

THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

QUARTERLY INDEX

Chamberlain and Halifax

MR CHAMBERLAIN'S speech on British foreign policy in the House of Commons last week has been followed by one on the same subject by Lord Halifax in the House of Lords this Tuesday. The Foreign Secretary spoke, to use his own words with reference to Lord Cecil, "with a sincerity that no one questions." Yet a study of his speech increases, so far from dispelling, the country's bewilderment over the Government's policy.

Take the urgent—and ever more urgent—question of the hour: the fate of Spain. The Italo-German part in the vast and hideous operations by which the lawful Government of Spain is being crushed is described in circumstantial detail day by day in the British Press of all political colours, and is being boasted of by Signor Mussolini himself. Yet Lord Halifax went out of his way on Tuesday to repeat Mr Chamberlain's assertion that all allegations of fresh Italian help to the Spanish insurgents were unproven. And in another passage he gave even Germany a clean bill. The Government, he said, had refused to accept as proof a prophecy of Germany's ultimate and sinister intentions, and they were accordingly not convinced that the remedies suggested to meet that prophecy were well conceived.

At this point we can only echo Lord Halifax's own opinion that "the ordinary man sees these things rather

differently." For, if the Government do not credit Germany with sinister intentions and are not seeking an Italian remedy for them, their policy is altogether inexplicable.

When we see our Prime Minister and Foreign Secretary in succession trying the Nelson touch and putting their spy-glass up to their blind eye whenever they are compelled to train it upon Italy's activities in Spain, we can only infer that their desire to conciliate Italy must be inspired by some motive of such overwhelming force as to make them ready to pay the very highest price for an Italian declaration of friendship. But what is this good object that the Rome conversations have in view? Since, *ex hypothesi*, it must be an object of such importance as to warrant the complete sacrifice of Spain and the jeopardising of all the vital French and British interests that are bound up with the maintenance of Spanish neutrality, we are driven to conclude that the Government are still working to detach Italy from Germany, and are still hoping that such a policy can succeed.

If this is really still the Government's point of view, there would appear to be two objections to it which, in combination, are decisive. In the first place, even if the Stresa Front could be restored, the Spanish price would be prohibitive; in the second place, the conditions for restoring it no longer exist, so that whatever

we pay in Spanish coin will be treasure thrown into the gutter.

The Government, of course, are unwilling yet to admit that they are going to pay any Spanish price at all. Non-intervention in Spain is to be worked for, even after the war in Spain is finished. Yes, but there has been no hint in either Lord Halifax's or Mr Chamberlain's speech of any rational grounds for expecting that British efforts to induce the intervening Powers to withdraw will be any more successful than they have been so far. If and when the insurgents and their foreign allies do win the war, the war will be over, and, therewith, the Non-Intervention Committee will have lost its *locus standi*. The Burgos Government will remain in sole possession of the field; at least *de facto* it will be the only surviving authority with any claim, to call itself the Government of Spain. What right or power shall we have to take steps to ascertain whether he is retaining the services of foreign troops or is continuing to give his allies strategic as well as commercial advantages in Spanish territory? Even if the undisputed master, *de facto*, of Spain chose to alienate Spanish territory to his allies in payment for services rendered, he would merely be exercising one of the essential rights of sovereignty, and we should be putting ourselves juridically in the wrong if we sought to impose a veto (save only in regard to the Spanish zone in Morocco, where Spain has contracted certain obligations under treaties to which we are a party). But of course the transaction, if there is one, between Franco and the "Axis" Powers will not be in such crude terms as that. There will be no alienation of territory; there will not even be a lease; there will merely be "assistance" like that granted to Turkey before 1914. Spanish harbours will be equipped and stored with the means of refitting and re-munitioning Italian and German warships; Spanish aerodromes will be ready at convenient points to serve as bases for Italian and German military aircraft. Spanish armaments will be of Italian and German type and manufacture. In fact, Spain will be geared to the Italo-German war-machine, so that Spanish wheels can be made to turn for Italo-German war purposes at a moment's notice—just as Turkey was brought in on Germany's side in 1914. If this prophecy is wrong, Italy and Germany will have given all their assistance to General Franco for nothing. And it therefore almost inevitably follows that the prophecy is not wrong. As for the Italian and German troops, a certain number, no doubt, will be ostentatiously

withdrawn, but we shall never know how many remain. On this point General Franco, in the exercise of his sovereign rights, will try to keep the French and British General Staffs guessing; and the French Staff, at any rate, will not be able to afford to take a risk. Henceforth the Pyrenees will have to be defended in force, like the Alps and the Rhine. And the thinner the screen of troops that the "Axis" has to keep in Spain to produce this effect, the more cheaply bought will be their advantage.

To this Spanish prognostication the Government may reply that we are begging the Italian question. If once Italy is won over from Germany's side to ours, what harm, they may ask, will it do to us if Spain does remain in Italy's hands? Will not Italy's influence in Spain keep German influence there in check? This rejoinder brings us up against the principal question; and that is whether the policy of restoring the Stresa Front has any chance of success. On this point there is unfortunately just as much ground for scepticism as on the other.

The Stresa Front was formed to keep Germany out of Austria at a time when Germany had not yet recovered her military strength. And under those conditions the Italians might, with French and British backing, have prevented the *Anschluss* by force of arms. But to-day the *Anschluss* is an accomplished fact. If Italy were to fight Germany now the war would begin on the Italian frontier and would end somewhere far inside it. Signor Mussolini knows that he cannot dream of challenging Germany under such conditions; and he has said so in public quite frankly. But in saying this openly to the Germans he has declared implicitly to us that, while it would suit him at the moment to coquet with us, he can never, in the hour of decision, come down on our side of the fence. In an anti-German combine he would have nothing to look forward to but hard knocks with no profits—for there are no unredeemed Italians still to be rescued in Central Europe. On the other hand, if he resigns himself to a German hegemony, he is relieved of the nightmare of having to fight a Continental Power for whom he is no match, while his chains will be gilded with glittering hopes of a Mediterranean Empire.

The conclusion is clear. If the Chamberlain-Halifax policy is to sell Spain, as well as Abyssinia, in order to buy an Italian alliance against Germany, we shall be paying Signor Mussolini in ready money for goods which it is impossible for him ever to deliver.

The New Feudalism

THE House of Commons has this week had a respite from foreign affairs and has returned to the concerns of British industry. On Monday the Government's Film Bill moved one stage nearer to enactment, and the adjourned debate on the Cadman Report was concluded. On Wednesday and Thursday the Coal Bill was discussed on the report stage. Thus three of the Parliamentary days of the week have been given to projects whose main purpose is the assistance and reorganisation of industries in which the State has taken a paternal interest. The film industry and the mineowners both regard their respective Bills with somewhat mixed feelings, and the Board of Imperial Airways can hardly be pleased with what has been said in the debate on the Cadman Report. But in each case the intention of the legislature is clearly that of assisting the three industries in question to lead a profitable existence.

As it happens, each one of the three industries under discussion exemplifies a different method by which the State can give assistance. With civil aviation, it takes the form of a direct cash subsidy. The film industry is helped by a quota restriction. And the mining industry is given statu-

tory assistance in limiting competition both in the production and in the sale of coal.

Thus by chance, Parliament has had before it this week a varied selection of the devices of the new economics. The legislators of a generation ago, whatever their politics, would have been shocked by the suggestion that any individual industry (with the perennial exception of agriculture) should be given special assistance in the struggle for existence, since that struggle itself was considered to be the guarantee to the community of the maximum possible efficiency in its economic mechanism. It is still very much open to question whether that economic philosophy was not, in the long run, likely to lead to a greater production of material wealth than the new policy, which has come to flower under the present Government, of setting up an apparently endless series of protected vested interests. But, whatever may be true of the principle, the practice has greatly changed. There is a formidable number of industries to which Parliament has already granted assistance, and there are others awaiting their turn.

If it be accepted, however, that Parliament is, in fact,

going to continue granting individual assistance to industries in difficulties, that does not in the least mean that there is no more to be said about the matter than to hearken unto the pleas of the applicant industries and to give them what they want. If the community is *de facto* surrendering the safeguards it used to enjoy in the form of unrestricted competition, it has the right and the duty to consider what form of protection for its interests shall be put in their place. Of all the ingenuity that has gone in recent years into the invention of protective devices, least has been devoted to the protection of the common interest. There are, it is true, Consumers' Councils here and Committees of Investigation there. But they have proved themselves to be, and must in the nature of things inevitably be, broken reeds. They are presented with a *fait accompli*; they are forced into an inferior position by the lack of adequate information; and they have constantly brought before their eyes the countable men and the identifiable factories that will be injured if they persist in paying attention to anything so nebulous as the public interest or so remote as the consumer.

So, with these derisory safeguards of the common interest, we drift from Bill to Bill, creating, by a process of economic casuistry, one vested interest after another. If the cases were few they could be ignored. But the list of industries possessing or seeking specific protection lengthens daily, and we are within measurable distance of setting up a new feudal system, with the British market, instead of the British land, parcelled out among the barons. There is no sphere of economic policy in which there is a greater need for careful thought on general principles.

One of the most obvious of these principles is that, if an industry in difficulties is to be given assistance at the public expense, it must in return take whatever measures are necessary to get out of its difficulties. The community can demand efficient service in return for its dole. This is the principle that has underlain the indignation aroused by the Cadman Report, since it is the subsidy to the air lines that entitled the House of Commons to take an interest in their efficiency. It is also the principle that entitled the public to accuse the Government of neglecting its interests in the debates on the Coal Bill. Ever since the Act of 1930 the community has struck a tacit bargain with the coal industry. Assistance would be given to it in restricting its production and constituting itself a sales monopoly, if in return the industry would submit to the amalgamation of coal mines, with the object of increasing the efficiency of production. The present Bill is the latest of many attempts to hold the industry to its bargain by correcting the legal defects that have been discovered in the compulsory amalgamation procedure of the 1930 Act. But, once again, the Government has paid more attention to the complaints of the coalowners

than to the demands of public policy, and the amendments which have this week been written into the Bill will make it easier for a camel to pass through the eye of a needle than for a scheme of compulsory amalgamation to run the gauntlet of legal and Parliamentary obstruction.

The Coal Bill also illustrates, by omission, another principle which ought obviously to be borne in mind in doling out assistance. Any form of assistance comes out of the pockets of the public in the final resort. But it is proper to ask how much is to come out of which pockets. If the assistance takes the form of higher prices, buttressed by State action, the burden is distributed among individual members of the public in proportion to their consumption of the protected commodity. If it is a foodstuff or a primary necessity, this method, in effect, raises the cost of the assistance by a regressive tax on the poor. But even in the case of an industrial raw material, is the method of price-raising always, or ever, justifiable? An excessive price for coal, for example, as Sir Malcolm Stewart has this week pointed out, is "a national calamity." There would seem to be the clearest case for asking whether the present price of coal is, in fact, excessive and whether, in any case, price-raising is the appropriate technique of assistance for the coalmining industry. But the President of the Board of Trade has been deaf to all suggestions of such an inquiry. The form, as well as the amount, of the assistance is being decided as the mineowners wish, not as the general interest requires.

These are merely illustrations of the matters that would have to be dealt with in any Code of Rules which the community might adopt to guide it in future cases where assistance is asked of it. It would not be difficult to suggest further rules. For instance, it would seem reasonable that an assisted industry should accept some degree of independent advice and supervision—a proposal which took concrete shape in the proposal for an independent Films Commission instead of the representative Films Council set up by the Bill. But for the moment what is chiefly wanted is that the necessity for some such coherent protection for the community should be recognised, rather than that its details should be filled in in advance.

Compared with the formulae of Socialism, suggestions such as this are moderate in the extreme. But if they are entirely neglected, as, by and large, they have been neglected in the past six years, we are in danger of drifting into a position in which full-blooded Socialism may be the only alternative to economic feudalism. Public monopoly will always be preferable to private monopoly, and it will be an unlucky day for British industry—and the British standard of living—if the public is ever left with the bare choice between Socialism and Unsocialism.

Mexico

WITH superficially startling abruptness Mexico has projected herself into the picture of world crises. Yet President Lázaro Cárdenas's decree of March 20th, by which all oil companies in Mexico may be expropriated, was only the last, if most startling, in a long line of Government actions aimed against both domestic- and foreign-owned "big business" operating in Mexico.

Contrary to general belief, Mexico is not really a rich country. It is true that Mexico is potentially rich in mineral and power resources. But it has neither capital of its own nor an adequate supply of skilled and industrious labour. President Porfirio Díaz realised this in the 1870's, and, during his thirty years and more of dictatorship he endeavoured to attract foreign capital and technicians to develop Mexico's potentialities. When he fell in 1910 and the National Revolutionary leaders succeeded, they set out to achieve a "Mexico for the Mexicans." Their programme

was to secure agrarian reform by breaking up the big estates of the *hacendados* and distributing land to the village communities (*ejidos*); and to free Mexicans (of whom two-thirds are Indian agriculturists working at subsistence level) from the authoritarian bonds of the Catholic Church and the Díaz State. From 1911 until 1934, when President Cárdenas assumed office, Mexican Governments drifted aimlessly, making inroads upon both Mexican and foreign owners of big *haciendas* in an inconsistent manner, allowing the foreign debt to go into utter default, fighting the Church with energy and success, and, for the most part, indulging in internecine domestic squabbles over party politics, power and "the cash that goes therewith."

Since 1934, when he ousted President Calles, President Cárdenas has been most energetic on behalf of the aims of the National Revolution of 1910. He has, under the agrarian and expropriation laws, ousted almost all foreign

and most domestic big *hacendados* from their property—many without compensation, and, where the Government gave compensation bonds of nominal amount, without paying either interest or amortisation. Accordingly, the foreign debt and the uncompensated agrarian expropriations are still problems in abeyance, periodically discussed in Washington and Mexico City, but with a hopeless defeatism on the part of the foreign powers concerned. Meanwhile, however, the breaking up of big estates has lowered agricultural yields, as it always does; export surpluses in primary products have diminished; Government expenditure has steeply risen, especially for the army and education; and small but clamant industrial trade unions, mainly confined to the oil and mining industries which are foreign-owned, have come to exercise a strong Leftward influence in politics. With zeal, integrity and laudable ambition the President has set out to make Mexico run, as a full-fledged Western State, before its people could economically walk: witness his disastrous failure last year, at a cost of several millions of pesos, in a collectivist experiment to grow cotton in the Laguna region. He has only a small civil service. Though his integrity is beyond question, corruption is nowhere more rife than in the Mexican civil administration. The country has a few, but still too few, good roads, and the development of the railways, both State and foreign-owned, has been held back by penal taxation and statutory wage-scales beside which even those of Britain look niggardly. This puts a premium on regional politics—and, still worse, on regional military power.

President Cárdenas has been caught between the trade unions on the Left and the intrigues of the Right. He has lacked normal foreign exchange proceeds by reason of hesitant agricultural exports. Deprived of liquid domestic capital (whose owners preferred to pay the 4 per cent. tax to lodge it in New York), and faced with a virtually untaxable Indian population, President Cárdenas had either to abandon the aims of the Party of National Revolution—thus adding his own failure to that of Obregón and Calles—or to plunge ahead more boldly than they. This involved pressure on the foreign-owned oil and mining concerns. He chose the former for the first trial of strength, expecting to be able to divide, and so rule, the American and Anglo-Dutch interests.

In the event, he succeeded for three years; but only on behalf of the workers themselves in the mining and oil industries. The foreign-owned concerns gave practically all they could, including a large measure of workers' and Governmental control over the day-to-day operations of their industries. But the climax came last year when, after the oil strike of last May, the Labour Board and the Government's experts awarded the workers such concessions—in addition to pensions, retirement and death compensation, sick benefits, paid holidays, etc.—as would, in effect, involve large contingent liabilities for future operations. Against such liabilities, in good accountancy, current reserves should be set aside. If those reserves were set aside, the oil concerns would not only have been unable to meet the 1937 awards to their workers. They would have been bankrupted—and therefore able to be expropriated for a mere song—in a gradual de-capitalisation process lasting, perhaps, no more than five years from 1937. They stood together, and when, in January, their plea for a stay of execution was refused by the Supreme Court, they refused to comply with the Government's requirements. President Cárdenas, playing his last card, expropriated the companies.

His action has raised two sets of problems, political and economic, and both are grave. First, it has involved Mexico's relations with the United States Government in no less than three ways. It has simultaneously jeopardised the United States' decade-old "good neighbour" policy towards Mexico, challenged the United States' will effectively to uphold the Monroe Doctrine as against Great Britain and the Netherlands (estopped by

it from independent action on behalf of their own oil interests), and invoked the spectre either of a Leftward or Rightward totalitarian regime on the United States' own frontier. This spectre has made the United States react energetically.

The economic problems are formidable. First, the United States Treasury—despite its rather platonic disavowal of any political motives—refused last week-end to continue its two-year-old policy of buying virtually all newly-mined Mexican silver. This has helped to push the peso once more over the brink of depreciation. The famous Mexican dollar, which stood in 1930 at 2.256 to the American dollar, and then fell to a steady 3.6 to the American dollar between 1934 and the end of last year, has now plunged within a fortnight to rates of 5.0 and even 5.50. Secondly, the oil industry of Mexico provided exports to about the same value as silver mining, and provided much more revenue and labour than the latter industry. Now, the assumption of control over the oil industry by the State is the assumption of *responsibility* by the State for the maintenance alike of the Mexican labourer's working conditions, of an earning capacity sufficient to keep the current yield of revenue unimpaired, and of a vital export trade wherewith to offset growing imports of food, etc. The latter factor itself is one of the reasons for the peso's weakness in the last year or eighteen months. Additional purchases of old Mexican silver by the United States Treasury in 1937, together with an increase in their purchase of newly-mined Mexican silver last year, alone availed to peg the peso at 3.60 in face of the growing import surplus and a growing flight of domestic capital from the country.

President Cárdenas has forced the American oil companies to lodge an appeal on March 23rd with the State Department of the United States, on the ground of "manifest denial of justice." This faced a Democratic President of the United States, pledged to the "good neighbour" policy and only too mindful of President Wilson's unhappy experience with Mexico, with the unenviable alternatives either of acquiescence in an act of expropriation which would certainly damage United States prestige and material interests throughout Latin America, or of proclaiming very clear limits to "good neighbourliness." Accordingly, a firm Note, addressed by the United States Government to the Mexican Government on Wednesday, demanded either the reinstatement of American oil companies in their properties or full compensation. That Note is, in effect, a writ which must of necessity also run for the Anglo-Dutch oil concern.

This in turn intensifies President Cárdenas's quandary. If he declares an oil war against American and Anglo-Dutch interests, he can only sell Mexican oil in bulk to Germany, Italy and Japan—countries with which, as he said in his proclamation a fortnight ago, both he and the Mexican people are utterly out of sympathy. Mexico has virtually no tankers; and 83 per cent. of tanker tonnage is controlled by the American and Anglo-Dutch interests. Of the remaining 17 per cent., mostly Norwegian, only the Japanese, Italian and German tankers come practically into question. If by losing Mexico's silver proceeds in the United States he has a silver war on his hands, and has simultaneously to lead an oil war in the company of the Right-wing totalitarian States, he automatically provokes the United States Administration and public opinion—perhaps beyond passive endurance. In any case, whatever happens to the peso, Mexico would be internally bankrupt within three months.

The realisation of all this has already broken the peso. It may break the Cárdenas administration with unpredictable results. And if some compromise be not speedily reached, it will assuredly break Mexico. The way of goodwill has been kept open by the oil companies and their Governments. The next move is with Mexico.

A Year's Revenue

THE official result of the financial year that ended on Thursday night was a realised surplus of £28,785,428. The conventional definition of a surplus has now, however, become so arbitrary that it is necessary to particularise in order to arrive at a true picture of the year's results.

The revenue side of the Budget accounts still remains comparatively simple. The total yield was £872,579,715, which was nearly £9½ millions more than the estimate. On the expenditure side, however, various interpretations are possible. At the time of the Budget the Chancellor of the Exchequer expected to spend £862,848,000 out of revenue and £80,000,000 out of borrowings, or a total of £942,848,000. Actually, he has spent £908,661,287. Moreover, that sum includes over £10 millions put to sinking fund, for which no provision was made in the Budget. It is possible, therefore, to argue that the actual results of the year are better than the Budget estimate by no less than £54,210,715. This is the most favourable figure that could be quoted by those who are determined to look at the returns through rose-tinted spectacles. At the other extreme those who include both sinking fund and all defence expenditure among the sums that ought to be met out of revenue will quote a deficit of £36,081,572. Between these two extremes the reader can pick his own result by juggling the definitions of revenue and expenditure.

The figures for the revenue are given below:—

REVENUE, 1937-38 (£000's omitted)				
	Actual Receipts 1937-38	Larger (+) or Smaller (—) than Budget Estimate 1937-38	Actual Receipts 1936-37	
Income tax	297,986	+ 9,836	+ 40,749	
Sur-tax	57,060	— 940	+ 3,520	
Estate, etc., duties	88,980	— 20	+ 990	
Stamps	24,170	— 4,830	— 4,970	
National Defence Contribution	1,420	— 580	+ 1,420	
Other Inland Revenue	1,730	+ 230	...	
Total Inland Revenue ...	471,346	+ 3,696	+ 41,709	
Customs	221,561	+ 1,711	+ 10,279	
Excise	113,700	+ 550	+ 4,200	
Total Customs and Excise	335,261	+ 2,261	+ 14,479	
Motor Vehicle Duties	34,608	+ 608	+ 1,881	
Total Tax Revenue	841,215	+ 6,565	+ 58,069	
Post Office (net receipt)	10,470	— 1,330	— 500	
Post Office Fund	825	— 825	+ 725	
Crown Lands	1,330	— 20	+ 20	
Sundry Loans	5,230	— 930	+ 680	
Miscellaneous Receipts	13,510	+ 2,510	+ 11,091	
Total Ordinary Revenue	872,580	+ 9,460	+ 47,864	

The healthy appearance of the total figure is very largely due to the excellent performance of the income tax, which has exceeded the estimate by nearly £10 millions and last year's yield by over £40 millions. Customs and Excise also show small improvements on the estimates. The other main taxes, on the other hand, have been disappointing. Surtax has failed to yield the estimate; it is this persistent failure of surtax to emulate income tax which lends credibility to the stories of large-scale evasion. The yield from stamps is badly down, as was only to be expected.

The largest item in the shortfall of expenditure below the Budget estimate is in the Civil Services. A margin of £10 millions was left in the Budget for supplementaries, but in the event only £3,666,000 of this was required. There were also savings on many items, of which the largest was one of £8½ millions in the vote for the Unemployment Assistance Board. The National Debt, on the

other hand, has required rather more than last year, and the margin left in the fixed debt charge was not quite large enough to meet the statutory sinking funds. The figures are given in the following table:—

EXPENDITURE, 1937-38 (£000's omitted)				
	Actual Issues 1937-38	Larger (+) or Smaller (—) than Budget Estimate 1937-38	Actual Issues 1936-37	
Interest and Management of National Debt	216,233	— 7,767	+ 5,360	
Payments to N. Ireland	8,887	+ 887	+ 891	
Other Consolidated Fund Ser- vices	3,115	— 85	— 125	
Post Office Fund	...	— 300	— 421	
Total Consolidated Fund	228,235	— 7,265	+ 5,706	
Army, Navy and Air Votes ...	197,250	— 1,018	+ 11,178	
Civil and Revenue Votes (exc. Post Office)	407,765	— 21,315	+ 26,607	
Total Supply Services (exc. Post Office)	605,015	— 22,333	+ 37,785	
Total Ordinary Expendi- ture	833,250	— 29,598	+ 43,491	
New Sinking Fund	10,544	+ 10,544	— 2,583	
Total Expenditure	843,794	— 19,054	+ 40,908	
Sums met out of Loans under Defence Loans Act	64,867	— 15,133	+ 64,867	

SELF-BALANCING REVENUE AND EXPENDITURE (£000's omitted)				
	Actual Revenue & Expenditure 1937-38	Larger (+) or Smaller (—) than Budget Estimate 1937-38	Actual Figures 1936-37	
Post Office and Broadcasting	76,080	— 378	+ 4,200	

Expenditure on the defence forces has approached the estimate more closely than seemed likely at one time. Taking total expenditure, including sums borrowed, the estimate was £278,268,000 and the actual expenditure was £262,117,000. The following table shows total defence expenditure by quarters during the last three years:—

DEFENCE EXPENDITURE (£ millions)				
	1935-36	1936-37	1937-38	
First quarter	27.5	37.5	46.3	
Second quarter	30.3	41.2	58.3	
Third quarter	37.3	48.0	68.3	
Fourth quarter	41.8	59.4	89.3	

The increase in the last quarter is much the largest of any in the table.

The final figures for 1937-38 make it possible to give rather more precise shape to the outlines of the Budget which the Chancellor of the Exchequer is to open on April 26th. The estimates for the supply services total £695,941,000, without any provision for supplementaries, which will certainly be needed. Adding on the 1937-38 expenditure on the consolidated fund (which does not include any sinking fund), the total comes to £924,176,000. The total of expenditure for which the Chancellor will have to provide cannot possibly be less than this, and is certain to be more. Against this, the revenue in the year just ended has brought in £872,580,000, and it has been estimated in *The Economist* (March 12, 1938, page 544) that a "natural" increase of something of the order of £40 millions can be expected in the coming year, making a total of about £912 millions. Even this figure, however, is £12 millions below the minimum possible total of expenditure. The Chancellor will thus have a substantial sum to find, either by increased taxation or by the various forms of financial sleight of hand at which the Treasury is a past master.

Topics of the Week

Arms and the Men.—In his important statement last week in the Commons on foreign policy, the Prime Minister reiterated the plea, which he had already made to the Trades Union Congress, for co-operation in the speeding-up of defence measures. There is no question, as yet, of placing industry on a war footing, and the expressed intention of the Government is to leave responsibility for detailed schemes for expediting the production of arms and munitions to employers and workpeople in consultation. Certain branches of manufacture, such as the production of aircraft and anti-air-raid equipment, naval construction and building works, require priority in the recruitment of men, as in the purchase of materials. Workers will need to be transferred from one district to another. Some dilution of skilled with unskilled or semi-skilled labour may be desired; and the introduction of more working shifts may be necessary. Sir Thomas Inskip's preliminary conference with the engineering unions on these questions on March 25th was disappointing; for the most important union, the Amalgamated Engineers, comprising 340,000 workers, was not represented. The A.E.U. still believes that the concessions in union standards and procedure made during the war were not afterwards fully rewarded; and a militant and sceptical minority is active in the union's ranks. In addition, the Minister for Defence gave no details of the Government's plans to the shipbuilding and engineering unions present at last week's meeting and allowed them to ask no questions. On March 28th, Mr Chamberlain and Sir Thomas met the National Confederation of Employers' Organisations, who responded favourably in general terms to their appeal. And next Monday the Minister for Defence will confer with the A.E.U.

The general attitude of the engineering union was publicly stated last Saturday by their secretary. The engineers were eager to defend their country and democracy, he said, but not to bolster up dictatorship. The force of appeals for speeding-up in armament work was lessened by the presence of 80,000 unemployed in the engineering trades; and, if skilled men were scarce, that was because the value of apprenticeship had been allowed to decline and industry's labour reserve to deteriorate during the depression. The union desired guarantees that the voluntary weakening of their standards would not involve any permanent loss or be accompanied by high profits for individual firms. The A.E.U.'s attitude may not be typical of T.U.C. policy, but while British industry hovers between peace-time and war-time conditions it is important that, if voluntary methods are to succeed, labour's suspicions should be allayed by full and frank discussion. In any event, while Government policy remains at a half-way stage, it is important that the existing industrial structure should not be needlessly impaired, psychologically or technically.

Defence in the Dominions.—Australia's new armaments programme is of great importance in the scheme of British Commonwealth defence, by reason not only of its size but also of its nature. Total defence expenditure over the next three years will be £43 millions, an increase of nearly £25 millions on the ordinary maintenance votes. Australia is to have a fleet of five modern cruisers, two of which are to be bought from the British Government, the seaplane-carrier *Albatross* being accepted in part exchange. Extra army expenditure will be devoted chiefly to coastal and anti-aircraft defences and to training in the technical branches. The air force is to be raised to 198 first-line craft. An important feature of the programme is the acceleration of output by the Commonwealth Aircraft Cor-

poration and an added stimulus to Australian munition factories. Australia's defence policy—which has secured the full support of the Leader of the Opposition—is thus of self-reliant character, though she has not abandoned her concept of extra-territorial defence through naval and possibly air action in co-operation with British forces. The new picture of several separate centres of strength in imperial defence, which was outlined in these pages last week, is already becoming clearer. Even Canada, with her reduced annual vote of \$34 millions for defence, comes into the same picture. Her self-reliance admittedly does not extend beyond coastal protection in the narrower sense, but imperial importance attaches to the Defence Minister's announcement that during the past year a survey had been made of 700 industrial plants adaptable to the output of munitions.

The Crisis in France.—When we went to press last week we were in time to record the intentionally wounding rebuff that had been administered to M. Blum by the Senate. To-day, a week later, M. Blum is still in office; but the French political crisis is also still unresolved; and he is now being assailed by troubles on the Left as well as on the Right. Out of patriotism M. Blum decided to swallow the Senate's insults without resigning, and to prepare a new and complete financial programme. Meanwhile, the animus against him among his opponents on the Right has been increased, strangely enough, by the difficulties that the Parisian artisans have been making for him. On the 24th—the very day on which the Prime Minister was being ill-used in the Senate—the 20,000 workers in the Citroën motor-car factory suddenly started a stay-in strike. The movement has since spread; some 35,000 workers in all are now involved; and, at the moment of writing, neither the Prime Minister himself nor the C.G.T. nor the French Communist Party has been able to induce the strikers to cease from action which can only have the most dangerous effect upon the prospects of the parliamentary democracy at home and upon the position of France in the world. Moreover, a national Government on a genuinely national basis seems as far off as ever, in spite of the efforts of M. Reynaud. But the diehards on the Right are taking less and less trouble to conceal that what they are manoeuvring for, under this specious title, is something just the opposite of what the words ought to mean. A genuine national government could only be built round the leading parties of the Front Populaire. The diehards are demanding a "cabinet of personalities" which would bear no relation, in its composition, to the will of the French electorate as it was expressed at the last general election. Latterly it has been almost common form in French domestic politics for the electorate to put the Left into power and then to find itself being governed by the Right again before the interval between elections is more than half over. Is this now going to happen once again? In the present state both of French tempers and of international temperature, it is not easy to believe that the old trick of French politics could be repeated this time with impunity.

The Plebiscite in Great Germany.—While in Austria the process of *Gleichschaltung* is going full-speed ahead, with major consequences for democrats, intellectuals and Jews, and considerable effects upon the life of the whole population, the Nazi plebiscite campaign is also in full swing throughout the *Germanisches Reich Deutscher Nation*, as Herr Hitler has taken to calling his new empire. The latest repercussions of the *Anschluss* of Austria upon other "unredeemed" German minorities are noticed separately on page 7. In the plebiscite campaign itself the outstanding features up to date are the fierce denunciations of Dr von Schuschnigg and the marked relaxation of the hitherto unremitting offensive against the two branches of

the Christian Church. The principal speakers seem to be concentrating on the straight issue of German national unity and keeping out of all ideological by-paths. The cue was given, in characteristically brutal language, by Herr Hitler's plebiscite commissioner in Austria, Herr Bürckel, in his opening speech on the 24th. He denounced Dr von Schuschnigg's "Christian Austria" on the ground that God had created the Austrians of the same blood as the Germans. It was for National-Socialism to look after what was national and for the Church to care exclusively for souls. In a speech of Marshal Goering's in Vienna on the 26th the Church was spared the castigation meted out to Jews and Legitimists. "National-Socialism now [*sic*]," said the Marshal, "was inspired with a deep faith in God and was not an enemy of the Churches so long as they kept strictly to saving souls." In a diocesan circular which was read in all the churches of Austria last Sunday, Cardinal Innitzer and three of his episcopal colleagues went far indeed to meet Herren Bürckel and Goering's demands by blessing the Nazi campaign against "Bolshevism" and advising their flock to vote for the Reich in the plebiscite. The Austrian Catholic prelates had been anticipated by the superintendents of the little Austrian Protestant Church, whose declaration has been given great prominence in the Nazi Press. On the other side, Dr Goebbels has suppressed the anti-Christian Nazi newspaper *Durchbruch*, and Herr Hitler himself has presented some ecclesiastical furniture to a Protestant Church at Dortmund. The probability is that the campaign against the Churches will be resumed as soon as the Austrian Catholic votes have been safely garnered in. But there is just a possibility that the *Anschluss* is to be the signal for a change, throughout the Reich, from Herr Rosenberg's policy towards the Churches to Signor Mussolini's.

The Fate of Austria.—Before Austria finally sinks into the position of a province of Nazi Germany, we wish to register a most emphatic protest against the assumption widely made in the British Press—and repeated this week by the Archbishop of Canterbury and others—that sooner or later this conclusion was inevitable and right. It was neither. In 1919 the allied Powers rejected the desire of the despairing people of Austria to coalesce with the Germany of the Weimar Republic. That refusal was a grave wrong. Later, the allied Powers, for reasons of shortsighted self-interest, refused to allow Austria to make preferential arrangements with her neighbours and so build the foundations of a Danubian federation. That refusal was both wrong and foolish, for it withheld the means of achieving the end which the Allies desired. And so the story unfolded to the time of the tragic mishandling of the proposal for the Austro-German Customs Union. But in 1938, in spite of all the drawbacks of their isolated position, the majority of the Austrian people clearly did not wish to be absorbed into a totalitarian Germany. The evidence of the plebiscite to be taken on April 10th, the result of which is a foregone conclusion, will prove nothing to the contrary.

Nor was the *Anschluss* an economic necessity. The economic affairs of Austria in the last few years have been handled with much shrewdness and wisdom; her finances compare very favourably with those of most Central European States, and she has secured more than her share of trade recovery. In spite of the size of Vienna, the proportion of Austria's population living in urban areas is smaller, her degree of self-sufficiency in agricultural products is greater, than those of Switzerland, and her territory is almost as well endowed by nature for a great tourist traffic. Given reasonably free conditions of trade in Central Europe, Austria could certainly have lived economically. Given reasonable facilities to make special arrangements with her neighbours—including close cultural relations with Germany—a free Austria would have been the natural link between Germany and the Danube basin in building up a federated Europe. Post-war Austria was not the economic absurdity that is

commonly supposed. She was made so by the folly of an economic policy for which the allied and associated Powers are chiefly to blame. In the event her individuality has been blotted out by the onward march of a militant pan-Germanism, and the hope that liberty might survive and grow in a Germanic country at the very heart of Europe has—for a generation—been crushed.

Czech and German.—The *Anschluss* of Austria is having its repercussions among other "unredeemed Germans." There have been disturbances in the two mainly German districts of Eupen and Malmédy which the Versailles Treaty assigned to Belgium; and the Flemings have pointedly dissociated themselves from the disapproval expressed by the Walloons. There has even been a resumption of Nazi propaganda activity among the tiny minority of Germans whom the North Schleswig plebiscite transferred to the Danish side of the frontier. The heaviest German pressure, however, has been felt, as was to be expected, neither in Denmark nor in Belgium, but in Czechoslovakia. There the German Press has raised a hue and cry in which the Polish Press, but not the Hungarian, has now joined. And the internal pressure is even more severe than this drum-fire from abroad. The secession of the so-called "Activist" German parties from the coalition supporting the present Government in Prague is now complete. The German Agrarians have been followed by the German Christian Socialists (i.e. Catholics) into Herr Henlein's camp, while the third and last "Activist" Party, the German Social-Democrats, have pitched their tents in no-man's-land. Without joining Herr Henlein, they have left the Government; and have explained that, while they will continue to support the Government on questions touching the sovereignty and defence of Czechoslovakia, they will not be associated with the Government when it comes to a settlement of Czech-German differences inside the republic. Meanwhile, Herr Henlein, who now finds himself at the head of the strongest single party of any in Czechoslovakia, is calling for parliamentary and municipal elections on the ground that, if Czechoslovakia is a democratic State, the electorate ought to be given an opportunity of expressing its wishes in regard to an entirely new situation. The Czechs, on their side, are exerting themselves to close their ranks; but though the present Prime Minister is himself a Slovak the Slovak Clerical Party has hitherto refused to join the coalition. At a party meeting held at Bratislava on March 24th, they decided not only to keep aloof from the coalition but also to intensify their campaign to win autonomy for Slovakia.

Everything thus turns on the question whether the Czech majority of the present Coalition can come to terms with the Henleinists; and this issue was clarified in a broadcast

address on Monday night by the Prime Minister, Dr Hodza. He announced that all existing laws and measures relating to the German-speaking minority in Czechoslovakia were to be consolidated into a new Act, which was to form the basis for a settlement of the minorities problem. There was to be no denationalisation of German, Magyar, Polish or Ruthene citizens of the republic, any more than of the Czechs or the Slovaks. Germany had given assurances of her intention not to interfere in Czechoslovakia's internal affairs, and these assurances had been repeated at the moment of the *Anschluss*. Dr Hodza also spoke warmly of Mr Chamberlain's statement of the British Government's policy in regard to Czechoslovakia. The points at issue are now coming into focus. The Germans in Czechoslovakia can now be reasonably sure that they are going to be treated as "first-class citizens"; that their nationality is not going to be undermined in violation of the letter and spirit of the law of the land; and that municipal affairs in German districts will in future be in German hands. On the other hand, the Czechs do not contemplate agreeing to territorial autonomy for the German districts and *a fortiori* not to their secession from the republic to the Reich. It is on this basis that the gulf must be bridged—if it is the genuine wish of both parties to bridge it at all.

* * *

Confusion in Washington.—Both Congress and the Supreme Court have this week given President Roosevelt a little of what he wants. On Monday the Court found part of the much-debated Public Utilities Act to be constitutional. The clause in question was that which compels holding companies in the public utility field to register with the Securities and Exchange Commission, and to become subject to rigid control in the issue of new securities, the acquisition of new properties, and other aspects of their activities. The Court's decision did not, however, cover the famous "death sentence" clause, under which disconnected utility "empires" are to be dissolved, and this clause will have to come up for adjudication in the future. The contribution of Congress to the President's pleasure was the passage by the Senate by a close vote of his Bill to reorganise the executive branch of the Government. In the main, this Bill places in the hands of the President the power to organise the National Executive, for which he is solely responsible, in a more efficient manner. The Bill also includes provisions which might have the effect of increasing the President's personal control over the Civil Service, and it abolishes the office of Comptroller-General.

* * *

Some such reorganisation as this has for many years been recognised on all hands to be necessary. But this particular Bill of the President's has been violently assailed by those who affect to see in it a sign of Mr Roosevelt's alleged Fascist ambitions, and also by that large section of opinion which still holds to the hallowed American tradition that the only good Government is an ineffective one. The vote in the Senate therefore became something of a test for Mr Roosevelt, and the result shows that he has still not entirely lost control of Congress. On the other hand, the Finance Committee of the Senate has been busy amending the Revenue Act in such a way as to abolish entirely the Undistributed Profits Tax, and to modify severely the tax on capital gains—two imposts which have been very close to the hearts of the New Dealers. Thus it is no longer possible to say who is master in Washington. As happened with Mr Hoover, the first effect of economic recession has been to create such dissension in Washington as to make any coherent policy impossible. The confusion is deepened by the fact that neither the President nor Congress seems to be very sure about what they want. It is little wonder that with such a confusing situation in Washington, Wall Street should have lost its never very robust faith in the imminence of a trade revival.

South African Protectorates.—The statement made this week by the Secretary for the Dominions on the future of the High Commission territories, has put an end to the persistent rumours in South Africa that the transfer of one or more of the territories to the Union was imminent. Union opinion showed signs of restiveness, and it was thought that General Hertzog would press hard for such a decision before the general election. The actual result of his discussions with Whitehall is much more cautious and palatable to British opinion. In order to increase co-operation between the two Governments, which it is agreed must be the prelude to any transfer, a Standing Joint Advisory Conference is to be set up. Its members will be the Secretary for Native Affairs and two other Union officials, and the three resident commissioners of Swaziland, Basutoland and Bechuanaland. Further, the Union Government are to publish to native and European audiences alike the terms on which they would propose that transfer should be effected. Only by such deliberate steps as these can the conditions be created under which a permanent solution of this vexatious problem will be possible.

* * *

Australian State Elections.—Mr B. S. Stevens has repeated, in New South Wales, Mr Lyons' feat in being returned to power for a third successive term. Like Mr Lyons, he heads a coalition of the United Australia and Country parties, and, like Mr Lyons, he appealed on a firm record of economic prosperity. He had, in addition, the concentrated advantage of public distrust of Mr Lang, who still heads the Labour Party in New South Wales, but who has to face to-day powerful opposition within his own party. Mr Lang has lost control of a newspaper which used to be one of his main channels of publicity, and a strong section of the trade union wing is almost as bitterly opposed to him as to the Stevens-Bruce Government. In South Australia, Labour has made little advance, but the success of Independent candidates has deprived Mr Butler's Government of its majority and created a deadlock. Such a result is uncommon in Australia, where party politics are highly organised, but the burning issues of the elections—notably the control of betting, which from all accounts has become a menace to the State's social and economic life—cut across all party lines.

* * *

The Electricity Grid.—The Central Electricity Board is frequently and deservedly cited as one of the most remarkable examples of State participation in industry. The Board was formed to meet a clear need which could not be filled by private industry, and it has acquitted itself both with technical efficiency and with financial success. The finances of the Board are discussed in our Investment Section on page 23, and it need only be said here that the financial results are such as to give the Board's stocks a high credit rating. Financial success is not, however, the only test of such a large undertaking. The Board was formed to realise two wider economies. By building the grid, which connects up the whole electrical system of the country, it was possible for the industry as a whole to operate with a very much smaller proportion of its total generating capacity held in reserve to meet the peaks of demand. And, secondly, by concentrating generation on the largest and most efficient stations it was hoped to reap substantial economies in the cost of generation. The scheme is now largely completed; the grid has been built, and of the Board's nine areas only one, the North-Eastern, is not yet completely connected. But already 97.4 per cent. of the electricity made available for public supplies in 1937 was generated for the Board, and 50 per cent. of the total units generated were supplied by fifteen of the most economical stations, which ran continuously throughout the year.

* * *

The capital cost of the grid was about £30 millions. Much the largest part of this capital cost is, of course, non-recurrent; and the scheme would have proved its advantages to the community even if the resultant savings had

taken a long time to mount up to the original cost. But, in fact, success has come much more quickly than that. The Board has been trading for five years only, and some parts of the scheme have not been connected for the whole of that period. Nevertheless, the economies resulting from the lower proportion of surplus generating capacity are estimated to have amounted already to about £17 millions, or more than half the capital cost, and this does not include the economies realised on fuel consumption. There is thus no room for doubt that the grid scheme has been a striking success. The Board has, of course, been powerfully assisted by the strong flow of economic recovery during its formative period. But this is hardly a detractor from the credit that is due to the originators and administrators of the scheme, since they had the boldness to forecast a substantial rise in the consumption of electricity. As events have turned out, the increase in electricity production over the period 1929 to 1937 has been 123 per cent. in Great Britain, compared with 45 per cent. in the rest of the world. Thanks very largely to the grid, we have thus made excellent progress in catching up in a field where a decade ago we were tending to lag behind.

* * *

F.B.I. on Industrial Location.—It is not surprising that the Federation of British Industries, in their Evidence before the Royal Commission on the Geographical Distribution of the Industrial Population, published on March 31st, should have endorsed the Board of Trade's view that the present distribution of Britain's industries "approximates very closely to the distribution which enables each of those industries to operate most economically and efficiently." Since the Federation confined their opinions to "purely industrial" considerations, they were able to present a formidable case against any proposals that the State should interfere with the movement and location of industry. An industrial structure, erected upon free trade and manufacture for export, has since the war been transformed by changes in overseas demand and British fiscal policy. Population has been redistributed in favour of domestic, as distinguished from export, activities. Between 1921 and 1935, the population of South-East England rose 42.7 per cent., or double the average increase for all Great Britain. Employment in "service" industries has risen (between 1923 and 1937) 40 per cent. more than employment in "production" industries; and, in manufacturing itself, employment has increased most in industries producing semi-durable consumption goods for domestic markets. Most of the industries which have grown up in or near London, the Evidence points out, must by their nature be near large markets, and could not be fostered elsewhere. It is not so much that industry has moved from the North to the South, but rather that London is acquiring the industrial trades and occupations essential to the equipment of any large urban area. Even now, the industrialisation of the South-East is small, in relation to the 14 millions of population in that region. Nevertheless, as the Federation admit, "these movements have given rise to developments which from the national point of view may be considered as disadvantageous." And it is hardly true that "if, in some cases, an industrialist has made mistakes, he has paid for them himself." The community has paid, in the cost of transport facilities, social services, the relief of distress and the rehabilitation of distressed areas, in ill-health, overcrowding, and traffic congestion. The Federation concede that the Special Areas should be treated as "a national social problem," above considerations exclusively of individual profit or loss. Should not the whole problem of national industrial development, however, be similarly viewed, since grave social disadvantages may be implied in extreme urban concentration?

* * *

Franco's Advance.—The past week has seen a further rapid advance in General Franco's Aragon offensive. Very little further progress has been made

south of the River Ebro beyond the towns of Alcañiz and Caspe which marked the furthest point of the first phase of the attack. North of the river, however, an advance has been made this week as rapid as the first advance south of the river a fortnight ago. From the neighbourhood of Huesca and Saragossa, the line has been carried from thirty to sixty miles to the east, and in its centre it has crossed the border into Catalonia and threatened the important town of Lerida. After a retreat which at times became almost a rout, the Republican Army has in the last few days been showing much stiffer resistance and has been counter-attacking near Teruel. The Insurgents, however, retain a very heavy superiority in aircraft and heavy artillery, and a note of despair is beginning to mingle with that of resolution in the announcements of the Republican Government in Barcelona. The capital itself has been spared any further visitations from the air, but the smaller towns all down the coast are being slowly battered out of existence by the Italian and German aircraft at General Franco's disposal. Very little effort is being made to conceal the extent to which the success of the offensive has been due to intervention from the Rebels' Fascist allies. The Non-Intervention Committee, however, is still deadlocked, and, though nervousness is naturally on the increase in France, the steady refusal of the British Government to abandon non-intervention on its part, or to recognise its breach on the part of others, inevitably holds the French severely in check.

* * *

Chinese Successes.—The news from the Far East during the past week has been almost uniformly of Chinese military successes. It would be rash to take too literally the Chinese proclamations of crushing victory for their own troops and of disastrous routs for the Japanese. But it is clear that the Japanese Army has suffered a severe reverse. For months past the grand strategy of the Japanese High Command has been to get control of the railway system of North China. The main railways form a gigantic "H," and of the four corners of the system the Japanese hold three—namely, Peiping and Tientsin in the North and Nanking and Suchow in the south-east corner. The Chinese, however, still hold the Lunghai railway, which is the cross stroke of the H, together with the vital junctions, Chengchow at its western end and Suchow at the eastern end. The main thrust of the Japanese attack has been southwards from Tientsin towards Suchow. Their advance for months past has been disappointingly slow, but they had penetrated to within a day's march of Suchow. But now it appears that they have been repulsed at the head of their advance, while the Chinese, taking full advantage of their great superiority in numbers, are harassing the Japanese communications, and claim to have cut the railway in the rear of the invader at several points. There are also reports that the Japanese are being steadily attacked by Chinese guerillas on the extreme right flank of their northern army in the province of Shansi. It is fully possible, indeed even probable, that when the Japanese have brought up reinforcements of men and artillery they will be able to resume their advance. But the events of the past week have shown that the Chinese Army is still a formidable fighting force, and that the Japanese still have to face a long and punishing war before they can achieve their objectives, or even be in a position to make peace gracefully. And in the setting of world politics and Japanese economics that is a major success for Chinese arms.

No Signs of Recovery

NEW YORK, March 22.—The first quarter of 1938 is now all but completed, and, in place of the expected spring upturn, the past three months have as yet brought nothing that can convincingly be presented as evidence of recovery. At the turn of the year, the more optimistically inclined forecast a recovery in the index of production from 84 in December to 100 in March; expectations of 90 for March were regarded as pessimistic. While the figure will not be available for some weeks, it appears probable that the March index will be no higher than the December figure, which was 79, or 84 adjusted for seasonal fluctuations.

The data for February are not yet available, but it is conjectured that February and March were not greatly different from January, when the index of production was again 79 or, adjusted, 81. In short, for some four months the index of production has been in the vicinity of 80 (1923-25=100).

The most commonly quoted index is the American Iron and Steel Institute's estimate of steel production, stated as a percentage of capacity:—

STEEL PRODUCTION (Percentage of Capacity Operated)			
Week beginning 1937		Week beginning 1938	
Nov. 6	48.6	Jan. 3	19.2
" 13	41.0	" 10	25.6
" 20	36.4	" 17	27.8
" 27	31.0	" 24	29.8
Dec. 4	29.6	" 31	32.7
" 11	27.5	Feb. 7	30.5
" 18	27.4	" 14	30.7
" 25	23.5	" 21	31.0
		" 28	30.4
		Mar. 7	29.3
		" 14	29.9
		" 21	32.1
		" 28	33.7

Each week in March the index was slightly higher than in the previous one, and it is now higher than it has been for about four months. March has also seen an upward movement in lumber production and shipments, and a similar tendency in miscellaneous car loadings; and there are some fragmentary signs of quickening in building.

On the other hand, news from the motor industry so far is negative; and retail trade appears to be falling back. Added together, the evidence lends support to the view that, during the winter months, the American economy has been forming a bottom; and in the past few weeks some indices have turned up, while others have continued to decline. These clues are still too scattered and indecisive to be accepted as proof of a turning movement.

Decline in Cheques Drawn

Probably no data more clearly reflect the flow of the American economy than the figures of "debits to individual accounts." In July, 1932, approximately the lowest month of the depression for production, debits amounted to \$25,239 millions. In February, 1933, the month before the closing of the banks, they were \$22,437 millions. In September, 1934, just before the upturn, they were \$24,009 millions.

DEBITS TO INDIVIDUAL ACCOUNTS (\$000,000)				
	1934	1935	1936	1937
January	...	30,063	35,424	39,479
February	...	25,730	31,572	34,526
March	...	31,744	37,496	42,003
April	...	31,651	34,783	37,133
May	...	30,206	33,225	34,406
June	...	31,581	37,505	36,453
July	...	33,394	34,816	36,903
August	...	30,376	31,469	31,886
September	24,009	29,141	33,248	33,360
October	26,750	32,695	37,313	36,073
November	24,751	32,344	35,869	31,593
December	30,995	36,373	45,896	39,103

Thus, in February, 1938, the cheques drawn were approximately equal to those drawn in February, 1935, which were similar in amount to those drawn in February, 1934. They were, however, about 25 per cent. below February, 1937, while production was 30 per cent. or more below the previous February's level. Too close a parallel should not be expected—for example, the debits of January, 1938, were actually slightly above those of August, 1937, while production was about 30 per cent. lower.

The cheques drawn in February are not conspicuously out of line with current production, but they are far out of line with bank deposits. In February, 1928, when demand deposits were approximately at the present level, debits exceeded \$54,000 millions, more than double last month's figure. In other words, the turnover of bank deposits is now only about half what it was a decade ago.

France

Financial Plans

PARIS, March 31.—The Senate has granted M. Blum 5,000 million francs to meet the liabilities maturing at the end of March. They refused to vote 9,000 millions he asked for, and contended that France could wait no longer for a comprehensive financial plan, to be put into effect, if necessary, by a Government of National Union. M. Blum promised that his Government would produce a financial programme forthwith.

The Government's financial plans will be presented to the Chamber on Friday, with a view to securing their authorisation before the Stock Exchange re-opens on Monday. Nothing definite is yet known about the Government's precise proposals, but it is believed that they may combine certain increases in taxation with measures to increase industrial activity. To implement them will require plenary powers, which M. Blum and the Socialists recently refused to grant to M. Chautemps. The key to the immediate future of French politics is held by the Radicals. How will they react to proposals which will once again strike at capital?

M. Blum's Dilemma

M. Blum's task is difficult. His first job is to reduce the gap between expenditure and the yield of taxation. The Left are not ready to concede extra hours of work to increase production, and at the same time they cry out for higher social expenditure. The second part of his task is to obtain a gesture of confidence, in the shape of subscribing a loan of many thousand million francs, from investors. And so far this is ruled out by the state of industry and the public finances.

What can M. Blum do? On the one hand, there is the way of coercion: a forced loan, a compulsory conversion, exchange control and supervision of key industries. Such plans caused the Senate to throw out M. Blum's first administration a year ago, and are now strenuously denied in official quarters. In principle, they would be contrary to democratic practice and not in accordance with the Tripartite Agreement. Moreover, they would involve a drastic modification of certain sections of the New Deal, and M. Blum is not in a position to exact such a sacrifice from his followers.

Confused Situation

The position remains uncertain. The Senate is hesitant. On the one hand, they reject a national coalition including the Communists. On the other, they dare not yet overthrow the Blum Cabinet. Meanwhile, events take their course. General Franco continues to advance in Spain. The Anglo-Italian conversations are still in progress. The franc is still sagging. And the unity of the Popular Front becomes appreciably more brittle.

M. Jouhaux, the trades union leader, was recently prevented from addressing a meeting by a Communist demonstration. On the other hand, fresh stay-in strikes in the

metal trades are disavowed by the Communists, who accuse the Socialists of initiating them in collaboration with the Trotskyites. The strikes go on, although everyone seems to condemn them, and it is strange that the Government has so far been unable to arrange a settlement.

Underlying Confidence

These political difficulties do not, however, imply that there is an entire lack of confidence in France. The country is still suffering from the vast losses of the Great War. The material losses of those years and the destruction of the flower of French youth are particularly felt now, twenty years after victory, in the industrial as well as the commercial and political spheres. But the fundamental French virtues of thrift and industriousness are unaltered, and—in spite of the errors of the politicians—the Popular Front represents, not only material demands, but also new ideals, national and social, which will ensure that France will be no less great in the future than in the hey-day of the past.

Fiscal receipts in February amounted to 3,161 million francs, of which 2,911 millions were ordinary receipts, or 132 millions less than the estimates. All items showed a deficit compared with the estimates, except the turnover tax and stamp duties—in spite of the fall in the franc, the sharp rise in prices and last July's increase in the rates of tax. Receipts from indirect taxes and estate duties were only 340 millions higher than in February, 1937, and the fall of 22.4 millions in the yield of taxes on railway transport, and of 6.2 millions in the yield of taxes on transport by road underline the recession in economic activity. These figures would—if more emphasis were necessary—lay stress upon the need for financial reform, since they prove that the deficit on the ordinary Budget will exceed the estimated figure.

Coal output in February was 3,770,812 tons (20.8 working days), against 3,705,056 tons in January (20.5 working days), and 3,799,159 tons in February, 1937 (21.6 working days). Average daily production was thus 180,808 tons, compared with 180,178 tons in the previous month. The number of men employed at the end of February was 246,305, against 245,489 at the end of January.

Germany

British Foreign Policy

BERLIN, March 30.—In Mr Chamberlain's statement on British foreign policy on March 24th, the passage that attracted most attention here was that in which he spoke of the "probability" of countries other than those directly involved, being drawn into a European War, and in which he also emphasised the Anglo-French connection. His refusal to guarantee the independence of Czechoslovakia directly had been foreseen. The German Press reacted characteristically by expressing surprise that the question of Czechoslovak independence was raised at all. The chief economic journal remarks "this problem has never been raised from the German side, but only from the English and French sides," and attributes the "dangerous nervousness" of Prague exclusively to English and French panic-making. On this it might be commented that the question of Austrian independence was also not raised from the German side, until that independence had disappeared, although the agreement of July, 1936, had recognised Austria's independence as her permanent status.

If force is threatened against Czechoslovakia, which at present is by no means probable, Mr Chamberlain's indication of British policy might not prevent it. It is believed here that, unless France had from the first a definite British guarantee of support, she could hardly resort to arms, were Czechoslovakia attacked. To do so would be to commit herself to a general war, involving the invasion of Germany, for which she, alone or with Russia, is probably not strong enough; and, presumably, Czechoslovakia would, in the meantime, have disappeared. If Great Britain desired to intervene effectively, she would have to intervene from the first. At present, the propaganda campaign against Prague is relatively quiet, and the Sudeten-German question is, for the moment, most alive on the southern side of the frontier, where the Henlein party shows increasing activity.

Economic Measures in Austria

The economic assimilation of the new Austrian Land proceeded rapidly last week. Contrary to expectations, the Customs frontier was suddenly abolished in part; that is, Austrian goods exported to the old Reich became duty-free,

but liable to German excise duties. With regard to foreign exchange, however, Austrian goods remain foreign, in that exchange certificates for payment, and permission, where this is the German rule, are required.

The lapse of the Austro-German commercial treaty of April 12, 1930, will entail international adjustments. With the disappearance of the treaty-duties conceded to Austria, the products of the most-favoured countries would be automatically subjected to increased German rates. As this is undesirable, it is decreed that the Reich duties on goods from the most-favoured countries shall remain for the present unchanged.

The Austrian Customs frontier against Germany remains. Measures have been taken to prevent a "selling out" of Austria or the excessive outflow to Germany of raw materials; and the German Supervision Boards will fix prices, profit-margins, and payment and delivery conditions, for Austrian goods.

Since March 28th, Austria has had a double currency, banks, traders, and communications accepting both schillings and reichsmarks; but the banks are paying out marks in exchange for schillings, and are going over to mark accountancy. Retail establishments have been ordered to list their prices in both currencies, at the new rate Rm. 1 = Sch. 1.50. Price-raising has been forbidden.

Austrian foreign-exchange control has been brought into line with German. The penalties for violation have been made much more severe. Property may not be removed abroad or disposed to the advantage of foreigners. Transactions in instruments of credit, cheques, bills, claims against foreigners, real estate, securities and precious metals, are regulated on Reich lines.

Foreign exchange values must be offered to the Reichsbank. The existing Austrian regulations for delivery of exchange receipts for exports are made more stringent, and measures have been taken to prevent the outflow of assets in cases of emigration.

Austrian Industrial Development

General Goering has made a long statement of proposed development measures. These include the construction of Reich motor-roads and the improvement of other roads, water-power extensions, mining and mineral oil exploitation, land amelioration, the intensification of agriculture, the establishment of dairies, public and private building and renovations, new railways, accelerated work on the Rhine-Main-Danube Canal, and a Danube port at Vienna. A cellulose mill will be started, and also chemical works, in particular for the production of oil from coal.

Direct rearmament measures, including the erection of barracks, the construction of aerodromes, new aviation works and increased output of aeroplanes are part of the programme. In accordance with a former, but recently revoked, Reich measure, tax exemption will be granted on investment for the expansion of industrial and agricultural plant.

The recently founded Hermann Goering Works, a creation of the Reich for iron-ore and iron production, will take over the chief Austrian iron and steel concern, the Alpine Montan A.G., whose production will be increased. The German Vereinigte Stahlwerke A.G. (Steel Trust) holds a majority interest in the Sch. 60 millions capital of the Alpine Co.; presumably a financial reconstruction will be required. The Styrian iron-ore fields are estimated to contain 200 million tons of an average ferrous content of 36-42 per cent.

The immediate strengthening of the Reich's ore and iron position will, however, be inconsiderable. Austria's ore output in 1937 was 1,880,000 tons, with an iron content of 667,000 tons; pig-iron output was 389,000 tons, and steel output 650,000 tons. These are small quantities compared with the Reich's ore imports of 18 million tons and its steel output of 19 million tons. Austrian exports of iron-ore were 383,000 tons, and Austria's total export of iron, iron goods, and scrap was only 273,000 tons.

The Austrian engineering, machinery, and electro-technical undertakings are already in great part Reich-owned or Reich-controlled. This is the status of 54 Austrian concerns, to mention only the important ones, including those which are subsidiary companies of German undertakings. The prospects of exploiting Austrian mineral oil are not very good; and to achieve any considerable results very large investments will be necessary.

Nothing new has appeared about Austrian foreign loans; but it is noteworthy that German-held dollar bonds have again weakened, and that the reichsmark section of the Young Loan last week fell to 6½ points below its highest quotation of 1938. In February the number of hours worked in industry was 11 per cent. higher than in February, 1936, and the increase was greatest in machine manufacturing. Lagged steel

production in the first two months of the year was 3,582,400 tons, compared with 3,058,700 tons in 1937.

The remission of taxes to encourage large families is to be extended; in particular, the repayment of marriage credits will be remitted, on condition that the debtor remains on the land. Money last week was in demand in connection with the approaching month-end. Of the Reichsbank's February-end credits of Rm. 929 millions, Rm. 747 millions were repaid in the first three weeks of March.

Italy

Record Capital Issues

TURIN, March 14.—This will be a record month in the history of capital issues by Italian joint-stock companies. Shareholders' meetings of both small and large companies have, one after another, approved of capital increases ranging from 10 per cent. upwards of existing capital. In recent years, capitalisation has been modest:—

	1935	1936	1937
New Companies : Number	2,499	1,976	2,195
Capital (million lire)	311	354	2,283
Old companies :—			
(1) Increased capital :—			
Number	1,540	1,820	1,940
Capital (million lire)	2,787	2,608	3,281
(2) Liquidated :—			
Number	2,003	1,851	1,530
Capital (million lire)	1,511	924	2,053
(3) Diminished capital :—			
Number	989	923	772
Capital (million lire)	1,810	1,327	621
Net increase (+) or decrease (—)	493	125	656
Capital (million lire)	—224	710	2,889

The total number of joint-stock companies now stands at 20,018, with a capitalisation of 47,695 million lire. The increases now projected will be mainly a matter of writing up. The force behind the movement is the recent tax of 10 per cent. on the capital of joint-stock companies. The tax decree authorised companies to issue new shares up to the amount required to pay the tax; and, to make the shareholders swallow the pill happily, authorised companies to issue, at the same time, up to two bonus shares for each paid-up new share. The issue of bonus shares can be justified by the writing-up of undervalued assets; for all assets, in a general way, can be deemed undervalued since the alignment of the lira in October, 1936.

The reaction to this enabling legislation will probably not be uniform among all the 20,018 companies. Most of them are one-man or family concerns, which will not be over-anxious to increase their capitalisation. The most important companies, whose shares are quoted on the Bourses, will, by watering their capital, achieve two objects: first, they will be able to distribute higher dividends, without increasing the percentage, and so without incurring the penalty of the new progressive taxation on dividends over 6 per cent; and, secondly, by writing up their assets, they will increase the yearly amortisation sums which, according to income tax regulations, they are allowed to deduct from gross income.

Upward Trend in Trade

Signor Lenti has analysed in *Il Sole* the recent trends in Italian foreign trade. Excluding trade with the colonies, the figures are as follows (in million lire):—

	Imports	Exports	Import Surplus
1934	7,582	4,965	2,617
1935	7,662	4,489	3,173
1936	5,883	3,830	2,053
1937	13,489	7,849	5,640
1937*	7,958	4,631	3,327

* Calculated in pre-alignment lire.

Expressed in index numbers (1929 = 100), the volume and value of foreign trade have moved as follows:—

	Volume		Average Prices	
	Imports	Exports	Imports	Exports
1929	100	100	100	100
1934	75.54	73.10	46.56	45.51
1935	73.11	65.92	48.61	45.63
1936	45.98	49.31	58.89	51.14
1937	67.95	80.42	92.00	64.75

Thus, the volume of imports has fallen by 32.05 per cent. since 1929; while exports fell only 19.58 per cent. But, since import prices declined only 8 per cent., while export prices fell 35.25 per cent., the terms of trade moved against Italy, and the surplus of imports in value reached a record high level.

This deterioration in the terms of trade is most marked in the case of semi-finished and finished products. As food and raw materials are a large part of imports, and semi-finished and finished products bulk largely among exports, improvement can only be achieved by a relative increase in the export price of finished products. How far such an increase could go without jeopardising exports is the crucial problem of Italian foreign trade.

Denmark

Repercussions of Events in Europe

COPENHAGEN, March 23.—The clouded European horizon has given rise to discussions about the expediency of forming a coalition Cabinet. Certain sections of the Press forecast a reconstruction of the Cabinet at least before Easter. So far no official statement has been made; but the general public has been visibly impressed by the events of the last fortnight. Many people point to the large extraordinary grants made by the Parliaments of Norway and Sweden for their defence forces, and demand that this country should follow suit. The Government will not, however, permit itself to be rushed into any panic measures.

Meanwhile, the elaborate Bill to adjust agricultural debts has receded into the background. Moreover, it is rumoured that the negotiations about constitutional reform are not progressing satisfactorily.

The forthcoming Budget and the additional grants for the expired financial year will together exceed 523 million kroner. Taxation and duties are estimated to yield 516 million kroner. On the expenditure side, about one-third, or 165.2 million kroner, will be used for social purposes, while the military estimates, with one small exception only, are so far kept within the strict limits laid down in the Defence Act.

Another important conversion has recently taken place. The 5 per cent. Dutch loan of 1926 has been converted into a 4 per cent. loan amounting to 12,615,000 guilders, repayment to take place over a period of thirty years. The foreign exchange saved on this transaction will amount to 1½ million kroner in the first year, and the Treasury will save in all about 3 million kroner.

The foreign exchange position remains satisfactory. In some weeks the holdings of the Nationalbank have increased, while in others outgoings have exceeded ingoings, but the net balance tends for the present to fluctuate around 88 million kroner. Another important item, timber, has been transferred to the free import list. Annual timber imports are valued at about 45 million kroner.

Business Caution

The 1937 accounts of the steamship companies make pleasant reading for the shareholders, and boards of directors in most instances have thought fit to compensate shareholders for their many lean years by paying dividends ranging from 10 to 30 per cent. But the prospects for 1938 are not bright. Although the tonnage of laid-up shipping is still negligible (33,000 tons at the end of February), the possibility of an increase cannot be ruled out. The February freight index was 130 (1935 = 100), compared with 135 for February last year.

The largest Danish trading and shipping concern, the East Asiatic Company, Limited, has felt the effects of the declining trend in business, and are only paying the same dividend as last year, namely 8 per cent.—despite an increase in earnings of 4.6 million kroner. The index of industrial production was 105 in February, compared with 104 in January. In February last year the index stood at 107.

Sweden

European Alarms

STOCKHOLM, March 19.—Events in Austria and on the Polish-Lithuanian frontier and reports of French military concentration on the Spanish border caused the leading political parties in Sweden, with almost unprecedented unanimity, to pledge themselves to support the Government's proposal to allocate an extra 50 million kroner for defence purposes. The idea of collective security is now dead in this country; to remain neutral is the nation's only aspiration in

Argentina

Recession and Foreign Exchange

BUENOS AIRES, March 12.—Dr Ortiz took office as President of the Republic on February 20th. In his address to Congress he declared his faith in democracy. Argentina, he said, had recently enjoyed a period of prosperity which had created a healthy feeling of optimism, but this prosperity seemed to be declining. On the following day Dr Groppo, the new Minister of Finance, dealt with this subject at greater length.

The drastic remedies and sacrifices necessary to strengthen the Government's finances and to protect the currency were still fresh in the public mind. The country should profit from experience and avoid a repetition of past misfortunes. The crops had been unfavourable, and there were symptoms of recession. Therefore, the greatest prudence was necessary in the administration of the public finances. The Budget estimates would have to be reduced. Approved expenditure was too high, and public works would have to be considered carefully. New issues must be stringently controlled.

The Central Bank recently issued a report on the exchange position. The official exchange market, it says, absorbs 90 per cent. of the exchange derived from exports. Out of this is paid the whole service on the foreign public debt and the cost of 83 per cent. of the country's imports. In 1937 payments for Argentine exports amounted to 2,095.2 million pesos at 15 pesos to the £1, and some 1,871.2 million pesos passed through the official market. The remaining 224 million pesos, derived chiefly from exports to neighbouring countries, was sold in the free market, which thus received only 10.7 per cent. of the total proceeds of exports. It also, however, received exchange from investments abroad.

The report goes on to explain that rates in the official market play a decisive part in determining local price levels, while those in the free market have relatively little economic significance. Prices of Argentine export products depend on the official buying rate, and of import products on the official selling rate. A depreciation of the peso in the official market would increase the cost of living with serious economic and social consequences. The report states that the disequilibrium of the free market became acute last January, when the Central Bank had to sell 56.7 million pesos of official exchange in the free market, because only 30.4 million pesos were offered, against 87.3 million pesos demanded.

Remarkable Fall in Exports

The progressive decline in exports during recent months became very striking in February, when the volume was only 766,425 tons, against 2,244,048 in the same month last year. Owing to higher prices, the fall in value was less marked; exports in February were valued at 126,463,884 pesos, against 274,320,169 pesos in February, 1937. This remarkable slump is mainly due to a big falling-off in shipments of cereals, and especially maize, exports of which fell from 760,859 tons in February, 1937, to no more than 20,099 tons last month.

There is now scarcely any old-crop maize available for export, owing to the very heavy shipments made early last year, while the new crop is not yet ready. Wheat exports also fell very considerably, as a result of the tendency of Argentine producers to wait in the hope of better prices. There has also been a big drop in exports of wool, hides and dairy products, though prospects for these are now improving.

Imports, on the other hand, are still considerably higher than last year, as is shown by the fact that the Customs revenue for 1938, up to March 9th, amounted to 71,957,850 pesos, or 12,607,271 pesos more than in the same period of 1937. In January there was an import surplus of 64,169 pesos, against an export surplus of 176,154,414 pesos in January, 1937. In contrast to the enormous export surpluses of the first five months of last year, there have now been eight successive months in which there has been either an export surplus far below the normal or even an import surplus.

There is no longer any doubt that 1938 will be a difficult year for Argentina, with no prospect of marked improvement until the next crops begin moving in December. The second official estimates of this year's wheat and linseed crops show reductions compared with the first estimates, while maize prospects have deteriorated further.

The outlook for the cotton crop has improved greatly as a result of rains in Northern Argentina in January and February. The first forecast of the Ministry of Agriculture gives this year's production as 72,000 tons, compared with 31,170 tons last year and 80,957 in 1935-36, which was a record year.

Decline in Timber Trade

Reports from the main staple industries are far from satisfactory. Hopes that the 5 per cent. reduction in export quotas agreed upon by the main European timber producing countries might have a stabilising effect on the timber market have not been realised. The situation will not improve so long as the large timber stocks held by Great Britain, Belgium, Holland and Denmark have not been absorbed. Some 150,000 standards of Russian timber have been offered for sale in Great Britain; and only 125,000 standards have so far been placed. Total Swedish timber sales at the beginning of March were only 250,000 standards, against twice that quantity at the corresponding date in 1937. Nor is the situation on the pulp market encouraging: of the current year's production only 80-85 per cent. has been sold. A 20 per cent. reduction in sulphite pulp production will probably be decided in the near future by the European sulphite pulp producers' organisation.

In order to cope with the situation on the paper market, considerable reductions in paper production have been decided by the various Scandinavian paper producers. The iron and steel market was dull during January and February, while a slight improvement could be noticed in March, when buyers again appeared in the market, attracted by lower prices.

Increased Exports

Foreign trade is still satisfactory, as is shown by the following figures:—

	(in million kroner)	
	1937	1938
	January	January
Imports	142	159
Exports	125	145
Import surplus	19	14

Exports show an increase of 18 per cent., while imports have risen only 11 per cent. A noticeable feature is that imports of iron and steel have substantially declined. Among exports, the biggest item is paper and pulp; exports of these commodities were valued at Kr. 46 millions, against Kr. 40 millions a year ago. The increase is due to greater volume as well as to higher prices.

Figures are now available for Sweden's trade with Great Britain during the whole of 1937:—

	(in million kroner)	
	1936	1937
	January-December	January-December
Exports to U.K.	374	476
Imports from U.K.	314	396
Export surplus	60	80

Wholesale prices continue to move downward, and the index of wholesale prices fell in February by 3 points to 134 (1913 = 100). The decline was particularly marked in the case of pulp, the index falling from 184 to 170. The price of consumption goods continued to show great stability.

The Stock Exchange has been weak ever since the beginning of the year, and the index of stock values fell in February from 176 to 173 (100 = par value). The money market continues to be exceptionally easy, and the competition for suitable investment objects is increasing. On account of the scarcity of Swedish bonds, investors have lately absorbed considerable amounts of Norwegian and even Finnish bonds. The cheapness of money is a stimulus to the building industry, one of the key industries, which, under present circumstances, is probably the chief support of Swedish prosperity.

Canada

Conservative Party Controversy

OTTAWA, March 12.—An important event occurred last week when Mr R. B. Bennett resigned the leadership of the Conservative Party, which he had held since 1927. While he gave a heart ailment as the reason for his retirement, the suspicion prevails that he resigned because he felt he could no longer rely upon the loyal support of the Right Wing of his party. The internal rift between the "diehard" and progressive elements in the Conservative Party, which developed in 1935 with the launching of Mr Bennett's "New Deal" programme, will come into high relief when the associations in each constituency begin to select their delegates for the convention called in the summer to choose a new leader.

There is the prospect of a keen struggle for control of the convention. Right Wing members will demand a return to the old orthodoxies of Canadian Conservatism, such as high protectionism and the abolition of all restraints upon business. Left Wing members, while advocating economic nationalism, desire stern governmental regulation of trade and industry, and favour a generous programme of social and industrial reform.

Local Relief Finance

Meanwhile, as the business recession becomes more serious, the King Ministry finds its problems increasing, and is again facing a crisis about unemployment relief. Municipal authorities all over the Dominion, who profess to be at the end of their financial tether, are clamouring for help from the provincial Governments, and the latter are insisting, in turn, that the Federal Government must increase its contributions for relief. The King Government refuses to increase its grants, and takes the view that the municipalities must look to the provincial Governments for help. The Liberal Ministry of Ontario is taking the lead on the provincial side, and it is being backed by the Governments of Quebec, British Columbia and New Brunswick.

The sudden bankruptcy of the Lake Sulphite Corporation, which was launched last year with a great flourish for the manufacture of sulphite pulp in North-Western Ontario, is surrounded with an aroma of financial and political scandal. Its plight is attributed by its directors to unforeseen costs in the construction of its plant, which is still unfinished, and inability to market a projected issue of first mortgage bonds.

The shareholders are not satisfied, and the Montreal Stock Exchange has arranged for a thorough investigation of the affairs of the company under the Quebec Securities Act. The Nipigon Company, a subsidiary of the Lake Sulphite Company, which makes groundwood pulp, has also ceased operations, and many people have been thrown out of work. The Ontario Government is involved, because it gave leases of large pulpwood areas on generous terms to the company, and opponents allege that it has been culpably negligent of the public interest, particularly in failing to make the underwriters of the bond issue implement their guarantee.

It is not expected that the Federal Budget will be presented until after the Easter recess, and, if there is any chance of including the tariff changes made necessary by a new trade agreement with the United States, it may be held back until May. For the first eleven months of the fiscal year revenue was \$468½ millions, compared with \$400 millions in the same months of the previous year, while expenditure amounted to \$439½ millions, compared with \$431½ millions. There are some adjustments to be made in the last month of the year, which will more than absorb the present apparent surplus, but it is estimated that the deficit may be kept down to about \$17 millions.

Business Slack

The general economic index of the Bureau of Statistics, after standing at 108.0 for the week ended February 19th, moved downward to 107.9 in the following week, and then, in the week ended March 5, moved sharply upward to 110.9, its best gain for several months. The following table shows the weekly movements in the index's component data:—

Week Ended	Car Loadings	Wholesale Prices	Bank Clearings	Complete Index
March 6, 1937.....	80.20	83.3	125.1	116.1
Feb. 19, 1938.....	76.61	83.6	90.6	108.0
Feb. 26, 1938.....	76.51	83.8	74.9	107.9
March 5, 1938 ...	79.60	83.5	100.4	110.9

Extreme caution still prevails in business circles, and there is great hesitation about making heavy forward commitments.

Letters to the Editor

Gas and Electricity

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of March 12th, Mr H. H. Williams of New York has, no doubt unwittingly, shown some confusion on the above subject. Mr Williams' opening premise has itself very little meaning in this country. It is that people choose gas, only where price considerations lead them to do so. On the contrary, there are extensive districts in this country where, for household heating purposes, gas and electricity are competing on roughly equal terms, and where the great majority of householders use gas for cooking and, if they have any automatic hot water supply, for that, too. The majority of such households would give definite assignable reasons for their preference, arising out of the nature of the two fuels.

Secondly, Mr Williams' comparisons of costs between the two fuels are vitiated by his surprising, and quite false, assumption that the comparative cost of two fuels for a given purpose is proportionate to the percentage of useful energy obtained in either form from a given quantity of coal.

Mr Williams' main point, however, is that electricity becomes cheaper to supply as more is used. What he overlooks is that the same thing is true of gas. It will not do to compare the rate charged for small quantities of gas with the low rate charged in a two-part tariff for large quantities of electricity. (Actually, even if one does, the economic benefit of the doubt is still on the side of gas, 9d. or 10d. a therm and ½d. a unit being roughly equivalent.)

The demand for gas for cooking, hot water and space heating, even in a working-class household, is more than enough to bring into play the advantages of high individual consumption, or in other words, to enable the consumer to benefit substantially from a gas two-part tariff. Under such a tariff, with a running charge of 4d., the average cost for a normal consumption would not be above 7d. a therm, at which price gas is considerably cheaper than electricity at ½d. A fuel bill based on electricity for lighting *plus* gas at two-part tariff rates for all heating purposes would normally be a good deal lower than the bill for the same services all carried out by electricity with a two-part tariff and a running charge of ½d.

The following table of comparative heat costs may be of interest to your readers. In it three prices for electricity in this country are taken. (1) The average revenue per unit sold to domestic consumers. (2) The average revenue per unit sold for all purposes. (3) The running charge under the most common two-part tariff. Against each is put the corresponding gas price. The cost of heat usefully employed is obtained on the general assumption that for domestic use electricity is 75 per cent. efficient, gas 50 per cent.

	Price	Cost per therm s. d.	Cost per useful therm s. d.
1. Electricity.....	1.75d. per unit	4 3	5 8
Gas	9d. per therm	0 9	1 6
2. Electricity.....	1.2d. per unit	2 1	3 10½
Gas	7d. per therm	0 7	1 2
3. Electricity.....	½d. per unit	1 2½	1 7½
Gas	4d. per therm	0 4	0 8

In conclusion, may I point out that, in this country, the gas industry would very readily take on the whole task of supplying heat for domestic purposes; that it has in its aid a capital equipment which already meets 38 per cent. of national domestic heat requirements against less than 1½ per cent. met by electricity; and that, through its capacity to store, it possess great elasticity to mitigate the effect of peak demands. Meanwhile, smoke from kitchen ranges and open grates blackens our skies and our lungs, and destroys the advantages of high consumption for gas and electricity alike.

