the United States, however loosely, to the policies of other Powers. It is easy from the outside to argue that the self-interest of America will compel her sooner or later to align herself with the democracies of the world, but within the United States logic of this kind is opposed by the passionate desire to ignore the world, and confused by the wishful thinking to which it gives rise. We in Great Britain should be the very last to complain of this American attitude, for, making all allowances for different circumstances (of which three thousand miles of ocean are the greatest), America's attitude to the rest of the world bears a strong family resemblance to Great Britain's attitude towards Europe. British policy yields reluctantly to the pressure of realism, and the reluctance is no less, and no less natural, on the other side of the Atlantic.

* * *

General Matsui's Kind Words.—The Japanese do nothing by halves. While with one hand they are stirring up America, they can still find energy for some vigorous pokes with the other hand at the torpid body of John Bull. Is the old boy dead, or is he perchance only sleeping? General Matsui appears to be irresistibly curious to find out. At least, we can hardly account otherwise for his piquant stroke of timing the kind words that he uttered for our British benefit this week so as to coincide with the equally remarkable silence of the Japanese Admiralty in regard to the tonnage of their next batch of capital ships. The effect of this Japanese silence upon the American naval programme is discussed elsewhere. As for General Matsui, he has told us that if Great Britain goes beyond a policy of simply defending her interests in China and makes a determined stand to maintain her political and economic relations with "the Kuomintang"—i.e. with China and with the Chinese Government—then a conflict of a very serious nature may arise between Great Britain and Japan. General Matsui lodges two specific complaints at our door. The Chinese exchange is still bearing up well, and munitions are still reaching the Chinese forces from abroad. So the Japanese

Commander-in-Chief's warning to us amounts to this: if we do not now actively assist Japan in her policy of making it impossible for the lawful Government of China to carry on in the face of Japanese aggression, it will be the worse for us. General Matsui has, of course, to be taken as seriously in 1938 as General Ludendorff had to be taken in 1917; and the German general's achievement in that year is a formidable one for the Japanese general to emulate. Ludendorff achieved the impossible: he brought America and England together as comrades-in-arms against his own country. That is hardly in the picture to-day, yet General Matsui need not quite despair. If the impossible has been achieved once, the thing can perhaps be done a second time. Meanwhile, we have been considerably forewarned of what we have to expect. We can only reply to the general that he may yet succeed in making even the British people turn bellicose if he perseveres with it.

* * *

Marking Time at Geneva.—The sessions of the League Council at Geneva during the past few days have been mainly concerned with two serious items on its agenda: the actual plight of China and the prospective plight of the Jewish citizens of Roumania. There has also been a session of the Committee of Twenty-eight on the "reform" of the Covenant. The common keynote of all these proceedings has been "no change." Neither Jewry nor Mr Wellington Koo has obtained much satisfaction from the Council; on the other hand, on the committee for "reform," the Covenant seems to be standing the racket. This committee reflects to-day a reversal of the positions which the Great Powers and the small countries adopted during the Italo-Abyssinian war. At that stage the small countries were all for carrying out the Covenant, while the British and French Governments, in differing degrees, hung back. The Committee of Twenty-eight was in fact largely created to serve as a smoke-screen to divert public attention while France and Great Britain negotiated with Italy. To-day the smoke is smarting in the eyes and stinging in the throats of the clever men who lit the fire; for the ex-neutrals—having been warned by the fate of Abyssinia what might be their own fate in similar circumstances—have been taking seriously the idea of suspending the operation of Article XVI. This idea has been mooted at Geneva during the past week by Holland and Sweden, with support from Belgium and Poland. The integrity of the Covenant has, however, found an unexpectedly vigorous advocacy this time not only from another group of weaker countries—e.g. China and Spain—who are the victims of aggression at this moment, but also from M. Paul-Boncour on behalf of France and from Lord Cranborne on behalf of the United Kingdom. We may reflect with some bitterness that if only these two Great Powers had acted in 1936 as bravely as they are speaking now, then by this time the policy of aggression would have been shown to be as inexpedient as it is immoral,

* * *

A Turn of the Screw in Greece.—"The dictatorial Metaxas regime abandons its previous measures and enters upon a new period—the period of severity." This is the Greek dictator's reply to the distribution of leaflets criticising his regime and exhorting the Greek people to re-assume their national liberty. Twelve party leaders and three military officers already know the difference between the new chapter of the Metaxas regime and the last. These fifteen critics have been promptly arrested and interned in one of those Aegean islands that were once upon a time the Roman Emperors' favourite dumping-ground for political undesirables. The present autocrat of the Aegean has been no respecter of persons, for his victims on this occasion include the Venezelist M. Sophoulis, the Independent Republican M. Mikhalakopoulos, the Progressive M. Kaphandaris, and the Conservative Monarchist M. Theotokis. Of these "men of the past," three are past Prime Ministers. It can hardly be imagined that this highhandedness is agreeable to the King of the Hellenes, who came to the throne with a mission to compose the long political feud by which Greece has been tearing herself to pieces for the past twenty-three years. The King would certainly have succeeded in this if he had been given a fair chance; and it is unquestionable that his was not merely the better, but in truth the only, way of restoring to his country the domestic peace which she so urgently needs if she is to weather the gathering international storm. Political ills have never been cured by sheer repression in any country—and least of all in so politically minded a country as Greece. We look forward with some apprehension to the period of "mercilessness" which, according to General Metaxas' proclamation, is to follow next if mere "severity" does not do the trick—and if the Greek nation continues to allow his dictatorship to continue.

Trinidad Riots Report.—The Report of the Royal Commission on the riots that broke out in Trinidad last June reveals a sorry page in British imperial history. A vacillating Governor and his chief official subordinate, who shares the Commission's censure, managed to adopt, it seems, just that policy or mixture of policies best calculated to inflame and prolong the outbreak. But the main value of the report lies in its analysis of the causes of the trouble

Member of the Federal Reserve System, the New York Clearing House Association and of the Federal Deposit Insurance Corporation

and its proposals for their remedy. The causes, in brief, were the pitifully low living standards of the native proletariat attached to the oil wells and sugar plantations—standards that had been further depressed by a sharp rise in the cost of living—and the complete absence of machinery for collective bargaining. The Commissioners recommend wide and trenchant reforms. These include the establishment of a separate Public Health Division staffed by full-time qualified officers; Government assistance to native labourers' housing, and what is virtually a slum clearance campaign; the improvement of public sanitation; encouragement to land settlement; educational reforms; and the organisation of trade unions under official guidance. British public opinion will press for the vigorous implementation of this candid report, and the writing of a fairer page in the relations between British authority and the native peoples committed to its trust.

Mr de Valera and Partition.—Hopes of a fruitful and far-reaching Anglo-Irish settlement seem to have dwindled a little. Mr Malcolm MacDonald was severely non-committal in his replies in the House on Tuesday. Almost everything depends, it is now clear, on how far the partition problem will be allowed to thwart agreement on economic and defence issues. Mr de Valera's own plan for Irish reunion, disclosed in Press interviews, is hardly the "middle way" likely to secure all-round acceptance. He proposes that Ulster should retain its present local Parliament and powers, but that the reserved powers now exercised by Parliament at Westminster should be transferred to an all-Ireland Parliament, elected by proportional representation. It would be surprising if any such sweeping scheme proved acceptable to Lord Craigavon.

The Dominions and American Trade.—The necessary sub-structure of a far-reaching Anglo-American trade agreement has been consolidated by recent developments that concern the British Dominions. First, the United States Administration has formally announced its intention to seek a new trade treaty with Canada to replace the existing agreement, which expires next January 1st. Secondly, the Australian Government has declared that it will open negotiations with Washington by requesting a trade agreement under the American Act. This follows a welcome *détente* in Australo-American commercial relations. Australia having almost totally abandoned its "trade diversion" policy, the United States has responded in the same spirit by allowing Australia the most-favoured-nation instead of the maximum tariff. Canberra has also announced that a delegation headed by Sir Earle Page will go to London in March to discuss a revision of Australia's

Ottawa pact; an expert party will leave earlier in order to spend time in the United States *en route*, and the whole delegation will probably return from London *via* Washington. The pessimists who deemed imperial preference an insurmountable obstacle to an Anglo-American trade pact may, after all, be proved wide of the mark.

The Population Bill.—The Population (Statistics) Bill met with a welcome on its Committee stage on Tuesday which contrasted strongly with the storms of its first appearance. The change was entirely due to the sweeping amendments which the Minister of Health proposed. These amendments were discussed in *The Economist* of December 11th, and they have the effect of converting the Bill into a much more limited and precise measure. Indeed, it is questionable whether the Minister has not conceded too much to the views of the Bill's opponents and unnecessarily limited the extent to which the collection of information on changes in the population could be developed without further statutory action. This criticism received added justification from the adoption by the Minister of a private amendment limiting the term of the Bill to ten years. It is possible, however, that this may prove a blessing in disguise, as the operation of the Bill in the next ten years may convince even Mr A. P. Herbert that it is possible to ask questions on this subject without outraging public opinion, and a much wider measure may then prove possible.

Movement of Industry.—It still remains to be seen whether the advocates of increased State interference to guide the location of industry for the protection and furtherance of national needs and amenities will succeed in convincing the Royal Commission on the Geographical Distribution of the Industrial Population against the *laissez faire* arguments in support of individual choice. Meanwhile, the evidence submitted to the Royal Commission has broadly revealed a state of affairs which, if not found remediable by State action, offers a gloomy prospect for the immediate future when the evils of unplanned congestion are likely to be intensified. Evidence on behalf of the Ministry of Labour on February 2nd showed that 26 per cent. of the insured population of Great Britain in July, 1937, was resident in London and the Home Counties, compared with 22 per cent. in July, 1923. In fourteen years the insured population of this area has increased 42.7 per cent., or nearly twice as fast as in Great Britain as a whole. This tendency has been largely due to the expansion of comparatively new, light and varied industries, producing mainly for home consumption and only slightly affected by the last depression; and to the drift of these enterprises to the fringes of London in close proximity to the metropolitan market. A movement away from the areas of heavy, depressed, export trades has taken place *pari passu* with this new industrial concentration; and not the least of the obstacles to the prevention of a long drawn-out agony of decline in the Special Areas by the establishment of new industries is this depletion by migration of the more vigorous elements among their experienced industrial population. In London and the Home Counties it is the character rather than the magnitude of the new settlements—the lack of co-ordination between industrial and residential development and the destruction of amenities—which cries out most urgently for redress.

Census of Road Vehicles.—The annual census of mechanically-propelled road vehicles for 1937 shows that during the quarter ended September 30, 1937, there were 2,938,485 vehicles on the road, an increase of 6.1 per cent. over the figure for the previous year. During the year, 486,269 new vehicles were registered, compared with 449,339 in the 12 months ended September, 1936. The following table shows the growth of the number of

vehicles of each kind in recent years:—

Year	Cars Taxed on Horse power	Motor Cycles	Hackney Vehicles		Goods Vehicles	Other Vehicles	Total
			Other than Tram- cars	Tram- cars			
1927	786,610	681,410	95,526	14,413	282,905	39,102	1,899,966
1928	884,645	712,583	95,412	13,945	305,744	40,210	2,052,539
1929	980,886	731,298	97,997	13,880	329,794	41,857	2,195,712
1930	1,056,214	734,319	101,131	13,665	348,441	43,556	2,287,326
1931	1,083,457	626,649	87,464	13,014	360,614	42,524	2,213,722
1932	1,127,681	599,904	84,950	12,468	370,100	44,464	2,239,567
1933	1,203,245	562,656	85,077	12,000	387,487	46,861	2,297,326
1934	1,308,425	548,461	85,129	11,516	413,320	50,057	2,416,908
1935	1,477,378	516,567	85,547	10,872	434,723	55,940	2,581,027
1936	1,642,850	505,779	86,009	10,260	459,227	64,481	2,768,606
1937	1,798,105	487,578	85,766	9,657	478,922	78,457	2,938,485

The fact that the number of vehicles on the road has increased by over 1,000,000 since 1927, and that it continues to increase at the rate of some 500 vehicles per day, lends support to the claim of the Delegation which recently inspected the German motor roads, that it is urgently necessary to modernise British roads. The Delegation's Report stresses two aspects of the present situation on British roads—the continued high rate of mortality and injury from accident, and the restraint upon the natural development of those businesses and industries which are dependent on ample, rapid and safe road transport facilities. It is for the Minister of Transport to decide whether the German example is applicable to Great Britain, or whether the modernisation of our existing system is sufficient. Perhaps the best policy would be a typical British compromise between the two.

Britain and Canada.—The announcement that Canada and the United States would seek a renewal and enlargement of their trade agreement came as no surprise. Concessions by Canada in the British market were indispensable to the consummation of an Anglo-American trade treaty; and she could not sacrifice valuable preferential margins without securing some compensation in American markets. Important classes of Canadian producers have come to regard the preferences secured by the Anglo-Canadian agreement as sheet-anchors of their prosperity. Since 1932 there has been a remarkable expansion of Canada's export trade to Britain. But there has not been a corresponding increase in British exports to Canada, as the following data reveal:—

Fiscal Year ending March 31	Canadian Exports to the U.K.	Exports to Canada from the U.K.
1932	174,043,725	106,371,779
1936	321,556,798	117,874,822
1937	407,996,000	129,534,000

How valuable the Anglo-Canadian agreements have been to certain Canadian producers can be seen below:—

Canadian Exports to the U.K.	Fiscal Year	
	1931-32	1936-37
Wood, manufactured and unmanu- factured	3,252,621	23,626,490
Bacon and hams	1,751,231	27,839,974
Canned salmon	3,646,393	6,969,946
Leather and manufactures of leather...	1,706,827	2,803,000
Canned vegetables and pickles	1,966,655	2,803,000
Fruits—mostly apples	6,194,367	10,452,283*
Copper	3,051,033	25,500,000
Rubber products	1,894,500	4,600,000

* The fruit figures are for the year 1935-36.

The Canadian Government will have to secure from Washington, for Canadian fish, lumber, cattle and other natural products, tariff concessions which can be fairly represented to voters as compensating for any sacrifices of preferential margins that the Anglo-American treaty may involve.

Canada and the United States.—In order to secure tariff concessions, Canada must be prepared to give better terms to the industrial products of the United States. The following table gives some detailed data about trade

between Canada and the United States in 1936-37:—

U.S. Exports to Canada Year ended March 31, 1937 (\$ millions)		Canadian Exports to U.S. Year ended March 31, 1937 (\$ millions)	
Fresh fruits	13.2	Spirits	21.5
Cotton	24.0	Grains and products	43.5
Printed matter	9.6	Livestock	15.0
Lumber	11.0	Fish	12.1
Automobiles	9.6	Newsprint	90.0
Automobile parts	27.2	Pulp	28.6
Farm machinery	10.0	Pulpwood	8.5
Other machinery	27.4	Other lumber	14.2
Steel sheets	10.9	Gold, bullion, etc.	81.0
Electrical apparatus	10.3	Nickel	23.6
Coal	26.0	Chemicals	8.7
Petroleum	31.0		
Chemicals	19.0		
Total*	394.4	Total*	435.0

* Including other items.

The trade agreement of January 1st, 1936, has mutually stimulated Canadian-American commerce:—

Fiscal Year ended March 31	Canadian Exports to United States \$	Canadian Imports from United States \$
1936	335,302,426	319,479,694
1937	435,014,000	394,419,000

These figures show a distinct revival in twelve months.

Oxford Mulcted.—That it is sometimes more blessed to give than to receive can be the consolation for the officials of Oxford University who, after basking in the sunshine of Lord Nuffield's bequests and the comparative success of their own Appeal, are now confronted with the prospect of paying £70,000 to Sugar Beet and Crop Driers, to avoid over ten-fold larger claims arising out of the fraudulent activities of the ex-Director of the University Agricultural Engineering Institute, Mr B. J. Owen. Announcing this settlement on behalf of the University, the Vice-Chancellor repudiated any corporate responsibility for the sale of worthless patents by the ex-Director, who was imprisoned for fraud in 1931. The Vice-Chancellor admitted, however, that the legal position was obscure, and the risks of litigation serious. He suggested that the original claim of £750,000 was directed against the University alone, because the Ministry of Agriculture, on whose advice Mr Owen, previously their own technical adviser, had been appointed to the Institute, could not be sued in tort. The Vice-Chancellor pointed out the difficulty of raising even £70,000 from corporate funds, when the Appeal sums could not be used, but stated that the Ministry of Agriculture would be approached for an *ex gratia* contribution. Oxford's plight is unfortunate, but the taxpayer's responsibility is less evident even than the University's.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED
Head Office: 41 Lothbury, London, E.C.2

With Next Week's Issue of
THE ECONOMIST
will appear our
Commercial History
and
Review
of
1937

The first section of this Review will describe the progress of industry and trade, agriculture, overseas trade, industrial profits, currency and banking, the Stock Exchange, etc. A second section will survey contemporary conditions in the principal countries in the British Empire, Western and Eastern Europe, Scandinavia and the Baltic, America and Asia. A third section will describe conditions in every important industry, and in the world's commodity markets.

Nervousness Abated

NEW YORK, January 26.—The rather numerous persons who expected a smart rebound in our economy in January have been disappointed. The upturn has been so slight that it is doubtful whether the present level of activity is as high as the average for December. The extremely nervous spirit which characterised the closing weeks of the year, both in the markets and in industry, has, however, largely subsided.

There is a gradual focusing of attention upon a number of critical points. This country has had practically no new issue market for corporate securities since the spring of 1930. For something over seven years, American corporations have, in general, been obliged to live on their capital, except, perhaps, in 1936 and early 1937.

This does not mean that there has been no capital investment in American industry. The investment of depreciation reserves, and (until a year ago) undisturbed corporate profits, has provided a limited stream of capital available to industry outside the issue market. This was somewhat augmented by bank credit, and in some cases by the conversion of working capital into fixed capital.

In this period, it is probable that the actual formation of capital funds was, in the aggregate, relatively small. During several of these years, it is quite probable that there was no net saving in our economy. Furthermore, this seven-year period has seen the expansion of the national debt by some \$20,000 millions, of which perhaps half was contributed from national savings and the remainder from bank credit. Whether this represented a diversion of funds which otherwise would have been available for investment in industry, or simply an activation of funds that would otherwise have remained inert, is purely conjectural.

Absence of New Investment

The absence of new investment is most conspicuous in three fields: railways, public utilities and building. Here again a definition of terms is required. The privately owned utilities have made substantial investments from depreciation reserves and from undistributed profits; and enormous investments have been made by the Government in such Federal electrical projects as the Tennessee Valley Authority, and the Boulder, Bonneville and Grande Coulee dams. In building, there has been an immense amount of public construction of post offices, bridges, playgrounds, etc.; and in 1936 and the first half of 1937 there was a very substantial amount of construction of single-family homes.

But, speaking broadly, neither the railway industry, the corporate utility industry, nor the corporate building industry has appeared in, or had access to, a public market for new capital. Yet it is obvious that the railways are badly in need of renovated or modernised equipment. It is stated on good authority that the utility corporations require new and additional equipment. And the comparatively low level of building statistics over a period of years argues a potential market for new construction.

Several reasons may be advanced for the cessation of the flow of capital into areas where there is concrete evidence of need. One would be the absence of capital formation. It is quite probable that there was no national saving in the years 1930-34; but there is a good deal of statistical evidence of saving in the years 1935-37.

A second suggestion would be that all the national savings were absorbed by the State in those years, so that none or almost none was available for private enterprise. On the whole, the data suggest that there has been some formation of capital funds, now held in the state of inert bank deposits or even in actual currency. The low levels of deposit velocity, and the enormous imports of foreign capital, add some support for this view. The existence of these idle funds suggests that the absence of new investment has been due to the absence of sufficiently attractive and remunerative openings

Decline in Corporate Earnings

At no time in the last seven years has capital invested in building been able to earn sufficient return to justify new investment. At least so far as New York and its vicinity is concerned, the rentals obtainable in office buildings and flats have not covered taxes, operating costs, maintenance and depreciation *plus* anything that could be called an attractive return on the investment.

In the railway industry, during the past seven years, low earnings have been the rule. For most of the period the immediate reason was reduced traffic; in 1937, as traffic recovered, there was first a sweeping reduction of rates and then a sweeping increase in wages. The earnings margin was so narrow that, for example, one major railway that had weathered the great depression, could not stand even four months of slackened traffic. A fair proportion of railway obligations is now selling at about the record low prices of 1932—prices that anticipate additional receiverships in the near future.

In the utility industry, earnings persisted fairly well through the depression. The consumption of the product did not decline so much as in most lines, and recovered rapidly when trade revived. But the combination of rising costs, rising taxes, and reduced rates continuously encroached on the profit margin, and with the current recession in demand, encroached very rapidly. Their position was by no means so vulnerable as the railways; but it was not strong enough to provide any considerable attraction for new capital.

Speaking broadly, American industry was not able to show much in the way of earnings between 1930 and 1934. There were, in the aggregate, small earnings in 1935, moderate earnings in 1936, and good earnings during part of 1937. But at no time during the past seven years has there been any extended period of sustained earnings such as would attract large amounts of new capital into miscellaneous industry.

Money Both Cheap and Dear

In short, American corporate enterprise has been more or less living on its own capital, and such renovations or replacements as it has made have been virtually limited to its own depreciation funds or its working capital. It has had little capacity to attract new capital, because of the decline in earnings.

In this country we have, since early 1930, vigorously pursued a policy of cheap money. Within limits this policy has been extremely successful. Bank credit has never been so cheap as in recent years, and was cheaper than ever in 1937. The yields on Government and municipal securities, and on gilt-edged corporate securities of institutional grade, are now at or near the lowest levels ever recorded in this country; and in some cases at lower levels than have ever been known in any part of the world at any time.

Yet over the same period, new capital for corporate enterprise in general has been procurable only in dribbles, and, when procurable at all, only at an extremely high cost. Some kinds of money have been extremely cheap and extremely plentiful; but so far as corporate enterprise in general is concerned, it has been scarce, and risk-bearing capital has been and is all but unprocurable.

France

Cabinet Confidence

PARIS, February 3.—The Stock Exchange is impatiently asking the new Cabinet what they intend to do for the finances, and the Government have answered by proceeding against a Conservative newspaper for announcing that M. Chautemps intended to ask for plenary power to control money and the exchanges. The sellers of francs are perturbed by this demonstration of *sang-froid* and confidence, which is in direct agreement with the wishes of the country. The franc is firmer.

A liberal monetary policy, budgetary equilibrium, and fidelity to the Tripartite Agreement were the main principles of policy enumerated by the new Minister of Finance in his first broadcast speech. M. Marchandeu explained that the Treasury would have to borrow 28,000 million francs in 1938, a sum representing only 15 per cent. of the national revenue estimated at 200,000 millions. This borrowing must, however, be facilitated by an increase in production, which would in turn increase the revenue of private persons and the fiscal receipts of the State.

Thus the Government is inviting investors to call off their strike and to end the flight of capital. Meanwhile, M. Chautemps, with MM. Frossard and Ramadier, is drawing up the new Charter of Labour with the support of the representatives of the big employers and the Trade Unions. This Charter should normally be brought before Parliament on February 15th, but there may be delays estimated at between fifteen days and one or two months.

The urgent need for an immediate increase in production is emphasised in the annual report of the Bank of France. The report declares that the financial resources of private enterprises are insufficient; that a cheap money policy must be enforced; and that France must seek its salvation in "its own riches and its qualities of labour and saving." The solution of French difficulties lies, the report says, in improving the balance of trade, which in 1937 showed an import surplus of 17,000 million francs—a deficit which lies at the root of the weakness of the franc and involved a heavy loss of gold from the bank in 1937.

A Half-Way House

Meanwhile, M. Bonnet, Minister of State, is holding conferences to consider ways and means of reducing the deficit, while the Bank of France is watching the exchange market more closely than ever. Moreover, it is still felt that this is a Cabinet of transition, a half-way house to the establishment of a Government of National Union. The task of such a Government would be to reinforce the authority of the State, intensify production, notably in the making of armaments, reconstruct France to reassert its independence and to solve peacefully the Franco-German problems. The desire for a National Government is expressed by a financial technician as M. Baudouin, as well as by political leaders like M. Blum and M. Chautemps; but they will first of all reckon with the Communists, who fear the disruption of the Popular Front and the growing influence of the Right.

The Rising Cost of Living

The social situation is still disturbed, and the Government cannot reject outright claims for higher wages fortified by the persistent increase in the cost of living. The index of the price of foodstuffs rose from 193 in August, 1935, to 215 in December, 1935, and in May, 1936, 250 in December, 1936, and nearly 315 in January, 1938. This increase is due to improvements in the prices realised for agricultural products, the drought and bad crops of last summer, and the rise in the price of certain foreign products after the devaluation of the franc. The increase has cancelled the benefits to the workers of their successive increases in wages.

WHOLESALE PRICES

	Jan. 8	Jan. 15	Jan. 22	Jan. 29
General index	608	615	611	612
National products.....	653	655	653	653
Imported products	527	544	535	537
Foodstuffs	622	623	622	620
Industrial products	596	609	601	605

Whatever the outlook, the tendency towards national unity and the hesitation of capital to take flight when financial and economic difficulties have reappeared abroad, prevents the pessimists from making too definite forecasts of the next stage in the course of events.

Germany

Germany and Freer Trade

BERLIN, February 2.—The proposals of M. van Zeeland for the liberation of international trade aroused relatively little interest here. Newspapers, while giving prominence to unfavourable Italian utterances, did not themselves attack the plan, or even sufficiently describe it. But after the failure of so many international initiatives, the proposals are not considered promising, or even realistic.

It must not be inferred that the Reich, were it invited to consult with the other great commercial countries would

answer with a negative. The attitude of official and party Germany is self-contradictory. On the one hand, isolation, industrial, commercial and financial, is propounded as a sound principle, bound entirely to supplant the odious and destructive economic *Liberalismus*. But if this is thrown back at Germany in the form of a charge that Germany is "the chief obstacle to economic collaboration," the imputation is rejected angrily. Germany, it then appears, is burning with zeal for free international trade; and it is the other countries that persist in maintaining obstacles.

Autarky and the Van Zeeland Report

Germany has tied herself up with an economic system which is incompatible with free trade in any form, and which contrasts, therefore, in everything with M. van Zeeland's plans. The German system is indeed a makeshift, the outcome of enforced and piecemeal adaptations to exigencies of the day. But, though not planned or foreseen, it has grown into an interdependent whole. No one of M. van Zeeland's recommendations could be adopted without prejudicing this interdependent whole.

M. van Zeeland finds that tariffs are less injurious than quotas. The German import-rationing system is the quota system in an extreme form and cannot be got rid of. M. van Zeeland stands for the most-favoured-nation system. In Germany that is regarded as a particularly vicious offshoot of *Liberalismus*, and she has proclaimed for preferences. Dr Schacht's New Plan includes official determination of German trade balances with individual countries. That is incompatible with the freedom of commercial payments which M. van Zeeland recommends.

German restrictions on commercial payments are simply restrictions on imports. They are more important than restrictions on debt-service transfers and capital movements; though if capital must be transferred in the shape of goods, it is hard to see how the three can be distinguished. Germany could not restore freedom of transfer for any purpose without a very large loan. She has expressly declared that she will not contract new loans. Nor does she believe that she would get new loans.

Certainly she could give no guarantee that foreign money would not be used for political-military purposes. In practice, it would be difficult to differentiate between uses; and as the present policy of autarky aims at achieving national security in the event of war, no concession on this matter could be readily negotiated.

Five Years' Economic Advance

Although Dr Funk was to take office as Reich Minister of Economy on January 15th, General Goering continues to administer the Department provisionally. General Goering's latest act is to create a Defence Economic Council (*Wehrwirtschaftsrat*) attached to the Reich Economic Chamber.

The Trade Research Institute has published an imposing list of five years' achievements in the economic domain. The number of persons in employment has risen from 12,580,000 to 18,370,000. The gross value of industrial production has advanced from Rm. 37,800 millions to Rm. 75,000-80,000 millions. Steel production has increased from 5,650,000 to 20,000,000 tons. The output of cement has risen from 3,250,000 to 12,500,000 tons. The domestic turnover of machinery has quintupled. The number of dwellings built

Established 1844 Funds exceed £7,000,000

annually has risen from 131,000 to 300,000. The national income has increased from Rm. 45,200 millions to Rm. 68,000 millions; and Reich tax revenue from Rm. 6,650 millions to Rm. 14,000 millions.

There seems little doubt that the expansion will continue. The latest Reich programme is for the development of Berlin on an enormous scale by means of constructions which will not be completed until 1950. The projects include the destruction of four railway termini and their replacement by two new termini; the intersection of the city by a broad north-south thoroughfare; four circular roads; a new underground railway; a new War Ministry building; a central assembly place for a million demonstrators; a vast pleasure lake within the city; and other imposing works.

Apparently no difficulty will be met in finding money. It is indeed expressly declared in another connection that the shortage of labour is the only possible impediment to expansion. The President of the Reich Unemployment Insurance Office foreshadows the introduction of a compulsory working year for women. According to this official, the overcrowding of the learned and scientific professions of which so much was heard, and which led to agitations for a *numerus clausus*, has come to an end. To-day, the demand exceeds the supply.

The Progress of Self-Sufficiency

The statistics for December indicate a slight setback in the outdoor and associated industries. The number of employed workmen was, however, 9.8 per cent. higher than in December, 1936; the number of hours worked 13.9 per cent. higher; and the average time worked daily 7.80 hours. Coal production in 1937 was 184,512,000 tons against 158,380,000 tons in 1936; iron-ore production 8,522,000 tons against 6,651,600 tons; and steel production 19,848,800 tons compared with 19,207,900 tons.

An official report brings out the sharp relative decline compared with before the depression of imports as a factor in Germany's total supplies. In 1928, some 56 per cent. of goods delivered from all quarters came from home industry, over 20 per cent. from home agriculture, and only just over 23 per cent. from imports. In 1937, more than 62 per cent. came from industry, over 21 per cent. from agriculture, and less than 16 per cent. from imports. These are value figures, at the prices of 1928.

Holland

Large-Scale Loan Conversion

AMSTERDAM, January 26.—The Minister of Finance has taken the long-awaited decision to proceed to a large-scale conversion of the State loans. No less than 1,672 million guilders of 4 per cent. loans are to be converted into 3 per cent., and all the outstanding 4 per cent. State loans will then be redeemable. Subscriptions for the new loan open on January 27th, and the issue price is 99½ per cent.

This new 3 per cent. loan, maturing in 38 years, is of an entirely new type, as the rate of interest will become 3½ per cent. in ten years' time. Since the Minister is entitled to redeem the loan at any time before maturity, it is, however, obvious that the investor will benefit by the higher rate of 3½ per cent. only if a general rise in the level of interest rates in the Netherlands sets in in due course. Actually, the chances of higher money rates look fairly remote at present, because there is a surfeit of available funds in the Netherlands capital and money market, and there is no demand for new capital.

The loans coming on to the market are almost exclusively for conversion purposes, since trade and industry show no marked signs of expansion. Indeed, numerous companies have themselves abundant supplies of liquid funds, which are being used to redeem loans and pay off bank credits.

For all these reasons, the new 3 per cent. conversion loan is regarded as having a very good chance of success. Already 623 million guilders have been placed with various State funds, and subscriptions for another 257 million guilders have been assured. On the Bourse, trading is already going on at a premium. Other State loans are also displaying a firm tendency the last few days. The Netherlands Indies 3 per cent. loan, for instance, which was such a failure when issued, is now quoted at a premium of 1½ per cent. over the issue price of 96½ per cent.

Embargo on Foreign Issues Relaxed

Although trading was on a restricted scale, there was, nevertheless, a good investment demand in January for first-

class shares. The urgent need for good investment material provided occasion for the introduction of some foreign securities on the Amsterdam market. Actually, an embargo on foreign issues has been in force for some time. This has not been completely suspended, but the authorities are now far less stringent in enforcing it. As a result, shares in the American Rolling Company, as well as debentures of 16 American companies (including 11 railroads) have been introduced.

On the whole the company reports so far published make a very satisfactory showing, although their views about the future are expressed with some reserve. The dividends declared are mostly in excess of last year's, and in many instances are substantially higher.

Increase in Unemployment

The unemployment returns for December show that the world-wide decline in prosperity has not failed to leave its mark on industrial and commercial affairs in the Netherlands. At the end of December, 437,469 persons were wholly unemployed, an increase of no less than 51,500 compared with the corresponding figure for November. An increase in unemployment is normal in December, but an increase of more than one-eighth is ominous. The number of unemployed is still 17,700 less than at the end of 1936, a fall of 4½ per cent., but this cannot be regarded as a very substantial improvement.

In December imports and exports advanced considerably compared with the corresponding month of 1936, as can be seen from the following figures published by the Central Bureau of Statistics:—

	Value in million guilders (gold and silver excluded)			
	December 1936	December 1937	January-December 1936	January-December 1937
Imports	114	128	1,017	1,551
Exports	80	96	746	1,148

The Netherlands Government have succeeded in renewing the clearing treaty with Germany for 1938.

Surplus of Coal Exports

Expectations that 1937 would be a flourishing year for the Netherlands coal mines have been realised. Output reached the record figure of 14,320,000 tons, an increase of 1½ million tons in a single year.

Until 1936 it was necessary for the Netherlands to import more coal than exported. In 1935 imports exceeded exports by 472,000 tons, but in 1936 this gave place to a small export balance of 98,000 tons, and in 1937 the exports exceeded imports by no less than 555,000 tons.

The balance of exports is not attributable to a decline in imports, which were actually considerably higher in 1937 than in 1935 and 1936. The fact that, in spite of this, the export surplus increased by 450,000 tons indicates that exports of Dutch coal, cokes and patent fuel have grown to a very encouraging extent. Export prices have also improved considerably.

Japan

War-time Expenditure and Control

TOKYO, January 14.—In addition to the defence estimates in the ordinary Budget, submitted to the present session of the Diet convened on Christmas Day, the Army and Navy are demanding some 4,000 million yen more for the China campaign, and this, together with 2,548 million yen previously approved, will bring the total expenditure on this head up to 6,550 million yen (in round figures). This new expenditure is to be financed by fresh taxation to the extent of 200 million yen. Under the taxation scheme a further 20 per cent. levy will be imposed on personal and corporation incomes; the excess profits duty, the stock exchange duty, and the excises on beer, *sake*, sugar, textiles, and petrol will again be increased; the sales tax on luxuries will be extended over a wide variety of articles; and the passenger duty will be reimposed.

War-time State control over trade and industry has lately been further tightened. The amount of exchange transactions requiring licences has been reduced from 1,000 yen to 100 yen. Import restrictions have been extended to wood pulp, crude rubber, and hides, while export embargo has been placed on coal, China-grass, ramie, jute, molybdenum, tungsten and antimony. In order to cope with the shortage of textile materials resulting from the import restrictions, the

Department of Commerce and Industry has published new regulations which provide for compulsory mixing of 20 to 30 per cent. of stable fibre with cotton or woollen goods for domestic consumption. The manufacture of articles containing more than 376/1,000 of gold has been prohibited, and an annual saving of 10 million yen in gold consumption is anticipated. A new Government order requires industrial concerns to furnish the Treasury beforehand with details of their capital expenditure schemes.

Large Import Surplus

The trade returns for 1937 show that the value of imports amounted to 3,783 million yen and of exports to 3,175 million yen. Compared with 1936, imports increased in value by 1,019 million yen, or 37 per cent., and exports by 482 million yen, or 18 per cent. This relatively larger growth in imports is mainly a matter of prices, and decreases in volume are recorded in many cases.

The combined trade returns for 1937 for Korea, Formosa, and the South Sea Mandated Territories show imports of 171.5 million yen and exports of 143 million yen, compared with 164 million yen and 104.6 million yen, respectively, in 1936.

The import surplus for Japan, including her colonies and mandates, amounts in the aggregate to 635.8 million yen, against 130.4 million yen in the preceding year. The excess of imports of merchandise is the largest ever recorded, except for 1924, the year immediately following the great earthquake.

Rising Note Circulation

The note circulation was at a considerably higher level in 1937 than in 1936, but the expansion has been particularly rapid since the outbreak of hostilities, as shown in the following table, which gives comparisons of monthly averages for two years:—

	(In million yen)		
	1937	1936	Increase in 1937
July	1,472	1,309	163
August	1,501	1,298	203
September	1,515	1,274	241
October	1,623	1,382	241
November	1,671	1,344	327
December	1,936	1,562	374

The note issue reached the year's peak at 2,399 million yen on December 30th, but after the turn of the year it began to decline, and was down to the level of 1,700 million yen in the second week of the current month.

Prices Move Upward

Commodity prices took a definitely upward turn during last month. The Bank of Japan's index of wholesale prices for December registered a further rise of 1½ per cent. in the month, and recovered to the level of last May. The net change during the past twelve months was 12.2 per cent., but the percentage variations in the price of individual commodities, compared with a year ago, were considerable, from an increase of 62.8 per cent. in the price of American timber to a decrease of 28 per cent. in the case of American cotton. The major advances were mostly in metals and chemicals.

Canada

The Government and Trade Agreements

OTTAWA, January 15.—The Federal Parliament of Canada reassembles on January 27th, but no heavy programme of legislation is forecast. The Government must now postpone any attempt to deal with the more pressing problems, such as constitutional reform, the debt situation and a programme of social security for the workers, until the Royal Commission on Dominion-Provincial relations produces its report, which is unlikely before the end of 1938.

In the negotiations for a triangular readjustment of trade between Canada, the United Kingdom and the United States, one major difficulty is now being encountered in the recent shift in the balance of trade between Canada and the United States. For twenty-one months before last September Canada had an unbroken monthly export surplus in trade with the United States. But in the last quarter of 1937, when the business recession produced price-cutting in the United States, Canadian importers proceeded to buy large quantities of American goods at bargain prices. In November the value of Canada's imports rose by about 14 million dollars, and imports from the United States represented 11 millions.

Business interests in Canada, adversely affected by this inflow, have demanded that the Ottawa Government should apply its emergency powers of special dumping legislation and, it is understood that they have been applied in the case of certain textile imports. The King Ministry may be compelled both to ask more from, and to offer less to, the United States than originally contemplated.

When he submits his Budget, the Minister of Finance should be able to show that his forecast of a deficit of 35 million dollars for 1937-38 was much too pessimistic. The figures for the first three-quarters of the current fiscal year ended December 31st put the yield of the Federal revenues at 402½ million dollars, compared with 339½ millions in the corresponding period of 1936, while expenditure, ordinary, capital and special, totalled 361½ millions, an increase of only 1½ million dollars. There is, therefore, already an improvement of 61½ million dollars in the Budget position and, although the recession in business will probably cut the gains in revenues during the last quarter of the year, the deficit may not much exceed 20 million dollars.

Albertan Legislation on Trial

The Supreme Court of Canada is now engaged in hearing the arguments about the challenged legislation of the Social Credit Ministry of Alberta. The basic contention of counsel for Alberta was that the lapse of the Imperial power of disallowance of Dominion legislation, as the result of the passage of the Statute of Westminster, had produced as a corollary the lapse of the Federal power of disallowance. The Court reserved judgment on this question and on the right of provincial lieutenant-governors to withhold assent from provincial statutes.

On the legislation to control credit, counsel for the Federal Government argued, from the speeches and writings of Major Douglas and other champions of Social Credit, that it was part of a concerted plan to destroy the existing financial structure of Canada, and therefore illegal. Counsel for Alberta contended that such arguments were irrelevant to the issue of the legal validity of the legislation. Meanwhile the *Financial Post* of Toronto alleges that the policies of the Aberhart Ministry are now dominated by the two English Social Credit experts on the Social Credit Board; and there are rumours of serious dissensions in the Social Credit ranks.

Oversupply of Newsprint

The leaders of the newsprint industry are addressing themselves to the problem of liquidating the oversupply of newsprint. A scheme is being worked out, under which companies with their full output sold and in a position to make deliveries will surrender some orders to assist less fortunate mills and spread employment. Some publishers are also co-operating by taking additional supplies, but it is not expected now that the industry as a whole will be able to operate at more than 75 per cent. of capacity during 1938, or that the operating ratio for the first quarter will be above 55 per cent.

In the week ended January 8th the general business index of the Bureau of Statistics rose 2.8 points. Given below are data of three major components of the index in recent weeks:

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Dec. 25, 1937 ...	76.6	82.8	87.7	106.0
Jan. 1, 1938 ...	68.6	83.0	99.5	106.6
Jan. 8, 1938 ...	82.8	83.5	96.2	109.4
Jan. 11, 1938 ...	81.4	80.9	102.6	117.3

The upturn in prices is a healthy sign, and the sharp rise in the price of copper and other base metals will help the mining industry. The primary iron and steel industries, however, report a decline in orders, and the textile plants are planning a curtailment of operations. Retail merchants in Eastern Canada report that price-cutting is rife, and profits are being adversely affected. The last two months have witnessed the usual seasonal increase in unemployment, but the number of people on public relief is smaller in January than it has been since 1930. The employment index of the Bureau for December 1st was 121.6 compared with 110.1 on December 1, 1936.

Letters to the Editor

England and Eire

TO THE EDITOR OF THE ECONOMIST

SIR,—As a reader of the *Economist* may I express the view that your article on this subject is on the whole fair and temperate. But what exactly has the writer in mind when, in his conclusion, he refers to "matters such as the treatment of the Catholic minority in Northern Ireland"?

So far as I am aware the franchise is the same, the social services are identical, and in the matter of education the position here is at least as good as it is in Great Britain, and some authorities contend better. There are two or three local government areas which the Nationalists might control on a counting of heads, if no regard whatever was had to the immense disparity in rateable valuation. Otherwise they control local government machinery in the areas where they predominate.

The number of their seats in Parliament is approximately the same under a system of single member constituencies as it was under a system of proportional representation with the county as a unit. There is no discriminatory legislation except a measure to combat the physical force party who, it is alleged, are not all Catholics. This legislation, therefore, is not aimed against any religious community.

In view of this, it is to be regretted that the writer was not more explicit and more frank in his definition, if for no other reason than the enlightenment of public opinion in Northern Ireland. Unfortunately, the primary grievance of the Catholic minority is that they are a minority, and the only solution they have in mind is to convert the Protestant majority in Northern Ireland into a minority of all Ireland. On all questions, apart from unity, I can say with confidence that Northern Ireland would welcome a complete agreement and reconciliation between Great Britain and Eire.

Yours faithfully,

ALBERT E. BURNS.

Bangor, Co. Down.

"Stop Me and Buy One"

TO THE EDITOR OF THE ECONOMIST

SIR,—The article entitled "Stop Me and Buy One" in your current issue comments appropriately on recent legal proceedings relating to L.C.C. hawkers' licences. It does not, however, mention another case heard before the same Judge two days later, also relating to the sale of ice-cream from tricycles, with equally ludicrous results, but one which in this

case may have very serious consequences for the retail trade generally. I refer to the appeals brought by a well-known ice-cream company against decisions of several provincial justices in connection with the Shops (Sunday Trading Restriction) Act, 1936.

This latter Act exempts (*inter alia*) ice-cream from its general prohibition of Sunday trading; but requires that employees in such exempted trades may not work on more than three Sundays per month, and must then receive a compensatory whole holiday on a preceding weekday; and further requires employers to keep relevant records of hours worked. These requirements naturally proving irksome to ice-cream traders, they exercised their ingenuity to prove that they were not covered by the Act at all.

Now, the Act refers in the first place to shops, and its provisions are extended "to any place where any retail trade or business is carried on as if that place were a shop." The Eldorado Company argued that this phrase did not cover their box-tricycles. They failed to convince the local Justices, but succeeded in the High Court.

It was fantastic, said the learned Judges, to argue that a box-tricycle, which was a movable, peripatetic apparatus by which sales could be made over a large area, was a "place" within the meaning of section 13. The terms of that section, they said, made it clear that "place" was *not* any place where any retail trade or business was carried on (though this is precisely what it does say).

If the effect of this judgment was merely to make it easier to sell ice-cream on Sundays, nobody need worry much. But unfortunately it may have much wider implications. The phrase which the High Court has newly interpreted runs throughout all the Shops Acts, and in the past it has always been supposed to extend the benefits of these excellent measures to the milkman, coalman and baker's roundsman no less than to the shop assistant.

If now the street trader is to be relieved from all these regulations, the small shopkeeper who is still bound by them will be placed (in more senses than one) in a most difficult position which Parliament certainly never intended. Somebody may, of course, be public-spirited enough to spend thousands of pounds in fighting another test case up to the House of Lords, in the hope (but not the certainty) of securing a contrary ruling. Otherwise, the only solution is for the whole machinery of Parliament to be brought into play to pass an amending Bill. Surely here, as with the other case you mentioned, there is something slightly out of proportion.

Yours faithfully,

DONALD BARBER,

Secretary,

Retail Distributors' Association.

Books and Publications

The Modern State

YEARS ago Mr Lawley became a convinced believer in the virtue and expediency of collective control of economic activity. He undertook the stupendous task of recording and sorting out every modern instance of State interference and international co-operation in social and economic matters; and his astonishingly complete list of State activities and inter-governmental agreements* is an invaluable work of reference. Broadly, Mr Lawley's creed is two-fold: he is convinced that it is impossible for modern Governments to avoid intervening more and more in social and economic affairs; and he believes that this trend is wholly to be welcomed.

He is rightly of the opinion that the world is conspicuously disfigured by poverty, economic insecurity and inequality, and the danger of war. These things are due, in his view, to the competitive use of private property, and the aggressive search for profits at home and abroad, and can

* "The Growth of Collective Economy." By F. E. Lawley. P. S. King. Two Volumes. 35s.

only be abated by restrictions upon the use and power of property, or in the international sphere by mitigation of the economic inequalities among nations by collective agreement.

Fortunately, he thinks, this is already happening. Economic necessity is educating statesmen and public opinion alike. Mr Lawley describes the measures of State control occasioned by the Great War; the tendency of Governments to undertake increasing responsibility for the fate of basic industries; the recent trend of public utility organisation; and the consequences of the development of conscious State policy in monetary and investment matters. Nations are coming together to discuss economic problems, even if they seldom agree to act in concert—largely because of the inequalities between them.

Mr Lawley's argument is not always very discriminating. There is clearly a distinction in fact between State interference to protect private interests and intervention to restrain them. Indeed, Mr Lawley might reflect that the most developed examples of the devices he favours are to be found in those countries where the democracy which he advocates has been destroyed.

It would, however, be unfair to make Mr Lawley the

sponsor of dictatorship. He lays down that public undertakings (for which he shrewdly favours a public utility form) must be not only efficient technically, but also planned in the interests of the whole community. His plan to control existing institutions where capitalist concentration is strongest, to take over key industries, new industries, basic services and all departments of banking and finance, is a Socialist, not a Fascist, programme.

In details Mr Lawley is often shrewd and sound. He argues very cogently that the State is fully capable of bearing the risks of enterprise at present borne by individual *entrepreneurs*. He lays stress upon the need for the State in most cases to assume control of property by the payment of compensation to the owners. He is strongly opposed to methods of violence, and believes that revolutions not based upon the consent of both the middle and working classes are bound to fail. He is a democrat, a Socialist and an optimist.

Unfortunately, he is so anxious to prove that the revolution he desires is already taking place peacefully that he tends to take uncritically the view that "increasing doses of State capitalism must be welcomed as steps towards a real collective economy." Socialism is "just round the corner." His political and economic arguments are too superficial—his simple view of profits as a surplus, and imperialism as competition for surplus values, too ingenuous. He seems to have an insufficiently clear picture of the price-mechanism, the nature of monopoly, the structure of the State and the character of national sovereignty. He does not perceive that autarky, which he condemns, is one expression of the collective action which he tends to approve; or that monopoly and restriction may be dangerous medicines. Nor does he sufficiently examine the implications of fiscal policies. But his collation of facts is an impressive achievement; and in broad outline his thesis is substantially correct.

Shorter Notices

"Unit Trusts and How They Work." By C. L. Rosenheim and C. O. Merriman. Pitman. 87 pages. 7s. 6d.

Within the compass of 62 pages (the rest are occupied by appendices and index) Messrs Rosenheim and Merriman offer a practical treatise on the operation and organisation of unit trusts. They are well qualified for their task; and it has been assisted, at the outset, by a philosophical introduction by Mr W. Piercy, which ably clears their practical ground of the biadweed of controversy. The authors have done much to simplify the maze of fact concerning unit trusts, and the effort of compression in accommodating their discussion to such a relatively limited space is remarkable. But such compression has drawbacks, as well as advantages. It assumes some familiarity with unit trust principles. And it has cramped the discussion at several vital points. A fuller discussion of comparative method for the two distinct types of flexible trusts would have been very welcome. There are, also, one or two rather tantalising statements which might deserve expanded discussion in a subsequent edition. The sale of "at least £200,000 and perhaps as much as £500,000 worth of units," which is regarded as essential before any profit is shown for unit trust managers, appears to be lower than earlier estimates. Perhaps a generous spread of overhead expenses over several trusts has been assumed. As the figures stand they suggest that the formation of unit trusts is more remunerative than some managers have apparently found in experience. Secondly, the report of the Board of Trade Committee does not support the statement that the £20,000 deposit in respect of each open trust, which they recommended, was to be made "simply to guard against the managers being forced to be 'bull' of securities at a time when both security and unit holders are urgent sellers." Finally, would the transfer of securities to a holder of a complete unit in a fixed trust attract full stamp duty, in view of the fact that there is no change in beneficial ownership?

"Milk Investigation Scheme—Cost of Milk Production in England and Wales." Interim Report No. 1. (November 1, 1934 to September 30, 1935). 87 pages. 2s. 6d.

This pamphlet makes a provisional report on a semi-official inquiry into the costs of milk production which was entrusted in 1934 to the Agricultural Economics Research Institute at Oxford. The sample of the farms from which data were collected was not large, but was probably well diversified for the resulting averages to be taken as broadly

accurate. From the large number of interesting details that emerge from the report, the one which will be most frequently selected is the average cost of production in all districts of milk produced for sale at wholesale, without any of the additional requirements of the special quality grades. This figure varies between 8.59d. per gallon in the South Wales region and 10.79d. per gallon in the South-Eastern region, the average being 9.41d. per gallon. The report is strictly confined to costs of production and makes no mention of the price obtainable for milk, or of costs incurred after the milk leaves the farm. It may, however, be added that the average pool price, in the period to which the inquiry relates, varied between 11.7d. in the lowest region and 12.7d. in the highest. The margin between the pool price and the net farm cost of production would therefore seem to range between 2d. and 3d. a gallon, which has to meet transport costs, profits and interest on capital. With reference to the last point, it can be calculated from the report that the average amount of capital invested is about 10d. for each gallon of production per annum. Interest alone will therefore absorb at least 1d. a gallon of the margin. It would be interesting if the investigation could be carried further, so as to make possible a judgment on whether milk production is, or could be, a profitable business. But it is clear from the figures here published that it is only the most efficient dairy farmer who can hope to make more than a bare return out of producing milk.

THE BUSINESS WORLD

British Shipbuilding

THE fortunes of the British shipbuilding industry vary with changes in world trade and international political relations. During the past few years the industry has benefited from the gradual revival of world business, which has led to an increase in orders for mercantile tonnage. By a grim paradox, it has also benefited from the deterioration of international relations, which has forced the Government to increase its expenditure on the navy.

The volume of mercantile tonnage under construction rose from 225,000 gross tons at the end of 1932 to 1,125,000 tons at the end of the past year. The volume of work on hand at the end of 1937, nevertheless, was still 435,000 gross tons smaller than eight years earlier. The decline in commercial construction since 1929 has, however, been offset to some extent by an increase in warships under construction in private yards, from 58,000 tons at the end of 1929 to 499,000 tons at the end of 1937. Partly as a result of the expansion of activity and partly because of the reduction of the shipbuilding industry's output capacity, the proportion of idle berths was reduced from 46 per cent. at the end of 1929 to 35 per cent. at the end of September last year. But the number of insured persons employed in the industry last June, at 133,291, was still 16 per cent. smaller than eight years ago. While recovery came late to shipbuilding and is not yet complete, the industry has certainly made substantial progress in recent years, both in the volume of its output and in technical efficiency. The immediate outlook, however, has been clouded by a marked decline in new commercial contracts since last summer, and the moment may be opportune for a re-examination of the influences which shape the course of activity in shipbuilding.

Developments in the shipbuilding industry must be regarded in the light of the special position of the British Empire. An Empire covering something like one-quarter of the earth's land surface requires for its continued existence an enormous merchant fleet and, for its defence, a large navy. It is not surprising that the British shipbuilding industry rose to pre-eminence; for the size of her merchant fleet and navy, added to natural advantages, rendered costs of production cheaper in this country than elsewhere and brought large orders from other countries. For many years before the war Britain regularly constructed more than half the world's output of merchant tonnage as well as most of the warships for countries without productive facilities. Since the war, however, the relative importance of the industry has tended to decline with the growth of economic nationalism. Thus, the proportion of the new mercantile tonnage launched in the United Kingdom declined from 59 per cent. in 1914 to 54 per cent. in 1929. During the last eight years economic

nationalism has been intensified, and Britain's proportion of total launchings has declined to 34 per cent. The fall has been absolute as well as relative; for the gross tonnage launched in this country last year, when world trade had practically regained the volume of 1929, was only 929,000 gross tons, against 1,522,600 tons in 1929, and 1,683,600 tons in 1914. The shipbuilding industry, in short, has taken the brunt of the declining co-operation between the various countries of the world, and, unfortunately, there are no indications of an early reversal of this trend.

These long-term tendencies need to be distinguished from the cyclical factors, which are so strongly in evidence in the shipbuilding industry. Owing to the difficulty of adjusting carrying capacity to changes in world trade, any decline in the demand for shipping services is reflected in a more than proportionate fall in shipping freight rates, and therefore in the value of shipping tonnage. Conversely, during a period of expanding world trade, freight rates and the value of shipping tend to rise inordinately as soon as the world's existing capacity is fully employed. During a period of falling freight rates, shipowners consequently curtail their expenditure on new vessels. On the other hand, a sustained rise in freight rates, when the volume of idle tonnage has fallen to small dimensions, usually produces a rush of new shipbuilding contracts.

The operation of these tendencies is revealed by a series of diagrams on page 321. The first chart shows changes in the total gross tonnage on the United Kingdom register since 1927, as well as in the proportion of the total laid up and in commission. The total tonnage of steam and motor vessels on the United Kingdom register declined from 20.2 million tons at the end of September, 1930, to 17.5 million tons at the end of 1937. In consequence of the decline in world trade, the volume of idle tonnage increased from 590,000 gross tons—3 per cent. of the total tonnage registered at the end of 1929—to 3,556,000 tons, equivalent to 18 per cent. of Britain's total carrying capacity at the end of June, 1932. The tonnage commenced reached its lowest level in the middle of 1933. Between 1933 and 1936, the coincidence of a gradual rise in the tonnage in commission with a reduction in total carrying capacity steadily reduced the volume of idle shipping. By the middle of 1936, unemployed tonnage was not much higher than in the years before the depression. At that point, however, the volume of international trade suddenly took a sharp upward turn and, early in 1937, the reserve capacity fell to negligible proportions.

The implications of these developments are shown graphically in the second diagram, which indicates the trend of *The Economist's* index of freight rates and of the value of a new 7,500-ton cargo steamer, as given in *Fairplay*. Movements of freight rates and of the value of merchant tonnage show a fairly close correlation, though tonnage values have been subject to wider fluctuation than freight rates. Both indices vary closely with changes in idle tonnage and both showed a substantial decline between 1929 and 1932, when the volume of idle tonnage tended to increase. Between 1933 and 1936, both freight rates and shipping values recovered to pre-depression levels; for idle tonnage in the latter year had been reduced to more normal dimensions. But freight rates and shipping values both rose inordinately between the middle of 1936 and 1937 owing to the prevalent fear that the demand for shipping capacity would soon tend to exceed the supply at the current rate of expansion in world trade. As there was scarcely any reserve capacity left in the spring of 1937, and since the supply of tonnage cannot be increased at short notice, this fear was

not unfounded. But the lull in world trade recovery since last summer went far to remove this possibility and produced a sharp reaction in freight rates. At the same time, the proportion of idle tonnage to total capacity again tended to increase.

How these developments were reflected in the volume of new merchant shipping orders is shown in the third diagram. Owing to the decline in world trade and the increase in reserve capacity between 1929 and 1933 the volume of merchant shipping commenced fell almost to zero. Since then there has been a steady improvement, followed by a sharp setback in the second half of last year, when the trend of world trade turned downwards and shipbuilding costs showed a strong upward movement. This diagram, and the chart showing changes in output since 1927, emphasise the relative decline in the proportion of the world's mercantile shipping tonnage constructed in Britain—a tendency which has, unfortunately, been particularly marked during the past two years.

It would seem, therefore, that the prospects of the mercantile shipbuilding industry in this country are not very promising. In the first place, international trade activity appears again to be declining. Secondly, there are no convincing signs of an early check to the long-term decline in the relative importance of the British shipbuilding industry. On the other hand, the volume of idle tonnage is still very small, and any resumption of an upward trend in world trade would be quickly reflected in rising freight rates and new shipbuilding contracts. Nor is there any indication of an improvement in international political relations which would permit a reduction in Britain's naval expenditure. To some extent, therefore, a further increase in warship work may offset any decline in mercantile contracts. Altogether, our survey of changes in the setting of the British shipbuilding industry forcibly illustrates Britain's interest in the furtherance of free commercial intercourse between the countries of the world.

The French Deadlock

By a Correspondent

CABINETS, in France, may come and Cabinets may go, but the economic crisis seems to go on for ever. There have been two drastic devaluations of the franc in the last eighteen months, and every Government has made great efforts to balance the Budget. But the main problem is still unsolved.

The root trouble of the French economy is the inadequacy of the national income, the estimates of which declined from 243 milliard francs in 1930 to 172 milliards in 1935. In 1936 it was estimated at 189 milliards, and the present level is once again between 230 and 240 milliards. This means that, in terms of money, the national income has recovered by 31 per cent. from its lowest figure. But wholesale prices have risen since 1936 by 75 per cent. and retail prices by just over 40 per cent. It is clear, therefore, that the successive devaluations of the franc (which have halved its gold value) have not provided the expected increase in the volume of production, which still remains almost at the minimum reached during the period of world deflation.

What are the causes of this obstinate paralysis of the economic machine? The explanation most frequently offered is that it is due to the social legislation of the Blum Government, and in particular to the increase in labour costs and the technical effects of the enforcement of the forty-hour week. The changes in wage rates effected by the so-called Matignon Agreements resulted in an average rise in labour costs of between 10 and 20 per cent. Paid holidays added another 4 per cent. to the wage bill, and the forty-hour week another 25 per cent. The total increase in the wage bill by the beginning of 1937 was therefore from 40 to 50 per cent. of the level prevailing before M. Blum's premiership. But that level itself, even before the summer of 1936, was estimated to be between 10 and 15 per cent. higher than competitive costs abroad, so that the first depreciation of the franc by about 30 per cent. in September, 1936, left the currency still from 5 to 15 per cent. overvalued. The disproportion was increased by the fact that wages have been increased by about a further 10 per cent. since last summer, on account of the rising cost of living. The franc has, however, depreciated rapidly and now stands at only half of its former external value. This has at last fully restored the equilibrium of French and international costs. Moreover, in the past twelve months the rise in the wholesale prices of national products and in retail prices has been faster than in wages, which means that the profitability of French industry has been restored. In many industries, dividends are certainly on a definitely higher level than in 1936. Indeed, it is argued that both the working class and the profit-earning class have gained at the expense of those classes whose incomes remained stable or increased less than prices, e.g. rentiers and salaried employees.

Nevertheless, production still hangs fire. The trade unions undoubtedly made a mistake in insisting upon a too rigid application of the forty-hour week. But the last Cabinet's expert committee on production did not accept the 40-hour week as a general explanation of the failure of production. And, in any case, adjustments have now been largely made, and the application of the law itself has been modified. Moreover, even on a forty-hour basis, the demand for labour does not absorb the whole supply. We must therefore look deeper for the explanation of the continued failure of the French national economy to react to any stimulus.

To the economist, the present position of France presents a strange paradox: on the one hand, there is a large-scale

One of the thirteen luxurious "HIS MASTER'S VOICE" All-world Radiogramophones

inflation, arising from the disorderly state of the public finances; but on the other hand there is continuing deflation of the economic structure. It is probable that the State will have to borrow some Frs. 30 milliards during 1938, in addition to its requirements for refunding operations. The increase of the national debt between August 31, 1936, and August 31, 1937, was 24 milliards, and in the two preceding years 17 milliards and 18.5 milliards respectively. Professor Lescure made an estimate some years ago of the total of net savings in France in the years of prosperity after the stabilisation, which he put at between 28 and 30 milliards per annum. This would be a higher proportion of the national income than in the much richer Anglo-Saxon countries, and may be taken as a generous estimate. Net savings must have fallen to a figure rather below than above Frs. 10 milliards before the Blum Government took office. It follows that the deficits of the State are at least as great as, and probably considerably greater than, the total of net savings. Not only have there been no savings in France in recent years available for maintaining the flow of capital into productive industry, but there has been a positive shortage of savings, and a considerable disinvestment of capital.

The position has been further complicated by the state of the currency. A considerable part of the national savings has always been kept in France in the form of bank-notes, and some estimates before the depression put the value of bank-note hoards as high as half the total circulation, or about Frs. 40 milliards. Against these hoards the Bank of France held at the beginning of 1932 over Frs. 90 milliards of gold and foreign exchange (about Frs. 180 milliards at to-day's value of the franc). In the ensuing years, however, there has been an enormous flight of French capital to foreign countries. The gold reserves of France have diminished by 50 milliard Poincaré francs, or 100 milliards of to-day's francs, and of this loss well over half, and perhaps four-fifths, is attributable to the flight of capital.

The circulation, however, has not been in the least diminished as the result of this conversion of hoards into foreign exchange, since it totalled Frs. 92.5 milliards on January 13, 1938. The previously hoarded bank-notes which were turned over to the Bank of France to pay for the gold were reissued by the bank in the form of direct and indirect advances to the State—the direct advances alone amount to not less than Frs. 38 milliards in the last two years. This, then, is the explanation of the puzzling phenomenon of active inflation by the State proceeding *pari passu* with the shrinkage of the national income. As a result of the extraordinary lack of confidence in the political and economic stability of the country, budgetary inflation, instead of providing a stimulus to industrial expansion, has in fact merely provided a means by which capital invested in fixed forms could be liquidated and exported from the country. An excellent example of the process is provided by the Rentes Stabilisation Fund set up after the second devaluation. This fund, which arose out of the writing-up of the Bank of France gold, was used to maintain the value of Rentes on the Bourse. In other words, it purchased

Rentes from private holders and placed in their hands cash which they could take to the Bank of France for conversion into gold. The process has been interrupted, whenever the rise in wages has temporarily run sufficiently far ahead of the rise in retail prices to induce an increase in the volume of consumption by the workers. But as soon as cash balances have been readjusted to the new value of money the disinvestment has started again. France is being stripped of her capital, and the Government deficit is providing the technical means for the process to be carried out.

For a situation of this sort only desperate remedies will avail. The four possibilities are the depreciation of the franc to such a low level as to discourage further exports of capital; the creation of a shortage of cash by a more-than-balanced Budget; exchange restrictions; and restoration of the confidence of capitalists. The first would be an extremely dangerous expedient, as it may be questioned whether there is any level of the franc, in the present circumstances, at which the export of capital would cease—and, even if there were, it might be so low as to have most unfortunate internal and external repercussions. A balanced Budget is out of the question so long as the need for rapid re-armament continues. Exchange control is not likely to be a complete solution, since though it might stop the further export of capital it could hardly, without the most drastic measures, stimulate a return of capital already abroad. But the return of this capital will be badly needed, both to provide the increase in investment—particularly in working capital—which is inevitable if the national income is to be raised, and also to secure the stability of the balance of payments while the heavy imports necessary for such re-equipment are made. In these circumstances there is no excuse for regarding exchange control as anything more than a temporary expedient to cover the initial stages of a fundamentally sound policy. In the last analysis, the matter is one of psychology. In France, as in America, the task is to achieve reforms which industry could in most cases well afford, without frightening capital away. The restoration of confidence in France as a field for investment, and the repatriation of French capital from abroad, are the only measures which can break the deadlock. For this purpose patriotism and clear thinking are required on both sides of the political fence. The Left should by now realise the consequences of the economic policy of the past two years; the capitalists of the Right, on the other hand, must not remain indifferent to the fact that their action is endangering the safety of their country. They must be brought to see that their almost hysterical dislike of the political ideas endorsed by a considerable majority of their countrymen is doing not only their country, but their own ultimate interests, enormous harm. Somehow a bridge must be built between the two sides. The attempt made during the recent crisis by M. Blum to form a National Government, belated as it was, proved still premature, but the creation of some such common basis for reconstruction is the most urgent service that French politicians, trade unionists and capitalists can now render their country.

Cinema Company Shares

THE cinema is one of the hall-marks of our age. In a generation it has produced marked social change and has transformed popular speech and thought. Governments recognise its importance, and the economist takes account of its place in the family budget. The present position of leading cinema company shares, however, suggests that the investor expects to gain but little from this rapid progress.

In the present article we propose to examine the broad investment aspects of the exhibiting side of the industry.

Film production, in the past, has been too undependable, and its financial excesses too notorious, to provide any regular basis for long-term investment. On the other hand, the exhibiting branch of the trade is popularly deemed to be highly profitable, and this view is supported by available facts. Mr Rowson, whose statistical investigations into the film industry are stamped with authority, has estimated that in 1934 every person in the country over the age of fifteen visited the cinema nearly thirty times on the average. The exhibiting industry at that time provided one cinema seat for every nine persons over fifteen. Doubtless these statistics have since been surpassed.

It is evident, however, that the cinema shareholder has not fully participated in the fruits of prosperity. The Gaumont-British ordinary shareholder has received no dividend for the past two years—thanks, mainly, to the company's losses on film productions. A few weeks ago the

new board of directors of Union Cinemas expressly refrained from proposing the adoption of the accounts, on the ground that they could not accept or support the values attributed to the principal assets. The new board also raised serious issues over the policy of the previous management, which had administered the company for only a year. Such facts go far to explain why the market is unresponsive to new cinema issues. The Odeon Theatres 5 per cent. debentures, issued at 99 last July, are now quoted 83-86. And the Associated British Picture Corporation—which is, by general consent, one of the most efficient units in the industry, with a progressive earnings and dividend record in recent years—may well have hoped, originally, to make its recent issue of 1,500,000 5s. ordinary shares to existing holders at a higher price than the 14s. eventually decided upon.

After the latest issue, the Associated British total debenture and share capital will amount to £7,366,688, and its reserve fund to £2,425,000. The Corporation now owns or controls some 500 cinemas—rather more than one-ninth of the total number in the country in 1934, according to Mr Rowson's estimate. The circuit is the largest in the country. In addition, the Corporation owns studios which have paid their way in recent years, together with a renting service which supplies half the country's cinemas.

Although the Corporation's capital resources have been considerably expanded in late years (as recently as March 31, 1935, the total capital of all classes was no higher than £5,450,000) aggregate earnings have also advanced by large strides. Some 15 per cent. was earned for the equity in 1934-35; in the two following years the rate jumped to 33 per cent. and then to 49 per cent., although the dividend was cautiously increased only from 10 per cent. for 1934-35 to 12½ per cent. for 1935-36, and 18 per cent. for 1936-37. The increase in the interim dividend for the current year from 7 per cent. to 10 per cent. was accompanied by the official statement that profits had been fully maintained.

The recent progress of the Corporation has, in fact, been buttressed by a prudent dividend distribution policy, and by expanding and realistic depreciation provisions. Over and above its physical assets, however, the Corporation has obtained two new shareholding interests in the past fifteen months. In October, 1936, the Corporation acquired rights in connection with the Ostrer holdings in Metropolis and Bradford Trust, the agency through which control is exercised over Gaumont-British. The full history of this transaction has yet to be disclosed. But it is evident that the second, and vital, part of the transaction—the acquisition of the "A" (voting) shares—has still to be effected, and legal proceedings are apparently in train. Exactly a year later the directors acquired a large holding of shares in Union Cinemas. In this case also, the precise terms of the transaction, the nature of the holding, and the extent of control, have not been disclosed.

These new responsibilities in part explain the company's need for fresh capital, which, in view of the company's profit-earning record, should have a satisfactory dividend basis, without including the additional earnings which should accrue from its employment. Nevertheless, shareholders may feel some difficulty in framing estimates, at this stage, of the ultimate financial results of the Corporation's two recent acquisitions. In the case of Gaumont-British, the chairman of Associated British has a seat on the board, but does not hold control. In the case of Union Cinemas, it is evident that a capital reconstruction will be required, and that preference dividends must for the present be ruled out. Viewed from the Associated British standpoint, do recent statements about the Union Company's position affect the Associated's purchase arrangements? Will the future profits of the Union Cinemas group, under reorganised management, provide a satisfactory return for Associated British?

We may, perhaps, indulge in some reasoned guesswork on the second point. Apart from its financial stake in Union Cinemas, Associated British has a management contract which, for a circuit of some 200 cinemas, is likely to prove valuable, without entailing, in all probability, any considerable increase in costs by the existing A.B.C. organisation. In addition, the Corporation's renting branch automatically increases its business, even assuming that it supplied some part of Union Cinema's bookings before.

And, finally, the annual income from booking a regular news-reel service to only part of the Union circuit may well be appreciable. Altogether, it may not be fanciful to suggest that these three sources of income may be of the order of some £200,000 per annum.

To put a precise investment valuation on the Corporation's Gaumont-British interest is equally difficult, particularly in view of the fact that a shareholders' committee has lately received sufficient support from dissident shareholders to lodge an application with the Board of Trade for an official inquiry into the affairs of the Gaumont-British Company. At present, therefore, a certain *sub judice* character attaches to the divergence of view which has arisen between certain "general" shareholders and the controlling interest in the management, which enjoys special voting rights on a relatively small direct financial stake. During the past two financial years, special losses of Gaumont-British of £766,809, arising from film production and distribution, have been written off from past profits and reserves. The Corporation has closed down its major production plants, and has divested itself of its distributing organisation, in return for a guaranteed income from General Film Distributors. Critics of this policy have suggested that the ordinary shareholders must resign themselves to prolonged absence from the dividend list, since the Corporation's income from the exhibiting subsidiaries will probably remain stable. The current quotation of 6s. 4½d. for the 10s. suggests that the attitude of shareholders is more resigned than enthusiastic. Just over a year ago, the company's annual meeting was adjourned until the directors had presented a consolidated statement of accounts. The ensuing statement, however, did not afford detailed and comprehensive information about group earnings. Nor did the succeeding year's accounts, presented last October, after a year of substantial changes and financial difficulty, provide a further consolidated statement showing the position at March 31, 1937.

A decision on the question of appointing an official inspector to examine the Corporation's affairs now rests with the Board of Trade. Meanwhile, recent years have seen the rise of a new star in the cinema firmament—namely, Odeon Theatres. This is solely an exhibiting concern, without any production or renting business, though it enjoys the benefit of an arrangement with United Artists in respect of film supplies. It acquired 86 cinemas last July, and has management agreements with 71 further theatres, which each provide an annual fee of £624 per annum and 60 per cent. of net profits. According to a recent report, by June next the circuit will number 300 cinemas, and a year later 400 cinemas. Investors should distinguish, however, between the cinemas of the Odeon circuit which are actually owned by the company, those in respect of which it has management agreements, and others which may fall outside the limited interests of Odeon Theatres in the total circuit.

A circuit of this potential size is, of course, a keen competitor with other cinema organisations, and it is not surprising that merger rumours have already cropped up. Such reports were recently denied by the chairman, Mr Oscar Deutsch. Meanwhile, the company has yet to publish its first accounts. There is a limited public equity interest, but the 5 per cent. debentures, of which £1,800,000 is outstanding, are publicly held. On the prospectus figures, their cover should be reasonably satisfactory. The market value of this stock, however, has fallen, like that of Associated British Properties 4½ per cent. debenture, which was issued in 1936 at par, and now stands at 89½.

Cinema securities, as a whole, are not in large investment demand at the moment, and it is difficult to forecast any early change. New cinema building proceeds apace, and much recent construction has been carried out at high cost. Competition by way of long programmes and price concessions in off-peak hours is keen. Popular feature films are expensive to rent, and the industry may have to adjust itself at some future time to a reduced volume of general purchasing power. It has, moreover, a rival of more than potential importance in the football pools, to which, it is estimated, some £50 millions may be transferred annually from other forms of popular diversion. And a final judgment must obviously await, not so much the passing of the Government's Films Bill, as the publication of detailed official information on the affairs of certain large companies.

Finance and Banking

Franc Uncertainties.—The franc has remained fairly steady during the past week, with spot sterling quoted on Thursday at Frs. 153, and the three months' rate at Frs. 6½ discount. Moreover, M. Marchandau, the new Finance Minister, announced last Monday the new Government's adherence to the Tripartite Agreement and opposition to exchange restrictions. This implies the continuance of M. Bonnet's policy, and as M. Bonnet now holds no portfolio he is free to collaborate with M. Marchandau. The market, however, is still somewhat anxious about the future of the franc. The fact that last week the French Exchange Fund was borrowing sterling by means of "swap" transactions suggests that its resources are now at an end. Also it has needed to use its borrowed sterling to support the spot rate, and is thus left with forward liabilities which may be uncovered. If this view is correct, recourse may again become necessary to the Bank of France's gold reserves, and the next few returns of the Bank will be carefully watched.

There is also considerable doubt whether France will receive the whole of the Dutch loan of Fl. 150 millions arranged last autumn. The first two tranches have already been floated, but the Dutch market is somewhat disturbed by the trend of recent political and social developments in France, and it is possible that only Fl. 12.5 millions out of the third tranche of Fl. 50 millions will be placed. The French Treasury is thought to have enough funds in sight to carry it on until the middle or end of March, but it is

difficult to say whether any such forecast includes its small margin of unavailed borrowing powers at the Bank of France. This lends point to M. Marchandau's insistence on Monday that the excess of expenditure over receipts is "Financial Public Enemy No. 1." There is no evidence that any large-scale borrowing programme is envisaged, nor is the Paris market in good shape to cope with it. At the moment there is no serious speculation in the franc, nor is there any further flight of funds from France. But the position holds more uncertain features than the calmer market conditions of this week suggest.

Gold and the Dollar.—The past week's developments in the foreign exchange and bullion markets can be viewed in closer conjunction than usual. The weakness of the American dollar and the increase in the premium to which the sterling price of gold has been bid over the dollar shipping parity are directly related phenomena. As far as the price of gold is concerned they have, of course, largely offset each other; for the fall in the price of gold which should have accompanied the depreciation of the dollar in terms of sterling has been avoided by the increase in the premium. This stability of the London price of gold at approximately 139s. 7d. no doubt gives expression to the wishes and policy of the authorities. Their representatives at the daily fixing virtually determine the price at which gold is dealt in, and this week their policy has been to ignore the fluctuations of the dollar to ensure reasonable stability in the sterling price of gold. There has, however, been a more direct and obvious link between the weakness of the dollar and the increased premium on gold in London. The bulk of the purchases of gold, both at and after fixing, have been made against sales of dollars. The largest of these operations have been made on behalf of important American and Continental interests to whom the position of the dollar has once more appeared to be suspect.

Argentine Exchange Developments.—The Argentine Government have reduced the exchange surcharge from 20 to 10 per cent. This surcharge applied to imports from and to those countries with which Argentina had no trade agreement, and less precisely to those with which Argentina's trade balance was passive. Great Britain and several other countries were exempt from the surcharge by virtue of their trade agreements, and were also, by the operation of the system of prior permits, able to sell goods to the Argentine at the official import rate of 16 pesos to the pound instead of the free rate, which up to ten days ago was 17.02 pesos to the pound. The surcharge, however, was applied to the official import rate and not to the free rate. Thus, the effective exchange rate on goods subject to the surcharge was only 20 per cent. on to 16 pesos, that is 19.20 pesos to the pound. During the latter half of 1937 the Argentine-United States trade balance ceased to be passive and became active. There is little doubt that Washington made representation for the reduction of the surcharge, and that the Argentine Government has now responded.

The Argentine central bank, which hitherto had been supporting the peso, this week withdrew its support, and so the free rate promptly rose from 17 to over 18 pesos. Thus while, officially, the lower surcharge of 10 per cent. means that American and other goods can now be imported at a rate of 16 pesos plus 10 per cent., or 17.60 pesos, exchange in practice cannot be purchased at less than 18.30 pesos to the pound. Hence, the assistance to American imports and therefore the indirect effect of the change upon British exports, is less than might be thought; for

Argentine is taking away with one hand much of what she is giving with the other. So far as British trade is concerned, the reduction in the surcharge is a less serious matter than the recent trade agreements with such countries as Holland, Czechoslovakia, Hungary and Italy, for imports from these countries now qualify for prior permit and the official import rate of exchange. On general grounds, however, these new agreements are obviously to be welcomed. It may be added that the Argentine railway remittances are mostly made at an official rate. Hence they are not prejudiced by this week's depreciation of the free rate.

Foreign Bank Deposits.—Lord Wardington, in his address to Lloyds Bank shareholders on January 28th, called attention to an important but hitherto neglected aspect of the "hot money" problem. Much of the foreign money which at times has flowed into this country in large quantities has either been deposited with the British

joint-stock banks or invested in the bill market. In normal times the banks are glad to attract foreign deposits, and they even pay more than the London deposit rate for it. In these days, however, foreign money coming to London is so subject to passing fears on the part of its owners, and therefore so liable to sudden withdrawal, that it becomes a source of embarrassment to the recipient banks. The banks dare not divide it up between loans, investments and discounts in accordance with their ordinary practice, and so feel bound to use it solely in loans to the money market or in buying bills of exchange. With both short loan and discount rates hardly better than ½ per cent. Lord Wardington was eminently right in pointing out that the banks could not afford to pay rates of 1 per cent. or more upon such deposits. He showed that other countries either paid only a nominal rate or imposed a charge for the safe keeping of this money. He might have added that the influx of this money also imposes a charge on the Exchequer, for the gold it brings with it has to be carried by the Exchange Equalisation Account.

MONEY MARKET NOTES

The Bank Return

Currency requirements over the end of the month have caused an expansion of £3.5 millions in the note circulation. The Reserve is reduced by the same amount.

	Feb. 3, 1937	Jan. 19, 1938	Jan. 26, 1938	Feb. 2, 1938
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Dept.				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	457.3	475.7	473.2	476.7
Banking Dept.				
Reserve	56.8	51.3	53.8	50.3
Public Depts.	12.2	11.0	13.6	11.4
Bankers' Depts.	96.1	124.4	113.1	111.4
Other Depts.	38.3	36.9	37.3	36.6
Govt. Secs.	80.4	104.4	98.9	98.1
Discounts and Advances	8.5	13.0	10.4	10.5
Other Secs.	18.9	21.8	19.0	18.7
Proportion	38.7%	29.7%	32.7%	31.5%

In the banking department, the withdrawals of currency from the joint-stock banks, as indicated by the increase in the note circulation, have been partly neutralised by a contraction in public deposits. This last movement is due to the Government dividend payments at the beginning of the month. Both bankers' deposits, however, and the total resources of the banking department continue to stand at a high level, compared with a year ago. This is due to the year's increase in Government securities, but it is possible that the reduction in the latter, in evidence during the past fortnight, may continue.

The Money Market

In spite of fairly heavy calling by one of the clearing banks last Thursday, money remains very easy. The continued reduction in tender issues of Treasury bills, due to reserve collection, and the ill-success of the market at recent tenders, means that few bills are available for re-sale to the banks. This week the banks have bought a few March and April Treasury bills at ½ per cent., but they have not been able to fill all their requirements. On Thursday there were a few more bank bills about at ½-¾ per cent., the actual rate depending, among other things, upon the names on the bill.

	Feb. 4, 1937	Jan. 27, 1938	Feb. 3, 1938
Bank Rate	2	2	2
London Deposit Rate	2	2	2
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	1½	1½-5/8	1½-5/8
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	17½-7½	17½-9½	17½-7½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

This week's Treasury bill payments have again been complicated by the calendar. Bills paid for on Monday, January 31st, and also those paid for on Wednesday to Saturday inclusive, are 89-day bills, and the highest price paid for these was £99 17s. 6d. per cent. Only 18 per cent. of the bills applied for at this rate were allotted, so that the market fared badly. May 1st being a Sunday, bills paid for on Tuesday, February 1st, went at £99 17s. 7d. per cent., or a penny higher. The difference in length did not compensate for the extra penny; and so this day's bills were not applied for by the market.

The Bullion Market

There has been a fair demand for gold this week. This has been met out of official supplies, but the authorities have thought it wise to permit an increase in the premium to a fairly wide margin. The reason is that this demand possibly represents a new tendency to switch out of dollars and into gold. So far as the London bullion market is concerned, this demand originates mainly from the holding companies representing foreign fugitive capital. The Swiss National Bank is also reported to be pursuing a similar tendency, but its gold purchases of course are made in official quarters and not in the open market.

Silver has been very steady, apart from a slight relapse on Thursday. There has been some more bear covering, but the market generally has been very quiet. The fact that the London price is still above the American parity

Date	Gold			Silver, price per oz. standard	
	Price per 100 oz.	Prem. or Disc. in	Amt. dealt in	Cash	Two Mths.
1938	s. d.	d.	£'000	d.	d.

" 2 ...	139 9	11 pm	458	20½	19½
" 3 ...	139 10	13 pm	583	20½	19½

* Above or below American shipping price.
The New York price of silver remained at 45 cents per ounce -999 fine during the week.

means that it cannot be trusted at its present level, but further covering from India might bring about a fresh temporary increase at any time. On the other hand, an increase in the forward price to over 20d. would at once bring out fresh sellers.

Foreign Exchanges

The tendency to shift out of dollars into gold, mentioned in the Bullion Market Note, led to considerable offerings of dollars, largely from Switzerland and Holland, and at one time sterling rose to \$5.01½. The announcement in the House of Commons on Tuesday evening that the restrictions upon British lending abroad were to be relaxed inspired the thought that there might be more British institutional buying of American securities, and this caused the rate to improve on Wednesday to \$5.00½. By the next day, however, it was back to \$5.01. Possibly in sympathy with the depreciation of the Argentine free rate, referred to in a Financial Note, the Uruguayan peso has depreciated sharply from 24½d. to 20½d. The course of the French franc is referred to in a Financial Note. Other Continental rates show little movement. Swiss francs were bid down from Frs. 21.62½ to Frs. 21.59½ on the weakening of the dollar, while guilders were very steady at Fl. 8.96½. Belgas improved from Bel. 29.63 to Bel. 29.51 on the greater steadiness of the French franc, but have since relapsed to Bel. 29.58½. Three months' belgas similarly narrowed to one cent discount, but have since gone again to three cents discount.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Bankers and Cotton.—The Chairmen of all three Lancashire banks made pregnant comments on the cotton trade at this year's annual general meetings. They were agreed that, taken as a whole, 1937 had been an unusually good year—the best for ten years, according to Sir R. Noton Barclay, chairman of the District Bank. Yet the year began better than it ended; for the collapse of raw cotton prices, which began in the early summer, has caused a substantial contraction in demand, and has had the familiar sequel of unsold stocks and reluctance to take deliveries on high-priced contracts. Sir Noton Barclay made the point that to-day 50 per cent. of Lancashire's output of 4,000 million yards of cotton and rayon fabric was absorbed by the home market. Mr Dewhurst, at the Williams Deacon's meeting, described the proposed scope of the new Enabling Bill, which, in spite of its complexity, he regarded as essential. A strong internal organisation, he believed, did not necessarily stifle our competitive capacity. The machinery for co-ordinating the spinning section and for withdrawing redundant spindles was already in operation, but both Sir Noton Barclay and Sir Richard Holt, the chairman of Martins Bank, admitted that the revival in trade had helped to ameliorate the problem of redundancy.

Swiss Bank Corporation.—During the past year the Swiss banks have had largely to contend with a continued influx of "hot money," practically all of which has come from France. Since last autumn, they have charged a 1 per cent. commission on deposits for less than six months; and have declined to pay interest on deposits for less than nine months. Some indications of this influx of foreign money are to be found in the balance sheet of the Swiss Bank Corporation for December 31st last. During 1937 time de-

posits fell from Frs. 88.0 millions to Frs. 75.8 millions, while current accounts rose from Frs. 654.0 millions to Frs. 772.4 millions. This net increase in deposits was more than balanced by increases in cash from Frs. 310.7 millions to Frs. 368.8 millions, and in sight balances with bankers from Frs. 151.1 millions to Frs. 204.0 millions. There was also a reduction in the bank's advances. In consequence, the bank has increased its liquidity, and this has affected gross earnings to a fractional extent. On the other hand, interest payable on deposits has fallen between 1936 and 1937 from Frs. 14.9 millions to Frs. 12.1 millions. Net profits have risen from Frs. 9.3 millions to Frs. 9.6 millions, and the 1936 dividend of 5 per cent. is to be repeated. Thus the bank has combined slightly higher net earnings with greater liquidity.

War Risks Restrictions.—On February 1st the long-expected change in the cover given by marine policies came into effect, and henceforward the risk of war and civil war will be covered by marine cargo policies only when the cargo is waterborne. When the goods leave the warehouse they are covered against riots and civil commotions, but not against war. As soon as they are on board the steamer they are covered against riots and civil commotions, *plus* war. When they reach the port of destination they remain so covered either until they are discharged from the steamer, or until 15 days have elapsed from the time of their arrival, whichever first occurs. Thenceforward, they are covered only for riots and civil commotion. If x represents riots and y represents war, this is the formula: Before shipment and after discharge, x applies. Between shipment and discharge, $x + y$ obtains; after discharge, x alone is valid. The new clause is therefore called the "waterborne" clause.

Investment

Course of Share Values.—Since the turn of the year the London market for equity shares has been in a state of uneasy semi-equilibrium, which has brought little profit and less satisfaction to the majority of speculative investors. In the first part of the month there was a slight but perceptible strengthening of the market's undertone,

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS
(July 1, 1935=100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

and in the second part a modest but equally perceptible sense of frustration. Some professional speculators ventured to test the market, but, in most cases, reversed their

commitments without going very far. The number of bargains marked in the Stock Exchange lists ranged daily between 5,500 and 7,500, against 10,000 to 12,000 on corresponding days a year ago. The figures afford no exact measure of the difference in the volume of business, but are highly significant. The firmest parts of the "House" have been, on the whole, the markets for gold mining shares and, more particularly, for gilt-edged securities, but in neither market can activity be interpreted as a vote of confidence in industrial prospects as such. All that can be claimed is that the decline which started in January, 1937, has now been arrested for two months, as the annexed chart shows. The curve of American equity prices, given on the same chart, shows that although the decline of values last year was far more precipitous in New York than in London, the net result has not been so very dissimilar, if allowance be made for the characteristically wider fluctuations of the American market. In both centres equity shares lost more in 1937 than they gained in 1936. Both reached a bottom in November, and achieved at least the shadow of recovery before the year ended. And both, after a substantial draught of hope deferred, are still just a little higher to-day than they were in November. London has no windmill-tilting President, but its inability to stage a convincing revival, despite the comfortable words of Ministers and bank chairmen, is not a hopeful sign for a renewed bull market.

Foreign Capital Embargo Relaxed.—Investors, who as a rule are not prone to look gift horses too closely in the mouth, will welcome the Government's decision, announced by the Chancellor on Tuesday, to relax many of the restrictions on the raising of capital for use abroad, which have been in force, altogether, for the last five and a half years. As we suggest in a "Topic of the Week" on page 282, the Government's clemency is certainly politic

and probably political; for its promulgation within a week of the issue of the Van Zeeland Report may well be more than a coincidence. Nevertheless, the decision will be welcomed by the market because, liberally interpreted, it promises to restore conditions of comparative freedom for operations by almost all borrowers who, at the moment, are credit-worthy. Borrowers like the Argentine Government, who were in fact able to come to London under the old regime, should find their task no harder under the new. But Governments, public authorities and State-controlled organisations in countries who are either on the defaulters' list or might use the proceeds of a loan for warlike purposes, have little hope of obtaining long-term financial accommodation from the British investor, apart altogether from the Treasury's continuing ban. The market, on the other hand, has a material interest in the fruits of a more liberal official policy towards company operations abroad. The path will now be made easier for the repatriation of foreign-held blocks of British shares, like the famous Boots deal; and any reputable mining house which wishes to finance a promising foreign-domiciled concern should no longer be driven to adopt round-about means of reconciling its own policy with the Treasury's. Foreign-domiciled and owned (but not State-controlled) companies desirous of floating a share or debenture issue, or obtaining a Stock Exchange quotation in London, will apparently rank lower in the new scale of official consideration, but will receive more sympathetic consideration than before. The "request" that all applications should continue to be filed with the Committee, in order that the Treasury may know what is going on, would seem to involve more than formal registration. In particular cases, "reasons of public policy" may still involve rejection, and in interpreting "public policy" the Committee's original terms of reference may still have force. Experience will show, for example, whether official "latitude" will tend to vary with the extent to which the proceeds of any loan are spent in this country.

Canadian Allotment Questions.—Although this week's discussion of the implications of the scaling down of certain applications for the Canadian 3½ per cent. Conversion Loan may appear disproportionate to the amounts of money actually affected by the decision, the latter certainly raises important questions of principle. Underwriters were called upon to take up practically £4 millions out of the £10 millions of stock issued. Reports that applications to the loan were sufficient to cover the full amount appear to be extravagant, but it is true that those responsible for handling the issue scaled down certain applications from quarters suspected of "stagging," in the interests of "orderly marketing." Once dealings had commenced. The number of applications so reduced was probably not more than half a dozen, and the reduction affected tens rather than hundreds of thousands of pounds of the stock. The fact that the terms of the issue provided a week's interval for conversion applications encouraged the "stag" to exercise a free option on a rising gilt-edged market. We may respect the desire to preserve an orderly market without upholding the method employed. The essence of an underwriting contract is the underwriters' obligation merely to take up an unsubscribed margin of stock. It is not designed to give issuers a double option to allot stock to select subscribers and to decide how much the underwriter shall take up; or to allot stock to subscribers if they like them and to underwriters if they do not. A specific contract affords no room for the exercise of discretion by or of the parties, however sound his judgment. The "stag" is sometimes a market nuisance, whose excesses may annoy the serious investor. On the whole, however, he performs a valuable function by assisting and broadening an inactive market during the period between the issue of a prospectus and the absorption of a new stock by the permanent investor.

Corporation Borrowing Resumed.—After an interval of seven weeks, corporation borrowing has been resumed. The queue of borrowers has stood still while Canada has had her innings. Now comes Bristol's issue of £2 millions of 3½ per cent. stock at 101½. The price is one-half point higher than the last series of issues, and the redemption years, 1961-66, also represent a small extension of average life, as compared, say, with the Coventry issue. The Liverpool loan, offered early in November at 101, now stands at a net premium of about one point on the issue price. Bristol, however, need feel no dissatisfaction with the terms, for although the eager subscription of the loan suggested that an issue at 102 would have "gone," that price might not have been maintained for a series of issues. The present condition of the gilt-edged market indicates that this price should satisfy corporation borrowers, without causing undue market indigestion.

The list of potential visitors to the London market, as we showed on page 238 of last week's issue, is long. These authorities whose first objective is to convert issues carrying 6 per cent. to a lower interest basis, can scarcely be regarded as falling within the context of Lord Wardington's suggestion, at the Lloyds Bank meeting last week, that local government borrowing should be postponed while the finance of the re-armament programme remained a primary need. Lord Wardington foresaw considerable difficulty when millions of pounds of corporation loans matured, and holders desired repayment in cash rather than in conversion stock. History suggests, however, that under normal conditions there is always a prevailing rate of interest at which borrowers with sound credit status can obtain long-term funds. Alternatively, the banks themselves, in the circumstances Lord Wardington has in mind, might be glad to re-lend the swollen deposits of hoarders to local authorities. Investors who feel that control over local authorities' borrowing and spending is desirable, may ask whether it is not already exercised, in reasonable degree, by local electoral opinion and the watchdogs of the public purse in Whitehall.

Wall Street and the S.E.C.—To encourage Wall Street in these dark days is a matter of no mean difficulty. The President essayed the task in his recent conversations with "Big Business," but while he spoke in the pleasant tones appropriate to tea-table discussion, his more outspoken lieutenants were making no secret of their real opinions on the subject of economic royalism. Again, the President, as commander-in-chief of the Navy, has been converted to a large-scale building programme. The proposal, however, is neither as large nor as immediate as Wall Street had hoped. Whence, then, has encouragement come? Singularly enough, from the very quarter which Wall Street has hitherto mistrusted to the point of positive hatred—the Securities and Exchange Commission. Last week, the President of the New York Stock Exchange submitted a report on the question of its own reorganisation, the recommendations of which included the appointment of a paid president and broader representation upon the Board of Governors. It is true that many contentious topics are left over for further investigation, but the report undoubtedly embodies a basis of judicious endeavour to accommodate the views of the Stock Exchange more closely to those of the S.E.C. The decision has practical wisdom, since it may well limit the opportunities for detailed investigation which the S.E.C. has frequently seized in the past. Thus, the function of the S.E.C. might gradually approximate to that of general overseer of the market. The spectacle of the market and the S.E.C. roaring together like sucking doves is welcome, though something more than the mere absence of acrimony is necessary before the market can produce any broad advance in security values.

Foreign Bond Movements.—January produced another reverse for the foreign bondholder. The fall in his holdings, measured by the Municipal and General Securities Company's index of 109 bonds, was of the order of 7½ per cent., from 85.8 to 79.3 (January to June, 1934=100). The most severe falls were recorded in the Near and Far Eastern and South American groups. Both Chinese and Japanese bonds showed comparable losses, while the prolonged absence of any statement of intention by the Brazilian Government regarding the future service of the debt has made an unpleasant impression upon the market. The following table gives last month's depressing record:

PERCENTAGE JANUARY-JUNE, 1934=100.

N.B.—Figures in brackets denote number of bonds included.

Pending an announcement regarding the future service of the debt, those Brazilian issues which have hitherto received interest in full have been retained in the "undefaulted" group, which last month suffered no less severely than the defaulted list.

Capital Issues in January.—Although some resumption of public issue activity was evident in the latter part of January, the amount of business was the lowest for some months. Even allowing for two large debenture issues made in January, 1937, our calculations reflect plainly the change that has come over the capital markets within the past year.

The following table gives our usual analysis of new money subscribed in recent months:—

(000's omitted) Excluding Conversions

Monthly Average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total
1933	17,520	2,429	449	20,398
1934	11,474	2,499	125	14,093
1935	18,388	1,270	21	19,679
1936	19,195	2,035	58	21,288

Dec., 1936	Dr. 50	18,588	2,173	20,764
Dec., 1937	Dr. 350	9,806	2,744	17,050
Jan., 1937	300	23,361	1,214	24,875
Jan., 1938	200	4,197	Nil	4,397
(New Basis)				
Nov., 1936	61,254	26,799	3,955	92,165
Nov., 1937	Dr. 150	13,318	2,897	16,065
Dec., 1936	Dr. 50	101,663	5,519	111,220
Dec., 1937	Dr. 350	12,855	2,744	20,099
Jan., 1937	300	32,778	5,061	38,235
Jan., 1938	200	10,547	1,320	12,097

Roughly half of the total on the "old basis" is attributable to the issues made to shareholders only by Edmundsons Electricity and Associated British Picture.

But our tables take no account of the recent Canadian loan, involving some £10½ millions nominal, since it was made for conversion purposes only.

Company Notes

Gas Company Results.—Although the Gas Light and Coke Company reports a record revenue of £13,573,409 for 1937, our table and chart below show that the ordinary dividend of 5.6 per cent. (paid for the ninth successive year) was slightly short-earned. Gas companies generally found it impossible last year to offset the effects of rising costs, particularly for coal, and recent increases in prices may not cover their full effects in 1938. The Gas Light and Coke accounts illustrate another significant operating feature. Towards last year's increase of £537,791 in total revenue, gas revenue contributed only £100,562, while sales of residual products increased by no less than £366,615 and rentals by £66,729. The growing importance of residual products has been wisely recognised and fostered by the companies in recent years, but in the case of Gas Light and Coke rising costs, both of manufacture and distribution, have absorbed the lion's share of the resultant increase in revenue, as our table shows:—

Years to December 31

	1935	1936	1937
Revenue:			
Sales of gas	8,403,295	8,725,012	8,825,575
Residual products	2,119,280	2,410,630	2,777,245
Rentals	1,661,922	1,829,835	1,896,564
Total revenue (inc. misc.)	12,236,807	13,035,618	13,573,409
Expenses:			
Manufacture	4,931,914	5,418,432	5,919,440
Distribution	3,423,196	3,668,924	3,816,700
All other charges and int.	2,446,908	2,492,970	2,448,346
Prof. & 3½% max. ord. div.	270,084	270,084	382,321
Ordinary stock:—			
Earned	1,164,705	1,185,208	1,006,602
Paid	1,080,733	1,079,104	1,077,401
Earned %	6.2	6.3	5.2
Paid %	5½	5½	5½
Redemption fund	40,000	40,000	40,000
Carry forward†	202,624	213,178	102,376

† After crediting Treasury grants of £19,012 in 1935, £3,777 in 1936, and £336 in 1937; and after charging issue expenses of £43,428, £59,327 and £339, respectively.

In the annexed chart we show the amount and the distribution of the company's earnings since 1929:—

GAS LIGHT AND COKE PROFITS—1928-37

The effect of the sale of residuals upon net revenue is the subject of comment in the South Metropolitan Gas report. Admittedly the directors to defer any increase in the price of gas until this year. Although the company's gas revenue

was reduced (as we show on page 328) net revenue was actually £50,321 higher at £560,249, owing to economies in distribution and other expenses.

Gas Light and Coke Position.—Significant changes in the Gas Light and Coke balance sheet suggest that the recent preference issue has been fully absorbed in financing the large extension of hire-purchase business in appliances. Debtors are up from £6,843,212 to £8,865,263 largely for this reason, while cash holdings are sharply reduced and a temporary bank loan of £550,000 has been arranged. It seems probable that the new preference capital has yet to become fully remunerative, but meanwhile the company is operating under difficult cost conditions. Stockholders may, perhaps, find some significance in the fact that the basic selling price of gas has been increased to 9d. A rough calculation, based on the company's sliding-scale arrangement, suggests that this price affords sufficient saving to consumers to permit the maintenance of the 5.6 per cent. dividend with some reasonable margin. In the last resort, however, the payment of the dividend is dependent upon profits actually earned. The present cost position would thus seem to make it difficult to guarantee the stable dividend record for which the gas industry has been famed in the past. Gas Light and Coke ordinary stock stands at 24s. 7½d., to yield £4 13s. per cent., and South Metropolitan, whose dividend was reduced in 1936, at 108½, to yield £5 4s. per cent.

Thomas Tilling Finance.—The disclosure of increased profits by this road transport holding company is satisfactory, but the chief interest aroused by the report lies in balance-sheet changes. The 10 per cent. cash dividend has been maintained, and a capital bonus of 25 per cent. has been declared—the third bonus distribution in four years. When the ordinary capital has been thus increased to £4,120,000, it will be nearly eight times larger than in 1930. The bonus will require £824,000, of which £500,000 will be obtained by capitalising the remaining balance of the Special Capital Reserve Fund. General reserve, however, at present amounts to only £58,793, after the writing down of London Transport "C" stock to market values. This reserve will ultimately stand at £1,000,000, for the directors propose to write up the book value of the holding of 1,933,142 Tilling and British Automobile Traction shares by £1,164,362 to £2,020,105, equivalent to £1 0s. 11d. per share. From this sum the balance of £324,000 required for the capital bonus will be found. The latest bonus distribution is thus, in essence, a capital "write-up," since the special reserve itself represented a surplus arising from the transfer of assets to London Transport. The trend of disclosed revenues is shown in the following table and chart:—

Years to December 31

	1935	1936	1937
Profit	388,005	428,752	480,147
Fees and interest	24,553	24,142	23,748
Prof. dividend	16,500	16,500	16,500
Ordinary shares:—			
Earned	346,952	388,110	439,899
Paid	263,675	329,600	329,600
Earned %	14.1	12.3	14.5
Paid %	10*	10	10*
General reserve	101,393	50,000†	100,845†
Carry-forward	176,436	184,946	194,400

* Also 25 per cent. capital bonus. † Also transferred direct to this reserve: £138,890 in 1936 and £1,164,362 in 1937.

The margin between disclosed ordinary earnings and cash dividends has tended to contract in recent years, but, as our table shows, the company's recent record provides adequate cover for the present increase in capital. The prospects of continued expansion, however, must surely be restricted by the Road Traffic Acts, under which the organisation and

operations of road transport are crystallising. On the costs side changes are likely to be upwards rather than downwards. These considerations, allied to the "pyramid"

structure of which Thomas Tilling is the apex, suggest that the yield of £4 5s. 6d. on the £1 ordinary shares at 59s. 6d. is no more than adequate.

Oxford Electric Preference Questions.—The recent arrangements for the sale of this undertaking appear to involve wider issues than the mere amalgamation of two electricity companies. The Wessex Electricity Company (a subsidiary of Edmundsons Electricity) had offered to buy the Oxford Electric undertaking, another subsidiary, upon terms to include payment of £239,298. Acceptance of the Wessex offer was urged by the Oxford Electric directors, although the City of Oxford shortly after made an alternative offer, the price being £300,000 (or 40s. per ordinary share). The parent company subsequently undertook that by acceptance of the Wessex proposals the Oxford Electric shareholders should receive 6d. per share more than under the City of Oxford proposals. Moreover, it was explained by Lord Meston at last Friday's meeting that examination of the offers showed that the Wessex offer was slightly better. Finally, the resolution in favour of the Wessex offer was passed on a poll by 260,425 votes to 23,300, though it had been lost on a show of hands. But the main interest of the transaction arises from the position of the Oxford Electric 6 per cent. preference shareholders, whose £1 shares are dealt in at around 25s. In the event of liquidation, these shares are repayable at par, and the Chairman was asked on behalf of the Public Trustee to explain the position, and to say if the shares would be repaid at par or if some more equitable offer would be made. It was also urged by another speaker that if Edmundsons would prefer to accept an independent assessment for the preference shares, they might wait until conditions for other undertakings were settled in the forthcoming Bill. To these contentions, the chairman replied that it was impossible and premature to make definite statements, though he reminded preference shareholders of the

The OCEAN

Accident & Guarantee Corporation, Limited
Head Office: 36-44 Moorgate, London, E.C.

FOR ALL CLASSES OF INSURANCE

conditions laid down by the articles of association. Preference shareholders, it appears, are still in doubt about their position in the deal, and will remain so unless and until liquidation is proposed. Since these circumstances may also arise if large-scale electricity amalgamations result from the forthcoming Bill, electricity preference shareholders must remain in uneasy doubt.

"Chartered" Progress.—The results of the British South Africa Company for the year to September last fully reflect the benefits of high copper prices and expanding production. The company's total revenue increased from £697,361 to £956,162. Dividends from mining and other interests increased from £325,550 to £897,102, profits on sales of investments from £246,134 to £266,973, and mining royalties from £115,942 to the substantial figure of £296,015. Net profits, after providing for a sharp increase in taxation, amount to £686,650 against £521,514, and the dividend of 2s. on the 15s. shares is covered with a margin of £20,487. Apart from its profits on share dealings, "Chartered" enjoys three principal sources of income connected with the Rhodesian copper mining industry. Its direct holdings in Rhodesian mining are valued at £2,840,417—slightly over one-third of the portfolio. The copper companies have resumed restriction, and are now operating at 105 per cent. of standard quotas. We have recently suggested, however, that if this rate is maintained, and if the average price of copper is in the neighbourhood of £42½-£45 per ton for the current year, the earnings of the leading producers will not be markedly changed compared with last year, allowing for the fact that Mufulira has increased its output this year. Secondly, "Chartered" draws royalties on copper produced, which vary according to the price of copper, and are pivoted on a price of £55, up to which the royalty amounts to £2 per ton. Since substantially higher prices were recorded last year, it appears that even if the Rhodesian output is maintained—as it should be, on a rough estimate—"Chartered's" royalty income will be lower in 1937-38.

Finally, there remain the important railway interests. Their financial position has been strengthened by last year's debenture conversion, and their operating position by the long-term agreement with the copper companies and the Government. During the year to September last, Rhodesia Railways' net earnings were substantially increased from £1,117,408 to £1,932,662. The sum of

£863,688 realised on net revenue account was transferred to reserve, raising the fund to £1,675,657. Under the terms of the railway legislation, an ordinary dividend may be paid, since the reserve now exceeds one year's debenture interest, and it is expected that a distribution will be made in respect of the current year. Whether this distribution will pass *via* the Rhodesia Railways Trust to "Chartered" during the current year, and whether it will offset the probable fall in royalty income, remains to be seen. The balance of probabilities suggest that investors should be prepared for some reduction in profits this year, though the decline may not be substantial. The 15s. shares stand at 30s. 3d.

Other Company Results.—Our usual analysis of profit and loss accounts, appearing on page 327, covers over forty-five companies in all. A number of investment trust reports are included, but the week's results include a considerable variety of miscellaneous industrials. The reports are discussed on page 327 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue commencing on page 317. Lord Warrington's survey at the *Lloyds Bank* meeting is discussed in Notes on pages 299 and 301. Major-General Sir John H. Davidson, after referring to the *Union Bank of Australia* centenary, discussed the crippling effect of taxation in New Zealand. He showed how the levy amounted finally to between 16s. and 17s. in the £ of net profits. Addressing *Sun Life Assurance Society* members, Sir William H. Goschen reported a record expansion in renewable premium income, and, in view of the considerable fall in capital values, he expressed satisfaction that a valuation of their own assets showed a depreciation of under 2 per cent. Mr E. V. Pearce, presiding at the *British Tin Investment Corporation* meeting, explained that the company's policy was to recommend for distribution all that had been earned. After discussing the difficulties of the tin industry, he expressed the view that a buffer stock would be beneficial. Reviewing the results of *Padang Langkat Rubber Estates*, Mr H. A. Barrett reported that the gross average price realised had been 9d. per lb., compared with 7.49d. for the previous year. At the *Governments Stock and Other Securities Investment* meeting, Mr J. S. Austen expressed satisfaction that the trust's portfolio showed a depreciation about equal to the fall of the "Banker's Magazine" index.

London

SETTLING DAYS

TICKET ACCOUNT
FEBRUARY 8 FEBRUARY 10

THE market reports have made poor reading this week—the last of the three-week account. There has been some rallying demand for Kaffir shares, fed by Cape and Paris buying, and the fixed-interest sections, under the lead of gilt-edged, remain firm. But of industrial pointers there are none, nor has Wall Street provided any incentive to the transatlantic section. An account which few market observers relished from the start has thus reached a dull, non-committal and faintly depressed conclusion.

Gilt-edged securities opened with a suggestion of dullness which was not significant, although it marked the temporary withdrawal of support. Further progress was recorded after this initial phase, however, and undated stocks took the lead in mid-week. The new

Canadian scrip opened nervously, possibly as a result of the unusual procedure followed at the allotment (described on page 301). The resumption of corporation borrowing had no effect on the strength of the newer scrips.

Among *foreign bonds*, the recent firmness in the Brazilian market was at first maintained, but Mr Eden's statement that negotiations for a new debt settlement have not begun produced a sharp reaction on Wednesday evening. Japanese issues reacted on the increasing budget burden of the China "incident," but recovered somewhat later, while the reports of internal tension in Germany depressed Young and Dawes loans.

More encouraging dividend hopes stimulated the *home rail market*, but it proved widely out in its estimate of the week's traffic gain, and a trickle of small selling caused small losses on Wednesday. The weak peso and discouraging crop estimates had a depres-

sing effect upon Argentine rail stocks.

Uncertain conditions prevailed among *industrial shares*, for the end of a long account never attracts new buying. In consequence, a small volume of liquidation was sufficient to produce a sequence of ragged price lists. Continued uncertainty regarding the cartel discussions and the future of steel prices affected steel shares, and Dorman Long were additionally affected by the short strike. A more cheerful note was struck by this market on Thursday, but it resulted largely from professional covering. Coal shares received no support, the market being affected by the publicity given to Part II of the Coal Bill.

Electricity supply shares remained satisfactory, and there were buyers for certain motor shares, including Atkinson-Oates. Thomas Tilling also rose on the accounts (discussed on page 303) and reached 59s. 6d. on Thursday. Engineering shares remained uneasy and dull. The year's brewing figures failed to stimulate interest in the share market, while tobacco issues received little investment support. Store and

provision shares were also a dull market. Despite the odd confusion regarding the France Fenwick dividend, the shares made headway on balance, but the shipping group generally showed only a partial recovery after a poor opening. Prices of the miscellaneous industrial leaders were broadly maintained, or where changed showed small fractional losses.

Small business was again reported in the *oil share market*. There were fractional gains in Royal Dutch and Anglo-Iranian in mid-week, but otherwise business was insufficient to prevent small fractional losses. Trinidad Consolidated provided an early feature on the contract with Trinidad Leaseholds. Leading *rubber shares* showed greater steadiness, though business was small. After a quiet opening, interest in the *Kaffir market* developed, and although demand was not of the urgent variety, most prices responded fairly well. Interest even in this market was not maintained, however, and while business was steady in mid-week, the public showed no sign of resuming its feed. A general set-back spread from Kaffirs throughout the mining share market on Thursday. East Geduld were prominent on the record January profits. West African issues remained reasonably firm after a modest improvement, and in the Rhodesian copper market Roan alone stood out with an early rise before joining the rest of the market in idleness. The reduction of the Burma Corporation interim had little effect upon the shares.

New York

After Wall Street's depressing series of losses, the two-dollar gains at the beginning of the week suggested to many operators that the tide might at last be on the turn. By mid-week, it was plain that the earlier rises had flattered the amount of general market interest and had, in fact, been accompanied by a diminishing volume. A reduction in steel operations, according to *Iron Age's* estimates, from 32½ per cent. to 31 per cent. of capacity, disappointed the holders of steel issues who began to resign themselves to the prospect of continued operations at a low level. Nor was any advantage gained from the evidence of a *modus vivendi* between the Stock Exchange and the S.E.C. (described on page 301). Special selling of American Telephone was reported, but there was a distinct improvement in speculative rail bonds. A few gains in the building and gold mining lists were also reported. Generally, however, the market is flat and deflated in spirit. It finds the February economic outlook clouded, and while

* Two hour session

Paris

Owing to the political crisis and the weakness of the franc, January was an unsatisfactory and agitated month for the Bourse. Activity continued at such a low ebb that quotations were not very sensitive to outside events, and movements have not been extensive. The year started well with noticeable professional activity in Kaffirs, and a firmer tendency in Rentes on the passing of the Budget. Weakness in the franc, following on the heels of renewed labour troubles, brought on a steady deterioration towards the middle of the month. The Bourse's nerves having been thoroughly unsettled in advance by alarmist rumours, M. Chautemps' resignation was finally received with comparative calm, especially as the market had been reassured by the undertaking not to impose exchange control. The interregnum naturally compelled the Bourse to adopt a waiting attitude, and a slight revival was checked by profit-taking by small speculators on M. Chautemps' re-acceptance of office. The tone has since been irregular and heavy. Internationalism came into prominence owing to the weakness in the franc, but have not recently run so true to form in responding to exchange movements. They were depressed in mid-month by a high contango rate, and at other times by adverse foreign news.

Berlin

January opened actively with a sharp upward movement in which all groups participated, except potash issues. The market then turned dull and prices sagged until the end of the month. The flotation of the Reich Loan was an unfavourable influence to a sustained advance, and Wall Street's weakness also disappointed the market. The initial buying was concentrated on steels, which had been neglected for some time, commercial banks and shipping shares. The subsequent decline was slow and irregular, and the volume of trading was so small that exaggerated price changes resulted. In the second week breweries were in demand. Later, in expectation of certain annual company reports, the market adopted a waiting attitude. Speculative forecasts of the General Electricity dividend led to sharp fluctuations in these shares. In the last days of the month prices moved irregularly, automotive, building, and textile issues being favoured. On the whole month shipping shares gained,

Hamburg-Südamerika rising by around eight points. All the leading commercial banks also rose, the biggest rises being shown by Deutsche and Commerz-und Privat. Reichsbank closed a little higher. Bonds were generally firm.

Amsterdam

Though January was not entirely uneventful, conditions remained very quiet. The volume of business remained small, and the frequent shifting of sentiment (chiefly in sympathy with Wall Street) was not reflected in large price movements. But despite day-to-day irregularity, quotations ended the month a little better on balance, even if below the best. Towards mid-January, events in France were watched with some anxiety, the consequence being a slowing down of activity rather than any actual effect on prices. Interest in domestic issues tended to revive once France's political crisis had been settled. Rubber share prices at first responded well to the quota reduction, but soon fell back into neglect when the commodity price failed to improve. Late in the month, disappointment was increased by renewed weakness in New York. The new conversion bonds, however, helped the market by opening at 1/2 premium. This large-scale conversion, which involved some Fls. 1,672 millions of 4 per cent. loans, was one of the chief events of the month, and has the unusual feature of prescribing that the rate of interest shall be raised from 3 to 3 1/2 per cent. ten years hence. The end of January was very quiet, and members devoted the 31st to national rejoicing, no official quotations being made.

Canada

Canadian stock markets, which continued stagnant up to the end of 1937, began the New Year with a burst of activity and in the first week most prices improved. Industrial, utility and bank stocks recorded the largest weekly rise since May, 1937. But though the latter part of January was not unsatisfactory, much of the impetus was lost by mid-month. Consolidated Smelters and International Nickel led the upward movement, but building materials, oil, machinery and equipment issues also showed strength. Food and textile stocks, however, remained sluggish and the pulp and paper stocks did not respond until the second week. Trading was more active than for several months and the healthier tone of the market was largely attributed to the belief that improvement in the United States was in sight. In the mining market, senior gold stocks were very strong, but there was a smaller rise in other mining securities. Base metals, however, which were strong about the middle of the

month, weakened later, although the upward trend of gold stocks persisted. A light turnover was reported in bonds, but the market was firm and comfortably absorbed the new issue of \$50 millions of Canadian National bonds. The price of newsprint and other corporation bonds has lately strengthened.

Capital Issues

APART from the Bristol Corporation issue, which is discussed in a Note on page 301, the only other public issue of the week is that of £1,500,000 London Power Company Debenture stock at 99, redeemable 1952-72. This security ranks among the highest of its class. The company, whose undertaking will be transferred to the Joint Electricity Authority in 1971, supplies electricity in bulk to constituent companies, which are bound, if called upon, to make up any deficiency in the London Power revenues to meet all charges, including sinking fund. The stock thus enjoys high security for the non-trustee investor, although its maximum life is somewhat long. The last big issue of this kind was of £2,000,000 Kent Electric Power 3 1/2 per cent. debenture stock, issued in November at 96, which now stands at 2 premium. Statements for information only have been published by Churchill and Sim, and by the Burton-upon-Trent Corporation. The latter is placing, at 100 1/2 net, £250,000 3 1/2 per cent. stock, redeemable only at a fixed date, May 15, 1963. The population statistics show that the issue misses trustee status by only 515 inhabitants.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

New Tinplate Negotiations.—The recent decline in the export demand for tinplates has caused uneasiness in the International Tinplate Cartel and controversy about the price policy to be followed. The Cartel of July, 1934—which includes American producers as well as British, German, French, Italian and a Norwegian mill—has succeeded in reducing competition in spite of unfavourable circumstances. A number of countries, which had been large importers of tinplates, have increased their production, and some have even started exporting. The unfavourable effect of these developments on the tinplate markets was mitigated by an increase in the demand brought about by the movement in many countries towards storing food for war-time. Last year the expansion of world demand caused a sharp rise in prices which came to a standstill last October. Since then there has been a revival of competition and the output of British mills has declined from 80 per cent. to 60 per cent. of capacity. British producers favour a maintenance of present prices in world markets. This is not surprising when it is remembered that, in spite of an increase in home consumption, the British tinplate mills exported last year one-half of their output, whereas in other countries this proportion was much lower, that of the United States being 15 per cent. Moreover, the capacity of the industry in this country will be considerably increased by the erection of a modern strip mill at Ebbw Vale. For the old style mills, the extension of capacity may give rise to difficult problems. But it will strengthen the international bargaining position of the British industry.

Short Time in the Cotton Trade.—A meeting was held in Manchester this week of representatives of fifty cotton-spinning companies engaged on the production of medium American welt yarns. It was announced that the ballot on the proposal to close the mills two weeks during February had shown "a percentage" in favour, but the extent of support for the scheme was not stated. It was decided that the firms who had voted in favour of organised short time should be asked to implement this policy, but it is understood that this movement has not met with the response expected. Owing to the shortage of juvenile labour the owners of some mills are afraid to close, lest their operatives should go to other mills which continue to run. Nevertheless, curtailment of spinning output is now considerable. For the second week in succession all the ring mills (numbering over twenty) of the Lancashire Cotton Corporation have been closed. There are irregular stoppages in the weaving branch and in Lancashire as a whole, and it is broadly estimated that machinery is running at less than 60 per cent. of capacity. An important factor is the existence of heavy stocks of piece-goods, which is partly the result of the refusal of buyers to take deliveries. During the last few days, however, rather better advices have been received from the home trade section and sales show signs of improving. Prices are being fairly well maintained, partly owing to the legalised price agreements prevailing in the spinning section.

Oil Developments.—The coincidence of the seasonal decline in gasoline consumption with the maintenance of an unduly high level of operations in the United States has resulted in an excessive accumulation of stocks, while the slowing-down in industrial activity has diminished the demand for heavy industrial fuels. Prices, in consequence, have fallen in most parts of the United States, and this has given rise to the belief that the general position of the oil industry has seriously deteriorated. Although gasoline and heavy fuel stocks in the United States—particularly the former—are at the moment excessive, this does not

necessarily imply that it is already beyond the oil industry's ability to correct the situation by restricting operations. Undoubtedly, fairly drastic steps are called for. Crude oil production at present is only 10 per cent. below the peak level reached in August last year, while refinery runs-to-stills are similarly only about 8 per cent. below their maximum of last summer. So far as oil markets outside the United States are concerned, the position remains generally favourable, although a certain slowing down in demand is to be observed. There are no indications of over-supply in the more important consuming countries. The competition formerly experienced from Russian and Roumanian oil has practically disappeared. Demand remains high, and even a moderate improvement in the general position would leave the leading companies favourably placed.

Volume of Overseas Trade.—The accompanying diagram shows the trend of the quarterly volume of retained imports and domestic exports during the past eleven years, on the basis of the indices calculated by the Board of Trade. Since the present indices, based on 1935, have not been recalculated for the previous years, the new indices have been linked on to the earlier series based on 1930. While this method somewhat affects comparability, the general trend of the volume of our imports and

exports is, nevertheless, shown clearly by the diagram. The decline in exports between 1929 and 1932 was considerably more marked than the reduction in imports during this period. And, since the volume of exports has risen no faster than imports since 1932, they are still substantially lower than in the years before the depression. Imports, on the other hand, have risen considerably above the pre-depression level—a consequence of the sustained expansion of the home market and, more recently, of the exigencies of the re-armament programme. The latest movements of the export index are less encouraging, for, as will be seen on the diagram, it failed to show a rise in the third and fourth quarters, when shipments normally show a strong seasonal expansion. The gradual improvement in the volume of exports, in fact, appears to have been arrested, at least temporarily, by the recession in world economic activity.

The Terms of Trade.—It is interesting to compare changes in the volume of imports and exports with variations in their average prices. We have, therefore, prepared a second diagram, showing the trend of import and export prices since 1927. The quarterly indices are those of the Board of Trade. In contrast to movements in volume during the depression, the fall in average prices between 1929 and 1933 has been most marked in the case of imports. Since imports consist largely of foodstuffs and raw

materials, while exports comprise mainly finished goods, this tendency is scarcely surprising. It enabled this country to continue importing its requirements of foodstuffs and raw materials without any increase in the unfavourable balance of trade. Indeed, the excess of the total value of imports over exports actually declined from £381 millions in 1929 to £258 millions in 1933. While the average value

AVERAGE VALUE OF IMPORTS AND EXPORTS

of exports remained almost unchanged between 1932 and 1936, the rise in import prices until the middle of that year was comparatively small. Between the third quarters of 1936 and 1937, however, when British and world economic activity was rapidly expanding, both import and export prices showed a rapid increase which was most marked in the case of imports. The terms of trade thus changed to the disadvantage of Britain, which contributed to the enormous increase in the total value of the excess of imports over exports between 1935 and 1937. During the last quarter of 1937, however, the downward trend of world trade caused a decline in average import prices, while those of exports remained virtually unchanged, an indication that the terms of trade have again changed in favour of Britain.

Depression in the Herring Industry.—Despite two and a half years' work by the Herring Industry Board, the immediate outlook for Britain's herring industry is still unpromising. At a time when fuel and other costs have been gradually rising, demand for the industry's products has recently shown a steady decline. Overseas countries provide the principal market for British-caught herrings, and they have lately been importing considerably less than in former years. Total exports—which consist largely of cured herring—fell from 3,768,000 cwts. in 1936 to 3,161,000 cwts. in 1937. Germany, which is still the industry's principal foreign customer, purchased considerably smaller quantities last year, and shipments to Russia were drastically curtailed. In consequence, the curers are reported to have no less than 171,000 barrels of herrings of last year's cure still on their hands. A surplus of no more than 100,000 barrels has hitherto been regarded as a serious handicap, and it is feared that the high level of present stocks will be reflected in a severe curtailment of demand in the forthcoming season. Unemployment among herring fishermen is already high, and the financial position of the industry is precarious. In Scotland almost one-half of the drifters now in use are obsolescent, and many are said to be scarcely seaworthy. In view of the industry's position it is hardly surprising that criticism of the Herring Industry Board is becoming more insistent. But the main problem is to find means of increasing the export demand for the industry's products; and this is perhaps a matter which concerns the Government as much as the Herring Board.

Steadier Freight Rates.—After the collapse in the last quarter of 1937, when *The Economist* index of shipping rates showed a decline of no less than 25 per cent., the freight markets showed greater steadiness in the past

month. *The Economist* index for January, given below, showed only a fractional decline in that month:—

The Economist INDEX OF FREIGHT RATES
(1898-1913=100)

	Average, 1913	Jan., 1937	Oct., 1937	Nov., 1937	Dec., 1937	Jan., 1938
European waters.....	110.0	135.5	181.3	164.2	140.8	124.6
North America.....	113.1	117.2	143.5	130.2	118.0	118.5
South America.....	123.4	141.8	148.6	125.0	109.4	110.6
India.....	106.3	130.7	177.9	161.9	141.2	142.6
Far East and Pacific.....	117.4	140.5	171.5	149.1	127.1	128.6
Australia.....	127.9	147.8	158.8	146.3	121.7	130.0
Total.....	116.3	135.6	163.6	146.1	126.4	125.8
1913 = 100.....	100.0	116.5	140.7	125.6	108.6	107.9

But, as the next table shows, movements of rates on the principal trade routes have shown considerable divergences:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade.....	114.0	-12.0	South America:—		
Bay—outwards.....	121.1	-27.5	Outwards.....	68.6	-2.7
Bay—homewards.....	171.0	-27.4	Homewards.....	152.6	-0.4
Mediterranean.....	83.2	-2.3	India—outwards.....	109.8	-12.3
Outwards.....	144.7	-15.8	India—homewards.....	175.4	+34.2
Homewards.....	118.5	+0.5	Far East, etc.....	128.6	+1.5
North America.....			Australia.....	130.0	+8.3

The trend of freight rates, however, appears to be still downwards. The long-term factors which have influenced the position of the shipping industry are discussed on page 294.

Tin Production and Consumption.—With the publication last week-end of the January bulletin of the Tin Research and Development Council it is possible to trace, with tolerable accuracy, developments in the tin position in 1937. Although complete statistics for December are not yet available, production in that month is estimated at 26,000 tons, bringing the 1937 total to 206,000 tons—which, as the following table shows, is the highest yearly aggregate ever recorded. World consumption last year is provisionally estimated at 181,000 tons, and visible supplies consequently show an increase; but it is likely that when full data are available consumption will prove to have been appreciably greater. Spot tin averaged £242 per ton on the London market last year, against £205 in 1936 and £225 in 1935. Fluctuations were, however, considerable. The monthly average rose to a peak of £283 in March and had fallen to £191 in December, against £232 a year earlier. At present the cash price is about £180 per ton. The weakness of the market in recent months has

1937	206,000(p)	181,500(p)	25,711	242.33

(a) End of the year. (b) £ per ton for standard, cash. (p) Provisional.

Although the European statistical position is not unwieldy, any sustained improvement in prices here must wait upon the recovery of business in the United States.

Wholesale Prices React.—The firmer tendency of wholesale prices noticeable at the New Year has now been followed by a fresh decline, which brings both the British and American index number to new low levels. Looking back, however, over the past two months as a whole, the complete *Economist* British index number has only fallen by 1.1 per cent., and the primary product index by 0.7 per cent., compared with declines of 5.6 and 9.0 per cent., respectively, for the two months to December 1st. Thus in spite of the recent decline, there is an appearance of greater stability. In the United States, on the other hand, this new stability only became apparent in January, and even here there has been a slight recession during the past fortnight. French prices continue to rise in sympathy with the fresh weakness of the franc.

INDUSTRIAL REPORTS

WHILE current activity remains at a high level in the heavy industries, the position of the textile trades continues to deteriorate. Most reports from industrial centres, however, are unanimous in drawing attention to the decline in new business. Even in the iron and steel industry the volume of new transactions remains limited. Current consumption of iron and steel remains as high as ever, but, as output is steadily increasing, some producers have recently been able to begin replenishing their stocks. The output of coal continues well above last year's level, but new export business has been unsatisfactory in a number of districts. Activity in the cotton and wool textile trades appears to be shrinking, and in Lancashire the position is becoming serious. In the House of Commons, on Wednesday, Miss Horsburgh urged strongly that the plight of the Dundee jute trade should be relieved by provisions for a curtailment of India's exports to this country in the new Anglo-Indian Trade Agreement.

Coal

Cardiff.—The Cardiff coal market is practically unchanged. During the past few days there have been many idle tips at the principal docks, but it is expected that there will be an improvement when the gales have abated and normal shipping movements can be resumed. Last week exports were 67,000 tons greater than in the corre-

sponding period last year, while for the four weeks ended January 30th they show a gain of 90,000 tons. Practically the whole output is covered by contracts, and the collieries are well occupied. Prices are nominally unchanged. The South Wales Miners' Federation decided on Monday to apply for a 10 per cent. increase in wages, and the owners are meeting next Monday to determine what recommendation they shall make under the provisions of the Conciliation Board Agreement authorising either side to review the wage position at the end of each year. It is anticipated that the audit for the three months ended last January will show a considerable increase in profits over the previous three months.

Newcastle - on - Tyne.—The forward coal market in the North-East remains quiet, but the prompt position is satisfactory. Durham collieries producing gas and coking coals are fully occupied for several weeks ahead, and while the pressure of demand for steam coal has been reduced, production nevertheless proceeds steadily. The Northumberland steam collieries are comfortably employed in the meantime, but new business lags as foreign consumers are taking no interest in the market. The market in patent oven coke is now very quiet, and prices in both the home and foreign sections are easing.

* These figures relate to January 26th. † Monthly average.

The index numbers for the groups composing the index are given below, with comparative figures for a fortnight ago, a year ago and also for September 18, 1931:—

	The Economist Index (1927 = 100)			
	Sept. 18, 1931	Jan. 27, 1937	Jan. 19, 1938	Feb. 2, 1938
Cereals and meat...	64.5	88.3	90.9	88.9
Other foods	62.2	67.8	62.4	61.4
Textiles	43.7	69.2	58.4	57.8
Minerals	67.4	97.2	95.8	94.7
Miscellaneous	65.8	82.2	79.8	79.3
Complete index	60.4	81.0	77.2	76.2
1913 = 100	83.1	111.4	106.2	104.8
1924 = 100	52.2	70.0	66.7	65.8

The group indices show that the past fortnight's fall in British prices was very general. The complete index is now 1.3 per cent. lower than it was a year ago.

Glasgow.—The position in the Scottish coal market is not uniformly satisfactory. Home business proceeds on steady lines, with industrial, public utility and domestic requirements active; but new export demand has contracted to very small proportions. Quieter general trade conditions on the Continent, mild weather and the heavy buying of several months ago have combined to produce an accumulation of fairly heavy stocks at importing depots abroad, and in cases where new business could be arranged the high level of prices tends to retard progress. As a result supplies are now more plentiful, and in Fife and the Lothians, the areas depending mainly on shipping business, the prices of steam coal and treble and double nuts have been shaded further this week by about 1s. per ton.

Sheffield.—Owing to the sustained home demand, the market in most descriptions of coal is strong. Industrial needs are the mainstay of the industry. The call for small fuel is very strong. Gas coal is sold freely under contract, and the household market is showing improvement. The popular grades are somewhat scarce, and prices remain firm. Furnace and foundry coke is rather quieter than of late, but gas coke is in good demand. Blast-furnace qualities are around 30s. per ton, and large selected patent oven

and graded coke for works and central heating sell at 30s. to 34s. per ton on rail at ovens. On the export market there is very little change in the demand for either prompt or forward delivery. Very little new business is being arranged, and shippers are not very sanguine about the success of recent quotations. There is, however, an inquiry for 65,000 tons of sized coal from the Montevideo electricity works.

* Including Cumberland, Westmorland, Gloucester, Somerset and Kent.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that current activity remains at a high level, although the volume of new business is still rather small. Consumers have recently shown more inclination to cover themselves forward. The steelworks have enough work in hand to keep them busy for some months to come and are being subjected to considerable pressure from users for delivery.

In the pig iron section adequate supplies are now reaching all the consuming branches of the industry. New business remains limited, but buyers have taken rather more interest in the market of late. No transactions have been reported in foreign foundry iron for a considerable period, although a certain amount is arriving against old contracts.

There is little stringency now in the semi-finished steel market, and most of the consuming works are able to operate at capacity. The British works producing this material are, however, still hard pressed to meet all their customers' requirements.

In the finished steel section there is considerable pressure on the part of consumers to obtain delivery against contracts and in many cases the works are heavily in arrears. The position in this respect, however, seems to be gradually improving. Export business remains quiet, but inquiry from several overseas markets appears to have increased since the beginning of the year.

Sheffield.—So far as steel is concerned the market is as firm as ever, but iron prices have tended to decline. Consumption of both forge and foundry iron is on a big scale, but deliveries are much more regular and adequate, and there is now no talk of a shortage. Production is at capacity, and

if the full make is not purchased, producers are quite content to be able to put something into stock. Not very much forward business has been done this week, users being well covered for the next few months, and are in the market only for odd parcels to meet additional needs. Consumers are experiencing less difficulty in placing contracts for East and West Coast hematite, but available quantities of special grades are below users' requirements. Bar iron continues in good request, common and market bars being the best features.

Although production of basic steel billets is being continually expanded, it is still insufficient to meet demand. Acid billets also continue in active request. Wire rods and strip make a good showing, business being substantial, and the call for structural steel remains at a high level.

Glasgow.—Production continues on an intensive scale and the tonnage of orders on books is such as to ensure many months of great activity. There is a strong demand for all classes of steel, but at the moment the greatest pressure seems to be for the heavier material. Within the past few weeks the number of vessels placed with Clyde shipbuilders has been small, but there is still much work on hand at the yards. Marine engineering firms in this area are also exceedingly busy and plant is constantly employed.

In the sheet trade new business has not been very plentiful recently and makers have been able to reduce the accumulation of orders on books. At the same time there are many inquiries on the market and makers look for an early improvement in the position as regards new orders. Things are rather quiet in the tube trade and it is not possible to keep all plant employed. In practically all trades supplies of raw material are now more satisfactory.

Cardiff.—Quiet conditions continue in the tinplate trade. In the week ended January 22nd the output was only at 61.40 per cent. of capacity. Production has declined mainly owing to a diminished foreign demand, but at 7,590 tons exports were about 2,000 tons greater than in the preceding week, but 350 tons less than a year ago. Prices are unaltered, but the general position of the export trade was to be reviewed at a meeting of the International Cartel to be held in Paris at the end of the week. The reduced demand of the tinplate works is reacting on the steel bar market, but the inland demand is still very active and the output of pig iron and ingot steel has been well maintained.

Textiles

Cotton (Manchester).—There has been no improvement in the market. Inquiry has been fair, but the limited business done has consisted of relatively small lots. Spinners continue to struggle against adverse conditions. Loud complaints have been met with from producers of American qualities and curtailment of output is now on a large scale. The ballot of the owners of 50 mills spinning medium American weft yarns on the proposal that all production should be stopped for two weeks during February has been indecisive.

Many firms, however, will restrict output during the month by 50 per cent. No relief has come to producers of Egyptian yarns and the stoppage of spindles in the Bolton district tends to increase.

In the cloth section there has been a fair amount of testing of prices, but buyers have not been any more disposed to increase the size of their orders and practically all the sales have been of retail dimensions. Demand for India has tended to fall off. Very little has been done for Egypt and West Africa. Irregular operations have been reported in printed and dyed sorts for the outlets of Central and South America. Some makers have done more business for the Dominions, especially South Africa and Australia. Reports from the home trade have been rather more encouraging. Conditions in Lancashire weaving districts remain very unsatisfactory, the stoppage of looms being on a considerable scale.

Other countries	2.7	3.1	108	102.6
Total	51.4	50.1	1,458	1,425.8

Wool (Bradford).—Manufacturing conditions are not very satisfactory, many mills running only three days per week, and consumption is lower than in any year since 1932. During the past week some firms have sold rather more piece-goods, but what is needed is a restoration of confidence throughout the entire textile trade, which would soon be expressed in more liberal purchases by piece-goods buyers in particular, thus leading to a larger consumption. Prices for both merinos and crossbreds are at a very usable level, and this should stimulate trade in every section.

THE COMMODITY MARKETS

In the absence of better news from the United States, the easier tendency of the prices of sensitive primary products continued during the past week.

Apart from copper, the prices of non-ferrous metals showed a slight improvement. Rubber prices, however, were marked down again in spite of the drastic curtailment of exports during the second quarter of this year announced last week. The majority of vegetable oils were also marked down. Raw cotton prices are scarcely changed on the week, but the slight improvement in wool prices at the beginning of the London auctions was not maintained at the close. The market in wheat remained steady, but raw sugar prices experienced a slump.

The downward trend of commodity prices in the United States is reflected in the decline in Moody's index of staple commodities from 150.4 (Decem-

ber 31, 1931 = 100) to 148.6 during the week ended last Wednesday. A month ago the index stood at 149.3 and a year ago at 205.6.

Metals

Copper.—After an early fall, prices recovered, to close on Wednesday showing a net loss of only 7s. 6d. per ton on the week. The dullness of demand had induced the American producers to lower their domestic price to 10 cents per lb. on January 28th, but a steady tone has since prevailed. Meanwhile, in London a considerable amount of forward buying on consumers' account has recently been noticeable, but supplies have been sufficient to prevent a stronger price rally.

Rhodesian production in 1937 amounted, according to information published early this week by the British South Africa Company, to 208,187 tons, against 142,340 and 143,500 tons, respectively, in the two preceding years. Last year's production was an all-time record. In December, however, the effects of the re-imposition of output restriction were discernible and production, at 16,265 tons, fell below the corresponding figure for 1936.

Tin.—After falling to the lowest level for over a year, prices recovered and closed on Wednesday showing a net gain on the week of £1 per ton. As with copper, these fluctuations are a reflection of the movement of United States demand. Meanwhile, according to Messrs. A. Strauss and Company, world visible supplies, at 23,254 tons, showed a decline of 987 tons last month. Allowing for a rise of 294 tons in the Arnhem carry-over, the net reduction in world stocks was 693 tons. New supplies fell from 10,636 tons in December to 7,425 tons in January, while deliveries rose from 9,015 to 10,157 tons. Smaller shipments from the Straits and negligible exports from Banka (D.E.I.) were the factors mainly responsible for last month's fall in supplies. Shipments from Banka are likely to show a considerable increase in February and deliveries will have to be maintained at a high level if stocks are not to increase. The annual statistics are discussed in a Note in our Industry and Trade Section.

Lead and Spelter.—The markets were featureless and both metals closed on Wednesday with a fractional net gain. It is reported from Czechoslovakia that the producers have applied to the Government for an increased import duty on spelter, to enable the Czech mines to resume production; but it is considered unlikely that the request will be granted.

Owing to its important armaments industry Czechoslovakia is a zinc consumer of growing significance.

Grains

The steadiness of the wheat markets, to which attention was drawn last week, has again been evident. Prices show little alteration compared with those ruling a week earlier and trading has been quiet. The flour market has, however, been slow and quotations have moved in buyers' favour. Demand for maize was rather dull and prices were accordingly reduced. The Argentine Government's first forecast estimates the area planted to maize at 14,696,000 acres, against 16,040,000 last season. Meanwhile, business in imported feeding barley has been extremely dull and quotations for the leading descriptions are nominal.

Other Foods

Provisions and Meat.—Danish bacon sold at slightly higher prices on the London Provision Exchange this week, but other sorts were in quiet request at unchanged rates. Hams were steady. The butter market opened firm and Colonial makes were marked up in price. Subsequently a rather quieter tone was evident and Danish showed a net fall on the week. Colonial cheeses also rose in price in a firm market, but other makes were unchanged. A firm tendency prevailed at the London Egg Exchange this week and eggs were generally dearer on shorter supplies. Trading in meat at Smithfield Market was featureless and prices were generally unaltered, except in the case of lamb, which was slightly dearer.

Colonial Produce.—An event of some importance was the decision of the Pepper Sales Control committee to raise the spot price of White Muntok in bond to 4d. per lb. (4½d. duty paid), an increase of ½d. per lb. over recent levels. Lampong, in bond, rose from 2½d. to 2½d. per lb. Raw sugar, on the other hand, was a weak market and prices showed a considerable decline. At this week's tea auctions some low-grade Indian sorts were rather irregular, but the tone generally was firm. The quality of the Ceylon grades on offer showed an improvement and there was brisk bidding for the finer teas at higher prices. The markets in cocoa and coffee were quiet, with prices showing little alteration.

Fruit.—Business at Covent Garden was rather less active, says *The Fruit-grower*, and prices generally showed a rather easier tendency. Apples were in steady demand, but were slightly cheaper on account of heavier imports. South African pears had a fair reception, but Californian were easier. Limited supplies of hothouse grapes sold well. South African plums were a

prominent feature, while peaches and nectarines from the same source sold steadily at unchanged rates. Oranges were a steady trade at rather firmer prices, while grapefruit was less plentiful. Lemons were in only moderate demand and were inclined cheaper.

Vegetables.—Most lines of vegetables sold well at Covent Garden during the past week. Forced asparagus, according to *The Fruit-grower*, was cheaper owing to increasing supplies. Beans were well maintained and cucumbers were firm on limited supplies. Lettuce and forced marrows maintained the recent level of prices. Forced rhubarb was more abundant and was cheaper, and mushrooms were also reduced. New carrots and new turnips put in an appearance. Cabbages and savoy were cheap, but cauliflowers sold rather better. Onions remained dear, while parsnips showed little alteration. The potato trade at the various London markets was rather dull for the time of year and prices in some instances showed a rather easier tendency.

Miscellaneous Commodities

Wool (Bradford).—Interest was centred on the sales in London which finished last Thursday as creditably as could be expected. Details of the quantities disposed of are not yet available,

but the purchases of the home and Continental trades have been up to the usual standard, the activity of Russia undoubtedly swelling the Continental total. The operations of the latter country during the first week certainly helped to establish a higher level of prices than expected, and it was regrettable that Russian buying did not continue throughout the entire series, for during the latter half of the auctions prices slightly receded, and at the finish were mostly 5 per cent. below the highest point.

Buying on the part of both the home and Continental trades has been steady and consistent throughout, the reasonableness of the raw material no doubt accounting for the operations of the home trade in particular. At the moment a big weight of wool is being submitted, particularly at overseas markets, and there is now very little difference between prices ruling in Coleman Street, Australia, New Zealand and South Africa. There has been an excellent display of both merinos and cross-breeds throughout the entire series, and the nature of the offerings has no doubt contributed towards the improvement in demand. The new clip wools catalogued have been mostly well grown, of good length, and average condition—characteristics which always stimulate buying. The carry-over is not more than was expected, and the wools will be available for future series.

Rubber.—As with metals, the market has tended to fluctuate in sympathy with Wall Street. After continuing to decline until Monday, prices scored a recovery and closed on Wednesday showing a net loss of about ½d. on the week. If the output quota is maintained at 60 per cent. for the remainder of the year, shipments in 1938 should amount to 920,000 tons, while a tentative estimate by Messrs. Symington and Wilson puts consumption this year at 990,000 tons. Thus world stocks may decline by 70,000 tons in 1938.

	Jan. 22, 1938	Jan. 29, 1938
Landed.....tons	2,513	1,920
Delivered.....tons	1,419	1,235
Stocks, end of week.....tons	60,845	61,530

Furs.—The general series of winter fur sales opened at the sales rooms of the Hudson's Bay Company on Monday last. The attendance was good and London, Paris and Leipzig merchants bought fairly freely: New York buyers also secured some parcels. Prices were about maintained at recent levels, but were well below those of October.

COMPANY MEETINGS

LLOYDS BANK LIMITED

A SATISFACTORY YEAR

NATION'S SOUND TRADE POSITION

IMPORTANCE OF EXPORT TRADE

NEED FOR FREER MOVEMENT

LORD WARDINGTON ON THE OUTLOOK

The eightieth ordinary general meeting of the shareholders was held, on the 28th ultimo, at Southern House, Cannon Street, London. Lord Wardington (chairman of the Bank) presided.

The notice convening the meeting having been read by the secretary, and the auditors' report by Mr F. S. Tull (Price, Waterhouse and Company),

The Chairman, in moving the adoption of the directors' report, said:—My lords, ladies and gentlemen,—I regret that I have to report the death of the senior member of our board, Mr Charles E. Barnett, shortly after our last annual meeting. He was a partner in the old banking house of Barnetts, Hoares, Hanburys and Lloyd, which became amalgamated with Lloyds Bank in 1884. He was a link between the very different conditions prevailing in the latter half of last century and those which confront us now. He saw the assets of this Bank grow from a figure of £10,975,635, when he first joined the board, to the sum of £465,000,000, which was the total in our 1936 balance sheet, the last one he ever saw. It is tempting to dwell on the many changes which took place in banking during the fifty-three years of his directorship of this Bank. Many of them are most interesting and will readily recur to you, but this is hardly the time or place to enumerate them. Throughout his long, active and useful life he was closely identified with the City, both as banker, and for many years as chairman of the Alliance Insurance Company, of which his father had been a director before him, and his grandfather one of the original directors. He had also been president of the Corporation of Foreign Bondholders. In all these positions he worthily upheld the traditions of the City, and gained the respect and affection of all with whom he came into contact.

BALANCE SHEET

Our report and balance sheet which we present to you to-day, and which I presume you will, as usual, take as read, show some very interesting but no very remarkable changes.

Reserve Fund.—To take the liabilities side first, you will see that the reserve fund is now £9,500,000 as compared with £9,000,000 in 1936, the result of the re-transfer which we have again made of half a million from our internal funds. We did the same last year, and there only remains a further £500,000 which, when it is re-transferred, will restore to the published reserve the whole of the £2,500,000 which you will remember we took in 1931 from that account to supplement our internal investment reserve fund. This was a precautionary measure, as I reminded you last year, of which we never had the necessity to make use.

DEPOSITS

Our current, deposit and other accounts stand at £410,000,000, but if it had not been for the unexpected receipt in the last week of the year of some large sums, the increase of £4,000,000 would have disappeared, and our deposits would have been below those of last year.

The question as to whether we should make any special endeavours to increase the amount of our deposits has given us a certain amount of preoccupation. Although it would seem to be illogical to estimate the importance of any business by the size of its liabilities, there is no doubt that size has a certain attraction, and it is not unnatural to look with admiration at figures which indicate a great business, and there is the risk that any falling off in these figures may involve the loss of public esteem. However, latterly, we have been actuated by other considerations, and our guiding principle has been to refrain from bidding for deposits by offering higher rates than we thought were economically justified.

Our principal concern was in connection with foreign deposits, that is to say, that large amount of floating capital seeking a temporary home, either with the object of obtaining a safe asylum or a higher return. Money of this character is very unreliable, and is

apt to be withdrawn at the shortest possible notice when any scare occurs. For this reason it is essential to keep such a deposit in a liquid form, so that it can be readily returned when called for. Short-term methods of employing this money during last year have only been able to command a rate of about a half per cent., the rate of allotment for three months Treasury bills, for instance, during the past half-year averaging no more than 1½. 4d. per cent. We considered, therefore, that to allow a foreign deposit 1 per cent. or more must result in a loss to the Bank. It can, of course, be argued that only a portion of such deposits is likely to be withdrawn at any one time, and that it would be a perfectly sound proposition to treat them as we do our home deposits, that is to say, to keep the usual proportions in cash, Treasury bills, loans, gilt-edged securities, etc., but for the reason given we felt that such an argument was not economically sound if applied to anything in the nature of nervous foreign money.

INFLOW OF FUGITIVE MONEY

There seems to me to be another reason, and an important national one, why the inflow of fugitive money into this country should not be encouraged. Nearly every other country has refused to give anything for it but a purely nominal rate. Some refuse to give any interest at all, and even charge for its safe keeping, and it seems to me to be sound business to follow the example of those countries and not to run the risk of putting the stability of our country's exchange to the serious inconvenience which would arise if deposits of this nature and in considerable volume were suddenly withdrawn and sent to other countries, which for the moment appeared a more attractive asylum.

Another undesirable result appears to have followed from an undue competition for foreign deposits. A greater demand for bills was a natural consequence, and the discount market has again suffered from an inability to extract a living wage from the low rate applied to the discount of bills. The discount market is an essential part of London's financial equipment, and of great importance in the composition of its intricate and delicate activities. It is highly desirable that it should be allowed an opportunity to live, and though the excessively low rates—to some extent artificial—which have ruled during recent years may be an advantage to the Treasury, and indirectly therefore to the taxpayer, yet these advantages would be dearly bought if they were to mean the extinction of the London bill market as we know it to-day, and consequently the greatly diminished attractiveness of the London bill, if its marketability were threatened.

There are no other items on the liabilities side to which I wish to draw your particular attention.

INVESTMENTS

On the assets side the account under the heading of investments calls for some comment. There has not been much change in the amount, the total being £2,000,000 less than it was last year, but because investments occupy a far more important place than formerly in the utilisation of our assets, I want to take a little time in speaking of our investment policy.

To illustrate the change which has taken place over a period of years I should like to call attention to the following figures:—

	1913	1919	1937
Average percentage of—			
Loans to total deposits	54.6	33.8	39.2
Investments to total deposits	12.1	20.9	28.0
Bills to total deposits	11.5	21.8	12.8

A point worth notice is that we have exchanged a considerable proportion of our commercial, private and other borrowers for the Government as borrowers, and it therefore behoves us to see that we

have an investment portfolio with scientifically graduated maturities as evenly spread as possible, especially so inasmuch as it is not the habit of Governments in these modern times to repay their loans finally. It is therefore open to argument whether, in the interest of liquidity, the present position can be said to be as satisfactory to the depositors and shareholders as a wide variety of borrowers, many of whom require advances only for seasonal purposes.

We have been able roughly to preserve our usual proportion between short-term and medium-term Government redeemable securities. Your directors have adopted this as a sound and essential principle in view of the fact that our liabilities are almost entirely repayable on demand or at short notice. The added importance which we pay to the investment policy is necessitated by the fact that the good trade which this country is now enjoying has not, except gradually through the year, influenced to the extent which might reasonably have been expected the sum total of our advances to industry. The reasons for this are many and complicated, and would require considerable time to explain in detail. The fact remains, however, that advances are below normal in relation to our deposits, and that investments are above normal. The weight of money in the country, and the importance of keeping money at the lowest possible cost, in view of the Government's heavy expenditure programme, make it difficult to see in the immediate future a return to the normal ratio of past years of advances to deposits. With this fact in mind a constant scrutiny of our investments has been carried out, and advantage has been taken continuously of any anomalies which have existed in market values between comparable securities.

LOCAL GOVERNMENT BORROWINGS

One of the features of the internal finance of the country at the present time which gives food for serious thought is the ever increasing demand for loans by local government authorities. Indeed, the competition to borrow has been so great that, but for the careful nursing of the market by the Treasury and the Bank of England, interest rates on local government loans would be higher than they are at present. The word "economy" has ceased to retain its old-time meaning. The protagonist in the cause of economy has been entirely eliminated. The word "economy" now means "wise spending." Wise spending from a local government point of view often means expenditure on whatever happens to be the current "fashion."

At a time when the primary need of defending the country is the subject of heavy additional borrowing—and taxation—by the Central Government, surely a large part of the borrowing by local governments could be postponed. The greater part of this borrowing requires to be sanctioned by the Central Government. That sanction is invariably given, and so the burden of debts mounts higher and higher. Local rates are continuously increasing, and, what is more to the point, the quinquennial valuation always seems to produce a higher assessment—never a lower. It is true that a large proportion of local government debt is described as productive. One cannot help feeling that such enterprises would be more productive in private hands. This has so often been proved when local authorities have attempted house building by direct labour. It is also true that there are some local governments who run their finances well. It is, however, the fact that nearly all local government public loans are immediately renewed at maturity, and, in the majority of cases, opportunity is taken to increase the amount required. Here are some figures showing the growth of local government debt:—

1914	...	...	£562,630,600
1920	...	...	£555,145,000
*1935	...	...	£1,421,501,979

* Latest available figure.

One can foresee a position of considerable difficulty when local government obligations, running into many millions of pounds, mature, and holders desire to be repaid in cash rather than convert into new issues.

LOANS AND ADVANCES

The next item of importance amongst our assets is our loans and advances. It is true that it shows an increase compared with last year of over £21,000,000, and the percentage to deposits has risen from 36.7 per cent. to 41.5 per cent., but I ought to point out that a large part of this increase only occurred during the latter end of the year, and the average throughout the year was 39.2 per cent. If the present figure continues throughout this year our profit and loss account ought to benefit.

From a study of the customary analysis of our advances we see that there has been a large increase of £9,000,000 under the omnibus heading of "Personal and Professional"; an increase of £2,000,000

under "Engineering"; while "Oils and Fats" borrowed £1,055,000 more, and "Public Utilities" £885,000 more. On the other hand, "Banking, Insurance and Finance" required £3,242,000 less, and "Shipping and Shipbuilding" £1,900,000 less. The other differences are comparatively small.

PROFIT AND LOSS

Our profit and loss account shows the satisfactory increase of £88,000, all the more satisfactory because it is arrived at after making the new provision for National Defence Contribution, and after providing a substantial sum towards our superannuation fund.

Incidentally, I may mention that we propose next year to simplify the unnecessarily cumbersome form of our profit and loss statement, especially that appearing in our report. It can, I think, be taken for granted that our profit figure has only been arrived at after debiting all such ordinary expenses as salaries, pensions, taxes, and the usual allocation to staff funds, without enumerating all these items separately.

Some of you may have hoped that these figures might have prompted us to recommend an increased dividend, but I think on reflection that you will agree with me that there are a sufficient number of factors entirely outside our control which render it desirable not to do anything which suggests that the signals are yet standing at "All Clear." I feel, too, that the staff might legitimately consider that they have a first claim on any increased profits for the restoration of those reductions in the annual increases which they have suffered in recent years.

TRADE OUTLOOK

In reviewing the situation last year I had the temerity to utter a word of caution, and to suggest that we ought to take every care to ensure against the activity of our internal trade degenerating into anything which could possibly be called a boom, and that in the second place we should look forward to the time when the chief causes of our internal activity had come to an end and take all possible measures to fill the gap with increased foreign trade.

The events of the past year have, I think, justified what may have appeared to be an unnecessarily cautious attitude on my part. It frequently appears to be the fate of a banker to be in opposition to the existing trend of public opinion, and if last year, when everything seemed rosy, I had my doubts as to the future, so again now, when talk of a recession in trade is somewhat loud and insistent, I see no reason in the fundamentals of our commercial position to apprehend any serious set-back.

There are many factors, especially in the political sphere, which are on the lap of the gods. Of these I am not able to speak with any particular knowledge or assurance, but trade in itself in this country appears to me to be generally sound. This does not mean that it is not wise to look forward to a time when it may be less active. This is always true wisdom in any circumstances, but it is the height of unwisdom to hasten such a time by creating an unfavourable psychological atmosphere in which the very thing we wish to avoid is artificially nurtured.

IMPORTANCE OF EXPORT TRADE

Bearing all these things in mind I should like to urge the importance of doing all that is possible not only to keep, but to increase the volume of our export trade. For this reason I welcome the steps which have been taken in this direction, slow moving though they are, and I think the Government are to be congratulated for following up the Tripartite Agreement by endeavouring to arrange a Trade Agreement between the British Commonwealth and the United States of America, remembering that a large proportion of the trade of the world is accounted for by transactions between these countries, and for their co-operation with Monsieur van Zeeland in his inquiry as to the best methods of removing those obstacles which continue to obstruct the flow of international trade.

Whatever steps may be taken as a result of his report, there can be no doubt of the necessity for securing a greater freedom of movement of goods between all nations. I referred at some little length to this point in my address to you last year, and I urged the importance to us as a great exporting country of taking every measure possible to see that our export markets were maintained. To-day this advice seems to me to be more than ever necessary, and it would be fatal to let our general activity in trade, for which our re-armament programme may be increasingly responsible during the current year, shut our eyes to the necessity of preserving and increasing our overseas markets. It is so easy to lose them. It is so difficult, once lost, to regain them. The overseas trade figures for 1937 add point to these remarks. Our adverse visible trade balance, with exports

of £596,761,000 and imports of £1,029,065,000, is no less than £432,304,000.

ADVERSE TRADE BALANCES

In normal years it is easy to exaggerate the significance of an adverse trade balance. In the first place it is partly rectified by invisible exports, though any precise figure in regard to them is largely a matter of conjecture. Secondly, there is usually a natural lag between the arrival here of imports of raw materials and the subsequent export of goods manufactured from them, and therefore a true balance of trade cannot be accurately struck on any arbitrarily chosen date. But in present circumstances, when so much of our imports of raw materials are being used for the manufacture of armaments, they cannot form the usual basis for subsequent exports, and our final balance of trade for 1937 must inevitably, even after making all allowances, throw exceptional strain on our exchange position.

Chairmen of the big banks have, I see, drawn attention to the importance of our export trade, and the necessity for its preservation, both from the point of view of maintaining employment in the future, and of off-setting the large amount of our imports. I gladly add my testimony to what has been so ably stated on this very material point.