Yours faithfully,

D. MILNE WATSON.

The Gas Light and Coke Company,
Westminster, S.W.1.

German Policy

TO THE EDITOR OF THE ECONOMIST

SIR,—Although I have long since been a keen student of your great paper, I feel there is one passage in your leading article on March 26th (page 669) which is not quite accurate. I do not think it can be shown that Herr Hitler undertook

the Austrian adventure as a result of Mr Eden's resignation; and, reviewing the sequence of events over the last few weeks, I would prefer to accept the explanation which is to be found in the admirable article in your issue of March 19th, describing Germany's preparation for war.

Thus, in the very early days of February, the dissension in the German army required to be dealt with and, in order to divert attention, the Austrian move was decided upon. Signor Mussolini hears of this and, on February 10th, approaches London regarding conversations.

It was the following week-end—that is, on Saturday, March 12th—that Herr Schuschnigg was sent for and given his orders, and it was not until the following week-end, Saturday, March 19th, that Mr Eden decided to resign. This can be confirmed by the twenty-four hours' hesitation on the part of Rome, when Austria was actually invaded, as this drastic step must have been a surprise even to Signor Mussolini.

Yours faithfully,

C. B. COOPER.

27 Throgmorton Street,
London, E.C.2.

Books and Publications

Local Government Service

It is fitting that a book on the local government officer* should have been written by Mr Hill. For many years he has been the general secretary of the National Association of Local Government Officers, which has so successfully striven to raise the status and qualifications of the thousands of officers employed by the multitude of local authorities. He has himself taken an energetic and prominent part in the efforts to improve their conditions, and more than any one else he should be in a position to measure the improvements effected in their conditions, to point out deficiencies and to indicate the next steps.

Of the importance of the subject there is no doubt. So many of our social and utility services are administered by local authorities that the selection, competence, training and integrity of their staffs is vital. It is not easy to secure impartial selection by examination or otherwise, instead of by personal preference, when there are large numbers of small councils, whose members are sometimes unable to grasp the distinction between practices which are permissible in private business and those permissible in public administration. Equally, the urgent need to prevent parochialism by service conditions which facilitate the free movement of officers between localities has not always been easy to make plain.

After setting forth the theory of the relationship between council and officer, the book describes the present position of salaries, pensions, compensation for loss of office due to changes of law, etc., recruitment methods and the examinations and opportunities in each of the chief departments of local government service. The author makes a plea for the extension of the Whitley Councils, and for the study, by officers and councillors, of public administration as a branch of social science.

There is an interesting chapter on the relation of the officer to public opinion, a topic on which Mr Hill must have accumulated considerable knowledge. The book ends with an examination of the Hadow Report on the recruitment and training of local government officers, and with chapters about the qualities of a public servant, and "on being superannuated." The author points out that the lower grades of the local government service have a salary scale lower than that of the civil service, but that the highest salaries are very much better. Ninety per cent. of the staffs are recruited at the age of sixteen years. He brings out clearly how much the various associations of officers have done to raise the technical qualifications of their members by instituting examinations, etc.

Many a councillor and junior officer will profit by reading the book. Mr Hill has been concerned to draw attention to the general problem of local government service, and though he must be a mine of information on all aspects of the subject, he has withheld from us much that we would

* "The Local Government Officer." By L. Hill. Town Hall Series No. 3. Allen and Unwin. 231 pages. 5s.

like to know. He gives a general picture of the relation between councillor and officer, rather as Lowell described it, but does not tell us the actual practice in many of the smaller local authorities, where there is often intolerable treatment of officers by parochially minded councillors, or touch upon the low level of competence and initiative which often results from it.

He points out that some authorities offer inducements to their officers to take courses of further instruction, but not how many are indifferent or positively discouraging, or what proportion of the officers take advantage of the facilities. Moreover, he might usefully have added some account, not only in general but in specific terms, of the actual contributions to the technique of the services which have been made as a result of the work of the various associations of professional officers.

But these are grumbles against an author for not doing what he did not set out to do. The book is expressly intended to present a general picture of the position and conditions of service of local government officers. It is, in fact, the broad case which the author has expounded for so many years, and for this purpose the book is well adapted. We hope that one day, perhaps when released from restraints of office, Mr Hill will give us the full advantage of his critical knowledge.

Shorter Notice

"The Stock Exchange Official Year Book." Thomas Skinner and Co. £3.

It is a commonplace to say of such works as the Official Year Book that no one professionally interested can afford to be without them. Its truth in this instance is attested by the fact that few City bookshelves lack this portly volume, which weighs nearly 10 lbs. and contains 3,912 pages. The Year Book contains full particulars of the securities dealt in on the Stock Exchange (including 43 new Government and municipal issues and 261 new companies), and invaluable special chapters on Government finances, company law and general Stock Exchange information. It is, of course, published under the sanction of the Committee of the Stock Exchange.

THE BUSINESS WORLD

The Bondholder's Friend

THE present world, with its dictators and expropriators, its re-armament and its self-sufficiency programmes, is not a happy one for the bondholder, who thrives on peace and free exchanges. Yet, if the recent trend of international events proves anything, it is that the bond is not only a more beneficent, but, in the long run, a far more potent economic instrument than the gun and the bomb. For a century or more, all over the world, the foreign bondholder has been building railways, spanning the seas and colonising new continents. His incentive has been the prospect of a return of anything up to about seven per cent., and his security a stamped scrap of paper. He is one of the world's greatest constructive forces, but his position is vulnerable to attack from many sides. Prodigality, uneconomic spending, civil war, revolution, political ambitions, and the spread of ideologies which conveniently invest default with the halo of patriotism—all are among the bondholder's enemies. And they are the more formidable because, in the last resort, the bondholder, unlike the debenture-holder, cannot put in a receiver to protect his interest. He has much at stake; for, according to Sir Robert Kindersley, the nominal value of Britain's overseas investments, in 1936, was £3,240 millions, of which as much as £1,259 millions was in countries outside the British Empire. Against the danger of default, watchfulness as well as prayer is a necessity, lest bondholders be among those who

"... call the gods, with vulgar spite,
To vindicate their helpless right."

It may be appropriate, therefore, to describe the history, functions and objectives of a body which, for many years, has proved itself an effective champion of the British bondholder. The Council of the Corporation of Foreign Bondholders derived its origin from a body formed in 1868 by prominent people in the City of London, who were impressed by the helpless condition of individual bondholders and the weakness of numerous small committees. The "Association of Foreign Bondholders" was a profit-making body, financed to a total of £60,000 by subscribers who were given certificates bearing interest at 5 per cent. and repayable at par. The profit-making idea was soon seen to be inconsistent with the real objects of the Association. Accordingly, in 1873, "The Corporation of Foreign Bondholders" was incorporated under licence from the Board of Trade as an Association without profits. The body which thus came into being has subsequently, in the course of a long and useful career, been concerned with arrangements representing a total indebtedness of over £1,400 millions.

Its present status, however, is based upon an Act of Parliament of 1898. At that time the original certificates had all been repaid with 5 per cent. interest, but holders at the time of repayment had received a certificate of permanent membership, giving them the right to elect members to the Council of the Corporation. In due course, many certificates passed into the hands of non-bondholders, whose wishes, in some instances, favoured a return to profit-earning status. On broader grounds, this was felt to be undesirable. The Corporation of Foreign Bondholders Act, therefore, provided for the redemption of the certificates and vested the right to nominate members to the Council in public bodies. The Corporation were entrusted by Parliament with the duty, *inter alia*, of watching over and protecting the rights and interests of holders of foreign Government bonds and of making, for this purpose, representations to foreign Governments. The Council consisted

of twenty-one members (with power to increase their number to not more than thirty), one-third of whom retired each year. Seven vacancies were filled by the nomination of two members by the Central Association of Bankers in London (which to-day is the British Bankers' Association), two by the London Chamber of Commerce, and three by the Council themselves.

The statutory character and complete independence of the Council have been an indubitable source of advantage in relations with the Treasury and the Foreign Office. Although the Council are in no way under official control, questions affecting foreign Government, State or municipal bonds are automatically referred to them. Contact between the Council and the Departments is continuous. Though the Council's representations to foreign Governments are, in many instances, made direct (where necessary the support of H.M. Government being asked), representations are frequently made by the Government at the Council's request through diplomatic channels. Except where questions of policy intervene, such requests are nearly always granted.

The Council's hands were perceptibly strengthened two years ago, when representatives of the Association of Investment Trusts and the British Insurance Association were included as regular members. At the same time, Lord Bessborough became President of the Council on the conclusion of his term of office as Governor-General of Canada. To-day the Council includes representative bankers like Mr Colin Campbell, Mr Edwin Fisher, Mr Holland-Martin, Mr Cecil Lubbock and Lord Wardington; authorities on insurance and investment like Mr Clifford Johnston, Mr Levine and Mr Lever; men of international financial experience and reputation such as Sir Otto Niemeyer and Sir Alexander Gibb; and a representative of the Stock Exchange in the person of Mr C. H. Pattison. There are, however, no members of issuing houses on the Council.

The Council is assisted in many of its functions by committees. The work of the General Purposes Committee, which meets regularly, is supplemented, in those cases where intricate negotiations are concerned, by special sub-committees composed of members of the Council. These bodies are distinct from the bondholders' committees which are formed, under the Council's statutory powers, to advise whether particular offers made on behalf of individual countries should be recommended to bondholders for acceptance. The personnel of these latter committees includes individual bondholders, and, in general, any bondholder is encouraged to come to the Council for information or to make known his personal opinion.

The Council are thus admirably situated to undertake negotiations without losing sight either of particular views or general interests. Whenever the Council have been accused of undue leniency, it has normally appeared that they had reason to believe that the difficulties with which a particular country was faced were very real and that the offer it had made, small as it might appear, represented a serious effort on the country's part. In other instances, political factors may have suggested that the rejection of an offer would involve grave danger of starting a default which might continue for many years or extend even to repudiation. The Council must necessarily consider each case on its own merits, and the value of their work for bondholders is in proportion to their ability and opportunity to take a wide and unprejudiced view. On occasion,

the Council find it advisable to ask for a deposit of bonds, whenever legal or technical exigencies require them to be invested with all the powers of the bondholders concerned. The latter, in such cases, receive certificates of deposit, which are usually quoted on the Stock Exchange; and they should, in their own interest, make every effort to comply with the Council's request. They have normally the assurance that no arrangement will eventually be made, and no compromise will be accepted, without the authority of a general meeting of holders of deposit certificates.

The Council enjoy cordial relations with other bondholders' organisations in Belgium, France, Germany, Holland, Italy, Portugal, Sweden and Switzerland. Conferences of the various associations are now held twice a year in London or Paris, and at the last conference the American Foreign Bondholders' Protective Council, recently formed on lines somewhat similar to those of the Council of Foreign Bondholders, was represented for the first time. The American Council is faced with certain difficulties which are non-existent in Europe, but it is clear that it fully reciprocates the desire of the London Council to find a solution of these difficulties, in order that co-operation between bondholders' organisations may be really world wide. In the meantime, the British Council continues to work in close co-operation, on this side, with independent bodies, set up before the Council's reorganisation two years ago, to deal with particular countries or loans. These committees include the League Loans Committee (an international body), the Chinese Bondholders' Committee and the Committee of British Long-Term and Medium-Term Creditors of Germany. The President of the Council is, in fact, the chairman of the League Loans Committee and a member of the other two bodies.

This brief recital of fact may assist individual bondholders in understanding the constitution, procedure and aims of a body which has done, and continues to do, in-

valuable work on their behalf. There are obvious limits to the achievements of any institution which, in the nature of things, must rely largely, in the last resort, on moral sanctions—which, in any event, are usually much more powerful in the long than in the short run. Nevertheless, the Council may claim to have achieved a large measure of success in decidedly difficult circumstances. The reasons can be readily reviewed. In the first place, the Council have influential as well as representative status. They have been able to claim, and to obtain, the backing of the diplomatic forces of the British Government, to an extent that no body representative of the bond market, or the issuing houses alone, could have hoped to achieve. In the second place, success has been due to the sound judgment of the Council in drawing conclusions on the best course to follow in the light of the exhaustive information which they have been in a position to obtain about the debt-paying power, as well as the intentions, of foreign Governments. Their policy has been dignified, temperate, and realist. It has neither condoned wilful default nor pressed a willing debtor beyond his powers. With appropriately favourable strategy, it has studied the technique of waiting; it has retired, the better to advance later, and has reserved extreme action for instances where it was likely to be not only desirable but effective.

The Council's task in the future may be more formidable than ever before. Hitherto, the bondholder's ultimate weapon has been the power to refuse new accommodation to debtors who have made no reasonable settlement of their existing obligations. If debtors no longer need, or choose, to borrow afresh, or if the British capital market is no longer free, by choice or by necessity, to meet their needs, the Council's task may call for almost superhuman skill and tact. Clearly, the case for the widest possible support from bondholders, jointly and severally, is stronger to-day than ever before, and, in the bondholder's own interests, that support should be forthcoming.

Labour in Road Transport

A THREATENED strike of over 150,000 lorry drivers and assistants was averted last month by a compromise giving the workers an increase of 3s. a week, with a promise by the employers to discuss the question of the cumulative week, which at present entails the working of a full 48 hours before any overtime pay is conceded. Thus the creaking machinery of collective bargaining in goods road transport has been set in motion again; but two problems have been left outstanding: one specifically related to road transport, the other more general.

The Road Traffic Act of 1930 was passed, *inter alia*, to protect the public "against the risks which arise in cases where the drivers of motor vehicles are suffering from excessive fatigue." It provided that wages and conditions should not be less favourable than those observed under the fair wages clause attached to all Government contracts (see *The Economist*, August 14, 1937, page 332). Subsequently the Road and Rail Traffic Act of 1933 laid down that observance of the fair wages requirement should be a condition of the granting of licences to public ("A") and limited ("B") carriers. In 1934 the exertions of the Minister of Labour resulted in the autonomous establishment by the trade unions and employers' organisations of a National Joint Conciliation Board for the Road Motor Transport Industry (Goods) in England and Wales. The National Board proceeded to draft a scheme, which came into operation in October, 1934, providing for a schedule of working conditions to be applied nationally and a schedule of minimum rates of wages. These rates were classified under three heads, namely, the carrying capacities of the vehicles driven, the character of the service (long-distance or local), and the types of area served. Areas, in turn, were sub-divided into three grades, the chief ports or industrial centres being comprised in Grade One, other industrial districts in Grade Two, and rural areas in Grade Three; with a separate schedule, based on an existing collective agreement, for London. Under the 1934 agree-

ment, the 48-hour week applies nationally to all trunk and local services, and to London and the three grades of areas alike. It requires overtime to be paid at the rate of time and one-eighth for the first 8 hours after 48, at time and one-fourth subsequently, and time and a half on Sundays. Subsistence allowances are laid down for work away from home, and a week's holiday with pay is to be given every year, in addition to statutory, public and proclaimed holidays, also with pay.

The following wage rates were proposed by the Board:—

WEEKLY WAGE RATES				
London		Rest of the Country		
Drivers (adults)—		Long-distance Drivers—		
Under 1 ton	56/-	Under 2 tons	50/-	
1 ton	60/- to 65/-	2 tons-12 tons	65/-	
Between 1-2 tons	64/- to 65/-	Over 12 tons	70/-	
Between 2-5 tons	70/-	Attendants	56/-	
Over 5 tons	74/- to 75/-			
Statutory Attendants	59/- to 61/-			
Rest of the Country				
Local Drivers		Size of Vehicle		
		Grade 1	Grade 2	Grade 3
Under 30 cwt.	52/6	49/-	45/-	
30 cwt.-2 tons	57/6	54/-	50/-	
2 tons-3½ tons	62/6	58/6	54/6	
3½ tons-12 tons	65/-	61/-	57/-	
Over 12 tons	70/-	66/-	62/-	
Attendants	56/-	52/-	48/-	

In fact, the scheme has not worked particularly well. The stable basis of wages and working conditions provided by the schedules has not been uniformly applied. It could not be enforced, since the Board was voluntary and had no statutory sanction—though it was inaugurated to implement the expressed intentions of Parliament. The three employers' organisations were not fully representative of the 62,000 licence holders and 157,000 authorised vehicles concerned. And private carriers (holders of "C" licences), which comprised 72 per cent. of all operators and nearly 68 per cent. of all vehicles, were excluded, because of

administrative difficulties, from the provisions of the 1933 Act and therefore from the schedules of the Joint Conciliation Board.

The Baillie Committee, appointed in 1936 to consider the better regulation of the wages and working conditions of road transport workers, recommended drastic changes. A Central Board and Area Boards (corresponding to the Traffic Areas) were to be set up, to formulate standard wages and conditions for employees of "A" and "B" licence holders, which were to be enforced by Ministerial Orders. The Committee recommended that drivers and attendants of "C" licensees should also be regulated; those engaged in retail distribution, either under an adequate system of regulation of wages and hours in retail trade or under a Trade Board or Trade Boards; and others, either under the conditions laid down for "A" and "B" licensees, or by joint agreements between employers' and workers' representatives.

The specific problem which the report of the Baillie Committee was designed to solve was finally brought to a head by the recent dispute. The road transport industry is licensed by statute, and it is the responsibility of all concerned, including Parliament, to ensure fair wages and fair competition. It is, moreover, in the general interest of public safety that fair or adequate wages should be paid. As the Baillie Committee pointed out, the traditional method of fixing wages and conditions in this country is by a voluntary system of collective bargaining. The voluntary method has so far been unsatisfactory in road transport because of the disparate and unorganised state of the industry. In the recent dispute one body of employers was reluctant to accept the findings of a collective agreement, because of the impossibility of their general enforcement. Only the tactful and public-spirited efforts of the independent chairman of the National Board, coupled with the unions' threatened strike, prevailed upon the parties concerned to give the present system a further trial, pending Parliamentary action. The usual alternative to voluntary collective bargaining, regulation by a Trade Board, is not very appropriate to the industry. The Baillie Committee argued that, to deal with the road haulage industry (which is far from being homogeneous) as a whole, the Trade Board system would be "too limited in its scope and too restricted in its powers" to meet the industry's require-

ments effectively. There are now signs that both employers and workers are ready to accept general enforcement by Ministerial Order under statute, as the Baillie Committee recommended; though a reasonable alternative would be the enforcement of the majority decisions of the Joint Board, comprehensively on the whole industry, by a Court of Law—provided that the Board were fully representative of all sections. Partial enforcement means lax standards and unfair competition.

The general implications of this situation in goods road transport are no less apparent. Labour law in Britain, the pioneer of industrial legislation, has reached a turning point. Reasonable standards of work and remuneration still depend upon voluntary collective bargaining or Trade Boards, supplemented by Ministerial encouragement and the minatory influence of the Government's fair wages clause. In the great unorganised trades of retail distribution and road transport, where workers and/or employers still lack a common organisation and policy, the voluntary system may not be strong enough to meet the demands made upon it. A body representative of employers and workers in retail trade, set up under the informal auspices of the Ministry of Labour, recently recommended a Central Board to determine minimum wages and conditions with ultimate official enforcement, which we described at the time as "a workmanlike and desirable application of Trade Board principles to an entire industry employing two million people." A similar step may well be advisable in the case of road transport. Collective bargaining is ideally the best determinant of labour relations. But until collective bargains receive the status of statutorily enforceable contracts over the whole range of industry, there will be gaps and starting holes. Outside the old and highly organised trades, collective bargaining has not yet, in all cases, progressed sufficiently to safeguard the workers' minimum interests, on the one hand; while employers may be reluctant, on the other hand, to commit themselves to promises which will not bind their competitors. Some countries have now incorporated collective agreements as an obligatory part of their labour law. In Britain we need not perhaps go so far; but, at least in occupations like retail trade and road transport, public policy and the national conscience may demand that collective bargaining and statutory sanctions should march together.

Stagnant Capital Market

THE disadvantages of the new capital market's close dependence on the Stock Exchange have never been more clearly revealed than during the past three months. Last year, though the prevailing trend of security prices was downward, gilt-edged stocks achieved a measure of stability after the opening months of the year, and the continued expansion in industry provided at least a moderately favourable background for the flotation of new industrial shares. In fact (as we showed in *The Economist* of December 25, 1937, page 628), total new borrowing in 1937 showed only a moderate falling off from the level of 1936, though the figures for that boom year in the Stock Exchange cycle fell far short of those of 1928-29.

During the past quarter, however, accentuated depression on the Stock Exchange has been associated with widespread disquietude over the trend of political events abroad and with undeniable evidence of a falling off in industrial activity at home. The result has been, at times, something approaching a state of paralysis in the new issue market. Issues on behalf of borrowers of every status from the gilt-edged to the ultra-speculative, whose preparation had reached an advanced stage, have had, nevertheless, to be postponed. Of those which have braved the rigours of market weather, some have had a reasonably favourable reception, but others have been left with underwriters in varying proportions from 99 per cent. downwards.

The effect of these conditions may be appreciated from a study of the tables given on the opposite page. Following our customary practice, we have made a detailed

analysis of the amount and character of all new borrowing, both by direct public issue (our "Old Basis" figures) and, more comprehensively, by Stock Exchange introduction and "permission to deal" (our "New Basis" totals). It will be seen from Table I that the aggregate capital offered directly to the public in the past quarter was less than two-thirds of that issued in the first quarter of 1937, and was equivalent to only 16 per cent. of the amount borrowed ten years earlier. Even in the first quarter of 1931, when industry was depressed and the market felt the first premonitions of the international financial crisis, the volume of new borrowings was nearly twice as large as in the past three months.

The British Treasury has remained outside the market, and the £9.7 millions raised by home municipalities was borrowed almost entirely in the earlier part of the period. After Canada had floated an important conversion offer in January, and Johannesburg had made a £2 millions issue in the following month, major operations on behalf of Imperial authorities came to an end. The £2.4 millions raised for "foreign" employment was actually the highest total under that heading for seven years. As this type of borrowing, however, had previously been almost non-existent, the result scarcely affords convincing testimony to the presence of credit-worthy borrowers who are able and willing to take advantage of the substantial recent relaxation of the Treasury embargo.

The most striking feature of all, however, in our table of borrowing by direct public offer is the decline in home issues on behalf of borrowers other than the Government

and municipal and public authorities—that is, mainly by one industry—to little more than one-third of the figure in the first quarter of 1937. When the basis of computation broadened (Table III), so as to include all new securities which have become available to the investor through the machinery of the Stock Exchange, the decline is even more clearly evident. The total raised in this category has been reduced from £71.2 millions in the first quarter of 1937 to only £24.3 millions in the first quarter of 1938.

Among the worst sufferers from the stagnation in the market have been industrial companies, new and old. Table IV shows that the falling off in new company prospectus offerings was common both to fixed interest and ordinary securities, but Table V, on our broader "new basis," makes it clear that the decline was steepest in the case of new equity capital. Issues under that heading (which include in 1938 only £4½ millions of bonus shares) have declined this year by £51.8 millions, while the total of new debenture and preference offers has fallen by £14.1 millions. In the first quarter of 1937 new fixed-interest stocks accounted for 25½ per cent. of the total "new basis" issues; in the first quarter of 1938 the proportion was nearly 35 per cent.

An analysis of the main groups of borrowers is given in Table II. So far as trade and industry are concerned, the largest drafts on the market this year (taking our "new basis" figures) have been made, in order of magnitude, by finance, electric light, etc., hotels, theatres, etc., oil,

South African mines, omnibus, iron, coal and steel, and docks and shipping companies—a heterogeneous list in which, on the whole, those trades predominate which were most active in the later stages of the industrial recovery of 1934-36. The extent of the falling-off in borrowing, even by these active groups, is indicated by the drop in their total issues from £50.9 millions in the first quarter of 1937 to £19.8 millions this year.

On page 66 appears a table showing the chief individual issues made this year and their present Stock Exchange prices. Prospects of early revival are not encouraging. The reaction in prices for existing industrial securities has now reached a point at which the shares of large and well-established companies yield anything from 6 to 10 per cent. on their latest dividends. Private and institutional investors, however, are reluctant to come into the market again so long as the possibility remains that, in a week's, or a month's, or six months' time, prices may be cheaper still. And until the Budget has been opened, and the financial implications of the speeding-up of the Government's re-armament programme are clearer, gilt-edged stocks are unlikely to obtain any large measure of fresh support. Conditions are certainly much less favourable than the Treasury might have hoped for the issue of a further *tranche* of Defence borrowing. It remains to be seen, indeed, whether the authorities, deeming discretion the better part of valour, will not choose to postpone any new offer until later in the year.

Finance and Banking

Mexico and Silver.—At the beginning of this week the United States Government announced that their purchase of silver from Mexico would cease at the end of March. This decision is probably as much the American reply to the Mexican Government's expropriation of the American and other oil properties as it is evidence of American annoyance at the unilateral unpegging of the peso after the United States Treasury had bought so much old and newly-mined Mexican silver to peg the peso throughout 1937 and the last three months. The announcement has serious implications for the world's silver market. The arrangement reached at the New Year was that the United States Treasury should buy Mexican silver at the rate of 60 million ounces per annum. Now Mexico's annual silver production is 88 million ounces out of an annual world output of 276 million ounces. The United States Treasury is not bound by its silver-buying programme to make good the cessation of its Mexican purchases by heavier purchases from Canada or elsewhere, and it is unlikely to do so to more than a limited extent. Hence the net result of this economic war is that 5,000,000 ounces a month of Mexican silver will be dumped on the world market without any corresponding increase in demand. As our bullion market report shows, the London price has already dropped from 20½d. to 18½d. for cash, and from 20½d. to 18½d. per ounce for forward, and it is difficult to see how this large accretion to the free world supplies can be absorbed. Further reference is made to this question in a leading article on page 3.

French Financial Plans.—The market for French francs has been in a state of uneasy suspense this week. The current news from France has been unfavourable, for it has been concerned with the resumption of labour troubles, with increasing bitterness between the extreme political wings and, therefore, with dwindling hopes of the formation of a National Government—which must be the preliminary to any measure of financial rehabilitation. Nevertheless, the franc has recovered from over 164 to 161½ to the £. The reason has been complete uncertainty about the financial plans which M. Blum has been preparing in semi-secrecy during the week. The market has been given to understand that the plans will not include control of the exchanges or of capital movements. On the other hand, an impression of momentous developments has been given by inspired statements that the proposals may not commend themselves to Radical Socialists, and by official intimation that if the Senate fails to approve the scheme by Sunday night the Paris bourse will not open on Monday. With these uncertainties hovering in the immediate future, speculation against the franc has dried up completely. No one will open fresh commitments when there is a danger that the next few days may bring a veiled form of official interference with the freedom of the exchange market. Moreover, if the Radicals strain at M. Blum's new plans, the Senate may be depended upon to reject them out of hand. This may lead, by way of a new ministerial crisis, to the National Government about which so much has been said. Already, the market is canvassing the possible policy which such a Government might follow.

Monetary Measures in Austria.—Austria's transition to the currency system of the Reich is now virtually complete. Schillings and reichsmarks circulate side by side, but the former are being withdrawn as rapidly as possible. London banks have this week been advised by their Austrian correspondents of the conversion of schilling balances into reichsmarks at the rate of 1.50 schillings to the reichsmark. Where short positions in schillings were being run, the balances must be covered

by purchases of reichsmarks at the official rate of about 12.38 to the £. In other words, these positions, which were presumably opened at the former rate of Sch.26 to the £, must be covered at a loss. Credit balances, however, have been converted at a correspondingly favourable rate, and these balances are available in the form of free reichsmarks. Commercial debts owing by Austrian firms to foreigners may be discharged in reichsmarks at the official conversion rate of 1.50, but these reichsmarks are of the registered variety, and may only be utilised to meet travelling expenses in the country. Thus, the uniform rate of conversion is being applied quite indiscriminately to produce different types of reichsmarks. Austrian subjects have been given until April 5 to declare their foreign assets and gold, and place them at the disposal of the Reichsbank. Contrary to rumours prevalent this week, it is unlikely that any of these foreign securities can yet have found their way to the international market as a result of sales from official German quarters. It is possible, however, that Austrian interests may have sold securities with a view to converting the proceeds in a form better calculated to escape the attention of the Reich authorities.

Bank of England Directors.—The House List of Governors and Directors of the Bank of England for the coming year was issued last week. Mr Norman is nominated as Governor, and thus enters upon his nineteenth year of office. Mr Cattermole is to be re-elected as Deputy-Governor. Two new candidates appear on the list of Directors, namely, Sir Otto Niemeyer and Mr Cameron F. Cobbold. Sir Otto Niemeyer has been connected with the Bank ever since his retirement from the Treasury eleven years ago. He is now chairman of the Bank for International Settlements. Mr Cobbold is also on the staff of the Bank, and has hitherto been chief of the Foreign Relations Department. He has on occasion acted as the alternate to Mr Norman at the monthly meetings of the B.I.S., and he usually accompanies Mr Norman on his periodical visits to Basle. The retiring directors are Mr E. T. Bunbury and Mr Laurence J. Cadbury. The former, who was a full-time executive director, is retiring for reasons of ill-health, while Mr Cadbury is retiring to make room for an additional full-time director. As Mr Holland-Martin has also been a full-time director for several years, these changes increase the number of full-time directors from two to three. The policy of appointing full-time directors, first inaugurated a few years ago, is obviously conducive to efficiency in the Bank's affairs. These new appointments also serve to emphasise the part played to-day by the Bank in international economic and monetary matters.

Indian Banking Results.—Sir Charles Innes gave a valuable review of Far Eastern trading conditions at the meeting of the Mercantile Bank of India, held on March 29th. Trade, he said, was good during the first half of 1937 all over the Far East, but it subsequently suffered from the American set-back and the outbreak of war between China and Japan. Nevertheless, India had the best external trade returns for any year since 1930, and the Indian farmers also obtained better average prices for their cash crops in 1937 than in previous years. Sir Charles alluded also to Indian industrial developments. The cotton mills had had a favourable experience, and had gained trade from Japan in neutral markets. Sales of jute goods had increased in volume, but unrestricted competition in India had made prices very low. The effect of war upon Chinese trade, however, had been deplorable. In the last five months of 1937, as compared with 1936, Shanghai's trade had dropped from 394 to 170 million

Chinese dollars. The Chinese Government's imposition of exchange control had added to the difficulties of the situation, and during the last few days the control had temporarily broken down. The Mercantile Bank's deposits had risen during the year by £1,350,000, and loans had risen by about £1,000,000.

The reports of the National Bank of India and the Chartered Bank of India, Australia and China have now been published. The former shows a very small increase in deposits and advances, but an improvement in profits from £993,000 to £996,000. The Chartered Bank's accounts show an increase in current and other accounts from £29.9 to £34.2 millions, off-set partly by a decline in fixed deposits from £18.3 to £15.6 millions. Advances are unchanged at just over £20 millions. Altogether, it is clear that the Eastern Exchange banks have successfully coped with the conditions of a year, which became more troubled as it progressed.

"Decline of the Bill of Exchange."—We regret that in an article under this title on page 689 of *The Economist* last week, a chart was given of the estimated total of bills outstanding in the United Kingdom, between 1926-27 and 1936-37 without acknowledgment of the fact that the chart had first been compiled by Messrs Jessel, Toynbee and Company. We should be glad if our readers would give credit where credit is due for the initiative in the first preparation of a diagram which, both in itself and for the basic idea which underlies it, is of the utmost interest and value to all concerned with the operations of the London Money Market. Incidentally, it is interesting to compare the figures plotted in the chart, which covered the period from 1926-27 to 1936-37, with those for the pre-war year. In the financial year 1913-14, the amount of inland drawn paper outstanding in this country averaged (on the basis of the calculations explained in last week's article) some £181,790,000. This is about £50 millions above the total for 1936-37 but about £30 millions less than in the peak year 1929-30. The amount of foreign-drawn bills outstanding in 1913-14 may be calculated at £336,213,000—a figure about half-way between the latest total of £143 millions and the peak of £540 millions in 1928-9.

Gold Production and Use.—The report of the Union Corporation for 1937 contains many useful details and estimates of the world's gold production and consumption from 1931 onwards. Details of gold production have already appeared in the Commercial History of *The Economist* published on February 12, 1938. They show that between 1931 and 1937 British Empire production rose from 15.6 to 19.7 million ounces, and total world production from 22.4 to 35.5 million ounces. The Union Corporation calculate that, between the end of 1931 and 1937, the world stock of monetary gold has risen from 597.4 to 816.2 million ounces. This, according to the report, is distributed as follows:—

GOLD IN CENTRAL BANKS AND TREASURIES			
	1931	1936	1937
	(Millions of fine ounces)		
United States	196.0	321.6	364.6
United Kingdom	28.5	74.0	77.0
France	130.5	85.6	73.3
Holland	17.3	14.0	26.6
Switzerland	21.9	18.7	18.5
Belgium	17.2	18.1	17.1
Argentina	12.2	14.3	16.7
Japan	11.3	13.2	7.5
Italy	14.3	6.0	6.1
Other countries	102.5	100.7	108.0
Total in central banks and treasuries	551.7	676.2	715.4
Amount in western hoards and exchange funds	45.7	102.6	100.8
Total	597.4	778.8	816.2

The amount shown as being held in western hoards and exchange funds is an estimate, derived by taking the difference between the gold held in central banks and treasuries and the Union Corporation's estimate of total monetary gold stocks. It excludes the United States "inactive account," which is included in the United States total. The Union Corporation note that the lack of change in the total during 1937 masks a considerable ebb and flow of gold between western hoards and exchange funds. The conclusion is reached that the various exchange funds, together with the American inactive account, were capable of taking up the major stresses consequent on the year's dehoarding and hoarding movements, which would otherwise have fallen on the central banks and treasuries.

MONEY MARKET NOTES

Foreign Exchanges

The London market has again been quiet, and apart from belgas there was little definite trend. The Paris spot rate rose to Frs. 164½ early in the week, but by Thursday was back to Frs. 161½. Feeling in Paris is apparently influenced in contrary directions, first by the hope of the advent to power of a National Government, and next by the fear that such a Government would at once depreciate the franc to a rate of Frs. 170. Dollars have fluctuated between \$4.95½ and \$4.97½, again with no definite trend. The recent Wall Street weakness has checked the flow of funds to New York. Belgas have definitely strengthened. A week ago the New York-Brussels cross-rate was at bel. 5.94 to 1 dollar or at the gold export point, and gold continued to leave Belgium. The steadier tendency of the franc and uncertainty over the dollar has since brought the cross-rate back to bel. 5.91½, or on the way to the gold import point of bel. 5.89. Shipments of gold, previously arranged, have been cancelled and the gold resold to the Belgian National Bank. Owing to the temporary breakdown of the agreement between the banks not to let the Shanghai rate fall below 12d., the rate at one time weakened from 14½d. to 11½d., but it has

since recovered to 12½d. The real cause of the difficulty is the meagre supplies of foreign exchange released by the Chinese authorities under the new restriction scheme, and the recovery in the rate to 12½d. may indicate that exchange is being allotted a little more freely. Ultimately the trouble is traceable to the war, and to the attempt of Japan to set up a separate monetary system in the North of China.

The Bank Return

Currency requirements at the end of the quarter explain the week's expansion of £5.9 millions in the note circulation. Last year's return is not comparable owing to the incidence of Easter.

The Money Market

During the first three days of this week the market was very quiet. There were no maturities of Treasury bills, and practically no new bills to be paid for. The reason was that the market had concentrated its applications for new bills on bills to be paid for on March 31st, so as to secure both a 91-day bill and a June maturity. Bills paid for on Monday, Tuesday and Wednesday were 92-day bills, and at the lowest price accepted, namely £99 17s. 6d. per cent., did not attract the market. Thursday's bills, however, went at the same prices, and were also a day shorter.

Three months' bank bills	9/16	17/32-9/16	17/32-9/16

* Viz. 1/2 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. 3/4 per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

On Thursday, when the bulk of the market's bills were paid for and when there were still no maturities, there was a big turnover of funds combined with a good demand for money. This was a purely temporary movement, for on Friday there were heavy maturities of Treasury bills and also large Government dividend payments.

The Bullion Market

There has been a moderate demand for gold in London, consisting of arbitrage purchases and a Continental hoarding demand of equal proportions. The latter emanates partly from Holland, and may represent a switch out of dollars and into gold, inspired by lack of confidence in the outlook for American securities.

The London silver market has felt the full effects of the American suspension of silver purchases from Mexico, discussed in a Financial Note. An equally important influence was the reduction in the American "home" price from 45 cents to 44 cents on Monday and to 43 cents on Tuesday, this being the first time this price fell below 45 cents since the inauguration of the silver purchase scheme. On Monday and Tuesday there was heavy selling in London, only miti-

gated by bear covering and by the fact that the price fell below the lower limits placed by some sellers. Later in the week the market became steadier, for India began to buy as well as to sell, and on Thursday a recovery occurred.

INSURANCE NOTES

Equity and Law Life Assurance.—The published accounts of this Society for 1937 are of even more interest than usual, since they include the results of a triennial valuation of liabilities as at December 31st last. For assurances the A1924/29 table with 3 per cent. has been used, and for annuities the a^(m) and a^(l) at 3 1/2 per cent. In both cases the basis is the same as three years ago, but on this occasion it is stated that 3 1/2 per cent. has been used for endowment assurances under the Society's house purchase scheme. The results of the last two valuations are given below:—

	1930-34	1935-37
Trading surplus earned ...	983,916	1,174,273
Profits on investments and on reversions ...	378,084	— 143,632
Brought forward ...	203,629	312,682
	1,565,629	1,343,323
Allocations:—		
Bonuses to policyholders	1,118,653	890,106
Shareholders' account ...	124,294	98,900
Staff pension fund ...	10,000	21,795
Carried forward ...	312,682	332,522
	1,565,629	1,343,323

Under the Society's system of distribution the rate of bonus declared on any policy depends to a large extent on the rate of premium charged. The rates are the same as on the previous occasion, namely, a minimum of 45s. per cent. per annum on the sum assured for whole life policies and 42s. per cent. per annum for endowment assurances, with as much as 80s. per cent. per annum in some cases.

The progress of this Society in recent years has been quite remarkable. In the last eight years, total funds have increased from £8,704,000 to £28,118,000, annuities in force from £3,000 per annum to £999,000 per annum and the net new business, including sinking fund assurances, from £1,739,000 to £8,061,000. Last year new life assurances constituted a fresh record at £4,667,000, against £4,659,000; new sinking fund assurances, however, fell from £4,794,000 to £3,394,000. Annuity consideration moneys, although still very large at £1,998,000, were £513,000 smaller than in 1936. The net rate of interest earned on the entire funds, excluding reversions, was 6d. per cent. higher at 4 9/8 per cent.

Total assets increased from £26,045,000 to £30,147,000, of which 36 per cent. consist of mortgages and policy loans. The distribution of investments shows no special change. British Government securities, debentures, preference and ordinary stocks all increased, in line with the progress of the funds. The Society was faced with a large depreciation on the valuation of its Stock Exchange securities. The chairman states, however, that, after fully meeting the depreciation and writing down the investments to within mean market values on December 31, 1937, the investment reserve of £100,000 is maintained intact. A dividend at the rate of 4s. 9d. per share per annum, free of tax, will be paid for the three years following December 31, 1937, on the company's called-up capital of 200,000 £5 shares, £1 5s. paid.

Employers' Liability Assurance Corporation.—The report of this company is always awaited with special interest. Much the greater part of its business is derived from overseas—mainly from the U.S.A.—and the report affords guidance to the experience likely to be revealed at later dates by the composite offices. Total premium income increased from £6,906,000 to £7,144,000, consisting of £390,000 in the fire account, £337,000 in the accident account and £6,417,000 in the general branch, which includes motor insurance and workmen's compensation. Thus, the general branch is much the most important. Though premium income in this branch increased by £209,000 claims increased by only £27,000 to £3,763,000, including a considerably increased provision for outstanding claims. The fall in profits is, therefore, to be attributed to a worse claims experience. Commission and expenses increased by £127,000 (some £44,000 being due to increased foreign taxes) while an increase of £132,000 took place in the provision for unexpired risk against a decrease of £21,000 a year earlier. The reserve for unexpired risk in the general branch is 40 per cent. of the main volume of premium income, but no reserve is held for a portion in which the risk had

expired at the close of the year; the net effect is that the reserve for unexpired risk amounts to 35.7 per cent. of total premium income against 34.8 per cent. in 1936. The underwriting results are shown:—

	1936		1937	
	Amount	Percent-	Amount	Percent-
	Premiums	age of	Premiums	age of
Fire	<u>27,757</u>	7.6	<u>37,352</u>	9.6
Accident	15,878	4.8	2,531	0.1
General	209,994	3.4	112,590	1.8
Exchange profits	2,529		...	
Gross surplus...	224,402		152,473	
British taxes ...	125,000		<u>72,000</u>	
Net trading surplus	99,402		80,473	

Total assets have increased from £10,958,000 to £11,559,000. Total investments in stocks and shares appear at £7,244,000, of which over £3 millions consist of Dominion and Foreign Government securities. Taking market values at the exchange rates ruling on December 31, 1937, there is a depreciation of £589,000, compared with an appreciation of £138,000 at the end of the preceding year.

The character and distribution of the Stock Exchange securities remain materially unchanged. In 1936 a note to the balance sheet stated that after converting the currency liabilities and assets other than the investments at exchange rates ruling on December 31, 1936, the surplus of £138,000 was reduced to £51,000. On this occasion it is declared that the depreciation of £589,000 would be increased by £17,000 on the basis of exchange rates on December 31, 1937. The book value of the company's holding of the Clerical, Medical and General Life Assurance Society shares once again appears at £486,019—a figure far below its true value. The reserve held in respect of the Merchants' Marine Insurance Company, Ltd., is unchanged at £400,000, but £50,000 has been transferred from profit and loss to write down the holding of that company's shares to £75,000. The dividend for the third successive year is 70 per cent. and costs £205,000, compared with net interest earnings of £246,000.

Investment

Course of Share Values.—The month of March will be remembered as one of the most difficult and depressing in Stock Exchange annals. Its *dramatis personæ* were Herr Hitler and President Roosevelt, and their influence was wholly on the side of the bears. Between the President, who appeared not to know his own mind, and the Fuehrer, who knew his mind too well, the position of investors on both sides of the Atlantic was indeed unenviable. As the chart on this page shows, the downward course of ordinary share prices in London had as steep a gradient as at any time since recession began, fifteen months ago. Wall Street, after a deceptive appearance of steadfastness at the time of the invasion of Austria, gave way subsequently on bitter disappointment over the absence of any thaumaturgic sign from Washington, or any evidence whatever of the hoped-for

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(July 1, 1935=100)

British: "Financial News" Index of 30 Ordinary Shares

spring revival in business. From the viewpoint of the chart theorist, last month's break in Wall Street was even more significant than the persistent depression of London. For whereas British equity values have been making new low records for the present depression, ever since the "resistance point" of last November was abandoned early this year, the curve of Wall Street crisis remained above last year's low point until the end of last week. Undoubtedly, trade factors alone cannot induce much contemporary support for market prices. Even in Great Britain, evidence of the reality of industrial recession continues to accumulate. Nevertheless, in the absence of psychological disquietude, whose origin is predominantly political, the markets might be capable of making a stand, somewhere near their present levels. But of surcease from political fears, there is as yet no sign.

Wall Street's Collapse.—Wall Street's demoralisation is now complete. A dubious recovery trend during the winter months, based upon the possibility of some evidence of business recovery in the spring, has given way to widespread despair, in which the expectation of any improvement in trade conditions finds no place.

Last week's obvious signal, when major breaks occurred with a rising turnover, has proved accurate, and this week trading has increased with every major fall in the indices. Monday's minor rally proved wholly deceptive, for it was followed by a fall of more than five points in the Dow Jones industrial average, with a turnover of nearly 1 1/2 million shares. Heavy sales in the closing stages of Wednesday's session brought the index to within four ominous points of the 1935 "low" of 96.71. Political fears and the passing of the Reorganisation Bill have no doubt played their part in this week's heavy losses. But the collapse appears to be based, in major part, on the lack of any evidence of industrial improvement, and it has, in all probability, been heightened by the restrictions on bear operations. It is precisely in such circumstances that the bears provide a cushion for disorderly retreat—a point which, if paradoxical, was certainly overlooked when the short-selling regulations were introduced. Wall Street is thus exposed to the full force of cash selling, based on the anticipation of a severe fall in industrial earnings this year. And in the circumstances of to-day, the market's attitude appears wholly reasonable.

C.E.B. Finances.—The tenth annual report of the Central Electricity Board, on which we comment on page 8, contains a highly important section on finance. Out of total borrowing powers of £60 millions, the Board has obtained consents for a total of £52 1/2 millions. Stocks

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

to a nominal amount of £53½ millions have been issued, of which £52,793,003 is outstanding. Inspection of the report reveals that the Board has been able to cover the service on its capital with greater success than it originally estimated. The Board began to trade in 1933, and its operating basis will be largely completed when the North-East Area is fully connected next year. In view of the gradual completion of its schemes, the Board originally estimated that trading losses for the first five years were possible. Already, however, the Board has covered the interest and sinking fund obligations on its stocks almost entirely from revenue. The balance of "revenue—general purposes" account amounted to £2,014,508 last year, compared with £1,686,944 in 1936. Including interest and unemployment grants, total revenue for general purposes amounted to £2,089,493—the revenue and capital charges in respect of standardisation of frequency are, of course, self-balancing. Of this sum, interest charged to revenue absorbs £1,212,644, and redemption funds some £535,032. An amount of £382,922 for interest on two stocks (which was, in fact, covered but for £41,015 by revenue) has been charged to capital, and the credit balance carried forward has been increased from £1,419,614 to £1,761,431, which is available to cover interest and redemption obligations—incidentally, on an increasing scale—in future years.

* * *

In the following table we set out the various stocks issued by the Board, the amounts allocated for general purposes, and their current return:—

Stock	Issued	Allocated to General Purposes	Latest Date for Interest from Capital	Price	Yield per cent. to Redemption
4% 1959-89	3,000,000	2,400,000	Dec. 31 1936	104½	3 15 d.
5% 1950-70	10,000,000	7,150,000	1937	110½	3 18 d.
4½% 1951-73	6,000,000	4,620,000	1938	108½	3 14 d.
5% 1955-75	7,000,000	4,725,000	1939	114½	3 16 d.
4½% 1957-82	10,000,000	7,000,000	1939	109½	3 16 d.
3½% 1963-93	8,000,000	5,200,000	1940	98½	3 11 d.
3¼% 1974-94	9,500,000	5,630,000	1941	91½	3 13 d.

The unallocated balance of these stocks is covered by a levy in respect of standardisation of frequency on the electricity supply industry. On the latest trading results, the "general purposes" obligations may be regarded as well covered. It is true that the Board has the incubus of an unduly high over-all rate of interest on its debt. But it is well ahead of its trading estimates, and would not appear markedly vulnerable to an industrial setback.

* * *

Lord Craigmyle's Resignation.—Beyond the bounds of Leadenhall Street there will be widespread regret that Lord Craigmyle has been impelled, on medical advice, to resign the chair of the Peninsular and Oriental Steamship Company. Since Lord Craigmyle, as the Hon. Alexander Shaw, joined the board of the P. & O. in 1920, more especially since he became deputy chairman and a managing director in 1927, and most of all since he followed Lord Inchcape as chairman in 1932, he has carried responsibility for the affairs of one of the greatest shipowning organisations in the world, in the most difficult period to which mercantile shipping annals bear witness. At a time when depression has overset less soundly financed concerns, the centenarian P. & O. has improved its services and its fleets, overhauled its capital accounts and reinstated a moderate dividend on its deferred stock. The truism that shipowners are born and not made was never better instanced than by Lord Craigmyle's decision to place substantial orders for new tonnage only a few months before a dramatic change of conditions raised prices to a level which he unhesitatingly described as uneconomic. Lord Craigmyle, who will retain his seat on the board of the P. & O. and the British India Steam Navigation Company, will be succeeded as chairman of the P. & O. by his close associate in management, Sir William Currie.

Company Notes

Dunlop Rubber Accounts.—It is again necessary to pay respect to the detail and clarity of the Dunlop Rubber report, with its full consolidation of earnings and assets, and its distinction between current and non-recurring revenues. Aggregate profits of the company, including its share of net profits of all subsidiary and sub-subsidiary companies, after depreciation, increased appreciably last year from £2,200,392 to £2,478,000, and together with credits not attributable to the earnings of the two years, total revenues advanced from £2,219,156 to £2,503,926. After deducting taxation, subsidiaries' preference dividends, and the parent company's share of undistributed profits, the balance available for the latter increased from £1,663,555 to £1,750,260. This figure is confirmed by the company's own profit and loss account, which shows that, in addition to trading profits and dividends received, the company also obtained a substantial repayment of £127,930 (against £11,035) from the Dunlop Plantations company in respect of preference dividend guarantees, and also a net dividend of £10,279 from the German company covering the year 1936. In the following table, these items are treated as special credits. On this basis, it will be seen that the 9 per cent. dividend was covered by earnings of 10.8 per cent. Including the credits, however, earnings were almost unchanged at slightly over 13 per cent. Our table follows, together with a ten-year earnings chart:—

	Years to December 31,		
	1935	1936	1937
Net profit	1,848,775	2,011,768	1,957,661
Depreciation	386,459	351,248	337,610
Taxation	419,761	394,900	495,815

* Of which £10,279 from Deutsche Dunlop Gummi.

DUNLOP RUBBER PROFITS 1928-37

For a year in which rubber prices fluctuated between a "high" of 1s. 1½d. and a "low" of 7d., these results are satisfactory, for they have been struck after "a substantial write-down" in the valuation of raw material inventories. Since the group as a whole held stocks, at or below cost, of £8,859,843 at the end of December, compared with £7,332,013 at the end of 1936, the further

fall in rubber prices cannot be overlooked by the ordinary stockholder. The report records, moreover, that trading conditions in the home and several overseas markets were favourable during "the greater part" of 1937, a phrase which suggests that the subsequent course of business has been less satisfactory. The five-year conspectus of reserves clearly reveals the conservative considerations which have governed dividend policy since 1933. Total reserves, in fact, now stand at £5,409,329 in the Dunlop books, compared with £5,146,355 in 1936 and £4,346,887 in 1933. An international trading company of this sort, however, has every justification for careful financial policy. Perhaps it is not without significance that the entire reserve provision for 1937 is earmarked for contingencies. Autarky in Central Europe, war in the Far East, depression in the United States and a significant set-back in the British motor industry, appear to warrant this gesture. The ordinary stock units have fallen further to 26s. 9d. to yield £6 15s. per cent.

* * *

Mersey Power.—This undertaking depends more than most electric supply companies on a relatively small range of industries for its prosperity. Last year these industries were extremely active, and applying our standard rate of depreciation, it would seem that "true earnings" available for the ordinary capital would have covered the 8 per cent. dividend nearly twice. The latest profits are analysed below:—

	1935	1936	1937
Revenue from sale of current	235,947	269,929	305,188
Net profit	129,755	140,440	163,119
Depreciation	55,000	57,500	75,000
Debt service	8,750	11,706	11,707
Pref. dividend	33,000	33,000	33,000
Ordinary shares:—			
Earned	33,005	38,235	43,412
Paid	34,754	37,236	39,718
Earned %	6.7	7.8	9.0
Paid %	7.0	7.5	8.0
Carried forward	3,511	4,510	8,204

The position of the company under a possible reorganisation of distribution is not very clear. Indeed, it might well be affected prejudicially to a greater extent than any other public company of substantial size, with the possible exception of the Edmundsons group. The company is not a Power Company as ordinarily understood—that is, it has no powers granted in perpetuity by Act of Parliament, but operates instead under a group of Special Orders. Some of the latter have a comparatively short period to run, and it might be that, if those Orders which have the shortest unexpired period provide the more generously to total profits, a reorganisation might tend to reduce divisible earnings. In this sense, the long-term outlook of the company, therefore, may be less assured than its excellent figures might suggest. There is one point of interest to collectors of financial *curiosa*. The Board of the Mersey Power Company now consists of three directors; two are human, the third is the Mid-Cheshire Electricity Company, Ltd. Such is the versatility of British company law.

* * *

Midland Electric.—Both the number of consumers and the output of this undertaking showed a handsome increase last year. New tariffs came into operation at the beginning of 1936, and entitled the corporation to increase its rate of dividend for that year. Net earnings for 1936, as the following table shows, were substantially increased, and on normal grounds a further advance might have been expected last year, since the reduction in tariffs would have taken effect in expanding consumption. The very modest increase in net earnings shown in the following table must be regarded as somewhat surprising.

	1935	1936	1937

* Including investment income.

The corporation's franchise has been extended to 1973, and it operates under a sliding scale which relates charges to dividend payments. Its £1 ordinary stock units stand at 38s. 9d., to yield £4 13s. per cent.

* * *

From the Chair.—A seasonal spate of company meetings this week has produced several chairmen's speeches of outstanding interest. Sir P. Malcolm Stewart's addresses to Associated Portland Cement shareholders are invariably challenging, and his speech on Wednesday ranks among the most effective protests ever made on behalf of coal consumers against high prices. As the cement industry consumes one ton of coal for every two tons of cement it produces, adequate and cheap supplies are obviously essential for the Associated group. Sir Malcolm roundly declared that the coal industry, as protected by the selling schemes, was neither efficient nor operated to the best advantages of consumers, workers and shareholders. Even those who would not go so far as to say that "there is no justification for the exorbitant prices ruling for coal," would contrast, at any rate, the position of the coal industry, with its statutory supports, and the cement industry, which, as Sir Malcolm showed, has secured progressive economies by its own exertions during many years. Sir Malcolm suggested, however, that increased coal costs may in part be offset by further operating economies, and also by the increase of 3s. per ton in cement prices introduced last December. Sir Malcolm, in fact, is "definitely hopeful" about cement in the current year—in marked contrast to his reading of the outlook for the brick industry at the recent London Brick meeting. He emphasised, also, the potential advantages of Associated Cement's acquisition, jointly with Tunnel Cement, of the Alpha company. This step appears to convert a co-operative selling organisation into a tightly-controlled unit, occupying a major place in the cement industry.

* * *

At this week's International Nickel meeting, Mr Robert Stanley struck a rather guarded note, appropriate enough in view of the fact that nickel consumption in the United States during the last quarter of 1937 fell by 44 per cent. compared with the previous nine months. He also disclosed that in time of depression part of the company's

The OCEAN

Accident & Guarantee Corporation, Limited
Head Office: 36-44 Moorgate, London, E.C.

FOR ALL CLASSES OF INSURANCE

refined copper output will be put into stocks. This explicit reference to the working of the European control scheme is of direct importance to shareholders in the Rhodesian mines. The chairman of British Aluminium declared that the 1938 report should make as satisfactory a showing as the very favourable 1937 figures. The key factor in this company's situation is the progress of the Lochaber hydro-electric developments towards completion, but the new alumina works at Newport are also scheduled to reach the producing stage later this year. Mr W. L. Hichens, at the Cammell Laird meeting, referred to the decline in mercantile shipbuilding business, but showed that at present the company has fifteen ships and one set of machinery on order. The chairman referred favourably to the position of English Steel Corporation and Metropolitan-Cammell, in which joint interests are held with the Vickers group. All the English Steel works are expected to be busily employed during the current year. The outlook for Metropolitan-Cammell appears to be favourable, but Cammell Laird itself is not entitled to receive any dividend on its holding in respect of 1938, under the terms of the 1934 reconstruction scheme.

* * *

Canadian Pacific Report.—The full report for Canadian Pacific Railway confirms the broad conclusions on the preliminary results published in our issue of March 19th. In view of the crop failure in Saskatchewan last year, it is evident that the company did well to increase its gross earnings by 4.7 per cent. to \$145,085,558. Mineral, timber and manufactures, in fact, more than offset the fall in agricultural tonnage. Both maintenance and transportation expenses, however, increased in greater proportion—the former by 5.5 per cent. and the latter by 5.4 per cent. In part, these increases reflected heavier traffic, and in part higher materials and wage costs. The operating ratio, accordingly, was nearly $\frac{1}{2}$ per cent. higher at 83.64 per cent. An increase of \$431,136 in net railway earnings, however, appears insignificant compared with an increase in "other income" amounting to almost \$5 millions, to which dividends from the holding of Consolidated Mining and Smelting stock and net steamship earnings each contributed about one-half. Neither base metal nor shipping conditions are so favourable now as they were a year ago, yet their part in the realisation of distributable profits is highly material. From one persistent source of expenditure, however, Canadian Pacific will obtain some relief this year. The "Soo" line is now in process of reorganisation, and, as a result of various financial measures, the direct and indirect liability of Canadian Pacific for interest guarantees will be reduced by \$2,900,820, to about \$1,275,000. These arrangements will stem a persistent drain on Canadian Pacific revenues, and the potential savings are equivalent to over 2 per cent. on the preference stock in a full year. On the question of charges for lines abandoned, however, the report is less explicit. The largest item in a total charge of \$2,495,362 amounted to \$1,433,109 for picking up 41.3 miles of track, but no indication of future property retirements is given. In view of the extremely adverse crop conditions last year—grain handlings were only 61 per cent. even of the 1931-36 average, and were responsible for a fall of \$5,869,000 in gross revenues for this class—the company may be said to have done relatively well. Unless Nature is wholly ungenerous, there should be some improvement in grain traffics this year. But with little prospect of relief in costs, and the likelihood of some fall in "other income," dividend possibilities are still obscure. In the circumstances, a quotation of 32½ for the preference stock seems rather to look on the bright side.

Mining Notes

Anglo-American Corporation.—Last year this company's diamond and copper interests enjoyed considerable prosperity, while its Witwatersrand gold subsidies (as we show in the next note) showed improved results as a whole. An expansion of £428,770 to £1,677,300 in the Corporation's revenue is thus readily understood. A charge of £250,000 (against £100,000) has been made for taxation, but new issue expenses amounted to less than £2,000 compared with nearly £48,000 in 1936. Consequently, the Corporation was able to pay 40 per cent. upon its increased ordinary share capital of £2,450,000, compared with 30 per cent. in respect of 1936 and 20 per cent. on £2,000,000 in the previous year. Towards the close of last year the capital was increased by the acceptance of an offer, by a group led by the British South Africa Company, for 700,000 cumulative preference and 300,000 ordinary shares for a cash consideration of £1,250,000. The proportionate dividend on the preference capital required £10,500. This issue is in due course to be converted into £350,000 preferred stock, and consolidated with the existing issue. Premiums amounting to £750,000 are brought into the appropriation account, from which the round sum of £1,000,000 is transferred to reserve, increasing that fund to £4,000,000. At the date of the balance sheet the company's cash assets amounted to no less than £8,510,800. Shares and investments show an increase from £5,781,200 to £6,920,700 at cost, less amounts written off. The surplus of assets over liabilities totalled £8,936,400. Unfortunately the recent trend both in the diamond and copper industries is such that shareholders can scarcely look for a repetition of these record results. Anglo-American Investment Trust, whose assets comprise shares and debentures in various diamond enterprises, including De Beers and the Diamond Corporation, showed a profit of £577,800 as compared with £263,400 in its initial period of operation. Expectation of a dividend of at least 4s. per share was justified in the event; this rate compares with 5 per cent. in respect of the initial period. Investments appearing in the balance sheet at £5,181,600 had a market value considerably in excess of that figure. The outlook for the Trust appears to be very comparable to that of Anglo-American Corporation.

* * *

Anglo-American Group.—Of the four producing subsidiaries in the Anglo-American group, whose latest results are analysed in the accompanying table, Brakpan and West Springs paid larger dividends last year than in 1936. Record tonnages were milled by Brakpan and Springs, but in the latter case this factor was more than

ANGLO-AMERICAN GROUP RESULTS

1935	1,809,700	838,500	53½		62,320	10,110,960	6.07		
1936	2,008,820	819,000	52½		53,110	10,123,020	5.73		
1937	1,985,050	819,000	52½		62,050	9,654,420	5.57		
West Springs :—									
1935	392,620	184,650	10		233,040	4,678,680	4.76		
1936	425,010	190,000	10		198,370	4,700,040	4.92		
1937	513,560	241,880	12½		115,180	4,552,610	5.14		

offset by a decline in average yield. The increase in earnings of Daggafontein was absorbed by larger provisions for taxation and Union Government participation in profits. A rather substantial falling off in Springs' ore reserve is attributed chiefly to the amount of dead work carried out in the southern section of the mine. The consulting engineer records that the position will not show any material change

until ore is being developed on a substantial scale in this section. At West Springs, the width of the ore body increased sufficiently to raise the value of the reserves as a whole, although the reduced development footage was reflected in the tonnage. Towards the year's capital expenditure, £70,000 was provided by the issue of 35,000 shares at 40s. and some £88,000 from profit and loss. This year's outlay, while expected to be heavy, should fall below the 1937 amount. Both Brakpan and West Springs benefited from the treatment of ore obtained from advance development work carried out for South African Land Company. This source of revenue, however, will cease after the middle of the current year. All the reports stress the point that prospects for 1938 depend largely upon the adequacy of the labour force; last year a marked shortage was experienced.

* * *

Among the mines not yet in the producing stage, it may be noted that South African Land and Exploration up to the end of last year had borrowed £641,240 out of the £1,250,000 agreed to be advanced by the Anglo-American Corporation in anticipation of a share issue at not more than 75s. Erection of the reduction plant is nearing completion. The accounts of East Daggafontein, in which Daggafontein is largely interested, show £206,200 in surplus cash assets, and a total of £406,100 remains uncalled. Crushing is expected to start early in 1939.

* * *

Union Corporation Group.—Beginning at 116,000 tons in January, 1937, the quantity of ore milled monthly by East Geduld rose to 144,000 tons in the corresponding month of the current year, on the completion of the plant extension programme. Net capital expenditure last year amounted to £67,440, and since future outlay under this heading is to be charged against working costs, it may slightly affect the average. The company has been adversely affected by a change in the assessment of profits by South African Revenue authorities. Of the 1936 earnings, some £423,750 was debited to profit and loss for taxation, and £97,500 was also provided against any possible additional liability. In addition, the Union Government's share of profits (as adjusted) absorbed £168,540. In respect of 1937, taxation amounted to £807,470, but no participation in profits was due to the Government owing to the increase in taxation over the scale in force at the date of signature of the lease agreement. Development footage amount to 37,790 feet—a fall of 13,530 feet from the 1936 total—but a large addition was made to the ore reserves. East Geduld now holds 120,000 Grootvlei shares—the maximum it is entitled to subscribe for—which, together with certain smaller items, appear in the balance sheet at £106,500. An increase in tonnage treated by Geduld Proprietary was offset by some decline in yield, and the company's resources had to provide for the payment of a 10s. call on the holding of 80,000 Grootvlei shares. The latter, together with rather more than one-third of the issued capital of East Geduld, are valued for balance-sheet purposes at £584,540. Net dividend receipts were £10,000 higher at £330,640, reflecting the increase in the East Geduld distribution. The progress of both concerns since 1935 is illustrated in the following table :—

	Working Dividends	Profit	Amount	Per	Carry	Ore Reserves			
	£	£	£	cent.	Fwd.	Quantity	Value		
					£	Tons	dwt.		
East Geduld :—									
1935 ...	1,500,720	776,880	113½		91,330	7,950,000	6.5		
1936 ...	1,609,390	855,000	117½		90,100	9,000,000	6.3		
1937 ...	1,782,960	877,500	118½		108,060	10,100,000	6.2		
Geduld Proprietary :—									
1935 ...	1,466,050	1,022,600	70		296,290	9,000,000	5.2		
1936 ...	1,413,270	1,095,640	75		312,230	9,100,000	5.0		
1937 ...	1,354,380	1,095,640	75		252,490	9,100,000	5.0		

On last year's dividends, East Geduld yield approximately 5 per cent., and Geduld Proprietary about 9½ per cent. The former company has yet to reach, while the latter

has probably passed, its zenith. Being in liquidation, Modder Deep does not issue a report, but the statistics given in the Union Corporation statement show a working profit of £107,220, against £241,100 in 1936. The distributions again totalled 1s. 6d. per share. Development on the Kimberley and Black reefs is stated to have given erratic but, on the whole, encouraging results.

* * *

Among the developing concerns, the directors of Grootvlei announce their intention of increasing the capacity of the treatment plant from 80,000 tons formerly projected, to 120,000 tons monthly, the balance of £310,000 available at the date of the balance sheet, together with the proceeds of the 300,000 shares recently issued at 75s., will suffice for the purpose. Operations with the initial treatment installation of 60,000 tons capacity is expected to start in the autumn. The capacity of the Van Dyk plant is also to be raised from 60,000 to 80,000 tons per month, additional resources being provided by the recent offer of 500,000 new 10s. shares at 21s. Milling with the first unit is to be commenced almost at once.

* * *

"Johnnies" Group Results.—Since the majority of the Rand goldmining subsidiaries of the Johannesburg Consolidated Investment Company have reached their prime, the showing made by the latest reports cannot be considered unfavourable compared with those of the preceding year. Several of the companies complain of shortage of labour, although this was to some extent remedied towards the close of the period. In the case of Government Areas, whose dividend most markedly reflected the process of the decline, it is noteworthy that the Government's share of the profits absorbed £1,700,850, a decrease of 11½ per cent. as compared with the 1936 amount, the reduction in the case of the dividends being about 18 per cent. Shareholders have suffered in somewhat greater degree than the Union Government. Reduced capital outlays, however, enabled the company to carry forward a balance of £80,040, compared with £35,500 brought in. The report affords no confirmation of recent market rumours of favourable developments upon the Kimberley reef. The value of the ore reserves shows a further fall, and some further diminution in dividends must be expected this year. Incidentally, the computations are in all cases based on gold at 140s. per fine ounce and current working costs.

* * *

Sales of certain property and township stands enabled the Langlaagte undertaking to pay a bonus distribution of 5 per cent. to supplement the 5 per cent. dividend declared in December, compared with 7½ per cent. in June. As shown in the following table, working profit fell off sharply. The consulting engineers state that "reclamation is of increasing importance." Incidental work raised average costs by over 1s. per ton. Profit of New States Areas fell a little short of the previous year's total, but did not entail any cut in the dividend. In this case also, the probable effects of a reduction in ore reserve values must be considered. Of last year's profits, the Union Government took £1,158,130, a total slightly less than in 1936. The consulting engineers intimate that the major development programme is nearing completion,

EST. 1795

V.S.O.P.

LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

but "considerable exploratory work in areas of lower percentage payable remains to be done." Considerably less exploratory work was carried out last year; 16,560 feet were sampled as compared with 28,100 feet in 1936; and the payable percentages were respectively 42.4 and 54.6. We set out below the working profits, dividends and ore reserve positions for the constituent mines in the group:—

		Working Profit	Dividends	Ore Reserves
		£	Amount	Quantity Value
			Per Cent.	Tons Dwt.
Government Areas	1935	3,873,250	1,680,000	120 11,457,000
	1936	3,343,570	1,540,000	110 11,024,000
	1937	3,018,780	1,260,000	90 10,247,000
Langlaagte Estates	1935	353,950	304,000	20 1,230,000
	1936	313,960	227,970	15 1,205,000
	1937	223,100	265,970	17½ 1,115,000
New State Areas	1935	1,891,370	378,510	25 4,114,000
	1936	1,842,450	454,210	30 4,190,000
	1937	1,812,830	454,210	30 4,203,000
Randfontein	1935	1,581,500	812,710	20 14,895,000
	1936	1,789,380	1,015,890	25 14,057,000
	1937	1,609,550	914,300	22½ 14,100,000
Van Ryn Deep	1935	584,220	359,070	30 3,443,000
	1936	561,300	299,220	25 3,430,000
	1937	557,690	299,220	25 3,433,000
Witwatersrand Gold	1935	150,680	93,930	20 1,471,000
	1936	137,420	105,660	22½ 1,614,000
	1937	139,630	117,410	25 1,620,000

Particular interest attaches to the development position of Randfontein. The footage shows an increase to 220,250 feet; irrespective of subsidiary development and of the total footage sampled in all sections, 69,600 feet, equal to 61½ per cent., proved payable, averaging 9.7 dwts. over 30 inches. For 1936 the corresponding figures were 63,490 feet; 59.7 per cent.; and 9.3 dwts. over 30 inches. Taxation required £453,020, against £568,000, and capital expenditure £197,020, against £211,770, leaving the increased amount of £401,360 to be carried forward. Capital outlay this year should again be less than in 1937. Van Ryn Deep virtually succeeded in maintaining the results of the previous year, a satisfactory achievement, since a large proportion of the tonnage mined was from sources not included in the ore reserve estimate at the end of 1936. Although the least important producer of the group, Witwatersrand Gold provides a modest, but exceptional, increase in earnings and dividends and carries forward a larger sum.

West Rand Consolidated.—Records in output, earnings, and in percentage extraction were established last year by West Rand. Operating profit totalled £1,198,400 against £1,144,300 in 1936. Taxation absorbed £474,800 compared with £420,100, but there was no appropriation for capital expenditure, which in 1936 required the modest amount of £12,500. Distributions on the ordinary shares again amounted to 25 per cent., while the payment of £7 1s. 8d. per deferred share absorbed £177,100 against £171,100 in respect of the payment of £6 16s. 10d. per share in 1936. Although development footage was reduced by 7,600 feet to 101,200 feet, ore reserves increased slightly to 10,630,000 tons, the average value of 4.4 dwts. being the same as in the three preceding years. It should be noted that reserves are calculated on the basis of gold at 140s. per fine ounce, while the majority of other companies take 130s. Further extensions to the treatment plant are proceeding and will raise the monthly capacity of the mill to 220,000 tons, an increase of approximately 600,000 tons per annum over last year's total. No indication is afforded whether the object in view is expansion of profits or their maintenance by the treatment of lower grade ore. On the basis of the dividends for the past three years, West Rand Consols ordinary yield fully 8 per cent. irrespective of allowance for Dominion income-tax, and may be regarded as attractive. The deferred shares are largely held by General Mining and Finance Corporation.

New Kleinfontein.—Of last year's record working profit of £312,390, some £106,190 was appropriated for expenditure on capital account. Accordingly, the advance in the dividend from 16½ per cent. to 20 per cent. did not

reflect the full expansion in earnings. Shortage of native labour restricted development work; the ore reserves, however, amount to 2,777,540 tons, and show an expansion of 208,220 tons. The consulting engineer anticipates a fresh advance in earnings this year. In view of this prospect and of the new capital issue, which will strengthen the financial position, shareholders would appear to be justified in anticipating larger distributions for the current year.

African and European.—The preliminary figures show that a rather spectacular falling off in earnings occurred last year, for profits amounted to no more than £478,840, compared with £807,900 in 1936. Thanks to reduction in the special appropriations, the reduction in dividends is not comparably severe, but the balance distribution of 5 per cent. makes a total of 10 per cent. for the year, compared with 15 per cent. for the three previous years. A transfer of £125,000 from exploration reserve and smaller items increases the general reserve to £1,000,000.

Other Company Results.—This week's company results are smaller in total than of late, but our usual analysis of profit and loss accounts appearing on page 65 includes some 55 companies. In addition to a number of important miscellaneous industrials, our list includes *Royal Mail Lines* and several store companies. The results are discussed on page 31, under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 43. The chairman's remarks at the *International Nickel, Associated Portland Cement and British Aluminium* meetings are reviewed on page 25, while the *Mercantile Bank of India* meeting is referred to on page 20. At the *National Bank of India* meeting the chairman referred favourably to the inauguration of provincial autonomy in India and reviewed economic prospects in the Bank's territory in detail. The chairman of the *Chartered Bank of India*, Mr A. d'Anyers Willis, made special reference to the effect of war upon Chinese finances and banking. At the *Bank of Australasia* meeting, Sir John Sanderson discussed the report of the Commission on Australian banking and currency, and uttered a warning against the imposition of rigidity in banking. Stressing the progress of the *Halifax Building Society*, Sir Enoch Hill pointed out that the balances on 191,632 mortgages out of the total of 239,147 were each below £500. Sir Courtauld Thomson discussed the increasing cost of motor claims at the *Employers' Liability* meeting. The resumption of dividends at 4 per cent. was reported at the *Banco di Roma* meeting. Criticism of official policy regarding air-raid shelters was voiced at the *Richard Costain* meeting. The chairman of *King Line* stated frankly that the outlook for tramp shipping was not very encouraging at the moment, but added that the industry, thanks to co-operation, was now better able to meet adverse conditions. The importance of the petroleum import line limit, which has recently been challenged, was stressed by the chairman of *London and Thames Haven Oil Wharves*. The chairman of *Maple and Company* reviewed the progress of the undertaking at home and abroad. The projected tin buffer pool scheme was endorsed by the chairman of *Ex-Lands Nigeria*. Substantial benefits from the amalgamation with Automatic Electric Company were reported at the *Automatic Telephone and Electric* meeting. *British Ropes'* satisfactory profits last year did not reflect the full benefit of increased capital, and the chairman expressed every confidence in the company's future. Record output and volume of work in hand were reported at the *Ericsson Telephones* meeting. New acquisitions and a forecast of future development plans were among the matters discussed at the *Law Land Company* meeting. Mr Eric Macfadyen disclosed that *Ledbury Rubber* had made forward sales of 134,000 lb. at over 11d. per lb. At the *Lanadron Rubber* meeting he stressed the secular expansion in rubber consumption. The chairman of *Bekoh Consolidated Rubber* reported that 268,800 lb. of rubber were sold forward at an average price of 11½d.

SELLING on Wall Street and Amsterdam has been responsible as much as anything for London's discouraging behaviour this week. It is true that there are few domestic pointers which are calculated to attract new business, and until budgetary uncertainties are out of the way, a cautious attitude in the gilt-edged market is easily to be understood. But the volume of support which the market can count on is scarcely able to take account of small selling of a regular nature, and of the further reduction in commitments before the next wave of political uneasiness. Not until mid-week was there a rally, and this brought no substantial recovery in prices.

Quiet conditions in the *gilt-edged market* at the opening were soon upset by a steady volume of selling, partly on Continental account, and on Wednesday morning a rather severe break was threatened. The market, however, recovered sufficiently to close fractionally better on the day, and maintained most of the improvement on Thursday. It was again noticeable that undated issues were most affected in the setback early this week.

A sharp recovery occurred in *Czechoslovakian bonds* at first, on anticipations of the coupon payment due on Friday, but the gain was not fully held. French issues were heavy in mid-week, and among Far Eastern bonds, Japanese were specially affected by the military and economic news. All South American issues declined further.

Little support was evident for *home rail stocks*, and the traffics comparison, although based on a holiday week last year, proved particularly depressing. Great Western ordinary lost as much as 1½ on Wednesday, and most of the marginal preference issues were also sold. Argentine rail issues remained almost unsupported, following the new weakness in the free peso and the discouraging trade outlook.

Industrial shares could find no relief from their heaviness of spirit. Wall Street's retreat and Continental selling played their part, but the main factor was lack of interest from the general investor. Erratic downward movements occurred throughout the international group. Among steel shares, Whitehead and Dorman Long were responsive to selling, and few shares, apart from Cammell Laird, were able to share in the mid-week improvement. Richard Thomas issues were again depressed. Electrical equipment shares were moderately sold, but prices reflected a greater volume than actually occurred. Small losses were also characteristic of the aircraft group, which had previously withstood general influences, but motor shares (particularly the heavy group) and engineering issues fell further.

The mid-week rally assisted selected store shares, like Woolworth and Harrods, to the extent of a few pence, and tobacco shares also staged a small rally. The brewery list, however, re-

mained dejected, and bank and insurance shares were generally marked lower. Uncertain conditions and reactionary prices prevailed throughout the miscellaneous industrial list.

Oil shares were irregular and unsatisfactory. On Monday prices tended to sag, although turnover was better, but after a slight improvement renewed weakness developed under the pressure of continued Continental sales, which did not slacken until mid-week. The pronounced weakness of the commodity price on the quota decision had its due effect on rubber shares. Prices were marked down, and the volume of selling increased considerably. The appearance of a few bargain-hunters in mid-week hardly affected the general trend.

Mining markets shared the general weakness. In Kaffirs there was no marked selling pressure, but sentiment was affected by movements in Wall Street and prices sagged all round. Under the stimulus of a little Cape support, quotations in mid-week recovered from their worst, especially for the developing mines. Rhodesian copper and tin shares were consistently dull. Shares of silver producers fell on the abrogation of the U.S. silver purchasing agreement with Mexico.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 151 industrial ordinary shares had fallen to 65.2 on Tuesday last (March 29th), a drop of over 4 points in five weeks (the index on February 22 being 69.4), and comparing with 86.5 at the end of March 1937. The corresponding yields are 5.65, 5.22 and 4.09 per cent. Since March 22, 1938, however, the decline in the index has been only 0.3. Fixed interest stocks have also fallen in the past month, the index of 2½ per cent. Consols being down by no less than 7.5. Industrial debentures and preference have fallen in a smaller degree. We give below the usual monthly particulars of fixed interest securities and ordinary share indices:—

New York

A SMALL rally on Monday, fed by wishful thinking on the subject of industrial recovery, gave Wall Street its only relief this week. On Tuesday a 5½ point fall in the Dow Jones index proved that the market was quite incapable of resisting the deterioration both in the underlying business situation and in the technical position of the market. An oversold market is no longer a steadying influence on the course of quotations, and while a few optimistic operators were sufficiently courageous to place a few buying orders on Wednesday morning, heavy selling in the last hour depressed prices further. Copper and steel issues proved vulnerable throughout the week, but utilities made the best of the Senate's tax bill changes, after the confirmation of the "Death Sentence" Act by the Supreme Court. *Iron Age* estimates that steel activity has improved from 34 per cent. of capacity to 35½ per cent. this week, but scrap prices have fallen further. Further falls have occurred in the bond market, affecting second grade rail issues in particular.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100).

* Two-hour session.