I now beg to move: "That the Report just taken as read be received and adopted, and that, in accordance with the recommendation of the Directors therein, a dividend be declared for the half-year ended December 31st last on the paid-up capital of the company at the rate of 12 per cent. per annum on the 'A' shares, and at the rate of 5 per cent. per annum on the 'B' shares, payable, less income tax, on and after January 29, 1938."

The resolution was seconded by Sir Austin E. Harris, K.B.E., the deputy chairman, and carried.

The retiring directors were re-elected, and Messrs. Price, Waterhouse and Company were re-appointed auditors for the year 1938.

Votes of thanks to the directors for their services during the past year, to the staff for their excellent work, and to the Chairman for presiding, were carried, and the proceedings then terminated.

UNION BANK OF AUSTRALIA, LIMITED

CRIPPLING EFFECT OF TAXATION

The annual meeting of the Union Bank of Australia, Limited, was held, on the 31st ultimo, in London, Major-General Sir John H. Davidson, K.C.M.G., C.B., D.S.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the bank celebrated its centenary on September 1st last, and during that long span of one hundred years it had consistently provided service for the community, confidence for its depositors, and the unbroken payment of dividends—a record of which they might justifiably be proud. In order to mark the centenary in a practical way, the board had authorised a bonus of 7½ per cent. of their annual salaries to all members of the staff in London, Australia and New Zealand, and a bonus to shareholders of 2 per cent., less tax, had also been declared.

A subject to which he wished to draw particular attention was the heavy and rising expenditure. Taxation in Australia was very heavy, but in New Zealand it was altogether crippling. In the Dominion the basis of taxation had really no relation to profits earned. The total assets and liabilities in New Zealand were added together and a profit of 1½ per cent. was arbitrarily assessed on this aggregate figure. This assumed profit was subjected now to an income tax of 7s. 6d. in the £. The resulting levy, plus land tax, and after allowing for all tax deductions, amounted to between 16s. and 17s. in the £ of the net profits. It was, therefore, no exaggeration to describe the effect of this taxation as crippling, and there would be no justification for remaining in New Zealand did they not feel a sense of responsibility towards the country itself, and had faith in the justice of the Government. While the tax remained at a moderate level, there remained a moderate profit, but the raising of the tax to 7s. 6d. by the present Government removed all chance of securing a reasonable return.

The subject of the taxation of the banks had for some time past been under the review of a committee which was set up by the Government to deal with taxation in general. They now awaited the decision of the New Zealand Government.

Gross profits were up by £69,808, but this had been largely offset by additional expenditure, which had increased by £56,272. It was gratifying that it was possible to declare a final dividend of 4 per cent., making 7 per cent., less tax, for the year.

The report was unanimously adopted.

SUN LIFE ASSURANCE SOCIETY

NEW BUSINESS—£22,000,000

SIR WILLIAM GOSCHEN'S REVIEW

The annual general meeting of the Sun Life Assurance Society was held, on the 1st instant, at the Chief Office, 63 Threadneedle Street, London, E.C.

The Hon. Sir William H. Goschen, K.B.E., chairman of the Society, in the course of his speech, said: Gentlemen,—The report is, as usual, very brief, but in it and in the pages that follow is condensed the story of a year's achievements of which we may well be proud.

To judge from the amount of space devoted in the Press to new business figures, they are the standard by which the public seems to measure the success of an assurance company. We need fear no criticism on that score, as last year we established, for the second year in succession, a new business record, the actual completions being 33,500 new assurances for sums assured exceeding £22 millions. The result of the succession of increases in new business is a record expansion in the renewable premium income, which now exceeds £4½ millions. From new business and increased income one passes naturally to expenses, and there also I am able to report success. For the third year in succession the expense ratio shows a decrease, in spite of the great volume of new business and of certain exceptional expenses which we have had to meet in 1937.

Such a successful year's work has brought a large addition to the funds. The total funds have increased during the year by over £2,250,000, and now stands at more than £43 millions.

You will observe from the life assurance revenue account that claims by death amounted to £1,071,000 and claims by maturity to £1,535,000, each showing an increase of about £100,000. An investigation has been made into the mortality experience for the year and the results are extremely favourable.

The annuity and sinking fund accounts do not call for any special comment, and the small remaining accident business follows its normal course.

BALANCE SHEET

Turning to the balance sheet, I need not spend any time on the liabilities side. So far as our assets are concerned their general character remains unchanged. Our investments on the Continent of Europe, other than in Norway and Denmark, are insignificant in amount, and I am pleased to be able to tell you that over 92 per cent. of the Society's assets are situated in the British Empire.

As you are aware, the year has been characterised by considerable depreciation in the capital value of Stock Exchange securities. In a year which has seen a fall of 12 per cent. in the value of Consols, of 5 per cent. in debentures, and of 20 per cent. in ordinary shares, it is reassuring to find from a valuation of our own assets that the depreciation suffered during the year, was less than 2 per cent. I think, therefore, that we can safely claim that we have come through a very difficult investment year with relatively less depreciation than might have been expected. I may also say that the market value of the Society's assets exceeds their balance-sheet value by a very considerable sum, which, with the amount carried forward at the last valuation, would suffice to cover a depreciation of many times that experienced last year.

I can think of no more convincing proof of the security afforded by an assurance company such as your Society than this evidence that our assets have suffered so small a depreciation in a year of general investment instability.

As you will have noticed, I have confined my remarks entirely to the Society's business, without embarking upon any examination of general conditions or venturing upon any prophecies. We have every reason to be satisfied with the result of our activities in the year 1937 and to look forward to another successful year in 1938.

RETIREMENT OF MR G. M. SEARLE

There is one point of domestic interest that I should like to refer to, and that is the approaching retirement in the month of June of Mr G. M. Searle after a service of practically fifty years. Mr Searle joined the staff as a boy writer in 1888, and reached the important position of joint secretary which he has held for ten years. Mr Searle has rendered very devoted service to the Society, and we wish him every happiness in his retirement. (Hear, hear!)

I should also like to take this opportunity of congratulating very warmly our general manager, Mr Riethel, his immediate assistants in the management, and the whole staff on the highly satisfactory results of their year's work. There is a fine team spirit running through the staff, and the zeal and energy that they have shown is worthy of our highest praise. (Applause.)

The report and accounts were unanimously adopted.

BRITISH TIN INVESTMENT CORPORATION, LIMITED

INCREASED DIVIDEND

The ordinary annual general meeting of the British Tin Investment Corporation, Limited, was held, on the 1st instant, at 20 Aldermanbury, London.

Mr E. V. Pearce, who presided in the absence in Malaya of the chairman, read the speech Captain O. Lyttelton would have made had he been present. He said that of the investments held by the Corporation and its subsidiary, 98.9 per cent. were quoted. The capital appreciation on the total holdings, of course, was considerably less than last year. After the deduction of the reserve fund from the cost of investments, it represented, however, over £1,200,000. The purchase of a new block of shares had turned out satisfactorily, which was shown by the fact that they were able to propose an increase of 4 per cent. in the dividend on the increased capital.

The whole of the gross revenue was derived directly or indirectly from dividends on their holdings. In their view, shareholders were well aware of how greatly the demand for primary commodities varied, and how volatile were the prices for them. It was quite obvious that the earnings of tin mining companies appeared likely to fall in 1938, and thus it did not appear probable that they could maintain their own dividend at 15 per cent. Nevertheless, they regarded themselves as directors of the company, not as parents or guardians, and, broadly speaking, their policy was to recommend for distribution all they had earned, and leave the shareholders to judge what reservations they should make in their minds, or perhaps what reserves they should make in their banks, against a future fall in the rate.

He would, however, draw their attention to the so-called lag, which delays a fall in revenue nearly as much as a rise, in a holding company of that kind.

PROBLEMS OF THE TIN INDUSTRY

Once again in 1937 the tin industry had suffered an unenviable publicity. The general impression was given that the rise in tin, partly due to international tin restriction, had been sharper than that in most other commodities. Nothing could be further from the truth. The movement in tin, as in other primary commodities, had been caused by a number of major forces which were at work. They could not hope to see rock-like commodity prices standing steadfast and unmoved above the rapids and whirlpools of political and even social tumult. He thought it very doubtful whether speculation had caused a higher price for tin than would otherwise have been reached, and in his opinion the rapidity and extent of the fall in the price had been largely due to the absence of speculation.

BUFFER STOCK BENEFICIAL TO WHOLE INDUSTRY

He would be the last to underrate the difficulties of administering a reserve stock, but to describe them as insuperable was absurd. It was most unfortunate that the whole subject of a reserve stock and its operation should have become the centre of an exacerbated controversy. The very mention of the word drew down complete condemnation from certain quarters even before the details of any proposal had been formulated. He must state quite strongly that his own view was that a buffer stock would be beneficial to the whole country if it was administered on sound lines. It was equally true that, if its administration was not carefully thought out, the results might be disastrous. He would only touch upon two points. First he was sure that the buffer stock ought not to be administered by those engaged directly in the tin industry. To-day there were many who had no commercial interests in the industry but whose knowledge and experience of it were wide.

The other point he wished to make was that, if the buffer stock was at any time to be realised, and if the cash was to be re-employed in purchases of tin, both operations should be conducted solely through the London Metal Exchange and the orders spread out amongst all its members.

No review of the tin industry in 1937 would be complete without some reference to the operation of the actual Tin Restriction Scheme. He thought that some unnecessary criticism had been directed against those producers who could not reach the tonnages they were permitted to export. They must remember that at the very beginning of the new scheme abnormal conditions had intervened, and because certain countries were unable to expand so rapidly as to reach abnormal figures was no reason for throwing stones at the standard tonnages obtained. He pleaded not for less criticism, for that was welcome, but for more objective and less controversial criticism from all those who had to live under a regime of restriction.

The report was unanimously adopted.

GOVERNMENTS STOCK AND OTHER SECURITIES INVESTMENT COMPANY, LIMITED

The sixty-sixth annual ordinary general meeting of this company was held, on the 28th ultimo, in London.

Mr J. S. Austen, the manager of the company, presided and said:—A matter in which very many people are interested just now is that of the depreciation of securities. The "Bankers' Magazine" makes a periodical valuation of 365 typical Stock Exchange securities, and from that it appears that on January 1st this year there was a depreciation on those securities compared with January 1, 1937, of about 16 per cent. If you had asked me how our valuation was likely to compare with that, I should have told you that I thought ours would probably be rather worse, because, no doubt, in their list there are many gilt-edged securities which do not appear in our list. Therefore I was somewhat pleased to find that our depreciation was also just about 16 per cent. But Lord St. Davids has told you on many occasions that in trust companies it is not the valuation that matters but the revenue, and I think you will consider that our increase of about £7,500 is satisfactory.

If you had asked me a year ago what our prospects were likely to be during this past year I should have told you with considerable confidence that our income would increase, but, to-day, with regard to the prospects of the current year, I cannot speak with that same confidence. You know yourselves that in certain directions there is not likely to be the same income accruing as there was last year.

But, after all, what you want to know is—what is your dividend likely to be at this time next year. I should very much like to promise that you will get an increased dividend, but, actually, I dare not promise more than that you will get the same dividend.

The report and accounts were unanimously adopted.

PADANG LANGKAT RUBBER ESTATES, LIMITED

IMPROVED RESULTS

The fifth annual ordinary general meeting of Padang Langkat Rubber Estates, Limited, was held, on the 31st ultimo, at 19 Fenchurch Street, London, Mr H. A. Barrett (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said the crop of 1,019,001 lb. of rubber harvested, together with the stock of 142,956 lb. brought forward, amounted to 1,161,956 lb., of which quantity 1,136,003 lb. was exported under licence. Additional licences for 22,046 lb. were sold, realising £448. The net proceeds of 1,136,003 lb. of rubber sold amounted to £39,379, the gross average price realised being 9d. per lb., which compared with 7.49d. per lb. for the previous year. The profit was £18,618, and the board recommended a dividend of 8 per cent. In regard to the replanting programme, the first 200 acres had been completed and good progress had been made with the second 200 acres. For the current financial year the company's exportable quantity—based upon the average of the international releases announced—namely, 73½ per cent. from October to June, and assuming 60 per cent. for July-September—would be approximately 1,069,150 lb. Of the current year's crop forward sale for shipment to December 31st last amounted to 178,000 lb. at an average of 8½d. per lb. There were no forward sales for 1938. Although the current price did not give an adequate recompense, he felt sure the International Committee was fully alive to that fact.

Mr A. P. Hadow seconded the motion for the adoption of the report and accounts, and in referring to his recent visit to the estates said that he found them in excellent condition.

The report and accounts were unanimously agreed to.

Shipping and Shipbuilding

The following charts illustrate the position of the shipping and shipbuilding industries. Their implications are discussed in the leading article on page 294. All the Charts except No. V have been compiled from statistics issued by Lloyd's Register. Chart I distinguishes between shipping laid-up and shipping in commission, and Chart II compares *The Economist* index of freight rates with the price of a new ready 7,500 ton cargo steamer, as given in *Fairplay*. Charts III, IV, V and VI show tonnage commenced, launched and under construction at home and abroad. The separation of steamers and motor ships in Charts V and VI clearly indicates the recent steep rise in the tonnage of motor-ships under construction abroad and the high proportion of the total for which they account.

Finance

GOVERNMENT FINANCE

For the week ended January 29, 1938, the total ordinary revenue was £32,789,000, against ordinary expenditure of £16,183,000. The deficit accrued since April 1st last is thus £92,438,000, against a deficit of £77,612,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On January 28th, applications at £99 17s. 6d. per cent. for bills to be paid for on any day except Tuesday of the following week were accepted as to about 18 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Tuesday at £99 17s. 7d. per cent. and above were allotted in full. £80.0 millions of Treasury bills are being offered on February 4th.

take SIR THOMAS INSKIP literally, the Government have gone no further than deciding that they ought to have a policy. The time, he says, has only just been sufficient to assemble the facts on which a policy can be based and, without prejudice to decisions that may, or may not, be taken in the future, the technical and financial difficulties of having a policy are almost insuperable.

It is quite impossible to regard the attitude taken up by the MINISTER FOR THE CO-ORDINATION OF DEFENCE as being a satisfactory answer to the criticisms. Lest this be thought to be an *ex parte* statement, it may be pointed out that no single speech was delivered in the debate from any quarter of the House, save only the MINISTER'S own, which did not express dissatisfaction with the present position, even though there were disagreements about the best remedy. The debate largely turned on the proposals for the storage of food which have been closely associated with the name of SIR ARTHUR SALTER and were fully expounded by him in a special article in *The Economist* of October 2, 1937. There were some passages in SIR THOMAS INSKIP'S speech which seemed to suggest that the Government might undertake some storage in the future. But in the main he devoted himself to criticism of the proposal. The cost, he said, even though it would be a non-recurring capital cost, would be too large. And even if storage were a good policy, it would never do to say so, as the announcement would immediately put up prices. The argument for secrecy in execution would readily be conceded if there were reason to believe that, behind the veil, effective measures were being taken.

SIR THOMAS INSKIP seemed to find in the expansion of the domestic production of food a satisfactory alternative to storage. He is supported in this view by the whole weight of that powerful section of opinion which neglects no opportunity of propaganda for an expansion of the domestic agricultural industry. This is a subject on which clear thinking is both necessary and also, apparently, very difficult to obtain. It is true that if we produced at home a larger proportion of our food requirements, our security in time of war would *pro tanto* be increased. It is also true,

as SIR THOMAS INSKIP was at pains to point out, that the domestic production of food has increased by about one-fifth in the past six years. It is a fact that domestic production could be considerably increased in an emergency, when cost would be no object, in a period extending from eight to eighteen months. The threat of war also is an added reason—if one were needed—for encouraging every possible advance in the technical efficiency of the agricultural industry, and for giving the farmer scientific assistance in the task of producing more food from each acre.

But when all these facts are fully admitted, the policy of expanding domestic production is still open, and in much greater degree, to all the objections that SIR THOMAS INSKIP brought against food storage. No measures that could practicably be taken could do more than alleviate the problem. Even so, they would be immensely costly. The 19 per cent. increase in production in which SIR THOMAS took such pride has been achieved at an annual cost in subsidies and higher prices far greater than that of any reasonable proposal for food storage—and with a smaller net contribution to security. SIR THOMAS was unwary enough to mention the post-war growth in sugar production in this country. But so far as security is concerned, storage would have provided much more sugar at a fraction of the cost. Finally, SIR THOMAS urged against food storage that it would involve a heavy capital expenditure for an emergency that might be only temporary. But is not the same argument applicable, with far greater force, to a proposal to subsidise an expansion in the home production of food? When the emergency had passed, nothing is more certain than that the agricultural interest would resist any attempt to shrink the industry back to economic proportions, and we should be faced not merely with the loss of the capital investment incurred, but with a very heavy continuing annual charge.

The case for food storage rests fundamentally on the fact that it provides a method of preparing for emergency at relatively small cost and with the minimum interference with the normal peace-time economy of the country. That case may not be unanswerable. But it is at least unanswered.

Brown Shirts and Brass Hats

THE events of last week-end were a landmark in Europe's post-war history and in the evolution of the new Germany. For, whatever form the new State may ultimately take, the first trial of strength between Army and Party in HITLER'S Germany is of critical importance for good or evil.

On the face of it, this first round goes to the Party. The changes announced late on Friday night last week effect an almost complete change in the personalities at the head of the German Army and German diplomacy. FIELD-MARSHAL VON BLOMBERG, the War Minister, whose marriage to a lady of more humble origin than is usual in the exclusive caste of Prussian officers was the occasion, but certainly not the cause, of the crisis, has resigned his office. But he has been accompanied into retirement by the Commander-in-Chief, GENERAL VON FRITSCH, who had constituted himself the leader of the malcontents in the high command of the Army, and by thirteen other generals of the Army and the Air Force. HERR HITLER himself has taken over the supreme command of all the armed forces. GENERAL KEITEL, who has been concerned for some time in the War Ministry with the co-ordination of the three forces, becomes Chief of the High Command, exercising under HERR HITLER the functions not so much of a War Minister as of a general Defence Minister. GENERAL VON BRAUSCHITSCH becomes Commander-in-Chief of the Army. In the diplomatic sphere

the most sensational change is the replacement of BARON VON NEURATH as Foreign Minister by HERR VON RIBBENTROP. HERR VON NEURATH does not entirely disappear into the outer darkness, for he has been made Chairman of a new Privy Council to advise the FUEHRER on foreign affairs, which is to consist of four representatives of the party (HERREN VON RIBBENTROP, GOERING, HESS and GOEBBELS), one Civil Servant (HERR LAMMERS, Chief of the Chancellor's Office), and three representatives of the Services (GENERAL KEITEL, GENERAL VON BRAUSCHITSCH and ADMIRAL RAEDER). The diplomatic purge was completed—or at least continued—by the removal from their posts of the Ambassadors to Austria, Italy and Japan.

These sweeping changes, announced so suddenly and with explanatory commentaries which served merely to emphasise the paucity of information, have naturally caused a sensation throughout the world. In every country responsible statesmen and public opinion alike have had to set themselves the task of deciding what the changes portend. At present almost all that can be stated with reasonable certainty is that the dominant motive for this latest instalment of *Gleichschaltung* is to be found in domestic politics rather than in foreign affairs.

From the purely German angle, even without its external repercussions, last week's *coup* is a fearful and a wonderful thing. If one had been making a list of the forces

that constituted pre-war Germany, one would have written "the Hohenzollern Dynasty, the Prussian Army, the West German Industrialists, Social Democracy, the Catholic Church, Protestantism and the Jews." Yet by now every one of these forces has been either suppressed or carried captive by an Austrian leader, with Bavarian lieutenants, at the head of a lower middle-class which used to be treated with a unanimous contempt by one and all of the now discomfited components of the old Prussia-Germany. In adding the head of the Prussian Army to his other scalps, HERR HITLER has achieved a stupendous feat which, down to last week, would have seemed incredible. But the sensational prelude of swallowing one's prey whole is not so difficult—as every boa-constrictor knows—as the prosaic epilogue of digesting it; and while the process of digestion is going on the creature's *Aktionsfähigkeit* (to use the Nazi phrase) is apt to be temporarily hampered.

Any disturbance of the smooth efficiency of the German war machine through the removal of so many of its high commanders will, however, be a passing phase. It would be of greater significance to discover, if we could, what changes are portended in the temper of the politicians at whose disposal this formidable machine stands. For some months it has been fashionable throughout the democratic States to credit the Reichswehr with being a brake upon the wild extremism of the politicians. Has this brake now been removed, and will the wild men run amok?

The superficial answer that sprang to every mind on first reading the news was that the moderating influences on German policy had indeed been completely removed. BARON VON NEURATH and GENERAL VON FRITSCH are known to have voiced counsels of caution in several crises. These men have left their offices. But the influence of the opinions they represent is far from having been removed. HERR VON NEURATH has indeed been promoted to what is, at least on paper, a higher office, as Chairman of the new Privy Council, half of whose members (or a majority, counting the Chairman) do not originate from the Nazi Party. Moreover, the appointment of HERR VON RIBBENTROP to the Foreign Office has the double advantage of formally recognising the influence that he has long exerted over German policy and of bringing him into much closer contact with the sometimes inconvenient realities of the foreign situation. The departure of GENERAL VON FRITSCH is also by no means the same thing as the exclusion of his views, for the General's moderating advice has consistently been founded less upon his personal predilections than upon the hard facts of strategic reality. Any other soldier in VON FRITSCH'S position must hold the

same views, and the presence of the Generals on the new Privy Council may mean that the views of the General Staff will be given more rather than less weight in the future.

Having had a day or two to recover from the first shock, foreign commentators have therefore been drawing the conclusion that though there may well be more sound and fury in the Wilhelmstrasse, there is not likely to be much change in the present course of German policy, which is not so much moderate as cautious. Last week's *coup* shows indeed that HERR HITLER is all-powerful in Germany. But not even he can change the facts of the outside world, and in no one of the fields in which Germany might possibly be tempted to risk an adventure have the deterrents been lessened by the change of command in Berlin. In Spain, it is as true to-day as it was a month ago that victory cannot be secured for GENERAL FRANCO without very heavy reinforcements of the assistance given to him by Germany and Italy—a proceeding which would be strategically even more hazardous for Germany than for Italy. In Austria, it is as true to-day as it was a month ago that any attempt to upset the SCHUSCHNIGG regime will break the Rome-Berlin axis in the middle. For all the protestations of Italo-German friendship it is reported that renewed assurances of Italian support against Nazi aggression have recently been given to Vienna, and it is perhaps more than a coincidence that the changes in Berlin have been immediately followed by a sudden willingness on SIGNOR MUSSOLINI'S part to make a move towards establishing friendly relations with Britain and France. Czechoslovakia is as tough a military nut to crack quickly to-day as a month ago. The Czechs have not failed to notice that GENERAL VON REICHENAU, the most Nazi of HITLER'S Generals, has been posted to Leipzig, immediately across their frontier. But they do not believe that the shade of his politics would assist him in overcoming the very large military difficulties of an attack on Bohemia. In the Far East it becomes more clear every day that, whatever uses HERR VON RIBBENTROP'S anti-Communist pact may have in Europe, it is working against German interests in China.

All these manifest facts are recognised by clear-sighted men in Germany as elsewhere. No one in his senses would interpret last week's victory of the Nazi Party as an addition to the guarantees of European peace. But when it is soberly considered, it seems to be less a cause for immediate alarm than a reflection of the stresses and strains behind the authoritarian façade which make Germany both less unified and less powerful than she would like to have the rest of the world believe her.

Cheap Money Maintained

AMONG the noteworthy developments of 1937—a year which consistently refused to run in the grooves of economic prophecy—the course of interest rates was not the least significant. At the outset, the monetary authorities were fighting an apparently losing battle to prevent long-term interest rates from rising. Before the end of February, indeed, the price of "Consols," which had already fallen 10 points between the beginning of 1935 and the end of 1936, dropped a further 10 points. And the yield on "Consols," the nearest approximation to a pure long-term rate of interest, having increased from 2.70 per cent. to 2.95 per cent. in the course of two years, touched 3.34 per cent. within two months. A regime of dearer money seemed at hand. But before Mr CHAMBERLAIN presented his Budget in April the gilt-edged market had taken a turn for the better. Thought prices for Government securities showed no decided recovery, they lost no further ground, on balance, during the year. And

since the beginning of 1938, the price of "Consols" has risen nearly five points.

The view that the upward tendency of interest rates was definitely arrested last year is strengthened by consideration of the terms obtained by borrowers of new capital, details of which are given in tables at the foot of the next page. Some of the more important figures are shown graphically, for every year since 1920, in the annexed chart. The statistics are subject to various qualifications. The price of new Government loans, for example, is affected by the proximity or otherwise of their dates of repayment; that of new industrial debentures varies with the credit status of individual borrowing companies; and new preference shares carry an "industrial risk" dependent on the current state of trade. The broad trend of the three curves in the chart is, however, sufficiently clear. Rates of interest on new capital declined rapidly after the war, between 1920 and 1924. They were stationary, with

irregular variations, between 1924 and 1929. Their decline was resumed between 1930 and 1935, but the downward movement appeared to be arrested and even reversed in 1936. Last year, however, this incipient tendency was itself checked. The price of new capital, as a whole, was certainly no higher in 1937 than in 1936.

PRICE OF NEW CAPITAL—1920-37
(Issued by Prospectus)

Certainly it would be unwise to attempt to read too much into last year's record. The Government undoubtedly obtained favourable terms for its first *tranche* of Defence borrowing; but this result was achieved only by the

Treasury's ability and willingness to allow the public departments to nurse the new stock for six to eight months, pending its absorption by the permanent investor. The detailed figures given in our tables show, again, that home corporations found it necessary to offer a slightly higher rate of interest—3.41 per cent. against 3.21 per cent.—on a slightly lower total of new money raised by prospectus last year, than in 1936. On the other hand, industrial borrowers raised much the same amount of new capital by public debenture issues in the two years, at an average rate of 4.13 per cent. in 1937 against 4.17 per cent. in 1936. The addition of issues made by Stock Exchange placing to those raised by public offer (the "New Basis" figures of our tables) reduces the average rate on *all* corporation issues from 3.60 per cent. to 3.44 per cent. and raises that on *all* new industrial debentures from 3.95 per cent. to 4.33 per cent., in 1936 and 1937 respectively. Finally, our statistics showing the terms on which maturing obligations were converted into new securities suggest that, whenever there was sufficient business to test the market, conditions were slightly less favourable.

The stability of last year's figures, however, taken as a whole, gains additional significance from the fact that, since the turn of the year, signs have not been wanting of a new downturn in interest rates. As we show in our "Investment" section on page 350, certain large British municipalities are floating new loans in London, to-day, on better terms than they could have obtained six weeks ago. Last year's check to dearer money, moreover, appears to have owed more to the logic of events than to deliberate intervention by the monetary authorities. It was unaccompanied by any substantial widening of the credit base, designed to augment the cash resources of the joint stock banks and drive them anew into the gilt-edged market. On the contrary, the banks found it necessary to sell some

AVERAGE RATES OF INTEREST ON NEW CAPITAL

All figures are based on "public prospectus" issues in London, unless otherwise stated. Figures which (as indicated by footnotes) are on our "New Basis" include, in addition, all capital made available by Stock Exchange placing and permission to deal.

* Excludes 4½ per cent. Treasury Bonds, converted in March, 1932, since holders had an option to go into either of two Loans.

of their existing security holdings, to meet the demand for additional advances from customers. Official restriction of new foreign issues and regulation of domestic gilt-edged borrowing, furthermore, were no more drastic last year than in 1936. And a year in which the Government unbalanced the national Budget, and announced a five-year borrowing programme of £400 millions, was hardly one in which a stronger gilt-edged market could have been forecast.

The fundamental causes of last year's check to dearer money were, in fact, largely outside the Government's control. They may be found in the abrupt reversal of the boom in commodity prices in the spring, and the passing of the peak of general business activity in the autumn. Throughout the year, the decline in equity values on the Stock Exchange was accompanied by a progressive tendency among investors to switch from ordinary shares to fixed interest stocks. And part, at least, of the "hot money" which came to London from abroad, reinforced by British funds withdrawn from America during the Wall Street slump, found a temporary home in the gilt-edged market.

Fifty Years

WITH this issue of *The Economist* we publish the seventy-fifth number of our *Annual Commercial History and Review*. Seventy-five years is a long time in the life of an industrial nation, exposed to the sharp fluctuations of the markets of the world and obliged to honour equally the claims of technology and political democracy. Even in the last 50 years the strength and adaptability of Britain have been strained to the uttermost by the shifting balance of world power in industry and trade, no less than in politics. The country we live and work in was largely moulded in that brief half-century, and the third and final volume of PROFESSOR CLAPHAM'S "Economic History of Modern Britain" comes opportunely to point the moral of those crowded years. His scene is the business world of *The Economist's* readers, and his "principal authority for general commercial history" the *Annual History and Review* itself. What is the picture he paints of our recent past?

In the years between VICTORIA'S Jubilee and the war, three features were outstanding in the development of Britain's economy. Adjustments were being made in technique and organisation to meet the pressure of international rivalry and the insistent demands of scientific discovery. The State was assuming the character of "universal intervener" in social and industrial matters; and the conditions of life and labour were being generally improved.

How far was Britain in 1914 already losing ground to younger industrial countries, equipped by British exports of capital and machinery? Germany, united since 1871, and the United States, freed from her frontier problem, were making great headway. In 1896 Japanese textiles were being sold in Australia and Hongkong. At the end of the Boer War the United States was producing three times as much steel as the United Kingdom, but only twice as much as Germany.

Britain, dependent for her employment and standard of life upon external trade, stood in a world of imitators. In international investment and finance, however, she still led the way. Her investments abroad in 1907 were £141 millions, or 75 per cent. more than in 1890; and in 1912 they reached £226 millions. The "war-chest" of securities which financed Britain and her Allies between 1914 and 1918 was well stocked; and merchandise exports were still advancing. While a quarter of British produce by value was shipped abroad in 1887, the proportion had risen by 1913 to one-third.

* Cambridge University Press. 577 pages. 25s.

To the question whether 1938 will see a new downward trend of interest rates, our figures do not afford a direct answer. It would seem, nevertheless, that if the authorities chose deliberately to encourage such a tendency, or to check any incipient movement towards higher rates, they would find underlying conditions more favourable to the technique of currency management to-day than a year ago. Although even a moderate trade recession might reduce the amount of new investment by various Government Funds (which, as we showed in *The Economist* of November 6, 1937, page 268, is now of the order of £75-£80 millions annually) it would confirm the present tendency of non-official investors to employ their resources in the gilt-edged rather than the equity markets. The authorities, moreover, might consider a pump-priming increase in the banks' cash basis more defensible when trade was sluggish than at a time when commodity prices and business activity were sharply rising. The growth of bankers' deposits at the Bank of England, since the turn of the year, suggests that official policy is already moving on these lines.

Yet, on the eve of the War, Britain was not relatively as active as she once had been, or as active as her greatest rivals. Rather more of British exports were being exchanged for a given quantity of imports in 1913 than in 1900; and there were signs that some of her basic industries were falling behind their rivals in technical efficiency. In 1911, about 36 per cent. more coal miners were working than in 1901 to win only 19 per cent. more coal. The efficiency of the cotton industry was at best stationary; and after 1885 technical change in the iron and steel industry lagged, and electrical metallurgy and the basic process of steel-making were neglected. And Britain's shipyards, against which no serious accusation of technical inferiority could lie, produced only 61.9 per cent. of the world's mercantile tonnage in 1910-14, against 81.6 per cent. ten years before.

It would be misleading, however, to press the charge of inefficiency too far. Sheffield quickly and successfully followed the lead of the United States after 1900 in the manufacture of special steels and high-speed tools. SIR CHARLES PARSONS' steam turbine revolutionised marine engineering between 1903 and 1906 and provided the needed link between coal and electricity. In 1914, Britain could still produce a textile plant, a fine cloth, or a battleship better than anyone else in the world. Even agriculture was adjusting itself, with fair success, to changed conditions. Cattle increased 16 per cent. between the 'eighties and 1914; and the orchard area 64 per cent. between 1873 and 1905. Permanent pasture increased from 42 to 52 per cent. of cultivated land.

Nor was Britain standing still in business organisation. By 1914 joint stock had practically completed the conquest of commerce and industry; the Stock Exchange had become a central institution of British life; there were over a million British shareholders and nearly 3 million members of co-operative societies; and a tendency was evident in certain branches to substitute association for competition. In brewing, iron and steel and armaments, integrations and vertical combinations were common. The great business units of Lever, Boot, Coats, and Imperial Tobacco, the concentration of British and Dutch oil interests, and the widespread banking amalgamations were already conspicuous. Trade associations to fix prices or output were developed in the metal and building trades. Faced with steadily rising costs, and unable by law to raise rates or fares, the railways similarly pursued economy by unobtrusive pooling schemes and agreements. The day of the great corporation, like that of the department and multiple stores, had arrived.

What was the rôle of the State in this period? By 1914, the transformation of social policy was already well advanced. A system of old-age pensions was established in 1908. Insurance against ill-health and unemployment was instituted in 1911; and a movement to break up the old pauperising poor-law system was gathering force. Building Acts, Factory Acts, Trade Board Acts, Shop Acts, Health Acts and Education Acts made up the outlines of the new Democracy.

The keynote to the transformation of public policy was public expenditure; and the engine of social reform was direct taxation. Harcourt's reformed death duties of 1894 and the Liberal super-tax of 1909 made the extension of State activities feasible; just as the new County Councils of 1888 made their local administration possible. Public expenditure in the early 'eighties was under £88 millions; in 1913-14 it was over £197 millions, compared with £2,695 millions in the War year 1917-18 and nearly £900 millions to-day.

The people were, on the whole, better housed and taught in 1914 than in the Jubilee year. For the most part, also, their material standards of living were higher. The national wages bill, which was about £480 millions in the middle 'eighties, rose to well over £700 millions in 1913. A man's real wage in 1900 was 50 per cent. more than that of a man doing similar work in 1850; and there had been a remarkable shift from ill-paid to well-paid work. But 1900 was a peak year, and thereafter real wages tended to fall. Trade unions, whose membership rose from 1,500,000 in 1895 to 4,135,000 in 1913, had increased their power of collective bargaining; but general prices had risen and industrial efficiency was slightly declining.

Nevertheless, wealth and happiness were more widely diffused than ever, and were still growing. The test of Britain's economic strength and endurance came in the War; and under rigid State control and supervision her

industrial civilisation showed unexpectedly great staying-power and adaptability. What were the War's effects? It is PROFESSOR CLAPHAM's view that, in spite of the magnitude and world repercussions of the cataclysm of 1914-18, almost all the major economic changes of the post-War period in Britain were predictable from the course of pre-War events. The overcrowding of the coal and cotton industries through the shrinkage of export markets and changes in technological and fiscal technique; the steady growth in steel production; the expansion of the chemical, gas and electricity, and motor-car industries, and of employment in transport, communications and distribution; the growth of the business unit in commerce and industry; the steady improvement in the well-being of British wage-earners, despite depression and Special Areas, with the acceleration of State social policies; the rationalisation of industrial methods and equipment; the abandonment of free trade and the movement to impose efficiency upon State-protected industries; the growth of the Government's power over money and the influence of the Central Bank: all these changes were already foreshadowed in pre-war Britain.

PROFESSOR CLAPHAM's unique account of Britain's economy from 1820 to the present day has left him at the end of his third and final volume deeply conscious of the continuity, adaptability and strength of British industrial and commercial life. The movement towards a more equal distribution of claims upon the national resources has been as characteristic of the evolution of modern Britain as the rise in the national income. Older, and more rigid, Britain is relatively less active than in the heyday of her industrial past. But more Britons found employment in 1937 than ever before; and, were it not for the betraying existence of the Special Areas, the comparative old age to which PROFESSOR CLAPHAM's classic story has brought industrial Britain would be far from evident.

Topics of the Week

Bombs.—Many humane and intelligent people think that to try and humanise war is both futile and wrong-headed. It is futile, they believe, because a country which has its back to the wall will in the last resort throw over every restraint in order to save itself. It is wrong-headed because the surest way to stop war altogether is to make war unendurably horrible. Both these arguments are wrong. Throughout history, and even in the climax of the Great War itself, instincts of humanity have imposed some restraint upon naked savagery. It is only in our latest wars that brutality seems to have been quite unchecked. Nor should further human sacrifices be needed to arouse the civilised world to action. Indeed, the discreditable events of the last months are already moving the public to action in England, America and elsewhere.

In England this stirring of opinion has taken the form of an appeal to both sides in Spain to abandon by express agreement the deliberate bombing of civilian populations. The appeal expresses no judgment on the issues at stake. It is not signed by any politicians or by labour organisations which have taken position on the Spanish question. But it is endorsed by the leaders of the Churches—Anglican, Catholic and Nonconformist—by the Lord Mayors of London and the chief provincial cities, by the Lord Chief Justice of England, by Conservative and Left-Wing newspaper proprietors, by bankers, by the leaders of British industry, and by representative spokesmen of the professions, the arts, the sciences, and the world of education and sport. Such an appeal changes nothing on the battlefield; it carries no sanctions; the cynic can dismiss it as another pious aspiration. But even on a short view, General Franco (the Spanish Government have

already publicly accepted the principle of the appeal) may reflect on its significance. He now knows that British opinion is likely to harden against the combatant who resorts to indiscriminate bombing. One day he or his friends may be anxious for the active goodwill of British Catholics, of "the merchants and bankers of the City of London," of the Conservative Press. It will not help him if his name goes down in history as the man who carried war against civilians to its most brutal extremity.

A similar American petition has been sent, not to Spain, but to President Roosevelt, asking him to voice the protest of the American people against the bombing of women and children in Spain. Even more significant is the campaign of the Hearst Press, launched on Thursday, which calls for a conference to formulate the rules of war. These rules are not merely to remain on paper; those who transgress them are to be treated as criminals by the civilised nations and if necessary suppressed as outlaws and bandits. This declaration is highly significant, coming from the Archpriest of Isolation; for it means joint international action to conserve civilisation. Is this a portent? It may be that Mr Hearst will provoke a greater response in the United States than we on this side would have anticipated.

The Coal Bill.—The concluding words of a leading article in last week's *Economist* dealing with the Committee Stage of the Government's Coal Bill expressed the hope that the Government would go no further than the concessions agreed to by Mr Stanley in the debate of Thursday of last week, and that they would insist

on keeping at least the main outline of the Bill intact. More leasured consideration of the concessions referred to, which were made by the President of the Board of Trade shortly before we went to press, raises a serious doubt whether the two halves of our last week's aspiration are not mutually contradictory. Mr Stanley, it would almost seem, has already given away the vital principle of his Bill. The concession he made was that every scheme for compulsory amalgamation of coal mines, in addition to running the gauntlet of the many administrative and legal formalities in the Bill as originally introduced, should also be submitted to investigation either by a Select Committee of each House of Parliament or by a Joint Select Committee. It is, of course, a notorious fact that the House of Lords has always been an obstacle to any reform legislation which contravenes the wishes of the mine owners, and it does not require very much imagination to see that a Select Committee of which all or even only half the members were appointed by the House of Lords would not be likely to be a body whose deliberations would either facilitate or speed up the process of compulsory amalgamation. The Bill, as it will be amended after Mr Stanley's concession has been embodied in legal phraseology, will not, any more than the existing Act of 1930, embody a formal prohibition of compulsory amalgamation, but it is perhaps no more than a realistic view of the matter to conclude that the progress of any really effective proposal for compulsory amalgamation through the procedure outlined will be similar to that of a camel through the needle's eye. Sir Stafford Cripps, in a most effective speech, listed no less than twenty-seven separate stages through which an amalgamation scheme must pass, each of them giving opportunity at the very least for delay and obstruction, and at the most for complete emasculation. It looks very much as if the new Act, like the old, will in fact combine approval of the principle of compulsory amalgamation with a procedure which completely stultifies it in practice.

The alacrity with which Mr Stanley made this concession to the mine owners' friends contrasts strangely with his stubborn refusal on Monday to make a similar concession to another body of opinion which is at least as widespread in the House and in the country as that to which he gave way on Thursday. The section of the Bill under discussion on Monday was that continuing until 1943 the legal authority for the mining industry's "selling schemes," which is the euphemistic name applied to the device for abolishing competition in the sale of coal. Here again the dispute is one between principle and practice; for there is a wide agreement that the economic weakness of the coal industry should not be accentuated by excessive cut-throat competition in the sale of coal. But the manner in which the selling schemes have been administered has given rise to a very large volume of protest, especially from the large industrial purchasers of coal, and an amendment was moved from the Conservative benches on Monday to limit the continuance of the schemes to the end of July, 1939, and to institute an enquiry into their working. Mr Stanley refused to accept the amendment, and could offer in return only a series of assurances from the Mining Association that the procedure for the consideration of complaints by the purchasers of coal should be considerably extended. "Purchaser," it should be noted, means only the first purchaser, and does not include anybody buying coal through an agent or merchant, and there will be wide agreement with the complaint made from both sides of the House that the assurances given to and by the President of the Board of Trade do not go to the heart of the matter, which is that an uncontrolled monopolist can always be counted upon to act in his own exclusive interest. Thus the debate has followed the course, which in the case of Coal Bills is becoming painfully familiar, of modifying or removing all those clauses to which the mine owners take exception, without any countervailing limitations upon those from which they hope to draw advantage. There must be many thousands of people throughout the country who have drawn from the events of the last few days the conclusion

which was stated by Sir Arthur Salter in a letter to *The Times* :—

If Governments cannot govern, a mixed system of State assistance and supervision—the alternative to the replacement of private enterprise by State Socialism—becomes indefensible. This new concession has therefore struck a heavy blow at private enterprise itself. There are very many who, like myself, if forced to choose between an obviously unjust semi-State system imposed by a State which has been captured by sectional interests, and a more complete State system, from which private enterprise has been eliminated, would, reluctantly, but without hesitation, choose the latter.

Selfish and stubborn individualism is, indeed, the poorest advertisement for private enterprise.

Mr Chamberlain at Home.—The Prime Minister echoed the hopes and fears of all British citizens when, speaking in his own City of Birmingham on February 4th, he expressed the gravest concern about the cost of re-armament and the dangers of war. He paid a melancholy tribute to the Services' efficiency in the execution of their grim task, without measurably allaying the doubts which still remain about the re-armament programme's lack of progress in specific directions; and he spoke significantly of the Government's intention to make further efforts to secure discussions among the nations with the object of restoring goodwill and confidence. In the industrial sphere, much more than in the international, Mr Chamberlain rightly found grounds for optimism. There had been a striking freedom from industrial warfare in recent years, he said, and wages and profits had risen together. Indeed, the Prime Minister set his immediate hopes higher than was perhaps discreet or justified. The recession, he declared, had already "passed off," and 1938 would be a starting-point for renewed prosperity, rather than a turning point in the cycle of trade. The Prime Minister's audience, oddly reminded maybe of Earl Baldwin's famous exordia on peace in industry and the world, were left to wonder what in fact the Government's financial and economic policy would be were the setback in trade to be appreciably intensified in the course of 1938.

Anglo-Italian Relations.—Something is in the air again between London and Rome. Exactly what, it is difficult to fathom. Whether as consequence or as coincidence, the sensational changes in Berlin were followed by a sudden outburst of aspiration in the Italian Press for renewed attempts to reach an understanding between the British and Italian Governments. At the same time the impression spread in London that Signor Mussolini was genuinely ready, if not anxious, to discuss the speedy withdrawal of Italian "volunteers" in Spain. Since the whispering galleries of Europe have been busy for weeks past

with rumours of an impending heavy reinforcement of the Italian army in Spain, this *volte-face*, if it was genuine, was surprising. But was it, is it, genuine? After the first lyrical outbursts the tone of the controlled Press in Italy has been more sceptical, and Signor Gayda continues to harp on the alleged breaches of non-intervention by the British, French and Russian Governments. But the Italians still profess to find a change of heart in London, which encourages them in the hope that an accommodation may be possible, and their tone towards Great Britain is, on balance, very considerably less hostile than it was only a short time ago. Italian diplomacy is subject to such quick changes and given to such deceptive appearances that it would be foolish to take anything that comes from Rome at its face value. But on a cool view it would seem that the choice before Signor Mussolini is one between strongly reinforcing his Spanish expedition and liquidating it, and he may well have realised that the risks of provoking a wider conflict by sending fresh troops make the odds against the success of that policy far too great for even an inveterate gambler such as himself. It is also just conceivable that the German changes played their part in influencing the Duce's policy. For if German policy, under the inspiration of Herr von Ribbentrop, is looking for an adventure, Austria is the one that presents least technical difficulties. But a Nazi adventure in Austria would immediately and decisively upset both the Rome-Berlin Axis and the Italian apple-cart.

Piracy and Police.—The sinking of the British merchant vessel "Endymion" last week has been followed by a rapid series of dramatic events. The British Government promptly made proposals to the French and Italian Governments for a reinforcement of the measures in operation under the Nyon agreement; but before even the preliminary conversations were concluded a second outrage had been added to the first. On Friday last the British ship "Alcira" was bombed and sunk—against every principle of law and precept of humanity—by insurgent aeroplanes from Majorca. The purpose of these rapidly consecutive atrocities was perhaps to send up the recently lowered insurance rates and thereby to re-weight against the Spanish Government the financial burden of insuring the import of food supplies. But the effect was to produce an announcement from the British Government that the British Navy will henceforward immediately attack any submerged submarine detected in the zone of Mediterranean waters that is assigned to Great Britain under the Nyon agreement. The Italian, as well as the French, Governments have agreed to take the same action in their zones. As for the danger of piratical attacks from the air, this has been dealt with in a warning addressed exclusively to General Franco. He has been told that the British Government reserve to themselves the right henceforth, without any further notice, to take such retaliatory action in the event of any recurrence of these attacks as may be required by, and appropriate to, the particular case. In announcing these measures in the House of Commons on Monday, the Foreign Secretary said that, according to the advice he had been given by the experts, these steps might be expected to put an end to the piracy completely. He added that, should that view prove to have been mistaken, the Government would not exclude any further action. On

the same occasion, Mr Eden stated that there was reason to believe that the pirate vessels in the Mediterranean were based on Majorca. He also declared that the Government would regard the despatch of large armed forces by any country to Spain as a breach of the Non-Intervention Agreement, and as creating a situation of which they would be bound to take a most serious view. Majorca is said to be under Italian occupation, and the planes which bombed and sunk the "Alcira" were of Italian make. If Signor Mussolini were contemplating a further increase of Italian intervention in Spain, this revival of piracy would be a natural overtone; but it is a strange accompaniment to the withdrawal which he is credibly reported to be making. Perhaps he has been hovering between two incompatible policies. If so, we hope prudence will now prevail decisively over temerity.

Storm in a Milk Jug.—The rights and duties of newspaper proprietors in regard to matter which appears in their advertisement columns have been hotly discussed in the last three weeks as a result of their attitude towards the campaign of the British Medical Association for purer milk. The B.M.A. offered large display advertisements to certain newspapers; but the latter, after discussion with their colleagues, suggested to the B.M.A. that the wording was likely to cause panic among milk consumers, reduce the consumption of milk, and undo the efforts of the Government to increase it. The objection was based on the startling manner in which the proposed advertisement set out the long list of diseases which can be conveyed by milk, the figures of deaths in epidemics spread by infected milk and, generally, on the undue emphasis on the danger of drinking milk. This "reference back" was seized upon by certain critics who claimed loudly that the newspaper proprietors were establishing an altogether improper censorship, actuated by the desire to please large advertisers such as the Milk Marketing Board. It must, however, be recognised that the newspapers have some measure of responsibility for the advertisements they print. They are legally responsible for cases of libel and they are bound to look at advertisements from the point of view of decency, sedition and, within the bounds of their knowledge, accuracy. They may refuse advertisements on aesthetic grounds or on grounds of good taste. Indeed, in theory they have a wide right of veto. But in practice it would be a great abuse of their position if they were to pick and choose. In the present instance, they called the attention of the B.M.A. to one aspect of the public interest which might lead them to modify their copy. This is in keeping with the normal practice of the press and, in the event, the B.M.A. have fallen in with the suggestion of the newspapers and have modified their statement, which has this week been carried by some of the main London newspapers. The sinister Press censorship has proved to have been a mare's nest.

The incident, however, will have had the effect of directing more attention to the state of our milk supply. Some of the facts which emerge, such as, for example, that 95 per cent. of London's milk supply is pasteurised, are reassuring. Great strides have also been made in the number of producers whose milk is certified or tuberculin-tested. On the other hand, the proportion of the supply that is not subject to such special conditions is still very large, and over the greater part of the country milk is not pasteurised. The B.M.A. campaign will bring fresh pressure to bear on the Government to ensure clean conditions for the whole of the herds of Great Britain, and in the meanwhile to enforce compulsory pasteurisation.

Public Expenditure.—A Conservative resolution in the Commons on Wednesday deplored the continued growth in public expenditure. On behalf of the Government, Colonel Colville endorsed Captain Balfour's disquiet. This attitude will evoke mixed feelings, since of the two chief claimants on the public purse, defence and social services, the former is likely to be a fixed, if not an increas-

ing charge during the next few years. The country could ill afford to cut down the social services which have rightly been placed in the forefront of national policy. Nor can it be argued that the burden of rates and taxes is weighing unduly upon industry in general, though the present magnitude of these imposts in relation to the national income cannot be very far from the practicable maximum. Indeed, in the high days of prosperity last spring it might well have been expedient to resort more to taxation to finance the defence programme and less to loans. On the other hand, if the boom recedes, there may be sounder arguments, as the Federation of British Industries has urged in a memorandum to the Chancellor, for increasing the proportion of expenditure covered by borrowing. The virtues of economy are relative, and the consequences of the adoption of a deflationary policy in a period of declining prosperity might be unfortunate.

Japan's Hidden Hand.—Secrecy is not always the best policy; and, next to sinking American warships, the best way for Japan to ensure a staggering increase in the United States Navy is for her to persist in concealing her own naval building programme. Japanese secretiveness has been the subject of American, British and French Notes—all of the same tenor—that have been presented in Tokyo this week. The British Note recalls that the Japanese Government have not seen their way to subscribing to the London Naval Treaty of 1936, and that they have also not hitherto felt able to give any assurances that treaty limits would in practice be adhered to by them. The British Government have therefore decided that it will be necessary for them to take advantage of the "escalator" clause in the treaty (i.e. to go beyond treaty limits on account of the action of a non-signatory Power) unless the Japanese Government can give satisfactory assurances that they will not, before January 1, 1943, lay down, complete or acquire any vessel not conforming to treaty limits without previously informing the British Government of their intention to do so and of the tonnage and calibre of the largest gun of the vessel or vessels concerned. In view of the forthcoming publication of the Naval Estimates, the Note asks for a reply by February 20th. Failing this, it will be assumed that the Japanese answer is unsatisfactory, and the British Government will then resume full liberty of action in consultation with the other naval Powers with whom they are in treaty relations. Three Notes to this effect must have been unpleasant for the Japanese to receive, and they have not yet committed themselves to giving a blank refusal of the very reasonable assurance that is being asked of them. A refusal must inevitably have a twofold consequence of the most disagreeable character from the Japanese point of view. In the first place, it will move the British Empire and the United States to increase in their own favour the ratio of superiority of either navy over the Japanese. Under the terms of the now defunct limitation treaties the ratio stood at appreciably less than 5 to 3, taking all categories of ships together. It may now rise to 6 or 7 to 3 against Japan for each of these two other navies taken separately, while at the same time Japanese policy may force the respective owners of these two navies to take counsel together. We have heard of a man cutting off his nose to spite his face; but it does seem fantastically incongruous to cut off ears and eyelids as well, all for the sake of face-saving.

The Japanese Campaign.—The Japanese Army has been advancing as slowly as Japanese diplomacy. Its efforts have been concentrated for some weeks past on dislodging the Chinese forces from the Lunghai railway, an important artery which runs roughly east and west halfway between Peiping and the Yangtze valley. The Lunghai railway is crossed at right angles by two other railways. The first, roughly a hundred miles from the coast, is the Tientsin-Nanking railway, which crosses it at Suchow; two hundred miles further inland is the Peiping-Hankow railway. The Japanese forces are advancing from both ends of the former of these two railways, that is south from

Tientsin through Shantung and north from Nanking, and they are meeting with stiff Chinese resistance as they move towards a junction at Suchow. In the last few days there has been news of further Japanese movements southwards down the Peiping-Hankow railway, and if this movement succeeds, it will cut the Lunghai railway in the rear of the Chinese troops who are defending it further eastwards. Throughout the war Japanese strategy has used the device of the flanking movement with great success, and it is clearly now being attempted once more on a large scale. In view of the superior armament of the Japanese forces it is only reasonable to suppose that it will succeed in time, and that the Chinese will be driven out of the whole of North China within three hundred miles of the sea down to the Yangtze. Indeed, this task should be easier for the Japanese generals than that of deciding what they are to do next.

Teruel Again.—The fortunes of war in the battle around Teruel have turned for the moment in favour of the Insurgents. It has become an affair of salients and counter-salients. Ever since the war began, the presence of the Insurgents at Teruel has pointed a threatening spear at the Government's vital communications. The Insurgents have for the moment suspended their efforts to re-include the town of Teruel within the point of the spear and have turned to attack a republican salient on the plateau of Sierra Palomera which threatened to cut the shank of the spear. This counter-salient within a salient was attacked from three sides, and the Insurgents report that the Republican defenders surrendered on Tuesday. This is an important local success for General Franco's arms, but its value seems likely to be merely tactical. So far as strategy is concerned, the advantage still lies with the Government, who have succeeded in disarranging General Franco's plans for an offensive elsewhere and have compelled him to devote his attention to resisting Government initiatives. This may prove to have been an achievement of the first importance.

The Dissolution in Egypt.—On February 2nd King Farouk signed a royal decree dissolving the Chamber and ordering a general election for a Chamber that is to re-assemble on April 12th. This is perhaps to be interpreted as a point lost by "the King's Friends" in the present Egyptian political game. Muhammad Pasha Mahmud appears to have hoped that the split in the Waft might go far enough to destroy its parliamentary majority and thus allow the new regime to sail smoothly into power with the constitutionally necessary backing in the Chamber. When it has come to the point, the Prime Minister has preferred not to try the issue, and has procured a dissolution instead. It remains to be seen whether he will be more confident in appealing to the electorate than in facing their representatives. This issue has been raised by Nahas

Pasha's presentation of a petition that a neutral Cabinet should be appointed to see the elections through. At the moment, it seems probable that this request will be refused and that, by inference, all the resources in the hands of a Government in office will be employed in order to "make" the election in "the King's Friends" favour. Will these resources suffice for the purpose? It is difficult to believe that anything short of a successful *coup d'état* will destroy the hold on the country which the Wafd has contrived to retain through all the vicissitudes of the past twenty years. The Wafd, after all, has succeeded in its original aim of winning for Egypt a genuine and complete independence; and it seems unlikely that this national service will be eclipsed in so brief a time by popular resentment at the high-handedness or even incompetence of a too long dominant party. Sooner or later, no doubt, the foreign issue that has now been happily settled will be replaced by domestic issues relating to concrete administrative and social questions. But when new parties with practical programmes do arise, it seems unlikely that the Palace will be their cradle. Whatever may be the result of the next move in the game, we remain of the opinion that King Farouk's present course is a dangerous one for a young and inexperienced sovereign.

Canada's Defence Estimates.—Canada is one of the few countries of the world to show a reduced appropriation for defence this year. Her defence estimates for 1938-39, which total \$34 millions, or about 16s. per head of the population, are \$2 millions below last year's figure, in spite of the fact that naval estimates are increased by a nearly equal sum in order to provide for the purchase from Great Britain of two new destroyers. These are destined for service on the Pacific Coast, on whose defence (together with the air arm) Canada is concentrating, partly for strategic and partly, no doubt, for internal political reasons. The total estimates for ordinary government expenditure (excluding railway deficits and unemployment relief) are reduced from \$421,868,928 to \$418,968,456, largely by virtue of the lower cost of defence.

Britain Tells the World.—On February 7th, the Prime Minister announced that a Committee would be appointed, under the chairmanship of Sir Robert Vansittart, to co-ordinate the many-sided movement, now in progress under public and private auspices, to inform our potential friends and customers in overseas countries of the real facts about Britain. The Government's radio campaign—represented so far only by the Empire programmes and unexceptionable if uninspiring broadcasts in Arabic for Palestinian consumption—has yet to be extended by the courtesy of the British Broadcasting Corporation to the more controversial field of Latin America where, it is alleged, Nordic publicity is already strong and effective. So far, the intention has been to disseminate no more than accurate news and representative entertainment, and it would be a pity if the need to adopt retaliatory measures outside the confines of the British Empire were to introduce the suspicion of propaganda. These official efforts to tell the world are, however, no more than part of a wide stream of publicity generated by cultural and scientific bodies, no less than by business men. And, in the long run, necessary though the Government's campaign may be in the present state of world politics, Britain will be known more by her deeds than by her protestations.

New Housing Subsidies.—The Government's new Housing (Financial Provisions) Bill, of which the text has now been issued, both consolidates and extends the subsidies granted for houses built with the purpose of clearing the slums or abating overcrowding. It has not been found possible in practice to draw a clear line between slum-clearance housing and overcrowding-abatement housing, and in the new Bill the subsidies for the two purposes are consolidated. The normal Exchequer subsidy will be £5 10s. per annum for forty years for each house, and there will

also be a statutory contribution from the rates of £2 15s., giving a total relief to the rent of about 3s. 2d. per week. These subsidies will be increased in the case of flats built on expensive sites, the Exchequer contribution ranging from £11 per flat where the site costs between £1,500 and £4,000 an acre to £26 a flat on the most expensive land, the local authority adding an amount equal to half the Exchequer subsidy. The chief feature of the Bill is the special provision made for rural housing. Houses provided by rural district councils in execution of the slum clearance and overcrowding campaigns will be subsidised at the rate of £10 a year from the Exchequer and £1 a year each from the rural district council and the county council, and in particular cases the total subsidy may be increased to as much as £16. The restriction of this special subsidy to rural district councils might discriminate unfavourably against districts which are essentially rural, but happen to be organised as small boroughs or urban districts, and the Bill includes clauses authorising an intermediate rate of subsidy in these districts. A further subsidy is provided for houses built to meet the general needs of the agricultural population, irrespective of either slum clearance or overcrowding, the standard rate of subsidy being £10 a year. These houses must be reserved for the agricultural population, and must not be let at a rent exceeding a figure fixed by the local agricultural wages committee. It has been common ground for some time that the rural population has not been as well served as the urban by the developments of housing policy in recent years. Costs of building in the country are indeed lower than in the town, but the difference is not nearly so great as that between urban and rural wages, and the agricultural labourer cannot afford to pay an economic rent. The new Bill should go some way towards removing this defect, though it is a little doubtful how far the mere offer of subsidies will suffice to produce a satisfactory volume of building. Local authorities tend in many cases to be lethargic bodies, and even when the spirit is willing, the burden of rates is already so heavy that some positive stimulus from the centre is necessary before the requisite action can be taken.

Greater London.—On February 8th the London County Council received from its General Purposes Committee the evidence to be submitted to the Royal Commission on the Geographical Distribution of the Industrial Population. After the war, when depression had fallen on the manufacturing districts of the North and on Wales, the magnetic power of the world's greatest centre of government, finance and distribution, which had abated between 1901 and 1921, was resumed. In the years 1921-31 London received 270,000 immigrants, representing 3.3 per cent. of Greater London's population, but only 0.7 per cent. of the inhabitants of England and Wales. Although London was probably receiving more than its expedient share of new British industries, the importance of the movement was liable to be exaggerated. It was at least true that the variety of London's industries implied a welcome immunity from the worst effects of industrial depression. Few industries had actually been transferred to London from other places. Nor were there any grounds for believing that the drift to London was necessarily permanent. On two counts, however, the concentration of industrial premises in and around London was certainly unwelcome. Strategically, the vulnerability of the capital was accentuated; and London's growth, both in character and magnitude, defied the best and most desirable principles of town planning. The loss of rural amenities and the growing distance and fatigue of travel called for regulation. The Committee made the point that many of these disabilities were the result not of the population's movement but of its unregulated movement. In general, the Committee favoured some measure of regulation, but urged strongly that no artificial diversion of industries could be either practicable or expedient. It may, indeed, prove that the most feasible solution for many of the problems before the Royal Commission will be, not the drastic control of industrial location, but firm and far-sighted regulation of the siting and design of industrial settlements.

An Upward Trend?

NEW YORK, February 1.—January ended without any material upturn in business above the average level of December. Nevertheless, there has been a slow climb from the last week of the Old Year. Steel operations have risen from below 20 per cent. of capacity to about 31 per cent. In a limited sense, the events of January suggest some change in trend; from August to December there was no month in which production was not below that of its predecessor, and each of the weeks in January has apparently been slightly better than the week before.

The December business indices of the Federal Reserve Board are now available:—

	BUSINESS INDICES			
	1923-5=100—ADJUSTED FOR SEASONAL			
	Dec., 1936	Aug., 1937	Nov., 1937	Dec., 1937

Factory Payrolls—Total	95.2	103.8	89.5	80.9
Durable Goods	93.4	...	89.9	77.2
Non-durable Goods	97.5	...	89.0	85.6
Freight Car Loadings	83	79	71	67
Dept. Store Sales	92	92	91	90
Dept. Store Stocks	71	...	76	73

The high level of "all other" building contracts is misleading, as the seasonal adjustment for December raised the unadjusted figure of 74 to an adjusted figure of 95. The factory employment figures is down only about half as much as factory output, and much less than factory payrolls, which may be due to part-time, or to the incidence of the recession.

The Department of Commerce has begun to collect inventory statistics. For December, 1937, 735 reporting wholesalers declared inventories 6 per cent. higher than in December, 1936. There was, however, a considerable variation among different industries. On the whole, these data and details of department store stocks confirm the impression that the inventory problem, while real enough, and sometimes acute, was a rather minor feature of the recession, and quite undeserving of the emphasis placed on it some weeks ago.

Slump in Capital Goods Industries

The published data, though preliminary, give a fairly clear picture of the recession. Among the non-durable or consumer goods industries, textiles and leather are very much below a year ago, but the others comparatively little; the great declines are in steel and automobiles and, presumably, non-ferrous metals. That is, the recession is centred in the capital goods industries and is intimately associated with the supply of investment capital. Since the first quarter of 1937, the volume of new capital issues has been practically negligible, and in the last four months new corporate issues have been almost entirely lacking.

As the capital goods industries are those most severely affected by the slump, it is to the capital goods industries that one looks for prospects of recovery. The railways are badly in need of equipment of all kinds, but they have neither earnings nor credit. The roads have asked for a general 15 per cent. increase in freight rates; and the decision of the

Inter-State Commerce Commission is expected before the end of the month, or in March at the latest.

A glance at the New York Bond Market will show the deplorable state of railway credit. It is freely forecast that unless there is a remarkable coincidence of higher rates and increased traffic, the third of the railway mileage of the country now in receivership will be increased. Indeed, in spite of the fact that there is no active public demand for Government ownership, there is a widespread opinion that such an alternative is not beyond the bounds of possibility. The utilities are in no such straits as the railways, but they have little or no command over new capital. As for residential building, all action waits on the Housing Bill now before Congress.

With the railway, utility and building demand for capital goods still obscure, the armament programme was awaited and received with great interest. The sum proposed (\$800,000,000), while large, is spread over a period of years and is concentrated on naval expansion. Its incidence is, therefore, limited; and the immediate impression was that it would have little general influence on the economy, at least in the near future.

The State of Banking

The unusually large post-Christmas currency return has raised the excess reserves of the member banks above \$1,400 millions. After the first increase in reserve requirements in August, 1936, the figure was \$1,800 millions; at the lowest point of last summer, they were a little over \$700 millions. Total member bank reserves are now \$500 millions more than a year ago. Member bank credit, however, continues to fall; total loans and discounts of the reporting member banks are \$1,350 millions less than a year ago.

On the other hand, there has been no fall in the total loans and investments of the Reporting Member Banks of New York City since the middle of November. In that period their loans have gone down \$250 millions, but their investments have increased by a corresponding sum. Outside New York, the Reporting Member Banks' loans and investments have fallen about \$200 millions in that period, representing repayment of loans. The credit contraction which was so marked between the middle of August and the middle of November, has become less apparent in recent weeks. In New York the repayment of loans has been wholly made up by increased holdings of investments; outside New York, there has been no such compensation.

In the past month (December 29, 1937—January 26, 1938), although loans and investments have declined, demand deposits have increased. The decline in deposits did not equal the decline in loans and investments, because of the increase in excess reserves over the same period. These phenomena of high deposits, and low velocity; of low money rates and declining loans, of extremely low interest rates on gilt-edged obligations, and almost unobtainable capital on other types of corporate securities, are now the salient financial characteristics of our economy.

France

New Financial Plans

PARIS, February 10.—M. Marchandau has just published his plans for the revival of production and trade. Realising that new credits will be needed for National Defence, the Minister of Finance intends to encourage business activity by fiscal concessions. These concessions will be given to enterprises which increase their level of production beyond that of the crisis years; to concerns which invest their increased profits in new plants; and to firms manufacturing for export.

These plans, as soon as they were known, made a very good impression on the Stock Exchange, which regards them as a means of stimulating private initiative by defending profits. Nor are they likely to be opposed by the Left wing in politics, since they will be brought forward together with plans for meeting the social charges of industrial undertakings.

Political Calm

The latest news from Germany was received calmly. During the last few weeks there has been a marked desire for better relations with Germany. It is generally held that the recent changes in Germany are purely a domestic concern. Victory has gone to Herr Hitler, who is no longer "Public Enemy Number One" in France, since French attention is now centred on the Spanish war and the troubles in the Mediterranean.

In a recent speech, the leader of the Trade Unions expressed himself in favour of mere supervision of the exchanges, rather than rigid control. He endorsed the collaboration of the democratic States in the interests of peace, and this again was taken to imply support for the Tripartite Agreement as against proposals for exchange control. In general, his speech was welcomed by members of all parties; and an agreement between capital and labour to stabilise the social laws and, at the same time, to intensify production seems not impossible.

Improved Foreign Trade

Foreign trade showed a distinct improvement in January. Compared with December, imports were lower in value and exports higher, as the following table shows:—

Francs ('000,000 omitted)

	January, 1937	December, 1937	January, 1938
Imports:—			
Foodstuffs	886	1,248	965
Raw materials	1,972	2,699	2,369
Manufactured goods	473	590	557
Totals	3,332	4,538	3,892
Exports:—			
Foodstuffs	283	368	310
Raw materials	574	791	869
Manufactured goods	911	1,186	1,271
Totals	1,768	2,345	2,451
Import Surplus	1,563	2,193	1,440

If trade with the colonies is excluded, the fall in the import surplus is even more marked. Between January, 1937, and January, 1938, it fell from 1,357 to 1,158 million francs. Between the same dates, the exchange value of the franc fell more than 30 per cent., so that the decline in the import surplus amounts to something like 40 per cent.

BRITISH MALAYA

For information on all matters relating to travel attractions, motoring, agriculture, mining and trade—you are invited to write for illustrated booklets, etc., to

MALAYAN INFORMATION AGENCY
MALAYA HOUSE, TRAFALGAR SQUARE, W.C.2

Imports of foreign coal were notably reduced, only 2 million tons being bought against 2,444,000 tons in December, 1937, and 2,400,000 tons in January, 1937. The value of coal imported was 419 million francs, compared with 519 millions and 304 millions, respectively, at the two previous dates. It should be noticed, however, that a great part of this fall in value is due to the way in which the customs statistics are compiled.

The increased export of manufactured goods mainly affected chemicals, textiles and paper. If coal imports can be further reduced—the workers have agreed to work more additional hours—and if new burdens are not laid upon industry, the improvement in trade should be maintained.

The number of unemployed on January 29th was 403,813, against 399,728 in the preceding week and 427,932 at the end of January, 1937, which saw the peak of last year's seasonal unemployment. Wholesale prices have moved as follows:—

	Jan. 15	Jan. 22	Jan. 29	Feb. 5
General index	615	611	612	610
Domestic products	655	653	653	652
Imported products	544	535	537	535
Foodstuffs	623	622	620	618
Industrial products	609	601	605	603

The Stock Exchange in January did not experience the recovery which is usual at the beginning of the year. The improvement in foreign trade, the rise in fiscal receipts, the new stability of prices and the plans of M. Marchandau may well have a favourable influence on the market, where quotations are well below those registered before the last devaluation.

Germany

The Army Crisis

BERLIN, February 9.—The crisis of last week, though intrinsically important, was not specially characteristic of German conditions. Conflicts between Governments and armies occur elsewhere. What was significant was the manner of the dénouement, or rather the account of it which was presented. While the non-German world was aware that there had been a serious conflict, the German public were only told, towards midnight on February 4th, about well-considered and comprehensive reforms for "the concentration of the greatest possible power in the Führer's hands."

It was not admitted that there was any urgent ground for these steps. That would have been a breach of custom, as graceless as showing the rent in a pair of trousers before it was decently patched. The participants in the changes were presented as having collaborated zealously. Two of the generals who would have collaborated had they not fallen ill received grateful letters. The general who did not fall ill got a Field-Marshal's baton, and the dismissed Foreign Minister received a Golden Party Symbol.

That was the picture painted for the German nation. No word of any differences, quarrels or ultimatums leaked out, and foreign newspapers were confiscated. The incident raises the question whether a great nation can flourish permanently in an enforced atmosphere of unrealities, simulacra and *chinoiserie*. This question is certainly important for Germany and probably for Europe, for, according to good judges, largely German, the illusionism of William II's empire was the first cause of the great collapse, and the mental and emotional state of Germany in 1914 was solid and genuine compared with that of Germany to-day. That is the most ominous feature of last week's events.

Hitler, the Generals and the Party

The causes of the clash, the changes in organisations, and the disputed question whether Herr Hitler or his *Generalität* won are only secondary. It does not seem, in fact, that either Herr Hitler or the generals won outright. The Army had certainly no desire to upset the Party-State, but was successful in so far as, in the vital matter of the War Minister, it took the initiative and won its point, though it had no lawful competence whatever in the matter.

Whether, as alleged, the Army also tried to enforce a more responsible foreign policy is not certain. But there is reason to believe that this did happen. It may be surmised that the predominance of the Defence Forces in the new Privy Council for Foreign Affairs, in which four generals and admirals sit with one professional diplomat, was an outcome of the Army's protests.

The changes in the personnel of the generals, which have been represented as the Party's successful purge, are in a different category. They certainly cannot be regarded as Herr Hitler's revolutionary retort to revolution. Herr Hitler was simply exercising his ordinary and undisputed powers, and the Army could not challenge him. Little is known of most of the newly-appointed generals; but judged by their noble names they will be solid with the military and aristocratic caste which dominates the Army as a whole.

If there is to be a real Army at all, this is inevitable, for the military aristocracy is the only efficient and stable social element in the Reich, though its close solidarity is perhaps not propitious for the future of the Nazi system. But the Reich generals have no motive for upsetting the Government, only a motive for getting their own way in matters vital to themselves. It is, however, important that the Army shows an increasing political self-sufficiency, a conscious isolation from the civil Government and an increasing tendency and ability to act as a unit. The Party's desire to counter this by infiltrating the Army with National-Socialist spirit, which was one cause of the decision to overthrow von Blomberg, is not likely to succeed.

Militarisation of the Reich

Indeed, it seems that the contrary process is under way. The Army is infiltrating and may soon dominate the civil administration—at least in the higher ranks. Before the war the same class that supplied efficient generals also supplied efficient Ministers and Secretaries of State. This condition is fundamentally unchanged. For no reason except that they are competent and zealous, military men have been taken, via the Four-Year Plan, into the Ministry of Economics, which controls or will control all the other economic Departments. If the new Privy Council for Foreign Affairs has any influence at all it must be Army influence. Behind the transformation scene which glows and glitters with Party symbols, the Army and the social caste identified with it are the one substantial reality. And it does not matter who waves the flags so long as the Army controls the guns.

The tradition that the Prussian Junker aristocracy lives by war is deeply rooted. This is largely a superstition, derived from the mere circumstance that the Junker aristocracy was the Army. The military element which has lately come to the fore again in Germany has given no indication of irresponsibility or irritability in international matters. Its language and demeanour have been unexceptionable. The real threats to Germany are feebleness and illusionism; and *de facto* Government by intelligent and serious generals behind the Party façade would certainly not aggravate these evils.

Sweden

The Northern Bloc

STOCKHOLM, January 27.—The Budget proposals for the financial year 1938–39 met with the approval of practically all parties. The new Budget was balanced at kr.1,228 millions compared with kr.1,202 millions in the current financial year. Revenue is estimated to exceed expenditure by kr.19 millions. Neither new taxation nor the abolition of existing taxes has been proposed. The Foreign Secretary delivered a speech in the Riksdag of great interest, reflecting to a large extent the views of all the Governments of the Northern countries. Referring to what he called "irregularity in the relations between Sweden and Italy" M. Sandler recalled that Sweden was brought into this situation by having fulfilled what the country regarded as its duty as a member of the League of Nations. Passing on to the question of Sweden's attitude towards the League, the Foreign Secretary stated emphatically that "after the experience of the Italo-Abyssinian conflict the system of sanctions laid down in the Covenant has *de facto* ceased to function." The immediate tasks of Sweden, he said, were in the North, and the future of Swedish policy lay in co-operation with the other Northern countries.

Timber Setback

The economic situation in Sweden underwent no great change in December. Industrial production was still high; and employment was satisfactory in spite of a seasonal rise in the number of unemployed from 12,000 to 16,000 during November. Labour negotiations have now been concluded in the most important branches of industry, i.e. engineering and the paper and pulp industries.

On the other hand, a conflict in the hotel and restaurant trade resulted in a lockout by hotel and restaurant owners.

The closing down of the bulk of Swedish hotels and restaurants naturally affected trade, since salesmen were unable to visit customers; and it put a temporary stop to the tourist traffic.

The timber market was extremely dull in December, partly on account of the closing of the Northern ports of Sweden to navigation, and especially to the considerable volume of timber stocks in Great Britain. At the turn of the year total timber sales for the coming season amounted to some 100,000 standards which compares with 325,000 standards a year ago. It is hoped, however, that the recently decided reduction of 5 per cent. in timber quotas by agreement will bring about an improvement in the timber market. Practically no sales of pulp took place during December on account of the considerable falling-off in paper production in the United States and the reduction in the price of sulphite pulp carried through by American and Canadian producers.

The quietness in the iron and steel market, which is usual in December, was distinctly more accentuated this year, and foreign orders substantially declined. Still more marked was the decline in sales for the domestic market. This has led certain iron and steel works to dismiss workers.

Improved Balance of Trade

Owing to a rise in exports during December and a reduction in imports the balance of Swedish trade in 1937 somewhat improved. The value of foreign trade is shown in the following table:—

	FOREIGN TRADE (In million kronor)	
	1936	1937
Imports	1,633	2,111
Exports	1,514	1,994
Import surplus	119	117

Swedish imports thus show an increase of 29.3 per cent., compared with an increase in exports of 31.7 per cent. An outstanding feature was the export of pulp and paper, valued in 1937 at kr.591 millions compared with kr.445 millions in 1936.

Wholesale prices moved downward in December and the Silverstolpe index fell to 136, against 143 in August, 1937, and 125 in December, 1936. At the same time the price of consumption goods remained steady.

THE CANADA LIFE Assurance Company

1937 Report

The net new business written during the year amounted to £11,442,000, an increase of £1,793,000 over the 1936 figure. The share of the British Isles Division of the Company amounted to £2,160,000, an increase of £145,000 over that for the previous year.

The Company's income during 1937 was £7,818,000, while in settlement of claims, bonuses, annuities and surrender values, the Company paid during the year £4,831,000. The assets of the Company increased during 1937 by £1,402,000 to £53,288,000 and include special reserves and undivided surplus totalling £2,092,000.

Czechoslovakia

Government Reconstruction Mooted

PRAQUE, January 27.—The economic situation is still influenced by events in the Far East. Political tension eased off at the beginning of the year, and to this the tour of M. Delbos and the visit of the Rumanian Minister, M. Micescu, contributed. The possibility of the Government reconstruction on a large scale is being discussed. Some excitement was recently created by the announcement by the leader of the Agrarian Party that they would collaborate with the national minorities, including the German Henlein Party, subject to absolute loyalty to the country.

New bills for extended expenditure, chiefly for defence, have been passed by Parliament after some amendments. The money market has been easy on the whole, despite large calls from public bodies. Only an insignificant revival on the Stock Exchange took place at the beginning of the year.

Fall in Employment and Production

Employment fell in November, and in December a further setback occurred. The number of unemployed persons at the end of December was 451,484, or 118,029 more than in November. The index of industrial production in November (1929 = 100) was 99.2.

The output of coal and iron again rose in December. Compared with 1936, the figures were as follows:—

	(000 tons)	1936	1937
Coal		1,320	1,534
Lignite		1,610	1,737
Coke		205	308
Pig iron		111	143
Raw steel		162	188

The production of coal, coke, iron and steel is at about the 1929 level.

While industrial production has shown a general tendency to decline in common with output abroad, the reasons for it are partly seasonal. Only in some certain trades, such as the glass industry, does a high level of employment persist unchecked. The index of wholesale prices (in gold) declined at the end of the year to 732, against 764 in April last.

Foreign trade has shown a further considerable advance. Imports in 1937 were valued at 10,966 million Cz. K., against 7,915 in 1936, and exports at 11,982 million Cz. K., against 8,036 in 1936. The export surplus was thus 1,006 million Cz. K., against 99 million Cz. K. in 1936.

Trade agreements have been recently concluded with Hungary, Turkey, Ecuador, Mexico, and Afghanistan. A new agreement with the United States is under discussion and is of importance for Czechoslovak trade, since exports in 1937 to the United States amounted to 1,112 million Cz. K. Negotiations for trade agreements with Austria, Denmark and some of the Latin-American countries are still going on; and in February the usual meeting of the Economic Council of the Little Entente will take place.

Spain

Government Measures

BARCELONA, January 24.—Since no special session of Parliament could be arranged before the end of the term laid down by the Constitution, the Budget has been prolonged by decree for the first three months of 1938. A special Committee, including representatives of the Defence Ministry and the Petrol Monopoly, has been set up to work out plans for the safe storage of liquid fuel against the dangers of bombardment.

The Government has decreed the issue of 25 and 50 peseta notes and 5 and 10 peseta silver certificates. This infringes the right of the Bank of Spain to issue notes. All silver coins are to be exchanged against paper money or silver certificates within 30 days, and hoarders will be liable to severe penalties. During December the revenue derived from direct taxes in loyal Spain again increased, and is now approaching normal.

Trade in War-Time

For a number of years before the Civil War the Spanish trade balance was passive and, in spite of the endeavours of successive Governments, the surplus of imports grew yearly. In 1933 the surplus was valued at 163 million gold pesetas, in 1934 at 243 million gold pesetas, and in 1935 at 291 million gold pesetas. This increasing deficit was not compensated, as in England, by income derived from freight on foreign cargoes, investments abroad, insurance premiums, etc.

At the end of June, 1936, however, the import surplus for the first six months was only 50.1 million pesetas against 129.4 million pesetas in the same months of the preceding year. This comparatively favourable result was brought about by an increase in the value of exports amounting to nearly 37 million pesetas, while imports were at the same time reduced by more than 42 million pesetas.

On July 18, 1936, the Civil War broke out. Since then, trade figures have been published regularly, although with some delay. These figures are provisional and approximate and, of course, refer only to trade with the loyal Spanish provinces, and so far only to the first quarter of 1937. They are based on declared values given by importers and exporters, expressed in gold pesetas.

The figures for the second half-year of 1936, with only twelve days free from civil war, showed a sharp diminution both in exports and imports, even after allowances had been made for the fact that they only represented business transacted in the loyal provinces.

Imports in the quarter were valued at 26,979,409 pesetas, while exports during the same period reached the value of 70,057,764 pesetas. Thus the officially recorded surplus of exports was over 43 million pesetas.

Great Britain was still by far the best customer of loyal Spain: in the first quarter of 1937, indeed, the value of Spanish exports to Britain fell very little, from 33,510,000 pesetas received from all Spain in the first three months of 1936 to 29,475,000 gold pesetas from loyal Spain. The second best customer of loyal Spain so far has been France, and exports to Germany have fallen to practically nothing.

Letters to the Editor

England and Eire

TO THE EDITOR OF THE ECONOMIST

SIR.—It is quite true, as the letter published in your issue of February 5th pointed out, that the law in Northern Ireland is the same for everybody. There is no suggestion that sectarian considerations affect judges or magistrates, or that the Government persecute Catholics as Hitler persecutes Jews.

There are, however, three serious accusations which can be made. The abolition of proportional representation in Northern Ireland elections has led to the under-representation of Catholics in Parliament. The gerrymandering of constituencies in local government areas (e.g. Derry Corporation) has led to the under-representation of Catholics locally. And Catholics do not get their fair share of public "jobs."

Catholics in Eire, where the Protestants have been very generously treated, are struck by the contrast between the treatment of religious minorities North and South of the border. While it is true that Catholics in the North are to some extent to blame for their ill-treatment because their policy is often one of disloyalty and abstentionism, the fact that they are ill-treated cannot be disputed.

Many Northern Protestants are, of course, liberal, but the Orange Order is a "party" just as much as the Nazis in Germany, and Northern Ireland was the pioneer of "party" states.

Dublin.

HIBERNIAN.

Capital for Agriculture

TO THE EDITOR OF THE ECONOMIST

SIR.—While most industries in the country have regained a measure of prosperity during the last few years, the position of agriculture still gives cause for anxiety. Those who have studied the question are almost unanimous in stating that the primary difficulty experienced by the industry is the inadequacy of the capital employed. This difficulty is likely

to become more severe as more intensive methods of cultivation are introduced. Investigation has proved that as the great majority of the farmers in this country are either farmers' sons or former labourers there is a tendency for more money to be withdrawn from the industry than is brought into it from outside sources.

If additional capital is needed it can be provided in one of two ways: either the profits of the farmer must be increased to enable him to save substantial sums for capital improvements, or money must be provided from outside sources. Profits can be increased only by raising the prices of farm produce to levels considerably higher than they are at present. This would result in an unstable economic structure, and would certainly be unpopular, except amongst the farming community.

Nor is there any guarantee that such additional profits would be sunk in the industry. The low wages now paid to farm labourers preclude any possibility of economies in this direction. Substantial relief from taxation is already granted, and it seems neither desirable nor equitable that these concessions should be extended.

There is only one practicable course: capital must be introduced from outside sources. There is ample capital awaiting investment, and there is no reason why the prospectus of a limited company engaged in farming should not meet with a ready response from the investing public once the initial distrust of any new venture is allayed. The formation of limited companies and the welding of the existing farms into larger units would result in the usual advantages of large-scale production and in more economic use of the land.

On the death of a farmer it would no longer be necessary to sell a field or to dispose of essential stock in order to pay outstanding debts and the necessary duties; part of his shareholding would be sold instead, and his interests could be divided amongst his children without the necessity for the physical division of the farm.

The idea of limited companies conducting farming is alien to our preconceived notions, but there is no logical reason why a system which has proved eminently satisfactory in other spheres should not meet with equal success in this essential industry.

Yours faithfully,

A. D. COZENS.

Petts Wood,
Kent.

Oxford Electric Company, Limited

TO THE EDITOR OF THE ECONOMIST

SIR.—As a preference shareholder, I should like to supplement the statements in your last issue.

In its first circular letter of December 6th the company put forward the report of the MacGowan Committee as the reason for the proposed sale and stated that "the purchase price offered is advantageous." The first meeting was abandoned, as the Oxford Corporation had intimated its intention to make an offer for the undertaking.

A second circular letter of January 20th was then issued in which it was stated that the offer of the Corporation was less than that of the Wessex Electricity Company, which latter was "most advantageous." Notice of an extraordinary meeting on January 28th to approve the sale to the Wessex Company accompanied this letter and also proxy forms.

A third circular letter of January 24th, with a copy of a letter of January 22 from the Oxford Corporation, was sent out stating that, for reasons given, the offer of the Corporation was better and was estimated at 43s. per ordinary share against 38s. for the Wessex offer. It also stated that it was the wish of Edmundsons Electricity Corporation that the undertaking should be sold to the Wessex Company; that Edmundsons owned a majority of the ordinary shares in the Oxford company and a controlling interest in the Wessex Company; and that Edmundsons undertook to give ordinary shareholders sixpence per share more than the Oxford Corporation offer would produce. It will be observed that, while the first circular letter gave the MacGowan Report as the reason for the proposed sale, this circular gives it as "the wish of Edmundsons" and no attempt is made to reconcile the two.

I have been in correspondence with the secretary and the chairman, Lord Meston, who is also on the board of Edmundsons, as to the alleged "advantage" to preference

shareholders of a sale. I also asked what price had been fixed for the preference shares before arriving at the estimate of 43s. for the ordinary. The secretary has replied to the following effect:—

(1) On voluntary liquidation, which is intended to follow the sale, preference shares are entitled to 20s. each under the Articles of Association.

(2) The rights of preference shares would arise for consideration when the liquidation took place.

(3) In the estimate the sum of 20s. had been allowed. The chairman merely reiterates the second statement.

It is impossible to reconcile these three statements and no attempt is made to do so or to explain how any liquidator could legally pay more than 20s. per share. Moreover no attempt is made to justify the statement in the circular letters that the sale is an advantage to the preference shareholders. As the market price was 24s.-26s. the disadvantages of a sale are obvious.

Edmundsons hold a controlling interest in the ordinary shares of the Oxford company and used their voting power in favour of the sale which, in effect, was to themselves.

Yours faithfully,

WALTER A. ANDERSON.

London,
S.W.7.

[The latest return of the Oxford Electric Company, Ltd., at Bush House, shows that 200,000 ordinary shares were in issue at April 20, 1937. No shares were registered in the name of Edmundsons Electricity Corporation, but the following holdings of 5,000 shares and upwards appeared: Arthur J. Jenkins and another 43,535; Arthur J. Jenkins and another—presumably a different joint-holder—41,694; Richard W. Fryer, 23,945; William C. Kilsby, 21,685; Sir Philip Dawson, M.P., and another, 12,920; Leslie A. Jackson and another, 7,750; Cecil B. Cave-Browne-Cave, 6,620; and Henry J. Butterfield, 6,095. The Unemployed

It took a long time for the treatment of the able-bodied unemployed to be distinguished from the treatment of paupers after the Poor Law reforms of 1834. In practice, however, it was never possible to assimilate industrial unemployment to the strict principles of the amended poor law. By the time the proposal for State-assisted insurance against loss of work for certain categories of workers came to be embodied in a statute of 1911, an array of *ad hoc* devices had already been contrived to provide different modes of treatment for the unemployed from the relief traditionally accorded to the aged and impotent poor.

The mass unemployment of the post-war years was initially dealt with by a combination of national insurance and poor relief. The magnitude of the problem soon exceeded the capacity of either sound insurance or local rates, and before 1930 a system of State-paid mass relief—the “dole” in popular speech—had been dangerously fathered on the original and extended insurance scheme, in the form of “transitional payments.”

The economic collapse of 1930 and the national crisis of 1931 compelled the State to reconsider the bases of unemployment policy, and it is the new system which has been evolved since then and put into practice under favourable conditions of national economic recovery that Mr Davison has clearly and accurately described in his latest book.* He sets out the leading events: the introduction of the Means Test for recipients of uncovenanted benefit; the Unemployment Act of 1934 stabilising the insurance scheme and creating the

Unemployment Assistance Board to deal with applicants not “in benefit”; the initial breakdown of the Board’s regulations and their revision in 1936; and the development *pari passu* of a special policy for the Special Areas.

The account is full and fair, though in comment the author not infrequently strikes a controversial note, accepting too easily for the advocates of “work or maintenance” the canons of sound finance, and failing perhaps to realise the sometimes disastrous incidence on families of the Means Test. On the whole, however, since it is not Mr Davison’s purpose to pass judgment on political issues, or to examine the larger fundamental question of the State’s responsibility for unemployment, his story is unexceptionably told. The financial safeguards of the insurance scheme had been swept away. The insurance fund was heavily in debt. The unbalanced position was too much for the national finances to sustain, and reform was imperative.

The curious and maybe illogical mixture of insurance and relief has not, however, been removed. Principles of sound accounting have been restored. The Unemployment Assistance Board and, in a different way, the Unemployment Insurance Statutory Committee, represent the introduction of long-sighted and efficient principles of administration, tempered as it has proved by local knowledge and advice, into a situation which had become chaotic. But the threefold system of insurance, uncovenanted benefit and poor relief is still a compromise. The most fruitful line of advance would seem to be the steady enlargement of the insurance scheme, which the revival of trade and industry has already made possible in some degree.

The principle that *all* unemployment benefit should be a State charge has so far foundered on the rocks of financial fact. But there remains

the dilemma which contributory insurance presents when its benefits become an indispensable social service which cannot be withdrawn even though the contributory conditions are not fulfilled. It seems that the contractual basis must, in a democratic country, sometimes be tempered by charity, where this can be done without abandoning or seriously weakening the limited liability principle of the schemes.

Some people would still not be very ready to accept the word “charity,” but the financial limitations of public policy cannot be gainsaid.

THE BUSINESS WORLD

More Oil from Coal?

The Committee appointed, under Lord Falmouth, to examine various processes for the production of oil from coal and their potentialities in an international emergency, is understood to have finished its deliberations, though no part of its report has as yet been published. In the following article, a correspondent states a case against the endeavour to replace petroleum by its various substitutes on any large scale.

THE preoccupation of many countries with problems of defence has served, recently, to emphasise the decisive part played by petroleum and its producers in modern warfare, as in modern industry and transport. It has also faced responsible statesmen in many nations with a serious dilemma. Of the world’s leading industrial countries, only the United States of America and the U.S.S.R. are large domestic producers of petroleum, yet all wish to assure themselves of adequate supplies in peace and war. Most Governments already draw a substantial revenue from the taxation of imported petroleum. From the viewpoint of harassed Finance Ministers, this form of taxation has much to commend it; for experience has shown that it combines ease of collection with buoyancy of yield. The military argument in favour of the replacement of petroleum by home-produced substitutes, despite their high production costs, appeals powerfully to many countries, particularly those which could be readily blockaded in a future war. But the more successful the policy, the greater the potential loss of revenue, since the addition of any tax to the costly home-made production would be calculated seriously to check consumption. What is Great Britain’s position in this respect?

The British Government in recent years has been an increasing beneficiary from duties on petroleum. In the current year these are estimated to yield £50,250,000, or 6 per cent. of the total national revenue. In 1932-33 the yield was £35,204,000, and in 1928-29 it was only £12,939,000. The first petrol tax was imposed in 1909, but it was purely a revenue duty, and its proceeds were earmarked for the Road Fund. Actually, its yield was very small, and in no year before 1921, when it was abolished, did it produce more than £3,000,000. A petrol tax was re-imposed by Mr Churchill in 1928, with the primary object of raising revenue, but with an avowed secondary motive of maintaining some kind of “balance” between road and rail between coal and oil. The extension of petroleum taxation to heavy oils in 1933, by Mr Neville Chamberlain, was made specifically at the instance of the coal and allied industries. From that year, indeed, dates the growth of the British Government’s interest in the possibility of using petroleum taxation as a species of tariff wall for the benefit of home-produced petroleum substitutes. The British Hydrocarbon Oils Production Act of 1934 guaranteed preferential treatment to such products for a number of years. Their position is, however, unusual—to say the least—inasmuch as the development of the home industry appears to be contingent on the continuance of effective protection on a scale roughly twice as great as the cost of the imported product. Every gallon of motor fuel and industrial spirit which displaces a gallon of the imported material involves the Government in a loss of revenue of 8d. The total present output of domestic substitutes for petroleum is something like half a million tons—equal to 5 per cent. of the total national consumption—and the taxpayer already pays the producers of substitutes a hidden subsidy of around £4,000,000 a year.

The more important petroleum substitutes produced in

Great Britain to-day are obtained by the treatment of coal in one of three different ways—namely, by high-temperature carbonisation to produce benzole, by low-temperature carbonisation, and by hydrogenation. In addition, shale oil and alcohol are used as substitute materials. The extent of the present output under each of these heads may be briefly indicated.

Benzole is obtained as a by-product at coking ovens, tar distilleries and gasworks. The coking-oven, however, is much the most important source of supply, and the quantity of benzole available at any given time consequently is mainly a function of the demand for coke by the steel industry. Approximately three gallons of benzole are obtained from every ton of coal carbonised. The current year’s estimated production of motor benzole is 235,000 tons, and the value of the preference of 8d. per gallon to the producers may be put at £2,000,000.

The main product of the low-temperature carbonisation process is not motor spirit but semi-coke, which is obtained to the extent of about 16 cwt. per ton of coal carbonised. Crude spirit and tar are subsidiary products derived to the extent of 3 and 17 gallons per ton of coal, respectively. At present only two British concerns operate this type of process on a substantial commercial scale. The motor spirit yield may be estimated this year at about 4,000 tons—apart from a further quantity obtained by the hydrogenation of some of the tar produced.

“I parted with £1,600, including all my securities.”

Widows with a little capital and no experience in financial matters are sometimes easy prey.

The tale is always the same. The tempting bait of high interest yields is swallowed... glowing promises are followed by bitter disillusionment and loss of capital. Tragedy indeed. For the protection of your wife, should you leave her a widow, choose the ‘Safeguard’ plan. None better. It provides a guaranteed income of £3, £6 or £9 per week according to her needs. It will free her from investment worries and shield her from traps laid for the unwary.

The ‘SAFEGUARD’ PLAN

provides a non-fluctuating income of £3, £6 or £9 per week for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged that the cash sums are payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

General Manager: VERNON E. BOYS

The third type of petroleum substitute is petrol produced by the hydrogenation of coal and coal-tar. The only British plant at present using this process is that of Imperial Chemical Industries at Billingham, which has a potential output of 150,000 tons a year. The yield of petrol obtained is of the order of 80 gallons per ton of coal used—a very much higher figure than that of any other process, though no commercial by-products are secured. The cost of production, however, at Billingham would appear to be over rather than under 1s. a gallon; for at a time when the product was competing with petrol imported at an average price of 3½d. per gallon, and paying 8d. tax, Lord McGowan, the chairman of the I.C.I., declared at an annual general meeting that the hydrogenation plant had not up to then shown results which would justify its description as a good commercial proposition, even with the advantage of the existing Customs duty.

Shale oil is in a different position from other substitutes. Actually the shale oil industry is older than the petroleum industry itself. The annual production of shale is some 1,400,000 tons, and the output of oil products exceeds 80,000 tons a year. The only other important "substitute" which is not derived from the treatment of coal is power alcohol, some 20,000 tons of which come into the motor spirit market annually. Despite the fact that it is produced almost entirely from imported raw materials (mainly molasses) it receives more generous treatment from the Exchequer than any other substitute. In addition to the 8d. preference, it enjoys the benefit of the remission of 8½d. per gallon duty which was granted to non-potable alcohol under the Finance Act of 1921.

At present, all petroleum substitutes together satisfy only a fraction of the total home demand. Their costs of commercial production, for the most part, cannot compare even approximately with the price of imported petroleum, *ex tax*. Clearly the question whether, and to what extent, British policy should aim at the replacement of "foreign" by "domestic" supplies depends on considerations apper-

taining to war rather than peace. There is no indication yet whether the Falmouth Report will or will not advocate the extension of the production of oil from coal, but it is of interest that the Government is participating to the extent of 25 per cent. in a newly-formed low-temperature carbonisation company in South Wales.

If, however, Britain's wartime strategy is to be based on the maintenance of a fleet sufficient to ensure effective command of the sea and the satisfaction of a large part of her petroleum requirements by domestic production, it is essential that the premium payable for this double insurance policy should be clearly stated. The cost of increasing "self-sufficiency" is not difficult to estimate. The present total British consumption of petroleum products and substitutes—satisfied as to 95 per cent. from external and as to 5 per cent. from domestic sources—is of the order of 10 million tons a year. About half of this total represents motor spirit. The c.i.f. cost in 1937 of imports of crude petroleum and petroleum derivatives (after deducting re-exports) was £44,250,000. If all the motor spirit were obtained by the hydrogenation of coal, this would involve the construction of thirty plants of the size of Billingham at a capital cost of £160 millions. The Government would lose all their revenue from the taxation of imported motor spirit, which now amounts to £44 millions a year. Even so, the country would be still dependent on imports for the half of the consumption of petroleum products, not represented by motor spirit. The inevitable problems of labour transference would be formidable; and, incidentally, the capital and labour now employed in the considerable oil-refining industry which has grown up in this country in recent years would be jeopardised. Finally, as Sir Thomas Inskip has pointed out in the House of Commons, every unit for producing oil from coal is a potential enemy target; and to depend solely on home supplies, without keeping in existence a service of tankers, is to give an additional hostage to fortune.

By-Passing The Stock Exchange

THE origins of the Stock Exchange are rooted in Government securities, and the gilt-edged market is still one of its main pillars. Here is a market which provides the economist's favourite illustration of free and sensitive dealings; a market which, in its time, has dealt in one penny-worth of War Loan, but can efficiently and expeditiously handle bargains running into hundreds of thousands, or millions, of pounds. Recently the market has had no reason for displeasure with the course of quotations, but it has become concerned for part of its bread and butter. There has been a noticeable tendency for outside dealings in gilt-edged stocks to increase, and a volume of business which in other times would have passed through the Stock Exchange has been short-circuited.

This phenomenon is not new, but two reasons have lately forced it into open discussion. The current paucity of Stock Exchange business naturally draws attention to any factor which tends to reduce the market's turnover. And available evidence suggests that the recent return of the institutional investor to the gilt-edged market has been effected through channels other than those of the Stock Exchange.

Outside dealings in gilt-edged stocks fall into three main classes. The first and simplest case is direct dealing between big institutional holders of gilt-edged securities—for example, between a clearing bank and a discount house. Such institutions are in daily contact in their bill and money business; it is, therefore, not unnatural that they should become aware of their respective attitude towards their gilt-edged holdings, and thus should transact business directly if a basis for dealing is found to exist. Secondly, operations in gilt-edged may be effected through an intermediary outside the Stock Exchange—for example, a firm of running brokers in the discount market. These firms will do business on the basis of appreciably lower commissions than those allowed under the minimum Stock Exchange

scales. A third class of extra-mural dealings affects only gilt-edged jobbers. It occurs when brokers are able to marry the buying and selling orders of their clients and thus save the jobber's turn. The tradition of the "House" is that the broker must deal in the market if he can; but there is no rule which forbids the marrying of transactions, provided that the appropriate broker's commission is charged.

The emergence of this problem of outside dealing to some extent results from the increased attention which the discount market has necessarily paid in recent years to transactions in gilt-edged securities. A discount house may cover its overhead costs from bill business, but its profits tend to depend increasingly on its portfolio of bonds, whether these rank as permanent investments or as media for jobbing profits. Competition by the money houses has forced up the prices of certain short- and medium-term securities to a point at which they are of predominant interest to the discount market rather than to the general investor. This is true, for example, of 4½ per cent. and 5 per cent. Conversion loans. From the discount market's point of view, jobbing in such stocks is becoming expensive (granted the minute adjustments in their prices which are required by changes in prevailing money rates) if full Stock Exchange commission is to be paid. Unfortunately for the Stock Exchange, however, this technique of direct and cheaper dealing is not confined to the "shorts." The new technique is being extended to longer-dated securities. A running broker is prepared to deal for 1/64 commission in War Loan, for instance, and such a rate, compared with the existing scale of Stock Exchange commission, naturally encourages resort to outside dealing.

The large banks have also played some part in this recent development. Their stake in the gilt-edged market is today so much larger, both absolutely and in relation to their total resources, than it was a few years ago that the func-

tion of handling their security portfolios has, in most cases, become the whole-time care of highly-paid specialists. Problems of the composition of investment portfolios and the technique of "switching" are now under constant study and can no longer be left to the leisurely consideration of a committee of directors meeting at relatively long intervals. The specialists who now perform these functions earn their salary by dealing as shrewdly and economically as possible. They ask for net prices and get them. More often than not, they are able to assess the "touch of the market" so acutely that brokers handling their orders can only execute them by marrying transactions at prices well inside the margins quoted by the jobbers. The increased cut-and-thrust in the gilt-edged market has thus been caused largely by the intrusion of the discount houses, with their substantial resources and a technique of cheap dealing developed from their bill business, and by the higher standards of economy and efficiency set up by the banks in their present-day investment business.

The losses suffered by the Stock Exchange as a result of these developments are twofold. The brokers lose commissions when they are supplanted in direct dealing or in dealing through a running broker. The jobbers also lose their turn both when dealings take place through outside channels and when brokers are forced to marry their transactions. Moreover, jobbers have been unfavourably affected by the practice, which has become common, by which part of a big order is placed in the "House" and the other part outside. As a result, jobbers have found on occasion that, after they have satisfied an important buying order, the market has suddenly moved against them owing to the completion of that order outside the House.

The problem as it affects the Stock Exchange is the more important since it carries the seeds of its propagation into other markets than that for gilt-edged securities. In considering possible solutions, two elements must be considered—the level of brokerage commissions and the jobber's turn. Much has already been done to meet the requirements of the big institutional investor through adjustments of commissions. The discretionary commission on bonds which have no longer than five years to run to final redemption covers a good deal of the ground most affected. The minimum commissions of 1/64 on 1 per cent. Treasury Bonds, of 1/32 on 4½ per cent. Conversion Loan, and of 1/16 on 5 per cent. Conversion Loan can hardly be regarded as penal deterrents to business. The 1/8 commission which applies to National Defence Bonds and War Loan (when deals of over £50,000 are involved),

however, is more likely to meet resistance on the part of the institutional investor. Again, the authorities might consider the possibility of countering the loss of really big orders by a reduction in commissions on operations of, say, over £250,000. Brokers, naturally, will not relish the idea of making further concessions on a scale of charges which they do not themselves regard as excessive. But the possibility of an extension in outside competition, coupled with the desirability of recovering some of the business already lost, should go far to offset this natural aversion to a lowering of the scale of commissions.

The problem of the jobber's turn raises the broader question of the elasticity of the gilt-edged market in the "House." Admittedly, that market did not enjoy a good year in 1937, but its reaction to uncertain market conditions was a restriction of its "book" to dimensions which appear small in relation to the normal turnover of the market. Consequently, the gilt-edged market has been rather more sensitive to comparatively slight changes in sentiment over the past twelve months than might have been expected by earlier standards. This reluctance to run a large position could be readily understood at certain periods last year, but inevitably the market has been forced to quote prices at which institutional business in gilt-edged has scarcely been encouraged. We should be the last even to appear to teach the gilt-edged market its highly specialised and difficult business. But, judging the experience of the past year objectively, the market might reflect whether its reluctance to take stock—for reasons which, at the time, may have seemed wholly adequate—was at times so pronounced that it was to some extent responsible for the tendency of would-be operators in gilt-edged stocks, on occasion, to look outside the "House" for the satisfaction of their requirements.

It is evident that the problem of outside dealing should be faced by the Stock Exchange. The traditional case for the functional importance of the jobber and the duty of others to support him is generally admitted, but in this connection it is not wholly relevant. Some muted appeals for the authorities to ban "direct" dealings in gilt-edged stocks, just as they banned them in the foreign exchange market, have already been heard. But an authority which is reluctant to seek the exclusive rights bestowed by a charter would not, presumably, be anxious to assume such powers by proxy. The new competition should rather be met in the time-honoured way, by removing its economic *raison d'être*. And that is a matter for the unaided efforts of the Stock Exchange itself.

Finance and Banking

The French Gold Transfer.—As we foreshadowed a week ago, the Frs. 3,000 millions of gold transferred last November from the French Exchange Fund to the Bank of France has now been handed back to the Exchange Fund. The suggestion has been made that the Bank of France took over this gold temporarily in order to facilitate the repayment of the sterling credit, but this explanation carries little conviction. It was unfortunate that the Exchange Fund parted with this gold in the first place, and owing to the recent flight from the franc, the Fund has been urgently in need of it. A fortnight ago we noted that the Exchange Fund was borrowing sterling by "swap" operations between the spot and forward market, and part of this Frs. 3,000 millions of gold may well be needed to cover the Exchange Fund's forward sales of sterling on their maturity. On the other hand, it is unlikely that the whole of this amount has been so mortgaged. If that were so, then the Exchange Fund would have drawn more heavily upon the Bank of France's reserves; for it would be foolish to make two such drafts on the Bank of France in quick succession. A larger amount in francs is involved, however, than appears at first sight; for these three milliards are "Auriol" francs, equivalent

to about 4½ milliards to-day. The Finance Minister's new assurance this week that the Government were aiming at various financial reforms, including the strengthening of the defences of the franc, is, again, too general to mean much. Still, at the moment France has secured a new breathing space. The market in francs is completely inactive, with no speculation or further flight of capital. Spot sterling remains at about Frs. 152½, with forward rates at Frs. 2½ and Frs. 6½ discount, for one and three months, respectively.

* * *

German Politics and the Mark.—Recent developments in Germany—not least the gradual elimination of Dr Schacht—have left their impression on the market for the many types of Reichsmarks now in existence. Even the official rate, with its rigid control and its unreality, fell from 12.39 to 12.44 on Friday and Saturday last week. It is, however, in the rates for the various types of blocked marks that the financial implications of current political trends in Germany have been most clearly reflected. Registered marks fell over the week-end from 48½ to 48½

per cent. discount, but have since recovered to about 47½ per cent. discount. For the time being the supply of these marks is strictly limited, but the position might be drastically altered if standstill creditors of Germany were to lose their confidence — hitherto justified — that whatever happened to German finances the standstill credits would remain inviolate.

* * *

The fall in the more restricted types of blocked marks — the credit, security and emigrants' marks — has been more serious. Compared with a month ago, the rate for credit marks has fallen from 84½ to 87½ per cent. discount and that for security and emigrants' marks from 84½ to 88½ per cent. discount. The amount of the depreciation may be, perhaps, more readily realised if the quotations are expressed in reciprocal form. Thus emigrants' marks, for example, have declined during the past month from 15½ per cent. to 11½ per cent. of the official Reichsmark rate. It will be apparent that, as the official rate has been practically stable in terms of sterling, the fall in the sterling value of the emigrants' mark has been of the order of 27½ per cent. This is an enormous depreciation in a currency whose value is already near zero.

* * *

Premium for Gold Coins.—One of the clearest indications of continuing distrust in the Continental currency situation is the persistent hoarding demand for gold coins in the London bullion market. The size of the turnover in these coins is difficult to estimate, since dealings in coins are not included in the published figures of gold dealt in at the fixing. But the Customs returns provide a more useful guide. They suggest that the "market" has lately been very active. Imports of coins from the beginning of the year to February 7th amounted to £4,565,000, against £4,943,000 for the whole of 1937. Exports were £4,606,000 for the first five weeks of 1938, compared with £4,796,000 for the whole of last year. Another indication of the increased demand for gold coins is the premium bid for them, which, since the beginning of this year, has risen from about 3 per cent. to 4 per cent. over the bullion price. The semi-official embargo on dealings in gold coins at a premium, which was imposed on the London market in 1936 in deference to the French Government's wishes, has now been withdrawn.

* * *

The Customs returns show that, of the exports of coin from the United Kingdom this current year, France has taken £2,363,000, the Netherlands £1,582,000 and Switzerland £620,000. France is obviously the chief magnet, and it may be assumed that the bulk of the coins exported to the Netherlands and Switzerland have been bought on French account and consigned to those countries for safe custody. Our main sources of supply of coins during this year have been Canada (£1,941,000), Venezuela (£691,000), Belgium (£677,000) and the United States (£677,000). Certain central banks have recently decided to profit by the existing and abnormal premium on coins and have sold part of the holdings of coin in their gold reserves against purchases of bar gold. Exports from Belgium are of this nature, and so are those from Canada; for the only appreciable stock of coins in the Dominion is held by the central banking authority. The Netherlands Bank has also been selling gold coins against bars, in order to supply the Dutch market, where demand was particularly keen when the semi-official embargo precluded dealings in London.

* * *

Argentine Exchange.—The Argentine Embassy in London has issued a statement, which in many respects bears out our Note of a week ago. It draws a distinction,

however, between the reduction of the surcharge from 20 to 10 per cent., which it regards as fundamental, and the coincident rise in the free exchange rate from 17·02 to 18·50 pesos to the pound, which is described as circumstantial. It is generally believed in Buenos Aires, however, that the Argentine central bank has for the moment ceased to support the free market, and this may be one cause of the depreciation of the free rate, which (as we showed last week) has largely nullified the reduction in the surcharge. At the moment, however, the outlook for the official import rate has become of the greater importance. The recent rains have come too late to save a large part of this season's maize crop, and for this and other reasons there is likely to be a serious contraction in the value of Argentina's exports. On the other hand, Argentina is still importing heavily, as she is spending the proceeds of last year's large exports. A year ago, the official import rate was reduced from 17 to 16 pesos to the pound, but it is now possible that it may have to be raised again. The Embassy points out that the free market is to some extent affected by movements of "hot money," large amounts of which have recently sought refuge in Argentina. If so, the prospect of an adverse trade balance may have occasioned an efflux, which, together with the withdrawal of official support, would help to explain the recent depreciation of the free rate.

* * *

January Clearing Bank Averages.—Since December there has been an increase of £6·8 millions in clearing bank cash, mainly due to the return of Christmas currency from circulation and to the fact that during most of the month the Bank of England was holding more Government securities than usual. Advances averaged £13·7 millions less in January than in December, owing to the completion of the repayment of the French railways' sterling credit. As there was a slight drop in deposits, the banks are for the moment in an even more liquid condition than usual.

(In £ millions)

The greater liquidity of the banks is reflected in the increase of £31·1 millions in their discounts, offset to some extent by a drop of £9·5 millions in call and short loans. Some surprise has been expressed at the increase in the banks' discounts, inasmuch as the market only secured meagre allotments of Treasury bills during the latter part of January. The banks, however, never buy hot Treasuries, and the market secured good allotments during December and early January. Presumably these are the bills which have been bought by the banks. At the same time, the drop in call and short loans shows that the banks have been buying all the bills which the market could spare. Investments are slightly greater than in December, and the past two months' record shows that, with the repayment of the French credit, the banks have for the moment ceased realising Government securities.

Bank of Nova Scotia.—The accounts of this bank for December 31, 1937, show that deposits have risen during the year from \$238·5 to \$242·4 millions, while total assets stand at \$299·5 millions, a new high record figure. The ratio of cash to deposits has also improved from 11·6 to 12·1 per cent., and the bank generally is in a very liquid condition. As regards the chief earning assets, Mr H. F. Patterson, the General Manager, alluded at the annual meeting to the year's increase of \$5,653,000 in advances, which, he explained, was due to a greater demand for advances by the bank's commercial customers,

to enable them to handle the larger volume of business offering during the year. This new demand more than counter-balanced the sharp falling-off in loans against grain due to the short crop harvested in the Prairie Provinces. Investments also increased during the year, but Mr Patterson explained that about four-fifths of the bank's securities were of less than ten years' maturity. Call loans in Canada were considerably lower, as a result of the diminution in stock market activity. Net profits increased by \$55,000 to a 1937 total of \$1,982,140. Mr McLeod, the President, discussed world conditions

MONEY MARKET NOTES

The Money Market

Heavy transfers of tax money from the joint-stock banks to the Bank of England have made money less plentiful, and on Monday, Wednesday and Thursday one or more of the clearing banks was calling from the market. For the same reason the banks are now less eager to buy bills, other than bills maturing on suitable dates. Much of the tax money passing into the Exchequer is, of course, quickly released through repayments of Treasury bills; but as this week's Bank return shows, some of the repaid bills are held by the Bank of England, and in this case, of course, the money is not returned to the market. In any case, these transfers of large sums between the banking system and the Exchequer means that the banks may at any time be temporarily short of cash.

	Feb. 11, 1937	Feb. 3, 1938	Feb. 10, 1938
Bank Rate	2	2	2
London Deposit Rate	1½	1½	1½
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	1½	1½-5/8	1½-¾
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	1½-9/16	1½-9/16	1½-9/16

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Following the repayment on February 1st of certain Australian maturities, the funds for which had previously been lent in the market, there has been a certain shortage of "bond money." Many bonds have since been carried against day-to-day loans, and it has not always been easy to renew them. In consequence, up to ½ per cent. has at times been paid to outside lenders for this class of loan.

Foreign Exchanges

The market this week has been very quiet. As stated in an earlier Note, there have been very few dealings in francs. On Tuesday, there was some demand for belgas, which brought the spot rate down from bel. 29·56 to bel. 29·52, but the rate has since returned to bel. 29·56. It is thought that the National Bank of Belgium has been selling sterling. Guilders and Swiss francs have

been very steady, and there is also little alteration in the New York rate, which has hovered round \$5·01. Still, the general tendency is for Continental money to move out of dollars, and the London market has also noticed a feeling of distrust in the future of the dollar. One consequence of the movement is that both the Dutch and Swiss authorities are now carrying large sterling balances.

The Bank Return

Few of the extra notes withdrawn by the public at the end of last month have yet returned, for this week's drop in the circulation is insignificant. The note circulation is now £21·1 millions higher than it was a year ago.

In the banking department, public deposits have risen by £5·3 millions. This is due to revenue collection, but by next week this extra money may well have been applied to the redemption of Treasury bills. Meanwhile, Government securities have fallen by £4·8 millions, possibly because of the maturity of Treasury bills held by the Bank. It was, in fact, reported in the market that the Bank was ready to buy bills if offered them. Both these changes have combined to deplete bankers' deposits, which have fallen by £8·5 millions. This drop explains the slightly greater stringency noticeable in the market, and also brings bankers' deposits to a more normal level for the first time this year.

The Bullion Market

Continental funds continue to drift out of dollars and into gold, and so the chief demand in London is still for hoarding or investment purposes. This

demand is, as usual, met out of supplies coming from official sources, but from the amount dealt in during the last day or two, and also from the slight drop in the premium, it appears that the authorities are showing a greater readiness to meet current demands. On Thursday a higher price would probably have been established at the fixing had it been thought desirable.

* Above or below American shipping price. The New York price of silver remained at 45 cents per ounce .999 fine during the week.

There is no change in the silver market, bear covering being fairly well offset by Continental selling. The intensity of the bear covering from day to day is shown in the changes in the spread between the cash and forward prices, any increase in the spread indicating a keener bear demand for spot silver. There are reports of selling in the Bombay market, where the price for the earlier of the two settlement dates now stands at a discount compared with the later date.

U.K. and Argentine 1933 Convention Trust.—The auditors' report for 1937 shows that £5,367,075 nominal of British Govt. 3 per cent. conversion loan, 1948-53, and £7,156,100 Argentine Govt. 4 per cent. sterl. Bonds, 1933, are deposited in the trust (same). Balance of assets deposited as capital reserve fund in cash and securities at cost (which is lower than market value) is £170,510, compared with £162,167 in 1936 and £156,559 in 1935. Balance of income distribution account carried forward is £17,180, against £11,439.

Sun Life Assurance Company of Canada.—For 1937, net new assurances were £51,274,626 (against £45,122,489). Assurance premium income, £20,711,036 (£19,871,652); gross income, £34,164,329 (£34,231,992). Total payments to policy-holders, £15,656,875 (£15,904,345). Total assurances in force, net, £588,662,239 (£563,678,695); funds, £166,185,018 (£154,876,088); assets, £170,813,372 (£159,822,645). Interest rate £4 6s. per cent., against £4 5s. 10d. per cent.

in his annual address. Much, he confessed, depended upon the course of events in the United States, but outside the "drought area" business in Canada had been steadily improving until September, and the subsequent recession had been very moderate.

* * *

Currency Report by the Reserve Bank of India.—The Reserve Bank of India has recently issued a Currency Report covering the two years 1935–36 and 1936–37. The report draws attention to the sustained progress made by India during the two years, and points to the beneficial effect of the upward trend of agricultural prices on Indian economy. The narrowing of the margin between prices of raw materials and finished goods is exemplified by the statement that the price index numbers of raw cotton and raw jute rose 36 points and 7 points, respectively, in the period, while those of cotton manufactures fell 5 points and jute manufactures 11 points. As a

result of the improved favourable trade balance, the Exchange remained very firm, but £88 millions of sterling was purchased during the two years at a rate of slightly over 1s. 6½d. per rupee. Extremely easy monetary conditions resulted in the flotation by the Government of a Rs. 12 crores 1948–52 loan, at par, in May, 1936, at the record low rate of interest of 2½ per cent. Interest rates on Post Office Cash Certificates and Savings Bank Deposits were also reduced, from July 1, 1936, to 2½ per cent. tax free and 2 per cent. respectively. Though the total outstandings of Post Office Cash Certificates have grown steadily from Rs. 35 crores in 1929–30 to Rs. 64.4 crores in 1936–37, repayments exceeded new issues in 1936–37 for the first time in many years, and there was a net outflow on balance of Rs. 1½ crores. Another item of interest is that net sales of silver in 1935–36 and 1936–37, on Government Account, amounted to Rs. 7.63 crores. The Report deals also with the changes consequent on the inauguration of the Reserve Bank and the handing over of the assets of the Currency Department in April, 1935.

Investment

Markets Turn Downward.—According to modern theory—which stresses the rôle of psychological and technical factors in short-term market fluctuations—special significance was attached to this week's renewed downturn in share values, which carried *The Financial News* index of 30 industrial equities under the low point of last November. From November 22nd until the end of last week the established downward trend of prices had been interrupted for much the longest period since the movement began. The index, which had fallen from 124.6 (July 1, 1935 = 100) at the beginning of 1937 to 93.1, had recovered to 98.5 by December 6th. Thereafter it slowly receded and last week-end reached the figure of 93.1 again, with its mystic associations. At that moment the German authorities chose to announce their far-reaching army and Foreign Office changes, on which the market, with one accord, put an unfavourable interpretation. On Monday the index broke rather violently through the "November low," to a level of 91.7. Next came the Ministry of Labour's announcement of increased unemployment in January, and the index further declined to 90.9 on Tuesday. On Thursday it stood at the new low level of 90.7.

* * *

Sensitivity to bad news is admittedly an outward and visible sign of an inward and deep-seated lack of confidence. Among other things, it shows that professional operators share the general public's nervousness, and are unwilling to support the market. Nevertheless, it is not yet by any means certain that another extensive break in prices is in prospect. There has been no sign, as yet, of the secondary and tertiary phenomena of such a movement—namely, "automatic" selling at price limits already placed below the former market level, and forced selling consequent upon the shrinkage in the value of collateral deposit against loans. It is true that the number of bargains marked in the Lists on Tuesday and Wednesday was higher than on the same days of last week, and that increased business normally affords *prima facie* evidence of the currents of involuntary selling. The actual increase, however, was not very considerable, and in the middle of the week the market had a slightly firmer tone. This week's twin bogeys may appear less formidable on second than on first thoughts. In particular, the January increase in unemployment is, on the whole, slightly less than seasonal; and in any case, present share prices are discounting a much steeper trade recession than has yet taken place. Incidentally, the behaviour of Wall Street may have interest for London, if and when the Dow Jones industrial index breaks, in turn, under its low point of last year. At the moment it has a

"margin" of a clear dozen points on the right side, and the American market for once was strong, early this week, when London was falling.

* * *

Birmingham Loan Terms.—Bristol re-opened the corporation borrowing season, but it has been left to Birmingham to blaze a new trail. The decision of the Birmingham authorities to issue a loan of £5 millions on rather less favourable terms to the subscriber than those adopted for the Bristol loan was doubtless based, in part, upon the recent strength of the gilt-edged market, which fortunately was again resumed on the eve of the issue. But while the market was inclined to consider the new terms rather finely trimmed, even for an authority whose credit is as good as its financial policy is sound, it was not, of course, in any conflict with their basic assumption of continued strength for trustee issues under present conditions—a matter which we discuss in a leading article on page 331. The Birmingham stock carries interest at 3½ per cent., and was issued on Thursday at 98. It has a 19 years' life to earliest redemption and 24 years to latest redemption, compared with 23–28 years for the Bristol 3½ per cent. loan, issued last week at 101½. The latter, of course, shows the more favourable flat yield, of £3 9s. per cent., compared with £3 6s. 4d. per cent. for the Birmingham stock. The redemption yields, however, are as close as makes no odds for the long-term holder, since Birmingham yields £3 7s. 6d. per cent. to latest and Bristol £3 8s. per cent. to earliest date. It is nearly two years since a series of corporation stocks was issued at a small discount—but at that time they carried an interest rate of 3 per cent. Whether other borrowers will follow Birmingham's choice on this occasion may be open to doubt. The market prefers stocks at a small discount, but does not set as much store on it as in 1936, when it sought a refuge against the possibility of rising interest rates. Nor do all cities enjoy the volume of local support which has always been characteristic of Birmingham's civic finance.

* * *

An Association for Outside Brokers?—The Bodkin Committee, in its report on share-pushing, published last August, recorded its estimate that there were between 600 and 800 outside brokers or share-dealers—"outside" in the sense that they were not numbered among the 5,500 members of recognised stock exchanges in the country, nor among the numerous agents who combined share dealing with such occupations as accountancy or estate agency. "Outside" brokers, in this sense, are not limited in their operations by the Stock Exchange ban

on advertising. A move is apparently on foot to bring outside brokers under the banner of a single association—a possibility of considerable interest in view of the expected introduction of a Bill based on the legislative proposals of the Bodkin Committee in the fairly near future. Until full details are made public it would be premature to analyse the possible functions and standing of such an association. There are, of course, points of fundamental importance which need careful consideration, such as the proposed association's attitude towards advertising, and the question of its potential relations with recognised stock exchanges. The rule against advertising is strictly enjoined by the Stock Exchange Committee in admitting country brokers to the "white list" for the return of half-commissions on the business which they put through London brokers. While a voluntary association could doubtless introduce improvements in professional standards, its attractions for "white list" brokers still remain to be disclosed.

* * *

Brazil Delays.—On November 20th the Brazilian Cabinet re-affirmed its earlier decision to suspend remittances on the Brazilian debt service and instructed the Finance Minister to open negotiations for a new agreement "in accordance with Brazil's resources." During recent weeks, repeated diplomatic representations have been made about the default, and a distinct improvement in Brazilian bond quotations during the first stages of the last account reflected the view that some offer of payment might be made in the reasonably near future. Hopes were dashed, however, on February 2nd, when Mr Eden announced in the House of Commons that, despite the repeated representations of the British Ambassador and of the local representative of the Council of Foreign Bondholders, no Brazilian offer to resume payments had been made. Indeed, it has not been possible to arrange a date for the opening of negotiations. A sharp reaction in Brazilian issues inevitably followed this statement. Brazil's policy is putting an almost unbearable strain on her ultimate interests; for though the London market has always been willing to give temporary accommodation to hard-pressed debtors, it does not forgive high-handed default.

* * *

Foreign Interests in China.—Despite the protestations and reassurances of the Japanese Foreign Minister, the fears of Western nations over the ultimate fate of their interests in China have not been allayed. How extensive these interests are may be gathered from the fact that Professor Remer put foreign investments in China (excluding Manchukuo) at just under £500 millions in 1931. British investments accounted for nearly half (£245 millions) of this total, Japanese for a further quarter (£120 millions), followed by the United States and France (both £40 millions). Belgian, German, Italian and Dutch interests are considerably smaller. Approximately £350 millions consists of direct business investments. The range of British interests in China is wide. Japanese capital is chiefly invested in shipping, in cotton mills, and in iron mines in the Yangtse Valley. No less than two-thirds of the total foreign business investments are in Shanghai, where British property has been valued at £152 millions, Japanese at £44 millions, American at £20 millions, and French at £8 millions. British investments in Hongkong have been put at £18 millions. About £150 millions of foreign capital is invested in Chinese Government obligations.

* * *

So far as trade is concerned, the United States, when she was the chief source of imports into China in 1936, supplied 20 per cent. of the total. Since 1933, Germany has doubled her share from 8 to 16 per cent., notably in fertilizers, rails, and armaments; whilst Japan's share has risen from 10 to 16 per cent. The United Kingdom (12 per cent.) has not recently lost ground, but since 1911 she has fallen from first to fourth place. Some 15 per cent. of China's exports go to Hongkong; and the bulk of these are re-exported. Apart from this, the United States

takes no less than 26 per cent. of China's exports. Japan is also an important market (15 per cent.), notably for raw cotton, coal and iron ore. China's chief other market is with the U.K. directly (9 per cent.). Finally, there is a considerable foreign interest in Chinese shipping. Some 40 per cent. of the China trade in 1936 was handled by British ships, and 17 per cent. by Japanese. Chinese ships accounted for 27 per cent. No other country's share exceeded 3 per cent. of the total. Japan, Great Britain, and the United States are thus the Powers with the greatest material interests in the Far East. Japan monopolises the trade and investments of Manchukuo, and her share in the investments and shipping of China is second only to Britain's. Britain controls half the foreign investments and nearly half the shipping in China. The chief American interest in the Far East is in trade. Economically, the United States is primarily interested in Japan, whereas the great British stake is in China.

* * *

Insurance Share Index.—Each quarter of 1936 saw *The Economist* Insurance Share Index at new high levels. In 1937, however, each quarterly figure was smaller than its immediate predecessor, and over the twelve months there was a fall of 11 per cent. the 1937 average of 4,795 (1913 = 1,000) comparing with 5,031 for 1936, and 3,406 for 1929. The indices are based on the course of an investment of £1,000 in the ordinary shares of each of twenty-four companies, making appropriate allowance for bonus issues. Details of the index are set out below:—

Company	1935	1936	1937	Mar. 31, 1937	June 30, 1937	Sept. 30, 1937	Dec. 31, 1937

Average	4,497	5,031	4,795	4,800	4,656	4,620	4,549

Only six shares showed improvement in the last quarter of the year, when the decline was somewhat steeper than between June and September.

* * *

Industrial Profits in January.—Our computations of industrial companies' profits (which are based on our weekly table of company profits, appearing in this issue on page 376) show that the rise in earnings, compared with the previous year, continues to be well maintained. The 107 companies which reported in January showed net profits of £13,832,382, an increase of £2,295,782, or 19.9 per cent., on the previous year's results for the same companies. The record for the past two years is given in the following table:—

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year
1936		£	%	1937		£	%

* After debenture interest.

Of the 107 companies which reported last month as many as 50 fell into three groups: financial and land, rubber, and investment trusts. The latter class contributed some 8 per cent. towards total profits, but accounted for only 4 per cent. of the increase. The Woolworth results give shops and stores first place in the month's total, while the actual increases in the profits of Apex (Trinidad) and Petroleum Storage contribute £462,053 to the total increase. The improvement disclosed, however, is of a fairly general nature, and is not unduly weighted by individual companies.

Company Notes

Southern Railway Dividend.—The home railway dividend season has begun well, with a declaration by the Southern Railway which exceeded the market's best expectations. A payment of 1½ per cent. is declared on the deferred ordinary stock, compared with ½ per cent. for 1936. Even the optimists had not expected a dividend of more than 1½ per cent. There is, in fact, the same air of pleasant mystification on this occasion as greets the emergence of the white rabbit from the conjuror's hat. Although the weekly traffic figures showed an increase of no more than £731,000 for 1937, the company's statement shows that gross receipts increased by as much as £1,312,769, of which £325,964 has been added to net revenue. The dividend is accordingly covered with about £6,000 to spare. But it is difficult to explain the difference of £581,769 between the weekly returns and the company's final figure for the year, solely in terms of ancillary income. Gross ancillary receipts in 1936 amounted to £3,012,000, and an increase of anything like £580,000 appears distinctly large, after all due allowance for improvement in cross-channel business and a busy year at Southampton. Such an increase, indeed, can hardly be reconciled with the company's evidence before the Railway Rates Tribunal last year, which forecast a reduction of some £24,000 in net receipts from ancillaries for the whole year. That figure suggested that the company anticipated a fall of £84,000 in the second half of the year, since net ancillary receipts increased by £60,000 during the first six months.

The estimate may have proved pessimistic, but the stockholder will regret, all the same, that the 52 weeks railway traffic figures did not give him a truer picture of the actual gross receipts. The case for supposing that an appreciable part of the difference is due to ancillaries (which are not included in the weekly returns) is strengthened by an analysis of the two halves of the year. During the first six months railway receipts increased by £338,000, and net railway receipts by £150,000. That figure, with £60,000 net from ancillaries, gave a net increase of £210,000. During the second half year, the corresponding increase in net revenue was £115,964. To assume that the company's estimate of net ancillary receipts proved accurate, would imply that railway net receipts during the second half of the year increased by £50,000, despite an increase in wage costs of the order of £130,000 from mid-August to the end of the year (apart from the expense of handling increased traffic), and despite the increase in materials costs, which may well have amounted to £250,000 on a rough estimate. Such figures appear quite incompatible both with the company's estimate of ancillary receipts and with the weekly traffic returns. Stockholders, therefore, will express due thanks for their dividend, but will look forward to finding its explanation in the forthcoming accounts. The deferred ordinary stock rose to 21½ on the announcement, and after some fluctuation now stands at 21½. The L.M.S. and Great Western announcements were awaited as we went to press.

London Transport Interim.—London Transport "C" stock, which stood at 81 on the eve of the announcement of a maintained interim dividend of 1½ per cent., has since varied only fractionally. As a pointer to the year's results, the interim declaration tells the "C" stockholder little. It will be covered by earnings with a margin, but the extent of that margin is a decisive factor in the current year, since the Board must pay 5½ per cent. on the "C" stock or expose itself to the risk of an application to the Courts for the appointment of a receiver. In a recent comment (*The Economist*, January 15th, page 125) we pointed out that there was no clue to the source from which additional revenue must come if the Board is to meet this statutory obligation. In recent weeks the trend of traffics has been more favourable, but in the absence of a bumper return in the last week of 1937, receipts would have been lower during the half-year to December, 1937, than they were twelve months earlier. The gain of £15,900 for the twenty-six weeks, however, has since been substantially improved by a succession of good returns (although last week's *plus* of £300 is disappointing) and now totals £84,500 for the thirty-two weeks to date. But without assuming any changes in costs, this recent rate of progress would have to be maintained, and its fruits retained net, for the rest of the Board's financial year (which ends at June 30th), in order to show earnings sufficient to cover the 5½ per cent. dividend. In fact, although the rise in costs has recently slackened, the current year's accounts will have to bear the burden of a net increase in wages and costs of stores. The investor will sympathise with the Board's difficulty. Its solution must be left to the Board itself. Evidently, however, an increasing number of investors now recognise the equivocal equity-cum-debenture status of the "C" stock, which represents an incubus upon the Board whose weight may, one day, have to be tested.

Road Transport Prospects.—No scepticism over the dividend prospects of London Transport "C" stock was displayed by Mr J. F. Heaton at this week's meeting of Thomas Tilling. It is not unreasonable, he declared, to anticipate that the full standard rate of 5½ per cent. will be paid. On the dividend prospects for his own company, Mr Heaton was entitled to speak with complete assurance, and he expressed the confident hope that the current dividend rate of 10 per cent. would be maintained on the ordinary capital, increased by the latest 25 per cent. capital bonus. His review of road passenger and haulage conditions, however, emphasised a point which was made in our comment on the report last week. The company has, in fact, to maintain half of its "services"—a term which the chairman might profitably have defined—at a loss, in order to meet the requirements of the public. It follows, naturally, that the remainder must be highly profitable, but clearly the level of general profitability is not so high as the investor is apt to believe. This is likely to be particularly true during a regime of high costs. On the haulage side, progress is being made, but here again operations are subject to the restrictions imposed by the Road and Rail Traffic Act of 1933. Possibly greater scope will be found in the co-ordination of the group's services with those of local authorities, where the two are operated together. The quite distinct solutions of this problem in Bristol and Brighton last year may provide an important precedent in other areas for the co-ordination of local transport. And these might well provide long-term benefits for the Tilling group. At the moment, however, there is no indication of a more than steady improvement in net operating revenues.

Gas Company Meetings.—Sir David Milne-Watson's survey at the Gas Light and Coke meeting covered much of the ground which was debated this week by critics of the coal selling schemes. The number of gas consumers and the quantity of units sold increased last year, despite mild weather, and despite the greater efficiency of modern appliances, which have largely replaced old types. But, as a consumer itself, the company has much less cause

for satisfaction. Sir David justified the recent increase in the price of gas by rising costs—not only of coal, for other raw materials had increased by 15 per cent., and wages by 6 per cent. The chairman had to confess that his fears for the operation of the revised coal-selling schemes had proved true. Apart from a heavy increase in price, the company experienced difficulty in obtaining satisfactory quality and delivery. Speaking with the authority of a large-scale consumer, Sir David expressed misgivings regarding the proposed extension of the selling powers for a further five years. Mr Frank H. Jones described the operation of the coal selling schemes in no less critical terms at the South Metropolitan Gas meeting. The experience of this company last year was in many respects similar to that of Gas Light and Coke. The number of consumers reached a new record, but sales of gas were lower, largely owing to the increased efficiency of modern appliances. Both speeches, however, did not conceal the fact that the gas industry is operating under difficult cost-revenue conditions at the present time.

Imperial Tobacco Position.—The full report of this company confirms the impression given by the preliminary profits statement, which was discussed on page 176 of *The Economist* of January 22nd. Disclosed net profits of £10,760,609 reached a new record level, but were only 1 per cent. higher than those for 1935-36. The balance sheet, as usual, does not add greatly to the shareholders' knowledge of the undertaking. A relatively large fall in cash, from £3,640,744 to £1,478,554, is evident, though net current assets are practically unchanged. Debtors are £730,810 higher at £9,522,007, and stocks, which stand at £35,841,542 and amount to 42 per cent. of the balance-sheet total, compare with £33,304,786 a year earlier and £31,239,897 in 1935. Between 1934 and 1936 the average import price of unmanufactured tobacco fell from 15.8d. to 15.1d. per lb., but the price rose in 1937 to 15.5d., this rise representing an increase in import values of rather over £400,000. But the "stocks" item in the Imperial Tobacco balance sheet covers every stage of manufacture. In terms of cash it represents more than two years' imports of raw tobacco, while this country's stocks in bond similarly represent in weight some 20 average months' supply. It does not seem, however, that rising leaf prices would account for all the £2½ millions increase in the company's stocks, and in any case the company adopts a policy of withdrawals from bond which minimises temporary fluctuations in price. The undertaking's position is more readily clarified at the annual meeting than by the published accounts.

Manchester Ship Canal.—The famous "Ditch" succeeded in maintaining ordinary dividend payments throughout the depression, and although recovery has come rather slowly, the preliminary results announced for 1937 suggest that the company has enjoyed its best year since 1930. As in that year, the ordinary dividend is 2 per cent. (against 1½ per cent. for 1934-36), and the preference dividend is raised correspondingly from 3½ per cent. to 4 per cent. The directors have transferred £35,000 to contingencies reserve, and the balance carried forward is reduced from £31,951 to £31,701. From these particulars, it would appear that the net profits earned for the 3½ per cent. (Corporation) preference stock increased from £249,421 to £271,923, which is only slightly below the 1930 figure. Since the chairman announced last year that an increased dividend would not be contemplated until there was a definite prospect of its being maintained, stockholders will receive the latest announcement with the more gratification. The ordinary stock £1 units are quoted at 7s. 6d., to yield £5 14s. 3d. per cent., and the preference shares are slightly cheaper at 14s.

U.S. Corporation Earnings.—The would-be bulls of Wall Street, if any remain, have received little encouragement from the latest corporation earnings statements

covering 1937 and the first quarter of 1938. International Nickel has declared a 50 cents dividend on the common stock payable March 30th. Dividends already declared in respect of 1937, of course, amounted to \$2.25. A payment of 25 cents is announced on the common stock of General Motors, payable next month. This is also at the same rate as for the corresponding quarter of 1937, but it compares with \$1.50 for the final quarter of 1937. Preliminary figures issued by the Radio Corporation show that net earnings for the year amounted to \$9 millions, equivalent to 41 cents per common share. The corresponding results for 1936 were \$6,156,000 and 20 cents. From this estimate, it may be deduced that earnings during the last quarter amounted to 12 cents per share, compared with 8 cents for the first three-quarters of the year. Gillette Safety Razor earnings are reduced from \$1.70 to \$1.50 per common share, and while the Eastman Kodak quarterly dividend of \$1.50 is maintained at the same rate as a year ago, the president of the company has drawn specific attention to the difficulty of predicting earnings for the current year, and to the consequent necessity for conservative distribution policy.

English Electric Dividend.—Ordinary stockholders in English Electric now have the reward for their patience. For thirteen years they have gone dividendless, and in 1930 they suffered a reduction in their equity under the capital reorganisation, while the preference shareholders also made considerable sacrifices in respect of their dividend rights. The profits for 1936 covered all arrears of preference dividend, and left 12.4 per cent. in earnings for the equity, assuming that only normal preference payments had been required. It was plain, therefore, that an ordinary payment would be made in respect of 1937, particularly as further progress was forecast by the chairman at last year's meeting. The dividend is, in fact, 10 per cent. Net profits earned for preference dividend have sharply increased from

£245,306 to £436,185, and the ordinary dividend is covered, therefore, by earnings of the order of 25 per cent. The year 1937 began with a record order book, and profits have doubtless been increased by an adequate return on overseas business, which represented 32 per cent. of total orders a year ago. The market was satisfied with the results, and put up the ordinary stock from 29s. 6d. to 31s.

Bolsover Colliery Progress.—Last week's satisfactory dividend announcement by the directors of Bolsover Colliery has been followed by the publication of a progressive report for 1937. The company's trading profit increased last year from £587,588 to as much as £741,349, while total income advanced from £628,869 to £788,763. The taxation provision is substantially increased, and the directors have made a further appropriation to development reserve of £50,000. The last provision under this heading amounted to £28,503 in 1935. In consequence, the amount earned for the ordinary shares shows a relatively moderate increase from £392,052 to £436,948, which covers 14 per cent. ordinary dividend by a similar margin of earnings as in 1936. Recent earnings are analysed below.

	Years to December 31,		
	1935	1936	1937
	£	£	£

* Reserves for general purposes, and (£100,000 each year) for redemption of capital values.

It is clear from the report that the selling schemes have played a large part in the achievement of these satisfactory results. Indeed, the report declares that, at times, the inland supply quota tonnage was insufficient to meet the demands of customers. This market, of course, is of primary importance to Midland collieries, few of which can match the excellent dividend record of Bolsover Colliery through depression and recovery. The balance sheet again shows a highly liquid position, and the £1 ordinary shares, at 42s. 9d. cum dividend, offer a return of £6 15s., which appears well secured under existing conditions.

Progressive Company Results.—This week's company results include those of several companies which, if not market leaders, may yet claim the attention of the serious investor. Borax Consolidated, whose interests are distributed in many different countries, show that progress in the year to September 30th last has been very satisfactory. Total profits amount to £561,925, against £460,692. The increased dividend of 10 per cent., against 7½ per cent., is more generously covered, for earnings are equivalent to 15.2 per cent., against 7.9 per cent. But it appears that

much of this satisfactory increase may be due to the United States Potash interest. Trading profits and dividends from subsidiaries increased by £29,567, but income from investments increased by no less than £71,666 to £113,367. The latest report, indeed, refers to a substantial return from this company. The question of profits dependent on conditions in the United States must concern Borax Consolidated shareholders, but the conservatism of the latest distribution suggests that the directors have taken this factor into account. William France Fenwick and Company are largely engaged in the coal-carrying trade, and have paid ordinary dividends throughout the depression. But the cyclical nature of the business is emphasised by the excellence of the latest profits, which amount to £171,142, against £89,688. Moreover, the figures probably understate the real improvement, since the 1937 profits include only one quarter's shipping subsidy. The directors refer frankly to the desirability of a substantial allocation for contingencies and of providing for possible future fluctuations in asset values. In consequence, the ordinary dividend of 10 per cent., against 5 per cent., still represents only half of available earnings. Besides the allocation to Reserve Account, survey and contingencies reserve has been strengthened by £40,000 from profits. Among companies with a stable earnings record, Power Securities, the utility holding company, takes a high place. Total profits last year amounted to £138,066, the highest in a decade. For many years earnings for the ordinary have varied between 11 and 12 per cent., and 7 per cent. has been regularly paid. The main interest of the year's results lies in the reserve appropriation. Some £50,000 has been placed to investment reserve, raising the fund to £250,000. The book value of investments (less reserve) appears in the balance sheet at £1,335,000, against £1,091,000 a year ago, and the directors state that aggregate values exceed book cost.

Ashanti Goldfields.—The annual report of Ashanti Goldfields for 1935-36 suggested the approach of stabilisation rather than of rapid advance. This conclusion has proved fully warranted by the results of the past financial year to September last. A somewhat increased tonnage of ore was treated, but there was a marked expansion in gold content, averaging 22.94 dwts. as against 21.17 previously. Owing in part to temporary causes, the rate of extraction has fallen from 91.21 per cent. to 88 per cent., while costs, excluding development, have risen by 2s. 1d. per ton to 28s. 1d. The gross profit of £1,293,570 (or 119s. 6d. per ton) compares with £1,225,600 (114s. 8d.) while the net profit amounts to £1,014,040 (or 93s. 8d. per ton) against £964,900 (or 90s. 4d.). N.D.C. absorbs £25,000. Increased production naturally involves higher royalty and other payments, while the provision for depreciation has been increased. Hence the rate of dividend has been maintained at 95 per cent. and not increased to 100 per cent. as some market circles had hoped. Some time ago it was hoped that the almost negative results at depth in the principal property would be compensated by discoveries in outside areas, and exploration in the latter tended to encourage this idea. More recently important developments have occurred in the lower levels of the Ashanti property, while exploration in the Justice's and other subsidiary properties generally proved disappointing. A recalculation of the ore reserves shows 1,595,100 tons averaging 19.7 dwts., an increase of 137,080 tons in quantity, but a small reduction in value. This is exclusive of ore in shaft pillars at the Ashanti and of 150,000 tons averaging 11 dwts. in Justice's mine. No change is shown in the company's investment in British Government securities, which slightly exceed £250,000; but holdings in other West African undertakings have been increased from £575,070 to £645,390. At September 30th last the appreciation of these holdings exceeded £1,000,000. On the dividends for the past two years, Ashanti 4s. shares at current quotation of about 6½s., show a yield of approximately 5½ per cent., and scope for rapid capital appreciation seems limited.

Bibiani Results.—The disappointment caused by the maintenance of the Bibiani dividend was more than counterbalanced by the marked increase in ore reserves shown by the annual report. The quantity, at 2,807,800 tons, compares with 2,049,300 tons at September, 1936, but the value is rather lower at 7.25 dwts., against 7.8 dwts. Actually, last year's profit of £108,330 exceeds that of the previous year by £26,800, but the directors, possibly with prospective expenditure in mind, have followed a conservative policy. Operating costs averaged 23s. 11d., against 25s. 3d., and the increased scale of operations more than counterbalanced the rising tendency of costs. Conditions continue unfavourable to the maintenance of a strictly regular output; but the directors anticipate that this year's yield will be at any rate equal to, if it does not exceed, that of the past year. Looking ahead, an output of at least 60,000 tons per month is envisaged, compared with the present average of 11,000 tons, and the consulting engineer declares that the property "stands revealed as a big and potentially a really great mine." Meanwhile the erection of the first half of the new plant is hindered by delays in securing supplies. At the meeting, the chairman mentioned that every endeavour would be made to complete the works within twelve months, and he added that the proceeds of the new issue of 250,000 shares at 20s. would be sufficient to meet the present programme. Bibiani 4s. shares are quoted at about 21s. 3d., showing a yield on the dividends of the past two years of barely 3 per cent.

Other Company Results.—Our usual analysis of profit and loss accounts appearing on page 376 covers some 65 companies in all. The majority are miscellaneous industrial concerns, but this week's reports include those of twelve gas companies, while a further batch of investment trust results has been published. The reports are discussed on page 357, under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue commencing on page 367. Sir David Milne-Watson's survey at the *Gas Light and Coke Co.* meeting is discussed in a note on page 352. At the *Beira Railway Co.* meeting Baron Emile D'Erlanger gave his reasons for regarding the latest rate of dividend as a maximum which a utility undertaking could safely pay. Addressing *Sterling Trust* proprietors, he referred to the distribution of the company's investments in various countries, and considered that an individual, confining his purchases to home securities, would not have avoided the losses arising from the war and the world crisis. Mr Alfred Shepherd, in expressing satisfaction with the *Standard Trust* revenue, discussed the unanimity of bank chairmen in believing that the immediate future of home industries was satisfactory. Mr J. H. Batty's reviews at the *Ashanti Goldfields Corporation* and *Bibiani* (1927) meetings are referred to in notes on pages 354 and 355.

London

SETTLING DAYS

TICKET ACCOUNT
FEBRUARY 22 FEBRUARY 24

THERE has been a perceptible "kink" in the market this week. The week-end developments in Germany were read bearishly, and the unemployment return produced a further decline. A firmer start in the industrial market on Wednesday was insufficient to affect the index on balance, and merely introduced a dull close for the account with prices at a new low. The market's current impression is that a further period of undecided conditions must be awaited. Gilt-edged and gold shares alone have saved the market from complete despair.

A slight reaction was at first reported in the *gilt-edged market*, and absence of business on Tuesday caused a fractional decline throughout the list. In mid-week, however, demand revived. Undated stocks, in particular, made good headway and National Defence Bonds regained par. The corporation scrips were slightly affected by the Birmingham new issue terms (discussed on page 350) and tended to react slightly. After early weakness, the new Canadian scrip rallied.

In the *foreign bond market* renewed selling of Brazilian issues gave way to quiet support, and prices improved among the senior issues. Far Eastern bonds were also better after a lame start, while German bonds, directly affected by week-end news, found steadier mid-week levels.

The Southern dividend (discussed on page 352), provided a much needed fillip for *home rail stocks*, and although its best effects were not maintained, the expectation of similarly cheering announcements from the L.M.S. and Great Western on Friday stimulated renewed attention. Argentine rails made no response to the news that the official exchange rates are to be maintained, but some desultory buying helped quotations later in the week.

A subdued opening in the *industrial market* was further weighted by the unemployment return, but dealers drew some encouragement from Wall Street's vigorous recovery on Tuesday, and staged a moderate mid-week rally. Wednesday's gains, however, were not held, and the net effect on prices was almost negligible. Steel shares continued depressed at first, but there was some moderate recovery later, though it was checked by technical liquidation. Electrical equipment issues remained weak, with English Electric the outstanding exception on the dividend (discussed on page 353). Crompton Parkinson and General Electric, which showed most weakness at first, also produced a moderate rally. Cable and Wireless ordinary rose smartly to 65½ on Thursday.

Leading motor shares similarly improved in mid-week, but a poor tone prevailed in the aircraft group. Engineering shares became steadier, Consolidated Signal in particular recovering after disappointment with the dividend. Leading tobacco and industrial shares received little investment support, and adverse freight movements at first affected shipping shares. Movements in the miscellaneous industrial leaders tended to become slightly less irregular as the week progressed. Courtalds, however, remained consistently weak, while Turner and Newall dipped below 80s. at one time on Tuesday.

In the *oil market* the week opened very quietly, and prices declined slightly. Subsequently the trend was irregular, a firm start in the leaders being followed on Tuesday by a setback due to the unemployment returns. A mid-week rally was not fully maintained, and price changes continued small. The depression which has clouded the *rubber share market* in recent weeks shows no signs of lifting. An uninteresting start to the week (accompanied, however, by a firm undertone) was followed on Tuesday by widespread declines. Wall Street's recovery proved a helpful influence later, but it merely

arrested, and did not reverse, the downward tendency. The *tea share market* remained apathetic, resisting alike Tuesday's depression and the mid-week recovery.

The *mining market* behaved better than other sections. Monday was a dull day for Kaffirs, dealers being more inclined to think about German developments than doing business. Thanks to Paris support for dividend-payers, and Cape interest in developing mines, sentiment improved markedly on Tuesday afternoon. The better trend was maintained, despite renewed reticence on the part of Paris. Diamond shares were assisted by Tuesday's rally but were otherwise uninteresting. West Africans shared modestly in the mid-week firmness in Kaffirs. Rhodesian copper shares were erratic, but were helped by Wall Street; the volume of business remained small. Base metal shares were somewhat neglected, though prices were steadier in mid-week.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 151 industrial ordinary share prices, at 70.9 on Tuesday last (February 8th), showed the greatest fall in any week during this year. A week ago the index stood at 72.5, and a month ago at 74.2. The yields are 5.04, 4.93 and

4.81 per cent., respectively. A selection from the component indices follows:—

New York

Wall Street re-assembled with the encouragement of a two-dollar rise at the end of the previous week in hand, but proceeded to demonstrate that this was little more than a flurry in "war" stocks. For a time on Tuesday, and early on Wednesday, it seemed that the long-awaited partial recovery was at hand. Tuesday's rally, led by steel and other pivotal stocks, reached \$5, but the market turned easier in mid-week after an early rise. The discussions between the United States Steel Corporation and the C.I.O., with their provisional agreement regarding wages and prices, had little effect, and they were overshadowed by the announcement of reduced steel prices. Longer-sighted operators, however, stressed the fact of lower prices upon a potential recovery in consumption. It is significant of the unenterprising speculative condition of the market that motor shares were not bought on the steel news. Building shares, however, continued their rise. The *Iron and Steel Institute* estimate of current steel production is 30.7 per cent. of capacity, against 30.5 per cent. a week ago and 80.6 per cent. a year ago. The report that early consideration will be given to railway pooling and co-ordination schemes helped rail stocks slightly, and speculative rail bonds were a feature of an otherwise lifeless bond market.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100):—

PUBLIC OFFERS

City of Birmingham.—Issue of £5,000,000 3½ per cent. stock at 98. A trustee stock. Redeemable at par July, 1962, or from 1957 on notice. Ranks with other stocks, subject to prior charges existing in 1900. Estimated population, 1,043,000; rateable value, £7,027,859; total net debt, £55,700,000 (of which £42,479,000 productive); rates, 15s.

PRIVATE PLACINGS

Severn Valley Gas.—This Corporation has placed privately 25,000 £1 4½ per cent. cumulative preference shares.

London County Freehold and Leasehold Properties.—This company has placed privately £250,000 3½ per cent. first mortgage debenture stock.

TENDER

Bridlington Gas.—Offer by tender of £50,000 4½ per cent. redeemable £10 preference shares at minimum price of par. Tenders must be received by February 28th.

BONUS SHARES

United Dominions Trust.—A 20 per cent. capital bonus is proposed, by capitalising £100,000 of reserve and distributing to ordinary stockholders one new ordinary share for £5 stock held. When this offer has been made, there will remain £400,000 unissued capital.

Bairns-Wear.—A bonus distribution is recommended on the ordinary shares of one share for every 20 held.

ISSUES TO SHAREHOLDERS ONLY

Bibiani (1927).—Issue of 250,000 4s. shares at 20s. to existing holders, in the proportion of one in nine.

Grootvlei Proprietary Mines.—Issue of 301,460 £1 shares at 75s. (South African currency) per share.

Mount Morgan.—Shareholders are now offered at par 200,000 £1.8 per cent. preference shares. Applications (in even hundreds) from shareholders as at February 15th will be given priority. Lists close on February 25th.

CONVERSIONS AND REPAYMENTS

Olives Paper Mills.—Issue at par to debenture and shareholders of £60,000 5 per cent. first mortgage convertible debenture stock, to repay on February 15th, £45,223 7 per cent. prior lien debenture stock.

SHORTER COMMENTS

Company Results of the Week.—The first important brewery company result to appear this year is that of PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS. The report shows a considerable improvement. Net profits are £456,547, against £400,227, the greater part of the increase coming from the Peter Walker and Son, Warrington and Burton dividend. Considered as a whole, gas company results for 1937 are only slightly changed. Among the larger undertakings are WANDSWORTH AND DISTRICT GAS, with net profits of £194,116, against £198,312, and SOUTH SUBURBAN GAS, whose net earnings of £148,437 are some £6,400 higher. Both companies report small increases in the quantity of gas sold. Net profits of LISTER AND COMPANY, LTD., are 10 per cent. higher at £74,312 to £94,860. Preference arrears up to November, 1935, are being paid off. Investment trust results show satisfactory increases in revenue. RAILWAY SHARE TRUST AND AGENCY COMPANY has increased the ordinary dividend from 6 to 6½ per cent., while BRITISH INVESTMENT TRUST maintain the former rate of 12 per cent., after earning £182,693, against £163,624. COOK SON AND COMPANY (ST. PAULS) are returning to the dividend list with a distribution of 1½ per cent. The full report of JOHN WHITE (IMPREGNABLE BOOTS) confirms the satisfactory impression made by the increase in dividend. Net profits of £46,797 are a new record, the company's forward purchasing policy having helped to meet rising costs. The directors note a tendency towards a return to easier and more stable prices. Owing to important changes in shareholdings, the CINZANO, LTD., profits of £85,556 are not strictly comparable with those of previous year. The chief change is the sale of shares in The French Cinzano Company, and certain

preference shares have consequently been redeemed and a return of capital is being made to "A" and "B" ordinary shareholders. Thanks to a rise in net profits from £58,772 to £82,044, ENGLISH CHINA CLAYS are paying 3½ against 2 per cent.

RAILWAYS

Beira Railway.—Total revenue increased by £115,869 to £557,899 in year to September 30, 1937. Net balance after £76,944 exceptional charges was £201,221, or £40,341.

Southern Railway Company.—Gross receipts increased by £1,312,769 during 1937 compared with 1936 and net revenue increased by £325,964. Final dividend 3 per cent. on preferred ordinary stock, making 5 per cent. for the year, as before. 1½ per cent. is to be paid on the deferred ordinary stock, compared with one half per cent. for 1936. Carry forward raised from £220,809 to £226,804. Dividends payable March 3rd.

MISCELLANEOUS

Dickins and Jones, Ltd.—Profit for year ended January 31, 1938, £125,097, against £120,504. After 4½ per cent. debenture interest, 5½ per cent. preference dividend, £7,000 for tax and N.D.C., £12,500 for extinction of leases, and £10,000 (nil) for improvements, etc., final ordinary dividend of 7½ per cent. is recommended, making 12½ per cent. for the year (same). Carry forward £47,861, against £53,497.

Borax Consolidated.—Report for year to September 30, 1937, shows trading profit £458,775, against £427,820. Deferred ordinary dividend, 7½ per cent., and cash bonus 2½ per cent., making 10 per cent. for the year, absorbing £130,000, against £97,500 (7½ per cent.). To special reserve £50,000. Carry forward raised from £236,160 to £237,068.

Radio Corporation of America.—Net profit for 1937, \$9,000,000 or 41c. per

common share, against \$6,156,000, or 20c. share, for 1936.

Lewis's, Ltd.—Profit for year ended February 1, 1938, after debenture interest, £808,000, against £806,846. Distribution on deferred shares maintained at 275 per cent.