Company Results of the Week.—

Two industrial offers have been made this week. *Odhams' Properties* have issued £185,000 5 per cent. first mortgage debenture stock at par and 285,000 5s. ordinary shares at a premium of 75 per cent. The stock is part of an authorised total of £1,250,000, of which £802,778 is already issued, and is secured on leasehold premises and the copyright licence of *The People*, which is published by Odhams Press under licence. The revenue of the property, in fact, consists of rents and royalties from Odhams Press, whose profits record in recent years is satisfactory, and whose payments to the property company have been fixed on a basis sufficient to pay 12 per cent. on the latter's preference and ordinary shares. The issues are to provide for the cost of new buildings in London and Manchester, and the yield on both debenture stock and ordinary shares appears reasonable in relation to the profits record of Odhams Press and its arrangements with Odhams Properties. An offer for sale of 500,000 1s. ordinary shares of *C. Lindley and Company*, at 75 per cent. premium, has also been made. The company deals in tools and engineering supplies, and the yield basis of 11 per cent. is shown on average profits over the past four years. Profits, however, have risen steeply in the past three years, and the possibility of fluctuations in earnings will tend to limit the appeal of the shares to the specialist investor. Statements for information

March was a thoroughly unsatisfactory month on the Amsterdam Bourse. During the first week, business was quiet, but prices were reasonably firm, despite occasional irregularity. M. Chautemps' resignation was without effect, and quotations were at first deceptively resistant to the annexation of Austria, apart from a short-lived decline in Government bonds. On fuller realisation of its significance, however, a rapid deterioration set in, a particularly bad session being experienced on Wednesday, March 16th. Fears of immediate and serious political conflict then died down, prices steadied, and a modest volume of public buying came in evidence. A few dull and quiet days were then followed by a comparatively rapid and serious decline in the last ten days of the month, 'in sympathy with Wall Street, and occasional rallies were quite unable to check the collapse.

PUBLIC OFFER
Odhams Properties Limited.—
Issue of £185,000 5 per cent. first mortgage debenture stock at par and 285,000 5s. ordinary shares at 8s. 9d. Stock redeemable at 102½ by 1971 by drawings, or from 1950 on notice. Properties leased to Odhams Press, who pay also for licence to publish "The People." Odhams Press profits, after

**STOCK EXCHANGE
INTRODUCTIONS**

Land Revenues Trust, Limited.—Particulars of 115,000 5 per cent. redeemable cumulative £1 preference shares. Redeemable at par April, 1956, or thereafter up to October, 1976.

Newcastle-upon-Tyne and Gateshead Gas Company.—Particulars of issue of £250,000 3½ per cent. debenture stock redeemable at par July, 1963, or from 1958 on notice. Interest ranks with debenture stocks and mortgages.

Nuneaton Corporation.—Particulars of issue of £250,000 3½ per cent. stock, redeemable at par November, 1958, or from 1953 on notice. Proceeds to repay existing loans. Estimated population, 47,940. Rateable value, £236,992; rates, 15s. Total debt, March, 1937, £1,214,591.

Company Results of the Week.—**PRIMITIVA GAS COMPANY** of BUENOS AIRES are paying 24 against 2 per cent., net profits having risen from £162,275 to £186,026. Although currency revenue rose, the loss on exchange was lower than in 1936, owing to the improvement in rates. **ROYAL MAIL LINES** have benefited from increased passenger and cargo business, and although operating costs were higher than in 1936, net profits rose from £631,087 to £743,055. **UPSONS, LTD.**, boot and shoe retailers, have increased the dividend from 12 per cent. to 13 per cent., net profits being 10 per cent. higher at £178,155. **JOHN LEWIS AND COMPANY** repeat the 12 per cent. dividend. Net profits of £241,592 have improved by some £8,000. The report points out that the separate businesses of John Lewis, Peter Jones, and Knight and Lee are now part of the company, and the profit and loss accounts consolidates their results. **RIVER PLATE TRUST LOAN AND AGENCY COMPANY** have earned £22,500 more at £221,626. This improvement is largely due to a non-recurring item of interest on mortgage loans and to the receipt of dividend arrears. **DAILY MIRROR NEWS-PAPERS** and **SUNDAY PICTORIAL NEWSPAPERS** are maintaining their dividends, but net profits of £336,384 and £218,882 respectively are lower than in 1936. **SMITHFIELD & ARGENTINE MEAT** have earned £80,378, against £49,933, and the carry forward is substantially increased in view of changing conditions. A better year has also been experienced by **UNITED GLASS BOTTLE**, whose net profits amount to £230,545, against £171,583. An increase in turnover has raised the profits of **A. REYROLLE AND COMPANY** from £174,287 to £207,667, the 12½ per cent. dividend being maintained on an increased capital.

(Continued on page 63)

THE Paris market was irregular and nervous last month, and deteriorated on political unsettlement at home and the annexation of Austria. The month started quietly with a nominal volume of business, in which internationals varied with movements in the franc. A tendency to greater activity was then checked by the Cabinet crisis, though M. Chaumet's resignation was eventually received with calm. After the Austrian crisis, the Bourse was much depressed by the foreign situation, and registered further disappointment that a National Front Government had not been possible at home. Unsettlement increased and there was steady selling, though neither quotations nor the volume of sales reached panic levels. M. Blum's financial proposals and a recrudescence of strikes were further disturbing influences, and it became apparent towards the end of the month that the technical position had also deteriorated.

(Incorporated in the Union of South Africa.)

EXTRACT OF ANNUAL REPORT TO 31st DECEMBER, 1937.

[illegible]

Ore Reserve.—With gold at a selling price of 140s. per fine ounce, and with working costs at present-day level, the fully developed ore reserve, as re-calculated at the 31st December, 1937, amounted to **10,333,000 tons** of an average value of **4.4 dwts. over 44 inches**. (1938: 10,403,000 tons at 4.4 dwts. over 44 ins.)

General.—As a result of minor alterations and extensions to the Reduction Plant, the tonnage crushed for the year was increased by 60,000 tons to a total of 2,650,000 tons. Work is at present in hand on a further extension, which, when completed, will provide a monthly crushing capacity of 220,000 tons.

Copies of the full Report and Accounts can be obtained from the London Secretary, Winchester House, Old Broad Street, London, E.C.2.

CANADIAN PACIFIC RAILWAY COMPANY

FIFTY-SEVENTH ANNUAL REPORT

OF THE DIRECTORS OF CANADIAN PACIFIC RAILWAY COMPANY

YEAR ENDED DECEMBER 31, 1937

To the Shareholders:

The accounts of the Company for the year ended December 31, 1937, show the following results:—

INCOME ACCOUNT

Gross Earnings	145,085,557.62
Working Expenses (including taxes)	121,343,310.59
Net Earnings	23,742,247.03
Other Income (after providing for depreciation of steamships and hotels)	11,629,711.05
Fixed Charges	35,371,958.08
Balance transferred to Profit and Loss Account	9,462,284.04

PROFIT AND LOSS ACCOUNT

Profit and Loss Balance December 31, 1936	138,532,703.39
Dividend of 1 per cent. on the Preference Stock, declared from the earnings of the year 1936, paid April 1, 1937	1,372,569.21
	\$137,160,134.18
Balance of Income Account for the year ended December 31, 1937	9,462,284.04
	\$146,622,418.22

DEBIT:

Amount credited investment reserve being equivalent to advances made in January and July, 1937, to Minneapolis, St. Paul & Sault Ste. Marie Railway Company to make up deficiency in amount available to meet interest obligations guaranteed by Canadian Pacific Railway Company	3,849,184.37
Loss on lines abandoned and on property retired and not replaced	2,495,361.76
Miscellaneous—Net Debit	327,084.26
	6,671,630.39

Profit and Loss Balance December 31, 1937, as per Balance Sheet \$139,950,787.83
NOTE.—Subsequent to the end of the year, a dividend of 2 per cent. on the Preference Stock, amounting to \$2,745,138.42, was declared from the earnings of the year 1937, payable April 1, 1938.

The balance of Income Account available for transfer to Profit and Loss Account was \$3,433,100 greater in 1937 than in 1936.

RAILWAY EARNINGS AND EXPENSES

The comparative results of railway operations were as follows:—

	1937	1936	Increase
Gross Earnings	145,085,558	138,562,763	6,522,795
Working Expenses (including taxes)	121,343,311	118,281,652	6,061,659
Net Earnings	23,742,247	23,311,111	431,136

Working expenses, including taxes, amounted to 83.64 per cent. of gross earnings in 1937, as compared with 83.18 per cent. in 1936, or, excluding taxes, 80.69 per cent. as against 80.13 per cent.

Gross earnings for the year increased \$6,522,795 or 4.7 per cent. The increase during the first half of the year was 7.6 per cent., but, owing largely to the crop failure in Saskatchewan, the increase in the last six months was only 2.3 per cent. The decrease for the year in earnings from grain and grain products was \$5,869,000, or more than 26 per cent.

The grain handlings in 1937 suffered a further severe drop to 94 million bushels, constituting only 39 per cent. of the 1925-1930 average, and but 61 per cent. of even the 1931-1936 average. Not since 1908 has there been a year in which the grain handlings were lower than in 1937, although the acreage sown to grain has more than trebled in the interval. Moreover, the unfavourable crop conditions on the prairies has an adverse effect on the earnings from all other classes of traffic handled to and from that territory.

Passenger earnings increased \$967,693, or 6.2 per cent., the largest increase in one year since the low point was recorded in 1933. All classes of passenger travel contributed.

Freight earnings increased \$4,999,575, or 4.7 per cent., the large reduction in grain traffic being more than offset by continued improvement in traffic from mines, forests and manufactures.

Working expenses increased \$6,091,659, or 5.3 per cent. Of this increase \$2,243,788 resulted from the progressive restoration of deductions from basic rates of pay of employees. The rate of deduction generally in effect at the beginning of the year was 10 per cent. and one-tenth of this was restored on each of the first days of February, April, June, August, October, and December. Effective April 1st, the rate of deduction for senior officers was reduced from 15 per cent. to 10 per cent.; for the Directors and members of the Executive Committee from 20 per cent. to 15 per cent.; and for the President from 35 per cent. to 30 per cent.

Maintenance expenses increased \$2,602,963, or 5.5 per cent. Notwithstanding higher wage rates, the cost of maintaining way and structures decreased \$670,765. This was due in part to smaller expenditure for removal of snow and ice and in part to the fact that the expenses in 1936 included \$1,605,000, the Company's proportion of the cost of providing work at the request of the Dominion Government for 5,000 unemployed men transferred from relief camps which were being closed. Maintenance of equipment expenses increased \$3,273,728, of which \$1,302,000 represented increased charges for the retirement of rolling stock. Repairs were heavier owing to the increase in traffic, and costs were augmented by a substantial rise in material prices and by the higher wage rates.

Transportation expenses increased \$2,689,357, or 5.4 per cent. The ratio of transportation expenses to gross earnings in 1937 was 36.2 per cent., as compared with 36.0 per cent. in 1936, this in-

crease being more than accounted for by the partial restoration of wage deductions. While the average freight train loading decreased slightly from 1,557 tons in 1936 to 1,544 tons in 1937, the average speed of trains was greater, and gross ton miles per train hour increased from 25,370 to 25,745 tons.

OTHER INCOME

Other income, after provision for depreciation of steamships and hotels, increased \$4,998,340.

Dividend income increased \$2,633,669, due mainly to additional dividends amounting to \$2,523,750, received from the Consolidated Mining and Smelting Company of Canada, Limited, which, by reason of much higher prices for lead and zinc enjoyed a prosperous year.

Net income from interest, exchange, separately operated properties and miscellaneous increased \$381,737.

Net earnings from ocean and coastal steamships, after deducting \$3,894,469 credited to depreciation reserve, were \$2,458,832, an improvement of \$2,472,895. The volume of passenger and freight traffic increased substantially on both Atlantic and Pacific Oceans. Passenger earnings from regular voyages showed an improvement in all classes, and the more settled conditions in the Mediterranean permitted the Company to secure a much larger number of passengers for the world cruise of the "Empress of Britain." While cost of supplies, of shore labour and of repair work was somewhat higher, a larger part of the increased gross earnings was carried into net earnings. During the year your vessels completed 201 voyages, in the course of which they steamed 1,418,660 miles and made 1,320 calls at 96 different ports.

Net earnings from hotel, communication and miscellaneous properties decreased \$489,962. Net earnings from hotel operations, before depreciation, increased \$46,608, but pursuant to the policy of providing for obsolescence of hotels outlined in last year's report an amount of \$1,257,598, being an increase of \$637,504, was appropriated for hotel depreciation. Net earnings from communications increased \$150,465.

FIXED CHARGES AND GUARANTEED INTEREST

Fixed charges increased \$128,236, which was more than accounted for by increase in interest on equipment obligations due to the acquisition of additional modern rolling stock.

As a result of the filing on December 31st last, by the Minneapolis, St. Paul & Sault Ste. Marie Railway Company (Soo Line) of a petition for reorganization under Section 77 of the Bankruptcy Act of the United States, certain bond interest guaranteed by your Company and payable January 1, 1938, became a direct liability. The amount of such interest, together with the interest on Soo Line notes secured by bonds guaranteed as to interest by your Company, was deducted from Income Account.

PROFIT AND LOSS ACCOUNT

An amount of \$3,849,184, being equivalent to the advances made to the Soo Line in January and July to make up the deficiency in the amount available to meet its interest obligations, guaranteed by your Company, was charged to Profit and Loss Account and credited to investment reserve.

The necessary adjustments in the property investment account were made for all property retired during the year. Charges aggregating \$2,495,362 for property retired and not replaced were made against Profit and Loss Account.

DIVIDENDS

After taking into consideration the disappointing result of the operations during the latter part of the year, the large disbursements which the Company will have to make during the first half of the current year as a result of its interest guarantee on obligations of the Soo Line, and the general uncertainty as to the prospects for 1938, your Directors decided to declare a dividend of two per cent. on the Preference Stock from the earnings of 1937, payable April 1, 1938.

LAND ACCOUNTS

During the year 129,751 acres of agricultural lands were sold at an aggregate price of \$1,330,149, an average of \$10.25 per acre, including 6,180 acres of irrigated land at an average of \$50.57 per acre and the remainder at an average of \$8.23 per acre.

Both sales and collections were somewhat better than in 1936. For the first time since 1929 the cash receipts from lands, including interest on deferred payments, exceeded land expenditures including taxes, irrigation, immigration and colonisation, and interest on note certificates. In view of the adverse crop conditions, the Company continued the policy of making concessions to farm contract holders in Western Canada. Interest rebated during the year amounted to \$960,360 and adjustment of principal and further interest concessions for cash payments amounted to \$966,556, bringing the aggregate concessions to contract holders for the period 1932-1937, inclusive, to \$11,477,082. Proof of the soundness of the policy followed by the Company in the early adoption of voluntary concessions to farm contract holders is found in the satisfactory public relations created and in the fact that, notwithstanding the subsequent legislation for farm relief enacted by the Dominion and Provincial Governments, your contract holders have continued to meet their obligations as voluntarily adjusted without taking advantage of the moratoria available to them.

PENSIONS

The contributory pension plan which became effective January 1, 1937, has been very favourably received by the employees, and at the end of the year approximately 93 per cent. of those eligible had elected to contribute.

The total contributions of officers and employees to the Trust Fund during the year amounted to \$1,772,110. In accordance with the Pension Rules, these moneys are being invested from time to time in Dominion Government securities or securities guaranteed by the Dominion Government. As was anticipated in respect of the early years of operation, payments on account of pensions from the Trust Fund were negligible.

The Company's pension disbursements totalled \$2,374,209 and were included in working expenses.

GREAT LAKES SERVICE

For some years the Company participated in a rail, lake and rail freight service connecting points in Eastern Canada and New England with Chicago and Milwaukee, via Windsor, Ontario, in which the portion of the haul between Windsor and Chicago was performed by an independent steamship line. In the spring of 1937 the connecting lake line announced the discontinuance of its Lake Michigan service, and the Company, in order to maintain its participation in this important traffic between the East and the Middle and Western United States, applied to the Interstate Commerce Commission for permission to establish a service with its own vessels between Port McNicoll, on Georgian Bay, and Milwaukee and Chicago. The Commission in a decision issued on October 4, 1937, authorised the Company to operate the service, but it was not then possible to commence operations before the close of the season. The new service will be commenced at the opening of navigation, will be performed with existing steamers of the Company, and will be designated as the "Canadian Pacific Great Lakes Line."

LONDON HOTEL SITE

The negotiations in regard to the lease of the Berkeley Square site, referred to in the last annual report, have been satisfactorily concluded. The buildings have been demolished, and the lessees have commenced construction of an office building in keeping with the character of this property in the West End of London. In order to enable the transaction to be completed, the leasehold interests in three additional lots have been extinguished. The site has been leased for a period of two hundred years from June 24, 1937, at an increasing rental, reaching a maximum payable in the eighth year and thereafter, which will give the Company a satisfactory return on the capital invested. The lessees are granted the option, on giving six months' notice prior to June 24, 1941, to purchase the freehold at a price that will return to the Company a sum in excess of the amount paid for the property.

FINANCE

There were issued and sold during the year £827,400 Perpetual 4 per cent. Consolidated Debenture Stock, the proceeds of which were used to redeem £750,000 Algoma Branch 5 per cent. First Mortgage Bonds of the Company, which matured July 1, 1937.

On February 1, 1937, the Company entered into an Equipment Trust Agreement with The Royal Trust Company as Trustee, under which \$16,080,000 Equipment Trust Certificates were issued, guaranteed as to principal and interest by the Company. This issue, designated as Series "D," maturing in equal semi-annual instalments from August 1, 1937, to February 1, 1952, inclusive, is payable as to

one-half of the principal amount in lawful money of Canada, bearing interest at three per cent. per annum, and as to the other one-half in currency of the United States of America, bearing interest at two and one-half per cent. per annum. Under this agreement new equipment costing \$16,080,943.50 was purchased by the Trustee and leased to the Company. The certificates were further secured by the pledge of \$4,020,000 Consolidated Debenture Stock, a proportionate amount of such Stock being returnable to the Company on payment of each instalment.

The balance of the rolling stock under the Hire-Purchase Agreement with the Dominion Government, referred to in previous annual reports, was delivered towards the close of the year, and the formal agreement has been executed. The principal amount owing to the Government under this Agreement is \$5,730,000, repayable in equal annual instalments from 1938 to 1950, inclusive. The interest rate was finally set at three per cent. per annum and accrues from May 11, 1938.

During the year equipment obligations to the amount of \$2,486,000 were redeemed by the Company and Consolidated Debenture Stock to the amount of \$134,000 pledged under Series "D" was released and cancelled. An amount of \$2,316,000 was deposited with the Trustee of the Equipment Trust, maturing July 1, 1944, and of that amount \$1,877,869 was expended by the Trustee under the terms of the Trust Agreement in the purchase of new equipment to be leased to the Company. Serial 3 per cent. Collateral Trust Bonds to the amount of \$1,000,000 were redeemed and on such redemption Consolidated Debenture Stock to the amount of \$1,250,000 was released and cancelled. Twenty-year 4½ per cent. Sinking Fund Secured Note Certificates to the amount of \$306,000 were purchased by the Trustee and cancelled.

For the purpose of defraying in part the capital cost of extensions and improvements of the property of the Company heretofore made and to be made, of refunding maturing obligations, and providing generally for the capital and other requirements of the Company, your Directors recommend that they be given your authority to issue Consolidated Debenture Stock, not exceeding in the aggregate the amount which the Company is by law empowered to issue, and to sell or pledge the same or any part thereof as circumstances and market conditions may warrant.

STOCK HOLDINGS

The holdings of the Capital Stocks of the Company in December, 1937, were distributed as follows:—

	ORDINARY	PREFERENCE	Percentage of Ordinary and Preference Stocks combined
No. of holders	Percentage of Stock	No. of holders	Percentage of Stock
Canada	26,044	149	56
United Kingdom and other	19,733	28,051	95.09
British	15,890	44	26
United States	4,002	600	4.09
Other Countries	65,669	26,843	6.01

Your Directors desire again to acknowledge their grateful appreciation of the efficiency and loyalty displayed by the officers and employees of the Company in relation to all matters affecting its interests.

For the Directors,

E. W. BEATTY,
President.

Montreal, March 14, 1938.

AUDITORS' CERTIFICATE:

We have examined the Books and Records of the Canadian Pacific Railway Company for the year ending December 31, 1937, and having compared the above Balance Sheet therewith, we certify that in our opinion it is properly drawn up so as to show the true financial position of the Company at that date, and that the Income and Profit and Loss Accounts correctly set forth the result of the year's operations.

Montreal, March 11, 1938.

E. A. LESLIE,
Comptroller.

Chartered Accountants.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest securities allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the last dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

Retail Trade Less Buoyant.—The widespread decline in general business activity is now beginning to find reflection in sales over the counter. Last February the value of retail sales, as recorded in this week's *Board of Trade Journal*, was only 4.4 per cent. higher than in the corresponding month last year. In December and January the increases compared with the corresponding months a year earlier were 8.3 per cent. and 6.2 per cent. respectively. An analysis of the returns shows that the improvement in the value of sales compared with February, 1937, was confined to food and perishable goods, the increase amounting to 8.1 per cent. This increase, however, is largely due to the rise in prices which has taken place during the past year. The value of the sales of general merchandise last February was actually 0.4 per cent. smaller than a year earlier. With the exception of October, 1937, and of certain periods affected by the varying dates of the Easter and Whitsuntide holidays, February is the first month since September, 1933, in which the value of sales of general merchandise was smaller than during the corresponding month a year earlier. In view of the increase in prices, the decline in the volume of sales of general merchandise was probably somewhat greater than the fall in the value of turnover suggests. Moreover, the decline in the sales of general merchandise between February, 1937, and February, 1938, was accompanied by an increase of 3.5 per cent. in the value of stocks at cost. In Central and West-End London the decline in the value of sales of general merchandise was as much as 7.3 per cent. In suburban London, sales were 2.2 per cent. lower than a year ago. While the remaining districts still showed a slight increase, the returns suggest that the demand for consumption goods is not being maintained.

Shipping Problems.—Prosperity's visit to British shipping was short. After rising from 90.6 (1898-1913 = 100) in June, 1936, to 169.8 in September, 1937, *The Economist* index of tramp shipping freight rates has fallen back to 118.9. The sharp increase in freight rates in 1936-37 was due to a sudden spurt in international trade. Since last autumn, however, the volume of world trade has declined almost as suddenly as it had previously risen. Moreover, the latest evidence suggests that world trade is still shrinking. The absence of a cheerful note in the annual report of the Chamber of Shipping is, therefore, scarcely surprising. As far as tramps are concerned, building and running costs have increased to such an extent that it is doubtful whether present freight rates, though still appreciably higher than two years ago, are sufficient to provide even for depreciation. In the case of liners the improvement in freight and passenger charges has been less marked. Moreover, liners are still seriously affected by subsidised competition, which keeps the supply of tonnage above demand. Tankers, on the other hand, are in a relatively more favourable position, for the increase in tanker freight rates in 1936-37, though not fully maintained, has been considerably greater than the rise in tramp rates. The report points out that the cost of building ships has risen by 40 per cent. or more during the past two years, while the cost of repairs has increased correspondingly. In his presidential address to the annual meeting of the Chamber of Shipping Mr W. A. Souter suggested that the true title for the history of British shipping in the past 100 years should be "The growth and decline of the British mercantile marine." Between 1840 and 1914, Britain's carrying capacity rose from 2.9 million gross tons to 18.9 millions, and her share of the world's tonnage rose from 30 per cent. to 44 per cent. Since then Britain's mercantile marine has fallen to 17.4 million gross tons, equivalent to 28 per cent. of the world's total tonnage. Moreover, in view of the downward trend of world trade

and the continued subsidisation of shipping in many other countries, the outlook for British shipowners is not altogether reassuring.

Tin Pool Criticised.—The meeting of the International Tin Committee, which was to have been held in Paris on April 5th, has been postponed. The reason is understood to be that Malaya's decision on the buffer pool proposals may not be known by that date. In the meantime, much criticism is being voiced of the buffer scheme itself (the proposed details of which were described in *The Economist* last week). It is being urged that, under the guise of a purely technical expedient, it makes a fundamental change of principle; for it ties the International Tin Scheme, for the first time, to a definite price range—and a high one at that. In the second place, the method of its canvassing and publicity—or lack of publicity—leaves much to be desired. Even now, there has been no official announcement bearing the *imprimatur* of the International Committee. After weeks of rumour the details of the scheme were allowed to become common knowledge, but only through an agency message of undisclosed authorship. Thirdly, the scheme, if applied, will involve disturbance in the industry and the market, both at the outset and later. On its inception, available market supplies of tin will need to be reduced if the price is to be brought up to the lower pool limit; while, ultimately, the fact that the pool will operate only in standard warrants will probably mean that consumers, particularly in America, who have hitherto been willing to pay a premium to obtain Straits tin, will have to take standard tin from the pool. Even more serious will be the opportunity and the incentive which the pool will give to private pools to operate like little fleas on the big flea's back. However "secret" the operations of the official pool, the main fact—namely, the price at which the pool will operate—will be everybody's knowledge. Finally, the "penal clause," under which a country which does not produce its buffer stock will forfeit its existing right to withdraw from the main scheme, is open to dual objection. It represents a form of extraneous pressure on Malaya, the area likely to be least enthusiastic over the buffer idea. And it removes, on behalf of a new expedient which is unnecessary to the working of the main scheme, one of the latter's essential safeguards at a time when its application may well become a matter of practical politics.

Rubber Committee Disappoints Market.—The International Rubber Regulation Committee sadly disappointed the markets this week. At its meeting on Tuesday the Committee—contrary to expectations—decided to leave the April-June quota unchanged at 60 per cent. of standard tonnages, and postponed its decision regarding the July-September quota until the end of May. The less optimistic operators had foreseen that the revision of the quota for the second quarter at this late date would present certain difficulties; but a sharp reduction in the third quarter's quota had been generally expected. It is scarcely surprising, therefore, that prices tumbled a sharp fall when the Committee's decision became known, and dropped to the lowest level since restriction began. Unless there is an unexpected improvement in American demand, it would be rash to assume that prices have reached bottom. Meanwhile, the I.R.R.C. has also announced its final recommendations for the renewal of the restriction scheme after the end of the present year. The Committee's provisional draft was outlined in *The Economist* of February 26th

(page 462), but the basic quotas have in certain cases been considerably increased and will now be as follows:—

	1939 Tons	1940 Tons	1941 Tons	1942 Tons	1943 Tons
Malaya	632,000	642,500	648,000	651,000	651,500
N.E.I.	631,500	640,000	645,500	650,000	651,000
Ceylon	106,000	107,500	109,000	109,500	110,000
India	17,500	17,750	17,750	17,750	17,750
Burma	13,500	13,750	13,750	13,750	13,750
N. Borneo ...	21,000	21,000	21,000	21,000	21,000
Sarawak	43,000	43,750	44,000	44,000	44,000
Siam	54,500	55,300	55,700	56,000	60,000
Total	1,519,000	1,541,550	1,554,700	1,563,000	1,569,000

These new quotas are substantially higher than those for the current year, the increases ranging from a mere 5 per cent. in the case of Malaya to 36 per cent. for Siam and 46 per cent. for Burma. Ceylon's new quota for 1939, arrived at after lengthy bargaining, is 28.5 per cent. greater than that for 1938, but, even so, it is by no means certain that she will accept the Committee's recommendation. If she persists in her demand for a higher quota, it will be necessary to call a conference of the signatory Governments. Truly the way of restrictionists on a falling market is hard.

Value of Agricultural Output.—Details of the value of agricultural and horticultural output in England and Wales last year, together with revised estimates for earlier years, are contained in the current issue of the *Agricultural Market Report*. Last year's aggregate showed an increase of almost 7 per cent. compared with the previous year's estimate, and was nearly 9 per cent. above that of 1930-31. The combined value of the output of livestock and livestock products has shown a continuous increase since 1931-32, and rose by a further £6,900,000 last year. Production of farm crops showed an increase of £3,800,000 in 1936-37, fruit and vegetables were up by £3,700,000, and glasshouse produce also showed a slight increase. Details are as follows:—

AGRICULTURAL OUTPUT—ENGLAND AND WALES
(Million £)

Commodity	1930-31	1932-33	1934-35	1935-36	1936-37
Cattle and calves	29.9	23.6	25.1	25.5	27.0
Sheep and lambs	15.6	14.4	15.9	15.0	15.6
Pigs	19.5	18.4	21.0	22.6	25.4

Total*	20.1	20.0	23.8	20.0	23.7
Glasshouse produce, etc.	7.1	7.8	8.1	8.5	8.8
Grand Total ...	202.7	182.5	206.0	205.9	220.6

* Including other items.

Poultry and eggs were the only items in the first group which failed to record an increase last year, and gains were also general among farm crops. These changes are, of course, the result of alterations in both quantity and price. In terms of volume, production was about unchanged in 1930-31 and 1931-32, but exceeded the output of these years by 18 per cent. in 1934-35. This gain was reduced to 12 per cent. in 1935-36, but recovered to 17 per cent. last year.

Further Fall in Prices.—The downward trend of wholesale commodity prices continues. In England, *The Economist's* complete index number has fallen during the

past fortnight by 1.0 per cent. and the primary products index by 2.6 per cent. The Irving Fisher complete American index number has declined by 0.5 per cent., and *The Economist's* index number of American primary products has fallen by 4.1 per cent. In spite of the depreciation of the franc, the past fortnight has witnessed a slight decline in French wholesale prices. The British and American indices are now substantially lower than they were a year ago, but in March, 1937, prices were practically at their peak:—

Other foods	62.2	70.4	60.2	60.1
Textiles	43.7	74.2	56.5	55.5
Minerals	67.4	113.2	95.4	93.2
Miscellaneous	65.8	87.0	77.6	76.1
Complete index	60.4	87.2	74.8	74.1
1913 = 100	83.1	119.9	103.0	102.0
1924 = 100	52.2	75.3	64.7	64.0

With the exception of rice, grain prices have hardened during the past fortnight. In the other food group, a sharp rise in tea balances declines in cocoa, butter and coco-oil. Among textiles, cotton has weakened after its previous rally, and flax has also cheapened. There has been a general fall in non-ferrous metal prices. The chief movement in the miscellaneous group was the sharp drop in rubber.

A Vital Sugar Meeting.—Following the ratification by the United States of the international agreement, the International Sugar Council has decided to hold the meeting for which the market has been waiting ever since the beginning of the year. The decision is opportune since the London price has declined almost to 5s. per cwt.—against an average of 6s. 4½d. last year—and the market is in urgent need of a lead. The recent decline of prices to the lowest level since the autumn of 1936 is due partly to technical causes and partly to the deterioration of the statistical position. World production this year, according to Messrs Willett and Gray, is estimated at 30,830,000 long tons, against 29,920,000 tons last year. On the other hand, consumption, according to Mr F. O. Licht, is expected to decline from 29,533,200 to 29,125,500 metric tons. The requirements of the free world market in 1937-38, originally put at over 3,500,000 metric tons, may actually fall short of 3,300,000 metric tons. Since a number

of countries have relinquished part of their quotas, the total of these now amounts to 3,508,500 metric tons, against an original total of 3,611,000 metric tons; but an additional 150,000 tons will probably be exported by countries outside the agreement. Total exports to the free market may reach a total of at least 3,550,000 metric tons this season unless—as is generally expected—a cut in the quotas is agreed upon at the forthcoming meeting on April 27th. But a reduction of 5 per cent.—the maximum possible under the agreement—would probably still leave supplies in excess of free market requirements, unless the voluntary abandonment of quotas is greater than seems likely at present. Owing to the restricted nature of the free market, a slight excess of supplies has a disproportionately depressing effect on prices, and it is therefore being suggested that the powers of the Sugar Council should be increased. If this is not done the present agreement is likely to be no more successful than the Chadbourne scheme.

INDUSTRIAL REPORTS

REPORTS from industrial centres contain little evidence of the seasonal expansion usually so marked at this time of the year. There has been no improvement in the cotton industry, and in the wool textile trade no more than 50-60 per cent. of the machinery is running full time. The majority of wholesale and retail clothiers appear to be content to clear last season's surplus stocks. The iron and steel markets are reported to be a little more active, but the volume of new transactions remains small. The output of the tinplate industry has been reduced to 43.7 per cent. of capacity. The deterioration is reflected in exports of tinplates, which, at 3,971 tons last week, showed a decline of 4,500 tons from the corresponding week last year. The output of coal during the week ended March 19th was 5,001,200 tons, against 5,235,000 tons during the corresponding period last year. Moreover, the volume of new business remains small and prices show a downward trend. In South Wales, for example, collieries are now almost entirely dependent on their contracts. There are no indications of an early change in present industrial trends.

Coal

Cardiff.—Spot prices have been reduced on the Cardiff coal market for the more bituminous classes, and there has been a further decline both in foundry and furnace coke, while patent fuel is also about 6d. easier at 25s. 6d. per ton. For backward positions provisional prices are being maintained, although the volume of new inquiry is restricted. Collieries are almost entirely dependent on their contracts, and as these leave only a relatively small percentage of current production free for disposal, shipments compare favourably with those in the corresponding period last year. The Great Western Railway Company's returns for the week ended March 24th give a total of 404,200 tons, compared with 359,600 tons in the previous week and 390,858 tons a year ago.

The negotiations between the owners and the workmen's representatives over the wages question have not yet been concluded, but the terms provisionally arranged include the introduction of holidays with pay to operate as from the present year. There are certain qualifying conditions, and allowances for a week's holiday consist of £3 for adults, £2 for youths between 18 and 21, and £1 for boys under 18.

Newcastle-on-Tyne.—While the coal trade in this area remains fairly steady, inquiry for forward delivery is small, the export section being very disappointing. The Northumberland steam coal market is quiet. Home trade has fallen away, with the result that some collieries are having difficulty in clearing sized coals. The Durham section remains very steady; collieries producing gas and coking coals are comfortably placed, but those producing second-class bunkers would welcome more trade. Patent oven coke is a very quiet market, there being no inquiry from abroad despite lower prices.

Glasgow.—The Scottish coal market is dull. Business is slow, both in the home and export markets. Export prices are now down to the lowest point touched for a long time past, and it is learned that the selling agencies are to exercise stronger control in order to check the decline. Competition in foreign markets remains as keen as ever. Industrial demands are satisfactory on the whole, but business with gas and electricity works both local and through the coastwise trade, including London, is now tapering off. Supplies are now plentiful.

COAL OUTPUT AND EMPLOYMENT

District	Week ended March 12, 1938		Week ended March 19, 1938

* Including Cumberland, Gloucester, Somerset and Kent.

Iron and Steel

Sheffield.—The second quarter has opened quietly, business in forge and foundry iron being largely confined to small parcels for early delivery. Output is in excess of requirements and some

furnaces are being damped down. There is a minimum of forward buying, the majority of consumers being fully covered for the first half of the year. Demand for hematite mixed numbers shows some decline, but the requests for special qualities remain satisfactory. Bar iron business is limited.

The steel market, on the other hand, continues very active, though in some classes of material it is now rather less difficult to place business. There is a sustained demand for basic and acid billets, but a slight easing of the pressure for wire rods is reported.

Sheffield's steel production in February totalled 145,900 tons, an increase of 8,400 tons on the corresponding month of last year. There is a good flow of home and overseas orders coming into this district. A Sheffield firm has booked a £10,000 order for high-speed steel hacksaws. Machinery orders are more numerous. The special steel branches are very busy, and there is a heavy demand for armour plate and other material needed in connection with the national defence programme.

Middlesbrough.—Producers of Cleveland foundry pig iron and East Coast hematite have to take material into stock. An announcement is awaited from the Import Duties Advisory Committee of their decision on the application for the re-introduction of the import duty on pig iron.

In the steel trade, re-rollers report an easier position, with ample supplies of billets and sheet bars. The heavy steel departments in this area continue very active, but demand for sheets for the home trade is only moderate and export trade very quiet.

Good Durham blast-furnace coke is obtainable at 32s. 6d. per ton at the ovens, with the tendency, if anything, rather easier. Ore freights are unchanged, and ample supplies of foreign ore continue to arrive. Heavy steel melting scrap is in good supply, the official prices being unaltered.

Glasgow.—Steel makers are supplied with work for some months ahead for plates and sections, including a heavy tonnage of shipbuilding material. Re-rollers of light sections are less fortunately placed, in some cases the tonnage on books being very small. This situation has largely been brought about by the influx of Continental material prior to the increase of the

import duty on semis. In the light sheet trade the position is unchanged, home demand being well maintained while export business is quiet. All the manufacturing industries in Glasgow and neighbourhood report continued activity and many new inquiries are on the market. An important contract announced this week is one for ten locomotives for the Federated Malay States Railway placed with the North British Locomotive Company of Glasgow.

Cardiff.—The position in the tinplate industry has further deteriorated; during the week ended March 19th

production was at the rate of only 43.7 per cent. of capacity. Shipments were slightly better than in the previous week, 3,971 tons as against 3,269 tons, but they were 4,500 tons less than in the corresponding week last year. Stocks, at 10,524 tons, are much higher than they have been since September, 1937. The market for black sheets is relatively better, but production of pig iron and steel is declining. Prices are nominally unchanged.

Textiles

Cotton (Manchester).—No change for the better in market conditions can be recorded. Bearish sentiment has

tended to increase, and many traders are concerned at the further fall in commodity and share prices. Raw cotton news has been rather featureless, but prices have tended to sag, chiefly owing to unsatisfactory advices concerning world consumption. Speculation in raw cotton is at a low ebb.

The market in American yarns has been upset by the reduction in prices of medium ring qualities. Buyers have been afraid of reductions in other sections. It has been quite exceptional for contracts to be put through for anything more than retail lots. A dragging demand has been experienced in Egyptian descriptions. The financial difficulties of a large old-established

DIRECTORS' REPORT.

(Presented at the Eighty-fourth Ordinary General Meeting, 30th March, 1938)

The Directors have now to submit to the Shareholders the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December last. These show a net profit, after providing for all bad and doubtful debts, of £673,785 3s. 5d. inclusive of £182,719 18s. 10d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £463,785 3s. 5d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum less Income Tax; to add £35,000 to the Officers' Pension Fund; to set aside £40,000 on account of Contingencies; and to carry forward the balance of £178,785 3s. 5d. Sir William Henry Neville Goschen, Bt., K.B.E., Mr. Archibald Rose, C.I.E., and Mr. Edward Fairbairn Mackay, the Directors who now retire by rotation, present themselves for re-election. The Auditors, Mr. David Charles Wilson, F.C.A., and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services. By Order of the Court, J. F. DUNCAN, Secretary.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.
We have audited the above Balance Sheet and Profit and Loss Account with the Books, Vouchers and Securities in London, and with the certified Returns from the Agencies and Branches. In our opinion such Balance Sheet is full and fair and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

London, 16th March, 1938.

hosiery concern in Leicester have caused anxiety, as several Egyptian spinners are creditors for substantial amounts.

Unfavourable reports have again been received from cloth manufacturers. Turnover has consisted of small lots to meet urgent needs. A slightly more hopeful feeling prevails with regard to India. Some shippers have been asked to cable prices for cloths which have not been bought for some little time, and more sales have been arranged for Calcutta, Madras and up-country. Useful orders have been secured in mulls and tanjibs for Egypt. The position in West Africa is as bad as ever. Home trade purchases have not been of any importance, but clearances have continued on a rather freer scale. Depressing advices have been received from the weaving towns of Lancashire.

Wool (Bradford).—Last Wednesday saw the end of the second series of Colonial wool sales. Prices were a little irregular, particularly when Russian competition for crossbreds ceased towards the end of last week. Still, the bulk of the offerings realised prices about equal to the close of the previous series, and any decline did not exceed 5 per cent. The home trade was a prominent buyer. The quality of the offerings was very good, and will probably prove to have been the best of the year. New clip wools from South America proved very acceptable, being bought freely by both the home and Continental trades, but America gave little support. Merino wool sold as well as could be expected, and at times prices were definitely in front of those ruling in Australia. The value of a spot market has again been proved, for all descriptions of combing wools, both merinos and crossbreds, made prices slightly in advance of what could be made for the combed article in Yorkshire and on the Continent.

Turning to consuming centres, trade does not show much improvement. It is doubtful if more than 50 to 60 per cent. of machinery is running full time, and many mills are still only working three days per week. It would almost

seem as if the present spring season's trade has missed altogether, the majority of wholesale and retail clothiers being content to clear last season's surplus stocks and so pave the way for a normal season's trade when the time arrives for the showing of new cloths for the spring of 1939. It looks as if the coming season's trade is going to be mostly in light-weight fancy woollen cloths, and sports wear is figuring prominently in the world of fashion.

THE COMMODITY MARKETS

THE past week has witnessed a further widespread decline in the prices of primary products both in this country and in the United States. The present downward trend of commodity prices is a reflection of the shrinkage in world economic activity and of the inability of producers to curtail their output proportionately. The growing conviction that a sustained revival of business activity in the United States is unlikely in the near future has hastened the decline.

The majority of commodities sensitive to changes in market psychology were marked down during the past week. Non-ferrous metals, rubber, oil-seeds, and sugar are all cheaper than a week ago. Wheat, exceptionally, remained firm.

In the United States the decline of prices is reflected in Moody's index of staple commodities (December 31, 1931 = 100) which fell from 145.3 to 142.1 during the week ended last Wednesday. A month ago the index stood at 151.2 and a year ago at 227.9.

Metals

Copper.—The cash price fell this week by £1 2s. 6d. per ton, to close on Wednesday at £38 1s. 3d. per ton—a new low level for the current year. The uncertainties of the political outlook, the weakness of Wall Street and of the United States copper market were the principal causal factors. Activity in the consuming industries in this country remains on a high level, but there was little demand. Meanwhile, unconfirmed rumours of a pending reduction in the production quotas have been circulating this week. So far the statistical position outside the United States remains sound, but if consumption begins to decline the producers may be inclined to take action.

Tin.—The cash price slumped by no less than £11 10s. per ton to the lowest level since 1933. The fact that tin is particularly dependent on American demand was the major cause, but there

is also a possibility that the Malayan Government will show greater opposition to the buffer pool and to the question of the standard tonnages than had previously been expected. No definite date has yet been fixed for the Malayan referendum, but the I.T.C. has decided to postpone its meeting originally fixed for April 5th until the Government of Malaya has reached a decision. If, as is likely, a substantial bull account has been built up in anticipation of the formation of a buffer pool, the market must be regarded as vulnerable.

Lead and Spelter.—Both metals shared the general decline this week, though, as may be seen from the table of wholesale commodity prices, the fall was less severe than in copper and tin. Reports of interference by the Mexican Government in the affairs of the foreign lead and spelter mining companies in that country may, perhaps, be discounted in view of the firm line taken by the United States Government in regard to American oil interests. Meanwhile, the United States market has displayed an easy tone.

Grains

After the sharp decline of the previous week, the wheat markets have shown a firmer tendency during the past few days. Decreasing shipments from Argentina and the smallness of the interior movement are now attracting the market's attention, while Australian sellers appear to have recovered their nerve. Nevertheless, the Commonwealth has hitherto made less than normal progress with the disposal of the crop. Weather news is likely to have increasing influence from now on. Flour markets have also displayed a firmer tone. Maize was a rather quiet market, while barley prices were about unaltered compared with those ruling a week ago.

Barley	cwt.	65,172	38,954
Oats	cwt.	41,448	37,294

Other Foods

Provisions and Meat.—The official quotations for bacon on the London Provision Exchange showed a slight advance last week-end, but the market has since had a quiet tone. Hams were generally unchanged in price. Colonial grades of butter were in quiet request on Monday, but were firmer on Wednesday; Australian was slightly dearer and Danish a little cheaper on the

week. Dutch cheese was reduced in price, while other makes were steady and unaltered. The seasonal decline in egg prices was checked this week. At Smithfield market, English beef, mutton and pork were a little dearer, but imported meat was about unaltered.

★

Colonial Produce.—Raw sugar was again a rather easy market this week and prices fell almost to 5s. a cwt. The decision of the International Sugar Council to hold a meeting on April 27th is discussed in a Note in the Industry and Trade Section. The spot market in coffee was quietly steady, while some descriptions of cocoa were reduced in price. The tendency at the sales of Indian tea was quieter than last week and prices were lower in some instances. A similar weakening was apparent at Tuesday's Ceylon auctions.

SIR CHARLES INNES ON THE POSITION AND OUTLOOK IN THE FAR EAST

The forty-fifth annual general meeting of The Mercantile Bank of India, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad Street, London.

Sir Charles A. Innes, K.C.S.I., C.I.E., chairman of the bank, presided.

The chief manager (Mr J. B. Crichton) having read the notice convening the meeting and the report of the auditors,

The chairman, after referring to the retirement of Lord Catto from the chairmanship and other changes in the board, said: I do not think that I need say very much about the accounts. I presume that as usual you will allow me to take them as read. (Agreed.) You will notice in the balance sheet that our deposits are up by £1,350,000 compared with last year, and that on the other side there has been an increase of about one million sterling in loans and advances. Our allocations to the pension fund, the premises account and contingencies are the same as last year. The figure which doubtless interests you most is the amount of net profit for the year. This is about the same as last year, in spite of our having had to provide for National Defence Contribution for nine months. You have heard so much of the recovery of trade that some of you may have expected a larger figure of profit. But the bank is an exchange bank mainly engaged in the financing of Eastern trade, and it is well known that the recovery of foreign trade has lagged behind that of home trade. Moreover we had special difficulties in 1937. The year indeed began well. In the first three months trade was active in most of the countries in which we operate, and indeed by March trade conditions in some of them had almost begun to approach the dimensions of a boom. But the second half of the year did not fulfil the promise of the first.

The first setback was associated with what is usually known as the "gold scare" in the spring. Then in August followed the invasion of China by Japan. You can readily imagine how this war disorganised the trade of China, and its repercussions were felt in almost every country in which we are established, particularly India and Malaya. Finally there came in the autumn the quite unexpected recession of trade in the United States of America. The effects of this recession were world-wide, but America so dominates the market in such commodities as rubber and tin that nowhere were they felt with greater severity than in countries like Malaya. I shall have more to say of these matters later. In the meantime I think I have said enough to show that having regard to all the circumstances of the year we may legitimately regard our net profit with satisfaction, and that we may congratulate Mr Crichton and his officers on the results they have shown. (Hear, hear.)

PROVINCIAL AUTONOMY AND BURMA SEPARATION

I turn now to the different countries in which we have branches, and I begin with India. The two outstanding events of the year were the inauguration of Provincial autonomy and the separation of Burma. Both measures imposed extra liabilities on Central revenues, the separation of Burma costing 251 lakhs and the inauguration of Provincial autonomy 198 lakhs. The military operations in Waziristan also caused heavy additional expenditure, and it is a testimony to Sir James Grigg's careful husbanding of Central revenues that after providing for these extra burdens he was not only able to make an immediate contribution of 138 lakhs for the financing of Provincial autonomy, but was also able to balance his budget for next year without any increase of taxation. He is to be congratulated on his achievement. It was made possible by the improvement of railway revenues and of Customs and Central excise receipts, though I regret to notice that all these sources of income deteriorated in the later months of the year.

Trade figures tell the same story. I am not setting out the Indian figures because the returns now published treat Burma as a foreign

country, and the figures are useless for comparison with those of previous years. But for external purposes India and Burma still constitute a joint currency system, and for purposes of comparison I have worked out the balance of trade in merchandise for both countries combined. They show exports valued at 220 crores and imports at 155 crores, and a favourable balance of trade in merchandise of 65 crores. These figures are considerably better than those of 1936, when exports were valued at 185 crores and imports at 124 crores. Indeed, they are the best figures since 1930, and they are the measure of the recovery since 1932, when trade reached its lowest ebb with exports of 138 crores and imports of 133 crores. The improvement in imports is especially gratifying as indicating increased purchasing power. There was a net export of gold from India alone of 16.36 crores. The average annual net export in the preceding six years was 48.93 crores, and it looks as if the stream of gold from India were beginning to dry up.

POST-WAR INDUSTRIAL PROGRESS

I was intimately concerned with the commerce and industry of India for a number of years, and the thing that impresses me most in the post-war economy of India—apart indeed from the network of motor-bus services all over the country—is the progress made in industrial development. I remember Sir Thomas Holland commenting in 1916 on the fact that not a single wire nail was made in India. One has only to read, in the last report of the Indian Stores Department, the long list of articles of Indian manufacture purchased for the Government to realise what strides have been made in the last twenty years. To take only a few obvious instances, India now manufactures all the sugar and matches and practically all the cement she requires, she has increased enormously her manufacture of iron and steel, and last year she imported only 599,000,000 yards of cotton piece-goods, against a pre-war average of 2,600,000,000 yards. I do not pause to inquire whether these developments are a good or a bad thing. They are going on, and the process will continue. It is significant that nearly one-fifth of India's imports from the United Kingdom in 1937 consisted of machinery and millwork.

India's progress in industrial development naturally has affected her trade with the United Kingdom, but there is still room for a great and profitable trade between the two countries. Apart from her raw materials, there are certain classes of manufactures for which India has special advantages, and on the other hand she is in need of many things which this country, with its highly specialised industries, can supply. It is to be hoped, therefore, that the protracted negotiations which have been going on will result in a trade agreement which will be advantageous to both countries. More than 30 per cent. of India's exports now go to the United Kingdom, a much greater proportion than in the pre-slump years, and the experience of the great depression should have brought home to India, as it has to other countries, the importance of the great British market.

IMPORTANCE OF AGRICULTURE

In spite, however, of industrial development, India still remains predominantly an agricultural country and, as Lord Catto was never tired of impressing on you, her prosperity ultimately depends on the prosperity and purchasing power of her agricultural population. It is satisfactory therefore that the agriculturists obtained better average prices in 1937 for what are usually known as their cash crops, though the price of raw cotton fell away at the end of the year, mainly owing to the bumper American crop, but also partly to the fact that Japan had to curtail her purchases. It is also satisfactory to find that in all provinces the new governments are placing agricultural uplift in the forefront of their programmes. Progress must be slow of course. There are many difficult

problems to solve, including those of malnutrition, fragmentation of holdings and agricultural credit, and the Ministries are already finding it difficult to square their programmes with the hard facts of finance. But the raising of the purchasing power of a population of some 350,000,000 by even a few rupees per head would make such an enormous difference to the trade of the world that for this reason alone, apart from all others, it is a goal worth working for. There was a good deal of labour unrest during the year, strikes being frequent, and also in one province some agrarian unrest. But it may be hoped that this is merely a temporary phase.

INDIA'S INDUSTRIES

I have left myself little time to deal with the great Indian industries. The tea industry has had a prosperous year, thanks to a skilfully managed restriction scheme, and though its labour problem still remains acute, the coal industry after a long period of depression is getting more remunerative prices. The cotton mills have also done well. The feature of the year for them was a large increase in exports both of yarn and cloth due partly to the pre-occupation of Japan with the war with China and partly to the stoppage of the Chinese mills. I have no good account to give of the great jute industry. For reasons into which I have not time to go, the mills entered some time ago upon a period of unrestricted competition. It is true that they succeeded in getting a record off-take for their products, exports of manufactured goods having risen to 1,031,000 tons in 1937 against 912,000 tons in 1936 and 669,000 tons in 1934. But they received very low prices for their goods. Indeed, prices are now at an uneconomic level, and moreover stocks especially of hessians are piling up. Negotiations are now proceeding for a curtailment of working hours by agreement, and everyone who has the interests of the industry at heart sincerely hopes that they will be brought to a successful conclusion, or that some other agreed solution of the present difficulties will be found.

BURMA, SIAM AND CEYLON

In Burma the new constitution has so far worked smoothly. The price of paddy is the barometer of Burma's prosperity, and I am glad to say that in 1937 the cultivator got a higher average price than in any of the preceding five years. Unfortunately the new crop was badly damaged by untimely rains in December, and prices, too, show a tendency to sag. The trade returns for separated Burma for the nine months ending December last show exports at 36.90 crores and imports at 17½ crores. Exports to India were valued at 18.53 crores and were 50 per cent. of the total. The figures are interesting as showing the dependence of Burma on the Indian market, and it is also worth noticing that of 90 lakhs of Treasury bills sold by the Burma Government only nine lakhs were placed in Burma. The balance was sold in India. I take this opportunity of offering my respectful congratulations to the Government of Burma on its new Trade Journal.

The trade figures for Ceylon in 1937 make good reading. Exports at nearly Rs. 332,000,000 were above the level of 1930, the last pre-slump year, while imports at nearly Rs. 243,000,000 were better than in any year since the slump began. The healthiness of the position is shown by the fact that the island had a favourable balance of not less than Rs. 89,000,000.

Tea is the island's most important product. Indeed, shipments of tea constitute more than 50 per cent. of the exports, and I am glad to say that producers had a comparatively prosperous year. They have certainly benefited from the Restriction scheme, and in 1937, in spite of increased quotas, the average price of Ceylon teas increased by 9 cents a lb. Exports of rubber, which come next in order of importance to those of tea, increased both in quantity and in value, but for reasons which I will explain when dealing with Malaya, the price of rubber fell heavily in the second half of the year, and it has been necessary to reduce drastically the export quotas. There was a similar fall in the price of coconut products, which constitute the third great export from Ceylon. At the end of the year they were selling at less than half the price touched in the opening months of the year, and this is a serious matter for the island as the bulk of the capital of the indigenous population is invested in coconuts.

The increase of imports is satisfactory, and may be taken as an indication of the slow return of prosperity to the island. The United Kingdom and India are the chief sources of supply, and both increased their trade with Ceylon, but it is significant that in cotton piece goods Lancashire is losing ground to India. Prospects for the coming year are hardly as good as they were a year ago, owing to the drop in the prices of rubber and coconut products and to the reduction of the rubber export quota. There is some complaint in the island about the increasing burden of taxation, and it is certainly the case that there is a lack of confidence in the share and

property markets in Colombo. But the Government are no doubt alive to the significance of warning signs of this kind.

MALAYA

I come now to Malaya, where we have several important branches. I am anxious not to weary you with too many statistics, but I must just mention that the gross value of the foreign trade of Malaya improved from \$1,151,000,000 in 1936 to \$1,603,000,000 in 1937, or by nearly 40 per cent., and was greater than in any year since 1929. Thus 1937 may be written down as a good year. But the prosperity of Malaya depends on the prosperity of the rubber and tin industries, and Malaya affords perhaps the best example of what I said earlier about the effect of American trade recession on other countries. As, of course, you know, rubber and tin are controlled by International Committees, and it is perhaps inevitable that from time to time these committees should come in for criticism. It is certainly true that they have not succeeded in preventing large fluctuations of prices. Nevertheless, it is well to remember that, broadly speaking, the control systems have been of great benefit to producers. Stocks have been reduced, supply and demand have been brought into better relation, and the control systems have contributed to the rise of prices from the low levels to which they fell in 1931. In that year Mr Rycie told you in his speech at the annual general meeting in 1932, the average price of rubber was only about 3d. per lb. and that of tin £118 per ton. In 1937 the price of rubber averaged about 9½d., and though it fluctuated violently, the price of tin did not fall below £180.

EFFECTS OF AMERICAN SITUATION

But control systems, however carefully managed, cannot legislate for a sudden and unexpected failure of demand, and it is here that the influence of America made itself felt. In the first six months of the year the consumption of rubber in the United States was excellent. The price rose till it touched 13½d. at the end of March, and the quotas were raised. But in the autumn came the unexpected relapse of trade in America. Consumption fell away and with it the price of rubber, which was at 7d. at the end of the year. The case of tin was much the same, and the price of tin, which was as high as £270 in August, was as low as £183 at the end of December. By the end of the year the stocks of both commodities had begun to rise again, and the control committees had to act. The rubber quota has been reduced from 90 per cent. to an average of 65 per cent. in the first six months of this year, and the reduction of the tin quotas has been equally drastic. It is to be hoped that the effect of these reductions will be to keep prices on a level fair both to producers and consumers. For unless this result can be achieved, producers are bound to suffer from the restriction of output. Let me take rubber as an example. Domestic exports from Malaya in 1937 amounted to 492,754 tons. If the quotas are maintained at 65 per cent. for the whole year, the permissible export in 1938 will be only 391,300 tons, and the diminution of production by 100,000 tons will obviously be a serious matter for producers, unless there is some compensating increase in the price they get for their product. Similarly the reduction of the tin quotas has already thrown a large number of miners out of work. I do not suggest that there is any likelihood of a return to the conditions of 1931, but unless there is a recovery in America I am afraid that there must be some setback in 1938 to the prosperity of Malaya.

I can deal only briefly with the import trade. Generally speaking purchasing power improved in 1938, and the value of imports was the greatest since 1929. All the main classes shared in the improvement, and a satisfactory feature was the increase of imports of cotton piece-goods from less than \$18,000,000 in 1936 to \$26,000,000 in 1937. Lancashire shared in this increase and had a good year, but the same significant fact emerged on which I commented when dealing with Ceylon. There was an even greater increase in the import of Indian piece-goods.

I must just mention here that as stated in 'the directors' report' we have registered a company in Penang under the name of the Mercantile Bank of India (Trustees) Limited in order that we may undertake the duties of executors and trustees in Malaya.

POSITION IN SHANGHAI

I am afraid that I cannot paint a very cheerful picture of Shanghai. It is true that the value of the trade of the port in 1937 at 913,000,000 Chinese dollars was only a million dollars less than in 1936, while the trade of China as a whole was actually greater in 1937 than in 1936. It increased from 1,647,000,000 Chinese dollars to 1,792,000,000 dollars. These are astonishing figures. They are due, of course, to the fact that there was a remarkable expansion of trade in the first seven months of the year. By the end of July imports had increased by nearly 37 per cent. and ex-

ports by 45 per cent. The year indeed opened under the most favourable conditions. Trade was booming, crops were promising, revenue was increasing, and China's currency and finance had been placed on a much better footing. The Government was firmly established in Nanking, and with its authority extending to all but the most remote parts of the country, there was a degree of unity hitherto unknown. The Shanghai Stock Market, which had been through a long period of depression, was moving steadily upwards, and on every side there were unmistakable signs of industrial recovery and trade expansion.

Then came the tragedy of the Japanese invasion of China. The first rumble of war occurred in the north, but hopes of a peaceful settlement were not dispelled till fighting broke out round Shanghai on August 13th. Fighting continued in parts of the Settlement and round Shanghai until November 10th, when finally the Chinese were driven from all surrounding areas. This was a period of great anxiety, our chief anxiety being for the safety of our staff and their families in Shanghai. Fortunately all of them came through unscathed, but business, of course, was carried on only under the greatest difficulties. The trade of Shanghai dropped from 394,000,000 Chinese dollars in the last five months of 1936 to 170,000,000 dollars in the corresponding months of 1937. It is even less now, for with Shanghai surrounded by Japanese forces no communication is possible with the hinterland, and export trade is virtually at a standstill. The recent imposition by the Chinese Government of exchange control added to the difficulties of the situation. That control, as you will have seen, has within the last day or two temporarily broken down. I can say nothing of the future except that with a return to normal conditions we are well equipped to resume our increasing share of financing the trade of Shanghai, and that past experience shows what astonishing powers of recuperation Shanghai has. But trade cannot recover until the war ends, and unfortunately there are no signs of an early termination of the struggle.

A REASONABLY GOOD YEAR

And that, ladies and gentlemen, is the end of my review, and if I have made myself plain you can see for yourselves what is the conclusion of the whole matter. We have had a reasonably good year, which would have been better had it not been for the untoward events to which I have referred, and the prospects for the coming year are not quite so encouraging as they were a year ago, particularly in view of the recent grave deterioration of the political situation in Europe. But there is no need for pessimism. We have learned to take the rough with the smooth, and I think I can say with some confidence that, thanks to the support which you have consistently afforded the board, your bank is in a strong position.

It remains only for me to express our obligations to Mr Crichton and his staff. We directors do our best for you as far as in us lies, but it is on them that the main burden rests, and whatever credit is due is due to them. You all know how much you owe to Mr Crichton. His unremitting devotion to the affairs of the bank is beyond all praise, and he is ably seconded by Mr Paton and Mr Cruden. We also owe a debt of gratitude to our managers in the East and to all our staff at home and abroad. (Cheers.)

The chairman concluded by moving the adoption of the report and accounts and the payment of a final dividend on the "A," "B" and "C" shares of 6 per cent., making 12 per cent. for the year, less income tax.

Sir Thomas Smith, Kt. (deputy chairman), seconded the resolution and it was carried unanimously.

The retiring directors and auditors were re-elected, and a vote of thanks to the chairman, directors and staff, proposed by Sir Alfred Watson and seconded by Mr F. G. Jones, concluded the proceedings.

BEKOH CONSOLIDATED RUBBER ESTATES, LIMITED

The eighteenth ordinary general meeting of the Bekoh Consolidated Rubber Estates, Limited, was held, on the 31st ultimo, in London.

Mr E. F. Slade, J.P., the chairman, said that in the 18 months covered by the accounts the Bekoh estates produced 1,283,894 lbs. of rubber, and the Coronation estate 922,036 lbs. in the nine months of actual working. The price received was 8-74d., as against 6-82d. per lb. the previous year. Costs were 1d. a lb. more than the previous year, owing entirely to higher coolie wages. The net profit was £34,330, and the amount brought forward from the previous year was £8,741. An interim dividend of 2½ per cent. was paid in March last year, and it was now proposed to pay a final dividend of 7½ per cent. and to carry forward £18,591.

It was unlikely that the current year's profit would be as good as in 1937. They must wait and see what they would be allowed to

produce for the whole year, and, what was more important still, what the consumption would be. They had 268,800 lbs. of rubber sold forward at 11½d. a lb. c.i.f., which was a great help, whatever the day-to-day prices might be. Transport, in his view, must constantly increase, especially road transport. Turning wheels meant wearing rubber and eventually, with restricted planting, he believed full output would be required. He could not fix a date for that, but he was optimistic.

The report was unanimously adopted.

BANCO DI ROMA

IMPRESSIVE FIGURES

The meeting of the Banco di Roma was held on the 24th ultimo. The report shows the great progress made in the struggle for economic self-sufficiency, and the tremendous amount of work which has been done for the consolidation of the Empire. The Banco di Roma, which had already opened eight branches in the Empire, has opened a further seven branches during the year, and is now established in all the most important centres. In Italy the Banco di Roma has opened another thirteen branches, and an exchange office inside the central station of Milan. It has also opened a branch at Baghdad, thus extending the network of its branches in the East.

The work done last year totals up to figures which are really impressive, and which give evidence of progress in excess of that attained in any previous year. For instance, deposits on current and savings accounts increased from Lire 982,348,882.83 (1936) to Lire 1,261,327,288.72, being an increase of Lire 278,978,405.89; balances due to correspondents increased from Lire 2,245,674,371.57 (1936) to Lire 2,796,285,837.12, an increase of Lire 550,611,465.55; cash and funds with the Central Bank from Lire 360,989,845.42 (1936) to Lire 392,154,377.74, an increase of Lire 31,164,532.32; portfolio and Treasury bills from Lire 1,471,052,780.56 (1936) to Lire 1,876,532,546.99, an increase of Lire 405,479,766.43; balances due by correspondents from Lire 1,012,400,505.06 (1936) to Lire 1,177,172,674.76, an increase of Lire 164,772,169.70; and secured advances from Lire 260,547,067.75 (1936) to Lire 499,266,759.22, an increase of Lire 238,719,691.47. Acceptances on behalf of customers also increased from Lire 6,775,692.95 (1936) to no less than Lire 114,143,612.27, being an increase of Lire 107,367,919.32, and only guarantees for third parties contract from Lire 172,003,824.17 (1936) to Lire 143,553,439.46, being a decrease of Lire 28,450,384.71.

The balance sheet, which is drawn up on the most rigid lines, closes with a profit of Lire 10,891,790.35, which makes it possible to resume the payment of dividends at the rate of 4 per cent. with the utmost confidence, and to transfer a further Lire 5,000,000 to internal reserves.

The meeting invited two other persons of note to join the board: S. E. l'On. Amedeo Fani and Senator Martin Franklin.

LONDON AND THAMES HAVEN OIL WHARVES, LIMITED

The fortieth ordinary general meeting of this company was held, on the 28th ultimo, in London.

Mr Thos. C. J. Burgess, the chairman and joint managing director, said that the profits amounted to £203,767. A dividend of 10 per cent., free of tax, was recommended. Last year he had stated that 1936 had been the closing of one stage in the company's history, and the beginning of a new one. Subsequent events had justified the remark, the contract between the company and the Shell interests having been terminated at the end of 1937, and no attempts had been made towards its renewal. Events had shown how wise the directors had been in taking a long view of the situation.

By virtue of the Mucking Line limit in the Thames beyond which low test petroleum in bulk had not been allowed to be carried by importing tank ships, Thames Haven had always been referred to as having a monopoly. That was quite untrue, and in the last 30 years there had been many attempts to get the import line for low test petroleum ships removed higher up the river. The matter had now come up again in a vital manner. Towards the end of 1937 it had been rumoured that the Anglo-American Oil Co. had made a proposal to the British Government which the Ministry of Defence evidently thought was one which should be promoted by all possible means. The directors, however, could not sit still and see the whole of their earning capacity taken away by what he would call an unholy alliance between Government Departments and world combinations. They felt if the shareholders did not support them that there was nothing for it but to realise that the time of their company's usefulness was past, and it was the intention of the directors to offer the most strenuous opposition to the shifting of the limit line.

The report was unanimously adopted.

BANK OF AUSTRALASIA

STRONG FINANCIAL POSITION

CONDITIONS IN AUSTRALIA AND NEW ZEALAND

SIR JOHN SANDERSON'S REVIEW

The 104th annual general meeting of the Bank of Australasia was held, on the 31st ultimo, at the Head Office, 4 Threadneedle Street, London, E.C.

Sir John Sanderson, K.B.E., in the course of his speech, said:—During the first six months (i.e., to April, 1937) of our financial year—and this includes the time of year when most of the exports from Australia and New Zealand are marketed—prices for wool, wheat and metals were definitely profitable, and our bank naturally had a share in this prosperity. For the subsequent half-year prices for nearly all commodities, excepting gold, suffered a sharp decline. Meat and dairy produce, which form a large proportion of exports from the Commonwealth and New Zealand, have been more fortunate in maintaining steadier prices.

BALANCE SHEET ITEMS

The total of the balance sheet has increased by £4,720,000 and now stands at the record figure of £55,846,000. Specie, bullion, Government notes and cash balances are more than doubled at £10,000,000, an increase of over £5,000,000. These represent rather less than 25 per cent. of our total liabilities to the public in respect of deposits. British Government, Australian and New Zealand Government and other securities stand at over £8,000,000. These, together with the aforementioned £10,000,000, represent 45 per cent., or 9s. in the £, of our total deposits. I think you will agree that this shows an unusually strong and liquid position. In fact, we would prefer to have larger funds in safe commercial advances if these were available.

As regards the profit and loss account, the total profit shown, after making a transfer to the credit of contingencies account, out of which account provision for all bad and doubtful debts has been made, is raised by £132,000.

Charges of management include an increase of £18,000 in Australian and New Zealand salaries and allowance, but, as most of you are aware, control over salaries is to a considerable extent removed from our hands by the awards of the Arbitration Courts in Australia and the Finance Act of 1936 in New Zealand. Rates and taxes, including National Defence Contribution, show a large increase of £96,500 to £269,700.

The net result of the profit and loss account is eloquent of the fact that, although its customers may be enjoying better times, it does not necessarily follow that the bank is doing measurably better in respect of profits. It has not been easy to maintain an adequate margin between the interest rates of deposits and advances.

Australia and New Zealand hold a prominent position in the world's markets, and in their endeavours to provide for their present standard of living and for their future prosperity rely upon maintaining a considerable margin of exports over imports. The trading banks are there to finance such endeavours—as they have done for over a century—and their success or otherwise depends largely upon their ability to obtain exchange. It is still not clear what the financial outcome of various experimental marketing schemes, with guaranteed prices, will be upon the national economy, but such action, particularly on the part of the New Zealand Government, deprives the banks operating in New Zealand of a considerable portion of their revenue-producing business and also of an appreciable portion of the London exchange which used to come to them from the proceeds of New Zealand exports paid for in this country.

WOOL, WHEAT, ETC.

Available estimates suggest that the wool clip for the year ending June 30, 1938, will exceed that of 1936-37, one of the largest on record, when it was round about 3,246,000 bales. The average price per bale realised was for 1936-37, £20 14s. 2d. (Aust.), but owing to the serious decline in prices during the past twelve months the average price per bale for the current year is likely to be substantially less.

The area under wheat in the Commonwealth increased from 12,000,000 acres in 1935-36, yielding 144,217,000 bushels to 12,342,000 acres in 1936-37, yielding 150,559,000 bushels. Figures for the year 1937-38 season indicate an acreage of 14,000,000 and a

probable yield of 175,000,000 bushels, of which it is estimated about 100,000,000 bushels will be available for export.

The production of gold in Australia continues to expand, the production in 1937 being 1,380,000 ounces, valued at £12,000,000 (Aust.), compared with 1,175,000 ounces for the previous year. Silver and lead are produced to the annual value of approximately £5,000,000 (Aust.).

EXCESS OF EXPORTS

For the year 1936-37 the excess of Australian exports over imports was about £36,000,000 sterling; against this, of course, there were commitments of about £25,500,000 sterling for interest on public debt payable in London, leaving a balance of £10,500,000 sterling, out of which any addition to London funds had to be provided. Owing to the large increase in imports and to the fall in the price of wool the 1937-38 figures are not expected to produce so good a showing.

The estimated population of Australia at June 30th last was 6,831,000. Recently an important official announcement has been made of the Australian Government's policy regarding immigration, and all who are interested in the progressive development of the country will fervently wish that success may attend the efforts of those who will be called upon to carry out the details which may be finally adopted.

Since the Lyons Ministry has been in power conversions in London to the extent of £198,500,000 sterling have, with the able assistance of Mr S. M. Bruce, the High Commissioner, been effected with a saving in interest of £3,256,000 sterling, or over £4,000,000 in Australian currency, per annum.

Since our last meeting of shareholders the report has been issued of the Commission appointed to enquire into the currency and banking organisation of Australia. The investigation lasted many months, and the result was not unfavourable to the trading banks, in that it recognised the services they had rendered to the community and did not favour their nationalisation.

Nevertheless, the report contained recommendations that were not greeted with unqualified approval, amongst them the granting of wider powers to the Commonwealth Bank in certain directions. In the event of a decision by the Commonwealth Government that, following the Commission's report, certain legislation is required, one may express the wish that the existing elasticity of the Australian banking system, which has stood the country in good stead for so many years, will be preserved. So far as possible the legislation should not seek to impose rigidity in cases where many authorities feel convinced can better be left to be treated by reason and good will rather than by compulsion.

NEW ZEALAND

The present Government in New Zealand has been in power since the General Election on November 27, 1935, when the Coalition Government was defeated. The next General Election will be held during this year. During the past year an important policy measure, "The Trade Agreement (New Zealand and Germany) Ratification Act," was passed. This Act provides for trade between New Zealand and Germany on a barter system. Under the agreement, which came into force on January 1, 1938, Germany undertakes to purchase New Zealand products to the full value of Germany's exports to the Dominion.

For the year ended June 30, 1937, wool exported from the Dominion was valued at £18,770,000 (New Zealand), an increase of £6,000,000 on the value for the preceding 12 months. Exports of butter for 1936-37 were 2,900,000 cwts., valued at just under £16,000,000 (New Zealand), and of cheese over 1,500,000 cwts., valued at nearly £4,500,000 (New Zealand).

Overseas meat exports to the United Kingdom for the year to September, 1937, included mutton carcasses, 1,750,000, and lamb carcasses, 9,000,000. For the 12 months ended December, 1937, New Zealand's total exports "of produce only" amounted to £66,713,000 (New Zealand), of which the United Kingdom took £50,724,000 (New Zealand), the next largest customer being the United States of America, with £4,796,000 (New Zealand), and Japan £3,132,000 (New Zealand). Her imports totalled

£56,000,000 (New Zealand), so that she had a favourable trade balance of £10,500,000 (New Zealand).

SYDNEY'S 150TH ANNIVERSARY

It is no exaggeration to say that conditions in Australia at the present time bear favourable comparison with those in any other country. In this happy atmosphere the 150th anniversary of the landing of Captain Phillip at Botany Bay was celebrated. The festivities in Sydney in connection with this important occasion in Australia's history have attracted visitors from all parts of the world and have contributed materially to a better understanding and a greater knowledge of Australia and her possibilities. All Australians must experience a thrill of pride in contemplating the material and other progress which has taken place during the past century and a half.

In their present wellbeing and in the contemplation of past achievement the people of Australia will, one feels confident, not relax their efforts nor lose sight of the necessity for ever-increased efficiency in order that this progress may be maintained.

NATION STRONGER AND MORE EFFICIENT

During the period of the financial and economic crisis Australia was subjected to a bitter experience. By a great national effort, and thanks to the character of her people, she overcame her difficulties and emerged a stronger and more efficient nation. Under the spur of necessity the Australian primary producers and the manufacturers found that it was possible to reduce costs of production by improving their methods and by utilising the most up-to-date means of working based on recent scientific research. As a result, in many industries Australian costs were brought closer to world export prices, and there was a welcome decrease in the need for extreme tariff protection. The operations of that remarkable enterprise, the Broken Hill Proprietary Company, at Newcastle and elsewhere, are an outstanding example of this.

Given a maintenance of the spirit that animated the people of Australia during the recent critical years, I have little fear of the future. It is essential, however, that there should be sound Government. There is little I can say on this subject without trenching upon political questions. I can, however, express appreciation of the sound and impartial investigations which are being made in respect of secondary industries by the Tariff Board and of the efforts which the Government is making in endeavouring to arrange treaties with foreign countries for the expansion of reciprocal trade.

THE WOOL AGREEMENT

I also desire to direct attention to the agreement which has been reached between representatives of the wool growers of Australia, New Zealand and South Africa for the purpose of promoting the interests of the wool industry in general. We are glad to welcome Dr Clunies Ross, the distinguished chairman of the body which has been established, with colleagues from New Zealand and South Africa—they are now making diligent enquiries in this country and on the Continent in respect of the very important task assigned to them.

Another point of unusual interest is the recent publication of the report of the commission appointed by the Federal Government to enquire into the existing state and future development of the Northern Territory of Australia. This extensive but very sparsely inhabited portion of the Commonwealth has sometimes been called Australia's "Heel of Achilles," and the report is one which, with obvious knowledge and courageous statement of facts, makes recommendations which must have a profound effect upon those who are charged with the administration of this particular area.

Sound internal policies must always be of great importance to the wellbeing of Australia and New Zealand, but we have to recognise that their future prosperity is at least equally dependent upon an improvement in the international political atmosphere and upon an amelioration of the world economic situation.

In addition to the maintenance of peace, the vital requirements are a payable price for exports and markets for what we hope will be an expanding production. Without an improvement in the world political and economic situation it is difficult to see how these things can be assured.

THE LATEST NEWS

I will conclude my remarks by reading a cable which the superintendent sends to give us the latest seasonal information:—"Season's prospects Australia fairly satisfactory, but rain urgently needed in some inland pastoral areas, particularly riverina. New Zealand conditions satisfactory, but autumn rains needed."

The report and accounts were unanimously adopted.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION

ANOTHER YEAR OF PROGRESS

The fifty-seventh ordinary general meeting of this corporation was held, on the 30th ultimo, in London.

Sir Courtauld Thomson, K.B.E., C.B. (the chairman), said that the main features of their operations in 1937 were: Premium income had increased by £239,000 to £7,144,000; their home premiums were the largest in the history of the Corporation, and fire business had made a steady advance. The balance in the profit and loss account was £398,000, of which £152,000 represented the underwriting profit. While the accident and general accounts were not so profitable as in the two previous years, the fire account profit was good in amount and ratio.

On account of the United States investment situation and the exchange factors, their Stock Exchange investments had depreciated during the year. There was, however, a large appreciation in the value of their investment in their associated life company, the "Clerical, Medical, and General," which had once again produced record figures in new business and in total funds. After all outgoings the Corporation had carried forward £304,000, an increase of £71,000 compared with the previous year.

JUDGMENTS IN MOTOR ACCIDENTS

Their motor business, taken as a whole, showed a profit in 1937, but had been unfavourably affected by the experience in the United Kingdom. That was mainly due to the additional amounts which it had been necessary to provide for claims paid and outstanding, both on account of the higher standard of damages and in view of the recent House of Lords decision in the case of *Rose v. Ford*. That laid down that a person, or his legal representative, who was injured or killed in an accident through the negligence of another was entitled to claim for loss of expectation of life.

The chairman proceeded to quote some examples of verdicts for damages where injuries and other circumstances were comparable, as reported in 1927 and 1929, with others reported within the last nine months, as follows:—

1927. Bus conductor injured when bus came into collision with motor-lorry. Fractured skull. Insane. Awarded £850.—1938. Farm labourer run into by motor cycle while cycling. Head injuries, showing signs of insanity. Awarded £7,500.

1929. Master tailor cutter injured in collision between his motor cycle and a taxi. Leg amputated. Awarded £1,600.—1937. Road labourer, aged 36, struck by tram-car. Leg amputated. Awarded £5,000.

1929. Manager to firm of paper merchants knocked down by motor van while crossing road. Skull fractured. Mentally deranged. Awarded £1,475.—1937. Bricklayer, aged 32, earning £3 10s. per week, while cycling was run into by motor car. Injury to brain. Mentally affected. Awarded £6,542.

1929. Boy, aged seven, knocked down by lorry. Arm amputated. Awarded £660.—1937. Boy, aged nine, pinned against a wall by a car. Leg amputated. Awarded £4,750.

PROFIT AND LOSS AND APPROPRIATION ACCOUNT

Turning now to the profit and loss and appropriation account, interest, dividends, and rents, less income tax, amounted to £246,000. Adding the total underwriting profit of £152,000, they had a balance of £398,000 to carry to appropriation account. With the amount of £234,000 brought forward from last year, there was available for appropriation £632,000. They had provided £72,000 for the balance of British taxation in respect of the profits of the year, which included approximately £17,000 for National Defence Contribution. £50,000 has been applied to write down the amount at which their investment in the Merchants' Marine Insurance Company stands in the balance sheet.

The directors declared last September an interim dividend of 1s. 6d. per share, less tax, which absorbed £88,000, and recommend the payment of a final dividend of 2s. per share, less income tax at 4s. 9½d. in the pound. This would cost £117,000, making a total of £205,000 in respect of dividends for the year. The directors recommend that the balance of £305,000 be carried forward, an increase as a result of the year's trading of £71,000.

The outlook was overshadowed by the grave international situation. They must not under-estimate the dangers, but what were most needed by any nation in times of crisis were steadiness of outlook and resolution of purpose. We had demonstrated those qualities in the past. As far as the company was concerned, he believed that their outstanding position in North America was a source of strength and that they would be able to take advantage of the development in the future of that progressive continent.

The report was unanimously adopted.

NATIONAL BANK OF INDIA, LIMITED

SUCCESSFUL RESULTS—INCREASED PROFITS

MR R. LANGFORD JAMES'S SPEECH

The ordinary general meeting of the National Bank of India, Limited, was held, on the 28th ultimo, at the Wesleyan Hall, Bishopsgate, London, Mr R. Langford James (the chairman) presiding.

The General Manager (Mr E. H. Lawrence) having read the notice convening the meeting and the auditors' report,

The Chairman said:—On the liabilities side of the balance sheet current, fixed deposit and other accounts amount to £30,466,945, which is an increase of £439,264 over the previous year. Acceptances on behalf of customers are up by £141,500, while on the other side cash, bullion on hand and in transit appear as £5,303,152, against £5,411,233. British and Indian Government securities combined amount to £15,304,062, which is some three-quarters of a million pounds higher than in the previous balance sheet. Bills of exchange at £4,525,842 show a reduction of £283,592, and discounts, loans receivable, etc., at £10,073,727, a small increase of £68,881.

When we last met I remarked on the large percentage of our deposits represented by cash and securities which, although disclosing a very strong position, left us with a desire to see a greater proportion of our resources employed in the finance of trade. Since then, however, the improvement in trade conditions has not been substantial enough to furnish us with the outlet looked for, and the ratio remains at the high figure of 67 per cent. Total advances and bills of exchange together amount to £14,599,569, which is less than the figure representing our Government security investments to which I have already alluded.

PROFITS AND DIVIDENDS

The net profits for the year amount to £465,861 16s. 8d., which is an increase of £9,575 10s. 5d. over the previous year, and with the sum of £243,954 18s. 10d. brought forward the amount available is £709,816 15s. 6d. An interim dividend at the rate of 18 per cent. per annum, less income tax, was declared in September last and the directors now recommend the payment of a final dividend at the same rate. These together will absorb £360,000, and we propose to add £50,000 to staff pension funds and to place £50,000 towards reduction of premises account, carrying forward to next account £249,816 15s. 6d. As usual, all bad and doubtful debts have been fully provided for.

The slight improvement in our profits is to some extent accounted for by a reduction in expenses of management, which are £6,600 lower than in the previous year. You will no doubt regard it as satisfactory that we are able to maintain the dividend distribution at the rate of 18 per cent. per annum and at the same time to make a suitable allocation to the staff pension funds and to write £50,000 off premises account. In viewing the profits, however, it is necessary to bear in mind our large holdings of Government securities, to which I have just referred, the income from which will tend to decrease as the securities which bear high rates of interest reach maturity date, when it seems almost inevitable that the rate on the loans issued to replace them will be on a lower basis.

There has not been any notable change in money conditions in India. The bank rate in that country remained at 3 per cent. throughout the year. This rate has been effective since November 28, 1935, and for close upon three years prior to that date the rate remained at 3½ per cent. We have thus had five consecutive years of a low bank rate in India, a condition which is possibly without precedent in our generation.

INDIA'S FAVOURABLE TRADE BALANCE

India ended the year with a favourable trade balance of about Rs. 56 crores, which shows a fall of Rs. 24.37 crores when compared with the previous year. The value of gold exported during the year amounted to £13,708,000, against £24,870,000 in 1936. Trade, generally speaking, in that country has not been unsatisfactory—though the experiences of some of the leading industries are at present not of a very happy nature, and to these I shall refer later—but, with the multiplicity of banks now operating, all business is keenly competed for and an adequate return on the money employed in financing trade is not always obtainable. I might here mention that the bank is approaching its seventy-fifth birthday, and it has been our pride during the three-quarters of a century in which we have been established to build up business connections which it is our constant effort to maintain and to augment by according

reasonable facilities to sound enterprises in the spheres where we are engaged.

I referred last year to the fact that nationalisation is now as attractive in India as it is in other countries, and it is only to be expected that a growing proportion of the internal trade of India will be financed by the indigenous banks who, with an increased demand for banking facilities, will extend their branches and be well placed to deal with it.

An interesting point was brought out by Sir James Taylor, the Governor of the Reserve Bank, at that institution's annual meeting last month: he pointed out that the population of India was estimated to have been 370 millions in 1935, as compared with 319 millions in 1921, and that by 1941 the figure is expected to be in the region of 400 millions, an increase of roughly 80 millions in twenty years. According to Sir James, the area under cultivation is not keeping pace with the growth of the population, so that, as he puts it, "the pressure of population on cultivated land between 1921 and 1935 has increased by approximately 11 per cent." This being the case, it is only reasonable to conclude that, unless and until the lag between population and land under cultivation is corrected, the balance for export of foodstuffs and such necessities of life as cotton, after satisfying the internal needs of the country, must tend to decrease.

NEW REGIME IN INDIA

You may recollect that at our last meeting I mentioned that on the day following the Provinces would commence their autonomous career. A year has passed, and, in spite of one or two isolated instances of what may be regarded, perhaps, as somewhat unfortunate happenings, I think you will join with me in congratulating the various Provincial Governments on their handling of the tasks appointed to them. This excellent start should augur well for the future of the country.

So far as finance at the Centre is concerned, there is also cause for congratulation in that Sir James Grigg has been able to produce a balanced Budget without recourse to additional taxation, in spite of the heavy strain on the Government of India's finances caused by the grant of autonomy to the Provinces.

It has been customary at these meetings to review at some length conditions in the industries in which the bank is mainly interested. The cotton mills in the West of India have experienced better trading conditions and profitable working, though on a modest scale, has been more the order of the day than the losses to which their shareholders have unfortunately become so accustomed of late years. Japanese competition, which had made itself felt so acutely for some time past, has been less in evidence, possibly on account of the pre-occupation of that country elsewhere, though I understand that recently Japanese goods have been making their appearance in the bazaars again in greater quantity. A committee appointed by the Bombay Government to inquire into the question of the wages of workers in the cotton mills in that Province has recently recommended increases which will amount to some 12/14 per cent. of the wages bill. This can scarcely be a welcome imposition to an industry struggling to emerge from a long period of depression.

COTTON AND JUTE

With prices of raw cotton on such a low level the Indian grower has been experiencing anything but a happy time, and as his best customer, Japan, must perforce limit her purchases to a minimum for the time being, prospects for this large section of the community cannot be anything but uncertain.

The jute mill industry in Bengal is in no better case than it was when we met last year; in fact, it would not be an over-statement to say that its affairs have gone from bad to worse. The trouble is, as you are probably aware, over-production. The total number of looms in the mills has increased from 25,000 in 1908 to roughly 63,000 in 1937, and the position is, I believe, that the Calcutta mills are capable of satisfying the whole of the world's requirements of jute goods. For many years the mills who are members of the Indian Jute Mills Association maintained the prices of their products at an attractive level by working short time. Almost inevitably this led to the erection of additional mills, some of which have found it profitable to remain outside the association, thereby not binding themselves to its working hours. The effect of competition by these "outside" mills has been to raise stocks to a high level and profits have dwindled almost, if not entirely, to

ERICSSON TELEPHONES LIMITED

ANOTHER SATISFACTORY YEAR

The annual general meeting of Ericsson Telephones, Limited, was held, on the 30th ultimo, in London, Colonel Sir Harold A. Wernher, K.C.V.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that in each of his last three speeches, covering the years 1934, 1935 and 1936, he was able to report record order books, and it was gratifying for him again that morning to inform the shareholders that 1937 had provided them with further records for output, net profit and volume of work in hand. Their business with countries within the British Commonwealth had been very satisfactorily maintained, and at the moment they had in progress important contracts for automatic telephone exchanges for the Australian Post Office. It might not be out of place to mention one particular contract, because it was one which was of general interest; he referred to an order received from the Racecourse Betting Control Board involving the renewal of a substantial portion of the electric totalisator at Ascot Racecourse. The contract, which would be completed in time for the Ascot meeting this year, would not only give greater flexibility, but would materially increase the rapidity with which bets could be handled.

It was always a pleasure to him to direct their attention to the very efficient telephone service which had been developed in this country by the British Post Office. There used to be a tendency to criticise adversely any enterprise conducted by the State, but there could be no doubt whatever that the Post Office handled a great and difficult business with an efficiency and singleness of purpose which would do credit to any commercial organisation anywhere.

For the first three months of the year their sales were in excess of 1937, and they had a record volume of work in hand; furthermore, in the future they should reap the benefit of the increased capacity of the factory. Under normal trading conditions those facts alone would justify a very optimistic outlook. The available balance in the profit and loss account was £147,965, and it was proposed to pay a final dividend of 12 per cent. free of tax, making 18 per cent. free of tax for the year, plus a bonus of 7 per cent., also free of tax, and to carry forward £36,708.

The report was unanimously adopted.

BRITISH ROPES LIMITED

RECORD PROFIT

The sixteenth ordinary general meeting of British Ropes, Limited, was held, on the 30th ultimo, at Great Eastern Hotel, London.

Mr Herbert Smith (the chairman) said:—The ordinary share capital has been increased by £112,061 occasioned by the issue amongst the existing ordinary shareholders of 896,488 shares.

The reconstruction of the factory at Leith, which was destroyed by fire, was completed in 1937, and was formally opened last November. It is one of the most modern and best equipped plants of its kind in Great Britain; an extensive programme of adapting and renewing machinery and buildings at our other factories is well under way, and when completed they will be representative of the most modern and industrial practice.

I am very satisfied with the trading profits of our wholly-owned subsidiary, Rand Ropes, Limited. Production has commenced, but it will probably be some months before the works are running to normal capacity output. Our other subsidiary companies have enjoyed very satisfactory trading during 1937.

The profit for the year after all prior charges amounts to £256,759, as compared with £211,576 for last year. This improvement is more satisfactory, as the full benefit of the additional capital could not be reflected in the current year's profits. Home trading during the year has been satisfactory. During the early part of the year we were particularly busy, and although trade has since slackened off, I have every confidence in the future of the company, and in its ability to earn adequate profits and to maintain the payment of dividends.

The board of directors consider the company's trading and financial position justified the establishment of a pension scheme, which will apply to all male employees. During the last two years £15,500 has been set aside, and we propose to allocate a further £13,000 this year, making £28,500 in all to enable the scheme to be put into operation immediately.

The directors proposed to recommend a dividend at the rate of 25 per cent. per annum less tax on the ordinary shares and the placing of a further £25,000 to general reserve.

The report was unanimously adopted and the dividend was approved.

vanishing point. Negotiations between the association and the "outside" mills for joint action towards improving the position have been in progress for some considerable time, and I was pleased to learn from the address of Mr H. H. Burn, the chairman of the Jute Mills Association, at their recent annual meeting, that he considers prospects for a settlement have improved of late. The well-being of this, Bengal's premier industry, is of such material interest to the province that it is sincerely to be hoped an understanding may be reached at an early date.

TEA, RUBBER AND SUGAR

Tea companies, under the protection of the international scheme for the regulation of exports, continue to enjoy modest prosperity. The first five-year scheme concludes its life at the end of this month, and it is satisfactory to record that the Governments concerned, i.e. those of India, Ceylon and the Netherlands East Indies, have agreed to legislate for its continuance for a further period of five years, until March, 1943. It is acknowledged that the practical working of the scheme has been handled with great ability by the International Tea Committee, who have thereby earned the confidence of all sections of the trade. No efforts are being spared to find and cultivate new outlets for tea in the hope, of course, that eventually the day will come when demand will absorb supplies.

As regards rubber, the optimism in the early part of the year was reflected in the price, which reached 1s. 1½d. at the end of March, but by the end of December had receded to 6½d. The hopes of a maintenance of a satisfactory statistical position were not fulfilled, and although the world absorption in the region of 1,080,000 tons showed an increase over 1936, the additional releases under the regulation scheme more than offset this increase, and there was an addition to world stocks of about 60,000 tons. In the second half of the year the decline in the trend of absorption, coupled with increased exports from producing countries, was naturally reflected in the price.

The rubber industry is extremely susceptible to the ebb and flow of world prosperity and international trade, and recent events in international affairs have had a disturbing effect throughout the world. The rubber plantation industry, however, has been developed on a solid foundation, and the value of international co-operation is recognised in the regulation scheme and the International Rubber Regulation Committee deserves our thanks for its services in the interests of producers and consumers during a very difficult period. It is satisfactory to record that the Committee has recommended a renewal of the scheme for a further five-year period.

Sugar prices in India recorded a further substantial decline last year, and manufacturers have been experiencing anything but a happy time. Recently legislation has been passed in the two leading producing provinces, Behar and the United Provinces, the aim of which, while ensuring to the ryot a fair price for his cane, is to entrust fixing of the selling prices to a central organisation, with a view to the elimination of competition between sellers. It is hoped thereby to raise values gradually to a remunerative basis, a laudable object which, it is hoped, may come to fruition, but the inherent weakness in the scheme is that, being confined to two provinces, if it meets with success, it may also have the effect of encouraging competition from other districts. Broadly speaking, it appears to be acknowledged that, so far as internal consumption is concerned, production in India has reached saturation point. This being so, it is, perhaps, permissible to question the wisdom of the undertaking, recently given by the Government of India, that export of sugar from that country will be prohibited during this and the succeeding four years.

CONDITIONS IN BURMA

In Burma trading conditions during 1937 showed further improvement. Rice exports at 3,200,000 tons were slightly in excess of the previous year's figures and paddy prices ruled about 10 per cent. higher. There was a marked increase in exports to Europe, these totalling 714,000 tons as against 535,000 tons in 1936. Shipments to India were correspondingly smaller, due to better crop conditions in that country, while exports to other markets were well maintained. The 1938 crop estimates indicate that the current year's exports should be maintained at about the same volume as last year, but unfortunately the price level has fallen, and this is bound to have an adverse effect on general trade conditions in the country.

East Africa continues to enjoy moderate prosperity, though Uganda is being paid disappointing prices for her cotton and in Zanzibar the recent boycott of cloves by Indian merchants has led to an abnormal accumulation of stocks. These are being marketed under a Government scheme.

The report and accounts were adopted.

The retiring directors and the auditors were re-elected, and a cordial vote of thanks was passed to the chairman, directors, general manager and staff.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

TREND OF INTERNATIONAL TRADE

MR A. D'ANYERS WILLIS'S REVIEW

The eighty-fourth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held, on the 30th ultimo, at the bank's premises, 38 Bishopsgate, London.

Mr A. d'Anyers Willis (the chairman) presided, and in the course of his speech said:—I need hardly remind you that the year under review has been a trying and difficult one for banks primarily concerned with the finance and trade of the East and Far East. Through this Far Eastern trade connection, with its wide ramifications, we are afforded business contacts with all parts of the world. You will appreciate, then, that the difficulties and uncertainties from which we suffer as a result of import or quota restrictions and of currency regulations are not necessarily confined to the countries where we are established. In our own field the most disturbing element has been the outbreak of hostilities in China during the second half of the year, for which no peaceful settlement is so far in sight.

INCREASE IN DEPOSITS AT CALL

The total of current and other accounts—in other words, deposits at call—shows a large increase of £4,336,802, whereas fixed deposits at £15,553,198 show a decrease of £2,779,707. Combining all deposits, there is an increase of £1,557,095. Cash in hand and at bankers has increased by £1,550,932, and is approximately 18·68 per cent. of our sight liabilities on current accounts. Bills of exchange at £10,159,417, show an increase of £1,920,027. Taking cash in hand and bills of exchange together, these two items represent 39·72 per cent. of all the sight liabilities of the bank, which I am sure you will agree with me is an exceedingly strong and liquid position.

The result of the year's trading is a net profit of £491,065, after providing for all bad and doubtful debts, against £496,682 a year ago, a decrease of £5,617. When you remember that last year we have had to provide a substantial sum for National Defence Contribution, I trust you will not consider the result unsatisfactory. We paid the usual interim dividend last September, which absorbed £210,000, leaving at our disposal £467,719. We propose to pay a final dividend at the rate of 14 per cent. per annum, to allocate £35,000 again to the officers' pension fund, to set aside £40,000 on account of contingencies—exactly the same as a year ago—and to carry forward £178,785.

INTERNATIONAL AND OVERSEAS TRADE

The national importance of this subject is, in my opinion, sufficient apology for the repeated references in my speeches to international and overseas trade.

It is, I suppose, only natural that manufacturers hitherto operating under a free trade system should, upon being able to benefit from a protected domestic market, lose some interest in overseas trade, particularly when exporting is so difficult owing to the fiscal and currency restraints now operative in various countries. The change to a modified protective system in this country was designed to alleviate a disability which was working to our detriment, but it was not intended that the limited protection which the domestic trade so acquired could dispense with the necessity of encouraging to the utmost our export trade, on which the health of our industrial structure must depend.

We all recognise the necessity for the prompt completion of the Government's re-armament programme, but the impetus it gives to industrial expansion cannot be regarded as a normal economic development.

PROMISE OF RECOVERY FALSIFIED

At the beginning of 1937 there was a feeling that world prosperity was at last returning. Commodity prices and freights were rising; the purchasing power of the primary producers was broadening, and there was a prospect of a sustained expansion in the world exchanges of produce and manufactures. This promise of recovery was disturbed in the first instance by a too rapid and unjustified advance in the prices of certain primary products caused by the baneful activity of speculators in the markets for these primary products. A warning sounded by the American Administration that measures might be necessary to curb this unwholesome speculation was followed by a lack of confidence in the price level then

ruling, and this lack of confidence deepened and became more widespread as clouds appeared on the political horizon.

In the summer came the Far Eastern crisis to add to an unstable economic situation in America the factor of apprehensiveness regarding the international situation. The British index of prices for primary products which stood at 163·9 at the end of December, 1936, rose to 181·9 by the end of March, 1937. Since then it has declined abruptly almost without a break till at the end of 1937 it had fallen to 147·4. The world is still hoping for a recovery in American business and trade activity, on which—as the U.S.A. is the largest individual consumer—the restoration of confidence in the general outlook for primary producers so greatly depends.

SITUATION IN CHINA

In the Far Eastern sphere of the bank's operations the year opened in an atmosphere of cautious optimism. Superficially, at least, the political situation in China seemed to be more hopeful than at any time since the inauguration of the Republic.

The outbreak of hostilities in the Shanghai district last August affected the Chinese commercial banks adversely and revealed that their assets were far from liquid, in many cases due to their large investments in the Chinese Government Internal Loans, and to advances against property. A situation immediately arose wherein the Chinese Government had to choose between inflation or the imposition of a moratorium upon the liabilities of the Chinese banks to the public. The latter alternative was decided upon and, as a result, the depositors were deprived of the use of their balances with Chinese banks except for small weekly payments.

As might have been expected, the prosecution of hostilities has adversely affected the national finances of China. The Chinese Maritime Customs and Salt Gabelle Services have been seriously interfered with by the Japanese. The ports of Shanghai, Tientsin, and Tsingtao, which contribute between them the major portion of China's Customs revenue, are in their hands, their control of the Customs administration in the two latter ports being practically complete. The Japanese are preparing to take over the Salt Gabelle revenues, and while, as in the case of the foreign loans secured upon the Customs surplus, an assurance is given that the rights of foreign bondholders in respect of British, American, French, and Japanese loans secured on the collections will receive consideration, the position is far from reassuring.

INDIA

Since I last addressed you, the inauguration of Provincial Autonomy in India has taken place, and although, as might have been expected, the working of the Constitution has not run altogether smoothly, no unwholesome political opposition has arisen which time, patience, and good will cannot overcome.

In the economic sphere, India, in common with other primary producers, profited by the general rise in commodity prices, which took a definite upward trend in the last quarter of 1936. The increase both in quantum and value of primary commodities substantially enhanced the purchasing power of countries producing them.

Coupled with the rise in value of raw products, there was a marked improvement in the international exchange of goods, and India's share in this respect showed marked expansion until the recession set in during the latter part of 1937. Owing, however, to larger imports of foreign merchandise, encouraged by the increased purchasing power of the people, India's favourable balance of trade in merchandise was comparatively smaller in 1937.

COTTON, JUTE AND TEA

The leading cotton mills in Bombay show some improvement as compared with this time last year, but this increased prosperity is by no means general. Many concerns both in Bombay and the Mofussil would appear to be in a rather worse condition than a year ago.

It is therefore surprising that the Textile Labour Inquiry Committee's report should have been adopted by the Bombay Government after only three days' consideration and ordered by them to be put into effect by the millowners as from February 1st. It is premature to forecast what will be the effect of wage increases of about 12 per cent. in Bombay and over 14 per cent. in one of the up-country

centres, but it is undoubtedly dangerous for a Government to dictate wages to an industry.

The Indian jute mills, both associated and non-associated, have unfortunately not experienced a happy year. It has not been possible so far for the associated mills to come to any agreement with the non-associated mills in regard to restriction—with the result that there is an over-supply of manufactured goods and, consequently, very severe competition with profits of all mills much reduced, if not to vanishing-point.

The present tea restriction agreement, which comes to an end to-morrow, has been extended for a further five years. Tea, after going through a difficult time, has, I venture to think, entered on a period of comparative prosperity.

MALAYA

Malaya is the world's largest producer, and the United States the largest consumer, of rubber and tin; in these circumstances it is inevitable that the fortunes of Malaya should be closely bound up with the trend of industrial activity in America, and this phenomenon has been strikingly apparent during the period under review.

Last year proved a very prosperous one for the Malayan tin mining industry. The present outlook is not so rosy as the current quota is only 70 per cent., which will be further reduced to 55 per cent. from April 1st, against 100 per cent. for the first quarter of 1937 and 110 per cent. for the remainder of the year. Also, since November, prices have remained well below £200 per ton.

The year 1937 opened with great promise, and the price of rubber rose to 13½d. at the end of March.

THE OUTLOOK

It is impossible to overlook the fact that, in the second half of 1937, business all the world over showed a marked recession, of which we had increasing evidence as the year drew to its close.

The United States of America—with their enormous purchasing power—are a very important factor in respect of any general world recovery, but until the authorities there have solved their industrial and agricultural problems—which are so much bound up with the serious question of unemployment—I fear that a real recovery in international trade is likely to be gravely retarded.

Under normal conditions the Far East is a very important field of the bank's operations, but until the present chaotic conditions there show some improvement, I think it only but right—without appearing to be unduly pessimistic—to sound a note of warning that the bank can scarcely look to being able to work profitably in China and Japan this year.

However, we have ample evidence in the past of the amazing recuperative powers of both China and Japan, and if the present most unfortunate state of affairs comes to a speedy end, I feel confident we should see a very rapid recovery.

In this connection I might mention in passing that, since we last met here, I have been elected by the directors of our affiliated institution, the P. and O. Banking Corporation, Limited, to be their chairman.

The policies and joint interests of the two banks are now co-ordinated and harmonised, and with their combined resources we shall be ready and able to cope with all business offered us when conditions in the Far East become more normal than they are at present.

TRIBUTE TO THE STAFF

As on former occasions, I desire to conclude my remarks by paying a sincere tribute to the efficiency and unfailing loyalty of our staff at home and abroad.

I should like, therefore, to assure the executive in London and every member of our staff—wherever stationed and however employed—that the directors, and, I feel sure, the shareholders as well, appreciate all they have done during the past year to maintain the high traditions which have always been associated with the Chartered Bank.

The members of our staff stationed in our China branches, who have suffered hardships in varying degrees as the result of hostilities, are especially deserving of our appreciation for the capable manner in which they have carried out their duties under very trying circumstances, and sometimes at great personal risk to themselves.

Shanghai stands out pre-eminently as the greatest sufferer. Intermittent bombing lasted for months after the outbreak in August, and although, fortunately, only slight damage was done to our property, and nothing untoward happened to our staff, I feel sure you will visualise with me the tremendous nervous strain which the situation has thrust upon Mr Murray, our Shanghai manager, and his colleagues. The disorganised trading conditions, the lack of social amenities and of opportunities for recreation have all contributed to make life very difficult indeed. (Applause.)

The report and accounts were unanimously adopted.

INTERNATIONAL NICKEL COMPANY OF CANADA, LIMITED

NICKEL NOT AN ESSENTIAL WAR MATERIAL

REVOLUTION IN CHARACTER OF BUSINESS

The annual meeting of the International Nickel Company of Canada, was held, on the 29th ultimo.

Mr Robert C. Stanley (chairman and president) said that an examination of the annual report indicated that 1937 was in all respects the most productive year in the history of the company. Sales of nickel had increased progressively since 1932 and during the past year reached a total of 207,700,000 lbs., representing 86½ per cent. of the world's consumption.

Notwithstanding heavy disbursements, cash balances as at December 31, 1937, stood at \$48,871,395.90 as compared with \$44,871,895.34 as at December 31, 1936. He could not stress too strongly the advisability of maintaining substantial cash reserves. The wisdom of this policy had been proved by the experience of this company in the years 1921-22 and again during the recent years of 1932-33. Capital expenditures during 1937 amounted to \$7,924,204.19, of which \$4,829,765.62 was spent in Canada to increase mining, smelting and refining facilities. These extensions, necessary to meet an increasing world demand for nickel, had been completed. All plants were now running at or near rated capacity.

Shareholders had received copies of "The Nickel Industry in 1937," a summary of developments and of diversified usage of nickel in the various fields of world industry, transportation and communication. A careful reading of this review indicated quite clearly that the amount of nickel used for munitions of war was of minor importance to the company as contrasted with the rapidly increasing quantity used in peace-time industries. Over the past twenty years the company had expended approximately \$18,750,000 in research, development and publicity to create peace-time uses for nickel. The many new and diversified applications of nickel furnished convincing evidence that the company's exploitation of nickel for industrial purposes had been highly productive. It was, moreover, a fact that during this same period no attempt had been made by the company to promote the use of nickel for armaments.

ARMAMENTS TAKE LESS THAN 10% OF WORLD OUTPUT

Nickel was of minor importance in warfare as contrasted with steel, copper, zinc and lead. Not only did but a small fraction of nickel go into armament, but the percentage that did go into armament represented a negligible percentage of the total of all metals used for armament purposes. For example, no nickel whatever was used in rifle or machine-gun barrels or in bayonet steel. Nickel in bullet jackets had been replaced largely by "gilding metal," a less expensive alloy containing no nickel whatsoever. Nickel was used in large gun forgings, trucks, aeroplanes and in armour for battleships. The alloy steels used for the purposes enumerated contained only from 1 per cent. to 5 per cent. of nickel, and the amount of nickel so used was less than 10 per cent. of the world output. Thus nickel was not essentially a war metal, nor was it essential to war, whether gauged by the percentage of nickel which went into armament or whether gauged by the percentage of armament metal which was represented by nickel.

Even if it were possible to prevent any part of Canada's nickel production from ultimately finding its way into armament, this would not hinder armament production. Canada produced in 1937 about 90 per cent. of the world's nickel. The remaining 10 per cent. originated in New Caledonia, Norway, Germany, Greece, Burma, Brazil and Tasmania. Aside from these active sources of supply, there were potential supplies in Finland and Russia and known deposits in South Africa, Dutch East Indies, Alaska and Korea. The current production of nickel outside of the Dominion of Canada was sufficient to meet the total world requirements for armaments. Naturally, those non-Canadian fields would be further exploited if the restriction of Canadian output made such exploitation commercially profitable or nationally desirable. Moreover, if nickel should become less available to the steelmaker he would promptly, through metallurgical research, find substitutes which would result in the loss of industrial markets for nickel.

AMPLE RESOURCES

With unsettled conditions in nearly all countries it was impossible to conjecture what the immediate future held in store for the nickel industry. Possessing valuable resources, an experienced organisation, substantial cash reserves and a well-diversified world business, the company was fortunate in being fully prepared either to withstand another period of trade recession or to continue its expansion of recent years.

HALIFAX BUILDING SOCIETY

ANOTHER YEAR OF PROGRESS

SIR ENOCH HILL'S ADDRESS

The Halifax Building Society's great year of progress was discussed, on the 28th ultimo, by the President, Sir Enoch Hill, J.P., F.C.I.S., when he addressed the members at the annual meeting in Halifax.

As President, Sir Enoch reviewed the position at length and said: The total amount advanced upon new mortgages during the year was £20,943,616 6s. 1d. For four consecutive years the loans by the society have been maintained at the remarkable level of more than £20,000,000 per annum. Since its formation 85 years ago the society has advanced for home and property purchase no less than £277,084,479. The new borrowers enrolled number 33,795.

There has been an increase of £6,080,910 16s. in the amount due upon mortgages, and the total amount outstanding on mortgage securities is now £98,276,899 12s., the average amount owing per mortgage being only £410. The society's mortgage accounts continue to be eminently satisfactory.

The liquid funds, represented by investments in trustee securities and cash in banks and in hand, have been maintained at a high level and now amount to £23,634,393 2s. 4d., equal to 19.27 per cent. upon the total assets of the society. The investment share and deposit funds have increased during the year by £7,783,560 7s. 9d., to a total of £117,089,819 2s. 4d.

An increase of £8,298,431 4s. 7d. has been made in the total assets, which now stand at £122,626,007 10s. 7d. This is a very remarkable growth, in face of the fact that the investment departments of the society have been very considerably restricted. This great increase is not entirely due to new business, because more than 3 per cent. of the previous year's total has been added by the natural momentum of the society's business on the principle of a snowball gathering increase by its progress.

New accounts opened during the year number 94,912, and the total number of shareholders' and depositors' accounts open at the end of the period was 712,414, an increase of 29,799 accounts.

PROFIT AND ALLOCATIONS

The balance of profit for the year amounted to £3,034,531 13s. 2d., to which has to be added the balance brought forward from last year, namely, £67,342 7s. 10d., making a total of £3,101,874 1s. out of which the following appropriations have been made:—

	£	s.	d.
Interest to shareholders	2,473,217	10	3
Staff superannuation fund	50,000	0	0
General reserve fund	400,000	0	0
	£2,923,217	10	3

leaving a balance of £178,656 10s. 9d., from which the directors have allocated a bonus of 10s. per cent. to the paid-up shareholders, Class 1, and a bonus of 20s. per cent. to the monthly investing shareholders, amounting together to £112,488 16s. 8d., leaving a balance to be carried forward to next year of £66,167 14s. 1d. The above allocation is on the same basis as that of the preceding year and will make a total yield for the past year to the paid-up shareholders, Class 1, of £3 15s. per cent. and to the subscription shareholders of £4 5s. per cent., the income tax on both interest and bonus being borne by the society.

BENEFITS FOR MEMBERS

The society's members and depositors can with every justification be congratulated upon the practical pecuniary benefits which they have derived from their association with the society. In the year under review, interest and profit totalling £3,497,431 has been paid to or credited to the accounts of members, whilst in the last 10 years the total sum of £30,366,508, free of income tax, has been received by or credited to the society's members and depositors as a reward for their thrift, and for their discrimination in the selection of the Halifax Building Society as the home of their savings.

The total reserve funds and undivided profit now amount to £5,066,167 14s. 1d. This includes the reserve fund No. 2, now amounting to £750,000, specially provided to meet any losses on the realisation of properties falling into the possession of the society. Neither the general reserve fund nor the special reserve fund, No. 2, has been called upon to make good any such losses. These, as usual, have been borne out of the profits of the year, and they represented last year an almost negligible proportion of the mortgage interest earned, namely, less than 3d. in the £. It will be noted that the reserve funds are covered by the cash at banks and in hand.

TEN YEARS' PROGRESS

A true measure of the real progress of the Society is obtained by contrasting the business of the past year not only with the previous year, but over a longer period. On the date of the amalgamation of the two Halifax Societies the assets of the combined societies amounted to £46,981,482, compared with the present figure of £122,626,007, showing an increase in the ten years of £75,644,525. The total number of open accounts has increased in the same period from 329,224 to 712,414, or by more than 100 per cent. The total reserve funds and undivided profit on January 31, 1928, amounted to £1,461,200, compared with the present figure of £5,066,167, an increase of £3,604,967, or more than 246 per cent. This is a marvellous addition to the Society's strength. There is an equally gratifying increase in the same period in the earnings, which have risen from £2,362,917 to those of the present year of £5,263,114. The balance of the net profit, after meeting all the liabilities of the Society, may be said to have become standardised at over £500,000 per annum.

The Society enjoys the distinction of being the largest institution of its kind in the world, and the directors and members are naturally proud of the magnitude of its business. The balance sheet shows that the assets represented by small mortgages under £5,000 each amount to 87½ per cent. of the whole, and the large mortgages over £5,000 each amount to only 12½ per cent. of the whole.

Out of the total of 239,147 mortgages, 191,632 are in respect of mortgages where the balance does not exceed £500, a fact representative of the aim of the directors at all times to give every possible preference and encouragement to applications for advances for the purchase of small houses on convenient terms. Every known facility within the bounds of prudence is offered by the Society, and borrowers present and prospective are assured of helpful consideration in their applications.

BUILDING SOCIETIES' AIMS

The object of building societies has from their establishment been a two-fold one, namely, to encourage thrift by providing the best return with complete safety and accessibility for savings, and to offer the utmost facility and assistance to the home buyer by way of an economic mortgage. How far that double object has been achieved is shown by the figures I have just quoted. A change in policy, however, has gradually been adopted by a number of prominent societies, owing to the disposition of the Government to encourage house tenancy rather than home purchase. Whilst retaining all the benefits for the encouragement of thrift and savings, societies have, to some extent, widened their basis of investment and have made loans upon group properties affording a greater margin of safety and supported by an adequate degree of owners' capital, generally on the basis of not less than one-third of the cost and coming within the range of trustee investments.

The building of residential flats in London and in some large towns has been greatly developed in recent years, and must be accepted as providing a new fashion in living accommodation with some attractions compared with the individual house. In some places and in particular circumstances, flats may fill a real need, but, in my opinion, they will not solve the nation's housing problem satisfactorily. For more than a century and a half the building society movement has inculcated a love of hearth and home and nurtured and fostered carefully the instinct of home-ownership, which has had an immense influence upon the social life and well-being of our citizens.

Many problems remain to be faced in the future, and the political conditions of the European countries, and particularly the fear of war, have caused great anxiety and caution to our nation. Among these is the question of insurance of property against war risks, and the Building Society's Association has been in constant touch with the Government to secure, if possible, an official assurance that the responsibility for war damage, should it come, would be borne by the National Exchequer as part of the inevitable cost and loss of any possible war.

I conclude with an expression of profound thankfulness that in a year in which crisis has followed crisis in international political affairs, the people of Great Britain, in times of comparative prosperity, have been able to continue in the quiet and happy enjoyment of the homes which so many of them possess through their own initiative and which have been provided largely by building societies.

The report and accounts were unanimously adopted.

THE KING LINE LIMITED

DIVIDEND PAYMENT RESUMED

THE TRAMP SHIPPING INDUSTRY

STRENGTHENED POSITION

SIR VERNON THOMSON'S SURVEY

The forty-ninth annual general meeting of The King Line Limited was held, on the 29th ultimo, at Winchester House, Old Broad Street, London, E.C.

Sir F. Vernon Thomson, K.B.E., the chairman, presided.

The Secretary (Mr F. W. Matthews) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—The directors' report and accounts for the year 1937—the forty-ninth year of the company's trading—having been circulated to the shareholders, you will, I hope, as customary, take them as read. (Agreed.)

For British tramp shipowners the year 1937 was the best trading year since 1929.

PROFIT AND DIVIDEND

The net profit of the King Line Limited for the year 1937, after providing for interest, the cost of Lloyd's surveys, and the premium of £16,650 on redemption of loan, amounts to £163,908. The directors have transferred to depreciation account the sum of £133,716, plus £49,312 surplus on sale of two steamers during the year. This £183,028 has been applied towards making good arrears of depreciation of the company's fleet, which had accrued owing to the world trade depression. An interim dividend of 4 per cent., less income tax, was paid in November, and the directors now recommend the payment of a final dividend of 4 per cent., less income tax, making a dividend of 8 per cent. for the year ended December 31, 1937, carrying forward the balance of £22,852.

Having regard to the fact that the shareholders of this old-established company have received no dividend for the last seven years, i.e. since 1929, it would have given the directors pleasure to have recommended an even more generous distribution, but in all the circumstances they deem it prudent to limit the dividend to 8 per cent. for the year.

It will be observed that during the last two years while profits have permitted of this being done the company has applied a very substantial portion of its profits to writing down the book value of its fleet. As you will know, it is essential over the course of the years to set aside adequate depreciation in order to provide for the vessels' replacement in due course, ships being a wasting asset.

BENEFITS OF GOVERNMENT SUBSIDY

Shareholders will recollect that during 1935 and 1936 a temporary subsidy was paid to British tramp shipping by the Government. In passing, it may be recorded that the whole of this most useful subsidy received by the King Line Limited was utilised towards making good the arrears of depreciation on their ships, and that no part of the subsidy was used by this company for the payment of dividends. The average level of freights during 1937 was such, I am glad to say, that under the Act no subsidy was payable in respect of that year.

Although in general opposed to subsidies, I gladly pay tribute to the beneficent effects of this temporary subsidy sought and granted in the exceptional circumstances of the recent world trade depression.

It may interest shareholders to know that notwithstanding the provision thus made for depreciation, at the end of 1937 there still remained about £63,000 arrears of depreciation calculated at 5 per cent. per annum upon the original cost of the company's fleet. However, most of the leeway lost during the great depression has now been made up. Although freights have unfortunately receded again to an unremunerative level, we have several voyages completing in 1938 at the satisfactory rates of freight of 1937.

THE COMPANY'S FLEET

The company now owns nine motorships and six steamships, of a total deadweight of about 121,640 tons. The average age of the fleet is 13½ years and the average age of the motorships is 9½ years. The whole stand in the company's books, after deducting depreciation and reserve fund, etc., at £3 14s. 2d. per ton d.w. Their market value to-day is in the aggregate considerably in excess of this.

With regard to the present-day high costs of new tonnage: these are, of course, affected by our national re-armament programme. Having regard to costs of raw materials and production generally, shipbuilders can no doubt justify their prices. Obviously shipbuilders are entitled to a reasonable return upon their capital and labour in common with other industries, but the problem for tramp shipowners is as to whether tonnage built at to-day's price could be profitably employed at about present freight rates. The answer to that I am sorry to say is quite definitely in the negative.

Shareholders will recollect that of the original loan to this company of £800,000 under the Loans Guarantee Act (Northern Ireland), £444,000 was outstanding at December 31, 1936, but the board are pleased to be able to report that the £444,000 was repaid during the year under review. Whilst happy to report having discharged the liability for this loan the directors are most appreciative of the facilities so courteously placed at their disposal by those administering the Loans Guarantee Act (Northern Ireland).

The company has no debenture or other indebtedness, and the balance sheet now submitted shows a sound position.

OUTLOOK FOR TRAMP SHIPPING

The outlook for tramp shipping at present is obscure and not very encouraging. Following the trade setback in the U.S.A., which developed in October, 1937, and the failure owing to frost of the wheat crop in Argentina, the shipment of which normally commences in January, and the much reduced Argentine maize crop owing to drought, the freight markets of the world have had a serious relapse. Argentina is the most important market for the employment of tramp ships. These untoward events, together with the tension and uncertainty of the international political situation, have produced in merchants and traders a marked lack of that confidence which is necessary for steady trade, with the result that demand has fallen off to such an extent that British tramp tonnage is again having to be laid up. But for the minimum freight rates instituted in 1935 and still in operation, world freight rates would now be upon an even lower basis.

It is not possible for anyone to speak dogmatically upon the subject, and there is ample scope for varying views, but my own impression, for what it is worth, is that the present setback in overseas trade is not likely to be permanent, but even if it were more or less so it is not likely to be so severe as the prolonged world trade depression from which the shipping industry emerged in 1936. Moreover, British tramp shipping as a whole, strengthened by the brief period of prosperity just experienced and by the adoption of the policy of co-operation, is now in a better position to meet adverse times.

For the time being the volume of world trade, which in 1937 is calculated to have been about 98 per cent. of that of 1929 as compared with 86 per cent. in 1936, probably reached its peak in the middle of last year. A permanent improvement in shipping is dependent upon a revival of international trade, and some relaxation of trade restrictions and the stabilisation of currencies would best promote this.

IMPORTANCE OF THE BRITISH MERCANTILE MARINE

The importance of the British Mercantile Marine to the nation cannot be too strongly emphasised. It is too often forgotten or taken for granted. In times like the present the British Mercantile Marine is of vital importance to the nation.

I shall be glad to answer any questions to the best of my ability, and now have pleasure in moving: "That the report and accounts, as submitted, be received and adopted, and that a final dividend of 4 per cent. be declared and paid for the year ended December 31, 1937 (making with the interim dividend paid in November last, 8 per cent. for the year), less income tax."

Mr Percy Cross seconded the resolution, which, in the absence of questions, was carried unanimously.

The retiring director, the Earl of Coventry, was re-elected, and Messrs James Brown and Sandeman having been reappointed auditors, the proceedings terminated.

ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED

RECORD PRODUCTION

SIR P. MALCOLM-STEWART'S SURVEY

The annual general meeting of the Associated Portland Cement Manufacturers, Limited, was held, on the 30th ultimo, at 21 Tophill Street, London.

Sir P. Malcolm-Stewart, Bt., the chairman, in the course of his speech, said:—The total revenue for the year at £1,594,828 is down by £92,522, and the balance of profit at £934,228 compares with £929,617.

After paying the half-year's preference dividend and an interim dividend at 7½ per cent. on the ordinary stock the balance of £602,978 permits of the payment of the final dividend on the preference stock and of a final dividend of 15 per cent. on the ordinary stock, making 22½ per cent. for the year.

Trading conditions during the early part of last year were somewhat adversely affected by unfavourable climatic conditions. However, when these changed an improved demand was experienced, and at the close of the year we had made record deliveries of Blue Circle Portland Cement. The influence of increased turnover, though helpful, was insufficient to maintain the trading profits at last year's figure in the face of the increased cost of manufacture. It is insufficiently realised that there had been no alteration in the selling prices of Portland cement, which had remained unchanged since 1935, until the middle of December last, when prices were advanced by 3s. per ton. This advance had no practical effect on the year's trading. Our consistent policy of endeavour to thwart the tendency of rising prices, which are bound to curtail construction and building activity, is again demonstrated by our holding down prices during the year, despite the rising cost of production.

LOW PRICES DESPITE INCREASED COSTS

It is interesting to note that the wages paid by us have been advanced by some 180 per cent. since March, 1914, and this increase does not take account of the cost of decreasing working hours from 56½ to 48 per week. The price of coal is some 100 per cent. higher and iron and steel 66 per cent. to 116 per cent. higher, according to the class of material; yet the net price realised by us to-day for Portland cement in the home trade is only 4.5 per cent. higher than in March, 1914.

This is a bald statement, but there is much behind it. It reflects clearly and, I trust you will agree, satisfactorily the results obtained from the definite policy outlined to the shareholders in 1925 and since consistently carried out to the advantage of stockholders and all who serve the company, whatever their responsibilities or duties. In addition, consumers have benefited by the maintenance of low prices, which have, in turn, favoured the further uses of cement and thus increased turnover of the products we manufacture. The progress achieved is due primarily to a simple cause not cloaked in mystery. We have steadily increased the efficiency of our production; the beneficial results have grown cumulatively as progress has been effected. One by one the works have been tackled, precedence always being given to that works endowed with the best economic advantages.

PRICE OF COAL

By far the most serious influence on costs is the steep increase in the price of coal, which will be felt to a much greater extent in the current year. For every two tons of cement manufactured approximately one ton of coal is required. It was difficult under the control as recently exercised to obtain adequate supplies of the qualities of coal which long experience has shown are best suited to our requirements. This difficulty has now been largely eliminated, for which we are grateful to the Mines Department for the considerable fulfilment of the assurances given by the Secretary for Mines in the House of Commons with reference to this matter. It was not to be expected that the very low prices ruling for many years would continue indefinitely; indeed, we are not so selfish as to wish for a range of uneconomic prices resulting in miners being underpaid for their hard and dangerous work in winning coal. There is no class of worker better entitled to a really good return of its labour.

Further, we do not wish the shareholders in collieries to be deprived of a fair return on their capital, provided always the financial structure of the companies in which they are interested, and the valuation of their assets, are sound. I believe it would be found that

there is a wide gap between the prices in force to-day and such fair prices as could be fixed if the regulations affecting the coal industry were framed on the essential principle that conditions favouring the obtaining of maximum quantities from the mines most economically situated and with the highest efficient production prevailed.

JOINT CONTROL WITH TUNNEL OF ALPHA

The outstanding event to report was the completion of negotiations whereby on January 26th last an offer was made by us to acquire the 1,100,000 issued £1 ordinary shares of Alpha Cement, Limited, through an exchange on the basis of nine Associated Portland Cement Manufacturers, Limited ordinary shares for every 20 Alpha ordinary shares. This offer has already been accepted by the holders of over 99 per cent. of the Alpha ordinary shares, and the appropriate number of Associated Portland Cement Manufacturers' ordinary shares are in course of being allotted.

An important feature of this acquisition is that it is jointly entered into by ourselves and the Tunnel Portland Cement Company, Limited, who take up 26 per cent. of the Alpha ordinary shares and issue to us in consideration therefor 231,660 Tunnel Company non-voting "B" ordinary shares of 10s. each fully paid. However, the transaction rests on a much broader basis than that of a joint ownership of the equity in the Alpha company. The Tunnel, the Alpha and our companies are entering into a working agreement for a term of years, which provides for the co-ordination and for the closest co-operation of sales policies.

The purchase was completed on March 24th, and Sir Arthur Marshall and Mr Gowen are being elected directors of this company and the British Portland Cement Manufacturers, Limited; Mr Gowen will shortly be appointed an ex-officio member of the managing directors' committee of both companies.

I will now make a few remarks on the general prosperity we are enjoying. It is natural that much interest should be evinced as to whether we are on the crest of the wave, have not reached it, or have passed it. Perhaps the present position can be best realised if we imagine two waves influencing our prosperity, interlocked but with differential speeds of expansion and contraction of volume.

Let us assume one wave represents the volume of normal activity not at all or but little affected by the defence programme. This wave, I believe, has passed its crest. The other wave, representing the volume of activity more directly due to the defence programme, has hardly reached its crest. Because these waves are interlocked it is difficult to measure precisely the volume of each, but the contraction in volume of the first wave is more or less compensated for by the expansion in volume of the second wave.

It needs considerable optimism to assume that when the volume of the wave directly affected by the defence programme in turn contracts we shall be so fortunate at that period as to experience an increase in the volume of trade not so affected.

TRADING PROSPECTS FOR CURRENT YEAR

With regard to the prospects for the current year, I am definitely hopeful. We have so far experienced a further improved demand resulting in a satisfactory increase of deliveries of Blue Circle Portland cement to date as compared with those made during the corresponding period of last year. This has no doubt been partially helped by the exceptionally favourable weather conditions. We are now bearing the full brunt of the increased costs of production, packages and transport, and of the second advance in wages last year, which we were glad to make towards the end of the year through negotiations with the National Joint Industrial Council for the Cement Manufacturing Industry. However, the increase in selling prices will mitigate the effect of the higher cost. The outstanding influence on my forecast is the bright prospect of an increased demand for our products owing to the continued growth of public and other large-scale constructional work. These are the sources which create demand for large quantities of Portland cement and I am assuming they will not be contracted by Government action.

For the reasons stated I look forward confidently to submitting to you satisfactory accounts when, all being well, we meet again next year.

The report and accounts were unanimously adopted.

LAW LAND COMPANY, LIMITED

A SATISFACTORY YEAR

MR M. E. F. CREALOCK'S SPEECH

The fifty-fifth annual general meeting of the Law Land Company, Limited, was held, on the 30th ultimo, at Brettenham House, London, Mr M. E. F. Crealock (the chairman) presiding.

The Chairman, in the course of his speech, said:—Ladies and gentlemen,—Before proceeding to refer to the accounts I want to express the pleasure of the board, and particularly myself, in having secured the services of Mr Miles Thornewill as a director. It is perhaps unnecessary for me to tell you that Mr Thornewill is the deputy-vice-chairman of the Savoy Group of Hotels. The interests in this particular neighbourhood of the Savoy Hotel and ourselves are very closely linked up, and I look forward to considerable benefit in the future from this fortunate alliance.

Turning to the figures, you will observe that the gross rents for the past year are slightly higher than for 1936. Lettings have been very successful. Brettenham House and its adjunct, Duchy House, still suffer disadvantage by reason of the building of the new Waterloo Bridge, and although its approach from the south is definitely taking shape, it will be, I fear, some time yet before our difficulties will be passed. However, we have secured excellent tenants in both buildings, though—on account of the disturbance arising from work on the new bridge—the rents obtained are slightly below our schedule. Carrington House is fully let with the exception of two of the shops. Plans for dealing with this small remainder are well in hand.

INCREASING COSTS

Service costs have gone up very considerably due to the not entirely regrettable rise in wages. Repairs have been the cause of some anxiety in view of the rapid rise in all building costs, but we have succeeded in keeping our figure very near to the normal, and have managed to complete some much-needed and very successful work to lifts, heating systems, entrance halls, staircases and lavatories.

As a result of the year's work we are able to add to the Leaseholds Redemption account, the special reserve for depreciation of the flat properties, and, further, to set aside a sum to meet the new National Defence Contribution tax for the nine months to the end of 1937. Having done all that we consider prudent, almost to the extreme, we are still able to recommend the same dividend as that paid for some years, and to carry forward a sum nearly £1,000 higher than for the previous year. You will, I hope, agree with me in regarding this as a highly pleasing result. The balance sheet calls for no explanation, I think, but perhaps I may direct your attention to the fact that mortgages and loans show a reduction of £111,000, whereas properties show a decrease of only £74,500 compared with 1936.

BURDEN OF LOCAL RATES

It may be that I should make some reference to the additional burdens which must be borne by all commercial undertakings. In addition to the National Defence Contribution, for which we have made provision for the past year, the local authorities have given notice of very considerably increased demands. The expenditure on air raid precautions must, of course, be suffered without complaint as an absolute necessity, but when we come to examine the remainder of the increase in local rates we find that it is solely due to the demands made on the London boroughs by the London County Council. The authorities which have to satisfy these enormous and ever-increasing demands have the unenviable task of collecting the money and passing it on to the London County Council, and yet they have not the slightest control over the manner of its spending. It is surely time that a far closer examination was made by every ratepayer of the purposes to which the money extracted from him is put. My own opinion is that we are spending not only more than is necessary, but far more than is desirable on what are known as social services.

Four years ago the London County Council rate was 6s. 8½d. in the £, compared with the present demand of 8s. 3½d. As you know, the great bulk of this company's property is in the City of Westminster. That authority has kept its own expenditure within most carefully guarded bounds, but is helpless in face of the extravagance of the London County Council. Of the total rate of 10s. 4d. collected by Westminster it spends only 1s. 0½d., and has to pass the whole of the remainder on to the London County Council and the Metropolitan Police. Much the same story can be told of St. Marylebone and Chelsea, the only other two boroughs in which we have property. Four years ago the money extracted from Westminster by the London County Council was £3,400,000, compared

with £4,200,000 which the current rate will involve—an increase of £800,000.

SPECIAL DEPRECIATION RESERVE

Before leaving the figures I should like to make a short reference to the special reserve for depreciation of flat properties. When this reserve was created we had in mind the very sudden change in fashion. All the newly-erected blocks of flats in London contained rooms of a size which would not have satisfied the demands of a few years ago. There were also certain features which were not to be found in our older flats. We therefore took the precaution to provide for a competition which we might have difficulty in meeting, and this special reserve has now reached a total of £48,000. At the same time we have taken a bold course in dealing with our flats as they became empty, and this, together with the swing of the pendulum—tiny rooms and restricted space are no longer so popular—we have succeeded in completing some most satisfactory lettings.

FURTHER DEVELOPMENTS

Having dealt with the past and touched only lightly on our future prospects, I must now make more definite reference to the future. Although the leases of the majority of our office properties have upwards of twenty years to run, your directors have had in mind the competition arising from the erection of blocks of offices in parts of the West End, also near at hand. We have felt, therefore, that we should place ourselves in a position to meet this competition and do all in our power to stay a possible flight of business and professional firms from Central London to the West End. With this purpose we have acquired the leasehold interest of the Arundel Hotel and Maltravers House on the Embankment, and we are at present negotiating for a renewal of the leases of that and the adjoining properties so that we may be in a position entirely to remodel on modern lines the whole of the buildings, forming almost a complete island.

It may be some time before a start is made on this scheme, but we feel that we should do our best to put ourselves in a position to carry out some such scheme should occasion arise. We have also taken other steps with a view to insuring the continuance of your property in the neighbourhood of the Strand as the premier office-centre of London.

The report and accounts were unanimously adopted and a balance dividend of 5 per cent., making 9 per cent. for the year, was approved.

MAPLE AND COMPANY, LIMITED

IMPORTANT CONTRACTS

The forty-eighth annual general meeting of Maple and Company, Limited, was held, on the 30th ultimo, in London.

Mr C. C. Regnart (President) said:—I am pleased to report that during the past year your company has experienced successful trading, despite the difficult conditions which existed during the latter half.

The year opened in an extremely gratifying fashion; the turnover at first more than maintained the 1936 level, and, with the opening of our new premises in Birmingham in March, we looked forward with confidence to even more successful trade in 1937 and, at one time, had high hopes, not only of maintaining the dividend, but possibly of increasing it. Unfortunately, increased taxation was announced in the Budget, with the result that a decline followed, and it is common knowledge that in London the second half of the year proved to be less successful.

I am pleased to inform you that the business in Birmingham is now well established on a normal profit-making basis, and we look forward with confidence to the results of the current year.

In regard to the subsidiary companies, much the same experience as in London was felt in Paris. We are now carrying out two important contracts from this branch, one being a contract for decorating and furnishing a Royal Palace, and the other the building of the Australian War Memorial at Villers Bretonneux for the Australian Government, which their Majesties are unveiling at the end of June.

Our factories in Cheltenham continue to manufacture furniture of the highest grade, designed in our studios, and you will find in the showrooms many beautiful examples of the product of these factories. We have recently secured for the joinery section an initial contract in connection with the fitting of the Queen Elizabeth, sister ship of the Queen Mary.

During the year many important contracts have been executed—for instance, the bronze work for the new Bank of England, and then in connection with our Marsteel production, for which we have great hopes in the future, all the metal partitioning for the new Great Ormond Street Hospital and other public buildings.

The report was unanimously adopted.

RICHARD COSTAIN, LIMITED

IMPORTANT CONTRACT WORKS

AIR RAID PROTECTION

The fifth ordinary general meeting of Richard Costain, Limited, was held, on the 30th ultimo, at Friends House, Euston Road, London, N.W.

Mr R. Arthur Costain (the chairman), in the course of his speech, said:—There is a reduction in the net profits at £62,692, as against £71,025. In view of the extent to which the erection of Dolphin Square has occupied the services of the company, this is not a matter for surprise. The directors' report indicates the approaching completion of Dolphin Square and the satisfactory demand for the accommodation provided there. There is full justification for the claim that Dolphin Square, in its position on the River Front, with its 3½ acres of quadrangle and gardens, its provision for home life, recreation and entertaining, and for child welfare, will be found to reward the enterprise of your board.

We recommend a dividend of 5 per cent., less tax, carrying forward £28,875. The reserves will be increased by £14,272, and the carry forward reduced by £2,707. The amounts put to reserves and carry forward in the period of the company's existence would have been sufficient to provide, if distributed as dividend, an additional dividend at the rate of 5 per cent. for each year.

Contract works have been carried out by the company during the year, including work for the Iranian Government, London County Council, local authorities, and important companies, and the services of the company continue to be sought in this class of work. The sales of houses this year to the present date on our Elm Park Estate are distinctly better than at this date last year.

CONSTRUCTION OF SHELTERS

On the general outlook there is one aspect of the defence needs of the country that naturally has a bearing on the prospects for the building and contracting industry. Your directors early realised that when the Government's plans for air raid protection had matured there would be an immediate new call on the resources of the industry, and, after a personal study of Continental methods and structures, they made certain arrangements to enable us quickly to provide air raid shelters of proved efficacy. In conjunction with the Westminster City Council two types of shelter have been erected at Caxton Hall, London, for public inspection, and these have created public interest throughout the country.

There has been a great deal of hesitation in the placing of orders owing to uncertainty as to how expenditure of this kind would be regarded by the authorities in relation to income tax and local rating. The Board of Inland Revenue has now defined its attitude towards expenditure on air raid precautions, and it is anticipated that employers of labour, local authorities, and the public will quickly make up their minds as to the type of protection they are willing and able to provide. I am bound to say, however, that it has been a matter of surprise to me to learn that the Home Secretary in a speech at Bristol, referring to expenditure allowable for income tax purposes, indicated that those who had space available to dig deep and simply constructed trenches might regard such expenditure as allowable, while those who construct special shelters either standing separately or as an addition to an existing structure would be treated as having spent money on capital account.

I would point out that the inevitable result of this will be that the newer industrial works, having ample site accommodation on the outskirts of great cities or in the country, will be able, as an item of current expenditure, to provide for their employees excellent cover from the peril of bomb splinters, while those whose works and offices are situated in London and the crowded areas of other great cities, if they are not content with precautions of very doubtful efficacy against the explosive power and range of the modern bomb, and decide to provide effective splinter-proof shelters of the type most suited to the limited areas at their disposal, will have to build out of capital, with no tax relief whatever and an unknown further liability for rating. I would urge that the Government find without further delay some method of encouragement—and that of a retrospective nature—so that these vitally essential works shall not be delayed further through doubt or uncertainty.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

AUTOMATIC TELEPHONE AND ELECTRIC COMPANY, LIMITED

SUBSTANTIAL BENEFITS FROM AMALGAMATION

The annual general meeting of the Automatic Telephone and Electric Company, Limited, was held, on the 31st ultimo, at the Incorporated Accountants' Hall, Victoria Embankment, London.

Sir Alexander Roger, chairman of the company, presided, and, in moving the adoption of the report and accounts, said that they were in respect of the first full year's working, since the company had acquired the manufacturing and other business formerly carried on by the Automatic Electric Company, Limited. The benefits derived were substantial and already justified the amalgamation of the two companies. Coupled with the advantages which had accrued from a larger turnover, the directors were able to report a gross profit of £209,242, as against £149,283, and a net profit of £148,624, as against £133,564.

At the last meeting he had informed the shareholders that the company was spending about £100,100 on factory extensions to meet the demands of the company's principal customer, the British Post Office. Partial use of the extensions had been secured during the year, and when the plans were completed they would be able to increase production and cut down a great deal of night work and overtime.

ALLOCATION OF PROFITS

If shareholders approved the dividend of 7 per cent. on the cumulative preference stock, the transfer of £10,000 to general reserve, and a dividend for the year of 10 per cent. on both the ordinary stock and the deferred stock and shares—including the interim of 3 per cent. already paid on the ordinary stock—there would be £105,632 to be carried forward—an increase of £20,186.

Although additions had cost £139,599, the item freehold land, buildings and machinery showed an increase after depreciation of only £93,911. Patent rights and goodwill had been reduced still further to £134,157, and the many hundreds of patents and patent rights held throughout the world enabled the directors to say that that composite asset was conservatively valued.

In regard to Elexcel, Limited, a great amount of effort had been expended in developing the sales organisation and improving its production of cooking and heating appliances. The trade was subject to fierce competition, however, and the board proposed to limit their competition to products on which they would specialise for the immediate future, and by that concentration there was a reasonable hope of making a profit.

THE POST OFFICE

The expansion and development of the Post Office telephone system continued unabated. When they considered the system had increased by 50 per cent. since 1931, they could appreciate adequately the energy, foresight and ability displayed. The industry had taken its part, not only in technique and production, but also in popularising the telephone through the medium of the Telephone Development Association. One of the main problems now was to make the advantages of telephone service available to those classes of the population with lower income levels. Since 1928 the company had progressively reduced the price of equipment to the Post Office, which was now paying about £70 for equipment that would have cost them £100 in 1928, and that in spite of increased wages, increased cost of materials, increased taxation, and increased cost of social services. That striking contribution to telephone development could only have been borne by increased efficiency.

Prices of equipment supplied to the Post Office had been fixed for several years now through the agency of a specialist committee of representatives of the Post Office sitting in conjunction with a committee of the manufacturers, and to illustrate the searching nature of those examinations with regard to prices, he might say that some 1,500 meetings had been held.

He had frequently referred to the pride which they justly had in their engineering achievements, and valuable research work had continued throughout the year in their laboratories, where they were ever alert to keep in the front rank as pioneers in new inventions and systems.

As for the nine months remaining of their current financial year, he could not see the country being embroiled in war, and he could not see serious political troubles. He could not see prices of raw materials and costs of production rising much, and he could not see taxation rising to a crushing level. He did see, however, that their order book ensured a full factory putting "recession" entirely out of their vocabulary, and he promised at least as good results as those before the meeting. Personally, he thought they would do better.

The report and accounts were unanimously adopted.

BRITISH ALUMINIUM COMPANY, LIMITED

RECORD OUTPUT

The ordinary general meeting of the British Aluminium Company, Limited, was held, on the 29th ultimo, in London.

Mr R. W. Cooper, M.C. (the chairman), who presided, in the course of his speech, said that the profit for 1937 had amounted to £773,432, which was an increase of £176,252 over the profit realised in 1936. They had commenced the year with a satisfactory order-book and the demand for their products was well maintained throughout the year, resulting in their having marketed a considerably increased tonnage of aluminium—in fact, the largest in the history of the company. The home and the export sales had both contributed to that increase, which was distributed between ingot metal and rolling mill products.

The price of the former, and to a great extent the latter, had remained steady. On the other hand, costs of production were higher, due to the rise in cost of raw materials and to increased labour rates. These latter had been further increased at the beginning of the current year, and, in addition, the system hitherto in operation by which men employed on necessarily continuous processes worked seven shifts of eight hours each per week, had been replaced by a system of six shifts of eight hours per week, without any reduction in average weekly earnings.

The effect of that change, and of the increases in labour rates and other improved conditions introduced during the last one and a half years, represented an addition of 20 per cent. to their wages bill in this country, apart from the additional cost of the larger number of men who were required.

Their total output of aluminium during 1937 had constituted a record. The extensions to which he had referred a year ago had made good progress during the year; so much so that he was pleased to be able to report that the first half of the additional aluminium producing plant at Lochaber had been put into commission earlier this month, and the balance they hoped to have in production before the middle of the present year.

THE LOCHABER POWER STATION

It did not appear to be generally recognised that at Lochaber they possessed by far the largest hydro-electric development in Great Britain. The measure of the size of a development of that nature was, of course, its annual output capacity in units of electricity and not its peak load for short periods. The Lochaber power station operated on a continuous load, and its output already greatly exceeded, and, when completed, would be several times greater than, the next largest hydro-electric development in the country.

The enlargement of the alumina works right up to the boundary of their property at Burntisland was nearing completion, and as the extra amount of alumina thus provided would be insufficient for their requirements they had had to find another site for a new, and a third, alumina factory. Certain essential factors had limited their choice of a site, and after careful investigation of a number of possibilities they had finally decided that the most suitable location was at Newport, Monmouthshire. That factory, they hoped, would reach the producing stage later on this year, and they had ample room for any extensions which might be required in the future. Rearrangement and extensions had also been in progress at their rolling mills, and those were well advanced and likely to be completed shortly.

Since the production side of their business was so largely dependent upon Scottish labour and Scottish water power, it was specially appropriate that they should be very prominently represented at the great Empire Exhibition which was to be opened at Glasgow in May. The general public had little conception of the manner in which aluminium entered into almost every branch of industry. They had, therefore, taken space in the Palace of Engineering, where they would demonstrate the range of their products and show in some measure the very wide uses to which they were applied.

The increased volume of business transacted during the year had enabled them to raise the final dividend to 8½ per cent., making the dividend up to 12½ per cent. for the whole year. The new ordinary shares participated in the dividend for the year to the extent provided for in the terms of the issue—that was to say, from the dates upon which the various instalments had been paid—the amount payable being equivalent to £1 15s. 10d. per cent.

The outlook for the current year as regarded the business of the company was encouraging, and they had confidence that they would be able, unless anything quite unforeseen occurred, to put before them at this time next year as satisfactory a showing as for the past year.

The report was adopted.

EX-LANDS NIGERIA, LIMITED

20 PER CENT. DISTRIBUTION

The twenty-sixth ordinary general meeting of the Ex-Lands Nigeria, Limited, was held, on the 29th ultimo, in London.

Mr H. G. Latilla (chairman and managing director), in the course of his speech, said: After having written off £2,883 13s. from prospecting and development expenditure and depreciation of £3,915 there remains a balance, being profit for the year, of £35,220 8s. 4d. Adding to this the balance brought forward from last year of £8,831 6s. 3d. makes a total amount available of £44,051 14s. 7d. Out of this amount we have already paid an interim dividend of 10 per cent., less tax, which, together with the directors' additional remuneration, absorbed the sum of £21,250, leaving a balance now to be dealt with of £22,801 14s. 7d.

It has always been the policy of this company, and I think it is a right one, to distribute to members as much of the profit as is possible, and, as stated in the directors' report, we are now recommending that out of this balance of £22,801 14s. 7d. a final dividend for the year of 10 per cent. should be paid.

The price of the metal has recently fallen and is now in the region of £185 per ton and it is difficult to prophesy what the future trend will be.

A scheme is at present being worked out for the establishment of a "buffer pool" to be operated in conjunction with the tin restriction scheme and to be controlled by a committee consisting of gentlemen in the City of London, who are quite independent of the tin industry, both from the production and consumption points of view. I am of opinion that the institution of such a scheme, if properly managed, should have a marked effect upon stabilising the price, which, I understand, it is suggested should, as far as possible, be kept in the region of £200 to £230 per ton.

During the last few months active steps have been taken to thoroughly prospect the remainder of the company's areas and to re-check the existing ones. Some encouraging results have already been obtained and I am hopeful that during the course of the current year further areas of payable ground will be proved. The question of maintaining our ore reserves is constantly before us and you may rely upon everything possible being done in this direction.

The report and accounts were unanimously adopted.

LANADRON RUBBER ESTATES, LIMITED

GREATLY IMPROVED RESULTS

The thirtieth annual general meeting of the Lanadron Rubber Estates, Limited, was held, on the 30th ultimo, at 1-4 Great Tower Street, London, E.C.

Mr Eric Macfayden (the chairman) said that they could look back upon 1937 as the most prosperous year the company had enjoyed for some time. Output had been 1,831,715 lbs. (including 292,000 lbs. produced against purchased rights), against 1,143,635 lbs. in 1936. The total income of the company was £71,277, against £36,822. If shareholders agreed to the appropriations recommended, the total dividend for the year would be 9 per cent., against 5 per cent. for 1936; the reserve would be restored to £60,000 and the carry-forward would be reduced by a matter of £17 to £4,568.

It would be no news that they had to anticipate a less successful experience in 1938. A year ago world stocks of rubber had been reduced to an amount little more than comfortable, and the price of smoked sheet in London stood at 1s. 1½d. per lb. The glass had begun to fall and no commodity had suffered more than rubber, which had lost half its value in eight months. There had been a steady increase in exports from the producing countries at a time when the buying power of their largest customer was declining and absorption elsewhere was stagnant. Releases had since been cut down, but the consequential reductions in exports had not as yet overhauled the decline in absorption. Real consumption of rubber must be at a high level, and if trade absorption was lagging behind real consumption, the necessary adjustment must be in course of being brought about. When it had been completed, prices would respond. The secular trend undoubtedly continued upwards. Tyre-using vehicles of all sorts continued to develop. Thus, within the last year or two the rubber tyre had found a rapidly expanding use in agriculture. The range of articles, other than tyres, into which rubber now entered, was ever-expanding. Rubber was still a new commodity and the scope of its ultimate usefulness even now could only be guessed at.

The report was unanimously adopted.

LEDBURY RUBBER ESTATES, LIMITED

FINANCIAL POSITION STRENGTHENED

The twenty-ninth annual general meeting of the Ledbury Rubber Estates, Limited, was held, on the 30th ultimo, at 1-4 Great Tower Street, London.

Mr Eric Macfadyen (the chairman) said that receipts from tin tributes were up substantially at £8,380, as against £1,978 in the previous year. That was due to the higher quota releases under the Tin Regulation Scheme and the better prices ruling for the commodity. Hitherto it had been their practice to transfer all tin receipts to the credit of property depreciation account, but this year they felt justified in taking a part into profits, as the amount standing to the credit of property depreciation account now more than covered the value of the rubber trees destroyed.

Against a profit to them of £183 in 1936, the Sungei Sabaling Estate, in which the company had a one-third interest, showed a small loss for 1937. Towards the end of last year they had felt justified in opening Sungei Sabaling for tapping. Operations had actually commenced on November 3rd, and the yield from the trees

had been fully up to expectations. Before production had been carried on long enough to turn a loss into a profit, the reduction in the quota had decided them to revert to non-production on the new estate. So far as Kinrara, Ledbury and Sione Estates were concerned, they had been upkeep in good order.

Yields at Kinrara were showing signs of falling off, and experimental manuring was being carried out there with a view to obtaining data for possible future manuring programmes. As mentioned in the directors' report, the replanting of a further 63 acres had been undertaken, and they proposed doing another 25 acres this year. The planted acreage at Sione had been reduced by 26 acres, due to loss of trees to make way for the mining dredge.

The result of the year's trading was a profit of £18,888. Deducting the interim dividend of 5 per cent. and the proposed transfers to property depreciation account and taxation reserve, they were left with £13,486, including the carry-forward from 1936. They recommended a final dividend of 7½ per cent. and would carry forward a somewhat larger amount, £7,242. For the current year they had forward sales to fill of 134,000 lbs. at over the equivalent of 11d. per lb. London landed, which would help to sweeten the average.

The report was unanimously adopted.

(Continued from page 41)

Fruit.—The exceptionally mild and sunny weather is helping the sale of dessert fruits of all kinds. At Covent Garden, according to *The Fruitgrower*, apples remained in consistent demand during the past week, while pears were also a steady selling line. The limited supplies of hothouse grapes sold at firmer rates, but South African were cheaper in consequence of heavier arrivals. Plums and pineapples from the same source were also in demand. English forced strawberries were available in increasing quantities and made from 8s. to 20s. a box. Oranges were in fair demand, while grapefruit remained cheap. Lemons were dearer, demand being active.

* Weeks ended Mar. 17 and 24 respectively.

Vegetables.—The few English and Guernsey tomatoes on sale at Covent Garden during the past week made good prices, according to *The Fruitgrower's* report. Cucumbers, lettuce, radishes, new potatoes, and house-grown beans all encountered a good inquiry, but cucumbers and beans were cheaper on increasing supplies. New carrots and turnips sold well, but with increasing supplies of outdoor, forced rhubarb was cheaper. Greenstuff was plentiful and rather cheaper, and the unusually mild weather severely restricted the demand for parsnips, carrots and onions. Business in old potatoes was also rather slack and there were abundant supplies—except in the case of best samples of King Edward, which were firm in price.

Miscellaneous Commodities

Oilseeds and Oils.—Business is almost confined to immediate requirements. The demand for linseed is slow and prices are easier. Shipments at River Plate ports last week were 28,000 tons, of which 12,000 tons was destined for the United States. India shipped only 5,500 tons. The quantity on passage to Europe has been further reduced to 120,600 tons, including 20,600 tons from India. To the end of last week Argentina had exported 468,000 tons and India 36,300 tons, the combined totals being 192,000 tons less than at the corresponding date in 1937. A noteworthy feature is the shrinkage in shipments to North America from 225,000 tons to 106,000 tons. The possibility of the United States having a much larger domestic crop next autumn is discounted by the official report that farmers' intentions indicate an even smaller acreage than last season with a probable yield of 200,000 tons, under favourable conditions. Cottonseed is steady but lacks support.

Trade in vegetable oils is disappointing and with larger supplies of edible and technical qualities available, prices continue to exhibit an easier tendency. The decline in linseed oil seems at the moment to have been halted, but current prices are 35s. per ton down

on the month and are at the lowest since last November. Alternative oils are strongly competitive. Business in cotton oil is restricted, but quotations are comparatively steady at the lower level.

Furs.—On Monday an important silver fox sale opened in London, in the course of which well over 100,000 skins were offered. Owing to the uncertain political outlook, the weakness of Wall Street and the difficulties of the French franc, the number of foreign visitors is small. As France, normally one of the largest buyers of silver fox skins, is buying very little, sentiment at the sale is depressed. In the first three days of this week prices showed a general decline, ranging from 5 to 10 per cent. compared with those of the January sale. About 60 to 70 per cent. of the offerings found buyers. It is expected, however, that the position will deteriorate further during the next few days. On the open market business is very small at present and prices are easy. The immediate outlook is judged with much reserve and a rally is not expected until industrial activity in the United States shows recovery.

Rubber.—At its meeting on Tuesday the International Committee disappointed the market by deciding to leave the quota for the second quarter unchanged at 60 per cent. and by postponing its decision regarding the July-September quota until its next meeting on May 31st. This factor, together with the weakness of the American market, caused prices to slump to their lowest since restriction began. The basic quotas for the draft scheme for the years 1939 to 1943 are discussed in a Note in the Industry and Trade section.

Building

We present below four charts, illustrating the present position of the Building Industry. In Chart I a distinction is drawn between houses produced by local authorities and subsidised private enterprise, and houses produced by private enterprise without subsidy. In addition, since 1934, it has been possible to distinguish houses built by unsubsidised private enterprise, which have a rateable value under £13 (£20 in Greater London) and are occupied by persons other than the owners.

Chart II shows the numbers of persons in employment in June of each year and the unemployment percentage in each quarter. Charts III and IV refer to the value of building plans passed by 146 local authorities (excluding the L.C.C. Area). It will be seen that the population of these towns is less than half that of Great Britain.

I.—HOUSES BUILT IN ENGLAND AND WALES

II.—NUMBERS EMPLOYED AND PERCENTAGE UNEMPLOYED

III.—TOTAL VALUE OF BUILDING PLANS (146 local authorities)

IV.—VALUE OF BUILDING PLANS: BY AREAS AND CATEGORIES (146 local authorities)

Finance

GOVERNMENT FINANCE

For the 12 days ended March 31, 1938, the total ordinary revenue was £32,791,000, against ordinary expenditure of £14,931,000. The surplus accrued since April 1, 1937, is thus £39,330,000, against a surplus of £7,530,000 in the year 1936-37. The detailed Revenue return for the year is printed in full on page 67.

* Revenue required to meet expenditure.
† Including margin for Civil Supplementary Estimates but excluding £80,000,000 from borrowing.
‡ Motor Duties Self-Balancing in 1936-37 now added to Revenue and Expenditure.

After reducing Exchequer balances by £134,162 to £2,363,977, the other operations for the period (as shown in the next column, but excluding £26,017,000 issued under the Defence Loans Act and £676,000 issued to Sinking Funds) increased the gross National Debt by £8,697,000 to about £8,146 millions. An analysis of the approximate position of the National Debt as at March 31, 1938, appears on page 66.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for on Tuesday are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On March 25th, applications at £99 17s. 6d. per cent. for bills to be paid for on Thursday, Friday and Saturday of the following week were accepted as to about 55 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Monday, Tuesday and Wednesday at £99 17s. 6d. per cent. and above were allotted in full. £50.0 millions of Treasury bills are being offered on April 1st.

THE ECONOMIST WHOLESALE PRICE INDICES

II.—SECOND INDEX, DECEMBER, 1910—NOVEMBER, 1928

In *The Economist* of March 26th, page 725, we gave a record of the original *Economist* index, from 1851 to 1910. In 1911 the scope of the index was enlarged by the inclusion of additional commodities whose importance had grown since the original index was first calculated in 1864. Details of the second index were given in *The Economist* of February 4, 1911. Like the original index, the second index is an unweighted arithmetic aggregate, but the basis was changed from the average of 1845-50 to the average of 1901-05. In addition, separate indices were calculated for groups of related commodities comprising the complete index. Moreover, the complete index was calculated as an aggregate as well as an average. A record of the second index, from December, 1910, to December, 1918, is given below. The remainder, covering the period from January, 1919, to November, 1928, will be published in a subsequent issue of *The Economist*.

Basis Average 1901-05	Cereals and Meat	Other Foods	Textiles	Minerals	Miscel- laneous	Complete Index	
	500	300	500	400	500	2,200	100

UNIT TRUST DISTRIBUTIONS

First Provincial Fixed Trust, Ltd. ("Reserves" Certificates).—Fourth distribution on series "Reserves" Certificates 4-46695d net per sub-unit was paid March 15. This included 0.07659d. net on sale of rights, etc.

Foreign Government Bond Trust.—Progress report for half-year to March 4, 1938, announces distribution payable April 1, on Coupon No. 8 of 5.20d. per bond-unit tax free, being at rate of £5 15s. 9d. gross per cent. per annum on initial price of £1 (making this rate about £6 per cent. for year). Percentage composition of portfolio shows 35.8 per cent. in Central and S. America,

28.4 per cent. in Far and Near East, and 34.8 per cent. in Europe.

Trust of Bank Shares.—Progress report No. 4 announced distribution on March 15th of 3.553d. per unit net after tax (against 3.348d. for same half-year in 1937). This makes for year 6.8856d. net, or £4 2s. 9d. per cent. per annum gross on current price of 18s. 6d. Analysis of Trust funds shows 43.20 per cent. in home banks, 7.35 per cent. in discount companies, 44.36 per cent. in overseas banks, and 5.09 per cent. in Trustee securities.

Investors Flexible Trust.—Third distribution 4.4d. net, was paid on March 22, 1938, on each sub-unit issued to February 19,

1938. This is in respect of income from September 2, 1937, to February 21, 1938. The distribution for the year is equal at current price to an annual yield of £6 15s. 5d. per cent. gross from cash dividends and an additional 1s. 4d. per cent. net from further income not subject to tax.

Investors Gold Share Trust.—The Managers, Fifteen Moorgate Unit Trusts, Ltd., announce that as from March 7th, this Trust was re-opened to meet public demand for sub-units. Certain changes in portfolio are announced: In additional units, Nourse Mines and Gold Coast Selection Trust will be substituted for Government Gold Mining Areas and Wiluna.

GOVERNMENT GOLD MINING AREAS (MODDERFONTEIN) CONSOLIDATED, LTD.

(Incorporated in the Union of South Africa.)

Issued Capital, £1,400,000 in 5,600,000 Shares of 5s. each.

DIRECTORATE:

J. H. CROSBY (Deputy-Chairman). Sir REGINALD A. BLANKENBERG, K.B.E. Dr. J. G. LAWN, C.B.E. G. IMROTH.
D. CHRISTOPHERSON, C.B.E. G. J. JOEL, M.C.

Extracted from the Annual Report to 31st December, 1937.

Tons crushed, 2,552,000, yielding 749,390.713 fine ounces of gold.

		Per ton, based on tonnage crushed.
Total Working Revenue ...	£5,288,843 8 6	£2 1 5

The **Ore Reserves** at the end of the year were estimated to amount to 4,203,000 tons with an average value of 6.2 dwts. over a stoping width of 48 inches. The estimate was based on gold at 140s. per ounce of fine gold and current working costs.

The full Reports and Accounts may be obtained from the London Agents, Johannesburg Consolidated Investment Company, Limited, 10 and 11, Austin Friars, London, E.C.2.

SHORTER COMMENTS

(Continued from page 63)

Briggs Motor Bodies.—Trading profit for 1937 £225,595, against £182,076. Net profit after taxation £103,505 (£93,134). Ordinary dividend 7 per cent., less tax (same). To general reserve £35,000 (£25,000). Carry forward £30,764 (£14,759). Net current assets after proposed dividend £545,712 (£472,697). Company have purchased and cancelled £30,000 of its 4½ per cent. first mortgage debenture stock in advance of sinking fund requirements.