Platt Brothers and Company (Holdings).—The scheme of capital reduction to replace the earlier plan was considered at a meeting held at Oldham on February 9th. It is understood that, though the scheme was opposed by a section of shareholders, there was a preponderating majority in favour.

Wandsworth and District Gas.—Balance of revenue account for 1937 £280,377, against £268,422. From income tax account £12,500 (same). Dividend on consolidated stock 7 per cent., as before. To employee co-partners £27,423, against £26,963. Gas sales increased by 1.6 per cent.

Wm. France Fenwick and Company.—Profits for year, 1937, £118,477, an advance of £55,690. To reserve for surveys and contingencies, £40,000 (£13,956). A transfer of £11,249 (against nil) is also made to reserve. Ordinary dividend raised from 5 to 10 per cent. Carry forward increased from £7,213 to £12,213.

Foy, Morgan and Company.—Net profit for 1937, before tax, £83,109, compared with £40,068. Provision for tax and N.D.C., £8,000, against £2,100. Tax free dividend on £1,000 ordinary shares, 3,600, against 1,000 per cent. Staff bonus doubled at £5,000. To preference share redemption fund £4,000. Carry forward increased from £9,084 to £9,941, after providing £7,000 additional for tax.

San Francisco Mines of Mexico.—Operating profit for year to September 30, 1937, £453,058, compared with £204,566. Net profits, after depreciation, etc., is £85,027 higher at £276,344. Total ordinary dividend 22½ against 7½ per cent.

No. 4 RENT, CONCESSIONS, and LOANS

The Scottish Industrial Estate is in the "Special Areas," and manufacturers who start production there are eligible (1) For concessions towards rent, rates, and Income-tax and (2) For advances of capital. The sources from which such help comes are:—

- (1) The Commissioner for the Special Areas;
- (2) The Special Areas Reconstruction Association Ltd. and Nuffield Trustees.

The Commissioner is empowered under the Special Areas (Amendment) Act, 1937, to make concessions

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the last dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

Iron and Steel Developments.—The world's iron and steel producers continue valiantly to resist the pressure on prices exerted by the dwindling demand for their products. Thus, on February 4th both the International Tinplate Cartel and the Tube Convention decided to maintain their prices. Both industries have derived considerable benefit from international co-operation. In a note on recent developments in the tinplate industry in *The Economist* of February 5th, on page 310, we pointed out that operations in Wales had already fallen to 60 per cent. of capacity, against an average rate of 80 per cent. in 1937. The International Tube Convention, formed at the beginning of 1937 after two years of keen competition in the export markets, remains in a strong position. The communiqué issued after its meeting on February 4th indicated that the agreement was to continue, and that the members of the Convention intended to "shape their policy in order to deal with competition as and when it arises." It remains to be seen, however, whether the attempt to maintain prices will be successful in the face of a further substantial decline in demand. Meanwhile, iron and steel producers in the United States have at last been compelled by circumstances to make a beginning with the reduction of prices, a cut of about 5 per cent. in certain finished sheet products having been announced on Wednesday. The British price structure has so far been unshaken by developments abroad, and domestic consumption has so far been well maintained. The decline of 22,400 tons to 1,081,400 tons in crude steel output between December and January was entirely seasonal.

* * *

Cotton Reorganisation Proposals.—During the last few weeks the Joint Committee of Cotton Trade Organisations and its constituent Associations have been actively engaged with the formulation of proposals for the reorganisation of the cotton industry. A special and important meeting of the Joint Committee will take place in Manchester next Tuesday to receive reports from the constituent organisations. This week the Special Committee appointed by the Manchester Chamber of Commerce, consisting of export merchants, has considered the draft proposals, and these have been approved. An Enabling Bill has been drawn up, and it is expected that after the meeting next week the leaders of the industry will be in a position to place definite plans before the Government with an appeal for its passage by Parliament. It is understood that certain influential Lancashire circles take exception to the proposals, and that representations have been made to the Board of Trade. So far, however, there has not been any public opposition in Lancashire. It will also be necessary to secure the support of the trade unions. Consequently, the proposals are to be considered at a meeting of the Legislative Council of the United Textile Factory Workers' Association in Manchester next Monday. Owing to the decline in activity during the past three months, it is being urged that there should be no delay in pressing upon the Government the importance of immediate action.

* * *

Employment in January.—The latest employment returns are somewhat less discouraging than those relating to December. The number of insured persons in employment in Great Britain declined from 11,437,000 on December 13th, to 11,309,000 on January 17th, a fall of 128,000. During the same period the number of unemployed persons on the registers of the employment exchanges of Great Britain rose by 162,000, from 1,665,000 to 1,828,000. This reduction, though substantial, is entirely seasonal and below the average of recent years. If allowance is made for seasonal movements the last month actually witnessed a slight improvement; for our

index of employment (which is corrected for seasonal changes) rose from 109½ (1935=100) in December to 110½ in January. Nevertheless, there is little reason for congratulation. Although the number in employment last month was still 87,000 higher than a year ago, the number of unemployed persons on the registers shows an increase of as much as 195,000 over the corresponding month last year. The incidence of recent changes in unemployment is shown in the following table:—

UNEMPLOYMENT BY INDUSTRIES IN GREAT BRITAIN

Industrial Group	Numbers in Thousands			Percentage	
	Jan. 25, 1937*	Dec. 13, 1937	Jan. 17, 1938*	Jan. 17, 1938	Approximate change since Jan. 25, 1937
Coal mining	138.4	101.5	99.5	11.5	- 4.0
Engineering	47.7	45.7	55.6	6.8	- 1.6
Motor vehicles, cycles and aircraft	16.3	19.1	23.5	6.7	+ 1.5
Metal goods manufactures	33.1	37.9	49.2	14.7	+ 2.2
Building	173.6	214.2	196.5	18.9	+ 1.9
Public works contracting	120.5	119.6	115.5	39.3	+ 2.4
Cotton	47.9	61.2	78.6	19.2	+ 7.8
Woolen and worsted	15.8	41.5	48.7	21.8	+ 11.1
Tailoring	24.5	30.3	36.3	16.9	+ 5.2
Hotel, boarding-house, etc., service	73.4	77.4	82.0	18.5	+ 1.6
Distributive trades	200.6	168.9	205.5	9.9	+ 0.1
All persons registered (including other trades)	1,689.2	1,665.4	1,827.6	...	...

* These figures are not strictly comparable, owing to the change made last September in the method of counting the number of unemployed persons.

Until recently, unemployment was generally lower than a year ago in most industries. The January returns, however, indicate that unemployment in many industries is now greater than a year ago. In coal mining—exceptionally—the number unemployed last month was still 38,910 less than a year ago. The accompanying chart

ESTIMATED NUMBER OF INSURED PERSONS EMPLOYED IN GREAT BRITAIN

(which shows changes in the number of insured persons employed in Great Britain since 1927) affords *prima facie* evidence of a decline in business activity since last autumn. But it also shows that the current level of employment is still substantially higher than in 1929.

* * *

Science and Industry.—A reader with an inquiring turn of mind will find a wealth of interesting material in the Report for 1936-37 of the Department of Scientific and Industrial Research (published, at 3s. net, by the Stationery Office). The department exists to encourage industrialists and others to make the fullest use of scientific technique and discoveries; and the layman will be astonished at the range of its work. He will learn that its experts have evolved a new system of refrigeration, and that they have been experimenting with the gas storage of fruit and vegetables. He will doubtless be surprised to discover that better bacon is made from pigs which have been rested before slaughter and that the pigs, while awaiting

their fate, should be kept warm—for shivering is a form of muscular exercise which leads to fatigue! Researches have been made by the Department into the question of the best colour for street lighting and into the effects of "shock waves" on the speed of aircraft in flight. The Report also records the progress made by the research associations formed on a co-operative basis in various industries under the department's auspices. These now cover such diversified trades as those producing footwear, confectionery, automobiles, textiles, electrical equipment and metal goods. Typical of the varied content of this section are the descriptions of an exhaustive examination into the factors responsible for cylinder wear in motor cars and of an inquiry into the effect of variations in the quality of condensed milk on the keeping properties of toffee. There is everything to be said for the endeavour to strengthen the contacts between industry and the National Physical Laboratory. It is gratifying, therefore, to learn that the charges made by the Laboratory are to be reduced in certain instances; and that arrangements have been made by which its staff will be able to visit works and plan investigations on the spot. These, the Report truly states, are developments which should be welcomed by industry.

* * *

Setback in the Carpet Trade.—As was to be expected, the building boom of the past few years and the growing interest taken by the public in interior decoration have led to a remarkable revival of the carpet trade. According to the Census of Production, the output of carpets rose from 21.5 million square yards in 1930 to 33.1 millions in 1935. The progress of the industry is also reflected in the employment figures; for the number of insured persons actively engaged in the industry rose from 25,270 in June, 1929, to 31,470 in the corresponding month last year. Exports of carpets also showed an increase from 6,480,600 square yards in 1929 to 6,848,200 square yards in 1937. During the same period retained imports fell, partly as a result of the imposition of duty, from 7,234,950 square yards to 5,502,290 square yards. Since last summer, however, the industry has experienced a serious setback. The number of insured persons unemployed last December was 17.2 per cent., compared with 4.6 per cent. a year earlier, and the Imperial Economic Committee's index of total wages paid by the industry fell from 150.0 (January, 1926 = 100) to 121.4 during this period. It is estimated that the industry is now operating at half time, with Scotland in a slightly better, and Kidderminster in a slightly worse, position. In the main, the setback is a natural consequence of the decline in middle-class dwelling-house construction, though the price policy of the industry may have hastened it. In January, 1937, carpet prices were advanced by 10 per cent. and in July a further 10 per cent. was added, the industry's justification for the advance being increased costs. Producers, however, had been warned of this increase well in advance, with the result that there had been a rush of orders before June 30th, which necessitated considerable overtime. Following the normal summer decline in activity came the sudden drop in wool prices, which caused buyers of both wool and carpets to keep out of the market—the former waiting for further falls and the latter being enabled to wait for a reduction in prices by the large stocks they had accumulated during the summer. Meanwhile, a recent cut in prices has failed to evoke much response from buyers.

* * *

Speculation in Cocoa.—The sharp fluctuations in cocoa prices during the last twelve months provide a striking instance of the effect of the entry of speculators on a large scale into a commodity market. Before 1934, writes a correspondent, the cocoa market was saddled with a surplus which, though fairly small, had its effect in keeping prices at a low level. Far from being diminished, this surplus was actually increased during 1934, 1935 and 1936 since in each year production continued in excess of consumption. The comparative figures (taken

from the statistical *Cocoa Journal The Gordin*) are shown in the following table:—

	World Production Metric Tons	World Consumption Metric Tons
1934	593,209	579,576
1935	678,141	666,721
1936	711,574	697,918

In the autumn of 1936, however, speculators were encouraged at the outset by the rapid rise in American and British consumption to enter the raw cocoa market. Cocoa prices at once began to rise, and by the middle of January, 1937, the ex quay Liverpool price per cwt. had reached 59s. 0d., against 23s. 9d. at the corresponding period in 1936. Rumours that the Gold Coast crop would be much less than anticipated, and that in consequence there would be a world shortage of cocoa, were largely responsible for the duration of this boom. At this time, moreover, responsible quarters pointed out in vain that, even on the basis of some of the low figures which were quoted for the Gold Coast crop, there would be no actual shortage. The crop, in fact, reached a record high level, and with the publication of the final estimate, the last reason for presupposing a shortage vanished. Apart from one or two short periods, prices slipped steadily back from February, 1937, till by the end of the year they were at the low levels which had ruled during the years preceding the season 1936-1937.

* * *

The decline in prices, though it was a direct result of the withdrawal of speculators, was wrongly attributed by the Gold Coast farmers to the buying agreement drawn up this year between the merchants operating on the Gold Coast, and since November a hold-up of cocoa stocks has been in force. Reports have been issued during the past week that the farmers are beginning to burn the cocoa. These, however, are entirely unfounded, and it is hoped that a settlement will be reached in the near future. Actually, deliveries of cocoa to American manufacturers declined during 1937 by about 24 per cent. (the total being 3,447,062 bags in 1937, against 4,573,095 bags in 1936), while British consumption fell by roughly 8 per cent. (94,168 tons in 1937, against 102,088 tons in 1936). The *Gordin* production figures for 1937 are expected to show a decline as a result of the Gold Coast hold-up, but it is anticipated that this will be fully balanced by an increase during 1938, when the bulk of the 1937 crop will be released.

* * *

Crisis in the Poultry Industry.—That the British poultry industry is struggling under an almost impossible handicap of diseased or weakly stock is the conclusion reached in the Report of the Poultry Technical Committee for Great Britain, published on Tuesday (price 1s.) by His Majesty's Stationery Office. This situation follows the unprecedented demand for stock, hatching eggs and day-old chicks in the post-War years, under the stimulus of high egg prices. Deaths at egg-laying trials have consequently risen from 6.6 per cent. in 1926-27 to no less than 17.7 per cent. in 1936-37. To cope with the present emergency, the Committee suggests the establishment of a Poultry (Stock Improvement) Commission for Great Britain, with Advisory Councils for England and Wales and for Scotland, and with a Standing Executive. The duties of the Commission would include, *inter alia*, the compulsory registration of the distributors of stock, hatching eggs and day-old chicks and the application of various conditions necessary to secure the production of higher quality stock. It would also examine the possible repercussions of the importation of poultry and hatching eggs on the problem of mortality at home. Some assistance from the Exchequer is contemplated. The total annual cost of the proposals, tentatively estimated at about £110,000, must, as the Committee rightly points out, be considered in relation to the value of the industry's output, which now amounts to some £30 millions annually. If prosperity is not to be permanently impaired, action along lines similar to those recommended by this Report would seem imperative.

Less Bacon.—The farmers' dissatisfaction with the working of the Pig Marketing Scheme, which caused the breakdown of the contract system at the end of 1936, was reflected in a sharp reduction in the pig population last year. Inevitably, therefore, the annual report of the Bacon Marketing Board, issued last week-end, records a sharp contraction in the output of the bacon-curing industry in 1937. The amount of bacon put into cure by the registered producers rose by 37 per cent., from 1,736,183 cwt. in 1934 to 2,376,891 cwt. in 1935, and by a further 16 per cent., to 2,756,808 cwt., in 1936. Last year's output, however, declined by 11 per cent. to 2,448,186 cwt. Consequently, the restriction of imports was slightly relaxed in order that total supplies might be maintained. Changes in imports since 1931 are shown below:—

	Empire	Foreign '000 cwt.	Total	Per cent. Reduction on 1931 %
1931	436	11,529	11,965	...
1932	541	11,651	12,192	...
1933	911	9,042	9,953	17
1934	1,457	6,870	8,327	30
1935	1,589	6,015	7,604	36
1936	1,898	5,343	7,241	39
1937	2,227	5,373	7,600	36

The Board still favours the principle of a levy on bacon imports, to be applied as a subsidy to pig producers at home. In a statement in the House of Commons in July, however, the Minister of Agriculture declared that the grant of financial assistance should be conditional upon the reorganisation of the curing industry so that both farmers and curers might work at a profit. Rationalisation is essential to the restoration of profitability in the bacon industry, and proposals to that end are now being discussed by the Ministry of Agriculture and the Bacon Board.

* * *

Labour Relations in the Steel Trades.—The iron and steel industry offers an outstanding example of the benefits of peaceful negotiation between employers and employed. The employers have lately agreed to the principle of paid holidays; and although detailed arrangements have still to be made, there is little doubt that the majority of the operatives will benefit from eleven days' paid holidays this year. The cordial relations existing in the iron and steel trades are doubtless partly the cause and partly the effect of the sliding scales, which have been a notable feature of the industry's wage agreements since the pre-war years. Basic rates (generally piece rates) have been

fixed for all the major operations, and are increased by a certain percentage for every rise in the ascertained selling price of the principal product. Wages in the steel melting and rolling trade, for instance, fluctuate in accordance with variations in the ascertained selling price of steel plates. When prices are rising, therefore—as in recent years—wages automatically follow suit. But the actual selling prices (which are ascertained monthly by independent accountants) usually lag well behind quoted prices, for the makers may still be occupied on old contracts entered into at a lower price level. Thus, although quoted prices are unlikely to rise further, it is possible that wages in some cases have not yet reached their peak. These sliding-scale arrangements are general throughout the industry except in the Sheffield special steel trade, where the engineering bonus system is in force. Together with the machinery of conciliation boards, the sliding scales have made a valuable contribution to the cause of industrial peace.

* * *

Coal Output per Miner.—The geological structure of coal seams is an important factor in determining the possible extent of mechanisation of production and hence of the average output per miner. How great is the variation of the daily output of coal per miner in the principal European countries is shown in the table below. To some extent these figures are also affected by differences in the number of hours worked per shift.

AVERAGE DAILY OUTPUT OF COAL PER MINER IN 1937

	Cwts.		Cwts.
Poland	35.5	Great Britain	22.5
Holland	34.7	France	16.0
Germany	31.4	Belgium	14.9

The two countries which head the list are both relative newcomers to coal mining. Poland received the richest part of the Silesian coal basin after the war, and has since expanded her output to meet internal industrial needs and an important export trade. As the Silesian coal field is relatively "young" and as long hours are worked in Poland, the high output per man-shift in that country is not surprising. Holland produced no coal before the war, but her output from Limburg and the Venlo district is now sufficient to satisfy domestic requirements and to leave a margin for a small export trade with France and Belgium. That Great Britain, France and Belgium, the leaders of the industrialisation of Europe, have relatively low outputs per man-shift is due to the exhaustion of the best seams, the difficulties of mining and the shorter hours worked. The recent increase in mechanisation has been unable appreciably to raise output per head.

INDUSTRIAL REPORTS

THE unemployment returns for January issued this week are rather more satisfactory than those for December, for the seasonal reduction in the number of insured persons employed was smaller than usual. The latest reports from industrial centres continue to bear evidence to a gradual slowing down in activity. Consumption of iron and steel remains at a high level and output of coal is well maintained, but new business is decidedly smaller. In the cotton trade the position is rapidly deteriorating owing to the insufficiency of replacement orders, and operations have been further curtailed. In the wool textile industry, also, unemployment is now considerably higher than a year ago. Business in jute goods, on the other hand, has been a little more active. Meanwhile, there are no indications of an early change of trend.

Coal

Cardiff.—There has been little change on the Cardiff coal market. Shipments have been adversely affected

by delayed tonnage and a dislocation of colliery stems, but the pits have been regularly employed. Domestic demand is good, and in the export trade there are few arrears in contract commitments. Substantial orders are reported to have been placed for sized coals, and in some cases the periods of delivery extend into 1939.

Prices are nominally unchanged, and the elimination under the district control scheme of the practice of supplying block tonnages to merchant firms is protecting the collieries against price cutting on the part of middlemen. In one or two of the other exporting districts there are complaints of under-cutting by contractors, and the matter is receiving the attention of the Exports Committee of the Central Council. There is a steady demand for coke, but the patent fuel market is quiet.

*

Newcastle-on-Tyne.—Despite a lack of inquiry the North-East coal market is steady, all grades being fairly comfortably stemmed. Northumberland

steam collieries are relying mostly on old contracts, whilst in Durham collieries are largely depending upon home trade. Coking and gas coals are well booked for some weeks ahead, whilst collieries producing bunker classes are comfortably placed. Patent oven coke is now a weak market owing to the lack of export trade and increasing production.

*

Glasgow.—The feature of the Scottish coal trade is the slowing-down of export business, which is now distinctly smaller than for a long time past. Shipments last week showed a further marked reduction to only 163,000 tons, compared with 193,000 tons in the previous week and 249,000 tons in the corresponding week of last year. Prices naturally have weakened, and concessions continue to be made in respect of most qualities in the East Coast districts.

Continental imports appear to be carrying fairly large stocks, and it is not expected that the position will show

any marked improvement for some weeks. In contrast with export business, home demand remains good, and collieries catering mainly for this trade continue to operate on a satisfactory basis. Most classes of Lanarkshire and Ayrshire coals are fully taken up.

*

Sheffield.—Prices are unchanged. Domestic demand is strong, and at most pits output is at a high level. The call for manufacturing fuel is on a big scale, and collieries working on contracts will be kept busy for some time. Any surplus is readily cleared. Small coal is in full request and firm. The demand for house coal has receded and is below the average for the time of year. Gas coal is freely inquired for. Coke is a firm market at unchanged prices.

Export business continues quiet, and there is no indication of an early improvement, although inquiries for spring delivery are about due. Bunkering trade is disappointing. The laying up of a large number of steam trawlers does not help the position.

COAL OUTPUT AND EMPLOYMENT

District	Week ended January 22, 1938		Week ended January 29, 1938

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that whilst satisfactory conditions continue to rule in practically all departments so far as the home trade is concerned, export demand fails to develop any sustained improvement. As a consequence those branches which rely largely upon export business are not so well supplied with orders as those which serve the home trade. Nevertheless, the decline has not been sufficient to affect the price position.

In the pig iron market the consuming industries continue to absorb a large proportion of the output and neither producers nor consumers are averse to putting a certain amount of iron into stock. New business is scarce, largely in view of the fact that consumers have bought heavily over the first half of this year. Specifications against contracts, however, are coming forward at a satisfactory rate.

The demand for semi-finished steel is good and the consuming industries which a short time ago were suffering from a tightness of supplies are now obtaining all the material they need as a result of the arrangements for supplementing home production by imports.

In the finished trades there is a strong demand in most departments. The works producing joists, plates and

sections, in particular, are being pressed to the utmost to keep abreast of deliveries. In the case of some materials orders cannot be accepted for execution in less than five or six months.

*

Sheffield.—While the volume of business in iron remains fair, there is undoubtedly a rather easier tendency. Consumers are well covered by contract and deliveries of forge and foundry pig iron appear to be equal to requirements. Some consumers, indeed, are able to begin building up reserves, and producers find themselves in a position to put a limited portion of their output into stock. Odd parcels of pig iron are well taken up, but there is little forward buying. Difficulty in securing supplies of hematite are much less pronounced, although supplies of special hematite are somewhat meagre. Business in finished iron continues to be on a good scale, although crown bars are less active. All prices are fixed over the first six months of the year, but already there is talk of some revision at the end of that period in favour of consumers.

Steel market business continues at a high level, and the demand for basic and acid billets is still ahead of supply. Structural steel requirements show no decline, and delivery delays are persistent. Business in strip and wire rods is good, while the call for stainless steel sheets shows no sign of easing. There is no change in the iron and steel scrap market. For iron sorts the pressure has recently become less pronounced, but heavy basic steel for melting remains in very active request.

Sheffield industries report a steady flow of new orders, both from home and overseas sources, and some firms have enough work on hand to keep them fully employed throughout the whole of the year.

*

Glasgow.—Steelmakers in this district are still exceedingly busy and have succeeded in overtaking a considerable proportion of arrears. While they have still much work on hand, they are now in a position to offer material within a reasonable period. Export business in most branches is quiet, but home demand is brisk, and most makers of finished materials as well as steel makers are well employed. Constructional engineers in Glasgow have received orders covering a heavy tonnage, while Clyde shipbuilders and marine engineers have also secured some important contracts.

*

Cardiff.—Quiet conditions are ruling in the tinplate industry. The latest output returns were certified at only 61 per cent. of capacity. At 6,497 tons, shipments at Swansea last week were about 1,800 tons less than in the corresponding period last year. Stocks are increasing despite reduced production and are now 5,100 tons heavier than a year ago. In view of the high production costs it was decided last week by the International Tinplate Cartel to maintain the minimum price at 22s. 6d. f.o.b. per basis box. Galvanised sheets are steady at £16 15s. per ton f.o.b. Quotations for pig iron and steel bars are firm at the scheduled prices of the Iron and Steel Federation.

*

Middlesbrough.—The market is steady but quiet, consumers of foundry pig iron being well supplied. Merchants

are being requested to take out deliveries of Cleveland foundry pig iron against old-standing contracts. East Coast hematite is being steadily taken up against existing contracts with users here and in the Midlands; small quantities are also being offered for export. Prices remain unaltered at the official bases. A further blast-furnace in this district has been put out of operation for repairs.

Further quantities of semi-finished steel have arrived from abroad and these, together with home supplies, are keeping re-rollers well furnished with their requirements. The demand for all classes of finished steel continues steady and specifications against existing contracts come forward freely. The scrap market is quiet but steady, and the official minimum prices are maintained. Ore imports are ample and the easier freight rates have been of some assistance.

Textiles

Cotton (Manchester).—Business has shown no improvement, and bulk spinners and manufacturers have had to make arrangements for curtailing production on a larger scale. Prices for raw cotton have risen on bullish reports from the United States concerning the limitation of next season's crop by legislation. But there is still some doubt concerning the Government's policy. The stock of cotton in the Government loan now totals 4,884,000 bales, to which must be added 1,600,000 bales carried over from last season.

The yarn market has continued flat. Despite the substantial restriction of output, sales have been less than production. About twenty-five mills engaged on medium weight American yarns have been closed this week. Some Egyptian spinners are now making rather freer deliveries to Germany, but trade prospects on the Continent are very uncertain. The voluntary selling price agreement for two-fold yarns suitable for poplins and voiles has been abandoned.

Manufacturers of piece-goods have had another unsatisfactory week, turnover being very disappointing. Producers and distributors continue to be harassed by heavy stocks. Demand for India has fallen off, sales being much smaller than in recent previous weeks. Some cables from Shanghai have been a little more encouraging, but trade of any importance for China cannot be expected. A few more orders have been booked in bleaching styles for Egypt. The position in West Africa remains very difficult. Necessary buying has occurred for the Dominions and the home trade. Reports indicate that more looms have been stopped.

COMPANY MEETINGS

GAS LIGHT AND COKE COMPANY

INCREASED SALES AND REVENUE

SIR DAVID MILNE-WATSON ADDRESS

The two hundred and thirty-first ordinary general meeting of the Gas Light and Coke Company was held, on the 4th instant, in London.

Sir David Milne-Watson, Bt., LL.D., D.L. (the governor), dealing with the accounts, said that sales of gas had gone up by 1.32 per cent., or about three and a quarter million therms. The increase had brought in an additional revenue of about £100,000. The rental of meters and stoves showed an increase of £71,000; coke and breeze were both very satisfactory markets and had brought in an additional £319,000; and tar products showed an increase of £56,000.

The sum available was £851,000, which enabled the directors to recommend the dividend on the new 3½ per cent. redeemable preference stock (1970), the usual dividends on the 4 per cent. consolidated preference stock and the 3½ per cent. maximum stock, and a dividend—unchanged—at the rate of £5 12s. per cent. per annum on the ordinary stock.

THE PRICE INCREASE

Continuing, he said: At the end of the year the directors, with great reluctance, decided that it would be necessary to raise the price of gas. During the year the cost of raw materials which we use, other than coal, went up by 15 per cent., also wages increased by 6 per cent. under the national agreement, and in the circumstances it became necessary to put up the price of gas by 3d. per therm. This advance barely covers the increase in the costs to which I have already referred, and, as I said at the time, it only means ¼d. a week to the average automatic consumer and 1d. a week for an ordinary consumer whose gas bill is 25s. to 30s. a quarter.

In a time of rising costs it is almost impossible to avoid a time lag in the adjustment of price, and, as you can see, the result in this case is that the proprietors have, in effect, suffered a loss of £100,000, which is reflected in the reduction of the amount carried forward.

EXPANSION OF BUSINESS

The sale of gas for the year showed, as I have mentioned, an increase of 1.32 per cent. over the preceding year. One of the greatest of all factors affecting the demand for gas is the weather, or, to speak more strictly, the temperature. With all our personal efforts, it still remains true that Jack Frost is the company's best salesman; 1937 was, on the whole, a warmer year than its predecessor, and the increase in the figures indicates, therefore, a larger genuine expansion in our business than the percentage I have quoted. Moreover, 1936 was a leap year, and therefore contained an extra day, so that the 1937 increase indicates a steady and continued rise in our sales, which is a source of great satisfaction to us. The increase represents in absolute quantity a vast amount of heat.

And there is another point. Recently our increases have been achieved in the face of the enormous change-over from older to newer and more efficient appliances in all parts of our area.

Hundreds upon hundreds of thousands of older appliances have come in and been replaced by up-to-date apparatus of greatly improved design, giving the same amount of effective heat for a gas consumption anything from 10 per cent. to 25 per cent. less. This has been, in a short-term sense, a drag on the wheels of our progress. Now we have reached a point where reasonably complete replacement of older appliances is in sight. For this reason I believe that during the coming years we may see from all the constructive work that has gone to the building up of the company's business more obvious results.

FINDINGS OF THE JOINT COMMITTEE ON CHARGES

At the beginning of the year the Government decided, in view of a protest which had been made regarding the introduction of a new tariff in South London, that an inquiry should be held into the whole system of gas charges. A strong joint committee from the Lords and Commons came to the following important conclusion:

That the basic price and dividend system afforded adequate protection to the consumer, having regard more especially to the competition to which gas companies are subject, and that no new formula is needed, or indeed can be found, which would look after the interests of both gas companies and their consumers.

Especially they repudiated the claim of the local authorities that no increase of price should be permitted without an inquiry by the

local authorities, and emphasised more than once the effectiveness of public opinion as a check on unreasonable charges to consumers.

Not only did the report emphasise the national importance of the industry in peace and war, but it drew attention to some of the avoidable and unfair handicaps under which we are made to operate, and expressed its opinion about them in the following memorable words: "It is contrary to public interest to lay burdens on gas to which electricity is not subject, or even to permit gas as the older of two competitors to suffer any longer than is necessary from adhesions of restraint because of a monopoly which it once enjoyed but has lost."

COAL POSITION

Throughout the country the price of coal has been considerably, and in many instances heavily, increased. Difficulties have been experienced in getting the classes of coal required and in obtaining satisfactory delivery. The Committee of Investigation, which purport to offer a means of redress to aggrieved consumers, have proved entirely ineffectual. It is true that under the Bill the Committees of Investigation are to be somewhat strengthened and that a central Appellate Tribunal is to be set up, but as a practical means of remedying grievances these bodies will have very little more value than their predecessors.

In my view, and it is shared by a large number of those in responsible positions who have given much anxious thought to the question, it is the monopoly itself which should be regulated. Its obligations to consumers should be strictly defined by Parliament. In the past when Parliament has authorised monopolies or semi-monopolies it has not failed to regulate them in such a way as to ensure that there can be no exploitation of the public by those to whom they have been granted.

It is surely contrary to the national interest that the monopoly in the sale of coal should alone escape regulation, and it cannot be beyond the wit of man to devise a scheme whereby such regulation might satisfactorily effect its purpose without interfering with the right of the coal worker to a reasonable wage. It has been done in other cases, and it can be done in the case of coal.

I sincerely hope, therefore, that the Government will see the wisdom of accepting the suggestion which has already been put forward that Part 1 of the Coal Mines Act of 1930, which deals with this question, should only be continued for such a period as will enable them to bring in further remedial legislation in the interests of consumers generally. In my judgment the coal question is one of the most important matters of home policy which has ever come before Parliament.

VAST SIZE OF COMPANY'S BUSINESS

The vast size which the company's business has now attained may be illustrated by some figures. We now have over 1,650,000 separate accounts on our books—an increase in 1937 of some 47,000. The Rental Department has to deal with transactions respecting over 2,000,000 appliances on the district; there are some 1,330,000 appliances on hire and roughly 750,000 on hire-purchase. The number of separate individual orders received for coke was roughly 676,000, 50 per cent. of them being received over the telephone by a staff specially trained for that purpose. Over 6,200 of these orders were successfully handled in one day, the peak day of the year.

Last year I was able to report the impending completion of the company's model housing estate at Kensal Green. It has proved up to the hilt all our claims for it; its effect on the lives of the tenants in greater leisure, lighter labour and lower bills has been striking. The tenants' average consumption of gas and coke for the very full service which the Kensal House equipment provides represents under the appropriate two-part tariff an average fuel bill of less than 4s. 6d. weekly, which is substantially less than what the average London working-class household pays for the average inadequate, dirty and laborious fuel service.

THE STERLING TRUST, LIMITED

INCREASED INCOME

The twenty-first ordinary general meeting of the Sterling Trust, Limited, was held, on the 8th instant, at Winchester House, London, Baron Emile B. d'Erlanger (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that were it not for the thick clouds in which so many foreign countries were shrouded and the shadow which those threw over their own country they would be better able to see how brightly the sun was shining above them.

Trade and industry had enjoyed a prosperous year, and it was mainly due to a psychological pessimistic complex that less favourable results for 1938 were predicted. He said "mainly" because the sharp fall that had taken place in many commodities must affect manufacturers and traders who had bought their stocks at considerably higher price levels than those then prevailing. Another factor to be taken into consideration was that of labour. He would not say that the working classes were content, because that would be evincing crass ignorance of humanity. He did believe they realised, however, that more and more interest was being taken in their welfare by statesmen of all parties, and what was equally, if not more, important, by the employers of labour; the standard of living had been raised to a level unattained in any other civilised country, and, as a consequence, the relations between employed and employers were better than they had ever been.

COMPANY'S GOOD DIVIDEND RECORD

Investment trust companies had been subjected to a certain amount of public criticism of late, the geographical distribution of investments being one of the main objectives of that criticism. At a previous general meeting he had pointed out how severely trust companies had suffered by investing on that principle, but the self-investing individual had acted on the same principle and, if he had confined himself to home securities, he would not have avoided the losses consequent upon the war and world crisis. The record of this company—which had been formed during the war, in 1916—was that they had been able to pay dividends varying between 5½ per cent. and 9½ per cent. or, throughout the 21 years of their existence, an average of 7 per cent. per annum, and, notwithstanding the heavy fall of security values during 1937, the break-up value of their ordinary stock at December 31, 1937, was 144 per cent. What private investor—he did not say speculator—had done as well?

With regard to the accounts for the past year, their income showed an increase of £6,163 at £209,996 after deduction of income tax, which had been increased last year. On the present occasion the board did not propose to place anything to reserve but were appropriating £40,000 to write down investments and, after paying the preference interest, they proposed to pay 5 per cent. on the ordinary stock, making 7 per cent. for the year. In view of the great fall in all security values, shareholders might like to know that the depreciation in their portfolio was under 5 per cent. and, as stated in the report, such depreciation was well taken care of by the reserve of £560,000.

Since they had heard so much of late with regard to the "geographical distribution" of funds, it might interest them to know that more than 50 per cent. of their funds was invested in the British Empire, 46½ per cent. in Great Britain and 6½ per cent. in the Dominions and Colonies. The rest of the funds were distributed as to approximately 19 per cent. in Europe, ½ per cent. in Africa, 3½ per cent. in Asia, 9½ per cent. in North America—chiefly the United States of America—and 14½ per cent. in South America.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,

THE ECONOMIST,

8 Bowyerie Street,

Fleet Street,

London, E.C.4.

Telephone: Central 8631

STANDARD TRUST, LIMITED

INCREASED DIVIDEND

The thirty-fifth annual general meeting of the Standard Trust, Limited, was held, on the 4th instant, at the offices of the company, 25-31 Moorgate, London.

Mr Alfred Shepherd, W.S. (the chairman), who presided, said that the item "income from investments, £111,191," compared with £98,108 for the previous year, showed an increase of over £13,000. Those figures in both years gave revenue derived from interests and dividends received applicable to the year embraced in the accounts, excluding certain income received in the shape of arrears due in previous years but only paid during the year under review. Those arrears had been dealt with by adding them to the balance brought forward from the preceding year, as set out in the appropriation account and the report. This year the arrears, after deduction of income tax, amounted to £1,944, as against £2,612 last year.

The increase of what might be called the current revenue from the company's investments for the year was eminently satisfactory, but the amount of arrears was less and would tend to diminish.

After payment of expenses, interest on debenture stock, income tax, dividends paid and recommended on the preference and ordinary stocks, there remained a balance of £10,443, as against £5,506 the previous year, and if they added to that sum the amount brought forward, with the addition of arrears, there was a sum of £41,503, as against £34,762 last year. That balance had been arrived at after deducting a final dividend on the ordinary stock of 3 per cent., making 5 per cent. for the year, an increase of 1 per cent. on last year's dividend, and had enabled the board to transfer £10,000 to general reserve, £1,597 to staff superannuation fund, and to carry forward £29,906, as against £29,116 brought in. The figures as regards the company's revenue must be satisfactory to the stockholders.

There seemed to be unanimity on the part of the chairmen of the big banks, whose annual meetings had just been held, that the condition of trade and commerce in this country, and the prospect of a continuation of that position, was such that pessimism as regarded the immediate future of home industries had no justification. Unless the world position became worse, the present feeling of uncertainty should disappear and better conditions return.

The report and accounts were unanimously adopted.

BIBIANI (1927), LIMITED

VAST ORE BODIES REVEALED

Speaking at the eleventh ordinary general meeting of Bibiani (1927), Limited, held in London, on the 4th instant, the chairman, Mr. J. H. Batty, reviewing the year's work, said they had been successful in treating 129,603 tons, as against 93,000 tons in 1936 and 67,000 tons in 1935.

The present plant had been altered almost out of recognition so that it might earn something for the shareholders. It was now producing about 11,000 tons per month.

Some disappointment had been caused by the delay in the erection of the new 30,000-ton treatment plant, but everything possible was being done to speed this up. The difficulties were due to delays in the delivery of machinery, and especially of structural steel. Every endeavour would be made to have the new plant completed within the next 12 months.

Developments this year had been extraordinarily successful, resulting in an addition of 758,500 tons to the reserve, making the stupendous total of 2,807,800 tons of an average value of 7.25 dwts. at a cost of about 1s. 1d. per ton. The consulting engineer's report indicated an ore body of tremendous volume and huge tonnage, which went to prove that they had the largest ore body known in West Africa, and he believed there were very few similar instances elsewhere. They had a great mine, and he anticipated that when the new treatment plant was running satisfactorily the capacity would eventually be brought to 60,000 tons.

Ore had been developed to the extent of nearly 3,000,000 tons on a capital of £450,000.

Total working costs came to 30s. per ton, which full production should reduce to about 25s. If this was realised, and the new plant gave an 85 per cent. extraction, the estimated profit on the 30,000 tons output should be about £27,000 per month.

Profits this year amounted to £108,325, and the directors recommended the payment of a dividend of 15 per cent., less income tax. To meet the commitments necessary for development of the company's resources it was proposed to issue the balance of the authorised share capital—namely, £50,000, consisting of 250,000 4s. shares—for which shareholders would be invited to apply in the proportion of one for every nine shares in their names at 20s. per share.

The report was unanimously adopted.

ASHANTI GOLDFIELDS CORPORATION, LIMITED

RECORD PROFITS AND IMPORTANT DEVELOPMENTS

Mr J. H. Batty, the chairman, speaking at the forty-first ordinary general meeting, held in London, on the 4th instant, said the investments this year consisted of British Government securities—£252,536 being identical with the amount shown in last year's balance sheet. These securities remained intact. Shares in other companies, £645,388, were £70,000 more than last year. Two additional companies, namely, Marlu Gold Mining Areas, Limited, and Gold Coast Selection Trust, Limited, had paid maiden dividends. The appreciation on investments exceeded a million pounds.

The profit and loss account showed, for the first time in their history, a profit of over a million pounds from the winning of gold. In dealing with this profit they had written off £12,854 re-opening of Justices and Ayeinm Mines, and set aside for the National Defence contribution £25,000 and £10,000 for income tax. They had already paid the first and second interim dividends costing £450,000. It was recommended that £10,000 be placed to the credit of the pensions fund, and a final dividend of 50 per cent.—£500,000. After these sums were deducted there would be a carry-forward of £100,360, as against £94,170 last year.

During the twelve months under review 216,602 tons had been treated, an increase of 2,889 tons over the previous year.

The grade of ore treated was 22.94 dwts., or 1.77 dwts. higher than in 1936. The yield of gold was 218,647 ounces, an increase of 12,315 ounces. These figures established further records and were highly satisfactory. The intention during the present year was to maintain the present output.

The Ayeinm shaft had been sunk 194 ft. to a total depth of 948 ft., and a new Sansu shaft started, which had reached a depth of 330 ft., and was to be extended another 300 ft. to 300 ft. below the old company's workings.

At Sansu a compressed air station and a 2,000 cubic feet compressor was installed.

During this year it was intended to extend the Main shaft 250 ft. to 31 level, and also the South shaft down two levels to No. 20 level. Ayeinm shaft would be sunk two levels of 123 ft. each to No. 10 level.

This year the programme was to extend levels 8, 9, 12, 14, 15 and 18 Cote d'Or to the south and to explore the new south shoot on the Obuasi reef at 19, 20 and 26 levels. At 29 level it was proposed to put a rise up to 28 level and crosscut back to the Main shaft.

ORE RESERVES STRENGTHENED

The ore reserves at September 30th last were 1,595,113 tons of an average value of 19.7 dwts.—an increase of 137,082 tons and a reduction in grade of 0.3 dwts.

Among the developments, that on 29 level was of paramount importance, in that it established the persistence of high values at the present lowest level in the mine and promised continuance in depth. With crosscuts 3 and 8 reported in December a shoot of about 300 ft., at an average assay value of, say, 34 dwts., over an average width of 19 ft., was now established.

NEW PLANT TO MEET THE FUEL PROBLEM

In the Metallurgical Department their operations had been hampered in the early part of the year not only by a shortage of labour which affected the supply of firewood, but also by inferior quality firewood. Although the situation had improved they did not feel justified in increasing the output beyond 18,500 tons per month. The position would, of course, be reviewed as circumstances improved, but it would be a false economy to overload the furnaces at the sacrifice of the recovery of gold which at present stood at over 90 per cent.

The firewood supply was a constant anxiety and to see how the situation could best be met they had obtained a report from that eminent metallurgist, Mr S. B. McCluskie. His recommendations were the erection of a re-treatment plant of a capacity of 600 to 700 tons a day to treat current residues and also of a wet flotation plant of 20,000 tons capacity, to replace the existing dry crushing and roasting plant.

Both the new plants were on order and it was hoped to have the former in commission by the end of the year with the object of treating current residues and of eventually treating accumulated residues estimated at about 1,500,000 tons.

The complicated nature of the wet treatment plant called for patience, and it might be two years before it was in commission. They were assured, however, that the expenditure involved would be more than justified by a considerable gain in revenue.

BEIRA RAILWAY COMPANY, LIMITED

SUCCESSFUL YEAR'S WORK

The thirty-seventh ordinary general meeting of the Beira Railway Company, Limited, was held, on the 8th instant, at 2 London Wall Buildings, London.

Baron Emile B. D'Erlanger, the chairman, in the course of his remarks, said: The gross revenue for the year at £972,273, was £170,921 higher than in the previous year, and as expenditure increased by only £45,108, the net revenue was higher by £125,813. Traffic showed all-round improvement. The main increases were in imports of general merchandise and export of minerals. General merchandise traffic was exceptionally good, the tonnage increasing by 62,254 tons, and the revenue by £116,135.

The result is a profit of £201,221. Your directors propose a dividend of 2s. per share, less tax at 3s. 7d. in the £; that £80,000 be transferred to reserve and £20,000 to dividend equalisation account; and that £30,203 be carried forward. The reserve fund will then stand at £300,000.

Last year Sir Henry Birchenough and I pointed out that the maximum rate of dividend paid by a public utility company could not be a material increase on last year's dividend of 1s. 8d. per share, without arousing criticism and possible legislation against the company. This year we are paying 2s. per share, and I consider that you should look upon this sum as the maximum payment that can safely be made in all the circumstances.

Our company has been receiving an allowance in excess of its mileage proportion on certain special rates on through traffic, and the Rhodesia Railways, Limited, who work our line at cost, have intimated that we should now agree to accept our mileage proportion only on this special traffic. We have agreed, as a temporary arrangement, to accept this proportion as from October 1, 1937. Having regard to our greatly improved financial position, I think it is equitable. It does not refer to traffic carried at ordinary class rates, upon which we get our published tariff rates, but only to special traffics which are carried at special through rates.

Generally speaking, trade conditions in the territories we serve are very good, and altogether I anticipate that the current financial year will prove to be a very good one.

The report was adopted.

Evered and Company.—First accounts show a gross profit of £49,490 for 1937; net profit, £32,336. Ordinary dividend, 10 per cent. for year. To reserve fund £15,686. An amount of profit on realisation of trade investment, of £12,450 has been placed to this fund, making it £35,000. Carry forward increased from £45,318 to £47,437.

Lester and Company.—Trading profits for year to November 30, 1937, £94,860, compared with £74,312. It is proposed to pay 2½ years dividend to November 30, 1935, on the 5 per cent. preference shares, absorbing £75,000. Carry forward slightly higher at £2,822.

Power Securities Corporation.—Net profit for 1937 £104,811, compared with £103,427. Administration, etc., expenses, including tax and N.D.C. absorbed £31,655, compared with £29,491. Ordinary dividend maintained at 7 per cent. To investment reserve £50,000, against £30,000 to general reserve. Carry forward reduced from £31,340 to £16,384.

Cinezano Capital Repayment.—It is proposed to repay in cash 2s. 6d., or 50 per cent., on each "A" and "B" ordinary share; this will require £623,847. The accounts for year to September 30, 1937, show that income from investments fell from £154,745 to £121,856. Ordinary dividend maintained at 6 per cent. Carry forward reduced from £91,342 to £79,244.

The Last Half-Century in Britain

In a leading article on page 333 we discuss Professor Clapham's recently published account of the last fifty years in Britain's economic history. The four charts below illustrate certain tendencies in Britain's social and industrial life during that period. Chart I indicates the course of population in Great Britain and shows the recent tendency for its growth to be arrested. In Chart II an attempt is made with the use of figures not wholly comparable to show the growth of the occupied population of Great Britain (over ten years of age) between 1881 and 1931, and to contrast the relative importance of certain industries at these two dates. Chart III illustrates certain aspects of the overseas trade of the United Kingdom, and Chart IV shows the course of wages and prices.

I. POPULATION, BIRTHS AND DEATHS

II. OCCUPATIONS

III. OVERSEAS TRADE

IV. PRICES AND WAGES

Index Numbers, 1880 = 100

Finance

GOVERNMENT FINANCE

For the week ended February 5, 1938, the total ordinary revenue was £45,170,000, against ordinary expenditure of £18,536,000. The deficit accrued since April 1st last is thus £65,804,000, against a deficit of £59,416,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills. On February 4th, applications at £99 17s. 6d. per cent. for bills to be paid for on any day except Tuesday of the following week were accepted as to about 18 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Tuesday at £99 17s. 7d. per cent. and above were allotted in full. £30.0 millions of Treasury bills are being offered on February 11th.

Scottish and North Country Investment Fund.—A progress report for the half-year to February 4, 1938, shows that the distribution for the half-year is at annual rate of £4 9s. gross per cent. on the initial price of £1, compared with £4 for previous half-year. The report sets out the principal changes in the composition of the fund.

First Provincial Trusts.—The management company, First Provincial Fixed Trust, Ltd., have issued a statement to certificate holders announcing that there is no intention of offering a conversion scheme inviting the exchange of sub-units into shares of a managed investment trust.

Edmundsons Electricity Corporation.—The results of the group's operations during January, 1938, as compared with January, 1937, show an increase of 12 per cent. of units sold.

Trinidad Petroleum Development.—Production for January, 223,366 barrels (deliveries being 218,633 barrels); for week ended February 5th, 52,063 barrels.

Artock Oil Company.—The directors estimate profit for 1937 (after drilling expenditure, but before major depreciation), at about £50,000, against £22,472 for 1936. Total production is now at rate of about 1,270 barrels average daily.

Trinidad Leaseholds, Ltd.—Oil produced during January, 50,689 tons; purchased during January from other companies, 76,748 tons.

Anglo-Ecuadorian Oilfields.—Production for January was 22,862 tons.

Phoenix Oil and Transport Company.—Gross production of crude oil of the Phoenix Group for January, 1938, was 55,891 tons.

Trinidad Consolidated Oilfields.—Production for January, 1938, 51,630 barrels, an increase of 2,788 barrels over December, 1937.

INDUSTRY AND TRADE</

his post. But the Ministry of the Interior, under which Dr Skubl will work, is to be in charge of Dr Seyss-Inquart, an Austrian citizen of Sudetic German origin who is said to be *persona grata* to Dr von Schuschnigg, but is also believed to be much more decidedly Nazi in his sentiments than his predecessor, Dr Glaise-Horsienau. It is significant that almost the first act of the new Minister has been to depart post haste for Berlin, where he is presumed to be discussing with Herr Hitler the implementing of further terms of the agreement for ensuring closer collaboration between the two States.

Other conditions of the settlement have already emerged in the release of political prisoners—including the murderers of Dr Dollfuss. It is also widely asserted that among the terms are the demand that Austria shall join the Anti-Comintern Pact. Economic matters are also believed to have played a part in the agreement, though in what precise form is not yet known.

The first point that must strike any observer is that the verbal renewal of Germany's recognition of Austria's independence has been given the lie in an act that is more eloquent than any number of words. Where is the independence of a State when its head has been summoned by the head of another State to meet him on foreign soil and has been virtually commanded to make specific—and crucial—changes in the composition of his own Cabinet?

Herr Hitler appears to have given Dr von Schuschnigg an ultimatum with a time limit expiring on Wednesday; and threatened that if the latter refused to agree to what was being demanded of him the Bundeskanzler would find himself confronted with an immediate resumption of a Nazi campaign of terrorism in Austria which might have been reinforced by action—rising to the degree of energy necessary for achieving the object—from the other side of the Austro-German frontier. If Herr Hitler has really achieved his purpose without resorting to naked physical force, that is a triumph for him in every way. A Power which can make its will prevail by mere threats is more formidable than one which cannot win without accepting a challenge to the ordeal of battle. At the same time, a bloodless victory would be far less dangerous for Herr Hitler both externally and internally. Externally, it reduces to vanishing point the likelihood of any forcible intervention by third parties; internally, it repeats the lesson of March, 1936. The "wild men" of the Nazi Party duly achieve their sensational aims; but they achieve them without a breach of the peace—in the teeth of all the warnings of the Prussian Colonel Blimps. What more effective way is there of making the Generals and the Junkers look silly?

If Herr Hitler really did reap this harvest last week, he can well afford to wait to see it garnered. And the date depends on whether the points that he has gained will suffice to set in motion an irresistible movement sweeping through the country, transforming social and political life and handing over power to Nazi enthusiasts. On the analogy of what happened in the Reich in 1932-33, the omens are all in Herr Hitler's favour; for this was just the technique by which Dr Brüning was deposed and Herr Hitler raised to power (that time, too, with the help of Herr von Papen's good offices). But Austria is not Germany; and since she has proved herself, time and again in history, to be not as Prussia is, the answer to the query is by no means certain. Within the boundaries of the Reich it might be easy to treat the Catholics, the Socialists and the Jews of Austria as they have been treated in Germany. Their resistance in a State with more tolerant traditions and where German pressure is indirect may be another matter. *Reculer pour mieux sauter* may be the Bundeskanzler's tactics, and who knows whether he may not succeed in securing, after all, that Austria's re-affirmed independence shall still be genuine? For example, it is a hopeful sign that he has to some extent balanced the complete amnesty which he has

been compelled to give to the Austrian Nazis by amnestying the Social-Democrats as well.

Some light—though not necessarily a very penetrating one—will be thrown on these problems by Herr Hitler's speech in the Reichstag on Sunday. Meanwhile, certain reflections of a disquieting kind suggest themselves. The first is that the threat of force has once again been used to compel the Government of a friendly State to do something which it did not wish to do. Germany has intervened in Austria's domestic affairs with impunity. Hitherto her repudiations of the Versailles conditions have been concerned with matters that could be described as "internal." This is the first positive action abroad. Where will it stop? It is not surprising that rumours are rife that a similar set of demands has been prepared for presentation to the Government at Prague. And common prudence dictates that all interested parties should be considering what they will do if this should prove to be the case.

Secondly, the belief that equipoise in Austria could be safely assumed to be secure because of the rival interests of Italy and Germany has been shown to be one more illusion. So challenging a move obviously could not arouse enthusiasm, and must have been watched with misgivings by Italians bred in the tradition of Italy's relations with her northern neighbour. But the Duce has said no word except of approbation. In view of commitments elsewhere he could do no other. But victories in Spain or even Abyssinia would be small compensation for a serious threat in the Tirol. Does Signor Mussolini's acquiescence mean that he has bartered his anticipated opposition for German help in Spain and other Mediterranean fields, or was he, too, caught unawares? The answer to this question is one which must be sorely perplexing the chancelleries of Western Europe. In any case it would be very simple-minded to assume that the Duce will not seek to turn the crisis in Austria to his own advantage in other fields.

All this must gravely deepen the anxiety of all who are responsible for international affairs, and it is imperative that the Western democracies should take stock of their responsibilities and obligations. While there are many who would agree that the refusal to allow Austria to unite with Germany in 1919 was a profound mistake, Austria has since that time developed in a direction which is certainly not Nazi; and to-day democratic countries could not watch with indifference the absorption of a community—under the threat of force—into a system which large sections of them mistrust and many of them detest.

The members of the League of Nations have certain very specific responsibilities in regard to the integrity and independence of Austria and in conjunction with France and Italy, Great Britain re-affirmed this interest at Stresa in 1934. It has also been repeatedly made clear by British statesmen that one of the conditions of our collaboration with Germany in Europe is that changes shall not be made by force. The events of the week have laid Germany under the gravest suspicion of having broken this condition—in effect if not in actual fact. So long as this suspicion remains, the smaller nations must live under the menace of fear and Europe as a whole tremble once more on the brink of war.

Only one man can allay these fears. If, as many believe, Herr Hitler genuinely wishes to avoid the risk of war, it is essential for Germany's immediate prosperity and in the long run for her own security that Europe should believe in her peaceful intentions. He must convince the peoples of Central Europe that though he may be concerned for the welfare of Germans living within their borders, it is no part of his policy to dictate their form of government or their economic and political policy. If he cannot do this Europe must remain in a state of the gravest unrest under the dark shadow of power politics. The world is anxiously waiting to see whether by deed—or by word on Sunday—Herr Hitler can dissipate the gathering clouds.

The Law of Libel

BRITISH justice is one of those things of which the average Englishman is extremely proud; and it is not uncommon to hear him contrast its fairness and impartiality with the tradition and practice of other countries, to the latter's disparagement. When pressed for particulars, it is an even chance that he would include among its special merits our law of libel. He would point out that while we enjoy the inestimable benefit of a free Press, the threat of damages in an English court of law preserves us from the scurrility and the menace of defamation—amounting almost to blackmail—which obtains in some other countries.

There is much truth in this general belief, and with the general principles of our British law few would quarrel. But there is another side to the story. Even a good thing may be misused, and in recent times there have been regrettable signs of a tendency to attach exaggerated attention to personal criticisms and to assess damages out of all proportion to the real damage done. There is danger in this hypersensitiveness, for not only does it produce quite unmerited windfalls for the lucky litigants, but also it may tend to check and restrain the Press in the exercise of its duty of making legitimate criticism and comment.

As long ago as 1934, *The Economist* described an imaginary libel action in which Johnny Briggs, professional cricketer of Lancashire, claimed and recovered damages for libel, on the strength of a published statement that he had bowled four half-volleys in one over. Our article, which was composed in a strain of irony, was intended as a parody, a wild and ridiculous parody, of the actions which even four years ago were engaging much of our judges' time. But fact has a queer trick of catching up with fiction; the mad extravaganzas of 1934 is the solemn history of 1938. Following the lead of other plaintiffs, our professional athletes, in fact, have caught the libel bacillus and learnt to meet the criticism of sporting journalists with writ and pleadings.

The latest example is Mr Boy McCormick, the former boxing champion, whose great years in the ring were between 1919 and 1922. Mr McCormick is now described as a traveller salesman and boxing instructor. Professionally, his boxing skill can be a matter of little moment to him to-day. But in the modern law court age does not stale a good case for defamation, and the sympathy of a jury flows as freely to a stale scar as to a running wound.

The libel on Mr McCormick appeared in a book written recently by a sporting journalist, in a chapter that described the amazing skill of Jimmy Wilde; and to illustrate Wilde's great gifts the author referred to a bout that Wilde once had with Mr McCormick. Before going further, let us refer back to *The Economist's* extravaganza of four years ago and the imaginary libel which was then considered the height of absurdity:—

In one over no less than four half-volleys from Johnny Briggs were clumped to the pavilion rails.

Here, on the other hand, is the actual libel complained of by Mr McCormick:—

When . . . Wilde was invited to put on the gloves with Boy McCormick, the then light-heavyweight champion of Great Britain, he knocked him out as easily as if he had been asked to do nothing more formidable than brush a fly off a pat of butter.

For this defamation Mr McCormick received last week from a special jury in the High Court 1,000 guineas damages, plus costs.

As a verdict, that seems to us to be ludicrous. Is there

anything in a statement that a man was knocked out twenty years ago by Jimmy Wilde which an ordinary man, using ordinary language in its ordinary sense, could describe as defamatory? And even if the statement were defamatory, could anyone, outside a jury-box, conceive that it is worth a thousand guineas of damage?

The word "defamatory" connotes normally a slur on character, and in that sense no man's character is impugned because it is said of him that he lost a boxing match. Why, then, should it be held in a court of law to be defamatory? Because, by the law, a man is defamed if he is held up to ridicule or contempt, and the jury in this case held that Mr McCormick, twenty years after the alleged incident, was so held up. Was any evidence offered that the ridicule had inflicted any material damage on the plaintiff? None whatever. But the plaintiff in a libel action need not prove that he has suffered any damage or indicate that he is a penny worse off after the ridicule than he was before. The damages in a libel action are "at large." Once the jury are satisfied that there has been a holding up to ridicule they may give what rein they please to their imagination, and assess the damages in maiden meditation, fancy free. They are in the delightful position of putting the defendant's money into the plaintiff's pocket without regard to facts, circumstances, loss, suffering or damage to character.

Now let us go back 25 years, to 1913. In that year there came to the House of Lords from the Scottish courts a libel case called *Stubbs v. Russell*. The facts were that *Stubbs Weekly Gazette* published regularly a list of firms who had had issued against them a "decree in absence." In one number Russell's name appeared for £9 19s. 6d. That, however, was a mistake; the debt had been paid; and Russell complained that it was a serious libel to include his name erroneously in what was to all intents and purposes a black list. But the House of Lords, in 1913, thought otherwise, and gave judgment for the paper on the ground that the entry did not indicate inability to pay. In Lord Kinnear's words, "it certainly did not hold the pursuer up to hatred, ridicule and contempt."

Between *Stubbs v. Russell* in 1913 and *McCormick v. Rich and Cowan*, in 1938, there is a world of difference. In 1913, it was no libel to accuse a man of not meeting his liabilities. In 1938, it is a serious libel to accuse him of having been knocked out 20 years ago. This is, indeed, a revolution rather than a change; and it has come about without any alteration in the law, which stands now where it stood in 1913. It has come about because of the looseness of our libel law, because of the ridiculous ambiguity of the words "ridicule and contempt," and because of the antiquated doctrine that damages can be awarded without damage being proved.

With the law in its present fluid state, the injustice of libel actions is practically certain to develop and increase. It is a matter of importance that legislation should be introduced to fix the law in a clear, reasonable and intelligible form. To attain that form need not be difficult, for the ideal is tolerably clear. It is to indemnify all whose characters have been defamed by written statements; to protect a man's trade and livelihood from inaccurate and unfair criticism; and to maintain a standard of severity high enough to make recklessness on the part of authors, publishers and newspapers unprofitable and dangerous. If that is accomplished, the public has full protection. But at present such is the uncertainty of the law that the most prudent publisher or printer will in all probability soon be unable to insure any part of his libel risk.

Britain's Overseas Markets

THE nature of British imports and exports is governed by our position in the world's economy. As 73½ per cent. of our total imports in 1937, by value, were foodstuffs and raw materials, primary producing countries are our main source of supply. These countries are among the main outlets for our exports, of which 85 per cent. consisted last year of coal and articles classified as wholly or mainly manufactured.

The main factors shaping the general course of imports and exports in 1937 were discussed in *The Economist* of January 22nd on pages 155-156. Between 1935 and 1936 exports made practically no headway, while imports showed a substantial increase. In the past year, however, both imports and exports rose considerably in value, but a substantial part of the increase was due merely to higher prices. Total imports, for example, rose by 21.4 per cent. in value last year, but by only 6.2 per cent. in volume; while exports of home-produced goods increased by 18.3 per cent. in value, but by only 9.5 per cent. in volume.

These general tendencies find their reflection in the geographical distribution of our trade, which is shown for recent years in the two charts on this page and in greater

shown little change during the past eight years. It was 31.9 per cent. in 1937, 31.2 per cent. in 1936 and 32.0 per cent. in 1929. The brunt of the changed distribution, in this case, has fallen on our trade with non-European countries, whose share in our total exports declined from 23.6 per cent. in 1929 to 19.6 per cent. in 1936, though it showed a slight increase to 19.7 per cent. last year.

When we examine the figures of our trade with individual countries some striking contrasts emerge. The percentage increase in our imports, between 1936 and 1937, from Empire countries like the Straits Settlements, the West Indies, West Africa and South Africa, was above the average, and from others, like Eire, Australia, New Zealand and Canada, well below it. The rate of increase in our exports to Eire, South Africa, and India and Ceylon was substantially below the general average. The Straits Settlements and West Africa alone increased their purchases by more than the average. Among European countries, the U.S.S.R., Latvia, Sweden, Norway, Holland and Italy increased their sales to us by considerably more than the world as a whole, while the converse applied to our purchases from Denmark, Poland,

SOURCES OF BRITAIN'S IMPORTS, 1929-37

detail in the tables on page 428. Since 1929 the most significant feature on the import side has been the absolute and relative growth in our purchases from countries within the British Empire. Our total imports in 1937 were £191.7 millions less than in 1929, but our Imperial imports were £46.4 millions more. This tendency continued during the latest year, but at a diminishing rate. The Imperial proportion of our total imports rose from 29.4 per cent. in 1929 to 39.2 per cent. in 1936, but increased only to 39.4 per cent. in 1937. The diversion of our purchases has been felt most keenly by non-European countries whose exports compete with those of the Empire. Thus, the proportion of our total purchases abroad which came from non-European countries declined from 35.5 per cent. in 1929 to 26.6 per cent. in 1936. The latter ratio, however, remained unchanged in 1937, and that year's slight increase in the Empire's percentage was achieved at the expense of European countries, whose share in our total imports, which had declined from 38.1 per cent. in 1929 to 34.2 per cent. in 1936, was further reduced to 34.0 per cent. last year.

In recent years the growth of the proportion of our total exports taken by the Empire has been less marked than that of our purchases from Empire countries. Between 1929 and 1936 the Empire's share of our total exports rose from 44.4 per cent. to 49.2 per cent. During the past year, however, the percentage declined to 48.4. Rather surprisingly, the proportion of our exports despatched to Europe has

DESTINATION OF BRITAIN'S EXPORTS 1929-37

Germany, France, Portugal, Spain, Hungary, Greece and Roumania. On the export side, among European countries, Estonia, Finland, Latvia, Italy, Czechoslovakia and Roumania showed particularly large percentage increases in the value of their purchases of British goods. The only European country which bought less from us in 1937 than in 1936 was the U.S.S.R. Among non-European countries, the average increase of 21.4 per cent. in our total imports was substantially exceeded by Irak, Iran, Chile and Argentina. Shipments from Egypt, China, Cuba, Peru, Brazil and Uruguay were substantially below the average. British exports showed a more than average increase in the case of Turkey, Irak, Iran, Japan, Cuba, Mexico, Colombia, Brazil and Argentina. Sales to Egypt, China, Peru and Chile, on the other hand, showed a less than average increase. Imports from the United States were increased by 22.5 per cent., but the rise in exports was only 13.8 per cent.

In general, the increase in our overseas trade last year was relatively well spread. Broadly, the Empire, for its part, takes nearly half our exports. Europe takes slightly more than one-third of our exports and supplies roughly one-third of our imports. The remaining quarter of the world, taken as a whole, supply us with raw materials, but take less than a fourth of our exports.

Roumania's Crisis

ROUMANIA, since Christmas, has plunged into a severe constitutional crisis. At the elections on December 27th, the Liberal Government of M. Tatarescu was decisively beaten. It resigned, and was followed by the brief pseudo-Fascist interlude of M. Goga, who, with an even smaller popular backing, succeeded in 45 days in irritating every Great Power and bringing confusion to the whole administrative and economic machinery of the country. Finally, on Friday of last week, King Carol dismissed M. Goga, suspended the Constitution and installed a new Cabinet with the Patriarch as its head and a galaxy of ex-Premiers as its members. If these events occurred in some remote principality they might be shrugged off. But Roumania is not Ruritania. She is a country larger in area than the United Kingdom and in population than the whole of Scandinavia. Her policy decides whether Russia has a corridor to her Czechoslovak ally or is faced with a *cordon sanitaire* from the Baltic to the Black Sea. Roumania is the largest and vital central member of the Little Entente, the only one of the victorious successor States of the Great War which is not in direct contact with either Germany or Italy, and she is an important source of grain and oil. Her strategic importance can hardly be exaggerated.

Roumanian politics require a little explanation. There are two large traditional parties in the country. Of these the Liberals are the senior. This is the party built up by the three Bratianu brothers, which governed Roumania during the War, and was responsible for the enormous expansion of the country as a result of the Peace Treaties. Its present titular leader is M. Dinu Bratianu, the last of the three brothers. Traditionally, the Liberals represent the administrative, military and commercial oligarchy. The opposing party is the Tsarunist or National Peasant Party, a combination of the Peasant Party of pre-War Roumania and the Roumanian Nationalist Party of Transylvania, which, under the leadership of M. Maniu, fought for the National cause in the old Hungarian Parliament. M. Maniu continues to dominate the united party, and it is due to him that the National Peasants stand, more than any other party, for democracy.

Since the War these two parties have alternated in office. The alternation has not been quite regular, since the Liberals have had many more years in office than the National Peasants; nor has it been due to any precise measurement of changes in the opinions of the electorate. In Roumania, Governments make elections, not elections Governments, and the alternation has been due only to a healthy realisation on the part of the leading politicians on both sides that neither party can be permanently and safely excluded from the sweets of office without provoking an explosion. "The sweets of office" is, in Roumania, a literal expression. The spoils system reigns unchallenged, and each change of Government is followed by a sweeping reconstruction of the whole administrative machine. Civil Service salaries are very low, and corruption is prevalent in Roumania to an extent that is unknown elsewhere in Europe.

It was the Liberals who drove King Carol, then Crown Prince, into exile; it was the National Peasants, under M. Maniu, who brought him back for the purpose of breaking up oligarchic domination which the Liberals were Great England up over politics and commerce. M. Maniu had been asked to build up a genuine constitutional monarchy, but off a path had different ideas. He wished to rule with the

For this Army, and the password of his policy towards from a shas consistently been *divide et impera*. He has damages, the case of each of the two larger parties, the As a vod—that of selecting for particular favour one

of the minor figures of the party, to the exclusion of its real leaders. The National Peasant Government, for example, was entrusted to M. Vaida-Voevod, who was later encouraged to secede from the party altogether and form a new semi-Fascist body under the name of the Roumanian Front. M. Goga, the 45-day Prime Minister, is also a former adherent of the National Peasants, who, not without encouragement, seceded to form a separate party. Among the Liberals, M. Tatarescu, a Right Wing personality who has frequently been charged with semi-Fascist inclinations, was put into office by the King without the consent, and latterly against the wishes, of M. Bratianu, the leader of the party. In its early days the Iron Guard also enjoyed some favour, as an offset to the major parties. But its very rapid growth, its ruthless methods, which do not stop short of assassination, and its demonstrated determination to pursue policies of its own, both at home and abroad, have latterly alarmed the King. The Iron Guard has fallen out of favour, and has retaliated by expressing hostility to the King. Another aspect of King Carol's reign, without which Roumanian politics cannot be understood, is the existence of a court clique which, by sitting at the toll-gate of patronage, occupies a central and dominant position in the administration of the country.

Before the election of last December it was apparent that the Liberals, under M. Tatarescu, had outworn their usefulness and become unpopular with the rest of the country. The National Peasants then made themselves, as they thought, fit for office by transferring the leadership of their party from M. Maniu, who long ago became an inveterate opponent of the King, to M. Michalache. But when the King invited M. Michalache to form a Government shortly before the election, he made the condition that a seat must be found in the Cabinet for M. Vaida-Voevod, whom the National Peasants regarded as a traitor to their cause. M. Michalache, as the King had calculated, refused, and the reins of government were handed back to M. Tatarescu, who proceeded with M. Vaida-Voevod's assistance to make the elections.

Then the unexpected, the almost incredible, happened. According to the convenient Roumanian electoral law, the Government is given a clear majority of seats in the Chamber if it can secure only 40 per cent. of the votes cast, a task which the local Prefects usually find well within their powers. But in December MM. Tatarescu and Vaida-Voevod could collect no more than 36 per cent. of the votes. The National Peasants received more than 20 per cent. of the votes and the Iron Guard more than 15 per cent., leaving only about a fifth of the total votes for all the other parties.

The King was thus faced with a difficult position. The Liberals, under M. Tatarescu, had been decisively beaten. The National Peasants were outraged by the trick played upon them, and they showed their resentment both by making an agreement with the Iron Guard to ensure as far as possible the fairness of the elections, and also by restoring King Carol's enemy, M. Maniu, to the leadership of the party. The Iron Guard was openly hostile both to the court clique and to the person of the King. The only party leader who was not either discredited or hostile to the King was M. Goga, leader of the National Christians, who received less than 10 per cent. of the total votes cast. M. Goga was consequently placed in office, the newly elected Parliament was dissolved before it could meet, and another election was called for early in March.

M. Goga's task was, by hook or by crook, to secure 40 per cent. of the votes cast, and thus to maintain a parliamentary majority for the King's policy. But it soon became apparent

that not even with the assistance of every conceivable device of administrative pressure could M. Goga hope for success. Moreover, his internal policy, by frightening the Jews, was bringing the commercial life of the country to a standstill. His external policy estranged France and Czechoslovakia, drew a rebuke from Great Britain, disappointed Germany and Italy and succeeded only in starting a quarrel with Roumania's powerful neighbour, Russia. So M. Goga had to go. The King has formed a new Cabinet of ex-Prime Ministers, which is to govern without Parliament. Martial law has been proclaimed and the constitutional liberties suspended. These drastic measures are chiefly directed against the Iron Guard. Most of the members of the new Government are more or less closely associated with the Liberals. The Patriarch-Premier himself is credited with some Fascist sympathies, but the vital portfolio of the Interior is held by M. Calinescu, who is known as a firm opponent of the Iron Guard. There are no members of the National Peasant Party in the Cabinet, but several of the Ministers have strong affinities with that party's views. M. Maniu himself refused to participate in a dictatorial Government, but his opposition may not be extreme.

The new Government is thus most accurately to be regarded as a royal dictatorship supported by the centre party, opposed both to the Fascists on the right and the democratic party on the left. The nomination of M. Tatarescu to the Foreign Ministry is an assurance that the

pre-Goga foreign policy will be continued—namely, a maintenance, at least on paper, of the Little and Balkan Ententes and of the military alliance with France, but with sufficient kind words to Berlin and Rome to give Roumania a firm seat on the fence.

Whether the new Government is anything more than a temporary solution must remain an open question. The King has placed the blame for the breakdown of the constitution on the politicians, where doubtless some of it rightly rests. But it is impossible to resist the conclusion that his own policy of playing off the parties against one another is also largely responsible for the unfortunate fact that no one element of opinion is now strong enough to govern Roumania without arbitrary force behind it.

The real tragedy of politics played in this fashion is that it obscures the real and deep-seated problems of the country. The economic and social condition of the peasantry is deplorable, the majority of them living in the most extreme poverty. The country also needs a policy of industrialisation whose aim is to raise the standard of living of the people rather than to make profits for politicians. And finally, there is urgent need for an Augean purge of the administrative machine which, through its unwieldy size and its unlimited corruption, imposes a very heavy burden on the country. These are the real problems of Roumania, and a weighty responsibility rests upon all those who have played their part in subordinating them to the desperate intrigues of ambitious politicians in Bucharest.

Topics of the Week

Mr Eden on British Ideals.—The Foreign Secretary made another of his felicitous public speeches at Birmingham on Saturday night of last week. Irresponsible reports in some organs of the Press made it necessary for him to begin his speech by denying that there was any rift in the British Cabinet, and in particular between the Prime Minister and himself, over foreign policy. His main theme, however, was to re-state the guiding principles of Great Britain's position in the world. British policy is founded entirely upon the democratic ideals of the British people. But attachment to democracy, as Mr Eden has consistently emphasised, does not necessarily involve antagonism to countries which think differently. Indeed, if it did, Great Britain would soon find herself professing ideological hostility to a very large part of the world, and no policy that hopes for the maintenance of peace can possibly found itself upon the doctrine of an inevitable clash between democracy and dictatorship. This part of Mr Eden's speech has been favourably received in Berlin, and there is no reason why it should not be. But we trust that German opinion has taken equal note of the other main point which Mr Eden was at pains to make. Addressing a young audience, he made the point that "the Government must strive in its foreign policy not only for peace in our time, but for peace in yours," and this involved that "there must be no sacrifice of principles and no shirking of responsibilities merely to obtain quick results that might not be permanent." This very obvious point badly needs making in England to-day. It is the complete answer to those who would found our diplomacy upon what may not incorrectly be called the Danegeld policy—one of making concessions with no assurance that they will not be used as ammunition for further demands at a later date. Concessions to other countries' ambitions should not be refused by a country like Great Britain, which has been peculiarly favoured with the good things of this world. But if this generation is to do its duty to its successors it must cleave with all courage to the principle that concessions cannot be given without guarantees that they will be exploited for the purposes of peace rather than for those of war. Mr Eden himself has never wavered from this principle in his public addresses. It is good to know that there is no dissension within the Cabinet,

since the confession of such disagreement would immeasurably weaken the influence for peace of Great Britain. But at the same time it is impossible not to wish that the Government as a whole would apply more resolutely in practice the principles so eloquently and individually enunciated by the Foreign Secretary.

The Coal Industry and the Consumer.—The Committee stage of the Coal Bill was concluded on Monday. The last two days of the debate were marked by a steady recurrence in different forms of the complaint that the interests of the consumers of coal were being prejudiced by the selling schemes, which the Bill continues. The Government's resistance to these complaints was as unyielding as its surrender to the mine-owners' pressure a fortnight earlier had been immediate, and it is very clear from this debate that the pressure which can be brought to bear by producers for the amendment of industrial legislation is very much stronger than any that can be mobilised on behalf of the numerically much more important body of consumers. It is of particular interest and significance to notice that the Labour Party, speaking through the mouths of the members for mining constituencies, joined the Government in resisting any proposals for enquiries into, or amendments of, the selling schemes. The Labour Party's brand of Socialism, like the Government's brand of capitalism, whatever it may profess in principle, is thus shown to be more concerned in practice with sectional interests than with those of the community.

It is reported that the Government have been surprised at the extent of the indignation that is felt throughout the country at the way in which the mining industry has been exploiting the monopoly position conferred upon it by the selling schemes. It is true that the largest consumers have some remedy in the Committees of Investigation provided for in every district selling scheme. During the past week, for example, the Lancashire and Cheshire Committee has questioned the justification for the large

increase in prices charged to the cotton industry (see page 409). But the Committees of Investigation are hampered because they are powerless to inquire into the price charged for coal by anybody except an actual producer. Any consumer, that is to say, who buys his coal through an agent, even though that agent may be in the closest association with the producer, will find little remedy in the mechanism of investigation. There has been a growing tendency in recent weeks to regard the present Coal Bill as a test case of the economic honesty of the new type of economic legislation favoured by the present Government. So far, neither the Government's resolution in pursuit of the public interest nor the technical adequacy of their measures for preserving the balance between the different elements in the national economy is coming out of the test very well.

The Balance of Payments.—The Board of Trade's official annual estimate of the United Kingdom's balance of international payments was awaited with more than usual eagerness this year; for the greatly increased debit on merchandise trade had aroused a certain anxiety. The details of the 1937 estimate, with the revised figures for 1935 and 1936, are shown in the following table:—

	(000,000's omitted)		
	1935	1936	1937
Excess of imports of merchandise and silver	£ 261	£ 345	£ 443
Excess of Government payments overseas ...	2	3	4
Total	263	348	447
Net national shipping income*.....	70	85	130
Net income from overseas investments	185	205	220
Net receipts from commissions, etc.	30	30	35
Net receipts from other sources	10	10	10
Balance of above items	+32	-18	-52

* Including disbursements by foreign ships in British ports.

Though the net debit on current account is less than some people may have feared, the Board of Trade has obviously not erred on the pessimistic side in framing its estimates. It has reduced its earlier estimates of national shipping income in 1935 and 1936 by £5 millions and £10 millions, respectively, in accordance with the results of a recent Chamber of Shipping inquiry, but has put the 1937 figure no less than £45 millions above the 1936 estimate, to take account of higher freight rates and better trade. On the other hand, the increase of £15 millions in the estimate of net investment income is less than some observers had expected; but in this case the 1935 and 1936 figures have been adjusted upwards. The Board of Trade figure includes money brought home and put to reserve as well as dividends distributed; even so, it is not easy to reconcile Sir Robert Kindersley's estimate of £168 millions for overseas investment income in 1935 with a Board of Trade estimate of £185 millions, since the former is gross income

and the latter net—that is to say, the Board's figure allows for the outgo of interest and dividends on foreign investments in Great Britain. It is significant evidence of the pre-occupation at home of our export industries that in a boom year the indicated debit balance on all items is almost exactly what it was in the slump year 1932.

Budget Prospects.—The weekly revenue returns continue to present a surprisingly favourable appearance. In the period from January 1st to February 12th, the receipt of income tax has been £15.3 millions more and that of total revenue £14.2 millions more, than in the similar period last year, which was one day longer. What is even more surprising, however, is that, in the same period, expenditure has been £16.8 millions lower than last year. This makes no allowance for expenditure out of money borrowed by Defence Loan, but as this only amounts to £9.0 millions, the comparison is not upset. Since January 1st the deficit has been reduced at a rate that is about £900,000 a day faster than last year, and if this relationship persists until the end of the year, there would be a surplus of about £30 millions, or, if sinking fund payments be excluded from expenditure, of about £39 millions. Moreover, unless the rate of expenditure out of defence borrowings is speeded up, it will not amount to more than £25 millions at the end of the year. There is thus an outside possibility of a true surplus on the year's working even after borrowing is taken into account. This, of course, would be absurd; but unless there is either a distinct slackening in the collection of revenue or a spurt in expenditure, or both, the Exchequer will certainly not realise the deficit for which it budgeted.

Britain's Reputation Abroad.—Wednesday's debate in the House of Commons on the need for extended publicity of all kinds to counteract false reports about Britain's circumstances and intentions revealed a high degree of unanimity among members. It was generally agreed that the State-subsidised propaganda of certain foreign countries, while dangerous to British reputation abroad, was not an example to be followed in retaliation. On the other hand, no speaker was inclined to deny the usefulness of national advertisement under present conditions of tendentious reporting of the world's news in the Press and on the radio. Defensive measures, as distinct from participation in any campaign of mutual vilification, can be justified, so long as opinion in all the continents is affected by high-pressure political salesmanship, organised by the news agencies and wireless stations of governments disinclined to accord to Britain the fair treatment needed to ease the conduct of her Imperial and international relations. To manufacture or subsidise State news, however, would not, in the long run, advance the best interests of Britain. Given a fair field and no favour,

the freedom of the British Press and the impartiality of the British Broadcasting Corporation have no superiors as weapons of national defence against hostile rumours. But their voices must be heard as far afield as Africa, India and South America to be effective, and the Government's duty to secure that distant platform has already been recognised by the appointment of a Committee to co-ordinate private and official publicity of all kinds. On Wednesday, cheap radio and cable facilities for British news agencies were advocated, and stress was laid upon the potential value of films. The channel between the Scylla of lost reputation and the Charybdis of dishonourable propaganda is narrow, but British commercial and political interests all over the world require that the passage should be made.

Dilapidations.—No better justification could be given for the existence of democratic institutions than the readiness of a representative assembly like the House of Commons to expose and proceed against private abuses and public scandals—a readiness not always equalled by the ability of the Government to impose its wishes upon the larger vested interests. Recent campaigns against share-pushing and the evil aspects of hire purchase have found general support in Parliament. On February 11th, yet another abuse was disclosed in the exploitation of occupiers of working-class houses by the speculative purchasers of reversions of long leases. The Leasehold Property Repairs Bill, which received a second reading and the Attorney-General's blessing, is directed against the practice of speculative syndicates of buying leasehold properties and presenting occupiers with long lists of accumulated dilapidations and costly repairs with the object of intimidating these tenants into purchasing the leases at a high figure. In South Wales, where poverty is still acute, this scandalous procedure has been particularly well organised. The Bill, which has a reasonable chance of reaching the Statute Book, applies to property of an annual value of £50 or less. It imposes upon the lessor the task of proving the repairs he requires to be absolutely necessary, and allows reasonable time for the occupier to carry them out.

The Singapore Base.—The great naval base in Johore Strait, on the northern side of Singapore Island, was opened with all due ceremony on Monday. This marks the conclusion of a great strategic enterprise, whose inception dates back as far as 1921, although the construction has been suspended once and retarded on a second occasion. The new base provides full facilities for the support and repair of the largest capital ships, and it is as heavily fortified as any point in the world. The strategic importance of Singapore can be seen by a glance at the map. It is in the truest sense the cross-roads of the East, for any traffic between the Far East and the Indian Ocean must pass through the narrow seas which it commands. Singapore is about 2,800 miles from the nearest point of Japan proper, and almost 2,000 miles from the Japanese island of Formosa. It is 1,400 miles from Singapore to the Chinese island of Hainan, the nearest point at which the construction of a hostile naval base in the future is at present conceivable, and the narrow China Sea between Hainan and Singapore is commanded on the one side by French Indo-China and on the other by the American Philippine Islands and by British Borneo. So far as geographical position can render a naval base immune to attack, Singapore is safe. The extent to which Singapore also protects the route to Australia, and that sub-continent itself, is very considerable, though not quite so obvious. The screen thrown by the Malayan Archipelago between Australia and Japan is over 2,500 miles long, and Singapore is near the extreme western end of it. The British Imperial Government, however, have played their part by providing a strong focal point at one end of the line, and it is for Australia and New Zealand to provide the defences for the eastern end, and for the Netherlands Indies to see that the line is not buckled in the middle. The Singapore base has frequently been attacked throughout the post-War years by Liberal and Labour

opinion in England, and if the world had developed on the lines that were hoped and expected eighteen years ago such a fortress would have been an unnecessary provocation and expense. In the troubled world which sees its completion however, Singapore is a valuable reinforcement to the defences of peace in the world, and a powerful safeguard for the continuance of the happy state of the Indian Ocean, the only one of the great seas from which immediate aggression seems to be excluded.

American Foreign Policy.—The American public is suffering from severe division and bewilderment of counsel on the principles of American foreign policy. It is a state of mind which is not so difficult for British observers to understand, because it is something with which we are thoroughly familiar at home. Write "United Kingdom" for "United States," "France" for "British Empire," and "Eastern Europe" for "the Old World," and we find ourselves standing in the Americans' shoes. The trade-name for the pair is "isolationism"; but, as we have discovered from our own experience, this particular line in footwear is most awkwardly bewitched. The first and last thing about isolationism is that the left shoe and the right shoe can only step in diametrically opposite directions—with the consequence that the distracted wearer, after straddling as wide as he can, has ultimately to kick off one of the shoes and hobble along in the other, wherever it chooses to lead him. This fairy-tale is being illustrated in the United States by the predicament of the isolationist-pacifist coalition, when faced by the President's plans for naval expansion. The close technical co-operation between the British and American Navies, and the solidarity shown to Japan, have convinced the isolationists that American naval expansion is really destined to serve British rather than American interests (it is one of the characteristics of isolationists, as Miss Dorothy Thompson has pointed out, to look upon a country's friends as its enemies and its enemies as its friends). The isolationists seem to be successfully forcing the Administration at Washington into giving the most explicit assurances that, in working out their naval policy, they will keep clear of all commitments to, or understandings with, other Powers, and will not even take account of other people's prospective naval strength or of the purposes for which they are likely to use it. But the consequence of such a policy, as the naval experts have been quick to point out, would be the need for an American Navy three or four times its present strength if the United States and American interests are to be protected against all contingencies single-handed. The isolationists are unwilling to follow their own logic so far; and their pacifist allies confound them still further by advocating not security but disarmament. The fact is that the American isolationists, like the rest of us, are being brought up against a hard fact; and this is that the only level of national armed strength at which isolation and security are compatible is a level that is higher than the cumulative strength of the whole of the rest of the world.

The Japanese Reply.—The Japanese reply to the American, British and French inquiries has been much what was expected. In the official answers to the three notes, the Japanese Government have categorically rejected the request for light on Japanese building plans. In an accompanying statement, however, a hint is dropped that Japan may be ready to do what her potential rivals want, so long as she does not have to say it in so many words. In this statement, the Japanese Government declare that if the other Powers were to expand their naval armaments beyond the existing Treaty limits, then Japan would "have no alternative but to alter her building plans" in order to cope with that construction. The inference that we are, presumably, meant to draw is that Japan is not building ships of more than 35,000 tons at present; and this presumption is supported by the fact that the formula, as quoted above, is to be found only in the official English version of the statement, while the crucial words "alter her building plans" have been changed to "adopt neces-

sary measures" in the Japanese text. This discrepancy confirms the impression that the dominant consideration behind the Japanese refusal has been one of "face." Unfortunately, a verbal hint is an inadequate protection for the other powers' security, and it is difficult to see how we can now avoid an unrestricted competition in oceanic naval armaments. In this matter, the American craving for isolation seems likely to have what will be, from the Japanese standpoint, an ironically paradoxical effect. Both the American and the British Admiralties may feel themselves constrained to make sure that their own navies are decisively stronger than the Japanese without reckoning into the account the naval strength of any potential associates. This will mean that, if a naval race does take place, Japan will find herself overwhelmingly outclassed by the English-speaking naval Powers unless—*quod est absurdum*—Japan now sets herself a two-power standard.

Pastor and Cardinal.—Modern Governments possess means of suppressing and distorting the truth which would have been the envy of a Roman emperor. Yet last week's events in Germany seem to show that, even to-day, the truth will out to a sufficient extent to be damning to tyrants. In Berlin on February 8th, for example, the long awaited trial of Dr Niemöller began—only to be adjourned next day. The trial appears to have opened with a demand from the Public Prosecutor that the proceedings should take place *in camera* and that all persons present should be bound over to secrecy under pain of six months' imprisonment in case they opened their lips. This demand is said to have been put forward by the State on the ground that Pastor Niemöller's behaviour had been anti-patriotic and that the counsel for the defence were in touch with foreign religious and political forces in the hope of bringing foreign influence to bear upon the Court. Thereupon, counsel refused to conduct the case for the defence unless this allegation was withdrawn; and when the Court appointed a lawyer of its own to conduct the defence in their stead, Pastor Niemöller himself refused to take any further part in the proceedings under these conditions. Thereafter, the case was adjourned—nominally to give the Court-appointed lawyer time to study the case, but really because the authorities found themselves in a fix. They must either incur the odium of unfairness or else give the defence the opportunity for a moral victory. The trial was adjourned until Saturday of this week and it is now reported that Dr Niemöller is to be allowed his own counsel and the supporting presence of a brother pastor of the Confessional movement.

Meanwhile, at Munich last Sunday, Cardinal Faulhaber virtually challenged the Nazi State to make a second Pastor Niemöller of him. In a sermon preached in a crowded church and relayed to two other churches, which were likewise full, the Cardinal told his congregation all the things that the Nazis most hate to hear. The German public did not learn the truth about the conflict between Church and State because encyclicals, pastoral letters and sermons were not allowed to be printed or otherwise circulated inside Germany. The Church was undoubtedly being persecuted in the Reich—as witness the suppression of 82 schools belonging to religious orders. The substitution of Rosenberg's book for the Bible was denounced as the offer of a stone for bread. Above all, Cardinal Faulhaber put the Nazis in the same pillory as the Communists—speaking of the two great parties which are fiercely antagonistic to one another in every way, but which show a fearful resemblance to one another in their methods of attacking the Church. The Nazi party-State will have to decide whether to take up this challenge; it can hardly be ignored.

Government by Marooning.—With the transfer of an ex-Prime Minister of Greece, M. Michalakopoulos, from the mainland to an island, the number of General Metaxas's opponents who have been disposed of in this

fashion has mounted up to twelve—five of whom are soldiers and seven civilians. This distinction—which may be taken as the Greek dictator's equivalent of our British Order of Merit—is not a new idea invented by General Metaxas. Mediterranean islands have been used for this purpose since time immemorial. M. Michalakopoulos's present insular quarters were occupied by Roman republican philosophers in the days of Nero and Domitian. The Young Turks celebrated their advent to power in 1908 by "insulating" in this literal sense the members of the opposition in Constantinople. Taking a leaf out of Talaat Bey's book, the British Government deported to Malta in 1920 as many of Kemal Atatürk's distinguished partisans as could be rounded up by British naval landing parties on the shores of the Bosphorus. And His Majesty's Government in their turn have had the honour of being copied by Mussolini—as may be verified by a census of the present population of the Lipari Islands. Is this political marooning good policy? "Saint Helena was the grave of Napoleon," General Metaxas may remind us—to which we can retort that the Book of Revelations was written—and published—by an exile, whom a Roman tyrant had marooned on the Dodecanesian island of Patmos.

India's Constitutional Crisis.—The latest political crisis in the Indian provinces, though straightforward on the surface, has tangled roots. Orders given by the Congress Ministries in Bihar and the United Provinces for the release of all political prisoners were disallowed by the provincial Governors, acting on the Viceroy's instructions. The Ministries thereupon resigned. It would appear that many of the so-called political offenders are violent criminals who might do grievous harm to innocent people and property, perhaps in other provinces, before they were again apprehended. Moreover, there appears to be more in the political tactics of the situation than meets the eye. The Ministries in question, being under awkward pressure from their own peasant constituents, may well have sought a diversion whereby they might escape rather than enlarge their responsibilities. Again, concurrence in their demands would have meant difficulties for the non-Congress Ministries, especially in Bengal, where terrorism is endemic and where, in spite of a progressive review of individual cases a relatively large number of political prisoners are still in custody. Yet, in spite of these complications, it would seem that the Viceroy has made a mistake in not pressing the principle of responsible government to its logical conclusion and leaving those responsible for law and order to cope—at the outset of the new regime—with whatever lawless political offenders they might choose to set at large. Gandhi has spoken cryptically of the "mischief" of British making which must be undone from the British side. It would be a disaster if the highly promising political progress of India were interrupted by a barren contest in face-saving.

Report on Oil from Coal.—In April, 1937, a sub-committee was set up by the Minister for the Co-ordination of Defence to inquire into the production of oil from coal. Since then there has been a strong demand from several quarters for the inclusion of oil from coal schemes in the growing schedule of national defence plans, because of the need to rehabilitate the coal-producing Special Areas and the difficulty of providing and protecting tanker tonnage in time of war. In general, any large-scale plan to increase domestic supplies considerably above the 5 per cent. of the consumption of petroleum products at present provided has been officially scouted on both strategic and economic grounds. Clearly, any attempt to produce all or a large part of our oil and petrol in Britain would be costly. As was pointed out by the Rivett Commission in Australia (*The Economist*, October 16, 1937, page 108) and endorsed by Lord McGowan in July, the production of oil from coal is still far too costly for private enterprise to undertake, even with the aid of a guaranteed preference considerably higher than the existing 4d. per gallon or an actual preference higher than the present 8d. From the strategical angle, too, only if the command of the seas were in danger or if there were a shortage of tanker tonnage (or some vitally important alternative use for it) would the arguments for reliance on home supplies definitely over-ride the objections.

The Falmouth Committee, in their report published on Tuesday, have broadly rejected the case for extensive home production, arguing that petrol production alone would involve a permanent annual subsidy of £43 millions, and the employment of no more than 170,000 men, without appreciably assisting the coal industry. "A policy of depending on imported supplies with adequate storage is the most reliable and economical way of providing for an emergency." Nevertheless, storage equipment (details of which are withheld in the report for reasons of national interest) is at least no less vulnerable to attack than hydrogenation plants—unless novel subterranean devices have been contrived. Moreover, the economic issue is not simply the narrow question of the comparative costs of production and imports, but rather part of the general problem of distributing the national resources, and especially shipping, in time of war. It may, for instance, be argued that the saving of tonnage involved in a considerable though not drastically large increase in home production would be worth the price paid in subsidy. Again, taking a longer view than merely war-time possibilities, there would be a commercial future for the production of oil from coal if the world's oil reserves were likely to run low in another generation. The Committee have therefore shown discretion in that, in spite of their negative decision on the main issue, they have recommended the increase of the guaranteed preference from 4d. to 8d. per gallon (to include diesel oil for use in motor engines), the encouragement of experimental plants and the financing of research.

The Housing Bill.—The second reading debate on the Government's new Housing Bill was not very successful in elucidating the main principles involved in the measure. The Minister of Health concentrated to an undue extent upon the impressive record of public housing in the years since the War. His own figures, however, showed that the effort was not over. It was estimated that 600,000 new houses were required—400,000 for slum clearance and 200,000 for the abatement of overcrowding—and of this total only some 200,000 have yet been provided. This fact, together with the mounting evidence of some slackening in private building,

makes a strong case for pressing on as rapidly as may be with the construction of new houses to clear the slums and relieve overcrowding. The Minister, however, apart from explaining the technical provisions of his Bill, did not address himself to the question whether those provisions would accelerate or retard the pace of building. The basic rate of subsidy for slum clearance in urban areas under the existing Act of 1930 is 45s. per annum from the State for each person displaced, plus £3 15s. from the rates for every new house built. Assuming an average figure of four persons per house (which may be on the low side) this is a total subsidy of £12 15s. per annum per house, whereas the new subsidy is to be only £8 5s. It is true that since the 1930 Act was passed both the cost of building and the cost of money have fallen, but it does not seem probable on the face of it that a reduction in subsidy will do anything to speed up the process of re-housing.

The amendment moved by the Labour Party criticised the Bill for abandoning "the sound principle of basing the subsidy upon the number of persons re-housed" and a suggestion was made from the Liberal benches that the subsidy should be based upon the number of rooms provided, which would have much the same effect. This also appears to be a point of some substance, which was not adequately brought out during the debate. To a far greater extent than is commonly realised, the problems both of the slum and of overcrowding result from the peculiar conditions of the large family. If the subsidy is to be given on the basis of the number of houses provided, it is only reasonable to suppose that the majority of the houses will be of the smallest type permitted by the regulations. The new subsidy may thus defeat its own ends. It is very much to be hoped that this point will receive adequate consideration at the Committee stage. Another aspect of the Government's housing policy was announced on Thursday in a White Paper on rent restriction. The Government have accepted the recommendation of the recent Ridley Committee that the larger houses in the present Class "B" should be decontrolled. They do not, however, accept the somewhat rigid formula proposed by the Committee for the gradual decontrol of the remaining controlled houses within a given period and prefer to say that control should be removed when the need for it has expired. This is not very precise; but the number of controlled houses still remaining is so large that it would be disastrous to press ahead, for the sake of logical tidiness, with a policy which might lead to widespread increases in rents.

Croydon Typhoid Findings.—The Report of the Inquiry into the epidemic of typhoid fever at Croydon, published on Monday, finds that the outbreak was caused by the infection of the water supply drawn from Addington Well. The disaster might have been averted had there been a greater measure of co-ordination between the functions and activities of various officers of the corporation. For several weeks workmen were employed at the well, including an active carrier of typhoid, and water was running to supply unfiltered and unchlorinated. The Medical Officer of Health was not informed either of the work or that filtration had ceased. Although he commonly received monthly analyses from various wells and reservoirs, Dr Holden was not responsible for the borough's water supply, which in fact was among the impossibly diverse duties of the Borough Engineer. There may have been some delay in deciding the origin of the outbreak and in fully informing local doctors. In the main, however, the epidemic was fought most ably; and the Report's chief criticism is directed towards the administrative circumstances which made the outbreak possible. There has clearly been a serious lack of system at Croydon; and there may perhaps be some grounds for the fear that supervision of the water supply may be similarly ineffective in other large and important county boroughs. The Report, in fact, is a warning to all persons locally responsible for public health.

The Nature of the Depression

NEW YORK, February 8.—The abrupt descent in four months from a high level of prosperity to a depth only exceeded by the worst months of the great depression has left everyone bewildered. In the post-war collapse, the index of production fell from its peak of 116 in January, 1920, to its extreme bottom of 74 in July, 1921, in eighteen months, which seemed a violent decline; in 1929, the index of production fell from 123 in August to 99 in December; and this, too, seemed a violent decline. Yet the fall from 117 in August to 84 in December was larger than that in the autumn of 1929; and in four months was almost as great as in the post-war collapse.

People refuse to believe it, and the commonest way of expressing such disbelief is to resort to euphemisms in describing it. The word "depression" is absolutely taboo; only such terms as "recession," "reaction," or "slackness" are allowed. In contrast are such episodes as the great mass protest meeting in Detroit last week, probably the largest demonstration of its kind ever held in this country, the number of demonstrators being conservatively estimated at 100,000.

The fortunes of Detroit rise and fall with those of a single industry subject to extreme fluctuations. It flourished last year, and hourly wages were pushed to a level which gave its workers hope of a very high standard of living. At present, it is stated that some 200,000 of the 300,000 members of the automobile workers' union are unemployed.

The situation is aggravated, as it is everywhere, by the fact that in good times enormous purchases are made on instalments, involving small and, in many instances, no cash payments, with the balance spread over many months. The consequence is that unemployment instantly becomes distress, since in good times the worker accumulates a burden of debt.

The meeting unanimously adopted resolutions for a moratorium on debt, rent reductions of 50 per cent. and an increase in relief funds. This incident is cited not only because the magnitude of the meeting is impressive, but because the focus of distress is so sharply defined. As late as September the motor industry was booming and workers were almost fully employed at the highest rates in history.

Housing, Rearmament and Recovery

The Housing Act has now been signed, but business opinion is mixed rather than enthusiastic. Broadly speaking, there is not much endorsement of the reduction in the cash payment on small homes from 20 to 10 per cent. American experience of home ownership on slender margins has generally been quite unsatisfactory. Furthermore, it is questioned if the greatest housing need lies in the demand for individual dwellings.

On the other hand, the provisions for what is called "speculative" building are considerably relaxed, and these may provide some stimulant, although this again is neutralised by the severity of the capital gains tax on "entrepreneurial" undertakings. The provisions relative to the construction of multiple dwellings or flats are generally rated as the most promising. But the prevalent attitude in building circles is to minimise the importance of the legislation and to emphasise the elements of cost and demand.

It was high costs that checked residential building in 1936; and when those costs rose still higher in the spring of 1937 they proved to be prohibitive and demand receded. Costs are now lower than they were at last spring's peak; but it remains to be seen if they are yet within the reach of potential demand.

The armament programme has attracted increasing interest, but it is recognised that the plans outlined can have only a limited effect on this year's aggregate output and no perceptible influence on the volume of production in the first half of the current year. Except for the Housing Act and the armament programme there has as yet developed nothing that could be described as a Recovery Programme. Generally

speaking, the business community is convinced that prosperity will come of itself in the second quarter of the year at the latest; or that the Government will embark on another large spending programme.

Increased Foreign Trade

The foreign trade returns for 1937 show the incidence of the great increase in both imports and exports that distinguished the year. Some of the larger items are given below:—

MERCHANDISE IMPORTS			
	(\$'000,000)	1936	1937
Vegetable Foods.....	\$	646	738
Vegetable products (inedible)	\$	338	489
Textile fibres and manufactures		387	477
Wood and paper.....		249	306
Non-metallic minerals		126	153
Metals and manufactures		207	281
MERCHANDISE EXPORTS			
	(\$'000,000)	1936	1937
Vegetable foods	\$	144	216
Vegetable products (inedible)		206	219
Textiles and manufactures		437	467
Wood and paper.....		100	137
Non-metallic minerals		364	499
Metals and manufactures (ex-mach.)...		234	501
Iron and steel semi-manufactures.....		80	231
Steel mill manufactures.....		32	67
Machinery and vehicles.....		614	889
Industrial machinery		158	240
Agricultural machinery		44	75

The monthly value of imports was greatest in February (\$307 millions), and from this figure it fell to \$208 millions in December. The course of exports was opposite; from \$223 millions in January the value rose to \$333 millions in October (the seasonal high) and remained near this level in December. The decline in imports coincided with the fall in commodity prices; and the big export increases were not in agricultural products but rather in metal and engineering goods.

It appears that the depression is still largely a local phenomenon—in its magnitude at any rate. No other country—not even Canada where economic events tend to move in sympathy with those in the United States—seems to have suffered a similar setback. Even the movements of commodity prices, usually fairly parallel in England and the United States, have been divergent. American prices have fallen much more sharply since the spring than British prices.

Reactions to Events in Austria

PARIS, February 17.—There is no tendency to dramatise recent events in Austria. It is argued, on the one hand, that it would have been futile to follow the precedent of March, 1936, when the Germans remilitarised the Rhineland, by first of all denying Germany's right to act, and then accepting the *fait accompli*. On the other hand, it is argued that Herr Hitler's latest success must not be exaggerated, because Signor Mussolini would surely not have accepted any decision which would involve an actual "Anschluss." Nevertheless, some people do regret the prestige which the Führer has been allowed to derive from this incident, since dictators feed upon prestige, and the Austrian affair may encourage further audacity—while the prestige of the democracies will suffer greatly in the small States of Central Europe, who only a few days ago had been reassured by the internal disorders in Germany.

The first loan—of 1,000 million francs in bonds of the Crédit National—issued by the new Chautemps Cabinet was subscribed in four days. Indeed, the position of this Radical Government with a Popular Front programme has recently been strengthened by events at home and abroad. The persisting crisis in America has stimulated the return of capital to France. Political troubles in Germany, combined with recent events in Roumania and the economic difficulties in Italy, appeared, at first glance at any rate, to have strengthened the hand of the democracies *vis-à-vis* the totalitarian States.

M. Chautemps' Stronger Position

At home the controversy between the leaders of the Centre, that is, MM. Reynaud and Flandin, about the formation of a National Cabinet, with or without the Communists, revealed the great difficulty—at least for the moment—of forming such an administration. Consequently, the position of M. Chautemps' Government was made to appear correspondingly more stable.

Nevertheless, M. Chautemps is faced with fresh difficulties in his relations with the Communists. They are asking that wages should be automatically adjusted to rising prices and pensions paid immediately to aged workers. With the Communists and Socialists bidding against each other for popular support, proposals are being urged which would endanger the public finances, and tend to counterbalance the favourable effects of M. Marchandeau's recent speeches in favour of sound finance and retrenchment.

The Chamber's discussion of the Bill to enact a new Labour Code will lead to fiery debate. M. Chautemps' proposals will, however, prevail: they are progressive, but at the same time likely to win agreement from the Senate; and the Prime Minister will thus gain time. The new Code will give the Government power to check agitation—unless, of course, there is a fresh crisis, which would provoke disorders very difficult to suppress.

M. Chautemps' colleagues are busily engaged in working out plans to revive business. M. Marchandeau intends to increase production and exports by means of fiscal concessions; and M. Bonnet is examining the possibility of limiting imports of coal by the development of hydro-electric power.

The Treasury is in immediate need of resources. But M. Marchandeau, a Moderate, is at least as likely to succeed in stimulating disbanding to cover the cost of National Defence as was the Socialist, M. Auriol, a year ago. If investors can be persuaded that the new Government's policy is in the right direction, then there may, in fact, be a rapid return of flight capital. A new loan of 3,000 million francs of Treasury bonds at 5½ per cent., with 4, 8 and 12 years' maturities, has just been issued.

The Direction of Foreign Trade

Foreign trade last year was divided between foreign countries and the French colonies as follows:—

(In million francs)			
	1936	1937	Increase
Imports:—			
Foreign countries	18,162	31,979	13,817
Colonies	7,252	10,336	3,084
Total	25,414	42,315	16,901
Exports:—			
Foreign countries	10,328	17,159	6,831
Colonies	5,163	6,775	1,612
Total	15,491	23,934	8,443

Thus, 75.5 per cent. of imports by value came from foreign countries, against 71.4 in 1936, and 24.5 per cent., compared with 28.6 from colonies; and 71.7 per cent. of exports went to foreign countries, compared with 66.7 per cent. in 1936, and 28.3 against 33.3 per cent. to colonies. The year's import surplus of 18,380 million francs, compared with 9,922 millions in 1936, was made up of 14,820 millions in trade with foreign countries and 3,560 millions in trade with the colonies.

The value of imports from Great Britain rose from 1,799 million francs in 1936 to 3,379 millions in 1937, and of exports to Great Britain from 1,933 millions to 2,720 millions; the import surplus in trade with Great Britain was thus 659 million francs. Imports from the British Empire were valued at 7,330 million francs, compared with 4,104 million francs in 1936; and exports to the British Empire at 3,202 millions, against 2,220 millions. The import surplus in trade with the British Empire was therefore 4,127 millions, or 27.8 per cent. of the entire French import surplus, against 24 per cent. in 1936, which is principally due to abnormal imports of British coal. Trade with Italy, which had been severely injured by economic sanctions, increased in 1937, and showed an export surplus of 59 million francs.

Wholesale prices have again fallen, as the following table shows:—

	Jan. 15	Jan. 22	Jan. 29	Feb. 5	Feb. 12
Wholesale prices:—					
General index	615	611	612	610	607
Domestic products	655	653	653	652	651
Imported products	544	535	537	534	528
Foodstuffs	623	622	620	617	617
Industrial products	609	601	605	603	599

The number of unemployed on February 5th was 406,050, against 403,813 in the previous week and 420,880 a year ago.

Germany

Ministry of Economics Reorganised

BERLIN, February 16.—Industry and trade were more interested in the reconstruction of the Ministry of Economics than in the changes in the military and diplomatic departments which, it was believed, would have little effect on the conduct of affairs. Reorganisation of the Ministry of Economics was announced when Dr Schacht resigned, and the announcement was at first represented to be merely a veil for Party differences with him on general questions of policy.

The Four Year Plan, which, contrary to the original programme, had accumulated a large, specially qualified personnel, was to be fused with the Ministry. In fact, the Plan was destined to swallow up the Ministry. This seemed anomalous, because the Plan embraced only a small part of industry, while the Ministry controlled the whole of industry as well as home and foreign trade and credit and currency. Nevertheless, according to the reorganisation scheme of February 4th, Plan experts are placed in charge of the most important department, regardless of whether or not the business they have to direct directly concerns the Plan.

This has involved the militarisation of nearly the whole Ministry. As the chief justification of the Plan was National Defence, Army staff officers were from the first put in charge of its most important branches. These officers, with others, now appear as heads of the Ministerial Departments. Moreover, as the Plan dominates the Ministry, the Ministry must be dominated by Field-Marshal Goering, another Army officer, who remains Commissioner for the Plan. The conclusion to be derived from these changes is that German economy has become more than ever Defence economy.

In industrial circles this development is not deprecated. The radical or Socialist element, which was believed to have urged the elimination of Dr Schacht, will not dominate the new Ministry. The Reichsbank will probably be increasingly influenced by the Ministry, and although it is surmised that Dr Schacht will be re-elected President for a new term, he will probably not retain office long.

Some more official or cartel reductions in prices are announced, including cuts in the prices of agricultural machinery and screws. Farmers continue to complain that industrial prices are moving against them. The food supply of Berlin is much as before, the chief shortage being of eggs. Imports of these have fallen to less than half the level of 1929, and the absolute and *per capita* consumption have heavily declined.

The new livestock census shows a fall of about 4 per cent. in the number of poultry in 1937, which was the consequence of fodder difficulties. The number of sheep, however, has increased very considerably. Heavy imports of wheat continue.

The Effects of Industrial Regimentation

In January the number of unemployed increased by 57,000 to 1,052,000, which is 800,000 fewer than in January, 1937. There has been some discussion about the financial burdens imposed by the new compulsory industrial organisations. It is now stated that the total expenditure of the "Reich Industry Group" in 1937-38, comprising seven "Chief Groups" and about a thousand subordinate and branch groups, is estimated at less than Rm. 46 millions, which is only 0.85 per cent. on an annual industrial turnover of Rm. 54,000 millions.

Major-General Thomas, Chief of the Economic Defence Staff, complains that the privileged home market is absorbing too great a quantity of raw materials to the detriment of exports, and the balance of payments suffers. This statement hardly squares with the fact that certain manufactured goods are at times hard to get, at least in the required sorts and qualities.

An official report shows that in 1937 only 24 share companies were founded, while 1,166 were dissolved; and that only 782 limited liability companies were founded and 9,804 dissolved. Altogether some 10,000 concerns officially classed as "capital companies" changed their status, being mostly converted into so-called "open companies," "kommandit" companies, and firms.

This is mainly a result of measures taken since 1933 to enforce the abandonment of "irresponsible" management, the irresponsibility consisting in part of the limited financial liability and in part of the absence of personal responsibility. The chief measure was compulsion to liquidate companies with small capital.

Active Industry and Increased Exports

The home market for iron and steel is active, and deliveries have fallen short of demand. The trade press expresses the view that the International Steel Cartel will be prolonged, but adds that this is not so certain as it was a year ago, the doubtful countries being Belgium and Luxemburg, where recent business has been unsatisfactory.

German exports of iron and steel and iron and steel goods (excluding machinery) in 1937 were 3,688,500 tons against 3,668,100 tons in 1936. There was a heavy fall in exports of pig iron, semi-manufactured products and cheaper varieties, and a corresponding increase in the dearer bars, tubes and wire. Imports of pig iron for the first time greatly exceeded exports. Exports of machinery totalled 425,587 tons against 335,560 tons in 1936. Exports of electrical goods, vehicles, internal combustion engines, bicycles, sewing machines and typewriters also increased.

Norway

Higher Government Spending

OSLO, February 7.—In his speech from the Throne on the re-assembly of the Storting, the King dwelt upon political, financial and economic developments during the past year, and briefly outlined the various public measures which were considered necessary to further commerce and industry. Subsequently, the Minister of Finance announced the Budget proposals for the financial year 1938-39. The Budget will be balanced at 563 million kroner, representing an increase in expenditure of about 30 million kroner, chiefly due to higher appropriations for State undertakings, such as the building of roads, the electrification of the railways, and housing schemes, while national defence and the reduction of the national debt will require larger sums than in earlier Budgets.

No new taxes have been proposed, with the exception of a small increase in the duty on petrol, and the total yield of taxes and duties is estimated at 459 million kroner, against 428 millions in the preceding Budget year. This year's Budget is the fourth prepared by the Labour Government, and is higher by about 120 million kroner than their first Budget, submitted in 1935.

Security for Workers

Public interest has recently been focussed on the question of compulsory provision for the economic security of workers in any concern—whether individual or joint-stock companies—employing capital in excess of 100,000 kroner. The funds necessary for this purpose are to be drawn, under this plan, from the surplus of any concern distributing more than 7 per cent. of the original capital invested. The

scheme also includes other measures to facilitate the accumulation of collective reserves for industry and trade. The Government have not yet, however, announced whether or not they will accept the recommendations of the Committee which has made these proposals.

The money market is still exceptionally easy. With the official discount rate at 3½ per cent. since January 5th, loan conversions have been negotiated by the Government and various municipalities on a 4 per cent. basis at rates only slightly below par. The prices of gilt-edged and other bonds have risen steadily in the last few weeks. If the present trends continue there is every reason to believe that the general level of interest may settle down around 3½ per cent.

Most of the banks, including the Norges Bank and the Big Three, have now published their balance sheets for 1937. The boom in the first half of the year and the general improvement in trade and industry are clearly reflected in the published figures. There are substantial increases in net earnings and total resources, and most of the banks have maintained the rate of dividend of the previous year.

Industrial production is well maintained, the index figure for December last being 121 against 114 in December, 1936. Compared with November, however, there was a recession of 11.1 per cent. The average of the index for 1937 was 122.5, which is 10 per cent. higher than the figure for 1936.

Canada

Federal Powers

OTTAWA, January 28.—Parliament reassembled on January 27th and the Speech from the Throne contained the usual references to increased prosperity and the success of various Ministerial policies, and dwelt upon the Government's desire to promote international trade and peace. The only legislative measures mentioned were Bills for the establishment of a Federal system of unemployment insurance, the enlargement of the authority of the Federal Railway Commission, the revision of the Franchise and Elections Act, and the establishment of more effective parliamentary control over the export of electrical power to the United States.

Before the session opened the Government had made a preliminary move about unemployment insurance, which a decision of the Privy Council in 1937 held to be within provincial jurisdiction, by drafting for passage by both Houses an Address to His Majesty praying that the British Parliament should pass a simple amendment to the British North America Act, to empower the Federal Parliament to legislate about unemployment insurance. This address has been forwarded to the nine provincial Governments. The acquiescence of six to the proposed transfer of jurisdiction has been promised, but the ministries of Alberta and New Brunswick have not shown themselves in favour, and Mr Duplessis, Premier of Quebec, has reiterated his opposition.

In a public speech, Mr Duplessis challenged the right of the Federal Parliament to amend the Constitution without the unanimous consent of the provinces, and declared that Quebec would not surrender an iota of its present jurisdiction to a body which was incapable of solving the railway problem. Although the King Government's majority in the Commons includes 60 out of the 65 Federal members from Quebec, it is doubtful whether it will proceed with a constitutional amendment which the Government of Quebec will repudiate as invalid.

The NATIONAL BANK of NEW ZEALAND, Limited

Established 1872

Head Office:—8 MOORGATE, E.C.2

Subscribed Capital - £6,000,000

Paid-up Capital - £2,000,000

Reserve Fund - £1,000,000

Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

Constitutional Reform Proposals

The Rowell Commission on Dominion-provincial relations has been sitting in Ottawa since January 17th. The view has been advanced that the aspirations of the Fathers of Confederation to create a Federal State with a strong Central Government gradually achieving a progressive unity for the Dominion have been frustrated, partly by unfortunate decisions by the Privy Council, which have encouraged provincial particularism by strengthening provincial powers, and partly by the culpable weakness of Federal Governments since the war, in failing to exercise the powers which they possessed to protect national interests against provincial pretensions. Particularly severe criticism was directed against Lord Atkin's judgment in 1937, which killed most of the social reform programme of the Bennett Ministry and imposed a limitation upon the treaty making powers of Canada.

It was strongly advocated by the Trades and Labour Congress and other witnesses that the Federal authority should be enlarged to make possible a uniform system of legislation and administration upon industrial and social problems. The Canadian Manufacturers' Association, on the other hand, argued that the basic problems of Canada were financial rather than constitutional, and could be most effectively solved by a general 20 or 10 per cent. curtailment in all public expenditures. The Bankers' Association also laid stress upon the burden of taxation, and intimated that, if the special taxation on banks in Alberta was not removed, they would probably close all their branches in that province.

Letter to the Editor

By-Passing the Stock Exchange

TO THE EDITOR OF THE ECONOMIST

SIR,—The article "By-passing the Stock Exchange" in your issue of February 12th deals, so far as it goes, very clearly and fairly with a development of relatively recent growth, but it is as notable for its omissions as for what it says.

While the writer deals only with the problem as it affects the gilt-edged markets, members of the Stock Exchange are well aware that the practice extends to practically every market in the "House," and, unless checked, may grow to proportions which will threaten the existence of the Stock Exchange as now organised.

You do not refer to the fact that practically every one of the transactions referred to is carried out on the basis of a price established by means of an organised market—the Stock Exchange—such prices being established through the operation of the accumulated knowledge and experience of jobbers by the risks accepted by them and by the use at their own risk of all their available resources. Without such a basis not one such transaction in a hundred could be carried out.

The jobber in the Stock Exchange, whether in the gilt-edged or other market, stands to be "shot at." He makes a price within the limit of his resources and experience of any particular market, not knowing whether he will be called upon to buy or sell the security, irrespective of what his opinion may be as to the respective wisdom of a purchase or sale. His outside competitor deals when it suits him; like the pirate buses of other days, he skims the cream of the business at a cut rate, and leaves the rest alone.

The outsider has no "overheads" to speak of in connection with his business—as your article points out "a discount house may cover its overhead costs from bill business"—but a broker must bear the heavy cost of an organisation designed not only to transact the large business between professional or semi-professional investors, but also to provide advice and information over an enormously wide area of investment, to the investor of £50 or £500, as well as to those who wish to deal in £50,000 or £500,000; he must maintain a staff to deal with a vast mass of correspondence which may or may not bring a direct return, and perform all the innumerable services a broker renders to his clients both large and small.

You refer to the reaction of jobbers to uncertain market conditions as being a restriction of their "books" and, while you are commenting on the gilt-edged market, the implied stricture reflects on other markets as well. But jobbers are ordinary business men intent on making a profit. Apart from

Business Qualms

Developments in the United States are being anxiously watched, and there is some fear of renewed depression. After a sharp advance in the first week of the year, the general economic index of the Bureau of Statistics gained rather more than another point in the week ended January 15th, but lost the equivalent in the week ended January 22nd. Given below are the data about the three major components:—

Week Ended	Car-loadings	Wholesale Prices	Bank Clearings	General Index
January 23, 1937.....	86.5	81.7	118.5	121.5
January 8, 1938.....	82.1	83.5	95.7	109.3
January 15, 1938.....	88.9	83.4	91.7	110.4
January 22, 1938.....	83.1	83.0	95.9	109.3

Merchants are hesitant about incurring heavy spring commitments owing to uncertainty about the price outlook. The mining industry shows no slackening of activity, and lumbering operations are progressing satisfactorily, although export demand is not strong.

The textile mills are experiencing a seasonal slackness and there has been a falling-off in the iron and steel, paint, automobile and footwear industries. But the firms producing light machinery and equipment remain busy, and farm implement plants are operating at a higher level than at this date for some years. In the last two months there has been a marked increase in the number of people on relief, and municipal authorities are complaining that their resources are being taxed to the limit to provide relief funds.

any individual view they may hold as to the immediate course of prices and their chances of being able to do a bargain at a profit, the extent to which they can commit themselves is restricted by their capital resources and their legitimate borrowing powers.

In this connection there is another factor to which you do not refer, and that is that the Chancellor of the Exchequer is a partner in every jobber's business and takes up to 50 or more per cent. of all profits—and frequently of fictitious or paper profits—but does not share the losses.

In considering possible solutions you state two elements must be considered, the level of brokerage commissions and the jobber's turn, and that the new competition should be met in "the time-honoured way, by removing its economic *raison d'être*"—by which presumably you mean cutting commissions and "turns" to a competitive level. Besides ignoring the considerations set out above, which I think show clearly enough that such a remedy would bankrupt the Stock Exchange in a short time, it takes no account of the extent to which brokers share their commissions with agents or so-called agents.

If banks charged their customers for such services as they render in connection with their customers' Stock Exchange transactions; if the Public Trustee charged his customers with the cost of doing their business instead of subsidising his office (quite improperly in the opinion of many) at the expense of stock brokers; if all solicitors charged their clients instead of their brokers for the services rendered; and if stock brokers themselves refused or were forbidden to return commission to an army of touts and parasites; then no doubt it would be possible and profitable to reduce commissions substantially. At the same time, if brokers are compelled to bring all business they get into the Stock Exchange, markets may be restored to a state of liquidity in which jobbing may become once more an economic proposition—which it is not at present—and not merely a gamble as to whether the value of the "book" will go up or down.

If anyone cares to study the value of estates left by members of the Stock Exchange for a number of years past, any illusions as to the profitability of the business generally will be dispelled. A few large fortunes will be discovered, and of them 90 per cent. will be found to have been left by elderly or old men who made them in the days of a shilling income tax and no sur-tax.

In conclusion, sir, may I note that you refer to "an authority (the Stock Exchange) which is reluctant to seek the exclusive rights bestowed by a charter" and to say that you might perhaps have said—*was* reluctant, etc.

Yours faithfully,
MEMBER.

Books and Publications

Too Late for Empire

MR W. H. CHAMBERLIN made his name as foreign correspondent in Russia for the *Christian Science Monitor*. His books on that country maintained the highest standards of professional journalism, and made it certain that his first book on Japan, to which country he was transferred three years ago, would be awaited with interest. In "Japan Over Asia,"* his professed aim has been neither to accuse nor to vindicate, but to set down objectively the main events and causes of the forward drive in Asia, and the auguries for Japan's Imperial career in the future.

Mr Chamberlin's objectivity suffers neither from deviation toward the polemical Left nor from the spurious realism of the pontifical Right. On a subject of such strong contemporary controversy, this is no mean feat, but Mr Chamberlin has the American's advantage over the Englishman that his attitude toward foreign politics is not determined by his domestic political beliefs.

There have been correspondents in Japan before, and they have been known to write books. But, although the ground is familiar, Mr Chamberlin proves himself an expert guide. Lucidly the reader is conducted through an analysis of Japan's advances to the North, the West and the South; of her trade offensive on foreign markets; of the economic and political peculiarities of the Japanese State; of the permanent farming crisis; and of the division between mediæval and modern ideas and technique which is the determinant characteristic of present-day Japan. A better general guide would be hard to find.

When this book was written, the present war in China was barely two months old. The sections of the book which will be turned to most eagerly are those which give the author's views on the probable outcome of that conflict, and on the internal strength of Japan. Unlike many who hold that Japan would have been satisfied with Manchuria, if only the League had not completely misunderstood the situation in 1931, Mr Chamberlin holds the opinion—which certainly seems more in accordance with the facts—that, ever since the occupation of Manchuria, Japan has experienced an overmastering urge to expansion on the Asiatic mainland.

In Japan the immediate response to the war was "unanimous patriotism." The disciplined nature of Japanese life makes this hardly surprising. Mr Chamberlin notes the

bitter contradiction that Japan's race for empire, justified by nationalist economists as the sole remedy for over-population and natural poverty, and the immense economic and financial sacrifices which it demands... seem to exclude any large-scale rehabilitation measures for the benefit of the peasants who, from the nationalist viewpoint, represent the best type of loyal Japanese subject.

But "revolution from below, a sweeping revolt of the masses, seems unlikely, unless under the stimulus of some crushing military defeat."

Nor is it likely that the mythical moderates or liberals of big business will restrain the military adventurers. Mr Chamberlin distinguishes the former from the latter in terms of the foxes and lions of Pareto's parable.

Will Japan succeed in establishing its Oriental Empire? Mr Chamberlin rightly emphasises the paramount importance of the time factor:—

If Japan can crush effective Chinese resistance within six months, the military and political side of its venture will have succeeded.... On the other hand, if China after a year still has forces in the field, perhaps armed from Russia, Japan's ultimate victory is likely to prove a Pyrrhic one.

The war is now in its seventh month. Quite apart from the question of Japan's financial and economic capacity to exploit a conquered China or to conduct a long drawn out campaign, Mr Chamberlin raises the question whether Japan has not appeared too late on the Imperial stage.

To-day the masses, even in backward and largely illiterate countries, are far more nationally conscious than they were

* "Japan Over Asia." By W. H. Chamberlin. Duckworth 328 pages. 15s.

during the empire building days of the eighteenth and nineteenth centuries.... Japan's problems are by no means ended when the process of military occupation is completed.

Various incidents involving the Western Powers in the course of the war have demonstrated clearly that the older Empires are most certainly not waiting, with finger on trigger and chip on shoulder, to discipline any upstart who may dare to confront them. But the spread of opposition to aggression among the peoples of the Western nations, exemplified by the many agitations for sanctions against Japan, together with the growing national consciousness in backward nations commented on by Mr Chamberlin, may well in the long run prove that Japan has indeed come too late to Empire. The Imperial system may be proving itself outmoded in the modern world, and Japan may be the last and the least successful of the military adventurers.

Shorter Notices

The Financial Times. "Golden Jubilee Supplement." February 14, 1938. 72 Coleman Street, E.C.2

The lapse of fifty years' vigorous life has brought from *The Financial Times* an appropriate souvenir of its widespread and well-known interest in all branches of business activity. A number of well-known persons contribute their views about the present position and prospects of trade and industry; and the result is a handsome and informative production.

"London and Cambridge Economic Service." Monthly Bulletin. January 24, 1938. London School of Economics. Annual Subscription £6.

The January Bulletin of this invaluable service of statistical information and analysis marks a substantial enlargement in its scope. Monthly tables of finance, prices and wages, output, external trade, shipping, employment and foreign exchanges are now included. The charts have been redrawn and increased in number. Frequent special articles will be published in future, and the number of foreign countries supplying information has been increased. The new Bulletin should be even more useful than the old to both economists and business men.

"International Trade Statistics, 1936." League of Nations Publications. Allen and Unwin. 384 pages. 10s.

The foreign trade of over sixty countries is here analysed for the years 1934, 1935 and 1936, and classified by commodities as well as by principal countries. In addition, imports and exports are reclassified into ten groups, according to use and stage of production. This remarkable compendium of commercial facts has been made even more useful for the many people who must depend upon it for reference.

Second Impression

AN ECONOMIC HISTORY OF AUSTRALIA

By EDWARD SHANN. 18s. net.

"The most complete treatment of its subject available."—*The Financial News.*

"Professor Shann's book is a masterly piece of work. It is a disciplined and objective study of the formative factors in the making of Australia. And what an astonishing story it makes!—here is history as full-blooded and significant as any country can show." *The Listener.*

CAMBRIDGE UNIVERSITY PRESS

THE BUSINESS WORLD

Recovery and the Reichsmark

POSSIBLY because of the high hopes aroused by his mission, M. van Zeeland's report has in some respects given rise to feelings of disappointment. The value of the report itself is fully recognised; public opinion has welcomed the constructive suggestions for lowering tariffs, abolishing import quotas and extending and modifying the Tripartite Agreement. Yet there is a natural feeling that political issues—which M. van Zeeland very properly refrained from discussing—form a real bar to any progress along the lines of the report.

A second reading of, at least, the monetary sections of the report suggests what M. van Zeeland may have felt to be the real crux of the world situation. That is the overvaluation of the reichsmark, possibly by about 30 per cent., which, together with Germany's accumulation of external debts, is one of the origins of Germany's present network of exchange restrictions and clearings. A fundamental fact to-day is that a large share of the world's international trade is done by the United Kingdom, the United States and Germany; and one member of the trio has abandoned the classical system of free external exchange and free internal economy. Consequently, there is a serious discontinuity in the normal flow of world trade and finance.

It is opportune, therefore, to examine whether there is any likelihood of a devaluation of the reichsmark, such as would facilitate a relaxation of the German exchange restrictions. The first question to consider is by how much the reichsmark is now over-valued, with respect, say, to the dollar or the sterling currencies. This question is far from being easy to answer. The official reichsmark rate is now about Rm. 12.50 to the pound, corresponding to the former gold parity, which Germany has never abandoned. A large part of Germany's external trade is conducted through clearing and compensation agreements, based in many cases on special rates of exchange, fixed *ad hoc* and varied from time to time. German exports, furthermore, are heavily subsidised by means of levies collected from within each industry. The amount of each subsidy varies between the different industries, the only limit imposed by the Government being that no subsidy shall exceed the amount by which foreign currencies are depreciated in terms of gold. Based on the official rate of Rm. 12.50, it is probably true to say that German prices are about 30 per cent. above the world level. But in fact most German exports have been placed upon a competitive level by means of the devices we have described.

The case for the devaluation of the reichsmark is that even from Germany's point of view it would be a preferable alternative to the present makeshift and complicated arrangement of clearings, compensation marks and export subsidies. Sooner or later, it is argued, the devaluation of the reichsmark will have to come. First England and then France were driven off the gold standard by the overvaluation of their currencies, though they still held gold reserves much larger than Germany possesses to-day. It will be impossible for Germany to adhere indefinitely to a nominal gold standard since she has practically no gold

reserves at all and is being continually forced to regulate her imports by strict reference to the size of her exports.

Nor (the argument proceeds) are there any serious technical difficulties in the way of German devaluation. By one means or another the mass of German external indebtedness embodied in the standstill agreements is being liquidated—admittedly at the cost of serious sacrifices by the creditors. The outstanding balance might be consolidated, perhaps on terms which would preserve for the creditors the principal of their debts, while bringing the rate of interest down to levels comparable with the present era of cheap money. The argument needs careful scrutiny, for the creditors would still need an assurance of an eventual repayment of their principal. But if devaluation and a removal of exchange restrictions brought Germany back into the field of normal international trade, then the former reimbursement credits, now frozen under the standstill credits, would not necessarily be repaid, but would simply resume their previous function. For the remainder, M. van Zeeland himself mentions the possibility of consolidation, and hints, indeed, that fresh credits might be forthcoming through the medium of the Bank for International Settlements.

Obviously, many important conditions, both political and financial, would first need to be fulfilled before external credits would be granted to Germany. And such assistance would do nothing to solve another problem which would at once confront Germany if her exchange restrictions were removed—namely, the probable withdrawal from the country of the capital owned either by Jews or by other German *émigrés*. That capital would in the aggregate be large enough to upset the stability of the exchange. Thus, even if all the other conditions were fulfilled, Germany would obviously remove her exchange restrictions only by degrees, in accordance with the recent Austrian precedent. The "blocking" of export of capital would need to be retained for a considerable time to come.

Sufficient has been said, nevertheless, to show that the obstacles in the way of devaluation are formidable. First and foremost, Germany does not admit the need for devaluation while exchange restrictions and clearings are an integral component of her present economic system. Re-armament and its methods of finance by concealed short-term borrowing, the Four Year Plan, and the whole internal system of control—all would fall to pieces if exchange restrictions were removed. This is realised even by that school of German thought which stresses the importance to Germany of external trade, and tries to secure that the export industries obtain their due share of Germany's raw material imports. Though individual Germans may hold differing views on self-sufficiency and the Four Year Plan, no one sincerely believes an early removal of exchange restrictions to be practical politics.

German exports, again, are already obtaining, through subsidies and clearings, many of the benefits of devaluation. Thus, Germany does not provide a parallel to England or the former gold *bloc* countries. Devaluation could only increase the cost of her imports and so raise the general level of internal prices and costs. It would not give any compensating help to exports unless the present system of subsidies were retained. Yet from the world point of view one of the objects of devaluation would be the abolition of these subsidies. If their withdrawal coincided with the consolidation of Germany's external obligations, it would release funds which could be made available for the service of the new funded debt.

The political advantages derived by Germany from exchange clearings should also be taken into account; for they have given her a powerful hold on much of Central and South-East Europe. Those countries look to Germany both as a consumer of their own products and as a supplier of many of their essential needs. Exchange clearing agreements may thus be a powerful weapon which Germany will not lightly relinquish. Undoubtedly, world recovery has assisted these countries to find "free exchange" markets, and to that extent to become less dependent upon Germany. But to the latter country that fact might itself appear as an additional reason why she should not lightly abandon exchange clearings.

Altogether, the outlook for the devaluation of the reichsmark is doubtful, to say the least. Countries such as England and the United States will require definite assur-

ances before they grant new credits to Germany, which for all they know will be used in financing re-armament. Germany, on her side, will require assurances that the world's markets will be opened to her sufficiently to bring her external trade up to the present high level of her internal activity. She will also need to be satisfied that she can devalue the reichsmark and relax her exchange restrictions without destroying one of the main foundations of her present economic system. All these points involve problems, political as well as economic, of the utmost difficulty, which can only be solved in an international atmosphere of mutual good faith and goodwill. Yet their solution is essential to world recovery in the true sense of the term. It is for statesmen, both in Germany and elsewhere, to find the will and the means to bring about that result.

The Miner's Wage

KING COAL suffered the fate of many monarchs after the last war. The rivalry of oil and electricity, fuel economy, the rise of road transport based on the internal-combustion engine, economic nationalism and the shrinkage in world trade—all these played their part in undermining his sovereignty. In Great Britain the coal industry became the breeding ground of Special Areas. Exports, output and employment fell; and the deep depression of the early thirties found the industry declining, overcrowded and relatively inefficient.

In the last two years, however, the tide has turned; and the position of the coal miner has been improved. The effect of industrial recovery, re-armament and the selling schemes which became operative on August 1, 1936, has been to raise export prices and, still more, domestic prices above the levels of 1929. Output in 1937 was 34 million tons more than in 1933, and only 2 million tons less than in 1930. Home consumption, in which the recent revival has been most evident, was over 5 million tons more than in 1913, the peak pre-war year, and some 15 millions more than in 1929. Even exports, which still lag behind the 1935 figure and far behind that of 1929, were 6 million tons more last year than in 1936. The operations of the industry resulted in a credit balance of nearly £10 millions in 1936 and over £13½ millions in 1937.

The benefits to the miners of this welcome change of fortune have been striking. In 1932 and 1933, over 30 per cent. of the insured workpeople in the coal industry were out of work. The percentage fell, however, to 22.2 in 1936 and 14.6 in 1937, and was as low as 11.5 on January 17, 1938, when only 99,500 coalminers were out of work, compared with nearly 425,000 in June, 1932. The decline has persisted in recent months, despite the setback in most major trades.

Miners' wages have followed the upward trend of activity in the industry. Since 1921, wages in the thirteen districts into which the producing areas of this country are divided have been made up of an agreed basic rate for each category of worker plus an agreed percentage addition determined by the proportion of the ascertained net proceeds of the industry which it is decided to treat as labour's share—ordinarily 85 per cent. but 87 in some districts. Wage rates necessarily change, therefore, with the commercial fortunes of the industry, except that in no case must the rates paid fall below specified minima. The principles of a minimum wage and a scientifically determined economic wage are thus combined. If the latter falls below the former, the minimum rate is paid, and the deficiency carried forward to be allowed for in more prosperous times. In 1936 and 1937 the operation of this system, coupled with the negotiation of important new agreements raising basic rates, or providing for higher percentage additions thereto, notably increased wage rates and earnings.

Net weekly increases estimated at nearly £335,000 were made in wage rates in the two years, the increases in 1937 varying from 2 to 20 per cent. on current rates. Earnings per man-shift rose from less than 9s. 2d. in 1933 and 1934

to 10s. 4d., 10s. 9½d. and 10s. 8d. in the first three quarterly periods of 1937; and the higher rates were earned when employment was much more continuous and widespread than for several years. The number of days on which the pits wound coal in 1937 averaged 5.13 per week, compared with 4.74 in 1935 and 4.86 in 1936; and the number of man-shifts worked per person employed rose from 256 in 1935 to 262 in 1936 and about 270 in 1937. It may well be, indeed, that earnings have reached a peak because the physical slack of short time, the absorption of which has accounted a good deal for the upward trend in earnings, has now been almost wholly taken up. The average number of wage-earners on the colliery books last year was 777,000, compared with 759,000 in 1935 and 756,000 in 1936. Any further very large increase is unlikely, though shortages of skilled labour were reported last year.

The advance in earnings, days worked and numbers of persons employed has been clearly reflected in the industry's wages bill. Wage costs per ton rose from 8s. 6d. in the first quarter of 1935 to nearly 10s. 1d. in the third

Hear the Music
you love best... when you wish

This beautiful instrument is the "open sesame" to the whole world of musical entertainment, broadcast or recorded. With it, you can listen not only to the voices of the nations calling from every corner of the earth, but also to the world's greatest artists, singing or playing for you at their supreme best on "H.M.V." Records.

Model 479 AC is a handsome 8-valve Radiogram covering a broadcast waveband. The chassis has five watts output and incorporates all the latest refinements in both radio and record reproduction. 33 Gns.

quarter of 1937; and in the first nine months of 1937 the miners received nearly £78½ millions, nearly £16 millions more than for this period in 1935. Generally, the miners in work to-day are appreciably better off than they were two years ago, despite an increase of 13 points in the cost of living between January, 1936, and December, 1937. Wage rates, employment and earnings have risen together, as the result of boom conditions, rising prices, organised marketing and controlled production under the Act of 1930.

There is, however, a reverse side to the medal. The quarterly earnings of coal miners have risen since 1932 from less than £27 10s. to well over £34, but this wage for three months is not strikingly high and, since the average includes all grades of labour, including salaried persons, it conceals the existence of low paid juvenile and unskilled groups of workers. Again, there is considerable variation between districts like Northumberland, Durham, South Wales, Cumberland and Scotland where earnings are below the average, and Yorkshire, Derbyshire and the other Midland areas where they are above the average.

This lack of uniformity is, however, no more than a reflection of the diversity of the age and commercial fortunes of the various districts. A more serious side to the tale of recent prosperity is the probability that the last two years' progress in earnings has reached its limit. Other costs have risen more rapidly than wages recently. There is no immediate prospect of any sharp recession in the demand for coal, so long as industrial activity and the re-armament programme are maintained, but it is unlikely that output, earnings, and especially exports will increase in 1938 appreciably beyond the satisfactory levels of 1937. And even at the height of prosperity about 100,000 coal miners are still out of work.

Nevertheless, the task of scaling down the coal industry to suit the limited opportunities afforded to it since the war has proceeded apace since 1930. In 1913 there were still over 1,127,890 persons employed at coal mines. In 1927 the total was still over a million despite the steady shrinkage in output and markets. To-day the number has fallen to little more than three-quarters of a million. Output quotas and selling schemes have largely stabilised the home market, on which the coal industry must now chiefly depend. In the absence of wide and disturbing changes in demand for export coal and bunkers, the industry may be facing a future of greater stability, with an annual output of about 230-240 million tons and an employed labour force

of about 750,000 persons. In the short run, however, the industry will always be affected by cyclical changes in general prosperity.

The upswing of the trade cycle has brought comparative prosperity to an industry which has made a beginning—but only a beginning—with the task of setting its own house in order. Its capacity to resist trade recession, however, must depend upon considerable advances in the direction of further efficiency, and upon reasonable and long-sighted policy from both owners and trade unions. Unless the owners, voluntarily or under compulsion, carry out the amalgamations necessary to eliminate the uneconomic pits and make general profitable working possible, the favourable record of 1937 will not easily be repeated. Great headway has been made in the mechanisation of coal-cutting and other mining operations, but the output per man-shift in British pits is drastically below the figure for Poland—with her newer pits—and Germany. And in view of the relative exhaustion of Britain's best seams, any appreciable improvement in this direction is not likely.

Much has been achieved by statute, by agreement between owners and mineworkers, and by technical improvement, but all parties in the industry must perforce cut their coats according to the cloth available. There is not likely to be room again for the 100,000 miners now out of work—indeed, this number includes many who are elderly and unfit to resume active full-time work, and excludes many more reclassified in other occupations. Nor is there room for a large number of the existing small and relatively inefficient mines. The process of scaling-down and pruning the industry must go on; for on it is contingent the prospect of steady employment for an appreciable body of miners at a reasonably remunerative wage. The maintenance of the owners' recently expressed attitude to the amalgamation clauses of the Coal Bill now in process of legislation, would jeopardise these objectives as much as any attempt by the mineworkers to secure further general wage increases unjustified by the industry's present position. The Federation's inclination to give the shortening of hours by international agreement precedence over wage demands in their current policy is a welcome tendency, though the effects of the forty-hour week in France offer warning against over-hasty change. In the long run, the miner and the mineowner alike depend upon the productivity of their industry. Trade recovery, so far, has brought relief, but fundamental problems of readjustment and reorganisation remain.

Oil Dividend Estimates

In many respects 1937 was a satisfactory year for the oil industry. All the statistical indicators paint a picture of vigorous growth. World production and consumption increased by about 12 per cent. to the highest level yet attained. Evidence of the active state of the industry was afforded by the astonishing rise in tanker freights by over 200 per cent. and their significant firmness, despite the severe reaction in other freight rates. The grim business of war in two continents and the accumulation of strategic stocks elsewhere added their quota to demand.

It is not surprising, therefore, that many oil companies achieved record outputs in 1937. In addition, oil prices in nearly all markets were comfortably above the level of 1936, despite the reaction in the closing months of the year. To translate movements in output and prices into net profits for individual companies, however, is notoriously difficult. Oil is not a uniform product, and the leading

companies are naturally reticent in disclosing vital information about their contracts. But the investment statistician can determine, within broad limits, the movements in gross revenues which result from changes in prices (in the particular market where each company sells its products) and in output and sales. This procedure is followed in the table opposite, which shows separate production and price indices for some dozen leading companies, based on a technique devised by Moodys-Economist Services. A "gross receipts index" is derived from these two key indices, the latest financial year being used as a base. It is, of course, a long road from such indices to estimating probable dividends, for which informed guesswork must largely be employed. Valuable guidance, however, has been afforded by this method in previous years, despite its limitations.

Examination of the combined receipts index reveals some striking differences in the estimates of movements in gross receipts compared with 1936. Attock Oil shows the greatest rate of advance, for its output has been more than doubled, thanks to the success of the new drilling programme. But heavy arrears of depreciation still remain as a first charge on profits. This factor goes far to explain the market's reaction to the apparently favourable profit figures for 1937. Estimates for Burmah Oil, the other Indian producer, are complicated by the absence of output figures.

The company's advance in trading profits may not be considerable, but increased investment income, particularly from the Shell and Anglo-Iranian holdings, should permit a material increase in the dividend—perhaps to 35 per cent.

The Anglo-Iranian combined receipts index is also substantially higher, owing largely to increased output. In view of the 60 per cent. increase in profits recorded in 1936, however, a somewhat smaller gain might be expected for 1937, though it should be possible to maintain the 25 per cent. dividend on the increased capital. United British Oilfields' results are subject to wide fluctuations, for the equity capital is particularly high-g geared. The speculative character of this share must be emphasised, although a dividend of 12½ per cent., and perhaps more, is within the bounds of possibility, unless development expenditure has eaten too deeply into available profits. Venezuelan Oil Concessions is also engaged upon a vigorous process of expansion. In this case, however, finance is being provided by a new issue of capital.

No current output figures for Shell are published, and the annual totals are not available until the report appears. But in past years dividends have corresponded closely to changes in gross receipts, estimated by our method. If the company preserved its proportion of world output last year—which appears likely—the maintenance of the 22½ per cent. rate (which was paid on the old capital, before the 20 per cent. capital bonus) seems possible on the increased capital. Mexican Eagle stands at the opposite end of the investment scale. The burden of recent wage increases and the outcome of the present struggle against the Mexican Labour Board's award are so problematical that a valuation of the shares by normal investment standards is ruled out. At best, the dividend is not likely to exceed last year's payment. The Anglo-Ecuadorian estimates cover the period to next June, and assume that crude oil prices are maintained in the remainder of the company's year. They must consequently be regarded as highly provisional. Moreover, the company's relations with the Government appear to have become strained, and an amicable settlement may prove costly. Lobitos, the remaining crude oil producer, may have fared better. The parent company should benefit from an increased distribution by the operating subsidiary, improved receipts from marketing and, not least, from higher oil tanker revenues. The receipts index for Apex (Trinidad) shows only a small increase, for most of the advance in 1937 has already been recorded in the accounts to September last. For the current period the company has to face the consequences of lower prices in the British petrol market, and its output is almost stationary. Both Roumanian producers, finally, have been affected by the general decline in Roumania's oil output, but this factor has been fully compensated by higher export prices. Transfer

difficulties under the Anglo-Roumanian clearing agreement, however, have multiplied, and the high yields now offered by Phoenix and Steaua Romana shares suggest that an interruption in dividends is already discounted.

So much for 1937. What of the future? The estimated dividend yields shown in the final column of the accompanying table suggest that the market is far from confident, either that oil company directors will be willing to make the generous distributions we have indicated or (more important) that the industry will be able to repeat last year's performance in the current year and beyond. The dangerous possibilities of disequilibrium in the vital American oil market are largely responsible for the market's caution. The winter season is normally an uneasy time for oil investors, but this year such hesitation has developed into concern for the whole structure of oil prices. A persistent demand in America for lighter fuel oils for heating purposes has ruled out an adequate restriction of refinery output. Owing to the seasonal reduction in the demand for gasoline, stocks have steadily risen to a record level, exceeding 85 million barrels, and two months have yet to run before the normal call on accumulated reserves commences. As a result, American petrol prices have been cut to wholly uneconomic levels, and export quotations have fallen proportionately. Efforts to reduce refinery intake by curtailing the output of crude oil have already been made, with a moderate degree of success. So far the crude oil market has preserved its strength, but the market for refined products is still top-heavy, and it is impossible to rule out the possibility of some reduction in crude oil prices during the current year. Moreover, estimates of gasoline demand in the United States show little advance on last year's total—a direct consequence of the business recession.

Companies operating outside the United States, however, are not threatened with any serious interruption in the growth of world demand. But average prices in 1938 are unlikely to be equal to those of 1937, and some setback in profits appears inevitable on this account. Investors may note that companies like Apex (Trinidad) and Anglo-Iranian, with a large or exclusive stake in the comparatively stable British market, will be affected by this week's reduction of ½d. per gallon in petrol prices, which follows the recent concession of an increased retailing margin by the leading distributors. The oil group, indeed, offers a wide spread of investment risks, ranging from speculation in the higher mysteries of Mexican politics to participation in the equity of a sober industrial giant like Shell. But all would suffer—if in unequal degree—from any disequilibrium between production and consumption, and none is immune from falling prices. In view of these hazards, can it be said that the market is unduly pessimistic in its valuation of oil shares? There may conceivably be some recovery in share prices if the adverse factors should fail to materialise, but at present that consolation is entirely negative.

Finance and Banking

America's Gold.—On Monday Mr Morgenthau announced that no more gold would be sterilised by the American Treasury until imports of gold exceeded \$400 millions a year. The January gold imports of \$30 millions would be deposited in the Federal Reserve Banks in conformity with that decision. Questioned on this announcement the following day, Sir John Simon said, in the House of Commons, that the change in American policy was made in order to modify arrangements which might have a deflationary tendency, and it was in accordance with the general British policy of easy credit. It was not necessary, however, for Great Britain to take similar action, as there were many differences between the monetary methods of the two countries. So far the change in American policy can have only a psychological effect; for the United States is importing very little gold at present. Indeed, the general tendency is for foreign funds to move out of dollars and into gold, and the London gold premium has again risen nearly high enough for gold to be sold by the American to the British authorities at a profit to the latter. One motive behind Mr Morgenthau's statement may be, in fact, a desire to show that the dollar remains firmly based on gold at its present parity. In any case, it would now seem that the narrowing of the credit base in the United States, brought about last year by the raising of member bank reserve requirements, went too far. The New York banks, in particular, having to contend with the withdrawal of deposits held by the interior banks as well as with the increase in their own reserve requirements, turned sellers of Government securities to replenish their cash. This was one initial cause of last year's setback, and in view of the present state of American business the authorities may well have reverted to their former specific of more abundant credit. Here again the main consequence of the change will be psychological, for as the result of last year's setback there is at the moment no shortage of credit.

The Credit Base.—During the first three weeks of January bankers' deposits at the Bank of England were running in excess of £120 millions, or a level somewhat higher than those of previous years. This made money very easy, and inspired suggestions that the authorities had decided upon a further expansion of the credit base. The picture was further complicated by the seasonal reduction in the fiduciary note issue on January 19th, which involved an increase of £20 millions in Government securities held by the banking department, and so made these appear unduly high. This, again, gave the impression of a deliberate decision to enlarge the credit base. Subsequent Bank returns, however, appeared to throw doubt on these suggestions. By February 9th bankers' deposits were down to £103 millions, or to much the same level as in the two

previous years. The following table reviews the actual changes in the banking department during the period from the first week of January (when the New Year disturbances were over) to the second week of February:—

	1936	1937	1938	
		(£ million)	(a)	(b)
Assets:—				
Govt. securities	— 5	—12	— 3	+17
Other securities	— 6	—10	—15	—35
Reserve	+ 7	+ 8	— 8	— 8
Total	— 4	—14	—26	—26
Liabilities:—				
Public deposits	...	— 2	+ 2	+ 2
Bankers' deposits	— 4	—11	—26	—26

(a) As published. (b) Eliminating effects of £20 millions reduction in fiduciary note issue.

If the disturbances due to the reduction in the fiduciary note issue be eliminated, the contraction in Government securities was considerably greater than in previous years. This week's Bank return, however, showed a rise of nearly £5 millions in Government securities (against less than £2 millions a year ago), and a growth of £3½ millions in bankers' deposits (against a fall of £8½ millions a year ago). Official policy, evidently, is still anybody's guess.

The New French Loan.—This week it was announced that the French Government were about to float a new internal loan for Frs. 3,000 millions in new cash, together with some Frs. 2,000 to Frs. 3,000 millions conversion of old debt. The exact terms of issue are not yet known, but they are believed to offer a yield of over 7 per cent. Last January, over 6 per cent. had to be offered in respect of an Algerian loan of Frs. 600 millions, and even then the lists remained open for three weeks. More recently, a Credit Nationale 6 per cent. loan of Frs. 1,000 millions was placed at 96, though it is believed to have been fully subscribed. The frequent appeals by the French Government to the Paris market, on terms which can only be described as onerous, are not calculated to restore confidence, but the plain truth is that the Treasury needs the cash. It is to be feared that French finances are not yet at the end of their troubles.

Italy and Foreign Capital.—In her efforts to attract foreign capital Italy has recently granted many concessions as regards both internal taxation and exchange restrictions. Thus, writes a correspondent, a foreign purchase of real or house property, of a value in excess of Lit. 500,000, is exempt from registration and other duties, including relief from death duties, except after the lapse of twenty years. A foreign purchaser of Italian shares is not exempted from the 10 per cent. coupon tax, but may reclaim the tax deducted from his dividends. An undertaking is also given that even in the event of war no disabilities will attach to foreign-owned capital. A resident abroad, whether Italian or foreign, may have bond interest up to a limit of 5 per cent. and also share dividends without limit transferred to him in his own currency without restriction. Nor are any exchange restrictions placed upon the transfer of such capital, in the event of the realisation of the bonds or shares. How far these provisions will tempt foreign capital to Italy is doubtful. There is no certainty that interest and dividends will be transferred without delay, especially as Italy's exchange resources are now decidedly tenuous. Nor can the guarantee of security in time of war command much confidence. The real point, however, is whether the foreign investor will be able to overcome his mistrust of Italy's economic and political outlook. If not, no special attractions of this kind will coax his money from his pocket.

Insurance Notes

National Mutual Life Assurance.—New life assurance policies were effected for a net amount of £1,038,000 last year—a record for this society. In addition, sinking fund policies for sums assured aggregating £58,000 were issued. Premium income showed considerable expansion at £413,000 compared with £388,000, and interest receipts were some £3,000 greater at £270,000. Although expenses increased, they formed a considerably smaller percentage of the premium income, at 14.1 per cent. against 14.6 per cent. in the previous year. The net rate of interest earned on the insurance funds, excluding reversions, fell from £4 6s. 1d. per cent. to £4 2s. 1d. per cent., but was 9 per cent. higher on the total funds. In accordance with the usual practice of the society, Stock Exchange securities have been taken at market prices on December 31st. On this occasion the customary balance of profit or loss on securities does not appear in the revenue account, but the movement in the reserve and the investment reserve funds indicates that there occurred an aggregate loss on securities realised and revalued of £641,000, or nearly 8.4 per cent. of the total assets. It may be argued that market value fluctuations are only of secondary importance in life assurance finance, as there is seldom any necessity to realise investments to meet outgo, and the maintenance of interest income is much more relevant. The practice of taking investments at market values may be commended as exhibiting to the members the exact current capital position, but up to the present it has not, in fact, been adopted by the majority of offices. It is easy, and not unusual, for erroneous inferences to be drawn, both when appreciation takes place and when depreciation occurs.

In spite of the £641,000 written off on account of investments last year, the total assets of the National Mutual fell only by £368,000 last year to £7,595,000. Some increase took place in British Government securities and debentures, but preference stocks were £161,000 smaller at £1,473,000. Ordinary stocks, which at the close of 1936 were £1,595,000, and accounted for 20.0 per cent. of the total assets, were much reduced at £1,085,000, equal to 14.3 per cent. of the total assets. While a considerable portion of this decrease in ordinary stock holdings is no doubt due simply to depreciation, it seems probable that there has been a well-marked change in the trend of investment policy. Trading conditions in 1937 appear to have been satisfactory, and interim bonuses on claims in 1938 will be at the same high rate as before, namely, 42s. 6d. per cent. for whole life assurances and 37s. 6d. per cent. for endowment assurances.

Scottish Life Assurance.—Total new sums assured in 1937 amounted to £2,214,000, compared with the record figure of £2,389,000 in 1936, and consideration moneys for annuities increased by £3,000 to £72,000. In spite of the higher rate of income tax the net rate of interest earned on the life assurance and annuity fund was 4d. per cent. higher at £4 4s. 6d. per cent. Total premium income amounted to £662,000 against £625,000, and among the items of outgo may be noticed an increase in death claims from £232,000 to £308,000. Total assets increased by £316,000 to £8,942,000. Mortgages on property showed some expansion, and loans on public rates increased from £135,000 to £274,000, but ordinary policy loans fell slightly from £692,000 to £680,000. On the other hand, loans on medical practices, with policies as collateral security—a form of business recently developed by the company—amounted to £212,000 against £116,000. British Government securities were £68,000 smaller at £1,255,000, and Foreign and Colonial Government securities fell by £195,000 to £535,000. Debenture stocks increased by £166,000 to £2,304,000, and preference stocks by £155,000 to £1,825,000, while ordinary stocks were £79,000 greater at £1,000,000. In accordance with the most recent practice of insurance offices, the company proposes to establish a pension fund for employees, to be constituted by a deed of irrevocable trust. The amount standing at credit of the superannuation account in the balance sheet, some £117,000, is to be transferred to trustees for this purpose.

Indemnity Marine Assurance.—The accounts of this Company in 1937 probably indicate what may be expected to have been the general experience of the marine offices. It was evident from the beginning of the year that marine losses were likely to be much heavier than of recent years, and that with increased trading and values premium income would be higher. In the case of the present company premium income increased by £94,000 to £456,000. Out of this premium income 33 per cent. was expended in claims, compared with 28.9 per cent. in the previous year, and 5.0 per cent., against 6.3 per cent., in expenses. Claims on account of 1936 premium income amounted to £199,000 (against £117,000), and the portion of the premium income still unexpended is only 9.8 per cent. against 26.2 per cent., 26.8 per cent. and 21.8 per cent. in the three previous years. The profit and loss account, to which no transfer is made on this occasion, is £131,000 subject to payment of the final dividend, and the reserve account remains unaltered at £100,000. Total assets amount to £1,761,000, the chief item of which, viz., "Government and other securities," at £1,598,000, appears at considerably below market values. The 1937 dividend is 7½ per cent., contrasted with 8½ per cent. in the preceding year.

MONEY MARKET NOTES

Foreign Exchanges

The continued realisation of dollars by foreign holders, many of whom were re-investing in gold, has kept the spot New York rate low, sterling at one time rising to \$5.0370. On Thursday, however, spot dollars were bid down to \$5.0317. Forward dollars also tended to be offered, but with no quotable alteration in rates. French francs have been subject to intermittent control by the French authorities, who apparently are using that part of the gold obtained from the Bank of France which was not already pledged against previous swap operations. There has been a fair amount of business, but little fresh outflow of funds from France. Spot sterling has hovered either side of Frs. 153, with forward rates strengthening slightly whenever the French

authorities intervened. Belgas remained at about bel. 29.57, but improved on Thursday to bel. 29.56½ in sympathy with the dollar. Guilders and Swiss francs have been very steady at Fl. 8.97 and Frs. 21.60½, respectively. The foreign exchange market has not noticed any Dutch or Swiss buying of gold, but this experience does not entirely agree with the bullion market's view.

The Money Market

The week's increase in bankers' deposits has made money a little easier. Calling by the clearing banks was on a very moderate scale, and the banks bought a certain quantity of Treasury bills of all maturities from March to early May. There is a good demand for

bond money, which is now only obtainable on a day-to-day basis, but the outside rate is no higher than ½ per cent.

Renewed Market Depression.—The slow recession of Stock Exchange prices at the end of last week was not incompatible with the possibility of a change of direction before the end of the account. The tide admittedly was at the ebb, but it seemed to be only a neap tide, which might quickly turn. And Wall Street, apparently, shared London's view. Unfortunately, the news from Austria this week destroyed all hopes of an early recovery in values; for the market viewed its implications more gravely than those of any political development since the German military re-occupation of the Rhineland. Even gilt-edged stocks were affected, while *The Financial News* index of ordinary share prices, which last week broke through its "November low" of 93.0 (July 1, 1935 = 100) and finished at 90.4, had fallen to 86.9 on Thursday of this week. Clearly, the factors governing the immediate course of prices are not economic but psychological. The sales which have depressed prices in this week's narrow markets—and still more, the marking-down of values by dealers who have been unwilling to take in stock—have not been based on considerations of future earnings, nor of the length to which any conceivable recession of trade might go. Nor have they been the inevitable sequel of a topheavy speculative position; for the bull is, at present, almost an extinct animal in London. The whole market, in fact, has been oppressed by the thought that every advance of the less responsible elements in the councils of Germany, and every new advance of German power in Europe, brings nearer an apparition whose name is inimical to the very idea of investment. On purely economic grounds, the Stock Exchange has probably little to fear. Although belief in the coming of some form of trade recession is more widespread to-day than, say, three months ago, there is probably no section of responsible opinion which imagines that its

intensity will be anything like that of the last depression. Dividend yields of 5 per cent. or more on high-grade ordinary shares discount more than a moderate falling-off in earnings. But the Stock Exchange has no basis even for the beginning of any mathematical calculation of the consequences of progressive deterioration in international law and order.

Austrian Bond Situation.—In view of the new diplomatic status of Austria, the bondholder should in prudence revise the standing of her public debt. The two loans of principal interest to the British investor are the 7 per cent. international loan of 1930 (of which £2,930,500 is at present outstanding) and the 4½ per cent. sterling guaranteed conversion loan, of 1934–59, of which the much larger sterling *tranche* of £10,163,900 is in issue. It may be recalled that suggestions were canvassed at one period last year for the possible conversion of the 7 per cent. issue, which has been regularly served, and is callable at 103 per cent. Regular sinking fund operations at or below this price are devised to repay the whole loan by July, 1957. The sterling part of the guaranteed issue (of which the remainder was floated in various international centres) was raised in London in December, 1934. The terms of the guarantee are of particular interest in view of the developments of the past week. The principal and interest of all *tranches* of the loan (except the Spanish) are guaranteed by eight States in the proportions given below:—

	Per cent.		Per cent.
Great Britain	24½	Belgium	2
France	24½	Sweden	2
Czechoslovakia	24½	Denmark	1
Italy	20½	Netherlands	1

there was an impression in the market that it might fare better at this week's tender.

The Bank Return

This week there has been a contraction of £2.0 millions in the note circulation. This is a perfectly normal movement, which occurred in the corresponding weeks of earlier years.

	Feb. 17, 1937	Feb. 2, 1938	Feb. 9, 1938	Feb. 16, 1938
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.

Issue Dept.	Feb. 17, 1937	Feb. 2, 1938	Feb. 9, 1938	Feb. 16, 1938
Gold	313.7	326.4	326.4	326.4
Notes in circulation	453.3	476.7	476.1	474.1
Banking Dept.				
Reserve	60.8	50.3	50.9	51.0
Public Depts.	24.4	11.4	16.1	15.8
Bankers' Depts.	90.6	111.4	102.9	106.4
Other Depts.	36.7	36.6	35.5	35.5
Govt. Secs.	83.1	98.1	93.3	97.9
Discounts and Advances	5.5	10.5	9.6	6.2
Other Secs.	20.4	18.7	19.0	18.8
Proportion	40.1%	31.5%	32.9%	33.6%

In the banking department the Reserve is strengthened by £2.1 millions, as the result of the week's contraction in the note circulation. On the other hand, there was a reduction of £3.4 millions in discounts and advances. These two movements alone would have caused a shrinkage of £1.3 millions in the resources of the banking department and so in the Bank's deposits. Such a movement is in itself insignificant, but it would have followed a shrinkage of

£4.8 millions in the previous week. To even out the Bank's position, the banking department has therefore acquired this week £4.6 millions of Government securities. In consequence bankers' deposits, which previously had been shrinking rapidly, have now risen by £3.5 millions. Generally speaking, the banking department is keeping its resources on an even footing at around £175 millions, and bankers' deposits are much the same as they were on several occasions last year.

The Bullion Market

During most of the week a moderate but persistent movement of funds from dollars into gold kept the London gold premium at a high level. On Thursday this was partly replaced by a general Continental demand for gold, inspired by fears of the outcome of the Austro-German developments. To meet this demand an unusually large amount of gold was released by the authorities, and it did not prove necessary to ration purchasers in any way. The suggestion is made that as the premium is now high enough to make it profitable to ship gold from the United States, it cannot rise higher. This theory is invalidated by the fact that the United States will ship gold only to the British authorities, who are already well supplied. On the other hand, the market does not expect any further increase in

the premium, which is already as high as 1s. 8d.

* Above or below American shipping price.
The New York price of silver remained at 45 cents per ounce .999 fine during the week.

The silver market has been weak and listless. Further bear covering has been more than offset by Continental selling, and also by Indian sales against shipments of unsold balances. Prices are lower than a week ago, and their decline has already attracted some support to the market by American speculators. This support will increase if prices lapse any further. On February 14th the premium of the spot price over the forward price temporarily widened, as bears were prolonging their positions by buying spot and selling forward. The market is now awaiting the Indian Budget, due at the end of the month. The duty on silver is already high enough to be a deterrent to imports, and if there is any change at all, it will be a reduction. Thus the approach of the Budget may cause the market to harden.

The British *tranche* of the loan is redeemable by sinking fund (which commenced last December), at or under par, by December, 1959, but is not optionally callable before 1949. The loan has fallen six points during the past week to 79, affording a redemption yield of 6½ per cent., while the 7 per cent. issue is 9½ points lower at 92, to yield 7½ per cent. The precise significance of these high yields and the character of the International guarantee may have to endure a sterner test in the future than during the past three years.

Council of Foreign Bondholders.—In view of the somewhat surprising misconceptions regarding the constitution and functions of the Council of Foreign Bondholders, the Prime Minister's statement on Monday was particularly opportune. The Corporation was incorporated in 1873 and reconstituted by special Act in 1898. The Government recognise the Council of the Corporation as the body entrusted by Parliament with the duty of representing the interests of the bondholders in matters arising from default, or threatened default, by foreign governments or municipalities. The Prime Minister disclosed that the Council had maintained the closest contact with the Treasury and the Foreign Office—indeed, the contact has been almost continuous in recent years. The Government follow debt negotiations very closely, and give the Council their fullest support. Where no acceptable agreement is reached, the Government are always prepared to consider what further steps can usefully be taken. This necessarily guarded statement will probably find general agreement among bondholders. The extreme use of diplomatic power which is sometimes advocated by disheartened bondholders might well be less rewarding, and would certainly be a more inflexible weapon, than official support of a more informal character, determined in the light of each particular case.

Railway Reports

L.M.S. Report.—The declaration of a 1½ per cent. dividend on L.M.S. ordinary stock disappointed the market, and the stock has since fallen—not entirely on the dividend—to 21½, at which price it yields no less than 7.4 per cent. Net revenue for 1937 amounted to £14,356,276 an increase of £308,100, or 2.2 per cent. Railway receipts were some £2,771,238 higher, but no more than £384,666 of this increase (or 13.9 per cent.) was retained net, while ancillaries actually produced £78,169 less. In sum, the increase in receipts amounted to £3,138,570, of which increased expenditure absorbed £2,830,470. Under this latter heading, approximately £1,875,000 (equivalent to 60 per cent. of the increase in receipts) was attributable to higher costs of materials and wages and £955,000 (or 30 per cent. of the increase in receipts) to the additional volume of business. The following analysis of the revenue results of the past three years shows that the increased ordinary dividend is covered with rather less than £15,000 to spare:—

	1935	1936	1937
Railway gross receipts	£61,658,170	£64,462,842	£67,234,080
Railway expenditure	49,521,404	51,211,001	53,597,673
Net railway receipts	12,136,766	13,251,841	13,636,407

Carried forward 134,491 79,083* 93,769

* £3,180,000 in respect of rates recoverable 1931–34 transferred direct to contingency fund.

The chart in the next column shows the distributions on the three main classes of stocks since 1928.

L.M.S. DISTRIBUTIONS, 1928–37

Although net revenue is not shown in the chart, it follows the upper curve closely throughout the period.

The company has clearly lacked the important contribution to net revenue provided for both the Southern and Great Western by ancillaries, and the results suggest that, but for the increase in charges which was introduced last October, the company's railway net receipts would have been lower—possibly by as much as £200,000. Locomotive running costs increased by 5.8 per cent. to £13,433,796, compared with an increase of 2.2 per cent. in total engine miles. This rise in expenditure is traceable almost entirely to higher wages and fuel costs. Maintenance charges, both for way and rolling stock, also show a considerable advance, although the latter account had the benefit of considerable credits from renewals fund in 1936 and has made a considerable contribution to that fund during the latest year. On balance, however, it is evident that fewer complete renewals were carried out in 1937. The company appears to have been more successful in retaining the 5 per cent. increase in charges on the passenger side, for the average fare increased from 1s. 0.79d. to 1s. 1.15d. Owing to a rather sharp reduction in the average receipt per ton of general merchandise, however, the average for all classes of goods traffic is slightly lower.

Great Western Report.—The announcement of a 4 per cent. ordinary dividend by the Great Western Railway board satisfied the market at the end of last week. The accounts show that earnings for the stock amount to approximately 4½ per cent. Gross railway receipts increased by £1,381,406, and of this some £402,719 was retained. Net revenue derived substantial advantage, however, from an increase in net dock receipts from £119,701 to £342,382, although this improvement was offset in part by a higher net deficit on parcels collection and delivery. Net revenue amounts to £6,886,505 against £6,314,829 in 1936. Thus, although the net operating receipts of the undertaking are within £510,000 of the 1929 figure, the reduced amounts now received from general interest are largely responsible for the fact that net revenue is nearly £2,000,000 below the 1929 level.

* After crediting £122,990 from profit on sales of investments and £710,000 from contingency fund. † £1,737,800 recoverable from rates appropriated direct to contingency fund. ‡ After charging £100,000 for appropriation to new works, revenue proportion suspense.

The part played by transfers from reserve funds and exceptional credits is brought out in the following chart, which covers the period from 1928.

G.W.R. NET REVENUE, 1928-37

Between 1931 and 1935, in fact, some £5,334,394 had been applied to maintaining a 3 per cent. ordinary dividend. The net revenue curve thus cuts through the total distribution line in those years.

* * *

The Great Western has been successful in retaining 29 per cent. of its increase in railway receipts net, compared with 14 per cent. on the L.M.S. and only 10 per cent. for the Southern. In part, this achievement may be related to the improvement in South Wales, whose late recovery may well have contributed more in revenue than it demanded in extra running costs. That factor, at least, is plainly responsible for the substantial improvement in net receipts from docks last year. The increase in locomotive running expenses from £5,095,170 to £5,341,381 reflects, more markedly than the corresponding charge in the Southern report, the effect of increased wages and fuel costs, though engine mileage itself was 2.6 per cent. higher last year than in 1936. Increased repairs and renewals of rolling stock were also carried out last year, while maintenance of the permanent way cost £215,189 more at £3,256,487. The company has announced this week that a scheme is being prepared for the electrification of part of the system. Further information will presumably be given at next Wednesday's meeting. The latest report shows that electric vehicle mileage represented only 3½ per cent. of the total. The ordinary stock has reacted sharply this week and now stands at 59.

Southern Railway Report.—The surprisingly good Southern Railway deferred dividend is clearly explained by the report. It is due largely to an excellent return from steamboats, which earned £337,542 net, compared with £101,059 in 1936, and thus entirely reversed the company's own estimate of reduced ancillary receipts. Gross railway receipts amounted to £22,113,580, compared with £21,256,414, but of this £857,166 increase only £87,645 has been retained net. As some £150,000 was retained net from the gross railway increase of £338,000 during the first half of the year, it would appear that the increase of £519,166 in railway revenues during the second half of the year failed to cover increased operating expenditure by as much as £62,355. After crediting net ancillary and miscellaneous receipts, net revenue shows an increase from £6,226,160 to £6,552,124—which actually exceeds the 1929 figure by £4,159 and is within £544,000 of standard revenue. The 1½ per cent. deferred dividend is covered with £5,955 to spare. The following table summarises the trend of revenues during the past three years:—

	1935	1936	1937
Gross railway receipts	£ 20,647,676	£ 21,256,414	£ 22,113,580

† After allowing £250,000 for estimated rating overpayment.

In the following chart the actual distributions on the various classes of capital are shown, the total of which, in recent years, closely corresponds to net revenue:—

SOUTHERN RAILWAY DISTRIBUTIONS, 1929-37

A substantial increase in prior charges, compared with 1929, explains the reduced payment to the deferred stockholder to-day.

* * *

The report reveals that gross passenger receipts increased from £16,090,002 to £16,919,613 (representing 76.51 per cent. of railway receipts against 75.70 per cent. for 1936) and that the average fare per passenger has slightly risen, in consequence of the 5 per cent. increase in fares last October. Detailed analysis of railway expenses, however, suggests that the relatively small pro-

portion of increased gross receipts retained net was due less to the effect of higher wage costs and fuel than to rather marked changes in maintenance expenditure. Locomotive running expenses increased by £156,835 to £4,364,925, and of this some £103,321 was due to higher costs of electric current. This increase is reflected in a rise in cost of current from 7.27d. to 7.42d. per electric motor vehicle mile run. But maintenance of permanent way, although increased from £3,284,682 to £3,528,870, had the benefit of a credit from renewals of only £243,295, compared with £580,400 in 1936. Considerably less renewal work was undertaken on rolling stock, but although the cost of complete renewals was reduced from £823,411 to £464,418, a net transfer of £230,198 was made to renewal fund from revenue, compared with a credit of £274,846 brought in from the fund in 1936. This change accounts in large measure for the increase in rolling stock maintenance from £2,386,244 to £2,526,358. The renewal fund, however, receives a special credit of £400,000 from improvements fund, which in turn has received £500,000 released from the fire insurance fund. Stockholders may read some importance in the fact that the company has decided not to proceed at present with the electrification of the direct Hastings line. This is the first occasion on which a main line electrification project has been postponed. A further sum of £1,250,000 was taken up by the company from the Railway Finance Corporation last year, making a total of £2,500,000 out of permissible borrowing of £5,929,811. Projected capital expenditure, however, amounts to £3,370,000.

Company Notes

Courtaulds' Dividend and Profits.—Courtaulds' ordinary shares reflected increased market caution as the dividend approached. On Wednesday, the shares, which are normally quoted on the basis of a 1/32 turn, were at one time called 40s.-42s. This unusually wide price, however, was due as much to the trying market conditions of the day, as to the publication of the 1937 dividend and profits after hours. The final distribution is 7 per cent., making 10½ per cent. for the year, compared with 10.28

COURTAULDS' PROFITS 1928-37

per cent. gross for 1936. This distribution accords with general market expectations. Net profits, after providing for depreciation, taxes and expenses, amount to £2,373,892. After adjusting the previous year's profits in consequence of the changed taxation basis, the comparable figure for 1936 is £2,296,458. An increase of £77,434 for the past year cannot be regarded as exciting. It suggests that the

American Viscose Company's difficulties, particularly towards the end of the year, coupled with the rise in costs in this country (the latter were not offset by increased selling prices until this year) have prevented the scale of advance which at one time last year seemed reasonably probable. In the accompanying chart, we show the course of the distributable profits earned by the company in each year since 1928, treating amounts written off investments from 1929 to 1931 as a charge against profits. The chart clearly emphasises the stable profits record during the past four years.

* * *

After again setting aside £100,000 to staff fund, net preference dividends absorb £300,000, leaving earnings of £1,973,892, after tax, available for the ordinary capital. The 10 per cent. net dividend absorbs £1,890,000, and is covered by earnings of 11 per cent., while the balance carried forward is increased from £212,749 to £296,641. The directors state that the forthcoming report will disclose the fact that business prospects are not encouraging. The market has at length learned to treat the declarations of the Courtaulds board with respect, and its reaction to this statement was immediate. The American subsidiary is facing difficult trading conditions at present, and while the company's new productive capacity will not immediately realise its full contribution to profits, its ultimate potentialities may well be important. The increase in rayon prices at the end of last year was interpreted as a sign that Courtaulds had consolidated their position in this leading market. That interpretation holds, but its translation into potential profits for the current year must be limited. At their lower level of 39s. 4½d., Courtaulds' ordinary pay satisfactorily for their keep with a yield of 5½ per cent., but as each year passes they still give no sign of the massive dividend prospects with which the speculator has so frequently endowed them.

* * *

Richard Thomas Position.—For some time past the market has been troubled by rumours that the construction of the new Richard Thomas strip mill plant at Ebbw Vale was falling behind schedule and meeting unexpected difficulties, and by fears that the new plant would come into production at the moment at which the demand for steel and tinplate was beginning to decline. As a result, the 4 per cent. debenture stock, which was issued at a small discount a year ago, has fallen to 79½, and the 6s. 8d. ordinary shares, which at one time last year stood as high as 17s., have fallen to 8s. 1½d. Recently a firm of stockbrokers circularised its clients, advising them to sell the debenture stock and preference shares. This week Sir William Firth adopted the unusual but frank course of replying point by point to the circular, tackling the rumours fairly and providing shareholders with much new information. On the rumours about the new plant Sir William was explicit. He admitted that there had been difficulties, but denied that they were significant and announced that the plant would be completed by September at the latest. He pointed out that the delay had been caused by the failure of certain British manufacturers to deliver up to schedule, on account of their preoccupation with the rearmament programme. Had it not been for that delay, the plant would have been completed in March. In dealing with the other cause of market anxiety—the uncertainty about the future demand for the strip mill's products—Sir William was less encouraging. The current position, despite the decline in sheet output, is evidently very satisfactory: weekly output and profits are higher than they were a year ago, and it is certain that the prospectus estimates of the profits for the year to March 31st and also the profits for last year will be substantially exceeded. At the same time, however, orders for tinplate are no longer running at the boom-like level of last year: they still represent seventeen weeks' output, but are 40 per cent. lower than they were a year ago. It is difficult to avoid the conclusion that the medium-term demand prospect is becoming more uncertain. Nevertheless, the potential cost reductions envisaged at Ebbw Vale should remain considerable even in a period when demand is somewhat diminished.

Yorkshire Electric Power.—Sales of current to consumers increased last year by 13.7 per cent.—a somewhat reduced rate compared with 1936—but a substantially increased export of power to the “grid” was recorded. Power receipts increased from £1,137,452 to £1,294,597, and the balance on operating account was some £41,452 higher at £631,694. In the following analysis of revenue during the past three years, we have treated the total allocations to plant renewals, contingencies, depreciation and reserve fund as a charge against profits. On this basis the ordinary distribution, which has been maintained at 8 per cent. for a decade or more, is covered with a margin of £11,145 in the latest year.

	1935	1936	1937
Units sold (millions):—			
To company's consumers	306	366	416
Increase over previous year (%)	13.7	19.5	13.7
To Central Electricity Board ...	134	90	136
Power receipts	1,015,418	1,137,452	1,294,597
Operating expenses	488,439	547,210	662,903
Total income	542,327	615,027	652,023
Plant renewals, contingencies, depreciation and reserve fund provisions	270,000	305,000	355,000
Interest and staff pensions	39,036	69,399	62,843
Preference dividend	75,470	74,252	73,035
Ordinary shares:—			
Earned	157,821	166,376	161,145
Paid (8 per cent. less tax)	155,000	152,500	150,000
Estimated depreciation on standard scale	195,000	215,000	240,000
Earnings for ord. shares (adjusted)	232,821	256,376	276,145
Do. do. (per cent.)	12.0	13.4	14.7

The procedure adopted above, however, raises an important point of accountancy practice. Until 1932, the company had no specific depreciation reserve fund, and the plant renewals fund amounted at that time to some £80,000, compared with total assets of £5,500,000. Surplus earnings were then carried to general reserve, but since 1933 the latter has been renamed “depreciation and reserve fund,” and has been credited with substantial surpluses of apparent earnings over the 8 per cent. dividend. In short, the company's depreciation policy appears to depend upon available profits rather than a pre-determined provision basis. While conservative accounting treatment is generally praiseworthy, in the case of an electricity undertaking it may meet the criticism that it is to some extent unscientific, and that the ordinary shareholder—no less than the consumer—would appreciate a more definite indication of “true earnings.” If our estimate of standard depreciation shown above may be regarded as reasonably accurate, it is evident that the 8 per cent. dividend is covered with a very satisfactory margin. The £1 ordinary stock units are quoted at 39s. 9d. to yield exactly £4 0s. 9d. per cent.

London Electric Supply Corporation.—Although not the doyen of the industry—for the Chelsea Company was incorporated in 1884—the London Electric Supply Corporation celebrated its fiftieth anniversary last year with a special bonus distribution of 3 per cent. in addition to the standard dividend of 7 per cent. The profit for the year amounted to £110,224, against £87,888 for 1936, and earnings divisible under the sliding scale were equivalent to 8.6 per cent. on the ordinary capital. The available profit, however, was equivalent to nearly 13 per cent., and the increased distribution was provided, in part, by a call on the No. 2 Reserve Fund, which consists of past profits available for dividend under the sliding scale, but not divided. Units sold increased by only 3.4 per cent. Calculations based on the disclosed operation of the sliding scale last year suggest that this increase was compounded of a small increase, rather under 2 per cent., in the supply to the Southern Railway for traction purposes—which still constitutes two-thirds of the company's load—and an increase of a little over 8 per cent. in units sold for domestic and industrial purposes. These figures are necessarily approximate. The relatively substantial increase in profits, however, supports their probability, for the margin of profit

on the traction load is much lower than that on the rest of the company's business. The £1 ordinary shares stand at 35s. 6d. xd. to yield £3 19s. per cent. based on the regular 7 per cent. dividend.

Imperial Tobacco Prospects.—Investors should be well satisfied by Lord Dulverton's review at the Imperial Tobacco meeting last Tuesday. The chairman's discussion of the active balance-sheet items, for instance, clearly illustrated the continued expansion of turnover. The greater volume of trade involved the carrying of larger stocks of raw materials, and the rise in the balance-sheet figure for stock-in-trade was, in fact, due entirely to purchases of leaf tobacco, though average leaf prices had again risen. In reviewing the company's prospects for the current year, Lord Dulverton adopted an attitude, in his own words, of “qualified optimism.” He was able to report that sales for the first three months of the year showed an improvement over the corresponding period of last year. On the financial side, however, the importance of taxation was stressed. In this connection ordinary stockholders may reflect that a full year's N.D.C. will be payable in the current year, compared with seven months for 1936-37. Despite the difficulties of high taxation and rising leaf costs, however, the chairman derived sufficient encouragement from the general outlook to declare that he would be disappointed if the results for the current period were less satisfactory than those of last year.

Harrods and John Barker.—The latest results announced by these leading London stores will induce investors to take a sober view for the current trading period. Harrods, Ltd., announce net profits for the year to January 31, 1938, of £817,802, an increase of £17,482. This improvement, while satisfactory in itself, contrasts markedly with the 13 per cent. rise recorded in the previous year. After providing £40,966 for staff funds and bonus and £29,000 for N.D.C., the amount earned for dividends is £747,836, against £800,320—the first decline since 1932-33. Earnings for the ordinary stock are thus equivalent to 20.8 per cent. against 23.9 per cent., and while the maintained 18½ per cent. dividend is well covered, the reserve allocation is reduced by £10,000 to £40,000, and the carry-forward is lower. John Barker and Company's preliminary statement shows an actual reduction of £45,385 in net profits to £344,817 before charging £10,000 each year to employees' funds. But the 15 per cent. ordinary dividend, paid for the sixth successive year, is still amply covered. Earnings are 5 per cent. lower at 29.8 per cent., and rebuilding and reserve provisions are reduced from £200,000 to £125,000. It would be premature, however, to read too much into these preliminary statements. But in view of the less satisfactory trend of retail business in the London area, investors will await the full reports with subdued expectations. John Barker ordinary yield £5 3s. 6d. per cent. at the much reduced price of 60s., compared with £5 6s. per cent. on Harrods ordinary at 72s. 6d. The former share still looks forward to the completion of the extensive rebuilding programme.

New Company Results.—A somewhat more satisfactory showing has recently been made by companies who have issued their first public reports. They enjoy no important feature in common (unlike those of certain new companies we have examined previously), nor is there any specific reason why their results should be closer to prospectus estimates. The table on page 404 analyses six recently published first reports. Total profits shown are actual for the period indicated, but we have expressed net earnings and equity percentages as annual estimates, according to the first trading period covered.

Comparison between actual and prospectus profits is often difficult, but both Ellis and Goldstein, and General Engineering Company (Radcliffe) commendably present a comparison of their initial profits with the latest prospectus

CAJA DE AMORTIZACION

SERVICE OF THE EXTERNAL DEBT OF CHILE RELATING TO THE YEAR 1937

The statement of the movement of the funds assigned by Law No. 5580 of 31st January, 1935, to the Caja de Amortización for the service of the External Debt of the Republic of Chile shows that the incomes for the year 1937 were U.S.\$6,106,751.41.

In accordance with the stipulations of the said law, 50% of the income received each year is to be earmarked for payment of a yearly sum for interest on the total amount of the External Debt, *pro rata* to the balances remaining in circulation on 31st December of each year, after deducting from the balances of the previous year the bonds redeemed with the remaining 50 per cent. of the incomes.

The distribution of interest for 1937 has been carried out by the Caja de Amortización in accordance with the stipulations of the regulations of Law No. 5580, approved by Supreme Decree No. 37 of 4th January, 1936, on the first working day of the second week of January of the present year, at the rates of exchange prevailing on that date and with the results contained in the following tables:—

CONVERSIONS EFFECTED FOR DISTRIBUTING AMONG THE DIFFERENT GROUPS OF FOREIGN LOANS AND IN THE RESPECTIVE CURRENCIES THE INTEREST FUND (Law No. 5580) RELATING TO THE YEAR 1937, TO A TOTAL OF U.S. \$3,053,375.70 AND THE BALANCE FROM THE PREVIOUS YEAR TO A TOTAL SUM OF U.S. \$5,327.53.
(Total for distribution: U.S. \$3,058,703.23)

Currencies	Exchanges in U.S. \$ 3rd January 1938	BALANCE IN CIRCULATION 31st December 1937		DISTRIBUTION OF U.S. \$3,058,703.23 in proportion to balances

Sw. Fr.	116,881,700 (3)	919,128.23	7.86 for Fr. Sw. 1,000	918,690.16	438.07

- (1) After deduction of £381,820 redeemed by the Caja de Amortización and £3,768 amortised extraordinarily by the Treasury with the balances of the “Amortisation Funds” which remained in the hands of the Fiscal Agents in 1931.
- (2) After deduction of U.S. \$3,198,500 redeemed by the Caja de Amortización, U.S. \$4,340,500 amortised extraordinarily by the Caja de Credito Hipotecario and increasing by U.S. \$1,000 the circulation of “Mortgage Bank 6%,” April 30, 1961,” Loan, due to Bond No. 7380 having, by mistake, been included in an extraordinary redemption effected in the year 1934 by the Caja de Credito Hipotecario, in spite of having been drawn for ordinary amortisation on 30th April, 1931.
- (3) After deduction of Sw. Fr. 1,727,000 redeemed by the Caja de Amortización and Sw. Fr. 29,000 amortised extraordinarily by the Municipality of Santiago.

The above distribution having been effected, the Board of the Caja Autonoma de Amortización de la Deuda Pública formulated the following declaration, in order to make known the amounts of interest which it will credit to the holders of Bonds of the External Debt, for the yearly payment corresponding to 1937, in conformity with the aforesaid Law No. 5580.

“The Caja Autonoma de Amortización de la Deuda Pública, in conformity with the stipulations contained in Article 3 of the Regulations of Law No. 5580 of 31st January, 1935, approved by Supreme Decree No. 37 of 4th January, 1936, hereby declares that: During the year 1937 it has received the following income for application to the service of the External Debt:—

Profits of The Nitrate and Iodine Sales Corporation of Chile	U.S. \$2,981,957.53
Income Tax of 4th Category and additional from the Copper Companies	3,124,793.88
	U.S. \$6,106,751.41

“Fifty per cent. of this income, or, say, U.S. \$3,053,375.70, is to be applied for payment of interest at the rate of “U.S. \$7.86 per 1,000 dollars of nominal capital, Sw. Fr. 7.86 per 1,000 Swiss Francs of nominal capital and £7 17s. 2.4d. per £1,000 nominal capital.

“With the remaining 50% of income received, bonds have been redeemed to the value of U.S. \$13,198,500 nominal, £381,820 nominal and Sw. Fr. 1,727,000 nominal, which have been taken out of circulation.

“After these amortisations have been effected, the balances of bonds of the External Debt outstanding are as follows:—

“£29,142,762
“U.S. \$220,410,000
“Sw. Fr. 116,910,700

“The above balances have also been reduced by £3,768, U.S. \$4,340,500 and Sw. Fr. 29,000. These reductions correspond to sterling bonds amortised extraordinarily by the Treasury with balances from the “Amortisation Funds” remaining in the hands of the Fiscal Agents in the year 1931: to dollar bonds amortised extraordinarily by the Caja de Credito Hipotecario and to Swiss bonds amortised in the same way by the Municipality of Santiago in 1937.

“These amounts having been deducted from the above figures, the present balances of bonds of the External Debt in circulation are as follows:—

“£29,138,994
“U.S. \$216,069,500
“Sw. Fr. 116,881,700.

“Santiago, 11th January, 1938.”

† No. of months in period shown in brackets. * No. of months on which estimate is based shown in brackets. ‡ After full year's pref. dividend and participation.

figure. It seems, however, that of the six companies listed above two, and perhaps three, achieved better profits, while another company maintained its earnings rate, and two failed to achieve the level indicated in the last full year shown in the prospectus (the companies being shown in that order in our table). The speech accompanying the report of R.F.D. states that, although the factory has been engaged on balloon-barrage work, it has also been consistently employed in general production. The directors of Barracks Fabrics Printing stress the trading difficulties of the initial period, but actual profits have not apparently fallen short of the prospectus figure by a considerable amount. The profits of £16,598 made by Peerless Kitchen Cabinets appear to compare unfavourably with a prospectus figure of £31,082. The report does not offer comment on the results, which will doubtless be explained at the meeting. The current yields shown in the table do not appear too high in view of the present earnings outlook and the size of the companies concerned. Retribution has also followed the extravagant 1937 "high."

San Francisco Mines.—Although operations were again interrupted by labour trouble San Francisco Mines again treated an increased quantity of ore. Despite the further concessions to employees, operating profits increased to £453,060, against £204,570 in 1935-36. Taxation in Mexico and at home was substantially higher, but a net surplus of £276,340 was realised, compared with £85,030. The directors were thus able to declare dividends totalling 22 1/2 per cent., as compared with 7 1/2 per cent. in respect of the year to September, 1936. Last year's final distribution, moreover, is payable upon an increased capital. The balance of £73,640 carried forward is more than double the amount brought in; and the cash position has

been materially strengthened. Developments in the main property were of a rather mixed character. The southern portion of the San Francisco mine "continues to offer a promising field for the development of ore"; but the northern end is giving indications of decline in value. Taken together, the total ore reserves of 2,853,720 tons (fully and partly blocked out) show a net expansion of 106,440 tons, a reduction in the carbonates being more than offset by increase in the lower-seated sulphides. In the base metal boom early last year, San Francisco shares reached 27s. The current quotation of about 7s. 9d. includes the final distribution of 1s. in respect of the past year, and reflects the fall in metal prices.

Other Company Results.—Our usual analysis of profit and loss accounts, which appears on page 427, covers over 55 companies in all. The gas and textile industries are well represented, and some further investment trust reports are included. On page 408 we discuss the results under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 416. Lord Dulverton's review of *Imperial Tobacco* prospects is discussed on page 402. Mr Frank H. Jones explained at the *Wandsworth and District Gas* meeting that an improvement in the sales of residuals was largely due to economies in working. Mr George Balfour reported that *Power Securities Corporation* had completed works to a value of £1,700,000 last year, and still had on hand contracts valued at £1,500,000. At the *Konongo Gold Mines* meeting Mr Robert Annan reported that in the first four months of the current year the mill had treated an average tonnage of 19 per cent. above designed capacity, with a gold recovery of about 94 per cent. At the *Bah Lias Rubber Estates* meeting Mr Eric Miller stated that the average net sale price of 8.87d. per lb. had shown the satisfactory improvement of 1 1/2d. Mr D. Abel Smith, addressing *Borax Consolidated* members, reported further progress in developing the new outlet for their products in agriculture. In discussing the hampering effect of exchange restrictions, however, he pointed out that over 130 clearing arrangements were in operation. At the *Railway Debenture and General Trust* meeting Mr Richard S. Guinness referred to the factor of safety resulting from the receipt of one-half of their income from prior charges, or three-fourths including preference dividends. At the *Railway Share Trust and Agency* meeting he expressed satisfaction that the revenue account permitted retention of a slightly larger margin after paying an increased dividend. Speaking to *General Investors and Trustees* members, Mr Gerald T. Moody emphasised the value of having liquid funds available for purchases at a time when market values were depressed. Prosperity in Liverpool and revival in the cotton and coal districts of North-West England were adduced by Lord Brocket to explain the progress made by *Peter Walker (Warrington) and Robert Cain and Sons*.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
FEBRUARY 22 FEBRUARY 24

MARKETS this week have been a prey to politics. At first, the disposition was to await Herr Hitler's week-end speech. But as the full import of the German demands on Austria became clear, the market was attacked by political "nerves." There was not a large wave of selling, but dealing immediately became difficult. Even shares which are normally a free market were quoted on defensive terms, and the support which has lately been available in the gilt-edged market, on any sign of temporary setback, has been noticeably absent this week. The lack of encouragement on the

home front and on Wall Street, and the disturbing political developments in Europe, have produced despondence in the market.

Business in the gilt-edged market opened easier, not particularly affected by the week-end news, but not supported on the previous week's scale. Further profit-taking on Tuesday followed the actual version of events last Saturday at Berchtesgaden, and the market finished at the worst on Wednesday evening, only to fall fractionally once more on Thursday. Recent corporation scrips resisted the fall relatively well for a time, but the Johannesburg loan opened at a discount, and the prospects for Stirling's issue were not eagerly canvassed.

European bonds improved at first,

but heavy falls occurred in Austrian issues (discussed on page 398) and German loans were irregular. Japanese bonds received some moderate support, but Argentine issues remained weak, on the economic situation in the republic.

Continued selling of *home rail stocks* was reported, and the indifferent traffics brought out further stock. There were signs of some intermittent support on Wednesday afternoon, but it was insufficient to prevent a fall on the day. The closing tendency, however, was somewhat steadier as a result, although the preference stocks continued a poor market. Consistent support for London Transport "C" stock, on the recent declaration of the chairman of Thomas

Tilling, caused a steady rise to 83 1/2. Leading *industrial shares* showed little resistance from the first, and while the volume of selling which followed the week's political news was not large in scale, it found the market totally unable to rally support. Steel shares showed further declines. Richard Thomas lost ground on balance, following the chairman's statement (see page 401) and Stewarts and Lloyd were a weak feature in mid-week. Reports that increased protection might shortly be given to the industry had no effect, and falls of one shilling or more were common.

Electrical equipment shares continued flat. Further selling of motor shares was in evidence, Triplex Glass and Rolls Royce being sharply lowered. Courtaulds fell as low as 39s. 6d. on the terms of the dividend announcement (see page 401) and textiles generally were very uncertain. John Barker ordinary fell from 67s. 6d. to 60s. on the profits figures. Investment industrial, in the brewery, tobacco and miscellaneous groups, showed relatively considerable losses, although Imperial Tobacco remained steady, on the chairman's speech (discussed on page 402).

The week in the *oil share market* has been more than usually dull. On Monday and Tuesday a very small turnover was accompanied by steady prices. In mid-week oil shares fell, as in other sections, and prices sagged all round, despite a little support for the leaders from Paris and Amsterdam.

The tendency in *rubber shares* was downwards throughout. Small sales by the public were widespread, without ever reaching important dimensions, and practically no support was forthcoming to offset this pressure. On Wednesday declines in prices were more numerous. Tea shares were uninteresting, but although not indifferent to outside influences, resisted the mid-week depression better than some groups.

The *mining market* generally was in idle or depressed mood, though political apprehensions were reflected in a further shrinkage of business rather than important price changes. Kaffirs started the week quietly (though the undertone was good), and did not decline generally until mid-week. Cape support for Western issues was reported and the news that the sterilisation of gold was being amended by the U.S.A. authorities also helped the shares at first. Rhodesian copper shares were again featureless and while prices were marked down, no special selling pressure was reported. West Africans held up well at first, and then drifted downwards through lack of support.

ACTUARIES' INVESTMENT INDEX

Again the Actuaries' index of 151 industrial equity prices has fallen nearly a full point in a week, reading on Tuesday last (February 15th) at 70.0, against 70.9 a week ago and 73.8 a month ago. The corresponding average yields are 5.09, 5.04 and 4.84 per cent., respectively, the yield rising above 5 per cent. for the first time on February 8th. A selection of the separate indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High

New York

Wall Street was not impressed with the modification of the gold sterilisation policy announced by Mr Morgenthau this week—thus proving, once more, that it is easier to deflate than to inflate. While the dollar weakened, Wall Street actually put leading industrial stocks down by a point. The President has also declared that prices were now too low. Almost a year ago his statement in the reverse sense was immediately taken up, but there was response in the other direction this week. Trading continues very light. In mid-week, there was some slight strengthening of stock prices, but the net effect upon the indices was almost negligible. Trading has averaged well below the 500,000 share mark for the first three days of the week, and detailed price changes are of no specific importance. *Iron Age* estimates steel activity at 31 per cent. this week, the same level as a week ago. Bonds continue dull, and rails are reactionary on balance.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100):—

Capital Issues

Fixed-interest issues have monopolised the attention of the new capital market during this uncertain week. The terms of the *Johannesburg* issue were well regarded when they first appeared, but the opening of the lists coincided with a reaction in the gilt-edged market, and while large applications were scaled down, the scrip opened at 1/2 discount.

(Continued on page 408)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 405)

With its redemption yield of rather over 3½ per cent., it may appeal to the non-trustee investor, granted an improvement in gilt-edged. Some sections of the market were disposed to look askance at the *Stirling County Council* prospectus. The terms for the issue are identical with those of the successful Birmingham loan last week, but the market status of the two authorities is not identical. In view of the reactionary state of the market at the end of the week, the fate of the issue was in doubt as we went to press.

PUBLIC OFFERS

City of Johannesburg.—Issue of £2,000,000 3½ per cent. inscribed stock at 99½, redeemable in London at par January, 1963, or from 1958 on notice. All stock issued under Ordinances first charge on revenue and assets. Proceeds for electricity, water, etc. Population 1937, 492,000; net loan debt, £8,803,914; assets, £22,355,360; excess of assets, etc., over liabilities, £11,910,888; rateable value: land, £50,151,083; buildings, £61,992,927; rates, 4d. on land plus 1d. for roads; Revenue, year to June, 1937, £4,480,789; expenditure, £4,678,500. Transferable at Barclays Bank (D.C.O.). List opened 9 a.m., February 16th, and closed 3.30 p.m. on same day.

Stirling County Council.—Issue of £1,200,000 3½ per cent. stock at 98. Redeemable at par January, 1962, or from 1957 on notice. A Trustee stock. Ranks with existing loans. Proceeds for housing, etc. Rateable valuation (for education), £1,211,583; gross revenue £1,012,315 (including £520,936 grants) and expenditure £996,266; consolidated rate 9s. 2½d. Total debt, £2,292,070 (of which £1,598,188 housing). Census population, 166,447.

STOCK EXCHANGE INTRODUCTIONS

Ilkeston Corporation.—Particulars of issue of £250,000 3½ per cent. stock, redeemable at par August, 1964, or from 1959 on notice. Stock has been sold through National Provincial Bank at 100½ net to Corporation. Ranks with other stocks. Proceeds to repay short-

term mortgages and temporary loans. Census population, 32,813; rateable value, £138,560. Net outstanding debt, £594,726 (of which £435,700 reproductive); rates, 16s.

PRIVATE PLACINGS

Mauritius Government.—An issue of £177,000 3½ per cent. inscribed stock, 1957-62, is being made. A large part will be taken by the Crown Agents for the Colonies, and balance placed through usual market channels.

Fiji Government Stock.—Issue of £144,740 inscribed stock, 1960-70, bringing amount of this stock up to £327,236. Of the present issue, £84,470 is being taken by the Crown Agents for the Colonies and £60,000 is being placed through usual market channels.

Second Anglo-Celtic Trust.—This Trust has placed privately £50,000 4 per cent. first debenture stock.

Third Guardian Trust.—The directors have placed privately £29,203 3 per cent. redeemable debenture stock, 1963-73, for general purposes.

ISSUES TO SHAREHOLDERS ONLY

Forward Trust.—Issue of 50,000 £1 6 per cent. cumulative preference shares at 25s. to preference and ordinary shareholders.

Van Dyk Consolidated Mines.—Issue of 500,000 new 10s. shares at £1 1s. (South African currency), in proportion of one new share for ten held.

SHORTER COMMENTS

Company Results for the Week.—The improved earnings position in the coal industry is again reflected in the profits of SHIREOAKS COLLIERY COMPANY which total £76,756, against £51,320. Contracts for sale of coal have been renewed at higher prices, but wages, wood and certain stores are costing more. MATHER AND PLATT, the textile engineers, have experienced their best year since 1929. Net profits at £209,786 are 11 per cent. higher than in 1936. A further batch of boot and shoe company results is now available. Net profits of J. SEARS AND COMPANY are practically unchanged at £262,369, while their subsidiary, FREEMAN, HARDY AND WILLIS, likewise discloses unchanged net earnings. The latter company reports that a factory has been built at Leicester to replace the existing Burlington Works. The position of LENNARDS, LTD., has improved considerably. A profit of £14,983 is reported, against a loss of £26,502, and it is proposed to issue fresh capital. FLEMING REID AND COMPANY, the worsted spinners, have made net profits of £155,099, against £155,479. A dividend of 17½ per cent. is payable on the capital as increased by last year's bonus. Among miscellaneous companies, CONSOLIDATED SIGNAL have earned 16 per cent. more at £51,416, and are paying 36½ against 30 per cent. The results of COPESTAKE CRAMPTON AND COMPANY illustrate recovery in the warehousing and wholesale trades. Net profits are £3,751 higher at £17,751, and 3½ per cent. (against 2½ per cent.) is being distributed. The full report of ENGLISH ELECTRIC COMPANY confirms the good impression made by the preliminary profits statement. Net profits amount to £499,685 against £298,806, and although it is pointed out that the rate of expansion in business shown in recent years cannot continue indefinitely, the number and importance of inquiries received are well maintained. Despite the increased cost of raw materials, INVERESK PAPER has earned £142,470 against £87,345, thanks to the effects of

plant modernisation, increased turnover and rising selling prices. A full year's dividend has been declared on both first and second preference stocks. It is stated in the BOVRIL, LTD., report that sales have been well maintained both at home and abroad, and net profits are £31,800 higher at £281,961.

MISCELLANEOUS

John Barker and Company.—Net profit declined by £45,385 to £344,817 for year to January 31, 1938, after all expenses, including taxation, fees and debenture interest. Ordinary dividend 15 per cent. for year as before. To place £100,000 to rebuilding and modernisation reserve; £10,000 to employees' pensions, etc., £25,000 to be written off fixtures, plant, etc. (in view of rebuilding programme). Carry forward £189,561 against £191,868. It is proposed to apply £100,000 from rebuilding and modernisation reserve to reduce book value of properties.

Bradford Dyers' Association.—Accounts for 1937 show that after £150,097 for depreciation, profit is £29,018. After debenture interest of £58,150 there is a net loss of £29,132, compared with net loss of £20,102. Carry-forward reduced from £40,504 to £11,372. The former figure was arrived at after transferring £50,000 from reserve.

Halifax Building Society.—Total assets January 31, 1938, £122,626,007 (an increase of £8,298,431). Share and deposit funds stand at £117,089,819 (an increase of £7,783,560). During year new advances were £20,943,616 (£454,863 more). Mortgage assets totalled £98,276,899 (an average of £410 per account). Liquid funds amount to £23,634,393. Bonuses are recommended of ½ per cent. to Class 1 shareholders and 1 per cent. to monthly subscription shareholders. Also £400,000 to general reserve. Reserve fund now £5,000,000; carry-forward £66,167.

Temperance Permanent Building Society.—Report for 1937 shows share capital £2,715,483. Deposits at December 31st, £2,263,781, an increase of £268,540. Advances on mortgage in 1937 were £961,748. Mortgage assets stand at £5,720,585, an increase of £201,676. Total assets £5,934,359, an increase of £226,882. Combined total of reserve, contingency fund and balance of profit carried forward £945,598.

Harrods, Ltd.—Net profit for year to January 31, 1938, £817,802, which is £17,482 higher. To N.D.C., £29,000, and £20,966 for Coronation staff bonus. To special reserve £40,000, against £50,000. Ordinary dividend and bonus, 18½ per cent. as before. Carry-forward reduced from £191,742 to £189,749.

English Electric Company.—The dividend was discussed in a Note on page 353 in our issue of February 12th. The balance sheet shows that the bank overdraft (£200,000 secured) has risen from £169,217 to £638,182, and loan secured on exports credit guarantee from £280,888 to £302,858. Stock and work in progress stand at £1,957,320 compared with £1,519,550. The directors state that the company enters on the year with the largest order book in its history.

Manchester Ship Canal.—The preliminary results were dealt with in a Note on page 353 of our February 12, 1938, issue. A record tonnage of 7,053,216 tons was carried in 1937, an increase of 679,908 tons. Net receipts of whole undertaking rose from £774,031 to £803,105. Net revenue £30,536 higher at £740,343. There was received £107,291 net from sales of land during year.

Richardsons, Westgarth and Company.—Shareholders are urged to send in proxies for the meetings on February 28th which are to consider the scheme for amalgamation with the North Eastern Marine Engineering and George Clark, Ltd. Under the scheme the issued capital of the amalgamated company will be divided among the shareholders of the three companies in proportion to the value of the net assets brought in by each.

Industry and Trade

Cotton Trade Reorganisation.—The new draft proposals for the reorganisation of the cotton industry, amended to meet the objections expressed by the President of the Board of Trade to the original scheme, have now been formally submitted to the Government, and representatives of the Joint Committee of Cotton Trade Organisations met Mr Oliver Stanley this week to discuss them. Mr Stanley's letter of December last asked for clear and comprehensive definitions to indicate the scope of the proposed Enabling Act, more detailed information in regard to the type of scheme likely to be brought forward under the Act, and the fullest possible information about the steps proposed for the development of export trade. The draft which has now been submitted, and a separate memorandum of export trade policy which accompanied it, deal very specifically with these points, and should, it is hoped in Lancashire, meet the Government's objections to the earlier scheme. Spinners, manufacturers and merchants are vitally interested in the proposals contained in the memorandum on the export trade. It is recognised by all sections of the industry that the proposals for the export trade are of crucial importance, and that the whole scheme will stand or fall by them. The details of the trade's proposals are for obvious reasons being kept secret. But their main outline is believed to be the formulation of plans whereby spinners, manufacturers and merchants should co-operate in producing and marketing bulk lines of cotton piece-goods at prices which will compete with Japan, Italy and other countries. Mass-production methods and co-operative efforts at marketing have been tried in the past, but they have been handicapped by insufficient financial resources. It is hoped that, with the backing of the whole of the producing sections, it will at long last be possible for Lancashire to make a selling effort in foreign markets commensurate with her productive capabilities.

* * *

Cheaper Coal for Lancashire?—Recent increases in the price of coal have placed additional burdens on the cotton industry, but the cotton interests now appear to have been successful in their agitation for a revision of prices under 1938 contracts. At an inquiry held last week by the Lancashire and Cheshire District Committee of Investigation, leaders of the cotton industry complained that, since 1935, coal had been costing the industry an additional £1,200,000 annually. The Committee of Investigation has now informed the cotton interests that, while it regards some increase in coal prices this year as justifiable, it is not convinced that the actual increases complained of (which range from 3s. to 4s. a ton) are warranted. The executive board of the Lancashire and Cheshire (Coal Mines) Scheme is therefore recommended to reconsider the 1938 figures "with a view to their amendment"; and is asked to notify the Committee of Investigation of the steps it proposes to take. The Committee is not armed with compulsory powers, but it seems likely that its recommendation will be adopted by the coalowners concerned. The latter's decision is naturally awaited with some anxiety in Lancashire—the more so in view of the fact that similar complaints regarding coal prices have been lodged with the Committees of Investigation for the Midland Amalgamated District and the North Staffordshire District. These complaints have not yet been investigated, and it is possible that the recommendation made may be influenced by the outcome of events in the Lancashire District.

* * *

Overseas Trade in January.—The trade returns for January reflect the downward trend in British business activity noticeable since last autumn. Both imports and exports showed a decline between December and January. The value of imports fell from £94.3 millions to £85.0 millions, and shipments of domestic goods declined from

£43.9 millions to £41.2 millions. Seasonal influences, moreover, cannot be held fully responsible for the decline. As the accompanying diagram shows, exports and imports have shown a downward trend since October and November respectively. Compared with a year ago,

TOTAL IMPORTS AND DOMESTIC EXPORTS

however, both imports and exports still show an increase amounting to 12.2 per cent. and 5.3 per cent. respectively. Between 1936 and 1937, moreover, imports rose by 21.4 per cent., and exports by 18.3 per cent. As imports have been maintained relatively better than exports, the

(£ thousands)

	January			Change between 1937 and 1938	
	1936	1937	1938		
Total imports.....	69,954	45,713	84,956	+ 9,243	+ 12.2

Re-exports.....	4,320	5,076	4,801	- 275	- 6.4
Total exports.....	38,780	44,177	45,984	+ 1,808	+ 4.1
Excess of imports over exports	31,174	31,536	38,971	+ 7,435	+ 23.5
Transshipments under bond...	2,397	2,942	2,835	- 109	- 3.7

past month witnessed a further substantial increase in the adverse balance of merchandise trade. And the latest indications do not herald an early and significant change of trend.

* * *

Overseas Trade by Commodities.—An analysis of quantitative changes in imports during the past twelve months shows increases in a number of important commodities:—

RETAINED IMPORTS. MONTH OF JANUARY.

Item and Measure	1936	1937	1938	
Wheat	'000 cwt.	6,612	5,286	6,566
Beef and veal	'000 cwt.	1,016	1,177	1,087
Mutton and lamb	'000 cwt.	524	595	568
Sugar (unrefined)	'000 cwt.	4,042	3,888	4,011
Iron ore and scrap	'000 tons	579	472	848
Raw cotton	'000 cents	1,377	1,575	1,463
Sheep's and lambs' wool	'000 cents	719	766	695
Flax, hemp and jute	'000 tons	55,600	59,767	41,646
Crude petroleum	'000 gals.	43,383	51,067	48,844
Hides, wet and dry	'000 cwt.	119	101	111
Wood pulp	'000 tons	221	143	168
Rubber	'000 cents	102	6	36
Unwrought copper	tons	20,242	22,025	27,173
Pig lead	tons	27,542	35,093	41,955
Iron	tons	5,062	3,237	3,542
Ore and concentrates	tons	232	720	320
Blocks, ingots, slabs and bars	tons	120	83	308
Iron and steel manufactures	'000 tons	6,811	10,091	10,524
Machinery	tons			

Imports of wheat and sugar last month were higher, and those of meat lower, than in January, 1937. The intake of raw materials for the metal industries was appreciably heavier, but imports of textile raw materials were lower, an indication of the recession in the activity of the textile trades, revealed also by the decline in the exports of cotton yarns and piece-goods, wool tops, worsted yarns and woollen and worsted tissues, and

linen piece-goods. The fall in shipments of linen piece-goods is substantial.

BRITISH EXPORTS. MONTH OF JANUARY

Item and Measure	1936	1937	1938
Coal	2,793	2,987	2,983
Iron and steel scrap	15,328	33,074	1,815
Pig iron and ferro alloys	8,190	13,796	13,274
Railway materials	6,899	17,968	13,247
Total iron and steel manufactures	164,772	215,040	191,161
Textile machinery	4,925	4,810	7,663
Cotton yarns	30,023	30,095	41,534
Cotton piece-goods	12,942	13,761	10,718
Wool tops	166,679	160,635	138,175
Woolen yarns	4,342	4,466	2,500
Woolen tissues	2,878	2,410	1,708
Woolen piece-goods	7,815	7,848	6,663
Woolen piece-goods	3,429	3,480	3,765
Linen piece-goods	8,254	9,398	5,834
Leather boots and shoes	26,209	27,746	34,398
Leather	24,956	24,558	14,522
Paper and cardboard	315,859	371,788	348,580
Locomotives and parts	1,871	1,831	1,924
Motor vehicles and chassis	6,235	8,871	8,275

The expansion in exports of coal has been arrested, and shipments of motor vehicles and iron and steel were below those of January last year. Exceptionally, exports of machinery, representing orders placed many months ago, continued well above last year's level.

Britain's Beer.—The consumption of beer in this country tends to fluctuate *pari passu* with variations in the general level of business activity, declining in years of depression and rising with the return of prosperity. Thus the output of beer in the United Kingdom reached its nadir in 1932, when the slump in business was at its worst, and has gradually expanded since then. Production in recent years (in thousands of standard barrels) has proceeded as follows:—

1928	19,597	1933	14,314
1929	19,435	1934	15,521
1930	18,811	1935	16,254
1931	16,377	1936	16,739
1932	13,228	1937	17,854

The cyclical fluctuations have been superimposed upon a secular downward trend of consumption. Consumption per head has been much lower in the post-war years than it was before 1914, and production has consequently shown a long-term decline. Thus, output, which fell by 6,370,000 barrels between 1929 and 1932, has since risen only by 4,626,000 barrels, and remains almost 9 per cent. below the level of 1929. In view of the business recession, reflected in the growth of unemployment since last autumn, it seems unlikely that beer consumption will maintain its recent rate of increase in 1938.

Motor Industry Recession.—The registration figures for December make it impossible, even for the most optimistic observer, to deny the existence of some recession in the motor industry. In September, October and November, 1937, sales of private cars in Great Britain fell short of the comparable figures for 1936 by 5.7, 12.4 and 13.3 per cent. respectively. Trade circles, however, ascribed this setback to special and temporary factors. The decline was continued, however, in December, when new registrations totalled 25,795, and were 7.3 per cent. below the 1936 figure. The fall was certainly relatively smaller than in the preceding month, but the downward trend now appears unmistakable. Moreover, the shift of demand from the more to the less expensive type of car was again in evidence in December. Registrations in the eight-horsepower category were actually higher than in December, 1936, at 7,987, compared with 6,810. In the ten-horsepower class the trilling nature of the decline from 7,348 to 7,308 has been attributed to the popularity of the new Vauxhall ten. In practically all other categories there were sharp reductions. Meanwhile, the commercial section of the industry showed no improvement; in December sales of goods vehicles fell by 16 per cent., from 7,565 to 6,334, the fall being fairly evenly spread between the different categories. This contraction followed declines of 4, 11 and

17 per cent., respectively, in the figures for September, October and November. Optimism about the immediate prospects of the motor industry is difficult.

Seasonal Decline in Steel Production.—Compared with the downward trend of activity in many other branches of activity, the output of the iron and steel industry has so far been well maintained. The returns of the British Iron and Steel Federation reveal a slight reduction in output between December and January. But the decline in pig iron and steel production was entirely seasonal, and was no greater than a year ago, amounting to 22,400 and 22,700 tons respectively. As the accompanying diagram shows, pig iron production increased at a slower rate than steel output between 1932 and 1936. During the past year,

BRITISH IRON AND STEEL PRODUCTION

however, this tendency has been reversed, for the output of pig iron last month was 110,400 tons higher than a year ago, compared with an increase of 82,500 tons in steel production. Imports of iron and steel materials showed a further substantial increase last month, when they totalled 308,700 tons, against 83,100 tons in January, 1937. On the other hand, the downward trend of exports continued, shipments in January showing a reduction of 23,800 tons on the corresponding month a year earlier.

PRODUCTION AND TRADE IN IRON AND STEEL (In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average ...	855.0	638.6	185.9	414.1
1929	612.4	803.0	235.2	364.9
1932	297.8	438.5	132.7	157.4
1936	643.5	982.1	123.6	183.8
1937	708.0	1,080.3	170.0	214.7
1937—December	671.4	1,019.2	94.8	204.8
1937—January	650.7	948.9	83.1	215.0
1937—February	603.7	995.9	82.9	200.5
1937—March	680.3	1,109.5	94.3	231.6
1937—April	680.7	1,080.4	88.5	239.5
1937—May	696.3	1,047.3	98.1	228.3
1937—June	699.3	1,106.4	174.8	235.4

1937—September	726.7	1,163.0	226.2	193.6
1937—October	769.6	1,133.6	220.5	206.9
1937—November	762.3	1,178.3	272.5	198.0
1937—December	783.8	1,103.8	288.3	196.8
1938—January	761.1	1,081.4	308.7	191.2

As a result of the coincidence of a substantial volume of home production with rising imports and falling exports, the quantity of iron and steel available for domestic consumers has increased substantially. There are now hardly any complaints concerning the scarcity of supplies. On the contrary, producers and consumers of pig iron, for example, have recently been able to replenish their stocks. Meanwhile, consumption remains heavy, but the volume of new transactions has been comparatively small of late.

American Steel Output and Exports.—In contrast to the high level of operations in the British iron and steel industry, production in the United States has been

sharply curtailed since last summer. For example, as the following table shows, the output of steel has fallen from 5,216,000 tons in March last year, to 2,206,000 tons in December.

OUTPUT AND EXPORTS

(In thousands of tons)

Monthly average	Output	Exports (excl. scrap)
1929	4,571	207
1932	1,122	31
1936	3,959	102
1937	4,187	289
December, 1936	4,424	135
January, 1937	4,125	127
February	4,414	139
March	5,216	206
April	5,072	240
May	5,154	328
June	4,184	305
July	4,556	461
August	4,875	404
September	4,302	283
October	3,392	332
November	2,154	290
December	2,206	260

The heavy demand for steel outside the United States stimulated some increase in American exports in the middle of the year. But exports also fell off in the fourth quarter and, in any case, sales abroad form only a small part of the total production of iron and steel in the United States. Nevertheless, the increase in American exports has been an important factor in the intensification of competition for a dwindling export market. There have been negotiations between representatives of the International Steel Cartel and the American Steel Exporters' Association for the purpose of keeping competition within limits and preventing a collapse of prices. A cable from New York indicates that the American Steel Exporters' Association is now trying to work out export quotas in co-operation with the International Steel Cartel in respect of about a dozen products. In the long run, however, the intensity of American competition in the export markets will vary with the course of domestic demand. While operations in the industry have increased from 19.2 per cent. of capacity in the last week of December to 31.0 per cent. in the current week, there are no indications that output will recover in the near future to the level of a year ago.

Rubber Control.—Dr George Rae's paper on the statistics of the rubber industry, read before the Royal Statistical Society on Tuesday—which, among its abundant facts and figures, had much to say of the rubber control scheme—came at an opportune moment. It is understood that the International Rubber Regulation Committee has virtually approved a scheme, drafted by a sub-committee, for continued restriction of production during a further five-year period from January 1, 1939. The new scheme is believed to be in process of submission to the signatory Governments. The existing agreement provides that the Rubber Regulation Committee must make a recommendation on the question of export regulation to the signatory Governments not later than March 31, 1938; and that if the Committee recommends the continuance of restriction the Governments must indicate their acceptance or rejection of its proposals within three months. There is little doubt that restriction will be continued, though its terms may be altered. For example, the virtual ban on new planting in the present agreement may be modified. Moreover, certain of the smaller producing countries, such as Ceylon, Burma and Sarawak, are known to be dissatisfied with their standard tonnages, and their claim for an increase may well be conceded. It is less certain whether any increase in their quotas will be made at the expense of Malaya and the Dutch East Indies, or whether it will represent a net addition to the aggregate standard tonnage. Meanwhile, business on the market has been quiet, but prices have remained steady.

Sugar Market Weakness.—The International Sugar Agreement, which has been in force for less than twelve months, is causing disappointment, for the sugar market has lately shown pronounced weakness. The price of centrifugals 96° on the London market, which averaged 6s. 4½d. per cwt. last year, fell below 5s. at one time last week, in consequence of heavy liquidation of the March position and a volume of stop-loss sales. During the past few days the market has shown more resistance and the price has recovered to around 5s. 4d. per cwt., but there appears to be little confidence in the future. To some extent seasonal factors are responsible for the market's weakness. The domestic beet season is at its height, and heavy imports of cane sugar from Empire sources tend to cause congestion. Arrivals from Cuba have been rather larger than last year. United Kingdom stocks have consequently been accumulating and, as refining demand has shown slight improvement, the market has been under pressure. Apart from seasonal factors there has recently been uncertainty about the statistical position. Export quotas under the 1937 Sugar Agreement were fixed on the assumption that world demand would increase by 3 per cent. in the current season; but this estimate now appears optimistic. United Kingdom stocks are, in fact, appreciably above last year's level. The uncertainties of the statistical position prompted the hope that the International Sugar Council would hold a further meeting, but so far no news of such a decision has been received. Altogether, a sustained price improvement seems improbable in the near future.

Prosperity on Tyneside.—Presenting the accounts of the Tyne Improvement Commission on Tuesday, Mr H. P. Everett laid stress upon the prosperous record of 1937. Tyne imports rose by 162,000 tons and exports by 55,000 tons; and the gross tonnage of naval and mercantile ships under construction at the end of the year reached the high level of 351,000 tons. General economic recovery and the demands of the re-armament programme stimulated industry; and coal shipments from the Tyne were 420,000 tons greater than in 1936, entirely because of a renewal in Italian demand, without which shipments would actually have declined by nearly 300,000 tons. Mr Everett looked forward to sustained activity in 1938; but drew attention to the significance for the Tyne, heavily equipped for coal exporting, of the increase in the proportion of world shipping tonnage burning oil as bunkers from 4 per cent. in 1914 to over 50 per cent. to-day. In 1937 the bunker trade of the Tyne fell by 241,000 tons, and the "out-standing and unhappy feature" of the river's trade last year was this serious decline.

Scottish Herring Drifters.—An extensive survey of Scottish steam drifters at the various Moray Firth ports, writes a correspondent, has revealed that many craft are in need of repair in order to meet the requirements of the Board of Trade. In many instances the expenditure is estimated at £150 to £200—a comparatively small sum considering the cost involved in connection with steam-powered fishing craft in these days. Scottish boat repairers have therefore entered upon an extremely busy period, as all vessels must be in condition before the beginning of the forthcoming herring season. Some of the older craft, however, cannot be reconditioned for less than £400 to £500, and as the share-owners are obviously not in a position to undertake such overhauls, their only alternative is to scrap these vessels. The question whether steam-driven boats are to continue in use or whether oil-engined craft are to be adopted is still undecided. Although most fishermen favour steam propulsion, they are convinced that a herring boat of smaller dimensions is essential in the interests of economy. Marketing progress abroad, it is felt, must necessarily be slow, and on account of self-sufficiency programmes in herring-buying countries, definitely limited. Diesel-engined boats of smaller dimensions than the existing eighty- or ninety-foot drifters are therefore coming into favour. A seventy-foot motor drifter costs about £3,300 to build, compared with about twice that sum for a larger-sized steam drifter; it is much cheaper to operate

and, for that reason, can be better adapted to the present abnormal state of the herring trade.

Wholesale Prices' Continued Decline.—The past fortnight witnessed a further fall in British wholesale prices,

* These figures relate to February 9th.

† Monthly average.

amounting to 0.9 per cent. in the case of *The Economist's* complete index number, and to 1.9 per cent. for primary products. In the United States, on the other hand, there are signs of a check to the decline. *The Economist's* primary products index for the United States has risen by 1.0 per cent., while the fall in the Irving Fisher complete index is only 0.3 per cent. There was a decline of 0.5 per cent. in French wholesale prices. The official index for Germany has remained almost unchanged for many months. The index numbers for the groups composing the index are given below, with comparative figures for a fortnight ago, a year ago and also for September 18, 1931:—

The Economist INDEX

(1927 = 100)

	Sept. 18, 1937	Feb. 10, 1937	Feb. 2, 1938	Feb. 16, 1938
1931				
Cereals and meat...	64.5	88.3	90.4	89.4
Other foods	62.2	68.7	61.4	59.6
Textiles	43.7	68.8	57.8	57.7
Minerals	67.4	99.3	94.7	93.4
Miscellaneous	65.8	82.8	79.3	78.5
Complete index	60.4	81.5	76.5	75.5
1913 = 100	83.1	112.2	105.2	104.0
1924 = 100	52.2	70.5	66.1	65.2

Textile prices are firmer, but otherwise the fortnight's decline is fairly general. Wholesale prices are now 7.4 per cent. lower than they were a year ago.

INDUSTRIAL REPORTS

THE keynote of the latest reports from industrial centres is still the absence of a revival in the volume of new business in many industries. Even the coal industry, which, until recently, obtained a large volume of new orders, is now experiencing a decline in new business, especially in the export trade. Our Cardiff correspondent reports that stocks have been accumulating in recent months both at home and in importing countries, and that a number of merchants have inquired whether it would be possible to cancel contract deliveries over the next few months. Similarly, the volume of new transactions in iron and steel remains small, and stocks of pig iron are again on the upgrade. The recession in the exports of tinplates, moreover, has led to the suspension of operations at a number of steel furnaces in Wales. Reports from the cotton and wool textile industries reveal no improvement. Stocks show a tendency to increase, and, despite the closing down of many cotton mills, output continues to exceed sales.

Coal

Cardiff.—Both at home and abroad stocks have been accumulating in recent months, particularly at foreign coaling depots, and merchants have been making inquiries to ascertain whether arrangements are possible under the centralised selling scheme either for the cancellation of contract coals due to them over the next few months, or for the sale of such coals at free market prices. Local industrial demand is slightly less active, and shipments in the foreign and coastwise trades at the South Wales docks last week totalled only 378,400 tons, compared with 430,000 tons three weeks ago, and 377,552 tons in the corresponding week last year.

The approved prices of the Central Board are unchanged, and so far there

have been very few reports of loss of working time at the collieries. The period of the suspension of the trade share provisions of the output and price regulation schemes expires at the end of March, but the Executive Board under the South Wales scheme have decided in favour of a further extension of the period till the end of September. The Monte Video Electricity Works have placed a contract for 75,000 to 85,000 tons of sized coals over the twelve months ending March, 1939. Exporters at Cardiff have been informed that in future the French Railways will make their purchases of coal through a central body to be known as the French National Railways Coal Department. Coke prices continue firm, but pitwood quotations are easier, and prices for Portuguese wood have been reduced by about 1s. per ton to 25s.-26s.

Newcastle-on-Tyne.—The prompt position in the North-East coal market is satisfactory enough, but the outlook gives little encouragement, there being no signs of any improvement in demand. Hand-to-mouth buying and heavy stocks abroad are largely responsible for this dull spell in the export trade. Moreover, consumers, especially in the Scandinavian countries, believe that prices will tend to decline as a result of the increased European production. Northumberland steam collieries continue to work regularly on contracts made last year, whilst in Durham, local industrial demand is still the basis of the market. The demand for patent oven coke is weak, particularly in the export section.

Sheffield.—The inland market continues very firm, demand for steam coal being at a very high level, with every indication of remaining so for some

time. Export business is still very small, but with good inland business collieries show little anxiety concerning prospects.

Glasgow.—Domestic demand remains active, but export trade in the Scottish coal market continues dull. Export business has shown some improvement during the past week, but is still well below the former level. Consumption in the importing Continental countries appears to be on the decline, while the position has been further affected in certain cases by offers of cheap coal from various European districts. Generally the collieries are now becoming more dependent on home business and contract orders for the shipping trade, and as conditions in both these directions remain satisfactory it has been possible in most cases to maintain prices. But the market in one or two steam sorts, as well as larger-sized nuts, remains dull.

COAL OUTPUT AND EMPLOYMENT

District	Week ended January 29, 1938		Week ended February 5, 1938

* Including Cumberland, Gloucester, Somerset and Kent.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that the market remains quiet. Although new business is scarce, heavy tonnages are passing into consumption.

The demand for pig iron is not so vigorous as it was a few weeks ago, but heavy deliveries are being made against current contracts. Production is heavy, and both makers and consumers are able to put iron into stock. Most users have covered their requirements up to June and are disinclined to extend their commitments into the second half of the year.

In the semi-finished steel department supplies are now adequate to meet the needs of all the consuming branches of the trade.

Although the output of finished steel is maintained at a high level, it is difficult to place orders for certain descriptions except for forward delivery. Export business remains quiet, but recently there has been rather more inquiry from several overseas markets.

Sheffield.—Somewhat quieter conditions in the iron market continue, and there is little likelihood of revival until nearer the end of the current quarter. There has been no decline in the volume of business in the steel market, and orders for basic billets are not easy to place in full. There is no change in the iron and steel scrap market, supplies of most sorts being equal to consumers' needs. Among the steady flow of new orders from home and abroad is one received by a Sheffield firm from the Russian Government for steelworks plant and equipment which will take over a year to complete. It is said to be the largest of the kind ever received here.

Middlesbrough.—Producers are well sold ahead, whilst consumers see no advantage in closing further contracts for later delivery. The local consumption of pig iron has not been reduced, but foundries are well supplied with iron from other sources, and Cleveland foundry pig iron can now be supplied without delay. It is not likely that consumers will purchase further parcels of foreign pig iron in view of the fact that home producers have introduced the 5s. per ton rebate to regular consumers. Owing to the increased home production of iron it is thought probable that the import duty will be re-established at the end of next month.

Glasgow.—Export business remains quiet, but there is a good volume of inquiry for several overseas markets and an early improvement in export demand is anticipated. Steelmakers are not yet able to promise prompt delivery for new business. Re-rollers are now obtaining almost adequate supplies of semi-finished steel. Manufacturers in Glasgow and neighbouring towns are still very busy.

Cardiff.—The recession in the demand for tinplates has been accentuated during the past few weeks. The

latest return of the South Wales Pool indicates that output during the week ended February 5th was only at 57.5 per cent. of capacity, compared with last year's peak figure of 80.5 per cent. and a weekly average of about 73 per cent. In the home market the demand is fairly well maintained, but exports continue to decline. Shipments at Swansea last week totalled only 4,041 tons, compared with 5,524 tons in the corresponding period of 1937. The slump is reacting on the steel furnaces and at several of them operations were suspended from the beginning of this week. In the other re-rolling sections of the industry there is little change. The demand for pig iron is still very active. Prices are unaltered.

Textiles

Cotton (Manchester).—There has been little change in market conditions. A limited business has been done and buyers have continued their policy of operating from hand to mouth. Raw cotton prices have risen. A feature of interest has been the passage of the Farm Bill in the United States. There is some confusion concerning the terms of the Bill, but it establishes drastic control of production. According to present arrangements the new crop is to be limited to 11,500,000-12,000,000 bales, against 18,750,000 bales harvested last year. The latest advices with regard to the trend of world consumption are not favourable.

It has been another poor week for spinners. Although many mills have been closed down and machinery stopped in other factories, production has exceeded sales, with the result that stocks have increased. Slightly more active demand has been experienced in the cloth market, but many difficulties have been encountered in arranging terms for fresh contracts. Business for India has been small. Here and there low prices have been accepted by needy manufacturers. Some producers of printed and dyed goods have done slightly better for the Straits Settlements. Irregular buying has occurred for Egypt, chiefly of white goods. Heavy materials have been in request for the Dominions. New business in home trade fabrics has not been at all important, but rather improved clearances are now taking place.

RAW COTTON delivered to Spinners (Million bales)

Variety	Week ended		Total Deliveries

Wool (Bradford).—There has been no improvement in the wool textile industry of this country during the past fortnight, although conditions are no

THE COMMODITY MARKETS

THE general trend of the prices of primary products was downward this week. The gradual decline in British business activity and the uncertain outlook in the United States did not provide any incentive for large-scale purchases by consumers or speculative operations.

Among non-ferrous metals, copper and tin were a little firmer than a week ago, but the prices of lead and spelter were marked down. The passing of the Farm Bill in the United States was responsible for a slight improvement on the raw cotton markets. Business and rubber was on a small scale at generally unchanged prices. Wheat was slightly cheaper, but raw sugar prices showed a small recovery. Meat prices are scarcely changed on the week.

In the United States, the sagging tendency of prices is revealed by Moody's index of staple commodities, which declined from 149.4 (December 31, 1931 = 100) to 147.8 during the week ended last Wednesday. A month ago the index stood at 152.4 and a year ago at 206.3.

Metals

Copper.—After a further decline, prices recovered to close on Wednesday with a gain of 3s. 9d. per ton on the week. An increased turnover in mid-week, despite the Austrian crisis, suggests that consumers are not well stocked and must come on to the market if the present rate of absorption is to be maintained.

According to the Copper Institute statistics, consumption outside the United States rose from 103,860 short tons in December to the high level of 114,640 short tons in January. Production of refined copper declined simultaneously from 119,410 to 103,820 short tons. In the United States, however, the position showed further deterioration last month. Apparent consumption, it is true, rose from 18,100 to 24,880 short tons, but refined production advanced from 60,460 to 70,480 short tons. U.S. stocks consequently rose from 259,900 to 299,130 short tons—a level high enough to induce consumers in that country to delay their long-overdue restocking movement still further. Stocks outside America fell from 211,850 to 206,820 short tons between December 31st and January 31st; but this improvement in the statistical position is unlikely to have much effect on the London market, in view of the psychological effects of the deterioration in the United States.

Tin.—Prices showed a further advance in anticipation of a substantial cut in the quota for the second quarter of the year, and of an announcement on the buffer pool question, after Friday's meeting of the International Tin Committee. The result of the meeting was not known at the time of going to press, but the maintenance of the improvement will depend upon the decisions then taken.

Lead and Spelter.—After an initial decline, prices of both metals rallied, to close on Wednesday showing a slight decline on the week. The unfavourable trend of American markets and the realisation that the statistical position continues to deteriorate were the principal causal factors. According to the Metallgesellschaft, the world's zinc smelter production reached the record total of 1,653,108 metric tons last year, against 1,495,245 in 1936. World production in December (145,680 metric tons) was equal to a daily output of 4,699 tons, against a daily rate of 4,529 tons for the whole of 1937 and 4,085 tons for 1936. In view of the setback to demand, the current rate of production must be reflected in a heavy accumulation of stocks.

Grains

The markets in wheat have been rather featureless in the period under review and prices are slightly easier. Demand for Australian remains somewhat disappointing, but there is no selling pressure from the Commonwealth. The statistical position of red wheat remains sound relatively to that of white, and Manitoba grades continue to command a premium. There is no improvement in demand for home-milled flour, while the position of imported descriptions is unchanged. The maize market has remained fairly steady,

but prices have eased slightly. Meanwhile, demand for imported feeding barley has improved and a fair business has been transacted at steady rates. There are few offers of English malting barley.

Barley	140,402 cwt.	109,111 cwt.
Oats	69,307 cwt.	44,125 cwt.

Other Foods

Provisions and Meat.—On the London Provision Exchange this week Irish and Dutch bacon were a slightly firmer market, with other kinds about unchanged in price; hams were rather dearer. Butter was firm on Monday but slow in mid-week. Colonial makes being dearer and Danish unchanged on the week. New Zealand cheese was cheaper, but other varieties were unaltered. The cold weather has served to check the seasonal weakness of the egg market and prices are only a shade lower than they were a week ago. Business in meat at Smithfield was fair and price changes were few.

Colonial Produce.—After last week's depression, the London market in raw sugar showed an improved tone and prices scored a recovery. The causes of the recent weakness are discussed in a Note in the Industry and Trade section. Cocoa was also a somewhat

firmer market following the news that part of the Gold Coast crop has already been burned. Tea, on the other hand, was in less active request this week and prices eased. The spot market in coffee was quiet and prices declined.

Fruit.—At Covent Garden during the past week the demand for most lines of dessert fruit has been adversely affected by the wintry weather, but prices have not suffered much. According to *The Fruitgrower* business in apples was not so active, although inquiry for cooking varieties remained quite good. A wide range of South African fruit, which was a prominent feature of the market, generally encountered an active demand. Grapes sold particularly well; peaches and nectarines were good items, but pears did not move quite so freely. Oranges remained a consistent trade, Jaffas being in best demand. Grapefruit were a slow trade, but business in lemons was rather better than recently.

COMPANY MEETINGS

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED

INCREASED PROFIT — DISTRIBUTION OF 25 PER CENT.

LORD DULVERTON'S SPEECH

The thirty-sixth ordinary general meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held, on the 15th instant, at Bristol.

The Rt. Hon. Lord Dulverton, the chairman, dealing with the accounts, said: The investments in subsidiary and associated companies, at cost, less amounts written off in those cases where depreciation has taken place, stand at £12,389,105, an increase of £278,094. This increase is the sum of several transactions, and represents an additional interest in businesses connected with our trade.

You will observe the note on the balance-sheet, which reads: "In the aggregate the market value of investments in associated companies is largely in excess of the book value"—and I am sure you will realise that this is mainly due to our holdings in the British-American Tobacco Company, Limited, and in some of its associated companies: these holdings represent your company's interest in the export trade, and we obtain a considerable revenue from this source.

STOCK IN TRADE

Stock-in-trade, including leaf in transit at approximate cost, and advances to branches abroad for purchase of leaf, etc., amount to £35,841,542. The increase here is £2,536,756 over last year's figure. The whole of this increase has been incurred in respect of purchases of leaf tobacco. The larger volume of trade now being done by your company involves the carrying of larger stocks of raw material, and, in addition, as I warned you last year might be the case, our leaf average prices are up again.

On several previous occasions I have alluded to the importance which we attribute to the selection and maturing of our leaf tobacco, and I think you will agree with me that the history of this company shows that our policy of buying the best tobacco that is produced, and of maintaining and maturing adequate stocks, has been amply justified. Your company has in the tobacco growing districts of America a large organisation of highly skilled buyers for the purchase of supplies of leaf, and similar organisations have been built up in the other countries from which our raw material is obtained. The closest touch between our leaf-buying organisations and our factories in this country has been maintained by visits of directors and officials to those organisations, and by corresponding visits from the responsible heads of those organisations to this country.

Debtors, less ample reserves for discounts and doubtful debts, amount to £9,522,007, an increase of £730,810. The explanation is a satisfactory one—increased trade. Here again, as in the case of stock-in-trade, there has been a very big increase over the last four years.

PROFIT AND LOSS ACCOUNT

The net profit for the year, after providing for all charges, bonus to customers, taxation and national defence contribution, and depreciation of property, plant, etc., together with all income from investments and loans—which includes substantial dividends from companies operating outside the United Kingdom—amounted to £10,760,609, an increase of £114,293. After providing £10,000 for directors' fees and transferring £250,000 to general reserve account there remains a balance of profit for the year of £10,500,609. Adding to that figure the balance brought forward from last year, £1,183,766, we get a total of £11,684,375 available for distribution. Out of this sum the dividends, totalling £852,209, on the three classes of preference stock have been provided, leaving for disposal a sum of £10,832,166.

THE DIVIDEND

An interim dividend at the rate of 7½ per cent., free of income tax, was paid on September 1st last, and it is now proposed, subject to your approval, to declare a final dividend of 7½ per cent. and a

bonus of 10 per cent., both free of income tax, making a total distribution for the year of 25 per cent., free of income tax. The balance remaining to be carried forward to the accounts of the current year amounts to £1,441,405, which is £257,638 higher than the amount brought in at the commencement of the year under review.

We have thought it well for a number of years past to mark our appreciation of the loyal and willing service of our employees both at home and abroad by a gift over and above the ordinary salary or wage. This policy has always been approved by the stockholders; it has undoubtedly tended to maintain and increase the good feeling which has existed among our employees, and I am confident that you will—as in past years—endorse the decision of the directors to make a gift to the staff and workpeople of a sum equivalent to 16 per cent. of the total salary or wage received from the company during the twelve months ended October 31, 1937. The general conditions of the gift remain the same, the directors reserving to themselves a discretion to grant or withhold a share in the gift in any case which may appear to them to require exceptional treatment.

CURRENT TRADE AND FUTURE PROSPECTS

Much as I hesitate to leave the firm ground of past history for the comparatively vague realms of prophecy, it would only be in accordance with custom if I were to attempt to give you our view of the immediate prospects of our business. Firstly, as regards our trade—our trade is healthy; indeed, our sales for the first three months of this year show an improvement over the corresponding period of last year. Secondly, as regards our financial prospects—here, of course, taxation is a very important factor. There is income tax and the national defence contribution to be paid upon the profits we earn, and in this connection I would invite your attention to the third paragraph in the directors' report, which reads as follows: "The national defence contribution began on April 1, 1937, and provision has been made in the accounts for the company's liability for the seven months to October 31, 1937. In the current year the charge for national defence contribution will operate during the whole twelve months."

TOBACCO DUTY

It is true that the considerable increase in our carry-forward at October 31st last will, if necessary, be available as a contribution towards the greater burden of the national defence contribution in the current year, but, of course, it can only be used once, and I should not like in any way to underestimate what I may term the taxation difficulties. Then there is the other kind of taxation which, though commonly described as indirect taxation, is nevertheless taxation in a form of which we are very directly conscious—namely, the tobacco duty. The duty on unmanufactured tobacco is at a very high rate, and I do not think its effect can be illustrated more graphically than by telling you that on the price which we as manufacturers receive for a ten for 6d. packet of cigarettes, nearly three-fifths is represented by duty, while the remaining two-fifths has to cover all our costs—the cost of the leaf itself, its handling in the country of purchase, its transport to this country, its storage while maturing in bond, our manufacturing, packing and distribution costs—and our profit. From this it must, I think, be obvious that the profits we derive from our manufacturing operations are the result of a low rate of profit on a very large turnover.

The general outlook for our business, despite the difficulties of high taxation and higher leaf costs, is, I think, encouraging, and I shall myself be disappointed if the results of the current year are less satisfactory than those which are before you to-day. If you regard this view of our immediate prospects as one of "qualified optimism," you will, I think, correctly interpret what I have attempted to say.

The report and accounts were adopted.

BORAX CONSOLIDATED, LIMITED

SUBSTANTIAL INCREASE IN PROFITS

POSITION FURTHER STRENGTHENED

The fortieth ordinary general meeting of Borax Consolidated, Limited, was held, on the 17th instant, at Southern House, E.C., Mr D. Abel Smith (the chairman) presiding.

The Chairman, in the course of his speech, said:—Ladies and Gentlemen,—The net profits are £486,232, or about £101,706 more than in the previous year. Our carry-forward from last year is £236,160, hence we have to deal with a total of £722,393.

The first and second debenture stock interest amounted to £112,500, the dividends on the preference shares to £44,000 and the sinking fund to £5,825. We have placed to buildings and plant depreciation reserve the sum of £70,000, an increase of £10,000 over last year owing to the larger amount now involved. The total of these items amounts to £232,325.

ALLOCATION OF PROFITS

Deducting this sum from the total of £722,393 there remains a balance of £490,068 as shown in the report. We propose to deal with this amount by paying a dividend of 6 per cent. for the year on the preferred ordinary shares, which will absorb £36,000, and a dividend of 1s. 6d. per share, or 7½ per cent., and 2½ per cent. bonus, making 2s. in all, on the deferred ordinary shares, which will take £130,000. We also propose to place to income tax reserve and National Defence Contribution the sum of £32,000 and £5,000 to the pensions and grants fund. In addition to allocate to a special reserve account the sum of £50,000, after which there will remain a balance of £237,068 to be carried forward to next year.

The special reserve account is a new item arising from the consequences of the shipping strike which practically tied up all shipments on the Pacific Coast of the United States from towards the end of October, 1936, to beginning of February, 1937. Many orders for ore accumulated during that period and the congestion in obtaining tonnage following the shipping strike involved still further delays in the execution of orders. Hence both we at our own works and many of our buyers, profiting by this lesson, have increased our reserve margin of stocks to avoid shortages of supplies in the event of any future disturbance in deliveries. So far as our own works are concerned, such stocks of ore are, of course, taken into account at cost, but in the case of our buyers they have paid for and hold these additional stocks and as they may reduce their orders in the future it is obviously wise to put aside a sum against this contingency. Your board has therefore deemed it advisable to place the sum of £50,000 to a special reserve account, which can always be dealt with as developments and circumstances may dictate.

CONTINUED DEMAND FOR PRODUCTS

During the period under review the demand for our products has continued steadily, spread over a wide variety of trades throughout the world, but unfortunately business is increasingly hampered by exchange restrictions, necessity of securing import permits, clearing arrangements, etc. Perhaps it is not generally realised that there are at present over 130 clearing arrangements in operation between different countries, which constitute but a halting substitute for the free flow of international commerce.

The constructional improvements at our mines and refineries already in operation have proved their value and the additional installations we have in hand, including increased storage accommodation, etc., will enable us to cope with any developments that the future may have in store for us.

As regards the prospects of the current year, so long as the present unrest and political uncertainties disturb the world it is impossible to predict the trend of trade. Our domestic and general sales during the first four months of the new financial year are satisfactory, if somewhat below the corresponding period of the previous year. In the United States, where, as you all know, business has had a setback, a shrinkage has occurred.

The unfortunate state of affairs between China and Japan has materially affected those markets, in both of which we have always enjoyed a good trade. We have unlimited sources of supply, also the cheapest and the most suitable ore known at present and you may rest assured that we can participate to the full in any improvement in the world's markets.

PROGRESS IN AGRICULTURE FIELD

In the last two annual reviews my predecessor has referred to the promising new outlet for our products in the field of agriculture, and I am glad also to be able to report that further progress has been made in this direction. This is particularly satisfactory as it is founded on sound principles. The universally recognised need for applying science to the study of agricultural problems has led authorities in all important countries to institute experimental stations, in the programmes of most of which the study of soil fertility is an important item. So great has been the appreciation of the remarkable results latterly obtained from Boron that, I understand, the study of its influence on plant growth is now being taken up at most of these experimental stations. Laboratory tests have shown conclusively that most plants, even though supplied in abundance with all other elements, cannot live if entirely deprived of Boron. The soil normally contains the small amount of Boron required by plants, but field tests have shown that conditions do exist where the supply of Boron in the soil has to be supplemented by judicious applications of Borax. These conditions have to be studied carefully and minutely over a period of years, so progress is necessarily slow. In view of the great interest shown by agronomists and the research now being carried out in so many directions, our company may look forward with confidence to a steady, increasing and wider application of Boron as a contribution to the elimination of diseases in plants and as a means of increasing the yield in a number of important crops.

INTEREST IN U.S. POTASH COMPANY

Regarding our holding in the United States Potash Company, as advised in our last report, this contributed a small maiden dividend which has been substantially improved upon during the current year. The mine continues to open up steadily, their refinery is disposing of its production at satisfactory prices and since potash plays so important a part in the fertiliser industry we consider this investment has proved its value and should continue to contribute a steady return.

Our managing directors, Messrs J. Gorstley and F. Lesser, visited our offices, mines and refineries in the United States during the past year—the former in the spring and the latter in the autumn. They were well satisfied with the way the company's interests on that continent are being safeguarded.

I hope this autumn to visit America to see for myself the company's great interests in that country. A first-hand knowledge of our activities there is essential for the chairman of this company. From what I have seen of this company's position in this country and elsewhere I am much impressed by its wide interests and the strong hold it has established in the main markets of the world in the face of all competition. It is built on a sound foundation with great possibilities in the future, provided there is no international upheaval.

DIVIDEND POLICY

There remains one point which in the interests of all concerned it is desirable to make clear to-day, namely, our board's decision in connection with the declaration of an interim dividend on the preferred ordinary shares. So long as world conditions could be regarded as stable and the trading of the company in the opinion of the directors so warranted, the practice was to declare an interim dividend on the 6 per cent. preferred shares in the month of May, followed by the payment of a final dividend in the month of November of the same year. We desire to give every possible consideration to the holders of the preferred shares whose dividend is limited to 6 per cent. per annum when in the opinion of the directors the declaration of such dividend is warranted. Under the present uncertain political and economic conditions ruling throughout the world the board in prudence have to be guided by the results of the year's working when ascertained. Hence we do not feel justified in considering this question until the approximate results for the twelve months in question are available—usually during the month of November—and subject to the figures so warranting we propose hereafter to declare and pay an interim dividend on such preferred shares around that date and, subject to the figures permitting, a final dividend on such preferred shares when the report of the company is published.

I wish to add a very appreciative tribute to the services of our staff in all countries for the loyal and able support they have so willingly rendered.

The report and accounts were unanimously adopted, and a resolution was passed authorising the conversion of the company's shares into stock.

POWER SECURITIES CORPORATION, LIMITED

ENCOURAGING OUTLOOK

The fifteenth annual general meeting of Power Securities Corporation, Limited, was held, on the 16th instant, at Winchester House, London.

Mr George Balfour, J.P., M.P., the chairman, said that last year they handled more financial business than in the previous two or three years, including underwriting or placing of debentures, preference and ordinary shares of industrial and public utility undertakings, mostly in Britain. Since the war there had been little activity in financing foreign or Empire enterprises. Empire territory should afford a good field for investment and attractions to emigrants from the Old Country if those at the head of affairs would only declare that they would not only welcome but adequately protect private enterprise. Emigration schemes had been talked and worked out, and money had been voted to settle emigrants in British territory abroad which could not be used. When would they realise that the only real urge to emigrate was to get a chance to "get on"? Human nature did not change and men would always take the risk of leaving home if they felt they were following money which would open up new fields of activity and give them the chance of self-expression even with the risk of disappointment. These new fields of adventure would never be attractively opened up to emigrants by State funds or control. States could only provide the necessary freedom, encouragement and security for a fair run for individuals to make profit or bear losses, according to individual enterprise, effort, sagacity and pluck.

LARGE CONTRACTS HANDLED

During last year they carried out a large amount of contract work at home and abroad, and completed many works, including the five-mile tunnel from Loch Garry to Loch Ericht, power station plant extensions in Malaya, East Africa and at home to over £1,700,000. The total amount of work handled was quite up to their average, and they had still on hand work amounting to over £1,500,000. The work on the Kut Barrage was progressing according to plan, and in the absence of any untoward conditions they should complete the job after next season's work, and when they came to settlement he had no doubt proper consideration would be given in dealing with the abnormal conditions they had encountered. Meanwhile they had made appropriate reserves in the accounts of Balfour Beatty and Company.

THE INVESTMENT RESERVE

The investment reserve, established to meet contingencies, had been applied in writing down the capital value of investments. Notwithstanding the fact that they received interest and dividend on their Italian investments, which were held by the Corporation in respect of contract works in that country, the directors thought it prudent to write down the capital value. They had recently realised some of the shares at prices on which their valuation was based. He was sure they would agree that it was wise to write down a large investment of that kind to what must be regarded as a safe value at that date. After taking this step the value of the whole of their securities was considerably in excess of the figure at which they appeared in the accounts.

After applying £250,000 from investment reserve, the investments, loans and participations stood in the balance sheet at £1,334,753. The net increase in the investments after adjustments was £43,687. Investments in subsidiaries remained at £457,529. The balance carried to the balance sheet of £104,811 showed a net increase of £1,380. The balance of £104,811, together with £31,339 brought forward from last year, made a total of £136,151, out of which there had been paid and appropriated dividend for the year on preference shares, less income tax, £26,833 and transferred to investment reserve £50,000, leaving a balance of £59,317 which the directors proposed to deal with in payment of a dividend on the ordinary shares for the year to December 31, 1937, of 7 per cent., less income tax, amounting to £42,933, leaving to be carried forward to next account £16,384 8s. 5d., compared with last year's figure of some £31,339.

As to prospects, the volume of work still on hand would employ their energies for some time to come, and there was a considerable volume of financial and engineering work in prospect. They had to move with extreme caution in dealing with business abroad, but he thought on the whole the outlook was clearer than for many years past.

The report was adopted.

KONONGO GOLD MINES, LIMITED

SATISFACTORY DEVELOPMENT WORK

The fourth ordinary general meeting of the Konongo Gold Mines, Limited, was held, on the 15th instant, at 20 Aldermanbury, London.

Mr Robert Annan, M.Inst.M.M., the chairman, after dealing with the accounts, said:—At the mine development has continued to yield satisfactory results, and at the end of the period the ore reserve amounted to 355,781 tons, averaging 9.7 dwts. per ton, compared with 272,759 tons, averaging 9.3 dwts., at the end of the previous year, showing a net increase of 83,000 tons and an improvement of four-tenths of a dwt. in value.

In the Akyenase Central Section the eighth level was opened during the year, and the first results were somewhat discouraging, indicating a considerably shorter length of ore than on the level above. However, driving to the north-east encountered further ore, and in the end this block has proved almost as productive as the one immediately above it.

In the South Section, No. 5 level, further work is required here before any conclusions can be drawn. In both the Central and the South Section another level is being opened up as rapidly as possible.

THE AKYENASE SHAFT

The Akyenase Central shaft has now reached a depth of 1,068 ft. A winze from the eighth level has been sunk in the ore-shoot in ore of excellent grade, and a start has been made in opening the ninth level from the bottom of this winze, the ore averaging about 12 dwt. in value. During January the fifth level in the South Section also came into ore again, 101 ft. of driving averaging 5 dwt. per ton over 109 inches.

On the Awere Vein another level, No. 5, is also opened up, adding to the reserves 7,000 tons of 28 dwt. ore, a substantially better result than from the block above. During the December quarter the sixth level reached the ore-shoot and advanced 130 ft. in ore averaging 20.3 dwt. over a width of 60 inches.

On the Odumase Vein results from development have been most encouraging. The first, second and third levels have now been driven on an ore-shoot 400 ft. long, and the fourth level was in course of development at the end of the financial year. As a result of this work we have added to ore reserves 47,617 tons, averaging 14.7 dwt. per ton over a width of 70 inches.

The most recent results received by cable indicate that the new ninth level being driven from the winze in Akyenase Central has now reached a length of 52 ft. in ore, assaying 10 dwt. over 53 inches. The fifth level in the South Section has, in addition to the January figures, which I have already given, been driven a further 38 ft., assaying 6 dwt. over 45 inches. The fourth level south-west in Odumase, which during January passed through 113 ft. of low grade ground and looked to have passed beyond the ore-sheet, has encountered ore again and has been driven 42 ft. on reef, averaging 12.5 dwt. over 47 inches.

OUTPUT OF THE MILL

During the year the mill crushed 66,241 tons, an average of 5,500 tons per month, the ore being derived as to 70 per cent. from the reserves, 24 per cent. from development and 6 per cent. from dumps. Gold recovered amounted to 28,363 oz., or 8.4 dwt. per ton, representing a recovery of 85.8 per cent. It has taken a good deal longer than anticipated to reach steady operating conditions.

At the time of our last meeting the mill was crushing an average of about 3,400 tons per month, and for the first four months of the current financial year the mill has treated an average of 7,147 tons per month, or 19 per cent. above its designed capacity, with a recovery of about 94 per cent. of the gold content, and there should be no difficulty in maintaining this rate of treatment.

Additional plant for flotation treatment, which was referred to at our last meeting, has been ordered, and the last of the material is being shipped this month. It should be in operation in April and should benefit both recovery and operating costs.

With the mill running at its present capacity the gross operating profit is averaging about £10,000 per month. Operating costs for the past year averaged 30s. 11d. per ton, a figure which we hope to improve in the current year. It includes 6s. 6d. per ton for development redemption, which up to the present has given us a safe margin over actual development cost.

Barring unforeseen accidents, we should now look forward to steady returns with the prospect of increasing output and reducing costs. Our ore reserves represent four years' supply for the mill at its present capacity and development and prospecting of the property will be continued with vigour.

The report and accounts were unanimously adopted.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED

A SATISFACTORY YEAR

The forty-ninth ordinary general meeting of this company was held, on the 17th instant, at Winchester House, London.

Mr R. S. Guinness, the chairman, said that the accounts for the year were satisfactory, both from the revenue and capital point of view. The revenue at £135,875 was an increase of £4,770 over last year, and the recovery power of their holdings was strikingly illustrated by the fact that the aggregate increase of revenue since the low point of the year ended January 15, 1934, amounted to some £21,300. They had still a considerable distance to travel before they could reach their peak earnings of 1930, which had amounted to some £157,000 and into which redemptions and conversions of debenture stocks to lower rates had made large and permanent inroads. In prevailing conditions they could not expect to reach that figure rapidly, but by continuing to apply the same standard of investment selection and by the consistent policy of retaining a reasonable margin of earnings in the business, the board were strengthening the company's revenue year by year.

It was a satisfaction that this year the revenue account not only allowed them to retain a slightly larger margin than last year, but also to recommend an increase in the dividend by $\frac{1}{2}$ per cent. to $6\frac{1}{2}$ per cent. Difficult times were still ahead, but he thought that shareholders would share the confidence of the board in the trust's list of investments.

In conclusion, the chairman said that he wished to call attention to the fact that the name of the company no longer represented its real activities. When their company was formed as the result of an amalgamation some fifty years ago the name was adopted because railways were under construction all over the world and the idea was that the company would take an active part in railway enterprise, but fortunately the board foresaw in good time what was going to happen, and at the time of speaking the company's investment in the ordinary shares of railways was just under $3\frac{1}{2}$ per cent.

The board were now considering dealing with the question of the company's title accordingly.

The report and accounts were unanimously adopted.

RAILWAY DEBENTURE AND GENERAL TRUST COMPANY, LIMITED

IMPROVEMENT IN REVENUE

The sixty-fifth ordinary general meeting of this company was held, on the 17th instant, at Winchester House, London.

Mr Richard S. Guinness, the chairman, said that in the almost day-to-day variation in conditions, international, national, political and economical, in which they had had to work during the past year, it was a matter of satisfaction to the board that the report submitted showed the capital to be intact and an improvement in revenue. The actual improvement in revenue amounted to £3,326, although the receipt of income in excess of revenue actually accruing in the year was lower this year than last year. From the total income of £145,677 there had been deducted expenses of management, debenture interest, preference dividend and a provision of £1,000 for National Defence Contribution. The net balance of £46,747 represented 7.2 per cent. on the ordinary stock, against 6.8 per cent. last year, when there was no charge for National Defence Contribution. Their allocation to reserve of £5,000 was the same as in the past two years, and after providing for income tax and for the dividend on the ordinary stock at $5\frac{1}{2}$ per cent. for the year, they were able to add £3,997 to the carry-forward, bringing it up to £37,710.

The board were happy to be able to maintain the increased dividend of last year, based as it was upon a large proportion of low fixed income returns, and to swell the margin retained in the business. He made no apology for again emphasising the fact that a large proportion of their income accrued from fixed interest securities, and when they reviewed the many phases through which world conditions were passing, he considered it a factor of safety that approximately one-half of their income was derived from prior charges in the form of bonds and debentures. If they included preference dividends they were then covering three-fourths of their income. The mainstay of the revenue account was their holdings of United Kingdom securities, from which they received £86,635, or $59\frac{1}{2}$ per cent. of the total. As to the future, he believed their list of investments to be sound, and, unless there was a major change for the worse, they should be able to maintain the dividend at the present rate.

The report was unanimously adopted.

GENERAL INVESTORS AND TRUSTEES, LIMITED

CAPITAL INTACT WITH SUBSTANTIAL SURPLUS

The thirty-first ordinary general meeting of this company was held, on the 17th instant, in London.

Mr Gerald T. Moody, the chairman, said that the position disclosed in the report must be a matter of satisfaction not only to those directly concerned in its management, but to every stockholder. The revenue, after providing for taxation, amounted to £101,037, which compared with £97,188 in the previous twelve months. It was proposed to pay a further 7 per cent. on the ordinary stock, making 11 per cent. for the year, to carry £10,000 to a dividend equalisation reserve account, and to increase the carry-forward from £5,437 to £6,882.

Investments now appeared in the balance sheet at £1,957,820, and on valuation as at January 31st showed a depreciation of £144,000, or approximately $7\frac{1}{2}$ per cent. Since the reserve accounts and amount carried forward aggregated £316,882, the company was in the happy position of having its capital intact with a substantial surplus, in spite of the fact that the valuation was made on the day showing the lowest recorded prices of the year.

The investments included upwards of £100,000 in British Government securities, indicating a liquid position, more particularly when taken in conjunction with their cash balances amounting to £79,203.

In these times of depression in the market value of securities it was of the utmost value to have funds available for the purchase of good securities which other investors were forced into selling at prices incommensurate with their intrinsic worth. Based on the valuation already mentioned, the company had approximately 53 per cent. of its funds invested in the British Empire and 18.5 per cent. in what, for want of a better term, he might call International securities, interests in undertakings the business of which was chiefly financial or of investment character. Those companies were in the main dealing with Empire interests, so that in fact considerably more than half of their capital might be said to lie in the British Empire. Their next largest group of investments, some $6\frac{1}{2}$ per cent., was in the Argentine, and the balance was widely spread throughout the world, in no one country being as much as 4 per cent.

The report and accounts were unanimously adopted.

WANDSWORTH AND DISTRICT GAS COMPANY

INCREASED SALES

The annual general meeting of the Wandsworth and District Gas Company was held, on the 15th instant, at Wandsworth, London, Mr Frank H. Jones (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance of profit of £280,377 compared with £276,527 for the combined companies in respect of 1936. The financial position of the company was perfectly sound. The sale of the various residuals was satisfactory, and an improvement over the previous year. That improvement had been obtained largely by economies in working and, therefore, was not wholly due to increased selling prices.

Expenditure on coal was again up by approximately 1s. per ton. The question of coal was one which gave the directors considerable anxiety. Their company, in common with others, was not permitted to declare a dividend other than one controlled by the price of gas, yet its main source of manufacture—coal—was almost free from any such restrictions. In the year under review the company had been able to recoup the increased price of coal by the improved sales of coke, but the directors felt that the rising price of coal from 1938 onwards would far outstrip any likely increase in the price of coke, and consequently they must look forward to a considerable increase in manufacturing costs. The directors had been compelled to raise the price of gas from January 1, 1938, an increase which had been caused by increased cost of materials generally and wages. General materials had increased by approximately 17 per cent., while the increase in the wages of employees actually represented an addition of 6 per cent., whereas the increase in the price of gas of 0.4d. per therm only represented 4 per cent. on the selling price throughout the area of the company.

The directors felt that to be able to report an increased sale of gas to consumers of 1.6 per cent., or over 60,000,000 cubic feet, was gratifying; 6,653 new consumers had been added, the total number now being well over 200,000. A new record had been obtained in the sale of new apparatus.

The report was unanimously adopted.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED

FURTHER PROGRESS

The annual general meeting of this company was held, on the 17th instant, in London.

The Rt. Hon. Lord Brocket (the Chairman) said that the accounts again showed an improved result, continuing the progress and development of the business which he had anticipated last year. They were largely dependent on the trades of Lancashire and the North-West of England, and those had revived considerably during last year. Their largest centre of activity was Liverpool, the prosperity of which depended upon shipping and overseas trade, which had been particularly active during the period under review, and so far indications were that that would continue. Shipbuilding, too, had been very busy.

Last year was one of the most successful for the cotton trade for many years, and although the close of the year saw some slight diminution in orders, due to the decline in the price of cotton and owing to high stocks in the hands of producers and merchants, it was to be hoped that these factors would soon be rectified. They had large interests in the mining areas of Lancashire, and that branch of industry, assisted by the selling schemes and the greater demand for coal, had benefited their houses in Wigan and Leigh.

The output of the company and its subsidiaries had continued to increase in all districts, which was evidence of the excellence and popularity of their various beers. Particularly was that the case with sales in bottle. Further extensions to their bottling plant were necessary and in course of erection, which would bring their plant to the forefront in modernity, speed and efficiency. They had continued their policy of rebuilding and modernising their houses with beneficial results.

The expenditure incurred had justified itself in the increased trade, which reflected the appreciation of their customers. Rebuilding and renovations to-day were a costly matter, but every care was given to the various details connected with such expenditure, and he could assure them that no waste of money was allowed.

The balance of profit available was £285,146, an increase of £55,847. The ordinary stockholders would be pleased to hear that the board recommended a final payment of 5½ per cent., making 7½ per cent. for the year.

The report was unanimously adopted.

(Continued from page 414)

Vegetables.—All lines of salads have been in poor demand at Covent Garden, states *The Fruitgrower*, owing to weather conditions. Mushrooms, however, were a point firmer and celery was in good demand. Asparagus was rather more prominent and prices were consequently easier. All varieties of kitchen vegetables sold well at firm prices. Some spring onions were on the market. Old potatoes were in active demand at the various London markets, but supplies were ample and prices tended to lower levels.

★

Milk.—The appended statistics relative to the operation of the Milk Marketing scheme in recent months are issued by the Milk Marketing Board:

	Jan., 1937	Nov., 1937	Dec., 1937	Jan., 1938
Prices (per gall.)	d. 17	d. 18	d. 18	d. 19
Liquid	6.249	7.525	7.073	7.724
Av. manufacturing..				
Contract sales (mill. galls.)				
Liquid	16.01	50.38	51.26	51.77
Manufacturing	48.14	12.08	12.85	14.94
Total contract	64.15	62.46	64.11	66.71
Used by farmhouse cheesemakers	0.35	0.94	0.66	0.59

★

Miscellaneous Commodities

Oilseeds and Oils.—Markets have been unsettled by the uncertain outlook

in certain European consuming countries. Linseed supplies have increased and mills are now able to resume crushing. The large quantities afloat for Europe are gradually nearing their destinations, and with shipments of the new Argentine crop maintained at a fair level, the quantity on passage to Europe has increased to 203,600 tons, including 12,400 tons from India. Current demand, however, is only moderate and with Bombay shippers pressing new crop on the market, prices have taken an easier turn. The linseed crop in India is expected to exceed that of last season. Moreover, freight rates are easier and shipping room more readily obtainable than a few weeks ago. Plate linseed has given way to a lesser extent, the statistical position being considered strong, and the potential requirements of the United States far from satisfied.

★

Rubber.—The market has been very quiet in the period under review, but the undertone has shown some improvement. Prices at the close on Wednesday were unaltered, compared with those ruling a week earlier.

MOVEMENTS OF RUBBER IN LONDON AND LIVERPOOL

	Week ended Feb. 5, 1938	Feb. 12, 1938
Landed	3,019	3,281
Delivered	1,200	944
Stocks, end of week	63,169	65,706

BAH LIAS RUBBER ESTATES LIMITED

INCREASED PROFIT

The annual meeting of the Bah Lias Rubber Estates, Limited, was held on February 16th at 19 Fenchurch Street, London.

Mr H. Eric Miller (the Chairman) said that the rubber crop harvested amounted to 3,508,308 lbs., a new high record for the company. The average net sale price, at 8.87d. per lb., showed a gratifying improvement of over 1½d. per lb. over the previous year and the revenue account benefited to the extent of almost £50,000.

In addition to Netherlands Indies company tax, which absorbed 20 per cent. of the statutory profit, they also had had to face export duties amounting on 1937 shipments to almost ½d. per lb. He mentioned last year the efforts that were being made to obtain relief from the onerous terms of the export duty ordinance, and he was happy to say that those efforts had been so far successful that the rate of duty for 1938 had been fixed at the equivalent of approximately ½d. per lb., whereas under the old scale it might have amounted to almost 1½d. The special 2 per cent. *ad valorem* duty, which was due to expire on the 25th inst., was to be replaced by a "defence" export duty of 1 per cent. Their liability for N.D.C. for April/October, 1937, was estimated at £2,500, and provision for this had been made by transfer from taxation reserve.

The profit for the year, at £73,652, was over £32,000 more than the comparable figure for 1935/36. A final dividend of 10 per cent. making 15 per cent. for the year, was recommended and £42,880 was being carried forward. The financial position of the company was exceptionally strong. A considerable part of their reserve land was eminently suitable for rubber growing, and when the present restriction on new plantings was relaxed the question of extensions would receive consideration.

The International Rubber Regulation Committee had fixed the rate of export for the quarter April-June at the low figure of 60 per cent., and if there was no revival and that rate had to be continued for the remainder of 1938 world exports for the year would amount to no more than 930,000 tons. Absorption in 1937 amounted to roughly 1,085,000 tons, and a comparison of these two figures suggested that in the absence of any further untoward happenings there was a margin on the right side which justified the expectation of a recovery from the present unduly depressed level of price.

The report was adopted and a resolution converting the shares of the company into stock was approved.

Furs.—The London winter fur sales closed this week on a satisfactory note, prices having shown little change during the past week. Prices in shillings and pence per skin, compared with those realised at earlier sales, were as follows:—

	Winter Sale, 1937	Autumn Sale, 1937	Winter Sale, 1938
Beaver Mackenzie River Ex Ex Large	136/-	102/6	88/-
Ermine York Fort Ex Ex Large	7/- to 8/3	6/2 to 6/3	4/4 to 5/-
Fisher York Fort 1 and 2 Dark	180/- to 400/-	Unsold	107/6 to 200/-
Fox Bonnard York Fort 1 and 2	43/- to 78/-	69/-	77/-
Fox Blue Arctic Dark	150/- to 230/-	180/- to 330/-	100/- to 310/-
Fox Groat York Fort Medium 1	105/- to 240/-	130/- to 210/-	120/- to 210/-

South-West African "Persian" lambs, which were not sold at the Hudson's Bay Company's winter sale in 1937, showed little change in price so far as selected grades were concerned. Low grades, however, declined in price by about 12½ per cent., compared with last September.

Coal Mining

The following charts illustrate developments in the coal industry since 1913. Chart I draws attention to changes in the values of British production and exports and the relation between British and world exports. Chart II traces the recent decline in employment and striking rise in earnings (discussed in a leading article on page 393). Chart III gives some indication of post-war changes in the efficiency of labour and the profitability of the industry. Chart IV shows graphically the increased mechanisation of various processes in coal mining since the war.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On February 11th, applications at £99 17s. 6d. per cent. for bills to be paid for on any day except Tuesday of the following week were accepted as to about 18 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Tuesday at £99 17s. 7d. per cent. and above were allotted in full. £15.0 millions of Treasury bills are being offered on February 18th.

this feeling in the House itself and ensured that the voting followed orthodox party lines. But though only a handful of Conservatives followed Mr Churchill's lead and abstained, many Government supporters evidently went into the lobbies with the utmost reluctance.

In the country, criticism has been expressed much more frankly and on a scale comparable to that aroused by the notorious Hoare-Laval agreement. It would, of course, be hotly resented if it were thought that the change had been made at the dictation of either Berlin or Rome; but this idea, which is not seriously entertained by the average Englishman, has played little part in influencing opinion at home. The grounds of criticism are mainly of a different kind. First, it is felt that the time when Signor Mussolini's chickens are beginning to come home to roost, and he is faced with serious economic, financial and political difficulties, is not the moment to start negotiations which raise expectations that we are prepared to make concessions of principle or of British interests. Whether the Cabinet contemplates serious concessions going beyond recognition of the Abyssinian conquest has not been revealed; but persistent rumour has it that naval parity in the Mediterranean, representation on the Board of the Suez Canal and a share in its defence are among the items that will be put forward from the Italian side. These are no doubt bargaining terms, but that they should be thought possible shows what a long way we have travelled from the situation existing in the autumn of 1935. From the German side, it is evidently hoped that the old plan of a Four-Power Pact may be pressed home, and that France may be driven to break off her Russian alliance. It is hardly necessary to say that British opinion will not dance to the dictators' piping in this way.

But apart altogether from such considerations, there is widespread support for Mr Eden's demand for proofs of good faith. In his speech he deliberately omitted any reference to Abyssinia, though this country has not forgotten the broken pledges of 1935. It was enough for his purpose to point out that the gentlemen's agreement of January, 1937, was promptly followed by the shipment of a large consignment of Italian troops to Spain; and that though the agreement provided for the cessation of anti-British propaganda, the poisonous broadcasts from Italy hardly ceased for a moment. Again, in the summer, relations were improved for the time being by the Prime Minister's letter to Signor Mussolini; but this was shortly followed by a series of "incidents" in the Mediterranean and the glorification by the head of the Italian Government of the victories of the Italian forces in Spain. Moreover, for the past 12 months, we have had the sorry story of procrastination at the Non-Intervention Committee and the refusal of Signor Mussolini in October to join in a conference with France and England to discuss the withdrawal of troops from Spain. In such circumstances it is not unnatural that this country should regard any undertaking by Italy with suspicion unless

accompanied by some such proof of good faith as, Mr Eden believes, would be provided by withdrawal from Spain.

It may be that the fears of the democratic nations throughout the world and of British opinion at home will be disproved by events. In the course of the debate, Mr Chamberlain sought to meet his critics by emphasising that at this stage he merely proposed to talk and not to negotiate, and that he had told Count Grandi that the British Government would not consider any agreement as complete unless it contained a settlement of the Spanish question. He further announced that Italy had accepted the British formula for withdrawal. In other words, the Prime Minister argued that his position was not materially different from that of Mr Eden; he was prepared to enter into conversations, but not to conclude an agreement until the proofs of good faith had been forthcoming. Moreover, from the other side of the table Signor Mussolini urgently needs to come to an understanding; for the new forward policy of Herr Hitler in Austria makes it imperative that Italy, in this moment of her relative weakness, should have other friends to fall back on if Germany's policy becomes too aggressive in Central Europe. Thus, with Mr Chamberlain's prestige staked on the success of these conversations, and with Signor Mussolini anxious to allay British hostility, there will be a very great desire on both sides to reach a settlement. Yet public commitments on the one side and the interests of the Empire, the state of public opinion and our international obligations on the other, would present serious difficulties even if there were agreement between Britain and Italy on the principles of international policy.

Hitherto, this common ground has been conspicuous by its absence. The most disturbing feature of this week's debate was the uncertainty it imported into the fundamental principles of British policy. Public opinion in this country has been most disturbed by the Prime Minister's blunt confession of his disbelief in the League as an effective political instrument in present conditions, and his admission that we are in a phase of power politics. This may be a realistic description of the state of the world, but even if this be admitted, with its corollary that we must find a means of living on terms with the dictatorships, it does not follow that we should replace the international democracy of Geneva by a Four-Power Pact. Between the liberty-destroying regimes and the democracies there is no common ground; and there is no assurance that even the universal desire for economic betterment and the avoidance of bloodshed will in totalitarian States put a check upon imperialist designs fostered by mass propaganda. To weaken, therefore, the confidence between the peace-loving peoples in the hope of a temporary relaxation of tension with Italy would be a disaster. Fear of this calamity is the chief reason for the misgivings aroused by the Italian talks and the dropping of a Minister who has fought so bravely for international collaboration.

Warning From Berlin

FOR three hours last Sunday Herr Hitler addressed the Reichstag and the world. The most promising way of battling with the torrent of words is to distinguish, as far as we can, between the things new and old that this master of the demagogic art has brought, for the occasion, out of his well-stocked store chamber of rhetorical properties. In retrospect, Herr Hitler's speeches are not easy to keep distinct from one another owing to the strong vein of constant repetition with which he contrives to work upon the mass mind. Thus, nobody was surprised to find that last Sunday's speech, like its predecessors, contained both a denunciation of Bolshevism and a catalogue of Herr

Hitler's own achievements in the way of overcoming economic adversity at home and restoring Germany to the position of a Great Power in the world. There was the usual protestation of Herr Hitler's will to peace and moderateness of ambition—but here we begin to come to an important difference; for this "all-clear" signal, which was trumpeted in such strident tones after the re-occupation of the Rhineland in 1936, is inserted in the present speech with so perfunctory a lack of emphasis that it can hardly be heard against the prevailing note.

France is assured that Germany has no further territorial claims against her, while as to Britain, Herr Hitler

has no dispute except in the matter of colonies. But for the rest the prevailing note is one of truculence. The speech gives—and is unquestionably intended to give—the impression that the Third Reich has now reached, in its irresistible march from strength to strength, a point of vantage beyond which it will no longer be necessary for the leader of the victorious Teutonic hosts to spend breath and waste time in assuring his victims that he means them no harm.

There were, of course, definite targets for the truculence: and the chief of them were the free Press of the world, the League of Nations, and Mr Eden. The last of this trio of *bêtes noires* was castigated by Herr Hitler on Sunday as a patron of the freedom of the Press in his own country and of Bolshevism in Russia. This was at midday, and a few hours later Mr Eden was out of office.

The victory over Mr Eden was the most spectacular apparent result of the speech; but the furious onslaught upon the foreign Press was certainly its most distinctive feature. Herr Hitler actually gave as his reason for still further strengthening the German army the "danger to the peace of the people" of Germany which, in his opinion, the foreign criticism of his policy constitutes. The additions to Germany's military strength are to provide an assurance that "these wild threats of war against Germany will not one day be translated into bloody force."

When the Führer descends to details, the criticisms that arouse his wrath do not, however, appear to be threats of war at all. He is furious that the foreign Press has discussed his collision with the representatives of the Prussian tradition in the Army; and he is annoyed at their having pointed out that his support of Japan in the Far East is inconsistent with his professed championship of the "Aryan" race. Both the points that he has picked out for castigation are thus examples of nothing more sinister than fair comment on undisputed facts. Clearly, what Herr Hitler is up in arms against is freedom of speech itself. Does he now feel himself strong enough to insist upon absolute silence abroad as well as in the Reich?

A target to which Herr Hitler has devoted scarcely less attention in this speech is the League of Nations. He denounces it as an organisation for procuring majority votes in favour of injustices. It was the Italians, not the Abyssinians, who ought to have been treated with tender solicitude at Geneva; and in the Far East the cause of civilisation is bound up with the triumph of Japan over China, because the Japanese will, and the Chinese cannot, build a bulwark against Russia. The recognition of Manchukuo by Germany is announced, and the Berlin-Tokyo-Rome triangle is buttressed up, as industriously as the League is demolished. The two policies are, of course, the obverse and reverse sides of a single medal, and neither of them is new in itself. But Herr Hitler has never before

been so emphatic in pointing out the connection between them. In his speech he no longer even affects to conceal what he is really doing. He is shovelling away the last remnants of collective security which still cumber the ground in the path of his advance.

Neither the attack on Mr Eden, however, nor that on the world Press, nor even on the League of Nations, sounds quite so ominous in the ears of the world as the remarks that Herr Hitler had to make about his neighbours in Austria and Czechoslovakia, about Spain, and about colonies. In regard to Austria, it is the omissions rather than what was said that are frightening, for there was no mention of the explicit guarantee of Austria's independence, and the direct "hands off" orders to the German Nazis, which were widely reported to have been Herr Hitler's contributions to the bargain of Berchtesgaden. He practised, indeed, a masterly vagueness calculated to spare Austrian feelings without cramping Germany's free hand.

Czechoslovakia received no direct mention. But there is a most ominous assertion of the right to protect the political liberty and cultural freedom of the ten million Germans of the former Austro-Hungarian Empire, who had been separated from the Reich by the Peace Treaties, and the total cannot be raised to this figure without the inclusion of the Sudeten Germans in the Czechoslovak Republic. If the precedent of past "warnings" by the Führer holds good, this portends an attempt at direct interference with the domestic concerns of Czechoslovakia.

In the matter of the colonies, Herr Hitler's two principal shafts went home. The natives were not consulted when the former German colonies were taken away from Germany and placed under mandate in the peace settlement; and the self-righteous League Powers' colonies were originally acquired "through naked and brutal force." As for Spain, Germany proclaims herself in complete agreement with Italy in working for "an independent national Spain" and the exclusion of "Bolshevism" on the Mediterranean. This is the proclamation in the shade of which British and Italian negotiations are to begin.

The general significance of last Sunday's speech is unmistakable. Herr Hitler now feels himself on top of the world. He believes that the democratic peoples who reject his principles and abhor his faith are no longer in a position to stay his triumphal course. He can now take the pawns off the board, one by one, without having to reckon with the intervention of any Power that can give him any serious concern. Behind an impregnable rampart in the Rhineland and on the Frisian coast, he can now gather in his harvest ("above all, we have a scarcity of fertile soil") in the vast expanses to the east. It may be an intoxicating vision for the Nazis; but it is one to demand immediate attention in the rest of the world. As clearly and as truculently as never before, we have been warned.

Machinery in the Office

EVER since the sons of Adam fashioned rude implements to save the labour of their hands in the fields, man's ambition to devise machines to lighten his toil has been perennial. The cutting-edge, the plough and the potter's wheel were milestones on the road to that fortunate day foretold by Aristotle, when sticks and stones would do the work of slaves, and all men would be free. Oxen, horses and running streams were harnessed to the uses of man in the quest for his livelihood, and with the advent of steam power barely two centuries ago the long-sought Age of Machinery was begun.

Just after the War a play from Central Europe caught the spirit of the new mechanical era. The "robot" was pictured doing the work of men in every respect but one.

He could do everything but think. In industry, where the processes could be broken up into a series of simple mechanical motions, the machine was by then all-conquering, and the mechanical division of labour had opened the markets of the world to the factories of every country. Mechanical operations and machine parts were standardised, and men became increasingly planners and tenders of machinery.

In other fields of human labour the triumph of the machine was not so easy. Domestic toil could not be wholly reduced in each small home to a series of simple repetitive operations. A leading article in *The Economist* on February 5th (page 279) showed how certain machines had already invaded the home, but domestic management is still too

large an element in housework for the robot to take entire charge.

In the office, too, there are limits to the use of the mechanical aids which in the last thirty years have transformed business life. The influx into business of young women, trained in typewriting and shorthand, bears witness to a notable change. The days of the quill pen and high stool have almost gone. The typewriter, the adding machine, the mechanical calculator and the sorting machine have been pressed into service to save the manual labour of writing, copying and performing simple repetitive—and monotonous—tasks. But a machine can do only mechanical work, and there is more in business than mere routine. Judgment remains a human perquisite.

Moreover, many even of the mechanical devices contrived to do repetitive operations are costly to produce. Only in offices, consequently, where a great number of routine tasks are controlled under a single management is it economic to substitute these expensive instruments for the labour of human hands or the simple processes of figuring—which by their standardised nature can be mechanically done. True, a limited number of machines like the typewriter and the cash register have come into general use. And at the other extreme, the cost of developing that indispensable instrument of modern office equipment, the telephone, on a national scale is far too heavy for any but a great "utility" organisation or the State itself. In the last resort, however, the factors which determine the scope of machinery in the office are functional rather than merely financial. The processes of business are less mechanical than those of industrial production. They are more diverse, and their average scale is narrower.

Admittedly, a significant part of the work of every office is based on routine, on correspondence and book-keeping, and to that extent the substitution of typewritten for handwritten letters, for example, has effected a substantial saving in time and money. But the higgling and haggling of the market are obviously beyond the robot's competence, and so are the discretion, the shrewdness and the business acumen expected of those who hold even junior positions in the hierarchy of business management. Even in the case of repetitive operations which by their nature are capable of being mechanically performed, the "plant" may be complicated and expensive enough to be uneconomic for all but the largest firms.

The installation of office machinery began with the adoption of card and loose-leaf systems of book-keeping at the beginning of this century. The laborious task of copying out complete records of every transaction in longhand into a bound book was in part eliminated to facilitate the use of the typewriter, which was then coming into common use. But book-keeping is more than the mere recording of the details of all transactions; it involves the classification of individual items according to the analysed information required for costing and other purposes; and from the introduction of machines to give a typed, instead of a handwritten, record, it was an obvious step to fashion and employ machines to add and compute figures. Laborious manual tasks were broken down into a series of simple operations, each of which could be performed by machinery.

To-day, accounting machinery—the "keyboard" models—of the typewriter *cum* adding machine variety can be divided, broadly, into two types. On the one hand, there are general purpose models which perform not one task, but many. Driven by electricity, they not only add and subtract, but can also, with slight adjustments, be used for such tasks as completing account cards and payment books or making up ledger, wages and audit sheets. On the other hand, special purpose machines are available to perform specific tasks. Whole office systems can be built up by the complementary use of many machines of this kind. Special models are produced for municipalities and public utility organisa-

tions; and the use of statistical data has been widely encouraged by the employment of computing machinery. One firm alone advertises over 450 different keyboard models with more than 2,000 optional features. And, as more and more extensive and varied figures are required for the scientific control of industry and to satisfy the schedules of information required of many undertakings by law, the need for new models or for greater adaptability in existing equipment grows.

Indeed, in view of the high capital cost of these intricate and ingenious machines, elasticity in the uses to which they can be put is essential. The purchase of a single model involves an important addition to overhead expenses. And the cost of the more elaborate machines might be wholly prohibitive but for the fact that their production is centralised to a considerable extent in Canada and the United States, whence the whole English-speaking market is supplied. The following tables give some indication of Britain's dependence on overseas supplies, the more so if it be borne in mind that a large proportion of the machines produced in the United Kingdom and exported consists of cash registers and typewriters rather than the more complex forms of computing machinery:—

ACCOUNTING AND CALCULATING MACHINES AND AUTOMATIC CASH REGISTERS

Year	Production* Factory Value	Exports		Retained Imports	
		Quantity	Value f.o.b.	Quantity	Value c.i.f.
	£'000	Tons	£'000	Tons	£'000
1932...		23	57	298	392
1933...	342	30	68	438	486
1934...	350	31	59	629	692
1935...	585†	42	85	247	476

* Including replacement parts. † Including adding, listing, book-keeping and billing machines with typewriters incorporated.

Keyboard accounting machines are lineal descendants of the typewriter and the old hand book-keeping, but another type of machine, which has recently come to be extensively used in commerce and industry, owes nothing to the traditional book-keeping system. In this type, complete details of each transaction are recorded by punching holes in a card, according to a specified code. By simple and rapid sorting (up to 24,000 cards an hour) any required classification of data can be automatically obtained. Punching holes in a card is probably the quickest known method of writing, and these machines (which were installed by a large and well-known insurance company during the war, when the servicing of foreign equipment was difficult) are speedy and comparatively free from error. They are equally useful without alteration in decimal and sterling countries; and models have been devised for invoicing and most office work. On the other hand, their original cost is very high, and the preparation and checking of the card used as a basic record is an expensive proceeding.

We may conclude, in short, that, while the introduction of intricate office machinery has been encouraged by the increasing integration of industry and commerce, which has made possible the incurring of high capital costs with economic justification, the day of the robot office has not yet arrived. The first round of the conflict between the clerk and the machine was won by the typewriter—to the ultimate advantage of the clerk and, still more, of the shorthand typist. In the second round the clerk has so far survived, because computing and accounting contrivances, although they save time and labour, are too costly to be used by offices other than the largest. The triumph of the large business corporation may turn the scale in the machine's favour. But, in the long run, no one may be the loser; for the installation of machinery at least eliminates much of the drudgery traditionally inseparable from office routine, and frees the minds of workers for more congenial and responsible business duties.

The Irish Tariff

PERHAPS no country in the past five years has embarked more boldly on the perilous seas of protection than Eire, formerly called the Irish Free State. That country's tariff covered at the end of 1931 some 68 articles; and the duties levied on nine of these were simply intended to produce revenue. By October, 1936, however, the list included 288 articles, and only seven of the duties were for revenue purposes. In addition, the tariff is supplemented by the official import list which, last year, specified as many as 1,947 articles in foreign trade subject to restriction or control. These regulations are evidence of the determination of the country to vindicate in the economic sphere the extreme nationalism of the De Valera regime. In view of the British Government's current discussions with the neighbouring Dominion, it may be useful to examine the details of this tangled tariff and to estimate the effect of the duties and restrictions on Irish trade, industry and agriculture.

While the list of duties and the methods of assessment are liable to amendment, the main details of the tariff can be indicated. In addition to the articles on which duties are chargeable, there is a further list of goods the import of which is prohibited except under licence, such as bicycles, boots and shoes, perambulators and some wearing apparel. In certain cases articles admitted under licence are subject to duty; but in others, as in the case of maize, no duty is charged. There are three types of licence. The General Licensing Provisions permit the exemption from duty of any chargeable article which is considered essential to the process of any manufacture. The Ordinary Licensing Provisions extend only to certain specified articles, such as metal furniture, forks and spades, and permits the import of licensed articles without payment of duty. The Special Licensing Provisions have more limited application. Persons ordinarily engaged in the sale of agricultural machinery, which is liable to an import duty of 33½ per cent. or a preferential rate of 25 per cent., may, for instance, import under licence grass mowers, wheel rakes and swathe turners free of duty.

The number of these concessions, combined with the range and magnitude of specified duties and prohibitions, makes precise description of the tariff difficult. For example, a person wishing to import a coffin will find this article liable to an *ad valorem* duty of 50 per cent. Coffins are, however, subject to the Ordinary Licensing Provisions, and may under licence be imported free of duty. To obtain a licence may involve delay, and the coffin importer will find among the "divers exemptions from all duties" in the Customs and Excise Tariff the stipulation that

Where an article is an article of personal, domestic or household use or ornament of a portable character . . . and was given by a person ordinarily resident outside Saorstát Éireann as a wedding present to a person about to be married who is ordinarily resident outside Saorstát Éireann and intends to reside permanently in Saorstát Éireann after such marriage, the article may be imported free of duty.

Thus, persons intending to reside in Eire after marriage may import a coffin free of duty, if they can persuade a friend to include one in their wedding presents. But the person normally resident in the country must pay duty on an imported coffin, even if it enters the country enclosing a dead body.

More important than the complications of the tariff regulations themselves are the effects of this mass of duties and prohibitions, leavened by licensing, upon the Irish economy. Between 1931 and 1935, for instance, imports of thirty-three articles fell in value by roughly £10 millions

owing to the growth of domestic production. Imports of wheat flour, bacon, sugar, bread, sweets and sweetmeats fell by nearly £4,000,000; of leather footwear by more than £1,500,000; and of furniture by £44,000. These few articles thus accounted for over half the decline of £10,000,000, and it may therefore be useful to look more closely at their history since 1931.

In July, 1932, a duty of 5s. per sack was imposed on imports of wheat flour in excess of limited quantities. In May, 1933, import was forbidden except under licence. Since 1931 domestic production of wheat flour has risen from 3,848,000 cwt. to 6,852,000 cwt. Home-grown wheat in 1931 was 7 per cent. of available Irish supplies. In 1935 home-grown wheat had risen to 33 per cent.

The remaining articles, imports of which fell markedly between 1931 and 1935, were leather footwear and furniture. In 1932 the 15 per cent. *ad valorem* duty on boots and shoes was raised to 37½ per cent., with a preferential rate of 25 per cent. In September, 1934, the import of boots and shoes, except under licence, was prohibited; and since then a limited quota has been admitted each year, under licence, paying 30 per cent. in duty. The duty on imported wooden furniture is now 50 per cent. (preferential) compared with 33½ per cent. in 1931.

Undoubtedly these measures restricted imports—as we have seen—and enhanced domestic production. Employment in industries producing wheat flour, bacon, sugar, sweets and sweetmeats, leather footwear and wooden furniture increased between 1931 and 1935 by 15,319, compared with a general increase of 37,000 in the number of insured workers in all industries, excluding agriculture and domestic service, during the same period. Thus, nearly half the increase in industrial employment took place in the very industries whose products accounted for over half the reductions in imports. Can we, therefore, infer that the more Eire has restricted imports the more she has increased industrial employment? We cannot. The articles we have singled out for special discussion are consumers' goods, for the most part food and clothing; and there is some evidence that the people of Eire are less well shod and well clad now than in 1931—in spite of the increase in domestic production of footwear and clothes. At least, the prices of these articles are relatively higher than they were. We have thus to balance increased employment against consumption of inferior articles and reduced spending power on other things.

The issue is even more important and interesting in the field of agriculture, which employs some 50 per cent. of the 1,300,000 gainfully occupied in the country. It may even prove that the diminution of rural employment, occasioned by the restriction of imported agricultural raw materials, more than outweighs the recorded gain in industrial employment. It is true that basic slag is subject to neither tax nor licence, but imports fell from 38,700 tons in 1930 and 27,600 in 1931 to 7,600 tons in 1935 and 16,600 tons in 1937. Oil seed cake and meal are free of duty but require licence, and imports fell from 1,135,700 cwt. in 1931 to 428,900 in 1936. Last year, however, they exceeded 660,000 cwt.

Similarly, neither maize nor maize meal are subject to duty, but they require import licences. These licences are given very reluctantly in the case of maize meal, and imports fell to practically nil in 1935 and 1936. Combined imports of maize and maize meal dropped from 12,570,000 cwt. in 1931 to 4,370,000 cwt. in 1936, though in 1937 imports exceeded 6 million cwt. Meanwhile, rural population fell by 98,000 between 1926 and 1936, and the movement of country people into Irish towns and overseas has become a major social problem.

While it is true that the vicissitudes of world trade, production and employment during the recent depression have influenced these trends, and that there was a distinct improvement in some directions in 1937 when commerce was generally reviving, there is more than a strong presumption that Irish agriculture has been deleteriously affected by policies which, at one and the same time, have restricted the supply of materials necessary for animal husbandry and curtailed the markets abroad for animal products. The gross value of Irish agricultural output fell from £64.9 millions in 1929-30 to £40.5 millions in 1934-35, during which period the pound was devalued. Clearly this decline was in part due to the sharp drop in world prices—although much of the produce was sold in

Eire—but, on the other hand, the figures suggest that the recent increase in industrial employment is more than counterbalanced by the diminution of agricultural activity.

Summarily, therefore, it may be suggested that, although protection has occasioned an increase in the production of consumption goods since 1931 and a corresponding rise in employment, the population of Eire has lost rather more than it has gained. The price of food and clothing has risen, while the quality has declined. Foreign markets have been diminished and activity on the land has fallen. Only the intangible gains of self-sufficiency and self-determination may possibly restore the balance in the minds of the Irish people and their legislators. Even so, the population of the country is steadily drifting overseas.

Herr Hitler's Figures

STATISTICIANS should feel grateful to Herr Hitler. There can have been no previous occasion when so many figures were listened to, voluntarily or compulsorily, by so many millions of people as in his speech to the Reichstag. To reproduce all of the figures he gave to illustrate Germany's progress in the five years of his rule would fill several pages of *The Economist*. Several of the more important and interesting figures are, however, tabulated below (the 1938 figures are the estimates given by Herr Hitler):—

GERMAN ECONOMIC PROGRESS, 1932-37

	Unit	1932	1933	1937	1938
National income	Milliard R.M.	45.2	46.6	68	...
Cost of living	120.6	...	125.1	...	...
Industrial production	Milliard R.M.	37.8	39.9	75	...
Retail turnover	"	...	21.8	31	...
Agricultural production	"	8.7	...	12	...
Unemployment	Millions	...	6.5†	0.47‡	...
Imports	Milliard R.M.	...	4.2	5.5	...
Exports	"	...	4.9	5.9	...
Savings Bank deposits	"	11.4	12.1	16.1	...
Short-term interest rate	"	6.23	...	4.5	...
Revenue	Milliard R.M.	6.6	6.8	14.0	17
Coal production	Million tons	104.7	109.7	184.5	...

* Not given. † January. ‡ October.

All these figures have been taken directly from the speech, and have not been verified or supplemented from other sources. The descriptions are close translations of Herr Hitler's terms, though in some cases closer definition would be desirable (e.g. "Industrial Production" is presumably a gross figure, as it exceeds the whole National Income).

These figures are, beyond question, an impressive record, and they illustrate in the most striking way the completeness of Germany's recovery from the depression. They were used by Herr Hitler, however, to demonstrate the superior economic virtues of National-Socialist rule. This is an entirely different matter, and it is very questionable how far even such an impressive array of figures as this would sustain a comparative argument. They might be held to prove not that the condition of Germany was good now, but that it was bad five years ago. Obviously, the country

which suffers the deepest depression will show the largest recovery. The only fair measure of progress is to compare like with like, to put 1937 alongside the last year of comparative prosperity in 1929. Herr Hitler would doubtless argue that 1932 is a fair criterion for assessing his achievements, since it was the cowardly weaknesses of the hated Weimar Republic that brought Germany so low. But in that case the equally democratic year 1929 is also fair. How, then, does the progress of Germany between 1929 and 1937 compare with the progress of Great Britain in the same years? The following table gives British and German figures for nine of the most important indices of economic progress that are available in comparable form in both countries. All the figures have been given in the form of index numbers with 1929 equal to 100. The greater severity of the depression in Germany is thus automatically shown by the fact that the German figures are lower than the British in 1932, while a comparison of the two 1937 columns shows what progress has been made in the two countries since 1929. To carry the comparison into as many details as Herr Hitler did would be tedious, but the following table gives British and German figures for nine of the most important indices of economic progress that are available in comparable form in both countries:—

ECONOMIC COMPARISONS, UNITED KINGDOM AND GERMANY

	United Kingdom		Germany	
	1932	1937	1932	1937
Industrial production	83.4	122.7	53.3	116.9(a)
Output of coal (inc. lignite)	81.3	93.9	67.3	109.2
Electricity generated	118.8	222.5	76.7	149.0(b)
Production of steel	54.7	119.2	35.5	118.3
Production of automobiles	97.4	212.6	27.7	189.9(c)
Retained imports*	58.6	85.8	34.7	41.7
Domestic exports*	50.1	71.5	42.5	43.8
Employment	91.4	112.4	70.0	103.0
Real wage rates†	109.4	110.9(d)	104.3	97.9(d)

* Value in national currency. † Official index of wage-rates corrected by official index of cost of living. (a) Based on eleven months. (b) Based on nine months. (c) Based on ten months. (d) Year 1936; figures for wage rates in Germany in 1937 not available.

The nature of the indices is sufficient answer to the objection that they have been selected to make a case against Germany. Yet in only one instance is the British figure for 1937 below the German. The figures of employment are significant; for if unemployment has gone down without employment going up, it can only be because men have been taken off the labour market by means of other than the provision of gainful employment. The last line of the table is perhaps the most eloquent of all. During the democratic years, the standard of real wages in Germany did not lag much behind the British; since Herr Hitler's advent to power the same cannot be said.

The whole world will rejoice with Herr Hitler that Germany is once more prosperous. But it will not follow him in ascribing the fact entirely to the ideas of the Nazi Party.

Topics of the Week

Anglo-Irish Talks Resumed.—The crisis of Mr Eden's resignation unfortunately coincided with the return of Mr de Valera and his delegation to London to resume their talks with British Ministers. Formal meetings had to be postponed, but informal discussions were soon begun, apparently in a hopeful atmosphere. Mr de Valera's comment on the Ulster elections made it plain that the partition of Ireland is still the first item in his agenda for any Anglo-Irish talks; and on Thursday four Nationalist members of the Northern Ireland Parliament came to London to confer with him. But he is apparently willing to reach agreement on economic and defensive problems provided he receives at least a gesture from the British Government on the issue of partition. It has been hinted that the gesture should take the form of action to secure more equitable treatment for the Catholic minority in Northern Ireland. Every Englishman of good will would applaud such a move. Meanwhile, the negotiations with Mr de Valera seem likely to move towards the expected compromise of remitting the land annuities against increased expenditure for Irish defence, which would allow formal British rights of occupation of certain Irish ports to be relinquished.

* * *

India's Crisis.—The Indian constitutional crisis caused by the refusal of the Governors of Bihar and the United Provinces, acting on the Viceroy's instructions, to consent to the immediate release of all political convicts, has moved steadily towards a compromise. Under the influence of Mr Gandhi, whose rôle of elder statesman has twice been invaluable during the past year, the Congress meeting at Haripura passed a mild resolution which avoided the danger—feared throughout India—of a "sympathetic strike" of other Congress Ministries. The Viceroy responded by holding out, though a trifle stiffly, the hand of reconciliation in a long statement explaining his action. His reasons had been threefold: the abrupt method of ultimatum used by the provincial Ministers, the danger to adjoining provinces, and the encouragement likely to be given to terrorism in Bengal. These are urgent reasons, more especially when Viceroy and Governors are willing to proceed with a policy of releasing prisoners after scrutiny of each case. But when Lord Linlithgow declared that the Ministers' responsibility for law and order is subject to the Governors' responsibility for peace and tranquillity in their provinces, which again is subordinate to his own responsibility for peace and tranquillity throughout India, the Congress view is bound to arouse sympathy. For the distinction between law and order on the one hand and peace and tranquillity on the other is not obvious; and either government is responsible or it is not.

* * *

Parliament at Work.—The House of Commons has done more in the last ten days than debate and approve a notable change in foreign policy. Indeed, the Government has suffered two slight reverses in the domestic field. On February 17th, a private motion approving pensions for spinsters, and backed in the country by support of a character and vehemence likely to disturb the most complacent member of an almost wholly male assembly, was carried, after the Treasury had pronounced unfavourably upon its financial implications. And the dust and heat of controversy and Cabinet fissure ought not to obscure Mr J. W. Banfield's triumph two days later. For ninety years, zealous members of the House have sought without avail to abolish night baking. On February 19th, a private bill for its abolition was carried in the teeth of the Government's contrary advice. There was force, however, in the official contention that the measure so long advocated by Mr Banfield was not

designed to remedy the whole evil, since long hours and low wages were the foundations of bakers' complaints. The Bill was, nevertheless, a step in the right direction, and its second reading, together with the consideration in Committee on February 18th of the National Health Insurance (Amendment) Act and the third readings accorded to the Blind Persons and Population (Statistics) Bills, reveal that there has been more than Ministerial calamity in the Commons' recent proceedings. The Commons' concern to redress popular disabilities has repeatedly been shown in recent months, and Mr Chamberlain's announcement on Wednesday that a Committee would be set up to review the project of pensions for spinsters was a recognition of the House's authority and independence in matters of social welfare, when powerful vested interests are not aroused. The way of the Films Bill is less straightforward; for conflicting interests are concerned and the Government's policy, like the trade's wishes, is uncertain. In Committee on Wednesday, the old questions of a small film commission instead of the Advisory Council proposed by the Bill and the cost test for quota purposes were wearily debated. Only the deputation of film workers who visited Westminster to protest against the labour implications of the proposed legislation seemed to have any clear idea of what they wanted.

* * *

Aftermath of Berchtesgaden.—Herr Hitler's victory at Berchtesgaden is being followed up with a masterly show of moderation. At first it looked as though the pace might be hotter; for the new Austrian Minister of the Interior, Dr von Seyss-Inquart, travelled to Berlin on the very day of his appointment, and had interviews there not only with Herren Hitler and Göring, but also with Herr Himmler, the Nazi Chief of the Secret Police. It has been announced, however, that this visit was paid with Dr von Schuschnigg's approval; and if *post hoc* means *propter hoc*, as it may be assumed to mean in Dr von Seyss-Inquart's case, his action since his return to Vienna may be taken as evidence that it was agreed in Berlin to put on the brake in Austria. The general amnesty for political prisoners, which was the first point in the Berchtesgaden agreement, has been applied impartially for the benefit of Social Democrats and Communists as well as Nazis; but the effect upon the two sets of beneficiaries has not, of course, been the same, for the parties of the Left are as deeply depressed as the Nazis are highly elated. Both parties have expressed their feelings in demonstrations; and while the Social Democrats have rallied to Dr von Schuschnigg, the Nazis have tried to take the bit between their teeth. The

Nazi demonstrations on Sunday were repeated on Monday on a larger scale and with a greater enthusiasm, but on Monday night the Government intervened by banning all political meetings and processions of every complexion; and on Tuesday Dr von Seyss-Inquart broadcast an address in which he firmly emphasised the need for rigorous discipline; the duty of working within the framework of the Patriotic Front, the existing constitution, and the law; the need for domestic peace, not conflict; and the importance of avoiding provocation. It has also been announced that the basis of Austrian monetary and economic policy is not to be changed in any way, and that there are no points in the Berchtesgaden agreement that have not been made public.

These manifest efforts to spare Austrian susceptibilities will, of course, if maintained, very potently promote Herr Hitler's aims—not only in Austria but in Central Europe as a whole. The repercussions of the Berchtesgaden agreement and the Berlin speech are already making themselves felt far and wide. In Hungary, the Magyar Nazi leaders have been rounded up by the police; in Roumania the Iron Guard has liquidated itself. In Czechoslovakia Herr Hitler's challenge of last Sunday has been resolutely taken up in the Government's organ, the *Prager Presse*. The Prague Government does not underestimate the seriousness of its position. But while it is prepared for any reasonable agreement with Germany, it is determined not to concede any diminution in the sovereignty of the Czechoslovak Republic, and it believes itself well able to resist any forcible intervention in its affairs. There is nothing more certain than that Dr Benesh will not go to Berchtesgaden. On the other hand the Poles are leaning over more heavily in the German direction. The next chapter in Austria will be one of the decisive factors in determining the policy of all these neighbouring States.

Two Wars.—The long battle for Teruel has turned in its latest phase in favour of the Insurgents. After their capture of the Republican positions in the Sierra Palomera a fortnight ago the Insurgent forces launched a strong attack on Teruel City, which fell to them on Tuesday. The result of the battle so far is therefore a net gain of territory to the Insurgents, since the Government troops have been driven back to their original line south of Teruel, and beyond it to the north of the city. But it is questionable whether the results of the battle can be measured in square miles, since the Government have undoubtedly succeeded in postponing, at least for a time, the threatened Insurgent attack upon Madrid, and in compelling General Franco to use up in the effort to regain Teruel a large part of his reserves of men and material, which cannot be too abundant. The recapture of Teruel was accompanied by a naval raid on

Valencia and Sagunto, which had more success in demonstrating General Franco's command of the sea than in inflicting damage on the cities. It is not improbable that this command of the sea will lead him into trouble with foreign Powers, as his reply to the strong Note on piracy has been rejected by Mr Chamberlain, and another stern warning from London is on its way.

In China, the Japanese continue to report detailed advances in their attack on the Lunghai Railway, but the strategic importance of the line is so great that a stubborn Chinese resistance is being put up, and the actual progress made by the Japanese forces is slow. These operations, however, and even the novelty of a Chinese air raid on Japanese territory in Formosa, have been overshadowed by the news that General Matsui, the Japanese Commander in Central China, and his two principal lieutenants, of whom one, Prince Asaka, is a member of the Imperial House, have been recalled. The reasons for this step are not clear. The Shanghai expedition was organised hurriedly and largely staffed both in its highest and its lowest ranks by reservists, and it is understandable that in view of a long and difficult war it is desired to make more permanent arrangements. At the same time it is impossible to resist the conclusion that the unfortunate impression made upon foreign opinion by General Matsui's blusterings in Shanghai, and still more by the outrages perpetrated by Prince Asaka's troops in the advance on Nanking, has played a large part in the decision. Thus, in spite of all appearances to the contrary, outraged world opinion has to be taken into account, even by Japanese Generals. There is some sign that domestic opinion has also revolted in detail, if not yet in principle, against the domination of the military, for a National Mobilisation Bill introduced by the Government to confer the most stringent powers of control upon the military in time of war or "incident" has met with strong opposition in the Diet, which has also been protesting with vigour against the alleged attempts of Admiral Suetsugu, the Home Minister, to organise a Fascist movement. On the surface Japan still looks strong, confident and united. Every now and then, however, the outside world is vouchsafed brief glimpses into the real state of affairs, which is by no means so flattering to the glorious conception of Imperial Japan which her propagandists would impress upon the world.

A New Constitution for Roumania.—King Carol, having abrogated the Roumanian Constitution by proclamation, has now put a new document in its place, upon which the Roumanian people was invited to express its opinion on Thursday of this week. The new Constitution is admirably designed to fulfil its main purpose, which is to provide a legal basis for the dictatorship of the King. The size of both Houses of Parliament is reduced, and there is the fashionable admixture of a corporative element in the process by which they are to be elected, although the regional method is in the main retained. The minimum age for electors is raised to 30, which is a direct blow at the main popular support of the Iron Guard. All initiative in legislation is to come from the King, although Parliament is to be given the privilege of final ratification of the King's decrees. The Constitution includes guarantees of equality before the law, and liberty of conscience, work, the Press, assembly and association. Whether these rights will be granted as fully in fact as they appear on paper is a matter on which it is perhaps legitimate to express some doubt; and in any case they are qualified, even in principle, by a prohibition of the advocacy, in speech or in writing, of a change in the form of Government, a change in the distribution of the wealth of others, exemption from taxes, or class trouble—a somewhat peculiar set of prohibitions, but one elastic enough to justify most measures of repression. The same doubts may be expressed about the practical force of the provision protecting all Civil servants from dismissal on a change of Government, and providing

punishments for the squandering or misuse of public money. If such a policy could be fairly enforced in Roumania it would immeasurably cleanse the politics of the country. But those familiar with the methods of the men and women most closely associated with the King will have some difficulty in believing that they will carry through this policy with the necessary thoroughness. It is evident from this new Constitution and from the vigorous measures for internal pacification adopted by the new Government that the King is making a determined effort to impose his government upon the country. M. Codreanu, the leader of the Iron Guard, has already conceded defeat. He has retired both from politics and from the country. Whether the strong democratic principles of the National Peasant Party can be so easily overcome is a very different matter. Roumania's crisis is all too clearly not yet at an end.

Civil Estimates.—The totals of the Estimates for the Civil and Revenue Departments in the coming financial year are given in the following table:—

	£000's omitted 1937-38	1938-39	Change
1. Central Government and Finance.....	2,653	2,542	- 111
2. Foreign and Imperial	9,275	10,270	+ 995
3. Home Department, Law and Justice.....	24,043	28,096	+ 4,053
4. Education	63,327	65,487	+ 2,160
5. Ministry of Health, etc.....	26,637	26,970	+ 333
Old Age, etc., Pensions	61,516	64,717	+ 3,201
Labour and Unemployment	82,700	80,644	- 2,056
6. Board of Trade, etc.	3,745	3,751	+ 6
Agriculture	13,649	14,511	+ 862
Transport, Roads, etc....	15,773	22,384	+ 6,611
7. Works, Stationery, etc.	10,414	11,692	+ 1,278
8. War Pensions	43,933	43,094	- 839
9. Contributions to Local Revenues	54,392	54,248	- 144
Total Civil Estimates ..	412,055	428,406	+ 16,351
Revenue Departments	13,896	14,285	+ 389
Post Office.....	73,228	76,802	+ 3,574
Total Civil and Revenue Departments	499,180	519,492	+ 20,312

The increased burden on the Exchequer will not be quite as large as the increase of £20,312,000 in the total, as the increase of £3,574,000 in the Post Office vote represents self-balancing expenditure. But even the net rise of £16,738,000 is alarmingly large for a year in which the Budget is already to be unbalanced by heavy defence expenditure. It will be seen from the table that the largest individual increases are under the heads of Transport and Roads and the Home Office. The latter is very largely due to Air Raid Precautions expenditure, which is to take £8,493,400, against £5,177,800. The increase in road expenditure is presumably due in the main to the taking-over by the State of the main trunk roads, and it is difficult to tell whether there is any increase in addition to this. Increases in education and in old-age pensions show that the citizen is costing the State more at both ends of his life's span. The only decrease of any size is in the cost of unemployment. The Unemployment Assistance Board is estimated to require £44,235,000, which is £7,135,000 less than in 1937-38. Expenditure from the Special Areas Fund is increased from £3,500,000 to £7,500,000. Altogether, the Estimates do not encourage the belief that the Chancellor of the Exchequer will be faced with an easy task on Budget Day.

Rubber and Tin Restriction.—Both the rubber and tin restriction schemes have the same fundamental character. They are primary producers' schemes with compulsory legislative backing. Both have been in force for some years; the tin scheme secured a fresh lease of life last year and the extension of the rubber scheme is in process of deliberation. But whereas the rubber scheme has consistently had a good market and a good press, the

tin scheme has been a source of endless controversy. Important announcements relating to both schemes are discussed in the Industry and Trade Section of this week's issue of *The Economist*. The statement on behalf of the rubber-growing industry, which relates mainly to proposed future standard tonnages in the different areas, is distinguished by its lucid detail. The tin announcement, embodying the decision of the International Tin Committee to reduce quotas for the second quarter of 1938, was so worded as originally to provoke serious misunderstanding. The market interpreted the new 15 per cent. cut in quotas, which it disclosed, as being related to "standard" tonnages, whereas it appeared that the cut was actually in terms of "operative" tonnages, after the making of certain adjustments last December. On the first interpretation, the actual physical reduction would have been about 9 per cent.; the true figure was a full 15 per cent.

The tin scheme's arithmetic, indeed, has now become so complicated that a revision seems overdue. The real source of difficulty, however, is not merely mathematical. At present the scheme, by general admission, does not enforce an equal degree of effective restriction on all the producing areas. Broadly, it would seem that in the second quarter of this year Malaya and the Dutch East Indies will be restricting to the extent of about half their effective capacity, while areas like Bolivia and the Congo will restrict by less than one-fifth. To add to the scheme's complexities, proposals have been made for a buffer pool, which do not appear to have been warmly received in Malaya. The last-named area, however, has a remedy for dissatisfaction in its own hands. The latest cuts will probably reduce total production sufficiently to bring into force a clause in the agreement under which any restricting country can give six months' notice of withdrawal if the production of countries outside the scheme is more than 15 per cent. of the world output for six consecutive months. Whether Malaya will take so extreme a step is doubtful, but the clause at least affords her a bargaining weapon for securing a more equitable allocation of the burden of sacrifice.