Smithfield and Argentine Meat Company.—Net profit for 1937 £94,416, after again transferring £25,000 to depreciation

reserve. Net profit for 1936 was £38,972. Ordinary dividend raised from 2½ to 4 per cent. Carry forward £17,678 higher at £65,650.

Coltness Iron Company.—Net profit for 1937 £239,980, an increase of £48,097. Ordinary dividend raised from 20 to 23½ per cent. Staff fund and reserve allocations maintained at £5,000 and £35,000 respectively.

Royal Mail Lines.—Profits from all sources in 1937 were £1,111,141, against £1,031,246. To depreciation £327,885 (£332,616). Ordinary dividend raised from 4½ to 5 per cent. To fleet reserve £146,435 (£170,014). To general reserve £100,000 (nil). Carry forward raised from £9,608 to £35,228.

Caledonian Insurance Company.—Ordinary participating policies which become claims by death or maturity during 1938 will receive interim bonuses at following rates per cent. in respect of each year's premium due since December 31, 1936: Whole life, £2 2s.; endowment, £2; double endowment, £2.

A. Reyrolle and Company.—Profit for 1937, after crediting interest and providing for depreciation, amounted to £155,322, compared with £130,743. Final ordinary dividend 7½ per cent., making 12½ per cent. The 195,000 £1 ordinary issued last April rank only for the final. Provision for development expenditure again £40,000; carry forward, £147,233.

VAN RYN DEEP, LIMITED.

(Incorporated in the Union of South Africa.)

Issued Capital: £1,196,892 in Shares of £1 each.

Working Profit (per ton milled 20/8.86)	1,622,343	Reserve for Liability under Miners' Phtisis Act	1,533
Sundry Revenue, less expenditure	29,026	Dividend No. 9—25 per cent.	437,500
Total Profit	1,651,369	Dividend No. 10—23½ per cent.	415,625
Add:—		Directors' Special Remuneration	7,500
Balance to credit of Appropriation Account at 31st December, 1935	74,837	Appropriated for Capital Expenditure	47,368
	£1,726,206	Balance unappropriated at 31st December, 1937	73,864
			£1,726,206

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1937, and disclosed the following:—

Tons	7,867,606
Stope Width (inches)	40.93
Stope Value (dwts.)	6.58
Inch-dwts.	269

DEVELOPMENT.—The development accomplished during the year on the Main Reef Leader horizon was 53,987 feet, a decrease of 1,056 feet compared with the previous year. The percentage payable was 58.3, average reef width 18.76 ins., average assay value 18.73 dwts. Inch-dwts. 351.

Kimberley Reef.—The station on the Kimberley Reef at No. 3 Shaft was completed and 423 feet of development was accomplished; of the footage sampled, 70 feet, equal to 34.1 per cent., proved payable and disclosed an average value of 6.54 dwts. over a width of 42.50 inches, equivalent to 278 inch-dwts. These results are additional to those given above.

In addition 19,511 feet, including 14 feet on the Kimberley Reef horizon at the May Shaft, was developed for East Daggafontein Mines, Limited.

MAY SHAFT.—This shaft was sunk 40 feet to its final depth of 4,025 feet, and a connection was made with the mine workings on the Main Reef Leader horizon.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

WESTERN REEFS EXPLORATION AND DEVELOPMENT COMPANY, LTD.

(Incorporated in the Union of South Africa.)

CAPITAL : Authorised £2,000,000. Registered and Issued £862,500.
In 3,450,000 Shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1937.

FINANCE.—The Cash Receipts and Expenditure from the inception of your Company to the 31st December, 1937, were as follows:—

RECEIPTS	EXPENDITURE
Working Capital—	Property, Options and Rights on Farms
2,442,500 Shares at 5s. each	£517,042
1,007,500 Shares at 3s. 6d. each	Shaft Sinking and Equipment
Sundry revenue received to date	772,256
	Boreholes and Prospecting
	261,671
	Joint Prospecting Ventures
	31,445
	General Expenditure
	60,139
	Shares and Interests in Co-operative Concerns
	1,838
	Stores and Materials
	21,913
	1,666,304
	Cash and Cash Assets, less Creditors
	848,043
	£2,514,347
	£2,514,347

OPERATIONS.—During the year shaft sinking operations proceeded without serious delay, and after the permanent hoists at each shaft were brought into commission, good progress was made.

No. 1 SHAFT.—The concrete lining in this shaft was continued to a depth of 106 feet. Sinking with temporary electric winches was done until the middle of August, when the shaft reached a depth of 410 feet. The permanent winding engines then became available. The total footage sunk for the year was 1,605 feet and the depth of the shaft on the 31st December was 1,639 feet. Electric blasting was commenced in May. A small station was cut at a depth of 1,402 feet.

No. 2 SHAFT.—The concrete lining was extended to a depth of 91 feet below the collar. The permanent winding engines replaced the temporary electric winches during the latter part of October, when the shaft had reached a depth of 550 feet. Electric blasting was started in June. During the period under review a distance of 1,157 feet was sunk, making the depth of the shaft at the end of the year 1,176 feet.

DIAMOND DRILLING OPERATIONS.—During the year diamond drilling operations were resumed on certain properties. The acquisition of a Prospecting Lease on Landpan necessitated further drilling in the close vicinity of this area, and in consequence the existing borehole on Vaalkop was deepened. On the Mining and Prospecting Lease Area, drilling was restarted to get information as to the strata underlying the Ventersdorp System. The Nootgedacht No. 7 hole was drilled to obtain geological information in advance of sinking operations in No. 2 Shaft. On Goedgenoeg a hole was drilled as it appeared that the Elsburg formation would be found at shallow depth underneath the Ventersdorp System. While this assumption proved to be correct, no payable reefs were intersected. The footage drilled during 1937 was 19,495 feet.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

EAST DAGGAFONTEIN MINES, LTD.

(Incorporated in the Union of South Africa.)

CAPITAL : Authorised £1,500,000. Registered and Issued £1,350,000. In 1,797,550 fully paid shares of 10s. each, and 902,450 partly paid shares of 10s. each, 1s. per share paid up.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1937.

FINANCE.—The cash receipts and expenditure from the inception of your Company to the 31st December, 1937, were as follows:—

RECEIPTS	EXPENDITURE
Working Capital—	Purchase of 50 per cent. undivided interest in 179 Dis-
1,197,550 Shares at 10s. each, fully paid...	cover's Claims
330,000 Shares at 10s. each, fully paid, issued at 30s.	£102,803
902,450 Shares at 10s. each, 1s. per Share paid up	Shaft sinking, Development and Equipment as per Schedule
270,000 Shares at 10s. each, fully paid, issued at 37s. 6d.	attached to Balance Sheet
	1,327,215
	Shares and Interests in Co-operative Concerns
	682
	Stores and Materials on Hand and in Transit
	8,247
	1,438,947
	Cash and Cash Assets, less Creditors, being the unexpended
	Balance of paid-up Capital
	206,200
	£1,645,147
2,700,000	£1,645,147

DEVELOPMENT.—The development footage accomplished on the Main Reef Leader horizon totalled 19,497 feet, which is 5,362 feet in excess of the previous year's figure.

Of the footage sampled during the year 4,770 feet, equal to 42.3 per cent., proved payable, having an average value of 29.95 dwts. over a width of 9.08 inches, equivalent to 272 inch-dwts. The corresponding figures for the previous year were 4,410 feet, payable, or 48.5 per cent., the value being 29.45 dwts. over a width of 10.72 inches, or 315 inch-dwts.

In addition to the above work on the Main Reef Leader, development of the Kimberley Reef at the May Shaft was commenced at the end of the year, an advance of 14 feet being accomplished; 5 feet was sampled which showed a value of 11.18 dwts. over a width of 28.00 inches, equivalent to 313 inch-dwts.

To date, the total footage developed on the Kimberley Reef Horizon in the May Shaft is 208 feet, of which 109 feet exposed reef. Sampling results over a distance of 100 feet gave 8.06 dwts. over a width of 30.85 inches; of this footage 95 per cent. proved payable at a value of 8.26 dwts. over a width of 31.00 inches.

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1937, disclosing the following:—

Tons	1,010,939
Stope Width (inches)	38.38
Stope Value (dwts.)	6.01
Inch-dwts.	251

MAY SHAFT.—The May Shaft was sunk 40 feet during the year to the final depth of 4,025 feet, and has been connected to the workings of Daggafontein Mines, Limited. Good progress is being made in the development heading from this shaft to connect with the East Daggafontein workings from No. 1 Shaft. On the horizon of the Kimberley Reef the station has been completed, and, as already mentioned, development on this reef has commenced.

No. 1 SHAFT.—A further 160 feet will have to be sunk in this shaft and the preparatory work is in hand. The steel headgear is completed and the first of the permanent winders was erected during the year.

REDUCTION PLANT.—A start has been made with the excavations and foundations for the Reduction Plant, and the erection of various items has been commenced. It was deemed advisable to place orders at an early date so as to have a sufficient margin of time in view of the serious delays that have occurred during the last few years in the delivery of equipment and machinery. A large amount of underground work still remains to be done, but it is anticipated that crushing will start during the first part of 1939.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

THE SOUTH AFRICAN LAND & EXPLORATION COMPANY, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL : Authorised £1,000,000. Registered and Issued £350,000.
In 2,000,000 shares of 3s. 6d. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1937.

CAPITAL.—During the year the amount of £43,750 paid to Brakpan Mines, Limited, in consideration of the transfer of the mining area acquired from that Company, was, in terms of the Agreement, applied by them to subscribe for 250,000 shares at par, bringing the Registered and Issued Capital of the Company at 31st December, 1937, to £350,000 in 2,000,000 shares at 3s. 6d. each.

FINANCE.—The Expenditure and Revenue Account shows that for the year expenditure at a total of £8,174 exceeded revenue by £6,357, mainly due to the debit of £6,127 to Interest Account. The net expenditure for the year and appropriations reduced the unappropriated profits to £19,062, which amount is shown in the Balance Sheet.

The expenditure during the year on shaft sinking, development and equipment amounted to £1,303,448. This has been debited to "Expenditure on Witpoortje No. 2," bringing the total balance of this account at 31st December, 1937, to £2,198,515.

Reserve for Liability under Miners' Phtisis Act is £1,267.

SPECIAL LOAN

At a Special General Meeting held on 9th July, 1937, shareholders confirmed an agreement whereby Anglo-American Corporation of South Africa, Limited, granted to the Company until 30th June, 1938, facilities up to the amount of £1,250,000, carrying interest at 4½ per cent. per annum. This sum was the estimated additional amount required to bring the Company's mine to production on a revised basis of 100,000 tons per month. It was further agreed that in due course an issue of shares in the Company would be made, from the proceeds of which any sums advanced by Anglo-American Corporation of South Africa, Limited, under this arrangement would be repaid, and that in consideration of the facilities afforded by that Corporation the shares so issued would be offered in the ratio of 40 per cent. to the Corporation and 60 per cent. to shareholders, and that the price of issue would not exceed 75s. per share.

As shown in the Balance Sheet, a total amount of £641,244 had at 31st December, 1937, been borrowed from Anglo-American Corporation of South Africa, Limited, in terms of this Agreement.

DEVELOPMENT.—Excellent progress with development work continued to be made during the year under review. An increased footage was accomplished by both Brakpan Mines and West Springs, the total advance being 51,567 feet, which is an improvement of 17,813 feet on the 1936 total.

A summary of the development work accomplished to the end of 1937 is as follows:—

	Total Footage.	Footage on Reef.	Footage Sampled.	Reef Width.	Assay Value.
For the year 1937	51,567	36,267	35,980	28.61	8.66
Previously returned	54,880	33,529	33,260	33.58	7.23
Total to date	106,447	69,796	69,260	31.00	7.92

To date, payable values have been disclosed over 31,620 feet representing 45.65 per cent. of the total footage sampled. The payable disclosures have an average value of 13.7 dwts. over a reef width of 34.1 inches, equivalent to 464 inch-dwts.

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1937, disclosing the following:—

Tons	2,743,610
Stope Width (inches)	47.85
Stope Value (dwts.)	6.24
Inch-dwts.	299

No. 1 SHAFT.—This shaft was sunk 2,212 feet, making the depth at the end of the year 4,468 feet. At various points the walls of the shaft had to be concreted, which caused delay in sinking. Nevertheless, the reef horizon was reached before the end of the year, and it is expected that the shaft will be completed to its final depth in February, 1938.

At 4,460 feet the Main Reef Leader was intersected; sampling disclosed an average value of 2.06 dwts. over a reef width of 32.12 inches, equivalent to 66 inch-dwts.

At a depth of 4,455 feet the Main Station was located and a start was made with the cutting of this section.

REDUCTION PLANT.—Good progress has been made with the Reduction Plant, which is nearing completion.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA, LIMITED, 11 OLD JEWRY, LONDON, E.C.2.

BRAKPAN MINES, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £1,250,000. Registered and Issued £1,150,000.
In 4,600,000 Shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1937.

Tons Milled	1,648,000	Yield (per ton 5-12 dwts.)	421,666 ozs.
Revenue (per ton milled 35/0-2)	£2,967,766	Government Taxes	£484,126
Working Costs (per ton milled 19/9-0)	1,627,354	Government Participation in Profits	144,900
Working Profit (per ton milled 16/3-2)	1,340,412	Reserve for Liability under Miners' Pithilis Act	2,579
Sundry Revenue, less expenditure	34,039	Dividend No. 50—30 per cent.	345,000
Total Profit	1,374,451	Dividend No. 51—30 per cent.	345,000
Add: Balance to credit of Appropriation Account at 31st December, 1936	95,986	Directors' Special Remuneration	7,500
	£1,470,437	Capital Expenditure	45,283
		Balance unappropriated at 31st December, 1937	95,049
			£1,470,437

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1937, and disclosed the following:—

Tons	7,081,100
Stope Width (inches)	46-61
Stope Value (dwts.)	5-76
Inch-dwts.	268

DEVELOPMENT.—The development accomplished during the year amounted to 69,388 feet, an increase of 3,827 feet on that done during 1936. The percentage payable was 41-1, the average reef width 30-85 ins., average assay value 12-26 dwts. Inch-dwts. 378.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

SPRINGS MINES, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Authorised £1,750,000. Registered and Issued £1,560,000. In 6,240,000 shares of 5s. each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1937.

Tons Milled	1,824,400	Yield (per ton 5-78 dwts.)	527,118 ozs.
Revenue (per ton milled 40 7-20)	£3,703,550	Government Taxes	£495,591
Working Costs (per ton milled 18 10-07)	1,718,505	Government Participation in Profits	613,837
Working Profit (per ton milled 21 9-13)	1,985,045	Reserve for Liability under Miners' Pithilis Act	12,949
Sundry Revenue, less Expenditure	5,675	Dividend No. 36—27½ per cent.	439,000
Total Profit	1,990,720	Dividend No. 37—25 per cent.	390,000
Add: Balance to credit of Appropriation Account at 31st December, 1936	53,112	Directors' Special Remuneration	7,500
	£2,043,832	Capital Expenditure	32,907
		Balance unappropriated at 31st December, 1937	62,048
			£2,043,832

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1937, and disclosed the following:—

Tons	9,654,424
Stope width (inches)	42-74
Stope value (dwts.)	5-57
Inch-dwts.	238

DEVELOPMENT.—The footage accomplished on the horizon of the Main Reef Leader was 23,322 feet, showing an increase of 3,847 feet compared with the previous year. The percentage payable was 38-52, average reef width 31-02 ins., average assay value 10-27 dwts. Inch-dwts. 319.

Kimberley Reef.—Exploratory development was done on this reef from No. 1 shaft; 645 feet was accomplished, of which 285 feet was sampled, disclosing an average value of 0-15 of a dwt. over a width of 93-11 inches. These results are in addition to those given above.

THE FULL REPORT AND ACCOUNTS CAN BE OBTAINED FROM THE LONDON SECRETARIES OF THE COMPANIES, ANGLO AMERICAN CORPORATION OF SOUTH AFRICA, LTD., 11 OLD JEWRY, LONDON, E.C.2.

WEST SPRINGS, LIMITED

(Incorporated in the Union of South Africa.)

CAPITAL: Registered and Issued, £1,935,000. In Shares of £1 each, fully paid.

EXTRACT FROM ANNUAL REPORT TO 31st DECEMBER, 1937.

Tons Milled	1,098,000	Yield (per ton 3-65 dwts.)	200,417 ozs.
Revenue (per ton milled 25/7-70)	£1,407,760	Government Taxes	£42,965
Working Costs (per ton milled 16/3-45)	894,201	Government Participation in Profits	218,757
Working Profit (per ton milled 9/4-25)	513,559	Reserve for Liability under Miners' Pithilis Act	5,986
Sundry Revenue, less expenditure	8,044	Dividend No. 24—61 per cent.	120,339
Total Profit	521,603	Dividend No. 25—61 per cent.	120,337
Add: Balance to credit of Appropriation Account at 31st December, 1936	198,366	Directors' Special Remuneration	9,000
	£719,969	Capital Expenditure	88,211
		Balance unappropriated at 31st December, 1937	115,175
			£719,969

ORE RESERVE.—The Ore Reserve was recalculated at the end of 1937, and disclosed the following:—

Tons	4,552,610
Stope Width (inches)	54-25
Stope Value (dwts.)	5-14
Inch-dwts.	279

DEVELOPMENT.—The footage of 17,841 feet accomplished during the year was 1,570 feet less than that for 1936. The percentage payable was 56-64, average reef width 45-61 inches, average assay value 15-00 dwts. Inch-dwts. 567.

BUDGET SUPPLEMENT

(Owing to the Easter Holiday "THE ECONOMIST" will be published next week on Thursday, April 14th, instead of Friday, April 15th)

The Fourth Estate

THERE has always been an element of self-flattery in the claim of the newspaper Press to represent the fourth estate of the realm. But it is nevertheless true that the provision of news is a public utility service of an importance at least equal to that rendered by any other privately-owned industry—of an importance, moreover, which the touchiness of dictators is daily extending from the domestic to the international sphere. The political scientists have been slow in turning their attention to the rôle to be played in the life of a modern democratic community by its Press, which is still, in spite of the new competition of the radio, its chief source of information on events in both the political and the social sphere. Their reluctance has presumably been due to the fact that the nature and operations of the Press have remained a largely uncharted territory. The warmer, therefore, should be the welcome extended to the Report on the British Press which has been compiled, with its customary industry and completeness, by PEP (Political and Economic Planning). Although this bulky volume contains a greater number of facts about the Press as an industry, as a profession, and as a social organ than has ever before been collected within a single pair of covers, it is modestly described as no more than an interim report. In particular it disclaims any intention of presenting a comprehensive set of proposals for the "reform" of the Press, and is content with submitting

merely a preliminary agenda for extended discussion of the place that newspapers should fill in a democratic community, and of the extent to which our existing British papers are meeting their responsibilities.

Throughout the community there are many elements of dissatisfaction with the existing service that the Press provides, and even in Fleet Street there is an uneasy feeling that the profession of journalism is neither as popular nor as respected as journalists feel it should be. There would be virtual unanimity on the proposition that freedom of the Press is an essential concomitant of democratic organisation. But the public is inclined to question whether the Press makes the best use of its freedom, while the Press itself complains that with the steady accumulation of legal restrictions its freedom is already no more than qualified.

Thus, from both sides there is recognition of the need for hard thought on the future of the Press. The chief request of the newspapers themselves would be to be granted some relief from the growing burden of libel, which not merely imposes severe restrictions upon what it is safe to print, but also lays very heavy monetary costs upon any popular newspaper, however carefully conducted. The journalistic profession would, however, be myopic if it expected to obtain any substantial relaxation of the law of libel until it had answered the complaints that are so widely directed against it.

What are these complaints? One of which much has been heard in recent months has been journalistic "intrusion" into private affairs. But this is really a matter of detailed practice rather than of fundamental status. The methods of intrusion which have received publicity recently are condemned by all save a minority of journalists, and there is no reason why the profession should not provide its own sanctions against their repetition. A more serious complaint is that the newspapers distort or misrepresent the news they print. The PEP Report* devotes considerable space to a discussion of this question, and the conclusion at which it arrives can be described as a qualified acquittal. The Report discovers very little evidence of deliberate and conscious bias. Even the pressure of the advertiser, though it exists, is less insidious than the layman is sometimes disposed to imagine. Much of a newspaper's work consists of selecting from the vast mass of material available those items of news which are to be printed, and since no two persons would make exactly the same selection, some infusion of subjective choice is inevitable. Bias, however, in the opinion of this Report, is rarely deliberate, and even more rarely venal. The chief criticism made under this head—and it is a very heavy one—is that journalists frequently distort or misrepresent the news they report by failing to understand its full import. This is not surprising in view of the immense variety of topics with which the working journalist may have to deal every day; for it is impossible for a newspaper to have on its staff specialists in every branch of news. But the Report is on safe ground in urging that the surest way of raising the standard of the news service provided by daily newspapers would be a steady improvement in the education and training of journalistic recruits.

Neither intrusion into private affairs nor distortion of news, however, is the chief ground of complaint against the modern Press. The great bulk of the criticisms relate to the double tendency that has been apparent in recent decades for the number of competing daily newspapers to shrink, and for the survivors to convert themselves from public servants into commercial concerns. This, it may be said, is the language of the critics, and its implications would not be accepted in Fleet Street. But even there it could not be denied that the weapons with which modern mass circulation newspapers compete are not only non-journalistic, but even increasingly antipathetic to the balanced reporting of the day's events. Moreover, although there is still a large enough number of newspapers to provide a hearing for a wide range of differing opinions on most subjects, any further reduction in the number of papers would bring the community within sight of a Press monopoly. There are many weighty and authoritative critics of the Press who find the most hopeful remedy for its defects in a return to a larger number of papers with smaller circulations.

The PEP Report performs a useful service in demonstrating how faulty is the economic basis for any such reasoning. The mass circulation has arisen not from the megalomaniac ambitions of individual proprietors, but from the fundamental facts of newspaper economics. One of these facts is that a paper which sets out to cater for the mass of the people can charge its advertisers only a low rate in comparison with the number of people who will see their advertisements. Another is that the British public requires in its daily newspaper not only several pages of news, but several pages of entertainment as well. Given these two facts, it can be established, as the PEP Report demonstrates by algebraic formulae, that a circulation in the millions is necessary to make ends meet. Thus a newspaper circulating chiefly among the well-to-do can fix its advertising rates at such a figure that it costs the advertiser 4d. to put an advertisement one column wide and one inch

deep before the eyes of a thousand readers. A popular paper, on the other hand, can hardly charge as much as 1d. per column-inch per thousand. But if the price of the paper is a penny, and the minimum number of pages acceptable to its readers is twelve, such a paper must, according to PEP's calculation, have a circulation of 1,000,000 to keep afloat. Those who would get rid of advertising altogether are informed that a penny paper with twelve pages would need a circulation of 4,000,000 before it could dispense with the advertisement remedy. It follows that any attempt, even if one could be devised, to abolish the mass circulation newspaper, would be swimming against a very strong tide of economic advantage. If the community wants more papers with smaller circulations it must either subsidise the Press out of public funds or else put up with newspapers of exiguous dimensions. Since it will do neither, it must keep the mass circulations.

Because the mass circulation newspaper is inevitable, it does not, of course, in the least follow that it is in every way desirable. On the contrary, all the faults of private control and individual proprietorship, which would tend to cancel each other out with a large variety of competing newspapers, are greatly magnified when the number of newspapers is small, and especially when many of them are clustered in groups under the same control. The most interesting section of the PEP Report is that in which various suggestions for minimising these faults are examined. State control of newspapers is rightly dismissed as a remedy far worse than the disease. The limitation of circulations is impracticable and the dissolution of "groups" and "chains" hardly less so. Indeed, the search for methods of social, but not governmental, control of the Press leads PEP to the examination of a number of frankly fanciful proposals, such as the ownership of all printing machinery by the State or the creation of a fund to subsidise experiments in newspaper production. The final conclusion is, however, to return the responsibility to the Press itself, with the admonition that "the Press, like the Bank of England, can only be defended as a private institution on condition that it acts in practice as a public one."

No one who is really familiar with the working of the Press will doubt that this is the only wise conclusion. Rules of conduct imposed upon the Press from above would either be disregarded or else would remove its freedom. For a democracy the only solution is to foster the growth of corporate responsibility in the Press. That can only be done by raising the professional standards of the working journalist, by recognising his calling as one of the learned professions and by giving him, as distinct from the financier or the capitalist, a wider control over what appears in the newspapers. To those whose imaginations run to reforming statutes and control boards, this will be a tame conclusion. But it is the only one consistent with democratic government; for if self-control is the prime ingredient of democracy, it must be allowed to show itself in a self-controlled Press.

This Week's Issue of
THE ECONOMIST
includes a special

BUDGET SUPPLEMENT

This detailed survey of British Public Finance discusses the National Accounts for 1937-38, the recent trend of Revenue and Expenditure, the position of the National Debt, and the Finances of Local Authorities. A concluding section sets out a series of estimates of the ratio of Tax Revenue to National Income since 1860, and reviews future budgetary prospects.

* "Report on the British Press." Published by PEP, 16 Abchurch Lane, London, E.C. 4. 333 pages. 10s. 6d. net.

The French Dilemma

FRENCH Cabinets habitually live upon the rim of the volcano. In political circles in Paris, a state of crisis is normal, and the foreigner, accustomed to less frequent shifts of the political scenery, is inclined at all times to exaggerate both the instability and the incoherence of French politics. But when all these allowances have been made, it is impossible to regard the present position into which the French Republic has drifted as anything but very critical or to await its further development with anything but grave alarm. France faces a very real crisis.

The immediate occasion of the crisis has been the complete financial programme that M. Blum determined to produce after the Senate had last week refused to approve one of the temporary expedients by which he had hoped to stop the gap for a few more months. His plan, published on Monday, consists in the formal sense of nothing more than a Bill authorising the Government to take by decree whatever measures they think necessary for economic and financial rehabilitation. But accompanying the Bill was a memorandum revealing M. Blum's intention of imposing a tax on capital of Frs. 100,000 and over, of enforcing the registration of securities in order to defeat tax evasion, of suspending debt redemption for two years and of imposing a diluted form of exchange control by concentrating all transactions in the Bank of France.

The reaction to this plan has been unfavourable. The Chamber, it is true, has passed it by 311 votes to 250. But the majority was so small and so many of the Radicals have deserted M. Blum that his only choice lies, as we go to press, between resigning immediately and awaiting almost inevitable defeat in the Senate. Thus the whole future of French politics is once more laid open to the shifting winds of a cabinet crisis.

It would be a very grave mistake to say that the opposition to M. Blum's plan is based on nothing more than party prejudice, personal animosity and sectional selfishness, although all three doubtless play their parts. But that there is real substance in the opposition can be seen from the perturbation of the Radicals, who stand to lose far more than they can gain from a collapse of the Front Populaire, or from the outspoken criticism of M. Paul Reynaud, who has worked hard for a reconciliation between Right and Left. It has become a commonplace that the fundamental economic malady from which France is suffering is paralysis of capital. Vast sums have been drained away to foreign centres and even what remains is congealing in the veins of French industry and commerce. It is useless at this hour to discuss who should bear the blame for this state of affairs—the capitalists for taking unreasonable alarm or the trade unions for unduly frightening them. It is quite enough to say that no programme of economic and financial rehabilitation has a chance of success unless it contrives to restore the circulation of capital in the French economy. Taxes on capital and restrictions on the export of capital, to be administered by Socialists, will not diminish, but increase, the panic of the French capitalist. There is nothing whatever in M. Blum's plan, as presented by him, to attract the *émigré* capital back home, and little to staunch the continuing outflow.

To these arguments of the Right and the Centre M. Blum can give no convincing answer, for the simple reason that no answer of his would carry conviction with those who need to be convinced. But it would be a mistake of at least equal gravity to imagine that the restoration of confidence in the capitalist is all that is required for economic salvation. There is another brand of confidence that is equally necessary—the confidence of Labour. Under the leadership of the Front Populaire, the French working classes have

achieved social reforms that were long overdue. The reforming movement, in the enthusiasm of the moment, was carried too far; some of its methods were reprehensible; and some removal of the hindrances to production that it imposes is necessary in the interests of re-armament. All this is realised, with more or less clarity, on the Left. But it is one thing voluntarily to return some of the conquests of 1936, at M. Blum's request and in the interests of national defence. It is quite another to have such a retreat imposed by a Government of the Right, jockeyed into power by the financial emergency and concealing under the patriotic veil a reactionary counter-attack of the employers. There is only danger in attempting to conceal the fact that a Government formed in opposition to the Socialists would face an outbreak of industrial strife and disorder of which it is impossible to foresee the outcome.

In these circumstances it is perfectly clear that the only possible solution is a National Government, holding the confidence of both sides. It is very greatly to M. Blum's credit that he, the leader of the Parliamentary majority, which is still, by every indication, the popular majority, has for months past proclaimed the necessity of such a concentration and, by unmistakable inference, offered the modification of his party's policy without which such a concentration would be impossible. He at least has demonstrated his ability to put the interests of the country above the narrower ambitions of his party. By so much greater must be the condemnation to be visited on the leaders of the Right, who, without M. Blum's backing in the electorate, have nevertheless refused their aid. Their aim is to form such a concentration without the Socialists. But to do so would not merely be to fly in the face of the electorate's clearly expressed wishes, but deliberately to court something not very far removed from civil war. To such a pass has ambition reduced the patriotism of some French politicians.

Common sense in France, however, has frequently triumphed at the eleventh hour, and it may do so again in the next few days. If the psychological hindrances can once be removed; if the leaders of the contending factions can agree to work out their policy round the same Cabinet table, there should not be any insuperable difficulties in the way of producing an agreed programme. The Left does not reject the principle of modifying the 40-hour week, and the Right must admit the necessity of increased taxation. Even the actual proposals of the Blum Government would be far less objectionable in the hands of a concentration Cabinet. The registration of securities can only be opposed by those who defend tax evasion. The levy on capital was intended to bring in a sum smaller than the British National Defence Contribution—but even if this slight burden is too heavy the onus is on the objectors to suggest an alternative. As for exchange control, even Great Britain, which M. Flandin holds up as an example of democratic integrity, resorted to it in a minor form in her own emergency. What is essential is that moderate proposals should not be blown up into monstrous bogeys to frighten the capitalist, just because they originate with a Socialist Premier. And similarly, the presence of Socialists in the Cabinet must be an assurance that moderate exceptions to the social legislation of 1936 are not a surrender of all that Labour has fought for. The supreme need of France at the present moment is that the politicians of either side should make the effort necessary to recognise the moderation of the other. A Government could be formed against which neither Capital nor Labour would feel it necessary to strike. The future of French democracy—and much else besides—depends upon whether the Government of national union will now at long last come to birth.

Men Without Work

ALMOST hidden in the great numbers of men and women who work or do not work according to the state of trade, there is a nucleus of more or less permanently unemployed. In September, 1929, about 53,000 insured persons—some 5 in every 100 of the total unemployed—had been out of work for a year or more. In July, 1933, the long-unemployed numbered more than 480,000, or 25 in every 100. In August, 1937, though the tide of depression had receded, the total was still 265,000, and the proportion was 27 per cent. In February this year the long-unemployed numbered nearly 279,000. (All these figures exclude the unknown number of long-unemployed who are not in receipt of "assistance" payments.) Recovery has failed to solve the problem of long-unemployment.

Who are the long-unemployed whose numbers are now increasing as trade slackens? Where and how do they live? What causes their plight, and what is being done for them? An admirable work of statistical and sociological research, designed to discover an answer to these questions, has just been published.* The problem is not wholly novel, for the aged and the disabled, as well as the lazy and shiftless, have always tended to lack work. But it is a new thing for over a quarter of a million men and women to be afflicted in that way at the height of prosperity. Their households in November, 1936, included as many people as the entire population of Liverpool. And the longer a man is unemployed, the more hopeless are his prospects of ever finding another job. Between the summers of 1935 and 1936, when the total of men unemployed for a year or longer declined by 41,700 (that is, by 11 per cent.) the number of those who had been out of work for over 5 years actually increased by 22,900 (by 76 per cent.) as the following table shows:—

Years	MEN, 18 TO 64, CONTINUOUSLY UNEMPLOYED FOR					Total Long-unemployed
	1-2	2-3	3-4	4-5	Over 5	
Summer 1935...	137,000	81,400	65,800	52,500	30,000	366,700
Summer 1936...	119,700	65,400	46,100	41,000	52,900	325,000

This is the problem to which the Commissioner for the Special Areas of England and Wales drew attention last November when he wrote of the "unemployed pensioners" and the "older unemployed men." Yet, as the Pilgrim Trust Report makes abundantly clear, long-term unemployment is not peculiarly a problem of the Special Areas or of coal-mining districts. Nor is it wholly confined to elderly persons. The Trust's investigators, who were obviously unable to make a clinical examination of every household afflicted by long-unemployment, carried out detailed investigations in six towns—Deptford, Leicester, the Rhondda, Crook, Liverpool and Blackburn. These places were deliberately chosen to give a shaded picture of England and Wales as a whole, including prosperous as well as depressed areas. The zero hour of the inquiry was November 23, 1936, when total long-unemployment among insured workers in England and Wales had just fallen below 300,000. The count showed that the evil of long-unemployment existed in prosperous Leicester and Deptford, as well as in depressed Crook and the Rhondda; and that its ravages spared neither old nor young. Of 250,000 long-unemployed men in the whole of the country, it is estimated that, in November, 1936, over 72,000 were young or very young, and more than 50,000 were middle-aged; while nearly 127,000, or more than 50 per cent., were old or elderly. The following table, based on the investigators' figures for the six towns, shows the incidence

* "Men Without Work." A Report made to the Pilgrim Trust. Cambridge University Press. 447 pages. 7s. 6d.

of long-unemployment on various age-groups in three main regions of England:—

ESTIMATED NUMBER OF LONG-UNEMPLOYED PER 1,000 WORKERS, AT VARIOUS AGES, IN THREE MAIN REGIONS OF ENGLAND AND WALES

Age Group	South and Midlands	North	Wales
Very young (18-24)	1	18	53
Young (25-34)	2	32	86
Middle-aged (35-44)	5	46	107
Elderly (45-54)	12	47	190
Old (55-64)	34	83	220

In places like the Rhondda, the long-unemployed have become almost a separate social class. In some respects, however, the long-unemployed in more prosperous places like Leicester and Deptford may be deemed worse off. They are more sharply divided from their active neighbours; they are more obviously individual misfits; and they are less catered for by the social welfare measures which have become part of the normal life of a depressed area.

Men and women who have been without work for long periods are not simply the backwash of deep depression or the rejected specialists of declining industries. They are found "in every town of this country, however prosperous, however diversified its range of industries." Although at least 40 per cent. of the long-unemployment throughout the country is concentrated in the basic industries of coal mining, shipbuilding, iron and steel and textile manufacture, there is some of it in every industry. In the summer of 1936 the long-unemployed numbered (per 1,000 insured workers) 123 in coal mining, 33 in gas, water and electricity, 27 in the distributive trades and 10 in the manufacture of motor vehicles and cycles. Unemployment in the major industries tends to produce unemployment in secondary and service trades. And everywhere there are men and women who fall out of work for individual reasons. The size of the last group is quite considerable. Out of 250,000 long-unemployed men in England and Wales, 172,700 were classed in the Report as being out of work because of depression in a particular region or industry, while the other 77,300, representing over 30 per cent. of the whole, constituted the real hard core of the problem of personal unemployability. Industrial and personal factors are, of course, interconnected; for "the longer a man stands in the queue the less likely he is to get out of it again." And the long-unemployed of both classes are exposed alike to the danger of moral impairment—of accepting their lot as a necessary and unavoidable condition. And upon the 250,000 men thus affected depend some 170,000 wives and 270,000 young children.

By examining the state of mind and the way of life of these unemployed, their families and friends, the Trust's investigators have brought more than statistical light to bear upon this grave national problem. Their report is framed in human terms, in terms of courage and despair, of dogged hopes and dull acquiescence. The factor common to all the families they visited was poverty. Over 17 per cent. of these families were living in deep poverty and 30 per cent. distinctly below the by no means generous standard of poverty adopted in the Report. In Liverpool the corresponding percentages were as high as 30 and 48. The environment of poverty and worklessness threatens, indeed, to create a separate class. "Poverty is not only a consequence of unemployment but a cause of it."

Meanwhile, valiant official and voluntary efforts are being made to ameliorate the lives of the long-unemployed. Clubs, residential centres and subsistence schemes up and down the country are designed to break down the unhappy isolation of the workless, to help them towards content and fitness, and to restore their confidence and self-respect. This is salvage work of the first importance, but the need to remove these blots from our national life is a national task.

Essays in Autarky

Italy's Oil Supplies

SIGNOR MUSSOLINI is too good an Italian to be insensitive to the revivifying possibilities of a paen-gyric on Italy's armed strength, at a moment when the German flag has been hoisted on the Brenner. And he is too much a realist to be unaware of the element of figurative optimism which pervaded the statement, in his speech to the Chamber last week, that Italy had ample reserves of mineral oils for a campaign of some length. Certainly, she has spared no effort to bring about that result, for she is well aware that any interruption of her oil supply would not only damage her economic situation, but would strike at the heart of her military preparedness. The problem of devising safeguards against such a danger, however, is peculiarly difficult of solution in Italy's case. It may be well, therefore, to set out, in the present article, some of the factors which tell most heavily against the attainment of Italian self-sufficiency in oil supplies, and to estimate the potential value of the measures she has so far taken to alleviate them.

Her chief difficulty arises from the fact that she herself has neither petroleum resources (apart from some shale) nor coal. Unlike Germany, she cannot achieve any considerable production of synthetic fuel. Whether oil will ultimately be found in Abyssinia is a moot point. The only important oil resources which are near at hand are in Albania—a country largely dependent economically on Italy. Albania's annual production of crude oil has increased from 25,000 tons in 1931-34 to 52,000 tons in 1936, and 70,000 tons in 1937. There is little hope, however, that Italy will carry out her ambition of meeting her oil requirements from Albania, though supplies from that country would be important for the Italian Navy in war-time, since they would be largely immune from interruption by enemy action.

For the rest, Italy's policy has been directed, inevitably, to the development of substitutes rather than towards self-sufficiency in petroleum itself. Natural gas, which is found in small quantities in some parts of Italy, is used by road transport in certain towns; but the cost of carrying it very far prohibits its use at any distance from its point of origin. It has been found impossible to carry out the Government's programme of converting all petrol-driven vehicles, by the beginning of last January, to the use of either natural gas or wood gas ("producer gas," obtained by burning wood or other solid fuel). And Italy's production of alcohol is still much too small to make its admixture with petrol, on any large scale, a technical proposition.

In fact, Italy is still dependent on foreign supplies of petroleum products, and her imports in recent years have increased significantly, as the following table shows:—

TABLE I.—ITALY'S IMPORTS OF PETROLEUM PRODUCTS.

	(Thousand tons)						Total
	Crude Oil	Petrol	Kerosene and White Spirit	Lubricating Oil	Fuel Oil and Gas Oil	Paraffin Wax	
1932 ...	127	325	146	66	834	24	1,522
1933 ...	135	291	137	67	1,081	27	1,738
1934 ...	143	348	150	66	1,122	26	1,855
1935 ...	220	367	155	90	1,251	28	2,111
1936 ...	301	209	112	54	1,118	20	1,814
1937 ...	891	259	94	70	1,194	26	2,534

Since Italy, in addition, obtains only 15 per cent. of her coal consumption from her own deposits, which are inconveniently situated in regions like Sardinia and Istria, she has been compelled to abandon the idea of absolute autarky. Her present oil policy aims at the importation

only of cheap crude oil, instead of finished products or their derivatives. In the case of petrol, this policy has already achieved some measure of success. About two-thirds of Italy's requirements of kerosene, which amount to about 160,000 tons per annum, are already being met by domestic refining, and much the same condition applies to gas oil. For fuel oil, however, Italy is still dependent in large degree on foreign supplies. Her annual consumption is about 930,000 tons, apart from the needs of her merchant fleet and Navy. Her output of fuel oil from domestic refineries has risen considerably in the last three years, as our next table shows; but even in 1938 it will not amount to as much as 400,000 tons:—

TABLE II.—ITALY'S OUTPUT OF PETROLEUM PRODUCTS (Thousand tons)

	Petrol	Kerosene and White Spirit	Gas Oil	Lubricating Oil	Fuel Oil	Bitumen	Coke	Paraffin Wax
1932 ...	157	33	23	22	127	12	32	0.7
1933 ...	163	42	23	25	139	13	34	0.8
1934 ...	126	38	37	21	76	12	37	0.5
1935 ...	103	50	33	24	94	26	20	0.5
1936 ...	130	41	38	21	110	46	27	0.6
1937 ...	285	126	130	52	307	81	32	2.3
1938† ...	334	117	141	62	397	86	33	3.8

† In terms of the Ministry of Corporation's programme of production.

The table shows that Italy is to produce this year some 334,000 tons of motor spirit. In 1937 she imported 259,316 tons, and made 285,277 tons, from imported materials, at home. These figures, however, do not include supplies for aviation purposes, which may be imported, free of duty or restrictions, by the military authorities. Meanwhile, the Government has raised the tax on petrol this year, to lessen the total consumption.

The construction of oil refineries has lately proceeded apace in Italy. The following is a list of the more important refineries, their location and their approximate output capacity:—

Company	Location	Approx. Capacity Tons per annum
Aquila	Trieste	450,000
Vacuum Oil	Naples	250,000
Agip	Venice	300,000
Agip-Romsa	Fiume	120,000
Shell	Spezia	100,000
Standard Oil	Trieste	60,000
Permoglio	Milan	25,000
Total		1,305,000

Two State hydrogenation plants are under construction at Bari and Leghorn, each with an annual capacity of about 200,000 tons. The Aquila, Vacuum Oil and Agip-Romsa plants make a complete range of oil products. The Agip of Venice and the Shell produce everything but lubricating oil, while the Permoglio produces lubricating oils and asphalt exclusively. The existing refineries are independent private enterprises, apart from the Agip. The latter is a company formed by the State, with regulatory powers in the petroleum trade, which extend to marketing as well as consumption. Nearly all the great refineries are situated in free zones. They are all given annual import quotas, the largest being the 33½ per cent. of Agip, with Standard and Shell next on the list. These three control 80 per cent. of the Italian domestic market. There is no competition. Quotas are fixed between the refineries and the Government. The refineries are subject to strict military surveillance, and directions as to the quantities and quality of the crude oils used are given by the Ministry of Corporations.

The refineries buy their crude petroleum from various producing countries. Last year some 464,000 tons came from the United States and 214,000 tons from Iraq. Oil fuel was imported from Roumania (420,000 tons), from Central America (370,000 tons) and from Iran (195,000 tons). Heavy duties are payable on all petroleum products passing through the Italian Customs. These are (per 100 kilogs. of petrol): Customs, Lit 12; sales tax, Lit 320; registration fee, Lit 0.30; landing tax, Lit 0.25; and licence tax, 3 per cent. *ad valorem*, c.i.f., making a total of Lit 332.55, plus 3 per cent. *ad valorem*.

A sales association is already in existence for the home market, of which importers and refiners are members. The whole question, however, is under revision, and separate associations are likely to be set up for producers, importers and the retail trade respectively. A refinery is to be constructed in Libya, and others, probably, in Abyssinia.

All this leaves one unsolved question. What will happen if war or any other international complication cuts off sea-borne supplies from the Italian refineries? In that event, supplies obtainable overland would have decisive importance for Italy. Germany can be ruled out as a source of emergency supply, since she has not enough petrol for her own requirements. Austria has lost her independence, and

her yearly production of 30,000 tons will now be consumed in Greater Germany. If Roumania be also excluded, on the ground that she is unlikely to be on Italy's side in any future war, there remains only Poland, with an annual production of 400,000 tons, and Czechoslovakia, whose output is only 20,000 to 25,000 tons. In any case, the greater part of Poland's production, and the whole of that of Austria and Czechoslovakia, is already consumed at home. Doubtless some petroleum from overseas, which succeeded in reaching North Sea ports in Germany, Holland and Belgium, might find its way to Italy. But it costs more to transport petroleum 100 miles by train than 5,000 miles by ship.

In the last resort, the maintenance of Italy's petroleum supplies in wartime will depend on her political relations with the petroleum-producing countries and with the Power or Powers which hold control of the seas. Altogether the Italian petroleum position is an object-lesson in the limitations rather than the advantages of a policy of complete autarky. Recently we suggested various reasons for the view that Italy's mineral resources were insufficient to render her independent, in any circumstances, of imports from other countries (see *The Economist*, December 25, 1937, page 627). The same conclusion holds of her oil supplies.

Topics of the Week

London and Rome.—The debate on Foreign Affairs in the House of Commons on Monday—the thirteenth debate on Foreign Affairs in nine weeks—came as an undoubted anti-climax. Partly this was because in the ten days that have passed since the previous debate there had been no change in the international situation which gave either the Government or the Opposition anything new to say. But in the main, the anti-climax arose from the fact that the House of Commons is forced to discuss this supreme issue of policy within the largely irrelevant framework of party politics. There are many people, both in the House of Commons and in the country at large, who are profoundly disturbed by the full implications of the Prime Minister's policy, but would, nevertheless, not contribute by their votes to put the present leaders of the Labour Party into power. On the other hand, the unbroken majority which follows the Government in the House of Commons on party issues does not reflect any similarly overwhelming support for the Government's policy throughout the country. During the week, Labour has won a seat from the Government at West Fulham, in a by-election which was largely fought on foreign affairs, and although the turnover of votes was little larger than can be expected at any by-election in the middle of a Parliament, it is clear that Ministers are deceiving themselves in their belief that they carry the whole country with them.

It is characteristic of this peculiarly frustrate condition of British politics that the only sound and balanced criticism of the Government's policy in Monday's debate came from Sir Archibald Sinclair, the leader of a body of political opinion which is to all intents and purposes disfranchised. Many of the points that Sir Archibald Sinclair made could not be denied by anybody who is capable of reading the facts. It is undeniable that there has been a progressive deterioration in international affairs since the abandonment of sanctions, and that it has continued with at least equal speed since the Prime Minister took over the control of foreign affairs from Mr Eden. It is undeniable that there is something more than faintly ridiculous in addressing complaints about the bombing of Barcelona to General Franco, and at the same time "continuing friendly talks in Rome with the real author and begetter of these outrages." It is undeniable that the steady determination of the British Government to close its eyes to the facts of non-intervention in Spain has in fact acted as an encouragement

to extended aggression there, and presumably elsewhere also. These are the real counts in the indictment that could be drawn by a competent opposition, and it is the measure of the Labour Party's incompetence that it has not succeeded in compelling the Government to answer the anxious questions that are being asked all over the country by people who have not the slightest desire to make party capital out of the difficulties of the international situation.

It is a profound misfortune for the country that at this grave juncture the matter has to be discussed in terms of black and white. During the week forecasts of the terms of the Anglo-Italian Agreement have appeared, with every superficial appearance of correctness. If they are correct, the Agreement will contain much that is well worth having. For example, there is to be a slackening in competitive fortification of bases in the Mediterranean, the Italian garrison in Libya is to be reduced, and Italy is to forswear anti-British propaganda in Arabia. In addition, there are to be repeated assurances by Italy of disinterestedness in Spanish territory and of willingness to withdraw her troops from Spain, and the Agreement is not to enter into force until this last promise has been fulfilled. The question for the British public to decide is not whether an agreement such as this is worth having, but whether it is worth the price that will have been paid for it. Mr Chamberlain made much play on Monday with the argument that the Labour policy, especially in its Spanish aspects, would incur a serious risk of provoking an international crisis of the utmost gravity. That is true, but it is also true that Mr Chamberlain's policy runs the risk of exposing both Britain and France to the gravest strategical hazards in return for an Agreement which does not, in fact, convert Signor Mussolini from a potential disturber of the peace into its reliable upholder. Neither policy is entirely safe; both run appalling risks. The real basis of the complaint against Mr Chamberlain is that he is running the bigger risks for the more problematical reward.

Larger Battleships.—It was announced in London, Washington and Paris on Friday of last week that the three signatories of the London Naval Treaty of 1936, having failed to obtain any satisfactory reply from Japan to their request for an assurance that Japan was not exceeding the Treaty limit of 35,000 tons for

capital ships, have decided by mutual agreement to abandon that limit. The British and American Navies will proceed to build larger battleships—the tonnage most frequently mentioned is about 42,000 to 45,000 tons. France, while approving of the British and American action, does not propose herself to exceed the 35,000 limit, unless some other continental European Power also decides to follow the Japanese lead and build monster battleships. There is still some hope, however, of persuading the other European naval Powers—namely, Germany, Italy and Russia—to keep to the 35,000 ton limit. This is the last feeble remnant of the whole post-war effort for naval limitation and disarmament. So far as the oceanic Powers are concerned, almost all limitations are now removed. The only one remaining is that which fixes the maximum tonnage of cruisers at 8,000 tons, and leaves a gap between the largest cruisers and the smallest battleships. And in view of the rumours of Japan's construction which continue to circulate, it seems unlikely that even this limit will be much longer maintained. Japan is assuming a very heavy responsibility by refusing to say the word that would limit this new extension of the naval building race. She can derive from it only the very small comfort of imposing upon American designers the necessity of getting over-size battleships through the Panama Canal. Against this, however, must be set the fact that she is deliberately challenging competition with two countries, either of which can outbuild her with ease.

Labour and Armaments.—In response to the Prime Minister's appeal for co-operation in speeding-up armament output, various moves have been made this week. The Minister of Defence has met the employers and the executive of the Amalgamated Engineering Union; and, although the A.E.U. have expressed some reluctance to commit their members to any definite line of action before the meeting of their National Committee in June, the employers' representatives have urged both the unions concerned to meet them in conference before Easter. The A.E.U.'s caution arises from no wish deliberately to impede the progress of national defence. The men's leaders, it is true, regard the Government's foreign policy, of which the acceleration of re-armament is an integral part, with some suspicion. An executive manifesto on Wednesday urged A.E.U. members to devote their spare time to the production of equipment for the distribution of medical or food supplies in Republican Spain. And, on the same day, members of the General Council of the Trades Union Congress discussed the Spanish conflict in all its aspects with Lord Halifax. But, in the main, the unions are concerned with strictly industrial issues. They are not inclined to make hasty concessions by the abatement of union regulations, so long as there are employable engineers out of work, or while aircraft, which bulk most largely in the Government's revised programme, are still being exported to foreign countries. The unions are also anxious to avoid a repetition of what they claim was their experience after the war, when their suspended rules and restrictions were not, it is alleged, adequately restored. The A.E.U. and the Confederation of Engineering and Shipbuilding Unions represent the skilled men, who hold the key to the production of armaments—the fitters and turners and shipwrights. Their contention, again, that undue profits should not be made by individual companies is intelligible, but there is a compelling case for haste. The onus of detailed decision has been inescapably laid upon the unions equally with the employers, with the Government holding a watching brief in the interests of national security.

Air-Raid Precautions.—Freed from the delays which accompanied the culpably long-drawn-out dispute between the Government and local authorities about the financing of air-raid precautions, local plans have been rapidly devised and the recruitment of volunteers has, in most places, been satisfactory. In general, civilian defences are still backward, but, now that the Home Office has

issued its advisory regulations as well as instructions about gas mask supplies, there is no reason why the leeway should not speedily be made up. The position of the great public undertakings, such as the Metropolitan Water Board, is more disturbing. As in the case of the local authorities before a formula was found, the precise proportion of the Government's contribution to the cost of schemes set on foot by the undertakings is not yet known. And, in consequence, some disinclination to proceed with the vitally necessary measures is evident. On Monday the Home Secretary announced in the Commons that the position of the public utilities was under review with a view to possible legislation. He urged the undertakings to proceed forthwith with their plans, but made it clear that not all schemes would rank for Exchequer assistance. Clearly, since industrial concerns are in general expected to prepare and finance their own safeguards against air attack, any unduly preferential treatment of public utility undertakings would be inadvisable. Nevertheless, the utilities have, in many ways, a special claim to help; and, in any case, it is imperative that the financial position be speedily clarified, so that undertakings can gauge precisely their probable commitments and proceed with their plans.

Calcium Carbide.—For the third time, the Caledonian Power Bill, to permit the British Oxygen Company to manufacture calcium carbide in the Inverness Highlands with the use of hydro-electricity, has been rejected by the House of Commons. The successful opposition included the defenders of natural beauty against industrial defilement as well as Members who have consistently regarded the proposal as a threat to the British coal industry and especially to South Wales. The Bill had the Government's indirect blessing though not, as the adverse vote shows, its actual backing. Sir Thomas Inskip represented the establishment of a smaller factory at Port Talbot as an extra argument in favour of the Corpach scheme, since the two plants were to be complementary. On Wednesday, however, the scales were weighted heavily against the Bill by the general belief that the proposal to grant the Inverness factory preferential terms of rating for a period of years was an unfair aid to a purely private undertaking. Only on the grounds of urgent and inescapable national necessity could this clause have been defended. In the debate, the Minister for Defence would not go so far as to state that the need for the Corpach plant was, in the Government's view, imperative—despite the importance of calcium carbide, which is largely imported, to national defence. Accordingly, the very mixed opposition had their way, and the Bill is, presumably, finally slain.

The Egyptian Elections.—The results of the Parliamentary general election in Egypt last week gave Muhammad Pasha Mahmud's Government party 96 seats, the Independents 59 seats, the Dissident section of the

Wafd (who have styled themselves Saadists after the founder of the Wafd, Saad Pasha Zaghlul) 79 seats, the remnant of the Wafd 12 seats. There are to be 18 second ballots, but the results of these can hardly make any substantial difference to the present figures. On the showing of these the Government will be more than equal, in the Chamber, to both sections of the Wafd combined; and, since any such combination is now highly improbable, the Government will be able to command a majority without needing to count upon support from the Independents. This change in the constellation of political forces in Egypt is so great that it cannot be accounted for merely by the "making" of the elections by the Government now in office. No doubt Mahmud Pasha's Government, like other Egyptian Governments before them at other elections, have taken full advantage of their powers in order to turn the voting in their favour. But there seems to be no evidence that, this time, the Governmental pressure on the electors has been heavier than usual, and while there have unfortunately been at least ten fatal casualties, these have not been all on the side of the Opposition. The King and his advisers have clearly not been pursuing a purely autocratic course; the event proves that they have rightly interpreted the views of the people. In a country where parliamentary politics are still largely personal, the most striking of the election results are the defeats of the leader of the Wafd, Nahas Pasha, himself and of his Coptic colleague, Makram Pasha. It is less than two years since Nahas Pasha achieved his party's supreme purpose by bringing back to Egypt in triumph the Anglo-Egyptian treaty of August 26, 1936. A reversal of fortune which seems paradoxical at first sight may, however, appear natural, and even inevitable, on second thoughts; for the Wafd's supreme purpose was also its *raison d'être*. With the Anglo-Egyptian treaty once signed and ratified, domestic Egyptian issues, so long suppressed and postponed, have rapidly begun to assert themselves. Nahas Pasha's error has been to live upon the capital of a political past which he himself has put out of date; and this error has cost the Wafd the secession of its "Saadist" section and now its defeat at the polls. The river of Egyptian politics is now flowing into new and uncharted channels.

The Vatican and the Austrian Hierarchy.—The ecclesiastical somersaults set going by the *Anschluss* of Austria to the Reich are becoming faster and more furious. While the Nazi plebiscite campaign was giving the utmost publicity to the letter (recorded last week) from Cardinal Innitzer to the Reich plebiscite Commissioner in Austria, Herr Bürckel, Cardinal Innitzer was addressing a second letter to Herr Bürckel in the same tenor, and the Catholic hierarchy within the pre-*Anschluss* frontiers of the Reich were meeting at Fulda to consider what lead they should, or should not, give on the plebiscite to their own flocks. Considering that Dr Goebbels' ministry was placarding

Vienna with posters displaying, in facsimile, Cardinal Innitzer's autograph *Heil Hitler*, it was perhaps rather ungracious of the Reich Minister of Propaganda to declare that the Cardinal's declaration was five years overdue. It looked, however, as though Dr Goebbels' taunt did not reflect the policy of Herr Hitler; for there were rumours that the capitulation of the Austrian Catholic hierarchy to Nazidom was to be taken as an opportunity for bringing the Catholic Church throughout Greater Germany into the Nazi fold on the basis of a common crusade against Bolshevism. This prospect was shattered last Friday by a couple of bombs thrown over the Alps out of the Vatican City. In a note published that evening in the semi-official *Osservatore Romano*, it was stated that the Austrian hierarchy's exhortation to their flock to vote "Yes" in the plebiscite had been made "without any previous agreement with, or subsequent approval by, the Holy See, and on the sole responsibility of the Episcopate itself." The same evening an address in German was broadcast from the Vatican wireless station in which the speaker went much further in denouncing the action of the Austrian bishops and in absolving the faithful from any duty to follow the advice of the clergy on political matters. Poor Cardinal Innitzer! He has no sooner done his homage to the Nazi Holy Roman Emperor than the new Henry IV is blasted by a new Hildebrand! But even Hildebrand has qualms, for on Saturday the Vatican announced that the broadcast (though not the *communiqué* in the *Osservatore*) was quite unofficial, and was delivered without the knowledge of the Cardinal Secretary of State. Finally, Cardinal Innitzer has been summoned to Rome and has issued a statement which in effect retracts his previous unconditional support of the Nazi party. The faithful Austrian Catholic can hardly be expected to know which of these voices is the authentic opinion of the Church.

* * *

Catalonia in Danger.—General Franco's advance towards Barcelona and the sea has continued almost without intermission. Lerida fell to him on Sunday last, and his troops are at points already within sight of the Mediterranean. The advance in the last few days has been considerably slower than in the early days of the offensive, and the Republican Army, in spite of its grave inferiority in artillery and aircraft, is still putting up a stiff resistance. But though the pace is slower, the Republicans are still falling back all along the line, while the Insurgents have suffered no reverse. No attempt is being made in Barcelona to minimise the fact that the supreme crisis of the war is at hand. The Government has been reorganised, with Dr Negrin still at the head of it, but without Señor Indalecio Prieto, who has hitherto been in charge of defence. Appeals have been sent out for volunteers, and there has been a satisfactory response; even the squabbles of the different groups of trade unions in Barcelona have been composed. The Government has dispatched one more plea to Britain and France to be allowed to buy arms, but they clearly realise how small is the hope of their appeal being answered. The British Government is apparently content to wait for General Franco's final victory, and if London will not move, Paris dare not. There is no sign from Barcelona, however, of any surrender. On the contrary, all the news from that city tells of resolution to continue the fight. The horrors of the Spanish civil war are clearly not yet over.

Eire's First Senate.—If Mr de Valera, who abolished the Senate of the Irish Free State, had designed with Machiavellian cunning to discredit the Second Chamber principle under the guise of restoring it, the results of the elections to the new Senate of Eire would have caused him to rub his hands. The method of election was designed to secure representation of the different walks of Irish life—cultural, economic and political. Of the 49 elective seats, six were filled by the universities by direct election. For the remainder, some 49 nominating bodies put up 132 candidates, divided into five panels.

The electoral college, however, was largely political; for it consisted of the members of the Dail and seven representatives of each borough and county council. Moreover, of the 43 members, 22 were returnable only from among the nominees of the Dail. In the result, many distinguished candidates were rejected, and many important cultural and other nominating bodies are unrepresented in a Senate whose character is mainly political. Judged politically, it shows a bare majority for Fianna Fail, the Government party. Mr de Valera, however, spurned the temptation to strengthen his position in nominating the final eleven members to the House of 60. His nominees, in fact, form a distinguished group and include such well-known critics of his policy as Sir John Keane and Mr Frank MacDermot. In this action he has shown the quality of statesmanship which, it may still be hoped, will carry him to a sound and durable settlement of Anglo-Irish differences. It is now suggested that a pact will be signed before Easter. Even if its scope is limited to technical trade matters we may well be thankful for small mercies.

* * *

Roumania's New Government.—The recent change of Government in Roumania has a significance which has not been fully appreciated. The first Cabinet headed by the Patriarch was formed in haste after the Goga débacle, and, since it contained six former Prime Ministers as Ministers Without Portfolio, was a somewhat cumbrous instrument of Government. It was generally anticipated that, after a short interval, M. Tatarescu, who was Liberal Prime Minister until December and served as Foreign Minister in the interim Cabinet, would be restored to power, to pursue his former policy of compromise, at home between Right and Left, abroad between the Axis and the League. What has happened, however, is something different. Not only have the ex-Prime Ministers departed, but most of the representatives of the Liberal Party also, and the new Ministers are very largely former adherents of the National Peasant Party. The new Foreign Minister is M. Petrescu-Comnen, who has been known in the past as a close associate of M. Titulescu, and, in spite of a period of office as Minister in Berlin, is believed to remain a firm adherent of the policy of the Little Entente. This interpretation seems to be borne out by the marked friendliness of the greetings he has exchanged with M. Litvinov. On the whole, therefore, the new Cabinet appears to be a move towards men of the Left, even though not towards democratic principles. It certainly lends no support to the belief that the new authoritarian Roumania has already fallen into the German orbit. On the contrary, King Carol and his Ministers are still holding to the traditional alliances of the country, and there is no reason to believe that they would not co-operate with enthusiasm in any system of ensuring the peace of Europe to which the democratic Powers of the West would lend their whole-hearted support.

* * *

British Holidays.—Widespread agitation for the "staggering" of holidays to avoid the congestion of transport and lodging facilities in the weeks before and after August Bank Holiday has been given a fresh importance by the growing practice of granting holidays with pay to wage-earners. It is estimated that some 5 million people, excluding the higher paid salaried employees, will take paid holidays this year and already the railways and holiday resorts have expressed anxiety lest their resources should be over-taxed. An article in the March issue of the *Ministry of Labour Gazette* states that the number of wage earners entitled to paid holidays under collective agreements is now 3 millions, compared with 1½ millions two years ago, and this total excludes not only salaried employees, but also workers on "standing" wages who are allowed holidays with pay and the employees of firms who give paid holidays under individual arrangements. The report of the Holidays with Pay Committee was signed on Wednesday and, although no details are yet officially known, it is confidently expected

that the report will unanimously recommend the general introduction of paid holidays by legislation. Such a proposal, to include 640,000 agricultural workers, 450,000 cotton workers, 240,000 workers in the woollen industry, as well as miners, iron and steel workers and a number of domestic servants, would bring the total of wage earners with paid holidays up to 13 millions; and the strain on holiday facilities, unless the holidays were spread out over several months, would be almost intolerable. The British practice of concentrating summer holidays on only a few weeks in the year has its roots in the practice of schools and offices rather than in considerations of climate and weather. And it would, indeed, be a pity if the very welcome trend towards holidays with pay, likely at the maximum to increase industry's wages bill by only 4 per cent., were to be in part nullified by conditions of uncomfortable congestion. The House of Commons on Wednesday welcomed the movement in a debate opened by the member for Blackpool, who urged that England should do today what Lancashire, with its "staggered" Wakes weeks, had been doing for many years. The House was evidently of the same mind.

* * *

Industry in the Special Areas.—Since much of the impetus which led to the setting-up of the Royal Commission on the Distribution of the Industrial Population was provided by Sir Malcolm Stewart's Reports on the Special Areas of England and Wales, special interest attaches to the evidence submitted by bodies, like the North-East Development Board, which represent places where industrial decline and migration are serious influences. The Board's territory includes the Tyne, the Wear and the Tees, and the total population of the North-Eastern coalfield areas has grown in excess of the employment capacity of the basic export trades. In Durham County, there is still a surplus of some 100,000 men and boys in the N.E. Area. Improvements in industrial technique and organisation are tending to make the gap between employment and population wider. The Board point out that the State already accepts, through tariffs and industrial and labour legislation, responsibility for the supervision of industry; and suggest, as a corollary, the State's duty to reduce the risk of severe fluctuations in employment in any one area by guiding the location of new industries. And the Board call for an intensification of the methods of inducement and publicity which have already, under the Government's auspices, brought 40 factories and a further 54 prospective tenants to the Team Valley Trading Estate. In general, the Board reject any policy of compulsion, but they urge that the Government's policy should be nation-wide.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

Business Unchanged

NEW YORK, March 29.—The Federal Reserve Board's business indices for February showed almost no change from January and December. Although the seasonally adjusted index has fallen five points since December, the unadjusted index has stood at 79 in each of the three consecutive months. The March figures are not likely to show any great change.

BUSINESS INDICES (1923-25 = 100) ADJUSTED FOR SEASONAL MOVEMENTS

	Feb., 1937	Dec., 1937	Jan., 1938	Feb., 1938
Industrial production (total)	79	80	84	116
Manufacture	75	76	79	116
Minerals	101	108	114	115
Construction contracts (total)	48	52	62	62
Residential	30	26	30	47
All other	64	74	88	75
Factory employment (total)	83.1	84.2	89.0	99.8
Durable goods	74.4	76.8	84.4	93.9
Non-durable goods	92.4	92.1	94.0	105.8
Factory payrolls (total)	73.5	71.6	80.9	95.8
Durable goods	64.2	63.8	77.0	92.5
Non-durable goods	85.3	81.5	85.8	99.9
Freight car loadings	62	65	67	82
Department store sales	88	90	89	95
Department store stocks	70	71	72	76

When an economy has suffered a severe and abrupt dislocation, it is doubtful whether seasonal adjustments are very informative. Seasonal adjustments assume normal continuity, and no one would detect normal continuity in the American economy during the past twelve months.

BUSINESS INDICES (1923-25 = 100) WITHOUT SEASONAL ADJUSTMENT

	Feb., 1937	Dec., 1937	Jan., 1938	Feb., 1938
Industrial production (total)	117	79	79	79
Manufactures	118	75	75	76
Minerals	111	107	103	97
Construction contracts (total)	54	49	43	42
Residential	42	25	22	26
All other	64	68	60	54
Freight car loadings	76	62	59	57
Department store sales	76	156	70	70

The pattern remains unchanged. From August to December our economy fell from a high to a low plane of activity. Since December it has remained on the low plane, apparently quite immune from the usual seasonal influences, which are largely derived from the motor, building and railroad industries.

This inertia has been disappointing. When March failed to bring convincing signs of improvement, patience became exhausted, and the month saw a severe decline in security prices. The decline was most drastic in railway securities, and in industrial securities associated with rails. The general disappointment was particularised by the small increase in freight rates granted by the Interstate Commerce Commission, on which special hopes had been registered. While the share averages show a decline of about 30 per cent. in March, several stocks and bonds are selling at a bare half of the prices quoted in late February. The decline of the last month alone has reached the amplitude of a major bear market.

Low Earnings and No New Capital

Yet there was no deterioration in the general industrial situation between December and February; and March was probably no worse than February. In February the market was capitalising its hopes; in March, it capitalised its disappointments.

The latter are closer to the facts; the earnings of the first quarter will begin to appear late in April, and they will in many cases show that large profits in the first quarter of 1937 have been converted into large deficits in the corresponding

quarter of the current year. Where earnings exist at all at the current level of activity, they will, in general, be about half or less than half of those made in the first quarter of 1937. With the index of production at 80, our economy is not even on a "repair and replacement" basis; and, from the economic standpoint, it is virtually without earning power.

The actual record of March, so far as fragmentary data are available, was by no means without its comforting aspects. Every week of the month saw an increasing rate of steel operations, which are now close to 36 per cent. of capacity. There is evidence of quickening in building. Altogether, the evidence still supports the opinion that the violent phase of the decline in production lasted from August to December.

In so far as inventories are an element in the problem, the past four months have witnessed some slight improvement. The violent advance in primary prices a year ago caused disequilibrium in the price structure, and the recent falls have made possible a partial readjustment. In the background, however, is the persisting and greater problem of the lack of new capital.

For seven years, the flow of new capital into American industry has been reduced to a mere trickle. The brief interlude of 1936 and 1937, when considerable capital expenditures were made by industry out of its own funds, has been followed by six months in which no new capital market has existed, except for the Federal and local governments. This is and has been for a long time the outstanding feature of our economy.

Shifting Balance of Trade

Foreign trade in February showed no change in trend:

MERCHANDISE TRADE (\$000,000)

	Imports	Exports
February, 1937	278	233
January, 1938	171	289
February, 1938	163	263

The peak of imports occurred in March, 1937, when they were valued at \$307 millions; since that time the decline has been continuous, and amounts to about 50 per cent. Last month's imports were about equal in value to the average of the first quarter of 1935.

The peak of exports was in October, 1937, when they were valued at \$333 millions, since when there has been an almost continuous decline, of smaller proportions than in the case of imports and partially seasonal in character. The consequence of these movements is an extraordinary change in our balance of trade:—

SURPLUS OF EXPORTS (+) OR IMPORTS (—) (\$000,000)

1936-37	1937-38
Oct., 1936	+ 52
Nov., 1936	+ 30
Dec., 1936	— 15
Jan., 1937	— 18
Feb., 1937	— 45
Five months' surplus	+ 4
Oct., 1937	+ 108
Nov., 1937	+ 91
Dec., 1937	+ 110
Jan., 1938	+ 119
Feb., 1938	+ 100
Five months' surplus	+ 528

It might have been supposed that such a change in our trade balance would be accompanied by large gold imports. The fact is exactly contrary:—

NET GOLD IMPORTS (\$000,000)

1936-37	1937-38
Oct., 1936	219
Nov., 1936	76
Dec., 1936	57
Jan., 1937	121
Feb., 1937	120
Five months' imports	593
Oct., 1937	90
Nov., 1937	22
Dec., 1937	18
Jan., 1938	2
Feb., 1938	8
Five months' imports	140

The operations of the various Funds may have deprived the gold figures of some of their former significance; nevertheless, the contrast in our visible balance between the winter of 1936-37 and the winter 1937-38 is so marked as to be noteworthy.

France

M. Blum's Proposals

PARIS, April 7th.—Expenditure for re-armament in 1938, M. L. Blum explained, when he presented his financial proposals, will amount to 27,793 million francs, or 46 per cent. of the total fiscal receipts. Revenue must be increased by an expansion of production. But, at the best, revenue will have to be further supplemented by fresh borrowing. The franc cannot be allowed to fall any lower, and the gold stock is now at the minimum needed for war. In such conditions, how is money to be found?

The Treasury's requirements in 1938 will be as follows:—

	(000,000's omitted)	Frs.
Ordinary Budget deficit		4,000
Extraordinary monetary expenditure		15,900
Civil expenditure		2,712
Pensions fund		2,537
Various		1,590
		26,739
Railways deficit		8,690
Advances to undertakings		1,328
		36,757

And this total does not take into account 9,887 millions of maturities. Long-term borrowing and inflation have so far covered the deficit. The true solution would be to have recourse to the money market. But this market has been dried up by the outflow of gold, and by the policy of restricting credits to prevent speculation against the franc. A considerable inflation for re-armament purposes would lead, under the new Blum plan, if not to true prosperity, at least to intensive industrial activity. The volume of wages would be increased, the demand for consumption goods would rise correspondingly, and the production of these goods would be expanded by working extra shifts in these industries, as well as on munitions.

Controlled Inflation

These results will be achieved, according to the proposals, which have still to be put before the Senate, by the organisation of a "closed circuit," on the example of Germany, under the control of the Bank of France. New francs will be created to cover the State's expenditure, through new advances from the Bank, commercial bills or short-term bonds, to be rediscounted by the Bank. But the free circulation of these new francs will be hampered by the centralisation of exchange operations by the Bank and the supervision of raw material imports. Any rise in prices will be checked by a better control over prices, and the legal regulation of cartels and monopolies.

M. Blum's plans also include proposals to increase production by giving assistance to the building industry, constructing new electrical plants, and securing the working of extra hours and shifts, especially in armament works; and to increase revenue, by such devices as a capital levy, ranging from 4 to 17 per cent., and a 7 per cent. tax on rentes. The gold stock of the Bank will be re-valued; and the Budget methods will be reformed.

Plenary powers to enforce the principal measures by decree until July 1, 1938, are being sought by the Government.

The Programme Criticised

Most people praised the clarity and the sincerity of M. Blum's *exposé* of the state of affairs in France. It is emphasised, however, that public indebtedness is due, not only to re-armament, but also to the social charges which have been imposed on industry and business during the last two years, estimated by Conservative critics to have amounted to 31,000 millions a year—not including the cost of paid holidays and strikes. Other critics say that the totalitarian methods envisaged, derived as they are from foreign sources, are not in line with French individualism. Others, again, point out that the proposed mobilisation of capital is not accompanied by a parallel mobilisation of labour. And it is generally held that M. Blum has not, in any case, got the prestige and authority needed to imply such a drastic scheme involving great sacrifices.

As a financial plan, the propositions of M. Blum have no immediate interest, but certain of its measures will certainly be taken up later by another Cabinet. As a political plan, it looks like a move to provoke a conflict between the Popular Front and the Senate. But the Senate is said to be the guardian of French individual liberties, and represents the strong interests of landed property.

Germany

Organising the Election

BERLIN, April 5.—Preparations for voting on April 10th dominated all other interests throughout last week. In magnitude and vigour, the official and party agitation as much exceeds that of earlier Nazi Reichstag elections as the earlier Nazi elections themselves exceeded the tamer election demonstrations of democratic countries. In a sense this is labour lost, because numerically the past best of an almost 99 per cent. majority can hardly be beaten. It was indeed semi-officially explained, some weeks ago, that, in view of the nation's unquestioned unanimity, no new election in the pre-Anschluss Reich area was necessary for home purposes; and that the aim of the present election was to impress and convince foreigners. This statement is characteristic of Germany's great sensitiveness to foreign opinion, which seems to conflict with her extremely self-confident attitude.

The economic assimilation of Austria to the old Reich continues to progress rapidly. The Minister of Economy, Dr Funk, made a general announcement of policy on April 4th. Dr Funk condemned the "usurious interest-rates" exacted from Austria by the countries which dictated the Peace Treaties; attributed her poverty to the resulting deflation policy; criticised her exports as excessive; and promised that the Reich would become a good customer. He has forbidden the extension of Reich cartels to Austria without permission.

Measures, including the reduction of interest and protection against distraint, are to be taken in the interests of Austrian farmers. Austrian banks will get Reich financial help to enable them to grant long-term credits for industrial expansion, and the Sch. 290 millions necessary for re-establishing Austrian insurance will be put up by the Reich insurance institutions. The Reich marriage-loans system (Rm. 1,000 for each marriage) was extended to Austria from April 1st. A general veto, similar to the Reich veto of November, 1936, has been imposed on raising prices. The foreign exchange restrictions on travel between the Reich and Austria have been partly removed, but so far only Rm. 300 a month may be taken without permit into Austria.

The chief Austrian iron and steel concern, the Alpine Montan A.G., is already benefiting from the shortage in the old Reich. The company has put some ten additional furnaces into blast, and will, it is stated, soon be working at full capacity.

Austria and Raw Materials

From a great quantity of data, mostly official, which is now coming out, it appears that any considerable alleviation of the old Reich's raw material troubles must depend on new investment. For 1936 the Trade Research Institute estimates Austria's total consumption of raw materials in industrial production at Sch. 1,000 millions, her imports of materials at Sch. 565 millions, and her exports of them at Sch. 444 millions. The imports, comments the Institute, are very high compared with the corresponding German figure; and 1936 was a year of low imports. In 1929, some 70 per cent. of Austria's industrially consumed raw materials had to be imported. Among materials entirely or mainly imported are textile materials, rubber, non-ferrous metals, coal, and mineral oils. Home production of cement and iron is about sufficient to meet the demand; and in wood, hides, and magnesite there are substantial export surpluses.

Austria's import surplus on the whole trade account has declined, practically without break, since 1929, and in 1937 was about one-fifth of the 1929 figure, although the volume of trade had in the meantime fallen by only a little more than half. A great deal is being written about the Reich's future commercial and transport relations with South-East Europe. On the basis of trade in 1937 Great Germany, as it is now

BANK OF MONTREAL

(Incorporated in Canada in 1817 with Limited Liability)

Financial Agents of the Government of the Dominion of Canada in London.

CAPITAL PAID-UP \$36,000,000

REST AND UNDIVIDED PROFITS \$40,164,863

TOTAL ASSETS IN EXCESS OF \$800,000,000

Head Office: MONTREAL

Sir Charles Gordon, G.B.E., President.

H. R. Drummond, Esq., Major-General The Hon. S. C. Mewburn, C.M.G., W. A. Bog, Esq., Vice-Presidents. Jackson Dodds, G. W. Spinney, Gen. Managers.

LONDON COMMITTEE:

His Grace the Duke of Devonshire, K.G. (Chairman). F. R. S. Balfour, Esq.

Sir Hardman Lever, Bart., K.C.B. Sir Frederick Williams-Taylor

London Offices: 47 Threadneedle Street, E.C.2 (Edward Pope, Manager)

9 Waterloo Place, Pall Mall, S.W.1 (J. H. Pangman, Manager)

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

officially described, would have the following share of the trade of the S.E. European countries:—

	Exports	Imports
	Per cent.	Per cent.
Bulgaria	47.1	58.2
Hungary	41.0	44.2
Yugoslavia	35.2	42.7
Roumania	26.9	38.0
Greece	32.2	29.6

The trade Press foreshadows, as a consequence of the Anschluss, the increased use of Trieste as a commercial port for the Southern Provinces of the old Reich. River transport problems are much discussed. It is emphasised that the navigable part of the Danube in German territory is longer than the German part of the Rhine, and that the completion of the Rhine-Main-Danube Canal, which is to be accelerated, will connect the Ruhr industrial district with the Black Sea and Mediterranean.

New Reich Loan

The Reich Budget for 1938-39 has been sanctioned, but as usual has not been published. The Budget law does not apply to Austria, but may, presumably, with revised totals, be applied later. Existing authorisations to the Finance Minister to give guarantees remain in force; and there will be further guarantees of not more than Rm. 100 millions (against Rm. 300 millions in 1937-38) for the furthering of foreign trade; Rm. 400 millions (against Rm. 360 millions) for regulating the cereal and vegetable oil markets; Rm. 100 millions for land improvement; and also guarantees for the flax and hemp industries and the egg and poultry markets.

The Reich announces the flotation of a new Rm. 1,000 millions loan in the form of 4½ per cent. redeemable Reich Treasury certificates, of which Rm. 250 millions have already been placed. The last loan, later increased to Rm. 1,200 millions, was floated in January. The surmise that the rate of interest might be cut to 4 per cent. has proved mistaken. The term to maturity is 17-20 years, against 15-18 years in the case of the January loan. The subscription price is 98½, and the yield 4.6 per cent. Austrian banks will participate. The present moment is considered propitious, for since the turn of the quarter the money market has been liquid.