Mr Roosevelt on Prices.—President Roosevelt, who is at home in most rôles, assumed that of the Professor of Economics on Friday of last week. Lecturing with school pointer and an abundance of charts, he developed his thesis that the United States is suffering not so much from prices that are in general too high or too low as from a lack of balance between prices. Prices in "administratively controlled" industries are too high, in his opinion, and those in industries subject to free competition are too low. An exposition such as this, in academic terms, will meet with very general agreement. The precise importance of it when in the mouth of the Head of a Government, however, depends upon the

emphasis. In the past Mr Roosevelt has concentrated upon the need for reducing prices in industries such as steel, where (it may be pointed out) it is not merely the selling prices, but also the level of wage rates, that are under "administrative control." This time, however, the President made it clear that he was more interested in raising prices, and he declared for a moderate rise in the general price level. His contrary statement almost a year ago, calling for reductions in the prices of some commodities, has frequently been cited as one of the contributing causes of the sharp recession both in prices and in industrial production that followed upon it. Whether this interpretation is correct or not, it is certainly true that the President's new statement has either created or coincided with a perceptible improvement in the business atmosphere, and for several days Wall Street, that most sensitive barometer of American industrial conditions, has been enjoying a series of quite sharp rises. Thus for the moment it looks as if the price level can be influenced as much by pronouncements from the White House as by other factors. In the long run, of course, this is an absurd over-statement of the influence of any opinion, however authoritative, and the startling effect of the President's two statements, last year and this, has been very largely due to the fact that they coincided in direction with the apparent tendency of more fundamental factors. This is reassuring, for even the most ardent advocate of a controlled economy would hardly welcome the subjection of economic tendencies to political pronouncements.

* * *

French Wages.—So long as the French Government rests upon the support of the Popular Front, the New Deal set on foot by M. Blum cannot be abandoned. M. Chautemps has clearly shown an appreciation of his obligations since the reconstruction of his Cabinet, and so far he has not wavered in his intention to make collective bargaining both comprehensive and effective in French industry. Collective agreements were first embodied in the law of France in 1919, but were easily evaded by employers who were not affiliated to employers' associations. The Matignon Agreement of June, 1936, a central feature in the social reforms of the first Popular Front administration, was designed to put an end to strikes and to cover the whole field of industry with collective agreements determining wages, hours and conditions of employment. In operation, the new Code was frustrated by the reluctance of employers to accept any measure of Trade Union control or even, in many cases, co-operation, and by the demand of workers in certain places to exercise a dominant influence over employers' recruitment and staffing policies. Strikes in December and January showed that the problem was complicated by rising prices and the retarding influence of the forty-hour week on industrial output. Patently, however, there was need, for the sake of political stability, to meet the reasonable wishes of the Trade Unions, whose importance in the Popular Front was considerable, while at the same time securing amendments of the forty-hour week to facilitate that increase in production upon which the future of the franc and the Budget depended

* * *

Last week, M. Chautemps seemingly made considerable headway in bringing the two parties together. On the immediate point at issue, the relation of prices to wages, he secured the Trade Union's approval for a compromise scheme, whereby employers will be permitted to state reasons to arbitrators why they are in fact unable to adjust the remuneration of their workers to movements in the cost of living. The Chamber has shown general favour to Chautemps' Labour Code, and if the Senate can be induced to accept it without serious amendment, the Prime Minister will have retained the principles of the New Deal intact without permitting its rigid application to impair French industry at a critical moment or allowing either the employers or the Trade Unions to dictate

industrial policy. Peace in industry and increased output are France's crying needs, no less for political than for financial reasons.

* * *

More Money for Broadcasting.—By its new charter granted at the beginning of 1937, the British Broadcasting Corporation was allotted 75 per cent. of net licence receipts. The Corporation was committed to heavy expenses for the Empire service, regional developments, and television; and the Ullswater Commission had urged that the 25 per cent. of licence receipts taken by the Treasury should be regarded as potentially available for broadcasting. It was therefore provided that the Corporation's allotted income should be increased if it proved inadequate. The B.B.C.'s annual report, published on Wednesday, shows that this contingency has now arisen, though more details of expenditure might well have been given. Not only has broadcasting come to occupy an essential place in the planning of National Defence, but, within the frame of orthodox entertainment and instruction, the present revenue of the Corporation is no more than sufficient for sound broadcasting. Allotted income from licences rose in 1937 from £2,590,705 to £3,112,887, excluding £104,000 applied to depreciation and income tax. The amount available for appropriation to capital account was only £200,000, which was not enough even to cover the year's expenditure. The financing of television from funds primarily intended for sound broadcasting limits the quality of both enterprises, and when to routine programmes is added the responsibility of protecting Britain's reputation in the air, the case for an increased income is unassailable, especially as licence revenue is unlikely to increase appreciably in the next few years. The issue on Wednesday of a supplementary estimate of £360,000, of which £310,000 is intended for foreign broadcasts and television, went some way to meet the Corporation's immediate difficulties. In the long run, however, more is required, and most if not all of the Treasury's share of licence revenue might well be surrendered.

* * *

Organisation in Road Haulage.—Important developments are impending in the road haulage industry in anticipation of new Government legislation implementing many of the recommendations of two major inquiries—the Baillie Committee on Wages and Conditions and the Transport Advisory Council's Report on Service and Rates. The broad principle of the latter has now been accepted, and the Minister of Transport is consulting with the road organisations on practical details. As a measure of security for road hauliers, the Minister of Transport is about to make regulations to increase the period of "A" (Public Hauliers) and "C" (Private Carriers) licences to five years, from two years and three years respectively, and the "B" (Limited Carriers) licence from one year to two years, provided that the observance of the conditions of licences be upheld by the strongest possible measures including, after fair warning, suspension and revocation of licences. The Minister also wishes to introduce a Bill dealing with road haulage rates. A further Bill promised in the King's Speech will be sponsored by the Minister of Labour, and will deal with wages machinery. Meanwhile, several rationalisation projects for the largely unorganised road haulage industry are in the air. At least five large-scale mergers have either been formed or are under negotiation. The most ambitious of these schemes was recently described in outline at a meeting of Associated Road Operators, one of the two largest road haulage organisations. In common with other schemes which have been mooted, it apparently provides for organisation on a regional basis. The fact that the goods haulage side of the road transport industry has not so far followed the passenger side by organising in large groups is partly due to the strict interpretation placed by the licensing authorities on Section 11 (3) (b) of the Road and Rail Traffic Act, 1933, which restricts the transfer of licences. Some relaxation in this direction will probably be necessary to facilitate the grouping of the multitude of operators in the industry.

Government Spending Plans

WASHINGTON, February 8.—Uncertainty about the course of business and the future of international relations hangs over the Administration and Congress. The debate about the business recession has quietened down, but if there is no quick and sharp upturn in a few weeks it will break forth anew. For the present the sceptics are waiting to see how right the Administration's forecasts of returning activity may turn out to be.

The expectation is that, as inventories are exhausted, the forward march of business must begin again. So far, business is not fulfilling this promise. In a few weeks, unless there is a really substantial improvement, the Administration is expected to devise a new spending programme. Senator Bulkley of Ohio is receiving the advice of Government engineers in working out a \$1,600 millions outlay for a great system of trans-continental high-speed toll roads, to be financed on a self-liquidating basis.

This is only a first straw in the wind. Other spending plans can be expected to follow. Whatever they are, the President announces they must be self-liquidating. There is to be no increase of dead-weight debt.

Increase in the Navy

The recession has been supplanted as a topic of the day by national defence. And the question of the hour is what lies behind the sudden decision to increase naval tonnage by twenty per cent. This question is being given many answers, some of them obviously no more than rumours, though even the most foolish rumours are repeated in the half-whisper that makes them sound like disclosures of treasured secrets. The gist of most of them is that the President is preparing to spring back again to the theme of his Chicago quarantine speech, and that arrangements have been made to co-operate with Great Britain and France against Japan.

The Chicago speech is, of course, the one factor that keeps the naval increase from being accepted as inevitable, since the American public insists on foreign policy being conducted without consultants and collaborators. The increase is going to cost in the neighbourhood of \$200 millions, spread over several years. It will give the United States the largest navy in its history, at a time when the public is determined to do as little abroad as possible beyond holding on to a minimum of rights.

No Foreign Entanglements

One easy explanation offered as truth is that the navy is being made strong to come to the aid of Britain. Another is that the democracies are finally going to take concerted action against Japan, and intend to operate a long-distance blockade in the Pacific. The peace movement is agitated by such rumours, and by a growing uneasiness about the President, who is now privately criticised as a "big navy" man, and a person of impetuosity, not to be trusted with a large navy.

The Isolationists are at present the allies of the Pacifists. It is an unnatural alliance, since the Pacifists do not believe in war at all, while the Isolationists fervently believe in a war of self-defence. The Isolationists are just as much upset by the rumours of secret commitments with Britain as the Pacifists. Between them they have created a background of whispers nearly as hostile to the President as the undercurrent among business men.

All these rumours and explanations are only worth repeating to give some idea of the atmosphere in Washington. The best informed correspondents believe that the rumours about foreign commitments are fantastic. As they see it, the State Department is trying harder than ever, not only to

avoid the "evil" of an understanding with Great Britain, but even the appearance of evil. Admiral Leahy has denied, as explicitly as a sailor with a command of language can, that there are any commitments.

The navy has no thought of obtaining assistance from any other nation. It has no thought of giving assistance in the solution of the problems of any other nation. It has no foreign commitments. There are no understandings regarding assistance to be given or received. There has been no talk of giving, or receiving, assistance.

The Aims of Defence Policy

If that is correct, the naval increase is explicable in quite simple terms. The United States is taking account of the partnership between Japan, Italy and Germany, with an eye on South America, where that partnership might become active. And the United States is insistent on footing its own naval bills, and will have none of the cheaper costs of collaboration. Adding together the German, Japanese and Italian navies, the Navy Department told Congress that the American fleet was considerably smaller. This was a strange calculation to make, as it is beyond imagination that the full navies of the three powers should ever go to war against the United States. But it is significant that these three navies were set before Congress as the ones with which comparisons should be made.

The testimony of Admiral Leahy often emphasised that the American navy must be prepared to defend two coasts simultaneously. This is taken to mean that the navy will be used to defend the Western Hemisphere, and so the naval increase is a warning to the dictator countries not to trouble themselves with plans for expansion on this side. The increase is the reply of the United States to the mounting armaments of the dictator countries. In other words, the United States have made a declaration of interest, the affirmation by a democratic power of the factors it intends to take into account in moulding its policy.

Nobody doubts that Congress will accept the naval increase. The only formidable opposition could come from the Isolationists, and the Administration has only to convince them that no secret understanding lies behind the new construction. This would be easier to do if British and American interests were not parallel, and their policies were not so much alike. If action has to be taken in the Far East it would be more palatable to American public opinion if it were taken alone, or at least begun alone. Certainly the emphasis is all on the lone hand, and it is worth noting that British friendship is, for the purposes of passing the Navy Bill, more of a liability, politically, than an asset.

The Anglo-Italian Discussions

PARIS, February 24.—French people, who for many years have regretted that Great Britain is no longer the leader of a liberal world, are anxious to know the outcome of the negotiations between Mr Chamberlain and the Duce. Since Paris cannot conceive of any weakening of the Entente Cordiale, the British Prime Minister's "audacious" move carries with it the best of wishes. If he is successful, then the Moderates foresee that French policy will be adjusted accordingly. But, until that happens, internal circumstances make it necessary for France to wait and see. And it is realised that, if Mr Chamberlain does not succeed, important political changes in Britain are likely.

National Defence

Meanwhile, after recent developments abroad, national defence has become more and more the focus of the financial and economic preoccupations of the Government. Following upon the transfer of the supervision of War, Navy and Air to M. Daladier, and the appointment of General Gamelin to control National Defence, a *Caisse Autonome de la Défense Nationale* will be created, presided over by M. Daladier, assisted by the Governor of the Bank of France and various Members of Parliament.

This body will issue loans (probably in small short-term National Defence bonds), and the Minister of National Defence will have control of these funds, which will be entirely devoted to armament—a provision which should facilitate the taking-up of the loans, since the previous experience of the Auriol Loan of March, 1937, with an exchange guarantee, gave rise to some doubts about the exact way in which the money might be used. Members of the three commissions for the Army, the Navy and the Air Force will meet *in camera* (for the first time since the war) to examine the problem of defence as a whole. Meanwhile, new exceptional credits have been decided upon for national defence: 1,800 million francs for the Ministry of Air; 800 millions for the navy; and 600 millions for the army; making in all 3,200 million francs, which, added to the 11,200 millions included in the extraordinary Budget for 1938, brings the total of extra defence expenditure to 15,000 millions for the year.

Activity Falters in Consumption Trades

Official statistics show that the index of industrial production is maintained at 91 (1928 = 100) largely by the activity in the industries which are working on Government contracts. The index of the output of metals was 92 in December, 1937, against 86 a year ago; and the index of coal and mineral production, which was increased by the decision to work extra shifts, rose to 99, against 85 at the end of 1936. But activity in the industries which produce for individual consumption is falling off. The index of paper production fell in the year from 192 to 183; of textile output from 95 to 91; of leather from 83 to 68; of automobiles from 101 to 87; and of building from 70 to 56.

The decline in the purchasing power of the masses is still perceptible. The number of persons unemployed on February 12th was 409,776, against 406,050 in the previous week

and 415,580 a year ago. The monthly figures published by the Statistique Générale de la France, showing industrial production, are as follows:—

	(1928=100)			
	Dec., 1936	Oct., 1937	Nov., 1937	Dec., 1937
<i>General index</i>	90	88	91	91
Mines	85	94	100	99
Chemical industries	106	100	105	107
Paper	192	177	189	183
Textiles	95	88	89	91
Leather	83	70	68	68
Iron and steel	73	88	90	87
Engineering	86	86	89	92
Automobile	101	83	85	87
Building	70	56	56	56
Gas and electricity	121	126	126	127
Miscellaneous	116	113	111	113
<i>Old general index (1913=100)</i>	100	100	102	102

Prices are now definitely above the December level, and the general index is the same as in October.

	Dec., 1936	Oct., 1937	Nov., 1937	Dec., 1937	Jan., 1938
General index of Wholesale Prices (1914=100)	496	611	590	601	611
Domestic products	522	641	636	650	654
Imported products	448	559	506	515	535
Foodstuffs	511	594	591	615	622
Industrial products	483	627	590	591	603
Retail prices (1914=100)	550	657	664	676	693
Lighting and heating	93.6	113	113.2	114	114.2
(1930=100)					
Clothing	77.2	102.3	102.3	100.6	100

The number of bankruptcies in January was 421, against 481 in December and 444 in November; bankruptcies and judicial liquidations together numbered 601, against 643 in December and 595 in November.

Labour and Output

A compromise has been reached in the Chamber between the demand of the Communists for an automatic adjustment of wages to the cost of living, coupled with trade union supervision, and the plan advocated by M. Chautemps, who does not want completely automatic adjustment, and rejects any control other than that of arbitrators representing both the employers and the workers. This compromise has still to be amended by the Senate.

Social conditions since the advent of the present Government have been generally calm. But industrial production remains too low and M. Daladier, Minister of National Defence, has emphasised once more that output must be increased, since "national work" is the franc's best guarantee. M. Marchandau's plans for increasing production have been approved. The State will waive its right to turnover tax chargeable on the increase in production between 1937 and 1938, and to the tax on industrial profits, when those profits are reinvested in new plant likely to increase production.

Germany

Britain and the Axis

BERLIN, February 22.—The resignation of Mr Eden from the British Foreign Office eclipsed other German political interests this week, including Herr Hitler's Reichstag speech, the German-Austrian agreement, and the Army changes. Mr Eden has never had a good German Press. He was regarded as too much tied up with the League and collective security, and therefore permanently opposed to Germany and Italy on broad grounds of policy.

Mr Chamberlain's apparently more conciliatory attitude to the two anti-democratic countries ought consequently to be welcomed. It is not clear, however, that this is really so. The relations between Germany and Italy, of which very little is known, are the determining factor. It was conjectured immediately after the Army affair that German-Italian friendship might be weakened. On the one hand, it was said that influential military men in the Reich doubted the wisdom of too close an association with Rome, if for no other reason than that Italy's Spanish entanglements must

weaken her as a factor in general European affairs; on the other hand, it was suggested that Italy might regard the changes in the German Army as immobilising it for immediate action.

With these conjectures the two accompanying rumours that some German military men wanted a *rapprochement* with England, and that Rome wanted reinsurance by way of clearing up differences with London, were both consistent. No German utterances could be directly unfavourable to an Anglo-Italian agreement. But it is probably feared that the "axis" may be weakened, and it might easily have been taken for an attempt to detach Rome from Berlin.

Against this must be set the impression that Mr Chamberlain may go further than Mr Eden towards meeting the Reich's wishes, though it is probable that nothing short of substantial colonial concessions would really improve Anglo-German relations. It is significant that while the Austrian affair was ripening the colonial agitation here almost ceased; but it is likely to come up again soon, unless, as is possible, Czechoslovakia is destined to take precedence.

Austro-German Trade

The agreement with Austria had no appreciable influence on the Bourse. It is not considered likely that the Customs Union plan will be revived. A decade ago such a union would have been relatively simple, and the two currencies could have been easily amalgamated; but, since the transfer crisis of 1931, conditions have become complicated.

Trade between the two countries has fallen heavily, from Rm. 641 millions in value in 1929 to Rm. 216 millions last year; and Germany's surplus of exports in trade with Austria has fallen even more, from Rm. 239 millions to Rm. 29 millions, although on total merchandise account in 1937 Germany's export surplus was substantial. In recent years, Germany has had difficulty in paying for Austrian timber, and Austria's purchases of German machinery and chemicals have been small. So far as can be judged from rather vague official hints, the negotiations now pending will concern only matters of trade.

Labour Recruitment

The decree issued this week, instituting a compulsory working year for all unmarried women under 25 years of age, was not unexpected. Nor was the proviso that women of rural origin must serve their year in the country. It is significant that this measure was decreed by Field-Marshal Goering as Commissioner for the Four-Year Plan. This strengthens the impression that the Plan—and with it General Goering—is to be the decisive factor in all economic matters.

It is estimated that the numbers in employment in the present calendar year will increase by 810,000, of whom 200,000 will be women. To mobilise the whole 810,000 will require State compulsion. Measures will probably be taken to convert very small retail traders and craftsmen into wage-earners—a process quite contrary to original National-Socialist policy, which favoured very strongly the independence of small shopkeepers and "hand-workers."

Complete confidence is officially expressed, probably with good reason, in the prolongation of the present boom in production. According to the Reich Prices Commissary the system of price-control in itself ensures against a trade recession. The chance of a dangerous advance in prices, and the setting up of a vicious spiral in prices, wages and costs, can be best prevented, it is held, by increasing Germany's independence of foreign supplies. And that is one aim of the Four-Year Plan.

This view is not entirely clear. It is claimed that mere stability of prices can prevent a "decline in investment and in the output of investment goods," which is the Commissary's definition of depression. Yet the present boom has witnessed little investment worth mentioning, except that undertaken by or enforced by the State, and this would presumably have proceeded under any price conditions.

Heavy Fall in Exports

The foreign trade returns for January, though affected by seasonal influences, cannot be considered satisfactory. The import surplus of Rm. 33 millions, compared with an export surplus of Rm. 79 millions in January, 1937, would have not been an unfavourable sign, if it had been due to very large imports. Actually, however, it was due to a heavy shrinkage in exports. Exports were only Rm. 31 millions higher in value than in January, 1937, when the seasonal decline, compared with December, 1936, was only Rm. 42 millions,

against a fall of Rm. 106 millions between December, 1937, and last month. Comparative figures were as follows:—

	(Millions of Marks)	December, 1937	January, 1938
Imports			
I. Foodstuffs	205.1	179.5	
(a) Livestock	17.1	9.1	
(b) Animal foodstuffs	57.4	49.6	
(c) Vegetable foodstuffs	99.7	91.1	
II. Industrial goods	321.2	299.8	
(a) Raw materials	182.0	178.3	
(b) Semi-manufactured	96.1	88.4	
(c) Manufactured	43.1	33.1	
Total	531.2	483.2	
Exports			
I. Foodstuffs	8.5	6.7	
(a) Livestock	0.4	0.8	
(b) Animal foodstuffs	1.0	1.7	
(c) Vegetable foodstuffs	3.5	2.9	
II. Industrial goods	543.6	439.1	
(a) Raw materials	47.3	43.7	
(b) Semi-manufactured	46.3	40.0	
(c) Manufactured	450.0	355.4	
Total	552.3	445.9	

Exports of manufactured goods fell between December and January by Rm. 95 millions, and almost all varieties of finished goods suffered. It is, therefore, surmised that the reaction in world trade may have begun to affect German exports.

Spain

Democracy Maintained

BARCELONA, February 6.—The recent meeting of the Cortes was a significant demonstration of unity among the Popular Front parties which constitute the Government. There was no illusion among members that the war would end in less than two or three years, but they were confident of success. Spanish pride is deeply wounded by the tendency of foreign countries to make arrangements about Spanish affairs without regard to the sovereignty of Spain's legitimate Government.

The Republican Constitution has never been suspended during the war. The Central Government has been given complete powers over public order, food supply, and the regulation of trade and banking, and all conflicting and regional organisations for these purposes have been abolished. No dictatorship is, however, being set up. The Government depends upon the support of the Popular Front parties, and were they to lose that support, the President, Señor Azaña, would have to form another Cabinet with popular favour.

Indeed, Señor Azaña, one of the principal brains behind the Government, is insistent that the Government should be strictly constitutional in all their actions. Within the Government, three Ministers, all Socialists, are outstanding. They are Dr Negrin, the Prime Minister, Señor Prieto, Minister of Defence, and Señor Zugazagoitia, Home Secretary. These men have been largely responsible for the restoration of order. Citizens are almost as safe in Republican territory as in law-abiding England; and many extremists, guilty of acts of violence during the period of chaos, are now in prison.

In general, the Government are pursuing a progressively more moderate policy. They have moved so far from the extremists that, within the framework of the Constitution, they may almost be regarded as Conservatives. The Anarcho-

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

Syndicalists, who were never members of the Popular Front and were removed last May from the temporary revolutionary administration, have ceased to count. The Government are giving facilities for the private celebration of Catholic religious services in Barcelona, and hope to extend this protection to other parts of Spain when circumstances permit. To re-establish public worship might be interpreted by some as giving aid to the Republic's enemies. The chapel of the Church of England is still closed, though it has never been molested, and one wonders why the large British colony does not resume regular services.

Economic Reconstruction

The most important Government measures have been in the economic sphere. A complete reconstruction programme has been worked out, and is under the direction of the Prime Minister, who is also Minister of Finance and Economics. Food supply is being organised. Decrees have been prepared to establish a uniform system of banking. The ill-starred experiments in collectivisation and workers' control have been abandoned.

Foreign interests, such as the American-owned telephone company, the British-owned power and light company and the Barcelona street railway, are being protected. The railways have been taken over by the State, administered by a National Council. In a quiet way, State intervention in industry is re-establishing the principle of private ownership as against collectivisation and workers' control.

A Government representative is appointed in each case. He manages the undertaking, and names the board of directors, on which first place is given to the original owner or owners of the concern. The directors then conduct the business under the supervision of the Department of Economics, which supplies raw materials and either buys and markets the products or directs their distribution. Some of the main industries now directed in this way are metals, power and light, paper and mining.

The Problem of Food Supplies

On February 1st, the Prime Minister said that the question of supplies was causing the Government great concern. The Catalan Government's department of supply has been merged with that of the Central Government, and a uniform system for the civil and military populations alike has been set up. The food problem is accentuated by the fact that the principal areas for wheat, meat and dairy products are in enemy hands.

Lack of labour and fertilisers reduced last year's crops, especially of cereals and potatoes, and inadequate transport facilities made matters worse. The Government's policy, however, is not to rely on imports. Spain, as Dr Negrin pointed out, has so far fought the war without foreign credits, and the Government's chances of success will depend upon the full employment of domestic resources. General rationing will soon be instituted. Transport is being reorganised; and both industrial and agricultural production are being intensified.

Palestine

Depressing Political Influences

JERUSALEM, January 26.—Pending the report of the new Commission, the population of Palestine is kept in suspense, and the different branches of economic activity are suffering from political unrest and uncertainty. But despite the discouraging political outlook which prevailed during the last twelve months, Jews in Palestine and abroad invested

nearly £P6,000,000 in 1937, according to an estimate of the American Economic Committee for Palestine.

The current deterioration in general economic conditions has not yet been reflected in all local markets, though it is probable that all will soon be influenced by the general downward trend. The decline in monthly immigration from 5,000 persons three years ago and 2,000 in 1936 to well below 1,000 last year is more eloquent than trade statistics.

The fall in the number of newcomers, each of whom used to spend some hundreds of pounds during their first weeks in the country, is the main reason for the fall in trade and industry. A population of 450,000 Jews, most of whom endeavour to maintain their former European standard of living, means a steady demand for agricultural and industrial products, but experience has shown that progress is dependent on an uninterrupted immigration.

Decline in Building

Conditions in building, the backbone of the Palestine economy (apart from the citrus industry), are very dull. Public works may bring some relief, but wage rates are falling. The average monthly area of building authorised in Tel Aviv fell from 35,000 and 37,000 square metres in 1934 and 1935, respectively, to less than 22,000 square metres in 1936 and below 16,000 square metres by November, 1937. In Haifa the authorised area fell from 27,000 and 32,000 square metres to 23,000 square metres and 17,500 square metres. The effects of the disturbances are more clearly reflected in Arab towns. Building in Jaffa came to a complete standstill in 1936, while in 1937 it shows an average of 4,000 square metres per month compared with 16,000 square metres in 1935.

Nevertheless, the estimated number of unemployed among the Jewish population does not exceed five or seven per cent. of the total number of workers, who are estimated at about 130,000. Some hundreds of those who were formerly engaged in building have found employment in the citrus groves, since many citrus growers no longer employ Arab labourers. Others, however, financially burdened as a result of the low prices realised by the 1936-37 crop, prefer the cheaper Arab labour.

Other Jewish workers have found employment on public works, such as the port at Tel Aviv, the Hadassah Hospital near Jerusalem, the Reading Power Station near Tel Aviv, and the levelling of sand dunes south of Tel Aviv. These and other schemes, together with the usual road construction, have this year employed many more people than in 1936 or 1935.

Wage rates have fallen, and the standard of living is declining. The fall in purchasing power is reflected in the complaints of retailers and grocers; but on the other hand, in some of the most important branches of industry there has been no marked falling-off.

Increased Expenditure

Revenue rose from £P2,759,000 to £P3,178,000 during the first eight months of the current fiscal year, an increase of about 15 per cent., but expenditure rose during the same period from £P2,718,000 to £P3,000,000, or nearly 22 per cent. The cost of defence is still a heavy burden on the taxpayer; in these eight months an additional sum of £P339,000 was spent for this item.

Palestine and foreign banks are becoming increasingly active. More than £2,000,000 were advanced in the period from July to October, 1937. Deposits increased and credits to customers of banks and members of the ninety-five Jewish credit co-operatives were increased. The number of bills protested fell in 1937 (up to November) to 7,300 for Jerusalem, Haifa, Tel Aviv and Jaffa, compared with 9,507 in the same period of 1936 and 7,264 in 1935. Landlords in the big towns are suffering from non-payment of rents.

Poor Citrus Season

The citrus season 1937-38 is not much better than last year. Prices of grapefruit are reduced, and planters are faced with the prospect of losses. Shipments during the present season up to the first week of January amounted to over 4,000,000 cases of oranges, grapefruit, lemons and other citrus fruits, which represents an increase of about 25 per cent. over the shipments during the same period of the preceding season.

Up to November the value of imported goods amounted to over £P15½ millions, compared with £P12½ millions and £P16.4 millions in the corresponding periods of 1936 and 1935, respectively. Exports, however, rose in value to £P5 millions in the eleven months, against £P2,760,000 and £P3,710,000 in the same periods of 1936 and 1935 respectively. The increase is due to greater exports of citrus fruit, Dead Sea chemicals, rice, skins and hides, barley and edible

oils. The import surplus in 1937 was £P9½ millions, the same as in the previous year.

Australia

Lower Prices and Slower Turnover

MELBOURNE, January 26.—Monetary conditions in Australia show a tightening tendency, owing to the lower prices ruling for wool, compared with last season, and the slower rate at which woolgrowers have been selling. The latter factor should be made good later on, but the lower prices mean a smaller supply of fresh money to increase bank deposits and reduce advances. At the same time, trading and industrial activity still reflects the stimulus given by the excellent 1936-37 season, imports and bank advances having both increased.

While the results of the 1937-38 season as a whole will be good, they are not expected to reach the 1936-37 level, and the margin between imports and exports will be less. Taking the figures so far available, the quarterly averages to December 31, 1937, of the trading banks in Australia show deposits within Australia of £314,088,237, or an increase of £22,759,822 compared with the December quarter, 1936; advances £274,320,326, or an increase of £6,688,699; and Government and municipal securities £44,722,260, or an increase of £3,289,919. After allowing for an increase in cash held in Australia, the balance has gone to swell London funds, which do not enter into the above figures.

The increase of £22,759,822 in deposits during the year fell mainly within the second half of the 1936-37 season. During the last quarter of 1937 the increase in deposits was only £5,813,962, against an increase of £7,048,979 during the final quarter of 1936. The smaller movement is due to the comparative sluggishness of the wool market.

Increasing Taxation

Taxation questions continue to engage the attention of business. The latest official statement shows a total of £108,303,392 collected by the Commonwealth and States during 1936-37, against £92,084,701 in 1929-30, or an increase of over £16 millions in seven years, although in the meantime the Governments have had the benefits of reduced interest from conversions in Australia and London and the suspension of interest payments to the British Government. Now that unemployment has fallen to the pre-depression level, there is a pronounced feeling that unemployment relief taxes should be abolished, but the Governments are not readily inclined to give up what has become a source of revenue for general expenditure.

Argentina

The President and the Opposition

BUENOS AIRES, February 12.—Political interest is concentrated on Dr Ortiz's new Cabinet, the names of whom will be announced within a few days. The Government's lack of a working majority in the Lower House has been the cause of parliamentary stagnation in the last two years. It has been widely rumoured for some weeks past that Dr Ortiz is anxious for conciliation with the Opposition. A rapprochement should not be difficult in view of his own long association with Radicalism.

If the new President can succeed in obtaining the co-operation of the Alvearista Radical deputies, the way will be clear for the passage of several important bills which have been held up for a long time, including measures for the State purchase of the Córdoba Central and Transandine Railways. Elections are due to be held in March to replace half of the Federal Deputies. Unless the voting is very much "regulated" the Opposition is expected to gain ground.

The country's economic outlook for 1938 has not improved during the past month. Despite heavy rains in the North of Argentina, a great part of the cereal zone is very dry. Recently the Banco de la Provincia de Buenos Aires, a semi-official institution, published a decidedly pessimistic report about the prospects of the maize crop in the Province of Buenos Aires. The hot months are normally the wettest in Argentina, and now, with autumn not far off, the hopes of general rains tend to diminish.

Diminished Exports

Exports in January were again disappointing. The volume was the lowest recorded in January in any of the last ten years, and was only 912,990 tons, against 2,400,732 tons last year. Owing to appreciably higher prices, the decline in value was less marked; exports in January were valued at 145,737,254 pesos, compared with 282,282,761 pesos in January, 1937. The value was higher than in January, 1936, though the volume was much lower. The decline last month, compared with January, 1937, was most pronounced in exports of cereals and linseed, the value of which fell 56.4 per cent. The fall was, however, general, and the value of exported pastoral products fell 35.9 per cent., chiefly because of the slackening of the world demand for wool.

The fall in exports during recent months is not in itself the chief cause of anxiety; owing to shortage of stocks, this would have happened even if the current season had recorded bumper crops. The more serious aspect of the situation is that, because of the partial failure of all the chief crops, there is little likelihood of the leeway being made up later in the year. The economic "miracle" of July, 1936, when a depressing outlook in Argentina was suddenly reversed by crop failures Northern Hemisphere can scarcely be repeated this year, since there will be no large cereal surplus available for export.

On January 28th the Government unexpectedly reduced from 20 per cent. to 10 per cent. the surcharge on imports from countries whose exports to Argentina are greater than their purchases from Argentina, and the Central Bank's support of the Argentine peso in the free market was at the same time withdrawn. The value of the peso was then 17.02 to the £1, and it fell steadily to 19.05 on February 5th, after which there was some recovery. As the greater part of the country's imports and exports still pass through the official markets, which are controlled, any buying or selling pressure on the free market produces much more effect on the rate of exchange than if there were no exchange control. That is, the balance of payments passing through the free market does not necessarily correspond to the complete balance of payments through both the free and official markets.

Continued Surplus of Imports

The value of Argentine imports in December was much higher than in the same month of 1936 at 143,737,694 pesos, against 104,326,439 pesos. In consequence of this and the decline in exports Argentina recorded an import surplus for the second month in succession. This is significant in view of the fact that Argentina has very few invisible exports and very large invisible imports. The current economic position of the country is obscured by the extraordinarily favourable figures recorded for the year 1937:—

	(In pesos)		
	Imports	Exports	Export Surplus
1936	1,116,710,994	1,655,712,396	539,001,402
1937	1,557,684,380	2,308,294,661	750,610,281

On February 11th the Government sent to Congress a long message explaining their motives in taking over the Córdoba Central Railway. The message recapitulates the Government's policy of ultimately taking over all the privately-owned railways, announced last year. The nationalisation of the railways, it considers, would strengthen the bases of Argentine social peace. The action of the Government in taking over the Córdoba Central Railway by decree has been criticised in Argentina as an encroachment upon the powers and privileges of Congress, and it is apparent that the purpose of the recent message is to persuade Congress to endorse the action of the Executive with regard to the railways without delay.

Letters to the Editor

Lancashire's Problem

TO THE EDITOR OF THE ECONOMIST

SIR,—Close examination of the article on "Lancashire's Problem" in your issue of January 29, 1938, lends colour to the view felt in Lancashire that those not directly connected with the cotton trade do not fully appreciate the complex nature of our difficulties.

The statement is made that Lancashire can count on her full share of any revival in the world's cotton trade. By using the average of the last few years as a starting point, this is probably true, but any comparison with recent years is confusing, inasmuch as Lancashire contends that some proportion, though admittedly not all by any means, of the 70 per cent. of trade lost prior to 1930, can be recaptured.

You support your contention by referring to last year's improvement of dividends in the spinning section. Since the operation of the Spinning Act, these results are not indicative of the position of the major proportion of the industry, and of the 3,000 firms engaged in the cotton trade, less than 500 are spinners, the others chiefly consisting of weavers, finishers, and merchants.

There is not the slightest doubt that, bad as conditions were prior to 1937, the results of the manufacturing sections (spinners excepted) will be considerably worse in 1937-38, in spite of a slight increase in exports—on account of the increased costs of production brought about by the protection the Government has afforded to other industries. Failing an advance in prices, these increases can only be met by improving the productive efficiency of the industry, and until the Government gives us the necessary authority to unify the trade, this cannot be achieved.

In the Lancashire cotton trade, production and distribution are nearly always separate functions, a state of affairs which always combines to assist the buyer and weaken the seller. When this is coupled with redundancy, of which there is at least 20 per cent., price-cutting becomes unavoidable.

Of the 400 finishing firms, scarcely any two work under similar conditions. The spinning section can use the spindle as their common denominator for negotiation or co-operative action. The finishing section has no similar yardstick, unless given statutory authority to use turnover for this purpose.

To-day, a small minority in each section is holding up all schemes for the betterment of the trade as a whole. The trade requires statutory authority to enable them to make this minority take their share of responsibility in the efforts to expand our export trade.

The desire to increase prices is not, as would appear from your article, Lancashire's main concern. The paramount point is that costs of production can be reduced very considerably if certain measures were adopted to eliminate uneconomic working. With statutory backing this could be done.

Yours faithfully,

W. CROSSLEY,

Director.

Yorkshire Dyeing and Proofing Co., Ltd.

[Our 1936 articles stressed the difference between the spinners and the rest of the trade, and our January 29 article fully recognised that the spinners had benefited more than other sections. But the spinners seem to have been at least as much concerned to widen their margins during 1937.—Ed. Econ.]

More Oil from Coal?

TO THE EDITOR OF THE ECONOMIST

SIR,—There is one point in the otherwise excellent article on "More Oil from Coal?", published in your issue of February 12th, upon which I feel compelled to join issue with you. It is stated in the article that power alcohol, "in addition to the 8d. preference, enjoys the benefit of the remission of 8½d. per gallon duty." This is not the case at all.

Power alcohol, which is mainly produced from imported molasses, is not only exempt from the 8d. duty applicable to petrol produced from imported crude, an exemption worth £187,000 a year to the alcohol producers, but in addition receives, not a "remission of duty," but a bonus or subsidy on production of 5d. per proof gallon, which is equivalent to 8½d. per absolute gallon. This dates back to the Revenue Act of 1906, as amended by the Finance Acts of 1920 and 1921.

The reason for this bonus or subsidy is that manufacturers of power alcohol are subjected to a certain amount of supervision and control of their processes, stocks and records by the Revenue authorities in order to check possible evasion of duty on potable alcohol. The bonus was granted in 1906 to give compensation for disorganisation to business caused in this way, and, until recently, was not particularly objectionable, since the amount of power alcohol produced was negligible.

The great increase in the scale of power alcohol production in recent years, from 14,000 absolute gallons in 1931 to some 5,600,000 absolute gallons in 1937, however, renders the present scale of the bonus grotesque, subjects the Treasury to an annual expenditure on the bonus of over £200,000, and inflicts grievous injustice on the purveyors of products competitive with power alcohol.

Yours faithfully,

H. E. CRAWFORD.

Bush House, W.C.2.

[The 8½d. a gallon is described in the Finance Acts of 1920 and 1921 as an "allowance," and is in fact a bonus on the production of power alcohol.—Ed. Econ.]

War or Depression?

TO THE EDITOR OF THE ECONOMIST

SIR,—Political leaders and most newspapers refuse to acknowledge any trade setback, but have no hesitation in describing the political outlook in most depressing terms. Personally, I see no reason why the international political situation should not improve, while I view the business outlook with grave concern.

Ever since 1918, the political outlook has been described as "fraught with danger," "extremely grave" and "just like 1914." Men have regularly forecast another war every few months, and have regularly been proved wrong. Great wars do not take place frequently, because they exhaust the combatants, and a very long time is necessary for the restoration of their strength.

My belief in the improbability of an early war has been confirmed by the result of the Austrian *démarche*. We have now had the murder of Dollfuss, the assassination of King Alexander, the remilitarisation of the Rhineland, the Abyssinian and Manchurian affairs, and the Spanish and Sino-Japanese wars, each enough to involve us in a war, but all passing off safely.

Why, therefore, should one ascribe the present weakness in the markets to the international situation? Why should steels and motors (pronounced cyclical industries) be suffering so severely if the trouble is political and not economic? Was the market strong before the Austrian affair? Those who are acquainted with your columns should not require any reasons for expecting difficult conditions in business, other than economic ones.

Yours faithfully,

G. E. ROSS.

London, E.C.2.

The Price of Revolution

IVAN SOLONEVICH was born and bred in White Russia; lived through the revolutionary period; worked in a dozen jobs under the Soviets; was clapped into a concentration camp in Karelia on a charge of espionage after a foiled attempt to escape from the country; and finally managed to flee over the Finnish frontier in the middle of 1934. The subtitle of his book* is "A Record of Unspeakable Suffering," and the publishers, in a flourish on the dust jacket, claim that it represents "the most damning exposure of Sovietism ever written." At the moment the author is in Sofia, editing a Russian newspaper "The Voice of Russia," and has dedicated the rest of his life to anti-Soviet propaganda.

The book is well worth reading, and, like so many of the anti-Soviet books of the last twelve months, will no doubt have a spectacular sale. M. Solonevich, writes Communism, the Party, all Soviet officials, the Red Army, the G.P.U., the Activists, the Stakhanovists and, indeed, everybody and everything with a name in the Soviet Union.

In his view, the entire Soviet population lives in daily hope of a great day of bloody retribution for the sacrifices that have been exacted in the erection of a fool's paradise. He quotes a former Red commander, Trienin (now escaped to France), who has said:—

"The country is awaiting war to give it a chance for insurrection. There need be no talk whatever of the defence of the Socialist Fatherland upon the part of the masses of the population. On the contrary, no matter with whom the war were fought, nor what military ruin were threatened, every bayonet and every pitchfork which could possibly be stuck in the backs of the Red Army would certainly be driven home. Every peasant knows it, as does every Communist. Every peasant knows that, as soon as the first shot is fired, he will immediately stab the president of the nearest village Soviet, president of the Kolkhoz, etc., and the latter understand quite clearly that on that day they will be slaughtered like sheep."

This is the lesson we are supposed to learn, but we are not wholly convinced.

For some years before his arrest, the author was a sporting journalist for the Soviet Press. His occupation carried him up and down the country, and he claims to have seen everywhere only hunger, misery, corruption, futility and the universal brutality of Soviet officials. He hated every minute of his life, his daily struggle for rationed food no less than the hypocrisy of Soviet journalism; and he sees all things Soviet through the veil of his own deep personal distaste.

His brother, Dr Boris Solonevich, had spent five years as a prisoner in the Solovetsky Islands. His son, Yura, was a suspect for associating with foreigners. Ivan himself had been apprehended by the G.P.U. many times for suspicious behaviour. Finally, the three of them made an attempt to escape by train from Leningrad. They were captured, clapped into solitary confinement and finally sent off with thousands of others to a lumber camp near the Svir river, attached to the Baltic-White Sea Canal project.

Most of the book is a vivid and sometimes moving account of experiences in the camp. The degree of suffering is, indeed, almost unspeakable. M. Solonevich estimates that at least 10 per cent. of the entire Russian manhood must be dwelling "in or near" concentration camps of the crudest kind. Page after page of gruesome details about the Svir camp fill this tempestuous book.

There is no sense of historical perspective anywhere in M. Solonevich's writing, and not a little of it is the sheerest nonsense. The author can lay no claim at all to impartiality, and rancour and resentment inform all his judgments. Yet the Soviet Union does really contain some of the horrors described, and a deep appreciation of modern Russia's great and genuine achievements can only be formed by those who know something of their tragic cost.

Shorter Notices

"British War Missions to the United States" (1914-1918). By W. G. Lyddon. Oxford University Press. 228 pages. 10s. 6d.

The story of the Missions sent to this country to America during the Great War to organise the purchase and shipment of essential supplies and, after the entry of the United States into the conflict, to ensure the most effective aid possible to the Allies, is little known. In a book which deserves to be widely read for its lively, incisive and economical presentation of an extremely interesting and successful experiment in Anglo-American co-operation, Colonel Lyddon has recorded the general history and particular objectives of the British War Missions. Faced with novel problems and, especially, the danger of appearing to interfere in the administration of a proud and independent State, the members of the Missions evolved *ad hoc* methods of procedure and organisation which satisfied at once the British Government and the American public. The strong personalities of Mr Balfour, Lord Northcliffe, Mr Gordon, Mr Brand and Lord Reading stand out from Colonel Lyddon's pages; and the various complicated problems of shipping, transport, food supply, munitions, war material and priority are made very clear. The virtual establishment of an alien shadow administration on American soil without friction was a remarkable achievement; and Colonel Lyddon's excellent book is a tribute to its success in delivering the goods.

"Complete Practical Income Tax." Ninth Edition. By A. G. McBain. Gee and Co. 336 pages. 7s. 6d.

The ninth edition of this convenient work includes a new chapter on the National Defence Contribution, and incorporates all the changes introduced by last year's Finance Act. Among business men and investors alike, it has proved its utility since 1925, and fully warrants its title.

THE BUSINESS WORLD

Interest Rates and the Treasury

THE annual addresses of Mr J. M. Keynes to the members of the National Mutual Life Assurance Society command an influential audience; for Mr Keynes is regarded to-day as the spokesman *par excellence* of the institutional investor. And last year, as Mr Keynes showed in his speech on Wednesday, the institutional investor's lot was not a happy one. Since Mr Keynes declared, a year ago, that ordinary share prices were too high, they have fallen, according to the Actuaries' Index, by 20 per cent. As the chairman of a British insurance office, however, Mr Keynes is concerned less with the trend of ordinary shares than of gilt-edged and fixed interest securities generally—in other words, with the course of long-term interest rates.

Now, although gilt-edged securities do not normally fluctuate as widely as ordinary shares, they have had an indubitably downward trend during the last three years. If the National Mutual had put all its assets into War Loan at the beginning of 1935, it would have lost 6 per cent. to-day; and if it had put them into 2½ per cent. Consols, it would have lost nearly 20 per cent. During the same period, industrial debentures and preference shares have both fallen, on the average, by 4 per cent. The decline in fixed-interest stocks was particularly noticeable last year, and Mr Keynes is disposed to attribute it, in the main, to a single cause—the policy followed by the monetary authorities in the face of a large influx of "hot money" from abroad.

Mr Keynes's argument, briefly, is that, in the first nine months of 1937, the Exchange Equalisation Account purchased about £190 millions of gold. Mr Keynes might, perhaps, have explained the method of computation of this figure; seeing that the increase officially disclosed in the holdings of the Bank of England and the Exchange Account between March 31st and September 30th was only £113 millions (at 140s. per ounce), and that this period included the heavy purchases made during the "Gold Scare." How were the increased gold holdings paid for? The authorities did not follow the "normal" method of selling Treasury bills to the market; for the bills held by the market actually *fell* by about £36 millions in the first nine months of last year. How, then, was the money raised? Mr Keynes finds that, roughly speaking, £14 millions was obtained by the re-sale of gold to the Bank of England; net receipts on long-term capital account from 2½ per cent. Funding Loan and National Defence Bonds were about £104 millions; and there was a revenue surplus of £12 millions after repaying Treasury bills formerly held by the market. The balance of about £60 millions, Mr Keynes declares, was apparently provided out of the capital resources in the hands of Government Departments, such as the Health Insurance Fund, the Unemployment Fund, etc., which took over Treasury bills from the Equalisation Fund and paid for them out of current accruals or by selling longer-dated securities to the market. The net result was that, over and above the Treasury bills repaid to the market, about £176 millions of liquid resources were withdrawn from domestic holders and placed at the disposal of foreigners who brought their hot money to London in the shape of gold. These holders, Mr Keynes believes, preferred to keep the greater part of their funds liquid, in the shape of bank deposits, Treasury bills and the like. As the monetary authorities chose to make no increase in total bank deposits, or in the market's holdings of Treasury bills, the foreigners' gain was the domestic market's loss. It is reasonable, Mr Keynes believes, to put the reduction in domestically held liquid assets, last year, at at least £100 millions to £150 millions.

Now, as we have repeatedly shown in earlier articles, an influx of foreign gold which is "sterilised" in the Exchange Fund and financed in the normal way by Treasury bill issues to the market may, paradoxically, have a deflationary effect if it be unaccompanied by any expansion of the basis of credit. But last year this effect was accentuated by the official policy of resorting to the issue of longer-dated securities, whose subscription necessitated a cheapening of the prices of gilt-edged securities generally. But the prevention of a rise in long-term interest rates remains, ostensibly, a cardinal feature of official policy!

Mr Keynes has performed a public service by drawing attention anew to the inopportune effect which a large-scale influx of volatile foreign resources may have upon a delicate financial mechanism like that of the City of London. Informed opinion will re-echo Mr Keynes's endorsement of Lord Wardington's plea that the banks should review the question of the rate of interest they allow on foreign deposits. Clearly, it is inadvisable that "hot" gold should be added to the deposits of the Bank of England and become the basis of an increase of credit up to ten times its own amount. But whether the technique chosen for "sterilising" it must carry the lion's share of responsibility for last year's drop in gilt-edged security prices may well be questioned. Apart from the fact that the accounts of large institutional investors for 1937 which have so far been published afford no conclusive evidence of a substantial increase in gilt-edged holdings, the time-table of last year's fall in values is difficult to reconcile with Mr Keynes's theory. The influx of gold was protracted at least until September; and the fall in gilt-edged prices was concentrated mainly on the two months of January and February, as the following table (based on the Actuaries' index figures for 2½ per cent. Consols) clearly shows:—

2½ PER CENT. CONSOLS					
Date	Price (Dec. 31, 1928 =100)	Yield (%)	Date	Price (Dec. 31, 1928 =100)	Yield (%)
1936—			1937—		
Dec. 29	150.9	2.95	July 27	132.2	3.37
			Aug. 31	131.4	3.39
1937—			Sept. 28	131.8	3.38
Jan. 26	147.3	3.03	Oct. 26	131.7	3.39
Feb. 23	133.4	3.34	Nov. 30	133.6	3.34
March 30	136.3	3.27	Dec. 28	132.7	3.36
April 27	136.6	3.27	1938—		
May 25	135.9	3.28	Jan. 25	136.2	3.27
June 29	133.2	3.35	Feb. 22	138.2	3.23

Although the lowest quotation recorded in the table was at the end of August, the decline between February and August was no more than 2 points in the Index, whereas in the first couple of months of 1937 the Index fell by as many as 17½ points. From February onwards, in fact, gilt-edged prices were not so much falling as bumping along the bottom. The reasons for the extremely moderate rise since August (which still leaves the Index nearly 13 points lower on Tuesday last than in December, 1936) may be a matter for argument; and they serve to reinforce Mr Keynes's submission that the financial authorities should take the market more fully into their confidence in disclosing the direction and consequences of their policy. But the fact that the gilt-edged market had re-achieved something like stability after February last year, while the influx of hot money continued at least until the autumn, suggests that while the sterilisation technique of the authorities may have continued to exert a depressing effect, other factors

must needs have been working the opposite way. Possibly some foreigners may have desired to combine safety for their hot money with a moderate income yield, and may thus have invested part of their proceeds in the gilt-edged market. And domestic, as well as foreign, investors probably tended increasingly to seek refuge in fixed interest securities as the slump in ordinary share values became increasingly severe.

Above all, one may question whether any explanation of last year's fall in gilt-edged values can be complete which does not include some reference to the far-reaching developments in industry and trade in the course of 1937. The abrupt fall in gilt-edged values at the beginning of the year coincided with a steep upward movement of commodity prices and with rising industrial activity. In conjunction with re-armament, these developments awakened fears—which at the time seemed neither unreasoning nor unreasonable—of a possible inflationary boom. Before the end of the spring, however, prices had turned downwards; and subsequently the curve of business activity began to flatten out in Great Britain and steeply to decline in the United States. The moderate rise in gilt-edged values in the autumn and winter coincided, in fact, with the growth of a certain anxiety in non-official quarters over the possible imminence of trade recession.

Home Railway Prospects—I

Home Rails and the Investor

ALL four group railway companies have now published their reports for 1937. Together with the speeches of the Southern and Great Western chairmen at this week's meetings, they provide detailed material for the home railway stockholder's annual review. There probably never was a year when the drawing of ready-made conclusions from the published results was more difficult. All companies had to meet a substantial increase in operating costs last year, but their net revenues did not equally reflect adverse cost conditions. All obtained benefits from an increase in charges during the last quarter of the year, but these benefits were smaller and less evenly shared than advance estimates had originally suggested. In last week's issue of *The Economist*, we showed that the Great Western had retained 29 per cent. of its gross increase in railway receipts, the L.M.S. some 14 per cent. and the Southern only 10 per cent. The L.N.E.R. report, which is analysed in detail on page 454, shows that the company retained some 37 per cent. of its increase in gross receipts as net revenue. This result, and the unexpectedly high dividend of 1½ per cent. on the second preference stock, follows not from a more favourable operating experience than other lines, but rather from an actual reduction in the revenue charge for rolling stock renewals.

Before investors can attempt to formulate a long-term policy it is obviously necessary that they should put the results of last year into due perspective. General business activity in 1937, according to *The Economist's* index, was 13 per cent. higher than in 1929 and 32½ per cent. higher than in 1932. Railway net revenues have not recovered in anything like the same proportions. Between 1929 and 1932 business activity fell by 15 per cent., but net revenues were reduced by 41 per cent. And last year they were still 15 per cent. lower than in 1929, except on the Southern, which exceeded the 1929 net revenue figure by a small margin. The L.M.S. and L.N.E.R. figures were, respectively, 16½ per cent. and 22½ per cent. below the 1929 level, which itself fell appreciably short of the "standard" level under the Railways Act of 1921.

Again, so far as the railways have shared in recovery, other pockets than the stockholders' have obtained the main benefits. Last year's wages award completed the restoration of the "cuts" made in 1931. Higher wages and increased costs of materials together absorbed 60 per cent. of the increased receipts of the L.M.S. last year, and the Great Western's experience seems to have been much the

If economic as well as technical causes were partly responsible for last year's changes in long-term interest rates, the moral is not that the monetary authorities should disregard Mr Keynes's warning of the effects which their policy may exert, but rather that they should review its implications in the light of present conditions which are certainly not identical with those of a year ago. There is wisdom in Mr Keynes's appeal that the authorities, while they continue to exhort the business community not to become unduly "slump-conscious," should themselves become, possibly, a little more "slump-conscious." "We could sleep more easily in our beds if we felt that they were sleeping less easily in theirs." The financing of hot money is not the only factor which may affect market confidence. All that jitters is not gold. A time will come when the Treasury will be borrowing to pay for British guns rather than foreign gold, and when the question of widening, or leaving unchanged, the basis of national credit may have a close bearing on the course of domestic economic activity. If, by any chance, symptoms of a business setback in this country were to become more pronounced, would the authorities be prepared to broaden the basis of national credit in a way they might have been unwilling to contemplate a year ago? The question is being widely discussed in the market to-day.

same. It may be that costs are now tending to reach a provisional upper limit; but approximately only one-third of the latest wages award was reflected in the 1937 accounts, and no appreciable reduction in the costs of typical railway materials, like coal and steel, is yet in sight. The railways, on the other hand, were spurred on by the depression to introduce operating reforms whose effect has outlasted their cause. The substantial reduction in the number of locomotives operated by the L.M.S. between 1929 and 1937, for example, has brought considerable benefits, both in operating and maintenance costs. And by general consent this company's forward-looking rolling-stock renewals policy should lighten the burden of renewal costs in the next few years. But there is no assurance that the companies will be able substantially to improve their net revenues by introducing further operating economies on a major scale in the immediate future.

What, then, are the prospects of increased revenue? The companies will have the advantage of the full 5 per cent. increase in charges this year. But, so far as the returns lend themselves to analysis, the actual increases in receipts recorded since the higher scale was introduced have proved somewhat disappointing. The average weekly increase for all companies up to the thirty-ninth week of 1937, before the higher charges took effect, was £132,000. The average weekly increase during the remainder of the year was £160,000. But if the companies' submissions to the Railway Rates Tribunal had been fulfilled an additional increase of something like £110,000 per week should have resulted from increased charges alone during the last

quarter, assuming that the volume of traffic had been maintained. The difference between the estimated and realised figures may suggest that more traffic has been diverted through the increase in charges than was generally expected.

It is unlikely, in fact, that the railways will find salvation through increased charges so long as individual traders can resort to the "C" motor licence. It is significant that although tonnage and gross receipts from general merchandise increased last year on all four lines, the average receipt per ton was lower than in 1936. The companies were more successful in retaining the increase on passenger and heavy goods traffic, but the very remunerative lighter goods traffic remained vulnerable to competition, even in a good year like 1937.

Stockholders will ask with some anxiety how they would be likely to fare if the volume of traffic were to fall off in some future year. The marginal equity stocks all offer ostensibly high yields at present prices, the figures being 6.7 per cent. for L.M.S. ordinary, 7.4 per cent. for Southern deferred, 6.8 per cent. for Great Western ordinary, and 7.6 per cent. for L.N.E.R. second preference stock. But these figures are certainly not too high if, in fact, the railways are vulnerable to the trade cycle, and if they are likely to continue to lose more revenue in depression than they regain in time of recovery. We may ask, therefore, what are the possibilities, on a longer view, of increasing the basis of railway net revenue?

During recent years, when all four railways have been bringing to full fruition the economies of "grouping," the Southern alone has attempted to achieve a positive increase in receipts by a policy of main-line electrification. And, by a curious coincidence, the Southern Railway has decided to postpone the electrification of its direct line to Hastings; precisely at the same moment as the Great Western directors, impressed with the increased cost of steam working, have decided to embark upon an electrification policy. Is the Southern becoming less convinced of the merits of main line electrification, except when a quasi-suburban load can be assured?

Lord Horne's disclosure on Wednesday that the Great Western is investigating the potentialities of electrification on the company's main line between Taunton and Penzance is by contrast highly significant. Admittedly, elec-

trical working over this section is unlikely to give such good results as in a suburban area. But if this proposal is found to be economic after full investigation, the case for main line electrification will have been greatly advanced.

The long-term investor would be curious to know, in fact, whether it may not become practical politics for all four railways at some future time. They can now borrow at gilt-edged rates by obtaining the Treasury's endorsement on their new capital, and Government-assisted railway construction might well make the same public appeal in a future depression as in the last. Two operating economies would follow extensive electrification. The electricity supply industry could obtain a higher load factor, and the railways could effect substantial economies in wage costs. The Weir report showed that the latter are, in fact, the most substantial of the potential savings of electrification, and estimated that the total net return on the capital cost of electrification would be 6.7 per cent.

Whether the Weir Committee estimates would hold today is questionable. Costs may be higher, but interest rates on new railway capital are lower. But whatever merits main line electrification may have for the long-term investor, it is of little help in assessing the immediate outlook, which, *prima facie*, is unexciting. The traffic returns published this year show an average weekly increase, on the four lines together, of £111,000. Allowing for the 5 per cent. increase in charges, therefore, the "natural" growth in traffic is evidently exiguous. Against it must be set the further increase in costs which occurred during the second half of last year. On the L.M.S., for example, the additional working expenses arising from increased prices and wages was estimated last June at £3,175,000 in a full "notional" year—which is roughly what 1938 will be. Additional charges at the rate of £1,625,000 per annum have since become operative, of which some £1,160,000 may be attributed to the wages award of last August. Additional wage costs alone this year may be put at £475,000 for Great Western, £675,000 for L.N.E.R. and £475,000 for the Southern. In these circumstances, buoyant net revenues can hardly be expected on any of the four lines this year. We propose to consider available figures of railway receipts and expenditure in greater detail in future articles.

Worsted Spinning Problems

THE wool textile industry, which was one of the first to recover from the depression, has, unfortunately, been among the first to experience a setback. The recession during the past few months has been substantial. Last month the proportion of insured workers unemployed in the industry stood at the high level of 21.1 per cent., an increase of 14.5 per cent. during the year. During the same

period, exports of wool tops fell from 4,466,000 lbs. to 2,500,000 lbs., and shipments of worsted yarns declined from 2,430,000 lbs. to 1,708,000 lbs. Similarly, exports of woollen tissues fell from 7,848,000 square yards to 6,663,000 square yards, and shipments of worsted tissues from 3,980,000 square yards to 3,765,000 square yards.

Clearly, deterioration in the position of the industry has been sudden and severe. For some time leading representatives have been concerned with the discovery of practical means to improve matters. Their efforts have taken tangible shape in an invitation to all worsted spinners to meet on March 3rd in Bradford, in order to discover what support exists in the industry for control schemes to eliminate price-cutting and redundant machinery.

The problem, in its essentials, differs in degree more than in kind from that of the Lancashire cotton spinning industry. There is at present too little work to employ British worsted spindles and looms, mainly because foreign consumers are making more of their own materials and buying less from abroad. Their policy has progressed in well-marked stages. At first they installed looms, for which they still bought British yarn. Later they installed spindles to produce their own yarn, but still bought British tops. Afterwards they began to take less of our tops, and the combing industry in its turn found that its capacity greatly exceeded its available business. That industry has reorganised itself in the last six years by imposing a combing tariff that ensures profitable running, and by buying and scrapping much redundant machinery. It is not sur-

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

£500,000 in 2,000,000 Ordinary Shares of 5s. each ...	£500,000
£1,000,000	£1,000,000

There are no mortgages or charges outstanding.

The List of Applications will open and close on Thursday, the 3rd day of March, 1938, for an
OFFER FOR SALE OF

500,000 6 per cent. Cumulative Preference Shares of £1 each at 20s. 6d. per Share, and 1,000,000 Ordinary Shares of 5s. each at 7s. 6d. per share.

Particulars contained in the Offer for Sale will show, *inter alia*, that:—

The business of A. C. Cossor Limited was founded nearly 50 years ago and manufactures scientific and electrical instruments, Valves, Condensers, Resistances, Transformers, Coils, together with Radio Receiving Sets and Television Receivers. The business is recognised as one of the largest of its kind in the world.

The Company is to work in close co-operation with the Associated Companies of Ismay Industries Limited and expand the scope and activities of its business by the manufacture and distribution of a wide range of household and electrical appliances.

The total net assets of the Company and its wholly owned Subsidiary Company, after writing off £148,601 in the last 7 years, amounted on the 31st March, 1937, to £716,522 (exclusive of Trade Marks and Goodwill).

The Directors are of opinion that the present day value of the assets is considerably in excess of this figure.

In addition the Company will have the benefit of the profits of the business as from 31st March, 1937, a period of approximately eleven months.

The Profits of A. C. Cossor and Surety Trust are shown as follows:—

	A. C. Cossor	Surety Trust	Total
Year ended 31st March 1931	£88,845	—	£88,845
Year ended 31st March 1932	£285,242	—	£285,242
Year ended 31st March 1933	£198,834	—	£198,834

Year ended 31st March 1935	£208,561	£5,580	£214,141
Year ended 31st March 1936	£195,340	£9,070	£204,410
Year ended 31st March 1937	£204,238	£4,588	£208,826

The combined profits for the last five years show an average annual profit of £205,370, which is sufficient to cover the annual dividend on the Preference Shares over six and three-quarter times. After providing for such dividend the balance of such average profits is equivalent to 35.07 per cent. on the nominal amount of the Ordinary Share Capital, and 23.38 per cent. on the price at which the Ordinary Shares are offered for sale.

The Joint Managing Directors are of the opinion that the net profit of the Company for its first financial year should be approximately £200,000.

Copies of the Offer for Sale are available and may be obtained from:—

prising, therefore, that the worsted spinners, faced with difficulties as formidable as those which faced the woolcombers a few years ago, desire a similar plan to that which was discussed in *The Economist* of September 4th and October 2nd, 1937 (pages 461 and 5). Indeed, they have paid the woolcombers a compliment by sending out their circulars for next month's meeting through the woolcombers' offices, so that every worsted spinner can be notified, whether he is a member of the Spinners' Federation or not. Labour support will probably be forthcoming for any scheme to make the industry more healthy; on the ground that even if no more spindles can be run than at present, and no more labour employed, a prosperous industry can afford to pay higher wages than a depressed trade.

It is not proposed to put before the forthcoming meeting any cut-and-dried scheme for control, but it is hoped that the meeting will at least reveal the extent of support for the movement. The difficulties, admittedly, are very great. The variety of yarns produced exceeds by many times the variety of tops turned out. There are at least five times as many spinners as combers. Some firms use only five or six qualities of wool, and their bulk output runs into about thirty or forty counts of yarn. Others use ten or fifteen qualities of wool in various blends, and produce scores of counts of yarn, in colours as well as in white. Others, again, blend or twist cotton or rayon or staple fibre with wool. It would be difficult to find more than half a dozen firms whose "balance" is identical and whose costs are alike. The industry is also open to the same kind of competition as faced the woolcombers when their own scheme was drawn up. Certain concerns which encountered financial difficulties some years ago have since been running under bank control, and have, in some cases, been noteworthy for their price-cutting policy.

In view of the fact that production costs vary enormously between one mill and another, it may well be simpler to arrange for the elimination of redundant machinery than to attempt to impose standard conversion costs. The elimination of machinery for which there is now no employment cannot be uniform throughout the different sections of the industry, and any agreement upon it will call for much skill and diplomacy. There are undoubtedly a number of firms to-day who, after three or four years of profitless

running, would be ready to sell out their undertakings—but on the basis not of scrap value, but of nuisance value.

The imposition of fixed conversion charges in such an industry seems almost impossible. Not only will the efficient low-cost firm object to turning away bids of a fraction below the standard rate—on which it could make a satisfactory profit—but it will object to providing a levy to help less efficient competitors. Some years ago spinners of single crossbred yarn endeavoured to operate a price-fixing scheme, when political causes had deprived them of many of their European markets. The agreement, as planned, covered only a small section of the trade—but it failed completely.

If the present movement receives support and some plan is put into operation, it may appreciably improve the morale of the industry. For example, it is undesirable that firms should be compelled to gamble in raw material to keep their machinery running. The scheme might also impose the reasonable conditions of payment known as "Federation terms," and prevent the recurrence of a situation in which yarn, spun to customers' instructions, remains in the spinner's warehouse for many months because the customer refuses to take it. There is, of course, a danger that any attempt to increase margins to an economic level may drive more of the business from spinners to spinner-combers, just as the increase of combing costs has tended to transfer combing trade to firms outside the Combing Association or to spinner-combers. Severe price-cutting between manufacturers who have a production capacity much in excess of available business has, in its turn, intensified price-cutting amongst spinners. A united front among the spinners might reduce cut-throat selling by weavers, and even encourage them to attempt a similar project on their own account—though, in fact, some of the keenest prices for cloth are quoted by firms possessing both spindles and looms.

Nevertheless, even if considerable support is forthcoming for the proposals, greater difficulties will need to be overcome than in the case of woolcombing. Even in Lancashire, the cotton spinning scheme had not to cope with so great a variety of products as worsted spinners produce. Unless owners of something like 90 per cent. of the spindles can be induced to co-operate, the present plan is probably doomed to failure.

Finance and Banking

Rally in the Dollar.—On February 17th President Roosevelt made his latest statement upon American monetary policy. He declared that no inflation or further devaluation of the dollar was intended. Nevertheless, he did feel that certain prices, such as those of farm products, were too low, while other prices—for example, those of building materials—were too high. A moderate rise in the general price-level was desirable, but should be achieved by raising those prices which were now too low. The recent decision to abandon the sterilisation of gold was in part linked with the new line of policy implied in these views, though it was due also to other considerations. The foreign exchange market has so far given greatest importance to the President's initial declaration ruling out further devaluation. Hurried bear covering brought sterling down from \$5.03½ on February 17th to \$5.01½ at the beginning of this week. Part of this movement, however, was due to the immediate uncertainties caused by Mr Eden's resignation, for on Monday sterling itself was weak all round. Since then, there has been a moderate recovery in the pound to \$5.01½ last Thursday, but it remains fair to say that the latest dollar scare is now at an end. On the other hand, it is clear that President Roosevelt is, if anything, shifting from the deflationary to the inflationary—or, at least, to the reflationary—tack, the latest evidence of this being the instruction to the Reconstruction Finance Corporation to resume lending. Hence the possibility of a future dollar scare cannot be ruled out.

Italian Credits.—The political developments of the week have let loose a flood of rumours concerning the imminence of large Italian credit operations on the London market. For the time being these may be completely written off. As far as normal bank acceptance credits are concerned, the tendency in recent months has been towards contraction. There is no reason to anticipate an early reversal of this trend, for the very good reason that, political *detente* or no, Italy remains a thoroughly bad credit risk in the City of London. A moderate volume of Italian paper continues to circulate in the market. The Italian agency bills have recently been more difficult to place at anything approaching fine rates. Market experience suggests, however, that the Italian banks in London have, on the whole, maintained more money in the short loan market than the total of their paper which is being run by the discount market. There is no specific guarantee afforded by this juxtaposition, but it has undoubtedly helped to maintain a reasonable market for Italian bills.

* * *

As far as the Export Credits Guarantee Department is concerned, there is no indication of any change of policy, following the events of this week. The department bases its operations on commercial considerations, and is influenced by political events only in so far as they

indirectly affect the export credit and transfer risks which it is called upon to underwrite. During the sanctions period the Department suspended all transactions involving the extension of facilities to Italy. Since sanctions were lifted, however, it has again been at liberty in the course of its normal commercial operations to underwrite export risks to that country. The Chancellor of the Exchequer announced this week that no request had been received from Italy for new and extensive short term credits with Government guarantee. Meanwhile, negotiations are proceeding in London between representatives of the Board of Trade and of the Italian

Ministry for Foreign Trade, for the renewal of the Anglo-Italian Payments Agreement of 1936. The arrears of commercial indebtedness which that agreement was intended to clear up have now been virtually settled. There is hope that, in its renewed form, the agreement will have universal scope and that it will in fact approximate more to a bilateral trade agreement than to a mere payments or clearing agreement. It remains possible, of course, that in the course of the present political negotiations, Italian demands will be made for credit facilities analogous to those granted to Soviet Russia under the Export Credits Guarantee scheme.

MONEY MARKET NOTES

Foreign Exchanges

The immediate consequence of Mr Eden's resignation was a weakening of sterling last Monday. In addition to the appreciation of the dollar, referred to in a Financial Note, both French francs and belgas were bid against sterling, the Paris spot rate falling to Frs. 152½ and the Brussels spot rate to bel. 29.51½. This movement against the pound only lasted for one day, for on Tuesday francs once more came on offer and remained so for most of the two following days. In consequence by Thursday the spot rate had risen to Frs. 154½, coming back later in the day to Frs. 154½. Three months' francs have also widened from Frs. 4½ to Frs. 5½ discount. The French Control has also had to support both the spot and forward market, and is thought to have lost a fair amount more of its resources. Belgas have equally depreciated to their previous rate of bel. 29.56. On the other hand both the Dutch and Swiss rates have remained very steady during the whole of the week, guilders being still quoted at Fl. 8.96½ and Swiss francs at Frs. 21.59½. Rates have not moved at all no several weeks.

The Money Market

While the Bank return indicates no apparent change in the position, market reports are to the effect that money is much easier. There has been very little calling by the clearing banks, and bond money is available from outside lenders at ½ per cent. The clearing banks are eager buyers of bills, but although last week the market got a slightly better allotment of Treasury bills (23 per cent. against 18 per cent. in each of the three previous weeks), brokers are still reluctant to sell.

	Feb. 25, 1937	Feb. 17, 1938	Feb. 24, 1938

Others	5½-3½	1½-5½	1½-5½
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	9½	17½-9½	17½-9½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

With the continued influx of revenue, the volume of tender issues of Treasury

bills continues to shrink. For the current week it is only £532 millions, compared with a peak level of £622 millions at the end of December. Floating assets have also fallen by £56 millions since the end of last year.

The Bank Return

This week's Bank return shows practically no change from the previous week. Compared with a year ago, the note circulation has risen by £19.4 millions, but this is mainly offset by an increase of £12.7 millions in the Bank's gold holdings. Thus the Reserve has only fallen by £6.7 millions.

THE COMING SCRAMBLE FOR STOCKS

by Major Angas

Author of "Investment For Appreciation"
Specialist in the Business Cycle

This detached and incisive pamphlet is about to be issued as a Special Number of Major Angas's DIGESTS on the Outlook for Trade and Securities.

The general tenor of this pamphlet is: "Be bold and buy before a boom begins."

A New Inflation is About to Commence

The above Forecast will be supplied only to existing and new DIGEST subscribers. It will not be sold separately. A 12-months' subscription to these DIGESTS costs \$25. Dates of issue depend on market developments, but normally one Digest will appear each month.

New subscribers ordering before the 1st of March may receive a free copy of Major Angas's "Investment For Appreciation" (\$5.) Also, his recent pamphlet on the problem of "Remaking The Boom" (\$1.50).

L. L. B. Angas, Investment Consultant, 301 Park Avenue, New York

In the banking department, the contraction in the Reserve during the past year has been more than neutralised by an increase of £12.4 millions in Government securities. Thus bankers' deposits have risen by £5.2 millions. This very limited expansion in the credit base is probably required to offset the increased Government short-term borrowings needed to finance the Exchange Equalisation Account's gold acquisition during the year. Thus there has been no effective enlargement of the credit base or change in monetary policy.

*

The Bullion Market

The Continental demand for gold has continued, and has been met out of supplies from official sources at prices

which still contain a fairly large premium. On Wednesday, the London price was suddenly raised by 1d. an ounce, only to be brought back to its previous level the following day. There is no obvious reason for these movements, which are a complete mystery to the market.

The appreciation of the dollar at the end of last week stimulated fresh buying from India, and on Saturday the forward price moved up ½d. nearer to the spot price. Both cash and forward prices strengthened during the early part of this week, owing to Indian bear covering and fresh forward buying, against Continental selling and also resales by speculators. By Thursday, however, the market had become a shade over-strained, and as the Indian market was closed for a holiday on that day,

INSURANCE NOTES

against £170,000. The results of these branches are given below:—

Department	Premium Income	Under-writing Profit	Percentage
Fire	1,119,326	25,229	2.3
Employers' liability	32,360	5,079	15.7
Accident	86,704	21,752	25.1
General	213,111	12,704	6.0
Motor	220,750	16,778	7.6
	1,672,251	31,084	

Total assets increased from £96,522,000 to £102,486,000, and thus, for the first time, the one hundred million mark was attained. Total loans increased from £6,103,000 to £6,272,000. British Government securities, which account for one-third of the assets, amount to £34,111,000, contrasted with £32,167,000 in the previous year. Colonial and foreign government securities, on the other hand, fell by £633,000 to £12,528,000. British municipal securities were also smaller at £5,701,000, against £6,175,000. Debenture stocks, however, increased from £12,965,000 to £13,931,000 and preference stocks from £6,894,000 to £7,033,000. The largest rise occurred in ordinary stocks, which increased by no less than £3,118,000 to £12,557,000. In view of the trend of market prices in 1937, special interest will attach to any comments which the chairman may care to make on this development at the annual meeting. The contingency fund, ordinary and industrial branches investment reserve funds remain unaltered at £300,000, £3,100,000 and £3,150,000, respectively. Out of the 1937 surplus in the industrial branch it is proposed to transfer £100,000 to the contingency fund. The dividend, which was increased in 1936 from 50 per cent. free of tax to 51½ per cent. free of tax, is further raised to 52½ per cent. free of tax; in addition, on this occasion, a bonus of 2½ per cent. free of tax is also being distributed.

*

Scottish Temperance and General.—A quinquennial valuation of this company was made as at December 31, 1937, when the life assurance policies were valued by the A²⁴ Table, assuming interest at 2½ per cent. Five years ago the O¹⁰ Table was used, assuming 3 per cent. interest. As no indication is given of the cost of strengthening the reserves, the trading profits shown below are to that extent understated. For annuity considerations the bases of valuation were the same as on the last occasion, namely a⁽¹⁾ and

the London price slipped back a little. The undertone remains steady, with attention mainly directed towards the Indian Budget due to be announced at the coming week-end.

a⁽¹⁾ tables with 3 per cent. interest.

	1928-1932	1933-1937
Trading profit	884,099	715,204
Capital profit	256,000	
Brought forward	182,493	123,365
	816,592	838,569
Allocations:—		
Policyholders	693,227	730,801
Carry forward	123,365	107,768
	816,592	838,569

The amount of £107,768 carried forward includes £35,166, the necessary provision for bonus to policyholders under the deferred and accumulating bonus schemes whose policies are not yet entitled to share in profits. The rate of bonus declared is 2 per cent. per annum. The declaration is the same as was made five years ago. In 1937, new sums assured amounted to £1,604,000, against £1,524,000. The net rate of interest fell by 1½d. per cent. to £4 1s. 5d. per cent. and the total assets increased from £8,236,000 to £8,544,000. Mortgages were lower by £54,000 at £1,973,000, but aggregate British, Colonial and Foreign Government securities are practically unchanged. Debenture, preference and ordinary stocks at £1,723,000, £1,658,000 and £687,000 showed increases of £68,000, £123,000 and £145,000 respectively.

Scottish Provident Institution.—New sums assured in 1937 were the largest recorded, their total of £3,313,000 contrasting with £3,166,000 in 1936. Annuity consideration moneys, however, dropped sharply from £249,000 to £99,000. The net rate of interest realised on the total funds, including investment reserve fund, was £3 15s. 7d. per cent., against £3 16s. 9d. per cent. The rate earned on the life assurance and annuity fund alone fell by 1s. 6d. per cent. to £3 17s. 5d. per cent. Death claims amounted to £1,016,000, or about £6,000 less than the preceding year, and surrenders were £11,000 smaller at £125,000. Total assets appear at £25,426,000 against £25,117,000. British Government securities, which at £9,033,000 represent over 35 per cent. of the total assets, fell by £256,000. Foreign and Colonial Government securities increased by £26,000 to £1,497,000, and debenture stocks by £59,000 to £3,467,000. Preference stocks increased by £193,000 to £2,885,000, and ordinary stocks by £340,000 to £3,478,000.

Investment

Political Markets.—From the early days of February, movements of prices on the London Stock Exchange have been governed by factors which have had nothing to do with industry, the trade cycle, hot money or the British Treasury. From the moment when the Army-Nazi "crisis" blew up in Germany, and Dr Schuschnigg was subsequently summoned to take his orders from Berchtesgaden, the markets have been in the grip of political fears. Prices, in fact, have been determined by the action of people inside and outside the markets, who had no clear idea where Europe was going, but thought that it was moving much too fast. When last week-end brought news of Mr Eden's resignation, with the possibility of a Cabinet split, a general election and encouragement for the European dictators, it seemed that there might be no immediate limit to the resultant fall in prices. Actually, on Monday, the markets stood fast and waited for Mr Eden's and Mr Chamberlain's speeches. It then became clear that Mr Chamberlain, right or wrong, would have his way and carry on his Government. Whatever the attitude of individuals towards the ultimate implications of the Government's attitude, it was enough that there would be no international débâcle next week, next month, or even, perhaps, next year. The *Financial News*' index of ordinary shares, which fell between February 4th and 17th from 93.1 to 86.9, rose by a complete 2 points on Tuesday and a further 1.3 points on Wednesday, and closed on Thursday at 91.7.

*

The following table shows how a number of leading market equities have been affected by recent events:—

	1937		Feb. 7 1938	Feb. 17 1938	Feb. 23 1938	Feb. 24 1938	Change on Week
	High	Low					
"Financial News" Ord. Share index	124.8	93.1	91.7	86.9	91.3	91.7	+ 4.8
British Oxygen (£1) ...	138/9	76/3	75/-	68/9	77/6	77/6	+ 8.9
Courtaulds (£1)	58 4/2	42/-	43/-	39 4/2	41 3/4	40 6/4	+ 2.7 1/2
General Electric (£1) ...	94 9	70/-	74/8	68 6	73/-	74 1/2	+ 5.7 1/2
Imp. Chem. Inds. (£1) ...	41/10 1/2	31 4/2	32 6	30 6	31 3	30 9	+ 3
Furter and Newall (£1) ...	112 6	72 6	81/3	76 10 1/2	80 7 1/2	80 10 1/2	+ 4 1/2
Vickers (10/-)	39/3	20 7/2	23/-	21 6	24 6	24 9	+ 3 3

In some instances this week's recovery has carried prices back above the level at which they were standing before political fears gripped the markets. In other cases, the net decline is now comparatively moderate, compared with its dimensions a week ago. The recovery, indeed, has gone far enough to suggest that some amount of new buying has been super-added to the inevitable closing of bear positions. Given even a temporary respite from politics, revival may go further; for there are no signs of a rapid deterioration in British industrial activity. And a brighter view of the possibility of a moderate revival in American trade this year is now being taken, apparently, even in America itself.

*

Further Corporation Borrowing.—With the Birmingham scrip standing at a small premium and the Stirling loan around par, this week has seen two new corporation issues on largely identical terms. The Corporation of London, whose last visit to the London market was in February, 1933, has issued £625,000 3½ per cent. stock, dated 1959-64, at 98, while Plymouth has issued £750,000 3½ per cent. stock, at the same price, but redeemable 1957-62. Calls on the latter are rather more widely spread, but since the two loans carry the right to a full half-year's interest in September and December respectively, this factor is approximately offset. The Corporation of London, perhaps, has a somewhat higher standing, and for this reason the slightly longer life of the loan, compared with recent issues of the same character, may be warranted. The proceeds will finance the proposed airport in Essex, while the Plymouth loan

will be applied in part to capital purposes and in part to replacing temporary loans amounting approximately to £275,000. The firmer tendency in the gilt-edged market this week provided a moderately auspicious background for the two issues. It is expected that South Shields will make a Conversion issue of £1,000,000 shortly, which may provide a further test for the new terms.

*

The Accountant's Function.—Sir Harold Bellman, in a speech delivered to an audience of Incorporated Accountants last week, did a service to his listeners and also to a wider public. For his theme was concerned with the larger social and economic obligations of the accountancy profession. Many practising accountants would have no difficulty in following Sir Harold in his first two points—that accountancy has proved its adaptability to changing forms of economic organisation, and that its professional standards are fully safeguarded. It was in the extension of these facts into a wider realm of responsibility that the speaker sought to cultivate more contentious ground. The textbooks recognise no "fiduciary responsibility" on the part of the accountant towards the public, either as consumers or investors. Yet, as Sir Harold pointed out, some larger obligation of this sort is thrust into the accountant's hand, whether he welcomes it or not. He is, in the first place, a primary safeguard for the small investor—a link between the company and its shareholders, which becomes the more important as the notion of shareholders' democratic control becomes weaker in practice. His services in such matters as reconstructions and marketing schemes, again, have an important bearing both for consumers and producers. Sir Harold, presumably, would not stress unduly either the achievement, or the advantages, of this form of indirect control. On one of his later points, however, there will be general agreement. Since modern business practice does demand the frequent intervention of the accountant, these ends will be served in proportion as the accountant is assisted by "the assurance of a vigorous and unified policy within the profession on major issues."

*

Changing Equity Yields.—For three weeks past, the average yield on the 151 industrial ordinary shares in the Actuaries' Investment Index has exceeded 5 per cent. It is necessary to go back as far as August, 1932, to discover a previous instance of this return on a mixed holding of industrials. For the equity share investor, the movements in industrial share yields during the past year have especial

(Chief Office): 1 Cornhill, E.C.3

The rate of bonus declared in the ordinary branch is again 2 per cent. on the sum assured. In the industrial branch the rates are the same as in 1936 at 16s. for each weekly premium of 1s. in the whole life class and 12s. in the endowment assurance class; the policies participating are those effected prior to January 1, 1931.

*

In the miscellaneous branch fire premiums fell from £1,138,000 to £1,119,000. Small increases took place, however, in the accident and motor branches, while in the general branch premiums amounted to £213,000

significance. We have extracted from the Actuaries' Index the movements in six groups between February 23, 1937, and February 22, 1938. The yield figures are not strictly comparable in certain cases, owing to the revision of the index at the end of the year. The margin of error arising from this discontinuity is, in fact, unavoidable. In the following table we have first shown the prices and yields in each group at the two dates. We have then calculated the percentage change in yields during the year, and compared this with the percentage movement in prices, *calculated on the 1938 price*. Thus we have endeavoured roughly to isolate the effect of price movements from changes in the yields:—

Group	Feb. 23, 1937		Feb. 22, 1938		Change in prices, based on 1938	Change in yields, compared with percentage change in price	Excess of percentage change in yield, compared with percentage change in price
	Prices*	Yields	Prices*	Yields			
Industrials, all classes	87.1	3.95	69.4	5.22	-25	+32	7
Building materials	100.7	4.99	82.3	6.86	-22	+37	15
Coal	127.5	3.14	94.1	5.51	-35	+75	40
Iron and steel	82.8	3.82	59.8	6.82	-38	+78	40
Motors	55.0	4.40	36.8	6.41	-49	+46	-3
Oil	105.2	2.84	77.8	6.42	-35	+126	91
Miscellaneous	78.2	4.17	62.8	4.87	-24	+17	-7

* December 31, 1928 = 100.

The imperfections of the method of comparison are obvious, but certain important conclusions nevertheless emerge. If the yield figures were strictly comparable over the year, and if they had moved just sufficiently to offset changes in prices, then the percentage changes in prices, calculated on the *present* index number, would cancel out the percentage change in yields, calculated on last year's figures. Any excess in the percentage change in yield, compared with the percentage change in prices based on this method, should, in theory, be attributable to increased dividends paid during the past year. In other words, the substantial differences between the two sets of percentages in the coal, iron and steel, and oil groups are an indication that this principle of higher dividends has failed, in these groups, to bring about anything like an equivalent adjustment in share prices. This brings us to yet another point. At any given moment, equity share prices take account not only of past dividends, but probable future earnings. Last year's yields were thus sub-normal, to the extent that they reflected dividends still to be declared. Conversely, if the market is now expecting industrial earnings to fall, the true present yield basis may be overstated.

Company Notes

L.N.E.R. Report.—The market had calculated for itself an increase in the net revenue of the London and North-Eastern Railway amounting to no less than £966,047, on the basis of the surprisingly good dividend declared on the second preference stock. The latter has been increased from one-half per cent. for 1936 to 1½ per cent. for 1937, and net revenue also covered a transfer of £150,000 to contingency fund. The explanation lies partly in the retention of no less than 37.1 per cent. of the increase in gross railway receipts and partly in an appreciable expansion of net miscellaneous receipts. Railway gross

receipts increased by £2,203,196 to £49,086,681, but expenditure was only £1,385,474 higher at £39,540,466. Net ancillary receipts increased by £15,580 to £84,870, and net miscellaneous receipts were as much as £132,745 higher at £476,357. Movements in net receipts and their distribution during the past three years are set out below:—

	1935	1936	1937
Railway gross receipts	45,145,649	46,883,485	49,086,681
Railway expenditure	37,156,391	38,154,992	39,540,466
Net railway receipts	7,989,258	8,728,493	9,546,215
Net ancillary receipts	Dr. 115,591	69,290	84,870
Net miscellaneous receipts	497,706	343,612	476,357

* After crediting £50,000 from general reserve.
† After appropriating £150,000 to contingency fund.

The following chart depicts the distributions on the various classes of stocks since 1928:—

L.N.E.R. DISTRIBUTIONS, 1928-37

The total distributions closely follow the trend of net revenue, although the latter is not shown. It may be pointed out that the first preference, redeemable preference and second preference dividends are grouped together. The payments on the first two stocks were reduced to 1 and 1½ per cent. respectively in 1932 and restored in full in 1936.

On further scrutiny, however, the investor may regard the results with some reservations. Locomotive and traffic expenses, which together increased by £1,067,338, fully reflect increases in wages and fuel costs. The explanation of the relatively small rise in total railway expenditure is to be found, in fact, in the renewals charges. Maintenance of way and works cost £273,819 more at £5,371,239, and slightly more work was carried out. The maintenance charge for rolling stock, however, was actually reduced from £8,491,892 to £8,443,596, thanks to a net credit of £2,313,183 from rolling-stock renewal fund, compared with £782,525 in 1936. The latter fund (which was augmented last year by a direct transfer of £3,340,000 from rates recovered up to December, 1935) consequently shows a reduction from £5,143,748 to £2,715,065. A substantial increase in renewals of merchandise and mineral vehicles has thus been offset by transfers from reserves. Further, miscellaneous net receipts have the benefit of an increase of £126,000 in the company's pro-

portion of net revenue from joint lines, and of £59,000 in interests and dividends, mainly from road transport investments. To the extent that some part of these reduced costs and increased revenue cannot strictly be linked to the year's railway operations, investors will be disposed to regard the latest results as somewhat exceptional. The chairman points out, in his review, that the latest wage award will cost over £1,000,000 in a full year, and that the increase in coal prices last year absorbed £203,750. Since the average weekly increase in traffics during the current year amounts to £40,700, and the company's renewals position is less favourable than that of the other companies, the second preference stockholder will find that these are hard facts.

London Brick Profits.—During the past four years, the published profits of London Brick have varied little compared with the considerable expansion recorded over the whole decade. The company has, in fact, consolidated its special position in the brick industry. Profits for 1937 amount to £589,654, compared with £591,569 for 1936, and the 20 per cent. dividend is but slightly lower if adjustment is made for the 1½ per cent. capital bonus of last year. The following table shows that the ordinary dividend has been covered by a small margin of disclosed profits:—

	Years to December 31,		
	1935	1936	1937

Carry forward 274,467 275,511* 80,000
† And capital bonus of one in nine. * Before capitalising £200,000 for bonus.

Investors may assess the early progress and later stability of the Company from the following chart:—

LONDON BRICK NET PROFITS 1928-37

The earnings record of London Brick shows a less extreme response to the year-to-year fluctuations in building activity than might be expected.

The market's fears of a decline in building activity explain the high yield basis of London Brick ordinary stock. Building plans approved declined from £117 millions in 1936 to £111 millions last year, the reduction being accounted for by dwelling-houses alone. The value of plans approved during the past two months,

however, showed an increase compared with the previous year, but it would be premature to infer that the trend has been reversed; the proposed reduction of the housing subsidy may be stimulating the anticipation of future requirements. The outstanding position of London Brick, and the extended markets which it now covers, should protect the company from any but long-term changes in building activity. The importance of widely-spread markets is emphasised in the directors' report, and it is underlined by geographical changes in building activity suggested by the 1937 plans figures. The regional changes in the building industry are examined in a Note on page 463, which illustrates recovery in such districts as Scotland, Wales and the Northern Counties which had previously lagged behind, and a reduction in activity in the London and South-East Areas. London Brick has shown its adaptability to changing conditions, in the past. The current yield of £7 4s. per cent., on the £1 stock units at 55s. 6d. would appear to discount any immediate fluctuation in earnings.

Further Store Results.—Mixed impressions are presented by the results of two more London stores. A decline in the profits of Selridge and Company from £485,086 to £448,090 is distinctly disappointing. The report points out, however, that non-recurring expenditure was exceptionally heavy, and this has evidently offset the improvement in sales volume and gross profits. The balance of trading profit, in fact, is struck after charging the cost of the Coronation display, in addition to the usual expense items. A smaller amount is payable under the Whiteley guarantee, but substantially higher tax provision and the inauguration of debenture sinking fund provision have combined to reduce equity earnings in much greater measure than total profits. Some £35,949 is available for the ordinary stock, against £128,215 for 1936-37, and despite the sharp reduction in the dividend from 15 per cent. to 8 per cent., it is covered by earnings of only 4.9 per cent., against 17.7 per cent. for the previous year. The balance carried forward is reduced in consequence by some £24,000 to £61,766. The balance sheet reveals no outstanding changes, but cash is reduced from £165,110 to £95,752, though the expenditure on additions to property during the year was less than in 1936-37. The managing directors' account is increased to £118,775 owing to advances of £7,233 during the year, whereas £20,000 was repaid in 1936-37. The preliminary statement of Swan and Edgar shows that total profits are £7,635 higher at £137,044—the latter figure being only £1,000 short of the 1929-30 "high." Although a new provision of £5,000 appears for N.D.C., expenses show a reduction, and earnings for the ordinary dividend, which is raised from 6½ to 7 per cent., are £12,557 higher at £105,613—equivalent to 8.9 per cent. In recent years, surplus earnings have been left to swell the balance carried forward, but on this occasion the bulk is employed for an initial provision of £15,000 to investment reserve. At the present price of 25s., the £1 ordinary shares yield £5 9s. 9d. per cent.

Bradford Dyers' Setback.—The profits record of Bradford Dyers emphasises the long-term difficulties of the textile trades, which economic recovery has done little to alleviate. There is little in the latest report to encourage the hope that the Association's former prosperity will be regained—at least in the immediate future. The last ordinary dividend was paid in 1930; preference arrears now amount to 25 per cent., or £637,309 gross; and although debenture interest has been paid regularly, in only one out of the past eight years has it been fully earned. After adding back

roughly £150,000 for depreciation, the profit for 1937 amounts to £179,115, against £191,653 in the previous year. The latter amount, however, included a credit of unknown amount from surplus tax provision. Debenture interest, which requires £58,150, is only half earned, and in consequence the balance carried forward is reduced to £11,372. In 1936 a draft of £50,000 was made on the reserve fund (now standing at £150,000), to meet the balance of debenture interest and to raise the carry-forward to £40,504. Despite these adverse results, the undertaking has found opportunities for expansion. Last year it was announced that two Egyptian textile companies were to be affiliated with the Association, and the balance sheet includes a reference to the formation of an Egyptian company. Shares in and loans to subsidiaries have together risen from £2,041,979 to £2,173,400—a change which more than accounts for the drop in cash from £254,779 to £179,472. As for the future, the company's fortunes must continue to depend first on the volume of textile production and upon revival in export trade. Without the remarkable rise in rayon consumption, the position of the finishing sections of the textile trades would have been even worse than these results suggest. The immediate outlook for Bradford Dyers is cheerless, the market's view being reflected in quotations for the ordinary shares of 4s. 3d. and of 7s. for the preference issue. Will the Association be compelled ultimately, to seek its salvation by following Lancashire's example? This week also brings the news that the directors of Calico Printers have deferred consideration of the preference dividend (now in arrears since the end of 1935) until the end of the Association's financial year next June.

Investment Trust Results.—Recent investment trust reports provide comprehensive evidence of the experience of the movement as a whole in 1937. The upward trend of total revenue is generally maintained, although the rates of improvement vary widely in individual cases. The reports of six representative trusts which have recently been published are analysed in the following table, which includes details of the distribution and valuation of portfolios, where the information is available:—

Trust (and Years Ending)	Total Rev.	Ordinary Stk. Earned		Div.	Portfolio Distrib.		Appn. or Depn.	Ord. Stk.

* Proportion by which valuation exceeds (+) or falls short of (—) book value.
† From chairman's speech. ‡ Or 1-3 per cent. after 1 year's preference dividend.
§ Per 5s. unit.

Increased dividends are common, though some companies which raised their dividends in 1936 have not declared a further increase in 1937. Indeed, somewhat greater conservatism in dividend policy is evident, for in every instance a larger amount of profits has been ploughed back. For such trusts as United States and General, Glasgow Stockholders, and British Investment the amount is appreciably larger. The last company, in fact, has maintained its reserve

and carry-forward during the past three years, employing the full excess of equity earnings to write down investments. The reappearance of investment depreciation emphasises the wisdom of this greater conservatism; the portfolio position in every case is less favourable than in 1935. It is difficult, however, to relate the percentages given above (and similar figures recorded in a Note on page 239 of *The Economist* of January 29th) to the proportion of equities held in individual cases. The decline in capital values, however, serves to emphasise one fact. The tendency among investment trusts to hold an increased proportion of equities has been evident throughout the recovery period, but the degree of real change was often masked, until recently, by the rise in market values. The fact that many companies whose analyses are based on valuations now show a depreciation, with a continued rise in the proportion of equity holdings, suggests that the switch into equities has been carried to further lengths than was apparent even a year ago.

U.S. Debenture Investment Policy.—The results of the United States Debenture Corporation to January last are satisfactory, if not unusual. The company, like other established trusts, has a steady earnings record; revenue has gradually recovered since the depression; and the last two years have each brought a modest increase in the dividend. Total revenue (excluding special credits) rose from £256,706 to £266,861 last year, and earnings for the ordinary stock amount to £122,254, equivalent to 13.0 per cent., against 12.3 per cent. The 10 per cent. dividend is thus covered with a satisfactory margin. A dividend reserve account of £35,319 has also been set up, partly from special income received during the past two years. The Corporation reveals the small deficiency of under 2 per cent. on the book value of the portfolio (against an appreciation of 26 per cent. in 1936-37), but this takes no account of the capital reserve of £939,890. Financially, the Corporation is evidently in a position of unusual strength. The directors, moreover, do not regard investment merit as incompatible with a particularly full disclosure of facts.

The report includes a nine-year analysis of income distribution. In addition, the analysis shows the average yield obtained in each category, and the valuation of investments, whether above or below book cost. The interpretation of these figures is further assisted by the print of the chairman's speech, which is circulated with the report. It appears that the figures for 1937-38 somewhat exaggerate the actual changes, since the portfolio distribution is affected by the sale of certain groups of securities. Moreover, some £363,610 of cash is being kept in hand until the investment outlook is clear—perhaps not an unwise procedure. Subject to this proviso, the changes during the past eight years are sufficiently striking. Holdings in countries outside the British Empire and the U.S.A. have fallen from 32 per cent. of the book cost of all investments to 9 per cent.; in the U.S.A., the proportion has risen from 6 to 35 per cent. Preference shares represent, roughly, the same proportion of all holdings, but the percentage of equities, which now represents 46 per cent. of the total, has trebled. Reviewing the outlook for 1938-39, however, the chairman is cautious. He frankly anticipates a reduction of dividends from America, and revenue is also bound to be affected by the large uninvested cash balance. The ordinary stock at 182½ yields £5 9s. 9d. per cent.

Other Company Results.—Over 55 companies in all are included in our usual analysis of profit and loss accounts appearing on page 483. Investment trusts, gas companies and newspaper companies are well represented, while the reports of three associated jute undertakings are now available. The results are discussed on page 461 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 469. After describing the new records achieved in the ordinary branch of the *Pearl Assurance Company*, Sir George Tilley referred to the first general revision of the ordinary branch life rates since 1916. The public were offered still more satisfactory terms, and a substantial increase in business was anticipated. Addressing the members of the *Scottish Provident Institution*, Mr Alexander Maitland reported that the market value of Stock Exchange securities had not decreased enough to necessitate additions to the reserve fund. Mr J. M. Keynes's speech at the *National Mutual Life Assurance Society* meeting is discussed in a leading article on page 446. At the *Anglo-International Bank* meeting Sir Bertram Hornsby explained that such existing connections as seemed safe and profitable were being maintained, and that assets were collected when favourable opportunity occurred. Addressing the members of *General Mortgage Bank of Palestine* at Tel-Aviv, Mr S. Hoofien pointed out that the bank's record of avoiding a loss on all business done had been maintained. Sir Frederick J. West, at the *Manchester Ship Canal* meeting, explained that the total of 7,053,216 tons of imports and exports was the highest quantity ever carried, and compared favourably with the general improvement for the country as a whole. *English Electric Company* shareholders were informed

by Mr G. H. Nelson that export business had increased substantially, though overseas trading had to meet German and Swiss competition. The satisfactory ore reserve position of *San Francisco Mines of Mexico* was discussed by the Earl of Denbigh at the annual meeting. Fully- and partly-blocked reserves total 2,853,000 tons, and amount to some five years' milling at their present rate. At the *Provident Mutual Life Assurance* meeting Mr Owen Hugh Smith expressed satisfaction that the net rate of interest earned had fallen only by 4d. to £4 9s. 2d. Presiding at the *Scottish Life Assurance* meeting, the Duke of Atholl drew attention to the fact that for the third time in succession the company had written well over £2,000,000 of new business. In his survey of the *Great Western Railway* position, Viscount Horne expressed some anxiety regarding the upward trend of coal prices. Every shilling increase in prices meant an additional cost of over £100,000 annually. There were, nevertheless, good reasons for expecting a further improvement in business. Points from his speech, and from that of Mr Holland-Martin at the *Southern Railway* meeting, are discussed in a leading article on page 447. Mr Holland-Martin disclosed that in 1937 passenger journeys totalled 378,714,000, an increase of 18,452,000. Of this increase, about 15½ millions (including 6 million season-ticket holders' journeys) originated in the electrified area.

London

SETTLING DAYS

TICKET ACCOUNT
MARCH 8 MARCH 10

THE Stock Exchange has produced a tentative rally on the debates regarding Mr Eden's resignation. How far this was due to the underlying technical position—for the market had an over-sold appearance at the end of last account—and how far it represents a valuation of short- or long-term political factors can hardly be assessed. The smart rises recorded in the earlier part of the week, in fact, appear to give more weight to the immediate fact that the Government had secured its vote of confidence than to any prospective changes in the international position. The market is at present concerned only with the shortest views, and cannot discern any major increase in the volume of business.

The week-end news produced a dull tone in the markets on Monday, but *gilt-edged* staged a partial recovery and bear covering hastened the improvement on Tuesday. The best prices, however, were not held in mid-week, and prices were again rather easier on Thursday. Corporation scrips became subdued.

European bond prices improved after a shaky start. Austrian 7 per cents. fell 7 points on Monday, recovered somewhat, and relapsed again later. Good support for German issues was maintained, except for a brief spell in mid-week. Brazilian issues were bid for at first, but soon lost favour.

Home rail stocks were at first marked down in sympathy with the rest of the market, but the resumed bidding on Tuesday produced several smart improvements, led by L.M.S. and Great Western ordinary. The traffics, however, disappointed the market, and sharp falls were recorded in mid-week. Argentine rails showed a fairly consistent recovery.

The industrial market was at first overshadowed by politics, and while in-

dustrial shares were relatively steady, the hesitation of buyers caused a slight fall in most sections. The first day's debate on Mr Eden's resignation, however, was sufficient to persuade the bears to cover, and their operations, helped out by a small volume of public interest, brought a smart rise in most sections. Its best effects, however, were not maintained after mid-week, though Wall Street continued to assist the internationals.

Steel shares responded vigorously to the improved atmosphere, Dorman Long, Vickers, Thos. W. Ward providing good features. Electrical equipment issues improved, under the lead of General Electric and Enfield Cable, while improvements of a shilling or more were reported in the motor share group on Tuesday and Wednesday. Support for brewery and tobacco issues was in refreshing contrast to the subdued investment interest in recent weeks, and Courtaulds and John Barker recovered considerably from their depressed levels. Shipping shares made consistent progress, and the miscellaneous industrial leaders recorded smart improvements. Imperial Chemical, however, were an exception in mid-week.

A quiet start in the oil market was soon followed by a marked improvement in common with other sections. The better tendency was encouraged after the outset by Continental support. It was not until mid-week, however, that the rise in prices was accompanied by some expansion in business. *Rubber shares* were also lethargic at the opening, but responded by degrees to the improvement in other markets. Professional interest was aroused, and there was even a reappearance of public support on a modest scale. Rises in quotations, if not very large, were widespread. *Tea shares* were quiet, and at first remained indifferent to the general recovery, but conditions became distinctly firmer in mid-week.

On Monday the mining markets, unable to measure the political situation,

were as dull as ever, but they responded to later events with general price increases and an expansion of business.

The *Kuffir* market began subdued, and then, helped by Cape and Paris support, showed a favourable response to political developments at home. Rising interest was not maintained throughout the week, but there was no denying the improved tendency. Helped by Wall Street and improved metal prices, Rhodesian coppers went ahead, but interest slackened a little towards mid-week. Tin shares were entirely indifferent to the quota reduction, though small gains followed the general market improvement.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Investment Index of 151 industrial ordinary share prices has now fallen below 70, standing on Tuesday last (February 22) at 69.4, a fall of over 4 points compared with a month ago, when the index was 73.5. A year ago it stood at 87.1. The respective average yields are 5.22, 4.85 and 3.95 per cent. *Gilt-edged* stocks, in contrast, have risen, the Consols index being 2 points higher than at the end of January. We give on page 460 the usual monthly particulars of fixed interest securities, and also a selection of the separate ordinary share indices.

(Continued on page 460)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

New York

The recovery in stocks late last week has been carried an important stage further, despite the interruption of Washington's birthday celebrations on Tuesday. Stocks advanced up to \$3 on Monday, and again on Wednesday, and some brokerage houses appeared to be operating in London on Tuesday. In mid-week, trading exceeded the million mark for the second time this month, and the concurrence of rising volume with rising quotations was not overlooked by short speculators. It is difficult, however, to account for the improvement in terms of the domestic economic trend. Steel activity, according to the estimate of *Iron Age*, is slightly down to 30 per cent., compared with 31 per cent. a week ago, and the estimates of 1,300,000 increase in unemployment between mid-December and mid-January did not provide the most helpful atmosphere. European news was regarded bullish, but on the rather cynical assumption that it would lead to a further inflow of hot money and increased re-armament activity in the United States. Commodity and metal stocks thus made the best recovery. Rail stocks improved and among utility preferred issues, smart rises were recorded by Electric Power and Light, and Electric Bond and Share.

New York Prices

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100):—

proposals made by a mutually representative Council is a workmanlike and desirable application of Trade Board methods to an entire industry employing nearly 2 million people.

Wages and Living Costs.—Despite the gradual downward trend of business activity since last autumn, wage rates remain on the upgrade. The accompanying diagram shows the trend of weekly wage rates and the cost of living on the basis of the Ministry of Labour's indices. The index of weekly wage rates for the last quarter of 1937 showed a further slight rise, and since the beginning of the year further wage advances have been granted in a number of industries, including building. The tendency of wages to increase for some time after a downturn in business activity is not unusual and has its counterpart at the beginning of recovery, when there is normally some delay before wage rates are revised upwards. Thus, the revival of business in the autumn of 1932 was not immediately followed by an increase in wages. As the diagram shows, the upward trend of wage rates was delayed until the spring of 1934. After a sharp rise in 1937, the official index of the

cost of living has now taken a downward turn. Though the decline is partly due to seasonal movements, it reflects the recent fall in the world prices of numerous commodities. While employment is diminishing, real wages, after a slight decline in 1937, are once more tending to increase.

Shipyard Workers.—On February 17th agreements for higher wages and paid holidays, previously negotiated between the workers' representatives and the employers, were approved by the shipyard unions' executives. More than 100,000 men are affected; some 65 per cent. who are employed at time rates will receive weekly increases of 2s.; the piece-workers will be given rises of 4 per cent. Each week, to cover their holidays, employees will be credited with one-fiftieth of their actual earnings. These agreements are the latest stage in the steady improvement of conditions in the shipbuilding trades which has proceeded since 1935 *pari passu* with trade recovery. In 1936 nearly 87,000 workers received net weekly increases in wage rates amounting to £9,850; and last year 101,000 received increases totalling £23,300 weekly, representing a 4s. a week rise for men on time work and an 8 per cent. advance in piece rates.

As in engineering, there are few cases in the shipbuilding industry in which minimum rates of wages for the various grades have been fixed by collective agreement; and the extent of the general changes to be made in existing rates is decided from time to time after negotiation between the employers' organisations and the unions, without any

sliding-scale machinery to relate wage payments to the progress of the industry. On the whole, this *ad hoc* procedure has worked satisfactorily during the rapid recovery of the past two years; and the new agreements, significantly after last year's disputes, cover apprentices, boys and youths, as well as adult workers. The position is not yet, however, wholly reassuring. The average unemployment among insured workers in the industry was 24 per cent. in 1937, against 31 per cent. in 1936, and on December 13th it was still 22.9 per cent. In the fourth quarter of 1937 the tonnage of merchant vessels commenced, under construction and launched showed appreciable decreases compared with the September quarter; and, with activity perceptibly slackening, the unions have not received under the new agreement the full concessions they originally claimed. Any marked recession in trade might involve some slight friction in the shipyards.

Rubber Restriction to be Modified.—As fore-shadowed a week ago, the Rubber Regulation Committee have now decided to recommend to the Government modifications, for a further minimum period of five years. The Committee's provisional recommendations, the text of which was issued this week, are generally an improvement on the existing arrangements. They include a substantial modification of the basic quotas and the removal of the ban on new planting. The new basic quotas, compared with those for the present year, are as follows:—

	1938	1939	1940	1941	1942	1943
	(In thousands of tons)					
Malaya	602	632	643	648	651	651
Dutch E. Indies	540	632	640	646	650	651
Ceylon	83	98	100	101	102	102
India	13	17	18	18	18	18
Burma	9	12	12	12	12	12
N. Borneo	16	19	19	19	19	20
Sarawak	32	39	39	40	40	40
Siam	40	...	...	...	...	...
Total	1,335	1,449	1,471	1,484	1,492	1,494

Thus the quotas have all been scaled up, while Malaya's supremacy over the Dutch East Indies has been reduced to negligible dimensions. These new quotas are believed to conform fairly closely to relative productive capacities over the next five years. The Committee is to be congratulated on its decision to recommend that new planting shall be permitted up to 5 per cent. of the total planted areas—although this concession is to be reconsidered after two years. Replanting is to be allowed unconditionally until the end of 1940, when the position will be reviewed. The Committee's final recommendations—which seem unlikely to differ significantly from the provisional text—must be made to the contracting Governments before the end of March, and the Governments must accept or reject them before the end of June.

Pig Iron Duties.—An application is before the Import Duties Advisory Committee for the reintroduction of the duty on pig iron which was suspended until the end of March, 1938. An announcement is expected shortly. Since the suspension of the 3½ per cent. import duty at the beginning of March, 1937, both domestic output and imports have considerably increased as a result of the rapid expansion of demand.

PIG IRON OUTPUT AND IMPORTS (In thousands of tons)		
	Output	Imports
1936—4th quarter	1,984.8	75.3
1937—1st "	1,934.7	56.7
" —2nd "	2,076.3	121.4
" —3rd "	2,169.9	260.7
" —4th "	2,315.7	205.9
" November	762.3	74.2
" December	783.8	72.2
1938, January	761.1	85.3

Owing to the higher rate of domestic pig iron output, imports have tended to decline since last August, when

they amounted to 94,000 tons. The December production of 783,800 tons, which was a record, compares with only 671,400 tons in the corresponding month a year earlier. The bulk of this increase was in basic pig iron. Recently, stocks of pig iron have again been accumulating at producers' and consumers' works, and additional purchases of foreign material have been discontinued. While the re-introduction of the duty would not, therefore, cause an immediate shortage of supplies, their adequacy in the future will depend on the course of demand for steel.

British Industrial Production.—The official index of industrial production, published in last week's *Board of Trade Journal* showed an increase of 6.8 per cent. between 1936 and 1937, compared with a rise of 4.7 per cent. in *The Economist's* more comprehensive index of general business activity. The official index showed a further rise between the third and fourth quarters of 1937, when *The Economist's* registered a decline. The apparent divergence is due to the fact that *The Economist's* index of business activity, unlike the official index of production, is adjusted for seasonal variations.

BOARD OF TRADE INDEX OF PRODUCTION
(1930=100)

Group	Year 1936	Year 1937	1937		
			Dec. Quarter	Sept. Quarter	Dec. Quarter
1. Mines and quarries	94.4	99.8	99.0	95.6	103.9
2. Iron and steel	150.1	166.7	155.6	165.5	177.6
3. Non-ferrous metals	143.8	165.3	154.0	173.7	166.2
4. Engineering and shipbuilding	123.3	136.2	132.4	134.9	135.2
5. Building materials and building	157.1	153.3	157.3	160.3	148.4
6. Textiles	126.4	129.8	130.2	127.5	126.3
7. Chemicals, oils, etc.	115.4	124.0	120.6	123.3	125.1
8. Leather and boots and shoes	120.7	118.8	119.6	117.7	115.6
9. Food, drink and tobacco	114.5	120.3	121.2	120.3	124.5
10. Gas and electricity	147.4	161.2	174.1	137.1	189.3
Total of manufacturing industries (2-10)*	129.4	138.3	136.9†	135.8	142.1
Total of all groups (1-10)*	124.6	133.1	131.7†	130.4	136.8

* Includes also various industries not specified above. † Revised figures.

Comparison of the group indices of the Board of Trade for the last quarter of 1937 with those of the corresponding period a year earlier shows increases in all series with the exception of those relating to building materials and building, textiles, and leather, boots and shoes. The trend of production in important branches of activity since 1934 is shown graphically on page 477.

Disappointing Diamond Sales.—The diamond trade in London and on the Continent was disappointed this week by the statement of Sir Ernest Oppenheimer at the Rand Selection Corporation's annual meeting. He pointed out that the world's diamond turnover (sales of the Diamond Trading Company) reached only £9,300,000 in 1937. This shows an increase of about £1,050,000 over 1936, but a decrease of £700,000 on the forecast for 1937. Sir Ernest Oppenheimer's remarks on the outlook for 1938 were not encouraging. He indicated that the diamond trade is in a sound position and that prices are firmly maintained, but he agreed that, in the absence of recovery in the United States, a reduction in sales this year must be expected. Until a few weeks ago the diamond trade had hoped that world sales would rise to the former boom level of £12,000,000 per annum by 1938 or 1939. Prices for luxury stones have been raised slightly at the opening sights of this year, though demand has remained small. But the organisation of the international diamond trade has been strengthened so greatly in the past few years that a temporary fall in demand no longer threatens a serious collapse in prices.

Building Plans.—An interesting analysis of building plans approved last year by local authorities in 146 of the principal towns in Great Britain is contained in the current issue of the *Ministry of Labour Gazette*. The figures, which exclude the London County Council, relate to areas with an aggregate population of some 18 millions and constitute a rough-and-ready guide to the future trend of activity in the building industry. The total value of plans passed last year was about 5 per cent. lower than in 1936; but, as the following table shows, changes in different parts of the country were far from uniform:—

BUILDING PLANS APPROVED, 1937

District	Dwelling Houses	Factories and Workshops	Shops, Offices, Warehouses and Other Business Premises	Churches, Schools and Public Buildings	Total*	Per cent. change since 1936
England and Wales:—						
Northern Counties	3,948,700	630,900	632,900	547,500	6,214,500	+13.7
Yorkshire	8,502,200	916,200	986,300	1,571,400	13,434,100	-7.3
Lancs & Cheshire	7,293,200	1,240,300	1,752,700	1,080,200	13,778,900	-0.5
North and West-Midland Counties	13,277,700	2,847,400	3,039,900	1,601,000	23,395,100	-7.6
South-Midland & Eastern Counties	3,457,600	556,400	352,800	1,220,000	6,192,200	-1.6
Outer London	15,037,100	1,932,800	1,808,800	1,100,800	21,887,600	-16.7
South-Eastern Counties	5,779,300	158,400	834,000	482,000	8,454,000	-16.2
South-Western Counties	1,678,300	62,300	288,100	375,400	2,689,000	+7.1
Wales and Mon.	1,748,700	197,200	131,500	119,000	2,533,600	+9.9
Scotland	6,915,300	734,000	496,700	2,202,900	12,342,000	+18.2
Total	67,638,100	9,275,900	10,323,700	10,900,200	110,921,000	-5.2

* Including other buildings and additions and alterations.

Substantial increases occurred in such areas as Scotland, the Northern Counties and Wales, which have been laggards in the recovery movement. On the other hand, in London and the South-east, where recovery came early, the demand for new buildings is much nearer saturation point. Taking the country as a whole, the decline, compared with 1936, was most marked (—10 per cent.) in dwelling houses, which accounted for 61 per cent. of the aggregate value; the total for residential building was, nevertheless, still over 50 per cent. greater than in 1929. A slight decline in factories and workshops was almost wholly confined to the North and West Midland counties. For each of the remaining classes of building the combined totals for 1937 were higher than those for 1936.

The New Tin Quota.—At its meeting on February 18th the International Tin Committee decided to reduce the quota for the second quarter of the year from

**BEST TIP
FOR
THE WEAK
BUY
BOVRIL**

70 to 55 per cent. of standard; with the same conditions for transfer to Malaya, Nigeria and the Dutch East Indies of proportions of the quotas of Bolivia, Indo-China and the Belgian Congo as were valid in the first quarter. The new quota is the lowest since the June quarter of 1935 and is exactly half that in force from April to December, 1937. Proposals for a buffer pool have been made to the Governments concerned and will be discussed at the next meeting of the Committee on April 5th. The announcement of these decisions convinced the market that the I.T.C. is anxious to regain control, in order to restore prices to the neighbourhood of £200 per ton. Permissible exports from restricting countries will be 28,648 tons in the second quarter, against 36,102 tons in the first quarter of this year:—

PERMISSIBLE TIN EXPORTS PER QUARTER
(In long tons)

	Annual Standard Tonnes	110% Quota (a)	Modified 70% Quota (b)	Modified 55% Quota (c)
Belgian-Congo...	13,200	3,247	2,066	1,624
Bolivia	46,490	12,637	6,570	5,162
French Indo- China	3,000	825	467	450
Malaya	71,940	19,784	14,321	11,252
D.E.I.	36,330	9,991	7,232	5,682
Nigeria	10,890	2,995	2,168	1,703
Siam	18,000	5,151	3,278	2,775

(a) In force April–December, 1937. (b) January–March, 1938.
(c) April–June, 1938.

Allowing for exports from "outside" countries, supplies in April–June should amount to some 34,750 tons, against an anticipated consumption of 37,500 tons. But if "outside" production exceeds 15 per cent. of world output any restricting producer may, under clause 22 of the tin agreement, give six months' notice and withdraw from the scheme. It seems unlikely that this clause will be invoked in the immediate future. But, in view of the difficult negotiations on the question of the buffer pool, the possibility of withdrawal from the scheme may become a practical issue during the next few months.

Cheaper Cream Needed.—A suggestion that the trade should seriously consider reducing the price of cream, in the interests of the milk industry and of the public, is made in a recently-published report of the Food Council. This body hopes that legislation will be introduced in the near future to prescribe legal standards of butter fat content for both full and single cream. The sizes of the containers in which cream is retailed should, it thinks, be standardised and marked as containing a specific quantity; for the present absence of control in this respect tends to mislead the consumer. Although the greater part of the cream sold in this country is produced from milk bought at "manufacturing prices," the Food Council is of opinion that the majority of English creameries are making only moderate

profits. Most of the Scottish creameries seem to be securing good returns, while the profits of retailers are generally substantial. The report, made to the President of the Board of Trade, concludes by expressing the hope that it will be possible to devise means of making skim milk more readily available for human consumption in circumstances which will not involve the displacement of whole milk in the diet.

Britain's Overseas Markets.—In an article on page 380 in *The Economist* of February 19th we examined changes in the distribution of our overseas trade since 1929. The table below shows which are our best customers on the basis of their imports from us per head of their populations:—

BRITISH EXPORTS PER HEAD OF POPULATION OF IMPORTING COUNTRIES

Countries to which consigned	1929	1936	1937

Brazil	0 7 3	0 2 3	0 3 3
Argentina	2 12 7	1 4 6	1 11 8

The Dominions, it will be seen, purchase considerably more from us per head of the population than most other countries, though Denmark, Norway and Sweden are also fairly high up on the list. Among British countries, South and West Africa alone imported more from us in 1937 per head of the population than in 1929. A number of foreign countries, including Denmark, Finland, the Baltic States, Sweden and Poland also increased their purchases of British goods between 1929 and 1937. Exports to many countries, however, including the United States, India, the U.S.S.R., China and Japan, remain very small per head of the population.

INDUSTRIAL REPORTS

The British Industries Fair opened this week under less favourable circumstances than a year ago. Reports from industrial centres reveal a good deal of anxiety concerning the decline in new business and the accumulation of stocks. Although consumption of iron and steel remains heavy, supplies are tending to exceed requirements in certain sections of the industry, and consumers are now in no hurry to place new contracts. Our Workington correspondent reports a deterioration in the North-West Coast hematite pig iron market, and our Cardiff correspondent

draws attention to a fall in the export demand for tinplates. Incidentally, after two years of negotiations, a European zinc sheet cartel has now been formed, comprising Britain, Belgium, Holland, Germany, Poland, Austria and Czechoslovakia. France has been invited to join the cartel. According to a message from Reuter's, the general level of f.o.b. charges has been fixed at between £5 10s. and £6 above the price of zinc, exclusive of duties and delivery costs. In the home market a slightly higher price may be fixed. The latest developments in the principal branches of

activity, as well as the general business outlook, are discussed in the *Trade Supplement* accompanying this issue.

Coal

Sheffield.—The inland market continues active, demand for industrial steam coal being at a high level. Household supplies are rather below demand, output being somewhat smaller, due to some extent to a shortage of labour. The call for small coal is heavy, output being fully absorbed under contract with

electricity and coke works. Gas coal is sold freely. The coke position is less strong, production having expanded with the bringing into operation of new batteries of coke ovens.

Export trade is very poor, shippers finding it very difficult to meet Continental competition. There is, however, a trickle of prompt business. Collieries are not much concerned at the paucity of orders, most of them being fully occupied in catering for the inland market. Prices are unchanged.

Workington.—The coal trade is active, largely because of the heavy requirements of small coal for coking. Welsh supplies have to be imported and round coal has to be crushed at the local collieries. Coke itself is in keen request by the local hematite pig-iron smelters. Land-sale is brisk. Shipments to Ulster and Eire from Workington, Whitehaven and Maryport have risen to over 6,000 tons weekly. Prices are steady.

Glasgow.—Little change has taken place in the Scottish coal trade. Domestic trade remains satisfactory, but export business is slack, and collieries catering chiefly for this class of trade are now largely dependent on contract orders secured some time ago. The Swedish State Railways have invited tenders for 192,000 tons of locomotive coal for April–June or for the full supply of 325,000 tons for April to December delivery, but local exporters are not confident of securing any sub-

stantial part of the contract owing to the keen competition from Poland and Germany. Supplies generally remain plentiful, and prices are barely steady.

Newcastle-on-Tyne.—The coal market in this area is quietly steady. Northumberland prices show little change, collieries being satisfactorily placed for prompt trade, but forward business is below expectations. Durham collieries continue to work regularly, the coking and gas section being firm whilst unscreened steam coal is cleared without difficulty. The export market for patent oven coke shows no improvement, and prices are declining. The Swedish State Railways are in the market for the supply of 325,000 tons of screened steam coal, delivery April/December, most of which will come to this country under the Trade Agreement.

Cardiff.—There was a slight increase in the volume of coal traffic at the South Wales ports last week, when the shipments in the foreign and coastwise trades totalled 412,100 tons, compared with 378,400 tons in the previous week, and 360,559 tons in the corresponding period last year. Current production, however, is in excess of effective demand, and since the beginning of February the number of shifts lost through lack of trade and shortage of wagons has been increasing. Prompt supplies of practically all classes are thus available, but prices are unaltered,

although those of foreign coals in Mediterranean and other competitive markets are lower.

Under the Anglo-French Trade Agreement arrangements have been concluded for the quarterly exchange of 80,000 tons of French pitwood for 120,000 tons of South Wales coal at a c.i.f. pitwood price of 25s. per ton, compared with 26s. 3d. under the arrangement covering the quarter ended February. There are indications of disruptive tendencies in the administration of the French control over coal imports and pitwood exports, and some of the French merchants have been offering mining timber at 24s. per ton, c.i.f. South Wales coke and patent fuel prices are nominally unaltered.

COAL OUTPUT AND EMPLOYMENT

features of THE SCOTTISH INDUSTRIAL ESTATE

No. 5. SERVICES

A manufacturer in the Scottish Industrial Estate need have no worries about the factory requirements of his business. Everything is done by the Estate. Every factory is connected to each of the services such as electricity, gas, water, and drainage, and no capital payment or guarantee of consumption in connection with this is required from a tenant.

A staff of skilled fitters, electricians, plumbers and such craftsmen is employed by the Estate and

will carry out any repairs and adjustments needed by the tenants. Such a service on the spot is vital in cases of urgency, and is a considerable saving to the manufacturer both in time and money.

A central garage is being provided for servicing and garaging vehicles owned by tenants.

These services all reduce working costs.

For information and particulars of the Estate apply to

SCOTTISH INDUSTRIAL ESTATES LTD

C.I.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that business remains quiet. But lately inquiry has shown signs of expanding. It is not expected, however, that new business will increase for a few weeks, for a considerable amount of material of home and foreign origin which has been delivered against existing contracts must first be absorbed. The consumption of most descriptions of iron and steel is at a high rate; but for the time being contracts are being worked off more quickly than they are being replaced. Pig iron demand is quiet but steady; but as most of the large consumers have covered their requirements for the first half of the year, new business is not important. Specifications against contracts, however, are reaching the producing works with regularity, and there is now no difficulty in meeting users' needs in full. Imports and home production are both on a substantial scale, and large supplies of semi-finished steel are available for the consuming works. Stocks have been replenished to a great extent, and it is not expected that there will be any considerable demand for this class of steel until the second quarter of the year.

The situation in the finished department is somewhat irregular, and while the heavy branches of the industry are operating at capacity, and still have arrears of contracts to overtake, some of the lighter sections are not so well provided with orders. The export trade remains quiet, but lately inquiry has been slightly more active.

★

Sheffield.—The quieter state of the iron market continues, and little change is expected until nearer the end of the quarter, when contract buying is likely to develop. The steel market remains strong. Prices on all markets are unchanged.

★

Workington.—A change, as disagreeable as it is surprising, has come over the North-West Coast hematite pig-iron market. Consumers have no business to offer, and they are not even asking for delivery. Although output is smaller because one furnace at Workington has been blown out to be refired, stocks are accumulating rapidly. The cessation of activity is disconcerting, and unless there is a speedy improvement, makers fear that users may be disinclined to take up delivery under the long-term contracts, in some cases to September and December, negotiated last November. Special qualities of iron, however, remain in keen demand. Midland needs of low-phosphorus iron are undiminished, as are those of the refined iron smelted at Backbarrow. There has been no change in prices.

The steel trade is fairly active. New orders are not, however, coming in as fast as in the last months of 1937. Orders on books, however, will keep the mills at Workington and Barrow fully occupied for another eight to nine months. There is a scarcity of native ore, at 24s. 6d. per ton.

★

Cardiff.—Conditions are easier in the South Wales iron and steel industry, particularly in the sheet and tinplate

branches. Tinplate production under the pooling scheme has become stabilised at about 57½ per cent. of capacity, but there are few inquiries, and shipments last week totalled only 5,133 tons, compared with 6,958 tons in the corresponding period last year. The lull in the demand for sheets for the home market has been slightly accentuated, and export business is quiet. But prices for tinplates and sheets are unaltered.

★

Glasgow.—Steelworks are still working to capacity, and there is every prospect of this high rate of output being maintained for many months to come. While some sections of the re-rolling industry are fully employed, there has been some slackening in other branches. A fairly heavy tonnage of structural work has been placed with local firms within the past week, and all engaged in this trade are very busy. In the Motherwell district several important contracts for railway wagons have been booked.

Textiles

Cotton (Manchester).—Raw cotton prices have continued to rise, and in certain directions demand for yarn and piece-goods has increased. Raw cotton prices have been affected by the passage of the Farm Bill in the United States and the announcement by President Roosevelt that he is in favour of a moderate rise in commodity prices. In connection with crop control for next season, the Secretary of the Department of Agriculture has stated that the area under cultivation will be 26,384,000 acres, compared with 34,192,000 acres last spring. On the assumption of an average yield, the crop may be about 11,370,000 bales, compared with 18,750,000 bales last year.

Business in yarn has again been limited. In the American section fair buying has been experienced in counts and qualities that are not covered by legalised price agreements. Home demand in Egyptian descriptions has been poor, but a little more trade has been done for the Continent. It has not been easy for manufacturers of piece-goods to make progress with the inquiry before them. Unsatisfactory advices have been received from India, most of the offers being unworkable. Some necessary buying has occurred in whites and prints, chiefly for Karachi and up-country. Irregular buying has taken place for the Straits Settlements, Egypt, South America and the Dominions. Home trade reports have been better, there being more new business, and stocks are now moving more freely.

RAW COTTON delivered to Spinners
(Million bales)

Variety	Week ended		Total Deliveries	
	Feb. 11, 1938	Feb. 18, 1938	Aug. 1, 1936-1937	Aug. 1, 1937-1938
American	23.5	20.8	683	716.8
Brazilian	5.0	4.6	208	190.4
Peruvian, etc.	3.3	2.0	90	76.2
Egyptian	3.8	11.8	222	199.7
Sudan Nakel	1.7	1.8	85	93.3
East Indian	13.3	15.0	236	187.4
Other countries	2.7	2.0	118	109.7
Total	55.3	58.0	1,642	1,593.5

Jute (Dundee).—There are no signs of revival. Spinners and manufacturers are compelled to curtail output and some mills are working only in alternate weeks, while others are idle one, two or three days per week. There is no demand for yarn and cloth, and in the case of the latter Calcutta goods are probably being purchased. It is interesting to note that during January 18,000,000 square yards of jute cloth were imported from India, compared with 12,000,000 square yards in January last year and only 28,000,000 square yards during the whole of 1928.

There are hopes that the Government will do its utmost to secure a tariff or quota on Indian manufactured goods in the negotiations with India for a new trade agreement. If the Government is not successful, Dundee may become a derelict area. With the curtailment of production, spinners and manufacturers cannot afford to make reductions on their quoted terms, as their on-costs are much higher.

No agreement has yet been reached between the Associated and "outside" jute mills in India, and at the present rate of output stocks of goods in Calcutta are increasing rapidly. The Associated mills may yet be forced to reduce their working hours voluntarily, without an agreement with the "outside" mills.

THE COMMODITY MARKETS

THE commodity markets responded this week to President Roosevelt's statement that he would like prices to rise, and to the subsiding of the political crisis, by marking up quotations.

Commodities sensitive to changes in market psychology, such as non-ferrous metals and rubber, all registered a rise in price. Wheat prices are scarcely changed on the week. Sugar and tea were slightly cheaper, but the market in cocoa was firmer. Raw cotton rose in price following the passing of the Farm Bill in the United States, which provides for a substantial curtailment of acreage this year. There was no important change in the prices of provisions, but eggs showed a seasonal decline.

The improvement in the United States is reflected in Moody's daily index of staple commodity prices (December 31, 1931 = 100) which rose from 147.8 to 151.2 during the week ended last Wednesday. A month ago the index stood at 151.1 and at 206.9 a year earlier.

Metals

Copper.—Second thoughts on President Roosevelt's statement regarding commodity prices, the improvement on Wall Street and a revival of buying interest led to a substantial rally; the cash price shows an advance of £3 on the week. The requirements of consumers are clearly considerable, and whenever there is an outside stimulus buyers enter the market. Despite the strength of the statistical position, however, there is some danger that the rise may be overdone, especially in view of

the fact that Mr Roosevelt has no practical means of bringing about a rise in consumption. Some reaction is therefore conceivable, unless an improvement in the European political situation should stimulate consumers and speculators to increase their commitments. A feature of the past week has been an increase in Russian purchases, and further support from this quarter is likely in the near future.

★

Tin.—This week's advance was due to the general factors mentioned above and to the quota decision of the International Tin Committee, discussed in a Note in the Industry and Trade Section. The market is stimulated by the fact that American consumers have begun to cover their requirements and by the belief that the Tin Committee has now regained control. A price of £200 per ton is expected in the fairly near future. This belief will probably induce consumers to replenish their stocks before long. The tone of the market may therefore be expected to improve unless American business prospects remain disappointing.

★

Lead and Spelter.—The improvement in general sentiment and increased caution on the part of sellers caused both lead and spelter to advance this week. As the approaching spring season should lead to much larger purchases by consumers than of late, the improvement seems likely to be maintained; though the high rate of production should prevent a marked rise in prices.

Grains

On account of reports of good rainfall in the United States winter wheat belt, buyers are holding off and

trading has been dull. Prices, however, are practically unchanged. The Farm Bill, which has now received the President's signature, represents an attempt to protect the American grower against the impact of depression; but the market is doubtful about its feasibility. Meanwhile, the price of flour has been reduced in response to a quiet demand. Maize has also been in slow demand and has eased in price, while barley prices have been quietly steady this week.

Other Foods

Provisions and Meat.—The official quotations for bacon on the London Provision Exchange were unaltered this week, but hams were rather dearer. Colonial grades of butter were marked up in a firm market, while Danish was unaltered in price. Colonial cheeses were also in firm demand, though prices were generally unchanged. With the seasonal increase in home production, the market in eggs was quiet and prices declined. At Smithfield Market price changes were few, though imported beef was rather dearer than in the previous week.

Colonial Produce.—The improvement in raw sugar was not maintained, and prices were reduced. Accra cocoas showed a firmer tendency, but the spot market in coffee remained quietly steady. Demand for Indian teas at this week's auctions were less active. The tone was easier for all grades. Plainest Ceylon teas showed little change, but medium broken Orange Pekoes met an irregular market and were often easier.

★

Fruit.—Business at Covent Garden was slow, says *The Fruitgrower*, demand apparently being affected by the cold weather. The apple trade, however, was fairly consistent and quotations were generally firm. Pears were again in slow request and, with larger arrivals from South Africa, prices were lower. Hothouse grapes were firm on limited supplies, but South African were cheaper.

COMPANY MEETINGS

PEARL ASSURANCE COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

RECORDS IN ORDINARY AND INDUSTRIAL LIFE BRANCHES

FURTHER REDUCTION OF EXPENSE RATIO

STRONG FINANCIAL POSITION

SIR GEORGE TILLEY'S ADDRESS

The seventy-fourth annual general meeting of the Pearl Assurance Company, Limited, was held, on the 24th instant, at the registered offices, High Holborn, London, W.C.

Sir George Tilley, F.C.I.L., the president and chairman of the company, presided.

The Secretary (Mr G. R. L. Tilley, M.A., F.C.I.S.) having read the auditors' certificate,

The Chairman said:—Ladies and Gentlemen,—The report shows, among other items of interest, what are the surpluses in the life funds, brought out by the valuation made by the actuary, and how these surpluses have been appropriated by decision of the directors. I presume it is your wish that, as in previous years, the report of the directors and the statement of accounts should be taken as read.

Since our last annual meeting Mr Harold John Sayer has been appointed to the board. Mr Sayer joined the company thirty-eight years ago as a junior clerk, and he has had a thorough and varied experience of the business both in the provinces and at head office. I welcome him to the board as an added source of strength in our councils.

CONDITIONS ABROAD

Before dealing with our own affairs, I should like to say a few words about the general conditions at home and abroad, from which, as a great business organisation with widespread interests, we cannot isolate ourselves.

Ahead, the position during the past year has been charged with anxiety, and to the grave unsettlement caused by the civil war in Spain there has been added the disturbing influence of the war between China and Japan.

That we have not been drawn into either of these conflicts is much more than a negative achievement. It is the triumph of a policy consistently directed to securing peace throughout the world. Here the endeavour to establish closer contact between statesmen of the leading countries—initiated by the Prime Minister—can do nothing but good in removing suspicions and promoting understanding. Conversations at first hand are more likely to create a better atmosphere than the interchange of long-distance speeches.

In no part of its foreign policy has the Government shown greater wisdom than in its consistent refusal to allow the dictatorships and the democracies to be aligned in two antagonistic groups. The world will never be made safe for democracy unless we succeed in living on terms of peace and security with the dictators. It would be a poor service to the ideals of democracy to make it the test of international friendship.

POSITION AT HOME

At home there has recently been some slowing down of trade activity, with a consequent rise in the unemployment figures. It would be a serious misreading of the industrial situation, I feel, to regard this as more than a temporary fluctuation, reflecting, in the main, the uncertain position in the United States. With the country in its present financial position, the proper reply to a temporary lull in activity is a vigorous and confident advance with the plans we have.

Turning to the general problems to the affairs of our own company, I desire to say that the more we are able to congratulate ourselves, in a phrase that has happily become familiar at these annual meetings, on a most satisfactory year.

ORDINARY BRANCH—RECORD FIGURES

In the ordinary branch the sum assured, together with the accrued bonuses, show a very substantial increase over last year's record

figure of one hundred million pounds, and this whilst maintaining the high quality of the business. The new policies assure a sum of £8,600,000. The premium income for the year, which amounts to £5,301,000, is an increase of £40,981 over 1936. The sums received in respect of the purchase of annuities reached a substantial figure, while the single premiums were again high at nearly £310,000.

It is gratifying to be able to report that the expenses of the ordinary branch are still at the very low level of 11.1 per cent. of the premiums. The interest yield on the branch funds, prior to deduction of income tax, is the satisfactory one of £5 1s. per cent. These two factors—an excellent interest yield and low expenses—are reflected in the rate of bonus. We have again declared a simple reversionary bonus of £2 on each £100 assured in respect of ordinary branch policies entitled to participate in the full profits.

As has already been announced, the first general revision of our ordinary branch life rates since 1916 was made recently, and an attractive set of tables has now been issued offering to the public still more satisfactory terms. This includes a new table for children's endowment assurance. With the advantage of these new rates, which were the subject of favourable comment in the press, we look forward with confidence to a substantial increase of business.

INDUSTRIAL BRANCH—REMARKABLE PROGRESS

The figures in the revenue account of the industrial branch reveal the remarkable progress which is being achieved and maintained in this class of business. The premium income for the year was £8,778,518, easily a record in the history of the company. This was an increase of £354,000 over the premium income for 1936 and it is worthy of note that in the last two years the total increase has exceeded £700,000.

Last year I called attention to the fact that in recent times there had been a marked improvement in the matter of outstanding premiums, and I am pleased to state that the same welcome tendency for the arrears to fall is again in evidence.

A new record for the company was established in the amount paid in claims, the total sum being £4,388,000. Of this nearly £3,000,000 was paid in respect of death claims, while the balance was in respect of the maturity of endowment assurance policies. The growth of endowment assurance, combining saving and assurance, shows how industrial assurance has outgrown its original function of providing for funeral expenses and has come to occupy a wider and even a more helpful place in the economy of working-class homes.

FURTHER REDUCTION IN EXPENSES

Last year, for the first time, the expenses in the industrial branch were brought below 30 per cent. of the premium income. This year there has been a further reduction, and the figure now stands at 29.4 per cent.

When it is remembered that our agency staff is in constant touch with the policyholders in their own homes, calling for the premiums at short intervals, always available to deal with inquiries and close at hand to arrange for the prompt payment of claims, it will be appreciated that an exceptional service is provided for the convenience and benefit of those who are insured in the industrial branch.

Our industrial policyholders also enjoy the advantage of our system of bonus distribution, whereby the sums assured are increased by additions wholly outside the contractual terms of the policies. This year the sum allocated to bonus distribution is over £5,000.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

NEW LIFE BUSINESS EXCEEDS £1,000,000

The one hundred and eighth annual general meeting of the National Mutual Life Assurance Society was held, on the 23rd instant, at the Society's House, 39 King Street, London.

Mr J. M. Keynes, C.B., the chairman, in the course of his speech, said:—It is pleasant to be able to record that during this past year every factor connected with the assurance business of the society has been favourable, and we have again produced trading profits more than sufficient to provide the cost of the normal bonuses. For the first time in our history the net new life assurance business of the year has exceeded £1,000,000, and at £1,037,771 shows a substantial increase over that of 1936. This follows upon increases in each year since 1932. Moreover, if, as is preferable, we apply the more instructive test of the increase in the yearly premium income, this increase also constitutes a record in 1937.

The amount absorbed by expenses and commissions showed less than the normal increase despite the larger volume of new business and the additional cost of maintaining our fine new head office premises, with the result that we are able to report a diminution in the ratio which the expenses bear to the premium income—from 14.6 per cent. to 14.1 per cent.

The amount paid in respect of policies surrendered has declined from £49,170 in 1936 to £42,894 in 1937, but the profit from this source was for various reasons greater last year than in 1936. We do our best to persuade those of our policyholders contemplating this course to adopt other steps than the irrevocable one of surrendering their policies. It is therefore of interest to mention that the sums assured on policies surrendered in 1937 amount to no more than 1.1 per cent. of the total business in force.

Calculated as a percentage on the total funds excluding reversions, the net interest earnings last year were £3 17s. 1d. per cent., compared with £3 16s. 4d. per cent. in 1936, in spite of the rise in income tax from 4s. 9d. to 5s., which, other things being equal, might have been expected to reduce the rate earned by rather more than 1s. Over the past seventeen years the combined net earnings from interest and capital profits or losses have averaged 6.4 per cent. free of income tax. The net interest earnings calculated on the actuarial liabilities come out at £4 5s. 6d. per cent. This margin between the rate earned on the liabilities and the rate assumed to be earned is a substantial one.

VALUATION OF INVESTMENTS

In regard to the valuation of investments, I am afraid that this has been a dismal year for all institutional investors and we have not escaped the common fate. The year has been remarkable for the way in which practically every class of investment has been substantially affected in the downward direction. In our case, however, we have had the advantage of the large book and realised profits on investments recently earned and held in reserve. This year's decline has lopped off less than half of the previous precarious rise and leaves us with a large surplus in reserves and carry-forward. More precisely the loss on valuation over the year amounts to about 8½ per cent. of our assets. This still leaves intact an appreciation of about 10 per cent. from the previous four years. How hard the lot has been even of the most cautious investor becomes evident when we calculate that if at the beginning of 1935 we had put all our assets into War Loan we should have lost 6 per cent., and old Consols actually depreciated by nearly 20 per cent., while during the same period the actuaries' index of industrial debentures has fallen by 4 per cent. and their index of industrial preference shares has also fallen by 4 per cent. Nevertheless, our own depreciation over this period is only 1.73 per cent.

The year has been remarkable for the similarity of the movement in the gilt-edged and the other markets. The fall in the gilt-edged market was particularly noticeable in the first three quarters of last year and has been commonly attributed to the Government's rearmament programme taken together with the increased demand for trade advances. I am disposed, however, to explain the decline mainly by reference to the particular technique by which last year the gold purchases of the Exchange Equalisation Fund were being financed. The managers of the Equalisation Fund have largely depleted the liquid resources of the domestic market at a time when the international situation and the recession in America were disposing the market to become more, rather than less, liquid, and the result is that institutional and other investors, no matter what their policy, have had a dismal, and indeed an insoluble, task to keep their assets intact.

The report and accounts were unanimously adopted.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION

SIGNIFICANT GROWTH OF BUSINESS

The ninety-seventh annual general meeting of the Provident Mutual Life Assurance Association was held, on the 23rd instant, at 25-31 Moorgate, London.

Mr Owen Hugh Smith (the Chairman) said that they had that day to consider not merely the report and accounts for the past year, but also the actuary's quinquennial report and the distribution of profits. The outstanding feature in the accounts for the past year had been the great increase in the volume of business. New sums assured (£3,250,000) were the highest in their history and were nearly 100 per cent. more than five years ago, and the premium income of £1,142,000 showed an increase of over £60,000 over the previous year.

Their growth in recent years, and more particularly in the year under review, he thought was to be attributed in the main to two causes. In the first place the industrial recovery in this country by increasing wages, salaries and profits had made more income available for saving in the way of life assurance. In the second place there was no doubt that the opportunities which they offered for assurance and thrift and the services which they endeavoured to render to their members were becoming better known and better appreciated throughout the country. For example, the distribution of over £500,000 under endowment assurances which had become due to nearly 5,000 members was a very strong inducement to their friends and relatives to follow their example. He thought they might say that their recent growth was not the result of any change of policy, but was the natural and healthy result of the services which they rendered to their members.

As to the other figures in the revenue account, the surrenders had fallen to £69,000, which was the lowest figure since 1927—another reflection of increased employment and prosperity. The claims by death at £191,000 were slightly lower than in the previous year and the claims by maturity had increased by £49,000. The rate of expenses to premium income had risen slightly from 14.5 to 15 per cent. as the result of the increased new business. The net rate of interest earned on the funds had remained remarkably steady, having fallen only by 4d. to £4 9s. 2d. But they were still reaping the reward of the long-term investments made at high rates of interest during the depression. If investment conditions remained as they were at present they must be prepared to face in the future a further decline in the rate of interest.

RECORD LIFE ASSURANCE FUND

Turning to the balance sheet, the life assurance fund had grown during the year by £678,000, another record figure. During the past year there had been a general fall in the market value of Stock Exchange investments. As they had never taken credit for appreciation in past years, they were now in the happy position that the market values exceeded the values in the balance sheet by £668,000, without taking into account the investment reserve fund of £1,000,000 which had been created in order to prevent any shrinkage in market values causing a drain on the life assurance fund.

As to the actuary's valuation report, the board had no hesitation in adopting his recommendations which enabled them, after strengthening the reserves by £280,000, to declare a bonus at rates 5s. per cent. per annum higher than those at the last division and equal to the highest they had ever previously declared.

MR C. R. V. COUTTS' REMARKS

Mr C. R. V. Coutts, F.I.A. (Manager and Actuary) said that the new mortality table had now been published, and happily for them the mortality rates corresponded very closely to those which they were experiencing in their Association. The existence of a standard table reproducing so closely their own experience had enabled them to make their valuation on what was known as the bonus reserve method, a method already adopted by several first-class life offices.

Ten years ago he had had occasion to mention that the recent actuarial investigations had shown that under their existing scale of premiums policies effected for the whole of life, especially those at the older ages, were really earning higher rates of bonus than policies under the endowment assurance plan. They had given effect to that principle on that occasion and were again for the third time giving effect to the same principle by allotting total reversionary bonuses at the following rates: 50s. per cent. per annum to whole life policyholders aged 65 and over; 45s. per cent. per annum to other whole life policyholders; and 40s. per cent. per annum to endowment assurance policyholders.

The report was unanimously adopted.

GREAT WESTERN RAILWAY COMPANY

BEST YEAR SINCE 1930

VISCOUNT HORNE'S REVIEW

The annual general meeting of the Great Western Railway Company was held, on the 23rd instant, at the company's offices, Paddington Station, London, W.

Viscount Horne, the Chairman, in the course of his speech, said: It is gratifying for me to be able to tell you that, in spite of the continuance of political unrest in several parts of the world, and many embarrassing restrictions on international trading, the year 1937 was the best experienced by the company since 1930.

The net revenue of the whole undertaking amounted to £6,886,505, an increase over 1936 of £571,676, out of which we have thought it desirable to appropriate £100,000 to a new works revenue suspense account. The amount available for dividend on the ordinary stock is £1,868,767. This is sufficient to enable a dividend of 4 per cent. to be paid on it for 1937, as compared with 3 per cent. last year, and at the same time to increase the carry-forward by £74,785 to £151,578. This is the dividend which we now recommend. The total receipts from the dock undertakings were higher by £356,107, of which about £200,000 can be attributed to the improvement in the coal trade, and £150,000 to other traffics.

THE WAGE BILL

From every pound of receipts which we earn, wages take 11s. and coal and other materials 3s. 5d. These, with rates and sundry items, bring our expenditure per pound of receipts up to 15s. 11d., leaving 4s. 1d. for interest on debentures and dividends on capital. In the early part of April last year claims were submitted by the railway trade unions for the termination of the percentage deduction from salaries and wages and the restoration of standard rates of payment for night and Sunday duty. In addition, claims for certain new conditions were submitted by the unions.

After a hearing lasting six days, the Tribunal, under the chairmanship of Sir Arthur Salter, decided that the percentage deduction from earnings should cease and the standard rates for night and Sunday duty be restored as from August 16, 1937. They also awarded an increase of 1s. per week to adult staff in "conciliation" grades whose base rate was less than 45s. per week, with an increase of 6d. per week to those with base rates of 45s. In addition, a former decision of the National Wages Board, under which new entrants on and after February 1, 1926, were not entitled to cost-of-living bonus, was cancelled and an additional day's leave with pay was granted to all "conciliation" and salaried staff required to work on Whit Monday or August Bank Holiday.

An application on behalf of the railway shop staff for the termination of the percentage deduction from earnings and for various other terms was settled by an agreement to terminate the percentage deduction, to grant one week's annual leave with pay, commencing in 1938, and to increase by 1s. and 6d. per week respectively the rates of pay of staff graded at 43s. 6d. and 44s. 6d. per week.

Settlements having as their basis the cessation of the percentage deduction were also effected with the other groups of staff, and the deduction has now ceased to apply to any grades. Further, during the past twelve months approximately 25,000 of our staff have received increased wages in accordance with sliding-scale arrangements which are based on the cost-of-living figures published by the Ministry of Labour.

On the assumption that the cost of living continues throughout 1938 at the level at which it stood at the beginning of the year—viz. 60 per cent. over the pre-war level—the increased cost for a full year will amount approximately to £695,000, and for the current year represent an additional expenditure of approximately £475,000, as compared with 1937.

The past year has seen important developments in the direction of securing a greater measure of co-ordination between the various forms of goods transport, which it has long been recognised cannot be made really effective until the road haulage industry has been placed on an organised basis.

A Government Committee under the chairmanship of Sir James Bailie has been investigating the problem of wages and conditions of service in relation to road hauliers, and in their report, which was issued last April, they expressed the view that the present statutory provisions regarding "fair wages" have been a great source of inconvenience and misunderstanding.

The whole matter is now under the consideration of the Minister of Transport, who has announced the Government's general approval of the recommendations which have been made, and their intention of introducing the necessary legislation in due course after consulting

the interested organisations on points of detail. The matter is one of urgency from the point of view not only of the interests of the road hauliers, but of all those engaged in other forms of transport, and as the subject is one of national importance, it is desirable that every endeavour should be made to deal with the recommendations at an early date. I am glad to see from a recent pronouncement by the Minister of Transport that the Government apparently intend to do this, at any rate, so far as the Bailie Committee's recommendation is concerned.

INCREASE OF RATES AND CHARGES

The receipts for the last three months of the year were augmented by the increase authorised in July last by the Railway Rates Tribunal, and although since the date when the case of the railway companies was brought before the Tribunal, the new burden of increased wages has been imposed upon us, it is a matter of gratification that we have at least some prospect of additional revenue with which to meet it.

We are, however, watching with some anxiety the upward trend of coal prices. Where coal forms so large a portion of our traffic, it is clear that the railway and the coalfields can only prosper in unison, but there is obviously a limit to what we can afford to pay. Every shilling of increase in prices means an additional cost to us of over £100,000 per annum, and whilst we recognise that some increase in coal prices was right and proper in order to give a decent remuneration to the miner and a reasonable profit to the colliery owner, the recent increases in coal prices will represent a very substantial addition to the burdens which we have to face in the current year. We felt, therefore, that the large increase in the cost of operating steam locomotives made it incumbent upon us to explore the possibility of effecting economies by substituting other forms of traction where the conditions are favourable. We have accordingly engaged a firm of eminent consulting electrical engineers to prepare a scheme for the electrification of part of our system. We have under consideration at the moment the section of the line which runs between Taunton and Penzance.

THE OUTLOOK

You will, no doubt, expect me to say something about the outlook for the company in 1938. However rash it may appear to be cheerful during such a recession from the peak of last year as we have recently witnessed, I confess that I am not afflicted by an undue anxiety so far as our railway is concerned. In spite of the apparent setback in trade, the volume of traffic dealt with by us since the beginning of the current year does not show any diminution when compared with the corresponding weeks of last year. There are, in fact, good reasons for anticipating a further improvement in our business. During the year negotiations were completed for the establishment of 73 new factories on our system, some of which are already in production.

Lord Portal tells me that with the assistance of the Government, the Nuffield Trustees and the Special Areas Reconstruction Association, companies with a total capital of nearly £2,000,000 are being set up in South Wales. These should reach full production during the current year, and give employment to about 6,000 people. Richard Thomas and Company's steelworks at Ebbw Vale will also be completed this year, and we expect to handle a large volume of traffic in connection with them, whilst amongst other important new factories now under construction in South Wales are Messrs Pilkington's glass works at Pontypool, the Aberdare Cable Works at Aberdare, and the British Aluminium Company's works at Newport. In addition, the British Oxygen Company have announced their intention of erecting a large factory in our dock area at Port Talbot, and negotiations for the establishment of a number of other important works are in hand. These projects are all additional to the programme of new munition and aircraft factories in South Wales which is being directly undertaken by H.M. Government and from which we expect to derive considerable benefit.

Even if our anticipations of additional traffic are not realised, and the volume merely remains at last year's level, the increase in charges should, when the year is completed, yield us a sufficient additional revenue to meet the increased cost of salaries and wages as well as the rise in the price of materials, particularly as we are fortunate enough to hold considerable stocks and have contracts for further supplies at lower prices than obtain to-day.

No man would be so imprudent as to predict what troubles may emerge in the near future from the clash of rulers or the rivalries of nations. These are factors which would upset all calculations. Leaving such possible catastrophes aside, reflection must remind us that there is still a vast amount of work in this country waiting to be done, and, provided that we keep our courage and our confidence in ourselves, there is no reason why this year should not as a whole be as good as last.

The report and accounts were unanimously adopted.

SOUTHERN RAILWAY COMPANY

INCREASED REVENUE AND DIVIDEND

The fifteenth annual general meeting of the Southern Railway Company was held, on the 24th instant, at Southern House, London.

Mr Robert Holland-Martin, C.B. (the chairman), in the course of his speech, said:—The total gross receipts were up by £1,313,000, of which the increases in purely railway receipts were as follows: £836,000 passenger traffic, £111,000 goods traffic, and £16,000 miscellaneous, that is an increase of £857,000, or just over 4 per cent., making the total gross receipts from railway working £22,113,000. We have carried in the past year more than a million passengers a day. The total number of passenger journeys, including season-ticket holders' journeys, in 1937 was 378,714,000, an increase over 1936 of 18,452,000—5.12 per cent. Of this addition about 15½ millions—5.6 per cent.—including 6,000,000 season-ticket holders' journeys, was due to journeys made in the electrified area.

You will remember that last year we were pleased with our increase of 11,000,000 passengers; we have now got this further great increase of 18,000,000 passengers over that figure, despite our lacking the extra day Leap Year gave us in 1936, and we shall be disappointed if we do not see some further growth this year. We have had an outstanding year of Continental traffic. Of course, the Coronation brought many visitors from the Continent, but even allowing for this, I think we can be more than satisfied with our figures.

After making various provisions we are left with the increased revenue of £326,000 and are able to recommend, after payment in full on our other stocks, not the dividend of ½ per cent. with which we resumed payments on the deferred stock last year, but a dividend of 1½ per cent., a decided improvement which I hope you will regard as satisfactory. And having paid that we place the balance of £6,000 to our carry-forward.

I should like to say a few words about the 5 per cent. increase in rates and charges. The Tribunal did not hesitate to give us authority to make the increase as from October 1st, and I feel that now that we have got it we shall have some chance during the coming year of retaining the gains we have already made and be able to apply them to consolidating our financial position.

ELECTRIFICATION AND IMPROVEMENTS

As to our electrification programme, full electric services on the direct Portsmouth line were begun in July last, and similar services will start next July to Portsmouth Harbour via Chichester, serving Bognor and Littlehampton; an electric service will also operate between Brighton and Portsmouth. Other electric schemes in hand include the railway from Virginia Water to Reading via Ascot, from Ascot to Ash Vale Junction, from Frimley to Pirbright Junction, and from Aldershot North Junction to Guildford. Work has also been started on the electrification of the lines from Gravesend Central to Maidstone West, Swanley Junction to Gillingham, Strood to Rochester and Oxford to Maidstone East.

With regard to our project for giving Hastings and Bexhill a second electric route, by the electrification of the line from Sevenoaks to Hastings via Tunbridge Wells, we have decided, after most careful consideration, not to proceed with this scheme at the present time.

You probably read in the Press a few weeks ago severe criticism of the Waterloo and City Railway. We have long been conscious of the shortcomings of this important link in our system and readily met a deputation of regular travellers on this line at Waterloo. We were glad to be able to show them that delay in improvements had not been due to lack of sympathy with their real grievances or to cussedness on our part, for there were very serious difficulties to be contended with, and to relieve their minds that we were at last in a position to do something. We have already sanctioned the following improvements: The construction of new rolling stock which will practically double the present carrying capacity. This will be designed to have more accommodation and larger doors, and should eliminate queues; renewal of signalling arrangements, cables, etc., and the placing of the conductor rail in a new position, all of which will also add their quotas, even if small ones, to the capacity of the line; and certain smaller improvements tending to greater comfort, such as welding of rail joints, noise-absorbing shields, etc.

At Southampton I can report progress in the letting of sites for factories on our large estate of reclaimed land. We are spending much money in improving our stations. It is our constant endeavour to make the Southern Railway as comfortable and efficient as any line in the world. We hope to be able to present year by year a story of physical and financial progress based on conservative finance, and, having set such a course, we look forward with confidence to the future.

The report was unanimously adopted.

MANCHESTER SHIP CANAL COMPANY

RECORD TONNAGE

The annual meeting of this company was held, on the 24th instant, at Milton Hall, Manchester, Sir Frederick J. West presiding.

The Chairman, in the course of his speech, said: I venture to think you will agree with me that the outstanding feature of the year under review is the tonnage of imports and exports carried over the waterway. They reach a total of 7,053,216 tons, which constitutes a record in the history of the company and an increase of 679,908 tons over 1936.

Receipts from Ship Canal tolls, ship dues and miscellaneous receipts showed an increase of £101,414, railway working an increase of £10,216, and the Bridgewater Department a small increase of £802—a total of £112,432. After taking away the decrease of £4,327 on the working of dock labour and adding a small difference in miscellaneous receipts and charges there remains an increase of £108,526.

Expenditure in the working of the Ship Canal was £9,908 more than in 1936, but we have thought it necessary to make provision of £101,083 to meet, as stated in the report, eventual, in many cases imminent, expenditure on renewals and for other purposes.

These provisions represent an increase of £68,083 over those made in the previous year, and the total increase of £77,991 as per Account No. 10 (a) under the heading of Expenditure is made up of the above two increases.

It is proposed that there should be appropriated £35,000 to the reserve for contingencies and repairs, and that out of the balance of £303,875 the following dividends, amounting to £272,174, should be paid: 3½ per cent. on the Manchester Ship Canal Corporation 3½ per centum preference stock, 4 per cent. on the preference shares, 2 per cent. on the ordinary shares, carrying forward £31,701 to next year's account.

The Chairman then dealt exhaustively with the programme of expenditure on renewals which the company had to provide for. Continuing, he said: I have dealt fully with this feature of the accounts because your directors wish you to realise the absolute necessity of their making adequate provision for future requirements before distributing as dividends the balance of current net revenue.

Now let us turn to the capital account. Receipts from sales of land, etc., amounted to £162,615, expenditure to £63,240, resulting in a reduction of £99,375 on the expenditure side of the account.

Bonds amounting to £92,255 were repaid during the year. During the last three years we have fortunately been able to repay bonds amounting to £211,025 without resort to further borrowing. This we have been able to do out of the proceeds of the receipts from sales of land, etc., and the retention of revenue moneys through the creation of reserves.

We intend to continue this policy as far as we are able, as you will appreciate that whilst we can manage without further borrowing the resultant saving in interest charges is an annual one, and, as such, a valuable contribution to the net revenue of the year.

The traffic passing through the port is the highest tonnage figure in our history, and compares favourably with the general improvement for the country as a whole. We may indeed claim a favourable margin.

While our exports happily show an improvement I again appeal for more support from local manufacturers and merchants in the freighting of outward cargoes through the port.

Our shipping services have been maintained, and a new homeward service from Brazil was inaugurated during the year by Messrs. Lamport and Holt. The "Manchester Liners" fleet has been increased by a fine new ship, the "Manchester City," and they have yet another vessel on the stocks.

Industrial expansion in the neighbourhood of the port is an important factor in our development, and I am glad to tell you that on our Barton Dock Estate, which we obtained statutory powers to develop some little time ago, there is now nearing completion the large new factory of Messrs Kellogg's. That company combed England to find a site with all the facilities necessary for an undertaking designed to supply the European market with a cereal food, and I think it augurs well that it should have found it at Barton.

A port, I need hardly remind you, is but a servant of commerce, unable to command absolute prosperity. It depends upon shipping, and shipping in its turn depends upon world purchasing power and international trade.

On general tendencies and future prospects I decline to speculate as so many factors are involved. Relative prosperity is, of course, another matter, and to this we can contribute by keeping ourselves financially strong and in the highest possible state of efficiency—and by missing no chances.

The report and accounts were adopted.

SAN FRANCISCO MINES OF MEXICO, LIMITED

NET OPERATING PROFIT DOUBLED

The 25th ordinary general meeting of San Francisco Mines of Mexico, Limited, was held, on the 22nd instant, in London.

The Rt. Hon. the Earl of Denbigh, G.C.V.O. (the chairman), who presided, said that as a result of the increase in base metal prices and in tonnage milled the total revenue of the company in the past year rose by £441,000 to the really substantial figure of £1,081,000; on the other hand, wage rates, supplies and transport charges were higher, and costs rose accordingly. On balance, however, the net operating profit was more than doubled at £453,000. The net profit amounted to £276,000, and the directors recommended a final dividend of 1s. per share, which, together with the interim dividend of 1s. 3d. per share, made a total of 2s. 3d. per share for the year.

As regarded development results, last year, he told shareholders that, in spite of early indications, the bottom of the old Frisco mine had apparently not been reached. Further development on the tenth level strengthened that view. They had recently been getting some really excellent results at that horizon. He also referred last year to the encouraging results obtained far to the south of the South Shaft. Since then further development had shown that there was an interesting complex of veins under the basalt capping which covered the southern extension of the mine. They had plenty to do, therefore, at the old mine before they reached its limits.

SATISFACTORY ORE RESERVES

With regard to ore reserves, after replacing the 580,000 tons milled there was a net increase of 106,000 tons. In view of the high rate of milling that was satisfactory. The fully-blocked and partly blocked ore reserves now amounted to 2,853,000 tons, or about five years' milling at their present rate. In short, the technical position at the mine continued to be satisfactory.

They had, however, been continually subjected to demands from labour, strike threats, incipient slowdown strikes, ore thefts, interference in management, and a general lessening of efficiency and discipline.

The results for the first quarter of the current financial year showed an operating loss of about £4,750 before providing for depreciation. In other words, under present circumstances the mine could not earn enough to cover its payments to those it employed, to the suppliers of the materials it consumed, and to the receivers of the taxes it paid. There was less than nothing left for the shareholder. He had taken out an estimate of what the results for the quarter would have been if costs had not been increased above the 1934-35 level. Instead of an operating loss of £4,750 there would have been a profit of no less than £50,000. That was a measure of the cost to the shareholders of change in local conditions. At present, metal prices continued there must be amelioration in some form or other. The mine was now virtually being run for the employees.

heard in Mexico talk of expropriation, but in the case of the mine he believed the Mexican Government realised that the Government itself or the Syndicates could not run the mine as efficiently as could a technical staff highly skilled at the job and with long experience of the mine. In other words, under its present highly-skilled management the mine had its best chance of weathering that stormy period of low metal prices.

The Mexican Government and Mexican labour must surely realise that shareholders, management and British financial interests would not be content to give their co-operation if the reward was inadequate. It was not sufficient that the reward should only be forthcoming when base metals were at peak prices.

It should be borne in mind that the burden placed upon them by increased wages, social legislation and Government and labour interference with operations did not finish the story. Cost of supplies, import duties, railway freights, loading charges at port, metal production tax, salaries and, in fact, nearly everything which entered into their costs of production had been stepped up.

THE OUTLOOK

On the other hand, he for one was an optimist about metal prices. It seemed evident to him that the fall had been overdone and that some time or other base metal prices were due for a rise. Last year showed that given good metal prices the mine could still earn really handsome profits. He believed that the Mexican Government and the Mexican people would one day wake up to the fact that the country and its inhabitants could not prosper unless industrial conditions were stabilised at some level or other. If that were done now the report was...

adopted.

ANGLO-INTERNATIONAL BANK, LIMITED

CHAIRMAN ON EUROPEAN FINANCE

The twelfth ordinary general meeting of this bank was held, on the 18th instant, in London, Sir Bertram Hornsby, C.B.E. (the chairman), presiding.

The chairman, in the course of his speech, said: Our liquidity has definitely improved. In point of fact we are now in the position where our readily available resources are sufficient to cover the whole of our liabilities to the general public.

Although current income shows a small excess of £10,080 over current expenditure, net losses on realisation of assets, and sundry provisions during the year amount to £51,850, with the result that the debit balance on profit and loss account has increased by £41,770, bringing the total to £528,794.

This bank's main business is on the continent of Europe, and, since the crisis, the greater part of our assets have been subject to moratoria, to exchange controls and to other methods of restriction for the protection of the local debtor. Wherever we have found it possible to effect reasonable settlements we have done so. Prospects of payment in full from those countries with which we are concerned seem to me to be still very uncertain, and, while recognising the difficulties which do confront various countries, it does seem to me that a greater willingness to honour their obligations might often well be shown. The German Standstill has been renewed for another year, and once again the renewed agreement regrettably makes no provision for capital repayment. The Hungarian Standstill has also been renewed for a year, with an understanding that it may be prolonged for two further years; it provides for the payment of a nominal rate of interest, together with small capital repayments in each year. Through the operation of the Anglo-Roumanian Payments Agreement we have been able to encash without loss some portion of the amounts due to us by Roumanian debtors.

In the present unsettled state of affairs we deem it unwise to seek new business. Our efforts are concentrated on the maintenance of such existing connections as appear safe and profitable, and on the collection of our assets whenever favourable opportunity offers. Expenses have been reduced to a minimum, and we feel that we are pursuing the best method of recovering our outstandings.

The report was unanimously adopted.

ENGLISH ELECTRIC COMPANY, LIMITED

RECORD ORDERS

Mr G. H. Nelson, the chairman and managing director, presiding at the nineteenth annual general meeting of the English Electric Company, Limited, held, on the 22nd instant, in London, said that the excess of liquid assets over current liabilities had risen from £1,779,760 to £1,942,826; the net profit was £436,185. The directors proposed to allocate £200,000 to reserve. The company had again commenced the year with the largest order book in its history.

Export business had increased substantially, although, due to severe competition abroad, particularly from Germany and Switzerland, trading overseas was difficult.

The remedy for uneconomic competition must lie partly in Government action as opportunity offers through the negotiation of trade agreements, but primarily in arrangements between manufacturers in the leading industrial countries. In the latter direction, although with most countries it is possible to obtain co-operation, with Switzerland in particular and Sweden at the moment no progress has been made.

Among important export orders were repeat orders from the Victoria Falls and Transvaal Power Company, Limited, for large transformers, railway equipments for the South African Railways, Steel Works equipments for India and Australia, Rolling Stock for the Colonies and the Argentine, and Diesel Engines for Trinidad and many other parts of the world. Important buyers of Diesel Engines had given their opinion that the company's engines had the best consumption and maintenance costs of any of which they had experience.

Further important orders included those from Supply Undertakings and the Central Electricity Board for large steam turbine generating sets and large transformers, and orders for Land Diesel Engines, the company's range for which was 250 to 3,500 B.H.P. Among traction orders received during the year under review were those from the Southern Railway for their suburban and express stock, for three Diesel Electric Shunting Locomotives and for two main line Electric Locomotives.

The report and accounts were adopted, and a dividend of 10 per cent. was declared on the ordinary stock.

GENERAL MORTGAGE BANK OF PALESTINE, LIMITED

GRATIFYING RESULTS

DIVIDEND OF 7½ PER CENT.

The Sixteenth Annual General Meeting of the General Mortgage Bank of Palestine, Limited, was held on February 6th last in the bank's offices at Tel-Aviv.

Mr S. Hooten (the chairman) stated that during the year under review the country had suffered to a considerable degree from the effects of last year's disturbances. The slow procedure in dealing with the Royal Commission's recommendations and the Government's hesitant and wavering attitude had created a state of political uncertainty highly detrimental to private initiative and to all economic progress. Immigration had been reduced and order had not been restored.

SATISFACTORY BUSINESS

The directors were, however, happy to be able to state that the bank's business continued to be highly satisfactory and that results were again gratifying. It had already been stated on previous occasions that at no time in the bank's history had there been a loss on any business done and the year under review had not marred this record. While during the four preceding years there had not been one single case of forced sale of mortgaged property there had, indeed, been three such cases during the past year, but they had all resulted in the bank receiving full satisfaction both as to capital and interest.

As there were over 3,400 mortgage loans outstanding the number of forced sales was still extremely moderate, especially if the adverse conditions prevailing in the country were taken into account. Out

of the arrears outstanding at the end of the previous year on all interest maturing until November 30, 1936, which amounted to 1½ per thousand of the total loans outstanding, 93 per cent. had since been collected. This year the arrears amounted to 1½ per thousand of the total loans outstanding.

Building activity had been reduced to a marked extent and the directors had, therefore, been able to devote a proportionately large part of the bank's available resources to the consolidation of the property market by granting the bank's usual long term loans in replacement of maturing short term private mortgage loans. The instalments were calculated so as to leave a substantial margin when compared with the net income to be derived from the properties and this explained why there had been no disappointments.

The item "Mortgage Loans" in the balance sheet had gone up by £500,777 and it now stood at £2,604,230.

ADDITIONAL WORKING CAPITAL

During the year under review the share capital had been brought up to £450,000 through the issue of £100,000 ordinary shares. Additional working capital had been provided through the issue of £480,000 Five per cent. 20-year debentures.

The results of the business had been satisfactory. After making ample provision for contingencies and for debenture interest there remained a net profit available for distribution of £43,746. During the year an amount of £5,000 had been transferred to reserve out of premium on shares issued and a further amount of £10,000 had been added to that out of the year's profits. It was proposed to pay, like last year, a dividend of 7½ per cent. on the ordinary shares and one of 6½ per cent. on the six per cent. cumulative preference shares. Interim dividends of 3 per cent. had been paid on both the ordinary and the preference shares on September 1, 1937, and the balance would be made payable on March 1, 1938.

The report and accounts were unanimously adopted.

(Continued from page 467)

owing to heavy shipments. Plums, peaches and nectarines from the same source have been selling rather better. Oranges sold steadily at slightly firmer rates and lemons also improved. Grapefruit, however, was in only fair demand.

★

Vegetables.—Kitchen vegetables were in more active demand at Covent Garden last week, in response to the colder weather. According to *The Fruitgrower*, forced asparagus, beans, new carrots and turnips were dear. Green peas were somewhat scarce and mushrooms prices tended to rise. Except for the week-end, when supplies were heavier, the price of greenstuff has been steady. Onions were firmer and parsnips in very short supply. The spell of wintry weather appears to have made little difference to the potato trade and prices at the various London markets, as shown in our table of wholesale prices, were slightly lower.

Miscellaneous Commodities

Radium.—According to the Canadian Department of Mines and Resources, the Eldorado Gold Mines, Ltd., Canada's large radium producer, is at present occupied with a substantial extension of capacity. This work includes, apart from the extension of the mine, substantial enlargements at the company's refinery at Port Hope, Ontario. After the completion of the work, which should be achieved by this summer, the company will probably be able to produce 5 grammes of radium, 35,000 lbs. of uranium products and 40,000 oz. of silver per month. At present the monthly radium output is only slightly in excess of 2 grammes. If a regular monthly production of 5 grammes is achieved, the company will

be the world's largest producer of radium. The Union Minière du Haut Katanga, the largest radium supplier for the past 20 years, has not published any production figures in recent years, but its current output is estimated at not more than 20 grammes per annum.

★

Rubber.—With the belief that prices on Wall Sta have reached their nadir, in Amarket showed a firmer tendency. The movement was assisted by the news of the Regulation Committee's decision (discussed in a Note in the Industry and Trade Section) to recommend the continuance of the restriction scheme for a further minimum period of five years. Prices are consequently appreciably higher on the week.

SHORTER COMMENTS

(Continued from page 461)

Lewis's, Ltd.—Total profits for year to February 1, 1938, £819,883, against £817,714. In addition, net rents produced £54,215 (£52,353). To tax, £39,846 (£30,249). To depreciation, £33,000 (same). To staff fund, £10,000 (same). Deferred dividend raised from 275 to 300 per cent., absorbing £352,500 against £323,125. To general reserve, £50,000. Carry forward reduced from £61,082 to £52,422.

Illustrated Newspapers.—Net trading profit for year to November 30, 1937, £196,169 against £182,071. To tax and N.D.C., £48,140 against £36,164. To preference dividend reserve, £50,000. Preference dividends paid for half-years ended

October 31, 1935, and April 30, 1937. Half-year's dividend to October 31, 1937, paid on January 1st. Carry forward £76,389 against £96,880 brought in.

Meux's Brewery.—For 1937 net profits were £146,241, a decline of £4,549. Ordinary dividend maintained at 11 per cent. 100 property and co. after £3,000 of super-annuation (same) carry-forward is £226,206, against £220,878. Sum of £68,000 taken from property improvement, etc., reserve to improve properties.

British Isles and General Investment Trust.—First annual accounts for period to January 31, 1938, show total revenue £42,054. Ordinary dividend 3½ per cent., absorbing £17,718. To writing off preliminary expenses £1,000. Carry forward £3,552. Valuation was £595,089, against £816,627 (book cost).

Provincial Newspapers, Ltd.—Net profit for year ended November 30, 1937, £135,557 against £134,784. To depreciation £18,170 (£17,988). For tax and N.D.C., £43,000 (£38,500). Ordinary dividend 2 per cent. against nil. To reserve £25,000 (£300,000). Carry forward £16,807 up at £48,905. Bank loan has been further reduced during the year by £57,000.

Philco Radio and Television Corporation of Great Britain.—For 1937 the net trading loss was £110,604 compared with a profit of £102,815 for 1936. Fees £900. Preference dividend £7,875 for half-year to June 30th. £2,436 provided for a loss by a subsidiary, making total debit £121,815. Cash reduced from £111,328 to £19,843.

Bell Telephone of Canada.—Total operating revenues 1937, \$40,500,232. Net income \$6,112,939 (or \$7.73 per share) against \$5,456,000 for 1936. Dividends \$7.50 per share, absorbing \$5,914,181. Forward \$198,758.

United States Steel Capital.—A meeting is called for April 4th to consider changing the common stock from a par value of \$100 to no par value, and increasing the authorised number of common shares from 12,500,000 to 15,000,000. The directors also seek power to issue bonds, etc. vertible into common stock. tion states that there for new financ

All tables appear regularly except those whose titles are printed in italics, which are special to this issue.

Trends in Industry

The following Charts draw attention to the recent divergent movements in the production of different industries. For this purpose the Board of Trade index numbers have been expressed as percentages of their level in 1935; and in each of the six charts a comparison is made between the index number for a particular group and that for all industries. Chart 1 brings out the very rapid expansion of iron and steel production, especially in the last quarter of 1937; while Charts 3 and 4 reveal a declining tendency in building and building materials and textiles towards the end of last year.

INDUSTRIAL PRODUCTION

(BOARD OF TRADE INDEX NUMBERS, 1935 = 100)

Finance

GOVERNMENT FINANCE

For the week ended February 19, 1938, the total ordinary revenue was £31,868,000, against ordinary expenditure of £12,233,000. The deficit accrued since April 1st last is thus £22,018,000, against a deficit of £24,527,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On February 18th, applications at £99 17s. 6d. per cent. for bills to be paid for on any day except Tuesday of the following week were accepted as to about 23 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Tuesday at £99 17s. 7d. per cent. and above were allotted in full. £10 0 millions of Treasury bills are being offered on February 25th.

52nd Year

Containing fuller and more up-to-date
information than any other book of reference

MINING YEAR BOOK

1938

Compiled by

WALTER E. SKINNER

PRICE TWENTY SHILLINGS NET

Post free (Inland), 20s. 6d.; Post free (Abroad), 21s. 6d.

1,060 pages. In Demy 8vo, bound in RED Cloth.

The International Standard Reference
Work on the World's Mines

The book is invaluable to everybody interested in the Mining industry, its contents comprising complete, up-to-date and reliable particulars concerning 1,325 of the principal Mining Companies of the World.

Gold, Silver, Copper, Tin, Diamond, Platinum, Iron and other Mines, Collieries, Exploration and Mining Investment Companies, arranged in alphabetical order.

SOUTH AFRICAN, RHODESIAN,
WEST AFRICAN, AUSTRALASIAN,
CANADIAN AND FOREIGN MINING
COMPANIES ARE FULLY
DEALT WITH

Particulars given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves; details of capital; calls; dividends paid; and the financial position as disclosed by the latest accounts; highest and lowest prices of the shares for the last three years; also latest prices.

Directors (3,745) and Mining and Consulting Engineers and Mine Managers (1,112) and their addresses, and names of the Companies with which they are connected.

Maps. 25 sketch maps are inserted throughout the book giving the particulars of the various companies, covering the Central, Western and East Rand and the principal properties in West Africa and Western Australia.

Dictionary of Mining Terms.—An up-to-date glossary covering 431 Mining terms, by the use of which Mining developments can easily be followed, and the difficulty of understanding technical phraseology quickly mastered.

Buyers Guide.—A Directory of Manufacturers and Exporters of Mining Equipment containing 255 listings.

To be OBTAINED from all Booksellers, or direct from the Publishers

ECONOMIST SHIPPING FREIGHT INDEX

We give below a complete record of our monthly and annual indices of shipping freight rates. The index is based on 28 representative routes for tramp shipping, divided into six groups. The monthly figure for each group is the mean of the weekly figures, and the final index is an unweighted arithmetic average of the group figures. An account of the method of construction and of the routes included was given in our monthly *Trade Supplement* for July, 1923.

I. ANNUAL INDICES

(1898-1913=100)

Year	Europe- an Waters	North America	South America	India	Far East and Pacific	Aus- tralia	Mean
1898	108.6	137.5	119.9	124.1	130.9	110.4	121.9
1899	113.0	120.6	117.5	124.7	122.9	118.1	119.5

The Burden of Arms

THE issue at this time of the year of a White Paper on Defence policy is becoming a regular custom. The paper published this week is the fourth in annual succession, but it is the least sensational of the series. It includes no statement of Government policy of comparable magnitude to the original decision in 1935 to initiate a policy of armament, or to the arrangements for co-ordination announced in 1936, or to the disclosure of the full magnitude of the financial burden of re-armament last year. But the fourth White Paper resembles its predecessors in one melancholy aspect; for each one has foreshadowed a larger programme of defence expenditure than the last, and we are now told that even last year's gigantic estimate of £1,500 millions in five years is certain to be exceeded.

If a perusal of the White Paper induces any satisfaction, it can only be of the grim variety with which a peace-loving nation contemplates the piling up of machines of destruction. Since we have set our national hand to the task, it must be accomplished with as much efficiency and despatch as are possible; and every proof of either quality is preferable to delay and incompetence, even in a destructive cause. But no man can rejoice when he contemplates the goal towards which we are so busily hurrying.

As a record of progress, the White Paper is undeniably

impressive in its accumulation of facts. In each of the three fighting services there is substantial achievement to record. So far as the Navy is concerned, the most impressive figures are those of tonnage under construction, which have increased from less than 140,000 tons on New Year's Day, 1935, to well over 500,000 tons this year. The objective of Air Force expansion is in considerable measure achieved, as the metropolitan air force has been raised to 123 squadrons, with vastly greater reserves of men and machines than existed three years ago. Less can be said about the Army; but even there it is recorded that the Mobile Division (which in many respects is the modern Expeditionary Force) is already embodied and ready for exercises this year as a fully-established unit.

These are the achievements of re-armament, and they are by no means inconsiderable. The White Paper is naturally more reticent about the disappointments. There are glancing references to "setbacks" and to "delays and difficulties," but details are not given. Yet it is in these that the man in the street, in his capacity either of taxpayer or of prospective soldier, is naturally most interested. Is the expansion of the Navy sufficiently divorced from old-fashioned ideas which bear little relation to the actual naval problems of to-day? Is the assurance that deliveries of aircraft are "now proceeding satisfactorily," a confession that

there have been grave difficulties up to now? Is the concentration on bombers—68 squadrons as against 30 of fighters—placing too much reliance on deterrence and too little on defence? Does the statement that the new types of anti-aircraft artillery promised in last year's White Paper are "shortly to be issued" mean that London and other cities are still devoid of modern protection?

These are some of the many questions that are inevitably raised in the mind of anybody who reads the White Paper carefully. And on one wide range of subjects it is difficult not to feel the gravest disquiet. This is the vital fourth sector of defence that has aptly been called the Home Front. When the White Paper reaches this sector there is an unmistakable change of tone. Up to that point, all has been figures and facts, couched in the past and the present. But on the Home Front the White Paper can speak only in the future and in the imprecise terms of intentions, aspirations and advice. The very impressiveness of the achievements in re-equipping the fighting forces serves only to throw into the sharper contrast the procrastinations and the obscurities of home defence. Now that so much has been done for the fighting forces, the home front must receive the first share of the Government's energy.

There is thus no lack of material, in the statements and omissions of the White Paper, for those whose duty it is to prod the Government into ever greater efficiency. There is another aspect of the programme, however, which must necessarily cause disquiet. Details of the Air and Army Estimates are given on a later page of *The Economist*, and the White Paper reveals that the total of these two, together with the Navy Estimates, will be no less than £343,250,000, of which £90 millions is to be borrowed.

France Stands Firm

THE French Chamber of Deputies in its great foreign affairs debate last Saturday was clearly concerned with issues far deeper than the surface dissensions of party politics. It was facing realities and delivering upon them the considered verdict of the real mind of the French people. In doing so, it was rendering a service to Great Britain as well as to its own nation. Superficially, the relations between France and Britain since the Armistice have not been particularly happy. Yoked side by side to the Juggernaut car of the Peace Settlement, the two countries have been resolute in double harness. When either has shown an inclination to advance along the strait way leading to genuine pacification, the other has hung back. Only when one of the partners has been bent on mischief has the other failed to resist, just when its perverse recalcitrance might, for once in a way, have done good. On the surface this is a melancholy story; but consolation can be drawn from the deeper moral that, in the last resort, France and Great Britain cannot, and will not, go their separate ways alone. With this moral the Chamber was chiefly concerned.

What passed in the Chamber last Saturday was an event in English political history as well as in French. The issues raised in the House of Commons earlier in the same week were reconsidered on this occasion on the other side of the Channel, and the same division of political forces revealed itself. The schism between Chamberlainites and Edenites in the Conservative Party in the United Kingdom was mirrored on the French Right in the duel between MM. Flandin and Reynaud. But the French debate was both more enlightening and more encouraging than ours. It was enlightening because the French love clarity as much as we love imprecision. It was encouraging because of the difference in the present constellation of political forces in France and England. The Left parties, being both in coalition and in office, had no temptation to subordinate a larger national and international outlook to the game of scoring

This gross total is £65 millions higher than the comparable figure for the current year, and as £10 millions more is to be borrowed, the increase in the burden on the taxpayer is £55 millions. The Civil Estimates, published last week, showed a net increase of £13.6 millions in comparison with last year's Budget estimate. There is little or no room for savings on the debt services, so that the Chancellor of the Exchequer is faced with the problem of raising nearly £70 millions more in revenue next year than this. This is a formidable task. After making all allowances for the effects of changed taxation, the natural growth in the revenue in the last three years has been £36 millions, £25 millions and £13 millions—in reversed chronological order. This year, it is true, the Chancellor will have the assistance of the first full year of N.D.C. But the gap is too large to be filled by that device; it may be difficult to avoid increases in taxation.

This year's problem, however, is comparatively simple compared with next year's. We are told that there will be a further increase in expenditure. But by that time the revenue may be far less buoyant and N.D.C. will have made its initial contribution. Clearly, re-armament is leading us into a financial maze almost as impenetrable as the diplomatic tangle which gave it birth. Before long, the Government will have to decide whether to propose increased taxation or increased borrowing; and the choice will be neither easy nor politically advantageous. In public finance, as in foreign policy, we seem to be steadily slipping from bad to worse. For the moment there is no escape from the resolute pursuit of our purpose to re-arm. But it is a policy which is playing havoc with our finances. We can only hope that it may end before we begin to sink beneath the burden.

points against their opponents on the domestic political front. Conversely, the parties of the Right, being out of office, and not being provoked by militant tactics on the part of the Left, were able to look at the issues on their merits. M. Reynaud was in a position to criticise and castigate M. Flandin with less reserve than Mr Churchill was constrained to impose on himself in expressing his dissent from Mr Chamberlain. And the contributions made by MM. Delbos and Chautemps gained from their ministerial responsibility the weight that those made by Mr Attlee and Mr Lloyd George lacked.

The upshot of the French debate is that France has made up her mind to pursue Mr Eden's policy and not Mr Chamberlain's, and that this decision has the support of all parties from the Socialists to the Right Centre inclusive—with a possibility that the Communists, and even the extreme Right, may come into line as well.

The conspicuous features of Saturday's debate were, on the one hand, M. Flandin's failure to attract much support for his views and, on the other, the striking consensus between M. Reynaud and the spokesmen of the Government. M. Flandin showed symptoms of not having quite the courage of his recently expressed convictions. Confronted with his fellow-deputies, he did not venture to advocate his policy of withdrawing behind the Maginot Line, and leaving Europe to Hitler, as boldly as he has been stating it in the British Press. He took refuge in recriminations over past history, and in personal attacks on MM. Blum, Eden and Chautemps. It was not M. Flandin's views but M. Reynaud's which evidently appealed to the Right Centre, and the agreement between Government and Opposition was underlined when M. Chautemps was able to congratulate M. Reynaud on "son magnifique discours si joyeux et français."

The essence of the Chautemps-Reynaud policy—which the Chamber endorsed by 439 votes to 2—is that France

will not "abdicate" or "take her discharge," and the meaning of this has been made perfectly clear. France will not renounce the League of Nations; she will not abandon her allies and protégés in Central and Eastern Europe; in particular, she will not abandon Austria or Czechoslovakia; she will go to war if Czechoslovakia is attacked; she will not denounce the Franco-Soviet Pact; she will not tolerate a German hegemony in the Danube Basin. And she nails her colours to the mast on all these points because she has a clear opinion of her own on the general situation.

Some people, as M. Delbos put it, were preaching a policy of abstention—of falling back on the West; but this was to forget that France had a moral as well as a material patrimony to defend: her respect for her engagements; her consciousness of the solidarity of Europe. If France sent in her resignation, France herself would soon be threatened. It was a most abysmal error to imagine that a country could place itself beyond the reach of cataclysms by isolating itself. On this subject M. Chautemps was as emphatic as his Foreign Minister. He, too, rejected the doctrine that France ought to make a complete reversal of her foreign policy—that she ought to renounce collective security and the Franco-Soviet Pact and seek an entente with the totalitarian Powers. Such a policy of abandonment, he submitted, would have no result but to repudiate the greatness of France without even guaranteeing her security. The resignation of France from her rôle in Europe would lead inevitably to a submission of the small nations to the hegemony of the Fascist Powers, who, thus fortified, would then impose on France conditions of equal severity. As for M. Reynaud, he began by declaring that Germany would find herself mistaken if she was hoping that the debate would result in a reversal of French policy and in a vote for abdication. The choice for France lay between maintaining the balance of power and resigning; and resignation would mean, not peace as some people said, but war. If and when Hitler had made himself master of Europe outside the Maginot Line, he would demand the French colonies, Alsace-Lorraine and a corridor to the Atlantic. In the face of this peril France must stand firm in national unity.

It will be seen that the speakers in this French debate have done a valuable service to the public of both countries. Even M. Flandin has "done his bit" in bringing out into the open the great issues which Mr Chamberlain pro-

fesses not to see. The French evidently believe that they can stand firm without jeopardising their alliance with this country. M. Reynaud declared, in terms, his conviction that, notwithstanding Mr Eden's resignation, there would be no substantial change in British foreign policy; and MM. Chautemps and Delbos obviously hold the same opinion, though the responsibilities of office imposed verbal discretion upon them in Saturday's debate.

At the moment, Mr Chamberlain is concerning himself, not with Central Europe but with Italy; and if his policy is to re-establish the Stresa Front against Germany it is plain from the debate in the Chamber that the French will wish him success and will join him in making the last sacrifice of Ethiopia in order to seal the unholy bargain. Such a triple agreement will be a somewhat ramshackle affair; for the three parties approach it from different motives and with differences of emphasis. Mr Chamberlain will, no doubt, enter on the Italian talks with his eyes chiefly fixed on the state of things in the Mediterranean and its reaction on our strength in the Far East and the distant fields of Empire. Though a successful drive by Germany through Central Europe and the Balkans would ultimately prove a serious threat to British communications and Imperial interests, the danger is a more remote one than the existing friction with Italy. The Duce, though gravely embarrassed by Herr Hitler's rapid moves in Central Europe, will not come down on our side of the fence or use force on the Brenner, but will seek to keep in touch with both sides, will rely on his influence in Berlin to prevent things from going too far for his own comfort, and will use his understanding with Britain, if he gets one, as additional weight to his diplomatic representations.

Thus, England and Italy are in an ambiguous position. What of the third party? France, for her part, will welcome aid from any quarter against a German drive to the South-East. She alone is committed by specific treaty obligations in Central Europe, and her voice is, therefore, the decisive one. Though she has committed grave blunders in the past, she now bases her case on the strong ground of resistance to aggression against free peoples, and M. Delbos now tells us that she will stand firmly to her moral responsibilities. And every obligation of international right, of honour and of self-interest compels us to rally to her side.

Urban Growth and Garden Cities

CIVILISATION, as we know it to-day, is mainly town life. Men crowd into towns to find work and organised amenities lacking in the countryside. Britain, a centre of world commerce and trade and a pioneer in industry, is pre-eminently a country of towns and town-dwellers. The export industries of Welsh and Northern towns have lately declined; but urban concentration proceeds apace near the great distributive regions of the Midlands and the South. Light industries, no longer obliged to settle near their raw materials and able to tap electric power at will, seek out the largest markets.

In 1931, just over half the population of England and Wales lived in towns with more than 50,000 inhabitants; nearly one-fifth lived in towns with over half a million inhabitants; and there were more than 8,000,000 people in Greater London alone. London is the centre of Britain's transport systems by land and sea and the focus of British government, finance and culture. The number of factories in London rose from 25,559 in 1921 to 39,233 in 1936. On the fringes of the city new industries and new housing estates are being established; and of 470 factories opened or extended between 1933 and 1936, over 40 per cent. were set up on the arterial roads leading out of the

capital. The tide of population is receding from the centre of the metropolis only to meet the incoming wave of immigrants in the new industrial districts of Outer London. Smaller cities are similarly swollen, and grave problems of health, transport and administration have arisen.

Indeed, the debit side of urban civilisation has notably grown in recent years, when public and private enterprise have still to cope successfully with the last two generations' legacies of slums and overcrowding. The despoiling of the countryside by urban outgrowths is only one part of the story. Urban growth, carried to extreme lengths, may menace the health of town-dwellers, wear down their nerves by constant and expensive travelling in congested traffic, and allow them little respite for recreation and refreshment in the distant countryside. The services operated by the London Transport Board carry over 250 million passengers annually at workmen's fares, and more than 4,000 millions in all. A rough and ready estimate of the annual cost of traffic delay in Greater London alone puts it at £20 millions. Nearly two-thirds of the families in London County occupy only part of a house originally built for a single family; and, according to the most conservative estimate of Greater London's requirements for fresh air and

recreation, over 60 square miles of additional playing fields and 140 square miles of extra open spaces are needed.

Considerations of health and economy alike demand some solution for the *malaise* of overgrown cities. Existing machinery has so far failed to stem the tide of urbanisation or markedly to mitigate its less welcome consequences. Housing Acts and subsidies have been fully employed simply to abate overcrowding and provide new houses. Town Planning and Ribbon Development Acts have combated chaotic town growth, but with only slight success.

It is frequently contended that little can, in fact, be done to check the growth of urbanisation. But in the last resort population movements are the result of broad changes in the location of industry, and a policy which is profitable for industrialists may be undesirable for the community as a whole. The State, indeed, is already committed to interference with the "natural" growth of industry by tariffs, quotas, subsidies, grants and social legislation; and already the task of improving houses, health and highways in crowded towns has been undertaken. As an alternative, however, to the laborious and expensive policy of remodelling existing cities, increasing attention is now being given to the practicability of persuading industrialists and house-builders to take their enterprises to places away from the immediate fringes of cities, and there to establish communities of reasonable size and protected amenities. Trading estates in the Special Areas and, under private management, in Manchester, at Slough and near London, have already shown how factories can be induced to settle on prepared sites with organised transport, power and market facilities. Letchworth and Welwyn have combined housing development with factories, in order to create towns "designed for healthy living and industry, of a size that makes possible a full measure of social life, but not larger, surrounded by a rural belt." And the paternal housing experiments of industrial firms at Bourneville, New Earswick and Port Sunlight (which celebrated its Jubilee this week) have sought similar objectives.

It is, indeed, largely upon experiments such as these—and the "satellite towns" of Sweden and the United States of America—that the practicability of abating urban congestion by decentralisation largely depends for proof. Housing estates without industries, or industries *minus* housing, merely aggravate transport difficulties; as the experience of Dagenham and Slough and the history of London Transport show only too clearly. The absence of residential plans for workers on the Team Valley, Treforest and Hillingdon Trading Estates, again, threatens somewhat to impair their deserved success. This point, at least,

was clearly realised by the founders of Welwyn and Letchworth, which are well within the orbit of London's markets, but have their own independent social and economic individuality. They are private enterprises, begun under the inspiration of Ebenezer Howard and his disciples. The First Garden City, Limited, founded at Letchworth in 1904, has proved in its 33 years of life that a garden city can be commercially successful—provided that ordinary shareholders are prepared to wait some years for dividends. Welwyn Garden City was started under less favourable conditions, shortly after the war, when land, labour and capital were all costly. Its objectives were more ambitious; for they included the operation of subsidiary enterprises such as retail trading, cottage building, industrial construction and brick-making, as well as the essential services of gas, water and electricity. Financially, the Welwyn company has had a chequered career, but, after two drastic capital reconstructions, it has shared in general trade recovery. Neither Letchworth nor Welwyn has yet succeeded in evolving a corporate life for all classes. Nevertheless, both are notably healthy places, where the wage-earner can live within easy distance of his work without having to make his home in the cramped, dreary streets of the ordinary industrial town.

We may briefly summarise the conclusions suggested by this review of an urgent social and economic problem. A general requirement for reform is the co-ordination of industrial and housing developments; and the pattern of policy, designed to persuade rather than to compel the complementary siting of houses and factories, is the trading estate and the garden city. In a planless way, industry is already being decentralised in regions like Greater London. What is needed is not State control of industrial movements, but rather State provision through local authorities, under Town Planning and other powers, of convenient sites for industrialists with adequate supplies of labour, suitable housing and transport facilities and accessible markets, combined with the encouragement—through voluntary organisations—of the social activities and amenities which distinguish garden cities from soul-less dormitory towns.

It may be that a combination of planned units, self-contained satellite communities (similar to Manchester's developments at Wythenshawe or Aberdeen's Kincorth, and more remote garden cities) will best satisfy the economic needs of the manufacturer, and at the same time rehabilitate the social standards of the community. Our civilisation may well stand or fall in the next few generations by its ability to retain the cultural and commercial advantages of town-life without surrendering the health and freedom of open spaces, gardens, fresh air and the countryside.

Progress in India

SIR JAMES GRIGG, Finance Member of the Government of India, described his latest Budget, which he opened in the Legislative Assembly on February 26th, as a dull one. It was dull only in the sense that it recorded neither any changes in taxation nor any spectacular movements of realised or anticipated revenue or expenditure. In some of its subsidiary aspects, however, notably the provision for defence and the finance of provincial autonomy, it was profoundly interesting. Revised estimates for 1937-38 showed an increase of Rs. 390 lakhs* in revenue and of Rs. 322 lakhs in expenditure; hence Rs. 75 lakhs of the Revenue Reserve Fund of Rs. 184 lakhs, the whole of which had been appropriated in order to show an estimated surplus of Rs. 7 lakhs, would be available to relieve the 1938-39 Budget. Of the increased expenditure, defence services were responsible for Rs. 260 lakhs, the greater

* A lakh of rupees is equivalent to £7,500; 100 lakhs make one crore.

part of which was due to the Waziristan campaign.

In 1938-39, defence is estimated to cost Rs. 4,518 lakhs, slightly more than the original estimate for the current year. A temporary shortage of British troops will be offset by the cost of better rates of pay and conditions of service designed to stimulate recruiting in Great Britain. Some Rs. 85 lakhs are to be spent on mechanising British cavalry and infantry, for which the British Government is providing a special grant of Rs. 80 lakhs, some of which has already been spent. In addition, the remaining balances in the Defence Reserve Fund are to be used to finance improvements in coast defences, the construction of a factory to make India self-sufficient in high explosives, the mechanisation of certain Indian units and other urgent measures. Sir James Grigg disclosed that the British Government had agreed to forgo India's long-standing contribution of £100,000 a year to imperial naval defence on condition that she maintains a sea-going fleet of at least six

modern escort vessels, available to co-operate with the Royal Navy in the defence of India, and that she accepts responsibility for the local defence of Indian ports. The defence relations between India and Great Britain are thus being steadily readjusted to meet changed political and strategic conditions. But difficulties are bound to continue while defence expenditure fills over half the Indian Budget.

The total estimates for 1938-39 are Rs. 8,592 lakhs of revenue (including the residue of the Reserve Fund) and Rs. 8,583 lakhs of expenditure. The Finance Member has had to take into account the trade recession, particularly in the textile industry, which has already caused a distinct falling-off of revenue from customs and excise and from the railways. The latter had a very good year in 1937, their net estimated surplus for the fiscal year being Rs. 283 lakhs. Under the Niemeyer award, this is added to the yield of divisible income tax amounting to Rs. 1,155 lakhs, and of this combined total the Central Government receives Rs. 1,300 lakhs and the provinces Rs. 138 lakhs. The latter's share in 1938-39 is estimated at Rs. 128 lakhs. In addition, the central Budget for 1937-38 has had to bear extra expenditure of Rs. 449 lakhs as a result of the reforms, of which Rs. 251 lakhs is due to the separation of Burma.

It is no mean achievement to have carried through so vast and expensive a constitutional change within the limits of a "dull" Budget, and at the same time to have made available over a million pounds of central revenue for provincial purposes. For 1939-40, the Finance Member forecast a considerably higher yield of income tax as a result of the Income Tax (Amendment) Bill, which he proposed shortly to introduce. But economic conditions seem unlikely to repeat the prosperity of 1937 for a while to come, and lack of revenue will obviously remain a heavy brake on social reform in India. Some of the provincial Governments have increased their own fiscal difficulties by measures of local prohibition, which deprives them of liquor revenue—one of the most striking of current developments is the effort of Bombay, Bihar and the United Provinces to find alternative uses for material formerly used to make liquor, notably through the manufacture of industrial alcohol from molasses. In the circumstances, Congress Governments, as well as others, have been compelled to go slow with economic reform, in the face of severe pressure from their own Left Wing and from peasant agitators. The

peasant movement has apparently gained great momentum during the past year, and is proving embarrassing to Ministers who had conducted "No-Rent" campaigns and similar agitations when in Opposition. The Madras Ministry has introduced a Bill providing for the compulsory liquidation of arrears of interest on agricultural debt and a limitation of such interest to 6 per cent. In the United Provinces a "Five Years' Plan of Rural Reconstruction" has been launched. It rests on the endeavours of 1,200 "field workers" who are engaged at nominal salaries to organise village assemblies, to encourage cottage industries, and generally to improve the life of the villagers.

The dominance of the Right Wing of Congress, which has been displayed in actual provincial administration, has also been proved in the course of the dispute over the refusal of the Governors of Bihar and the United Provinces to release all political prisoners immediately. The Congress, assembled in full session at Haripura, refused to extend the conflict beyond those two provinces, and both Ministries have now returned to office on the basis of a compromise. The Governors will accept the advice of their Ministers on the release of political prisoners provided each case is separately examined. Face has been saved on both sides, but the Ministers have obtained the substance and the Viceroy the shadow; for the latter had insisted that the release of these prisoners was dangerous in any case, and that his and the Governors' responsibility for "peace and tranquillity" overrode that of Ministers for law and order.

Regrettable as was the initial clash, the episode has been a lesson both to British and to Indians of the meaning of responsible government. The future of Indian provincial government under the Act of 1935 seems more assured to-day than ever before, and nothing but good can come of the Indian realisation that, as reactions in the British Press plainly showed, public opinion in Great Britain is anxious to keep faith with India and to test to the fullest degree her capacity for self-government. Only by such slow education of all those concerned can federation and central autonomy be brought to reality. That is the next stage in India's advance towards the place in the world that her size, her numbers, her resources and her ability mark out for her. It has been brought nearer both by the incident of the political prisoners and by the sound central finance once more exemplified in the Finance Member's latest Budget.

The Defence White Paper

The Statement Relating to Defence issued on March 2nd is summarised below.

THE general lines on which it was proposed to expand capacity for the production of armaments were explained in the White Paper of February, 1937. A number of new factories have been brought into production, and others are under construction. Existing factories are working to a high level of output.

It is not to be expected that no setbacks should be encountered in a programme of this magnitude. For example, the full expansion of production necessary to enable the programme to be completed within the time originally contemplated has made demands on the supply of certain materials and on certain types of skilled labour which could not be met without some delay, the more so as it has been the policy to avoid as far as possible interference with the requirements of private industry.

Regarding the task as a whole, it can be said that, while delays and difficulties have been experienced, and deliveries have not in some cases come up to anticipation, progress has on the whole been satisfactory. The difficulties hitherto encountered have been largely met, and the rate of production is now rapidly increasing. The position in regard to raw materials has been kept under continuous survey.

THE NAVY

The speed with which the strength of the Royal Navy is being increased is shown by the following figures of tonnage building at successive dates:—

January 1, 1935	...	...	...	139,345
January 1, 1936	...	...	...	281,925
January 1, 1937	...	...	...	375,740
January 1, 1938	...	...	...	547,014

During the year April, 1938, to March, 1939, some 60 new vessels of all classes are expected to be put into service, representing a total of over 130,000 tons.

The programme of new ships to be laid down in 1938 has been planned in accordance with the principles stated in the preceding White Paper, and will consist of:—

Two capital ships, one aircraft-carrier, four large cruisers, three small cruisers, three submarines, three minelayers, two river gunboats, one destroyer depot ship, one submarine depot ship, one Fleet Air Arm supply and repair ship.

The programme will also include boom defence vessels, tugs, motor torpedo boats, and miscellaneous small craft.

* Inducement for existing firms to expand.

THE ARMY

The accumulation of the necessary war reserves for the Army is proceeding on a large scale. In the production of nearly all the major articles of armament and equipment for which new designs are being adopted the stages of design and development are already ended, or are within sight of completion.

A certain amount of modern equipment, including vehicles, has already been issued to the Territorials.

THE AIR FORCE

The new types of aircraft were for the most part placed in production before the construction and testing of prototypes. This policy, which was deliberately adopted in order to reduce delay to a minimum, has involved certain initial difficulties, but it has enabled new types of aircraft to be delivered to squadrons much earlier than would have been possible under the methods used in the past. The types in question have shown a high degree of performance.

The equipment, including many new and improved types of armament and instruments, has come fully up to expectations, and deliveries are now proceeding satisfactorily. As a further step to ensure maximum production the number of types of aircraft in the Service is being progressively reduced, so that not only can a clear run be obtained in each factory on a single type, but also several factories can be engaged in the production of one type.

The six shadow factories for the manufacture of engines have already begun production. One of the two airframe shadow factories is expected to begin production a few weeks hence and the other later in the year. Other shadow factories for airscrews and carburettors have also started production, and a shadow factory for bombs is on the point of doing so.

WORKS AND PERSONNEL

Good progress has been made with the Army works services for bringing barrack accommodation up to modern standards, and providing the workshops and buildings required for modern mechanised forces, both at home and abroad. A large building programme is also being carried out to provide the new type of accommodation which is necessary for the two Anti-Aircraft Divisions.

The total number of new aerodrome sites acquired since the expansion programme started is 59; of which 30 are now occupied by units.

To keep pace with the growing strength of the Fleet, naval personnel has expanded at a steadily increasing rate. Additions were made to total numbers of approximately 3,000 during the years 1933 and 1934, and of approximately a further 10,000 during the years 1935 and 1936. In the year 1937 an increase of over 10,000 has been planned, the effect over the five years being an expansion of about 25 per cent. In 1938 an increase of 7,000 is in contemplation. Some difficulty has been experienced in the past year in obtaining skilled tradesmen, but the position in this respect is showing most satisfactory improvement.

A number of measures have been taken to facilitate and encourage Army recruiting. These measures fall under two headings: revision of the qualifications for enlistment and improvements in conditions of service. Under the first heading, physical and educational standards have been adjusted to suit the duties of the various arms, and in certain corps the age limit has been raised. Under the second heading there have been increases of ration allowance and of recruits' kit allowance, the improvement of messing and accommodation, the abolition of "holding" for an extra year's service abroad, and the granting of permission to soldiers over 21 years of age to sleep out of barracks. During 1937, 3,600 more recruits were taken than in the previous year.

Last August men serving in Sections A and B of the Army Reserve were invited to rejoin the Colours; up to the end of January some 2,600 had done so.

The year 1937 was a record recruiting year for the Territorial Army, 45,320 recruits being obtained and the strength of all ranks being increased by 17,690.

In the Air Force training facilities have been greatly extended both for pilots and technical personnel, and

further extensions will be made. The number of Service flying training schools has been increased from four to 11, and they have also been relieved entirely of elementary flying training, which is now carried out at 13 civil flying schools. Since April, 1935, approximately 4,500 candidates have been accepted for training as pilots, and 40,000 airmen (including 6,300 apprentices) mostly for training in skilled trades, as compared with a typical pre-expansion entry of approximately 300 pilots and 1,600 airmen a year.

The Royal Air Force Volunteer Reserve, which was recently established to create a reserve of pilots and other personnel, is working very satisfactorily and will be further extended. The estimated pilot entry for the year April, 1937-March, 1938, was 800, but this programme has already been exceeded, and over 1,000 entrants for the pilot reserve have been accepted since April, 1937.

Detailed plans are being worked out by the Admiralty and Air Ministry to give effect to the decision taken in July, 1937, for the transfer to the Admiralty of the administrative control of the Fleet Air Arm.

Of the four new infantry battalions and two new Army tank battalions referred to in the White Paper of February, 1937, two infantry battalions and one tank battalion have been formed, and very satisfactory progress made in building them up to establishment. The Mobile Division is now in being as a formation, and will train as such this year.

In the process of building up an adequate home defence Air Force, the Metropolitan strength was raised during the past year to 123 squadrons; the corresponding number in 1934 was 52 squadrons. The present force comprises 68 bomber squadrons, 30 fighter squadrons, 15 squadrons of general reconnaissance aircraft and torpedo bombers, and 10 Army Co-operation squadrons.

GROUND DEFENCE

The development of active ground defence against air attack has continued throughout the year. More units have been converted to form part of the expanded second Anti-Aircraft Division, and others have been converted and reorganised for Coast Defence purposes. Between April and December, 1937, the two Anti-Aircraft Divisions increased their strength by 345 officers and over 9,000 other ranks. The new types of weapons and equipment to which reference was made last year will shortly be issued.

A successful start has been made with a balloon barrage scheme, most of the material for which has already been delivered. Sufficient regular personnel have been fully trained to enable them to supervise and train in their turn the auxiliary personnel who will be primarily responsible for manning the barrage. Recruiting of the auxiliary personnel is expected to start in May.

As regards the system of organisation, the Air Ministry is responsible for the air defence scheme as a whole, and the anti-aircraft units of the Territorial Army, which provide the gun and searchlight defences, come directly under the Air Officer Commanding-in-Chief, Fighter Command, for operations in war and combined training in peace.

The measures for the protection of the civilian population against the consequences of air raids have been taken an important stage forward by the Air Raid Precautions Act, 1937, under which local authorities will discharge the duty of preparing comprehensive schemes for the purpose, with substantial financial assistance from the Exchequer.

The local authorities are required to provide for the instruction of the public, the enrolment and instruction of voluntary personnel for air-raid wardens, first-aid parties, first-aid posts, etc., arrangements to deal with the dangers of poisonous gases, a survey of accommodation locally available which could be used, with adaptation where necessary, for public shelters, the organisation of the hospital services for casualties, the organisation of emergency fire services, co-ordination with public utility undertakings, lighting restriction and warning systems, as well as the preparation of plans on which the Secretary of State could, if the emergency arose, give directions as to evacuation.

A general training school for Air Raid Precaution Officers of local authorities is being opened in London. About 25 to 30 officers will attend each course, which will last between two and three weeks. The two schools for anti-gas measures are now fully in operation and a course for

superintending instructors in the measures for dealing with incendiary bombs is also beginning.

A large proportion of the gas respirators required to supply the whole civilian population is already available, and the balance will have been obtained by the end of this year. Similarly, the supply of protective clothing for volunteers who will be actively engaged in the schemes proceeds regularly, and arrangements are being made for its partial distribution to local authorities.

The Home Office, working in conjunction with the Office of Works and the Scottish Office, is responsible for the design, production, and issue of the equipment for the use of the local authorities as their schemes develop. As the result of co-operation with various manufacturers, orders have already been placed for about 2,500 light trailers; these are fire pumps coupled up to an engine and mounted on a light chassis which can be towed by an ordinary motor car. In addition, orders have been placed for 200 trailer machines of larger pumping capacity as patrol vehicles for areas of heavier fire risk. Large-scale production of this type will be in progress this year.

Further experiments have led to orders for five types of heavier duty machines primarily for station work—i.e., fighting conflagrations.

Supplementary to the military plans for the defence of trade and the protection of important points against air attack, the maintenance of adequate supplies of food and

feeding stuffs, including a proper system of control and distribution, has occupied a prominent place in the work.

EXPENDITURE

In the White Paper presented to Parliament in February, 1937, it was stated that, taking the programme as it then stood, it would be imprudent to contemplate a total expenditure on defence during the next five years of much less than £1,500,000,000.

Estimates for 1937-38 provided for a total expenditure by the three Defence Departments of £278,250,000, of which £80,000,000 was to be met by borrowing. In addition, about £2,250,000 was provided for air raid precautions schemes.

For the year 1938-39 provision is made in the Estimates of the three Defence Departments for expenditure amounting to £343,250,000, of which it is proposed to meet £90,000,000 by borrowing. In addition, nearly £8,500,000 is provided for air raid precautions services.

Present indications are that the defence programmes now in hand are likely to involve defence expenditure in 1939 in excess of the provision made in the Estimates for 1938.

Even on the assumption that 1939, as now seems probable, will be the peak year of defence expenditure, the total expenditure on defence over the five financial years 1937-41 will exceed the sum of £1,500,000,000 mentioned in the White Paper of February, 1937.

Topics of the Week

Lord Halifax at the Foreign Office.—The appointment of Lord Halifax as Secretary of State for Foreign Affairs has been greeted by loud protest from the Labour Party against the appointment of a member of the House of Lords to take charge of what is now the most important and most criticised Department. A debate on the matter took place on Monday evening in the House of Commons. It is, in truth, an unfortunate situation that the Foreign Secretary should have his seat in a House where the Opposition is very inadequately represented, and that questions on foreign affairs in the House of Commons should be answered either by the Under-Secretary, whose authority is restricted, or by the Prime Minister, who is not in constant contact with the detailed work of the Foreign Office. The debate revealed a general agreement on all sides that, other things being equal, it was highly desirable for the Foreign Secretary to sit in the Commons. But there was also a very general agreement that, the personnel and the policy of the Government being what they are, Lord Halifax is the best available person for the post. Parliament has indeed accepted the change from Mr Eden to Lord Halifax more quietly than could have been expected before it took place. This does not mean that there is any lack of support for the position which Mr Eden has taken up. On the contrary, it is being made clear from every corner of the country that there is a very large body of opinion of all parties which takes his side of the controversy. But there is also recognition that it is not in the country's interest to embarrass the Government in the very delicate and difficult task that they have undertaken of reaching an agreement with Signor Mussolini.

It must also be recorded that much of the opposition to the Government's policy which might have showed itself in votes and speeches has been driven into silence by the clumsy tactics of the Labour Party, who have framed their indictment, both inside and outside Parliament, in terms calculated to frighten rather than to attract the large section of middle opinion which is disquieted by Mr Chamberlain's policy without going as far as to believe that the Labour Party are heaven-sent diplomatists. This dissatisfaction with Labour tactics has already led to the resignation from the party of Lord Arnold, who was a member of both the Labour Governments, and it is apparent that the cleavage of opinion on foreign affairs is not confined to any

one party. Success in the task that the Government have undertaken would, of course, rally a large section of the public to Mr Chamberlain's thesis, and in pursuit of this aim the Government are pressing on with the preparations for conversations with Italy. Lord Perth, the British Ambassador in Rome, has been in London to receive his instructions. Nothing definite is apparently known of the terms which Signor Mussolini will both demand and concede, but it has been most emphatically denied that he is seeking a share in the control of the Suez Canal, and the Non-Intervention Committee is passing through one of its recurrent phases of making substantial progress towards the acceptance of the British plan for the withdrawal of volunteers. There is thus every reason to believe, until evidence to the contrary is produced, that both the British and Italian Governments are anxious for an agreement, and the hope will be universally expressed in this country that a genuine and worth-while understanding may be achieved. There has never been much disagreement on the desirability of such an accord, but only on the methods and possibilities of achieving it. Success would therefore be welcomed. But failure would be followed by a dual crisis both in the affairs of Europe and in those of the British Conservative Party.

Mr Eden and Lord Cranborne.—Mr Eden addressed his constituents at Leamington on Friday last, and Lord Cranborne his at Weymouth next day. Both speakers struck the same note and made the same points. The two ex-Ministers combined great self-restraint and public spirit with an equally marked confidence in the correctness of their judgment and the rightness of their action. Each of them dealt with the minor as well as the major question at issue. On the minor question they both reaffirmed emphatically their own conviction (reached in the light of the full evidence at their disposal) that the Italian invitation to negotiate had been accompanied by something of the nature of a threat of "now or never." On the major question—whether it was good policy to enter into negotiations with Signor Mussolini unconditionally, without asking for a previous fulfilment of undertakings already given—they were both equally emphatic. And their case is particularly impressive in the present context, for it is, after all, a case which the champions of the old diplomacy have never tired of making against the post-war tech-

nique of convening general conferences with an unlimited agenda. It was, in fact, nothing but the orthodox demand for "adequate diplomatic preparation" that Mr Chamberlain scouted as an indignity to which no self-respecting Great Power could be expected to submit. Lord Cranborne made it clear that he and Mr Eden had been perfectly ready to see unofficial exploratory conversations with Count Grandi continue. Their point was that the official conversations ought not to begin until existing Italian pledges in the matter of withdrawing troops from Spain had been implemented—*pari passu* with the implementation of the corresponding pledges of other Powers.

As Mr Eden put it, the course that the Government had chosen was an indication of the sincerity of their desire to reach an agreement, but it was not necessarily an indication of their wise judgment in international affairs. It was possible, he submitted, to stand firm and obtain the same results, if they were there to be obtained, without the risks attendant on the present course. Was it to be agreement when you could get it negotiated on a solid basis? Or was it to be agreement if you could get it, regardless of the basis? Mr Chamberlain's course was, as Lord Cranborne put it, to condone existing breaches of obligations and so to strike a further blow at the whole structure of international confidence. And on this showing Lord Cranborne reaffirmed his own, and Mr Eden's, opinion that the issue was a fundamental one. The verdict of the country as a whole, if it could be consulted, would doubtless be the same. Perhaps Mr Chamberlain's knowledge that he will have to justify himself not merely to his own supporters but also to Mr Eden and the great mass of people who think with him, will serve as a salutary obstacle to any headlong progress along the dangerous road that the Prime Minister has chosen to take.

Climax in the Irish Talks.—Mr de Valera, after spending last week-end in Dublin, returned on Wednesday to resume, apparently for the last time, his talks with British Ministers in London. Trade relations have had first place in these later discussions, and the hopes of a comprehensive settlement which animated both sides at an earlier stage have faded. Mr de Valera himself remarked on his return to Ireland last week that such a settlement—"the only one that would have world significance"—seemed now unattainable. The fact that inability to proceed on the larger issues that divide the two countries has not prevented progress towards at least a trade agreement is itself a welcome victory for common-sense. But it is difficult to avoid the reflection that if Mr Chamberlain could spare for Ireland a little of the optimistic zeal that he has lent to the chance of a settlement with Italy he might be rewarded with a far greater return in strategic and economic advantage, and in friendship that would stand the test of time.

Another Beveridge Report.—Once more the Unemployment Insurance Statutory Committee has reported that there is a true surplus in the Unemployment Fund; and once more the Minister of Labour has accepted the Commission's recommendations for increased benefits. The balance in the Fund on December 31st last was £60,379,000. The Committee estimates that the reserve necessary to meet the losses of the Fund in the depression half of the cycle is £52,963,000. The surplus is thus £7,416,000. In addition, the Committee proposes to use its new powers to pay off £20,000,000 of its debt to the Treasury which will yield a net annual saving in interest of £500,000. These sums will pay an extra shilling a week to the wives or adult dependants of insured unemployed and also to extend the period of benefit. The Committee also finds that the agricultural scheme is accumulating a surplus and accordingly recommends both reductions in contributions and increases in benefits. These findings are based on the usual authoritative survey of economic prospects. The Committee recognises that there was a definite change in the trend of unemployment in the last quarter of 1937. But they agree with the view of the Committee on Economic Information of the Economic Advisory Council that "the

probabilities are against the recession becoming a depression in 1938 or even in 1939." In the longer period, they once more revise downward their estimate of the future average unemployment percentage over the period of a complete trade cycle. When the Act was passed in 1934, the balancing point of the Fund was assumed to be 18.1 per cent. It has now been reduced to 15.1 per cent. Hitherto the Committee's optimism has always been more than justified by the course of events. Whether its luck will hold as well in the downward phase of the trade cycle as during the period of recovery remains to be seen. But though the testing time of the Fund's solvency is approaching, it still seems to be some way off.

Trinidad Report Debated.—On the Colonial Office vote, last Monday, the Opposition raised the matter of the Trinidad Commission of Inquiry. A good deal of time was spent, rather unfortunately, in debating the question of the Governor's resignation, and Labour members accused the Secretary of State of having dismissed him for his liberal attitude towards the rioters and their grievances. Mr Ormsby-Gore made it clear that no such charge could be justified; a Governor of stronger health and firmer decision was obviously now required. On the major practical issue the Secretary of State was reassuring. He had given general instructions to the new Governor to carry out the Commission's recommendations. The medical department in the colony would be radically improved, and a labour department was being organised. The Government had appointed an adviser to the Colonial Office on labour questions, who would visit Trinidad immediately after his return from the Rhodesian copperfields. The whole episode has been profoundly disturbing to our complacency over British colonial administration. It suggests, first, that parliamentary vigilance should be intensified, and, secondly, that there is a deal of dead wood in the colonial service. Bureaucratic apathy and inertia must share the blame with avaricious commercial exploitation for the unhappy conditions in Trinidad, which, it is generally hoped, will now be corrected.

Domestic Affairs.—While the substitution of Lord Halifax for Mr Eden at the Foreign Office and Monday's discussion of the disturbances in Trinidad last June again largely focused attention on overseas events, home topics in the past week have commanded more Parliamentary interest than for some time past. The appearance of a batch of Service Estimates and a White Paper on re-armament (summarised on page 489) evoked the shadow of the forthcoming Budget and rising expenditure. In the second-reading debate on the Government's proposal to decontrol the rents of all houses with a rateable value of £35 a year in London and Scotland, and £20 elsewhere, there was a clear-cut division of opinion. Sir Kingsley Wood argued that there was no longer any serious shortage of this type of house. The Labour Opposition contended that there was, and professed no confidence in the Government's policy to secure low rents for cheap houses by free competition between builders. Mr Tom Johnston claimed that the effect of the Bill was to provide the machinery whereby the rents of 450,000 families could be raised; and it was at least clear from the discussion that the extent and tempo of the policy of decontrol must depend upon exact inquiry into the state of housing supply, such as the Government propose to undertake through a Committee before 1942. The time taken in the discussion of subjects like rent restriction and hire purchase is well spent; but members heard with regret the Prime Minister's announcement that there would be no opportunity to introduce the long-awaited and controversial Electricity Bill this Session, in view of the pressure of foreign affairs, finance and films upon Parliament's time.

Hire Purchase.—March opened in Parliament with the successful passage of Miss Ellen Wilkinson's Hire Purchase Bill through Standing Committee. So far, this salutary measure, designed to eradicate practices which bear unjustly upon hirers whose limited means compel

them to secure many of the amenities of living through the widespread system of deferred payments, has surmounted the obstacles of private member procedure. Although more opposition has been forthcoming from the trade than at one time seemed likely, the Bill has the support of the Hire Purchase Association, whose concern for improved standards of commercial behaviour has been notably demonstrated. Miss Wilkinson has enjoyed the assistance of the Attorney General, in addition to the general backing of public opinion and the specific endorsement of her proposals by judges whose daily contact with hire-purchase cases has revealed the evil effects of disreputable practices. If the Bill becomes law, it will no longer be legally possible for firms to "snatch back" hired goods after a third of the instalments has been paid, without recourse to a county court. All contracts must state explicitly the cash as well as the hire-purchase price of the goods hired; and hirers will be permitted to surrender the goods and end their obligations on payment of a proportion of the agreed price varying with the length of time for which the contract has already run. Discussion and amendment in committee have improved the Bill, and its appearance on the Statute Book will be the occasion for merited gratitude.

Schuschnigg Himself Again.—At a time when there is an unusual dearth of statesmen with will-power, Austria has shown herself capable of providing one such statesman for herself as well as one for her sister—and antagonist—the Reich. Flushed with repeated triumphs over Frenchmen, Englishmen and Poles, not to speak of Germans in the Reich, Herr Hitler has come up at last against an Austrian Bundeskanzler who has the will to fight. According to precedent, there ought now to be in progress a Nazi landslide in Austria as there was in the South-German states whose Governments talked so bravely up till the moment when they were *gleichgeschaltet* in 1933. But Dr von Schuschnigg—as those who know him might have guessed—is not of the stuff to provide one of Herr Hitler's obligatory half-yearly triumphs. He gave his interpretation of the Berchtesgaden agreement in a speech at Vienna on Thursday of last week. His theme was that Austria's interpretation of her duty as a German state would be to keep her own end up *vis-à-vis* the Reich; and he gave the Austrian Nazis warning that the letter of the Berchtesgaden agreement represented the spirit in which it was going to be interpreted by him. It had been agreed, he reminded them, that the Austrian Nazis were to enjoy neither support from quarters outside Austria nor toleration for political agitation from the Austrian Government. The Austrian Constitution of 1934 had been recognised by Herr Hitler, once again, as being the law of the land, and the watchword for Austria was now "so far and no farther." He concluded by putting to himself the question "Do you think you can carry through your

programme?" and replying "I not only think; I know I can."

There can thus be no doubt about Dr von Schuschnigg's determination to maintain the independence of his Government and country. But the sequel to his speech in the province of Styria, a south-eastern march of the German-speaking world that has always been a stronghold of Pan-Germanism, has caused doubts about the possibility of his policy to be re-born, despite his own confidence. The Styrian Nazis' retort to the speech was to jam the wireless, to hoist the swastika flag over the town hall of Graz, and to announce a converging march of all the Nazis in the province upon the city. At the weekend Dr von Schuschnigg acted promptly, and vigorously. Troops were sent down in lorries from Vienna, aeroplanes circled over the town, and the Mayor of Graz was dismissed. On Tuesday Dr von Seyss-Inquart, the Nazi Minister of the Interior, visited Graz, ostensibly with the purpose of imposing discipline upon his followers there. But the presence among them of Herr Hitler's nominee served only to intoxicate the Styrian Nazis, and they paraded before Dr von Seyss-Inquart in flagrant breach of his own instructions. Since then he has been in conference with the local Nazi leaders, one of whom has interpreted the Government's views as permitting the use of the swastika and the Hitler salute in private. It is clearly not going to be an easy business for Dr von Seyss-Inquart to control his followers, or for Dr von Schuschnigg to control Dr von Seyss-Inquart.

Chamber and Senate in France.—In spite of the remarkable decisiveness and unanimity that characterised the debate on foreign policy last Saturday, this week has been an anxious one for M. Chautemps' Government. It looked for a day or two as though, at a moment when, of all moments, union and stability in France were of vital importance, the Government might be forced into resignation by a deadlock between Chamber and Senate over the purely domestic question of the Labour Arbitration Bill. A hard-driven Premier had to pass from a Saturday spent on a crucial debate on foreign affairs to a Sunday of wrestling with the Senate over the text of this piece of draft domestic legislation. In spite of his appeals to the Senate to refrain from making any drastic amendment of the text which the Chamber had sent up to it, the Senate did reject an important clause providing that the documentary evidence relating to the ability of employers to meet increases in wages owing to rises in the cost of living must be shown to the two arbitrators representing Capital and Labour respectively, as well as to the neutral arbitrator whom the Bill appoints to deal with this question. This might have involved the opening of a firm's books to the trade unions. But if the Government accepted the Senate's amendment it would be abandoning a compromise at which it had arrived in laborious negotiations with the

Confédération Générale du Travail. Accordingly, on Monday, the Chamber rejected all but a trifling residue of the amendments that the Senate had made on Sunday, and on Tuesday it went still further in the direction of restoring its own original text—with M. Chautemps now vainly imploring the Chamber, in turn, to leave the Senate some chance of saving its face. On Wednesday the Chamber did show some consideration for the Senate's susceptibilities, and the omens now point to an agreement.

Dictators' Justice.—Both the German and the Russian dictators have this week demonstrated their contempt for the antiquated democratic notion of justice. M. Stalin's latest "treason trial" eclipses all its predecessors in the rank and past services of the accused, who include M. Rykov, a former Prime Minister of the Soviet Union, and M. Krestinsky, who preceded M. Stalin himself in the key-post of Secretary of the Communist Party. But otherwise the trial has followed the familiar pattern. There has been the same series of utterly unbelievable accusations of continued and deliberate treachery to the Soviet State. There has been, with one exception, the usual monotonous record of pleas of "Guilty." The exception was M. Krestinsky, who confessed to his crimes in prison, but retracted his confession in open court. Such a refusal to abide by the rules of the game was obviously disconcerting to the Public Prosecutor, as it clearly indicated the existence of wreckers in the Commissariat of Justice, and it is not surprising that within twenty-four hours M. Krestinsky was brought to see the danger in which his selfish action was placing his accuser and that he accordingly retracted his retraction. What internal purpose these trials serve is, presumably, M. Stalin's business. But outside the Russian borders they serve only to sicken and disgust the friends of Russia and delight her enemies. By comparison, the treatment of Dr Niemöller by the Nazis is almost gentle. The pastor was sentenced by the court of law before which he appeared to a sentence of seven months' honourable confinement and to a fine of £25, both of which were considered as cancelled by his imprisonment before trial, and to a further fine of £75. But he was no sooner set free by the law than he was arrested by the police, and the latest news is that he is to be sent to a concentration camp. Thus the Nazis allow the formality of a fair trial, they allow their prisoners to plead not guilty, and they do not shoot everybody who falls foul of the party. But these are minor differences compared with the negative justice under either regime.

Japan's Three Fronts.—Japan's war continues on three fronts, of which only one involves actual shooting. The battle for the Lunghai Railway continues. The Japanese regularly report great victories and the rout of their opponents, but the only result of these advances seems to be to give them more territory to occupy and longer communications to defend against the growing threat of Chinese guerrillas. In the East, where two Japanese armies are converging from north and south on Suchow, progress is slow. The first flank attack down the Peiping-Hankow railway has also been held up and another flank attack still further to the west in Shansi has been developed. The Chinese regular armies are being pressed back to the Yellow River, but the Japanese have not yet reached the vital Lunghai Railway. This progress must be gallingly slow to those sober minds in Japan who realise that it is not a contest between the Japanese and Chinese armies so much as a race against time before the effort to swallow China overstrains Japan's capacities. The pressure from the Army for a totalitarian mobilisation of the nation is increasing, but so is the civilian resistance, and the Government is having a rough time in the Diet with its National Mobilisation Bill. The third front is the foreign reputation of Japan, and there has been a sharp reminder that here too Japan is steadily losing ground, in the shape of a further American protest against the treatment of American nationals by the Japanese Army. With every advance of the Japanese Army, the difficulties of the country increase.

The Air Estimates.—The Estimates of the Air Ministry for 1938-1939 show another large increase in expenditure. The gross total is £111,111,502, or £22,913,400 more than last year. This gross total, however, is reduced in several ways before the net figure is arrived at. Although the decision has been taken to transfer the Fleet Air Arm entirely to the Admiralty, the change cannot be effected this year, and there is consequently a grant of £5.7 millions from the Navy Estimate in reduction of the cost of the R.A.F. Other appropriations-in-aid amount to £2.3 millions, and no less than £30 millions is to be raised by loan. This leaves a net Estimate to be voted of £73.5 millions, which is £17 millions more than the corresponding figure last year, and includes an item of £780,000 for interest on borrowings. The following table shows the details of the estimate, and also the extent to which the total recently increased:—

	1933	1934	1935	1936	1937 (Estimate)	1938 (Estimate)
Number of effectives	28,470	28,780	35,942	48,583	70,000†	83,000†
Pay, etc., of the Royal Air Force	£000	£000	£000	£000	£000	£000
Quartering stores, supplies and transportation	4,020	4,227	5,025	6,274	8,466	10,175
Technical and warlike stores	1,399	1,456	2,537	3,328	4,476	6,144
Works, buildings and lands	6,953	7,190	11,640	25,342	31,542	42,631
Medical services	1,390	1,820	4,864	10,560	(43,542)*	(60,631)*

	378	368	375	416	482	524
Net expenditure	16,701	17,671	27,515	49,996	56,500 (82,500)*	73,500 (103,500)*

* Including sums to be issued from the Consolidated Fund in accordance with the Defence Loans Act, 1937.
† Maximum number to be borne.

It will be noticed that the total expenditure (deducting the cost of the Fleet Air Arm) will next year be well over six times what it was only five years ago. The Memorandum from the Secretary of State which accompanies the Estimates gives a number of impressive details of this very rapid expansion. The strength of the Metropolitan Air Force has been increased from 52 squadrons in April, 1935, to 123 to-day. Moreover, each squadron to-day is equipped with much more modern machines and backed by much fuller reserves than before.

Lord Swinton's White Paper reveals that in several particulars the process of re-equipping the R.A.F. with modern machines has been slower than was hoped when the programme was planned. These delays are ascribed to the necessity for supplying the jigs and tools necessary for such large production, to changes in design in accordance with far-reaching developments in aeronautical construction, and also to the shortage of draughtsmen and skilled labour. It is stated, however, that re-equipment will be substantially completed during the coming financial year, and that "the new types of aircraft have in general equalled or exceeded the expectations formed of them in the design stage, and the Air Council are satisfied that they bear comparison with any aircraft in production abroad." Lord Swinton also expresses himself as being satisfied with the results of the shadow factory scheme, and new shadow factories are announced for air screws, carburettors and bombs. The White Paper also includes some interesting announcements on the organisation of the R.A.F. The duties of the Air Officer Commanding in Chief have been divided between an Air Officer in command of the Air Striking Force and an Air Officer in command of the Fighter and Army Co-operation Units. This latter officer is also to be in "operational control" of the ground defences of the country, consisting of Anti-Aircraft guns and Searchlights and the units of the Balloon Barrage. In this way the unified command of all sections of the defences of the country against air attack will be achieved. The Estimates, it will be noticed, show increases under almost every head. The single exception is works, buildings and lands, which

is to require £2.2 millions less than last year, but this single reduction in itself demonstrates the progress that has already been achieved with the bulk of the programme. Technical and warlike stores, which is the location covering aircraft and armament, is the largest item, and shows the biggest increase, and the total spent in the coming year under this head will be more than double what it was two years ago. There is a further substantial and welcome increase in the expenditure on civil aviation. The Report of the Cadman Committee on recent allegations into the Air Ministry's civil aviation programme policy is to be published before the Estimates are discussed in the House of Commons, and it is not unlikely that there will be some announcement of alterations in the methods of encouraging the growth of civil aviation.

The Army Estimates.—As with the Estimates for the other fighting services, those for the Army are complicated by the policy of meeting part of the cost from borrowing. The gross total for 1938 is £106,106,500, but of this sum £21,143,000 is to be borrowed (the remainder of the War Office's allocation of this year's borrowings is applied to the Royal Ordnance Factories), so that the net charge upon the revenue is £85,357,000. The details are given in the following table:—

	1933	1934	1935	1936	1937 (Estimate)	1938 (Estimate)
Number of effectives	148,700	149,500	152,200	158,400	168,900	170,000
Pay, etc., of the Army	£'000	£'000	£'000	£'000	£'000	£'000
Territorial Army and Reserve Forces	9,416	9,514	9,440	8,987	10,488	10,819
Medical Services	4,721	4,777	5,055	5,979	7,867	9,775
Educational Establishments	872	910	1,010	1,106	1,035	1,105
Quartering and Movements	785	866	910	944	1,053	1,327
Supplies, Road and Transport	1,205	1,269	1,650	2,358	1,909	2,446
Remounts	3,758	3,851	4,450	4,794	6,005	8,677
Clothing and Stores	4,358	5,153	8,060	14,752	20,368	33,335
Works, Buildings, Lands and Miscellaneous Effective Services	3,427	4,292	4,802	5,991	4,882	8,137
War Office	802	816	852	938	(10,936)*	(15,280)*
Half-Pay, Retired Pay, Pensions, etc.	8,127	8,242	9,368	8,446	8,447	8,541
Net Expenditure ..	37,540	39,692	44,654	55,015†	63,120 (82,174)*	85,357 (106,500)*

* Including sums to be issued from the Consolidated Fund in accordance with the Defence Loans Act, 1937. † Including minor adjustments.

The figures show an all-round expansion, though the largest increase, as might be expected, is under the heading of "warlike stores." The total expenditure on the Army is now almost three times what it was five years ago.

The accompanying Memorandum by the Secretary of State contains a number of interesting details of the progress of the Army during the year. The changes in the War Office which have been so prominently before the public eye are alluded to very briefly, and are said to have been introduced "with the object of ensuring the co-ordination and expediting the dispatch of business." Recruiting has been distinctly better during the past year. The intake of recruits for the financial year just ending has approximated 28,500, compared with 22,800 for the previous year. Nevertheless, the strength of the Regular Army is still 1,200 officers and 22,000 other ranks below establishment, and during the year the number of men leaving the colours will be about 32,000, so that there is plenty of room for further improvement in recruiting. The strength of the Army Reserve will be about 130,000 at the beginning and about 142,000 at the end of the financial year. The figures for the Supplementary Reserve are 25,000 and 30,500, respectively. The Territorial Army now stands at 9,046 officers and 149,797 other ranks, and the number of recruits in the calendar year 1937 was considerably higher than the previous year. The White Paper reports further progress in the mechanisation of the Army. By the end of 1938, of the 15 cavalry regiments on the British Establishments, only 3 will be horsed, and the number of horses on the

establishment is now only 5,205, as compared with nearly 29,000 in 1914. The most important change in organisation announced in the White Paper is the transfer of responsibility for Searchlight units from the Royal Engineers to the Royal Artillery, and the simultaneous reconstitution of the Royal Artillery in two separate branches, one comprising Horse, Field and Medium Units and the other Anti-Aircraft and Coast Defence Artillery and Searchlights. On the problem of the supply of weapons and munitions the White Paper is not explicit, and contents itself with reporting progress in general terms. But the increase in the estimates required for these purposes can be taken as convincing testimony of the extent to which the programme is now getting into its full stride.

Royal Ordnance Factories Estimate.—Following the precedent of last year, the Estimate for the Royal Ordnance Factories has again been issued separately. The details are shown in the following table:—

	1936 Estimate	1937 Estimate	1938 Estimate
Establishments	81	99	118
Wages, etc.	3,135	4,446	6,480
Materials and stores	1,545	2,947	3,768
Machinery obtained by contract	468	2,372	2,114
Works carried out by contract	225	558	757
Works carried out by H.M. Office of Works	25	5,154	6,201
Land	281	280	173
Miscellaneous	118	186	539
Non-effective charges	109	123	127
Deduct appropriations-in-aid	5,987	16,164	20,276
Excess of payments over receipts ...	5,556	15,482*	19,542*
Deduct transfer from supplies suspense account	97	100	50
Vote	333	583	684

* Includes £7,946,000 in 1937 and £8,857,000 in 1938 to be issued from the Consolidated Fund under the Defence Loans Act, 1937.

As was to be expected, most of the items show considerable increases. The sum to be borrowed under the Defence Loans Act will be spent on the construction of new munitions factories, including the conversion of the reserve factories at Hereford and Birtley, and it is evident from the Estimate that the erection of new factories has not yet reached its peak. The sum to be spent in 1938-39 on these items is £8.7 millions, but it is estimated that the further cost of factories already provided for will be £11.2 millions in future years. The bulk of the work of the Royal Ordnance Factories is, of course, undertaken for the three fighting Forces, and the appropriations-in-aid for 1938-39 include £2.1 millions from the Navy, £6.8 millions from the Army, and £1.2 millions from the Air Force, all three sums being considerably in excess of the previous year.

"Nationalisation" of Agriculture

NEW YORK, February 21.—The Farm Act was signed last week, and the Treasury announced a modification of its gold policy. The Farm Act is in effect a re-incarnation of the Agricultural Adjustment Act of 1933, and a continuation of the existing Soil Conservation Act plus certain crop insurance features. It has been thoroughly and laboriously studied, amended, and deliberated in Committee over a long period of weeks. But the absence of real discussion in the Press, where it has been respectively glorified and vilified, has not enlightened the general public, either as to its aims or its methods; and certainly, outside of Congress, there are few who profess an understanding of its intricacies. Its basic provisions are contingent upon a kind of plebiscite, and certain other basic provisions are contingent upon the appropriation of funds, not included in the Act itself.

The Act contemplates the national organisation of agriculture. The producers of five major agricultural commodities—cotton, tobacco, rice, wheat and maize—will be invited to vote as to whether or not they favour the adoption of a quota for their respective products. Unless more than one-third of the votes cast are adverse, the control will be put into effect. There is every reason to believe that no more than a small negative vote will be cast in each case.

Crop Restriction

Quotas will be established by the Secretary of Agriculture, on the basis of acreage to be planted. This acreage is expected to produce a crop of a given magnitude. Cotton, for example, would be allotted an average of about 26 million acres, intended to produce in 1938 a crop of 10,750,000 bales. The acceptance by the cotton plebiscite of the cotton quota principle would not bind any individual; he could accept his own quota, or refuse it. But if he accepts it, he becomes eligible for very tangible benefits; if he refuses, he forfeits all claim to these benefits; and once he has accepted, an evasion of his obligations subjects him to penalties.

The benefits include those now provided under the Soil Conservation Act; but the principal inducement is the promise of a Parity Loan. This loan would be 52 to 75 per cent. of the parity price, when the average price of cotton on August 1st is below 52 per cent. of the parity price, which is about 16 cents a pound. Every agricultural commodity in the United States has a parity price, which is usually the price which would have the same present purchasing power per unit to-day as the average price of that commodity possessed in 1909-1914. The provisions relating to cotton are typical of those covering the other four commodities, except that in

the case of wheat and maize, the principle of the "ever-normal granary" is emphasised; that is, the principle of carrying over the surpluses of large harvests to make up the deficits of short crops.

The intention is to raise and stabilise the prices of basic crops; and the method is the limitation of production. This limitation of production is dependent, in the first instance, upon voluntary co-operation; and, in the second instance, on a complicated system of rewards and penalties. The term "nationalisation of agriculture" is quite accurate, provided it is clearly understood that the whole programme depends upon its acceptance by two-thirds of the producers involved, and that the compulsion exercised takes the form of bounties for compliance rather than penalties for refusals to comply.

Desterilising Gold

On February 14, the Treasury announced what is definitely a new gold policy. Until further notice gold received by the Treasury will be monetised up to \$100 millions a quarter. As domestic production is approximately \$50 millions a quarter, this policy indicates an intention to increase member bank reserves by that amount at least, and by twice that amount at most.

This is not really a drastic departure from the policy of 1937. Last year, it is true, all gold receipts were entered in the Inactive Fund; but at the same time about \$130 millions of reserves were created by open-market purchases, and \$300 millions of inactive gold were released in a single operation in September. These two factors increased member bank reserves in the year by about \$430 millions, while the present programme would distribute approximately the same sum evenly over the year.

The episode illustrates one of the problems of currency management. Every action taken or proposed is instantly labelled "inflationary" or "deflationary," and the new gold policy was dubbed inflationary. The simple statistical fact is that, in the second half of last year, there was a substantial contraction of bank credit, amounting in the reporting member banks to above \$1,000 millions, due initially to a large repayment of brokers' loans and then to a repayment of commercial loans, presumably representing inventory liquidation. It is quite consistent with the general policy of the Reserve System to undertake a "reflation" of this contraction, and the action taken may be regarded as directed toward that end.

Neo-Mercantilism

No one can understand the American economy unless he can appreciate its ideology. There has been a popular revolution against *laissez faire*. The extension of State responsibility has consisted of the revival of pre-*laissez faire* concepts, which roughly are associated with mercantilism. The concept

Germany

Second Thoughts on Austria

BERLIN, March 2.—The belief that recent changes in international affairs were revolutionary and would operate exclusively in the Reich's interests were modified last week. It had seemed that under the Berchtesgaden agreement Austria would speedily become a second Danzig with its international status formally unchanged but with the Nazi party in control. Herr Schuschnigg's speech and other Austrian developments of the week tempered this confidence considerably.

The replacement of Mr Eden by Lord Halifax is no longer treated with unqualified jubilation. True, the promised substitution of British policy of realities for Mr Eden's allegedly "idealistic" and impractical methods is in the line of German political thought. But Germans last week were impressed by the extraordinary vigour in protest of the groups sympathising with Mr Eden. Germans want concessions from Great Britain, at least in the Colonial sphere, and they do not see how Mr Chamberlain can concede them if he is to be opposed simultaneously by Imperialistic Diehards who would surrender nothing British and by "idealists" who will have no truck with dictators.

Dependence on Foreign Food

The final return of the 1937 cereal crop is 22.2 million metric tons, against 21.9 million tons in 1936, and an average of 23.2 million tons (Saar yield estimated) in 1931-36. Bread grains, at 115 million tons, are some 420,000 tons below the 1936 level; but fodder grains have been correspondingly increased. There is likely to be a drastic application of the present regulations against feeding livestock with grain; and there will presumably be heavy imports of cereals (mainly of wheat and maize) in the current year (suggested already in the January trade returns).

Wheat consumption is still rising. In the crop year 1936-37 it was already 400,000 tons higher than in 1933-34. The compulsory cereal deliveries by farmers are stated to have been satisfactory, and owing to imports the stock of wheat is larger than a year ago. A recently published book on "Germany's Supply of Grain in the Event of a Blockade" is pessimistic in view of the shortage even in peace times, which has to be made good by imports. In time of war and blockade the consumption of bread grains would increase, it is stated, by 20 per cent. Land amelioration might ultimately increase the cereals area by 15 per cent., but this work would take decades, and in the meantime more intense mechanisation is suggested.

The industrial situation is unchanged. It is believed that the new and mostly military officials in the reorganised Ministry of Economy favour a policy of large imports of raw materials and foodstuffs. There have been some further cuts in the prices of small metal goods, wire articles and tools, apparently in the agricultural interest. General Loeb, the chief of the General Industrial Department of the Ministry of Economy, has suggested that the home-produced motor-fuels for general consumption will not be entirely satisfactory, and that motor-car manufacturers will have to adapt their engines accordingly.

The average number of persons at work in 1937 (according to the Health Insurance returns) was 19,797,000, of whom 69.4 per cent. were men. The number of hours worked in industry in January was 8.4 per cent. higher than in January, 1936. Coal production in January was 15.9 million tons against 14.9 millions in January, 1937.

Increased Import Surplus

The slackening-off in coal exports is causing some anxiety. Exports in 1937 totalled 38.6 million tons, against 28.6 millions in 1936; but there was a steady decline after August, and in particular to France and Italy, the chief customers. Ingot steel production in January rose to 1.8 million tons, and the output per working day was 7 per cent. higher than in December.

The 1937 balances in trade with all the Continents except Asia show a reversal of the tendency obtaining in the first years of the New Plan towards an approximate equation of

France

Prospects of Peace

PARIS, March 3.—French opinion runs true to the post-war ideals of Geneva and collective security. But the pressing dangers for peace and the social order of ideological blocs and competition in armaments suggest that nothing must be rejected *a priori* which may bring peace and business revival to unquiet Europe. That is the moral of the Chamber's latest vote.

There is too great a distrust in France of the dictatorships in Berlin and Rome for any very considerable hopes to be placed in Mr Chamberlain's attempt to bridge the gulf by agreement. On the other hand, France would be happy to find this scepticism disproved by the course of the Anglo-Italian discussions.

M. Chautemps' Middle Course

Some parliamentary prophets still foresee the formation of a Government of National Union in the near future. Meanwhile, M. Chautemps, with his Popular Front Cabinet, continues to pursue a moderate policy. He has set his face against the more extreme social demands of the Left, and refused to concede the rigid application of sliding scales to relate wages to the cost of living.

His Labour Code was fully endorsed by the Chamber; and it was a most inoffensive measure which he then put before the Senate—to meet with considerable opposition. Outside the legislative assemblies, M. Chautemps' policy has been no less cautious, and a recent demonstration of miners against union instructions to work extra shifts was severely punished. (The social and political implications of the dispute between the Senate and the Chamber over the labour proposals are discussed in a Topic of the Week on page 493.)

Recession in Industry

Although the general atmosphere is calm, however, this country, which only shared very slightly in the recent return of world prosperity, is now feeling the first effects of world recession. Orders in the metal trades are falling off; and the January output of steel, at 623,000 tons, was 55,000 tons lower than in the previous month. Business in the textile industries is declining. The Stock Exchange is completely dead and, in this poor context, several billion francs of public loans will have to be issued shortly to finance increased re-armament.

Nevertheless, fiscal receipts last month showed further improvement. The increase of 725 million francs in the yield of taxation between January, 1937, and January, 1938, is mainly due to the higher proceeds of the turnover tax, owing to higher prices. Indirect taxes, however, registered a further decline, which suggests that there is no increase in consumption. Revenue in January was 4,128 million francs, of which 3,946 millions were ordinary receipts, against 3,117 millions in January, 1937.

Prices have moved as follows in recent weeks:—

	WHOLESALE PRICES					
	Jan. 22nd	Jan. 29th	Feb. 5th	Feb. 12th	Feb. 19th	Feb. 26th
General index	611	612	610	607	611	613
Domestic products	653	653	652	651	654	656
Imported products	535	537	534	528	535	538
Foodstuffs	622	620	617	617	622	624
Industrial products	601	605	603	599	603	605

The general index has thus remained relatively stable while showing a very slight tendency to rise, which is accounted for by small upward movements in each of the component indices.

The number of persons out of work on February 19th was 409,770, against 409,776 in the previous week and 415,580 a year ago.

imports and exports. This was upset in 1937 by heavy imports of raw materials and foodstuffs, which necessarily came in great measure from overseas. Of the absolute increase in exports much the greater part went to Europe, though there was a relatively larger increase in exports to overseas countries.

The export surplus in trade with Europe rose from Rm. 851 millions in 1936 to Rm. 1,055 millions in 1937. The import surplus in trade with all overseas countries rose from Rm. 293 to Rm. 598 millions; in trade with America from Rm. 117 to Rm. 356 millions; in trade with Africa from Rm. 134 to Rm. 197 millions; and in trade with Australia from Rm. 14 to Rm. 46 millions. In trade with Asia, on the other hand, there was an export surplus of Rm. 1 million, against an import surplus of Rm. 28 millions in 1936. Imports from Great Britain were valued at Rm. 307 millions, against Rm. 264 millions in 1936, and exports to Great Britain at Rm. 432 millions against Rm. 405 millions.

Reich revenue from taxes in the first ten months of the financial year was Rm. 11,584 millions against Rm. 9,553 millions in the same months of 1936-37. Some Rm. 400 millions of the increase came from Customs and Excise.

This is a reaction to the Reich Loan. The January bank balance sheets show the same influence. Deposits fell sharply; and the leading banks sold bills heavily. The balances of all banks covered by the return declined by no less than Rm. 805 millions.

Switzerland

Increased Rhine Traffic

GENEVA, February 21.—In 1937 some 2,960,265 tons of goods passed through the Swiss port of Basle, which was a new record and 30 per cent. more than in 1936. Exports amounted to 219,025 tons, or 7.4 per cent. of the total traffic, compared with 4.9 per cent. in 1936 and 3.1 per cent. in 1935. Owing to improvements made in the bed of the Rhine, the river waterway is now more used than the Rhone-Rhine canal, which carried 77 per cent. of the traffic in 1932, 42.5 per cent. in 1936 and 34.5 per cent. in 1937. The Rhine brings coal to Switzerland from England, France, Poland (via Danzig) and the Ruhr, sugar from Czechoslovakia, and wheat from Hungary and Eastern Europe.

The Swiss fleet, no longer a joke, consists of 1,306 one-thousand ton barges and a number of tugs. The lack of space for these ships made it necessary to build new dock basins, and a new port is being constructed at Birsfelden, near Basle. Some 41 million francs have been invested in the port of Basle and its equipment, and it is estimated that the import of goods through Basle represents a saving of 15 to 20 million francs annually on freight.

The devaluation of the Swiss currency caused a revival in the tourist industry. During the past year, the 5,500 hotels of Switzerland received 3,508,000 guests, of whom 1,600,000 came from abroad, compared with 2,952,000 and 1,156,000 in 1936. Some 300,000 foreign motor cars entered Switzerland in 1937, against 144,000 in 1936. The increase in tourism was in part responsible for the improved earnings of the Federal Railways.

Railway Receipts and Indebtedness

The Swiss Federal Railways carried about 114,817,000 passengers and 15,795,000 tons of goods, against 106,933,000 and 12,804,000, respectively, in 1936. Receipts amounted to 335,853,000 francs, compared with 290,366,000 francs in the previous year; and the surplus in 1937 was 124 million francs, against 78 millions in 1936. The railways have a debt of about 3,500 millions, and interest and other obligations amount to 146 millions a year, so that the real deficit for 1937 will be nearly 22 millions, compared with 68 millions in 1936.

The board of directors and the Federal Government intend to reduce the debt, and Parliament has included in the Federal Budget for 1938 a sum of 43 million francs to be paid into a special reserve fund for the redemption of railway debt. The finances of the Federal Railways will not be sound until the interest on the debt and other engagements have been reduced by about 40 million francs a year to make up for the annual deficit on working. This cannot be achieved for many years, and only on the condition that traffic receipts do not decline. The taxpayer will be called upon to contribute 1½ million francs to restore the railways'

finances; but effective railway reorganisation is held up by party quarrels.

Room for More Motor Cars

Sales at the fifteenth International Motor Show at Geneva, which closed on February 20th, are reported to have been slightly higher than last year. The Swiss motor car market is not overcrowded. At the end of 1936, there were 118,319 motor vehicles, including 69,098 motor cars, 1,515 charabancs, 18,454 motor lorries and 28,639 motor cycles; these figures were slightly increased during 1937, but did not reach the 1931 total of 131,208 motor vehicles, the highest figure yet recorded. Thus there is a potential market for at least another 10,000 motor vehicles. Great Britain had six stands in the motor-car section of the Exhibition out of forty-seven, and nine out of thirty-five in the motor and pedal-cycle section.

The first session of the Permanent Agricultural Committee, convened by the International Labour Office, was held at Geneva from February 7th to 15th. The Committee was composed of experts from 22 countries. According to the I.L.O. statistics there are, in the whole world, some 865 million persons "gainfully occupied," and of these no fewer than 550 millions are employed in agriculture.

[In the letter from Switzerland dated December 26th, and published in *The Economist* on January 15th, the final sentence of the first paragraph should have read "The Federal Government has been authorised to levy the Extraordinary Crisis Tax for another year (a Commission is examining the question whether this tax should be prolonged for a further three years), and to increase slightly the rates of tax on higher incomes.—ED., Econ.]

Danzig

Gdynia-Danzig Rivalry

DANZIG, February 2.—According to Polish railway statistics there was a marked increase in the trade of both Danzig and Gdynia in 1937. Over 1.27 million tons were imported through Danzig, compared with 0.73 million in 1936, and 5.55 million tons were exported, against 4.57 millions. Gdynian imports were nearly 1.8 million tons, against 1.4 millions in 1936, and exports 7.21 million tons, against 6.33 millions. Gdynia maintains a marked lead, but Danzig trade is growing considerably faster.

At first sight, therefore, it would seem that Danzig's continual complaints about Polish mercantilism and the severe effects of Gdynian competition were unfounded. The Danzig figures are heavily weighted, however, by metal ores and coal. Imports, excluding metal ores amounting to 1.08 million tons in 1937 against 604,000 in 1936, increased by only 88,000 tons in 1937; and exports, excluding coal, which rose from 2.38 million tons in 1936 to 3.56 millions, in fact decreased by over 197,000 tons. Gdynia's exports, on the other hand, excluding coal which in 1937 amounted to 788,000 tons more than Danzig's total exports, rose by over 55,000 tons; and Gdynia's imports, excluding metal ores, which increased by only 4.6 per cent., rose by 1.27 million tons.

Valuable goods tend to be diverted via Gdynia, and Danzig's trade is artificially maintained by bulky goods of little value. Danzig's trade was also adversely affected by the poor state of Poland's grain trade, due to export restrictions on rye and fodder. The export of grain via Danzig fell from 626,000 tons to 173,000; but Gdynia's grain trade rose from 2,500 tons to 17,800 tons.

All these railway statistics include transit trade, while the figures of value, issued by the Warsaw Statistical Bureau, exclude transit trade. Comparing the volume in 1936 and 1937, purely Polish traffic through Danzig rose 15.9 per cent. in the case of exports and 52.1 per cent. in imports, compared with Gdynia's increase of 14.2 and 27.1, respectively. Transit traffic alone accounted for 0.2 of Gdynia's increase in tonnage and 9 per cent. of the increase at Danzig.

Ten Years' Decline in Danzig's Trade

During 1937, the value of Gdynia's exports rose from 370 million zlotys to 477 millions, and of imports from 578 million zlotys to 721 millions. The value of Danzig's exports rose from 306 million zlotys to 316 millions, and of imports from 71 millions to 100 millions. The 16.3 per cent. increase in the volume of Gdynia's trade represents an increase in

value of 26.4 per cent., whereas the increase of 19.7 per cent. in the volume of Danzig's trade represents an increase of no more than 10.2 per cent. in value. In the last ten years, while the value of Danzig's trade has fallen from 2,198 million zlotys to 416 millions, that of Gdynia's trade has risen from 158 million zlotys to 1,198 millions.

Herring imports have risen considerably at Gdynia, despite Danzig's superior facilities. Gdynia's coffee imports are twice those of Danzig; Gdynia's cocoa and tea imports are more than twice as big; and Gdynia has now a virtual monopoly of cotton, wool, jute, hides, rice and fruit. The steady increase in Gdynia's exports of butter, eggs and bacon is important, even if it does not necessarily show, as Danzig claims it does, that exports are being deliberately concentrated in the Polish port.

Canada

Tariff Policy Criticised

OTTAWA, February 12.—In the House of Commons the Ministry's trade and tariff policy has received considerable attention. Mr Bennett and other Conservatives tried to depict the Government as ready to sacrifice a large part of Canada's valuable trade privileges in the British market to promote a political concordat between Britain and the United States. Ministerial spokesmen replied that all legitimate Canadian interests would be safeguarded in the negotiations, and that the inoculation of the Canadian public with these ungrounded fears was largely responsible for the present recession in business.

From a group of Western Liberals there came sharp criticisms of the Ministry's delay in fulfilling their pledges of drastic tariff reduction. Mr Gordon Ross, a leader of the malcontents, proposed that the three Prairie Provinces should be allowed to create a free trade enclave, as there could otherwise be no recovery of real prosperity for them.

Freedom in French Canada

The Government has been formally petitioned to use the Federal power of disallowance in the case of the notorious "Padlock" Law passed last year by the legislature of Quebec. Under its authority the Quebec police have not only banned "Leftist" meetings and forbidden the publication or circulation of "Leftist" newspapers, but they have also raided the private houses of labour leaders, social workers and others to seize and confiscate literature. During the debate, Mr Woodsworth, the trade union leader, demanded to know why a Liberal Government, which had seen fit to disallow the banking and other legislation of Alberta, could not intervene to safeguard elementary human rights. But during the debate some of the Ministry's French-Canadian supporters gave their blessing to this law. Its nominal author, Mr Duplessis, Prime Minister of Quebec, publicly admitted that the law owed its inspiration to Cardinal Villeneuve, Archbishop of Quebec and Primate of the Roman

Catholic Church for all Canada, who has openly proclaimed that freedom of speech and writing merely means licence for the enemies of the Roman Catholic Church to attack and slander it.

The Government has introduced a bill dealing with the export of hydro-electric power which provides that, while existing licences will not be affected, any new licence can only be obtained by special act of Parliament. Mr C. H. Cahan, who was Secretary of State in the last Conservative Ministry and has been a vigorous critic of the Privy Council and its decisions upon Canadian constitutional cases, has introduced a bill to abolish Canadian appeals to the Privy Council, and a remark made by Mr Lapointe, the Minister of Justice, suggested that the Government may support it. The two Social Crediters in Alberta, recently sentenced to terms of imprisonment for publishing a defamatory pamphlet, have now begun to serve their sentences, despite Mr Aberhart's protest that hard labour for such an offence is unduly severe.

Rising Revenues and Business Caution

Federal revenues for the first ten months of the present fiscal year totalled \$438,065,893, an increase of 66½ million dollars compared with the figure for the same period last year. Ordinary expenditure for this period was 320½ million dollars, a decline of nearly 12 millions. When capital expenditure, the cost of relief, etc., are added, however, total disbursements amount to 414½ millions, an increase of about 9 millions. There is likely to be a nominal surplus for the fiscal year of about 24 million dollars, but this will be wiped out by the deficit on the Canadian National Railway, and various items of special relief expenditure.

The general business index published by the Bureau of Statistics has been relatively stable. Given below are data of three of the major components with comparative figures.

Week Ended	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Feb. 6, 1937	84.73	83.0	122.1	118.9
Jan. 22, 1938	83.1	83.0	95.9	109.8
Jan. 29, 1938	81.60	83.6	95.2	109.2
Feb. 5, 1938	79.94	83.6	100.9	109.6

In business circles a feeling of uncertainty about the outlook and a consequent hesitancy in making heavy commitments is still the dominant mood; but with the advent of milder weather in many parts of Canada, there has been an improvement in certain lines of business—an increased demand for lighter clothing, hardware, farm implements, paint and other commodities, and mounting sales of motors, gasoline and oil.

There is some evidence of price-cutting to sustain the volume of sales. The winter lumber cut is smaller than a year ago, and practically all the newsprint mills have curtailed their operations since the beginning of the year, in an effort to work off the surplus stocks built up by publishers in the last half of 1937. Reductions in the prices of base metals threaten to affect producers' profits, but in general there has been no abatement of mining activity.

Letters to the Editor

Interest Rates and the Treasury

TO THE EDITOR OF THE ECONOMIST

SIR,—There are some points in your interesting article under this heading on which it may be useful for me to comment.

I ought to have given in the first instance the reference to Mr Paish's estimate of the gold purchases in the first quarter of 1937, which is to be found in the issue of *Economica* for last August. Mr Paish's method yielded an estimate for the gold held on March 31, 1937, made before the official figure was available, which was very nearly right. The excess of the gold purchased in the first quarter of 1937, given by his method, over the actual imports of the period might be explained by gold ear-marked at the Bank of France and actually imported later on. If, however, he has attributed to the first quarter of 1937 gold purchased at a previous period, an excess of, say, £30 millions in his estimate will not materially affect my argument, since I gave a very cautious and conservative estimate of the depletion of domestic liquid assets, which had a sufficient margin to cover an even larger error. I do not know why the Treasury should not give quarterly figures. Meanwhile, however, Mr Paish is per-

forming a very useful service by employing the best available method of interpolation, particularly if his efforts result in the authorities being persuaded eventually to supply the actual figures.

A number of critics have seemed to think that the force of my argument is impaired by the fact that, whilst the fall in gilt-edged prices was fairly continuous over the nine months, about three-quarters of it occurred in the first three months. But I should not have expected a close correlation over very short periods between gilt-edged prices and the liquid resources of the domestic market. In the early part of the year the announcement of the Defence programme, combined with a high level of business activity and some expectations of inflation, led to a rapid discounting of the supposed prospects, which would have proved an over-discounting and have been corrected instead of increased in subsequent months, if it had not been for the further continuous depletion of the liquid resources available to the domestic market.

I do not want to overstate the part played by the Exchange Account. If there had been no influx of hot money and no gold purchases, and the Treasury had nevertheless depleted the liquid resources of the market to the same extent by direct action, the result would have been much the same. But,

in view of various declarations by the Chancellor of the Exchequer, I felt it unlikely that the Treasury were depressing the gilt-edged market on purpose, and more probable that they were led to do so imperceptibly by a complicated train of events, including a new Loan raised long before it was required, the final consequences of which were not fully realised. Thus it seemed worth while to raise an issue of high general importance which will emerge, independently of other events, whenever there are large operations either way by the Exchange Account. Moreover, if it were not for the hidden operations of this Account, the course of events would not be veiled from us until long afterwards.

The available data do not allow an exact quantification of the facts, and the statistical points discussed above are only details compared with what is known and agreed. For I infer from your article that you are in full accord with the main substance of the matter, namely that over the period in question there was a large depletion of the liquid resources of the domestic market, and that this was bound to have a very depressing effect on gilt-edged securities and, to a certain extent, on other securities also, particularly at a time when, as you point out, other influences—which, so far from wishing to neglect, I would wish to emphasise—were increasing the demand for liquidity. Furthermore, as you have previously pointed out, the rather absurd result of a deflation of domestic credit when gold flows in, and a corresponding inflation when it flows out again, will continue to occur, until the technique, apparently pursued at present, is revised. I regard this, the full complications of which I have not attempted to explore either here or in my address to the National Mutual Life Assurance Society, as being to-day the major issue of credit policy.

I am,
Your obedient servant,
J. M. KEYNES.

Roomsbury, W.C.1.

[Reference is made to Mr Keynes's letter in a leading article on page 504 of this issue.—ED., *Econ.*]

Lancashire's Problem

TO THE EDITOR OF THE ECONOMIST

SIR,—Your comment on Mr W. Crossley's letter, in your issue of February 26th, was not, I am sure, intended to convey the impression that cotton spinners have benefited unduly during 1937 at the expense of the rest of the industry; but it is just possible it might be read in that sense by those not familiar with the industry. It is true that a large part of the spinning section is working under voluntary but legally binding price schemes, and that these have helped to stabilise prices; but I think the known facts prove that the Committees concerned have exercised their functions with a full sense of responsibility. During the brief period at the end of 1936 and beginning of 1937, when demand was unusually brisk and prices rose, the increase was most marked for those classes of yarn which were not subject to price control. One section of the trade (medium ring yarns) came under a price scheme late in 1937, and the first action of the Committee was to reduce the ruling margins.

An examination of spinners' balance sheets over the last ten years will show that in very few cases have shareholders received any return on their capital, and that in addition many have had to accept a drastic writing down of their claims. It is true that spinners are now in a position to limit further dissipation of their resources, and it is only natural that they should do so. So long as the present chaotic conditions in the industry generally continue, spinners must obtain the best terms possible in the circumstances for their services. Their experience of the last ten years has proved that their sacrifices have been merely frittered away without benefit to the industry generally.

If measures are taken to strengthen the organisation as a whole, spinners will be glad to play their full part in efforts to improve the position of the industry, and with this in view would be willing to submit their prices to supervision by a body representing the interests of the trade as a whole.

One section, however, cannot by itself do what is necessary. All sections must be placed on a more economic basis. That is why the responsible organisations in all sections of the industry support the Enabling Bill proposals which have been submitted to the Government.

Yours faithfully,
FRANK PLATT,

Managing Director,
The Lancashire Cotton Corporation, Limited.

Balances of Payments

TO THE EDITOR OF THE ECONOMIST

SIR,—May I offer one or two comments on the very interesting and useful table of comparative balances of payment, based on the League of Nations data, which you published on January 29th (page 232)? It is a little rash to publish such a table without a reminder of the danger of using official balance of payments figures for comparison between countries. As the League editor says at the outset, "the figures given vary from well-founded and carefully compiled administrative statistics to confessedly doubtful inferences drawn from an unquestionably inadequate basis of established fact."

The table "excludes gold movements," including the export of home-produced gold. Such exports of gold are as much a current credit item as any other export and their omission would seriously misrepresent the position of any important gold-producer. Curiously for South Africa, gold imports are included in the merchandise balance, because "gold is exported from South Africa as a commodity and not for monetary reasons." This is, of course, equally true of Australia and Canada; and even for the U.S.A. gold produced should be treated as an export, which is afterwards re-imported as a capital movement.

The table gives the average of 1934, 1935 and 1936, but for Australia and New Zealand it is noted that only two years were taken. The result shows Australia as a considerable borrower. It is not clear why the previous year 1933-34 is omitted, in which year Australia was a lender; as was the case also in 1936-37, for which official data were not available. The "borrowing" was of course chiefly drawing on London balances, accumulated in the "lending" years.

If 1933-34 had been included, and gold exports taken into account, the average Australian borrowing would have been nine instead of 48 million gold dollars, and the inclusion of 1936-37 would leave her on the border line between debtor-borrower and debtor-lender. The inclusion of gold would have raised Canada's average lending from 48 to 115 million gold dollars, and would have removed U.S.A. from the class of creditor-borrower to that of mature creditor-lender.

Yours faithfully,
L. F. GIBLIN.

King's College,
Cambridge.

[We accept Professor Giblin's rebuke for failing to make clear the great variations in reliability between the different estimates. In any case, the main purpose of the article was to expound the proposed classification and the figures were given mainly as illustrations. As for the exclusion of gold, it was decided that it would be impracticable to include exports of domestically-mined gold in every case, and exception was made for South Africa because that is the only country where gold exports make a decisive difference. Australia and Canada could be treated similarly. But it is surely wrong to treat gold produced in the United States as an export. The Australian figures are given for years from July to June, for New Zealand from April to March. It was thought that comparability was best preserved by taking two years, the whole of which fell within the period taken for other countries.—ED., *Econ.*]

The Stock Exchange and the Public Trustee

TO THE EDITOR OF THE ECONOMIST

SIR,—In his letter in your recent issue "Member" mentions as a possible and profitable way of reducing commissions substantially, that the Public Trustee might charge his customers with the cost of doing their business "instead of subsidising his office (quite improperly in the opinion of many) at the expense of stockbrokers."

The Public Trustee does charge fees on the sale or purchase of securities and also receives a share of the broker's commission and is thus doubly remunerated. Paragraph 60 of the Official Pamphlet gives the scale of fees and subparagraph (b) states: "The trust will pay the brokerage in every case. The fee is additional to any refunded commission retained by the Public Trustee."

Accounts delivered by the Public Trustee show the fees deducted but not the refunded commission.

Yours faithfully,
BENEFICIARY.

Market Control

THE Aluminum Company of America is a powerful corporation which has built up a monopolistic enterprise for the production of aluminium. American thought, perhaps naturally nowadays, is concerned with the possibility of exercising some control over such bodies, and Professor Wallace, in this volume of the Harvard Economic Studies,* attacks the problem with a painstaking erudition which commands admiration. Despite a fairly successful effort to make so technical a study readable, this is no book for the general reader; but, for the knowledgeable student of economic and industrial problems, it is at once a model of close and lucid analysis and an invaluable work of reference.

To give any more than a general indication of the ground covered by the author is impossible. Aluminium is a new metal, its first reduction by electrolysis dating from the middle of the nineteenth century. The history of the industry and its organisation, both in the United States and in Europe, is here related in detail. In the United States, the industry acquired a monopoly character, and in Europe came under the control of an "oligopoly" of a few firms, subject at different times to a cartel of varying rigidity.

Professor Wallace's aim is to describe, in the light of the current theory of this type of trading, the reactions of the market in aluminium and aluminium products to monopolistic or "oligopolistic" control; and to show the extent to which competitive influences have nevertheless survived. The argument throughout leads up to the question whether a certain measure of healthy competition can be secured and maintained in the general interests of society.

The industry acquired impetus from the development of the electric furnace and, from about 1924, of a series of aluminium alloys. Its growth was determined by various factors: some were inherent in the technical progress of industry, and others were external, such as the rise of the motor industry, the war, the coming of the aeroplane, and the course of tariff policy in America. The development of new uses for the metal brought into being what was virtually a new industry, controlled in America by a single company which alone could cope with the rapid diversification of demand.

The time and capital required to establish reduction works, not to mention problems of location and raw materials and the importance of integrated organisation, discouraged free entry into the industry. In addition, the scarcity of specialist technicians and changing uses for the metal favoured the established firm.

These influences were apparent in Europe as well as America, but the American company took advantage of the situation with particular determination. Its conflict with the anti-trust laws, discussed at some length, is primarily of interest to Americans; but the last fifteen pages of the book on "Possibilities for Economic Reform" are of general interest. Professor Wallace seems to think that "a maximum of desirable results" would ensue from Government competition in ingot production, or possibly (in a final illuminating sentence) "if the executives of the integrated firm or firms understood thoroughly how to promote the public welfare and placed it ahead of private advantage whenever the two conflicted"—a pious hope, indeed.

There is ample evidence throughout the book of the difficulties encountered by Professor Wallace through lack of proper statistical data. Economists cannot make the bricks of policy, so widely in demand nowadays, without statistical straw. Apart from policy, however, all students of technology and industrial chemistry will be indebted to Professor Wallace for the first of his six brief appendices entitled "Aluminium and the Electrochemical Revolution." Here is a revealing example of the force of discovery and invention in the determination of economic development.

THE BUSINESS WORLD

Home Railway Prospects—II

Railway Capital Expenditure

LAST week we considered the 1937 accounts of the four group railways, mainly in relation to the year 1937. That year included, on the revenue side, a 5 per cent. increase in charges (operating only for the last quarter) and, on the costs side, a significant rise both in wage rates and in coal and raw material prices. These abnormalities, however, are not important enough to prevent the year's results from being fitted into their place in the long-term development of railway economics. Indeed, as 1937 may prove to have been the peak year of the present trade cycle, the figures afford material for a significant comparison with those of 1929, the peak of the previous cycle.

The disparity between general recovery and railway recovery is striking, as we showed last week, and as is further evident from the series of charts on page 533 of this issue. Before discussing the reasons and effects of that disparity, we may examine the basis of railway business itself in the capital accounts of the four companies. To what extent and in what directions are the railways requiring

new capital? In the first of the annexed tables the total expenditure figures are given for each company under each of the more significant headings in the last peak year (1929), the bottom year of the depression (1932) and the last two years.

The most striking point which emerges from the figures is the substantial increase in capital investment which has taken place since 1929 for both railway and non-railway purposes. For the companies as a whole the increased investment in railway assets since 1929 is £26.3 millions, a sum which would almost suffice to cover the entire railway outlay of the amalgamated Great Southern Railways of Ireland. New investment in non-railway assets totalled £13.7 millions, and the combined total investment since 1929 amounts to no less than £40 millions. The asset of "Lines," which by the middle of last century had already reached a development recognisable on to-day's maps, has actually absorbed the largest share of this fresh investment—the explanation being that "Lines" includes all stations,

buildings and equipment other than rolling stock and workshops. By contrast, the decision of the railways to take an important share in the non-urban road passenger transport of the country has called for only an extra £9.8 millions.

Between the individual companies there are wide differences in the rate of investment. The increase in railway assets for both the Southern and the Great Western has been about 5½ per cent., for the L.M.S. about 1½ per cent. and for the L.N.E.R. about 2½ per cent. In non-railway assets the relative increase by the Southern has been easily the greatest, its proportion of about 30 per cent. being accounted for mainly by the great Southampton Dock development. The Great Western's non-railway investment has risen by about 12 per cent., mainly represented by docks and by road transport shares. For the L.M.S. and the L.N.E.R. the rise has only been about 3 per cent. and 3½ per cent., respectively, representing mainly the purchase of road transport shares. There is thus a marked contrast in the rate both of railway and non-railway investment between the South England systems (S.R. and G.W.R.) and the Northern systems (L.M.S. and L.N.E.R.). Each of the South England systems has, in fact, achieved a measure of success in its own sphere—the Southern being the only company to have topped its 1929 revenues this year and the Great Western the only system to have maintained full trustee status for its stocks. Are we to adjudge this success to be the reward of a bolder investment policy? Or, alternatively, must we conclude that even where circumstances are relatively favourable, as in the South of England, substantial capital investment is still necessary if the railways are to take advantage of that condition? To answer these questions, we may proceed to examine the development of railway and ancillary revenues since 1929. The available figures are set out in Table II. In compiling the figures we have not deducted "Miscellaneous Charges," nor have we attempted to allocate them between the railway and other undertakings. The cost of interest payable by the companies on superannuation, etc., funds (which is much the largest of the miscellaneous charges) has, however, been shown in the table, though not deducted in arriving at the last column.

The Southern is the only company to approach the 1929 net railway receipts. The decline, as compared with 1929, varies on the other lines from under 12 per cent. on the Great Western to over 22 per cent. on the L.N.E.R. Among individual movements the most noteworthy are the rise, in every case, in road transport revenues (though their total is still small) and in dividends received, which are derived mainly from road transport concerns. Other important developments are the rise in docks, hotels and rent revenues for the Southern; the rise in steamboat and rent revenues for the Great Western; the rise in steamboats and docks revenues on the L.M.S.; and the rise in dock revenues on the L.N.E.R. On the other side, the universal fall in general interest receipts (and, for the L.M.S., of rents also) is particularly significant.

When the results of Table II are applied to the capital expenditure of Table I, some unexpected conclusions emerge. In the following table, the return per cent. on capital invested in railway business and in all non-railway business is shown for 1929 and 1937 for each company:—

RETURN ON CAPITAL INVESTMENT

	Southern		Gt. West'n		L.M.S.		L.N.E.R.	
	1929	1937	1929	1937	1929	1937	1929	1937
Net railways receipts as percentage of railway investment	3.5	3.3	4.95	4.15	4.2	3.5	4.3	3.3
Net ancillary and other receipts as percentage of non-railway investment	9.9	7.7	5.75	4.1	4.15	3.75	2.9	2.5

Notes on the above table: Miscellaneous charges are not deducted, so that the net return would be less than the rate shown, but the comparisons and conclusions suggested by the table are not affected. Also, part of the non-railway receipts (notably "general interest" and "special receipts") are not specifically related to the capital expenditures shown in Table I, general interest being derived from investments which appear in the balance sheet, but, naturally, not under capital expenditure; while special receipts are mainly grants from the Treasury towards works undertaken under the 1929 Development Act. Both, however, are best included as non-railway revenue for the present purpose.

It may appear surprising that the rate of return on the railway investment of the L.N.E.R. was, in 1937, about the same as that earned by the Southern, and in 1929 was much greater. In fact, the average return on the Southern's railway investment in the two years is the lowest of any company. The Great Western and L.M.S. maintain a fair balance between the return on their railway and non-railway investment. The difference between the relative prosperity of the Southern and the relative poverty of the L.N.E.R. is determined entirely by the success of their non-railway business. As the non-railway investments of the L.N.E.R. are also relatively greater than those of the Southern (representing 12.1 per cent. of capital receipts, against 9.4 per cent.), the effect of a poor return on those investments is magnified. In passing, the proportion of non-railway capital expenditures to total capital receipts is 10.5 per cent. for the G.W.R. and 6.5 per cent. for the L.M.S.

It would be misleading to read too much into these figures. For example, the relatively small railway return of the Southern does not necessarily afford evidence against electrification, though it may suggest caution in accepting electrification as a panacea for all railway ills. What is important is that the large capital investment of recent years has not sufficed to prevent a decline in either railway or non-railway revenues; and that such economies as reductions in the physical numbers of locomotives and wagons are not reflected, even on the L.M.S., by lower capital expenditure on rolling stock. For a time during the depression, the success of the L.M.S. in economising rolling stock suggested that capital could at least be withdrawn from the railway system to offset reduced railway business. But to carry the increased traffic of 1937 the capital has had to go back. Furthermore, they already have schemes in hand calling for substantial further capital expenditure. On the Southern the estimate totals £2,520,000 for 1938 and £850,000 subsequently; on the Great Western, £1,505,000 and £3,095,000, respectively; on the L.M.S., £3,729,000 and £1,442,000; and on the L.N.E.R., £8,385,000 and £7,791,000. In the next article of this series we propose to consider some of the implications of these figures.

THIS NEW 24 GN. RADIOGRAM BY "H.M.V."

reproduces
your favourite
records with a
NEW beauty

... and
incorporates
a radio chassis
of an advanced type

"His Master's Voice," who sponsored the introduction of the first popular radiogram, and whose leadership in electrical sound reproduction is everywhere acknowledged, offer you, in this attractive new console model, world-wide radio entertainment and the enjoyment when you will of the best in recorded music.

With it you have your choice of broadcast programmes from all of the five continents of the world: you can play programmes of recorded music rendered by the world's greatest artists. Over the air or on records you can get music that expresses your own taste and mood, that will make your leisure hours richer and happier.

Enclosed in an elegantly-proportioned walnut cabinet, this "H.M.V." radiogram is a very desirable piece of furniture.

"HIS MASTER'S VOICE"
All-World RADIOGRAM

What Price Gilt-Edged?

THERE are as many factors in the gilt-edged market's outlook as there were ingredients in the Weird Sisters' cauldron. Yet up to six and a half years ago they could generally be summed up under one of two heads: the trade cycle and Government policy.

When Great Britain was on the gold standard, the basis of the national credit structure was determined by the amount of gold which the Bank of England could attract and retain in an absolutely free market. Under these conditions, the normal corrective for a trade recovery which threatened to swell into a boom was a higher Bank rate, whose announcement was the signal for a downturn in gilt-edged and equity values alike. When the Bank rate was reduced again, in the ensuing trade depression, ordinary gilt-edged continued to fall, but Government stocks recovered, with the aid of an influx of temporarily unemployed funds into the gilt-edged market. In the earlier stages of industrial convalescence, firmness in gilt-edged usually overlapped the resumed bull market for ordinary shares; but as revival proceeded, funds temporarily placed in the gilt-edged market as "cloak-room deposits" were progressively withdrawn. Hence the rule that, in depression as in recovery, gilt-edged and equities tended to move in unison in the earlier and in counterpart in the later phases. Under these conditions, the impact of Government policy was limited mainly to the effect of debt creation, retirement or refunding, which changed the volume of gilt-edged securities available in the market. Prices, it is true, were vulnerable to unexpected or unfavourable political news. But the resulting price changes were usually temporary, unless the outcome threatened an increase in Government borrowing, as in the years after July, 1914.

Undoubtedly, Britain's adoption of a "managed" in place of a gold standard currency has profoundly modified the basic conditions of the gilt-edged market. To-day, when immense gold holdings are sterilised in the Exchange Fund, the monetary authorities can exercise considerable control over the gilt-edged market, not merely by their borrowing policy, but also by contracting or expanding the credit base by adjustments in the respective gold holdings of the Exchange Fund and the Bank of England. So important, indeed, is the rôle of the Treasury's policy under present-day conditions that only last week Mr J. M. Keynes explained a considerable fall in gilt-edged values last year chiefly by reference to Government borrowing during the period of a large gold influx into the Exchange Fund. Can we safely assume, therefore, that cyclical economic factors, which played so large a part in determining the course of the market in earlier days, have now been relegated to a minor rôle?

Before attempting to answer this fundamental question, we may review the actual course of an "irredeemable" Government stock like 2½ per cent. Consols, which is shown on the annexed chart from December, 1928, to February, 1938, in terms of the Actuaries' Index number (December 31, 1928 = 100). The chart suggests that between 1929 and 1931, when Britain was still on the gold standard, the curve of Consols prices followed the traditional pattern. Gilt-edged and equity values declined together after Bank rate was raised to 5½ per cent. early in February, and to 6½ per cent. in September, 1929. Subsequently,

however, gilt-edged rose strongly as industrial depression became increasingly severe in 1930, and Bank rate was reduced by successive stages to 2½ per cent. in May, 1931. From the summer of 1931 onwards, however, conditions became increasingly abnormal. The *crise de confiance* before and after sterling left the gold standard, which kept Bank rate at 6 per cent. from September, 1931, to February, 1932, produced a veritable slump in gilt-edged. When the crisis passed, the market came increasingly under the influence of Government policy. The rise in the index from 92.8 near the end of 1931, to 165.3 in December, 1934, covered the period of War Loan conversion, and of Government control of the market for foreign loans and domestic trustee borrowing. The rise in gilt-edged prices was obviously less a cyclical move than a process of readjustment of general interest rates to an entirely new basis. Its progress was undoubtedly influenced by the fact that, between the two dates, the Bank of England's gold holdings (valued at the old gold price of 85s. an ounce) increased by £71½ millions, of which only £15 millions was neutralised by a reduction in the fiduciary issue. During the same period, the ten London clearing-

banks increased their cash and balances at the Bank by £31½ millions, their deposits by £234 millions, and their investments by £298 millions.

More recently the process of supporting the market "at the source" has been much less in evidence, and to that extent more "normal" influences have been given time and space in which to operate. If the sudden rise and almost equally sharp fall in Consols in 1934-35 be regarded as a temporary movement, above a trend which followed a course somewhat similar to that shown by the dotted line on our chart, then the first real setback to gilt-edged occurred at the beginning of 1937, when the Consols index fell in a couple of months from 150.9 to

133.4. The timing of this movement is particularly important for investors seeking a clue to the probable course of gilt-edged in the near future. It ante-dated both the Government's issue of £100 millions of National Defence Loan last May and the Exchange Fund's heavy purchases of gold during the gold scare in the summer. But it coincided exactly with a quasi-inflationary rise of prices and other traditional symptoms of a trade boom; and it was accompanied by a downturn in ordinary share prices. Mr Keynes himself declares, in a letter on page 499 of this week's issue of *The Economist*, that a high level of business activity and some expectations of inflation, conjointly with the announcement of the Government's Defence programme, had a determining influence on the gilt-edged market in the early part of last year. Though Bank rate has lost its significance as a divining rod, it is clear enough that a potential bubble was pricked last spring and summer; and gilt-edged have subsequently honoured tradition by ceasing to fall and by showing the beginnings of recovery.

There is undoubtedly force in Mr Keynes's contention (with which we have already expressed our agreement) that the recovery of gilt-edged last year was seriously hampered by the policy of the authorities, who, without making any significant addition to the credit basis, borrowed new money and spent it, not on defence, but on

PRICE OF 2½% CONSOLS
(Actuaries' Index: Dec. 31, 1928=100)

the financing of the Exchange Fund's gold accretions. Here, Mr Keynes raises an issue whose high general importance can hardly be ignored in responsible quarters. His view, however, does not exclude the probability that another factor in the market's behaviour was the discounting of a major change in economic tendencies. The majority of investors now believe that some recession in trade has already begun. If the outlook in the next few months is for a moderate but not a disastrous setback in economic activity, and if the effect of Treasury policy may, for the moment, be left out of account, then the gilt-edged market may have begun a phase during which the trend of prices should, in the light of past experience, be favourable rather than otherwise. On this reasoning, it may not be unduly optimistic to look for a continuance, for the time being, of the perceptible recovery in values which started last November. Unfortunately, however, Treasury policy cannot be omitted from the gilt-edged equation, at a time of national re-armament, when the Government has given notice of its decision to borrow some hundreds of millions of new money.

Now, Government borrowing, for any purpose whatever, is in itself an unfavourable factor for gilt-edged prices. But the authorities have two means of supporting the market if they choose—one direct and the other indirect. Various funds under their control have resources accruing at a rate measured in tens of millions every year. In the last resort, however, support from this quarter is subject to the proviso that the public departments should be regarded as "firm underwriters" of Government issues rather than necessarily permanent investors.

If the digestive capacity of the market proves not

wholly equal to the task imposed on it, will the authorities use their ultimate weapon? Will they transfer gold from the Exchange Fund to the Bank of England, thus producing something like a tenfold increase in the volume of currency and credit and driving the banks (and probably other large-scale institutional investors) afresh into gilt-edged? That, in its plainest terms, is the riddle which today is exercising the whole market. In the absence of such assistance, the outlook for gilt-edged securities is indeterminate, though not necessarily unfavourable; if it be forthcoming, the Government's new financing may not be incompatible with the absence of a further fall—or even with a moderate future rise—in gilt-edged prices. For the last few weeks, the authorities have kept the market guessing over their policy, and at the moment it is not even clear whether they have one or are following a purely opportunist plan. Nevertheless, if the authorities were to decide on a policy of expansion, they would not lack plausible arguments. The present Government is committed not only to the maintenance of cheap money but to the prevention, as far as possible, of a damaging trade depression. An expansion which would have been "inflationary" in 1937 may conceivably be held out as a slump preventative in 1938 or 1939. And in 1940, before the Treasury's new borrowing is likely to have been completed, the problem of converting £366 millions of 4½ per cent. Conversion Loan, 1940-44, will have come on the horizon—to be followed, in 1944, by an opportunity for funding £323 millions of 5 per cent. Conversion Loan. Without presuming to award either praise or blame to a decision which, by all appearances, has not yet been taken, we may hazard a guess that the odds are on a forward policy.

Roosevelt and Reflation

DURING recent weeks there have been signs of a change in American monetary policy. A year ago, the general trend of policy appeared to be, on the whole, deflationary. The legal minimum reserve requirements of member banks in the Federal Reserve system were increased in the middle of 1936 and again, on two occasions, in the spring of 1937. Early last April, President Roosevelt delivered his famous warning that certain commodity prices were dangerously high, and the gold scares followed almost immediately. Subsequently, America has suffered a severe setback in securities, commodities and general business, which has doubtless had its effect in Washington as elsewhere.

The Administration at Washington has now announced that its policy, adopted at the end of 1936, of sterilising new gold imports according to British practice, has been suspended. Gold received by the Treasury, up to a limit of \$100 millions each quarter, is allowed to pass into the internal banking system and so to swell the credit base. This has been followed by a new declaration by President Roosevelt to the effect that the price-level generally is too low. Certain commodities, he believes, are dear, but others are much too cheap, and he hopes by raising them to lever up the price level generally. What this means in practice remains to be seen, but it has been widely interpreted as a reversion to the Administration's former policy of reflation. Both Wall Street and the commodity market have already responded, though to a limited extent.

So far as the gold announcement is concerned, its immediate consequences are likely to be mainly psychological. Foreign capital is on the whole flowing out of American banks and American securities, and the United States' domestic production of gold is about \$50 millions a quarter. But if the belief that the President is about to administer a fresh dose of reflation continues to grow, its effects may be decidedly significant. Can the dose be made really effective? The answer involves an examination of the member banks' excess reserve position. During the year to June, 1937, the raising of legal minimum requirements reduced excess reserves from \$2,591 to \$876 millions. The effects of this reduction, however, were unevenly spread throughout the banking

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

system; for the New York City banks were much the most seriously affected. First, their own legal cash requirements were increased. Next, the banks throughout the country, in order to increase their cash reserves, drew on their balances with the New York City banks, who thus lost cash at a time when they needed more of it. Consequently, most of the reduction in excess reserves was concentrated on them, and they proceeded to replenish their cash by realising securities. Largely for this reason member banks' holdings of Government securities fell during the same year from \$9,200 to \$8,400 millions, and most of this realisation came during the first few months of 1937. This, in turn, upset the bond market, whose weakness was one of the immediate causes of last year's general setback.

These recent developments have a double moral. In the first place, they show that in these days, when monetary and banking policy is so largely under Government control, sudden reversals of policy, due to excessive or misjudged large-scale Government intervention, must be looked for. In the second place, and more particularly, they suggest that if President Roosevelt is thinking once more in terms of reflation, the question of legal and excess reserves presents an obvious lever to his hand. He has only to reverse the lever, in order to release a fresh supply of bank credit, for the rejuvenation of the bond market, for new Government financing, or for other purposes.

Finance and Banking

Maria Theresa Thalers.—During the past year the national mints of Great Britain, France and Belgium have coined about 9,000,000 ounces of silver into Maria Theresa thalers. These operations have as yet evoked little general interest, but they have provided the material for some exceptionally bitter complaints from the Italian Government. The Maria Theresa thaler is the eighteenth century Austrian silver coin which, partly by accident and partly by the beauty of its design, gained currency in East African territories, including Abyssinia, and in Arabia during the beginning of the nineteenth century. It has remained the prevailing currency of those territories for about 130 years. To supply this special demand the coins continued until 1935 to be minted in Vienna. When Italy began her invasion of Abyssinia she acquired from the Vienna mint the original matrices and stamping machines for these coins. Her conquest accomplished, Italy began minting these thalers, but she failed to bring the new coins into general circulation because they were made of silver below the traditional 833.33 fineness. Italy then gave up the attempt to mint the silver thalers and began to put into circulation the paper lire which were good enough for the conqueror country. The vanquished, however, showed even greater distrust of paper than of the debased thalers. Within a few months a scarcity of the genuine thalers had become widely apparent, and the premium on them had risen to close on 50 per cent. of their normal exchange value of 2s.

At this point the Royal Mint in London was approached by a London firm with a view to producing the thalers. After all, these circulated in territories other than Abyssinia, which were being greatly inconvenienced by the premium on the coins. In view also of the fact that the conquest of Abyssinia was not recognised by the British Government, the Royal Mint consented. After an interval the Belgian and French mints followed suit. As a result the price of the thalers fell rapidly from their inflated level of over 30d. to around 24d. in the summer of last year. It now stands at about 18d., which little more than covers the cost of the silver content and minting charges. Another result has been the complete failure of Italy's efforts to introduce paper currency in Abyssinia and the consequent loss of the profit which this would have yielded. This interesting episode in elementary monetary mechanics provides an instructive commentary on the Quantity Theory of Money.

It would be well not to read too much into the recent decisions of the American authorities. But if the direction of the prevailing wind has really changed, or is changing, other possibilities, now mainly hypothetical, may assume concrete form. If the President, for example, were to decide to grapple with his internal political worries, he might make his peace with the utilities and with Wall Street, and adopt what Wall Street would call a "reasonable" view on questions such as methods of taxation and labour conditions and costs. Whatever the intrinsic merits of such a peace-making programme, it would give an indubitable stimulus to business, both inside and outside America—particularly if it coincided with some measure of political appeasement in Europe.

There are three possibilities, all of which would provide a stimulus to American economic activity—peace in Europe, reflation in the United States, and a truce between Washington and Wall Street. None can be predicted with confidence, and all involve matters of high controversy. Yet it would be wrong to rule any of them completely out of account. If, by something like a miracle, they were to materialise, either simultaneously or successively, they would, in all probability, be followed by a new phase of recovery, both in the United States and in the outside world. At all events, the business outlook to-day appears to depend largely upon them.

It also shows that when an alternative source for the supply of coin exists, some qualification must be made to Gresham's law that "bad money tends to drive out the good." The opposite has been true in this instance.

Hongkong and Shanghai Banking Corporation.—The maintenance of the Hongkong and Shanghai Banking Corporation's dividend for 1937 at £5 10s. per share prepared the market for satisfactory accounts, since in the present state of Far Eastern affairs the directors would undoubtedly tend to err on the side of conservatism in their dividend policy. The net profit for the year amounted to \$15,432,217, as against \$15,107,175 for 1936. There is no sign in the allocation of this profit or in balance sheet changes of any unfavourable reaction on the bank's business of recent political events in China. As in the preceding year, \$1,000,000 is allocated to the reduction of bank premises account and the carry-forward is raised from \$3,340,790 to \$3,383,005. The balance sheet shows a general expansion which may to some extent be attributed to the sudden increase in the trade of Hongkong following the Japanese invasion of China. The effect of a flight of Chinese capital to the colony may be seen in the increase of current accounts from \$649,329,397 to \$700,263,010. Notes in circulation have risen from \$127,636,280 to \$200,254,180, and among the assets there has been a general expansionist movement.

Foreign Banks in London.—The Central Hanover Bank and Trust Company has this week opened its first foreign branch, and it has chosen London as the centre in which to stage this new departure. Hitherto, the bank has been represented here—as in Paris—by a representative's office. The conversion of this London office into a fully fledged branch may be regarded as a forerunner of developments in the foreign business of this important American bank. It is also significant as an indication that London remains the unquestioned centre from which such development must radiate. Equally instructive is the impending establishment in London of a branch of the Türkiye İş Bankası, which is the most important indigenous industrial bank in Turkey. The bank is of the typical "*banque d'affaires*" type and should provide a direct link between foreign capital and Turkish industry.

MONEY MARKET NOTES

The Money Market

The early March dividend payments amounting to about £10 millions have affected market resources, as may be seen from the Bank return which shows bankers' deposits £10,110,804 higher. There has, however, been no sign of surfeit in the short loan market during the week. Clearing bank money against bills remains in ample supply at $\frac{1}{2}$ per cent., but certain quarters of the market report a steady demand for bond money from outside lenders at $\frac{3}{8}$ per cent. The clearing banks are still keen buyers of bills and have bought Treasury bills ranging up to the March 25th maturities. The market syndicate obtained a 33 per cent. allotment at last Friday's tenders and discount houses have therefore been rather readier sellers of bills than in preceding weeks.

	Mar. 4, 1937	Feb. 24, 1938	Mar. 3, 1938
Bank Rate	2	2	2
London Deposit Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan Rates:			
Clearing Banks	1-1*	1-1*	1-1*
Others	8s	12-5s	8s
Discount Rates:			
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	17s-9½	17s-9½	17s-9½

* Viz. $\frac{1}{2}$ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. $\frac{3}{4}$ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

In accordance with usual seasonal trends the amount of Treasury bills issued by tender is declining and is now £100 millions less than it was at the beginning of January. Tap bills from the beginning of the year and up to February 26th fell by £39 millions.

The Bank Return

March dividend payments appear to have been largely financed by Ways and Means advances from the Bank of England, and the latest return shows Government securities up by £7,020,000, while Public deposits have fallen by £5,305,745. The joint impact of these movements on bankers' deposits is somewhat softened by an increase of £3,820,140 in the note circulation, but even so these deposits are £10,110,804

higher on the week at £115,711,224. In the corresponding week of last year Government securities were substantially unchanged, Public departments were £2.2 millions higher and bankers' deposits were down by £6.7 millions, having had to take the whole brunt of the end-of-month rise in the note circulation. The contrast between movements in those two comparable weeks is instructive:—

	Mar. 3, 1937	Feb. 16, 1938	Feb. 23, 1938	Mar. 2, 1938
	£ mill.	£ mill.	£ mill.	£ mill.

Reserve	53.6	53.0	52.6	48.8
Public Deps.	15.2	15.8	16.7	11.4
Bankers' Deps.	93.8	106.4	105.6	115.7
Other Deps.	37.7	35.5	35.5	36.0
Govt. Secs.	85.1	97.9	97.4	104.4
Discounts and Advances	4.3	6.2	6.5	7.1
Other Secs.	21.9	18.8	19.5	21.0
Proportion	34.5%	33.4%	33.3%	29.9%

If current note circulation be compared with the figures for twelve months ago the gap is steadily narrowing. This is due to the fact that a year ago the hoarding of sterling notes was still powerfully affecting the total circulation. The present circulation is only £17.4 millions higher than it was a year ago. Three months ago the gap was over £34 millions.

The Bullion Market

Hoarding demand for gold has completely subsided and during the latter part of the week the Exchange Account has had to turn buyer of gold in the open market. Thanks to these official purchases the sterling price has been well maintained and has hovered during the week between 139s. 9d. and 139s. 10d. These quotations continue to include substantial premiums over the dollar shipping parity. The Indian Budget made no change in the duty on silver imports and this fact appears to have caused some disappointment among Indian operators. Selling from India consequently appeared towards the end of last week; but the bear position in the market is still too extended to allow such selling to affect the price. By Thursday the cash price had re-

covered to 20½d. from which it had fallen to 20¼d. on Monday. The market is described as steady and as offering no prospects of substantial changes in the near future.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Disc. count	Amt. dealt in	Cash	Two Mths.

* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce -999 fine during the week.

Foreign Exchanges

The week has been exceptionally quiet in the foreign exchange market. The cessation of sales of dollars against purchases of gold has deprived the market of a substantial part of the business which had been occupying it in recent weeks. The dollar has not, however, staged any appreciable recovery following this relief and has remained substantially steady at around \$5.01½ during the week. French francs came on offer on Tuesday and Wednesday following the deadlock between the Senate and the Chamber on the Labour Charter. After weakening to 154½ the rate has come back to around 153½ with the help of a little official support. Control operations have also been apparent in the forward franc market and the discount on three months' francs has been brought back to 4½ francs. Belgas have again been offered to a moderate extent and closed at 29.56½ on Thursday, having touched 29.54 on Tuesday. In every market commercial operations are reported at a minimum, while international movements of capital are also exceptionally small at the moment. The quietude of the London market is, moreover, enhanced by a considerable diversion of business to Continental markets.

INSURANCE NOTES

The Prudential.—The eighty-ninth annual report of the Prudential, which reaches us as we go to press, shows a fresh increase in total assets, at the end of 1937, from £315,923,771 to £330,415,840. Income from all sources rose from £52,889,774 to £54,635,180. In the ordinary branch, the number of life assurance policies issued during the year was 99,337, assuring £32,457,832, and the number of life policies in force at the end of the year was 1,034,049, assuring, with bonus, £265,723,573. The surplus on the branch was £3,672,278 (including £596,428 brought forward), of which £2,729,683 has been allocated as bonus to participating policyholders, at £2 6s. per cent. for whole life and £2 for endowment assurance. In the industrial branch, the number of policies issued during the year was 2,444,651, assuring £66,191,627, and the total number of

policies in force at the end of the year (including 4,590,715 free policies) was 27,938,867. The premiums received were £22,296,696. Of the branch surplus of £6,584,448 (including £588,864 brought forward), some £4,044,192 was allocated as a bonus to participating policyholders at £1 12s. per cent. (£1 per cent. on policies in the State of Eire). The expense ratio in the industrial branch has again been reduced. In 1920 it was 40.5; in 1937, 22.7—a remarkable figure whose achievement redounds to the credit of all concerned. The surplus in the general branch (including £257,590 brought forward) was £539,538. Total dividend for the year on the "A" shares is 19s. 5½d. per cent., free of tax, of which ordinary and industrial branch profits provide 18s. 11d. Dividend on the "B" shares (from general branch profits) is 2s. per share, free of tax. All in all, the report

of this, the largest office, is again an impressive record of progressive achievement. It will be fully analysed in a leading article in next week's issue of *The Economist*.

Britannic Assurance Company.—New sums assured in the ordinary branch in 1937 amounted to £3,594,000 against the record total of £3,865,000 in 1936. In the industrial branch new sums assured fell by £117,000 to £9,769,000. The net rates of interest earned in the ordinary and industrial branches were £4 6s. 8d. per cent. and £4 12s. 4d. per cent., compared with £4 8s. 1d. per cent. and £4 14s. 6d. per cent., respectively, in the previous year. Ordinary branch expenses amounted to £181,000, equal to 13.1 per cent. of the premiums. Considering the small average sum assured this rate is very satis-

factory. In the industrial branch, expenses were actually smaller in amount than in 1936, and represented 31.4 per cent. of the premium income (which expanded by £124,000 to £3,908,000), compared with 33.2 per cent. and 34.4 per cent. in the two previous years and 47.4 per cent. in 1920. In the absence of unforeseen circumstances it seems likely that this year, or 1939, will see the expense ratio below 30 per cent., a level which, only a few years ago, would have been regarded by even the largest industrial offices as almost an unattainable ideal. There is no doubt that the achievements of various insurance offices in this direction in recent years have been remarkable, and to-day, when all relevant circumstances are taken into account, it is probably true to say that industrial insurance is more economically conducted than any other branch.

The results of the usual annual valuation of the Britannic are given below for each of the last two years:—

	1936	1937
Ordinary Branch—		
Surplus earned during year	396,824	412,492
Brought forward	124,311	161,139
	521,135	573,631
Bonuses to policyholders	275,457	285,714
Shareholders' account	34,539	39,185
Investment reserve fund	40,000	40,000
Staff pension fund	10,000	5,000
Contingency fund	90,000	25,000
Carried forward	161,139	178,732
	521,135	573,631
Industrial Branch—		
Surplus earned during year	674,592	697,745
Brought forward	140,081	158,173
	814,673	855,918
Bonuses to policyholders	241,500	267,500
Shareholders' account	265,000	240,000
Investment reserve fund	60,000	60,000
Staff pension fund	95,000	95,000
Carried forward	158,173	193,418
	814,673	855,918

The basis of valuation was the same as in 1936, namely, A1924/29 in the ordinary branch, using 2½ per cent. for participating policies and 3 per cent. for other contracts, and the E.L. No. 8 (Males) Table, combined with interest at 3 per cent., in the industrial branch. The ordinary branch rate of bonus is again 38s. per cent. on the sum assured; as usual the cost of the bonus, including shareholders' proportion, is well within earnings.

In the industrial branch bonus additions will be made to premium-paying policies becoming claims by death or maturity before March 31, 1939. Such bonus additions will vary from 5 per cent. on the sum assured for a policy ten years in force, to 20 per cent. for policies twenty-five years in force or longer. Total assets increased from £28,159,000 to £30,103,000. Mortgages and loans amounted to £4,792,000, compared with £4,421,000, but there was little change in British Government securities or in Colonial and foreign government securities. Debentures, at £2,864,000, were smaller by £148,000, but preference stocks increased from £2,456,000 to £2,585,000, while ordinary stock holdings increased by £1,082,000 to £5,059,000. Investment and other reserve funds total £2,200,000, against £2,000,000 in 1936. After providing for the dividend, again at 50 per cent. free of tax, and providing the sum of £20,000 for National Defence Contribution, there is a profit and loss balance of £140,000.

Provident Mutual Life Association.—The annual accounts of this association and the chairman's speech are of more than ordinary interest. A large proportion of the business transacted is in broad occupational groups—for example, transport workers—under special block-collecting arrangements, which enable wage earners to enjoy conditions of insurance equal to those procurable by the better-to-do classes under ordinary life assurance. In 1937, 29,058 policies were issued for the record amount of £3,127,000, giving an average sum assured of £107; the previous year's total was 23,920 policies for £2,662,000. Although investments are not written up or down annually to accord with market values, the chairman reveals their aggregate market values in the course of his speech. The 1937 accounts give particulars of the quinquennial valuation of liabilities and distribution of surplus. Death claims were some £2,000 smaller at £191,000 and surrender values fell substantially from £103,000 to £70,000; the net rate of interest on the life assurance fund was £4 9s. 2d. per cent., against £4 9s. 6d. per cent. in 1936. The net depreciation of the investments appears to have been £864,000, equal to £6.9 per cent. of the assets at the end of the year; this result must be considered, in all the circumstances, to be favourable. The book value of the assets increased from £11,915,000 to £12,521,000. There was no particularly noteworthy change in the distribution of the investments, and the investment reserve remains unaltered at £1,000,000.

To the actuary of the Association, Mr C. R. V. Coutts, belongs the distinction of having first advocated—some thirty years ago—the “bonus reserve method of valuation,” which has in the last few years been adopted by certain first-class offices. Now that an up-to-date assurance mortality table has been published which closely corresponds with the experience of his own office, Mr Coutts has abandoned the use of the familiar OM 3 per cent. net premium method in favour of a bonus reserve valuation. For mortality he has used the A24/29 table, with interest 4 per cent. for with-profits policies, and “adequate provision” for future expenses. The future rates of bonus assumed in the valuation were those declared at the last distribution of profits as at December 31, 1932, namely, 40s. per cent. per annum for whole life assurances (increased to 45s. per cent. for attained ages not less than 65) and 35s. per cent. per annum for endowment assurances; these various rates are calculated on the sum assured.

The effect of the change in method is to strengthen reserves, as compared with the OM 3 per cent. value, by £280,000, and the results of the last two years are given below:—

	1936-37	1937-38
Trading profit	1,395,455	1,439,314
Profit on securities	—	450,000
Brought forward	171,309	210,268
	1,566,764	2,099,582
Allocations:—		
To Policyholders	941,496	1,101,062
“ Staff pensions fund	25,000	50,000
“ Investment reserve fund	390,000	450,000
“ Strengthening reserves	—	280,000
“ Carry forward	210,268	218,520
	1,566,764	2,099,582

The rates of bonus declared are 5s. per cent. per annum in excess of the above rates reserved for in the valuation, and are as follows:—45s. per cent. per annum for whole life assurances (increased to 50s. per cent. for attained ages not less than 65) and 40s. per cent. per annum for endowment assurances, these rates being calculated on the sum assured. This extra 5s. per cent. per annum is referred to as a special additional bonus, and it is stated to have been given in consideration of the fact that the average rate of interest earned in the quinquennium on the life assurance fund has been considerably in excess of the 4 per cent. assumed in the valuation. The smaller distribution in 1932 was made at a time when, owing to the economic crisis, there were violent fluctuations in the values of securities, and it was considered expedient to withhold trading surplus which would otherwise have been available for distribution. It is particularly pointed out in the actuary's report that the basic rates of bonus assumed “may be expected to fluctuate on one side or other of the basic rate according as the experience of the association has, during the period under review, been more or less favourable.” The capital position is strong; on December 31st last the investment reserve fund together with the carry forward and the excess of market values over book values of investments aggregated £1,886,520, representing 15.1 per cent. of the total assets.

Clerical, Medical and General.—New sums assured in 1937, at £3,239,000 (including four group life assurances for £387,000), were 14 per cent. in excess of the 1936 total, which was a year of record production. The average sum assured per policy of new business, excluding group assurance policies, was £908 compared with £875 in 1936. The net rate of interest fell by 2s. 9d. per cent. to £3 19s. 6d. per cent., compared with the rate of 2½ per cent. used in estimating the liabilities. Death claims were £440,000, against £374,000, and surrender values increased from £124,000 to £170,000. Annual premiums amounted to £945,000, against £904,000. Assets increased from £14,908,000 to £15,654,000. Mortgages of all kinds, which at the end of 1935 were £4,655,000, expanded further from £5,055,000 to £6,311,000; loans on medical practices amounted to £686,000, compared with £480,000 in the previous year and £66,000 in 1935, the year in which the present scheme was adopted by the company.

In approved cases a loan is made upon the security of the practice coupled with a guarantee bond issued by the Employers' Liability Assurance Corporation (of which the company holds 50,000 shares). A life policy is effected with the company for the amount of the loan. By the use of its special “supplementary units” plan of assurance not only is the cost kept at a minimum, but the doctor has the right when the loan is repaid to convert the units into whole life assurance or an endowment assurance policy, irrespective of the then state of his health. The company is in a very favourable position to make a success of this scheme

on account of its close relations with the medical profession. British Government securities, which account for only 4 per cent. of the total assets, fell from £794,000 to £655,000 and Colonial and foreign government securities were £313,000 smaller at £1,392,000. Debentures also fell from £2,219,000 to £2,030,000. Practically the whole of the ordinary stocks held refer to the shares of subsidiary companies, and there is little change in total book values. Freehold premises increased from £1,397,000 to £1,555,000. No Stock Exchange securities stand in the balance sheet either above cost price or middle market price on December 31, 1937, less accrued interest. The book values of other than marketable securities have been taken very conservatively.

United Kingdom Provident Institution.—New sums assured last year were a record and amounted to £5,023,000, compared with £4,621,000 in 1936. The net rate of interest earned on the life assurance fund rose by 2s. 1d. to £4 5s. 7d. per cent. Death claims were £38,000 greater at £729,000, but the mortality expected seems to have been satisfactory, as the number of claims was only 81.2 per cent. and the aggregate amount paid was 86.2 per cent. of that expected by the A1924/29 Table. It is the practice of this society to give higher bonuses in its temperance branch than in the general branch. In the temperance branch the number of claims was 77.3 per cent., and in the general branch was 87.4 per cent. of the expected; on

this occasion, however, the general branch experience was more favourable, the amount paid in claims being 81.6 per cent. of the expected against 91.9 per cent. in the temperance branch. There was a substantial reduction in surrender value payments from £234,000 to £198,000. Total assets increased from £24,594,000 to £25,472,000, and some interesting changes occurred in the distribution of the investments. Loans and mortgages increased from £5,763,000 to £6,646,000, but British Government securities fell by £634,000 to £2,948,000. Colonial and foreign government securities total £2,123,000, against £1,816,000. Debenture stocks fell sharply from £2,826,000 to £2,147,000. Preference stocks showed little change at £2,169,000 and ordinary stocks rose by over £1,000,000 to £3,366,000. The investment reserve remains unaltered at £1,000,000.

National Provident Institution.—Following the record new business sums assured of £1,882,000 in 1936, there was a further rapid expansion last year to £2,126,000. The net rate of interest fell by 2s. 3d. per cent. to £4 3s. per cent. Death claims amounted to £292,000, showing a reduction of £47,000 compared with 1936. The claims intimated in the last five years represented 85 per cent. of the expected by the A1924/29 Table. Total expenses of management, including commission but excluding special valuation expenses, amount to 13.6 per cent. of the premium income. Total assets increased

from £12,547,000 to £12,909,000. Increases were shown in loans and mortgages from £3,088,000 to £3,257,000, in debenture stocks from £3,078,000 to £3,254,000, in preference stocks from £787,000 to £850,000, and in ordinary stocks from £667,000 to £825,000. Decreases of £184,000 and £141,000 respectively were shown in British Government and in Colonial and foreign government securities, at £1,746,000 and £855,000.

Scottish Widows' Fund.—For many years the new business of this society has regularly reached a new high level. In 1937 a fresh record was created, when new sums assured exceeded the £5,000,000 mark at £5,048,000. Death claims fell by £93,000 to £1,145,000, and surrenders were also somewhat smaller at £184,000. The net rate of interest earned was 1s. 3d. per cent. less at £4 4s. 10d. per cent. Total assets increased from £34,328,000 to £34,894,000. Stock Exchange securities, which exceed £28 millions, stand in the balance sheet at or under their market values on December 31, 1937. Loans on property are practically unchanged at £1,340,000, but loans on public rates increased from £1,489,000 to £1,926,000. On the other hand, policy loans fell by £135,000 to £1,595,000. There was no marked change of any kind in the distribution of the investments among the various headings. The next quinquennial investigation takes place at the close of this year, and by all indications the results will be very satisfactory.

Investment

Course of Share Values.—A month ago, we suggested that the inability of the London market for industrial ordinary shares to stage a convincing revival, despite the

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(July 1, 1935=100)
British: “Financial News” Index of 30 Ordinary Shares
American: “Standard Statistics” Index of 50 Common Stocks

comfortable words of Ministers and bank chairmen, was not a hopeful sign for renewed investment interest. The conservatism of our view was speedily vindicated, for

early in February *The Financial News* index broke through the low point of last November, and the fall was not arrested until the index figure had fallen from 94.2 on February 1st to 86.9 on February 17th. During this period, the politicians had things much their own way. There was not even a modest recovery in values (which has now raised the index to 89.9) until the market had digested the implications of Herr Hitler's changes in the German Army and Foreign Office and of his renewed fraternal interest in Austrian affairs, and until the resignation of Mr Eden was revealed as involving no split in the British Cabinet. Comparison of London's experience last month with that of New York, indeed, affords striking evidence of the advantages of relative “isolation” and the width of the Atlantic. Prices on Wall Street continued to rise last month, while London prices were falling. The considerations which favourably affected American sentiment are distinctly hypothetical; and realisation of this fact may be reflected in the relatively small volume of dealings in New York. For index number theorists, however, the position is beginning to hold out definite interest. By contrast with London, which is still in the process of making new “lows,” New York has been passing, since last November, through a phase in which each intermediate high and low point has tended to be slightly above its predecessor. If the tendency continues, chart-buying may have an appreciable effect on prices.