Although the terms of the new issue are almost identical with those of the preceding Consolidation Loans, totalling some Rm. 8,500 millions, the market conditions are radically new. According to Dr Schacht's announcement to the Reichsbank's shareholders in March, the contraction of undisclosed Reich bill liabilities for armaments and public works (so-called "secret debt") has ceased. In the past the bill liabilities contracted by the Reich in any considerable period always exceeded the sum of the new Consolidation Loans in the same period and in consequence the abnormal money market liquidity, which the loan-flotations temporarily reduced, was speedily restored.

Hungary

Relations with Greater Germany

BUDAPEST, March 18.—The union of Austria with Germany is of the utmost importance for all Danubian countries, and particularly for Hungary. The traditional friendship between Hungary and the two German nations in the past will no doubt be maintained with the Greater Reich, which Hungary was among the first nations to recognise. The Rome Protocol will remain in force between Italy and Hungary.

More than half of Hungary's foreign trade in 1936 and in 1937 was done with Austria, Germany and Italy. In 1936 some 40 per cent. of Hungary's exports went to Austria and Germany, and 13 per cent. to Italy. In 1937 the proportion of total exports which went to Austria and Germany further increased to 42 per cent., and that to Italy fell slightly to 12 per cent. Hungarian imports from Austria and Germany in 1936 and 1937 were 43 and 44 per cent., respectively, of total imports, and only about 7 per cent. came from Italy.

Though Hungary had an export surplus in trade with Austria, there were numerous items in the balance of payments to Hungary's debit, so that Austria, to some slight extent, became the creditor of Hungary. On the other hand, Hungary has in recent years accumulated a credit balance with Germany, and these balances will no doubt be offset, since the Austrian currency is now merged with the German mark.

As neither the German nor the Italian currency is freely convertible, Hungary cannot contemplate abandoning in the near future control of the foreign exchanges. There is every reason to expect, however, that the necessary convertible exchange for vital imports, and for the service of foreign debts, will be secured, thanks to the policy of fostering exports to markets in distant countries with freely convertible currencies.

The Five-Year Plan

The Prime Minister, M. Darányi, on the eve of reconstructing his Cabinet, announced a five-year programme of public works, armaments and social improvements, the cost of which will be about 1,000 million pengő, or approximately £40 millions. Dr Imrédy, President of the National Bank, was entrusted with the execution of this programme and invited to join the Cabinet as Minister without Portfolio, to co-ordinate and direct the Government's economic policy.

Dr Imrédy, who retains his position at the National Bank as chief guardian of the currency, is particularly well fitted for this key position in the Cabinet. He enjoys the confidence of all political parties. He is a sound financier, and his presence in the Government is a guarantee that no inflationary device will be resorted to in the Five-Year Plan.

Actually, the Five-Year Plan, which provides for an expenditure of 1,000 million pengő, will be chiefly financed by a special tax on property. It is estimated that 600 million pengő will be raised from this special tax within the next five years; but credit facilities will be granted to pay (in ten annual instalments) the special levy, which will be progressive, but in no case exceeding 8 per cent., nor less than 1 per cent. per annum.

Bonds, and persons whose total property is worth less than 50,000 pengő (£2,000), are exempt from the special tax. Agricultural property will be taxed at a lower rate than industrial and commercial property, in view of the burden imposed on agriculture by the higher industrial prices. On the other hand, it is very appropriate that industrial and joint stock companies, having for the last fifteen years enjoyed considerable benefits from tariff protection and tax exemption, should now be called upon to make a special effort, somewhat similar, in spirit if not in the letter, to the British National Defence Contribution.

The remaining 400 million pengő, not covered by special taxation, will be raised during the next five years by loan operations. The Treasury has at present liquid funds exceeding 200 million pengő, part of which will assist the financing of the public works and armament programme, and there is a general belief that the internal loans will be placed without difficulty. In view of the fact that the Treasury proposes gradually to refund the internal indebtedness incurred in earlier years, the credit system of the country could easily absorb at least part of the proposed loans; and insurance companies and private investors could take up the rest.

The Five-Year Plan, and notably the re-armament programme, will greatly stimulate industrial production, and the proposed road building and agricultural improvements will bring work to the unemployed in rural districts. M. Darányi, in his speech announcing this ambitious scheme, declared that raising the standard of living in rural districts would be the chief endeavour of his Government. To this end the urban population would be called upon to bear additional burdens.

Poland

A Success for the Government

WARSAW, March 31.—The recent ultimatum to Lithuania, backed by the massing of troops at the frontier, which was successful in persuading the "Irishmen of the Baltic" to call off the diplomatic and economic sanctions which they applied against Poland after the seizure of Vilna in October, 1920, seemed to cause as much surprise to Polish opinion as it did to foreign. Since the death of Pilsudski nearly three years ago, the capacity to decide and act with resolution appeared to have deserted the leaders of Poland, and the masses had almost reached the conclusion that effective leadership had died with "The Great Marshal."

The failure of the National Unity Movement launched rather more than a year ago by Colonel Adam Koc—who was replaced in January by General Skwarczyński—did nothing to enhance the prestige of the Pilsudski regime, and the Congress of the Peasant Party held in Cracow last month

showed unmistakably that the gulf between the regime and the masses had widened.

A spectacular success for the Government was accordingly necessary, and a frontier incident was seized upon to force Lithuania to establish "normal diplomatic relations" with Poland. The very moderate conditions attached to the ultimatum, however, left no doubt of Poland's desire for a genuine reconciliation with her recalcitrant neighbour, and the course of events since the acceptance of the ultimatum has strengthened the belief that a substantial majority of the Lithuanian nation appreciates and shares this desire.

The effect on public opinion here has been wholly satisfactory for the Government, and it would not be surprising if the first opportunity were seized for another spectacular success in foreign affairs. The "inspired" newspapers are now waging a violent campaign against Czechoslovakia for that country's alleged mistreatment of its Polish minority, with demands for complete autonomy for the Polish minority in the Teschen coal-mining district. The Polish minority in Czechoslovakia, which for many years was represented as numbering about 120,000, is now spoken of as 250,000; and a minority of 250,000 would naturally seek a larger autonomous area than a mere 120,000.

Economic Improvement

The ordinary Budget session of Parliament, which began last December and closed to-day, was noteworthy for a series of optimistic speeches on Poland's economic outlook by M. Kwiatkowski, the Minister of Finance, who is now virtually the country's financial and economic dictator. Although professedly in favour of free economy, M. Kwiatkowski is carrying Poland deep into autarky with his public works programme and the creation of a new industrial region in what is called the strategic triangle. He expects to spend about 1,000 million zlotys on public works during the fifteen months which began on January 1, 1938. He contends that Polish economy has been made almost shock-proof against external events, though the foreign trade figures for the first two months of 1938 hardly support this contention.

Nevertheless, most of the indices continue to register a slight but steady improvement, with industrial production in January at 89.3 per cent. of the 1928 average, the highest figure for any month since 1930. The number of workers employed in industry has increased by 75,000 during the past year.

Changes in Foreign Trade

Imports last year were valued, according to Polish valuations, at 1,254.3 million zlotys and exports at 1,195.6 millions. The figures of trade with leading countries are as follows:—

	1936		1937	
	Imports from	Exports to	Imports from	Exports to
	(In millions of zlotys)			
United Kingdom ...	141.6	221.6	149.2	219.2
Germany	142.9	145.3	182.2	167.4
United States	119.3	67.3	149.1	101.0
Belgium	43.4	84.3	56.3	69.0
Austria	44.9	58.8	57.8	58.6
France	43.5	43.7	40.7	49.2

In the first two months of 1938 imports were valued at 212.5 million zlotys and exports at 176.2 millions—leaving a visible deficit in foreign trade of 36.3 million zlotys. In the same months of 1937, imports were valued at 172.3 millions, exports at 190.5 millions, with an export surplus of 18.2 million zlotys.

The effect of the German annexation of Austria will not be shown for two or three months in the Polish foreign trade returns. A factor of more immediate importance is the Bill recently passed by the Lower House in the United States, and now before the Senate, raising the import duty on tinned hams from 3½ to 9½ cents a pound. Poland in the last few years has built up an extensive market for pork products in the United States, and an increase of 6 cents a pound in the duty on hams would almost ruin the market—unless the burden could be shifted to the Polish Treasury.

The newspapers here suggest that Jewish interests in the United States are striking back at the Poles for their anti-Jewish activities; but it was a mistake ever to believe that the United States could become a permanent market for pork products from Poland. The continued decline in the export surplus in trade with the United Kingdom is also causing growing concern.

Lithuania

Changing Balance of Trade

KOVNO, March 21.—A number of changes took place in 1937 in the balance of foreign trade. On the one hand, agricultural prices improved; on the other, industrialisation continued. And these factors were influential in bringing about a marked rise during the year in both imports and exports.

Imports in 1937 were valued at 213 million lit, against 156 millions in 1936. Imports of raw materials and semi-manufactured goods rose appreciably, and the increase in purchases of iron, coal and coke, machinery and cement for building was also noticeable.

Exports rose from a value of 191 million lit in 1936 to 208 millions in 1937; and the increase was due to higher prices for butter, pig-meat and wood products (including cellulose). The value of butter exports rose from 35 million lit to 41 millions, and of pig products from 12 to 16 millions. Owing to the bad harvest in 1936, flax exports fell in value from 17 million lit in 1936 to 15 millions in 1937; but exports of wood products rose in value from 30 million lit to 42 millions.

Altogether, there was an import surplus of 5 million lit, compared with an export surplus of 35 millions in 1936. The debit balance was, however, reduced by remittances from abroad, which rose from 1 million lit in 1936 to 6 millions in 1937. Nevertheless, it has been necessary to make exchange restrictions more stringent.

New Trade Policy

In January this year, the value of imports was 16.7 million lit, compared with 13.1 millions in January, 1937, while exports were valued at 16.2 millions, against 16.1 millions. In view of the good harvest, the Government have abolished the prohibition imposed last year on the export of rye, though each rye shipment has still to be officially sanctioned.

With the object of bringing the total values of imports and exports into line, a reorganisation of the export trade is now planned. Some branches will come under State monopolies. In addition, Lithuania has been actively conducting trade discussions with foreign customers. In 1937, 63 per cent. of exports went to Great Britain and Germany, 46 per cent. to the United Kingdom and 17 per cent. to Germany. Russia took only 5.3 per cent., but a new agreement provides for a 10 per cent. increase in Russo-Lithuanian trade. New treaties have also been made with Holland, Hungary, Greece and Brazil.

Shipping activity in Memel has appreciably increased. General industrialisation is proceeding apace. New factories and extensions to old ones are widely projected, and plant is being generally brought up to date.

Finland

Domestication of Debt

HELSINGFORS, March 25.—Finland's public debt has changed considerably during the last few years. Several bond loans issued abroad and the floating foreign debt have been redeemed and replaced by bond loans issued inside the country.

THE COMMERCIAL BANK OF SCOTLAND LIMITED

Incorporated by Royal Charter and Act of Parliament

PAID-UP CAPITAL . . . £2,250,000

RESERVE FUND . . . £3,100,000

ESTABLISHED 1810

This tendency is shown by the following figures, calculated at current rates of exchange:—

	Dec. 31, 1934	Dec. 31, 1936	Dec. 31, 1937	Feb. 28, 1938
(Millions of dollars)				
Foreign debt—				
Funded	70.4	39.1	28.4	26.7
Floating	2.1	1.5	...	...
Total	72.5	40.6	28.4	26.7
Internal debt—				
Funded	21.6	39.9	51.6	51.6
Floating	1.1	1.8	3.9	4.1
Total	22.7	41.7	55.5	55.7
Grand total	95.2	82.3	83.9	82.4

Notice was recently given of the redemption of the State loans of 1889, 1895, 1898, 1901 and 1903, on which the rate of interest is 3 and 3½ per cent. The nominal amount of these outstanding loans was 7,286,152 Dutch florins and 58,756,500 French francs on the last day in February, 1938, but nearly one-third of the former amount, and about 90 per cent. of the latter, were held by the Treasury, which had bought them in gradually.

Production Checked but Record Trade

The deterioration in world markets had some influence on industrial production in Finland by the end of 1937. The setback affected the exporting industries most, their index of output dropping in December to 167 (1926=100), against 191 in September, 1937, and 171 in December, 1936. The value of production, however, was still appreciably higher in December than a year ago. On the other hand, the index of production for industries supplying the home market was slightly higher in December, 1937, than a year before, both in volume and value. Building operations have continued unchecked during the first few months of 1938.

During the first two months of this year, foreign trade recorded considerably higher figures than during the corresponding months in 1937, and higher than ever before at this time of the year. The value of imports in January and February amounted to 1,264 million marks, compared with 1,020 millions last year, while the value of exports amounted to 996 million marks, against 868 millions a year ago. The surplus of imports amounted to 268 million marks, compared with 152 millions in 1937.

Palestine

Economic Setbacks

JERUSALEM, March 22.—Palestine is a land of paradox. After unprecedented prosperity, recession began in 1936. The immediate occasion was the Italian attack on Abyssinia in the autumn of 1935 which precipitated a minor banking crisis, the restriction of credit, the reappearance of unemployment and the failure of traders to meet their engagements. Simultaneously, and for other reasons, the immigration of capital into Palestine, which had been so marked since 1932, began to slacken, although immigration continued at a high rate.

The disturbances of the past two years did not improve the situation, nor is the present uncertainty about the political future conducive to business confidence. The consequence is that Palestine is now suffering a very definite depression. But not all the symptoms are those of depression in normal circumstances. Setting aside 1936, when foreign trade was dislocated by the disturbances, imports fell from £17,853,493 in 1935 to £15,913,044 in 1937. On the other hand, exports rose from £4,215,486 to £5,819,676, almost the whole of the increase being explained by exports of citrus fruits (£1,479,956).

With a tenfold increase in fifteen years in the production of citrus fruits, the necessity for export has risen in the same ratio. Unfortunately, as the volume has increased, prices have fallen, with the result that in the past two or three seasons the sum realised by the sale of oranges and grape fruit abroad has been, on the average, less than the cost of production, transport, etc.

Capital and Investment

One of the financial features of Palestine during the past few years has been the relatively large amount of money lying at the banks unused, although the interest paid is insignificant—at a time when there was said to be a scarcity of capital for industry. The more cautious capitalists were apparently

chary of Palestinian investments. During the past fifteen months the amount on current account fell gradually, with a temporary upward movement at the beginning of last year, from over £13 millions in January to a little over £11½ millions in November.

Some £480,000 of this loss is explained by an increase in the sums placed on deposit; but the greater part of the balance, together with more than £1,275,000 brought in by immigrants during the year, was apparently consumed, for there was no expansion in business to absorb additional capital.

A very large part of this money is capital brought to Palestine by immigrants of small means who place it in the bank, while they look round for opportunities of using it remuneratively. This class of small capitalists looking round for opportunities is very noticeable in Palestine. While they look, their capital diminishes.

Japan

More Money for War

TOKYO, March 9.—The supplementary Estimates for the China campaign, just approved by the Lower House, total 4,850 million yen, of which the Army accounts for 3,260 million yen, the Navy for 1,040 million yen, and the remaining 550 million yen is to be held in reserve by the Treasury. The major part of this sum is to be financed by borrowing, and only 420 million yen will be met by fresh taxation, raising the price of tobacco and raiding self-balancing revenues.

New taxation includes an additional levy on personal and corporation incomes, increases in the excess profits duty, the capital stock tax and stock exchange duty, special excises on sugar, beer, *sake*, wine, matches, etc., a reimposed passenger duty, and a new entertainment tax. War expenditure by the end of January reached 2,540 million yen, and the new vote brings the total up to 7,390 million yen.

Although the greater part of re-armament and war expenditure has been and will be financed by new loans, the burden of taxation is rapidly increasing. According to a statement submitted to the Diet by the Treasury, *per capita* taxation will be more than doubled in respect of direct taxation between 1936-37 and 1938-39, and increased by nearly 30 per cent. in respect of indirect taxation during the same period. The following table gives a comparison of taxation per head for three fiscal years:—

	Direct Taxation Yen	Indirect Taxation Yen	Total Yen
1936-37	7.19	10.50	17.69
1937-38	10.92	11.66	22.58
1938-39	15.27	13.30	28.57

The large Japanese joint-stock banks had a favourable record in the last six months. The aggregate net profits of the six leading banks for the December half-year amounted to 29.6 million yen, compared with 29.3 million yen in the preceding half-year. A continuous and substantial increase in advances was the chief cause of the banks' ability to show a further recovery in earnings, despite low and almost unprofitable short-loan and discount rates.

Another feature in the balance sheets of the "Big Six" is a further reduction in investment holdings. While deposits rose by 339.2 million yen, and loans and advances expanded by 348.9 million yen, investment holdings were again down by 83 million yen.

Falling Imports

The downward trend in imports still continues. Imports in February, valued at 187.4 million yen, were 5 million yen (2.6 per cent.) less than in January and 115 million yen (38 per cent.) less than in February, 1937. The decrease in imports was mainly accounted for by the two textile materials cotton and wool, which between them fell by over 100 million yen.

February's exports, valued at 181.6 million yen, were 19 million yen (11.7 per cent.) more than in January, but 44 million yen (19.5 per cent.) less than in February, 1937. The decline in exports was distributed over all classes of goods, but the contraction was more marked in minor exports than in major ones.

The Bank of Japan's index of wholesale prices for February registered a further rise of 1.6 per cent. during the month. On February 15th the average level of the retail prices of commodities, including food, clothing, fuel and light, and miscellaneous, was 3.14 per cent. higher than a month before.

Letter to the Editor

New Model Army

TO THE EDITOR OF THE ECONOMIST

SIR,—On March 19th, in your leader (the second) under the title of "New Model Army," you imply that the abolition of the Cardwell system is *res judicata*, only not announced officially because India has something to say; adding that this very fact is another argument against it. I have no source of information but those open to other men in the street, and do not imagine that a Ministerial decision unannounced has therefore not been reached; but my study of the new Army Estimates, Mr Hore-Belisha's Memorandum thereon, his speech introducing them and that of Mr Amery, the chief survivor of the supporters of Mr Arnold-Forster's alternative scheme, does not suggest that the matter is already closed. For the Minister responsible for our military forces, it is not sufficient to show awareness of things he could wish altered; he must construct an alternative scheme, with all its implications foreseen and estimated from every point of view before it is too late to go back; and particularly he must be sure that the defects he now finds are really consequences of the scheme he attacks and will vanish on its abolition. Have all these preliminaries to prudent swapping of horses in mid-stream been fulfilled? At all events nothing has been published to show it.

Two tasks are in hand: to remedy the immediate results of ten years' neglect of the Army after the expiry of the ten years' peace allotted to the getting of it once more in order; and to discover (if possible) a system better suited than Cardwell's to the present state of the world. As compared with his predecessor Haldane, the Secretary of State is *felix opportunitate* in having apparently unlimited credits in the Treasury book of futurities, instead of being compelled by his own party to begin by saving some millions out of total Army Estimates of under thirty. His emergency measures are not here in question; re-enlistment of Army Reservists for pension may be unavoidable to-day, but not even Mr Amery (I imagine) regards it as anything but a *pis aller*, not to be taken as prophetic of the New Model. Mr Hore-Belisha's first approach to the permanent problem is to ask whether a commander with complete control of our whole Regular Army and surveying the whole Imperial field would dispose his forces just as at present and his answer is "No." That is a wise question for the General Staff to have asked, and answered; but it is only a preliminary, not yet related to the realities which obtrude themselves even in war; and that General Staff officer helps his commander most who takes inevitable limitations into account at the very beginning of his planning. The Secretary of State's commander with complete control (as of course he perfectly well knows) does not and cannot exist without mighty changes in the fundamentals of our Constitution which no Minister, or even Cabinet, can alter at will. It is unnecessary to repeat here the outlines of what the Cardwell system really is, given in my letter published by you on December 18th last; but let us take a few examples of the "rigidities" of which Mr Hore-Belisha has complained but (unlike certain reformers) has *not* (as I read him) laid at the door of Cardwell.

(1) "The number of units to be stationed in India is predetermined." Well, not absolutely; and not at all by Cardwell—witness the fact that 25 per cent. of the 1914 Regular garrison of India, including seven battalions and four cavalry regiments, have since left permanently; and any further withdrawal, permissible on grounds of safety, to Mr Amery's "somewhere east of Suez" can be made without Cardwell turning a hair. Only, the British Exchequer would have to find millions to maintain them, or see them disbanded. The rigid factors are the pre-Cardwell decisions that India's external and internal security shall be guaranteed by the presence of units of the British Regular Army one and indivisible; and that India shall pay the cost, which necessarily brings in the Governments with which India, in her progress towards Dominion status, is provided. The Cardwell system merely shows how, under these conditions, the necessary British Army personnel can be supplied to India with most advantage to all concerned. It does *not* lay down that there must be "one of every pair of battalions at the home depot and the other in India," nor even that for each battalion abroad there must be one at home, apart from the

depôt), but only that the best value in men and money will be obtained if there can be at least one home battalion for every one abroad; and this optimum was attained for the first time by Haldane in 1909.

(2) *Second Rigidity*: that the new rates of personnel emolument which the Secretary of State announced on March 10th as to be provided by Supplementary Estimate, seriously affect Indian finances; and we have not heard the last of this, political conditions being as they are. But Cardwell did not concern himself with pay-codes, and has no more to do with it than has any other system by which soldiers of the British Regular Army can be ordered to India, e.g., straight from an Amery-Forster depot, without ever seeing a battalion; for it is not practicable to pay men of one and the same Army much less in India than at home. That really would separate the two Armies, however we might play about with uniforms and battle honours on the Colours; and heaven help the Adjutant-General who undertakes to keep the British units in India at full strength under such conditions! The natural development would be that India should herself undertake the recruiting at home for the units with her inferior emoluments, and that would be John Company back full-circle, with foredoomed failure. But there is one other alternative to which a note in the new Estimates seems to point as a coming possibility; and that brings us to

(3) *Third Rigidity*: the limitation of our re-armament of British troops outside India by the pace at which the Indian Government agrees to proceed. India has always repaid us for the money spent from our Estimates in providing drafts for the units in India, and, in 1933, after a long wrangle, we agreed to pay, *per contra*, an annual sum representing the rental value of India as a training ground for British troops and also our contingent claim to draw on those troops, in emergency, for service elsewhere (in addition to paying all

current charges when troops are actually so directed). The broad result is that the drafting charge against India is rather more than wiped out by our payment of £1½ millions a year, which is charged not on Army but on Civil Votes. A note in Army Estimates, 1938, records that this payment is increased by £200,000, the first instalment of £600,000 to be paid to India towards the capital cost of mechanising certain British units there, such charges having always been paid hitherto by India. There lives no such dangerous enemy of the British Exchequer as the British public servant, military or civil, in India or elsewhere, once placed in a position to influence the incidence of charges between the London exchequer and his own; and it must be expected that everybody in India will push to exploit this breach in our line to the fullest possible extent. If, moreover, India by Fabian tactics succeeds in extending the precedent to the new pay-code—I cannot pretend to assess the practical value of the Viceroy's reserved powers in military finance—the results to the British taxpayer may be calamitous. But whatever may happen, it will not be the fault of Cardwell, nor would the scattering of his ashes prevent it, even if accompanied by the posthumous rehabilitation of John Company.

There are other important questions on which the Secretary of State has not disclosed the views of his new military colleagues, such as the relative fighting values of men of the

"Old Contemptibles" (Cardwell) stamp and of the products of a depot-trained long-service system; the size and fighting quality of the Army Reserve produced by the home-staying short-service sections of the Establishment; and the effect, on Army Estimates of the future, when next the cold fit supervenes, of pensioning for life, at about forty, largely increased numbers of long-service men, with physique and expectation of life altogether different from the old pre-Cardwell hard-drinkers. In my time, when pensions were definitely out of fashion, the growth of the pension votes (from causes many decades past) was still a nightmare to me, eating up the money available for fighting men at the rate of a battalion every year, but nobody cared; credit was got at once for any increased liberality, while the full bill would not arrive till long after the Minister, the Members of Parliament and even the civil servants had passed on. Any hope that, by holding fast to a fixed total for Army Estimates, the War Office could be made to pay for its own extravagances in this line was, of course, built on sand.

With all this ground to be re-surveyed, in spite of your last leader, I cling to the hope that the Army Council has yet time for fully informed and dispassionate forethought.

I am, etc.,

Cookham,
April 2nd.

C. HARRIS.

Books and Publications

The Prisoner Speaks

It really needs two people to review this book,* one who knows something of prisons and another who understands insurance. The reason is that Mr Wicks, the author, is an enthusiast for certain insurance reforms and, when he sits down to write about his prison life, he cannot get his mind away from insurance or from the scandals which, in his view, are prevalent among insurance companies. He even finishes the book by reproducing a memorandum which he wrote some years ago on the departmental segregation of insurance assets.

It is a pity, too, that Mr Wicks is a very credulous person and believes all sorts of things which the reader will find it hard to swallow. He believed, for example, that on the first morning of his imprisonment the governor or chaplain would realise that an innocent man had been found guilty and take steps to secure his immediate release. He believes that one of the visitors to the prison, said to be valet to a Cabinet Minister, disclosed to the prisoners he visited Budget secrets before the Budget speech, so that Wormwood Scrubs knew all about the Budget before the House of Commons.

He believes that his food in prison was tampered with, and hints, broadly enough, that an attempt was made to poison him. He believes that among the articles which a well-to-do prisoner can get smuggled in by corrupt officers is an

irregular supply of whisky. He believes that nearly every afternoon an ex-prisoner under various names and disguises visited the prison and took betting orders from customers inside the prison.

He is most credulous of all where politics are concerned, and he attaches extraordinary importance to his own position in the world of international affairs. One of his fellow prisoners was a man intimately associated with Mr Wicks' enemies and actively engaged before his imprisonment in anti-British propaganda and espionage. He and Mr Wicks had long talks together, growing more and more intimate, until the man at last disclosed an anti-British plot of great danger hatched in Paris. Bursting with the importance of this news, Mr Wicks applied to the Governor for permission to communicate either with a certain high officer of State or with an M.P. about the grave danger in which our country stood. The Governor was unsympathetic, and asked sternly whether, contrary to regulations, Mr Wicks had written down an address in Paris which was the headquarters of the anti-British plot.

But for the underlying tragedy, it would be a comic scene. The prisoner, urgent in his demand to be allowed to save his country from the plots that he had discovered, all eagerness, patriotism and enthusiasm. The Governor, official, correct, humourless, desiccated, his mind concentrated on the beloved regulations of the Prison Commissioners, bothered only by the thought that, contrary to regulations, one prisoner might have written down something that another prisoner had told him.

All this credulity of Mr Wicks detracts greatly from the value of the book. A prison is often full of rumours which are not true and with every repetition get further from the truth, until even the original lie becomes itself unrecognisable. Mr Wicks has been far too ready to take them at their nth value, and the only real worth of the book lies in the picture it gives of the mind of an honest if mistaken man sentenced, as he genuinely believed, unjustly.

THE BUSINESS WORLD

A Coal-Tar Centenary

THE centenary has just been celebrated of the birth of Sir William Henry Perkin, who, as a boy of eighteen, discovered the aniline purple and laid the foundation of the coal-tar colour industry. The circumstances of this epoch-making discovery are worth recalling. On the suggestion of Albert, Prince Consort, a certain Von Hofmann, a brilliant student under the great Liebig at Giessen in Germany, then the centre of the most famous chemical school in the world, consented in 1845 to become the first director of the London Royal College of Chemistry. Professor Hofmann was profoundly interested in coal-tar research, and it was in his laboratory, in 1856, that the London-born William Perkin discovered the aniline process, by treating aniline, a product of coal-tar, with bichromate of potash and sulphuric acid. In the following year Perkin started to manufacture the dye commercially at Greenford Green, near Harrow. Although the coal-tar industry was thus cradled in England, it attained maturity in Germany; for the development of subsequent discoveries on a commercial scale gave Germany a virtual monopoly of the manufacture of synthetic dyestuffs. Great Britain herself made little headway until after the introduction of the Import Restrictions Act of 1921, which prohibited imports of foreign dyes except under licence. But between 1922 and 1937, Britain's output of dyestuffs rose from 10,640 to 28,243 tons.

Owing to the manifold uses of coal-tar products, the industry as a whole has risen to a position of considerable importance. In earlier days, when bee-hive ovens were widely used for the manufacture of metallurgical coke, coal-tar was a waste product. Subsequently, it was found that this by-product of the manufacture of gas or coke was a veritable store of chemical riches. From it are derived well over 1,500 finished products. These include the whole series of brilliant synthetic dyes, of which indigo blue and Turkey Red are familiar examples. Ammonia, whose compounds are invaluable in improving the fertility of the soil, is another by-product of the industry. Aspirin, novocaine (the most successful substitute for cocaine), salvarsan (the specific against syphilis), and atoxyl (for the treatment of sleeping sickness) are only a few of the well-known pharmaceutical products procured from coal-tar. But scientific progress in the utilisation of coal-tar has also led to the discovery of new means of destruction. "T.N.T.," lyddite and tear gas are well-known examples.

Coal-tar is obtained by the carbonisation of bituminous coal in horizontal retorts at high temperatures (900°-1200° C.), where the primary object is the production of coal-gas or coke. The yield and composition of the tar depend on the class of coal carbonised, the type of retort setting used, the temperature at which the coal is heated and the way in which heat is applied. The average yield of tar is 10 gallons per ton of coal carbonised, or 5 per cent. of its weight. As coal-tar is a by-product and, consequently, is not produced for its own sake, its output varies, in a large measure, with the demand for iron and steel and for "town" gas. World production of coal-tar in recent years has been estimated as follows by *Die Chemische Industrie*:—

WORLD PRODUCTION OF CRUDE COAL TAR

(In millions of metric tons)

	From coke ovens	Total
1929	6.5	9.0
1934	4.5	7.5
1935	5.25	8.0
1936	6.25	over 9.0

As is to be expected, the United States is the leading producer, with an output of 2,100,000 tons in 1935. In the

same year Britain's output was 1,840,000 tons, compared with 1,450,000 tons produced in Germany, 529,000 tons in France, 516,000 tons in the U.S.S.R., 170,000 tons in Belgium, 167,000 tons in Japan, 140,000 tons in Holland and 100,000 tons in Italy.

The list of derivatives of coal-tar is almost unending. Crude tar itself is used as an anti-corrosive paint. In hydrogenation, as practised in this country at Billingham, it yields petrol. "Fractions" derived from it yield other useful materials, such as motor spirit, fuels for Diesel and oil-burning engines, plastics, disinfectants, sheep dips and timber preservatives. Pitch, the residue after distillation, is used as a binder in the manufacture of briquettes. The products of coal-tar include insecticides, perfumes, photographic chemicals, petrol, rubber accelerators, asphalt, varnish and many others. Moreover, the usefulness of coal-tar has by no means been fully explored even now.

Coal-tar colours are derived from the leading refined products—benzene, toluene, naphthalene, phenol and anthracene—after further treatment. Naphtha is the basic material in the manufacture of intermediate products for the dyestuffs industry. From anthracene arises the whole range of vat colours and many mordant dyes. Benzene, discovered by Faraday in 1825, together with nitric and sulphuric acids, furnishes the almond-smelling oil nitrobenzene, from which is made aniline, the base of a series of brilliant dyes. Indigo blue was first prepared by Baeyer in 1870, and was later extensively and cheaply produced from benzene. It has, incidentally, ruined the plantation industry in India. Similarly, the production of alizarine dye (or Turkey Red) from anthracene has decimated the acreage under the madder plant in France and other parts of Europe.

According to the *Industrial Chemist* the world's production of synthetic dyes has risen from 215,500 metric tons in 1934 to 243,000 tons in 1936. Britain's output in recent years has been as follows:—

BRITISH OUTPUT OF SYNTHETIC DYES

Year	Tons (2,240 lb.)	Year	Tons (2,240 lb.)
1913	4,069	1932	22,045
1926	13,439	1933	23,636
1929	24,911	1934	23,628
1930	19,012	1935	26,211
1931	21,420	1936	27,332
		1937	28,243

British exports of synthetic dyes in 1937 totalled 5,728 tons, against 5,173 tons in 1936. According to the *Journal of the Society of Dyes and Colourists* the estimated output of synthetic dyes by the leading producers in 1935 and 1936 has been as follows: Germany, 73,828 tons (76,752 in 1935); the United States, 53,229 tons (44,752); Great Britain, 27,332 tons (26,211); Japan, 19,065 tons (19,680); U.S.S.R., 25,594 tons (24,600); France, 12,210 tons (10,480); and Switzerland, 7,503 tons (6,681).

Coal-tar has thus provided mankind with many useful products. It has given man antiseptics to sooth and heal his wounds; and it has also, unfortunately, given him high explosives and tear gas. Nor can the manufacture of destructive products be easily restricted by international agreement; for many of these products also serve commercial purposes. For example, high explosives derived from coal-tar may be used either in the mining of minerals or in the destruction of life. But for civilisation's sake we may hope and pray that the wonderful array of coal-tar products, which a British chemist was among the first to reveal to the world, will be used in the service and not in the destruction of humanity.

Indian Banking Trends

THE issue of the annual report of the Reserve Bank of India, followed by the annual meetings of several of the exchange banks, offers a convenient opportunity to review banking conditions in India and the Far East. Like other primary producing countries, India has begun recently to feel the effects of the world trade recession, and business in China has been seriously affected by the Sino-Japanese war. While the exchange bank chairmen, on the whole, gave their shareholders a reassuring account of 1937, they were unable to speak with certainty of the future.

On the Chinese outlook, in particular, their language was very guarded. Mr d'Angers Willis, for example, told the shareholders of the Chartered Bank of India, Australia and China that so far the bank's material losses had been slight. He added the warning, however, that the bank could scarcely expect to be able to work profitably in China and Japan this year. Sir Charles Innes, at the Mercantile Bank of India meeting, equally warned his shareholders that trade in China could not recover until the war ended. Mr Miskin, at the Hongkong and Shanghai Banking Corporation, similarly called attention to the widespread dislocation caused by the war. The chairmen rightly laid stress on China's great recuperative powers; but she is, in fact, suffering more serious and widespread damage than in any earlier war since the opening of the Treaty Ports. Nor can the war's duration or outcome be confidently predicted.

In India the political outlook is infinitely more peaceful. The new constitution is working, and on the whole the Provincial Governments are settling down to their task. India is, however, undoubtedly feeling the first effects of the world trade recession. Her exports have recently begun to fall away, both in volume and in value, but the purchasing power created by increased exports during prosperous months has continued to be reflected in larger imports. For the moment, therefore, India's balance of trade has turned against her. The same phenomenon is apparent in other primary producing countries, like Australia and Argentina.

Nevertheless, as the following table shows, the aggregate trade turnover in 1937 was better than that of earlier years:—

Monthly Average	(Million Rupees)				
	Goods			Treasure Net Imports (+) or Exports (—)	
	Imports	Exports	Export surplus	Silver	Gold
1929	208.6	268.8	+60.2	+6.1	+14.9
1933	95.6	120.4	+24.8	—5.1	—41.8
1934	104.4	123.6	+19.2	—2.8	—49.7
1935	111.9	130.9	+19.0	—7.6	—36.0
1936	101.9	150.4	+48.5	+12.6	—26.6
1937	132.8	168.5	+35.7	+4.9	—13.6
1937 (Jan.) ..	113.8	206.6	+72.8	+16.8	—22.6
1938 (Jan.) ..	150.7	136.5	—14.2*	†	†

* Import surplus. † Figures not available.

The internal price-level has moved in much the same way. The average level of wholesale prices for the complete year 1937 was higher than that of previous years. Even the January, 1938, index was just higher than that of the preceding January. Since the peak was touched last August, however, there has been an appreciable decline:—

WHOLESALE PRICES (CALCUTTA)			
January, 1929.....	100.0	January, 1937.....	69.5
" 1933.....	61.7	August, 1937.....	74.5
" 1936.....	64.5	January, 1938.....	70.9
" 1937.....	72.3		

The reversal of the trend both of external trade and of internal prices has had its inevitable effect upon India's banking position. This is suggested, in part, by the

following summary of recent returns of the Reserve Bank of India:—

Middle of	(Million Rupees)				
	March, 1937	June, 1937	Sept., 1937	Dec., 1937	March, 1938
Assets					
Gold	444	444	444	444	444
Rupee coin	620	556	614	625	629
Balances abroad	267	227	130	35	91
Sterling securities*	783	803	803	803	788
Rupee securities*	234	274	274	274	274
Investments	76	72	77	63	67
Liabilities					
Note circulation...	1,935	1,890	1,811	1,820	1,890
Deposits: Govt. ..	146	110	131	91	158
Banks ..	239	271	294	261	149

* Held against the note issue. The rupee securities are those of the Indian Government.

These returns show a substantial fall during the year in the Reserve Bank's balances abroad, and also in bankers' deposits with the Reserve Bank. The report points out that owing to the active state of trade and the consequent demand for credit at the beginning of 1937, the Reserve Bank thought it advisable to ease the situation by increasing its weekly purchases of sterling. Later in the year came the recession and the gradual shift in the trade balance. The latter factor was reinforced during the year by a shrinkage in gold exports below the level of 1936. Thus, the surplus sterling available for sale to the Reserve Bank gradually diminished.

Prima facie, there is a certain parallel between India and Australia. Both are primary producing countries, and both are members of the sterling area. The banking system of both has at its base what in Australia are called "London funds," whose Indian counter-part is the Reserve Bank's balances abroad. In both countries there seems to be a direct connection between the size of London funds and the supply of bank cash at home. Finally, in both a downward turn of the trade cycle involves at least a temporary diminution in London funds; for exports at once shrink, while imports continue to repeat the last previous upward move of the trade curve.

Here the parallel ceases, for India is a country of complex economic structure, and bankers' balances with the Reserve Bank are an uncertain and unsatisfactory indication of the total supply of credits. Certainly there is no stringency in India to-day. As Mr Langford Tanner explained at the National Bank of India meeting, the exchange banks have had, all the year, resources invested in cash or securities, which might be used in financing trade. In fact, as we pointed out a year ago, the channels of the supply of credit from the Reserve Bank to the indigenous banks and thence to the local shroffs and village bankers, are over-long and tortuous. While credit may be cheap in the centres of finance, it has become dear by the time it has reached the up-country farmer. So far, only the scheduled banks hold balances with the Reserve Bank, but last August the Reserve Bank drafted a scheme for the linking up of all private bankers directly with the Reserve Bank. Unfortunately, the indigenous bankers indicated that the conditions inherent to the scheme did not appeal to them, and so no further progress has been made. The problem of opening up the channels of credit all over India thus remain unsolved.

Meanwhile, for the exchange banks 1937 was a better year than might have been expected, mainly because these resources and their risks are spread over many countries. As their chairmen, however, have been careful to indicate, the current year may be somewhat less favourable. There is no reason to fear impairment of their resources, but some reason to expect a certain shrinkage in earnings. Such a shrinkage would represent the banks' share of the total bill to be paid for trade recession and Japanese military ambitions.

American Mutual Funds

THE Mutual Fund, or Mutual Investment Company, is the latest and currently most popular embodiment which has been given to the investment trust idea in the United States. The general management investment trust has never recovered from the disasters that overtook it in the great depression and is still under a cloud of official and popular suspicion. The fixed trust had a merry but a brief life in the United States. The mutual fund is the third variety, and the only one of the three which continues to attract sums of fresh capital from the public.

The mutual fund has attracted the attention of Wall Street and Washington only during the last few years. But in Boston, its home town, it has long been familiar. There are many similarities between the growth of the mutual fund in Boston and that of the investment trust in Edinburgh. In both cases the idea originated in the existence of large sums of capital administered in a fiduciary capacity by lawyers. The Edinburgh Writer to the Signet developed into the investment trust manager. The Boston attorney developed into the professional trustee, an occupation unique to that city. The Boston trustee, who devoted his whole time to the fiduciary management of other people's money, was among the first to sponsor the living trust, i.e. a trust set up during the lifetime of the donor. And from the living trust to the mutual fund is only a step, since the earliest mutual funds were little more than amalgamations of living trusts.

In the last two years, the mutual investment company has been given powerful assistance by the American Government. The Revenue Act of 1936 gave it special tax exemptions, which can be interpreted as a tacit recommendation to the public. Ordinary investment trusts are subjected to taxation on their incomes, in addition to any tax that may be payable by their shareholders on dividends received. This double taxation would be objectionable enough in itself, but when it is levied on realised capital gains in addition to income, and when it is supplemented by the Undistributed Profits Tax, it can add up to a very heavy burden. Mutual investment companies, however, are allowed to deduct from their income for tax purposes all dividends paid to shareholders, and they thus virtually escape all double taxation. This provision lends particular importance to the legal definition of a mutual investment company. The Act lays down eight requirements which such a company must meet:—

1. It must be organised for the purpose, and substantially all its business must consist of investing in stocks and securities.
2. At least 95 per cent. of its gross income must be derived from dividends, interest and gains from sale of securities.
3. Not more than 30 per cent. of its gross income must be derived from capital gains on securities held for less than six months.
4. At least 90 per cent. of its net income must be distributed to its shareholders as taxable dividends.
5. Its shareholders must upon reasonable notice be entitled to redemption of their stock for their proportionate interest in the corporation's properties, or the cash equivalent thereof, less a discount of not more than 3 per cent.
6. Not more than 5 per cent. of the gross assets of the company taken at cost may be invested in the securities of any one issuer, with the exception of the United States.
7. The company must not own more than 10 per cent. of the capital of any other corporation.
8. It must not have outstanding bonds or indebtedness in excess of 10 per cent. of its gross assets.

These requirements adequately define the mutual investment company. It is, in fact, a mutual investment pool, with the greatest simplicity on both sides of its balance sheet. Its liabilities are all in shares of one variety; its assets are a widely diversified portfolio of investments. In addition, there is the element of redemption, by which

any participant in the pool can withdraw at a valuation at any moment. It is true that the terms of the Act compel a mutual trust to distribute its realised capital profits, but this is in the American tradition both of investment and of taxation, and it will be seen that requirement (3) dissuades a mutual trust from paying too much attention to short-term market movements.

The table overleaf gives some particulars of five selected mutual trusts, including the three largest, and it will be seen how rapid has been their growth in the last few years. In this period the previously existing trusts have grown rapidly, new ones have been founded, and companies which were previously general investment trusts have changed themselves into mutual form to take advantage both of public favour and of the Revenue Act. Most of the older mutual trusts were entirely independent of any investment banking firms. This is no longer true of some of the newcomers, and it remains to be seen whether the disadvantages which have flowed from the close connections between general investment trusts and brokerage houses will also be experienced in the new medium.

On the whole, however, the mutual fund is an admirable medium of investment for the small man. It provides him with a means of investing in industrial equity securities, but with a wide spread of his risks. The provision for withdrawing capital on demand compels the managers to limit their investments to securities that can easily be realised. In practice, much the largest part of the funds of these companies is invested in the best-known industrial equities, with a small admixture of bonds and a varying proportion of cash. In short, the portfolio of such a company is invested in exactly the same sort of securities as the "small man" would himself choose; he is not, as in the usual investment trust, entrusting his money for investment in securities whose names and merits are equally unfamiliar.

"I parted with £1,600, including all my securities."

Widows with a little capital and no experience in financial matters are sometimes easy prey.

The tale is always the same. The tempting bait of high interest yields is swallowed... glowing promises are followed by bitter disillusionment and loss of capital. Tragedy indeed. For the protection of your wife, should you leave her a widow, choose the 'Safeguard' plan. None better. It provides a guaranteed income of £3, £6 or £9 per week according to her needs. It will free her from investment worries and shield her from traps laid for the unwary.

The 'SAFEGUARD' PLAN

provides a non-fluctuating income of £3, £6 or £9 per week for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged that the cash sums are payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

to him. The same factor of withdrawability also provides a most compelling sanction against bad management. In fact, the quality of the management of the mutual funds, due, if to nothing else, to the caution that is forced upon the managers by the nature of the funds, has been above the average. The following table compares the movements in the liquidating values of the shares of five mutual funds with the movements of the Standard Statistics index of 50 common stocks. The comparison, however, is not strictly fair to the mutual funds, since, although their liquidating values have been adjusted for stock dividends, no allowance has been made for the large amounts of capital returned to shareholders in the form of realised profits on sale of securities. In the circumstances, the performance of all the funds is good, and of some of them outstandingly so:—

PERFORMANCE OF MUTUAL FUNDS

	Dec. 31, 1928, to Dec. 31, 1932	Dec. 31, 1932, to Dec. 31, 1936	Dec. 31, 1928, to Dec. 31, 1936	Dec. 31, 1936, to Dec. 31, 1937
<i>Standard Statistics 50-stock index</i>	— 75.1	+ 218.5	— 20.8	— 24.0
<i>Massachusetts Investors' Trust</i>	— 71.5	+ 102.9	— 42.2	— 35.4
<i>Incorporated Investors</i>	— 73.1	+ 136.0	— 36.5	— 38.3
<i>State Street</i>	— 55.4	+ 148.2	+ 10.8	— 35.4
<i>Broad Street</i>	— 46.6(a)	+ 131.2	+ 23.5(b)	— 38.9
<i>Loomis-Sayles</i>	— 16.8(c)	+ 135.7	+ 96.2(d)	— 11.8(e)

(a) Dec. 31, 1929, to Dec. 31, 1932; change in Standard Statistics in same period was — 69.5 per cent. (b) From Dec. 31, 1929; change in Standard Statistics — 2.9 per cent. (c) From Dec. 31, 1930; change in Standard Statistics — 56.5 per cent. (d) From Dec. 31, 1930; change in Standard Statistics + 38.7 per cent. (e) To September 30, 1937; change in Standard Statistics — 18.1 per cent.

Finally, the mutual fund provides for the small investor the great advantage of immediate marketability. It is true that a small discount is charged, but this is little more than the cost of dealing on the Stock Exchange.

These are powerful advantages, and it is little wonder that the small American investor has shown a more constant affection for the mutual fund than for either of its two predecessors in the investment trust field. This has been demonstrated during the past year. In the last quarter of 1937, when the Stock Exchange was falling rapidly, many of the mutual investment companies made very large sales of their shares to the public. The mutual trust has thus passed through a period of declining security values without losing its popularity. Figures showing the development of the mutual funds mentioned above, at various dates since December, 1937, appear in the table at the head of the next column.

There is thus some evidence for the belief that the mutual fund meets a real need. It has, of course, many points of similarity to the flexible unit trusts which have

	Net Assets (\$000)	Net Assets per Share*	No. of Shares*	Yield† %
<i>Massachusetts Investors' Trust</i>				
December 31, 1928	10,941	50.01	219	4.7

* Adjusted for stock dividends. † Calculated on dividends paid in twelve months preceding date. § Limit of shares to be issued to public reached. ** Nine months.

been the latest development of the unit trust movement in Great Britain. There is still, however, a considerable aura of fixity hanging over the British flexible unit trusts, whereas the American mutual funds change their investments with much greater frequency. The Massachusetts Investors' Trust, for example, whose portfolio consisted on December 31st last of 111 different securities, had either bought or sold 39 different issues in the preceding three months.

The mutual funds in their present enlarged form are still young and comparatively untried. It is not, however, too early to say that they provide a form of investment for the small saver which more exactly fits his requirements with fewer adventitious complications than any previous American adventure in the investment trust field. Restrictions of company law could prevent the exact application of the pattern in Great Britain. But when confidence returns sufficiently to turn the mind of the markets once more to the problem of providing satisfactory vehicles of investment for small sums, there may be much that could be learned in London from the experience of the "Boston trusts."

Finance and Banking

French Financial Proposals.—On Monday last, M. Blum's new proposals (which are the subject of a leading article on page 75) were outlined in an annexe to the Special Powers Bill, which in itself simply authorises the Government to legislate by decree. The urgency of the present financial position needs no emphasis. The Government has nearly reached the limit of its borrowing powers at the Bank of France, and has had to abandon as impracticable the idea of a National Defence Loan. During the present year, the Government is faced with the following liabilities:—

	Frs. milliards
Ordinary budget deficit	4.0
Extraordinary defence expenditure	15.9
Other extraordinary expenditure	6.8
Railway deficit	8.7
Sundries	1.3
Debt maturities	9.9
Total	46.6

Even this total of Frs. 46,600 millions may not tell the whole story. M. Blum proposes the revaluation of the

Banque de France's gold from a basis of about Frs. 112 to the pound to one approximating to the present value of the franc, whatever that may be decided to be. This may yield up to Frs. 20,000 millions, according to the new value placed upon the franc. Then it is proposed to suspend sinking fund operations for two years, though the text leaves it obscure whether the suspension applies to funds provided for out of the Caisse d'Amortisation revenues. Rentes are to be taxed; there is to be a 4 per cent. capital levy on all capital over a certain limit, and bearer shares on the Paris Bourse are to be replaced by registered shares in order to minimise tax evasion. The special tax on equities is to be reduced from 24 to 18 per cent., but industries' profits from the re-armament boom are to be asked for a special National Defence Contribution.

While many of the above proposals are calculated to arouse the wrath of the tax-payer, especially in the agricultural districts, other proposals of a more specifically

monetary character are equally drastic. Internally it is proposed that contractors to the Government will be authorised to draw bills on the Government for money due to them, and it is elsewhere proposed that the bill of exchange shall be legal tender for all commercial dealings. If these bills are to be of any use when drawn, they must be made ultimately rediscountable at the Banque de France. In that event, France will be adopting something like the Nazi system of internal finance, without the Nazi safeguards of complete control over prices, wages and exchange dealings. It is, however, proposed to centralise all exchange dealings in the hands of the Banque de France, which will only sell exchange against documents showing that the exchange is wanted for a legitimate purpose. It is further suggested that the French banks should convert into francs foreign currency balances held on behalf of their customers, and should invest those francs in Treasury bonds. The idea is mooted that this conversion should be made by using the mechanism of the forward market. But even if the French banks bought sterling forward against their spot sales, they would in turn have to re-sell their Treasury bonds in order to cover their forward purchases. Or is the idea that the forward purchase should be renewed indefinitely through successive "swap" operations? None of these monetary proposals carries great conviction, and cumulatively they give the impression of a perceptible move towards "control" in the French economy.

Britain and the French Proposals.—If the French banks were to convert their sterling balances in the manner suggested in the preceding Note, would the London money market be upset? The argument is that the sterling, consisting of balances with the British joint-stock banks and accepting houses, will be bought by the Banque de France, which will transfer it to its own balance at the Bank of England. There will thus be a substantial change-over of funds from bankers' deposits to other deposits at the Bank of England, and a narrowing of the British credit base. Inquiries in London suggest that little anxiety is felt, partly because no single British house is carrying very much money of this kind. The British authorities, moreover, would have little difficulty in rectifying such a situation if it arose. If the Banque de France desired to leave its sterling lying idle, it would be invited to buy gold from the British Exchange Equalisation Account. The money paid for the gold would be used by the Exchange Account in taking over Treasury bills from the banking system, and thus it would return from other deposits to bankers' deposits. Alternative methods of rectification could no doubt be devised. It will be time to consider these points, however, if and when the proposals take effect.

Historic Reichsbank Return.—The weekly return of the Reichsbank for the week to March 31st is the first to bear the influence of the absorption by that institution of the Austrian National Bank. This influence is most evident in the note circulation, which has risen during the week by Rm. 813.7 millions to a new high record level of Rm. 5,621.6 millions. The holding of bills of exchange and cheques has risen correspondingly by Rm. 980.1 millions to Rm. 5,901.9 millions. Part of this expansion is accounted for by the incidence of the end of the month. As the expansion in the note circulation in the corresponding week of last year amounted, however, to Rm. 493.1 millions only, the latest return clearly bears evidence of the gradual transition from schilling to reichsmark paper currency in the new Austrian province. The return, incidentally, shows no material change in the gold holding. Either, therefore, the transfer of the Austrian National Bank's reserve has not yet been effected or the new metallic and *devisen* reserve has gone to swell the hidden reserves of the Reich. They may, for example, have been included in the omnibus item "other assets," which, according to the latest return, rose by Rm. 432.1 millions during the last week of March. Such a movement is without precedent.

Federal Reserve Board Report.—The annual report of the Federal Reserve Board for 1937 has just appeared. Cabled summaries of its contents suggest that its compilers are seriously concerned with the trend of business conditions in the United States—as, indeed, they may well be. The main objective of Federal Reserve policy during the year is stated to have been the provision of an adequate supply of cheap credit for the genuine needs of business. At the same time, care has been taken to control the volume of member bank reserves in such a way as to avoid all possibility of a dangerous inflationary expansion of credit. When the business situation took a sudden turn for the worse, in the autumn of last year, the Federal Reserve authorities consciously eased the regulations regarding margins on brokers' loans. The report, however, closes on a guarded *non possumus*. It abstains altogether from making suggestions as to the measures which should be taken to counter the business recession; for they would lead the Federal Reserve Board into spheres strictly beyond its responsibilities. The report merely makes the significant comment that monetary control is in itself insufficient to maintain economic equilibrium. In so far as monetary control can be effective, however, it is a weapon which lies ready to hand. The report states that the Federal Reserve authorities have general authorisation to buy or sell \$300 millions of short-term Treasury securities in the open market if necessary, with a view to helping business.

Bank of Scotland.—The balance-sheet of this institution for February 28, 1938, shows that the resources of the bank have been well maintained. Deposits which a year ago dropped to £37,636,000, have now recovered to £39,298,000, or nearly to their level of £39.5 millions in February, 1936. Acceptances have risen since last year from £2,452,000 to £3,713,000. On the other hand, advances have risen only from £9,800,000 to £9,868,000, while discounts (excluding Treasury bills) have fallen from £251,000 to £233,000. Since those Scottish bank balance-sheets which were issued last autumn continued to show an increase in advances, the Bank of Scotland's figures may suggest a moderate check to the movement as a whole. The Bank's cash items have risen since February, 1937, from £5,323,000 to £5,627,000 while Treasury bills have increased from £600,000 to £650,000, and investments from £25,677,000 to £26,112,000. Net profits have fallen from £318,000 to £313,000, but this may well be due to the heavier incidence of taxation, including the National Defence Contribution. The new capital issued last December is beginning to rank for dividend. The whole of the paid-up capital of £1,600,000 was at the same time converted into £2,400,000 fully-paid stock by the transfer of £800,000 from reserves. To compensate for this change

the rate of dividend has been reduced from 18 to 12 per cent., but the amount distributed remains unchanged.

* * *

Chinese Exchange Allotments.—According to a cable received by the Chinese Embassy in London at the beginning of this week, the Central Bank is to base its foreign exchange allotments upon past experience of legitimate requirements of foreign exchange in excess of supplies available in the market. It is stated that already the Central Bank is making generous allotments; so much so that the first two weekly allotments for the whole of China are nearly as much as the import surplus for a whole month, as indicated by the January and February trade returns. Even at Shanghai, where recently the temporary breakdown of the foreign exchange agreement between the banks was attributed to a shortage of

supplies, the Central Bank claimed that it released during this fortnight more exchange than would have been needed to cover Shanghai's import surplus for the first two months of the year. Also in China as a whole the official allotments under the new scheme were in excess of the Central Bank's actual sales under the relatively free regime prevailing until a short time ago. A final point made is that the Government's foreign exchange requirements are now being provided for separately, instead of being purchased in the open market. This week the rate on Shanghai has been rather firmer, though it is now no better than 1s. 1d., against 1s. 2d. before the breakdown of the Shanghai agreement. Obviously, the Chinese authorities are anxious, as far as possible, to maintain a generous supply of exchange. Whether, in their present plight, they can continue to be generous indefinitely is another matter.

MONEY MARKET NOTES

Foreign Exchanges

THE market in francs this week has been nervous and narrow, and it only took a small order to affect the spot rate either way. This has made it very difficult to find any connection between fluctuations in the rate and passing events in Paris. Early in the week the spot rate for sterling was bid down from Frs. 161½ to Frs. 158½. It subsequently reacted to Frs. 162, but on Thursday afternoon, when the Senate Finance Committee rejected M. Blum's proposals, francs were bid again. There was a fair turnover in dollars, but the rate hovered only between \$4.96½ and \$4.96¼. The heavy gold sales in London on Thursday caused a slight weakening in the rate, as the gold was bought for arbitrage against the dollar. Three months dollars have narrowed to ½ cents premium, which is the smallest margin for a considerable time. Belgas on the whole followed the dollar, but at one time when dollars were bid the cross-rate went out temporarily to the export gold point of Bel. 5.94 to the dollar. The cross-rate has since improved, and it is not thought that Belgium lost much gold. Forward belgas strengthened during the week, the three months' rate coming in from 25 to 19 cents discount. There was little movement in guilders or Swiss francs.

*

The Bank Return

The Easter expansion in the note circulation has now begun, and this week's Bank return shows an increase of £4.3 millions. The total expansion during the past fortnight is just over £10 millions, though this is partly due to payments made at the end of the quarter.

	Apr. 7, 1937	Mar. 23, 1938	Mar. 30, 1938	Apr. 6, 1938
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Dept.				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	469.9	479.5	485.4	489.7
Banking Dept.				
Reserve	44.6	47.8	41.8	37.6
Public Deps.	24.5	15.6	17.8	12.8
Bankers' Deps.	94.8	109.1	108.1	112.4
Other Deps.	38.3	36.6	37.4	36.8
Govt. Secs.	101.1	105.1	110.8	111.9
Discounts and Advances	7.4	6.6	8.7	10.1
Other Secs.	22.3	20.1	20.2	20.1
Proportion	28.2%	29.6%	25.6%	23.1%

In spite of the week's currency withdrawals, which incidentally have reduced the reserve by £4.2 millions, bankers' deposits are £4.3 millions higher than a week ago. One cause of this increase is a drop of £5.0 millions in public deposits, attributable to the Government dividend payments at the beginning of the month. There have also been small increases in Government securities and discounts and advances, and a small drop in other deposits, all of which have helped to swell bankers' deposits. These now stand at the relatively high level of £112.4 millions.

*

The Money Market

Money is now very easy. In some quarters it was described on Thursday as unlendable, though other quarters reported a moderate demand for funds. Still, loans against bonds, from lenders other than the clearing banks, are obtainable at ½ per cent. With the opening of the new financial year, weekly allotments of Treasury bills have risen to £50.0 millions, and for the moment equal maturities. The market last week obtained a better allotment, and was also able to obtain bills at £99 17s. 6d. per cent. at the tender. Still, the banks are keen buyers of Treasury bills of all dates up to the end of June, while the market are not ready sellers, as bill brokers are well supplied with funds out of current maturities.

	April 8, 1937	Mar. 31, 1938	Apr. 7, 1938
Bank Rate	2%	2%	2%
London Deposit Rate	2	2	2
Short Loan Rates:

Others	1½-8	1½-8	1½
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	1½-9½	1½-9½	1½-9½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks, within six months of maturity. 1 per cent. for loans against other collateral.

The total volume of Treasury bills issued by tender was £512 millions at the end of the financial year. The total contraction in the tender issue since December 31st was £110 millions, or practically the same as in the previous year.

The Bullion Market

After keeping the London market relatively short of gold during most of the week, on Thursday the authorities suddenly offered £1,004,000. Before the gold was absorbed at the fixing, the price fell by one penny, which brought it to parity with the American shipping price. It was then taken largely for arbitrage offerings against the dollar, and a secondary consequence was that dollars themselves came on offer against sterling. A further £250,000 was sold after the fixing at the same price, but once this had been disposed of the price returned to 141s. 1½d. per ounce. It is not clear why this large quantity of gold was forced on the market; or whether it represented new gold from Russia or somewhere else, or offerings on behalf of an overseas central bank. It was not Belgian gold. Except for a brief and temporary movement this week, the belga has been within the gold point.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Discount	Amt. dealt in	Cash	Two Mths.
1938

" 2 ...	140 1	1½ pm	99	18½	18½
" 4 ...	140 0½	par	391	18½	18½
" 5 ...	140 0½	1 pm	290	19½	18½
" 6 ...	140 1½	1 pm	122	19	18½
" 7 ...	140 0½	par	1,304	19½	18½

* Above or below American shipping price.
The New York price of silver remained at 45 cents per ounce .999 fine during the week.

The silver market has been quieter this week. The reduction in the New York price from 45 to 43 cents an ounce prevents London prices from recovering to their previous level of just over 20d. for the New York parity is now no better than 18½d. per ounce. On a short-term view it is necessary to watch India, for Bombay stocks were only 5,000 bars on April 1st, equal to about 30 days' supply. Hence fresh Indian buying may be imminent. Still, so long as the cash price in London remains above the New York parity, not over-much faith can be placed in it. Nor is there much prospect of an immediate American-Mexican settlement, while the depreciation of the Mexican peso alone makes it unlikely that the previous New York price of 45 cents will be restored.

INSURANCE NOTES

Norwich Union Life Assurance.—This society is the largest of the purely life offices, and is one of the best known British insurance organisations abroad. Not only does it transact a large volume of life assurance in the Dominions and in foreign countries, but it is closely identified with, and owns the whole of the ordinary share capital of, the Norwich Union Fire Insurance Company, whose ramifications are worldwide. Last year total new sums assured increased from £11,091,000 to £11,530,000. Of these figures £4,038,000 and £3,953,000 respectively were obtained outside the United Kingdom. Consideration moneys for annuities increased from £280,000 to £301,000. The net rate of interest on the life and annuity funds was 1s. 4d. per cent. smaller at £4 6s. 6d. per cent., compared with valuation rates of 2½ per cent. for assurances and 3 per cent. for annuities. Death claims amounted to £958,000, against £988,000 in 1936.

*

It may safely be assumed that the trading results of the year were very satisfactory. Total assets increased from £44,754,000 to £47,400,000. The society has always invested an unusually high proportion of its assets in mortgages and loans, which further increased last year from £15,046,000 to £16,134,000. British Government securities fell from £3,740,000 to £3,505,000, but Dominion and Foreign Government securities increased from £3,333,000 to £4,154,000. Debentures amounted to £9,192,000 against £8,159,000, and preference stocks showed little change at £3,374,000. Ordinary stocks consist almost entirely of the shares of the Norwich Union Fire Insurance Company, which still appear at the price at which they were acquired in 1925, namely £6,088,000. On this book value the dividend of 24 per cent. represents a gross yield of 4½ per cent.

*

Norwich Union Fire Insurance.—Up to 1936, the fire premium income of this Society had showed steady reduction for a number of years, caused by a decline in the volume of foreign business, chiefly in the United States and Canada. Last year, however, there was a welcome and substantial increase from £1,637,000 to £1,744,000. Claims amounted to £702,000 against £741,000. Underwriting results were very satisfactory; indeed, they were the best for many years. Accident premium income was £70,000 larger at £1,487,000, and in this department also the results were favourable. In common with general experience, the marine premium showed large expansion from £174,000 to £225,000. First years' claims and expenses amounted to 57 per cent. of the premium income, against 49 per cent. in the previous year. The results of the last two years are shown below:—

	1936		1937	
	Amount	Percent-	Amount	Percent-
	of	age of	of	age of
	Profit	Premiums	Profit	Premiums
	<u>£</u>		<u>£</u>	
Fire	83,604	5.4	169,295	9.7
Accident & Gen.	77,681	5.5	87,862	5.9
	<u>166,285</u>		<u>257,157</u>	
Less Taxes, etc.	75,085		136,230	
	<u>91,200</u>		<u>120,927</u>	
Total net surplus	91,200		120,927	

A transfer of £100,000 has been made to the general reserve out of the profits of the year.

*

The total assets of the Society and its subsidiary companies increased from £5,815,000 to £6,006,000. British Government securities fell from £890,000 to £838,000 and Dominion and Foreign Government securities increased from £829,000 to £882,000. Debenture, preference and ordinary stock holdings only showed minor changes. The value of the investments, at middle market prices on December 31st last, using exchange rates then ruling for currency holdings, exceeds book values, and general reserve now amounts to £1,000,000. The entire ordinary share capital, which consists of 44,000 shares of £25 fully paid, was acquired by the Norwich Union Life Assurance Society in 1925 for £6,088,000, and forms an excellent investment for that Society. The dividend is again at the rate of 24 per cent., of which about 75 per cent. is met by available interest earnings after deducting interest on the debenture stock.

*

Beacon Insurance.—This company, which before 1933 was known as the Abstainers' and General, maintains a separate Abstainers' Section in which the premium rates are lower than for non-abstaining policyholders. Last year, actual deaths in the Abstainers' Division amounted to 75.1 per cent. of those expected by the A1924-29 table, against 76.7 per cent. in 1936. In the General Division they were 90.7 per cent., against 92.2 per cent. New sums assured have shown considerable expansion in recent years, and in 1937 they increased from £1,153,000 to £1,232,000. The net rate of interest earned was 1s. 1d. per cent. smaller at £4 0s. 1d. per cent. When dealing with the 1936 accounts, the chairman drew attention to the greater volume of business transacted in the fire and accident departments. Last year premium income increased by £53,000 to £135,000.

*

It is considered inexpedient to bear the expenses of the company's definite policy of development out of current revenue, and in the meantime £15,000 has been transferred to a development account. The directors propose to arrange for an issue of further share capital. Total assets increased from £4,728,000 to £4,988,000, and mortgages and loans rose from £2,231,000 to £2,459,000. No marked changes took place among Stock Exchange investments, which amount to £2,055,000. Book values are taken at middle market prices on December 31, 1937, but in no case do they exceed the amount payable on redemption. Depreciation, amounting to £38,000, has been transferred from the investment reserve fund, which now stands at £138,000.

*

Provincial Insurance Company.—This non-tariff company, in addition to its home activities, operates in many parts of the British Empire and in some foreign countries, but has never entered the U.S.A. In its thirty-four years of

existence it has built up a steadily progressive business, accompanied by consistently favourable underwriting results. Last year combined Fire and Accident premium income increased from £1,156,000 to £1,244,000. The profit realised was £102,000 compared with the record figure of £105,000 obtained in 1936. The small recession was due to a less favourable experience in the accident department, which is known to include a considerable proportion of motor insurance. Marine premium income increased by £35,000 to £171,000. This increase in income, in conjunction with a less favourable experience, has reduced the ratio of the marine fund from 109 per cent. to 102 per cent. of the premium income. The results of the last two years are given below:—

	1936		1937	
	Amount	Percent-	Amount	Percent-
	of	age of	of	age of
	Profit	Premiums	Profit	Premiums
Fire	34,185	17.4	43,783	20.1
Employers' lia-				
bility	70,333	7.3	57,759	5.6
Marine	5,338		7,004	
	99,180		94,538	
Less items debited				
to profit and				
loss	46,470		65,448	
	52,710		29,090	

Total assets increased from £2,065,000 to £2,305,000. Despite the severe depreciation of security prices during the year, the market value of investments is still in excess of book values. As in 1936, some £50,000 has been transferred to general reserve, which now amounts to £500,000. Interest income increased from £58,000 to £63,000. The preference dividend requires £20,000, and the ordinary dividend, which is repeated at 50 per cent., takes £19,000. The company is soundly managed and in a strong financial position.

*

World Marine and General.—This company, which transacts marine, fire and accident insurance, became allied to the Northern Insurance Company in 1920. Marine premium income last year rose from £110,000 to £135,000. The fund at the end of the year, at £224,000, was equal to 167 per cent. of the year's premiums. Fire and accident premiums were practically unchanged at £124,000. The results of the last two years are given below:—

	1936		1937	
	Amount of Profit	Percent- age of Premiums	Amount of Profit	Percent- age of Premiums
Fire and accident	6,891	0.5	7,007	5.6
Marine	15,000	13.6	15,000	11.1
	14,309		22,007	
Less items debited to profit and loss account ...	3,392		3,363	

Total assets increased from £982,000 to £995,000, of which Stock Exchange securities account for £860,000. This figure is exceeded by the aggregate market value on December 31st last. The financial position of the company is strong. There is a general reserve of £300,000 and a profit and loss balance, after payment of the final dividend, of £150,000. The dividend is again at the rate of 40 per cent., free of tax, and costs £40,000 compared with net interest earnings of £29,000.

Investment

I.C.I. Report.—The full Imperial Chemical Industries report has been received with general approval. In the first place, it confirms the favourable impression created by the preliminary figures (discussed on page 636 of our issue of March 19th). It is evident from the detailed discussion of each branch of the undertaking at home and abroad that 1937 was a year of general prosperity. In many instances, record sales were achieved, despite the slackening tendency of business towards the end of the year. A note of caution is also introduced in the review of Far Eastern markets. In general, however, the past year was undoubtedly the most successful in the group's history. Its achievements in terms of profits may be assessed in the following table, and these are related to the trend of the past decade in the accompanying chart:—

	1935	1936	1937
	£	£	£
Dividends from subsidiary and associated cos.	7,983,841	8,541,830	9,716,611
Income from investments	368,589	507,592	465,958
Total profits	8,352,430	9,049,422	10,182,569
Taxation	645,891	846,093	1,171,862
Obsolescence & depreciation	1,000,000	1,000,000	1,500,000
Pension fund	150,000	150,000	172,000
Preference dividends	1,590,738	1,591,014	1,663,512
Ordinary stock:—			
Earned	4,965,801	5,462,315	5,675,195
Paid	3,935,512	3,935,913	4,284,158
Earned (%)	10.7	12.0	12.2
Paid (%)	8	8	8½
General reserve	1,000,000	1,500,000	1,500,000
Carried forward	638,740	665,142	556,179

Note.—In 1936, £1,000,000 from central obsolescence, £500,000 from general reserve and £5,434,141 from capital reserve applied to writing down interests in subsidiaries. In 1937, £1,500,000 from general reserve written off investments, and £1,150,000 from central obsolescence written off interests in subsidiaries.

I.C.I. PROFITS AND DIVIDENDS 1928-37

Total income rose by more than one million pounds to £10,182,569, but after heavier taxation requirements and an increased allocation of £1,500,000 to obsolescence reserve, the amount earned for the ordinary stock shows a comparatively small increase from £5,462,315 to £5,675,195. In this respect, the I.C.I. colossus shares the experience of many humbler undertakings. The increase in the ordinary dividend from 8 to 8½ per cent., coupled with the maintenance of the general reserve provision calls, in fact, for a draft of £108,963 on the balance carried forward.

The report adds comparatively little to the statement regarding the position of marketable investments, which was issued with the preliminary figures. The sum of

£1,500,000 has been transferred from general (capital) reserve towards covering total investment depreciation, based on market or computed values, of £1,824,066. Of this amount, a substantial proportion relates to the company's German investments. The problem of Imperial Chemical's investment values has undoubtedly perplexed the market during recent months, but its solution has been regarded in most circles as reasonable and expedient. Interests in subsidiary companies, including net balances on current account, have increased from £67,222,839 to £70,437,729 during the past year. It will be recalled that allocations totalling £6,934,141 were made in 1936 towards writing down their values; following the usual annual review of the assets of wholly-owned subsidiaries, it has been decided to apply £1,150,000 from central obsolescence fund to writing down subsidiary interests, a provision which is taken into account in reaching the total shown above. On the far-reaching changes in management organisation we comment in the succeeding note. Their consequences in terms of profits will doubtless not be immediately apparent. On the other hand, a current yield of £5 9s. 3d. per cent. on I.C.I. ordinary stock, at 31s., may be regarded as reasonable. At least, the present dividend is well covered, even if export markets and domestic trade may experience some recession during the current year. The investor, however, can count on a further expansion in the turnover of several of the newer products, coupled with the group's re-armament equity, to redress some part of any potential setback.

I.C.I. Organisation.—The details of the changes recently effected in the higher management of Imperial Chemical Industries, which are furnished in this year's report, will be closely scanned by shareholders, who have hitherto been passive spectators, in the stalls, of a transformation scene which was not in the original programme. The general effect of the changes is that the functions of sole Managing Director will be put into commission. The Board of Directors will include a Chairman, a President, eight Executive Directors and six Non-Executive Directors. Immediately below the Board, in the hierarchy of control, will be a Management Board (replacing the former General Purposes Committee) which will exercise the functions usually assigned to the office of Managing Director. Under it will be a body known as the Groups Central Committee, which will serve as a connecting and co-ordinating link between the Management Board and the 10 operating Group Boards, whose functions, under powers conferred by the main Board, will be unchanged. These operating groups have the company's principal products as their nuclei—viz. Alkalies, Dyestuffs, Explosives, Fertiliser and Synthetic Products, General Chemicals, Leathercloth, Lime, Metals, Paint and Lacquer and Plastics. The most significant—and, possibly, the most debatable—innovation is the creation of six Executive Committees, concerned respectively with commerce, finance, personnel, research, overseas and technical matters. These Committees will, in fact, sectionalise the business of day-to-day administration. Each has an Executive Director, fortified by a Committee of three other Executive Directors. Presumably, the danger of over-segregating functions which, in the last resort, are merely different aspects of the single duty of central management, has been insured against, partly by overlapping of personnel on the Executive Committees, and partly by making the Chairmen of these Committees responsible directly to a single Management Board. Even those shareholders to whom the personalities of the high command may be so many names will hardly fail to notice two things. The first is that while the Board has 16 members and the Management Board 13, each Executive Committee has only four. The closer the various bodies are to the company's day-to-day business, the smaller and more compact is their personnel. The second feature is that while the Executive Directors are

members of every body from the Executive Committees to the main Board, the highest Executives of all—namely, the Chairman and his Deputy, the President—are on the Board and Management Board only. The Olympian nature of their position is emphasised, but the strain of detailed duties is appreciably relieved. By becoming less Marthesque, they can be the more effectively Marian.

Hadfields Accounts.—Hadfields, Ltd., is one of the few companies whose dividend and report have recently exceeded market expectations. When the dividend was announced, the shares stood at 27s. 6d., and they improved to 29s. 10½d. before the publication of the report. This week, the shares have advanced further to 31s. 3d. The accounts are satisfactory in every way. Earnings, struck after unspecified allowances for depreciation and taxation, and after providing for the reduced debenture interest allocation, have advanced from £219,423 to £269,041. On the ordinary capital, 32 per cent. has been earned and 22½ per cent. paid. Two years ago the dividend was only 7½ per cent., and last year the distribution from profits was 13½ per cent., supplemented by a payment of 10 per cent. tax free from the profit on the disposal of the company's interest in Beans Industries. This year's distribution, moreover, is paid on an increased capital, following the conversion of part of the debentures into ordinary shares. Hadfields, indeed, has been willing to distribute more generously than most companies the fruits of prosperity to its shareholders. The company's medium-term future, however, is very much more firmly assured than that of other steel companies. In the re-armament programme, its products—especially armour-piercing shells—play an increasingly important part. Consequently, the company is relatively protected against trade recession. The strength of the demand for its products, indeed, is well illustrated by the increase of 40 per cent. in the balance sheet total of stocks and work-in-progress. In short, Hadfields ordinary shares appear to be one of the more satisfactory heavy industrial shares, and they offer a yield of £7 4s. per cent.

Industrial Profits in March.—Reports issued last month show that industrial profits rose by the substantial measure of 9.19 per cent., although, as in February, this rate of progress is less rapid than that recorded by "March" companies either in 1937 or 1936. The record of net profits and percentage increases for the past two years is given in the following table:—

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year
1936		£	%	1937		£	%
March	236	33,391,656	17.39	April	245	31,712,217	23.36

March ..	307	53,554,168	12.52	March ..	337	56,721,336	9.19

* After debenture interest.

March normally brings a large number of electricity and iron and steel reports. Last month these accounted for some 30 per cent. of total profits and provided over half of the increase. In March last year only three out of 24 groups showed a decline in profits compared with the previous year, but this year such groups numbered seven. Altogether, the latest evidence is not incompatible with some slackening in the rate of increase in industrial net profits.

Foreign Bond Movements.—The full force of market weakness was experienced in the foreign bond market last month, and every section of the index com-

plied by the Municipal and General Securities Company recorded a fall, usually of a pronounced character. Uncertainty regarding the future status of Austrian bonds, under the financial domination of the Greater Reich, coupled with the general weakness of all South American issues on the evidence of a sharp deterioration in agricultural conditions, are the outstanding features of a depressing month. The total index of 109 bond prices has in fact fallen by ten points:—

AVERAGE JANUARY-JUNE, 1934=100.

End of Month	Europe	Near & Far East	Egypt	South and Central America	Complete Index	Under-allocated Bonds	De-allocated Bonds
				States Provinces Total

N.B.—Figures in brackets denote number of bonds included.

This week's news is not without some features of encouragement for the bond market, although it provides little basis for a positive investment policy. The receipt of the monthly service funds to cover the Austrian 4½ per cent. and 7 per cent. issues has apparently encouraged expectations that payments will be maintained in full. The 7 per cent. issue touched 47 in mid-week for this reason: Funds representing only 50 per cent. of the April 1st coupon on Brazilian twenty-year funding issue of 1931 have been received in London, New York and Paris, but even this arbitrary payment encouraged the Brazilian market to the extent of a point or two. Reports have also been in circulation regarding the possibility of slight increases in the service on Roumanian loans, though no official announcement has yet been made.

Stock Exchange Dividend.—The Stock Exchange itself has felt the direct force of increased taxation during its latest financial year to March 25th. A final dividend of £9 per share makes a total distribution for the year 1937-38 of £14, compared with £15 paid in respect of 1936-37. The consequent reduction of £20,000 in the gross distribution is more than accounted for by a charge of £17,000 for N.D.C.—the Stock Exchange, in fact, must be one of the first institutions to provide for virtually a full year's contribution—and by an increase of £4,000 for income tax. It appears, however, that the balance carried forward has been increased from £109,612 to £125,500. The shares, which are £36 paid, and carry unlimited liability, were quoted slightly lower at 212-217 following the dividend declaration.

Alliance Trust Results.—Among the older investment trusts, the record of this large Scottish company, which controls investments valued at over £11 millions, is particularly impressive. Gross revenue has exceeded £700,000, thus surpassing the previous "high" of £692,294 in 1930-31. The dividend is restored to 25 per cent., the rate maintained for many years until 1934-35. And now that investment depreciation has become commonplace, it is gratifying that the market value of securities as at January 31st last again exceeded book values. The allocation of revenue in the past three years is shown overleaf.