Foreign Bond Movements.—Despite the intrusion of politics in the bond market last month, the index of 109 foreign bond prices computed by Municipal and General Securities Company showed a minor improvement, from 79.3 to 79.5 (average January-June, 1934 = 100). A sharp

fall in Austrian and Czechoslovakian bonds was responsible for the decline in the European section of the index from 97.9 to 96.2, but an appreciable recovery was recorded in Far Eastern issues. Details of the component indices are given below:—

AVERAGE JANUARY-JUNE, 1934 = 100.

End of Month	Europe	Near & Far East	Egypt	South and Central America		Complete Index	Unfaulted Bonds	Defaulted Bonds
				States	Provinces

N.B.—Figures in brackets denote number of bonds included.

South American provincial issues were further depressed, and their fall is also evident in the defaulted bond index. Defaulted issues, however, improved by 2½ points over the month.

Capital Issues in February.—Activity in the new issue market last month was restricted, but public offers involved over £16 millions of new money, a total which is much higher than either a month or a year ago. This achievement, however, was entirely due to active corporation of borrowing which accounted for over £11 millions. The following table gives our usual analysis of new money subscribed in recent months:—

(000's omitted) Excluding Conversions

Monthly Average 1937	United Kingdom	British Possessions	Foreign Countries	Total
Old basis	£18,603	£1,842	£525	£20,970
New basis	32,296	5,283	592	38,171
Monthly Total				
(Old Basis)

Electricity Reports

Lancashire Electric Results.—An increase of over 20 per cent. in sales by the Lancashire Electric Power Company is remarkable for so large and old-established an undertaking. The average price received, however, shows a considerable reduction. According to the chairman's speech on Thursday, reductions in charges made in July, 1936, applied in the first full year, were reflected in a reduction in the average price for domestic consumption from 1.92d. to 1.81d. for 1937. The following analysis reveals a substantial increase in profits:—

	1935	1936	1937
Parliamentary Company			
Units sold to general consumers (millions)	330	370	449
Increase %	9.3	12.1	21.4
Units sold to C.E.B. (millions)	167	184	342
Receipts (excluding C.E.B.)	850,095	946,559	1,071,741
Receipts per unit sold	619d.	615d.	574d.
Trading profit	382,892	423,065	501,797
Income tax	20,643	25,797	31,808
Depreciation, and amounts (+ or -) adjusted on carry forward	105,147	114,037	179,212
Balance	257,102	283,231	290,777

	1935	1936	1937
Holding Company			
Net profit	263,564	291,381	298,634
Debt service	61,596	60,341	60,103
Fixed preference div.	88,535	87,879	87,004
Earnings for part. pref. and ord.	113,433	142,661	151,527
Dividends	100,756	118,188	150,000
Ord. stock earned %	8.4	9.0	7.6
Ord. stock div. %	7½	7½	7½
To reserve	...	40,000	...
Carried forward	21,168	5,641	7,169

It is evident from these figures that the greater part of the increase in trading profit has been applied to strengthening the depreciation allocation. Total provisions for depreciation of the subsidiary companies, plus the sums applied to debenture redemption fund and undistributed profits by the parent company for 1937, slightly exceeded £190,000. This sum is close to the depreciation requirements computed on the basis of our standard scale. Applying this standard basis, last year's earnings were almost precisely equivalent to the 7½ per cent. ordinary dividend paid. True ordinary earnings, in effect, did not shrink from 9 per cent. to 7½ per cent., as the figures at first sight suggest, but rose rather from a "true" 6½ per cent. to 7½ per cent. The £1 ordinary stock units stand at 35s. to yield £4 8s. 3d. per cent.

Midland Counties Electric.—The trading profits of the Midland Counties Electric subsidiaries showed a further substantial increase last year from £664,703 to £767,352. Precise comparison, however, is affected by the acquisition, during 1937, of controlling interests in Tamworth District Electric and Mansfield District Traction. An issue of £1,000,000 4½ per cent. preference shares was also made during the year. Our table shows, however, that the 8 per cent. ordinary dividend was covered by earnings of 9.8 per cent., against 9.2 per cent. in 1936:—

	1935	1936	1937
Trading profit of subsidiaries	628,101	664,703	767,352
Depreciation reserves	281,647	306,955	377,116
Revenue paid to parent company	347,641	353,660	390,236
Net earnings of parent company	332,600	337,480	374,183
Debt service and other interest	31,000	34,197	41,793
Preference dividends	93,000	91,500	111,919
Ordinary capital:—			
Earned	208,600	211,783	220,471
Paid	174,375	183,000	180,000
Earned %	9.0	9.2	9.8
Paid %	7½	8	8
To reserve	32,665	25,000	37,125
Carried forward	7,864	11,647	14,993

The group's ability to reserve almost half of its trading profit—the precise figure is over 49 per cent.—for depre-

ciation is to be envied. It is true that a proportion—it is not known how much—of the company's properties consists of traction undertakings, for which a higher rate of depreciation is appropriate; but there can be little doubt that the depreciation provision is more generous than the majority of companies in the industry would regard as necessary. It is clear, indeed, that the company is highly prosperous. If depreciation took only 40 per cent. of the trading profit, instead of 50 per cent., the earnings shown would be equivalent to nearly 14 per cent. on the ordinary capital, and on this hypothetical basis the ordinary shares would show an earnings yield of over 7 per cent. at the current price of 37s. 6d.

Northampton Electric Light.—As the following table shows, Northampton Electric recorded a further expansion in sales and profits in 1937. Commenting on the results a year ago, we suggested that a reduction of prices might be near at hand, but apparently this has not yet materialised. According to the latest records, the flat-rate lighting price in Northampton is 5d. a unit, which appears high compared with the prices usually charged in towns of similar characteristics. Our analysis shows that the 10 per cent. ordinary dividend was covered by earnings of no less than 17.2 per cent.:—

	1935	1936	1937
Units sold (excluding sales to C.E.B.) in millions	65.9	75.6	85.5
Increase %	12	14½	13
Revenue (excluding bulk supplies)	283,050	320,645	350,201
Net profit	182,890	205,145	252,811
Depreciation	58,068	70,727	93,724
Debt service, etc.	18,319	19,831	22,386
Preference dividends	2,625	2,625	2,625
Ordinary shares:—			
Earned	103,878	111,962	134,076
Paid	72,500	87,000	87,000
Earned %	14.6	13.7	17.2
Paid %	10	10	10
Additional depreciation	10,000	10,500	16,000
General reserve	10,000	15,000	20,000
Written off	...	...	2,865
Carried forward	15,030	18,445*	26,656

* After crediting £3,953 income tax.

On an earnings basis, the ordinary shares of the company at the current price of 46s. 3d. compare very favourably with the majority of electric supply undertakings. In view of the preceding comment, investors may consider that a conservative valuation is probably justified. The position of the company is not, of course, comparable with that of typical power companies, for it has no powers in perpetuity such as power companies hold under their Acts of Parliament, and the most lucrative part of its area is probably the town of Northampton itself, which is supplied under Orders dated 1890 and 1904. These Orders give the local authority power to purchase the physical assets of the undertaking without compensation for goodwill at no distant date, and it is not impossible, therefore, that when the promised reorganisation of electricity distribution occurs, the shareholders may find that the present generous level of profits cannot be fully maintained.

Company Notes

Imperial Chemical Management.—On Tuesday it was announced, on behalf of Imperial Chemical Industries, that a scheme which had been under consideration for some time was being put into force. As a result, the functions of sole managing director, hitherto exercised by Lord McGowan, will in future be undertaken by a management board composed of executive and non-executive directors, under Lord McGowan's chairmanship. The announcement was certainly not unexpected by the market, and its contents were, as a whole, less detailed than had been looked for in some quarters. Its chief interest hinges on the position accorded by the market to the I.C.I., ever since its formation at the end of 1926, as

the leading exemplar of large-scale rationalised enterprise. To what lengths, in such an organisation, should centralisation of control be carried? The company itself has, in fact, secured efficiency and, in recent years, a rising annual profit, from a process of departmentalisation of its numerous branches; but control of finance, in particular, "at the top," has continued to call for the qualities of a super-man. Despite its size, the I.C.I. is not the largest British "trading" organisation; the London, Midland and Scottish Railway, for example, has a larger capital, and the Halifax Building Society has higher total assets. But neither of these organisations transacts as varied a form of business as that of the I.C.I. And one of the first acts of Sir Josiah Stamp, on becoming head of the L.M.S., was to devolve important executive responsibilities on various officers known as Vice-Presidents. To mention an even more distinguished precedent, it is nearly a century since a British Prime Minister finally decided that to maintain intimate touch with the detailed work of Government Departments was a task beyond human power. Government by committee necessarily has its disadvantages, but at least it reduces the risk that an individual, however gifted and knowledgeable, may err, in all good faith, in his judgment of present events or future tendencies. For some time past, I.C.I. ordinary stock has been a falling market, and the units fell a further 6d. to 30s. on Wednesday after the announcement, and were uneasily maintained on Thursday. The issue of the report for 1937, in due course, will reveal how far the market is correct in its supposition that a satisfactory trading experience has been accompanied by some net depreciation in the value of the investment portfolio, due in part to the fall in American security values last year.

Courtaulds' Report.—The preliminary statement of profits (discussed in *The Economist* of February 19th) prepared Courtaulds' stockholders for a modest increase in earnings and for an unencouraging report. Trading profits have increased from £3,144,921 (on a comparative basis) to £3,430,204. These figures are struck after charging depreciation and excise duty, and include dividends from the American company which in the aggregate exceed the profits earned during 1937. The bulk of the increase in profits, however, has been diverted to increased taxation and N.D.C., which absorbed £1,029,760, compared with £821,389 in 1936. The report describes the present business outlook with characteristic candour. English manufacturing business last year was slightly better in volume and profits than in 1936, but "all sections are depressed by the present stagnation pervading the whole textile industry." In the United States, business was brisk for the first eight months of 1937, but conditions rapidly deteriorated, and "the outlook for 1938 is not encouraging." Canadian business tended to decline at the end of last year, and while an improvement was recorded in Europe, the company obtains a direct financial return only from Italy. The balance sheet, as usual, shows enormous strength. Properties and plant now stand in the books at a net total of £9,461,155, compared with £8,235,299 at the end of 1936. In consequence, a reduction in the book value of gilt-edged and other securities is recorded, from £15,355,897 to £14,271,052, compared with a market value of £15,453,412. The capital expenditure is associated with the completion of the Preston rayon factory. It will be interesting to have the chairman's views regarding the progress of this and other factory extensions.

FOR ALL CLASSES OF INSURANCE

An interesting point emerges from the changed presentation of the accounts. By comparing the 1936 profit figures as published, with those presented for comparison with the 1937 results, it is possible to infer that excise duty for the calendar year 1936 amounted to £1,363,228. This figure provides a basis for a rough estimate of the proportion of total artificial silk output produced by Courtaulds during that year. The net excise receipts for the year to March, 1937, amounted to £2,125,944, after deducting drawbacks. It is necessary, therefore, to assume that there was relatively small change in conditions between the first quarters of 1936 and 1937, and further, that Courtaulds enjoys roughly the same proportion of export business as the rest of the industry. On these hypotheses, it may be calculated that the company's proportion of total artificial silk production in 1936 was of the order of two-thirds. The calculation is affected by changes in silk duties in December, 1936, which released "staple fibre" from liability to excise, but it demonstrates to the Courtaulds stockholder that the company has firmly established its leadership.

* * *

London Brick Meeting.—Sir P. Malcolm Stewart assumed the mantle of a less confident prophet at the London Brick meeting last Tuesday. Stockholders may have felt the better able to receive his candid caution regarding the current year after hearing the account of a remarkable recovery in business in 1937. The current year has begun well—presumably the comparison is affected by sub-normal demand early last year—but the chairman emphasised that it is early in the year to make a forecast, and that the company has a colossal production to market. There is, apparently, good reason to suppose that the company will maintain its turnover (in this connection the recent building plans figures are a helpful pointer), but costs are still rising, and the company's policy is opposed to higher prices, which must inevitably increase building costs. In these circumstances, Sir Malcolm was as frank as a chairman could well be when he turned to the question of dividend policy. In recent years London Brick has paid three 5 per cent. interim dividends, and stockholders have naturally set up the presumption, usually justified in the event, that the final dividend would not be less than this amount. The chairman is hopeful that the regular 5 per cent. interim dividends will be maintained, but stockholders are invited to regard a final dividend of the same rate as "a matter of hopeful expectation, rather than as an assured certainty." Thoughtful stockholders will appreciate the frankness of the chairman on this occasion; they have the plainest indication that, although the long-term basis of London Brick is sound—for it sells a wide range of products on a national and not a local scale—immediate dividend prospects are limited.

* * *

Enfield Cable Finances.—A 60 per cent. capital bonus, coupled with the maintenance of the 25 per cent. dividend on Enfield Cable ordinary shares, was a rather unfortunate precursor of an 8½ per cent. drop in total profits. The ordinary shares, which jumped sharply on the bonus news, fell by no less than 12s. 6d. on the report, and have subsequently fallen to the lower level of 9s. 3d. Such wide fluctuations are not usual in Enfield Cable shares, and they might have been softened by giving some indication of profits when the bonus was announced last week. It appears that the reduction in profits is due, not to smaller turnover, but to lower selling prices. No reference, however, is made to costs. Since one-third of the total sales in the previous year was to export markets, it may be inferred that competition overseas has been more severe. The drop in profits, in any case, is not serious, but as the accompanying table shows ordinary earnings are nearly £30,000 lower, owing mainly to a provision of £7,000 for N.D.C. and higher depreciation.

	Years ended December 31		
	1935	1936	1937
Total profit	141,915	223,395	203,944
Depreciation	12,345	15,875	19,449
Tax, N.D.C. and fees.....	1,456	7,000	13,667
Preference dividend	15,000	15,000	15,000
Ordinary shares :—			
Earned.....	113,114	185,520	155,828
Paid	100,000	125,000	125,000
Earned %	29.2	40.9	33.2
Paid %	25†	25	25*
Reserve	10,000	80,000	25,000
Profit on inv. realisation.....	1,442	4,311	Dr. 1,626
Carry forward	29,906	14,737	18,940

† Also capital bonus of 25 per cent.
* And capital bonus of 60 per cent.

In terms of the newly increased capital, last year's earnings represent only 20.8 per cent., and the report specifically states that the percentage rate of dividend will be altered in future years. While the nominal capital may more nearly reflect the value of the assets employed in future, therefore, the bonus does not enhance the earnings position one whit. Assuming that profits are maintained and divided in the same proportion between dividends and reserves, the "notional" 1938 dividend may be calculated at 15½ per cent. At the current price of 91s. 3d., or 55s. ex dividend and rights, the new shares would yield £5 13s. per cent. on this basis.

* * *

Pennsylvania Railroad Revenues.—The depression in railroad stocks is no respecter of merit, and Pennsylvania Railroad common shares, which reached \$50½ last year, have since fallen to \$22½. Advance particulars from the annual report show that the line was affected by the withdrawal of the emergency freight charges (which were equivalent to a loss of \$15 millions in gross and net revenues compared with 1936) and by a substantial increase in operating expenses. Total operating revenues increased by some \$14,508,320 to \$455,933,509, but operating costs increased by no less than \$23,873,592 to \$337,961,293, owing to higher wages and materials costs, and to the increased volume of traffic. Net revenue from railway operations fell by some \$9,365,272 to \$117,972,216 and the surplus available for common dividends was reduced by \$12,265,179 to \$19,134,172. Dividends of \$1.25 were paid last year, compared with \$1 for 1936.

* * *

Olympia Setback.—The steady fall in the 5s. ordinary shares of Olympia, Limited, correctly discounted a serious setback in profits last year. Income has fallen from £150,373 in 1936 (excluding investment profits) to £101,552, and the ordinary dividend, which had been maintained at 10 per cent. for seven successive years, is passed. Net profits, before charging special expenditure on decorations and renewals, amount to £39,770, against £81,346, and the preference dividend is, in fact, short-earned by some £4,731. The main reason for this reverse is the transfer of the Motor Show from Olympia to Earl's Court, and no suitable tenant has been found in replacement. Again, the Daily Mail Ideal Home Exhibition will be held at Olympia this year, but will be transferred in future years. The problem facing the management is evident; heavy continuous overhead expenses mean that the loss of a single exhibition may seriously affect revenue. The directors, apparently, consider that London now has more accommodation than the existing exhibitions require. Accordingly, they are revising their former policy, and propose to take part in the promotion of exhibitions. A subsidiary is being formed to assist in the organisation of trade exhibitions, and the first, arranged in conjunction with Odham's Press, is to be held in November. Much will depend on the success of these ventures, and the current price of 2s. 3d. for the 5s. ordinary shares shows that the market maintains some reserve towards the company's immediate dividend prospects.

THE PENNSYLVANIA RAILROAD

SUMMARY OF ANNUAL REPORT FOR 1937

THE 91st Annual Report of the Pennsylvania Railroad Company covering operations for 1937 will be presented to the stockholders at the annual meeting on April 12, 1938. Total operating revenues increased over 1936 by \$14,508,320 or 3.3%. Operating expenses increased \$23,873,592 (due principally to higher wage scales, larger expenditures for maintenance, higher costs of materials and supplies and greater expenses incident to increased business). Net income was \$27,278,638, as compared with \$38,742,091 in 1936. Surplus was equal to 2.9% upon the outstanding Capital Stock as compared with 4.8% in 1936. Surplus per share (par \$50) was \$1.45 as compared with \$2.38 in 1936.

OPERATING RESULTS

	1937	Comparison with 1936 Increase or Decrease
TOTAL OPERATING REVENUES were.....	\$455,933,509	I \$14,508,320
TOTAL OPERATING EXPENSES were.....	337,961,293	I 23,873,592
LEAVING NET REVENUE FROM RAILWAY OPERATIONS of.....	117,972,216	D 9,365,272
TAXES amounted to.....	39,332,751	I 4,618,602
HIRE OF EQUIPMENT and JOINT FACILITY RENTS were.....	5,638,538	D 2,804,208
LEAVING NET RAILWAY OPERATING INCOME of.....	73,000,927	D 11,179,666
INCOME FROM INVESTMENTS AND OTHER SOURCES amounted to.....	37,559,227	I 1,439,694
MAKING GROSS INCOME of.....	110,560,154	D 9,739,972
RENTAL FOR LEASED LINES, INTEREST ON THE COM- PANY'S DEBT AND OTHER CHARGES amounted to...	83,281,516	I 1,723,481
LEAVING NET INCOME of.....	27,278,638	D 11,463,453
APPROPRIATIONS TO SINKING AND OTHER FUNDS, etc....	8,144,466	I 801,726
SURPLUS (Equal to 2.9% on Capital Stock).....	19,134,172	D 12,265,179

Dividends aggregating 2½% (\$1.25 per share) were paid during the year and charged against 1937 income. Both gross and net income were adversely affected to the extent of about \$15,000,000, as compared with 1936, by the elimination of the so-called emergency charges on freight traffic.

The Pennsylvania Railroad invites the active interest of its stockholders and bondholders in getting people to travel and ship via The Pennsylvania Railroad.

London Store Results.—The preliminary statement of A. W. Gamage and Company indicates an improvement in trading which the market received with satisfaction. The ordinary capital was increased from £400,000 to £500,000 last year, but the 15 per cent. dividend is maintained and net profits have increased by £5,162 to £110,761 before tax. Apparently the distribution is still well covered by earnings, but the margin must be somewhat diminished, since the ordinary dividend now requires £75,000 gross against £60,000. During eight months of the year, the business had the use of the proceeds of the ordinary share issue amounting to £275,000, less expenses. This issue was made to safeguard cash resources rather than for extension, since the company finances its growing instalment business internally. The full report of Harrods confirms the satisfactory impression made by the profits statement. Total profits of £2,712,962 are £103,582 (or 4 per cent.) higher, but earnings for the ordinary stocks, at £488,002 (before charging £40,967 to staff funds) are £11,518 lower, owing to the provision for N.D.C. and to higher charges under several expense items. The book value of the D. H. Evans holding is increased by £600,388, with a contra entry increasing the general reserve. These shares have hitherto stood neither at true cost nor at intrinsic values in the Harrods balance sheet, and the increase from £581,502 to £1,181,890 represents the addition of a premium of £2 per share, which is put forward as a conservative estimate of the potential premium on the Harrods shares issued as consideration in 1928. In other respects, the balance sheet is little changed. The strong liquid position, however, is further improved, surplus liquid assets amounting to £1,066,000 against £986,000. General, rather than detailed, conclusions from the Selfridge report were discussed by Mr H. Gordon Selfridge at last Monday's meeting. Non-recurring expenses and a higher pay-roll more than offset the increase in trading profit, but it was stressed that the considerable expenditure on the Coronation display was undertaken with open eyes, though the expense exceeded estimate. The autumn's business, it seems, was disappointing, and though investors will agree that 1937 was exceptional, no new factors are evident which encourage greater optimism regarding the current year.

Tanganyika Concessions Scheme.—The reconstruction scheme foreshadowed by the board at the end of January proves to be a complicated measure, but the company's position is equally complicated. In the first place, the African Railway Finance Company has to be put in regular funds to serve its debentures, whose proceeds were employed in the completion of the Benguela Railway. At present, African Railway Finance holds 1,087,875 6 per cent. "B" preference shares of Tanganyika Concessions—its only asset—and has no income. These shares will be replaced by £1,373,100 of 2 per cent. Notes, redeemable as the sinking fund payments on the outstanding £1,373,100 2 per cent. debentures fall due. In consequence, the redemption of the African Railway Finance debentures will in future rank as a capital charge in "Tanks" books. The second step is to eliminate the existing debit balance (which includes the irrecoverable advances to African Railway Finance) and to reorganise the capital structure. These effective changes are summarised in the following table:—

Existing Capital	New Capital
10% pref. 26,394	Cum. part. pref. ... 2,305,783
6% "B" pref. ... 3,340,870†	Ordinary (10s.) ... 3,139,678
Ordinary (£1) ... 6,279,356	New shares
Unissued 353,380*	(unissued) 4,554,539
£10,000,000	£10,000,000

* To be cancelled. † Of which £1,061,481 held by African Railway Finance to be cancelled.

Holders of 10 per cent. preference shares will lose their special rights and dividend arrears, but will receive, in effect, two new cumulative participating preference shares, which each rank for 4 per cent. cumulative and 2 per cent. non-cumulative preferential dividend, together with partici-

pating rights up to a further 4 per cent., making a total potential rate of 10 per cent. Existing public "B" preference shareholders, whose 6 per cent. dividend is now two years in arrear, are invited to exchange into the new preference capital on a share for share basis, while their arrears and rights of conversion into ordinary shares will be cancelled. Finally, the ordinary capital is written down by one-half, and the company will have £4,554,539 of unissued capital in reserve.

Preference shareholders will probably feel that their sacrifice of arrears has been equitably compensated under the scheme. It covers all depreciation on the company's investments, and the Benguela Railway share and debenture holdings will be reduced from £6,571,620 to approximately £2,250,000. Consequently, the directors anticipate the payment of a dividend on the new preference capital for the seven months to July 31st next. They do not, however, give any indication of potential profits in the future, and it is on this point that the preference shareholders may feel the need for enlightenment. The 10 per cent. preference shareholders have 55 per cent. of dividend arrears, and if the maximum participating dividend was paid, their claims would not be met for 5½ years. The "B" preference shareholders sacrifice 12 per cent. in arrears, and 2 per cent. in cumulative rights, in return for potential 10 per cent. payments. The ordinary shareholders, clearly, will not object to a scheme which merely reduces their nominal capital and enables them to participate in profits at a much earlier point.

Mexican Oil Wages.—Mexican Eagle shares fell further from 8s. 7½d. to 7s. 10½d. on Wednesday, following the dismissal by the Supreme Court of Mexico of the foreign oil companies' appeal to set aside the wages award. It will be recalled that, in December, the oil companies disputed the basis of the Arbitration Board's findings. The award contemplated that the oil companies could "afford" 26 million pesos per annum. In fact, their average profits were stated to amount to 22½ million pesos for the three years to December, 1936, and it was further stated that the full award, including such singular benefactions as 80 per cent. retirement pensions, and four to six weeks' holiday with pay, would involve not less than 64 million pesos. In the light of these statements, the companies' rejoinder to the Supreme Court's decision is easily understood. The Supreme Court's refusal to grant the injunction will have "serious consequences for the companies' employees and those dependent on the industry." In the last resort, the Mexican Government is largely dependent on the industry—indeed, it was remarkable last year how quickly the strike was settled as soon as an internal shortage of petroleum supplies became apparent. The Government, however, appears rather to be devoted to the policy of slow strangulation, coupled with a willingness to grant further oil concessions to existing and new companies which, in the circumstances, is scarcely explicable. Indeed, the whole affair is in the Mexican tradition. Investors would be as unwise to expect any relief for the oil companies as to hope for the debt settlement for which they have waited for years. Recent suggestions from Mexico City that an early settlement was in prospect have been doubtfully received in London, which knows that optimism in the matter of Mexican finance rarely pays.

Other Company Results.—Apart from the results discussed in preceding notes, some of the more important reports are discussed on page 519 under the heading "Shorter Comments." In all, some 45 companies are included in this week's analysis of profit and loss accounts on page 540.

Company Meetings of the Week.—Reports of company meetings commence at page 527 of this issue. The remarks of Sir P. Malcolm Stewart at the London

Brick meeting are discussed on page 512. At the *Scottish Widows'* meetings, Sir Ian F. C. Bolton referred hopefully to the prospective surplus when the quinquennial valuation is made at the end of this year. Mr Francis E. J. Smith discussed the investment policy of the *Clerical, Medical and General* office, and declared that when investment yields were low, the management sought—successfully last year—good mortgages, and preferred short-dated securities. The chairman of *British Assets Trust* expressed the hope that the increased dividend would be maintained, but found it difficult to make a reliable forecast of future earnings. At the *Illustrated Newspapers* meeting, Lord Southwood expressed satisfaction that sales and advertisement revenue had been well maintained in spite of the constant production of new publications. The directors are

considering the advisability of exceptional expenditure on a publicity campaign. Mr H. Gordon Selfridge's comments upon the year's working of *Selfridge and Company* are referred to in a Note on page 514. An address prepared by the late Sir James Crichton-Browne was read to *Bovril, Limited*, shareholders by Lord Luke, who referred to Sir James' valuable services rendered to the company during thirty years. At the *Anglo-French Exploration* meeting, Mr F. A. Robinson discussed the effect of taxation on the opening of new mines, which was essential if gold output was to be maintained. Mr George Balfour, at the *Lancashire Electric Light and Power* meeting reported that the company was receiving as many applications for supplies and connecting as many new consumers as a year ago, while output showed comparable increase.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
MARCH 8 MARCH 10

AFTER last week's smart recovery, markets have again relapsed into quiet and indifferent trading. The volume of turnover for the greater part of the week has been wholly sub-normal, and it has affected the gilt-edged market no less than industrials. The Defence white paper and the estimates have failed to stimulate interest in industrials, but they produced a sharp setback in the Funds on Thursday.

The *gilt-edged market*, in fact, had already lost part of its recent strength at the opening, and even a small volume of selling sufficed to depress quotations fractionally. The significant exception was National Defence Bonds, which rose further to a new high level of 109½ on Tuesday. Old Consols showed a particularly heavy fall on Thursday, when Local Loans were again depressed. Home corporation crips were naturally affected, and the Birmingham issue fell to a small discount in mid-week.

Far Eastern bonds recovered appreciably, the China 1913 issue being helped by the annual drawing, while Japanese issues responded readily to buying in a market short of stock. A rally in Austrian and Czech bonds was also reported, but an early improvement in Brazilian issues was not held.

Home rails became idle, and prices declined fractionally. The traffics disappointed the market, and Great Western ordinary, in particular, fell 1½ on Wednesday, and again on Thursday.

Movements in the *industrial market* were generally downward, but usually of small dimensions. The demand for steel shares abated, and advances were limited to shares in the news, like Projectile and Engineering. Coal shares were also slightly easier. In the electrical equipment market, the sharp fall in Enfield Cable (discussed on page 512) was outstanding. Engineering shares showed a few exceptional advances, such as Westinghouse Brake, but like motor issues they generally moved lower. The Air estimates did not stimulate particular interest in aircraft shares. Textile issues remained neglected, and Courtaulds again fell below 40s. following the report. Shipping shares received little support. Among the miscellaneous industrials, I.C.I. showed a net fall on

the statement (see page 511), while London Brick were 2s. lower on Wednesday, following the meeting (discussed on page 512).

In sympathy with the easier trend on Wall Street, *oil shares* sagged early in the week. There was little business passing, but quotations were sensitive to small sales. Mexican Eagles were not especially depressed by the Supreme Court's decision on the labour award, for the result had already been discounted. The *rubber market* was stagnant and prices changed only fractionally. While investors did not fear further declines, they were not tempted to increase their holdings, and the volume of orders was hardly sufficient to test prices. On Monday conditions in the *tea share market* were brighter, but the improvement did not last.

In the mining market the week was even more than usually idle. *Kaffirs* were thoroughly somnolent, remaining indifferent to the Rand returns for February and to the start of dealings in the new Grootvlei shares. There was a little Cape enquiry for Venterspost, and later some Paris support for dividend payers. West Africans eased from sheer neglect. Rhodesian copper shares continued dull, but prices were fairly steady. Base metals shared in the general apathy.

ACTUARIES' INVESTMENT INDEX

By Tuesday last (March 1st), the Actuaries' index of 151 industrial equity prices had recovered to 70.3, compared with 69.4 a week ago, but was still lower than a month ago, when the index stood at 72.5. The corresponding average yields are 5.16, 5.22 and 4.93 per cent., the percentage having risen above 5 for the first time on February 8th. We give in next column a selection of the separate indices.

New York

By the end of last week it was evident that Wall Street had lost its impetus, and while there was a slight attempt to put stocks higher on Tuesday this week, the meagre volume of business was evidence enough of lack of speculative interest. In a week, market sentiment has swung round to asking whether the present level of stocks can be maintained without a definite sign of business recovery. At present this is lacking. *Iron Age* again estimates steel output at 30 per cent. of capacity, but suggests that demand conditions are slightly better. No special selling pressure has been seen in the stock market, but lack of resistance brought falls of \$1 or more in such stocks as U.S. Steel, Bethlehem and American Smelting in mid-week. Nor is the market expecting great benefits from the Tax Bill, which is now being discussed in House Committee.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100):—

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Paris

The Bourse last month was again in uncertain mood, and responded in listless fashion to political developments at home and abroad. During the first ten days, occasional good sessions brought some support for local issues and sporadic interest in gold mines. Renten, however, weakened on news of the one milliard francs 6 per cent. loan at 94. An improvement then followed on the rally in the franc, the closing of the lists for the new loan, and some-

what better foreign news. But a series of particularly dull sessions set in, and even internationals failed to respond to the easier franc. Strike threats, and the report of yet another Treasury bond issue for 3 milliards 5/2 per cent. bonds at 94 encouraged the depression. The immediate response to Mr Eden's unexpected resignation was unfavourable, and the month ended in depressed and apathetic mood, with home politics the dominating factor, focussed on the conflict between Chamber and Senate on the Labour Bill.

Berlin

Home and international political developments in February had no visible influence on the Bourse. Shares were generally dull and the price level changed little, but fixed-interest securities were consistently strong. Selling for foreign account caused a decline in the whole list at first, but a general recovery followed, in which steel, the leading chemical and most textile issues shared. In the third week, trading declined and at times even first-class corporations were not quoted. Steel, chemical, and electrical issues, however, were favoured. Trading then became cheerful, but substantial rises were confined to special groups, such as chemicals. Commercial banks remained firm during the month and responded to the publication of the Commerz- und Privatbank report. Reichsbank recovered after a sharp drop in the middle of the month. Liner shipping companies weakened. Buyers of Reichsmark bonds were rationed and numerous mortgage-bank municipal loans reached par. The German section of Young Loan advanced. The official shares index (1924-26 = 100) for January was 113.84, against 111.30 for December; bonds, 99.81, against 99.68.

Amsterdam

February was an unexciting month, but sagging prices were later followed by an unobtrusive recovery, and on balance the month ended with a small all-round improvement. Business was at first featureless, except for an occasional response to improvement on Wall Street. The firmer trend of commodity prices and talks of inflation from the U.S.A. gave an appreciable impetus to the Bourse. Tin shares rose on the quota cut, with Billiton Tin especially prominent, and proved resistant at times when the general drift of the market was downwards. Rubber shares came in for attention on the renewal of restriction. There was a fairly satisfactory undertone at the close.

Canada

The tone of the Canadian stock markets since the middle of January has been sluggish, with a small volume of trading. There is a lack of confidence in the immediate future. February proved uninteresting, with little change on balance. In mid-month junior gold stocks and base-metals were supported and moderate gains were general. These stocks gradually lost ground and attention was turned to utilities and rail equipment stocks, but business remained on a small scale, and the month ended quietly. Construction, equipment and liquor stocks have received better support than others, but power and newsprint issues remain out of favour. Investors at present have the greatest faith in gold stocks. Government bonds are firm and prices have advanced slightly, but there is still a very cool response to speculative issues. The recently formed Lake Sulphite Company has been forced into liquidation, largely through its inability to market a projected issue of first mortgage bonds. For the week ending February 3rd the Investors' Index of the Bureau of Statistics was 105.9, against 107.8 for the previous week and 139 a year ago. The index of long-term Dominion bonds for the week ending February 3rd was scarcely changed at 116.2.

Capital Issues

The new issue market this week has found something of its old form. South Shields has offered £1 million of 3 1/2 per cent. stock, 1955-58, at 98, an operation which is first in a sequence of conversions of existing 6 per cent. stocks due this year. Since the Plymouth scrip stood at 1/2 discount on the eve of the offer, an eager response from cash applicants was not anticipated. An offer for sale of 500,000 6 per cent. £1 preference shares at 20s. 6d. and 1,000,000 5s. ordinary shares (at 50 per cent. premium) on behalf of A. C. Cossor is the largest industrial issue for some time. The ordinary shares offer a high yield, based on the directors' estimate that profits should reach £200,000 in the company's first financial year. The issuing house has purchased the ordinary shares at par, and issue expenses apparently absorb some 2s. 1d. of the premium. Net assets (excluding trade marks and goodwill) amount to £716,522. On the basis of the offer prices, the market

capitalisation of the concern amounts to £1,262,500. The offer of 5s. ordinary shares in Alliance Box at 100 per cent. premium shows that profits increased sharply during the latest half-year. The shares carry the right to a prospective 15 per cent. dividend in respect of the year to March next. The company is evidently expanding, though it is still relatively small for general investment interest. Associated London Properties have issued a further £180,000 of 5 per cent. "B" debenture stock at par. The existing stock stood at a premium of 2 points before the issue, which was thus assured of a ready response. The prospectus shows that the stock, which is a second charge, is covered on the capital value and revenue of flats and business premises. Statements for information only cover debenture issues by South Metropolitan and Wandsworth and District Gas, while Welwyn Commercial Buildings preference issue is of a private character.

PUBLIC OFFERS

Associated London Properties.—Issue of £180,000 5 per cent. "B" mortgage debenture stock at par. Part of £420,000 total; secured (subject to prior charges of £1,469,726) by specific charge on properties of £2,553,600. Redeemable at 102 1/2 in January, 1976, by cumulative sinking fund from 1939, or from 1945 on notice. Proceeds for balance purchase price of 16 properties (Great Westminster House, St. Ermin's, etc.) which form security. Anticipated income, £163,647. Remainder of company's properties valued at £829,300, with income of £70,171. Interest on prior charges, £66,711; sinking fund instalments, £9,250. List closed 9.5 a.m. March 2nd. About four times oversubscribed.

CONVERSIONS AND REPAYMENTS

South Shields Corporation.—Issue of £1 million 3 1/2 per cent. stock at 98, offered in conversion to holders of £1 million 6 per cent. stock, 1938-48. A trustee stock. Redeemable at par March, 1958, or from 1955 on notice. Holders converting receive £2 cash per £100. Census population, 113,455; rateable value, £546,930; rates, 14s.; net debt, £2,950,500 (of which £446,000

productive and £1,440,000 housing). Revenue, £1,129,000 (32 per cent. from rates).

BY OFFER FOR SALE

Alliance Box Company.—Offer for sale of 195,000 5s. ordinary shares at 10s. Fibre board container makers, of Warrington and Partington. Net assets, £145,972. Profits, after depreciation, before interest and fees, years to March 31: 1936, £31,912; 1937, £35,631; 6 months to September 30th, £29,249. Preference dividend, £7,500. Standard Industrial Trust take issue at 8s. and expenses (or 9s. 2 1/2d.), and take at 22s. 6d. any of 60,000 new 7 1/2 per cent. preference shares not taken by members. Lists closed 9.10 a.m. March 1st. Underwriters will have to take up about 40 per cent. of the issue.

A. C. Cossor, Limited.—Offer for sale of 500,000 6 per cent. cumulative £1 preference shares at 20s. 6d. and 1,000,000 5s. ordinary shares at 7s. 6d. Makers of scientific and electrical apparatus and appliances. Net assets (of company and subsidiary), £716,522. Combined profits, after depreciation, years to March 31: 1935, £214,141; 1936, £204,410; 1937, £208,826; for six months to September 30, roughly £51,732 (after sales policy reorganisation). Net cost of offer to Ridgford Trust, about £1 per preference and 7s. 1d. per ordinary share.

STOCK EXCHANGE INTRODUCTIONS

Wandsworth and District Gas Company.—Issue of £400,000 3 1/2 per cent. debenture stock, which Messrs Seymour, Pierce and Company take at 100 1/2 net. Redeemable at par July, 1968, or from 1963 on notice. Interest ranks *pari passu* with that on existing debenture stocks.

South Metropolitan Gas Company.—Issue of £600,000 3 1/2 per cent. stock which Messrs Seymour, Pierce and Company take at 100 1/2 net. Redeemable at par August, 1968, or from 1963 on notice. Interest ranks with existing debenture stocks.

PRIVATE PLACINGS

Konversionskasse für Deutscher Auslandsschulden.—Issue of 4 per cent. Sterling Bonds, Fifth Series; guaranteed by German Reich. Redeemable at par January, 1948. Bonds issued for same nominal amount of interest instalments and similar recurring payments in respect of which payment has been made in Reichsmarks to the Konversionskasse. This issue made in respect of interest due or paid January-June, 1938.

United Kingdom Gas Corporation.—This Corporation has placed privately 20,569 4 per cent. first redeemable cumulative £1 preference shares.

SALES BY TENDER

West Hampshire Water Company.—Offer for sale by tender of £20,000 4 per cent. perpetual debenture stock (a trustee stock) at 106 minimum and 1,000 £10 "B" ordinary shares (7 per cent. maximum dividend, paid for last 11 years) at £17 minimum. Revenue from water rates, etc., year to June 30, 1937, £46,022; net revenue, £26,149; available for ordinary, £13,221.

Rickmansworth and Uxbridge Valley Water Company.—Issue by

tender of 15,000 £10 4 1/2 per cent. preference shares at a minimum of £12.

Colne Valley Water Company.—Tenders are invited up to March 18, 1938, for £122,000 7 per cent. "E" ordinary stock, at a minimum price of £163 per £100, yielding at that price £4 5s. 11d. per cent. To rank for dividend up to 7 per cent. with all existing ordinary stocks. Net income for 1937, after interest, preference and existing ordinary dividends, £58,206. Supplies Harrow, Wembley, etc. (90 square miles). Estimated population, 528,000. Water rental in 1937, £359,184.

BONUS SHARES

Projectile and Engineering.—This company proposes to capitalise £50,000 (put to reserve out of the past year's profits), and to distribute as a bonus one new 10s. ordinary share for every five held. The bonus shares do not participate in final dividend of 7 1/2 per cent. and cash bonus of 5 per cent., both less tax, now recommended, but will rank for any distribution in respect of the current year.

ISSUES TO SHAREHOLDERS ONLY

Welwyn Commercial Buildings.—Prospectus circulated only to existing stock and shareholders in company and associated companies, etc. Issue at par of 120,000 5 1/2 per cent. cumulative £1 preference shares. Dividend guaranteed by Welwyn Garden City. To repay bonds and loans. Excess of revenue over expenditure, years to September 30: 1935, £6,397; 1936, £8,919; 1937, £13,799. Net assets, £127,991. Company formerly an Industrial and Provident Society.

SHORTER COMMENTS

Company Results of the Week.—Slightly increased profits have been earned by TAYLOR, WALKER AND COMPANY who again pay 10 per cent. Considerable progress has been made by JAMES BOOTH AND COMPANY, the brassfounders, whose net earnings of £100,903 are £11,000 higher. The Gateshead firm of CLARKE, CHAPMAN AND COMPANY pay 10 per cent. against 8 per cent., and net profits, at £90,838, are £24,000 higher. D. NAPIER AND SON have converted a loss of £23,834 into a profit of £65,047 (before depreciation), but have not yet resumed dividends on the 8 per cent. non-cumulative preference or on the ordinary shares. The accounts of PETER ROBINSON, LTD., reflect the reorganisation of last year. Trading profits are higher, but the amount earned for dividends is reduced owing to the new debenture service. WILLIAM WHITELEY, LTD., have made trading profits of £122,064 against £138,188, and an increased sum is receivable under the Selfridge guarantee. I. AND R. MORLEY, LTD., maintain the 5 per cent. dividend, net profits being 21 per cent. higher at £116,095. WOLSEY, LTD., profits are some £6,000 higher at £78,263, despite the fall in wool prices and consequent writing down of stocks. It has been decided in future to charge advertising expenditure against the year's revenue. H.P. SAUCE, LTD., have earned £209,212 against £207,203. The policy of making numerous extensions and improvements to plant has benefited MONSANTO CHEMICALS, whose net profits of £132,802 are 15 per cent. higher, and who are resuming ordinary dividends. ASSOCIATED DYERS AND CLEANERS also have resumed dividends, following the capital reconstruction last year, and trading profits are nearly £10,000 higher at £60,716.

Industry and Trade

Economic Progress in Scotland.—Every year the Clydesdale Bank publishes an excellent *Survey of Economic Conditions in Scotland*. The opening article of the latest issue attempts to measure the extent of the progress achieved during 1937 and to assess the prospects for the future. An index of business activity, prepared by the bank on somewhat similar lines to that of *The Economist* for Great Britain as a whole, shows that Scotland suffered more acutely than the rest of the United Kingdom from the depression of the early thirties. Up to 1935 recovery in Scotland was more limited than in England, but during the past two years this disadvantage has been reversed and Scotland has now made up most of the leeway lost during the depression. The estimated number of insured workpeople in employment in Scotland rose from 1,141,000 in mid-1936 to 1,203,000 a year later, compared with a depression "low" of 981,000 in 1932. The Scottish employment position, however, is characterised by a curious paradox. For, whereas the recovery of business has been seriously hampered in certain directions by shortages of skilled labour, the problem of unemployment remains acute. The number of unemployed workpeople still on the registers at the end of last year was no less than 270,000, or 17.6 per cent. of the insured population, against 12.2 per cent. for the United Kingdom. "This 'hard core' of workers too old for transfer, or young people who have never been in regular work, presents the central problem of long-term readjustment in Scotland's economic life."

A characteristic of recovery North of the Tweed is the large part played by the re-armament programme. "It would," so the writer of the survey suggests, "be almost

true to say that what building was to English recovery, re-armament has been to Scottish." This is of considerable importance for any assessment of future prospects. Here the author is moderately optimistic. It is true, he suggests, that a setback to British business as a whole might be expected to have unfavourable repercussions in Scotland, but this may be counterbalanced by two other factors: no sharp diminution in building activity appears likely in the near future, and the full effects of Government work have not yet been felt. But while the immediate outlook is not unfavourable, the present modest level of prosperity may prove ephemeral unless every opportunity is seized to broaden the basis of the country's economic activity and to render it more adaptable to the changing demands of modern markets.

Coal Exports.—In the last two years the export trade in British coal has notably recovered, as the result of world economic revival, general re-armament activity, the resumption of Italian purchases, and the negotiation of trade agreements with Continental countries. Exports (excluding bunkers) amounted in 1937 to 40,352,288 tons, compared with 34,519,384 tons in 1936. This figure compared unfavourably, however, with the 60,266,618 tons exported in 1929; and the greater progress (compared with the pre-depression period) which has been achieved by important foreign exporters is noteworthy. German exports of coal amounted to 43,176,000 tons in eleven months of 1937, compared with 42,210,000 tons in the whole of 1936 and only 26,400,000 tons in 1929. Polish exports have not yet regained the 1929 level of 13,800,000 tons, but, at

11,599,000 tons in eleven months of 1937, show considerably greater recovery than has taken place in British shipments. Re-armament and domestic scarcity in France and Belgium have stimulated British exports of coal in recent months, but shipments in January were below the level of January, 1937, and although collieries have satisfactory export orders for the next few weeks, there has been a disappointing falling away in forward contracts for later dates. A similar slackening of German exports in recent months is reported by our Berlin correspondent on page 497. The unusual prosperity lately experienced by the coal industry is not likely to be drastically impaired in the near future, but the latest developments suggest that appreciable further advance is unlikely; and in the export section a further decline may be expected.

Freight Rates Fall Again.—After a steadier tendency in January, tramp shipping freight rates resumed their downward movement last month, a reflection of the shrinkage of international trade. *The Economist* index of freight rates declined by 5.5 per cent. between January and February. Moreover, the index for last month is the lowest since November, 1936, and shows a fall of 30 per cent. from the highest level reached in September last year.

The Economist INDEX OF FREIGHT RATES
(1898-1913=100)

	Average, 1913	Feb., 1937	Nov., 1937	Dec., 1937	Jan., 1938	Feb., 1938
European waters.....	110.0	144.0	164.2	140.8	124.6	117.6
North America.....	113.1	116.6	130.2	118.0	118.5	109.3
South America.....	123.4	124.0	125.0	109.4	110.6	122.4
India.....	106.3	148.9	161.9	141.2	142.6	130.3
Far East and Pacific.....	117.4	132.2	149.1	127.1	128.6	120.4
Australia.....	127.9	140.5	146.3	121.7	130.0	113.4
Total.....	116.3	134.3	146.1	126.4	125.8	118.9
1913 = 100.....	100.0	115.5	125.6	108.6	107.9	102.1

With the exception of South American trade, freight rates declined between January and February on all the principal shipping routes:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade.....	108.6	- 5.4	South America:—		
Bay—outwards.....	104.6	-16.5	Outwards.....	91.6	+ 23.0
Bay—homewards.....	164.5	- 6.5	Homewards.....	153.2	+ 0.6
Mediterranean:—			India—outwards.....	105.3	- 4.5
Outwards.....	81.7	- 1.5	India—homewards.....	155.3	-20.1
Homewards.....	137.5	- 7.2	Far East, etc.....	120.4	- 8.2
North America.....	109.3	- 9.2	Australia.....	113.4	-16.6

As there are no indications of an expansion of international trade in the near future, the prospects for an early and sustained improvement in freight rates are not very bright, especially as the world's carrying capacity is again increasing as a result of the orders placed during the period of rising rates in 1936-37.

Cotton Yarn Price-Fixing.—The Committees which control the legalised price agreements in the American section of the cotton industry decided this week that the old basis should be maintained without any change. In this movement for minimum prices a weak point has been medium counts in mule twist, and recently an attempt has been made to put into force a legalised price agreement in this section. Mr Frank Platt, managing director of the Lancashire Cotton Corporation, announced that proposals had been made to 33 firms. Of the 23 firms which have replied, 22 intimated their agreement with the proposal and undertook to sign a legal agreement. The present position under which some yarns are under a minimum price agreement, while in other counts and qualities there is a free market, has given rise to some striking irregularities. Since the end of last year,

for example, the price of 36's American mule twist has fallen by ½d. per lb., while the price of 36's American ring beams, which are under a minimum price agreement, has advanced by ½d. per lb. During this period raw cotton prices in Liverpool have risen nearly 0.4d. per lb. The result is that whereas producers of ring beams have maintained their margin, that of mule twist spinners has fallen by about 1d. per lb.

Recession in Linens.—Among the industries which have been adversely affected by a declining export demand recently, linen has been a notable sufferer. The reversal of its fortunes is the more obvious in view of its comparatively favourable history since 1929. Compared, for instance, with the cotton and woollen textile industries, linen has made considerable progress since the slump years. Whereas exports of linen yarns and manufactures last year were still above the 1929 level, overseas sales of cotton and woollen manufactures were heavily reduced compared with that year. Exports of cotton piece goods of all kinds fell from 3,671,586 thousand square yards in 1929 to 1,921,918 thousands in 1937; exports of woollen tissues dropped from 108,186 to 79,837 thousand square yards, while shipments of worsted tissues declined from 47,281 to 42,998 thousands. Overseas sales of flax and linens in recent years have been as follows:—

	Flax and hemp yarns Cwt	Linen and hemp piece goods Thousand sq. yds.
1929.....	90,184	71,540
1932.....	61,854	65,890
1934.....	88,302	77,596
1935.....	86,097	77,163
1936.....	97,358	88,728
1937.....	92,877	83,143
January, 1937.....	8,528	9,398
January, 1938.....	5,847	5,834

Thus the setback which was already noticeable in the annual totals for 1937 was sharply accentuated after the turn of the year. The drop in exports last January, compared with January, 1937, was almost entirely accounted for by declining shipments to countries outside the Empire—and especially to the United States. Almost 30 per cent. of the industry's insured workpeople were registered as unemployed in January, an increase of 14.2 per cent. over the corresponding month last year. Unless business activity in the United States and other overseas countries shows an early improvement, the outlook for the linen industry cannot be regarded as encouraging.

Progress in Retail Trade.—The gradual expansion in the value of retail sales in Great Britain, which was a feature of last year, was still in evidence after Christmas.

SHORTER COMMENTS

(Continued from p. 519)

Gallaher Profits.—Net Profits, £430,859, an increase of £31,749. Final dividend, 15 per cent., making 22½ per cent. as before; but bonus is increased from 2 per cent. to 5 per cent. Shareholders are offered 129,360 new shares at £2 per share, in proportion of one for ten held.

Associated Portland Cement.—Final dividend, 15 per cent., making 22½ per cent. (same). Carry forward increased by £9,228.

British Portland Cement.—Final dividend, 15 per cent., making 22½ per cent. (same). Carry forward increased by £3,772.

Moss' Empires.—Gross profits for 1937 were £174,630 (against £168,519). Debenture interest absorbs £23,614 (£23,839). Income tax £18,959 (£6,850). N.I.C. £3,750 (nil). Fees and expenses £5,969 (£5,824); other charges £7,052 (£7,260); depreciation £23,957 (£24,531). Ordinary dividend 10 per cent. Carry forward £28,555, as against £19,775.

Canadian Celanese.—Report for 1937 shows net profits of \$1,489,102, as compared with \$1,519,503 for 1936. To interest on income funding rights and sinking fund \$122,400; to special reserve account, \$100,000; this leaves balance of \$1,266,702, transferred to earned surplus account. Appropriated from capital surplus account, \$140,068, which was transferred to reserve for amortisation of patents, etc.

Short Brothers (Rochester and Bedford), Ltd., and Pobjoy Airmotors and Aircraft, Ltd.—The offer to exchange one ordinary share in Short Brothers for twelve shares in Pobjoy has been accepted by a sufficient number of Pobjoy shareholders to give Short Brothers 82 per cent. of the ordinary shares of Pobjoy.

Cannon Brewery.—New profits for 1937, £312,035, or £2,666 more. Deferred ordinary dividend 10 per cent., as before. To property and contingency reserve

£100,000, as before. Carry forward raised from £213,230 to £217,265.

H.P. Sauce.—Net profit for 1937 shows a rise of £2,208 at £209,211. Ordinary dividend remains at 30 per cent. To reserve, £40,000, as before. To staff pension account £7,500, against nil. Carry forward raised from £74,640 to £76,132.

Clarke, Chapman and Company.—Net profits (after charges and tax and £13,609, against £12,946 for depreciation) are £77,228 for 1937, against £53,867. Ordinary dividend raised from 8 to 10 per cent. To reserve £20,000, against £10,000. Carry forward raised from £13,207 to £19,889.

D. Napier and Son.—Trading profit for year to September 30, 1937, amounted to £58,172, compared with a loss of £24,902. Carry forward raised from £88,051 to £99,534. The regular payment is made on the 7½ per cent. cumulative £1 preference shares, but there is again no dividend on the 8 per cent. non-cumulative £1 preference or ordinary shares. Stock, etc., rose from £343,915 to £429,901. Plant and machinery are up from £186,828 to £246,586 and cash from £28,383 to £87,184.

Lewis's Investment Trust.—Profit for year ended February 28, 1938, was £290,237 (against £275,859). After 7 per cent. preference dividend, allocations are proposed of: £10,000 to general reserve; £15,000 to 4 per cent. note redemption reserve account; £8,535 to 5 per cent. debenture stock redemption reserve account; and 17½ per cent. (less tax) ordinary share dividend (same), leaving £40,147 (against £25,164) to be carried forward.

Abbey Road Building Society.—Report for 1937 shows that 10,380 advances were made of £6,756,952 (against £7,506,680). Profit, after expenses, interest and taxes, £1,529,540 (£1,507,038); dividend, £1,278,703 (£1,239,533); to reserve funds, £218,662 (£272,673). Shareholders and depositors, 273,164 (271,201); liability to them, £47,460,974 (£45,478,305). Total assets, £50,295,517 (£48,034,710), of which

85,849 mortgages represent £41,156,167 (against 78,175 mortgages of £42,715,954). Reserve funds and carry-forward, £2,552,900 (£2,320,723).

Greyhound Racing Association Trust.—The directors, in order to avoid any misunderstandings which may have arisen as a result of notices in the Press to the effect that a debenture for £250,000 has been issued, announce that the debenture was issued to cover advances from the company's bankers which had been made before the issue of new ordinary shares. Part of the proceeds of the new issue, which was fully subscribed, will be used to liquidate advances made on the security of this debenture.

British Home Stores.—Preliminary figures show net profit for 1937 of £96,316 after depreciation but before tax (a decrease of £3,832). To: Income tax account, £27,857 (£20,095); general reserve, £10,000; to fixed assets contingencies, £4,000 (same); other contingencies, £1,000 (nil). Ordinary dividend 33½ per cent., absorbing £33,750, against £45,000 taken by last year's capital bonus of 50 per cent. Carry-forward reduced from £13,202 to £11,737.

Cable and Wireless West Indies Services.—The business of Cable and Wireless, Ltd., in the West Indies, previously conducted by several companies, is being consolidated in the hands of the wholly-owned subsidiary, the West India and Panama Telegraph Company, Ltd. The name of the latter company has been changed to Cable and Wireless (West Indies), Ltd.

Anglo-Portuguese Colonial and Overseas Bank.—Net profits for year to January 31, 1938 (after bad debts, tax and N.D.C.) are £16,076, which are added to the balance of £49,505 brought in; carried forward, £65,581. Total assets stand at £3,258,575 (against £2,872,387) of which cash in U.K. £590,214 (£378,528), bills discounted £874,025 (£712,589), and investments £540,497 (£277,932). Current and deposit accounts stand at £1,261,680 (£985,217).

quieter, mainly because most consumers have large stocks on hand. Sheet makers are steadily employed, the bookings for black sheets being particularly good. The market for galvanised sheets is now less satisfactory owing to the small volume of export business. There is no decline in the home demand. Fabricators are all very busy and are absorbing large tonnages of finished material.

★

Cardiff.—The depression in the tinplate industry is becoming accentuated. Production has fallen to 50.96 per cent. of capacity under the pooling scheme. Under the pressure of last year's exceptionally active demand restrictions on output were removed, but they have now been restored, and from the beginning of March to May 28th production has been fixed at 60 per cent. of nominal capacity. Minimum prices are unaltered. Exports of tinplates from Swansea last week totalled 5,005 tons, compared with 5,133 tons the previous week, and 6,308 tons a year ago. The slump in tinplates is reacting unfavourably on the production of both pig iron and steel ingots. Operations have already ceased at a number of steel furnaces, and it is feared that one or two of the blast furnaces may have to be blown out.

Textiles

Cotton (Manchester).—Spinners and manufacturers have again found progress difficult and firms whose sales have equalled production have been quite exceptional. The limited amount of export trade is a serious factor. Although stocks in some quarters have moved a little more freely, supplies remain large. The upward movement in raw cotton prices has been checked. With regard to the acreage under cotton for the new season in the United States, a referendum of farmers is now being taken, and if two-thirds of the growers agree to the Government proposals, the officials will work out maximum allotments for each State and each individual farmer. During the first six months of this season, cotton consumption in the United States was 3,085,000 bales, a decline of 22 per cent. on the corresponding period in the previous season.

According to some reports, delivery instructions in American yarns have been slightly better, but new business has been restricted. A little more activity has shown itself in Egyptian qualities, chiefly for the Continent. The cloth market is dragging. Very few manufacturers have secured orders for anything more than retail lots. Only miscellaneous transactions have been reported.

Total	58.0	53.5	1,702	1,647.0

for the several markets in India. Fancies have attracted some attention for Singapore and South America. Limited quantities of light bleachers have been booked for Egypt and standard makes have been wanted for the Dominions. The improvement in the home trade has been maintained.

★

Wool (Bradford).—The more extended call for raw wool at slightly firmer prices has strengthened the hands of topmakers and spinners, who for months have experienced the utmost difficulty in selling their products at a margin of profit. Any improvement in merinos is covered by ½d. to 1d. per lb., with crossbreds about steady, topmakers stating that they have sold a little more freely. There is keenness to operate overseas on the part of nearly all sections of the trade. During the last week Japan has bought a little more freely than in the earlier part of the selling season in Australia.

The home woollen and worsted trades are not experiencing any real improvement. Many mills are working short time and there is a pronounced paucity of new orders for yarns and pieces, particularly for the latter. New export orders are scarce, and spinners and manufacturers must look chiefly to the home trade as the outlet for their products. Wool is selling as freely as can be expected, and current prices are in line with what can be realised for either the partly or fully manufactured article.

THE COMMODITY MARKETS

THERE were indications this week that the stimulus given to commodity prices by President Roosevelt's exhortations has spent itself, for it was not followed by an improvement in consumption.

Consumers have shown no anxiety to cover their requirements farther ahead. Thus the prices of copper, tin, lead and spelter were marked down. Rubber prices also gave way on the lack of buyers' interest, and raw cotton, similarly, was cheaper. Wheat and raw sugar, on the other hand, are scarcely changed in price on the week. Among provisions, bacon was dearer, but egg prices continued their seasonal downward trend.

In the United States, Moody's daily index of the prices of staple commodities (December 31, 1931 = 100) declined slightly during the week ended last Wednesday, from 151.2 to 151.0. A month ago the index stood at 148.6 and a year ago at 210.8.

Metals

Copper.—The doubts expressed a week ago regarding the sharp advance in copper prices have been amply justified; for the cash price at the close on Wednesday, although above the lowest, showed a net loss of £1 18s. 9d. per ton on the week. The slowing down of demand in the United States and the irregularity of Wall Street caused consumers to exercise reserve. The statistical position remains favourable and consumers are by no means well

stocked; but in the absence of a sustained improvement in the United States, the outlook must be regarded with caution. According to precedent the next month should be the most active period of the year on European metal markets, while April should witness the beginnings of a seasonal slackening of forward business. Hence, if no improvement in demand occurs during March the next few months may well prove a critical period for the copper market.

★

Tin.—Mainly in consequence of lower purchases in the United States, most market quotations have declined, and the cash price showed a net loss of £3 15s. on the week. Moreover, the gradual increase in home warehouse stocks is discouraging buyers on this side of the Atlantic; the tendency has been accentuated by a decline in British and Continental tinplate activity—an unusual development at this season. Meanwhile, the February statistics revealed a considerable fall in stocks. The visible supply at the end of February, according to Messrs A. Strauss and Co., amounted to 21,225 tons, a fall of 2,029 tons on the month. But since the Arnhem carry-over advanced by 253 to 2,256 tons, the net decline in world stocks was 1,776 tons. New supplies rose last month by only 280 tons to 7,705 tons, whereas deliveries still amounted to 8,251 tons, against 10,157 tons in January. The deliveries figure was, however, the lowest for some years and the market was not impressed by the fall in stocks, since it is convinced that invisible stocks have risen substantially of late. It is thought, therefore, that any major improvement in prices would be followed immediately by an increase in supplies.

★

Lead and Spelter.—Despite a fair demand from the building industry, the cash price of lead declined by 16s. 3d., while spelter lost £1. Demand for spelter has been shrinking owing to the decline in the activity of the galvanising industry. Both metals can be regarded as cheap; but the possibility of a further fall in prices cannot be ignored. Production is still well in excess of current consumption, while prospects for the conclusion of producers' agreements are insignificant.

Business in wheat has been quiet, but prices remain steady. The official estimate of the Argentine wheat crop has

been reduced by about 1,000,000 quarters, but on the other hand the United States winter wheat belt has been experiencing favourable weather. Meanwhile, an improved demand for Australian wheat has been evident this week.

Little fresh business in home milled flour has been transacted this week and imported descriptions also remain a quiet market. Demand for maize continues dull and prices have shown a sagging tendency. Prices of imported feeding barley have been well maintained, although business has been quiet.

Barley	93,466	76,919
Oats	51,239	53,708

Other Foods

Provisions and Meat.—On the London Provision Exchange during the past week bacon was firm, with all the principal descriptions higher in price. Hams were also dearer. Colonial makes of butter were rather dearer, but Danish declined. Cheese was generally unchanged. The seasonal decline in egg prices was continued this week, and demand was quiet. At Smithfield Argentine beef and New Zealand lamb were both cheaper, but English mutton was slightly dearer. Other price changes were few.

★

Colonial Produce.—Markets have been generally featureless during the past week. The market in Accra cocoas

was quiet, and prices were unchanged. Spot coffee prices were steady, and raw sugar was about unchanged in price. At this week's auctions Indian teas were in good demand, but an easier tendency was again in evidence, particularly for low medium kinds. Ceylon grades encountered good competition; teas up to 1s. 3d. per lb. were steady, while good medium and fine kinds sold well at rather dearer rates.

★

Fruit.—Business at Covent Garden was fair during the past week, says *The Fruitgrower*. Demand for dessert lines improved with the better weather. Inquiry for apples was moderate, with substantial quantities of new season apples from South Africa. South African grapes were a prominent feature and sold well, but prices declined owing to the heavy supplies. The trade in pears has been moderately good, while peaches and nectarines met a steady sale. Oranges were cheaper owing to a less active demand, while lemons were slow and cheaper. Grapefruit were a limited trade, but supplies were smaller.

* Weeks ended Feb. 17 and Feb. 24 respectively.

Vegetables.—The Covent Garden report of *The Fruitgrower* states that all kitchen vegetables were in good demand during the past week. Fair supplies of asparagus met a steady sale, and house-grown beans held their price. Lettuce, endive and Canary tomatoes met a better inquiry, and cucumbers were more abundant. All kitchen greenstuff sold rather better, cauliflowers being in short supply and consequently dearer. Washed carrots sold better, and good onions were firm in price. New potatoes met a better inquiry. The call for old potatoes showed some improvement, but ample supplies prevented any marked rise in prices.

Miscellaneous Commodities

Oilseeds and Oils.—Markets are very quiet. Fairly substantial arrivals of linseed in the past few days have enabled mills to operate again to meet cake and oil contracts. Shipments last week were small, Argentina exporting only 14,000 tons and India 3,000 tons. The quantity on passage to Europe has thus been reduced to 149,900 tons, against 186,600 tons in the previous week. In the first eight weeks of the year Argentina has shipped 344,800 tons, against 427,000 tons during the corresponding period last year, and India has exported 17,400 tons, against 16,000 tons. The Argentine Board of Agriculture announced last week that the exportable surplus of Plate seed was 951,000 tons. Shipments to the United States and Canada have fallen off, but this is regarded as only temporary, as American requirements are far from being met and the domestic crop is about exhausted. Cottonseed is fairly steady, but there is little demand and prices are slightly lower on the week. Vegetable oils generally are quiet, and demand restricted. Trade in oil-cakes is about normal for the season and prices of home-made are maintained.

★

Rubber.—The firmer tone noted a week ago has given place to an easier tendency and most of last week's gain has been lost. Meanwhile, it was reported this week that Mr J. G. Hay's negotiations in Siam have been successful and that that country will continue to adhere to the restriction scheme. No further details are yet available.

COMPANY MEETINGS

LONDON BRICK COMPANY, LIMITED

TRADE MAINTAINED DESPITE EARLY DIFFICULTIES

RECORD DELIVERIES

WIDER AREA OF DISTRIBUTION

CURRENT YEAR'S OUTLOOK

SIR P. MALCOLM STEWART ON BUILDING POSITION

The thirty-eighth ordinary general meeting of the London Brick Company, Limited, was held, on the 1st instant, at the Connaught Rooms, Great Queen Street, London, W.C.

Sir P. Malcolm Stewart, Bart., O.B.E., LL.D., J.P., chairman of the company, presided.

Mr A. Guthrie Stewart, one of the secretaries, read the notice convening the meeting, and Mr F. H. Parrott, F.C.A., representing the auditors (Messrs Derbyshire and Company), read the report of his firm.

The Chairman said:—Ladies and Gentlemen,—I presume it is your wish to take the report and accounts as read. (Agreed.)

If you will refer to the debit side of the balance sheet you will notice that the issued ordinary stock now stands at £2,000,000, the addition of £200,000 during the year being in respect of ordinary shares issued as fully paid in accordance with the resolution passed at the last ordinary general meeting of the company.

Sundry creditors and accrued charges at £234,416 show a decrease of £16,017, which calls for no particular comment. The reserve for taxation and contingencies at £325,000 has been increased by £5,000. It should be noted that the current legal liability for income tax and N.D.C. is included in sundry creditors.

THE ASSETS

On referring to the credit side of the balance sheet you will observe that the fixed assets now stand at £2,160,000, a net increase of £60,000, after additions to capital amounting to £210,000 and writing off £150,000 for depreciation. Stocks in trade are increased by £25,190, due to the increased quantity and higher prices of stocks of general stores and fuel necessitated by the company's augmented production. Sundry debtors and advance payments are up by £59,330 owing to deliveries towards the end of the year being well maintained.

Liquid investments at £574,122, and investments in British Government securities and cash at bankers at £201,733, together totalling £775,855, are down by £186,248 on the previous year. It should be noted that the market value of all our investments at December 31st was higher than the figure at which they appear in the balance sheet, and this is the case to-day.

Turning to the profit and loss account you will see that the profit from trading amounts to £563,477, an increase over last year of £5,708. Interest and dividends on investments at £25,840 are lower by £7,454. The total revenue of the company at £589,654 is down by £1,915. The sum of £150,000 has been set aside for depreciation and utilised in writing down the works assets. After providing for the dividend on the 8 per cent. preference stock the profits earned enable the directors to recommend a final dividend on the ordinary stock of 5 per cent., less tax, making 20 per cent. for the year. The sum of £4,489 remains to be added to the carry-forward, which will then stand at £80,000.

BUILDING TRADE CONDITIONS

During the past year our sales executive encountered difficulties of a character not experienced for many years. They centred round the early months, when we suffered a long run of climatic conditions unfavourable to building operations, and were faced with a marked decline in the demand for building bricks. It became impossible to determine how far the shrinkage of demand was due to abnormal weather conditions and how far to actual falling off in demand. Nevertheless, we continued on full production in the belief that an increased demand would eventuate. Meanwhile stocks accumulated heavily.

However, our courage was rewarded. The demand came, but too late to clear stocks as rapidly as we should have liked. Not until

June did our sales satisfactorily expand. In that month and in the month of July we made monthly deliveries exceeding 160,000,000. Thereafter trade was well maintained, and despite the poor trade in the early months we closed the year with record deliveries. The increased volume of sales was successfully effected through the considerable widening of the area of distribution made necessary by the changing location of building activity, there being increased building in the Midlands and the North in which we have participated. This involved the production of a larger percentage of 3-in. bricks, 2½ in. being normal for the requirements of London and the South.

There is no doubt that house building in London and in the South has been slowly falling off, but this was partially offset by an increase of larger building operations in this area. Massive blocks of flats and office buildings are being constructed in areas previously occupied by placid private dwelling houses. Many businesses not primarily concerned with finance, banking or the traffic in and out of the docks are moving to offices in the West End. One heaves a sigh as the old landmarks pass, but commerce must be served; we are mainly an industrial nation.

EXTENSION OF ACTIVITIES

These are the circumstances which have compelled us to increase the area over which our products are distributed. Despite the larger turnover, the cost of production and rail and transport charges was materially higher, and continues to advance. Nevertheless, we persist in our policy of keeping down the price of our products to the consumer, and thus make an effort to thwart the tendency of rising prices, which must discourage building operations.

The extension of our activities may sometimes have unfortunate reactions on local works. But the expansion of our sales is a primary requirement for the maintenance of efficient production, the attainment of which every manufacturer should fight for relentlessly, not merely to increase profits for profits' sake, but because of the enhanced opportunities afforded of improving the welfare of employees and staff who help to procure it.

With regard to some of the smaller local brickworks affected, it should be remembered that their resuscitation was only due to the abnormal demand intensified by the Government assistance given to make good the considerable arrears in house building. It must have been apparent to those with experience and knowledge of the trade that the activities of such works would inevitably be affected should the strong demand ease off for our products in our immediate home markets. While the influence of our sales policy has for many years restrained excessive prices, we always endeavour to fix fair prices.

SPECIALISED PRODUCTS

During the past year we not only achieved records for common building bricks, but also for all the specialised products of the company. Since we introduced our rustic facing bricks twelve years ago 600 millions have been sold, and to meet the present demand which comes from all parts of the country and for all types of building, we are manufacturing 3 millions per week.

Last year I told you of the proposal to make a sand-faced facing brick under our own patented process. We had been experimenting with this for some years past. This brick has now been introduced to the market and has had a most favourable reception. For a facing brick of pleasing colour and texture at a low price there is evidence of a good demand.

Our cellular brick makes steady headway; sold at the same price as common pressed bricks, it offers wonderful value. Its qualities of lightness, strength, and insulation from heat and cold are being growingly appreciated by engineers who have important work to

carry out, and we are gratified that our cellular bricks have been specified for certain portions of the new Scottish Government buildings in Edinburgh, by the L.C.C. for the new headquarters of the London Fire Brigade, and for other important work.

It is thus seen that our sales department during the past year has achieved excellent results despite the difficulties encountered in the spring. For these results our thanks are due to Mr Worboys, Colonel Rowe, and our competent staffs in London, Birmingham and elsewhere.

RECONSTRUCTION AND EXTENSIONS

Last year witnessed the completion of several important items of our considerable programme of reconstruction and extension. At Stewarby we benefited from the additional production arising from the recently completed reconstruction and extensions. The additions to our model village there are also proving advantageous. At Calvert we recently finished reconstructions bringing these works up to a productive capacity of 200 millions per annum.

We are indebted to our chief engineer, Mr Ratcliffe, and his staff, who have been working for many years past under high pressure in order to increase our productive capacity and so secure an adequate supply of British bricks to meet the unprecedented demand experienced during recent years. Thus we have during the year successfully further expanded our productive capacity, which to-day is 1,750 millions. To-day the productive capacity of the country is sufficient to meet all requirements. At the moment we are busy with kiln reconstruction at Arlesley and the concentration of additional plant for the production of hollow flooring, partition blocks, and agricultural drain pipes. The excellent quality of the products manufactured at Arlesley by our own design of plant has created the good demand which calls for this extension, the increased output from which we hope will be available next May.

ADDITIONS TO MOTOR FLEET

During the year we have added considerably to our motor transport fleet, which we established in order that we might give the best possible service to our customers, particularly through prompt delivery to site. Customers are increasingly calling for this facility. An interesting development is the establishment of local railheads and motor-truck depots from which our locally established transport delivers into the surrounding area. This co-operation between the railway company and ourselves has proved successful and will, we trust, be extended. We endeavour to make our motor vehicles an excellent advertisement for the company and its products. Every care is being taken to ensure that they are well turned out, and, what is more important, that they are considerably driven on the road. We have been gratified to receive a number of spontaneous tributes from road users as to the high standard of driving of our transport staff, who through their care and courtesy contribute to safety on the roads.

PROFIT-SHARING BONUS SCHEME

Stockholders have been informed from time to time of our Employees' Profit-sharing Bonus Scheme, which has been in force for some twelve years. One of the merits of the scheme is its simplicity. The rate of dividend on the national bonus shares is the same as that paid to ordinary stockholders. Ordinary dividends represent the surplus profit available for distribution after the prior requirements of the business have been satisfied. Now, last year we distributed £200,000 in ordinary shares as a bonus to our ordinary stockholders. This meant that £200,000 of accumulated profit, which it had hitherto been deemed necessary to retain in the business was released.

We feel an adjustment should be made since our employees contributed to the earning of this profit, and in view of the fact that its distribution affects their interest in the profit-sharing bonus scheme. We are, therefore, adding to the bonus payment which they would have received one-ninth of the same, this being the proportion by which the stockholders' interest in the ordinary capital of the company has been increased through the free issue of the ordinary shares. I am confident you will approve of the action we have taken in this matter.

OUTLOOK FOR CURRENT YEAR

I will now comment on the prospects for the current year, and in doing so must at the outset refer again to the somewhat changed circumstances of trading experienced in the last year. These make me feel it is not possible to give you quite the same confident forecast that I have made, fortunately correctly, for many years past. There is another factor which influences me. For the past thirteen years the average annual dividend on the ordinary shares or stock

has been rather over 20 per cent., and in recent years we have regularly paid three interim dividends of 5 per cent. and a final dividend of not less than 5 per cent. I am conscious that many of our stockholders, receiving such interim dividends punctually, regard them as a sure indication of a final dividend of not less than 5 per cent. Their outlook has become one of expectation of a certainty, and frankly I shall be happier should we maintain 5 per cent. interim dividends, as I hope we shall do, if stockholders would regard the payment of a final dividend of 5 per cent. as a matter of hopeful expectation rather than as an assured certainty. I avail myself of this opportunity of speaking frankly on the subject and am most anxious you should not misunderstand me.

I am not pessimistic about the prospects of the year; indeed, helped by favourable weather and the efforts of our sales department, we have for the first two months obtained definitely better results than for the corresponding period last year, and there is to-day a reasonable prospect that we shall maintain our turnover. It must, however, be remembered that it is early in the year to make a forecast, and we have a colossal production to market. Therefore I am not in quite the same position to make the confident forecast of previous years, but have decided it is necessary to be candidly cautious, and if careful attention is paid to what I have outlined I believe you will not be disappointed with the results which we shall submit to you when, all being well, we meet next year.

SERVICES OF MR WORBOYS

I would like to say that it gave me much gratification in March last to recommend to the board that Mr A. T. Worboys, who is well known to many of you, should be appointed deputy chairman. There is a touch of romance about Mr Worboys' association with the business. He came into it when a lad, has served it faithfully for 37 years, and has rendered it valuable service. To-day we are benefiting from his hard work and long experience.

I would again express the thanks of the board, and I am sure of the stockholders, to the staff and all employees for their support and co-operation without which our successful year's results could not have been achieved.

The chairman concluded by moving the adoption of the report and accounts, and called upon Mr Worboys to second the motion.

Mr Arthur T. Worboys (deputy chairman).—Before seconding the resolution, may I be allowed to thank the chairman for his appreciation of my services? I have always been very happy in my association with all my colleagues, and I can only say that in my new position as deputy chairman of the company it will be my earnest endeavour to follow worthily in the footsteps of those who have gone before me. I now beg to second the resolution put by the chairman.

The resolution was carried unanimously.

The retiring director, Mr Malcolm Stewart, was re-elected; and Messrs. Derbyshire and Company having been re-appointed auditors, a hearty vote of thanks to the chairman, directors and staff concluded the proceedings.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

NEW BUSINESS OVER £5,000,000

SIR IAN BOLTON'S STATEMENT

The one hundred and twenty-fourth stated annual meeting of The Scottish Widows' Fund and Life Assurance Society was held, on Tuesday, the 1st instant, in the Society's Head Office, Edinburgh.

Sir Ian F. C. Bolton, Bart., C.A. (chairman of the Ordinary Court of Directors), presided.

In moving the adoption of the report and accounts, the Chairman said: You will see from the report that last year the society's new business exceeded £5,000,000 both before and after deducting the amounts reassured with other offices under specially large policies. This is the first time in our history that the net figure has passed the five million mark, and so a fresh record has been set up.

In these days we are accustomed to read of records being achieved in many spheres of human activity. Sometimes we may doubt whether this or that record has been worth striving for, but about the value of the society's record new business there can be no doubt. It means the extension of life assurance to an increasing number of people who have not hitherto enjoyed its benefits; not the least of these is the peace of mind which comes from the knowledge that safe provision has been made for dependants.

REVENUE ACCOUNT

I now refer to the principal items in the revenue account, dealing first with the income. The new annual premiums were considerably in excess of the renewal premiums which went off in respect of claims and surrenders, and our total premium income, which now exceeds £2,000,000, was about £65,000 greater than in 1936. Interest income, both gross and net, was increased, and the gross rate of interest earned on our larger funds was only 4d. less than in the preceding year, a result which you will agree is most satisfactory in view of the low interest yield which is available on new investments.

The income tax payable was larger mainly on account of the increase in the rate of income tax which was made at the last Budget, with the result that the net rate of interest of £4 4s. 10d. per cent. was lower than in 1936. In these days a net interest yield on the funds as a whole of almost 4½ per cent., after deduction of income tax, cannot but be gratifying to our members.

On the other side of the account our death claims were lower. This is an item which necessarily varies a good deal from year to year, but owing to the careful selection of lives the amount is always well within that for which provision is made in our calculations. Claims by maturity were again larger as the natural consequence of the increase in endowment assurance business which has been taking place for many years. Surrenders, I am glad to say, were again reduced and have now reached a lower level than we have seen for about ten years. Expenses and commission together were slightly increased, but, owing to the higher premium revenue, the ratio of expenses to premium income was reduced from 14.31 per cent. to 14 per cent., a movement in the right direction.

INCREASE IN FUNDS

The funds have increased during the year by nearly £700,000. The balance sheet shows how the assets are invested and calls for little comment, the most important change being further increases in "Loans on Parochial and other Public Rates" and "Municipal and County Securities in the United Kingdom."

Unsettled conditions during the past year both at home and abroad have resulted in depreciation of practically all Stock Exchange securities, but the society's position remains immensely strong. Although the fall in values has encroached upon the margin between the market values of our Stock Exchange securities and the values at which they stand in the balance sheet, this margin is still very substantial and enables us to face the future with confidence unimpaired.

In conclusion, I would remind you that we are now in bonus year, at the end of which our quinquennial valuation and distribution of surplus fall to be made, and we look forward to being able to present to you next year another successful report not only for the year, but also for the quinquennial period.

The directors' report and the accounts as audited were adopted unanimously.

SELFRIDGE AND COMPANY, LIMITED

INCREASED GROSS PROFIT

The thirtieth annual ordinary general meeting of Selfridge and Company, Limited, was held, on the 28th ultimo, at the company's store, Oxford Street, London, Mr H. Gordon Selfridge (chairman and managing director) presiding.

The Chairman, in the course of his speech, said:—One year ago we were able to announce a record figure for profits, while this year, notwithstanding a handsome increase over last year in both annual returns and gross profit, our net result is less than 1936's figure by £37,000. The reason for this is that certain large non-recurring expenses have been charged up in full this year, plus the fact that our pay-roll is higher and the item of expense called labour is greater throughout the entire business.

The largest single item of expense in the non-recurring list is, of course, that of Coronation decorations—a feature which won the applause of millions of people during the months from May until well in the autumn of the Coronation year of 1937.

We did it all with our eyes open. We were never carried off our feet and, now that the ceremonies of that great year are matters of history, we find ourselves not regretting the expense, but proud instead of our contribution to London's fine efforts.

But the autumn's business did much to upset our calculations and, had the last six months shown the same rate of progress as the first, we should have easily met all of these extra expenses and again published a record balance sheet. If—If—September, October, November and even December had been kinder in weather

and general world conditions we would have handsomely topped the half-million mark in net profit. The abnormally warm weather of these months must take the blame, so let it go at that.

In a broad-gauge view of this business I feel that it is perhaps more beautifully in hand than ever. Our returns are continually increasing.

The absence of the same profit as last year, plus the increase in taxes, which includes the National Defence Contribution, affects chiefly and, I may almost say, only the trust ordinary shareholders, and, as over nine-tenths of these are owned by my son and myself, we are the chief losers—if losers is the proper word.

While the net profits are a little less than a year ago, we feel that the business as an institution or enterprise is of greater value than ever—of greater value because it has built itself into even a stronger, happier, great place in the public mind and has cemented to itself a greater number of friends.

So, while I am receiving no dividends on the ordinary shares this year, by my words just spoken you see I feel richer in the possession of those shares than I did last year.

Turning to the balance sheet, I find little to add to my speech. You will notice that we have already begun to pay off the 4 per cent. mortgage debenture stock, and each year hereafter will assist in this direction until it is eliminated from the sheet.

As you realise, we always give (in red ink on one side) the corresponding figures for the previous year. Small changes only appear, the chief one being the increase in income tax and National Defence Contribution from £35,700 to £80,000—a great pull upon our profits. But, never mind, each one must do his share, and we never wish to be relieved of our fair proportion of the expenses of this intelligently and honestly administered country.

The report and accounts were unanimously adopted.

BRITISH ASSETS TRUST LIMITED

INCREASED INCOME AND DIVIDEND

MR A. W. ROBERTSON DURHAM'S ADDRESS

The fortieth ordinary general meeting of the British Assets Trust, Limited, was held in Edinburgh on Wednesday, March 2nd, Mr A. W. Robertson Durham, chairman of the company, presiding.

In moving the adoption of the report and accounts, the Chairman said: A print of the report and accounts for the year ended January 15, 1938, has been in your hands for some days and, with your approval, I propose to hold these as read.

You will see from the accounts that the gross income for the year amounted to £344,531 as against a figure of £309,925 for the previous year, which shows an improvement of approximately £34,606. After deducting management and other expenses, income tax and N.D.C., as well as debenture interest and preference dividends, there remains £55,444 available for the ordinary stock as against £32,082 last year, and we are glad to be able to recommend a dividend for the year of 10 per cent. on this stock—an increase of 2½ per cent. As stated in the report, further sums, amounting to £21,169, were received in respect of arrears of dividends relating to previous years and other revenue which appeared to be of a non-recurring nature, such as special and extra dividends declared as a result of the Undistributed Profits Tax in U.S.A., underwriting commissions, etc.

INCOME RESERVE FUND

Last year the directors decided to open an income reserve fund, and transferred sums thereto amounting to £75,000. This year, as shown in the balance sheet, we have increased this fund to £120,000 by the transfer of a further £45,000, consisting of the £21,169 referred to above and £23,831 from the profit and loss account leaving £46,511 to be carried forward as against £50,625 brought in. This fund is invested in a separate account in short-dated Government and other high-class securities of a similar nature for the purpose, so far as is possible, of avoiding depreciation, and keeping the fund readily available to maintain the dividend during times of depression.

On the payments side of the accounts, the management expenses show an increase of approximately £1,000, chiefly owing to the fact that our New York office, established at the end of 1936, has been in operation for a full year. Taxation is up by £14,000 owing to the larger amount of income falling under assessment, the higher rate of income tax as compared with last year, and the National Defence Contribution.

In view of the uncertain outlook and the fact that security prices especially in this country were still at a comparatively high level,

we considered it advisable during the year to reduce our short-term indebtedness, and to enable us to do this we have substantially reduced some of our holdings, especially in industrial ordinary shares.

This has been reflected in the balance sheet and you will see that the investments, after deduction of the capital reserve fund and contingent fund, amount to £6,899,149, showing a decrease of approximately £407,000 as compared with last year. As stated in the report, the market value of these investments as at January 15, 1938, shows a depreciation of 8.72 per cent. on the balance sheet figure, and we have also given there a statement showing the distribution of the investments.

On the liabilities side of the balance sheet you will notice that the deposits and loans have been reduced by about £276,000, and the terminable debentures by £108,000. The sundry creditors are about £120,000 lower than last year, whilst sundry debtors show a fall of approximately £70,000 and cash has increased by £20,000.

FUTURE PROSPECTS

Although our income has shown a satisfactory increase, the past year was disappointing in many respects. The year opened at home and in the United States on a high level of industrial activity and general confidence in the future. However, in the spring, a series of setbacks occurred on both sides of the Atlantic, including the gold scare, the N.D.C. in this country, labour troubles and political uncertainty in the United States and a general fall in commodity prices throughout the world, which led to a break in prices of securities and a consequent sharp contraction in the value of our investments. In the United States hopes of an early revival are at present obscured by the apparent deadlock between business and the Government, and, it is practically certain that industrial profits will be lower during the current year than they were in 1937, and that our income from the United States will show a considerable decline. As regards the outlook in this country confidence has been impaired and there has been a considerable fall in security values. However, as the dividends we shall receive from our home investments during the current year are mainly in respect of the trading year 1937, when business generally was at a high level, we do not expect to suffer any very serious decline in this part of our income.

We hope that we shall be able to maintain the increased dividend now proposed, but it is exceedingly difficult at the present time to make any reliable estimate of future earnings.

The chairman completed his remarks by moving the adoption of the report and accounts, and the payment of the dividend recommended therein.

The motion was seconded and adopted.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY

CONTINUED PROGRESS

RECORD NEW BUSINESS FOR FOURTH SUCCESSIVE YEAR

The one hundred and fourteenth annual general meeting of the Clerical, Medical and General Life Assurance Society was held, on the 3rd instant, at the Society's office, 15 St. James's Square, London, S.W.1, Mr Francis E. J. Smith (the chairman) presiding.

In moving the adoption of the report the Chairman said that the report showed that the year 1937 had been one of steady progress in the Society's affairs. The results included a record expansion of business, favourable mortality experience and substantial increases in premium income and funds.

NEW BUSINESS RESULTS

It would be seen that an appreciable amount of group life assurance had been completed. That class of business was transacted last year, for the first time, in connection with a large staff scheme, which was very welcome. Even if the group life figure were excluded, the total of the ordinary new business represented, for the fourth successive year, a fresh high record for the Society.

He welcomed the opportunity of expressing the gratitude of the directors to all their agents in England and Scotland and to their friends, The Employers' Liability Assurance Corporation, for their help and support, without which they could not have accomplished such results. He looked forward with confidence to a continuance of active support from all their friends, including policyholders both old and new, so that 1938 might see past achievements eclipsed.

An expanding new business was welcome evidence of vitality, but

it was not, and could not be, the conclusive test of well-being or strength. Another significant index was afforded by the growth of the premium income, and it was highly satisfactory to note that during 1937 the premium income, after excluding single premiums, had risen by over £40,000, a record increase in the history of the Society. Including single premiums, which, at £72,371, were not unduly large, the premium income for the first time exceeded the figure of one million pounds.

THE SOCIETY'S ASSETS

The chief change in the Society's assets was the substantial increase in mortgages and loans and the considerable decrease in the total of Stock Exchange securities. That change gave effect to an investment principle which had proved of value to them more than once in their history, namely, that when the prices of investments on the Stock Exchange were high, and yields correspondingly low, they sought good mortgages, and, during 1937, he was glad to say, their search in that direction had not been in vain.

The total of mortgages and loans in this country had risen during the year by over 1½ millions to very nearly 6 million pounds. The directors were satisfied that in every case the capital was secure, and the usual high standard of interest collection had been fully maintained.

As regards the Stock Exchange investments, amounting to over £4,800,000, no individual security stood either above its cost price or above its middle market price less accrued interest on December 31, 1937. That sounded a very simple statement to make, but it was important to note that such a basis of valuation implied, broadly speaking, the salutary principle of "writing down but not up." In total, the resulting book values were materially lower than the market values, and the aggregate difference, or appreciation, being excluded from their accounts, constituted a substantial reserve margin held against possible future shrinkage of capital values.

Their property holdings remained practically unchanged, at about 2½ millions, and, as it was their practice to take credit only for a moderate rate of interest and to apply the balance towards reduction of book values, those book values rested upon conservative bases.

INVESTMENT POLICY

In matters of investment policy their preference continued to be for the short-dated type of security, as they took the view that the slight loss of yield thereby incurred was more than compensated by the greater stability of capital secured and by the opportunity afforded of taking prompt advantage of any rise that might take place in interest rates.

He hoped that the 1937 net interest yield of £3 19s. 2d. per cent. would be regarded as satisfactory, especially in relationship to the net rate of 2½ per cent., upon which their actuarial reserves were based in respect of every life assurance and annuity contract upon the books of the Society. A large margin of net interest—nearly 1½ per cent.—thus existed as the foundation of their interest profits, and the Actuary told him that the surplus required for the next quinquennial bonus, to be declared three years hence, was accruing at a very satisfactory rate.

THE RESERVE STRENGTH OF THE SOCIETY

The Society to-day continued to grow in vigour and in health. The present position was that, in addition to their abundant 2½ per cent. reserves and over and above the hidden reserves implied by conservative book values, there existed a large amount of free available surplus, which consisted of the £686,000 carried forward after the bonus two years ago, and was increased by the good earnings of the two years which had since elapsed.

With such reserve strength and earning powers, they were in a position not only to assure their existing policyholders that they had no cause to worry, but also to continue to invite, with all confidence, the help of agents and friends in spreading wider and wider the scope of the Society's business.

Their friends and connections would find in the prospectus attractive and up-to-date forms of policy, and those who knew the Society's policies best would be the first to agree that they had two particularly fine tables to offer—the Prime Cost and Supplementary Units, which, in combination, should prove invincible. These two forms of policy had proved their success and were thoroughly maintaining it.

In conclusion he wished to express the directors' appreciation of the excellent work done during the past busy year by the officials and staff of the Society. The results before the meeting were the best tribute to their ability, and the directors had every confidence that success would be maintained and, indeed, increased. He added a special word in respect of the general manager, Mr Rowell, whose services continued to be of the greatest value and help to the directors.

ILLUSTRATED NEWSPAPERS, LIMITED

CONTINUED SUCCESS

The twelfth annual general meeting of Illustrated Newspapers, Limited, was held, on the 2nd instant, at the Connaught Rooms, London.

The Lord Southwood, the chairman, in the course of his speech, said: The net trading profit, including dividends received from investments and bank and loan interest, amounts to the sum of £196,169, as compared with £182,070 last year, an increase of £14,098. There is a balance of £124,797, to which must be added a sum brought forward from the past year of £96,879, leaving an available balance of £221,677, as compared with £193,742 last year. There has already been paid a full year's preference dividend, less tax. Out of the remaining sum of £126,389 your directors have, after very careful consideration, deemed it wise and prudent to recommend a transfer of the sum of £50,000 to a reserve for preference dividends, and so protect the equity of the ordinary shareholders. I am sure the ordinary shareholders will approve the wisdom of this course.

During the coming year it is the intention of your directors to consider the advisability of incurring exceptional expenditure upon some form of publicity campaign, with the object of developing and building up of the company's various publications. In this event they will resolve to appropriate, say, a sum of £20,000 out of the balance now carried forward on the profit and loss account, which sum will be expended as and when the directors think desirable, and for the purpose they have in mind.

With this company's accounts you will have received a balance sheet and profit and loss account of The Illustrated London News and Sketch, Limited, for the year ended November 30, 1937, and you will notice that the net profits of that company also show an appreciable increase over last year, with the result that that company is able to increase its dividend. This benefits this company to a considerable extent, inasmuch as we hold approximately 94½ per cent. of the share capital, and we shall be able to bring into our accounts this year a sum in excess of that received last year. The net amount we shall receive after tax is £58,240 0s. 11d., which, added to the amount carried forward on our balance sheet, more than covers our preference dividend for 1938, which I think the shareholders will agree is a satisfactory position.

SUCCESS OF CORONATION NUMBERS

We have, of course, during the past two years been greatly benefited from national events, which have enabled the company to publish a number of special issues, which have naturally added considerably to the profits. Perhaps one might specially mention the special numbers published by *The Illustrated London News*. I am sure you will agree that those productions are equal to anything of a like nature that has ever been produced. The sales of *The Illustrated London News* Coronation Number reached a very large figure indeed, and, I think I am right in saying, constituted a record even for *The Illustrated London News*. (Hear, hear.) All our other papers produced special numbers in connection with the Coronation, which were equally deserving of praise. The editors, as well as the printing and process departments, deserve the highest tribute.

I am glad to be in a position to report that the sales of our publications and the advertisement revenue have been well maintained in the year under review, which is very gratifying in view of the fact that new publications are constantly being produced and competing with us in a greater or less degree.

VALUE TO ADVERTISERS

Too much stress cannot be put upon the value of our papers to advertisers, which, as the shareholders know, are *The Illustrated London News*, *The Sphere*, *The Tatler*, *Skech*, *Bystander*, *Illustrated Sporting and Dramatic News* and the monthly magazine *Britannia and Eve*. These papers have the very highest reputation. Indeed, I think that all our papers are universally recognised as national institutions. They are universally popular and their life an exceptionally long one, passing, as we know they do, from hand to hand all over the world, thereby having what must be an enormous reader circulation.

It is unfortunate that in the present year we have, as you know, to face very much increased costs in paper and printing. Some portion of this I hope we shall be able to recover, but you will, I know, realise that in the case of our publications it is quite impossible for us to make any increase in the selling price. At the same time, it is imperative that we maintain our high standard of production. The shareholders may rest assured that intensified efforts are at all times being made to improve the business of the company.

The report and accounts were unanimously adopted.

BOVRIL LIMITED

LORD LUKE'S TRIBUTE TO THE LATE SIR JAMES CRICHTON-BROWNE

Before proceeding with the business of the forty-first annual general meeting held, on the 28th ultimo, in London, the Lord Luke, K.B.E., chairman, said he would like to speak of the loss the company and indeed the country had sustained in the death of Sir James Crichton-Browne. Sir James joined the Bovril board in 1908; he was then 67 years of age, but during the last thirty years he was always alert, interested and really helpful. It would be impossible to exaggerate the value of his services to the company, or the admiration his qualities of mind and character had inspired in his fellow directors.

Outstanding as he was in medical and scientific achievements, that side of his character was at least equalled by his amazingly wide range of general knowledge, his old-world courtesy and kindness, and his strong sense of devotion to duty.

SATISFACTORY YEAR

The chairman then went on to review the accounts of a very satisfactory year, during which sales had gone up considerably both at home and abroad.

In the profit and loss account, "Gross Profit on Trading, less Advertisements" was £54,577 up, at £416,525, that was after the deduction of a larger sum than usual spent on advertising.

The interim dividends on the pre-preference, preference, ordinary and deferred shares, paid last August, absorbed £101,875. After paying the balance dividends on the prior issues, there was £176,364 left. After providing for a carry-forward slightly less than that brought in, it was proposed to pay a final dividend on the deferred shares of 4 per cent., and to carry to reserve £65,000; in other words, on the year the deferred would receive £65,000, and the replacement to reserve would be a similar sum.

Referring again to Sir James Crichton-Browne, the chairman said that at the age of 97 Sir James showed very little diminution of his mental powers. The last thing he did, handicapped as he was by illness, was to prepare the address he proposed to deliver to the shareholders. This it would be his (Lord Luke's) privilege to read to the meeting.

In the address he had prepared, Sir James recalled how in 1897 the great Russian physiologist, Pavlov, had shown that the administration of meat extracts to dogs stimulated the mucosa of their stomachs and produced a copious secretion of gastric juice.

REMARKABLE EXPERIMENTS

It had been inferred, the address continued, that in human beings these extracts similarly increased the gastric flow, but no scientific proof of this had, until quite recently, been adduced. But during last year, by a remarkable series of experiments at King's College, London, Dr Boon had demonstrated that meat extracts in varying degrees had the same effect in stimulating the gastric secretion in human beings that they had in dogs and other animals. This was a fact of first rate importance.

A wide range of typical food products was investigated, and it was found that of these Bovril was the most potent and rapid stimulant of the gastric mucosa. It seemed to Sir James of great importance that this means of stimulating the gastric secretion should be more widely known. Following acute illness there was generally a depression of gastric secretion and the gastric juice was poor in hydrochloric acid, which was present in the normal healthy stomach and was, indeed, essential for the proper action of the digestive juices of that organ.

THE BENEFITS OF BOVRIL

By stimulating the mucosa to an increased flow of hydrochloric acid, Bovril restored the gastric juice to normal, and thus assisted recovery. That was an important finding, but the clinical significance of Dr Boon's discovery was, in the opinion of Sir James, wider still. In such a disease of the stomach as gastritis, which was often the precursor of very serious trouble, there was a deficiency and alteration in the character of the secretion of the gastric juice, a deficiency and alteration which Dr Boon's results suggested might be corrected by the judicious administration of Bovril, which so powerfully stimulated the secretion of gastric juice containing the essential hydrochloric acid.

It would seem prudent, therefore, for people at, or after, middle life who suffered occasionally from indigestion, not dietetically explicable, or other gastric disorder, to try the effect of Bovril in warding off the often disastrous consequences of reduced gastric activity.

The Duke of Atholl, K.T., G.C.V.O., C.B., D.S.O., seconded the adoption of the report and accounts, and the resolution was duly carried.

THE ANGLO-FRENCH EXPLORATION COMPANY, LIMITED

DIVIDEND OF 10 PER CENT. MAINTAINED

The forty-eighth ordinary general meeting of the Anglo-French Exploration Company, Limited, was held on the 2nd instant, at Winchester House, Old Broad Street, London.

Mr F. A. Robinson, the chairman, who presided, in the course of his remarks said: The amount of £957,688 is the most important item in the balance sheet, representing as it does the total book cost of our holdings. The item £30,000 represents our land.

PROFIT AND LOSS ACCOUNT

Turning to the profit and loss account, the amount received in dividends, etc., was £61,933, and from the sales of shares £90,075, as compared with £45,054 and £108,271, respectively. Notwithstanding the large amount of £14,493 for investigation of properties debited to profit and loss, we show a net profit of £116,584, as compared with £132,714 last year.

We brought forward £47,089, which, added to the net profit for the year under review, makes £163,674 at our disposal. We have written off £12,799 for depreciation and we have transferred £25,000 to reserve accounts, which will leave £125,874, out of which we recommend the payment of a dividend of 10 per cent., leaving £47,124 to be carried forward. This is the fifth year in succession we have paid 10 per cent., while substantial amounts have been allocated to the reserve fund and the staff fund has been placed on a permanent basis.

In our report you will find the usual classification of our holdings. The percentage of quoted securities is 98 per cent., which, I believe, is the largest it has ever been in the history of the company.

Having regard to the class of business conducted by our company, it was only to be expected that the sharp fall in prices on the Stock Exchange would be reflected in a decrease in the value of the company's assets. Given more settled conditions in the international situation, I do not doubt we shall see a recovery.

PROSPERITY OF THE GOLD-MINING INDUSTRY

Meantime, regardless of what has been going on in the outside world, the gold-mining industry itself has been pursuing its course of progress and prosperity. The working profit was £31,700,000, and the amount paid in dividends was £16,748,000. About half the profit was taken by the South African Government in taxation and royalties. If the output of gold is to be maintained in years to come it is obvious that new mines must take the place of those which in the natural order of things will become exhausted, but such enormous taxation is bound to impede the expansion of the industry, which is of paramount importance to South Africa.

Apex (Trinidad) Oilfields, Limited, had a most successful year, which ended September 30th last, and paid dividends amounting to 45 per cent., as compared with 35 per cent. in the preceding year. The position of the company may be said to be very sound and reflects great credit upon the management in Trinidad and London.

Anglo-Burma Tin Company, Limited, made a net profit for the year ended June 30th of £19,247, and was able to maintain the dividend at 25 per cent. The developments on the property have been continued with satisfactory results. A large portion of the additional plant required to work these areas has been shipped and is in course of erection. In order to pay for the plant and to redeem the balance of the old debentures the company made an issue, in April last, of £80,000 6 per cent. debentures. The Anglo-French Company were the holders of £10,000 of the old debentures, and we agreed to take the new debentures in exchange.

Contrary to expectation, the world consumption of tin has fallen off, while the production has increased. This has resulted in an accumulation of stocks on hand followed by a heavy fall in the price of the metal. In order to bring about equilibrium, the international quota, which during the greater part of last year stood at 110 per cent. based on the 1929 production, was reduced to 70 per cent. in the early part of the present year, and a couple of weeks ago was still further reduced to 55 per cent.

The consumption of tin for the current year is estimated at about 150,000 tons, which is about 50,000 tons less than in 1937. If the quota of 55 per cent. is maintained, the output would be at the rate of about 140,000 tons per annum, including countries outside the restriction scheme, as compared with 206,000 tons in 1937. The effect of this would be that the visible stocks will be reduced and this should have a favourable effect on the market.

The report and accounts were unanimously adopted.

LANCASHIRE ELECTRIC LIGHT AND POWER COMPANY, LIMITED

FURTHER PROGRESS

The ordinary general meeting of the Lancashire Electric Light and Power Company, Limited, was held, on the 3rd instant, in London.

Mr George Balfour, M.P. (the chairman) said that the accounts reflected continued growth in load, output and revenue. The total units sold during the year amounted to 791 millions; 449 millions had been sold to their own customers compared with 370 millions for the previous year; an increase of 21.4 per cent. The amount taken by the Central Electricity Board was nearly 342 millions, compared with 184 millions, and of the total units sold by the company approximately 43 per cent. had been exported to the Central Electricity Board.

They had connected 5,922 additional domestic consumers, making a total of 45,420, an increase of 13 per cent. The total number of consumers supplied directly and those of other undertakers whom they supplied in bulk was approximately 143,000, an increase of 10.6 per cent. They were steadily increasing the number of their consumers who had adopted the two-part tariff, and of the total number of low tension consumers connected, 86 per cent. had adopted that tariff.

Reductions in the price of current to consumers had been made in July, 1936, and had therefore affected only the last half of that year, whereas they had applied to the whole of the year under review. Those reductions were reflected in the drop in the average price received from that class of business from 2.06d. per unit in 1935 to 1.92d. per unit in 1936 and 1.81d. last year. The unit consumption per consumer had, however, increased by approximately 2½ per cent.

The price received from the Central Board for the 341,642,000 units taken by them was 1.482d. per unit. He had usually made some observations on these occasions regarding their relations with the Board, but would content himself on this occasion by remarking that they still had to settle their account with the Board for 1936 and last year. Shareholders would agree that they ought to obtain some little sum for wear and tear and use of their plant in the past; except for those chronic troubles their relations with the Board continued to be friendly.

CURRENT YEAR'S GOOD OUTLOOK

With regard to the current year, he had put himself to some trouble in an endeavour to gauge the industrial outlook in the Lancashire area. He had always held the view that the electricity demand for power and domestic use in any area was a fairly stable indication of trade prosperity and, based on that assumption, the outlook was very satisfactory. Last year each month had shown an increase compared with 1936, and it was pleasing to know that they had started the current year with a comfortable increase over last year. They were getting applications for supplies and connecting as many new consumers as they had done a year ago, and their output showed approximately a like increase.

There had been a great deal of talk about trade decline, but as far as he had been able to observe the only downward kick was not due to any fall in trade. A very temporary and inevitable excess demand was created due to having to supply an increased volume, not only for the market but at the same time to make provision for a quick increase in stock to maintain the higher rate of production. For a short time, therefore, they had had an unavoidable but exaggerated activity but, generally speaking, that time had passed. No doubt that was the cause of the slump talk which he felt was more political than industrial. It was possible that certain industries such as the domestic motor vehicle manufacturers might show temporary slackening, but this was due no doubt to a cycle of trade peculiar to such industries. Again, they must remember that when they talked of the number unemployed they brought into calculation the seasonal, temporarily unemployed, and youngsters, which, of course, prevented comparison with pre-war figures.

They supplied a large number of consumers in the textile trade, spinners and weavers, iron, coal and steel industries, bleachers and dyers, miscellaneous engineering works and railway load as well as electro-chemical processes. Judging by the demand of these industries upon their services he saw no change for the worse in the near future.

As to the accounts, the trading profit of the subsidiary companies and interest receivable amounted to £506,278 compared with £426,056 in the previous year. They proposed to pay an additional half per cent. on the participating preference stock, making 7½ per cent. for the year, and 5 per cent. on the ordinary stock, making 7½ per cent., less tax.

The report was unanimously adopted.

Home Railways

The following charts illustrate the experience of the British railways during depression and recovery. They may be studied in conjunction with our present series of articles on the four home railways, of which the second appears on page 502 of this issue. Chart I compares gross railway receipts with the movement of *The Economist* business activity index since 1928. In the second chart, the trend of railway goods receipts is compared with the growth of commercial motor vehicles in use, as estimated by the Society of Motor Manufacturers and Traders. On each of these charts, the two curves have been equated for 1929. In Chart III, the blocks for locomotives, passengers and goods traffic are equated for 1924, and the locomotive figures include due allowance for electric motor vehicles. Chart IV relates the trend of receipts per freight train mile with the average freight train load, the 1937 figures being based on the returns for the first 48 weeks.

SHORTER COMMENTS

(Continued from page 520)

Swears and Wells, Ltd.—After debenture interest of £22,500 (against £23,265) and depreciation £20,000 (same), net profit is £113,729 (against £110,059). Ordinary dividend 8 per cent. for year, as before. To general reserve £10,000 (same). To staff fund £5,000 (same). Carry forward £75,164 (against £69,434).

"Romic" Motor Accessories.—Net profit year to September 30, 1937, £12,765, compared with £8,364. Ordinary dividend 9, against 7½ per cent. To general reserve £4,000, against £2,000. Carry forward reduced from £1,091 to £1,036. Interim dividend in respect of year to September 30, 1938, 3 per cent. against nil.

William Whiteley, Ltd.—Profit for year to January 31, 1938, £147,245, against £162,909. Proportion of management

shares, £3,717, against £5,086; N.D.C. provision, £3,000; depreciation, £8,500, as before; employees' fund, £1,000, as before. Interim ordinary dividend maintained at 10 per cent. Selfridge and Company liable for enough to make up full 25 per cent. on ordinary stock. Carry forward unchanged at £79,277.

Hollinger Consolidated Gold Mines.—Net operating profit 1937, \$5,761,193, an increase of \$126,279. Depreciation, \$573,712 (\$185,275). Dividends again 22 per cent., requiring \$5,412,000. After net profit from the sale of securities, etc., of \$95,829 (\$349,105), carry forward is \$6,182,569 (\$6,311,259).

Stanley Motors.—The position of this Company was discussed in a Note in *The Economist* of December 11, 1937, page 542. The company earned a profit of £21,677 in the half year ended December 31,

1937. The initial report covering the period September 21, 1936, to June 30, 1937, showed a net loss of £4,584.

Wolsey, Ltd.—For 1937 profits amounted to £78,263, against £72,416. Preference dividend now paid up to date with payment of six months arrears, plus full dividend for 1937. Also the £20,000 advertising suspense account is being written off. Profits in 1937 were affected by the sharp fall in wool prices, which entailed a writing down of stocks and forward contracts. Carry forward raised from £32,476 to £34,114.

Peter Robinson, Ltd.—Profit for year to January 31, 1938, £61,109, (after debenture interest) against £81,838. Ordinary dividend 4, against 2½ per cent. To N.D.C. £2,300. To employees' benevolent fund £1,000, against nil. Carry forward raised from £19,572 to £21,131.

INDICES OF RETAIL SALES IN GREAT BRITAIN
(AVERAGE DAILY SALES IN 1933=100)

We give below annual indices of Retail Trade for the years 1932 to 1937 by districts on the basis of average daily sales in 1933=100. The returns on which the indices are based are compiled jointly by the Retail Distributors Association and the Bank of England, and are published monthly in the *Board of Trade Journal*.

HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in the Colony of Hongkong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

ONE HUNDRED AND TWENTY-SECOND REPORT OF THE BOARD OF DIRECTORS
to the Ordinary Yearly General Meeting of Shareholders, held at the
Offices of The Hongkong and Shanghai Banking Corporation, 1 Queen's Road
Central, Hongkong, on Saturday, the 26th February, 1938, at 11.30 a.m.

TO THE SHAREHOLDERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

GENTLEMEN,—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance Sheet for the year ending 31st December, 1937.

The net profits for the year, together with \$3,340,789.84, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$18,773,006.68.

The Directors recommend writing off Bank Premises Account the sum of \$1,000,000. After deducting \$1,000,000, the Interim Dividend of £2 10s. 0d. per share, paid on 8th August last, viz., £400,000 at 1/2d = \$6,564,102.56, and remuneration to Directors, there remains for appropriation \$11,275,542.35, out of which the Directors recommend the payment of a final Dividend of £3 per Share, viz., £480,000, which, at 1/2d, the rate of the day, will absorb \$7,744,537.82.

The Balance \$3,383,004.53 to be carried to New Profit and Loss Account. The sterling equivalents of the Assets and Liabilities are shown at 1/2d, the rate ruling on the last day of the year.

DIRECTORS

Mr. T. E. PEARCE has been elected Chairman for the year 1938, and The Hon. Mr. J. J. PATRICKSON has been elected Deputy Chairman.

The Hon. Mr. M. T. JOHNSON, Mr. G. MISKIN and Mr. A. L. SHIELDS retire in rotation, but being eligible for re-election, offer themselves accordingly.

AUDITORS

The Accounts have been audited by Mr. JOHN FLEMING, C.A., and Mr. H. R. FORSYTH, C.A., who offer themselves for re-election.

HONGKONG, 8th February, 1938.

ABSTRACT OF ASSETS AND LIABILITIES

31st December, 1937

between aircraft operation and construction; with the result that a country, rightly renowned for its pre-eminence in the manufacture of high-class aircraft engines, has been unable to furnish its foreign services, apart from the Imperial routes, with modern and efficient machines. On the Scandinavian services, improvised in 1935 and operated by British Airways, it was even found necessary to purchase and use foreign aircraft. "Far-reaching changes in organisation and outlook are required to co-ordinate policy, operation, construction and ground organisation."

The Committee suggest the appointment of an extra Parliamentary Under-Secretary of State to be solely concerned with civil aviation; the strengthening of the higher control of the Department of Civil Aviation to secure more vigour and foresight in future policy; the creation of a Permanent Under-Secretary of State for Air; and the appointment of a Director of Aeronautical Production. The Government has announced its intention to strengthen its permanent staff as suggested, but refuses to transfer responsibility for research and production from the present Service Members of the Air Council, because "the whole organisation is now working at high pressure on re-armament."

Indeed, as the Committee point out, most of the research undertaken by the Air Ministry has had, perhaps necessarily, a military bias. And, in so far as defects in the Air Ministry organisation have been the "primary cause" of the stagnation of British civil aviation, the over-riding calls made in recent years upon the Air Ministry—and upon British aircraft constructors—by the needs of national defence may in part have been responsible. Nor can this *apologia* be wholly denied validity. The plea cannot, however, be advanced on behalf of Imperial Airways, indicted in the Report as "intolerant in suggestion and unyielding in negotiation." The management have failed to co-operate fully with the Air Ministry, and their attitude in staff matters, which "has left much to be desired,"

Anglo-Italian Talks

IN Rome, this week, Mr Chamberlain's new venture in British foreign policy has been launched. The negotiations between Count Ciano and Lord Perth have started. What results do we wish for? And what are we likely to get?

What the British electorate would like is fairly clear. They would welcome an Anglo-Italian *détente*, but this only on a basis that would make the change both honourable and durable. They want to see Italy agree with this country in sincerely accepting a system of international law and order which would bring appeasement and thus open the way for an all-round disarmament. But they do not believe that justice can be founded on injustice; and the experiment of jerry-building on the sands is not one that they wish to see tried by a Prime Minister who is a newcomer to the tricky field of international relations.

Mr Chamberlain's own words, in the House of Commons last Monday, "our desire for peace does not involve a willingness to purchase peace to-day at the expense of peace hereafter; nor can we abrogate our moral obligations to our own people or to humanity in

to this British desire, to which Mr Chamberlain has paid lip-service, much relevance to the discussion of the League of Nations is actually taking place in the Italian capital. Does Signor Mussolini believe in Mr Chamberlain's profession of faith "in the possibility that the League of Nations may some day be the salvation of the world?" And in Mr Chamberlain's own mind is that "some day" scheduled to mature at any date this side of the Greek calendar? What, then, are the British and Italian nego-

has not been worthy of a subsidised public service.

The Committee recommend that Imperial Airways, whose safety in operation they do not call in doubt, should concern themselves primarily with Empire and ancillary "short-haul" services. The European services, whose first-class development is a matter of national importance, are recommended for the direction of British Airways, suitably reorganised in capital, management, equipment and personnel; while the London-Paris route should be worked by an amalgamation of the two companies. The benefits of these proposals have still to be proved. In addition, the management of Imperial Airways calls for immediate reform. There should be, on the one hand, a whole-time chairman; and, on the other, collective agreements with the working staff. And "it would be proper in the case of subsidised air transport for dividends to be restricted to the limits usually associated with public utility companies."

Parliament has been vindicated in its assertion of an age-old claim to impeach its executive officers for negligence in the performance of their public duties. Yet it was only by a series of fortunate coincidences that this most necessary function of a democratic and representative assembly was exercised in this case. Mr Perkins was well-informed, and his indignation about the flaws in British civil aviation was not to be set aside by smooth answers. Quite fortuitously, he secured time to state his views formally to the House. As a result an Augean stable has been disclosed for cleansing; and the Air Ministry's general efficiency will be debated next Wednesday. The episode provokes the conclusion that the regular run of Parliaments business should include time and, despite Government Whips, power to investigate departmental policy and practice far more fully than is possible under the present haphazard system of ineffective discussions on Estimates and adjournment motions. In matters of government, the price of efficiency, no less than of liberty, is eternal vigilance.

tiations' immediate objectives? We have no assurance that at Rome, this week, the British Government are not offering to sell to Signor Mussolini Abyssinia's title to independence—which is not, after all, a British asset for us to bargain with—in the hope of securing, behind a renovated Stresa front, a continuance of our possession of Tanganyika—which, the Germans say, is stolen goods.

If Signor Mussolini could really be relied on—in spite of past words and deeds—to stand up with us and our friends for the principles of self-determination and security for small nations, there would be a magnificent assurance of a peaceful Europe. But if it is to be a matter of bargaining territory or strategic positions—the old game of power politics—in order to build up a temporary coalition of interested parties against Germany's pretensions, Mr Chamberlain may wake up to find that a country which has been deliberately baulked of its generous impulse to fight for the Covenant and for the ideals that the Covenant embodies, will not respond to his call to fight for our share of the spoils of 1918. To the general public in this country, which has the sure instinct of simple minds, peace in Europe means peace, first and foremost, with Germany; and it certainly does not mean organising a coalition against her. Can we imagine a British public which squirms at the thought of being compelled to recognise Italy's sovereignty over Abyssinia, ever being induced by His Majesty's Government to go to war with Germany—in order to make Africa safe for British Imperialism by helping Italy to retain the South Tyrol? Can we imagine the City consenting to give Italy a financial accommodation which would in effect be a subsidy paid

in advance for mercenary military service? Can we imagine that a money payment would be more than a fraction of Signor Mussolini's price for entering into so formidable an engagement? And—most pertinent, and most rhetorical question of all—can we imagine Signor Mussolini being able, when it came to the point, to induce his own people to stand up on the Brenner and take the brunt of a Germany marching to liberate the Southern Tyrolese and break a fresh attempt at "encirclement"?

The more closely we examine the elements of such a bargain, the more chimerical does the project appear. Yet if this particular bargain is really not practical politics, there is little left on which to deal. If the Anglo-German deadlock over the colonial question continues, we may expect to see Italy procrastinating between the two parties as she did in 1914-15. For in present circumstances a war either with Germany on the Continent or with Great Britain and France in the Mediterranean would almost certainly condemn Italy to swift and shattering ruin. But she might still hope to gain a rich reward by blackmailing both parties while she "kept them guessing."

With this prospect in view, it seems unlikely that the present Anglo-Italian negotiations can lead to anything more substantial than the shadow of a naval agreement. The Admiralty will hardly be willing to limit effectively their power of bringing a decisively superior strength into action against a Mussolinian Italy if the need were to arise. Perhaps they might be ready to agree that the peace-time establishment of the British Mediterranean Fleet should not be greater than the total Italian Navy. But what would this profit Signor Mussolini if, immediately upon the declaration of war, our Mediterranean fleet could be reinforced *ad libitum*? But perhaps the Italian dictator relies on being able to make this impossible by gaining at any rate a vicarious command over the Straits of Gibraltar. Such command might be his if the possession of both the European and the African shore were to remain permanently in the hands of a Spanish Government which was Italy's vassal. And this consideration raises the question whether Mr Chamberlain is insisting that an Anglo-Italian settlement shall include a genuine and complete cessation of all foreign intervention of every kind in Spain. This point seems elementary; yet it is being rumoured that the Spanish question may be excluded from the agenda of the Rome conversations in order to be dealt with "on parallel lines" in the Non-Intervention Committee.

But even if Signor Mussolini entertains the hope that control of the Straits of Gibraltar is going to fall into his hands with the acquiescence of His Majesty's Government, can he renounce other Mediterranean ambitions that are unquestionably unattainable by Italy with Great Britain's assent? For a *Realpolitiker*, what will be the value of a British verbal recognition of Italy's sovereignty over Abyssinia so long as Great Britain has it in her power to insulate Italian East Africa from Italy at any moment? In order to feel himself really secure in the possession of Ethiopia, must not Signor Mussolini obtain at least a fifty per cent. share in the naval, military and air command of the Suez Canal and the Straits of Bab-el-Mandeb? And, even then, could he feel completely secure without eliminating the Anglo-Egyptian corridor that at present intervenes between the south-east corner of an Italian Libya and the north-west corner of an Italian Eritrea? Apart from this question of confirming his hold upon what he already possesses, can Signor Mussolini permanently renounce his dream of a neo-Roman Empire round the shores of the Mediterranean? Can he mortify his appetite for Tunisia: a French protectorate which is the missing strategic link between Sicily and Libya, and which already has to-day a larger Italian than French element in its population? The Duce's empire in the Danube Basin is melting like snow on the Styrian Alps. A Mediterranean empire is his only possible consolation prize.

Such demands or, at all events, the more ambitious of them, cannot finally be met by a simple negative. But, on the other hand, they can only be permanently solved in a genuinely peaceful atmosphere and on the assumption of a common attitude towards the whole colonial problem. That attitude must involve a liberal regime, acceptance by colonial powers of the principle of trusteeship and the abandonment of the use of colonies as strategic points of rival military systems.

Unhappily, the day when these conditions can be realised is not yet in sight and, so long as the contrary assumptions of power politics must be made, Signor Mussolini could only hope to gain his Mediterranean ambitions in a head-on Italo-German collision with Great Britain and France.

What, then, is likely to come out of the present Anglo-Italian conversations? *Parturient montes*—and we shall be thankful if the mouse that is about to be born proves to be nothing worse than ridiculous.

The Budget Outlook

WITH all the Estimates for the coming year in his possession and less than three weeks to go to the end of the financial year, the apprehensive taxpayer can get his first glimpse of the Budget prospect. With expenditure mounting at an appalling rate there is clearly no hope of tax remission. Will it be possible to avoid further additions to the burdens we already carry?

The weekly returns of revenue and expenditure continue to present a buoyant aspect. This is particularly true of the Income Tax, which was expected to produce £31.0 millions more this year than last. In the nine months to December 31st, £13.1 millions of this gain had already been realised. In the 64 days to March 5th, the intake was £19.8 millions more than in the corresponding period of last year, which was one day shorter. The Income Tax can thus be said to be £1.9 millions ahead of schedule and it requires a collection in the remaining four weeks no greater than last year's for the estimate to be exceeded. Estate Duties, Customs and Excise and Motor Vehicle Duties are similarly ahead of schedule by £0.9 millions, £1.0 millions and £0.6 millions. Surtax, on the other hand,

though £2.4 millions larger than last year, is not going to realise the expected increase of £4.5 millions, and Stamps are badly down. The total revenue from taxes had to show an increase on last year of £20.6 millions in the last quarter to realise the estimate. With four weeks out of thirteen still to go, £4.0 millions of this increase is still outstanding. Non-tax revenue, on the other hand, has been coming in much better than was expected, with the result that the revenue as a whole already shows an increase larger than was estimated for the full year.

On the expenditure side, the cost of the debt has been rather higher, but this will be automatically offset by smaller allocations to Sinking Fund. The position in the Supply Services is peculiar. They were expected to cost £32.7 millions more over the whole year and had actually cost £54.7 millions more by December 31st. But since the New Year, the expenditure (excluding sums borrowed) has been £31.1 millions below last year, so that the total to date shows a much smaller increase than was budgeted for. Summarising the whole position, we can say that, if revenue and expenditure in the remaining four weeks

exactly reproduce those of last year, there will be a surplus (again omitting borrowings for defence) of £12.8 millions, of which £9.1 millions will come from the expenditure side and £3.7 millions from revenue. But there may well be surprises to come before March 31st.

So much for this year. What of next year? The estimates amount to £253,250,000 for the defence forces and £442,691,000 for the civil services and revenue departments, other than the Post Office—a total of almost £696 millions. Supplementary Estimates will have to be allowed for in addition. The Navy Estimates include nothing for the 1938 programme of construction. Last year, it was estimated that about £4.8 millions would be spent in 1937-38 on the 1937 programme. This year's programme is rather smaller and may be delayed by congestion in the shipyards. Some civil Supplementaries can also be foreseen already. As a guess, £8 millions may be allowed for both categories, raising the total to £704 millions. The Consolidated Fund, the bulk of which is debt charges, can be presumed to require the same amount as last year, namely £235½ millions. This makes the total of expenditure to be met out of revenue roundly £940 millions.

This is the measure of the task that faces the Chancellor of the Exchequer. What will be his resources? The Budget estimate for the current year's revenue was £863.1 millions. As has been demonstrated above, the present indications are that this figure will be exceeded. The revenue is already nearly £4 millions ahead of programme and there may be further gains to come. Let us provisionally estimate this year's revenue at £868 millions. The National Defence Contribution has only produced £580,000 this year, but it is estimated to bring in £25 millions next year, and the fact that this year's estimate has not been realised is no justification for writing down next year's expectation. Here, then, is a gross gain of £24 millions or a net gain, after deducting the consequential reduction on income tax, of £18 millions. Moreover, the changes in the income tax made in the last Budget will fortify the revenue next year by an estimated amount of £2,850,000 more than in the current year. There are thus "automatic" increases of, say, £21 millions, which raise the revenue to £889 millions.

We have not yet, however, allowed for the natural buoyancy of the revenue. The table at the head of the next column shows, for the main taxes and for the total, what have been the changes in yield each of the last four years, as compared with its predecessor, after making all allowances for changes in rates of taxation.

The two largest contributing items to the annual increase are the income tax and Customs and Excise. The yield of the latter duties has been running, since the New Year, rather below last year, and though the comparison may not be so unfavourable later in the year, it would be rash to

INCREASES IN REVENUE, 1934-1938
(Adjusted for Changes in Taxation)
(£ millions)

	Adjusted change in Revenue, in comparison with previous year, in			
	1934-35	1935-36	1936-37	1937-38*

Total Tax Revenue	+13.6	+40.4	+33.5	+33.1

* Budget Estimates.

assume any increase. On the other hand, the income tax, which is collected in arrear, ought to show a further substantial rise. *The Economist* figures of company profits are still rising, and for most variable individual incomes the current year, on which tax will be payable next year, will have been the best of the recovery cycle. Surtax, with its two years' lag, should also be higher next year. Death duties, however, so far as they are at all calculable, are more likely to be down, and stamps will certainly show a decline. On the whole, it is difficult to foresee a "natural" increase in the revenue of more than £20 millions.

This brings the total of revenue to, say, £910 millions, leaving a gap of £30 millions. Are there any further means other than additional taxation, for bridging the gap? None that can be foreseen with any confidence. But it is worth noticing that the non-tax item of Miscellaneous Receipts was put this year at the very low figure of £11 millions. In the four preceding years it was £24.6 millions, £21.7 millions, £15.1 millions and £22.1 millions—in reverse chronological order. Admittedly the Road Fund is no longer there to raid, but it is not impossible that there are other hen-roosts which the Chancellor of the Exchequer can rob. But though there may be £10 millions, or conceivably £15 millions, available from this source, there can hardly be £30 millions.

The outlook is, then, for increases in taxation sufficient to bring in at least £15 millions and possibly £30 millions, unless the Chancellor of the Exchequer on Budget Day can find some source of revenue within the framework of the present taxes whose existence is not known to the lay commentator. But, barring such a miracle, the taxpayer had better start searching his pockets. Even £30 millions is not a crushing burden, and there is no question that it can be found. But the finding will not be an agreeable process.

The Bastion of Europe

GERMANY'S ambition to expand towards the south-east has been re-stated in recent weeks in terms that prohibit misunderstanding. The Berchtesgaden interview with the Austrian Chancellor and its sequel were intended to bring the incorporation of Austria in the Reich one step nearer. Herr Hitler's speech to the Reichstag on February 20th seemed to make it clear that the next step was to bring Czechoslovakia similarly within the German orbit. True, the name of Czechoslovakia was not mentioned; but the ten million Germans over whom the Fuehrer asserted protectorship, all too clearly included the Sudeten Germans of Bohemia. More than ever, Bohemia, the bastion of Europe, as Bismarck called it, becomes one of the danger-points of the Continent. If political and cultural autonomy for the German minority were the full content of Herr Hitler's ambition, Czechoslovakia should attract his anger

far less than other countries, for the Germans in Czechoslovakia enjoy the full political and cultural rights of citizens in a democracy, which is far more than can be said about the German minorities in Poland or Italy, which are Germany's best friends. The grievances of the Sudeten Germans may be genuine. But they are also being made stalking-horses for wider aims. The Third Reich would like to see Czechoslovakia, or at least its formerly Austrian—as distinct from Hungarian—territories, brought under German domination. Without in any way prejudicing the question whether Germany's desire to have Bohemia and Moravia within her sphere of influence will lead her some day to take by force what she wants, it is instructive to inquire what Germany, and the German war machine, would gain thereby.

The republic as a whole has a population of 15,000,000,

of whom about 11,000,000 live in Bohemia, Silesia and Moravia, the provinces in which Germany is most interested. The German-speaking minority numbers about 3,500,000, and as their nationalism runs high, they would be excellent recruits for the German armed forces. The Reichswehr would thus receive an immediate accretion of 5 per cent. in man-power, even without counting the Czechs. At the same time, the strategical task of the German army would be reduced. The distance from Opawa in Silesia near the Czech-German frontier to the Danube near Bratislava, is just over a hundred miles. If Austria, Bohemia and Moravia were incorporated in the Reich, this would become the new south-eastern frontier of Germany, instead of the present Czech-German frontier of about 950 miles. Moreover, the present frontier is within 120 miles of Berlin, 65 miles of Leipzig and Nuremberg, 25 miles of Dresden and Chemnitz; the safety of all these centres of population and manufacture would be greatly increased if the Czech thorn in the German strategic flesh could be removed.

The agriculture of Czechoslovakia would be of considerable assistance to Germany. In 1932-36 the average production of the country was 1.6 million tons of wheat, 1.75 million tons of rye, 1.2 million tons of barley, 1.3 million tons of oats, 9.1 million tons of potatoes, 240,000 tons of maize and 543,000 tons of beet sugar. In barley and oats usually, and in rye sometimes, the country produces a surplus for export, and as Germany frequently has to import these cereals, the Czech production would be very valuable. Czechoslovakia also has a huge reserve of timber, one-third of her territory being covered with forests. In 1929-30 the yearly production was as high as 23,800,000 cubic yards, of which more than half was exported. Timber is one of the raw materials Germany badly needs.

More important than the agriculture of Czechoslovakia, however, is its industry. Bohemia, Moravia and Silesia are one of the most highly industrialised parts of the Continent, over 40 per cent. of the population being occupied in industry and mining. The output of coal in 1936 amounted to 12,233,181 tons and that of lignite to 15,948,767 tons. After allowing for the high heating capacity of Czechoslovak lignite, the total output of the country is something of the order of 16 per cent. of the German. In 1936 the Czechoslovak output of pig iron and steel was 1,140,000 tons and 1,560,000 tons respectively, or roughly 8 per cent. of the German capacity. Czechoslovakia does not, however, produce her own iron ore, the highest output having been 1,800,000 tons in 1928, and in this respect the metallurgical industry of Bohemia would be in the same delicate situation as that of Germany in the event of war. The engineering industry of Bohemia is world-famous, especially in the manufacture of armaments. The Skoda works at Plzen (Pilsen) employed 40,000 workers in the 1920s, and there are other armament factories at Brno and Bratislava. The eight automobile factories of the country have a capacity of 40,000 cars a year. As for chemicals, the Aussig works near the German frontier are the largest on the Continent outside Germany. The great re-armament of Czechoslovakia in recent years has undoubtedly expanded the capacity of the country to manufacture munitions, whoever are its masters.

Czechoslovakia is thus, beyond question, an economic prize. When the Habsburg Empire fell to pieces, only one-fifth of its area and one-fourth of its inhabitants fell to the

new Czechoslovak Republic. But 85 per cent. of the coal and lignite production of the Empire, two-thirds of the iron and steel industry, 60 per cent. of the engineering industry, 75 per cent. of the textile industry and over 93 per cent. of the sugar production were in the territories out of which Czechoslovakia was constituted. A Germany which commanded the Czech lands would therefore have much the largest part of the old Austro-Hungarian military machine, without its diffuse territories. The military striking power of the Reich would be increased by very much more than the comparatively small size of the territory would indicate.

There would be no greater mistake, however, than to think of Czechoslovakia as merely a second Austria, ready to fall into Herr Hitler's hand whenever the international political situation permits. There are three important differences between Austria and Czechoslovakia. First, the majority of the population of Czechoslovakia are not merely not German, but determined not to have reimposed upon them the German yoke they endured for 300 years. Secondly, Austria is almost powerless to defend herself by force; Czechoslovakia is strong. Thirdly, Austria has many friends but no allies; Czechoslovakia has close alliances with the two powers which, except for Germany, are militarily the strongest in Europe.

The Czechoslovak Government has frequently expressed its willingness to open discussions with Berlin. But it will not consider any grant of autonomy to the German-speaking regions such as would infringe upon the sovereignty of the Republic or upon its defensive powers. Nor will it accept Nazi participation in the Government. If Berlin wants more than Prague will concede, she will have to take it by force. And taking it by force would be by no means an easy task

for any general. The Czech Army consists of 181,000 effectives, with well over a million trained reserves available. It is fully trained and splendidly equipped. The Czech armament factories are among the best in the world, especially in the manufacture of automatic weapons, and they are being systematically removed into the interior. Forewarned by the anti-Czech propaganda of the German Press, the fortification of the German frontier was undertaken in 1935 and is now nearing completion. The defender's task is assisted by geography, as the frontier is mountainous and largely unsuitable for mechanised attack. In view of the size and efficiency of the Czech Army, the strength of the fortifications, the enormous preponderance that the attacker needs in modern warfare and the great length of other frontiers that the German Army would have to watch in the event of hostilities, the odds are by no means as overwhelming as they might appear at first sight. Militarily, Czechoslovakia resembles a hedgehog which might defy the attack of a nation far stronger than itself for a considerable time.

These are the facts that lay behind the remarkable warning publicly issued last month by General Krejci, the chief of the Czechoslovak General Staff. When he declared that his army was ready and determined to beat off any sudden attack, he was speaking no more than the simple truth. The military strength of Czechoslovakia is one of the guarantees of European peace, for, were it any reason to believe that a sudden onslaught would succeed, the temptation to attempt it might prove irresistible. As it is, Czechoslovakia can be attacked only at the cost of a major war. Bohemia is thus still the bastion of Europe—a bastion resolutely manned, which will not be surrendered.

Topics of the Week

Mr Chamberlain's Foreign Policy.—The Labour Party's amendment to the Government's motion in the House of Commons on Monday deliberately widened the scope of the debate. The House was invited to discuss not merely the armaments which we are so rapidly accumulating but also the political purposes to which they are to be put. On this political question Mr Chamberlain took the offensive in his opening speech. But we cannot say that his vigour has thrown much light on the vital question of what his foreign policy really is. We now know that he does not like authoritarian ideologies and that he thinks that the people of this country would fight—he would do so himself—in defence of democracy, meaning liberty. But in getting into fighting trim, where exactly does Mr Chamberlain draw the line on which he proposes to turn and bite? Neither liberty nor democracy is, after all, a British monopoly. There are some small nations in Europe which also possess these treasures. But "what small country in Europe to-day, if it be threatened by a larger one, can safely rely on the League alone to protect it against invasion?" And "why should we mislead them by giving them an assurance of security when such security can only be a delusion?" So it is not for the liberty of small countries that Mr Chamberlain's England is going to fight in the year x as Sir Edward Grey's England fought in 1914. But all hope of the preservation of the small countries' liberties is not quite extinguished; for "a small nation may have powerful friends who will act as its guardians and protectors and so preserve the peace." Perhaps Belgium may count on being protected by Great Britain out of friendship, though it would stick in our throat to assist her in fulfilment of the Covenant? But, wistful Belgians, do not set your hopes too high; for in an earlier passage Mr Chamberlain has already warned you that "co-operation in the defence of any allies we might have in case of war" is "our fourth and last objective." Mr Chamberlain's own comment on this order of priority was that his programme, taken as a whole, gave "an impressive picture of the armed power and economic might of this country." The Prime Minister of the United Kingdom may think so, but the heads of other States may equally well think that this is cold comfort for Great Britain's prospective allies. In considering so narrowly the question whether we are going to be so kind as to come to the assistance of our neighbours, Mr Chamberlain seems to have lost sight of the equally pertinent question whether any of these neighbours are likely, on Mr Chamberlain's not very attractive terms, to burn their fingers for the sake of the British Empire. "Precarious Isolation" seems to be the goal towards which our Prime Minister is rapidly steering us.

The Defence Debate.—In spite of the terms of the Labour Party's amendment, which attempted to divert Monday's debate from re-armament to foreign policy, the bulk of the speeches were concerned with the progress made in building up the national defences. On this subject the House of Commons and the country is perennially in a position of seeking information about the uses that are being made of the vast sums of public money provided for the three Defence Forces. On Monday a little information was vouchsafed, but not very much. The main controversy of the debate concerned the progress made in expanding the Air Force—since, as Mr Churchill said, the Navy was making satisfactory progress and the British Army was not a decisive factor in European strategy. Hitherto it has been customary for the Government, as well as private members, to compare the sizes of Air Forces in terms of first-line strength. On Monday the Prime Minister rather significantly abandoned this comparison in favour of the much less precise one of "air power and air strength." Mr Winston Churchill interpreted the change as an admission

that we had not succeeded in building up to an equal first-line strength with Germany, and since Sir Thomas Inskip, in replying to the debate, did not dispute this interpretation, it must presumably be accepted as accurate. Air Force progress, in fact, is not entirely reassuring, and it is plain that for some time to come the air will require more attention than the other two fighting forces. But there is every evidence that the fourth front of home defence is still weaker. Very little was said about this in the debate by the Government spokesmen. The Prime Minister, it is true, emphasised that what wins a war is not armaments so much as staying power—a doctrine which is entirely borne out by history. But if that is so, the argument for reinforcing the staying power of the British people becomes all the stronger. Sir Thomas Inskip contributed a few titbits to the programme of home defence. The balloon barrage, for example, was almost ready; the coast defences were being strengthened; and there were other "resources of defence" which were too secret to be revealed to the House of Commons. But there is still an unwillingness in the Government to see the problem of home defence as a whole and to tackle it with an energy comparable to that which has gone into the programme of re-armament. This is the aspect of the whole matter which deserves the greatest emphasis in the coming months. Even without an extended programme of home defence, the expense of re-armament is mounting. The Prime Minister warned the house to expect "a substantial advance" upon the original figure of £1,500 millions, and he could not guarantee that next year would see the peak of expenditure. The outlook for this year's Budget, which is discussed in a leading article on page 543, is not particularly rosy. But the outlook for next year and the year after is black indeed.

A Plebiscite for Austria.—The pressure of the Nazis has forced Dr von Schuschnigg to take the bold step of holding a plebiscite of the Austrian people on Sunday. The agreement between the Government and the Nazis has not been kept by the latter. They have seized the opportunity offered to them of conducting political activity within the framework of the Patriotic Front, but they have refused to heed the ban on provocative demonstrations, the display of the swastika and the use of "Heil Hitler" as a greeting and slogan. Dr von Seyss-Inquart, Herr Hitler's nominee as Minister of the Interior, has in turn visited Graz and Linz, the Nazis' chief strongholds, but in each place he seems to have encouraged the Nazis rather than checked their ardour, which was his ostensible purpose. This was clearly an intolerable position for Dr von Schuschnigg. In a speech at Innsbruck on Wednesday evening which showed all his customary resolution and courage, he announced that the Austrian people would be invited to vote at a plebiscite, to be taken on Sunday, "for a free and German, independent and social, Christian and united Austria, for peace and work, for the equality of all those who affirm themselves for the people and Fatherland." The result of the vote will be awaited with anxiety throughout Europe. Dr von Schuschnigg's own following can be relied upon to vote Yes. So, apparently, can the Socialists, with whom the Chancellor has effected a partial reconciliation in the last few days. But what of the Nazis? The Government of the Reich has no ground for complaint. It has frequently pressed, unofficially, for a plebiscite, and Herr Hitler has formally recognised the freedom and independence of Austria. Moreover, Dr von Schuschnigg's own text invites Austria to declare herself German. The rules laid the dice in favour of the Government and, by laying down that all voters must be over 24, disfranchise many of the Nazis. If they voted No, they would run the risk of appearing a tiny minority. If they voted Yes, they would contribute to the size of a majority that must

strengthen Dr von Schuschnigg's hands. They are, it appears, to abstain and complain that the conditions of the plebiscite do not come up to the standards of fairness that Nazis demand for countries where they are not in control. There is also the ugly possibility that the Nazis may attempt to hamper the vote by fomenting disorder.

Czechoslovakia Stands Firm.—The very definite reaffirmation of the foreign policy of France in the Chamber debate a fortnight ago has now been followed by an equally clear and authoritative enunciation of the foreign policy of Czechoslovakia. A statement made on Friday of last week by the Czechoslovak Prime Minister, Dr Hodza, at a joint meeting of the Chamber and the Senate at Prague has been confirmed in an interview given next day by the President of the Republic, Dr Benes, to a representative of *The Sunday Times*. Dr Hodza's statement was rather on the negative side, and Dr Benes' rather on the positive; but there was no discrepancy between the two pronouncements; and the two together strike a concordant note of clarity and courage which is rarely to be heard in the jungle which we have allowed to rankle over the field of international affairs. Dr Hodza began by emphasising the vitality of the pacts that link Czechoslovakia with Yugoslavia, Roumania, France and the Soviet Union, and the recent general improvement in the relations between the Danubian countries. He then took up the reference, in Herr Hitler's last speech, to the ten million Germans outside the frontiers of the Reich, with a glance at Field-Marshal Goering's subsequent observations on the mission of the German Air Force. He contested Herr Hitler's claim that the protection of these *Auslandsdeutsche* was a legitimate interest and function of the Reich. If applied to the Germans in Czechoslovakia, this would mean an interference by Germany in Czechoslovakia's internal affairs, which would not be tolerated in any circumstances by the Czechoslovak Government and people. They would defend, with all their might, all the attributes of Czechoslovakia's independence. Dr Hodza expressed a desire to eliminate the psychological hindrances to an understanding between the two countries, but declared that a fruitful collaboration was only possible on a basis of non-intervention and equality. Czechoslovakia was not afraid.

Dr Benes likewise laid it down that the problem of minorities was for Czechoslovakia an internal issue which could never be a subject of direct official discussion or negotiation with a foreign Power. To admit the contrary would be to admit the right of a foreign country to interfere in Czechoslovakia's internal affairs, and the process, once begun, would never stop. The Czechs were prepared to defend their democratic ideals and their territorial integrity by force if necessary. Having thus underlined Dr Hodza's negatives, Dr Benes added some positive points, which were so many bridges thrown across the gulf. Czechoslovakia would continue to fulfil her minority treaties; she recognised the moral right of Europe to take an interest in minorities in Czechoslovakia, as a matter touching European peace; she was prepared to furnish her friends, and in particular Great Britain and France, with any information on the minorities question that they might desire; she was prepared to make her contribution to a general European settlement; and she would welcome a rapprochement between the Great Powers—e.g. between Great Britain and Italy. Dr Benes, incidentally, gave some striking figures of the educational advantages enjoyed by the Germans in Czechoslovakia by comparison not only with the Czechs but with the Germans in Prussia; and he also went into the question of the German quota of officials and the reasons why it is at present still only up to about 60 per cent. of the proportionate figure. Czechoslovakia is thus both standing firm and justifying her stand. As is argued in a leading article on page 544 of this week's *Economist*, she will not be an easy nut for the Third Reich to crack.

Another French Crisis.—Once more a French Cabinet has fallen because it could not obtain from Parliament the special powers of which it stood in need to maintain financial equilibrium. The chief differences from the usual formula for these affairs appear to be that the financial difficulties are not immediately pressing and that M. Chautemps welcomed, rather than fought against, the departure of his Government, which had been in office for only seven weeks. The occasion of the crisis was the impending need for a Defence Loan. To ensure the success of the loan, M. Chautemps wished to reassure the investor that the "pause" in social legislation would continue and that fiscal economies would be attempted. For this he needed special powers, but his allies, the Socialists and Communists, refused to grant them, so he resigned without waiting for a vote of the Chamber. Behind these immediate circumstances, however, is the growing feeling in France that the time has come for a Government on a much broader base than any that have been formed since the 1936 elections. As we go to press, M. Blum is trying, as he did seven weeks ago, to form a Government reaching from the Communists to M. Paul Reynaud. That some such combination should prove successful, and give France a period of firm government, must be the wish of all France's friends. But it remains to be seen whether the desirability of such a concentration is sufficiently outstanding to overcome the tenacious jealousies of the political groups.

The Debate on Palestine.—In the debate on Palestine in Committee of Supply in the House of Commons last Tuesday, Mr Ormsby Gore was assailed by critics of all parties on grounds which were not all compatible with each other. He was criticised both for having rushed the House into an acceptance in principle of the Peel Commission's proposals and also for the nine months' delay in sending out the Technical Commission which is to report upon the practicability, in detail, of the partition plan and its corollaries. The charge of dilatoriness seems to have been more widely supported than its opposite, and it was pointed by the figure of the cost of the troops that have to be retained—and also constantly brought into action—in Palestine pending a settlement. The debate, which at one passage became heated, did not bring out the reasons for the delay in following up the report of a Royal Commission which had argued, so eloquently and so forcefully, that dilatoriness could and would aggravate the situation in Palestine without being able in any way to ameliorate it. Mr Ormsby Gore announced that the Government "stood exactly where they stood in the debate last July." They still believed in partition; they still were determined to see the policy of partition through; they were committed to the principle underlying the Peel Report, but they were not committed to the details. It is greatly to be hoped that they will now push rapidly ahead with what is, after all, the subsidiary

task of making the technical investigations that are necessary for taking action upon a policy that has long since been decided. Nothing but harm can come of prolonging, one day longer than is absolutely necessary, an interim period which is exacting a steady toll of bloodshed, is working economic havoc, and is accentuating on both sides a bitterness which must be appeased if any plan whatsoever is to work.

Parliamentary Proceedings.—Last week closed in the House of Commons with the discussion of two important social questions. On March 3rd a protest was voiced against the possibility that the Housing (Financial Provisions) Bill might work in favour of the erection of flats to the detriment of house-building. In spite of the London County Council's policy, the average Englishman, given reasonable freedom of choice, is a house-dweller by inclination. The rejection on March 4th of a private member's bill to enable local authorities to engage widely in trading activities followed precedent. Up to a point, the measure might have been useful: local authorities would have been saved the considerable cost of securing special powers by private Act; and all parallel authorities would have secured general powers to do what, for odd and accidental reasons, only a few are now empowered to do. The home of the Chamberlains runs a municipal bank; and Bradford makes bricks. But to admit local authorities into the whole field now covered by private enterprise would be a serious step.

This week, after debating Defence and Palestine, the House returned on Wednesday to discuss the latest weapons of national defence and entertainment, foreign broadcasting and television. The House does not wish foreign distortions of the truth about Britain to stand unchallenged on the air; but many members are rightly afraid of entering into dishonourable controversy by methods less unimpeachable than those hitherto adopted by the British Broadcasting Corporation. Apart from the major debates, Thursday's announcements of increased pay for the Army and a new policy for the pig and bacon industry, and the Cabinet changes—which moved Lord Hailsham to the Lord Presidency of the Council and filled his seat on the Woolsack by the appointment of Lord Maugham—the highlights of the week were the Cadman Committee's vindication of Parliamentary criticism and the Prime Minister's assumption of responsibility for foreign affairs questions in the Commons. Though Mr Butler, Lord Halifax's Under-Secretary, gave valuable assistance to Mr Chamberlain in his onerous task, the words of Prince Ranjitsinji, in a different context, are not inapt: "That a captain should himself be a bowler is usually considered inadvisable. The idea is that he will bowl too much or too little. There is something in this."

Collective Bargaining on the Roads.—Nearly 200,000 lorry-drivers may come out on strike in a fortnight's time. The Road and Rail Act of 1933 made the payment of fair wages a condition for the granting of goods licences; and a voluntary body representing employers' and workers' organisations was set up to determine wages and conditions. This National Joint Conciliation Board has never worked well. Its decisions have not been comprehensively put into effect by employers; and the transport unions would have preferred a statutory body with power to enforce fair wages and conditions, as, indeed, was recommended recently by the Government-appointed Baillie Committee. The present dispute began in October, 1937, when the unions asked for a 6s. increase in London daily wages and the regularisation of the 48-hour week. The claim was later extended to include all England and Wales. When the National Board met this week, one of the three groups of employers, the Associated Road Operators, refused to give an assurance that, if an agreement were negotiated, as the result of a joint committee's deliberations, they would abide by it. Strike notices, to expire on March 26th, were the unions' retort; and the only guarantee that Parliament's intention in the 1933 Act will be implemented is for collective agreements to be made and enforced. Goods transport conditions on our dangerously congested roads are too often unsatisfactory. The proper solution would seem to be effective statutory control, according to the Baillie Committee's findings. Meanwhile, Mr Bevin's call for support from other unions, including the dockers and railwaymen, raises another issue. Whether such action would be legal under the Trades Disputes Act of 1927 is still uncertain.

A Spanish Naval Battle.—The chief incident in the Spanish civil war since the Battle of Teruel died down has been the torpedoing of the Insurgent cruiser "Balears" by a Republican destroyer in the Mediterranean on Sunday. It has hitherto been assumed that the Insurgents had the command of the sea on both coasts of Spain, and this assumption has largely rested upon their possession of superior strength in cruisers. In particular, General Franco has had at his disposal the "Balears" and the "Canarias," both of which are powerful modern vessels finished only shortly before the war broke out. Early on Sunday morning, however, this cruiser flotilla came into contact with a Republican fleet, consisting of two cruisers and a flotilla of destroyers. The destroyers attacked, and succeeded in torpedoing the "Balears." British destroyers played a gallant part in rescuing some of the crew, although the sinking ship was being bombed by Republican aircraft. This incident may turn out to have had quite an influence on the outcome of the war. For even if it has not seriously affected the balance of naval power it will have made the Insurgent ships much more cautious in their patrol of the Government coast, and, as a result, the grant of belligerent rights to General Franco may not result, as everyone has tended to assume, in an effective blockade of the Government. General Franco never allows a reverse to go by without an effort to retrieve his position, and his defeat in the naval battle has been followed by the launching of a big offensive on the Aragon front south of Saragossa, the results of which are not yet apparent. Meanwhile the Non-Intervention Committee is meeting with continued difficulties. The chief bones of contention at the moment appear to be the exact number of volunteers to be withdrawn in the preliminary stage. The Germans and Italians are pressing for a figure of 10,000 to be withdrawn from the side which is proved to have the smallest number of volunteers, and a proportionate number from the other side. Russia, however, is holding out for double that number. A demand is also being made by Italy that the control of the land frontier between France and Spain should be strengthened—a demand which is, of course, resisted by France so long as there are no proposals for parallel strengthening of the control at the ports. As always,

these technical points are merely being used as stalking-horses for the political designs of the participants, and if an agreement can be reached between the great Powers the difficulties of the Non-Intervention Committee will disappear like magic.

The Moscow Trials.—As the news comes from the court at Moscow day by day, one fantastic enormity out-herods another as though Stalin had an infinity of sensations up his sleeve. Krestinsky's "Not Guilty" plea of one day has been corrected to "Guilty" the day after in a friendly colloquy in court with Krestinsky's fellow-prisoner Rakovsky. Next Rosengolz takes up his parable to recount the details of a Red Army plot for seizing the Kremlin and carrying out a *coup d'état* last May Day. Then comes an Usbeg comrade, Khojaev, to tell the story of his dealings with British agents with an eye to detaching from the Soviet Union the Socialist Soviet Republic of Usbegistan (next door to Afghanistan, on the upper waters of the Oxus and Jaxartes) and turning it into a British protectorate. Rakovsky's contribution was to divulge that, while he was Soviet Ambassador in London, he had been bullied by John Bull into joining the staff of the British Secret Intelligence Service—a predicament which ceased to embarrass him when Trotsky one day whispered in his ear that he, too, was a British Secret Service agent. Bukharin, like a hero, put up a fight in court to demonstrate (what is no doubt the truth) that he was neither a spy nor a murderer but a convinced theoretical communist who was disinterestedly acting up to his principles. But he was gradually borne down by the brusqueness of the Judge, the brutality of the Public Prosecutor, and the growling hostility of the public. Next came Dr Levin, the official physician to the Kremlin, with his account of how, at Yagoda's instigation, he had slowly done to death—by ultra-modern methods of slow poisoning—the famous author Maxim Gorky and his son, and also Yagoda's own predecessor in the command of the OGPU, and Kuibyshev, the former head of the State Planning Commission. The doctor's evidence was confirmed by Yagoda himself. As we go to press there comes one touch of comic relief. Rosengolz admits to having allowed his wife to sew up in his trousers a charm (consisting of some pointed texts from the Psalms) wrapped round a piece of bread (which is presumed to be a communion wafer). What are we to make of it all? Why, for instance, has M. Stalin chosen precisely this moment to make his fantastic accusations against the British Government? We can only concur in Signor Mussolini's caustic comment that M. Stalin is proving himself the best Fascist of them all.

Mr Bennett's Resignation.—The retirement of Mr R. B. Bennett from the leadership of the Conservative Party in Canada has come at last. For the past two years his ill-health had made it inevitable, and had there been any obvious successor it would no doubt have occurred long ago. The same difficulty still remains, for during the period of his leadership his personality was supreme, and a wit once alleged that his Cabinet could meet in a telephone-booth. But the problem goes much deeper than a mere selection among candidates of roughly equal claims. There are forces at work in Canada which have hitherto been kept in the background by the strong personalities of Mr Bennett and Mr Mackenzie King, and by the long rule of the Liberal Party at Ottawa. These forces are to-day symbolised by the power of Mr Mitchell Hepburn in Ontario and of M. Duplessis in Quebec. It is highly significant that after a series of by-election disappointments the Conservatives recently increased their majority, to their own surprise, in Sir George Perley's old seat of Argenteuil, thanks to the assistance of M. Duplessis' Union Nationale Party. It is still more significant that the Conservative conference which accepted Mr Bennett's resignation agreed to recommend to the national convention of the party that its name be changed from

"Liberal-Conservative" to "National-Conservative." Clearly there is afoot a profound realignment in Canadian politics.

The Navy Estimates.—This year's Navy Estimates are deprived of what is normally their most interesting feature, the programme of new construction. The programme—whose main features are two capital ships, one aircraft-carrier, seven cruisers and three submarines—was announced in the Defence White Paper a few days before the Estimates appeared. But no details of the cost of these ships appears in the Estimates, presumably because the Japanese refusal to give assurances that she is keeping within treaty limits, and the consequential tripartite discussions between London, Washington and Paris, have delayed the preparation of plans. A Supplementary Estimate is to cover the cost in the present year of this new construction. Thus the full cost of the Navy is even greater than the gross total of the Estimate, which, at £123,707,000, is £18,642,000 more than last year's figure. Since £3,000,000 more is to be borrowed, the increased burden on the Budget is £15,642,000. The details are shown below:—

	1933	1934	1935	1936	1937 (estimates)	1938 (estimates)
Average number of effectives	89,863	94,351	94,259	99,886	112,000†	119,000†
Wages, etc., of officers and men	£12,514	£12,689	£13,140	£13,693	£14,181	£15,027
Victualling and clothing	3,182	3,147	3,435	3,575	3,978	4,421
Medical establishments, &c.	376	366	406	400	411	441
Fleet Air Arm	1,089	1,338	1,993	3,572	4,200	5,718
Educational and scientific services	650	650	665	702	794	880
Royal Naval Reserves	373	342	334	330	373	356
Shipbuilding, repairs, maintenance, etc.	18,449	20,929	25,784	35,179	32,125 (54,125)*	40,881 (62,881)*
Naval armaments	3,767	4,034	5,658	8,629	7,770 (12,770)*	10,392 (15,392)*
Works, buildings and miscellaneous	2,816	2,622	2,839	3,939	2,906 (5,906)*	4,092 (7,092)*
Admiralty Office	1,079	1,106	1,155	1,307	1,459	1,603
Non-effective services, civil superannuation, etc.	9,145	9,393	9,479	9,641	9,869	9,897
Total expenditure	53,444	56,616	64,888	80,976	78,065 (105,065)*	93,707 (123,707)*

* Including sums to be issued from the Consolidated Fund in accordance with the Defence Loans Act, 1937. † Maximum strength.