	Years to January 31		
	1936	1937	1938
Gross revenue	603,473	659,780	707,013
Expenses	26,883	30,051	31,868
Tax and tax reserve	94,428	166,174	139,663
Interest	165,271	160,214	158,055
Preference dividends	76,179	74,355	73,139
Ordinary stock:—			
Earned	240,712	228,986	304,288
Paid	180,952	186,156	199,063
Earned (%)	29.3	28.3	38.2
Paid (%)	22	23	25
General contingent fund...	50,000	40,000	100,000
Carry-forward	44,114	46,944	52,170

The advance in gross revenue last year was at a slightly lower rate, but earnings for the ordinary stock have risen by as much as 10 per cent. to 38.2 per cent. This improvement is due in part to the provision in 1936-37 of £60,000 for a special taxation reserve account, in addition to normal tax payments. This allocation was not repeated in 1937-38, but the general contingent fund receives £60,000 more at £100,000. Distribution policy is and always has been conservative, and its reward is apparent in the satisfactory comparison between market and book values of investments. The report expressly refers to the difficulty of placing a reliable valuation on the mortgage investments, but this branch of the business is being gradually liquidated, and now accounts for no more than 7½ per cent. of total investments. A current price of 515 and a yield of £4 17s. per cent. illustrates the high rating of the ordinary stock. In view of the Trust's earnings record and of its moderate gearing, the stock may enjoy more than average protection against industrial recession.

* * *

Colvilles' Progress.—The results of this leading Scottish steel undertaking last year are striking. Increasing technical efficiency and the steady expansion of the business appear to have played their part, no less than the high level of output. Total profits of £1,046,130 are 42 per cent. higher than in 1936, and while subsidiaries have contributed £54,610 to the increase, their own progress is modestly reflected in dividends. Colvilles' report, now presented in an improved form, shows that the subsidiaries earned £572,262 in 1937 (after tax) against £252,055. The parent company has increased the previous year's depreciation provision of £185,000 by a special allocation of £110,000, so that after an increase in income tax and N.D.C. from £135,000 to £240,000, the earnings for the ordinary stock are £93,300 higher at £426,286. The increase in dividend from 7 to 8 per cent. represents a conservative distribution of net profits, for earnings are equivalent to 14.5 per cent. against 11.1 per cent. Of the surplus, some £150,000 is placed to general reserve, while the balance carried forward is increased by more than £40,000. The Colvilles group has steadily consolidated its position in the Scottish steel industry. Since 1934 a number of important businesses have been acquired, and the current programme of expansion is also impressive. Net additions to the parent company's fixed assets in 1937 exceeded £350,000, and shares in subsidiaries at cost now stand at £2,024,650 against £1,419,650, the balance-sheet total being some £2½ millions higher. The principal changes on the liabilities side are the appearance of a bank loan of £500,000 and an increase from £83,075 to £501,961 in loans, etc., due to subsidiaries. Work is now proceeding on the construction of new coke ovens and blast furnaces at the Clyde Iron Works. Originally, the scheme was to be financed out of an issue of ordinary shares. This method of financing has been varied, for the cost is to be met partly from the company's own resources and partly from a loan of £1,000,000, payable in instalments over the next twelve months. The inference is that less favourable conditions in the capital market have not deterred the company from proceeding with plans designed further to increase the efficiency of the business.

"The Chairman Said"—Investors are looking increasingly to company chairmen for guidance regarding the future trend of business. During the past week, four industrial pronouncements of major importance have been made, and they have faced the business situation with a proper degree of frankness. Even at the Vickers meeting, the chairman underlined two factors which may serve as a check to extravagant dividend hopes. Re-armament activity is affecting the commercial engineering business of the group, and it is apparent, both from statement and from dividend policy, that the management is giving careful consideration to the problems which may arise when defence demands become more normal. On the other hand, the Vickers-Armstrongs works were fully employed last year, and profits on large contracts are not taken into account until their completion. While the business of the group appears as fully assured as any in heavy industry, the chairman's repeated warning that divisible profits may not expand commensurately with gross income is certainly relevant. In some respects, the British Insulated Cables and Associated Electrical Industries speeches covered common ground. Both groups, for instance, have an equity in railway electrification at home and abroad, and new business has been booked for the L.N.E.R. scheme from Manchester to Sheffield, involving for the former company an amount of £1 million. The establishment of new cable works, to which attention has been recently directed, was criticised by Sir Alexander Roger, who declared at the British Insulated meeting, that existing plant was "amply sufficient" to meet all the requirements of the trade. The appreciable improvement in the position of Associated Electrical Industries in recent years underlines the advantages of the generous depreciation provisions set aside last year. The group, of course, is considerably interested in export business, and while it is not expected that the volume of business this year will equal that of 1937, a serious recession is not anticipated, since unfilled orders at the beginning of the year were large. The difficulties inherent in a world trading organisation, dependent in considerable degree upon the price fluctuations of one primary commodity, were discussed in detail by Sir George Beharrell at the Dunlop Rubber meeting. He expressed his conviction that rubber restriction must be maintained, and his audience undoubtedly appreciated his emphasis on the strong financial position which the company has built up in recent years. This should serve as a cushion against the unfavourable contingencies which may have to be faced during the current year.

* * *

U.S. Steel Report.—The measure between peak and depression in the United States steel industry last year is suggested by a fall of 75 per cent. in the operations of United States Steel Corporation. Production early in the year compared favourably with 1929 levels; yet December saw a lower operating rate than any recorded during the previous two and a half years. For the whole year, however, the Corporation was able to earn \$94,944,000 for dividends, against \$50,583,000 in 1936; to pay off all preference arrears (16½ per cent. in all was distributed); to earn \$4.18 per common share, and to add \$27,695,000 to the earned surplus carried forward. Even the \$1 common stock dividend looks generous enough in to-day's circumstances. Gross sales rose by 28 per cent. to \$1,396 millions, net operating income was almost doubled at \$122½ millions, and miscellaneous income, at \$130½ millions, showed a similar degree of improvement. The production statistics given in the report show that the output of steel products was 15.7 per cent. higher, at 12,762,000 tons, while shipments of other items such as pig iron, coal and limestone rose to an even greater extent, and almost 60 per cent. more iron ore was produced. In fact, operations were at a sufficiently high level in the greater part of the year to overshadow the serious recession of the early winter. Prices, moreover, were increased (largely to meet higher wages and production costs), and averaged 11 per cent. higher than in 1936. Demand for iron and steel products was most satisfactory in the first half of the year, but orders declined heavily when seasonal demand should have been recovering.

Yet, even in the third quarter, 73.6 per cent. of steel capacity was in operation, and earnings per common share were as high as \$2.79. Employment did not reach its peak until August, and the report attributes the improvement in earnings primarily to the "reasonably constant" use of producing facilities during most of 1937. The year closed with 21 per cent. of capacity in operation. This contrast between extremes in 1937 is an unhappy augury for the current year, for accumulated orders which kept the plant going at a reasonably high level until the autumn have long been cleared off. Inventories totalled \$331,479,000 at the end of 1937, as compared with \$286,004,000 a year earlier, a rise due in part to prices and in part to increased volume. The anticipated spring recovery has proved a phantom, and common shareholders can hardly look forward to any considerable improvement this year. The stock has recovered this week to \$42, a few points above its recent "low."

* * *

"Three Counties" Electric.—The dividend on the "B" ordinary shares of Shropshire, Worcestershire and Staffordshire Electric was reduced last year from 6½ per cent. to 5½ per cent. Profits for the past three years are analysed below:—

	1935	1936	1937
Units sold (millions)	200	234	269
Increase (%)	11.1	17.0	16.5
Net profit	500,913	596,068	618,611
Less transfer to reserve account ...	175,000	225,000	240,000
	325,913	371,068	378,611
Interest, etc., receivable	143,733	151,760	131,954
Net income	469,646	522,738	510,565
Interest payable	191,580	203,372	206,883
Preference dividends	135,000	135,000	135,000
Dividend on "A" ordinary shares ...	24,000	24,000	24,000
"B" ordinary shares:—			
Earned	119,066	160,366	144,682
Paid	138,912	159,250	134,750
Earned (%)	4.9	6.5	6.0
Paid (%)	6	6½	5½
Carried forward	54,294	55,411	65,343

The provision which the company makes by transfers to reserve in lieu of depreciation, compared with our standard scale, appears to be somewhat low. The latter would require some £40,000 in excess of the £240,000 actually provided.

* * *

Last year's growth in net profit was disappointing in relation to an increase in expenditure on capital account of over 15 per cent. Partly, no doubt, this is due to the effect of rising costs, to which the report refers. It may also have been partly due to reductions in tariffs which have not yet been fully reflected in increased consumption, or to the time lag between expenditure on capital account and its fructification in net revenue. If the two latter explanations are valid, earnings for the current year may cover the reduced rate of dividend with a more generous margin for depreciation.

* * *

Hudson's Bay Profits.—The fortunes of the Hudson's Bay Company are intimately linked with conditions in the Canadian wheat belt and the world's fur markets. The recession in profits for 1937-38 is, therefore, not a matter for surprise. Total profits and the amount earned for dividends are each about £57,000 lower at £326,520 and £169,309 respectively. The first ordinary dividend for eight years, however, has been paid, following the payment of preference arrears in the previous year. The distribution is 3 per cent., less tax at 3s. 0½d., but an additional 1 per cent. (not subject to tax) is paid from the land account surplus. The 3 per cent. payment is covered by earnings of 6.3 per cent., compared with earnings of 8.9 per cent. in the previous year, after allowance for

normal preference dividends. Recovery continued at a high level in Canada until the second half of 1937, but in the Prairie Provinces the situation was governed by the serious drought in Saskatchewan. The estimated value of the wheat crop in these provinces was \$155 millions last year against \$195 millions in 1936, though the average price of wheat was higher. In view of conditions in Saskatchewan, the continued improvement in profits from the company's retail stores is satisfactory, but even in this department operations began to decline last autumn. Fur collections in the 1936-37 season rose slightly, but prices realised at the London auctions were considerably lower. Moreover, the results of fur trading in the 1937-38 accounts cover the year to May 31, 1937 only, and the decline in prices will presumably be felt to a greater extent in the current year. The ordinary shares now stand at 20s., but it is difficult to assess their prospects of recovery under present conditions.

* * *

Engineering Company Results.—Recently published engineering company results are distinctly favourable, in view of increased cost of materials and labour. These factors, however, were more than offset by a high level of turnover. In the following table we compare the profits in 1936 and 1937 of four companies whose reports have attracted attention in the past fortnight. Except for Churchill Machine Tool, the companies have been introduced to the market only in recent years:—

Company	Pref. div.	Ordinary Shares				Ordinary Shares	
		Earned		Paid		Price	Yield
		£	%	£	%	s. d.	%
British Timken (£1) 1936	...	83,824	44.0	28,594	15½	57 6	5.2
1937	...	93,007	41.4	33,750	15½		
Churchill Mach. Tool (£s.) 1936	10,524	46,220	93.1	22,515	45½	20 6	9.7
1937	5,166	66,957	45.0	59,553	40		
Craven Bros. (Man.) (£s.) 1936	...	39,918	13.6	37,500	12½	9 9	7.7
1937	...	66,172	24.4	45,000	15		
Trussed Concrete (£s.) 1936	2,607	21,156	16.1	16,393	12½	10 0	8.3
1937	3,000	44,638	22.1	30,100	15		

† Also 20 per cent. capital bonus. ‡ Also bonus in ordinary shares of 125 per cent. to ordinary and 45 per cent. to preference shareholders.

The progress shown is at a high rate, especially as it is hardly affected by capital gearing. None of the companies has any loan capital, and only two have moderate preference share issues.

* * *

British Timken, makers of roller-bearings, earned £133,007 in 1937, against £111,824 (after depreciation but before tax) and are maintaining the 15 per cent. cash dividend. The rate of earnings is only slightly reduced on a capital as increased by the previous year's 20 per cent. scrip bonus. This bonus is repeated and, as in 1936, is in effect paid out of current profits, for the allocation to general reserve exactly covers bonus requirements. Churchill Machine Tool, manufacturers of precision grinding machines, have in recent years regained a further degree of prosperity after a series of years in which considerable earnings were not distributed. Craven Bros. (Manchester) also retained all earnings in the business in 1934 and 1935, and though the latest dividend of 15 per cent. is 2½ per cent. higher than in 1936, it is on a

conservative basis, for total profits were almost doubled at £86,808. A construction company, Trussed Concrete Steel, has shown an equally interesting trend. Prospectus profits, which already showed a steep rise since the depression, have been completely surpassed, and the balance (before depreciation and tax) in 1937 amounted to £79,398, against £41,906. This company has adopted the somewhat unusual procedure of applying share premiums of £20,860 towards a dividend equalisation reserve of £25,000. In general, investors will welcome these and similar results of engineering companies in 1937, but the high yields obtainable on the ordinary shares reflect a fairly cautious assessment of earnings possibilities on a long-term view.

Mining Reports

Robinson Deep.—Additions to the treatment plant financed from the share issue made in 1936 resulted in the milling of an increased tonnage last year. A reduction of 1s. 7d. to 33s. 5d. in average yield per ton was largely counterbalanced by lower working costs, due to a substantial curtailment of the development footage. Although this factor arose from a shortage of native labour, it did not preclude an increase in the ore reserve tonnage. Tax requirements were somewhat larger than in 1936. Progress during the past three years is analysed in the following table:—

	Years ended December 31		
	1935	1936	1937
Tons milled.....	1,215,000	1,265,000	1,350,000
Working profit	£911,210	£934,190	£947,060
Dividends	£326,570	£525,000	£562,400
Amount per "B" share	2/9	4/6	5/-
Carried forward	£60,910	£58,150	£73,150
Development footage	55,870	52,547	39,260
Ore reserve, tons	6,032,000	6,102,000	6,607,000
Value, dwt.	4.9	4.9	4.8
Average net price for gold ...	142/-	140/1	140/6

Out of the balance of working capital still in hand, a further expansion of the capacity of the treatment plant from 115,000 tons to 125,000 tons per month has just been completed. Its utilisation would appear to depend upon the maintenance of the improvement in the supply of native labour which has recently occurred. Dividends on the "A" shares will call for £37,500 in 1938, as against £62,500. In view of this fact, and of the probability of some further expansion in output, the maintenance of last year's dividend total on the "B" shares seems confidently to be expected. Their yield basis is fully 8 per cent.

Simmer and Jack.—Owing to underground fires and labour troubles, this company last year did not benefit fully from the reconstruction programme carried through in 1936. Nevertheless, output, earnings and dividends increased substantially. A decline of 1s. per ton to 30s. in yield was accompanied by a saving of over 2s. in costs. A larger development footage did not produce a corresponding expansion in the ore reserves. The consulting engineer reports that work in the upper levels of the mine has indicated the existence of large blocks of medium-grade ore on both the main reef and the main reef leader; while development on the south reef in the Howard shaft area has also given encouraging results. Hoisting and ventilation will be facilitated by the completion of the South Deep vertical shaft. Results for the past three years are set out below:—

	Years ended December 31		
	1935	1936	1937
Tons milled.....	1,126,500	1,209,500	1,209,500
Working profit	£441,210	£537,190	£537,190
Dividends	£37,500	£225,000	£225,000
Amount per share	1s. 6d.	1s. 6d.	1s. 6d.
Carried forward	£550	£69,430	£69,430
Development proceeding with plans designed	64,690	64,690	64,690
Ore reserve efficiency of the business.	2,374,000	2,374,000	2,374,000
Value	4.9	4.9	4.9
A	140/7	140/7	140/7

On the basis of last year's dividends, the yield on the 2s. 6d. shares at 12s. 9d. is no more than 6 per cent. It should be noted, however, that in 1936 some £215,680, and in 1937 some £190,380 was appropriated from profits for expenditure on capital account. Requirements under this heading will presumably be on a much smaller scale in future.

General Mining.—The revenue of this corporation consists mainly of dividends upon its shareholdings. Since these payments were maintained last year, profits declined by only £13,900 to £527,600. Reserve again receives £200,000, raising the fund to £800,000, and a sum of £10,000 is again set aside for additional provision for taxation. After the payment of 5s. per share (25 per cent.), as before, the somewhat increased balance of £132,150 is carried forward. At current quotation of 88s. 9d., ex the final distribution of 3s., the shares yield about 5½ per cent.

De Beers Report.—No surprise was occasioned by the absence of any further dividend on De Beers deferred shares, although at first sight an actual falling off in profits last year was somewhat unexpected. The explanation, however, arises from the sale, in 1936, of certain investments which were not required for the purpose of control, and were realised to expedite the payment of arrears on the preference shares. The profit from this source amounted to £416,770, as against £79,140 in 1935, and £84,860 last year. Despite the fall in sales during the second half of the year the "Diamond Account" shows a credit of £2,536,600, compared with £2,243,800 in 1936, while interest and dividends received were, on balance, little changed at £843,900. Greater activity in mining and treatment operations required increased expenditure, totalling £994,730, against £639,680, while £220,000 was appropriated for taxation.

The net sum available is £2,264,300, some £611,700 less than the corresponding figure in 1936. Two years' preference payments to the end of 1937 absorbed £2,000,000, and the 15s. dividend on the deferred required £860,840, leaving £732,760 to be carried forward, against £1,329,350 brought in. The balance sheet shows several interesting changes. Some 57,275 deferred shares have been issued in exchange for the majority of the preference shares of Premier (Transvaal) Diamond, and share premiums of £572,750 resulting from the transaction, have been added to reserves. Another new item under reserves is for £121,800, representing diamond sales in advance, which will be credited to profit and loss for 1938. A reduction of £1,515,100 to £2,099,750 in investments is largely attributable to the sale of the company's holding in Rhodes Fruit Farms and to the re-classification of certain investments under current assets. The revenue account for the current year will benefit from the distributions totalling £512,500 declared by the African Explosives and Industries, though the comparative figure for the previous year was not apparently disclosed. But it is difficult to forecast the company's income from its holdings of shares in other diamond concerns, and from its own sales. The diamond industry is sensitive to economic conditions, particularly in the United States. The yield of 10 per cent. on the preference issue covers a measure of risk, while the deferred shares have obviously moved into a more speculative category.

Consolidated Diamonds.—The accounts for last year of this company, which is controlled by the De Beers, show a rather substantial decline in revenue. After allowing for depreciation on a somewhat increased scale, and

slightly reduced debenture interest, the balance available amounts to £442,100, as against £766,500. Payment of the preference dividends, including arrears, absorbed £1,092,000 in 1936. Preference dividends last year, with two interim payments of 6d. each on the ordinary, absorbed respectively £168,000 and £224,000, leaving £201,550 to go forward. As anticipated in market circles, there is no further dividend on the ordinary. The financial position shows improvement, the surplus of current assets over liabilities amounting to £395,000, against £327,000. As in the case of De Beers, a departure is made in stating the diamond sales in advance, the amount to come into credit for the current year being £120,800. Results last year, both as regards mining and prospecting, are described by the consulting engineers as satisfactory.

Other Company Results.—A number of rubber company results, and also the profits of a further batch of investment trusts and of London store companies, are analysed in our usual table of profit and loss accounts, which appears on page 128 and covers over 60 companies in all. The results are discussed on page 103 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 128. Lord Elphinstone, at the *Bank of Scotland* meeting, referred to the continued improvement in the Scottish constructional industries, and disclosed that the demand for smaller advances was still increasing, although larger borrowers were obtaining more finance outside ordinary banking channels. The chairman referred favourably to the efforts which are now being made to extend Scottish industry, particularly in the lighter trades. At the *North Union Fire Insurance* meeting, Mr Ernest Hicks expressed satisfaction with the progressive volume of home fire business, while profit from the foreign section had been satisfactory. Addressing members of the *Norwich Union Life Assurance Society*, Mr Hicks reported that the excess of market book values of investments was still considerable. New business obtained had set up a fresh record. A surplus over the book value of investments was also reported at the *Wesleyan and General Assurance* meeting by Mr John B. Field. Premium income and the total of new sums assured had increased in 1937.

The respective chairmen's surveys at the annual meetings of *Dunlop Rubber Company*, *British Insulated Cables*, *Vickers*, and *Associated Electrical Industries* are discussed in a Note on page 98. At the *Sunday Pictorial Newspapers* meeting, Mr John Cowley reported that the newspaper had received a not unfavourable proportion of national advertising. At the *Daily Mirror Newspapers* meeting, Mr Cowley reported rapid strides in sales, and announced a change in the method of dividend distributions, designed to replace quarterly dividends by an interim and a final payment. Sir Max J. Bonn declared at the *United Glass Bottle Manufacturers* meeting that the high technical efficiency and low unit costs of the glass bottle industry should enable it to withstand competition from tin and fibrous containers. Sir Max pointed out that the heavy order book at the beginning of the year largely reflected the anticipation of requirements by the company's customers. Sir Sydney Skinner referred to the satisfactory progress of the rebuilding scheme now being carried out by *John Barker and Company*, and to the company's determination to seek additional trade in the face of a somewhat difficult trading outlook in the current year.

The Government of Southern Rhodesia invites enquiries regarding the potentialities of mining in the colony

Southern Rhodesia to-day offers a profitable field of investment to Companies undertaking exploration and mineral investment.

The colony is rich in Asbestos, Chrome, Tungsten, Coal and numerous other minerals.

Gold mining is in a flourishing condition and its further development is awaiting capital.

£100,000,000 IN GOLD ALONE HAS BEEN PRODUCED IN THE LAST FORTY YEARS, AND NUMEROUS PROSPECTS AWAIT INVESTIGATION.

THE COUNTRY'S VAST MINERAL WEALTH REQUIRES MORE DEVELOPMENT

MINERAL PRODUCTION FOR 1937 EXCEEDED £7,400,000

Enquiries may be addressed to The Secretary, Department of Mines, Salisbury, Southern Rhodesia or to

The High Commissioner for Southern Rhodesia, Rhodesia House, 429, Strand, London, W.C.2.

APRIL 26 APRIL 28

MARKET conditions this week have been undistinguished though prices have improved a little on balance, since the "House" has shown occasional powers of response to minor buying interest. The opening advance, based on forecasts of the Anglo-Italian pact, and of peace in Spain, was thus in sharp contrast to the depressing conditions of the previous week. Sentiment, however, remains unpredictable, although a modest return of public interest has carried the mild rally, which was due mainly to bear covering on Tuesday afternoon, somewhat further.

A firm opening in the gilt-edged market was followed, after a breathing space early on Tuesday, by further rises, although their causation appeared mainly to be due to bear covering. In mid-week, indeed, the slackening of professional activity temporarily exposed a lack of interest on the part of the general investor. War Loan was most prominent, both in the early improvement, and also in the mid-week decline. Further selling of New Zealand stocks followed the report of an increase in social services, but other Dominion issues were generally firm.

European bonds responded to the improved atmosphere at first, and the Austrian 7 per cent. issue was especially strong in mid-week. German issues improved on German buying, but did not maintain their best levels. Japanese bonds were responsive to the arrangement to maintain the yen, and reports of progress in the negotiations regarding the future of the Chinese Customs Administration assisted the Customs and salt loans. South American issues were rather firmer early in the week.

Limited business was reported in home rail stocks, though they made some response in sympathy with the early improvement. The traffics, however, were followed by a reaction, although Great Western ordinary closed higher on balance on Wednesday. Argentine rail stocks were depressed by the week's dividend decisions, and by the sharp reversal of the republic's economic position.

Although the firm tone in the industrial market appeared rather half-hearted at times, certain sections enjoyed a modest increase in support. In particular, leading re-armament issues—including Hadfields and Vickers—attracted a few buyers, while Tube Investments provided a mid-week feature. Movements in electrical equipment shares were limited and irregular. Clyde Valley improved on the new share issue, but otherwise business in supply shares was small. Small improvements on little business were the rule among motor, aircraft and engineering shares. Traditional provincial support assisted brewery shares, but tobacco issues showed less consistent movements. Among the miscellaneous leaders, Imperial Chemical Industries improved sharply on the eve of the report (discussed on page 96), but reacted slightly on profit-taking. Several of the miscellaneous industrial leaders, including

Murex and Turner and Newall, held their improved levels, and building material issues were somewhat higher.

After a firmer opening, checked early on Tuesday, oil shares made fair gains. The pause was renewed on Wednesday, and although prices were rather firmer on Thursday, the volume of business remained small. A similar trend was also evident in rubber share dealings, although it was measured more by the tone of the market than by any significant changes in prices.

Kafir shares opened firm, with a steady if not exciting volume of business. Bear covering assisted the late recovery on Tuesday, and prices were then well maintained, although the volume of business showed a disappointing decline. Little interest, however, was shown in the developing mines, in the absence of Cape support. Diamond shares began well, but the publication of the De Beers report was followed by a fall in both issues. In the Rhodesian copper group, Rhokana promptly recovered the deduction of the dividend, and Roan Antelope improved on the interim announcement, and support was renewed on Thursday.

ACTUARIES' INVESTMENT INDEX

Again the week's fall in the Actuaries' Index of 151 industrial ordinary share prices has been quite trifling, the index standing on Tuesday last (April 5) at 65.0, compared with 65.2 and 68.2 a week and a month ago respectively. The corresponding yields are 5.68, 5.65 and 5.33 per cent. A selection of the separate indices follows.

New York

RAILROAD affairs have provided the main interest in Wall Street this week, but turnover has gradually shrunk, to the accompaniment of weaker prices in all sections. The improvement in rails was limited from the first to the bonds, in anticipation of the President's message next week, but fears developed later that an agreed programme has not been achieved, and losses were generally recorded throughout the railroad list. The reduced rate of steel operations, estimated by *Iron Age* at 32½, against 35½ per cent. of capacity last week, produced dejection in industrial stocks at first, but the leaders scored gains on Tuesday, particularly at the end of the day. The mid-week reaction, however, cancelled most of the improvement, at least in pivotal stocks. Apart from a rise in Austrian 7 per cents. and the firm front of utility bonds, this section of the market has been quiet and irregular. Business indicators are providing a little sign of immediate recovery for the market.

STOCK EXCHANGE INTRODUCTION
Border Breweries (Wrexham), Ltd.—Particulars of issue of £200,000 4½ per cent. first mortgage debenture stock and 57,160 6 per cent. cumulative £1 preference shares. Stock redeemable at 102, by December, 1987, by drawings from 1945, or at 105 from 1958 on notice. Profits, after depreciation: 1935, £30,952; 1936, £37,726; 1937, £42,525. Total assets, £717,626.

Eastbourne Gas Company.—Issue of £29,850 3½ per cent. debenture stock to Messrs. Seymour, Pierce and Company at 100½ net. Redeem-

able at par 1968 or from 1963 on notice. Interest ranks with existing debenture stocks.

Tottenham and District Gas Company.—Issue of £98,000 3½ per cent. debenture, disposed of through Messrs. Laurence, Keen and Gardner at 100½, less ¼ per cent. brokerage. Redeemable at par 1963. Interest ranks with other debenture stocks, etc.

Commercial Gas Company.—Issue of £200,000 3½ per cent. debenture stock which Messrs. Seymour, Pierce and Company have purchased at 100½ net. Redeemable at par September 1, 1968, or from 1963 on notice.

CONVERSIONS AND REPAYMENTS
Coventry Corporation.—The outstanding £876,556 of 6 per cent. stock, 1938-48, will be repaid at par, with interest, on July 1, 1938.

Lincoln Corporation.—The holders of £750,000

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

Lord Hirst and the Trade Outlook.—In his address to the annual meeting of the Federation of British Industries Lord Hirst, the retiring President, said that he saw no slump ahead. His evidence, however, was derived not so much from the latest signposts of economic trends as from the achievements of the past. In his view the recent recession is unjustified on economic grounds, but is due to the psychological effect of world affairs. Lord Hirst was quite justified in pointing out that industrial activity remains at a high level, but his contention that there are now more people in employment than ever before is not altogether correct, for the number of insured persons at work in Great Britain has fallen from 11,706,000 last September to 11,380,000 in the past month. Moreover, Lord Hirst did not mention the widespread decline in new orders, as a result of which many important industries, including cotton and wool textiles, and the tinplate trade, have sunk back into a condition of depression. Furthermore, the relative slowness of the decline in general business activity since last autumn is largely due to the long time-lag between the placing of new orders and their completion in certain important industries, including building, iron and steel, and engineering. Increased armament expenditure may soften the impact of shrinking civil orders during the next few months, but it is unlikely to prevent some further contraction in general business activity. On the other hand, Lord Hirst's forecast that re-armament is unlikely to be completed within five years may well prove correct. Indeed, the latest developments on the international political stage indicate that we are only at the beginning of a colossal armaments race whose end no one can foresee.

Seasonal Increase in Employment.—The slight improvement in employment noticeable in February continued during the past month. The number of insured persons at work in Great Britain on March 14th was 11,380,000, an increase of 56,000 over February 14th and of 71,000 over January 17th. Concurrently, the number of unemployed persons on the registers of the employment exchanges of Great Britain declined by 61,440 to 1,749,000 between February and March. At first sight the increase in employment seems satisfactory, suggesting that the downward trend in British business activity has been arrested. It must be remembered, however, that employment normally shows a strong seasonal increase between January and May. And, if allowance is made for seasonal variations, the trend of employment remained downward last month. Our index of employment, for example, which is adjusted for seasonal variations, declined from 110½ (1935 = 100) in January to 110 in February and 109½ in March. The increase in the number

of persons at work has thus masked the continuance of the downward trend. Moreover, the number of insured persons employed last month showed an increase of only 16,000 over the corresponding month a year earlier, and the number of registered unemployed was actually 202,000 higher than a year ago.

UNEMPLOYMENT BY INDUSTRIES

Industrial Group	Numbers in Thousands				Percentages
	Mar. 15, 1937	Feb. 14, 1938	Mar. 14, 1938	Mar. 14, 1937

All persons registered (including other trades)	1546.9	1810.4	1748.9	...	...

As the accompanying table shows, the increase in unemployment has been most marked in the cotton and wool textile industries, which have suffered severely from the decline in export orders. The coalmining, building and contracting industries are the only branches of activity listed in the table which experienced a decrease in unemployment during the past twelve months. A year ago, however, employment in building and contracting was affected by adverse weather conditions. As the downward trend in employment has been masked by a slight seasonal improvement, it may appear all the more abrupt in the summer, when business activity usually shows a decline.

Consumers Reduce their Purchases.—Although the rate of increase in the value of retail sales, as measured by the monthly indices published by the *Board of Trade Journal*, has tended to slow down in recent months, the value of turnover has so far remained ahead of last year. It has been suspected, however, that the increase in the value of turnover has masked a decline in volume during recent months. This surmise has now been confirmed by the evidence given in the annual report of the Retail Distributors' Association issued this week. In a series of charts the course of the value of department store sales since 1935 is compared with their volume. The diagrams show that the sustained expansion of the volume of turnover was suddenly reversed last spring. Since then the volume of

transactions in the principal departments has shown a distinct decline. This development goes a long way to explain the decline in new orders for consumption goods which has been in evidence since last summer. In view of the importance of retail trade, it is to be hoped that the authorities will, in future, supplement the monthly statistics of the value of retail sales with indices showing the trend of the volume of turnover, especially as the technical difficulties of adjusting values for changes in prices appear to have been largely overcome.

Setback in the Tinplate Industry.—The slump in the tinplate industry has been one of the most surprising developments in the British iron and steel trade since the beginning of the year. In 1937 production exceeded all records with an output of 957,700 tons, compared with 814,800 tons in 1936. As recently as last September the mills operated at 80.5 per cent. of their nominal capacity under the pooling scheme, and the proportion of the capacity employed averaged 73 per cent. during the past year. Since January production has rapidly declined. Early in March quota restrictions, which were suspended during the 1937 boom, were restored, and allocations for the period from the beginning of March to the end of May were fixed at a maximum figure of 60 per cent. of capacity. Demand, however, has recently fallen far below this estimate and the returns of the Welsh Plate and Sheet Manufacturers' Association show that the industry operated at only 43.7 per cent. of its capacity during the week ended March 19th. At the end of February there were in operation only 266 tinplate mills and 65 sheet mills, compared with last year's peak figures of 402 and 106 mills, respectively. The proportion of unemployed persons in the industry was then 35.2 per cent., against 15.2 per cent. at the corresponding date in 1937, and only 9.6 per cent. last September. The industry rarely carries heavy stocks, but these now exceed 11,000 tons, compared with last year's smallest weekly total of 1,442 tons. Prices, however, are regulated by the International Tinplate Association, and, in spite of the heavy fall in the price of tin, these have remained unchanged since last December at from 22s. 6d. to 23s. per basis box, f.o.b.

The setback is attributed to overstocking during the past year, followed by a sharp contraction in world exports since January. The decline in exports has been most severe in the United States, but British exports to Continental countries during January and February were less than one-third of shipments in the corresponding period last year. Had it not been for an increase from 26,500 tons to 43,400 tons in consignments to Empire markets, the position of the industry in South Wales would be even worse. It is hoped that there will be an improvement when stocks have been reduced, but the outlook is unpromising, and the European Cartel will find it difficult to weather the storm, particularly in view of the inauguration of tinplate manufacture in Belgium and the demand of that country for an export quota.

Government and Cotton Cloth Supplies.—During the last few months meetings have been held between representatives of the Lancashire cotton industry and the Government's Supply Department to ascertain what each manufacturer could supply in the event of a national emergency. A further meeting was held at the beginning of this week at the offices of the Manchester Chamber of Commerce. There was a discussion concerning the arrangements to be made for manufacturers to co-operate with the Supply Department in its attempt to obtain the required information. It is understood that the firms concerned will supply particulars of their capacity to provide the textiles likely to be required. From time to time Lancashire firms receive substantial Government contracts for khaki drills, ground sheets, tent cloths and other service equipment for

the army, navy and air force. It has been suggested that the Government might take advantage of the present relatively low prices by purchasing sufficient stocks to last over the first few weeks of any emergency. Such a policy would also do something to mitigate the severe recession in the cotton industry.

Further Decline in Shipping Rates.—The deterioration in world economic conditions is reflected in the persistent decline in our index of tramp shipping freight rates. As the table below shows, the decline in freight rates continued during the past month, when our index was 16.2 per cent. below the figure for March, 1937, and 32.0 per cent. below the figure for last September. Moreover, the index for last month was the lowest since November, 1936.

The Economist INDEX OF FREIGHT RATES
(1898-1913=100)

	Average, 1913	Mar., 1937	Dec., 1937	Jan., 1938	Feb., 1938	Mar., 1938
European waters.....	110.0	150.4	140.8	124.6	117.6	109.3
North America.....	113.1	117.1	118.0	118.5	109.3	110.6
South America.....	123.4	119.3	109.4	110.6	122.4	129.6
India.....	106.3	151.4	141.2	142.6	130.3	120.0
Far East and Pacific.....	117.4	143.3	127.1	128.6	120.4	111.8
Australia.....	127.9	145.1	121.7	130.0	113.4	111.6
Total.....	116.3	137.8	126.4	125.8	118.9	115.5
1913 = 100	100.0	118.4	108.6	107.9	102.1	99.2

As the next table shows, freight rates declined between February and March on most of the principal trade routes:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	97.8	-10.8	South America:—		
Bay—outwards.....	104.6	—	Outwards	106.3	+14.7
Bay—homewards.....	148.4	-16.1	Homewards	153.0	- 0.2
Mediterranean:—			India—outwards ..	101.1	- 4.2
Outwards.....	82.8	+ 1.1	India—homewards ..	139.0	-16.3
Homewards	124.3	-13.2	Far East, etc.	111.8	- 8.6
North America.....	110.6	+ 1.3	Australia	111.6	- 1.8

The latest reports from the freight markets remain unpromising.

The accompanying diagram shows the movements of *The Economist* tramp shipping freight index during the past ten years:—

THE ECONOMIST SHIPPING FREIGHT INDEX

The decline since last September has been as sudden as the previous advance. And there are no indications that the current trend is likely to be reversed in the near future. International trade and commodity prices are still declining, while total shipping capacity is being increased by the

(Continued from page 103)

showed a profit of \$19,654,860, plus a non-recurring profit of \$2,839,503 from the sale of an investment. Dividends declared in 1937 were \$14,949,988, including \$13,070,625 (\$1.00 per share) on the common stock.

Edmundsons Electricity Corporation, Ltd.—The results of the operations of the Edmundsons group of companies during March, 1938, as compared with March, 1937, show an increase of 7 per cent. of units sold.

John Dickinson and Company.—Net profits for 1937 £369,290, an increase of £92,274. Ordinary dividend maintained at 10 per cent. plus a bonus of 4 against 2 per cent. To reserves:—General, £100,000 (£50,000); contingency, £35,000 (£25,000). Carry forward £4,000 higher at £76,970.

Amalgamated Anthracite Collieries.—Trading profits 1937 £294,052 against £345,141. Tax £16,000 (£27,000). Debenture interest £114,265 (£117,783). To debenture reserve £56,144 (£105,613). Carry forward £257,709 (£194,606). Depreciation and general reserve stands at

£529,593. It is not proposed to set aside further sums for depreciation.

Van Den Berghs and Jurgens.—Trading profits 1937 £1,438,196, an advance of £230,003. Net profits, before tax, are £1,172,643 against £940,040. Income tax and N.D.C., £323,096 (£187,787). To reserve £200,000 (same). To contingencies reserve £50,000 (nil). The ordinary dividend absorbs £715,462. Carry forward reduced from £266,167 to £150,325.

Army and Navy Stores.—Net profit for year to January 29, 1938, £180,638, is £9,264 lower. Ordinary dividend and bonus unchanged at 15 per cent. To reserve £15,000 (£20,000). A further £25,000 placed to development account. For N.D.C. £6,000. Carry forward reduced from £124,870 to £103,055.

General Motors Corporation.—Net profit 1937 \$196,437,000 (\$4.38 per share), compared with \$238,482,000 (\$5.35 per share) for 1936. Current assets \$492,899,000 (\$513,986,000); current liabilities \$145,683,000 (\$174,300,000); net sales \$1,606,790,000 (\$1,439,290,000).

United Premier Oil and Cake Mills.—Total income 1937 £100,047, against £121,197 for 1936 which included £23,648 from profits of previous years. Ordinary dividend and bonus unchanged at 12½ per cent. To reserve £10,000 against £25,022. Carry forward raised from £39,855 to £39,877.

Mexican Eagle Oil.—The company has joined with the other oil companies concerned in filing injunction proceedings with the Mexican Supreme Court, claiming *inter alia* the illegality of the Expropriation Decree of March 18th. The petition has been admitted, and the date for hearing is set down for some time in September.

Civil Service Supply Association.—Profits for the year ended February 28, 1938, are £64,002 against £67,662. There is left £61,340 (against £61,103) after debenture interest. Dividend on "A" shares of 6 per cent. against 5½ per cent. last year; £6,000 to reserve (same); £2,660 to debenture redemption account (first allocation). Carry forward £31,445 against £29,637

completion of tonnage ordered during the period of rising rates. Although current rates are still well above the depression level, it is doubtful whether they are sufficient to enable shipowners to provide for normal depreciation, for running costs have shown a substantial increase in the past two years.

* * *

Oil Market Developments.—The precipitous decline of business activity in the United States, which has wrought havoc on so many of the commodity markets, has had a depressing influence on prices of petroleum products in recent months. This development may be illustrated by the following price indices from the current issue of the *Petroleum Press Service* :—

	GULF EXPORT PRICES.			
	Gasoline (64/66 Be)	Kerosene (44 water white)	Gas Oil (30° pl.)	Fuel Oil ("C" Bunker)
	(1929 = 100)			
1932 Average	48.3	53.0	79.5	63.0
1934 "	48.4	54.1	89.7	122.0
1936 "	56.5	51.4	77.9	113.3
1937 "	60.9	64.1	100.2	121.7
1937 March	61.0	64.1	93.7	124.2
June	63.1	60.8	98.4	125.5
September ...	63.7	65.5	102.5	119.5
December ...	53.1	66.9	108.4	112.9
1938 January	52.0	65.0	108.4	108.8
February	51.1	60.2	98.0	105.6
March	50.4	58.9	95.2	102.3

The decline in American gasoline prices since the autumn, however, is not due to a decline in the demand for motor spirit; in January, for example, consumption achieved an all-time record for that month. The fall has been caused by the maintenance of production at too high a level during the winter, and to the consequent accumulation of stocks to the record level of 93 million barrels, against about 83 millions at this time last year. Selling pressure was reduced and demand on the home market registered a marked improvement last month owing to increased purchases in anticipation of the advance in railway freight rates at the end of March. The larger output of gasoline was the inevitable consequence of the high level of refinery operations, resulting from the hopes entertained last autumn that the consumption of lighter fuel oils would reach record dimensions during the winter months.

* * *

These hopes have not been realised. The mild weather reduced the demand for domestic heating, while the business recession was responsible for a diminished consumption by industry. Thus stocks of fuel oil, so far from showing the normal seasonal decline, actually registered an increase. Efforts have been made in certain States to adjust crude oil production to the lower level of demand—though for technical reasons this is by no means easy—and refineries have also curtailed their operations in certain instances; but these efforts have not been adequate. It may be concluded, therefore, that, apart from the unlikely contingency of an early and sustained improvement in American business prospects, the oil industry will have to refrain from the normal seasonal expansion of its operations if the price structure is not to be seriously undermined in coming months.

* * *

A New Nitrate Agreement.—After protracted discussions, an international nitrate convention was concluded three years ago. This convention, which comprises all the European synthetic producers and the Chilean nitrate industry, provided for the international regulation of sales and prices of nitrogen fertilisers. Unless renewed, the convention will lapse at the end of June. During the past few weeks there has been an informal exchange of views between the leading producing interests in order to prepare the way for a new agreement. Although no official information is available, the conclusion of a new agreement is confidently expected. There are few industries which are so dependent on international co-operation as the nitrate trade. The world's capacity for the production of

nitrogen is nearly twice as large as requirements, and nearly all producing countries are dependent on exports. Without an international agreement, therefore, over-production and price-cutting are inevitable. The current agreement has removed both these dangers. Prices have remained fairly stable and production has been kept below consumption, so that some reduction of stocks has been possible. According to the British Sulphate of Ammonia Federation, world consumption of nitrogen reached the record of 2,675,000 metric tons in the fertiliser year 1936-37, an increase of over 600,000 tons over 1934-35, the last year before the conclusion of the current convention. Production in 1936-37, at 2,594,000 metric tons, also reached a record, but it was only about 525,000 tons higher than in 1934-35. In view of the success of the convention, producers are unlikely to let it lapse at a moment when the downward trend of the prices of agricultural products may lead to a decline in the consumption of fertilisers.

* * *

Foot and Mouth Disease.—Hopes expressed in January that the epidemic of foot and mouth disease was spending its force have unhappily been falsified. The Ministry of Agriculture, following reported infection at Banbury market on March 24th, has imposed a Standstill Order, prohibiting the movement of stock except by licence, over most of England. The situation in the Midlands is grave. Cattle shows at Hereford, Crewe, York, Lechlade, Lincoln and Ipswich in April, and at Oxford in May, are threatened with cancellation. The number of outbreaks reported since April 1, 1937, has risen from 155 to 297 in three months of this year; and the numbers of animals destroyed from 7,514 cattle to 13,800, 14,497 sheep to 22,900, 6,197 pigs to 9,500 and 7 goats to 16. The amount of compensation paid to farmers since April 1, 1937, is reported at about £433,000, compared with £232,000, between April 1, 1937, and January 1st this year. The new Standstill Order, which in effect bans markets and shows in the greater part of agricultural England, will probably be maintained for at least a fortnight. At a crucial point in the livestock farmer's year, the Order serves as a sharp reminder that, so far from being under control, the disease has appreciably increased in intensity since the encouraging forecasts of early January.

* * *

World Using Less Cotton.—The preliminary results of a census of raw cotton consumption during the six months ended January, 1938, were published recently by the International Federation of Master Cotton Spinners' and Manufacturers' Associations. Exclusive of Italy, the world's mill consumption of cotton in this period amounted to 13,124,000 bales against 14,337,000 in the corresponding period of the previous year—a drop of 1,213,000 bales or 8.5 per cent. Detailed figures are as follows:—

Variety	(In thousands of bales)		Change
	Six months ended Jan. 31, 1937	Jan. 31, 1938	
American	6,309	5,572	— 737
East Indian	2,891	3,120	+ 229
Egyptian	565	576	+ 11
Sundries	4,572	3,856	— 716
Total	14,337	13,124	— 1,213

Total consumption of all varieties of cotton in Great Britain in the half-year ended January, 1938, was 1,429,000 bales, compared with 1,455,000 bales in the previous six months and 1,396,000 bales in the corresponding period a year ago. These figures bear witness to the decline in the activity of the cotton textile industry in recent months. Meanwhile, mill stocks of all kinds of cotton, excluding those of China, Italy, Japan and Spain—from which countries no reports were received—reached an aggregate of 5,050,000 bales on January 31, 1938, against 5,900,000 bales a year earlier, when only Italy was excluded from the figures. The world's total spindles are given as 147,157,000, against 149,618,000 in July last, both figures being exclusive of Italy.

INDUSTRIAL REPORTS

markets remains restricted. Coastwise trade is also easing in certain directions, partly owing to smaller requirements of public utility concerns. The London trade has slackened. Local industrial demands continue satisfactory. There is a plentiful supply of all classes of coal, with the price trend still easy.

*

Newcastle-on-Tyne.—The North-East coal market is quiet, but most collieries are fairly well supplied with orders up to the Easter holidays. In Durham, coking and gas coals are well booked, but second grades of unscreened steam coals are in poor request.

Iron and Steel

Sheffield.—The iron and steel market has undergone very little change this week. So far as pig-iron is concerned, the volume of buying is at a very low ebb, although a slightly better demand for foundry sorts shows signs of developing. Supplies generally are well in advance of market requirements. There is very little easing of the demand for basic steel billets, but good headway is now being made in overtaking arrears of delivery. Acid billet requirements are maintained on a good scale, and there is a substantial call for structural steel, wire rods and stainless steel sheets.

*

Glasgow.—There was some improvement in the lighter branches this week. Although re-rollers of light sections are by no means fully employed, the bookings this week have been more satisfactory and the number of inquiries greater. In the sheet trade there has been some improvement in export business, local sheet makers having secured several orders. Heavy steel-makers are still fully employed, and new work is plentiful, particularly for heavy plates. Since the beginning of this month, Admiralty work to the extent of about £2½ millions has been placed with shipyards in Scotstoun and Greenock, which, with the work already on hand, will ensure regular employment for shipyard workers in these districts for a couple of years at least. A number of important shipbuilding tenders are under consideration, and further vessels for Clyde yards are expected shortly.

*

Cardiff.—The tinplate industry remains depressed. According to the latest output returns, operations are at 45.3 per cent. of capacity. Although this is a slight improvement, there has been a further reduction in the number of mills in operation. Shipments of tinplates at Swansea last week totalled 4,873 tons, compared with 3,971 tons the previous week, and 9,104 tons in the corresponding week last year, and stocks, at 11,800 tons, are heavier than they have been for many years. One of the blast furnaces in South Wales and Monmouthshire has been blown out, and there are now six in operation, compared with seven at the beginning of the year. Prices of heavy materials and of semi-finished products are unaltered.

Textiles

Cotton (Manchester).—Business has again been limited. Curtailment of production in spinning and weaving continues on a large scale. There are now 98,216 unemployed operatives in the industry, an increase of 3,208 on the month and of 55,930 on the year.

Raw cotton prices have fluctuated. Bearish sentiment has been accentuated by the poor world consumption reports. Increased interest is now being taken in the prospects for the new American crop which has had favourable weather so far.

Spinners have given out very unsatisfactory reports concerning the business done. Delivery instructions have also been disappointing.

In some sections of the cloth market inquiry has been more active. Manufacturers have been prepared to accept very low prices and some of the quotations have been considered attractive. If it were not for the large stocks held, current prices would be favourable for free operations.

*

Jute (Dundee).—The depression in the jute market is acute. This is mainly the result of the Indian jute mills failing to come to an agreement to curtail their output. Stocks of hessians in Calcutta rose sharply during March. Stocks of hessians are now 353 million yards, an increase of 57 million yards since the end of February, while stocks of sackings increased by 13 million yards to 112 million yards. A further weakening of prices for Calcutta goods has followed, and this has been reflected in a decline in prices for the raw material. New crop reports are very satisfactory this year and a larger crop is expected to be sown. Last year at this time, reports were unfavourable and prices tended to advance, ruling at anything from £4 10s. to £5 per ton higher than they are now.

Negotiations are still proceeding between the Associated and the "outside" mills for an amicable agreement to curtail working hours, and there are hopes that a solution will be found in the near future. With the price of 10 oz. 40 in. hessians falling to 15s. 9d. and 8 oz. to 12s. 10d. for near shipment, the Indian mills are definitely losing money, and the low level naturally affects the prices ruling at other centres. Dundee manufacturers cannot afford to reduce their terms further and they are resorting to curtailment of production. It is estimated that the works in Dundee are running at less than 50 per cent. of capacity.

THE COMMODITY MARKETS

THE trend of the prices of the principal primary products remained downwards during the past week, both in this country and in the United States. In particular, the majority of the sensitive commodities, such as non-ferrous metals, rubber, cotton, vegetable oils, wheat and raw sugar, were marked down in price during the past week.

The sharp decline of prices during the past few weeks is partly due to the growing realisation that an early and sustained improvement of business conditions in the United States is unlikely. Pessimism has been increased by the growing disparity between the production and consumption of a large number of primary products.

In the United States, Moody's index of the prices of staple commodities (December 31, 1931=100) declined from 142.1 to 139.8 during the week ended last Wednesday. The extent of the decline is revealed by the fact that a month ago the index stood at 150.9 and at 226.3 a year ago.

Metals

Copper.—After falling back to £37 17s. 6d. per ton, i.e. the lowest level of the current year, the standard cash price for copper recovered and closed at £38 11s. 3d. on Wednesday, a net gain of 10s. on the week. There have been substantial sales throughout the week, but the market proved broad enough to absorb them without a new pressure on prices. In spite of this encouraging feature, the outlook for copper cannot be regarded with confidence. Reports from consuming centres, both in this country and on the Continent, speak of declining new orders and the accumulation of stocks of semi-finished and finished products. At the same time, the position in the United States remains unsatisfactory. In March domestic sales in that country were only 20,635 short tons, compared with 23,520 short tons in the preceding months and 53,100 short tons in March, 1937. Production outside the United States is well under control, and the output in the United States is on the decline. Nevertheless, producers may be unable to keep prices stable if consumption should show a further decline.

*

Tin.—Tin fluctuated within wide limits this week. At one time the standard cash price fell to £167 10s. per ton, i.e. the lowest level since the spring of 1933, and although the closing price was £1 10s. above that level, there was a net loss of £4 on the week. The market is much disturbed by the

unsatisfactory industrial outlook in the United States, which normally takes some 50 per cent. of world supplies. At the same time, the absence of any official news regarding Malaya's attitude towards the tin buffer pool is affecting the market adversely, particularly as the opposition against the pool is increasing in private circles, both in Malaya and in this country.

*

Lead and Spelter.—Lead declined by 8s. 9d. per ton this week, to close at £15 10s. per ton, while spelter lost 2s. 6d., closing at £13 13s. 9d. per ton. There was no new feature on the two markets this week.

Grains

After showing a firmer tendency a week ago, wheat prices registered a further decline, revealed by the fall in Liverpool futures (May) from 6s. 10d. per cwt. to 6s. 5d. during the week ended last Wednesday. The immediate cause of the decline in prices was the renewal of Australian selling pressure and forecasts of a heavy winter wheat harvest in the United States. The area under winter wheat in the United States is 51.5 million acres, against 47.1 millions last year. Inclusive of spring wheat, the total area under the "golden grain" in the United States is 73.8 million acres, compared with 68.2 millions in 1937. Should last year's average yield of 12.8 bushels be repeated this season, the total crop would be 964 million bushels. Prices of other grains also showed a decline this week.

Other Foods

Provisions and Meat.—Meat prices at Smithfield showed little change this week. Hams were also sold at last week's prices, but quotations for bacon registered an advance. Similarly, most grades of butter were dearer and the market in eggs was also firmer.

*

Colonial Produce.—The prices of the majority of commodities under this heading registered a decline this week. Raw sugar fell below 5s. per cwt., thus underlining the importance of the forthcoming meeting of the International Sugar Council on April 27th. Coffee was also marked down, but the demand for tea at the Mincing Lane auctions showed some improvement and prices for Indian tea showed a slight rise. Cocoa prices are scarcely changed on the week.

*

Vegetables.—Sales of all seasonal lines of vegetables at Covent Garden were good during the past week, states *The Fruitgrower*. Tomatoes, cucumbers, radishes, lettuce and spring onions were all in steady request, and cucumbers, although more plentiful, maintained their price. English asparagus is arriving more rapidly. House-grown beans were cheaper, and there were large supplies of Madeira beans and some green peas. Forced marrows had a steady sale, and rhubarb was abundant and cheap. Supplies of new potatoes were good, though trade in old potatoes was slow. Kitchen green-stuff and cauliflower were plentiful and cheap, but good carrots and parsnips were scarce and their prices were maintained.

COMPANY MEETINGS

BANK OF SCOTLAND

SATISFACTORY RESULTS OF YEAR'S OPERATIONS

STRONG LIQUID POSITION

IMPROVED CONDITIONS FOR SCOTTISH INDUSTRIES

LORD ELPHINSTONE'S REVIEW

The annual general meeting of the proprietors of the Bank of Scotland was held within the head office, Edinburgh, on the 5th instant, The Right Honourable Lord Elphinstone, K.T., presiding. In submitting the directors' report, the chairman said:—

My Lords, Ladies and Gentlemen, I assume that as usual we may hold as read the report by the court of directors of the affairs of the bank as at February 28th last, a copy of which you have all no doubt received.

To fill a vacancy on the board, the directors by virtue of the powers contained in the bank's constitution invited Colonel Norman Kennedy to be an ordinary director, and I am glad to say that he agreed to accept office. His appointment will, I am sure, be welcomed by the stockholders, and will come up for confirmation by them to-day.

TRADE AND INDUSTRY

On the last two occasions on which I occupied this chair, I was able to refer to the steady improvement in business conditions in this country, and it is satisfactory to record that the recovery was maintained during the past year. There have doubtless been during the past few months some indications of a set-back from the higher levels of production and employment attained in the earlier part of the year, but we all earnestly hope that the prevailing uncertainty as to world conditions will before long be removed, and that a more stable situation generally will be experienced. When that desirable end for which this country is striving is attained, we can, I think, look forward hopefully to the future.

Every effort must, of course, be made to promote an extension of our overseas connections, and the somewhat artificial stimulus to our home markets due to the heavy and increasing expenditure on armaments must not be allowed to obscure the necessity for fostering our foreign trade, although it must be admitted that the field is still greatly circumscribed by tariff and currency restrictions imposed under a widespread tendency to attain national self-sufficiency. In this connection the steps being taken to reach closer trade collaboration with the United States and other countries are to be heartily welcomed.

In Scotland our staple industries—iron and steel, coal and engineering—continue to operate under improved conditions. The home market for coal remains strong, but the export trade is difficult and uncertain. Shipbuilding also is showing a much higher level of activity, but the scarcity of orders for commercial tonnage, which existing conditions do not tend to encourage, is a regrettable feature. Agriculture, for the assistance of which we lend freely and substantially, on the whole shows distinctly better results. Conditions in the jute industry cause anxiety, and it is hoped that measures will be devised to ameliorate them. The Scottish herring fishing trade seems to be as far from prosperity as ever, and some means must surely be found to lift it out of the depths to which it has fallen.

The efforts now being made to extend Scottish industry in general, especially among the lighter trades, are to be strongly commended and in this connection it is hoped that the Empire Exhibition to be opened in Glasgow next month and the establishment of the trading estate at Hillington will meet with unqualified success.

THE BANK'S BALANCE SHEET

Turning now to the bank's balance sheet you will observe that effect has been given to the resolutions adopted at the extraordinary general meeting of the proprietors held on December 21st last. The issue of additional capital stock which was then authorised was largely over-subscribed, and the capital now stands at £2,400,000 fully paid. The reserve fund has been adjusted in terms of the said resolutions by the addition of the premium on the new stock together with an allocation from the "balance carried forward," and by the withdrawal of a sum sufficient to pay up the uncalled liability

on the whole of the stock. With the allocation of £50,000 from this year's profits the reserve is now £2,050,000, and in addition we have a sum of £150,084 representing the balance of undivided profits carried forward.

It will be observed that our stock is now being quoted officially in units of one pound—a change which we consider will be appreciated by our stockholders.

You will agree, I think, that the figures we present as the result of the operations of the past year—the two hundred and forty-second of our history—are satisfactory. The difficulty of obtaining remunerative rates on our London money at call and on short notice continues, and at the same time taxation and other charges show a very substantial increase. Our connections, however, both in Scotland and in London, continue to extend. Our foreign exchange department again shows satisfactory progress.

Deposits amount to £39,298,450 compared with £37,635,697 a year ago. As usual, the average for the first ten months of our financial year was in excess of the total on February 28th. Heavy withdrawals invariably take place during the last two months. I may add that we have no money from outside sources, our deposits representing entirely lodgments from our own customers.

The note circulation at £3,363,767 is higher by over £124,000. The average circulation for the year is again substantially in excess of the corresponding figure for the previous twelve months.

The changes in drafts issued and acceptances do not call for comment.

LIQUID ASSETS

On the assets side, cash, bank balances, documents *in transitu* and money at call and short notice amount to £10,425,456, i.e. 22 per cent. of our liabilities to the public. Bills discounted (including a moderate holding of Treasury Bills) and our investments amount to £26,994,984, or 58 per cent., giving a total of £37,420,440, or 80 per cent. of our liabilities to the public in liquid assets.

ADVANCES

Advances amount to £9,868,287, showing a small increase over last year's figure. The average amount lent for the greater part of the year was considerably in excess of the total at February 28th. Several advances of substantial amount were repaid towards the close of our financial year. We continue to experience an increasing demand for smaller advances, but our larger borrowers do not seek from us to the same extent the facilities to which we have been accustomed. The practice of financing business requirements through other than ordinary banking channels continues to be a feature of the existing cheap money conditions.

INVESTMENTS

Our investments at £26,111,794 show an increase of £434,563. The market value is substantially in excess of the value in our books.

BANK PREMISES AND HERITABLE PROPERTY

During the year a substantial sum has been expended on the purchase, reconstruction and renovation of properties. To accommodate the increasing business at our Princes Street, Edinburgh, branch we have purchased a property at 94 Princes Street, and the business will be transferred there shortly. New branches have been opened at Hillington Road, Glasgow, and Troon. Extensive reconstructions and additions have been completed at Perth and various other branches, and several houses for agents, have been acquired. After writing down substantially the initial expenditure involved in these acquisitions and reconstructions the whole of the properties of the bank, including heritable property yielding rent, stand in the books at £465,000 which, it will be recognised, is a moderate figure.

RESULTS FOR THE YEAR

I need hardly say that in accordance with our invariable practice ample provision has been made for every known bad and doubtful debt before our profits are arrived at.

	£
The nett profits are	313,253
Add : The balance from last year (less amount allocated to reserve	145,995
	459,248
Deduct :	
Applied to reserve fund	50,000
Transferred to trustees for officers' pension fund	30,000
Transferred to heritable property accounts	25,000
Dividend paid in October last on £2,250,000 stock (paid up to extent of £1,500,000) at the rate of 18 per cent. per annum, less income tax	101,250
Dividend now proposed on £2,250,000 stock fully paid, at the rate of 12 per cent. per annum, less income tax	101,250
Dividend on £150,000 new stock fully paid, for the period from the date of payment of the stock to February 28th, at the rate of 12 per cent. per annum, less income tax	1,664
	204,164
	309,164
Leaving to be carried forward	150,084
The reserve fund will then be	2,050,000
Add : The balance carried forward.....	150,084
Total	2,200,084

BANK STAFF

It will be observed that a dividend of 12 per cent. on the fully-paid stock is the equivalent of 18 per cent. on the partly-paid stock, so that the actual distribution to the proprietors for the full year will be equal to that for the previous year.

Once again I have pleasure on behalf of the court of directors in expressing our appreciation of the highly efficient service rendered by the executive, agents and staff throughout the year. The Staff Joint Council continues to operate very successfully.

Mr John Whitelaw Johnston, our London manager, recently expressed his desire to retire as at April 30th, after over forty-eight years' service, and the board accepted his resignation with very sincere regret. They have already placed on record their appreciation of the outstanding service he has rendered to the bank, and I feel sure the proprietors will join with them in their good wishes to him on his retirement.

To succeed Mr Johnston as manager, the board appointed Mr Alexander Ballingall, at present assistant manager. Mr David Palmer Petrie has been appointed assistant manager.

DIVIDEND

I have pleasure in moving that the report and balance sheet as submitted be adopted and that a dividend be now declared at the rate of 12 per cent. per annum less income tax on 2,250,000 of fully-paid stock for the half-year to February 28th, and that a dividend at the same rate less income tax be declared on the £150,000 of new stock recently issued, from the date of payment of the stock to February 28th, both dividends to be payable on April 16th.

The motion was agreed to.

The Lord Elphinstone, K.T., and the Lord Henry Scott were unanimously re-elected Governor and Deputy-Governor respectively for the current year. Colonel Norman Kennedy, D.S.O., T.D., Mr Harry Auldjo Jamieson and Mr S. Crawford Hogarth were re-elected ordinary directors.

The alterations in the regulations for the management and administration of the bank specified in the notice to the proprietors of March 23rd, 1938, were duly approved.

Mr H. L. Usher, C.A., and Mr R. Arthur Morrison, C.A., were re-appointed to conduct the audit of the bank's books for the current year, and a vote of thanks to the Chairman terminated the meeting.

WESLEYAN AND GENERAL ASSURANCE SOCIETY

CONTINUED PROGRESS

MR JOHN B. FIELD'S REVIEW

The ninety-seventh annual general meeting of the members of the Wesleyan and General Assurance Society, Limited, was held, on the 5th instant, at the Central Hall, Corporation Street, Birmingham, Mr John B. Field, the society's chairman, in the chair.

The Chairman, in the course of his speech, said:—You will share my pleasure in observing that our society has had a successful year, and will turn with interest to the figures of the various departments of its business.

ORDINARY DEPARTMENT

The premium income of the ordinary department was £760,633. This is £27,659 more than that of the year 1936. An interesting feature is that over £760,000 new sums assured, out of the total of £1,649,933, represented policies for £500 and over. This is a record.

The valuation was made by the actuary on the same basis as last year, and reveals a total surplus of £206,918. This has enabled the directors to declare a bonus at the rate of £1 18s. per cent. of the sum assured, which is the same rate as that declared last year.

INDUSTRIAL DEPARTMENT

The premium income of the industrial department has increased by £40,458, and now stands at £1,405,461.

The valuation of liabilities disclosed a surplus of £188,733. The directors decided that a portion of this sum—namely, £100,415—could safely be distributed as profit. Since 1928 it has been the practice of the directors to allot 60 per cent. of any divisible profit to the industrial department policyholders, and, continuing this prac-

tice, the sum of £60,249 has been so allotted in giving benefits additional to those provided by the industrial assurance contracts. Over the period a total of £655,174 has been applied for these policyholders who have no contractual right to participation in profits. The current allocation is in the same form as last year, so that additions are made to the sums payable on claims arising either by death or maturity on or before April 1, 1940.

The remaining 40 per cent. of the divisible profit of the industrial department, amounting to £40,166, has been allocated as follows: namely, £21,140 for the benefit of with-profit policyholders of the ordinary department, and £19,026 for distribution to the outdoor staff.

ANNUITY, SICKNESS, AND CAPITAL REDEMPTION DEPARTMENTS

The annuity department has grown rapidly in recent years, and the fund now amounts to £224,671.

In the sickness department, which has been closed to new business for many years, there are very few contracts remaining.

The capital redemption fund amounts to £517,060. The actuary has strengthened the valuation basis and the surplus is likely to increase from year to year.

FIRE, ACCIDENT, MOTOR VEHICLE, AND EMPLOYERS' LIABILITY INSURANCE DEPARTMENTS

The premium income of the fire, accident, motor vehicle and employers' liability insurance departments now stands at £44,046, there having been an increase of £4,009 in the year. The funds amount to £62,575. All the risks are reinsured, and there are therefore no outstanding insurance liabilities as a charge on the funds.

FUNDS AND ASSETS

The funds of all the departments of the society amount in total to £14,835,809. They are covered by assets which stand in the balance sheet at £15,644,709.

The increase in the assets during the year amounts to £910,865. This new money has been invested under the majority of the headings shown in the balance sheet.

Mortgages on property have been increased, and now stand at £3,947,255. The magnitude of this figure is mainly due to the operation of the society's house purchase scheme, under which £425,522 was advanced during the year to enable householders to purchase their homes.

PROGRESS

It is interesting to look back over a period of ten years to see exactly what results have been achieved by the society. The premium income of the society has increased from £1,692,377 to £2,238,591; the ordinary department fund from £3,745,896 to £6,200,151; the industrial department fund from £4,110,063 to £7,828,769; the investments and general reserves together from £100,000 to £600,000; and the assets from £8,198,527 to £15,644,709.

The figures for the year 1937 make it clear that prosperity and progress have been maintained. The actuary, in his report to the directors, states that he expects substantial surpluses for many years to come, and he adds that the finances of the society are in good order and the actuarial reserves are adequate.

The report and accounts were unanimously adopted.

JOHN BARKER AND COMPANY,
LIMITED

DIVIDEND OF 15 PER CENT.

The forty-fifth ordinary general meeting of John Barker and Company, Limited, was held, on the 7th instant, in the Derry and Toms Building, Kensington High Street, London.

Sir Sydney Skinner (chairman and joint managing director) said that the year had not been a particularly easy one. In the early part of 1937 there was a serious bus stoppage lasting four weeks, and as their trade was largely dependent upon transport facilities for their customers this adversely affected them. Their rebuilding scheme was progressing satisfactorily, and every effort was being made to safeguard their customers from any inconvenience. The dislocation, rearrangement and replacing of departments had added to the cost of maintaining and conducting the business. Bearing those matters in mind the final net profit of £344,817 was not altogether unsatisfactory.

With regard to the rebuilding, during the year several floors in the Western Section were completed and opened for trade, and the part now practically finished, striking a new note in architecture and window furnishings, gave promise of a magnificent block of premises when completed. The third and fourth floors, completed during the last few days, were some of the finest fashion floors in the whole of the store trade in spaciousness and selection of merchandise.

The reserve accounts at £1,085,000 were the same as for the last eight years, but this was after allocating £100,000 out of this year's profit to the rebuilding and modernisation reserve, and transferring a like amount from that account and writing it off the book value of the properties. Cash stood at £593,889.

Gross profit amounted to £1,548,510, or a drop of £45,260 compared with the previous year, and the net profit of £344,817 was £45,383 less than for the previous year. The final figure was after providing for the new charge of N.D.C. and the Coronation holiday bonus and the cost of rearranging departments affected by the building operations. But for those factors their expenses would have been considerably lower and their final net profit not far short of that for the previous year.

The position in regard to local taxation, in the form of rates, assessments and demands, to which he called attention last year, had been aggravated rather than relieved, and the burden of increased assessments bore heavily upon the company despite every effort for reduction.

Quite apart from unforeseen circumstances and international complications, the trading outlook for 1938 promised to be difficult. He could assure the shareholders, however, that their arrangements were made and their organisation laid out for additional trade, and he sincerely hoped that they would not be disappointed when the current year's results came up for review.

The report and accounts were unanimously adopted, and the payment of a final dividend of 10 per cent. on the ordinary shares, making, with the interim dividend already paid, 15 per cent. for the year, was approved.

NORWICH UNION LIFE INSURANCE
SOCIETY

RECORD NEW BUSINESS

The one hundred and thirtieth annual general meeting of the Norwich Union Life Insurance Society was held, on the 5th instant, at Norwich.

Mr. Ernest Hicks (the president) referred to the retirement as general manager and actuary of Mr H. G. Wilton, F.I.A., and his appointment to the board, and in moving the adoption of the report and accounts for 1937 said that last year he had referred to the disturbing events which had occurred during 1936, and he was sorry to say that 1937 did not produce any solution to the many international problems which were confronting us at the beginning of the year. Indeed, the position in the Far East became definitely worse, while in Europe there was much unrest in many countries, and civil strife still raged in Spain, where, unfortunately, there seemed no immediate prospect of peace. Although the Society did not transact business in either of the two centres of conflict, the general financial disturbance and lack of confidence throughout the world had made things extremely difficult for all large financial institutions such as their own.

The Society had last year to find investments for over five millions of money, and the problem which faced the Finance Committee was: what could be recommended which would combine adequate security with a fair rate of interest? They had for many years been one of the leading offices for mortgage business and were able in 1937 to put out in this way nearly £2,500,000.

VALUE OF SECURITIES

The values of their Stock Exchange securities appeared in the balance sheet at or under the mean market prices as at December 31, 1935, with the exception of any investments made since that date, which were written at cost or under. The margin in their favour between the present market values and the values at which the various investments stood in the balance sheet was still a very considerable one, and he would add that in valuing securities with a fixed redemption date no credit was taken for any excess of market value over the ultimate redemption figure.

Their new business of £11,530,120 constituted a record in the Society's history, being £439,337 in excess of that for 1936, which was their previous high-water mark. Of the total new business, 66 per cent. was obtained from the United Kingdom, 24 per cent. from the Dominions and 10 per cent. from foreign countries.

Notwithstanding the large increase of new business, the expense ratio for the year worked out at only 14.65 per cent. of the premium income. When he reminded members that even in pre-war days the expense ratio rarely fell below 15 per cent., it would be agreed that they were not paying too much for their business.

Their mortality experience for 1937 was also one of the most favourable on record, and bore testimony to the care exercised by their medical directors in the selection of lives. They had paid out as much as £957,602 in respect of claims by death, but in spite of a larger volume of business, this figure was actually £30,714 less in amount than the corresponding figure for 1936. In addition, sums assured totalling £1,709,240 became due under matured policies.

SATISFACTORY RATE OF INTEREST

Despite an increase in the rate of income tax in 1937, the Society was able to show a net return of £4 6s. per cent. on its total funds, a reduction of only 1s. 3d. per cent. in the net rate for 1936. It had been a source of considerable satisfaction to the board, while market rates of interest were falling, to feel that the Society's reserves were on a basis which assumed an earned rate of interest of only 2½ per cent., so that even to-day there was a margin of no less than £1 16s. per cent. between the valuation rate and the net rate actually obtained on their funds. This basis of reserves had now been continuously maintained for over 35 years.

On December 31st last the total sums assured, excluding capital redemption policies, on the Society's books, exceeded £123,500,000. That, he thought, would perhaps give them the best idea of the magnitude of their business, and of the responsibilities which rested upon the directors and officials. He would remind them that theirs was a mutual society with no shareholders, and if their founders could be present that day they would surely be proud of the Society's record and of the service which, as he thought the figures in the report showed, they were rendering to the community.

He had mentioned a year ago that in South Africa and in France they had converted what were previously agencies into branches of the Society. They had now had a year's experience, and he was pleased to be able to say that the new arrangements were working excellently.

The report and accounts were unanimously adopted.

NORWICH UNION FIRE INSURANCE
SOCIETY, LIMITED

ALL-ROUND ADVANCE IN INCOME

The annual general meeting of Norwich Union Fire Insurance Society, Limited, was held, on the 4th instant, at Norwich.

Mr Ernest Hicks (the chairman) said that the accounts compared favourably with those of the previous year. The fire premium income amounted to £1,743,805, showing an increase of £106,858, replacing the decline in volume which had been in evidence for some years. The increase in business was fairly generally distributed, both the home and the foreign departments benefiting. It would seem that he was right last year, when he pointed out that insurance companies' accounts suffered from a lag before improvement in trade became apparent in them, and he then expressed the hope that 1937 would show some advantage from the better trading conditions which had then already set in. He was glad to say that his forecast in this respect had turned out to be correct. Home fire business was progressive in volume and the loss experience satisfactory. In the foreign field various difficulties must have adversely affected, if not their results, certainly the extension of their business, but in spite of this they did make progress, and the profit contributed by the foreign field was satisfactory. The result of the fire account was that they were able to transfer a profit of £169,294 to the profit and loss account, being 9.71 per cent., as compared with £88,604, or 5.41 per cent., in the previous year.

ACCIDENT ACCOUNT

The accident account as a whole produced a premium income of £1,487,041, an increase of £69,848, in which both the home and foreign sections participated. The profit was £87,862, or 5.91 per cent., as against £77,681, or 5.48 per cent., in 1936. The ratio of profit was only slightly greater than last year, but it was obtained from an increased income, in spite of a still further reduction in their American casualty business. They could not, however, be entirely satisfied with their foreign accident account. Motor insurance formed a large part of it, and there were few countries where this could be transacted at a profit. Efforts, in which they co-operated, were being made by all companies to improve this unfortunate position, and they themselves were energetically trying to develop other classes, which gave promise of a better reward. The home section of the account continued to expand, but the tendency for the cost of motor claims to increase persisted. The financial burden upon the motorist, shouldered for him by his insurance company, became increasingly serious. The other departments of their home accident business showed satisfactory progress and in the aggregate good results.

The premium income from marine business now amounted to £225,495, an increase of £51,590 over the preceding year. The marine fund was £206,518, which was substantially in excess of all anticipated liabilities of this department, but they had thought it wise to make no transfer to profit and loss.

The amount brought forward in the profit and loss account was £430,531, and the transfers from the fire and accident accounts totalled £257,156. Interest and dividends came to £159,929 (after deduction of tax), which, shareholders would be glad to see, in view of the trend of interest rates, was an increase over last year. With the transfer fees this gave a total of £847,624. In view of the improved earnings they were in a position to transfer £100,000 to the general reserve, making this £1,000,000, which was in addition to the full departmental reserves maintained for all liabilities. It was also proposed to transfer £75,000 to the pension fund, carrying forward £401,444.

PROGRESS IN ALMOST EVERY DIRECTION

The total assets of the society now amounted to £6,005,951, being an increase of £191,407 on the 1936 figures. It was a satisfaction to summarise the general position at the end of last year, which they could do with a measured feeling of gratification, not to the extent of being content to look upon their achievement as in any sense the goal of their desires, but with the established fact before them that progress had been made in almost every direction. Income had advanced all round, and the aggregate profits were better, those of the fire department being the best they had shown since the Great War. These favourable features would, he was sure, inspire every section of the organisation to go forward in the current year with the object of further extending the already widespread business of the society, its service in many lands, and its prosperity throughout the varied field of its operations.

The report and accounts were unanimously adopted.

SUNDAY PICTORIAL NEWSPAPERS
(1920), LIMITEDSATISFACTORY RESULTS DESPITE YEAR'S
DIFFICULTIES

The ordinary general meeting of Sunday Pictorial Newspapers (1920), Limited, was held, on the 4th instant, in London.

Mr John Cowley, who presided, in the course of his speech, said: The profit for the year ended February 28, 1938, after providing for income tax, National Defence Contribution, working, office and other expenses, contingencies, etc., amounted to £218,881 13s. 10d., which is £28,692 less than the profit of the previous year.

The sum of £20,000 has been placed to reserve account, and £5,000 has been applied as a provision for pensions. After payment of interim dividends totalling 12½ per cent. on the ordinary shares, and providing for the dividend on the preference capital as set out in the appropriation account, there remains £140,170 9s. 7d. to carry forward against a figure of £117,538 brought in from last year.

FUTURE DIVIDENDS PAYMENTS

Before I proceed to comment on our business I want to make a few remarks about our dividend policy. Hitherto we have paid four interim dividends on the ordinary shares each year. An interim dividend has already been declared on account of the current financial year. It is our intention to pay another interim dividend later in the year, and to consider the payment of a final dividend when the result of this year's working is known. Thereafter the policy will be to make one interim distribution, and to pay a final dividend after the close of the financial year. I do not wish you to read into my remarks any possibilities of a greater or lesser return—that, of course, must always depend on our profits—but by adopting the course outlined we shall be following general commercial practice, and incidentally save a little money.

Taking all the circumstances and conditions into consideration, the company's account for the past year is, in the view of your directors, a not unsatisfactory one. When nervousness and the consequent depression began last autumn it was immediately reflected in all newspapers. The less confident feeling which began then gradually increased, and as the months went by developed into a feeling of "no confidence." This feeling, as we all know, has been reflected in markets all over the world, has affected trade generally, and has had its effect also on many of the advertisers in this country. The falling off of advertisements in the national newspapers has been very marked. While your newspaper has suffered a reduced income from this cause, there is consolation in knowing that owing to the wide appeal of the *Sunday Pictorial* and the popularity it enjoys with national advertisers your paper has received a not unfavourable proportion of this class of business.

Now as to the future, it is extremely difficult to decide whether to look on the present year optimistically or otherwise. Since our financial year ended there has been no recovery in the volume of advertisements owing to the lack of confidence in politics and in business which still prevails. It is to be hoped, however, that the political atmosphere will gradually improve so that normal business is resumed and confidence restored in all directions.

A year ago, you will remember, I was somewhat optimistic in regard to the trade outlook, and to the newsprint business in particular. Then the newsprint industry was running to almost 100 per cent. of capacity. To-day that trade, in Canada at any rate, is producing barely 65 per cent. to 70 per cent. of capacity, which condition is not a favourable one by any means. I refer to the paper-making industry because your company holds large investments in pulp and paper-making undertakings. I would add, however, that these investments are of considerable potential value, given normal trading conditions.

THE "SUNDAY PICTORIAL"

Before I conclude my remarks I think I ought to make some reference to the *Sunday Pictorial*. We have a newspaper which is of the convenient and handy size, well printed, containing the proper balance of news, special features, articles by well-known writers and pictures. It is our aim to produce each week a first-class picture newspaper in every respect and by such changes as are thought necessary from time to time endeavour to meet the needs of the Sunday newspaper reading public, so that the *Sunday Pictorial* may make an even wider appeal in the future than in the past.

When we meet in a year's time it is my sincere hope that we will then be living in more settled times with a clear and more favourable outlook. In the meantime, you may rely upon your directors, with their able and enthusiastic staffs, doing all in their power to add to the well-being of your company.

The report and accounts were unanimously adopted.

BRITISH INSULATED CABLES, LIMITED

Manufacturers of all types of bare and insulated cables and overhead conductors for the transmission and distribution of electrical energy, including allied accessories and house wiring systems, also aluminium and copper sheets and sections, electric resistance welders and rivet heaters, lead strip and glazing sections, meters, rail joint bonds, static condensers, magnetic moulding machines, etc.

NEW RECORDS IN SALES AND OUTPUTS

INCREASES OVER WHOLE RANGE OF PRODUCTS

NEED FOR CLOSER COLLABORATION WITH GOVERNMENT DEPARTMENTS

PRODUCTION DELAYED BY "INQUISITORIAL INSPECTION"

SIR ALEXANDER ROGER'S ADDRESS

The forty-second ordinary general meeting of British Insulated Cables, Limited, was held, on the 1st instant, at Exchange Station Buildings, Liverpool.

Sir Alexander Roger, chairman, presided over a good attendance of shareholders.

Mr F. Waine (the secretary) read the notice convening the meeting.

The Chairman, addressing the meeting, said:—I have pleasure in formally submitting to you the directors' report and accounts for 1937, which I presume may be taken as read.

Before proceeding with the business of the meeting I should like to refer to the absence of the vice-chairman, Mr John Ferguson, owing, I regret to say, to serious illness. For many years Mr Ferguson has been a particularly valued member of your board, and I am sure you will join with me and with all his colleagues in sending to Mr Ferguson our sincere wishes for his speedy recovery. (Hear, hear.)

I am sorry to say also we are without our new director, Mr James McKay, who unhappily has a bereavement in his family. Mrs McKay died a day or two ago, and he sends his apologies. I am sure you will ask me on your behalf to send our regrets.

On behalf of my colleagues and myself I have also to record with much regret the resignation, for reasons of health, of Mr Alexander Crook, our secretary. In view of the importance and complexity of our business we have thought it desirable to divide the duties hitherto carried out by one individual, and have appointed Mr F. Waine as secretary and Mr W. H. McFadzean as financial secretary. We are well satisfied with this arrangement.

You will have observed that the accounts have this year been presented in a new form, which we hope you will regard as an improvement.

SALES AND OUTPUT INCREASES

Both in the value of sales and in the volume of output new records have again been achieved. Of particular satisfaction, however, is the fact that these increases have been spread over practically all our products, which, as shown by the leaflet enclosed with the accounts, are now classified under some eighty different headings. The widening of the company's interests for many years past has been, and will continue to be, an important feature of our policy, and the success achieved is a matter of gratification to your board.

The profit on trading, etc., at £821,358, has again been arrived at after "Contingent Reserves Adjustment." The increase of £55,663 in profits, as compared with 1937, is due to the greater volume of turnover, together with the improved factory efficiency and general benefits now accruing from the heavy expenditure made during recent years on modern plant. Without the combination of these factors results for 1937 would not have been so good, as unusual fluctuations in the price of metals and appreciable increases of labour generally.

Adding to the profit of £821,358 the balance brought forward from last account of £380,879, we have a total of £1,202,237. Depreciation of fixed assets on the same scale as applied last year absorbs £143,019, and after providing for directors' remuneration, interest on debenture stock, and dividends already declared and paid on the preference and ordinary capital there is left available

DIVIDEND AND BONUS

From this it is proposed to transfer £100,000 to reserve account and to pay a final dividend of 10 per cent. (less tax) on the ordinary stock, making with the interim already paid a total dividend for

the year of 15 per cent. (less tax). In addition, your directors are pleased to recommend that the cash bonus of 5 per cent. (less tax) on the ordinary stock be again distributed. Our ability to maintain the 1936 rate of distribution on the ordinary stock for 1937 is a source for satisfaction, bearing in mind the increased ordinary capital now ranking.

After making these appropriations there remains £446,992 to be carried forward, which compares with £380,879 brought forward. This shows an increase of £66,000, but neither the amount carried forward nor the amount of cash in hand—namely, £374,000—is too large for the size of our business. We are essentially a trading company and are subject always to the variations of demand, and we must always maintain a strong purchasing position with ability to withstand competition.

Turning now to the balance sheet, "Capital" at £3,000,000 is £333,334 higher, due to the bonus issue made in April last to ordinary stockholders. This was accomplished by making inroads into our reserves to that extent.

"Current Liabilities and Provisions" show relatively little alteration in total, but changes appear in some of the individual items. The amount owing to subsidiary companies has decreased by some £262,000, but this must be read in conjunction with the reduction appearing under the head of "Subsidiary Companies" on the assets side of the balance sheet. Both these changes are largely accounted for by the final application of the rationalisation scheme dealt with in my speech of a year ago, and I am pleased to inform you that the advantages then anticipated have been fully realised. (Hear, hear.) General creditors and contingent reserves fluctuate, of course, from year to year, and on this occasion this item includes provision for the new National Defence Contribution.

TAXATION WITH SECURITY

Your company's total contribution to the taxation requirements of this country is, I can assure you, of a very substantial nature, and I think I should take this opportunity of pointing out that the present burden of taxation, while perhaps just tolerable in a period of national prosperity such as the present, will become increasingly onerous in the event of any recession in trade.

I am bound to add that if the choice of British citizenship lies between high taxation coupled with security and low taxation accompanied by instability and chaos, then I prefer the former. (Hear, hear.) I should, however, add that bureaucratic control, unnecessary interference with the earning of profits and repression of individualism adopted with such disastrous results by many other countries, has gone quite far enough here. (Hear, hear.) Great Britain and the Empire were not built by these methods, and there is no need to copy the economic and political hysteria of other countries.

DEFENCE PROGRAMME

The Prime Minister has stated that the Government is arranging for a further degree of acceleration of the defence programme and has suggested that the leaders of the different sections of industry—employers and employed—should discuss ways in which they could best give the Government the assistance that is needed.

Let me say at once that so far as this company and the group of companies allied with us are concerned, we, in common I am sure with other manufacturers, will do everything in our power to help, but there is a great need for closer collaboration between Government Departments and manufacturers.

It is a striking, but I think true, statement that there are few, if any, manufacturers who would choose to fill their works with Government contracts if other work of the necessary volume were

available. The reason for this attitude of mind is I think primarily the difficulty they have of getting on with the real job of production which is delayed by the inquisitorial inspection to which their goods and their accounts are submitted at every stage.

If the authorities would put before us an approximate programme of their total ultimate requirements, together with a schedule of delivery needs, and place promptly agreed contracts, I am confident some of their present difficulties would disappear. They would certainly buy more cheaply, they would get better deliveries as the factories could be laid out for long-term production, and the manufacturers would be willing even to extend their factories at their own costs if the ratio of the percentage profit to the aggregate turnover rendered it economically possible.

"CLOGGING WHEELS OF PRODUCTION"

Parliament must have the power and the will to protect the public purse against profiteering, but there is a vast difference between profit and profiteering and there must be recognition that the manufacturer is entitled to a reasonable return. (Hear, hear.)

It is difficult to determine what is in fact a fair profit rate on a particular class of goods and the variety is infinite. What might be a reasonable figure applied to a product involving a large proportion of labour relative to raw material would be excessive if applied to another product in which the proportions were reversed.

At present Government Departments have no yard stick to guide them. Every Ministry has its own methods of inspection and examination of goods and of financial accounts, and the officials working under instructions do so with the dread of the Auditor-General and the Public Accounts Committee of the House of Commons.

Methods of safeguard and control which are perhaps admissible and necessary in ordinary times are clogging the wheels of production in the present emergency, and it requires the whole-hearted collaboration of both sides to have these disabilities and delays removed.

BUILDINGS AND PLANT

Returning now to consideration of the balance sheet, "Reserves and Surplus" are down in total by £167,000. This is accounted for by the capitalisation last April of £333,334 of the reserve account, offset to some extent by the appropriation this year from profit and loss account of £100,000, and the increase in the balance carried forward.

On the assets side of the balance sheet "Fixed Assets" amount to £1,816,053. During the year the expenditure on buildings, plant, etc., amounted to the large figure of £206,989. This was met partly by the depreciation allocation of £143,019, leaving a net increase of £63,970.

Through the application of depreciation allocations out of profits all plant purchased prior to 1912 has been fully written off, and in addition the plant and buildings since provided have been adequately written down. Over the last 12 years we have invested some £2,000,000 on new buildings and plant. The benefits accruing from this enormous expenditure covering, as it has, the necessary extension of buildings and the installation of the most efficient machinery obtainable, have already been referred to.

A SUCCESSFUL SUBSIDIARY

"General Investments" are up by almost £127,000, covering sundry additions made during the year. In addition to producing a satisfactory yield, many of our holdings give us an advantageous association with other companies. As usual, a careful estimate of present values has been made, and your board are satisfied that these are in excess of the figures shown in the balance sheet.

"Current Assets" show an increase of some £335,000, accounted for mainly by the increase in stocks and the greater balance of cash in banks and in hand.

Turning to matters of more general interest, there is no branch of our great business of which we are more proud than our wholly-owned subsidiary, British Copper Refiners. Founded only six years ago, the company dealt last year with over 50,000 tons of copper, which was mined and smelted within the Empire by the Roan Antelope Company of Northern Rhodesia, shipped on British bottoms, refined at Prescott, and fabricated into a thousand uses. Profits were not so good as in the previous year, but they were very satisfactory.

IMPORTANT RAILWAY CONTRACTS

Last year I gave you some details of the important Brazilian and Polish railway electrification contracts on which we were engaged. With regard to the former, this work is nearing completion

well up to time, and the Polish contract was completed some months ago. I have only recently returned from a visit to Poland, and I can assure you that our work was carried out to the entire satisfaction of the Polish Government.

We have been fortunate in obtaining contracts from the London and North Eastern Railway for the track-equipment work involved in the electrification of the main line from Manchester to Sheffield, and that part of their London system from Liverpool Street and Fenchurch Street Stations to Shenfield. These contracts cover over 400 miles of single track, have a value of over £1,000,000, and constitute by far the most important railway work yet to be carried out in this country on the overhead system.

EFFICIENCY AND LOW COSTS

We are obtaining our fair share of the work of our class arising out of the rearmament programme, but it amounts to only a small proportion of our aggregate business.

It is, of course, very pleasant to meet you and to talk of record output and profits, but I want to emphasise that they have only been achieved as a result of the heavy capital expenditure made on buildings, plant, etc., in our eternal pursuit of efficiency and low costs, and because of really hard work on the part of our staff and workpeople. Your appreciation of the work of the staff, on which so much depends, is automatically shown through the profit bonus which has been in existence for many years, and with regard to the workpeople we have agreed to allow each of them having one year's completed service one week's holiday with pay. This is in addition to increases of pay and a repetition of the Christmas box that I referred to last year, but I feel sure that these actions of your board will meet with your approval.

The increase in output and the improvement achieved in certain manufacturing processes have, in spite of increased costs of materials and labour generally, enabled us to reduce still further the selling prices of many of our products. The sharing of such benefits with our customers is, as I mentioned to you last year, the considered policy of your board. An investigation shows, for example, that by advancement of technique we have succeeded during the last ten years in reducing the cost of the manufacture of copper wire by over 50 per cent., and yet it shows that we are now earning less profit per ton of output than we then were. This means that more than the whole of the economies in cost has been passed on to our customers. Our reward lies in the fact that we are now disposing of many more tons per annum than formerly.

HIGH SPECIALISATION

There is a general impression that the manufacture of electric cables is easy and necessarily profitable instead of being what it is, a highly specialised branch of electrical engineering. This view seems to be particularly prevalent among a certain class of bargain-hunting buyers, among the trades union leaders and among a certain class of investors, who seem to think that any proposition for the establishment of a small works for the manufacture of any class of electrical conductor is bound to be a success.

The technique and practical experience acquired over many years and stored at immense cost seem to be discounted and disregarded. It is not realised that a cable can only be tested thoroughly after being buried in the ground or in the walls, and that if anything goes wrong the buyer is faced with heavy replacement cost and interruption to his supply. The buyer may have saved a trifling sum on his original purchase, but, unless he is dealing with manufacturers of experience and substance, the initial advantage may be, and frequently has been, totally outweighed by subsequent additional cost.

In a year in which our profits are a record in the history of the company I want to point out that a large proportion is derived not from our trading but from earnings upon investments made out of reserves gradually accumulated over the past fifty years.

The cable plant already existing in this country is amply sufficient to meet all requirements of the trade, and the volume of business available shows in the past few months distinct signs of recession. Surely, therefore, it is folly to start new cable-manufacturing undertakings which, instead of improving employment, have the reverse effect.

GREAT FINANCIAL STRENGTH

Fortunately, we are in a position of great financial strength owing to the conservative policy followed for many years. Our plant, manufacturing technique, and standard of production are beyond reproach, and it is our full intention to maintain the high quality of our products whatever may arise in the matter of competition.

In my speech last year I spoke with optimism of the trading prospects of 1937, and my forecast, as I am sure you will agree, has been fully realised. In view of the adverse factors just mentioned, I cannot hold out such high hopes for 1938. Orders are not so plentiful as they were a year ago, although the works are busy, and particularly so on telephone cable orders for the British Post Office.

The provision of a no-delay trunk service throughout the entire country, representing as it does the mainspring or backbone of telephonic communication, is essential if maximum telephone development is to be achieved, and this statesmanlike policy is being pushed steadily on by the British Post Office.

CONFIDENCE—NOT PESSIMISM

Having given my views for 1938 regarding our own business, I would like to offer a comment on the general business situation in this country. It is this: I have a feeling that the caution and pessimism expressed in all directions are overdone. Our perspective is distorted by reason of international politics and economic troubles in other countries, and we do not sufficiently appreciate that if the bumper year of 1937 had been less good we would be extremely satisfied with the volume of business as it is to-day.

It is perfectly true that business recession in other countries affects business here adversely, but general conditions here are definitely better than elsewhere, the economic position of the country is strong, there are no speculative positions open either on the Stock Exchange or the Metal or Produce Markets, while business of all kinds is being reinforced through the Defence Programme expenditure. Surely it is time for pessimism to be replaced by quiet confidence.

STAFF AND WORKPEOPLE

It gives me pleasure, in conclusion, to ask you to join with me in expressing thanks for all the loyal and efficient service given to the company, both by the workpeople and staff, and, in a particular measure, by our managing director, Mr G. H. Nisbett. (Hear, hear.)

If I may be permitted a personal note, I would like to say that in a long business experience I have never met with a better and finer team spirit, less bickering and jealousy, and more general determination to keep a company in the front rank than in the company of which you are the proprietors. (Hear, hear.)

I now beg to move that the report and accounts be received and adopted and that the dividends and cash bonus therein recommended be paid. (Applause.)

Mr G. H. Nisbett, M.Eng. (managing director), having seconded, the report and accounts were unanimously approved.

Mr D. Johnstone Sinclair proposed the re-election of Major A. L. Chandler, M.C., Mr Eric Taylor, and Mr James McKay as directors. Mr T. H. Martin-Harvey seconded the motion, which was carried.

Mr B. Welbourn proposed and Colonel J. Tennant seconded the reappointment of Messrs Chalmers, Wade and Company as auditors, and this was agreed to.

Mr James Platt, proposing a vote of thanks to the chairman and directors, which was heartily carried, expressed the hope that they would continue the conservative policy which had so successfully maintained the company's prosperity even in the dark days of depression.

The Chairman, in reply, assured the meeting they could rely upon the board doing their very best in good times or in bad for the shareholders, staff, and the workers.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

DAILY MIRROR NEWSPAPERS, LIMITED

SALES EXTREMELY SATISFACTORY

The eighteenth annual general meeting of this company was held, on the 6th instant, in London.

Mr John Cowley (the chairman of the company), in the course of his speech, said:—The profit for the year amounted to £336,584 4s. 11d. From this sum we have placed £20,000 to reserve account and allocated £10,000 as a provision for pensions. After payment of interim dividends on the ordinary shares totalling 15 per cent., and providing for the dividend on the preference shares, as set out in the appropriation account, there is a sum of £131,515 to carry forward, against a figure of £98,931 brought in from last year.

The sales of a newspaper and the advertisements carried are the two chief sources of income, but it is from the advertisement revenue that a newspaper company is able to give a return to the shareholders. Now in regard to the progress in the sales of *The Daily Mirror*, you will remember a year ago I made reference to the steadily increasing demand, and that the promise of the sales was very encouraging. I am now able to say that during the last twelve months the sales of your paper have made rapid strides, and I am pleased to add that to-day the daily sale of *The Daily Mirror* is extremely satisfactory. This position has been achieved by adhering to a policy of spending our money in obtaining the most interesting of the world's news and pictures, and securing the best editorial services. We are very much indebted to our editorial director for his enterprise in this connection.

SUCCESS OF BOARD'S POLICY

Our aim is to produce a daily paper in keeping with modern times and modern thought. This policy has proved highly successful. We have not frittered away our money in useless and abortive attempts to secure sales by pestering every householder in the country to become a reader, nor have we endeavoured to bribe them with an offer of a free gift.

Now in regard to the other revenue received by a newspaper company—from advertisements. As you all know, it is the income from that source which enables a newspaper to show a satisfactory profit and loss account. In this connection I may say *The Daily Mirror* is held in high esteem by national advertisers and their agents.

The paper-making industry in this country, and also in Canada and the United States, has been steadily set back. For the past six months the setback has continued and still continues. This time last year there was a fear in the mind of every newspaper publisher in this country and in America that not only would the price of newsprint be continually increasing, but also that there would not be sufficient paper to supply the requirements of many of them. There is now little fear of the price of newsprint paper becoming dearer for some time to come, and the manufacturers could easily produce 30 per cent. more than newspaper publishers are consuming at the present time.

In this connection I must again refer to your company's investments in the paper-making business. Our investments in Albert E. Reed and Company, the Anglo-Canadian Pulp and Paper Mills, and to a lesser degree the Anglo-Newfoundland Development Company, are (as I have pointed out before) a great asset to your business by reason of the fact that they act as a safeguard for our paper supplies, and it was in connection with those holdings I was hopeful last year that we should be securing an increasing revenue. However, there is the position, and it is to be hoped that when the political atmosphere throughout the world is clearer, and when we know also the extent of the additional taxation which seems to be inevitable, both the business of paper-making and the enterprise of advertisers will again expand.

FUTURE DIVIDEND POLICY

Before I conclude I must refer to the dividend policy of this company. For many years past we have paid quarterly dividends in respect of the ordinary shares. This we propose to vary. After the dividend, and the distribution out of the ascertained realised surplus from sale of investments, already announced to be paid on April 22nd, your directors propose to pay a further interim dividend at some date later in the year, and after our meeting next year to pay a final dividend in respect of the year 1938-39. After that we propose to pay an interim dividend in the autumn of each year, and a final dividend after our annual meeting. Your directors consider this a desirable change, which will be in keeping with the practice followed by most public companies.

The report and accounts were unanimously adopted.

DUNLOP RUBBER COMPANY, LIMITED

SATISFACTORY RESULTS—INCREASED PROFIT

SIR GEORGE BEHARRELL'S ADDRESS

The thirty-ninth ordinary general meeting of the Dunlop Rubber Company, Limited, was held, on the 5th instant, at the Hotel Victoria, Northumberland Avenue, London, Sir J. George Beharrell, D.S.O. (the chairman), presiding.

The Secretary (Mr Charles Tennyson, C.M.G.) having read the notice convening the meeting and the report of the auditors,

The Chairman, after paying a tribute to the work of the late Sir Eric Geddes during the 15 years of his chairmanship, in the course of his speech, said:—As I expect many of you know, it is just 50 years this year since J. B. Dunlop took out the patent for his pneumatic tyre. I wonder if you have ever thought that we owe to the taking out of that patent by a veterinary surgeon in Belfast, and its subsequent purchase and exploitation by the company from which your company derives title, two of the greatest factors in modern civilisation, two factors which have changed and are still changing the whole aspect of the world—I mean modern road and air transport.

A SATISFACTORY REPORT

The Dunlop jubilee is therefore something of importance not only to you as shareholders in the company but also to the whole country and the world at large, and your board are particularly glad that on this interesting occasion they are able to present you with such a satisfactory report of the company's activities. Whatever 1938 may have in store for us, we can be thankful that trading conditions for the greater part of the year 1937 were favourable in the home market, and also in several overseas markets.

In this country, though each month showed an improvement over the corresponding month in 1936, the rate of improvement tended to decline, and in the last quarter there was quite a sharp fall. This tendency was reflected in the slowing down of our own business during the latter part of the year. In foreign countries conditions varied, but in America there was a moderately sharp recession in business activity at the end of the first quarter, and a violent decline in August, which, during the last months of the year, almost reached panic proportions.

COMMODITY PRICES

Commodity prices continued to advance during the early months of 1937, but during the later months prices began to decline generally. The position of rubber was typical. The price of standard smoked sheet on December 31, 1936, was 10½d. per lb. It rose rapidly to the high point of 1s. 1½d. on March 30th, and then fell continuously to the figure of 7d. per lb. on December 31, 1937, the average price for the year being 9½d. per lb.

You will remember that when I addressed you last year I pointed out that if there was a serious drop in price manufacturers would be in a difficult position with regard to their stocks, and I gave this as one of the main reasons which had impelled your board to continue a policy of conservative finance. As stated in the directors' report, the heavy fall in the price of commodities during the year entailed a substantial writing down in the valuation of raw material inventories.

Having regard to these facts and to the continued and even increased political instability in many parts of the world, I think you will agree that the result of your company's trading for the year was eminently satisfactory, showing an aggregate profit higher than for any year since the new form of accounts was adopted and a total available for distribution substantially in excess of last year, in spite of a greatly increased provision for taxation.

PROFIT AND DIVIDENDS

You will have observed that the aggregate total profits of the whole Dunlop group of companies in 1937 were £2,504,000, which, as I said just now, is the highest total for any of the past five years, the lowest corresponding figure being £1,869,000 for the year 1935.

The burden of taxation is increasing rapidly in all countries, and the effect of this has been that the taxation borne by Dunlop subsidiaries has risen to £355,000, representing an increase of £112,000 over the preceding year. In addition to this the main company has had to provide in 1937 for taxation amounting to £496,000, so that the total taxation burden of the whole of the Dunlop group of companies in 1937 was £851,000, and this total does not include local and indirect taxes and Customs duties.

If you refer to the consolidated statement of assets and liabilities, you will see that at December 31, 1937, the total liability for taxation of the whole group amounted to £1,144,000. It is indeed a disquieting thought that industry the world over is staggering under this

crushing burden, which seems destined to become even greater in the immediate future owing to re-armament.

The increases of both taxation and profits held back by subsidiaries naturally reduce the amount available to the main company. However, in spite of this, the total net profit of the Dunlop Rubber Company for 1937 is £1,591,000, and including the balance brought forward from last year of £590,000 the total available for appropriation amounts to £2,181,000.

In view of your company's world-wide interests and the uncertainty of the future, your board has thought it prudent to strengthen further the reserve for contingencies by appropriating thereto the sum of £250,000, thus bringing the total of this reserve up to £1,032,000.

After providing for the preference dividends the board is enabled to recommend a dividend of 8 per cent. on the ordinary stock, and a bonus of 1 per cent., and this dividend and bonus, if approved, will be paid on April 20th.

REVIEW OF ACTIVITIES

In the course of a review of the Dunlop group's activities during the year under review, he said:—I told you last year that there had been an all-round increase in the demand for the products of the cotton mills. The demand increased further in 1937, and the output achieved was a record. As always, great attention is being given to research and improvements in quality, and some important developments are in contemplation.

The result of the plantations company again showed a big improvement over the figures for the preceding year, the increase in net profits amounting to £162,000. This result was, of course, mainly due to the relatively high average price of rubber during the year. 3,415 acres of the immature area—all budded—were brought into tapping during the year, and the yields from the budded areas fully justify the policy of the company in adopting this method of planting, and are in accordance with our expectations.

REGULATION SCHEME—NEED FOR RENEWAL

During the year under report shipments of crude rubber continued under the control of the International Rubber Regulation Scheme, and we have now entered into the final year of that scheme's operation. I have referred to the fluctuations that occurred during 1937 in the price of rubber, and it might be inferred that the committee which controls the scheme has failed in its task.

It is easy to look back and indicate in the light of after-events one or two decisions which might with advantage have been different; but one could not expect the committee to foresee political and economic crises which have come as a shock to the whole of the world. The committee has to frame its policy in accordance with the anticipated consumption of the rubber manufacturing industries of the world and for its estimate of this consumption it must depend upon the forecasts and statistics supplied to it. In the past several months these forecasts have been substantially falsified by a quite unforeseen recession in trade.

I am satisfied that the committee has worked impartially and wholeheartedly to arrive at a stable price which would be fair to both the producer and the consumer.

I would hesitate to suggest what in fact constitutes a price that would be reasonable to the efficient producer, and at the same time fair to the manufacturer, but I can say that if the price of rubber remains at its present level the accounts of your Plantations Company will present an appearance very different from that shown in its last report.

As you are aware, negotiations are at present in progress for a continuation of the regulation scheme for five years from January 1, 1939. It is unthinkable that, in present conditions, restrictions should be abandoned. I am satisfied that the world's potential production is very considerably in excess of any probable requirement of the manufacturers, and the removal of control would bring to the production side of the industry a state of depression and chaos which could not be in the interests of the manufacturer. Manufacturers require adequate supplies and a stable price at a reasonable level. Until there is a better balance between consumption and production, that can be achieved only by regulation of exports.

TYRE DIVISION

Despite acute competition our replacement sales of pneumatic tyres for motor-cars, commercial vehicles, motor-cycles and bicycles were higher than in 1936, while in sales of accessories, Dunlopillo upholstery and industrial tyres new high records were obtained. For these excellent trading results we are indebted not only to the excellence of our products and their ready acceptance by the public, but also to a virile organisation and a trade goodwill which is of the greatest value.

A prominent sales feature of the year has been the introduction of our new "Dunlop Fort" car tyre, first placed upon the market

at the end of May last, and now widely known as "The Tyre with Teeth," on account of the serrated tread pattern which has so largely reduced the risk of skidding, even under the most adverse conditions. The growth of motoring and the ease with which second-hand cars can to-day be purchased demand that your company shall maintain its reputation and strength in the high-quality market, and the new "Dunlop Fort" tyre is being of the greatest assistance in this direction. Its remarkable features are convincing the motoring public that a slightly higher first cost is fully justified, not only by the long life which the tyre gives but by the safety factors which it undoubtedly provides.

In addition, the tyre enables the fullest use to be made of the remarkable braking and accelerative powers of the modern car. Its success is assured. It is a unique production and is rapidly being accepted as such.

RECORD CYCLE-TYRE SALES

Sales to motor-cycle manufacturers showed a definite improvement, as did sales of cycle tyres, which actually constituted a new record for our first equipment business. Our turnover in aeroplane equipment again advanced, and with the great developments which are going forward in aeroplane construction we can look forward to further increases, and provision is being made to cope with them.

Sales of Dunlopillo upholstery continued to increase for public service vehicles, for which the product is now well established, and has indeed become standard equipment.

Last year I told you of the rubber wing which we had introduced for passenger-carrying vehicles, and I said that over 2,500 vehicles were already equipped with this. I am glad to be able to say that this year the number has increased to 5,000 vehicles, and orders are now being received from overseas markets. This is a business which we believe to have a substantial future.

Rim and Wheel Company.—Our rim and wheel works, which of course cater both for motor-cars, motor-cycles, cycles and aeroplanes, have been fully occupied during 1937. The factories are thoroughly modern in every way and have made a satisfactory profit.

RUBBER PRODUCTS GROUP

This group includes footwear, general rubber goods, garments, and sports goods, and it is satisfactory to be able to record that all divisions of the group showed an increase in turnover, and the profits of the group were substantially better than last year.

This excellent result was obtained in spite of the fact that price competition was more intense than ever. This applies particularly to the footwear trade, where we still suffer severely from duty-free imports from within the Empire. We continue to urge upon the British Government the necessity for dealing with this question.

In these divisions we have to deal with price cutting in the home market by British manufacturers. This may become a serious menace if we are faced with a period of falling demand. In order to counteract these difficulties we are striving all the time to improve quality and to derive full benefit from the great goodwill of the Dunlop name. In accordance with the same policy we are paying greater attention than ever to styling our goods, so that they may have the maximum of appeal to the public on the ground of appearance. The progress made in these divisions, both with old and new products, during the past five years, in spite of the peculiar difficulties with which the group is confronted, has been really remarkable.

OVERSEAS MANUFACTURING COMPANIES

I now turn to overseas business, and will take first the Associated Dunlop factories. The year in France has brought steadily rising costs in all departments, caused by the fall in the franc and by social legislation, which raises wages and shortens hours. In spite of this, our position in the market was strengthened during the year and a satisfactory profit has followed. Whether this will continue must depend upon many factors—particularly on whether it is possible to maintain an adequate level of prices for our finished products.

The results of the American company were substantially better in 1937 than in 1936, notwithstanding the severe recession which affected general business in the United States during the last six months of the year. The results for 1938 depend on general trade conditions in America, and our associated company is in a favourable position to take advantage of any improvement.

General industrial and commercial activity in Canada showed substantial improvement, in which the Canadian Dunlop Company shared. As a result the gross margin was substantially in excess of that for 1936, and the company showed a profit for the first time for some years.

Dunlop business in Japan is suffering from the restricted supplies of raw materials available, and from other restrictions resulting from a state of war. Despite the adverse effect of

this during the second half of the year, our turnover and profit increased.

The Dunlop Perdriau Company of Australia, in which you own a minority interest, has enjoyed to the full the general recovery in the Commonwealth and earned satisfactory profits.

In South Africa we have, since the establishment of the factory, had continually to increase productive capacity to catch up with the growing demand for our products. Sales in the year under review increased substantially over the preceding year and, as a complete justification of our policy of local manufacture, I may mention that the sales of Dunlop products in 1937 were largely in excess of those of 1934, the year immediately preceding the commencement of local production. Net profits also show a gratifying increase in comparison with 1936. For 1938 we anticipate further expansion in sales, and we hope at least to maintain the margin of profit.

The Indian Company, which already had a profitable and expanding business, commenced manufacture in the second half of 1936 and has materially improved its position. As it was thought wiser to retain the money for the expansion of the business which is confidently expected, no Ordinary dividend has been declared, although a surplus was available.

The establishment of the Irish factory has justified itself in every way. In 1937 there was a satisfactory increase in sales, and although the gross profit margin was lower than in 1936, increased sales and improved conversion costs enabled a satisfactory profit to be obtained.

I am glad to be able to tell you that our volume of export business and the profits earned in 1937 both showed very substantial improvement compared with 1936.

PROSPECTS

I have now given you a general survey of your company's operations during 1937. I am sure every one realises that the outlook for the near future is shrouded with uncertainty. As I told you just now, conditions at the end of 1937 seemed to be tending downwards practically all over the world. That tendency has continued through the early months of this year, though I am glad to say it is less marked in this country than elsewhere. I believe I am right in saying that the decline began in the United States, and the course of events in that country will undoubtedly have a very substantial effect on conditions in other parts of the world.

American economists and business men are not optimistic as to the prospects of the immediate future, but it is undoubtedly of vital importance to the American Government and the American people that confidence should be recreated, and business and employment set once more on the upward path. The economic background is by no means so unfavourable as it was in 1929, and I think most people are confident that during this year there will be, first, a marked retardation of the decline and then an upward movement, but the timing of these events cannot be foretold. Recent events in Europe and the Far East do not tend towards the establishment of that confidence which is essential to a real trade revival.

In some other foreign countries conditions are in certain respects less favourable than in the United States. I have mentioned the difficulties caused in France by rising costs and the fall in the value of the franc. The removal of these difficulties must depend largely on political considerations, in regard to which any accurate foresight is impossible. It is also impossible to foresee a satisfactory solution of conditions in the Far East, at any rate in the near future.

The purchasing power of South American countries is adversely affected by the fall in the prices of primary products. Trade with Brazil has become more difficult since the recent political changes, which have resulted in closer exchange restrictions, and conditions in Mexico some time ago led the company to suspend trading there.

Fortunately, the outlook in British territories overseas is generally more favourable. General trading conditions in the home market have withstood remarkably well up to now the adverse influences of the recession. The re-armament programme will undoubtedly be of assistance in tiding over the period immediately ahead of us. Your company's organisation has never been so efficient, and its financial position was never so sound. I do not doubt that we shall maintain, and we should extend, our share of the business available. We shall continue to do everything humanly possible to provide against unfavourable contingencies. But a company whose activities are as widespread as ours must take a long view and, in circumstances such as those which prevail to-day, a cautious view.

I am sure, therefore, that you will approve the conservative financial policy which your board has thought fit to adopt, and that it will be a source of satisfaction to you that the company is provided with such an excellent shock-absorber in the shape of reserves.

The report and accounts were unanimously adopted.

UNITED GLASS BOTTLE MANUFACTURERS, LIMITED

EXCELLENT RESULTS OF THE PAST YEAR'S OPERATIONS

SIR MAX BONN'S SURVEY

The twenty-fifth ordinary general meeting of the United Glass Bottle Manufacturers, Limited, was held on the 7th instant, at 8 Leicester Street, London.

Sir Max J. Bonn, K.B.E., the chairman, who presided, said:—No doubt you will take the report and accounts as read, and will have studied them with satisfaction. For the first time they reflect, in some measure, the results of the merger, and strict comparisons with previous years are rather difficult. It may simplify the review I have to present to you if I preface a more detailed consideration by a few general observations.

The financial results of the two manufacturing groups fully justified the mathematics of "relativity" on which the merger terms were based—a particularly pleasing tribute to the accountancy experts.

As you will remember, we acquired our interest in British Bottles, Limited, by capitalising its ascertained earning basis, expressed in U.G.B. shares. If I draw your attention to the footnote to the balance sheet, you will observe that profits made by British Bottles (and its manufacturing subsidiaries) figure in the accounts to the extent only of the dividend received by the U.G.B. It follows, and I wish to emphasise, that British Bottles have retained a substantial balance of profits which, with the carry-forward from 1936, constitutes a satisfactory nucleus for a contingency reserve within the Northern group. We are thus building up a reserve account in British Bottles to meet any possible needs for heavy capital expenditure.

BALANCE SHEET ITEMS

Turning to the accounts, I wish to draw your attention to the following items in the balance sheet:—

The share capital is increased by the 600,000 7½ per cent. preference shares of £1 each and 500,000 ordinary shares of £1 each issued to the Distillers Company, Limited, and their associated companies in discharge of the purchase consideration for the shares of British Bottles, Limited. The investment in the latter company appears in the balance sheet under the heading of "Shares in Subsidiary Companies," and figures at the equivalent of the U.G.B. shares at their nominal value.

Trade creditors have risen from £193,369 to £237,686, and provision for increased taxation, including the item for National Defence Contribution, contingencies and research expenditure, etc., from £180,678 to £227,169.

Turning to the other side of the account, additions to land and buildings, £37,316, include the completion of the new warehouse at St. Helen's Factory.

Stocks of bottles, materials and stores are higher this year by the sum of £38,691, due to large purchases of timber and raw materials made towards the end of the year.

Trade debtors, which have increased from £321,254 to £406,680, reflect greater volume of business. The amount due from subsidiary companies, £106,942, an increase of £93,347, mainly represents the dividend payable by British Bottles, Limited, and an increased dividend by Kork-N-Seal, Limited, which amounts have been received since the end of the financial year. Cash at bankers and in hand is £139,937.

PROFIT AND LOSS ACCOUNT

The increased trading profit, excluding the dividend from our new acquisition, amounted to £66,767. After meeting the increased charges for directors' remuneration £10,058, share issue expenses £5,657, income tax and National Defence Contribution £36,000, and bringing in the dividends from the subsidiaries, the net profit available is £280,811.

RESERVES AND DIVIDENDS

The board has allocated £16,810 to debenture redemption reserve (now standing at £128,201), £60,000 to general reserve (bringing it to £400,000), £15,000 to Staff Benevolent Fund and £20,000 for new head office equipment and rebuilding of the offices at Charlton and St. Helens, so as to bring them into line with modern standards of office amenities.

The year's preference dividend has been paid and in September last an interim dividend of 3½ per cent. (as against 2½ per cent. last year) was distributed on the ordinary shares.

Your directors now recommend a final dividend on the ordinary shares of 6 per cent. less income tax (making 9½ per cent. for the year as against 8½ per cent. last year), and a cash bonus of 2½ per cent. less income tax (same as last year).

INCREASED SALES

The year under review was characterised by a far greater velocity of trade and some increase in selling prices, though in no way comparable to some of the increases we have had to meet in regard to our own costs. Throughout the industry there has been, I am glad to say, a marked reluctance to attract business by undercutting—an evil to which I have had to allude on previous occasions. The steadier tone was no doubt due to the rising manufacturing costs common to all bottle makers, both labour and raw materials, and the greater measure of confidence in the general trade of the country which made it possible to utilise production capacity more adequately without trying to fill one's order book by price cutting. I can only hope that this sweet reasonableness will be maintained should there be any apprehension at some future time as to a setback in the trade cycle.

Our high technical efficiency and low unit value will, as far as I can judge, enable the industry fully to hold its own against the substitute type of containers of which we hear so much from time to time, i.e. the tin container and various fibrous ones.

MEDICINE BOTTLE SERVICE

We are now supplying the well-known "UGB" washed and sterilised medicine bottle service with bottles fitted with white moulded caps produced by our Subsidiary Cap Company, instead of black as hitherto. The Cap Company are now installing injection moulding machines which will enable them to cover the full range of plastic mouldings.

DIRECTORS' REMUNERATION

Reverting to my comments at last year's meeting relating to a limitation of profits, within the provisions of Article 103, to which the directors' commission should be applicable—both in view of the recent merger and by way of general consideration—the board asked your auditors, Messrs Cash, Stone and Company, to give them the benefit of their independent views as to what figure might be deemed fair, both to the general body of shareholders and to the board of directors. The figure arrived at by them, in the light of past achievements and prospective possibilities, was one highly flattering to the management and appreciably in excess of a figure the board themselves had in mind and have adopted.

THE FUTURE

The general trade conditions which prevailed during the greater part of 1937 resulted in our entering the New Year with the highest order book ever experienced. This increase was largely due to a greater number of customers anticipating their requirements, and consequently this heavy booking will discount the volume of new orders for the early part of 1938. I find it increasingly difficult to draw conclusions from any short period comparisons, as so much valuable custom reaches us by way of bulk orders, the dates of which vary considerably from year to year.

STAFF

Obviously, our new relationship with the factories in the Northern group, especially in a year of intense activity, has imposed an endless strain on the management, in spite of the most cordial co-operation from our new associates; I wish to pay a most unqualified tribute to my colleagues, Mr Moorshead and Mr Judd. But they would be the first to wish to relay the tribute throughout all the intermediate grades, from the factory managers down to every single operative.

The report and accounts were unanimously adopted.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED

ALL RECORDS BROKEN

The thirty-eighth annual general meeting of Associated Electrical Industries, Limited, was held, on the 1st instant, at Bush House, London.

Sir Felix J. C. Pole (the chairman), in the course of his speech, said:—Profit made during the year, including dividends from subsidiary companies, which dividends in the aggregate were less than the profits earned, amounted to £1,290,008, an increase of £234,384. After deducting depreciation and taxes there remains a balance of £691,493, to which has to be added £176,118, the amount carried forward from the previous year, making the total profit available for distribution £867,611. From this there has been appropriated £100,000 to a special reserve and £100,000 to dividend equalisation account, to which I will refer later. After providing for the dividend on preference stock £78,458, there remains £589,153, and your directors recommend a dividend on the ordinary stock at the rate of 10 per cent. per annum, less tax, leaving a balance to be carried forward of £220,015.

GROWING VOLUME OF ORDERS

If you will now turn to the report you will note the statement that the output from the various works of the group was greater than in previous years. Orders received during the year 1937 as well as orders in hand at December 31st last showed a substantial increase over those for 1936 and constituted a record. As a matter of fact, all previous records have been broken, as will be apparent from the fact that our group had last week 41,721 employees at work. This is almost twice as many as at the lowest period of the slump, and is to be associated with the fact that the value of orders received last year was appreciably more than double the total for the year 1933.

As regards the future, I will content myself by repeating what was said by our managing director, Mr Lusk, at the recent meeting of the British Thomson-Houston Company.

He said: "We regard 1937 as a peak year in our industry and we have not expected that the volume of business available in 1938 will equal that of 1937. On the other hand, we do not expect any serious recession in 1938 from the level of 1937 and we are not disturbed at the prospect of some falling off in incoming orders during 1938, particularly as we started the year with a large unfulfilled order book."

METROPOLITAN-VICKERS ELECTRICAL COMPANY

As you are aware, your company owns the assets of the Metropolitan-Vickers Electrical Company, and therefore, I have usually mentioned some of the outstanding points affecting that company.

In the first place, we are co-operating closely with the Government in connection with the munitions programme.

Large orders received include one from the Victoria Falls and Transvaal Power Company for four more 33,000 kw. turbo-alternator sets for the Klip River power station. This company had previously ordered eight of these sets, so that when the station is completed there will be 12 sets, all of Metropolitan-Vickers Company's manufacture, and it will be unique in being the only power station in the world equipped with 12 33,000 kw. sets of the same design and manufacture.

We have received an order for another 100,000 kw. turbo-alternator set for the London Power Company's Battersea station, also a large repeat order for switchgear for the same station.

(Continued from page 110)

Fruit.—Helped by the exceptionally fine weather, business at Covent Garden last week was generally good, reports *The Fruitgrower*. Prospects for the Easter holiday trade are satisfactory. The apple trade was active, with the exception of cooking apples; pears were again in demand at slightly firmer rates. Hot-house grapes were available in limited supplies from Belgium, but South African grapes were plentiful and prices weakened. Plums from the same source were dearer, and sales of pineapples and melons were good. Oranges continued to meet with fair inquiries, but supplies were limited. Lemons remained steady in price.

Miscellaneous Commodities

Oilseeds and Oils.—Oilseeds and their products have not escaped the wave of depression which seems to have adversely affected most commodities in the past few days. Indian shippers have offered new crop linseed in increasing quantities, and prices have declined by several shillings per ton. Plate linseed has shown some resistance but is also lower. Generally, however, prices are steady for near positions, but the forward market is inactive.

The South African Railways ordered 42 locomotives similar to the 120 previously supplied by Metropolitan-Vickers Electrical company. I had the pleasure of riding on one of the locomotives during my recent visit, and can tell you that the railway officers who are responsible for operation spoke in glowing terms of their performance and reliability. There are now approaching 400 route miles of electrified main line and the change-over from steam to electric working has proved an enormous success.

Another very important railway order is for the London and North Eastern Railway for the electrical equipment for 70 mixed traffic locomotives required for the Manchester-Sheffield electrification, a notable step in the history of the railways of this country as this will be the first section of main line to be worked wholly by electric locomotives.

For some years past we have done a very large business in South Africa, including winders for mines, generating station equipment, and railway electrification. Last year's business was most gratifying, and I can say most definitely that as regards all types of engineering plant your companies have a very high reputation.

The report and accounts were unanimously adopted.

VICKERS LIMITED

INCREASED PROFITS DIVIDEND OF 10 PER CENT.

The seventy-first annual general meeting of Vickers Limited was held, on the 1st instant, in London, Mr A. A. Jamieson (the chairman) presiding.

The Chairman, in the course of his speech, said:—The first feature in the accounts to which I propose to call attention is the redemption of £2,000,000 5½ per cent. debenture stock. This was repaid at 103 on December 1, 1937, the earliest moment permissible under trust deed. Our company has thus been relieved of the necessity of providing interest and sinking fund on this debt.

The net profits for the past year were £1,351,056, an increase of £188,446 compared with 1936. Before arriving at the net profit £60,000 has been charged for the premium paid on the redemption of the debenture stock. After the transfer of £400,000 to reserve and £100,000 to contingencies reserve your directors recommend the payment of a dividend of 10 per cent. on the ordinary stock.

You will remember that in the accounts for 1936 a sum was taken from contingencies reserve in part settlement of the Vickers-Armstrongs' profits guarantee policy. Your directors therefore considered it prudent to replace part of this sum out of the profits of 1937. The appropriation to reserve has also been increased, but there is no intention of building up this reserve to a sum which is in excess of prudent requirements.

The Chairman then gave an exhaustive survey of the position of their associate companies.

Continuing, he said:—With two exceptions (Spanish and Irish companies) every subsidiary company had a satisfactory year and each has contributed by way of dividend to the profit of the parent companies. Disposal of our Irish interests has been negotiated.

The vital importance of continuing research work is fully realised, and in spite of the present heavy demands on our technical staff and productive capacity such work is constantly proceeding.

I would remind you of the statement made at last year's meeting that though gross profits might expand, the net or divisible profits might not show a corresponding expansion. This warning is as true to-day as it was a year ago.

The report and accounts were adopted and the dividend recommended was approved.

Rubber.—The market was dull, buyers showing little interest despite the severe fall in prices last week. Nor are there any indications of an early improvement of consumption sufficient to invite large-scale purchases by manufacturers and, consequently, a rise in prices.

Sweden in the Trade Cycle

Recent discussion of the desirability of planning a public works programme to be carried out in the event of a slump lends special interest to the experience of Sweden, whose Government has endeavoured to apply a policy of this nature. On the left-hand panel of the following charts the activities of the State and the rapid rise of exports since 1932 are compared with the national income and certain of its constituents. On the right-hand panel Swedish and British experiences are compared. It should be remarked that the Swedish unemployment percentage is less representative than the British and the numbers unemployed very much less. Except in the case of industrial production the index numbers are of values. They are all based on 1929 = 100.

THE ECONOMIST WHOLESALE PRICE INDICES

II.—SECOND INDEX, DECEMBER, 1910—DECEMBER, 1923

In *The Economist* of March 26th, page 725, we gave a record of the original *Economist* index, from 1851 to 1910. In 1911 the scope of the index was enlarged by the inclusion of additional commodities whose importance had grown since the original index was first calculated in 1864. Details of the second index were given in *The Economist* of February 4, 1911. Like the original index, the second index is an unweighted arithmetic aggregate, but the basis was changed from the average of 1845-50 to the average of 1901-05. In addition, separate indices were calculated for groups of related commodities comprising the complete index. Moreover, the complete index was calculated as an aggregate as well as an average. A record of the second index, from December, 1910, to December, 1918, was given in *The Economist* of April 2nd, page 66. Figures, covering the period from January, 1919, to December, 1923, are shown below.

Basis Average, 1901-05	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index

restrictions which have been won for the benefit of skilled engineers in past years, is no light decision. It can only be taken if adequate guarantees are secured that the safeguards in suspense will be speedily restored when the emergency passes, if the general body of members approve and if a very definite limit is set to the profits of individual armament firms.

These considerations go a long way to explain the unions' caution. The engineers have enjoyed some two years of prosperous activity, and in both engineering and shipbuilding wage-rates and employment notably improved in 1936 and 1937. To-day the tide is receding; and the unions' leaders are anxious that the workers who are already experiencing unemployment should be provided for under the arms plan, before their well-paid and well-employed brethren are called upon to abate their privileges.

Two other hesitations on the part of the unions have been more criticised. The suggestion that the promise to restore the former trade union customs after the war was not fulfilled begs a lot of questions. The Great War was a revolution; other countries turned their industries upside down and new conditions of competition came into being. The British trade unions retained a position of very great strength at the end of the war. The miners were able to secure a seven-hour day—which had subsequently to be abandoned under competitive pressure. The railwaymen secured a very favourable cost-of-living wage scale. In many trades the wartime bonuses were largely incorporated into permanent wage scales to an extent which created serious difficulties for British exports. Workers in the building trades were able to make their own terms for the training of apprentices to erect the "homes for heroes" which sprang up in post-war years. And the engineers were not unsuccessful in partially demobilising the wartime entrants.

American Deadlock

IT is by no means a new thing for the American Congress and the President to be quarrelling. Indeed, ever since the days of President Washington, the rare periods of harmonious concord have been so exceptional as to excite wonder whenever they have occurred. But the present rift at Washington amounts to much more than the customary bickering which goes on between the two ends of Pennsylvania Avenue. An extraordinary change has come over the American political scene since the Presidential election of November, 1936. Before that election the President had had to face opposition as bitter and as personally venomous as any that even his most unpopular predecessors had encountered. He appealed to the country, and the country gave him the largest majority in its history. He seemed to be in an impregnable position.

The picture of Roosevelt triumphant was changed to that of Roosevelt crestfallen by the ill-starred proposal for the reform or, as his enemies called it, the packing of the Supreme Court. It is still difficult for outsiders to understand how the attempt of a Government just decisively endorsed at the polls to enforce its legislative Acts could be genuinely believed to be an attack on the fundamentals of democratic government. The fact remains that it was so regarded, that Mr Roosevelt was accused of seeking an unconstitutional dictatorship for himself, and that sufficient credence was attached to both contentions to defeat the proposal, in spite of Mr Roosevelt's stubborn defence of it.

The same charges have been raised against him in the last few weeks during the fight over the Reorganisation Bill. In essence, this is a badly-needed measure empowering the President to rationalise and re-align the amorphous bulk of the executive branch of government. Each of his

All this was mainly a matter of negotiation interspersed with some strikes, for the clock cannot instantly be put back in a changing world. In the upshot, however, British labour may certainly claim to have secured reasonably favourable arrangements for its members. If the Utopia hoped for after the war eluded us, the trade unions—except in the export trades—achieved a high real wage for those of their members who remained in work. Any general charge of bad faith over the wartime agreements would be difficult to sustain.

On the other hand, the criticism that the unions should not attempt to dictate terms on British policy or attempt to alter the Government's line of action is a more complex issue. If the situation were such that the Government felt constrained to take power to mobilise the nation for war preparation—dictating to employers what they should make through a modern D.O.R.A. and inscribing the personnel of the nation for national service—there would be nothing more to be said; for it would clearly be improper for a section to set its wishes against a course accepted by the nation as a whole as a matter of public safety.

But as yet that is not the issue. The Government is rightly seeking to enlist the maximum of voluntary effort behind its re-armament plans. It can only do this successfully to the extent that it secures unity of purpose and enthusiasm for the ends which it is pursuing. It is right that the Trade Unions should let the Government know what preoccupations—if any—stand in the way of securing wholehearted backing from their members and that the Government should seek to remove them. This is not dictatorship by a minority but commonsense. British re-armament, whatever the material results may be, will be ineffective if the "home front" is split or riddled with misgivings. The Unions will have done a real service if the representations of their spokesmen have reminded the Government of this vital consideration.

recent predecessors has asked for something of the same sort, and Mr Roosevelt's Bill differed very little from the drafts of earlier years. In so far as it did so differ—for example, in the proposal to abolish the office of Comptroller-General—it would have been fully open to Congress to delete the offending clauses, while leaving the rest of the Bill intact. But the Opposition chose to see in this Bill another sign of dictatorial ambitions. Mr Roosevelt having dared last year to attack the judicial branch of the Government, he was counter-attacked on his own ground and charged with planning tyranny because he wished to organise more efficiently the executive branch, for which he has an incontestable mandate from the people. The counter-attack, borne on the crest of a flood of a quarter of a million telegrams to Congressmen, has succeeded. The President has been told not merely to mind his own business, but to be very careful how he does even that.

The reversal of Mr Roosevelt's political fortunes has, of course, been powerfully assisted by the astonishing intensity of the depression that has swept across the country in the last six months. It is true that the sensationally rapid decline in business activity in November, December and January has not been continued at anything like the same rate in the last two months. But it is equally true that there is no convincing sign of recovery yet to be seen. The official index of industrial production, which was as high as 117 as recently as last August, had fallen to 79 in February, and little change is expected in the March figure. The appearance of figures such as these, at a time when the hopefulness of recovery was beginning to pass over into confidence, has been sufficient to induce in the American people a mood of the blackest pessimism.

At the first onset of this recession the President, like all administrators in office, attempted to deny its existence. There was a second phase in which he left it to cure itself. But the pressure of facts is now forcing him to take active steps. The remedies of 1933 have been taken down from the shelf and re-examined, and the most effective of them has been re-adopted. The pump is once more to be primed with a Federal deficit; Congress is to be asked to appropriate \$4,250 millions for relief payments, for loans to States and municipalities for public works, and for loans to business. This decision, coupled with the Congressional humiliation of its author, has lifted Wall Street's spirits, and once more there are hopes that the next few weeks will see some beginnings of industrial revival. But it is not possible to feel very happy about the reversion to depression measures. Pump-priming, even when it succeeds, may be a dangerous narcotic. And it is doubtful whether pump-priming of less than heroic dimensions will be of much avail, unless some truce is called in the present savagery of political conflict.

For the bitterness of the dissension that now divides the President and virtually the whole business community, blame can be placed on both sides. The President professes to believe in an economic system in which the greater part of industrial enterprise is in private hands, and in any case he has neither the mandate nor the power to substitute for it a system of State control. But many of his actions have certainly had the effect of discouraging the exercise of ordinary business enterprise. He has done this by the wording of his speeches, by his labour policy, by his campaigns against an ill-defined notion of monopoly, by his enmity against the public utilities, above all by his innovations in the field of taxation, which have seemed to discriminate against bigness, wealth and conservative finance as such. Each one of these things in itself is doubtless defensible. Together they have been a frankly deflationary force. But business is also far from blameless. The leaders of industry and finance have resisted needed reforms and criticised the methods of recovery, while offering no consistent and coherent alternative to the New Deal. They have been content to live on contradictions, as when they insist on the removal of taxes and the balancing of the Budget in one and the same breath. Too much of their opposition has been neither responsible nor constructive. Above all, the business community can be criticised for deliberately work-

ing itself up into such a lather of hatred (no other word is strong enough) of the President, that its fury is choking the whole industrial and financial machine. These faults on both sides are now being reinforced by bitter obstinacy. In either camp the moderate counsellors are at a discount. The President, in particular, has broken with many of his wisest friends, both among the politicians (like Vice-President Garner) and among the business men (such as Mr Bernard Baruch). Both sides are now in the mood in which each protagonist delights to obstruct the efforts of the other, with the result that American affairs are rapidly moving towards deadlock.

It would be an exaggeration to say that the chief trouble with America to-day is psychological: a community of 125 millions is run on more than emotions. But it is true that the main cause of the recession is to be found in a stoppage of the channels that connect the savings of the community with the means of their concrete investment in capital goods, and now that the deflationary monetary policy of a year ago has been reversed, the hindrances are mainly those that arise out of the lack of confidence. If political bitterness could be forgotten and a practical short-run programme worked out by the President and his adversaries, there is no doubt about the improvement of the atmosphere that would follow. It would be necessary in any such bargain for the President to concede the amendments in the taxation system for which business is clamouring, and he would also have to declare a moratorium on any further measures likely to diminish business profits. The other side would need to accept those reform measures that are already on the statute book; they would have to abandon their present attempts to vilify the President; and would need to accept him as being, in constitutional law and in actual fact, the only possible leader of the nation.

It is, of course, for Americans themselves, and not for the outsider, to say whether some such proposal as this would involve too much swallowing of personal pride on the one side and the other to be acceptable. But it must be clear to all, on both shores of the Atlantic, that unless animosity can in some way be transmuted into agreed action, the peculiar frustrations of Congressional government will soon resume their sway, and, as with Wilson in 1919-20, or with Mr Hoover in 1931-32, for two vital years there will be no Government in Washington.

Is Motoring Too Dear?

AT Easter, the first of the year's festivals of the open air and the open road, there is a special relevance in the contention of an owner-driver correspondent, of moderate means, that the pleasures of private motor-car ownership are purchased more dearly than is generally realised. The writer, who purchased a ten horse-power car for £220, garaged it on relatively favourable terms in the West End of London and obtained a 15 per cent. no-claim bonus from his insurance premium, found that motoring cost him £180 in the first year—an average of £3 10s. per week, or 3.5d. per mile. Of his total expenses, running costs (petrol, oil, maintenance, etc.) accounted for 31 per cent. Standing costs (garaging, insurance, tax, etc.) were responsible for 26 per cent. And capital costs (depreciation and loss of interest) were 43 per cent. of the whole. As his total mileage was 12,000, and he was content to leave regular operations like greasing, decarbonising and effecting running repairs to professional hands, his bill of costs can be regarded as not unrepresentative of that of many small private owners, who use medium horse-powered cars mainly for pleasure purposes. Even by the utmost pinching and scraping, this owner believed that he could not reduce his average cost below £2 12s. a week.

These figures deserve to be read in conjunction with those given in an article in *The Economist* of January 21, 1938, page 169, in which we drew attention to the relatively high price of popular British cars compared with those of standard American cars in the United States. Why is British motoring expensive? By what measures may its costs be appreciably reduced?

So far as the selling prices of British cars are concerned, high prices can hardly be attributed to the multiplicity of competing producers. Last year, out of a total British output of 387,462 private cars, as much as 90 per cent. was made by six producing groups—including 66 per cent. by the "Big Three" (Morris, Austin and Ford), and 24 per cent. by Standard, Vauxhall and Rootes. But these six firms produce no less than 40 different types of engine and even larger numbers of chassis and body types. In the United States, however, the three largest manufacturers (General Motors, Ford and Chrysler) accounted last year for about 90 per cent. of a total output of no fewer than 3,915,000 units, but actually had fewer models in production than the six British manufacturers. The big British manufacturers have steadily extended their range of models, with a view to competing in all, or in most, sections of the popular

market. This is a species of insurance against changes in popular taste, but the manufacturers' losses on unprofitable models form a heavy first charge against the profits of the "popular" classes. It was estimated last year that 26 out of 40 models achieved sales of less than 5,000 units. And so small an output in the "popular" class is uneconomic.

How can this difficulty be overcome? Periodic changes of fashion make an allocation on a quota basis impracticable, and the prospects of reduction of redundant models by agreement appear very small. The industry may claim, indeed, with some justice, that the Government cannot escape responsibility for the present state of affairs. Its horse-power taxation has split the British market into an inordinate number of sub-divisions, and tended to make horse-power a yardstick for many purposes for which it is really irrelevant. It is an important factor, for example, in insurance charges. With even less reason, many garages assess their services according to horse-power, and many repairers base their charges on the same inappropriate standard. Even for taxation purposes, many more logical bases might be suggested, such as amount of road-space occupied, or weight, or even the total value of a car. There is reason to believe that if the classes of cars for taxation and maintenance purposes were reduced to three—small, medium, and large—at least we should no longer have individual firms following the wasteful policy of turning out, at the same time, cars of 8 h.p. and 10 h.p., or of 12 h.p. and 14 h.p.

A second line of approach to the problem may depend on frank recognition by the car manufacturers that whatever tends to make motoring dear *after* a car has been sold is of direct interest to them, since it tends to restrict the total volume of their sales. Next to high initial prices depreciation and insurance probably rank among the worst deterrents to the private motorist. Now the burden of depreciation has been substantially increased by the success of recent efforts among motor agents to maintain selling prices. In the past, price-cutting has usually meant inflation of the allowance on second-hand cars "traded in" in part payment for new vehicles. To-day, however, schedules of prices are usually agreed—and observed—for most second-hand models, and many people wait longer before changing their cars. Incidentally, the trade might vary their allowances between different owners, and different records and lengths of service, when new cars are being purchased. To-day the sheep and the goats are treated exactly alike. The elusive "prospect," who has been wooed

by high-pressure salesmanship, obtains the same price for his much-used car as the owner who changes regularly, after running his car much less intensively, and puts the agent to the expense only of a few clerical duties.

Regular buyers of moderate-priced cars form an increasing section of the market, and their existence provides a basis for a business arrangement between the large manufacturer and the customer. Hitherto, however, manufacturers have shown extraordinarily little appreciation of the benefits which would accrue to them, in stability of demand, if they offered some inducement to their customers to continue to buy from the same firm. The manufacturer might agree, for instance, to hire-purchase arrangements on the basis of a regular monthly or quarterly payment, in return for which he would provide the motorist with a new car at stated intervals. At the moment, the semi-permanently depressed state of the second-hand market militates against such a system. That difficulty, however, might be overcome if the manufacturers were to combine, on the lines recommended some years ago by M. André Citroën, to buy up very old second-hand vehicles and remove them from the market.

Finally, the cost of insurance looms large in the eyes of the private motorist, because it is usually paid once a year as a lump sum. Something like £15 millions a year is paid out by car-owners annually in insurance premiums, compared with £16 millions in vehicle taxation and £60 millions for new cars. With one significant exception, none of the larger manufacturers runs his own insurance scheme. Such a development, however, would enable the cost of insurance to be reduced through lower selling costs; while middlemen's profits on replacements and spare parts could be eliminated, if the terms of the insurance provided that repairs charged to insurance should be undertaken only by the manufacturer's service stations or accredited agents. Moreover, the probability of retaining a client, when he bought his new car, could be increased by a system of bonuses which gave him certain benefits if he continued to insure with the same manufacturer.

These are but a few suggestions for cheapening the cost of motoring, which have been mentioned chiefly because the initiative for their adoption lies, in most instances, with the motor manufacturers themselves. The latter cannot hope to receive substantial reductions in motor taxation from the Chancellor of the Exchequer, but they should be prepared to make special efforts to retain their own hold on the public.

The Art of Debt Collection

WHATEVER charge of lack of enterprise may be laid against the business men of England, one business at least has proved itself within the past fortnight to be abreast of the times. Hitherto, the general public has known very little about the business of debt collecting, but now, thanks to an action in the High Court, it knows a good deal. We know that this young industry has a highly-developed modern technique and an admirable acquaintance with the psychology of the ordinary man and woman.

The action was that of *Pierce v. Witney Blanket Company and Another*, and it arose out of the purchase by Mrs Pierce from the Blanket Company of a coat on terms of deferred payment. The price was £2 15s., with 5s. down and monthly payments of 10s. each. The payments fell into arrear, but by October, 1936, the coat was paid for and nothing more was owing. By a clerical mistake, however, the debt-collecting agency employed by the Blanket Company thought there was still 10s. outstanding. To recover that non-existent debt it brought into play the most modern scientific devices for making a reluctant debtor pay up.

The first recorded move of the debt-collecting agency—the Recovery and Adjustment Bureau, Ltd., of Cannon Street—was to concoct a telegram to itself, in these terms:—

Recovery Bureau 56 Cannon Street London stop instruct you proceed immediately and make example this stubborn defaulter stop use fullest possible measures enforce our claim stop you have our fullest authority Butcher manager.

Actually this telegram was never dispatched; it was signed by a man who did not exist, and it called for action which nobody had any intention of taking. There was no Mr Butcher, and no telegram had come from the Blanket Company. It was a fake designed to frighten the debtor and to do nothing else. And it was duly forwarded to Mrs Pierce as having been sent by her creditors. If Mrs Pierce had a gift for arithmetic it must have caused her no little surprise, for the cost of sending it (if it had been sent) would have been 2s. 6d., while the amount of the debt (if there had been a debt) would have been only 10s. In other words,

it was suggested that the Blanket Company was in the habit of spending on one piece of telegraphic invective 25 per cent. of the debt to be collected when a 1½d. letter would have been equally good. That throws some light on the Adjustment Bureau's estimate of the intelligence of the general public and the ease with which most of us can be reduced to a state of panic.

Mrs Pierce having already paid the money, however, the wire naturally did not work. The fictitious Mr Butcher was therefore pushed off the stage and another figure brought on—a more terrifying figure this time, because he had an official-sounding title. He was Inspector Matthews. The district agent of the Recovery Bureau was told, in a letter which was passed on to Mrs Pierce, that the inspector would join the district agent within six days "for immediate action by the authorities without fail, p.p. Recovery and Adjustment Bureau, Limited.—A. Orris, Collection Manager." The sixth day came, but no Inspector Matthews. Instead there was another letter from our Orris—this time direct to Mrs Pierce—saying that the inspector had been instructed to proceed with "legal adjustment and attestation," and would "call at her abode within the next six days accordingly." It would have been interesting to know whether there ever was an Inspector Matthews, what he was in the habit of inspecting, and what he would have adjusted and attested. But unfortunately for us, Mrs Pierce at this point consulted her solicitor, the bluff collapsed, and the curtain fell before the play was finished. It is a great pity that she did not wait for a few more periods of six days to let Orris develop his campaign to the full.

The ordinary man might be tempted to think that a person who tried to collect a debt by faking telegrams, inventing fictitious characters, and threatening non-existent legal processes deserved a pretty stiff censure from the Bench. The most that His Lordship had to say in this case, however, was that the method should not have been adopted—which rather recalls the episode of Little Willie, who, out of spite, blew up his nurse with dynamite; and mummy

said "There's too much noise," but poppa said "Boys will be boys."

It may be that such moral scruples will be allowed to check these up-to-date methods of collection, but, if the authorities take a more realistic view of the relation between debtor and creditor, there is no limit to the efficiency of the machinery which could be built up. To the Inland Revenue it would obviously be invaluable in the collection of income tax. After the second buff note they would no longer be restricted to the old, red, "final" form. Instead they would call round with a telegram, just to hand, proving to the taxpayer how gravely his failure to pay was regarded:—

Collectors of Taxes Victoria S.W. Am shocked and disgusted hear Mr Smith still owes one pound two shillings sixpence income tax due first January last stop unless much mistaken he is most stubborn defaulter whole Belgravia stop authorise you take all methods amplification adjudication enforce payment stop if they fail threaten defaulter personal visit from me six days hence stop that ought to do it Simon Treasury S.W.

And the plan need not be confined to the collection of debts. What is sauce for the debt collector is sauce for the commercial traveller and the convasser, and there is no reason why the great science of salesmanship should not be reinforced by its sister science of making the customer pay for what the salesman has sold him. Why should not a newspaper, for example, stimulate its sales and its circulation by sending to potential readers the appropriate telegram to force them to a decision:—

Economist Newspaper 8 Bouverie Street E.C. Understand Mr William Sykes Seven Dials is not subscriber *Economist* stop regard it essential his sales resistance be broken down stop inform him my opinion making great mistake stop should not miss regular reading admirable articles finance politics stop particularly recommend views freedom of Press and international affairs which no intelligent citizen should neglect stop Hitler Berchtesgaden. We must think the possibilities over.

Topics of the Week

Parliament Adjourns.—Civil and domestic questions have had little opportunity to figure prominently in Parliament's programme since the New Year, and Members dispersed on Thursday with their ordinary business appreciably in arrears. The Coal and Films Bills have gone their weary way through the Commons without further serious obstacles. Apart from the belated nationalisation of mining royalties, the Coal Bill, after its concessions on the question of compulsory amalgamations, represents a much smaller advance on its abortive predecessors than might have been hoped for. Nor, in the case of films, where the desired objective—to safeguard and improve British film production—was generally agreed, did the Government show the decision and insight which were conspicuously lacking among the film interests themselves. Neither Bill ranks as a notable legislative achievement; and the overriding claims of defence and foreign policy rendered it impossible to proceed with measures which might have been more worthy of the Government's Parliamentary strength. Sir Samuel Hoare may now have to wait for several months before he is given the chance to enrol himself among the conspicuous reformers of the British penal code. The Government's plans for the reorganisation of electricity distribution have apparently been suspended *sine die*; and its action on the Import Duties Advisory Committee's Report on the steel industry has been similarly delayed.

Miss Wilkinson's Hire Purchase Bill (discussed on page 145) has so far successfully overcome the hazards of private member procedure. The Government's Rent

Restriction Bill reached the Report stage on Tuesday. But the highlights of the year so far have been the resignation of Mr Eden, the introduction by Mr Chamberlain of new methods, if not new objectives, into foreign policy, and the rallying of all parties behind a fresh drive to shore up the national defences and increase Britain's capacity for war. The background of the session's discussions at Westminster has been alarms and excursions abroad. The split in the Government's ranks on foreign policy, which seemed at one time possible when Mr Churchill arose, meteor-like once more, to sponsor Mr Eden and the League of Nations, did not materialise. Despite the call to national unity backed by the need for national effort in re-armament, the Government failed to hold West Fulham in last week's by-election. But only a bold critic would rate the Government's strength in the country appreciably less at Easter than it was at Christmas. Meanwhile, Mr Hore-Belisha has made hay at the War Office while the sun has shone. Together with Mr Malcolm MacDonald, who has negotiated patiently with Mr de Valera, and Lord Halifax, who has suavely performed the difficult task of filling Mr Eden's shoes, the Minister for War has enhanced his reputation in five months when few men have made their mark.

British Protest to Mexico.—The British Minister in Mexico City delivered a note on Friday of last week which went rather further than the previous representations made by Washington as a result of the expropriation of the foreign oil companies. The United States protested

against the expropriation and asked for either the return of the companies' properties or for the payment of adequate compensation. The British Note demands only the return of the property of the Mexican Eagle Oil Company, and does so, moreover, in sharp terms. The British Government does not deny the right of other countries "to expropriate in the public interest and on payment of adequate compensation," but the present instance is said to be "essentially arbitrary in character." The award rendered by the Labour Board against the company was "not justified by the facts," and the Supreme Court, in confirming it, "ignored the fact that essential evidence had been improperly excluded." After the award, says the Note, "one injustice becomes the basis for others," and "the severity of this harsh and arbitrary step (expropriation) was out of all proportion to the exigencies of the situation, which it was allegedly designed to meet." This is strong language; and it is permissible to wonder whether it is good tactics for the British Government to be so much more severe than the United States, even though the British interests involved are the larger. But in any case, severity is deserved, for the Mexican Government has chosen very bad ground for a quarrel with the two strongest powers in the world. It is reported that a polite but unyielding answer has been sent to the British Note, and there is every indication that Mexico intends to fight it out. The people are being rallied to withstand an economic siege, and the foreigner will doubtless be blamed for the economic woes that are about to descend on Mexico. But the action that has precipitated the conflict is purely Mexican, and the responsibility for the consequences must rest on the shoulders of President Cardenas and his advisers.

* * *

Rome, Geneva and Abyssinia.—In anticipation of the Anglo-Italian Agreement, which now appears to be on the point of completion, the British Government has sent the Secretary-General of the League of Nations a note requesting him to place on the forthcoming agenda of the Council the item "Consequences arising out of the existing situation in Ethiopia." The note points out that many members of the League, including no less than five members of the Council, have recognised Italian sovereignty over Ethiopia, whereas other States members have not given their recognition either explicitly or implicitly. "This situation should be clarified." The intention is that the Council shall release its members from their obligation not to recognise the Italian conquest. Whether this can be done in a formal vote is doubtful, in view of Russia's and China's presence on the Council. The position of the South American States is also doubtful,

as they are pledged, in agreement with the United States, not to recognise changes brought about by force. But by one means or another, the British Government will recover its freedom and will, in due course, utilise it to accord recognition to the Italian Empire. M. Bonnet, the new French Foreign Minister, is expected to follow suit. This sequence of events, which is confidently forecast, will be a depressing and humiliating occasion for the League of Nations—indeed, for all hopes of building up an international order founded on justice and the respect for law. The conquest that is to be recognised, entirely apart from the fact that it rests on a most precarious military basis, is the result of an attack which the League itself characterised as a wilful aggression. The League and its members, Great Britain and France among them, are eating their words, and another of the world's hopes is being devoured in the process.

* * *

This is not, of course, the first time in history that expediency has been preferred to the abstract principles of international justice. But this particular surrender is more formal and abject than most; it could only be justified if it were the inescapable price of some great advance in the peace and security of the world. If, for example, the recognition of Italy's conquest were the certain means of avoiding a major European war, public opinion would approve it. Mr Chamberlain made it clear in his speech at Birmingham last Friday that he does, in fact, look upon his negotiations with Rome in this light. He asked his audience to exercise only a little more patience until the Anglo-Italian Agreement was concluded (it is now reported that the initialling will take place in Rome on Saturday of this week), and he offered to eat his hat if it did not then appear that not he, but the Socialist and Labour Opposition, had been the dupes of the affair. It is certainly true that every effort is being made, both in London and in Rome, to create the appearance of a major diplomatic stroke. The conclusion of the Agreement is to be sealed by the presence of a British Cabinet Minister, in the person of Mr Hore-Belisha, and there is an outburst of friendliness for England in Italy. There is even mention of the appointment of a French Ambassador, accredited to the King of Italy and Emperor of Ethiopia, before Herr Hitler's visit. It is almost as if the Fuehrer were to be welcomed by a demonstration of the re-created Stresa front. The picture is pretty. But consideration of the realities in Central Europe and round the coasts of the Mediterranean does not shake our conviction that it is a staged *tableau*. And if Herr Hitler should turn out to be himself one of the *metteurs en scène*, that would only be in accordance with the tried and very successful methods of the partnership in deception that has hitherto united the two dictators.

* * *

M. Daladier Tries His Hand.—While Herr Hitler was once more taking a plebiscite, France was once more changing her Government. On Friday of last week, M. Blum went to the Senate with his Finance Bill (discussed in *The Economist* last week); and he duly met the defeat which was a foregone conclusion. A verbal duel between M. Blum and M. Caillaux ended in a rejection of the Bill by 223 votes to 49, after the Senate had rubbed in the fact that their objection was to the man rather than to the measure (which they did not seriously examine). M. Blum accordingly resigned. M. Daladier, who, for some days past, had been standing at the ready, lost no time in setting about the task of cabinet making. He offered the Socialists five places in a diminished cabinet of seventeen or eighteen, with the Ministry of Foreign Affairs for M. Blum. The National Council of the Socialist Party sat all through Saturday night, but M. Daladier's offer found no favour with them in the light of some of the conditions attaching to it. He had laid down that there must be a strict maintenance of non-intervention in Spain, that the factories now occupied by the stay-in strikers must be evacuated "in a humane

manner," and that the new Prime Minister must have the plenary powers in finance which the Senate had just refused to his predecessor.

* * *

Accordingly on Sunday M. Daladier formed a cabinet of right wing Radical-Socialists reinforced by some men of the Centre, of whom the most notable are M. Paul Reynaud, who is Minister of Justice, and M. Mandel, who has the portfolio for the Colonies. M. Bonnet returns to office in the unfamiliar rôle of Minister of Foreign Affairs, while the crucial portfolio of Finance goes to M. Marchandeu, who held it under M. Chautemps. The Premier is retaining the portfolios of War and National Defence. The Ministry of the Interior, on which a heavy responsibility may now fall, has been given to a Radical-Socialist, M. Sarraut. The chief innovation of the new Government is the formation of an Inner Council of seven members, MM. Daladier, Chautemps, Patenôtre, Reynaud, Sarraut, Bonnet and Marchandeu, who are to meet daily. The refusal of the Socialists to collaborate has deprived the new Cabinet of an assured majority in the Chamber. Nevertheless, it has made a good beginning. The declaration of policy was approved by the Chamber on Tuesday by 573 votes to 5. A Finance Bill, conferring plenary powers on the Government until the end of July, was passed by a similar majority. It has still to pass the Senate; but that body is expected to give M. Daladier what he wants, if only because he is not M. Blum. The statement of the use the Government intends to make of its powers, which is discussed in detail in our Finance section on page 148, shows that the distinction between M. Blum and M. Daladier is one of degree only. But in the present state of political psychology in Paris it is apparently enough to make all the difference. The new Government has also secured a signal success in putting an end to the strike in the Paris aircraft factories. The men have not only gone back to work, but agreed to work 45 instead of 40 hours a week, in return for an increase of wages. This example is expected to assist in settling the other stoppages in the metal trades, which looked at one time as if they might attain very serious dimensions.

* * *

Czechs and Germans.—The situation in and round Czechoslovakia remains tense—though less tense, no doubt, than it would be if the Czechs were not displaying such remarkable *sang froid*. One of the last acts of the outgoing French Foreign Minister, M. Paul-Boncour, was to confer with the French diplomatic representatives in the Soviet Union, Poland and the Little Entente countries, and to send them back to their stations with instructions to ascertain the attitude of the Governments to which they are accredited towards the question of the independence of Czechoslovakia. Meanwhile, the Polish Minister at Prague has handed the Czechoslovak Government a memorandum

on the alleged use of Czechoslovakia as a base of operations for anti-Polish Communist propaganda. And the Sudetic German Party has announced that no *rapprochement* of views has resulted from their leaders' conversations on April 3rd with Dr Hodza. Over the week-end there were rumours that the Czechs had made up their minds to negotiate with both Herr Henlein and Berlin, and that the idea of conversations between Herr Henlein and the Czechs was approved by Herr Hitler. A hint of coming internal changes—but these without any change in the fundamental democratic principles of the constitution of the Republic—was made by President Benes on Sunday in a statement to the Czechoslovak National Council. On the same day—which was plebiscite day in the adjoining territories on three sides of Czechoslovakia—the *pièce de résistance* in Berlin was a procession of some 500 Sudetic Germans carrying banners inscribed with slogans expressing their wish for an *Anschluss* for the Sudetenland. They drew up in front of the Chancellory and called for Herr Hitler, who duly showed himself on the balcony and pointed to the banners with a smile. Thus the pressure on Czechoslovakia continues; and so long as it continues, the frontier of Bohemia will remain both the danger-spot and the bastion of Europe.

* * *

The Hitler Plebiscite.—On Sunday German citizens voted on the *Anschluss*, not only in Austria and in the Old Reich, but also on the high seas, whither the voting members of the principal German colonies abroad were taken for a ride, beyond the limits of foreign territorial waters, on board German ships. Returns of the results have been published both for Austria separately and for Great Germany, i.e. Austria and the Old Reich combined. The announced results were as follows:—

	Austria	Reich, including Austria
Entitled to vote	4,474,138	49,546,950
Votes cast	4,460,778	49,326,791
	(99.70%)	(99.55%)
Valid votes	4,455,015	49,251,449
Yes	4,443,208	48,799,269
	(99.73%)	(99.08%)
No	11,807	452,180

If these figures are to be accepted, Herr Hitler's voting-drill has reached a pitch of perfection on which it would be hardly possible to improve. In future plebiscites the Fuehrer might as well declare in advance an affirmative vote of 99.99 per cent. and save the voters the trouble of recording results which can be taken for granted *a priori*. What would have been the results of an impartially administered plebiscite like that which was taken in the Saar? That precedent shows that even an impartial administration does not entirely safeguard the voters from the pressure of fear for the consequences of their action if they vote in the sense disliked by a powerful police machine. The coming of a terrorist government casts its shadow before, and free opinion wilts under its chilly shade. Yet, if anything

Next Week's Issue of THE ECONOMIST

will include a SPECIAL SURVEY of the position and prospects of BUILDING SOCIETIES

Articles dealing with all aspects of the Building Society movement will be accompanied by comprehensive statistics from 1925 to 1937. The Survey will discuss such subjects as:

Building Society Expansion	The role of interest rates
Mortgage business	Future demand for houses
Outlook for new business	Building standards
	The "Pool" system

The Survey will include special tables, setting out the financial record of 110 of the largest societies since 1925.

is certain about Austrian opinion, it is that the Austrian Catholics and the Austrian Social-Democrats were agreed on at least the one point of being definitely and vehemently opposed to an *Anschluss* with a Nazi German Reich, and that these two elements in Austria were, in combination, numerically stronger than the Austrian Nazis. After all, the invasion of Austria was precipitated by the fear that Dr von Schuschnigg's plebiscite would show a majority against the *Anchluss*. Plebiscites, in short, decide nothing.

Britain's Oil Supplies.—Supplies of petroleum products now rank among national munitions of war and an article in last week's issue of *The Economist* (page 77) disclosed the lengths to which a nation such as Italy is prepared to go in her efforts to mitigate her dependence on overseas sources of supply in war time. Great Britain, despite her large domestic coal resources, will continue, like Italy, to depend upon oil imports in peace and in war. So long, however, as she retains control of the seas, she has little reason to fear any interruption in her supplies, in an emergency, which could not be amply offset by adequate storage facilities. This, the fundamental conclusion of the Falmouth Committee (which recently investigated the whole question of increased oil-from-coal production) is corroborated by a detailed examination of overseas sources of supply made by the *Petroleum Press Bureau*. The following table shows the distribution of our imports of petroleum products, in 1937, from various countries of origin:—

	(Thousand Tons)					
	Crude Oil	Petrol (