The biggest increases, as might be expected, are in shipbuilding and naval armaments, which are also the items to which the largest sums of borrowed money are to be applied. There is also a sizeable increase in the cost of the Fleet Air Arm, due partly to expansion and partly to the transfer of certain costs from the Air Ministry to the Navy.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

BRAZIL

A Symposium

Brazil has the largest area of any country in North or South America, with a population second only, among American countries, to that of the United States. The development of her commensurately vast resources, mainly by men of European stock, has owed much in the last hundred years to the extensive and continuous provision of capital by European—not least by British—investors. From time to time Brazil, making a virtue of necessity, has co-operated with her oversea creditors in debt-funding schemes. The events of last November, however—when the assumption of quasi-dictatorial powers by President Vargas coincided with an embargo on foreign debt payments which has not yet been removed—were unprecedented. Are they symptomatic of far-reaching changes in Brazil's political and economic development? Has she assimilated some of Europe's extreme contemporary ideologies? Are her rulers desirous of treading the road to self-sufficiency? If so, how far is their policy compatible with Brazil's economy as a "new" country? If not, how best can she reconcile her present situation with the reasonable claims of her bondholders? In the following pages, three eminent writers discuss, independently, the facts on which an answer to these questions must needs be based. Professor André Siegfried, a recent visitor, describes Brazil's topography, her people and her industries. Dr Arnold J. Toynbee sets out the main features in her political landscape. Finally, a special financial correspondent analyses her exchange position and states the case for an equitable settlement with her bondholders. Professor André Siegfried's article has been translated from the French by H. H. and Doris Hemming.

Brazil and Its People

(By André Siegfried)

THE outstanding impression brought back by a visitor to Brazil is that man's relationship to Nature (with a capital N) is entirely different from that in the temperate climate of Europe, which has been civilised and exploited for many centuries. When the Greek philosopher Protagoras said that man was the measure of things, he expressed a thought which, though true of Europe, manifestly cannot be applied to the new world. Above all, it cannot be applied to South America, for there man is out of all proportion to his surroundings. Nature is far too vast for him.

Travelling from Pernambuco to Rio and Santos, I skirted the coast for 1,400 miles, but that was only a part, an insignificant part, of the Atlantic seaboard of Brazil. From Rio de Janeiro to Bel Horizon, the capital of the State of Minas Geraes, I penetrated some 200 miles inland, but hardly touched the fringe of Brazil's enormous mass. On this continent distances discourage any attempt at comparison. From North to South, or even from East to West, Brazil is 2,500 miles across. It is over three and a quarter million square miles in area. France could be put twice over into States such as Para or Amazon, and these are only two of the twenty-one States of which Brazil is composed.

In Brazil, Nature crushes man by her might. She is inhuman. We admire her in spite of our instinctive fear, but we feel no affection for her. We are awe-struck, astounded by the Bay of Rio, the wonder of the world, but we are never charmed by it. Those mountains of sombre granite, strange and gigantic in form, overhang the sea and pierce the sky with their daring peaks. We never cease to admire them, but—everyone makes the same confession—we do not love them as we love the familiar, harmonious scene of Europe. The dominating impression is the indifference, the inhumanity of Nature.

The climate of the tropics always succeeds in making the European feel an exile; for he misses the rhythm of the seasons. In the tropics there are only summer and winter, represented by a dry season followed by a wet season, without any period of transition. When the sun shines every day in an azure guaranteed in advance, we appreciate it less; we lose all sense of time under a sky that does not change. Stronger still is the apprehension of Nature's dangerous strength that a European feels in the Brazilian forest. In Europe, in France especially, we cannot comprehend this. With us, a forest has become a feeble thing which

must be protected and would disappear were it not the object of the unremitting care of a corps of specialised civil servants. The exploitation of the soil is carried out at the expense of the forest. In America, and especially in South America, the forest has never been entirely conquered. At the slightest relaxation we see it take back what has been wrested from it. The constant moist heat of the climate generates a swarming, all-pervading life which is hostile to man. Thus, on the South American continent, the immense reserves of natural wealth give two contradictory impressions: first, a fully justified confidence that these riches are limitless and inexhaustible; and, secondly, a conviction that their exploitation, in spite of appearances, is difficult, and their conquest precarious.

Hence, in examining the economic condition of the country we must adopt a different mental approach to that which we should employ in the older lands of Europe. The French peasant collaborates with Nature and the seasons, and out of this collaboration is formed a complex unity made up of self-interest, sentiment, and an almost physical attraction. The products of Nature are achieved in proportion to the work expended, and the cultivator ends by loving his toil. In Brazil the soil, being almost virgin, demands less effort from the planter. Many crops, especially in the North, are to be had for the gathering. When the soil shows the first sign of exhaustion, the planter needs only to move a little farther on. In the *fazendas* we frequently find, alongside existing plantations, others which have been long since abandoned. Colonisation is carried on chiefly by this method, which leaves behind it a trail, not of conquered territory on which to base further progress, but of worked-out regions left to lie fallow.

The South American is sometimes the conqueror, sometimes the slave, but seldom the partner of Nature. His economic life resembles a succession of assaults. Some succeed brilliantly, others fail completely, and all eventually have to be renewed, either because the soil is temporarily exhausted or because the export markets are depressed and prices are not remunerative. This explains the violent commercial changes, characteristic of Brazil, in which catastrophic crises follow sensational booms. It explains also why one product after another has served as the fundamental basis of Brazil's prosperity. Sugar, gold, rubber, coffee have in turn filled this rôle. To-day, coffee is Brazil's leading

export; to-morrow it may be cotton, or even rubber again. But this sky-rocket development, with its alternate phases of splendid exaltation and blank despair, is the product of natural conditions which are part of the underlying personality of the continent.

THE BRAZILIAN PEOPLE

There is no Brazilian race, any more than there is a French race or a British race; but there is a Brazilian people, with a keen national sense. The formation of this people out of a medley of racial elements, and the maintenance of its political unity throughout the centuries, in spite of very powerful centrifugal forces, discloses many problems.

The population of Brazil in 1936 was estimated at 42,395,151. There were only four millions in 1800, but there were 14,334,000 in 1890 and 30,635,000 in 1920. Progress has been rapid, yet what do 42 million people amount to in a country larger than the United States? In the strip of territory along the coast the density of population varies from 27 to 112 inhabitants per square mile, but further inland the figure falls to 10, and in the centre there are not more than 2. The population, in fact, is concentrated in the States on the Atlantic seaboard between Pernambuco and Uruguay. The federal district of Rio and the States of Rio de Janeiro, Minas Geraes and São Paulo together hold 43 per cent. of the people, though they cover only 10 per cent. of the total area. And even in these States a short motor ride of twenty-five or thirty miles, away from the big cities, takes one across wide stretches of open country, magnificent but empty. Brazil is often compared with India, and not without reason; but Asia is saturated with teeming humanity, while the American continent remains sparsely settled and condemned to relative sterility.

The basis of the Brazilian people is the Portuguese stock. Their charm, which admirably adapts itself to the tropics, is incontestable. Towards the north of Brazil the Portuguese came into contact with the Indian. At Pernambuco one sees at once a strain of Indian blood in the general population, clearly shown by the formation of the skull, by coppery complexions, and especially by an indefinable bearing with a faint resemblance to the silent fluidity and defensive reserve of the Chinese. Further south, the presence of the negroes, who were imported from Africa in the past as slaves, is much more pronounced. At Bahia and Rio de Janeiro, where they are numerous, life is gay, easy-going and lazy. There is dancing and music, and the social scene is imbued with the characteristics which the negroes carry with them wherever they go. Unlike the Indians, they are successful in certain callings, though frequently, if they can earn enough to live on in two days, they will work no more during the week. The men on the quays at Rio, who recline against a wall and savour the pleasure of doing nothing, derive from it a voluptuous enjoyment which the westerner will never understand.

Though there are pure blacks and pure Indians in Brazil, the mixture of both with the whites predominates. The Portuguese have never felt any repugnance for half-breeds, and the barrier which separates the races of the United States, as if by a *cordon sanitaire*, does not exist in Brazil. Coloured people enjoy full social and political rights. Yet cases where a man of negro blood has risen high on the ladder are rare, for the black man contents himself naturally with more modest situations. In the army he is in the ranks, in the civil service he is the porter, in the home he is the servant. The darker he is the lower his position in the social scale. Nevertheless, intermingling has been carried far, and it still continues. One wonders whether the coloured elements will not be finally absorbed into the aggregate, giving it merely a slightly darker tinge. If so, Brazil will have solved peacefully and effectively the terrible problem which stretches like a dark curtain across the future of the United States. In this matter the Portuguese, in their easy-going way, will have hit upon a solution without even looking for it. The price paid—and thoughtful Brazilians do not ignore it—is the handicap imposed by this strain of colour, which carries with it not only a natural indolence but, in the religious domain, a weakness for superstition.

An influx of new immigration has recently come from Europe to modify Brazil's initial racial combination. From 1886 to 1935, some 4,010,913 immigrants entered Brazil. Of this total, Italians accounted for 1,373,722, Portuguese for 1,149,502, Spaniards for 558,087 and Germans and Austrians for 230,183—to which we must add Japanese, whose numbers by 1934 amounted to 173,500. Almost all the immigrants have gone towards the south. The centre of gravity of the country is tending to move away from the north towards the States south of Rio de Janeiro. And the country, thanks to this wave of immigration, is becoming whiter. But it is the Portuguese who always assimilate; the newcomer soon learns the language and becomes passionately Brazilian. Thus, a superficial impression may exaggerate the importance of centrifugal forces. Unity really does exist: in the language, which carries with it a tradition of culture; in the civilisation, which continues to be Portuguese in tint, and to be well adapted to these new climes; and in a vigorous patriotism which prides itself on the very size of the country ("bigger than the United States of America"), on its past, and on its future as a "young nation."

PRODUCTION AND EXCHANGE

A study of the economic structure of Brazil in relation to the outside world thus discloses certain problems both fundamental and general. Here, as we have seen, is an immense country whose resources have hardly been explored. For their exploitation, or even for the simple equipment of the new community with roads, houses and public utilities, considerable capital is required. But Brazil is not a capital-creating country. Such sums as her people accumulate during their periods of prosperity are insufficient to provide massive funds for works of importance. Consequently, Brazil is a young country, financed by countries which are economically more advanced. If we examine her balance of payments (before the partial suspension of interest payment on her foreign debt in

SAN PAULO (BRAZILIAN) RAILWAY COMPANY LIMITED

The São Paulo Railway is the natural channel for transport to and from the Sea of all Exports and Imports of the thriving State of São Paulo. The Port of Santos possesses Wharves alongside which all Ocean going steamers are berthed. The quays and spacious warehouses are perfectly equipped for the rapid despatch of all descriptions of cargo.

The City of São Paulo, situated at an altitude of 2,700 feet, is possessed of wide avenues, important public buildings and excellent shops, and can be reached from Santos within two hours by train at frequent intervals. Trains connect at São Paulo for the Cities and Towns of the interior.

A subsidiary Road Transport Company gives door to door delivery of parcels and goods within the Company's zone and beyond in conjunction with the Company's Railway, communicating Railways and their road organisations.

1934), we see that, in addition to the import of goods, the debit side of the account comprises the following items:—

	Million £
Interest on Government, State, and municipal bonds	22
Interest and dividends on foreign capital invested in Brazilian enterprises	12
External expenses of the Government and expenses of Brazilians residing abroad	3
Immigrants' remittances to Europe	2½
Total	39½

Brazil has no "invisible exports," such as the yield on capital invested abroad, or the remuneration for "services." Her foreign trade must therefore be not merely balanced, but favourable. I do not propose to enter here into any detailed discussion of the causes or consequences of Brazil's decision, last November, to suspend payments on her external debt. The case for the bondholder, in this regard, is argued by a financial expert on a later page. I may, however, be permitted to set out one or two general considerations which appear germane to the basic issue. Brazil's surplus of exports has always been insufficient to meet the full amount of her overseas payments. The balance has been furnished by a constant inflow of foreign capital; equilibrium has never really existed.

Now it does not follow that Brazil has not been enriched. Her country has been populated; her people have been equipped; her cities have been beautified, and her roads have been built. But her production of exportable goods has been insufficiently developed. Brazil, consequently, is rich in products, but not necessarily in products which the people of other countries will buy in competition with other tropical products—like coffee, sugar, rubber and even cotton—most of which are cultivated in the great colonial empires of Europe.

Brazil, in fact, has a twofold economy. The domestic market, influenced only indirectly from outside, progresses under shelter, while the external market, with its limited number of products, directly concerns only a fraction of the population in the great coastal cities, but is violently subject to international crises, with their manifold repercussions on currency, exchange and prices. And Brazil, like

many other "new" countries, has long been desirous of widening her domestic market by establishing and fostering her own manufacturing industries. The movement was initiated by her great statesman, Maua, in the latter half of the 19th century. Her industries were already fairly numerous on the eve of the Great War, and since 1914 their expansion has been rapid. The country is well endowed with raw materials: minerals, timber, hides, cotton, etc. Though coal of good quality is lacking, there is abundant water power. Labour is neither very plentiful nor very good; for the negro is lazy and the Indian unsuitable. But it is extraordinarily cheap, and wages range from 6 to 8 milreis a day—say 1s. 6d. to 2s. Since the revolution of 1930 a fairly strict set of labour laws has been in force. Though the output is mediocre, the advantage of the low wage level is obvious.

There is, however, another side of the picture to be considered. Machinery, or at least its more complicated types, must be imported. Brazil cannot hope seriously to compete with either Europe or America in the more difficult processes of production. And Brazilian industry is limited to a home market with a mediocre purchasing power. Except in a few large cities, the standard of living in Brazil is astonishingly modest, especially in the North. In her fine climate, one need wear little more than a pair of linen trousers, a shirt and a pair of sandals, or eat much more than dried fish, cassava meal, and bananas.

Nevertheless, various circumstances have favoured industrial development in recent years. World economic recovery has coincided with political insecurity in Europe. A certain amount of foreign capital has taken refuge in Brazil and has been invested in industrial undertakings. Its profits, instead of being sent abroad, have been reinvested within the country. The development of industries such as boots and shoes, hats, cement, oil, drugs, and chemicals, and cotton and silk textiles, has thus undoubtedly been facilitated. Europe's exports to Brazil, in future, may be destined to consist less of products like these, and more of machinery and machine parts, of highly finished goods and of articles difficult to manufacture.

The phase of capital loaned, in short, is being succeeded in Brazil by one of capital invested. The difference is fundamental. The lender always hopes eventually to repatriate his money, but invested capital is permanently assimilated into a country's wealth. Capital which crosses the seas seldom returns.

Brazil's Political Landscape

(By Arnold J. Toynbee)

THE politics as well as the economics of Brazil are a matter of profound interest to other peoples in both hemispheres. Here is the largest, and the nearest to the Old World, of all the countries of America; and while large tracts of Brazil are, as M. Siegfried points out, still virgin soil, the population of Brazil is already the second largest among the populations of American States; these forty millions and more are being reinforced by immigrants from Europe; and these immigrants are by no means drawn exclusively from the mother country. The Portuguese contingent is not more important than the Spanish, the Italian and the German; and these immigrants have been bringing in with them their own European ideologies. When we ask

ourselves whether the political insulation which the Americas have now enjoyed for more than a century is likely to break down, our eyes inevitably turn towards Brazil as the American country in which some answer to this question is likely to be given earliest. It is this element in Brazilian politics that lends special interest to them at this time in the world at large.

This tendency for Brazilian politics to be swept into the European current is, of course, very recent. Till lately, Brazil has moved on political lines of her own, which have been dictated to the people by the country itself. In a country so vast, so sparsely and unevenly populated, and so poorly equipped with communications, an effective political

unification has only recently become practical politics. For the most part the several States of the Brazilian Federation have lived their own lives and have pursued their own interests; and the political conflicts that have chequered Brazil's history have arisen between the middle States—which are relatively well developed, rich, populous and close to the federal capital at Rio—and the outlying States, which are always jealously on the watch to prevent the central States from dominating the Federal Government and thereby establishing a virtual hegemony over the rest of the Union. To translate this Brazilian political geography into comparable Australian terms, we may equate the State of São Paulo with New South Wales, Rio Grande do Sul with Victoria, Minas Geraes with Queensland, the outlying north-eastern States—Parahyba, Pernambuco and their neighbours—with Western Australia, and the Amazonas with the Northern Territory of the Commonwealth. The political upheavals in Brazil up to date can all be expressed to a large extent in these regional terms—though that may not be the whole explanation of any of them.

For instance, the revolution of 1930, which brought into power the present dictator, Dr Getulio Vargas, was in part a political reaction to the world economic crisis, which took the form of a coffee market crisis in Brazil; but it was also in part a revolt of Rio Grande do Sul, aided by Minas Geraes, against the ascendancy of São Paulo. The two aspects of the affair were, of course, inextricably interlaced, for São Paulo is the Brazilian coffee State *par excellence*; and São Paulo's long-established, but more and more hotly

resented, hegemony was made finally intolerable by a suspicion that the Paulista coffee planters, in their dire straits, might be tempted to take advantage of their control over the Federal Government in order to constrain the poorer States of the Union to pay their quota towards helping this richest State out of her sudden economic difficulties. Again, the civil war of 1932 can be explained as an unsuccessful attempt by the Paulistas to recover their liberties (as it seemed to them) or to reassert their hegemony (as it seemed to the beneficiaries of the revolution of 1930). Finally, the unsuccessful revolt of November, 1935, which was branded with the bad name of Communism by the victorious Vargas regime, might alternatively be described as an excessively importunate attempt on the part of a distant and neglected North-East to force its local grievances upon the attention of the authorities at Rio.

THE VARGAS GOVERNMENT

During the past eight years President Vargas has ridden these successive storms and has steadily increased his power. The terms granted by him to the defeated Paulistas in 1932 were remarkably lenient, and the Constitution of 1934 departed less widely than might have been expected from that of 1891, which had been modelled on the Constitution of the United States. In Brazil, as in other Latin-American countries, a Liberal-Democratic constitution of the nineteenth-century North American or West European type has in practice often masked an oligarchic kind of government

by cliques which—however violently they may have contended with one another over personal questions—have been apt to be drawn, all alike, from a narrow circle which has not extended very far beyond the bounds of three interests: the landlords, the Army and the Church. Dr Vargas' assumption of dictatorial powers on November 10, 1937, might have been nothing more novel than a repetition of a *coup d'état* that has been common form in the Latin American political arena. There are signs, however, that this particular Latin American dictatorship may be approximating towards the post-war European pattern. The homage to corporativism may be nothing more serious than a concession to a passing political fashion; on the other hand, Dr Vargas' apparent inclination to base his claims to leadership on a warning against the alleged dangers of Communism can hardly have been suggested by any traditional feature, or present reality, in Brazilian political life.

Is there really a Communist danger in Brazil? And can Dr Vargas' present system of government properly be described as Fascist? The Spanish element in the European stream of immigration into Brazil brought with it, long ago, some tincture of Spanish revolutionary ideas; but it is only lately that Spain herself has begun to be drawn into the European social maelstrom. Till recently, the Hispanic Alter Orbis began, not at the shores of the South Atlantic, but at the line of the Pyrenees; and the Iberian Peninsula was as remote as Latin America from the contagion of European ideologies. This long-maintained insulation is past history in both Spain and Portugal to-day; and what has already happened in the mother countries of Latin America is evidently no longer impossible on the farther side of the ocean. Whether there is to-day anything in Brazil that deserves the name of Communism (except as a mere term of political abuse) is perhaps a matter for argument. But there are authentic Brazilian Fascists—they call themselves Integralistas—and though, for the moment,

these have been disbanded like all the other political parties, it is perhaps not inconceivable that Dr Vargas might one day try to enlist them in his cause—or, alternatively, supplant them by imitating them—as a way of putting his own power on a broader and firmer basis.

The situation is complicated by the fact that the native Brazilian Integralistas are not the only force of Fascists in the Brazilian field. The unassimilated majority of the German immigrants—who are concentrated in the centre and south and live to a large extent in compact settlements—have their own Nazi organisation, which is energetically fostered, and by the same token closely supervised, from Berlin. In having to contend with this double problem of a German as well as a native Fascist organisation in their country, the Brazilian Government is in the same awkward situation as the Hungarian. And while it is true that distance here tells in Brazil's favour, it is also true that Herr Hitler has a long arm. It might not be beyond his dream to turn the German minority in Brazil, and the native Brazilian Fascist party, into levers for prising Brazil out of her present Pan-American setting and working her—who knows?—into some new international grouping based on the Anti-Comintern "Triangle."

These possibilities were mooted at the moment when Dr Vargas made his *coup* last autumn. In all probability such conjectures were premature. Yet at this critical moment in the history of the world the pace of events is apt to outstrip expectation. The political insulation of the Americas is hardly likely to resist for ever the modern mechanical process of "annihilating distance." And if the democratic system of international relations were to collapse, then Pan-Americanism, as well as the League, might rapidly be encroached upon by new constellations of power. On these several accounts, the domestic political development, as well as the foreign policy, of Brazil seems likely to remain a matter of general interest as far as we can see into the future.

The Bondholders' Case

(By a Financial Correspondent)

THE history of Brazil's relations with her bondholders has been chequered. At the beginning of 1937, the external debt of Brazil (federal, state and municipal) was £158 millions in sterling, £73 millions in dollars, £17 millions in French francs and some £2 millions in florins and other currencies, giving a round total of £250 millions. In barely forty years the bondholders have accepted three voluntary abatements of their contractual claims—marked by the fundings of 1898, 1914 and 1931. In addition the Aranha scheme effected a unilateral scaling down of payments in February, 1934, and there has been a complete suspension of debt remittances since last November. Yet the fundings of 1898 and 1914 did not prevent large new borrowings in the years which followed, and even the Aranha scheme of 1934 did not prevent the flotation of a 4 per cent. stock in 1936 to fund commercial arrears. If the foreign lender is to be criticised for his dealings with Brazil, it must be for his liberality rather than for harsh insistence on his bond.

The default of November 10, 1937, certainly differed from its predecessors in several important ways. Before, Brazil could plead necessity and could claim, with at any rate some degree of justification, that the lenders themselves had been imprudent in allowing the debt to mount so high. In 1937, there could be no such extenuating plea. Only four years before, Brazil had decided, unilaterally and by her own decree, how much she could afford to pay her creditors, and had scaled down a contractual service of £22 millions to annual amounts which in 1937-38 rose barely to £9 millions. When the scheme was decided upon, the national revenues were running at the rate of between 2,000,000 and 2,500,000 contos a year, and exports at about £55 millions a year. By the end of 1937, Brazil was budgeting on 3,500,000

contos and exports were likely to total over £70 millions. To plead that the obligation fixed by Brazil herself in 1934 had become too burdensome for fulfilment in 1937-38 can scarcely carry conviction with Brazil's creditors. Indeed, the very method of announcing the default, as an incidental item in a broadcast *pronunciamento*, betokened internal politics as a motive, as well as external economics.

At the same time, it is only fair to admit that in the months before the default Brazil had unwittingly been building up an exchange problem of some difficulty. During 1936, there had been a gradual appreciation of the milreis, which had risen from an average free market rate of 89\$400 to the £ in December, 1935, to an average of 82\$700 in December, 1936. By 1937 traders had the impression that the appreciation would continue, and exporters began to dispose of their foreign exchange as quickly as they could, while importers arranged, wherever possible, to defer payment in order to maximise their exchange profit. This provided a new and artificial stimulus to the rise, which during the summer became out of hand and drove the rate below 75\$000. Imports, already too high in relation to exports, were stimulated still further, and commitments were entered into for the future. Consequently, by the end of last year, when the over-valuation of the milreis was being corrected, importers were not only required to pay for higher current purchases, but also to find exchange to meet the payments deferred earlier in the year. Not unnaturally, there was a shortage of foreign exchange, which for a time provoked almost a crisis.

The crisis, however, had not become apparent when the debt service was suspended, and cannot explain it. Apart from that passing difficulty, there is no room for doubt that Brazil, if she were willing, could before long resume the Aranha level of payments. The return of the

milreis to a more healthy level should have its normal effect in increasing exports and restraining imports. Since the (essentially sound) revision of coffee policy which was also decreed last November, Brazil has aimed at a competitive instead of at a supported price, and the value of the principal export has fallen. It is early yet to estimate how the coffee situation will develop, but there is no need to fear a disastrous contraction in the total export value. Competitive prices are already stimulating sales. It is true that a fall of, say, 30 per cent. in values is unlikely to produce the full 40 per cent. rise in sales which would be necessary to restore the 1937 turnover figure. Nevertheless, an export of some 15 million bags—i.e., the 1935 level, compared with 12.2 millions last year—does not now seem out of the question. If prices remain as at present, the total value would be some 12½ per cent. less than in 1937, giving a sales figure of about £27 millions. Similarly, an estimate of cotton exports, based on a rise of 10 per cent. in volume and on present prices, would give about £11 millions, making a total of £38 millions for the two chief exports. About £2½ millions can be added for cocoa and, say, £19 millions for other merchandise. Thus, a total figure for Brazil's exports of £59½ millions is reached.

FUTURE EXPORT SURPLUS

Such an estimate can, of course, be no more than a rough calculation. Accurate figures for Brazilian foreign trade are notoriously difficult to arrive at from the published returns; more especially in recent years, when the compulsory surrender of 35 per cent. of foreign exchange obtained from exports has led exporters to return their consignments at the lowest possible figure. So far as can be judged, however, the estimated export of £59½ millions would compare with about £55 millions in 1935, £64½ millions in 1936, and about £70 millions in 1937, when coffee prices stood high. The question of an export slump, therefore, does not arise.

The possibility of obtaining an adequate export surplus thus seems largely to turn on Brazil's willingness to restrain imports to a reasonable level. The task should not be over-difficult. As M. Siegfried points out, the industrialisation of Brazil has made considerable progress in the last four years, and the country is already capable of producing many types of goods which were formerly bought from abroad. Moreover, the Government is conducting a campaign to encourage the cultivation of wheat, and this should result, in due course, in a reduction in the amount (over £7 millions in 1936) spent on wheat imports. Taking these factors into consideration, it can hardly be questioned that, provided the Government plays its part in restraining tendencies to extravagant imports, the difficulty caused by the exchange shortage should prove purely temporary, and that the country's exports provide ample resources to cover debt remittances on the Aranha scale.

There remains the possibility, however, that the Government may contemplate at least a temporary increase of Brazilian imports for naval defence purposes. The keels of three destroyers were laid in the Brazilian naval dockyard last May, and expensive materials and machinery must necessarily be imported for the work. A new monitor is also on order and there is the possibility that nine more destroyers will be provided for, of which three would be built in Brazil and six abroad. As these plans do not exhaust the programme for replacement of obsolete warships, there is room for substantial abnormal imports, which would ordinarily be financed by special credits or long-term loans. Will the Government be tempted to meet the bill with funds normally belonging to bondholders?

In fact, Brazil need not make a rigid choice of destroyers or debt service. The present total service includes not only the Aranha payments of about £9 millions a year on the long-term Federal, State and Municipal loans, but also about £4 millions on the liquidation of British and American frozen commercial debts over four years from 1936. By 1940 those £4 millions will be released. If Brazil believes that destroyers are vitally necessary for her defence, she could earmark part of the £4 millions to pay for them two years hence, when they would be likely to be delivered.

A PROVISIONAL SETTLEMENT?

Continued refusal by Brazil to consult the bondholders' just interests will leave her open to the charge of preferring short-term advantage to sound policy. Once the default is established for even a relatively short time, the diversion of funds will create vested interests in them elsewhere, and restoration of Brazil's credit will become immeasurably more difficult. Mexico, doubtless, did not originally intend the complete default which has since condemned her to economic stagnation, despite even her princely natural endowment in oilfields. Yet Brazil is at this moment in danger of drifting on the same course. She is a country which, more than most, requires, and will continue to require, foreign financing for the development of her great natural resources. True, the country is still honouring its commercial engagements—but so, until recently, was Mexico. No Government can enjoy good commercial credit while it remains in default on its bonded debt. So long as non-payment continues, an extension of British Government guaranteed export credits is more than problematical. The direct and indirect ownership of the bonds is much too widely spread and powerfully represented for such a proposal to be made without fierce protest in Parliament and the Press. In short, there is no middle course for Brazil. Either she must put an early end to her default, or reconcile herself to future economic stagnation.

By her own past actions she has allowed temporary payment difficulties to arise. It is no help to bemoan the past, but, equally, it is in the interests neither of Brazil nor of her creditors that the position should be allowed to drift. The creditors have, at the very least, the right to be told what steps the debtor intends to take. The President has declared that Brazil will pay her external debts to the utmost of her capacity, but he has yet to announce what measures he proposes to ensure that that capacity is not allowed to dwindle through fruitless delays. The creditors are surely justified in expecting at least a resumption, within the next few months, of payments on the basis of the Aranha scheme for, say, a year, or until the coffee position becomes less obscure. If Brazil feels herself unable to achieve this result at once, a prompt disclosure of her position might be accompanied by an offer of temporary payments on the basis of her real capacity. Strained as is the patience of the bondholders in this country and in the U.S.A., they are for the most part reasonable men and women who claim only to be treated with reasonable consideration and good faith. It is greatly to be hoped that the President will not allow himself to be diverted by any short-sighted or self-interested advice, but will have the wisdom to use his newly-acquired access of authority to take prompt steps in restoring his country's credit.

* Preliminary.

Using the uncorrected indices, we find that automobile production fell from 94 in December to 65 in January, but the output of steel ingots rose from 42 to 50, while plate glass production fell from 108 to 62. Textile activity showed an upward trend: cotton consumption rose from 81 to 86, and silk deliveries from 62 to 92. Several items involving consumption goods also rose: sheep slaughtering from 140 to 161, and cigarette production from 202 to 221; but sugar meltings dropped from 81 to 66.

Thus, the relative stability of the aggregate indices masks a good deal of movement in the component items; and in this respect January showed signs of improvement, since in December the sub-indices were almost all falling. It is probable that February will show a similar tendency. The index of mineral production shows very little decline either from the level of last summer, or from that of a year ago.

For some three consecutive months the unadjusted index of manufacturing activity has stood at about 75, a very low level; in the corresponding three months of last winter the figure was 115. The average for 1931 was 80; in 1932 it was 63; in 1933 75, and in 1934 78. Thus the current level of manufacture is at about the average for the four worst years

of the depression, and may be contrasted with the 1936 average of 105 or the 1937 figure of 109.

To descend from a summer index of 112 (the average for June, July and August last year) to a winter index of 75 is not recession: it is collapse, and betokens a sudden cessation of production, and within certain limits, of demand. Yet retail trade, as measured by department store sales, has shown no decline that could not be explained simply in terms of slightly lower prices; and there is no depression in agriculture.

Prospects of Recovery

Indeed, the rapidity and depth of the decline in manufacturing affords the only plausible argument for expecting a revival in the not far distant future. The dominant characteristic of the American economy in recent years has been its extreme instability. The following table shows the major fluctuations in the past five years:—

INDEX OF MANUFACTURES

(1923-5 = 100)

	Unadjusted	Adjusted
March, 1933	58	56
July, 1933	97	102
December, 1933	67	73
May, 1934	89	86
September, 1934	70	69
April, 1937	125	118
January, 1938	75	76

In five years, there have been three cycles of production of an amplitude of 20 per cent. or more. One might perhaps argue from this that a sharp rebound in the near future is quite likely, although actual evidence of such a recovery is still lacking.

The expectation of recovery is clearly shown by recent movements in security prices. Earnings in the last quarter of 1937 were, for the most part, far below those of the preceding quarter, and it seems doubtful whether the first quarter of 1938 will show any marked improvement. Relative to the earnings position, share prices are high, and reflect the conviction that the present depressed level of output and earnings will last for only a short time.

Surplus of Exports

The foreign trade figures for January showed a decline from December in both imports and exports, of which the decline in exports may be explained as seasonal:—

	Merchandise Exports	Merchandise Imports
	(\$000,000)	
January, 1937	223	240
October, 1937	333	224
November, 1937	315	223
December, 1937	320	209
January, 1938	289	171

The decline in imports is obviously cyclical, for it has been continuous and extensive since late in the winter of last year. The result of the fact that exports are higher and imports lower has been to convert an import surplus of \$18 millions in January, 1937, to an export surplus of \$119 millions in January, 1938.

These figures do not readily lend themselves to interpretation. At a time when our merchandise balance was becoming active on a large scale, gold imports have been greatly reduced, and the dollar has been rather weak. It has been rumoured that there was a heavy movement of foreign balances out of New York over this period; and the trade figures would suggest that these balances may have been drawn upon to pay for exports. The fall in imports after last March was one of the earliest statistical evidences of declining demand in this country; while the year's advance in exports, even with some allowance for the more than seasonal decline since the peak in October, 1937, is evidence of sustained demand abroad.

France

Financial and Labour Problems

PARIS, March 9. — Nearly 20,000 million francs will have to be borrowed for National Defence in 1938; and an improvement in foreign trade is needed to ensure the stability of the franc. Yet the Communists and the Socialists are bidding against each other in demands for increased expenditure; and when the franc stands at 156 to £1, depressed by the material and psychological effects of a large surplus of imports and the Budget deficit, they are clamouring for old-age pensions.

M. Chautemps has asked for plenary monetary powers, which would probably involve the postponement of all new social expenditure, including old-age pensions, and modifications of the 40-hour week for the benefit of armament industries. The Socialists are not willing to support this claim. [The consequent political crisis is discussed in a Topic of the Week on page 547.]

The first of the six bills which constitute the new Labour Code has been finally voted by Parliament. When a labour dispute occurs, it is to be brought before an Arbitration Committee, then, if necessary, before two arbiters, and, in the last resort, before a super-arbiter nominated by the arbiters or by officials. Wages may be adjusted if the index of the cost of living has risen by 5 per cent. in six months, and if the index shows a 10 per cent. rise an immediate revision can be ordered.

The bills have been widely modified by both Chambers; and the proposal for a sliding scale and the suggestion that the books of the employers should be open for inspection to trade union delegates to decide whether or not it is financially impossible to raise wages have been turned down. At the moment, fresh troubles abroad and the desire to avoid domestic crisis have convinced both parties that M. Chautemps' compromise must be accepted.

Nevertheless, a political crisis has occurred. And the new Labour Bill is not likely to put an end to social conflict, so long as the cost of living is rising at the same time as companies' profits are falling. In any case, the passage of the first part of the Labour Code has proved so difficult that the remaining five bills will for the moment be held over.

The Senate endorsed the setting-up of the "Caisse Autonome de la Défense Nationale," to issue defence loans and take charge of the funds thus borrowed for military expenditure, which will reach 20,000 million francs this year. Unhappily this sum does not represent all the money to be borrowed, which will amount to between 30,000 and 40,000 millions. The question now is to choose the best guarantees or fiscal exemptions to entice investors and the most attractive type of bonds. Persistent social and political uneasiness, and the fear of new difficulties in Central Europe, which has been—rightly or wrongly—increased in Paris by the new turn in British foreign policy, are causing anxiety in the markets. Indeed, these influences, with the renewed economic recession which is now perceptible here, are contributing to paralysis of the markets.

Foreign Trade Improves

The import surplus in February was higher than in January but lower than in February, 1937:—

	February, 1937	January, 1938	February, 1938
Imports:			
Foodstuffs	1,004	965	1,139
Raw materials	2,171	2,369	2,536
Manufactured goods	492	558	613
Totals	3,667	3,892	4,288
Exports:			
Foodstuffs	237	310	289
Raw materials	610	869	843
Manufactured goods	848	1,272	1,187
Totals	1,695	2,451	2,319
Deficit	1,972	1,441	1,969

Imports rose in value by 17 per cent. between February, 1937, and February, 1938, but fell in volume from 5,346,000 tons to 4,542,000 tons. Imports of coal fell from 2,775,000 to 2,048,000 tons because of an increase in production and lower consumption. Exports rose 37 per cent. in value; all categories increased, and exports of manufactured goods also increased in volume from 210,000 to 241,000 tons.

The import surplus in trade with foreign countries (excluding French colonies) was 1,435 million francs, against

1,580 millions in February, 1937, or about 950 million in francs of 1937, a figure much lower than a year ago. Exports are, however, only 54 per cent. of imports, a disequilibrium which remains disquieting, though the increase in imports was appreciably lower than the 20 per cent. rise in prices.

Germany

Foreign Debts

BERLIN, March 8. —The Leipzig Spring Fair, which is being well attended, promises to be a great success. It was opened with a fighting speech by Dr Funk, the new Minister of Economics, who dealt with domestic and foreign trade, currency, colonies and foreign debts. Together with complaints about the foreign debt, which Dr Funk went so far as to describe as "a question involving the fate of the whole German nation," the Minister gave—somewhat inconsistently—a glowing account of Germany as economically the most flourishing country in the world.

Dr Funk declared that "Germany's economy is absolutely sound and proof against crises," and that Germany has attained stability and is independent of the fluctuations of world markets. He praised with emphasis the mark currency, and declared that "so-called currency automatism on the basis of the old gold standard" will continue to be rejected by the authoritarian countries because it would make for "international dependence." A "reasonable clearing system," on the other hand, might well, he said, prove a satisfactory basis for an international currency agreement. This view differs from that of Dr Schacht, who recently spoke in favour of a general return to the gold standard. Dr Funk declared that Germany desires an increase in her foreign trade. He claimed that her domestic credit stands higher than that of foreign countries, and repeated the familiar assertion that a foreign loan is not wanted.

The Case for Colonies

According to Dr Funk, the return of the German colonies would result in a saving of foreign exchange amounting to Rm. 200 millions at first, and later of Rm. 500-600 millions. The colonies would not only deliver their own products, but would provide the conditions for new production in Germany. But "the colonial question is a political question . . . a question of national honour." The indebtedness to abroad the Minister also treated as a political question, which has, it seems, changed its character since the Reich re-armed.

With Germany's present position of might in the world it is intolerable that German State loans abroad should vegetate in conditions unworthy and derogatory to German prestige. . . . The State-guaranteed German foreign loans have to-day quotation levels and interest rates unworthy of National-Socialist Germany and damaging to her prestige.

"The foreigners who lent the money are exactly as much guilty as the politicians of the former system."

These remarks will be better understood if it is realised that the private debts to abroad are here habitually described as mere "commercialised reparations"; and, according to this interpretation, reparations are still being paid. Dr Funk's speech seems to foreshadow a new offensive on the debt question. In view of the lever for collection possessed by most creditor countries in the shape of the Reich's export surpluses to them, and the smallness of the debt service, which is now about Rm. 200 millions a year, conditions are not propitious for such an offensive.

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

Regimentation of Labour

The regimentation of labour is becoming steadily more drastic. The Reich Board for Labour Exchanges and Unemployment Insurance has issued three new ordinances. The ordinance of August, 1934, which made the employment of persons aged under 25 conditional on the consent of local Labour Offices, exempted apprentices; from now on these also may not be taken on without permission. A second ordinance prescribes that all undertakings are in principle obliged to secure Labour Office permission before taking on any kind of employees, the aim being apparently to ensure a sufficient supply of labour for Four Year Plan undertakings. The third ordinance requires the registration at a Labour Office of all young persons (aged under 21) immediately after leaving elementary, intermediate or higher schools.

The number of youths of both sexes reaching their fourteenth year will fall, it is stated, from 1,100,000 in 1937 to 822,000 in 1947, after which it will increase again. A Press organ of the Ministry of Economics comments that young people

must increasingly take into account that they will be compelled to subordinate their private wishes in choosing careers to the economic and political exigencies represented by the Labour Offices.

Activity in Iron and Steel

The outlook for industry in the spring is favourable. Although the home supply of iron and steel has improved, new restrictive measures have been taken in regard to building. In December and January, Germany's output of ingot-steel was the highest in the world, exceeding that of the United States, which is normally very much larger. The agreement announced in Brussels for the regulation of American steel competition has been well received, in view of the German aversion to any defensive price-cutting by the International Cartel.

German exports of heavy iron and steel declined sharply in January, while imports increased. In 1937, out of 111,000 tons of semi-finished iron and steel products exported, some 54,000 tons went to Great Britain. Exports to Great Britain of machine tools for metal working rose to 14,500 tons, against 10,460 tons in 1936. Russia was the chief machine tool buyer, with 25,100 tons, against 21,600 tons in 1936. Although total exports of machinery rose considerably, the export of textile machines declined; sales to Great Britain fell by more than half.

The money market early this week was influenced by impending quarterly income-tax payments, and there was little demand for short-term investments. The Reichsbank's return for the end of February, with its enormous increase of credits and investments by Rm. 929 millions, or Rm. 278 millions more than in the same week of 1937, caused no little stir. The bills portfolio rose to Rm. 5,637 millions, against Rm. 4,777 millions in 1937.

A decision about the future presidency of the Reichsbank is expected by March 18th, when the annual meeting will take place. It is considered probable that Dr Schacht will be given a further term, not by re-election but through direct nomination by Herr Hitler. The belief is general that Dr Schacht will retire soon afterwards. The Party continues to regard the Reichsbank as reactionary, and certainly it has so far been outside direct Party influence.

Roumania

King Carol's New Cabinet

BUCHAREST, February 24. — The last two months were the most stormy period in Roumanian politics since the Great War. The general belief is that King Carol has at last found a Cabinet which will be able to lead the country and to restore confidence. Indeed, large sections of the population have become increasingly tired of party politics resulting in frequent changes of leaders, disorder in civil administration, and distress for the masses.

Accordingly, the first reaction was a widespread sigh of relief, especially in Jewish business circles, where the entire brunt of the unfortunate Goga experiment was borne. The new Cabinet is opposed on two sides: the Democrats, led by M. Iuliu Maniu, and the Iron Guard are both hostile. But while M. Maniu has been so far muzzled, M. Codreanu has felt it advisable to disband his party temporarily.

The first auguries are favourable to the new Government, but its further fate depends on its success in separating

civil administration from politics and uprooting corruption. These are tremendous tasks, since both politics and venality are ingrained into the body of civil servants; and what needs to be changed includes not only the system of administrative regulations, but the administrators themselves.

Business Improves

After the catastrophic slump during the short-lived Goga Cabinet the economic position distinctly improved. Stock exchange quotations rose by 10 per cent. or more. On the other hand, the "black" market for foreign exchange has become dull, and rates are declining uninterruptedly. Shortly before the resignation of Goga the sterling rate reached 1,350 lei to the £1, compared with the Roumanian National Bank's selling rate of 690; on February 23rd, for the first time for many weeks, the market rate fell below 1,000.

One large department store reports that its average turnover increased in February, compared with January, by 20 per cent. In banking circles, however, it is believed that business will recover only gradually. In January some factories had only 3 per cent. of their turnover in January, 1937; and even the sale of commodities needed by the masses of the people fell heavily: the turnover of the sugar industry in January was only half of the normal. In the iron and steel industry, new orders received in January by one outstanding group were only 28 per cent. of those booked in January, 1937, and in the copper industry they were only 25 per cent. In February the figures jumped to 60 per cent. in both cases and show distinct signs of further improvement.

There are also complaints that the collection of outstanding debts has become extremely difficult; and that retailers regularly offered to return to the factories the commodities still unsold instead of making cash payment. It has yet to be seen whether the consumers will begin to buy again in the near future. The banks—even the State-owned Deposit and Consignment Institution—have had to reimburse in some cases up to 10 per cent. of their total deposits, and the proceeds seem to have been sent abroad through the "black" exchange; accordingly, the return of deposits withdrawn during January last is going on with some hesitation.

Shortage of Material for Export

News about agriculture is good. Although figures are not yet available, it has been officially announced that the area under winter wheat is larger than in previous years. On the other hand, the exportable surplus seems to be much smaller than at the end of the winter in recent years: the surplus of wheat is estimated officially to be as low as 8,200 carloads, and the surplus of barley is practically nil. Exports of maize have been prohibited on account of the poor yield of the last crop, but it is believed that a small quantity—3,000 carloads—will be released for exportation in the near future.

Accordingly, the spring trade will be less active than in previous years, and this may affect the trade balance, all the more because the output of crude oil is much lower than it was in the corresponding months of last year (570,000 tons in January, compared with 653,000 tons in January, 1937). This will curtail the inflow of foreign exchange, which may well affect the forthcoming negotiations with foreign bondholders, announced for March.

The rising prices of Government bonds show that the public does not anticipate any default on the obligations of the Treasury; and the large export surplus realised in 1937 leaves plenty of margin for a temporary rebuff, without imperilling current payments abroad. Temporary difficulties in the spring will be easily tided over by the sale of cereals for future delivery, provided that the present promising crop prospects do not deteriorate.

Japan

Developing China's Resources

TOKYO, February 10. — Much attention is being paid to the planning of development and control of the currency in North China. The Government expects to complete the scheme for industrial exploitation in North China in time to present the necessary bills to the current session of the Diet.

The proposed company will have control over railways, communications, mining, electricity, and salt, but cotton cultivation, sheep breeding, and the heavy industries will be outside its jurisdiction. The company's capital will be fixed at 300 or 400 million yen, none of which is to be subscribed by the Chinese, but its subsidiaries will be mostly under joint

Sino-Japanese capitalisation. A similar central body will be set up for Central China.

For money and banking, the Finance Minister explained in the Diet the details of the projected China Federated Reserve Bank, which will be the central bank of issue for North China. The new institution will have a capital of 50 million yen, half of which is to be subscribed by the Provisional Government of the Chinese Republic and the remaining half jointly by the Bank of China, the Bank of Communications, the Central Bank of China, and the Hopei Provincial Bank. The Yokohama Specie Bank, the Industrial Bank of Japan, and the Bank of Chosen will raise among themselves 12.5 million yen and advance this sum to the Provisional Government.

The new bank will issue notes to an amount of 300 million yen against notes of the Bank of Chosen, in addition to silver and the supplanted notes of the Chinese banks. The bank also will act as an exchange bank, and exchange business will be conducted by the Bank of Chosen as proxy. The new currency will be eventually linked to the yen, but for the present no attempt will be made to do this.

Decline in Foreign Trade

The feature of the preliminary details of foreign trade in January was the sharp diminution in both imports and exports. Exports during the month were the lowest recorded for any month since February, 1934. Imports in January, valued at 192.5 million yen, fell by 111.4 million yen, or 36.7 per cent., compared with the corresponding month of last year, while exports, valued at 162.5 million yen, declined by 36.8 million yen, or 18.5 per cent.

The greatest decreases in the value of imports were in raw cotton (89.5 per cent.), raw wool (71.8 per cent.), and crude rubber (52.3 per cent.). There were increases only in the imports of wood pulp, ammonium sulphate, and oil-cake. The decline in exports was spread fairly evenly over the list with the exception of cotton yarn, timber and machinery. The value of cotton piece goods exported fell off by 5.6 million yen, or 14.8 per cent., and of raw silk by 4.9 million yen, or 18.3 per cent.

Quiet Home Markets

Home trade indices do not show any striking change in the trend compared with recent months. The Bank of Japan's index of wholesale prices in January registered a further rise of 1.7 per cent. during the month. On January 15th average retail prices of commodities, including food, fuel and light, clothing and miscellaneous, were 1.2 per cent. higher than a month ago.

New business has been limited in wholesale trade in consumption goods, but retail trade has, since the beginning of December, revived in certain lines. Trade in the New Year has not fallen off as some feared it might, and department store sales have recently been running well above the preceding year's level. This is to a considerable extent due to consumers' anxiety to make their purchases before the proposed sales tax on a large number of goods comes into force, and before the new textile goods compulsorily mixed with staple fibre are put on the market.

Hongkong

Commercial Improvement

HONGKONG, February 18. — The total visible trade of Hongkong in 1937, excluding treasure, was 35 per cent. greater in value than in 1936, and 70.5 per cent. greater than in 1935 (values in local currency). Imports in the last five months of the year were abnormal, owing to the amount of cargo destined for Shanghai which was landed here; and, added to this, there has been considerable traffic in war material, such as oil, motor lorries and aeroplanes, which has swollen the figures of both exports and imports.

Nevertheless, the returns for the first half of the year show that, even under normal conditions, 1937 would have shown a substantial improvement compared with previous years; and there has been an all-round expansion in the general trade of the colony. The following is a comparative table of imports and exports in the last three years:—

	IMPORTS		EXPORTS			
	1935	1936	1937	1935	1936	1937
Merchandise	364.9	452.3	617.0	271.0	350.8	467.3
Treasure	38.8	72.7	386.5	215.9	143.8	395.2
	403.7	525.0	1,003.5	486.9	494.6	862.5

Imports of merchandise from the United Kingdom rose from \$29 millions in 1936 to \$45.7 millions (7.6 per cent. of total imports) in 1937; and imports from the United States from \$32 millions to \$51.7 millions (8.4 per cent. of total imports). Japan's share of the import trade fell from 12.8 per cent. to 9.4 per cent., although the actual value of \$58 millions was practically the same as in 1936. Exports to the United Kingdom have risen during the past five years from \$4.5 millions in 1933 to \$20.8 millions in 1937, or 4.3 per cent. of the total exports. During the same period, exports to the United States have doubled, the total for 1937 being \$41 millions, or 8.8 per cent. of the total.

Calm and Confidence in Canton

Canton and the surrounding Provinces are still free from the invader and, despite the spirit of the people, is unbroken. A plot to bring about a *coup d'état* in Canton, which has cost the Japanese a considerable sum to amount to two million yen. Certain well-known 562 allowed it to appear that they were consenting parties, but at the same time passed on to the Canton Government information about the plot. The Government was therefore ready and, as soon as there were signs of trouble, martial law was proclaimed, and several hundred deluded agents of the Japanese were arrested.

Simultaneously, an attempt on the part of Japanese destroyers to enter the Canton River was stopped by the Bocca Tigris forts, and the river was closed by a boom. The latter has now been raised, and normal river traffic has been resumed. From time to time Japanese naval ratings have landed on various islands at the estuary of the river but apparently their purpose has been to collect food and water and not permanent occupation.

Air raids over Canton occur almost every day but the population takes them as a matter of course, and the damage done so far has been comparatively negligible. The amount of through traffic between Hankow and Kowloon via Canton continues to grow, and one realises now that, if hostilities had broken out twelve months previously, before the Canton Hankow line was completed, the Chinese Government would have been completely shut off from sea-borne supplies and the course of events would have been very different.

Satisfactory Company Reports

The company reports for 1937 which have so far been published have shown marked improvement on the previous year's returns, and increased dividends have been paid in some cases. Transport companies in particular have benefited from the big influx of refugees, and so, too, have property companies, whose empty tenements have filled up rapidly during the past six months.

Local shipping under the British flag has done well, and the dock companies have been kept very busy with repair work as well as with new construction, while the Hongkong and Kowloon Wharf Company is paying a dividend of \$8½ per share against \$4½ last year. A very large amount of local funds is, however, tied up in Manila Gold Shares which, for the greater part of 1937, fell steadily from their high boom value to pegged rates at a very low level. During the past few weeks there has been marked recovery.

Letters to the Editor

Gas or Electricity

TO THE EDITOR OF THE ECONOMIST

SIR,—Your recent articles entitled "Gas or Electricity" give an extremely interesting comparison of these industries, but they leave unsettled a question I should like to raise.

Let me start with the premiss that most people would prefer to use electricity for cooking and water heating rather than gas, if the rates were lower. The reasons for this are obvious: sanitation, safety, utility, etc. The consumer's choice of gas is simply a matter of price. If the cost of electricity were to be based on cooking and water heating requirements alone, it would probably continue to be higher, but when we add lighting and miscellaneous appliances—for which electricity is absolutely required—is it not pertinent to inquire whether or not present rates for electricity properly allow for lower cost due to greater volume?

The effect of larger volume upon cost is much greater, I believe, than is generally realised. According to data published by the electricity industry, showing the cost per kilowatt hour for different amounts of annual use, the cost of electricity for lighting, miscellaneous appliances and refrigeration—a total of 1,100 kilowatt hours per year—would be at the rate of 3.2 cents per kilowatt hour, or \$35.20 per year. Similarly, the cost of electricity for cooking and water heating—a total of 6,100 kilowatt hours per year—would, if these were the only services rendered, be at the rate of 1.45 cents per kilowatt hour, or \$88.45 per year. The cost for the combined services, requiring a total of 7,200 kilowatt hours per year, would be at the rate of 1.4 cents per kilowatt hour, or \$100.80 per year.

The cost of cooking and water heating by gas may be estimated with the aid of figures given in one of your articles showing the relative efficiencies of gas and electricity for these services. Your figures indicate that gas is 16½ per cent.

more efficient for cooking and 12 per cent. more efficient for water heating. Reducing by these percentages the above estimate of \$88.45 for cost of electricity, we arrive at a figure of \$76.33 as the cost of cooking and water heating by gas. The combined theoretical cost of lighting, etc., by electricity, plus cooking and water heating by gas would thus amount to \$111.53 per year as compared with \$100.80 if all the services were rendered by electricity.

It would thus appear that there might be a basic saving of approximately 10 per cent. if the consumer's choice were electricity for all of the above services. If this is the fact, it would follow that as long as the consumer chooses electricity for lighting and miscellaneous services, it will be within the power of the electric industry to furnish the cooking and water heating services at a lower cost than is possible by gas.

I have not given consideration to space heating, because in the United States other fuels, oil and coal, are the consumer's choice. Furthermore, space heating might prove very undesirable to the gas and electric companies if widely employed, because its peak load is very great in comparison with the average and is of relatively short duration.

Very truly yours,

H. H. WILLIAMS.

68, William Street,
New York.

Ulster's Road Monopoly

TO THE EDITOR OF THE ECONOMIST

SIR,—In your two articles on "Ulster's Road Monopoly" you make no reference to the "user" or the general community, and how their interests are affected. We are a community of small thirty-acre farmers outside Belfast and Derry with peculiar transport requirements.

You give statistics showing how passenger fares have, in the main, been reduced, but you do not mention the number of local bus services suppressed as uneconomic. These services served the public and paid the local man, who ran them with his out-of-date and cheap bus, very well.

On the carriage of goods side you forget the total suppression of the local inter-farm and inter-village carrier trade which—again—the enterprising small mechanic had started with a cheap old 30-cwt. lorry, easy to take down country lanes and turn in awkward corners. This has all disappeared, as it is said to be illegal and uneconomic. No small individual can now "carry" for hire. No ambitious small crossroad shopowner can buy a £50 lorry and start doing odd farm jobs in his spare time for his neighbours. That is now illegal; it is uneconomic; and of course it would not pay to send an eight-tonner from a transport centre ten miles away to carry some manure from a neighbour's outlying farm to the home-stead. But it did pay the local man.

I think we must all agree after a year's experiment that, as far as the user is concerned, the only section of the community who have benefited are the long-distance passenger and large Belfast and Derry firms who run their own lorries and have supplanted the local carrier firms.

One other point that should be considered in comparison is the alternative system in the Irish Free State, where the railway companies have taken over all the passenger services and are both serving the public well and making it pay.

H. MONTGOMERY IRWIN.

Derrygore,
Enniskillen,
N. Ireland.

[In gladly printing this defence of the consumer, we would only point out that it is not correct to say that his point of view was neglected in our articles, though it was doubtless not so eloquently expounded as by Mr Montgomery Irwin.—ED., *Econ.*]

POINT FROM LETTERS

England and Eire.—The abolition of proportional representation in Northern Ireland reduced the Nationalist parliamentary representation from 12 to 11 members. This may be a pity, but "serious" is a too vivid description. The entrance to the civil service is by competitive examination without religious test.—*Albert E. Burns, Bangor, Co. Down.*

Books and Publications

Transatlantic Trade

THE considerable debt already owed by all serious students of the economic and political aspects of world affairs to the Information Department of the Royal Institute of International Affairs has been rendered still more heavy by their latest brief but exhaustive survey of Anglo-American trade.* When vital commercial talks between the Governments of Great Britain and the United States are nearing the point of decision, no business man or intelligent citizen can afford to ignore this statement of recent changes in British and American trade policy, the character and implications of the countries' mutual trade, and the balance of payments interchange of goods between the United States and the United parts of the British Empire.

60 years ago, the United Kingdom and the United States were the world's chief protagonists of free trade and protection, respectively. World depression, however, led to changes in their policies. A preferential tariff was introduced by the British Government in 1932, and, together with the Ottawa Agreements of the same year, produced an appreciable diversion of British trade to Empire countries. In the United States, the first experiment in tariff bargaining since 1911 was inaugurated with President Roosevelt's New Deal, and between 1934-37 sixteen trade agreements, covering nearly 50 per cent. of American trade, were concluded. The American tariff was in consequence considerably modified, though not seriously reduced; and the way was open for negotiations between the two most important trading nations in the world, representing 30 per cent. of world commerce or, with the British Empire, 40 per cent.

The United Kingdom is the United States' best customer; and the American market for British goods was only exceeded in 1936 by South Africa, India and Australia. The visible balance of trade between the two countries is heavily in favour of the United States; but one-third of the British import surplus is counterbalanced by invisible exports; and, since the British colonies have normally a large surplus of exports in trade with the United States in addition to receipts from American tourists, commercial relations between the United States and the British Empire as a whole are, within the limits of fairly wide annual fluctuations, very nearly balanced. In 1936, there was a net balance of \$416 millions to the debit of the United States.

British imports from the United States last year were little more than half their value in 1929, but in 1936 they still represented 11 per cent. of total British imports and nearly 18 per cent. of total American exports. Although there is no British export to the United States (except whisky) comparable in importance to the raw cotton, tobacco, machinery and mineral oils imported from that country, there are among the dutiable American imports from the United Kingdom more than sixty items of which the United Kingdom is the "principal supplier."

The scope for valuable tariff reductions, however, is not wide. Any large concessions to the Americans' desire for the modification of British duties and Imperial preferences on wheat, timber, hams, fruit, and other agricultural produce are impeded by the British Government's intention to retain its new policy of agricultural protection and by the dependence of Dominion producers on the British market. The modification of American duties on high quality cotton and woollen textiles from the United Kingdom, like the abatement of British duties on American automobiles and tools, cannot proceed very far without alienating powerful and important manufacturing interests in both countries.

The bilateral discussions in progress depend for their success upon the tri-partite re-adjustment of British, American and Imperial commerce. "It may be doubted whether the limitations imposed by the system of Imperial Preference will allow the United Kingdom to pay a suffi-

ciently high price for really important concessions." But "although it may also be doubted whether the direct economic benefits to other countries of an Anglo-American trade agreement would be far-reaching," any stimulation at all of trade between the two countries would be indirectly of benefit, not only to world commerce, but to political appeasement and co-operation among the nations.

Shorter Notices

"Literature and Society." By D. Daiches. Gollancz. 287 pages. 5s.

The attempt to relate literary and social developments is too seldom properly attempted, and has never been successfully achieved. Mr Daiches' book is a commendable excursion. He aims to show the vital connection between economic life and literary expression, but more often than not, except superficially, he fails, and actually produces little more than the usual summary and catalogue of books and authors.

"The International Distribution of Raw Materials." By H. Kranold. Routledge. 269 pages. 15s.

Contemporary discussion of the nations' access to raw materials, and the connection between this problem and the prospects of world peace, give this book, which sets out to consider the international distribution of raw materials objectively, a special interest. Most of the available factual material needed for a dispassionate judgment on the issues in current debate is clearly given; and Mr Kranold is probably weakest when he discusses the political aspects of the matter and reaches the conclusion that the problem is one of "education in international virtue."

THE BUSINESS WORLD

Home Railway Prospects—III

New Railway Capital

OUR survey of British railway accounts last week revealed a striking contrast, in recent years, between falling revenues and rising capital expenditures. A detailed comparison of the figures of 1937 with those of 1929 showed that, with the sole exception of the Southern, none of the groups had been able to equal, or even closely to approach, the earnings of the pre-depression year, and that even the higher revenues of the Southern represented a considerably lower return on the capital invested than those of 1929. To the £40 millions spent on capital account from 1929 to 1937, the current year will add another £16.1 millions, and a further £13.2 millions will be required to complete work now in hand on the four lines.

How far is this tendency likely, if prolonged, to react upon the railways' ability to raise new capital? Some difficulty, it would appear, is already being felt. In the table below, the first column shows that the increased capital which the companies have been able to raise since 1929 has been relatively small. Against the £40-odd millions of fresh capital expenditures, new capital raised has been only £14.9 millions, and the excess of capital expended over capital received has risen by £26.2 millions. Over a period which has included a new issue boom, both for fixed interest stocks and industrial securities, the railways' inability to finance their capital expenditures in the normal way is significant.

The last eight columns of the table illustrate some of the methods by which the companies have, in fact, met their capital problem. Much the most important source of capital has been special loans from the Railway Finance Corporation and London Electric Transport Finance Corporation. But it is also evident from the small extent of the rise in cash and Government securities on the Southern and L.M.S., and the actual decline on the Great Western and L.N.E.R., that the relatively large increase in savings banks' receipts and in the superannuation funds has been invested

inside and not outside the undertakings. As the cash and gilt-edged cover for the savings and superannuation funds is still generous, it would perhaps be truer to say that the yet more generous margin of 1929 left ample room for the investment of part of the liquid funds in new fixed assets; and that the directors have naturally looked to their surplus liquid funds to meet part of their capital expenditures. But such a source of finance cannot provide new funds indefinitely. Other minor economies of capital are illustrated in the table by the reduction in the stocks and stores carried and in advances to building societies and staff for housing. The sums recovered for over-payment of rates represent, strictly, a recovery of current expenditures, but they have contributed in part to maintaining the funds at a time of large capital outlay. A further device to meet the demand for capital was illustrated in the tables accompanying our article last week. These showed that the amounts invested in non-railway land had fallen since 1929 on the L.M.S. by £1.8 millions and on the L.N.E.R. by £1.3 millions. The sale of the L.N.E.R. Tyne Docks to the Tyne Improvement Commissioners last year is a further example of the same policy.

These and similar operations, entirely sound in themselves, afford evidence that the companies are scanning their books for internal contributions towards their capital requirements. They suggest not only that the Government-guaranteed issues of the Railway Finance Corporation were a means of providing capital cheaply, but that without that intermediary it was becoming difficult to obtain outside capital at all. The effects of "finance from the inside" go further than many stockholders have realised. In essence, the railways have been expending gilt-edged funds on fixed assets at a time of steadily increasing charges for interest on savings deposits and superannuation funds. This procedure, in fact, imposes a hidden prior charge on the undertakings, as will be seen from the following table,

FOUR GROUP RAILWAYS: 1929-37

† After deducting amounts invested.

which shows the deterioration in the net balance of the two items between 1929 and 1937:—

(Thousand £)

	S.R.	G.W.	L.M.S.	L.N.E.R.
Received in general interest less interest paid for superannuation.....	1929 +149.5	+568.0	+74.5	-180.4
	1937 -53.7	-216.4	-960.7	-639.7
Net deterioration.....	1929-37 203.2	784.4	1,035.2	-459.3

The final effect of these movements on the companies' net profits have, of course, been modified by such factors as grants received from the Treasury under the Development (Loan Guarantees and Grants) Act of 1929, and, more particularly, by the return on the new capital assets in which the railways' funds have been invested.

Unquestionably, the statutory form of accounting which the railways are bound to employ is in part responsible for the way this particular problem presents itself. When a railway company replaces worn-out equipment, it can only charge to revenue the cost of replacing what has gone. If the new asset is a better asset—a more powerful locomotive or an electrically- instead of a gas-lit coach—the "betterment" must be charged to capital and not to revenue. No doubt the Inland Revenue would apply the same rule to an ordinary industrial concern in arriving at the profit liable for income tax. But any reasonably conservative board would prefer to treat as a revenue charge the normal "betterment" involved in keeping equipment up to date—which, in the long run, means *competitive*—and would so reckon it in the company's published accounts. The railway form of accounting allows larger earnings to be shown, but requires more frequent calls for fresh capital. So long as the profits allow reasonable allocations to be made to reserve, without keeping the return of capital unduly low, there is no great difference between the two systems. But in a world where dividendless stockholders constantly press their claims, on the one hand, and trades union leaders keep jealous watch on profits, on the other, the statutory accounting of the railways does not ease the directors' task. By industrial standards, revenue tends to benefit at the expense of capital; and in practice the whole of the profits shown is distributed in dividends.

So long as this system continues, the normal improvement and modernisation of the railways will call for considerable sums of capital, and sooner or later the problem of raising the capital may well become acute. In a normal industrial concern a solution would doubtless be sought in a reorganisation of the existing capital. Hitherto, such a suggestion has been countered by the argument that the companies' assets, taken as a whole, stand in their books at less than their replacement cost to-day. The real question, however, concerns earning power rather than book values. An ordinary industrial concern would recognise that part of its earlier capital expenditure, though still represented by assets, was no longer profitable, and should be written off. If the equity stocks were reduced to a nominal value justified by current earnings it would be possible, in favourable market conditions, to raise fresh capital by the issue of ordinary stock. But so long as profits are in a declining trend there must be difficulties in the way of that solution, since even after a capital reorganisation the market will not be anxious to take up new stock.

Alternatively, there might be some extension of the system of indirect Government guarantee for new capital. That capital would necessarily have a prior charge; but if it could be invested to earn more than its cost, the equity would benefit, and ultimately it might be possible to re-establish the balance by issuing equity stocks. Except on the Great Western, however, that solution must remain somewhat remote. As a final alternative, the policy of liquidating non-railway assets (already illustrated on a small scale in sales of non-railway land by the L.M.S. and of Tyne Docks by the L.N.E.R.) might be further developed. Under this plan the railways might float off their ancillary undertakings as separate concerns, the shares of which could be issued to the public. But only commercially sound parts of the undertakings could be liquidated in that way, and the operation might amount only to parting with good assets to provide money for less good. In any event such a policy would almost be one of desperation.

Our detailed review, in fact, leads us to the conclusion that the paradoxical but profoundly significant, that unless the ways can re-establish their profits, the capital problem must in time become acute. Accordingly, we propose to consider present and future earnings in a final article.

Wool Textile Shares

WHEN the directors of Courtaulds, Ltd., referred last week to "the present stagnation pervading the whole textile industry" wool textile shareholders, in particular, felt the force of their words. For, quite apart from current indications of a recession in the woollen trades, recent company news has been particularly cheerless. The Woolcombers' report, published this week, reveals a sharp fall in profits; another coming concern, Isaac Holden, has recently halved its interim dividend; and William Hollins, which showed signs of a long-awaited recovery in 1936, suffered a disappointing setback last year.

In such circumstances it is perhaps remarkable that woollen textile shares have not suffered even greater rebuffs in the market. Woolcombers' ordinary stock, after this week's fall, yields no more than 5.7 per cent. gross. Patons and Baldwins' £1 stock units have fallen from a high level of 69s. 6d. last year to 44s. 4½d.—an appreciable setback, but not much more serious than the fall in leading industrial shares. Has the process of adjustment been taken far enough?

It is a long-standing investment rule—subject, like all rules, to important exceptions—to measure their prospects according to movements in wool prices. The test is necessarily rough, and must be verified by the state of the woollen trades in general. But the "inventory risk" is peculiarly real for certain sections of the industry,

She used to be comfortably off...

WIDOW. 82, requires situation urgently. Where child of 8 not objected to. Capable, good cook. Write F. Box 263, Daily.

EVERY year illness or accident leaves thousands of families to face the world alone. In most cases they are not well provided for. Few men are in a position to put aside money enough to maintain their dependants at a satisfactory standard of living in the event of death. It is only fair to your family and to yourself that you place this burden on broader shoulders.

Consider the

'SAFEGUARD' PLAN

which provides a guaranteed income of £3, £6 or £9 per week tax free for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged for the cash sum to be payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

yet virtually absent, in its direct form, for others. Ranked according to investment stability, the combers come first. They work entirely on commission, and thus avoid the direct risk that falling prices may involve heavy losses on stock valuations. The latest balance sheet of Woolcombers, as at December 31st last, shows that "stores and work in progress" amounted to as little as £65,277 out of total assets of £2,027,161. These "stores," moreover, probably consisted of such materials as coal, olive oil, and machinery parts. The typical spinning and weaving concern, on the other hand, has large stocks and work in progress at any given time, and is forced to cover its raw wool requirements a considerable time ahead.

Thus we find that, in striking contrast to Woolcombers' position, the balance sheet of Patons and Baldwins last May showed stocks amounting to £3,569,208, out of total assets of £6,875,468. Combing business is, of course, affected indirectly by the trend of wool prices, which plays an important part in spinning activity. The combers, in other words, cannot control their turnover, though they have effectively controlled their combing rates since the formation of the Woolcombers Mutual Association in 1933, and have also eliminated much surplus capacity. Yet, even in the combing sections, there is evidence that spinner-combers and outside combers have recently been attracting business from members of the Association.

While the stock risk is important for the woollen spinner and manufacturer, however, differences in organisation between individual concerns prevent its rigid application as a precise test of profits. Of the three manufacturers whose record is given in the accompanying table, Patons and Baldwins are spinners of specialised hand-knitting yarns, Kelsall and Kemp is a woollen manufacturing firm with its own spinning plant, while Salts (Saltaire) is a worsted concern which covers every process from combing to dyeing. In these circumstances, the distinction which some investors make between stock risks in spinning and manufacturing becomes somewhat undependable.

For broad purposes, nevertheless, wool prices still rank with activity in the wool textile industry, as a key indicator of combing and spinning profits. Accordingly, in the table which follows we have shown movements in unemployment and total wages paid (the latter index covers about two-thirds of the industry) as a guide to woollen textile activity, and the prices of merino 64's tops and the *Weekly Wool Chart* combined index for wool, tops and yarns, as a representative guide to movements in wool prices. The annual averages cover pre-depression, depression and recovery years, and a comparison of the January figures with those of the corresponding month last year is also included:—

	Annual Averages					Monthly Averages	
	1929	1932	1935	1936	1937	Jan., 1937	Jan., 1938
Unemployment (%).....	13.9	20.8	13.0	9.2	10.2	7.1	21.1
Index of wages paid (1930 = 100).....	116.4	93.3	101.2	106.5	109.4	107.2	93.2
Merino 64's tops (d. per lb.)	38.5	23.3	28.1	32.9	35.6	38.0	27.1
"Weekly Wool Chart" index of wool, tops and yarns (July, 1914 = 100)	128	69	82	99	121	124	95

THE COMMERCIAL BANK OF SCOTLAND LIMITED

PAID-UP CAPITAL - - - £2,250,000

RESERVE FUND - - - £3,100,000

ESTABLISHED 1810

A substantial setback, both in trade conditions and prices, is indicated by each of the monthly comparisons. At first sight, however, there is no direct evidence of an appreciable reduction in actual activity last year, but the annual averages mask a continuing reduction in business since last midsummer. The Woolcombers' setback is not wholly explicable by rising costs; it also reflects a reduction of perhaps 25 per cent. in woollen activity since last summer. Wool prices, again, were well maintained until August, but the slow marketing of the new clip has been associated with a fall of 31½ per cent. in wool values during the past six months. And this fall has yet to be reflected in the current financial results of wool manufacturers.

In our next table total profits and equity earnings and distributions are given for five leading concerns. Comparison between the two tables shows that direct inference between indices of prices and activity and profits cannot be pressed too far. The year 1932 was more favourable for the companies than the indicators might have suggested. But in recent years the correlation between prices and profits has been more close, so far as the manufacturers are concerned:—

† Tax free. ‡ Allowing for participation rights of preferred ordinary, which received 100, 125 and 125 per cent. for the three years. (a) Interim for current year reduced from 5 to 2½ per cent. f.t. (b) After debenture interest throughout and (1932-37) after exchange losses. (c) 1929 and 1932, calendar years. (d) £1 denomination, except Salts (Saltaire) 1s.

It is justifiable, therefore, to examine the position of the last three concerns in relation to wool price movements more closely. Patons and Baldwins, as we have seen, carried stocks of £3,569,208 last May. This valuation, however, took account of a hidden reserve against a fall in prices; while its amount was undisclosed, it is known that, a year earlier, the company had £385,000 set aside as a stock reserve, and the last balance sheet showed undistributed profits of almost £1 million and a capital reserve of £480,000. Though no accurate estimate can be made of last year's addition to the stock reserve, a generous amount would be needed to offset the entire fall in wool prices since last May. Doubtless this company, along with other manufacturers, has allowed stocks to run off, but the fall in prices may well affect the current year's profits. In today's conditions, the prudent reserve policy of past years stands fully justified.

The last report of Kelsall and Kemp, the Rochdale flannel and blanket manufacturers, showed that the parent company's stocks amounted to £318,024. No particulars about the basis of stock values were given by this company, though the stability of the stock figures between June, 1936, and June, 1937, suggests, either that physical stocks had been reduced or that conservative values were employed last year. To calculate the effect of falling wool prices since last June on this figure might be misleading, for the reasons already discussed; and the recent announcement of a main-

tained interim dividend of 2½ per cent. suggests that profits are running at least at the 1935-36 level. The company, however, follows a steady depreciation policy which, coupled with an appreciable preference dividend charge, tends to magnify the movement in equity earnings.

There remains Salts (Saltaire) whose capital structure, since its reconstruction, provides an example of high gearing *in excelsis*. The company has in issue £1,000,000 of 5 per cent. debentures, £350,000 of 5 per cent. loan stock, £600,000 of 7 per cent. non-cumulative preference capital, and £60,000 each of participating preferred ordinary and ordinary shares. The last balance sheet, at March 31, 1937, showed that stocks at cost or market value amounted to £1,739,860—almost exactly half the total assets. Investments in subsidiary companies stood at £816,441, a figure which covers some further stock values, while the issue of loan stock last July was specifically intended to finance increased stocks, together with the purchase of interests in four other concerns. The razor-edged equity of Salts (Saltaire) is particularly liable to be affected by any recession in trade and in wool values.

On the whole, it seems doubtful if wool textile shares, even after their appreciable falls, are yet discounting the full effects of the potential setback in profits which may be experienced during the current financial year. The excellent dividend record of Woolcombers may be advanced in justification of the relative low yield of 5.7 per cent. gross on the ordinary stock. Yet the numbers employed by representative woolcombing concerns fell by 21½ per cent. between January, 1937, and the corresponding month this year. More vulnerable, as the yield figures suggest, are the manufacturing concerns. It would be premature, at this stage, for holders of worsted spinning shares, like Salts (Saltaire), and Illingworth Morris, to count on early benefits from voluntary co-operation to reduce rate cutting and redundant machinery. The background of the attempts to introduce such a scheme was described in our issue of February 26th, and its initial "send-off" is referred to on page 580. But Bradford itself is fully conscious of the difficulties which must be overcome if any scheme is to be effective. Wider technical differences are to be found in the practices of individual worsted spinners than in those of cotton spinners. "Lancashire's Remedy," therefore, may not be exactly Yorkshire's relish. Altogether, a rather cautious appraisal of woollen textile company prospects seems to be indicated, even assuming that the worst of the fall in wool values has already been seen.

Leviathan of Insurance

IN the modern business world, mere size is not everything, but it nevertheless counts for much. During the whole of the present century the size of the business unit has tended to increase. Is there a limit to the economic advantages of large-scale enterprise? Obviously, one method of approaching the problem is by a study of the experience of some of the largest organisations in Great Britain to-day—the London, Midland and Scottish Railway, which has £437 millions of capital invested in its railway and ancillary services; the Halifax Building Society, with its total assets of £123 millions; Imperial Chemical Industries, with its issued capital of £72 millions; and, last but not least, the Prudential Assurance Company, with its present assets of £330 millions and total income in 1937 of £55 millions. The Prudential, whose latest accounts are the subject of the present article, has long been much the largest British insurance company. Its history has shown that the handling of an annual revenue greater than that of many of the world's sovereign political States is certainly not incompatible with economical administration and increasing prosperity. And the story of progress was fully maintained in 1937.

A few items taken from the past year's accounts will give some slight idea of the company's immense size and vigour. The four Prudential approved societies at the close of 1936 had a membership of 3,600,000. Exclusive of these societies, the company's total assets increased by some £14½ millions in the single year 1937. New policies issued in the ordinary branch during the year totalled 99,000, for total sums assured of £32½ millions, while in the industrial branch the total new policies were 2,445,000 and the sums assured £66 millions. The ordinary branch premium income last year increased from £13,230,000 to £13,726,000, but annuity consideration moneys fell from £1,387,000 to £877,000. Net interest income increased, but the rate of interest earned, after deduction of tax, was 1s. 1d. per cent. smaller at £4 8s. 3d. per cent.

In the industrial branch an increase of £841,000 to £22,297,000 in premium income afforded a satisfactory indication of permanence in the policies issued. That impression is confirmed by the statement in the report that the average duration of existing whole-life premium-paying policies exceeds eighteen years. In another respect, also, the Prudential's experience in 1937, as in earlier years, was encouraging; for the year witnessed a further fall in the expense ratio. In 1920 that ratio was 40.5 per cent. of the premiums paid. Since then it has fallen every year, and in 1937 it was 22.7 per cent., against 22.8 per cent. in 1936. A similar experience is common to other large industrial insurance companies, but none shows so small a ratio as the Prudential. The difference is, however, explainable in part by the Prudential's practice of paying bonuses to its agents, allocated out of each year's surplus. The allocation amounts to about 3 per cent. of the premium income, and is excluded in arriving at the published expense ratio.

The Prudential makes an annual actuarial valuation of its life assurance liabilities. In the table at the head of the following page, we show the results disclosed by the valuation of December 31, 1937, with the corresponding figures for 1936. On the basis of the 1937 valuation, the company has declared reversionary bonuses at the same rates as in

1936. In the ordinary branch the rate is 46s. per cent. for whole life assurances and 40s. per cent. for endowment assurances. In the industrial branch the rate is 32s. per cent. The bonus is calculated on the sum assured in each case. It is fair to say that while the ordinary branch bonus rates are satisfactory, their level is not particularly noteworthy in comparison with that of British offices in general. On the other hand, the industrial branch bonus rate stands out as a remarkable achievement. There have been no changes in the bases of valuation in the ordinary branch, which are OM 3 per cent. for assurances and a^(f) and a^(m) 3 per cent. for annuities. In the industrial branch, the English Life Tables (No. 10) replace the corresponding No. 8 Tables, and interest has been taken at 2½ per cent. instead of 3 per cent. The cost of this change was in part met by sums of £1,200,000 and £800,000, which were set aside in 1935 and 1936 as additional reserves. We may assume, however, that the total cost was, in fact, well over the £2,000,000 provided in this way.

We may next consider the results of the Prudential's large and important general branch. This is, in effect, the aggregate of a variety of other departments of insurance business, whose figures for the last two years are set out in the next table. Their total net premium income last year was £2,638,000—a figure which exceeded that of 1936 by £33,000. The fire insurance figures of the company's American subsidiary, the Prudential Insurance Company of Great Britain, located in New York, are not included in our summary of results:—

	1936 £	1937 £
Fire	111,091	90,397
Employers' liability	14,350	962
Motor	15,844	62,891
Miscellaneous	3,107	7,791
Sickness and accident	42,016	45,727
Marine	...	60,269
Sinking fund	54,926	23,201
Fees	17,432	19,324
Exchange	44,668	20,318
	185,998	163,238
Net interest earnings	111,282	119,411
	297,280	282,649
Less : Income tax	30,000	30,000
N.D.C.	...	15,000
	267,280	237,649
Cost of dividend	133,333	133,333

Transfers of £100,000 and £47,600, respectively, were made last year to the investment reserve fund and "additional reserve" in the general branch. The balance sheet

is subdivided in respect of both liabilities and assets into six groups.

The investment policy of a company with £330 millions of total assets is obviously a matter of moment to the Stock Exchange and investors in general. Actually, the ordinary and industrial branches account, respectively, for £123 millions and £192 millions of the whole. Our last table shows how the combined assets of these life assurance branches are invested:—

	1936 Amount £	Per cent. of Total Assets	1937 Amount £	Per cent. of Total Assets
Mortgages, including loans on policies	48,672,183	16.2	43,185,928	13.7
British Government securities and T.F.A. stocks	87,113,347	28.9	89,668,507	28.5
Indian, Colonial & Foreign Government securities..	16,693,727	5.5	16,474,776	5.2
British Municipal and County securities	5,302,950	1.8	5,277,056	1.7
Colonial, Foreign Municipal & Provincial, etc., securities	5,734,641	1.9	5,429,655	1.7
Debenture stocks	48,042,759	16.0	52,827,646	16.8
Preference & Guaranteed stocks	26,622,079	8.8	28,837,890	9.2
Ordinary stocks	34,194,079	11.4	38,080,860	12.1
Reversionary interests, properties and other assets	28,512,442	8.5	34,837,253	11.1
	300,888,207	100.0	314,619,571	100.0

It will be seen that the Prudential holds nearly £90 millions of securities either issued or guaranteed by the British Treasury, representing more than one-fourth of the total assets. Last year, the amount invested in debenture stocks rose by £4½ millions, and the total in preference and guaranteed stocks by £2½ millions. The increase under the heading of ordinary stocks, however, was nearly £4 millions. On the other hand, the percentage of total assets represented by mortgages (including loans on policies) declined last year from 16.2 to 13.7. Included in the latter total is an item "loans on stocks and shares," which declined last year from £16,224,000 to £9,282,000. The aggregate market value on December 31st last of the Stock Exchange securities in each branch exceeded their book values; while in addition there are investment reserve funds amounting to £5,100,000. Contingency funds total £7,363,000 and there is a general branch additional reserve fund of £1,143,000.

For many years now, shareholders in the Prudential have obtained a highly satisfactory return on their investment. There are two classes of shares: the "A" of £1 denomination, fully paid; and the "B" of £1, on which 4s. is paid up. The "B" shareholders are entitled to 75 per cent. and the "A" shareholders to 25 per cent. of the divisible profits in the general branch, but the "B" shares do not participate in the surpluses of the life branches. Dividends on both classes of shares are free of tax. For 1937 the rate of dividend on the "A" shares paid has been increased from 19s. 0½d. to 19s. 5½d. per share. Of the total dividend some 18s. 11d. is provided by the ordinary and industrial branches and 6½d. by the general branch. The rate of dividend, free of tax, on the "B" shares was increased a year ago from 43½ per cent. to 50 per cent. and payment is at the latter figure this year.

The results summarised in this article show clearly that the Prudential—the leviathan of British insurance—shared in general prosperity during 1937. Its business and assets continued to expand and the total amount paid to its shareholders was again increased. The company's experience at least suggests that in insurance a high level of efficiency is compatible with large-scale organisation; that here, as in industry, mass production may have a place—though not an exclusive place, as the results of the medium and small-sized British offices testify.

Finance and Banking

Arms, Politics and the Franc.—Just as the political position in France appeared to be reaching some measure of stability, as a reaction to external events, another storm has blown up which has overthrown the Chautemps Ministry and left a trail of destruction in the franc market. The immediate reason for the storm was the financing of the French Government's re-armament programme. This calls for a loan to the tune of 15,000 millions francs, to be raised in the near future. M. Chautemps and his financial advisers were rightly convinced that in the present state of the capital market in France there was no reasonable prospect of raising this money on terms that would not shatter what is left of French Government credit. Hence M. Chautemps' request for special powers to carry through the immediate financial and labour policy of the Government. To the Left of M. Chautemps this demand was interpreted in terms of some amendment of the forty-hour week; to his Right, in terms of exchange control. Consequently, Ministerial and exchange crises flared up simultaneously, and as usual proved mutual stimulants.

Francs have therefore been sold both on speculative account and by holders of capital still fleeing the French markets. From a rate of 154 quoted at the end of last week the franc has fallen in London to 158½. The French Exchange Fund has intervened in the market, but with the intention of braking rather than rigidly pegging the rate. Its gold resources, as may be judged from the recent transfer of gold from the Bank of France to the Fund, must be exiguous. The latest return of the Bank of France shows that the Bank has advanced another 800 million francs to the State.

The Unemployment Fund's Investments.—The annual report of the Unemployment Insurance Statutory Committee provides in its appendices detailed information of the investments held for the Fund at the end of each year. A comparison of the last two of these tables shows, therefore, how the £23 millions surplus of the Fund accumulated during 1937 was invested. These are the relevant details:—

	Dec. 31, 1936 £	Dec. 31, 1937 £
5 per cent. Conversion Stock, 1944-64	...	9,078,353
4½ per cent. Conversion Stock, 1940-44	1,899,000	20,000,000
1 per cent. Treasury Bonds, 1939-41	28,978,100	30,000,000
Ways and Means Advances	1,200,000	1,200,000
Treasury Bills	...	1,250,000
2½ per cent. Treasury Bonds, 1937	8,794,400	...
Interest and cash	14,390	...
Total	40,885,890	61,528,353
Cost price	40,610,287	63,506,223

It will be seen that the Fund's investments continue to be held in extremely liquid form. The bulk of the funds provided last year by the excess of current income over expenditure and by the repayment of the 2½ per cent. Treasury bonds held for the Fund were invested in Conversion 4½ per cents. and 5 per cents.

Of special interest is the first appearance in these investments of Treasury bills. The intrusion of this item is significant not in itself but for the light it sheds on what has always been a mystery and source of curiosity in the market, namely the rate at which Treasury bills allotted through the tap are issued. The appendix already referred to shows that the cost price of the £1,250,000 Treasury bills held at the end of 1937 was £1,248,640. This indicates that the bills in question, provided of course they conformed to the normal three months' currency, were bought for the Fund at an average rate of 8s. 9d., or 1¼ per cent. If, as must be presumed, these bills were issued through

the tap, here is the first specific indication yet available that tap bills are discounted at a rate appreciably below the tender rate. At no time during the three months preceding the end of last year did the weekly tender rate for Treasury bills decline below 10s. 1.55d. per cent. If, on the other hand, these bills were bought in the open market and resold to the National Debt Commissioners for account of the Fund, the profit taken by the intermediaries must have been substantial, judged by present-day discount market criteria, since at no time during the period in question would it have been necessary to bid under ½ per cent. in the market for getting the hot bills.

February Clearing Bank Averages.—The "cash" of the clearing banks fell by £8½ millions in February as compared with January, owing mainly to the reduction of Government securities held by the Bank of England. This decline in cash was accompanied by a corresponding movement among other assets, with the exception of advances, which were £13.8 millions higher than in January. This last movement probably reflects in part the grant of banking accommodation for the temporary financing of tax payments. Other items among the assets have also moved in accordance with normal seasonal trends. Bills discounted show a reduction of £43.4 millions, which is in keeping with the reduction of the tender issue of bills during the last quarter of the financial year.

	Feb., 1937	Oct., 1937	Nov., 1937	Dec., 1937	Jan., 1938	Feb., 1938
Capital and reserves	132.5	132.5	132.5	133.3	136.0	136.0

Investments	655.8	624.6	619.4	620.4	621.2	618.4
Loans and advances	888.0	967.3	969.8	962.5	918.3	962.6
Investments in affiliated banks	23.5	23.5	23.6	23.7	23.9	23.9
Cover for acceptances, etc.	159.0	160.0	159.3	158.1	158.4	152.4
Total assets	2,483.7	2,523.3	2,520.3	2,540.6	2,539.4	2,488.3

The smaller outstanding volume of bills is also apparent in the fall of £9.1 millions in short loans. Investments show a slight reduction which suggests that the rise in this item in the preceding month had not the significance widely attributed to it in the market. As a result of this general contraction of assets, deposits have fallen by £49.0 millions. The cash ratio, at 10.64 per cent., is higher than in February, 1937, when it stood at 10.12 per cent. The decline in liquid assets, such as bills and short loans, during the past twelve months probably accounts for this policy of working to a higher cash ratio.

Banco Nacional Ultramarino.—Eight years of recuperation have now allowed the Banco Nacional Ultramarino to come out with a drastic scheme of reconstruction. This Portuguese institution was severely hit by the 1929 slump. Since that year it has paid no dividend and published no accounts apart from those privately submitted for the approval of the Portuguese Government. In recent years, however, it has been evident from the increased activities of the bank that the damage of the crisis years was slowly being repaired. Profits were being put aside to reconstitute the bank's liquidity and to prepare for the inevitable reconstruction of capital. The scheme now published involves a reduction of the capital from Esc. 93,650,110 to Esc. 40,000,000. Of the written-down

capital Esc. 15,000,000 is to be allotted to old shareholders in the ratio of one new Esc. 100 share for every five shares of Esc. 90 held. The remaining Esc. 25 millions will consist, as hitherto, of 25,000 preference shares of Esc. 1,000, held by the State. The whole sacrifice thus rightly falls on the equity holders—a rare instance of justice in company reconstruction which in this case was no doubt facilitated by the fact that the State was the preference shareholder. Following the reduction of the capital, power will be sought to increase the ordinary capital from Esc. 15 millions to

Esc. 50 millions, and the new shares will be offered for subscription, preference being given to existing ordinary shareholders. The bank is to remain for an indeterminate period under the control of the Portuguese Government. Since 1931 this control has been maintained through an administrative board, which has taken over the functions of the board of directors. The board consists of eight administrators, of whom four are Government nominees, and a chairman, who is also appointed by the Government.

MONEY MARKET NOTES

Foreign Exchanges

THE fresh break in the French franc which is discussed in a preceding Note has provided the focal point of foreign exchange movements during the past week. Most other changes in rates have been reactions to that major influence. At first the control operations in francs, involving as they did substantial sales of sterling, caused sterling to take part of the pressure and to weaken in terms of dollars, guilders and Swiss francs. But after appreciating to 5.00½ on Monday the dollar has relapsed to around 5.01½, as developments in Wall Street have proved a deterrent to the influx into the United States of the capital which during the past week has been leaving the Continent. The fall in the French franc has put a severe strain on the belga. Capital has been leaving Belgium on the theory that despite the rigid link of its currency with gold and the strong reserve position, Belgium will not be able to ignore a depreciation of the French franc which carries that currency to a substantial discount on the Belgian franc. Already that discount has widened this week to 6 per cent. The supporting operations effected by the Belgian authorities this week have involved appreciable sales of gold to the British Exchange Account. Quite independent of the movements in the franc has been a further slump in the free Argentine peso rate. From 19.10 the rate has this week fallen to 19.40. Thus the benefit to exporters to the Argentine recently granted through the abolition of the exchange surcharge has been more than lost. This week's fall in the peso is explained by the withdrawal of all support by the central bank and by the sluggishness of the normal demand.

market syndicate, while maintaining its application price at £99 17s. 6d., saw its allotments scaled down from 33 to 30 per cent. As the average rate of discount worked out at 10s. 0.94d. per cent. it is evident that substantial tenders must have been put in at £99 17s. 6d.

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¼ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The sudden acceleration in loan expenditure on re-armament shown in recent Exchequer returns is causing the weekly issues of Treasury bills to hold at a level well above normal for this period of the financial year. This week, as last, the amount on offer is £45 millions, against maturities of £50 millions. Supplies of money remain ample and loans against bonds have been readily available from outside lenders this week at ½ per cent.

The Bullion Market

In spite of the renewed flight from the franc the public demand for gold in the open market this week has been small. On most days the Exchange Equalisation Fund has been a buyer on balance; and partly for this reason the authorities have decided to drop the price by ¼d. each day, though over the week as a whole movements in the dollar exchange have been such as to make for a higher sterling price of gold. Thus, while the price has come down steadily since Friday of last week from 139s. 9½d. to 139s. 6½d. the premium on the dollar shipping parity has fallen even more steeply, namely, from 14½d. to 10d. Conditions in the silver market have been quiet, though quotations have moved with some abruptness. On Tuesday, for example, the spot quotation fell by ¾d., which was the widest daily movement recorded for many weeks. India continues to provide the main support of the market. Bombay stocks are now running low and Bazaar buying is the principal feature of the market. In addition there are still remnants of the bear position in silver built up in India towards the end of 1937 to provide a source of persistent technical support for the market.

Chinese Government silver continues to reach this country via Hong Kong in substantial quantities.

* Above or below American shipping price. The New York price of silver remained at 45 cents per ounce - 999 fine during the week.

The Bank Return

Movements shown by the Bank return covering the week to March 9th are small. The most important are a fall of £1.4 millions in bankers' deposits and a rise of £1.1 millions in public deposits. These compensating changes are in part accounted for by revenue payments. Bankers' deposits at £114,279,741 are over £20 millions higher than they were at the corresponding date of last year. Government securities show an increase of £775,000 on the week, a movement which may accord with the aggressive special buying of bills witnessed in the open market in the past few days. There was an increase of £916,000 in the note circulation over the week. Other securities in the Issue Department, which have been declining for some time, were reduced during the past week from £381,000 to £28,000. Last May they stood at over £5 millions.

	Mar. 10, 1937	Feb. 23, 1938	Mar. 2, 1938	Mar. 9, 1938
	£ mill.	£ mill.	£ mill.	£ mill.

Other Secs.	22.3	19.5	21.0	21.5
Proportion	33.7%	33.3%	29.9%	29.4%

The increase in the note circulation as compared with corresponding 1937 figures continues to fall. The gap was further narrowed over the past week from £17.4 millions to £14.8 millions. Hoarding of sterling notes is not what it was at this time last year. Nor is the expansion in the domestic demand for currency so obvious.

Investment

Blows for Wall Street.—The London market this week has given exaggerated importance to the few investment pointers in the week's news. Re-armament is to cost more than £1,500 millions, but most observers had expected that the Prime Minister's statement was already discounted more fully than, in fact, it was. Yet, after a day of concern over the budgetary outlook and, ironically enough, of disappointment with armament company news, the market took a turn for the better, in which bear covering appeared to play no little part. The more telling blows, however, have been reserved for Wall Street. The failure of Richard Whitney and Company, an old-established firm of bond dealers, has been followed by some disturbing revelations. Although the direct repercussions of the failure appear to be small, there is general agreement that Wall Street could well do without publicity of this sort at the present juncture. Nor has the market attempted to conceal its disappointment with the Interstate Commerce Commission's freight rates award. Wall Street was expecting an effective increase of 10 per cent. in freights, but the over-all increase is of the order of 5 per cent. Coal (other than anthracite), iron ore, and agricultural and forestry products are not affected. According to the Commission's estimate, the increase in rates will provide additional revenues of \$270 millions, based on the 1936 traffic, but in the railways' view, the benefit will not amount to more than \$170 millions annually.

In view of the current trend of traffic—car-loadings are down to depression levels at present—it is clear that the railways will need most, if not all, of the prospective increase in railway income for revenue purposes, and will have little margin to spare for maintenance expenditure. Wall Street's recent hopes of re-recovery have been based largely on the prospect of railway capital expenditure. Perhaps these hopes will now be centred on increased capital expenditure by the utility companies. The T.V.A. has this week proposed the purchase of private utility plants in the south-eastern states for "actual legitimate cost, less depreciation." Although this basis would be unacceptable to the companies, Mr. Willkie, president of the Commonwealth and Southern Corporation, has submitted a basis for negotiation, and there are signs that the White House would welcome a *modus vivendi* between public and private undertakings. Its potential effects upon capital construction, however, would necessarily be delayed and meanwhile Wall Street is capable only of drift.

Home Railway Policy.—The meetings of the L.M.S. and L.N.E.R., together with a speech by Mr. Holland Martin, chairman of the Southern Railway, to the Railway Stockholders Union, have provided authoritative indications of railway policy during the past week. At more than one point, Sir Josiah Stamp's survey to L.M.S. stockholders on Thursday showed a suggestion of optimism. Sir Josiah fairly weighed the effect of rising costs against increased railway charges, and expressed the hope that the increased ordinary dividend might be improved upon in 1938. Excluding the benefit of the increased charges, a decline in revenue from merchandise has occurred during the first two months of this year, which has been made good by receipts from heavy freights and passengers. The general prospect for the system, it appears, is that trade may be at about the same level as last year, or perhaps a little better. Net financial results for 1938, therefore, will reflect the increase in rates and fares for nine months, less the increase in wages costs for seven months, together with any general increase in costs of supplies. Partial experience of the increase in charges, which came into operation last October, suggests that the estimate of additional revenue for the L.M.S. of £2,200,000 is justified. Increased wage costs, compared

with 1936, involve £1,830,000, and increased costs of materials £2,230,000 in a full year. Of this joint increase of over £4 millions, however, a large part will not be felt until 1938-39, thanks to forward purchases. On the operating side, Sir Josiah gave several telling examples of improved efficiency, but on the question of electrification, he made it plain that so far as electrification was required for national purposes, as distinct from its value to the railways as such, public funds and not stockholders' funds must finance it.

Mr. Holland-Martin was concerned largely with the "gold mine" which electrification had provided for the Southern Railway. The main line schemes of the past five years have involved capital charges of £4½ millions—the total expenditure, of course, has been greater, since other eventually necessary improvements have been introduced at the same time—while receipts have increased at the rate of £640,000 per annum. The over-all return is thus 14 per cent. on the capital. Actually, the Brighton line has produced a return of 21 per cent., the Eastbourne section of 12 per cent., and the Portsmouth line, during its first six months' operation, of rather more than 9 per cent. In other words, the company has tackled electrification projects in order of their potential return. Future prospects of electrification are good, but not so impressive as these results. Mr. Holland-Martin disclosed the interesting fact that electrification schemes were required to show a minimum return of 4 per cent. of capital expenditure, after allowing for differences in operating costs between steam and electric working, and must also hold out prospects of a generous increase in new revenue. Mr. William Whitelaw's principal topic at the L.N.E.R. meeting was concerned with the company's renewals policy. Hitherto the company has been forced to cut its coat for maintenance according to each year's cloth. Renewals charges in 1936 and 1937, however, have been based on a provision formula similar to that adopted by the other main line companies. After the extensive rebuilding programme in recent years, arrears of rolling stock renewals have been largely wiped out. Apparently, the company's substantially smaller increase in maintenance expenditure last year, compared with other lines, is due in part to economies in the company's shops. Since the chairman referred to the prospect of a further reduction in repairs and partial renewals during the current year, stockholders may anticipate the current year's results with greater confidence—provided that receipts during the year continue encouraging.

Industrial Profits in February.—Profits of industrial companies reporting in February usually show greater stability than those of January companies, and no especial significance attaches to the relatively small increase in profits of 5.52 per cent. last month. The record of net profits and percentage increases for the past two years is given in the following table:

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year
1936		£	%	1937		£	%
Feb.	205	30,427,925	9.80	March	207	53,554,168	12.52
March	236	33,391,656	17.39	April	245	31,712,217	23.36

Nov.	177	15,591,516	13.49	Dec.	152	18,101,112	14.69
Dec.	175	18,438,723	15.49	1938			
Jan.	110	13,222,882	15.92	Jan.	107	13,832,382	19.99
Feb.	208	27,956,388	8.95	Feb.	202	29,792,378	5.52

* After debenture interest.

The stability of February's profits is partly explained by the fact that Imperial Tobacco alone accounts for 36 per cent. of total profits, but for only 7 per cent. of the increase. Gas and electricity companies together provide some 17 per cent. of the month's total profits. Numerically, however, the largest single group is investment trusts, which show a 9 per cent. rise in earnings. Shops and stores are another important section, but their profits are only £36,947 higher at £2,118,331.

Shareholders' Protection Association.—The S.P.A.—the mere initials are now quite familiar to investors—has completed its fifth year. The report of the executive committee for 1937, indeed, records that its activities are now too readily taken for granted; in fact, the accounts show a small deficiency for the second year in succession, and the continued support of individual investors is still required. In view of the work which has been successfully undertaken on behalf of the investor—and particularly the small investor—the appeal for increased membership deserves a full measure of response. The Association's prestige increases in proportion to its success and support, and an annual subscription of ten shillings is not a high price to pay for vigilant examination of all matters affecting shareholders' rights, and in particular, preference shareholders' rights.

Electricity Reports

Metropolitan Electric.—This undertaking, which supplies part of the central London area and a thriving industrial district extending as far west as Maidenhead, continues to record steady progress. Dividend policy has not settled down to that regularity which is characteristic of most companies in the industry. For some years an ordinary dividend of 10 per cent. was paid, but in 1936, an additional Jubilee bonus of 2½ per cent. was paid. Last year's 10 per cent. dividend has been supplemented by a 2 per cent. bonus, to which no specific description is attached. A comparative table of earnings follows:—

	1935 £	1936 £	1937 £
Gross Revenue:—			
London Area	498,716	537,830	561,671
Western Area	721,551	874,124	967,487
Total	1,220,267	1,411,954	1,529,158
Net Revenue:—			
London Area	141,964	174,623	169,657
Western Area	212,595	313,868	285,849
Interest and dividends	173,505	200,994	237,896
Total	528,064	689,485	693,402
Sinking funds, depreciation and reserve fund	178,220	242,511	250,369
Interest	57,551	57,186	52,208
Preference dividends	22,500	22,500	22,500
Ordinary stock:—			
Earned	269,793	367,288	368,325
Paid	250,000	331,250	338,496
Earned %	11.0	15.1	14.0
Paid %	10	12½	12
To No. 2 reserve fund	12,677	12,496	19,106
Carried forward	143,215	151,104*	161,826

* After providing £25,000 debenture premiums

Part of the undertaking, of course, is subject to the provisions of the 1925 Act, but the greater part is independent. The accounts show the division with admirable clarity, all figures for each item in the two areas being shown separately, with the single exception of the net revenue account, which is published without sub-division. The division of the final balance, however, is to be found in the balance sheet under the London area and the Western area, so that it should be possible to perfect the otherwise admirable clarity of the accounts. The £1 ordinary stock units yield £5 3s. 3d. per cent. at 46s. 6d.

North Metropolitan Electric.—Output and sales of this undertaking have long shown more rapid progress than the average. Last year, as the following table indicates, the rate of progress was again high, though less rapid than for previous years:—

	1935	1936	1937
Total consumers	296,606	336,722	375,067
Units sold (millions)	495	597½	691
Increase (%)	17	21	16
Net revenue	794,825	855,443	914,332
Interest charges	65,031	80,374	80,628
Depreciation and reserve funds	327,670	337,352	374,082
Reserve and redemption funds	31,762	31,762	47,387
Preference dividends	84,000	84,000	84,000

Ordinary shares:—			
Earned	286,362	321,955	328,235
Paid	251,001	278,151	278,151
Earned %	11.8	12.1	12.4
Paid %	10	10	10
Contingency fund, etc.	30,000	30,000	39,383
Carried forward	49,862	63,666	74,367

Analysis of the figures shows that sales through the company's own distribution undertakings still show the most rapid progress, with an increase of 19.1 per cent. against 25.4 per cent. in 1936. This group accounts for 43 per cent. of total output, against 38 per cent. in 1935. Sales to other distributors last year increased by 12.7 per cent. against 16.7 per cent. for 1936. The higher figure for the company's own distribution undertakings is not attributable solely to greater enterprise, for the other distributors supplied in bulk may be said, in general, to serve areas whose electrical development began at an earlier date. The report states that the Southgate Borough Council have given notice to purchase that part of the company's undertaking governed by the Southgate Order of 1904. In view of the Government's intentions to rationalise distribution, it may be doubted if this transfer will be consummated. It might, however, have some effect in reducing earning power of what is, probably, one of the most remunerative of the company's component sections. The £1 ordinary stock units at 47s. yield £4 5s. per cent.

Scottish Power Company.—The financing of large construction undertakings which require some years to reach the revenue-earning stage involves considerable difficulties for public companies. One of the few examples in recent years is furnished by the Grampian hydro-electrical developments of Scottish Power. As we show in the following table, this undertaking is still in the stage where substantial charges of interest to capital are required. It is clear, however, that the greater part of the capital expenditure of the subsidiary companies (with a book value of over £8,000,000) is now in a full revenue-earning position. Profits during the past three years are analysed below:—

	1935	1936	1937
Trading profits of undertakings	547,669	615,827	670,588
Interest charged to capital	5,037	12,391	23,943
Total	552,706	628,218	694,531
Depreciation	162,196	188,328	201,329
Income tax	56,883	72,824	88,514
Available gross revenue	333,627	367,066	404,588

Parent company's expenses	22,587	23,532	24,716
Interest on loans	8,199	8,721	11,570
Preference dividends	102,300	100,650	111,575
Ordinary stock:—			
Earned	200,541	234,163	256,727
Paid	200,260	231,800	228,000
Earned %	8.0	8.1	9.0
Paid %	8	8	8
Carried forward	8,106	10,468	10,695*

* After allocating £28,500 to general reserve.

In the absence of information concerning the division of capital expenditure between civil works, whose claim for depreciation is relatively smaller, and the normal physical assets of electric supply undertakings, it is impossible to assess the adequacy of the allowance made for depreciation. The appropriation of £200,000 is apparently less than

the wear-and-tear allowance established for income tax purposes. But it may, nevertheless, be adequate, and on a reasonable view of depreciation it is probable that the dividend paid is approximately covered by available earnings. The £1 ordinary stock units yield £5 14s. 3d. per cent. at 28s.

British Power and Light.—The report of British Power and Light reveals a small setback in the consolidated earnings of the Corporation and its subsidiaries, and earnings for the ordinary capital are reduced by £6,000. The setback is attributed to increased costs arising from the abnormally low rainfall in North Wales. From the North Wales Power Company's accounts it appears that £10,000 has been taken from the Contingencies Reserve, "which was established for this and similar purposes," but the significance of the transfer is somewhat nominal, since the same amount is re-allocated out of the year's earnings to the Fund. Profits for the past three years are analysed below:—

	1935	1936	1937
Units sold (millions) (excluding C.E.B. and special contracts)	100.8	112.3	126.4
Increase per cent.	15.5	12.2	12.5
Consolidated Figures	£	£	£
Revenue from sale of energy (ordinary consumers)	619,000	705,208	806,743
Net profit	364,514	401,383	409,638
Reserve for depreciation	93,906	112,631	121,421
Income tax	38,531	49,740	58,262
Debenture interest, etc.	70,542	67,836	65,551
Preference dividends	46,500	45,937	45,188
Ordinary stock:—			
Earned	115,035	125,239	119,216
Paid	78,614	87,697	106,575
Earned per cent.	8.8	8.6	7.8
Paid per cent.	6	6	7

The report includes a consolidated balance sheet of the Corporation and its subsidiaries, and a consolidated profit and loss account, for which the board is to be commended. It appears that the depreciation allocation is about £10,000 in excess of our standard scale; on the basis of the latter provision, consolidated earnings for the year would be equivalent to just over 8 per cent. on the ordinary capital. The £1 ordinary stock units yield £5 per cent. at 28s.

Electrical Distribution of Yorkshire.—Steady progress was maintained by this company last year. Sales increased by 12.7 per cent., and net revenue, after provision for taxation, was £19,343 higher at £252,206. Earnings for the ordinary capital, however, are reduced, for the directors have made a further increase in the allocation to depreciation and reserve account. Profits during the past three years are analysed below:—

	1935	1936	1937
Units sold (millions)	42.7	48.6	54.8
Increase (%)	15.8	13.7	12.7
Net revenue (after tax)	195,483	232,863	252,206
Interest and bank charges	2,877	9,606	730
Depreciation & reserve account	50,000	70,000	100,000
Preference dividends	32,550	32,025	48,239
Ordinary stock:—			
Earned	110,056	121,232	103,237
Paid	104,625	102,938	101,250
Earned %	9.5	10.6	9.2
Paid %	9	9	9
Carried forward	42,237	56,181*	58,168

* After charging £4,351 issue expenses.

Allocations to depreciation and reserve account on the latest scale would appear to be somewhat in excess of the provisions calculated according to our standard scale. The £1 ordinary stock stands at 42s. to yield £4 5s. 9d. per cent.

HALIFAX

BUILDING SOCIETY

LARGEST IN THE WORLD

ANOTHER RECORD YEAR

TOTAL ASSETS—122 MILLION POUNDS

RESERVES—5 MILLION POUNDS

Extracts from the 85th Annual Report to be presented to the Shareholders at the Annual General Meeting at Halifax on Monday, March 28th, 1938.

MORTGAGES

During the year the sum of £20,943,616 was advanced upon new mortgages, granted mainly upon security of dwelling-houses acquired by members for their own occupation. The total sum due upon mortgages increased during the year by £6,080,910, and now stands at £98,276,899, the average amount owing per mortgage being £410.

The mortgage accounts are in a very satisfactory condition, and there are no properties in the possession of the Society at the end of the year to be reported in the statutory schedule and no properties in possession of Receivers on behalf of the Society as Mortgagees.

LIQUID ASSETS

The surplus funds of the Society, invested in Trustee Securities, have been maintained, and, together with Cash at Banks and in hand, amount to £23,634,393.

SHARE AND DEPOSIT FUNDS

The Share and Deposit Funds increased during the year by £7,783,560 and the total funds of Investing Shareholders and Depositors now stand at £117,089,819.

TOTAL ASSETS

The total Assets of the Society now amount to £122,626,007, an increase of £8,298,431.

ACCOUNTS

The new accounts opened during the year and the total number of accounts open at the year was 712,414, being an increase of 29,799 accounts.

PROFITS

The balance of profit for the year, after payment of expenses and provision for Income Tax, National Defence Contribution, and all interest due to Depositors up to the date of the accounts, and for depreciation of office properties, amounted to £3,034,531, out of which appropriations have been made to Shareholders of interest and bonus £2,585,706; to Staff Superannuation Fund £50,000; and to General Reserve £400,000.

RESERVE FUNDS

The total Reserve Funds and Undivided Profit now amount to £5,066,167.

The Directors heartily congratulate the Members on the Society's continued progress and prosperity, and the strong financial position disclosed in the Statement of Accounts.

Company Notes

Imperial Airways' Future.—The outspoken criticisms of the Cadman Report have actually been followed by a rise in Imperial Airways ordinary shares, from 22s. 9d. to 24s. 3d. Future dividend prospects are necessarily the key factor in valuing the shares, but they are difficult to assess. Fifteen months ago the shares still stood over 50s. and were clearly discounting a generous increase in dividend payments. The raising of the ordinary dividend last year from 8 to 9 per cent. incurred no little criticism, for it was clear that, while the subsidy had been reduced, the dividend and a substantial part of the obsolescence provision were provided by the public purse. The Cadman Committee introduces the novel recommendation that as the position of Imperial Airways envisaged in the Report should be securer than that of normal commercial companies, the restriction of dividends to the limits "usually associated with public utility companies" would accordingly be proper. This proposal is not brought into sharper focus by the Government's declaration that, within the limitations of existing contracts, the suggestion will be considered in connection with further assistance by way of subsidy. The Government interest in the company's distribution policy has acknowledged the need to raise new money from the public—although official intervention last year was widely held responsible for the decision to issue one million ordinary shares at no more than 30s. per share, when the market value of the existing shares was appreciably higher. On the clearest interpretation, it would seem that shareholders should regard a 9 per cent. dividend as a maximum.

* * *

It is more difficult, on the other hand, to define the minimum. Future revenue conditions have been entirely changed by the Empire Air Mail services, with new subsidy conditions and Post Office payments. The subsidy arrangements may be periodically adjusted according to operating experience and costs, but the only guide to potential dividend possibilities lies in a provision that, if the company appeals against any reduction in the subsidy on the provisional triennial basis already arranged, an allowance shall be included of working costs equal to "10 per cent. of the capital employed in the scheme." This ratio, however, would not necessarily be equivalent to 10 per cent. on the share capital. Again, what is the accepted rate of dividend for public utility concerns? The British Sugar Corporation operates under a basic dividend of 4 per cent., while electricity companies in the London area are restricted to basic dividends of 7 per cent., and the Gas Light and Coke Company to a basic dividend of 5 per cent., with actual payments under sliding scale of 5.6 per cent. Meanwhile, the company must sooner or later raise more capital. According to the prospectus published last June, the directors were then contemplating an issue of preference shares. The eventual financial return from operating the Empire service cannot be assessed at present, but the prospective loss of some part of the revenues from European services, under the proposed pooling scheme, and the smaller loading ratio on the new routes, are factors which deserve the shareholders' attention. The revised European services should, however, assist British Airways, which made a loss during the year to September, 1930. A holding of 63,947 £1 shares in this company represents the principal asset of Hillman's Airways, whose 5s. shares now stand at 2s. 6d.

**DON'T BE VAGUE—
ASK FOR
Haig**

await Mr Samuel Courtauld's speech. There was a general impression of long-term confidence in his remarks at this week's meeting, which acted as a counterpoise to more than one trace of concern for immediate business prospects. At home, Mr Courtauld is perplexed about the cause of the setback in the textile trades. There is apparently some sign of new buying of viscose yarns, but a "substantial increase" will be required if the Preston factory is to be started up. If operations are commenced, moreover, the benefit for this year's accounts will be small. Secondly, the return on "Fibro" is at present limited, for the present low prices for cotton and wool, coupled with a 50 per cent. increase in wood-pulp costs, are combining to close the margin of profit. The chairman hopes, however, that both factors will prove transient. It is clear, however, that the American business is the least favourably situated. It has substantial, though not serious, stocks. And its contribution to the parent company's revenue will in any case be smaller this year, even if profits are maintained. It will, in fact, take substantially the whole of the current year, on the kindest estimate, for American Viscose to regain its lost ground. It is reassuring, however, that rayon fibres have retained their position, despite the textile setback. That is a factor of predominant long-term importance. And holders of Courtaulds' shares, on this long-term basis, will agree that Mr Courtauld has enhanced his reputation for frank speaking by sharply rebuking the critics of the so-called "pessimistic" announcement accompanying the dividend. Mr Courtauld's view of this matter might well be read by some other company directors who are prone to issue statements, usually in the opposite sense.

* * *

Vickers and Cammell Laird.—Immediately after the publication of the Defence Estimates and the Premier's warning that re-armament would cost more, the dividends of two of the most important industrial participants in the re-armament programme—Vickers and Cammell Laird—were announced. In each case, the distributions are very conservative, and they have greatly disappointed the market. Vickers is maintaining the ordinary dividend at 10 per cent., profits having increased from £1,162,610 to £1,351,055, and earnings on the ordinary capital from 15.8 per cent. to 20.2 per cent. Cammell Laird's profits have increased from £146,449 to £223,707, and although the earnings on the ordinary capital have increased from 10.8 per cent. to 16.8 per cent., the dividend has been increased only from 5 per cent. to 8½ per cent. On second thoughts, the shares recovered part of their setback. Companies participating so considerably in the re-armament programme as these concerns must necessarily be hyper-conservative in distribution policy. The re-armament programme will not last indefinitely, and provision must be made for the future. There can be no doubt that both companies will continue to enjoy high earning power under present conditions. Vickers-Armstrongs has twice as much naval shipbuilding work in hand for 1938-39 as any other company, and its naval contracts for the coming year are nearly 50 per cent. higher than they were in 1937-38. Cammell Laird's naval contracts show a less spectacular increase, but the company's business is second only to Vickers-Armstrongs. Again, contracts for gun-mountings, which are made by Vickers-Armstrongs, will this year increase by 10 per cent., and there will be an even greater increase in the demand for armour-plate, of which the English Steel Corporation, owned entirely by Vickers and Cammell Laird, is the most important supplier. Consequently, the profit-earning capacity of these companies is assured. It is from this standpoint, rather than from the point of view of rapid increase in earnings and dividends, that investors should consider the prospects of heavy armament companies. The fact that they are, in effect, "recession-proof" gives them investment attractions which other concerns in heavy industry do not possess. At 21s. 4½d., the 10s. shares of Vickers yield £4 18s. per cent., while the 5s. shares of Cammell Laird yield £4 17s. per cent. at 8s. 7½d. For shares in companies with a guaranteed order-book such prices are probably not excessive.

THE PRUDENTIAL ASSURANCE CO. LTD.

Points from the Speech of
SIR EDGAR HORNE, Bart.

Chairman of the Company, at the 89th Annual General Meeting held at Holborn Bars, London, E.C.1, 10th March, 1938.

Comparisons with 10 Years Ago

	1927	1937
Ordinary Branch Income	£15,600,000	£20,300,000
Industrial Branch Income	£22,400,000	£31,000,000
General Branch Income	£1,700,000	£2,900,000
Total Assets	£209,000,000	£330,000,000

The Year's Work

NEW BUSINESS. In the Ordinary Branch the new sums assured were **£32,457,000**, the largest amount of new business in the history of the Company.

PRUDENTIAL OVERSEAS. New sums assured through Overseas Branches exceeded **£8,000,000**.

WAGE-EARNERS' ASSURANCE. In the Industrial Branch the amount received in premiums increased by **£840,000**. The amount paid in claims by death or maturity of endowments was **£10,774,000**, an increase of **£2,028,000** compared with 1936. Bonus additions to claims and surrenders during the year amounted to over **£2,361,000**. The expenses of the Industrial Branch were brought down to **22.7 per cent.** of the premiums.

POLICYHOLDERS' BONUSES. The rates of reversionary bonuses in the Ordinary Branch are maintained at **£2.6.0 per cent.** for Whole Life and **£2.0.0 per cent.** for Endowment Assurances, and in the Industrial Branch at **£1.12.0 per cent.** for policies in Great Britain and Northern Ireland.

NATIONAL HEALTH BENEFITS. Through the Prudential Approved Societies, with their membership of 3,700,000, a sum of **£4,656,000** was expended on benefits. Dental benefit alone cost **£566,000**.

BRITISH ASSETS. Over 81 per cent. of the assets are invested in the United Kingdom. Only 8.8 per cent. of the assets are invested outside the Empire.

Total Income Exceeds £1,000,000 A WEEK

Swan, Hunter Recovery.—In 1936, Swan, Hunter and Wigham Richardson experienced a setback in profits, but the directors' decision to draw on non-trading revenue and part of the credit balance to pay the 7 per cent. dividend showed well-placed confidence in the prospects for 1937. Profits, after excluding £30,863 non-trading credits in 1936 and £22,641 last year, increased from £178,516 to £275,953. The allocation for depreciation is slightly increased at £32,808, and ordinary earnings have advanced practically to the full extent of the increase in total profits. The following table shows that the 9 per cent. ordinary dividend is covered by earnings of 11 per cent. :—

	1935	1936	1937
Profits	£236,022	£178,516	£275,953
Depreciation	27,858	30,518	32,808
Fees	1,471	1,505	1,413
Debiture service	14,773	14,773	14,448
Preference dividend	47,391	47,391	47,391
Ordinary shares :			
Earned	144,528	84,329	179,893
Paid	85,553	119,774	153,996
Earned %	9.4	4.9	11.0
Paid %	5	7	9
To reserve	50,000	...	50,000
Carried forward	35,255	30,673*	29,210†

* Including £30,863 non-trading credits. † Including £22,641 non-trading credits.

The company has a considerable volume of naval work on hand, including one battleship, two cruisers and four destroyers, and a certain amount of mercantile tonnage. During the past few months, however, mercantile orders have not been freely placed with shipbuilders, and their immediate prospects thus depend very closely upon naval work. Swan, Hunter should obtain their due share of naval business, but the current quotation of 24s. 6d. ex dividend for the ordinary shares, against last year's high level of 36s. 10½d. shows that the market's estimates of future earnings have been considerably revised. The shares yield the comparatively high return of £7 7s. per cent.

The Week's Steel Results.—A number of commercial steel companies have issued acceptable results this week. The 1937 profits of Lancashire Steel Corporation, for instance, have risen by no less than 42 per cent. to £804,765, a figure which is double the 1934 level. Provision for central depreciation is even more substantial than before, at £175,000 against £150,000. Tax provisions, however, absorb £235,169 against £97,403, and earnings for the ordinary capital have increased to 10.9 per cent. against 6.9 per cent., after deducting £25,000 staff fund allocation in each year. Despite the increased earnings ratio, the dividend of 7 per cent. is maintained, and reserves receive £100,000. The company's progress is reflected likewise in the balance sheet. Net additions to plant in 1937 were £163,477 against £65,700, and current assets as shown in the balance sheet are 16 per cent. higher at £1,815,661. It is generally expected that the ordinary shares may be put on the market in due course. Profits of Baldwins, Limited, have not yet been announced, but the dividend is unchanged at 10 per cent. It is, of course, payable on an increased ordinary capital of £2,494,737, following the 1936 issue of £415,789 new shares which did not rank for dividend until 1937. Earnings in 1936 would have represented 12.9 per cent. on the increased capital, and while the market was expecting at least some improvement in profits, it had at one time hoped for an increased dividend even on the larger capital. Millom and Askam Hematite Iron for many years have paid no ordinary dividend, but in 1936 the equivalent of 15.5 per cent. was earned on the ordinary capital as written down dividend last year's scheme. Dividends have been resumed at 10 per cent. payment for 1937, out of earnings of £1,196,269, and a surplus of £76,100 over the ordinary dividend, coupled with £24,000 from the carry-forward enables the directors to put £50,000 to reserve and to write £50,000 off fixed asset value. The latter,

after giving effect to the reorganisation, now stand at £591,167 against £914,453, and investments in subsidiaries are more than halved at £267,900. Yields of 5.8 per cent. on Baldwins and 5.6 per cent. on Millom and Askam shares indicate a relatively confident market view of the current year's prospects.

Halifax and Abbey Road.—The reports of the two largest building societies in the country have certain features in common. In both cases, the number and value of new advances was lower last year than in 1935, and a small drop occurred last year in the number of outstanding mortgages in the £500-£1,000 class. The Halifax Society, one of the country's largest financial institutions, records a satisfactory year. Some 33,795 new advances were made during the year to January 31st last—an increase of 6 per cent.—the amount involved being £20,943,616, against £20,488,753. This recovery, however, was insufficient to offset the decline which occurred in the previous year and the level of 1935-36 was not regained. The balance of profit (after deposit interest) amounts to £3,034,532, against £2,904,665, and total assets have now reached the impressive total of £122.6 millions. The Halifax Society deals chiefly in mortgages of moderate size; roughly four-fifths in number of the outstanding mortgages represent debts not exceeding £500. The proportion of such mortgages for the Abbey Road Building Society is about one-half. In 1937 this Society advanced £6,756,952 on 10,380 mortgages, representing a decline of 10 per cent. in value and 24 per cent. in number, compared with small increases between 1935 and 1936. The balance of profit, however, was slightly higher at £1,529,540, compared with £1,507,038, despite increased charges, particularly for income tax and N.D.C. Comparison of the mortgage assets in the last three balance sheets suggests that small mortgages, up to £500, are assuming increasing importance. In number, such mortgages now represent 50 per cent. of the total, compared with 44 per cent. in 1936. Though the experience of individual societies varies widely, the building society reports already available suggest that new advances in 1937 were rather lower.

Mexican Oil Developments.—It is impossible to reach any firm conclusion regarding this week's Mexican oil developments, except that they have run true to Mexican form. On Monday the companies were faced with the Supreme Court's ultimatum to conform with the Labour Board's wage award (the terms of which were referred to in last week's issue of *The Economist*, page 514) by mid-day, Mexican time. The companies, realising the desperate character of their struggle, had apparently decided on passive resistance, and it was widely believed that direct intervention by the Mexican Government and oil workers would follow. The evening, however, apparently found the oil companies' representatives and President Cardenas in conference, seeking a way out of the present impasse, although a sum of 500,000 pesos, which is represented as part payment of "wages" due in respect of the strike last May, was placed under embargo at the bank. The outcome of the conference appears to be a postponement of the award for three days. It has been suggested that domestic oil prices might be increased to cover the margin between the concessions which the companies are willing to pay (for "willing" it is perhaps permissible to substitute "able") and the costs imposed by the award. Mexican Eagle shares have been an erratic market throughout the week. They closed at 7s. 6d. last Friday, fell further to 6s. 10½d. on Monday, rallied sharply to 8s. 4½d. on Tuesday, and closed at this price on Thursday. As we go to press it seems improbable that this week's respite will produce an acceptable compromise.

Consolidated Mines Selection.—Shareholders in this Kaffir finance concern who had been expecting an increased dividend for 1937 obviously paid more attention to the investment than to the marketing side of the company's business. Dividends and interest at £82,500

show a further expansion; but profit on share dealing amounted to no more than £156,060, compared with £225,150 in 1936 and £186,440 in 1935. The change in Kaffir market conditions early last year is thus vividly reflected. Taxation, including N.D.C., naturally absorbs more than before; and the allocation to reserve has been reduced to £25,000 compared with £50,000 in each of the two preceding years. After paying 25 per cent. on the shares, against 30 per cent. previously and 27½ per cent. in respect of 1935, a somewhat increased balance of £35,860 is carried forward. On the basis of last year's dividend, the yield at the reduced price of 26s. for the 10s. share exceeds 9½ per cent. This appears generous, but it may possibly not be excessive in view of the uncertain outlook for the current year. The company will doubtless receive an increased distribution upon its holding of Mawchi shares, and possibly upon certain of its West African interests; but the repetition of the 4s. per share dividends from Anglo-American Corporation and Anglo-American Investment may be less certain.

Other Company Results.—An increasing number of industrial results have been published this week, and our usual analysis of profit and loss accounts, beginning on page 606, contains some 80 companies in all. Groups well represented include electric power companies, the heavy industries and investment trusts, while the miscellaneous section includes some important accounts, including those of British Portland Cement and Provincial Cinematograph Theatres. The results are discussed on page 577 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings commence in this issue on page 587. Points discussed by Sir Josiah Stamp and Mr William

Whitelaw at the *London, Midland and Scottish* and *London and North-Eastern* meetings are referred to on page 569. At the *Britannic Assurance* meeting, Mr J. A. Jefferson disclosed that the net rate earned in the industrial branch last year amounted to £4 11s. 2d. per cent., while the expense ratio showed a substantial fall of 1.86 per cent. to 31.38 per cent. Mr J. Wilcock Holgate, at the *Refuge Assurance* meeting, expressed the view that while life assurances are numerically well distributed, their low average amount suggests an extensive field for development of new business. Record new business was reported at the *Standard Life* meeting, and premium income last year exceeded the £2 millions level. Net interest earnings exceeded 4½ per cent. on the funds. A challenging review of "cheap money" was voiced by Sir Ernest J. P. Benn at the *United Kingdom Provident Institution*. He put the case for the saver, and declared that the industrial value of cheap money could be over-stated. Sir Charles Fergusson reported to members of the *Equitable Life Assurance Society* that it had been decided to employ the new mortality tables of the Faculty and Institute of Actuaries and the stringent interest basis of 2½ per cent. At the meeting of the *Hungarian General Credit Bank* it was disclosed that deposits made with the bank had grown at a faster rate than the average accumulation of deposits in Hungary, while foreign liabilities had fallen. Mr George Balfour, addressing shareholders in *Midland Counties Electric Supply* showed that since 1922 the number of consumers had increased from 4,172 to 134,102, and the units sold from 23.8 millions to 419 millions. Sales of units in 1937 increased by 16 per cent. At the *Harrods, Limited*, meeting, Sir Woodman Burbidge expressed pleasure with the results of D. H. Evans in the first full year after rebuilding. Sir Harold Snagge pointed out at the *D. Napier and Son* meeting that orders in hand had grown tenfold from the level of £101,000 in September, 1932, when the company's fortunes were at their lowest. Sir Edward Cook explained at the *National Bank of Egypt* meeting in Cairo that the strong reserves built up in the prosperous years justified a relatively small reduction in the dividend.

THE STOCK EXCHANGES

London

TICKET	ACCOUNT
MARCH 22	MARCH 24

THE new account opened with a complete absence of sparkle. Values tended to ease in all sections, from gilt-edged down, and after the Prime Minister's statement that re-armament would cost more than the scheduled £1,500 millions, conditions became even more depressed on the cheerless Budget outlook. Some resistance in prices towards the end of business on Tuesday, however, developed into a mild rally, in which bear covering played some part, and mid-week prices, for no ostensible reason, were as mildly confident as Tuesday's had been gloomy. Except in gilt-edged, however, the recovery was not fully maintained.

Gilt-edged stocks opened reasonably firm, with fractional rises in most of the leading "irredeemable" issues. Business remained small, however, and the market showed a complete lack of resistance to unsettled conditions on Tuesday. Yet the market had again lost its Budget fears in mid-week, and maintained a firm tone, particularly in the undated stocks. The South Shields scrip opened at ½ discount, but some demand was reported in mid-week for Corporation of London scrip.

Austrian bonds were disturbed in the foreign market, but a rally occurred in most European issues in mid-week. Continued buying of Chinese issues was

associated with reports from New York of efforts for a settlement. The latter centre, however, did not put the dollar bonds higher.

Home rails were initially depressed, for the market was quite unable to absorb small selling. The traffics, however, provided a much-needed stimulus, and Great Western and Southern were prominent on Wednesday. The further depreciation of the free peso found jobbers unwilling to take Argentine rail stocks, and prices were easily depressed without any appreciable volume of selling.

Until the mid-week rally occurred, *industrial shares* were unsupported. The Baldwins and Cammell Laird dividends, quickly followed by the Vickers announcement, exerted a depressing influence on the whole steel share list, but a partial recovery occurred in mid-week. Electrical equipment shares showed only a small response to the improvement, but a number of motor shares moved higher on Wednesday, after a depressing start. Imperial Airways found sufficient encouragement from the Cadman report to close 1s. 6d. higher at 24s. 3d.

Courtaulds advanced in anticipation of the chairman's speech (see page 572) but reacted later, while other textile shares continued indifferent. There was no material demand for brewery and tobacco shares, and while most of the shipping issues staged a mid-week rally, they failed to maintain their gains.

Lower levels for the miscellaneous leaders attracted some small support in mid-week, and the bears immediately responded to the signal by covering their open positions. The improved prices, however, were not held, and prices were again feeble on Thursday.

A very quiet start in the oil market was followed on Wednesday by noticeably more cheerful tone and some expansion of turnover though there was no specific reason for the improvement. Mexican Eagle were again the centre of interest, for reasons set out on page 574. Anglo-Ecuadorian were depressed on news of the company's liability to income tax, but shared in the mid-week recovery. Business in rubber shares declined further. A moderate improvement and less selling was reported on Wednesday, but prices of many shares were hardly tested. Shares followed the general trend.

At first *mines* were dull, and prices sagged. Quotations then became somewhat firmer, though little business was passing, and finally there was a more cheerful undertone and some broadening of interest. Wednesday's improvement in Kaffirs was, however, technical, and turnover remained at a low level. Paris, after holding firm Monday, supported the miners' payers later. Rhodesian copper responded to the recovery in the price.

is £143,091 against £143,682. Carry-forward, £446,992, compared with £380,879.

British Insulated Cables.—A new profit record was reached in 1937 of £821,358, comparing with £765,695. Final ordinary dividend 10 per cent., plus cash bonus of 5 per cent., making 20 per cent. (same as for 1936, but on capital as increased by the 20 per cent. scrip bonus). To reserve, £100,000 (same), and depreciation allowance

(Continued on page 606)

Industry and Trade

Worsteds Spinners' Re-organisation.—On March 3rd, over four hundred firms of British worsteds spinners, mainly situated in the West Riding of Yorkshire, met in Bradford to consider means of eliminating redundant machinery, and consequently, price-cutting. A committee was appointed and proposals were adopted for an investigation into the possibilities of price control and purchase of redundant plant. The initial expenses are to be covered by a levy of a penny per spindle, payable in two instalments. It is understood that any scheme which may be evolved will be a voluntary one. Preliminary investigations, classification of spindles, and adaptation of plans like those of the cotton spinners and the wool combers to fit worsteds spinners' needs, may take anything from six months to a year. It is estimated that support has already been received from two-thirds of the industry.

Purchase and scrapping of redundant plant will probably be easier than price fixing. The difficulties in the way of price-fixing are (a) the variety of raw material qualities with no fixed published prices for present or future dates, such as rule in the cotton futures market, and (b) the marked variation in spinning costs between one firm and another. Price control would necessitate investigation of offenders' books—a degree of inquisition unknown in wool textiles since war-time State control. Some owners who operate plants, bought at bankruptcy prices, are quite satisfied with existing margins. Indeed, the interests and conditions of the worsteds spinners are so diverse that the prospects of the inception of a voluntary scheme are unpromising.

Liverpool Steam Ship Owners.—The annual report of the Liverpool Steam Ship Owners' Association expresses the views of a representative body of ship owners in this country. In the report for 1937 satisfaction with last year's improvement in international trade and freight rates is tempered by anxiety concerning the future. The report expresses grave concern at the deterioration of our balance of payments, especially as the Board of Trade's estimate of shipping income in 1937 may have again been over-estimated. In the view of the Liverpool Ship Owners, the rise of British manufacturing costs, due partly to re-armament, is disquieting in that it increases the difficulties of British exporters. The prosperity of shipping cannot be maintained by one-way employment alone, "even if it were possible for the nation . . . to maintain its imports by drawing on its capital reserves and borrowing." The principal event of the year in the domestic affairs of British shipping, the report points out, has been the evolution of a scheme of voluntary co-operation which came into force at the beginning of 1938. The Association, however, strongly criticises the coal

selling schemes which are "operating to create price levels above those for competitive fuel in the open world market and in consequence to loss of custom in that market."

Malaya's Tin Tactics.—To induce the restricting producers to maintain their loyalty to a commodity control scheme is always difficult on a falling market. In the case of the tin scheme the difficulties are aggravated by reason of the fact that the low-cost producers are under-assessed and therefore at present making disproportionate sacrifices to keep the tin scheme in being. News from Malaya this week suggests that the authorities in that country may be beginning to kick against the pricks. The Government is considering a scheme whereby the F.M.S. miners will be allowed to produce an extra percentage during the April-June quarter. Since the excess production will be deducted from the quotas for the succeeding quarters, while the tin will be held in bond at the smelters' works in Singapore and Penang, the proposal does not violate the principles of the tin scheme. Its ostensible object is to alleviate the country's unemployment problem; though, in view of the fact that production must subsequently be curtailed, it seems a rather roundabout method of achieving this end. On the other hand, it has been suggested that political motives are involved. The Government's proposal draws attention to the serious labour problems consequent upon the restriction of tin production, and it may conceivably be argued that if Malaya has adequate stocks the *raison d'être* for the proposed buffer pool disappears. At all events, this latest development suggests that the problems of the International Tin Committee will not be easily resolved. A piquant situation may arise when production in Malaya has to be drastically curtailed at the end of June.

Motor Registrations Decline.—Ever since the beginning of the present season last September, the motor industry has been suffering from a decline in the demand for its products; and the January registrations unfortunately show that this downward trend continues. Owing to seasonal variations in demand, the registration figures in any month can be seen in perspective only by comparison with those of the same month a year earlier. For the fifth successive month, the January figures, on this basis, showed a decline. Private cars registered for the first time totalled 24,858 units, against 28,820 in January, 1937, a drop of 13.7 per cent. In recent months, however, a shift in demand has been evident from the higher to the lower-powered categories, with the result that new sales in the 8 horse-power class have actually exceeded those of a year earlier; but even this consolation is lacking in the January figures. The decline in sales of the more popular types may be illustrated as follows:—

	January, 1937	January, 1938
8 h.p.	7,332	6,714
10 h.p.	7,846	7,428
12 h.p.	3,820	3,752
14 h.p.	3,334	2,305

Increases compared with a year earlier were rare—being confined to the 17, 21 and 30 horse-power classes. Meanwhile, new sales of goods vehicles in January were 10.8 per cent. smaller in 1938 than in 1937—7,256, compared with 8,132. A modest increase in sales of certain categories of diesel-engined vehicles was insufficient to offset a sharp setback in practically every category of petrol-driven goods vehicle.

Employment in February.—On a superficial view the latest employment returns are not unsatisfactory, for the number of insured persons at work in Great

Britain increased from 11,309,000 on January 17th to 11,324,000 on February 14th. This increase in employment, moreover, was accompanied by a decrease in the number of unemployed on the registers of the employment exchanges of Great Britain, from 1,827,607 to 1,810,421. But there is usually a seasonal increase in employment between January and February. And if allowance is made for seasonal influences, the February returns appear less encouraging. Indeed, the increase in the number employed between January and February was less marked than usual. Thus, our index of employment, which is adjusted for seasonal variations, declined slightly, from 110.1 (1935) to 110.0 in January to 110 in February. Compared with a year ago, the position is not so satisfactory. Last month was only 20.6 higher than in February, 1937, while the number of registered unemployed showed an increase of 238,000. The incidence of recent changes in unemployment is shown below:—

Industrial Group	Numbers in Thousands			Percentage of Insured Persons Unemployed	
	Feb. 22, 1937	Jan. 17, 1938	Feb. 14, 1938	Feb. 14, 1938	Approx. change since Feb. 22, '37

All persons registered (including other trades)	1572.0	1827.6	1810.4	...	...

* These figures are not strictly comparable, owing to the change made last September in the method of counting the number of unemployed persons.

With the exception of coal-mining and public works contracting, unemployment shows an increase in all the industries enumerated in the table. The determination has been most marked in the cotton, and woollen and worsted industries, in which unemployment has increased by 51,660 and 29,960 respectively during the past year.

The accompanying diagram shows the trend of the number of insured persons employed in Great Britain since 1927. Employment marked a peak last autumn, but

NUMBER EMPLOYED IN GREAT BRITAIN

has since shown a marked decline. Nevertheless, employment still remains substantially above the 1929 level. There is normally a seasonal improvement between January and May. So far, however, the seasonal increase in employment has been less marked than usual.

Lower Steel Production.—The latest returns of the British Iron and Steel Federation reveal a slight decline in the output of pig iron and crude steel between January and February. The production of pig iron fell from 761,100 tons in January to 693,300 tons in February, and the output of steel ingots and castings declined from 1,081,400 tons to 1,057,600 tons. Calculated on a daily basis, however, production actually showed an increase,

from 24,540 tons to 24,760 tons in the case of pig iron, and from 41,600 tons to over 44,000 tons in the case of steel ingots and castings. Moreover, production last month remained well above the level of February, 1937, the increase amounting to 89,600 tons in pig iron and 61,700 tons in steel ingots and castings. The trend of the production of pig iron and crude steel since 1927 is shown in the accompanying diagram.

IRON AND STEEL PRODUCTION

Despite the decline in the demand for a number of steel products, such as tinplates, consumption remains heavy. Stocks of pig iron and steel, however, have recently tended to increase. The volume of new business, moreover, remains well below current output, and in the absence of a revival of buying during the next few months, operations may have to be curtailed. But as the import duty on pig iron may be re-introduced, and those on steel raised, at the end of this month, a serious deterioration in the British iron and steel industry may be averted.

Cheaper Quicksilver.—The London spot price of quicksilver was reduced by 2s. to £12 15s. per flask of 76 lbs. during the past week. Well over £15 per flask was paid on the open market a year ago, but even the present reduced figure would not be possible without the co-operation of the Italian and Spanish agents. Despite the substantial requirements of the defence programme (quicksilver being used in scientific instruments and in anti-fouling paint) demand for the metal is slow. Fears of a shortage as a result of the hostilities in Spain caused many of the larger consumers to anticipate their requirements last year—but the expected scarcity has not occurred. From the beginning of the civil war the Spanish Government has controlled the mines at Almaden and the quicksilver port of Alicante and exports from the latter have proceeded at a record rate. Moreover, Italy, the second largest producer, produced 2,305 metric tons last year, against a previous record of 1,998 metric tons in 1929. Supplies were therefore very plentiful last year, when British imports amounted to 1,655,000 lbs., compared with 1,284,000 lbs. in 1936. In view of the fact that this expansion of British imports has continued in recent months, consumers are now showing great reserve. Only a sharp

contraction of supplies would suffice to improve the tone of the markets. That this is unlikely may be realised when it is pointed out that both Italy and Spain are in urgent need of foreign exchange and that the export of quicksilver is one of the easiest means of satisfying that need.

Wolfram Supplies and Prices.—Mainly owing to the reserve of consumers, the market in wolfram has recently been very quiet and prices have declined. Chinese ore is now quoted around 68s. per unit, against 85s. at the beginning of the year and 125s. to 130s. in the autumn of 1937. For most peace-time uses wolfram is still too dear, and other steel alloy metals (especially molybdenum) are tending to take its place. Armament demand remains heavy; and the existence of a war in China—which normally supplies up to two-thirds of the world's requirements—makes it scarcely surprising that rumours of a shortage of supplies have, until recently, kept prices at a high level. China's exports last year, however, amounted to 165,178 metric quintals, against 70,499 quintals in 1936. This extraordinary increase was by no means due solely to the heavy shipments made before the outbreak of hostilities; for even in December exports were 12,421 quintals, against 10,041 in December, 1936. The bulk of the Chinese supplies comes, in fact, from the extreme South and South-West—a part of the country which, besides being outside the area of hostilities, has direct rail communication with French Indo-China. This consideration, coupled with the fact that the exports provide much-needed supplies of foreign exchange, makes it improbable that Chinese wolfram supplies will suffer any drastic curtailment in the near future. Fears of a shortage thus rest on very flimsy foundations. But if there is no likelihood of a shortage, the present price level is definitely too high, and the downward adjustment of quotations may be expected to continue.

Petroleum on the Farm.—Much information of practical value to farmers is contained in a booklet, issued by Shell-Mex and B.P. Limited, entitled "Petroleum and Agriculture." An opening article describes the many uses to which the various types of tractor can be put on the modern farm. The improvement in tractor performance is illustrated from data collected under the Nebraska Testing Scheme in the United States. From the inception of the scheme in 1920 until 1926, tractor

weights were reduced by nearly 40 per cent. and fuel consumption by 35 per cent. Since then, tractor design has been more or less standardised, recent developments having been mainly concerned with adapting the tractor to an ever-widening range of uses—and especially to the needs of the small mixed farm. To-day, thanks to developments like row crop equipment, pneumatic-tyred drive wheels and a much greater range of sizes and types, tractors are being used for every kind of operation. The completely horseless farm has, in fact, become a practical possibility. Its relative economy arises from the fact that a power-driven appliance enables a man to control more power. The full benefit of the tractor economy is not secured unless the tractor is fully loaded and is provided with suitably designed implements.

Trade Marks for India.—At the Legislative Assembly at Delhi the Government is embodying in a Bill its policy for the registration of trade marks. This is the consummation of about seventy years' controversy. Hitherto India has been practically the only important country content to rely on advertisement as the sole means of trade mark protection. There has been no register or public record of trade marks, and little or no remedy against infringement except that available under common law. It was not possible for India to join any international conventions covering trade mark and patent rights; nor for any manufacturer or merchant domiciled in India to obtain registration of a trade mark in countries where a domestic registration was a preliminary condition. The new Bill, closely following British law and practice, will clearly define trade marks, stipulate what may and what may not be registered, introduce classification of goods, define the rights of trade mark proprietors and provide remedies and reliefs for infringements; and a Register will be established. One section corresponding to Section 8 of the 1937 British Act provides for registered users; and a word or words in the Indian vernacular language, if a dictionary word, can be registered, even if the corresponding word in English or other languages is already registered or pending. Many marks now in use in India may have to be cancelled as being merely descriptive or laudatory. The dominating position of the merchant or importer class is being specially studied, with a view to adjusting equitably the rival claims of the actual manufacturers of the goods on the one hand and those of the importers on the other.

INDUSTRIAL REPORTS

This week's batch of reports from industrial centres does not reveal any significant change of trend in the major branches of activity. In general, new business remains limited, in contrast to the usual revival in many trades at this time of year. The decline in new orders remains most marked in the export trade. Although the total consumption of steel continues at a high level, stocks are increasing. Our Cardiff correspondent already uses the term "depression" in referring to the iron and steel industry in South Wales. Domestic demand for coal remains active, but export business is declining. If it were not for the operation of the selling schemes, our Newcastle correspondent points out, a severe fall in prices would probably have taken place. There has been no improvement in the cotton industry, and some spinners and manufacturers have described their sales this week as the smallest for a long time.

Coal

Cardiff.—New business remains very restricted. The contract commitments of the collieries are not enough to absorb output, and working time is being lost in nearly all parts of the

coalfield. In these circumstances, approved prices are easier for spot shipments, but the Control Board is resisting the attempts of buyers to exploit the weakness of the market for immediate shipment by firmly maintaining their provisional quotations for backward positions. In this policy they are being helped by the fact that there is little coal in the hands of speculative middlemen, and monthly quantities due to contractors are being cancelled if they are not taken.

There are two contracts in the market, particularly for Spain and Portugal, but they have not yet been placed. Shipments at the South Wales ports last week totalled 395,500 tons, compared with 390,900 tons the previous week and 402,522 tons in the corresponding period last year. The depression in the iron and steel industry is reacting unfavourably on coke and industrial coals. Quotations for coke are slightly lower. Patent fuel is quiet but unchanged. Pitwood prices are weaker, and Portuguese supplies have been reduced from about 25s. 6d. to 24s. ex ship.

Glasgow.—The shipping branch of the coal trade remains dull, and the

tonnages despatched last week showed a sharp drop to 176,000 tons, against 230,000 tons in the previous week and 253,000 tons in the corresponding week of last year. All the usual overseas markets appear to be "off" for the time being, and only some tentative inquiries are being received. In connection with the big Swedish railways order, tenders have now been put in by one or two Scottish firms, at prices ranging from 17s. to 18s. per ton.

The home trade is also showing some sectional slackening, but is on the whole still satisfactory. Coastwise trade is rather quieter, the Irish trade having slowed down during the past week or two. Prices for shipping business remain easy.

Newcastle-on-Tyne.—Shipments of coal and coke from the North-East are disappointing, and if it were not for the operation of "controlled" coal selling, there is every reason to believe that a severe fall in prices would have taken place. Production is maintained, an indication that the industry is indebted to local trade for its present position. The Northumberland steam market is steady; collieries are working

well enough at present, but there is still a lack of forward inquiry. Durham collieries have a regular trade, most of them being comfortably booked for the greater part of this month. Patent oven coke is easy owing to the lack of export trade.

Iron and Steel

London.—According to the weekly report of the London Iron and Steel Exchange, quiet conditions rule in the markets, although there is little indication of a decline in the tonnage passing into consumption. Most consumers have purchased their requirements for as far forward as they care to commit themselves, and as a consequence it is not expected that great activity will rule

in the market for the next month or two. At the same time, expectations that the import duties will be raised at the end of March has led to a rush to deliver materials purchased abroad at a time when the stringency in the British market was at its height.

New business in British and foreign pig iron has been limited, and stocks have accumulated at the producing and consuming works. At the current rate of consumption, however, it should not be long before stocks are reduced to more normal proportions.

In the semi-finished steel department full supplies are now available for all classes of consumers, and this has enabled the finishing works to overtake arrears of orders.

The demand for steel is steady, but at full capacity, contracts are being worked off more quickly than new business is coming forward; but it is still difficult to place orders for near delivery for some descriptions of steel. Whilst export business remains quiet, Continental prices have shown a firmer tendency as a result of the recent meetings of the British, Cartel and American steelmakers.

Sheffield.—The tendency in the iron and steel market is towards easier conditions. So far as iron is concerned supplies are well in advance of demand, and there is no immediate prospect of revival, consumers being adequately covered by contract, in many cases up to the end of the first half of the year. A re-imposition of the duty on imported iron, for which application is

to be made, would, it is argued, go a considerable way to straighten matters out.

Demand for basic steel billets is as strong as ever, and business in acid billets continues good. Stainless steel sheets and wire rods continue very active. Prices are unchanged.

Business in the scrap market is limited, especially for iron, prices of which are showing a sagging tendency. Heavy foundry cast iron is quoted at 70s.-75s. per ton, and heavy wrought iron for shearing has dropped to about 82s. 6d. per ton. High-speed steel is obtainable down to £60 per ton.

Middlesbrough.—Whilst the output of Cleveland foundry pig iron is not large, stocks are accumulating at makers' works. Local foundries are consuming the Midland and Continental iron which they were obliged to purchase some time ago owing to their inability to secure local iron. It is expected that the import duty on pig iron will be re-imposed at the end of this month, whilst imports of semi-finished steel will be restricted to the import quota.

In the steel departments arrears of delivery of some classes of material have been overtaken, and orders for light sections and for sheets could be delivered fairly promptly. The heavy finished departments continue busy and have good order books.

Blast-furnace coke supplies are now in excess of the demand, and owing to the reduced inquiry for export, the position is easier. Local merchants have no difficulty in disposing of heavy steel-melting scrap at official prices.

features of THE SCOTTISH INDUSTRIAL ESTATE

No. 6. SPORTS GROUNDS and CANTEENS

The Scottish Industrial Estate is planned as one harmonious unit. Careful attention has been given to the needs of the employers and employees alike. Throughout the Estate at convenient points canteens and restaurants are being erected for the use of tenants, employees and Traders visiting the Estate. Both light refreshments and full meals are served at moderate charges.

The Estate Company has also set aside sufficient ground for recreation and football fields, and other sports grounds will be constructed and equipped.

The grounds will be let to clubs which may be formed within the Estate or can be used for inter-firm sports.

For full information and particulars of the Estate apply to

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY

IMPROVEMENT IN NET REVENUE MAINTAINED

PASSENGER RECEIPTS BEST SINCE 1929

INCREASING COSTS

ELECTRIFICATION POLICY

CURRENT YEAR'S OUTLOOK

SIR JOSIAH STAMP'S REVIEW

The fifteenth annual general meeting of the London Midland and Scottish Railway Company was held at Friends House, Euston Road, London, N.W.1, on Thursday, March 10, 1938, Sir Josiah Charles Stamp, G.C.B., G.B.E., chairman of the company, presiding.

The Chairman: I will now ask the assistant secretary to read the notice convening the meeting.

The assistant secretary (Mr G. R. Smith) read the notice accordingly.

The Chairman: Ladies and gentlemen, I now lay on the table the report and accounts for the past year, and as they have been in your hands for some days, I presume you will, as usual, take them as read.

ADMINISTRATION

It is with great sorrow I have to refer to the fact that during the past year we have lost by death three members of our board.

On August 14th Sir Arthur Rose died, after a short illness, at the early age of 62. He was a man of wide experience, high capabilities, and sound judgment. He was also an indefatigable worker for the company, and represented us on MacBraynes and the Scottish Motor Traction Companies, and his work for the country, especially as Commissioner for Special Areas in Scotland, is well known; indeed—and it is a sad thought—had he spared himself more in public service he might still have been with us.

You will remember that a year ago we reported that Mr Ismay was away on sick leave. In June last he resigned, and he passed on several months later. There thus came to an end a long family connection with the old London and North Western and the London Midland and Scottish Railway Companies, and we have suffered a great loss, especially in our shipping interests.

Another long family connection, this time with the Midland and London Midland and Scottish Railway Companies, ended by the death on November 23rd of Mr Douglas Vickers. He had been a director for thirty-five years, and his industrial and engineering experience and his friendship and counsel will be greatly missed. He also rendered great service as a British Representative on the Permanent Commission of the International Railway Congress Association.

As you will have seen from the report, Mr Murray, unable to travel regularly to London owing to ill-health, resigned his seat at the board, but I am glad to say we still have the benefit of his experience and advice on the Scottish Committee in Glasgow. His place has been taken here by Sir Robert Greig, who joined our Scottish Committee on February 22, 1934, and has a great knowledge of agricultural and Scottish interests.

Viscount Runciman, who you will remember resigned from the board in 1931 on his appointment as President of the Board of Trade, has been re-elected a director, and the company are fortunate in again having the benefit of his wide experience and specialised knowledge.

We have also been fortunate in the accession to the board of Sir Robert Burrows, who has extensive knowledge of the large industrial and commercial interests of Lancashire.

You will share our satisfaction that His Majesty the Coronation Honours conferred a knighthood on Sir William Wood, our Vice-President for Finance and Service Departments, who has rendered fine service to British railway interests generally.

I regret to say our chief accountant, Mr Taylor, has retired

through ill-health. He has been succeeded by his assistant, Mr George Morton.

RESULTS OF THE YEAR

I should like to mention before coming to a review of the 1937 results, that in conjunction with the other railway companies we have, with the consent of the Minister of Transport, omitted shillings and pence from our full published accounts.

For the fifth year in succession we have an improvement in net revenue. The various results are given in detail in the summary before you, and I need not repeat the details of the railway receipts, but it is interesting to record the fluctuations of the last nine years:—

	Railway Receipts.	Per cent. of 1929.
1929	£ 73,195,000	100
1930	68,241,000	93.2
1931	63,223,000	86.4
1932	58,507,000	79.9
1933	58,185,000	79.5
1934	60,572,000	82.8
1935	61,658,000	84.2
1936	64,463,000	88.1
1937	67,234,000	91.9

and the improvement has been maintained in 1938, the results for the first eight weeks of the year showing an increase of £317,000 over 1937, which is a little better than our anticipations.

1937 AND 1929 COMPARED

Since the low-water mark in the railway receipts of 1933 the recovery has been fairly generally spread over the various classes of traffic, but it is interesting to compare 1937 with 1929. The decreases against 1929 are:—

	£	Per cent.
Passengers	1,385,000	6.4
Parcels, &c.	344,000	4.9
Merchandise (Class 7 and upwards)	3,155,000	14.4
Merchandise (Classes 1 to 6)	314,000	4.6
Coal	538,000	3.8
Live Stock	236,000	28.8
Miscellaneous	Increase 11,000	1.7
	£5,961,000	8.1

The passenger receipts are the best since 1929, and although 6.4 per cent. below 1929, they show a steady improvement each year since 1933, which is continuing in 1938. We carried 46 million passengers in 1929, and last year were only 1,700,000 short of that figure, but in passenger miles there was an increase from 7,672 million miles to 8,104 millions, or, say, 6 per cent.

MARKED DECLINE IN GENERAL MERCHANDISE

The decline in general merchandise (Class 7 and upwards) is marked, and it is here that we suffer most from the effects of competition. While we had this severe loss in receipts done as measured by ton-miles was 99.9 per cent. increased at level, and the reduction in revenue was mainly due to the same cause.

effects of less short distance traffic and reduced rates. The former factor can be readily appreciated when I add that the average length of haul in the eight years increased from 70.4 to 76.6 miles, although 1937 itself showed a reduction of one mile—the first year which has shown a reduction since the L.M.S. was formed.

The receipts from coal and low-grade traffics covered by the term "Classes 1 to 6" have recovered well and will, I hope, reach the 1929 level in 1938.

The livestock figures are very bad and reflect the Irish difficulties.

RAILWAY EXPENDITURE

I have compared the traffic receipts last year with 1929, and without giving you each intervening year the corresponding reduction in railway expenditure is 6½ per cent., and you will bear in mind the large proportion of railway expenditure which is unaffected by the volume of traffic. We are thus doing substantially more actual work than in 1929 at considerably less working cost.

Compared with 1936 the expenditure increased by £2,387,000, and the main cause is the large increase in prices of materials and rates of wages I mentioned a year ago. I told you that we could then see three-quarters of a million additional for price advances, but the increase has been much more severe. The growth in railway expenditure is made up of:—

	£
Maintenance	941,000
Operating expenses	1,352,000
Other	94,000
	£2,387,000

INCREASED MAINTENANCE COSTS

As in 1936, the increase in maintenance of way and works and rolling stock is due to the growth in prices of labour and materials, the renewal provisions alone increasing by £493,000. The increase in operating expenses, while due partly to the growth in traffic, is largely a reflection of increased rates of wages and prices of coal; we were fortunately aided in the last two months of the year by considerably better operating conditions than in 1936, when we were heavily handicapped by unfavourable weather.

The railway net receipts total £13,636,000, an increase of £385,000 over the previous year, and are disappointing compared with the successive increases of roundly £1,000,000 in each of the three previous years, but the chief reason was beyond our control and the costs capable of control were reduced.

As regards the other businesses I need say little. The net results from road transport, steamers and docks again show the highest figures in any year, the docks being aided (at the expense of steamers) by increased charging powers which Parliament granted us last year. Canals have gone a little worse owing to special damages due to floods, while hotels and air services I refer to later.

I have previously explained to you the effect of increased merchandise receipts on the collection and delivery, and this year the result is an increased loss of £55,000; whilst the expenditure, increased by £102,000, the expenditure, mainly for the reasons I have explained in relation to other accounts, increased by £157,000. The net result compared with 1929 is, however, an improvement of £280,000 and, with slightly higher receipts than in 1929, expenditure has been reduced by £260,000.

THE NET RESULT
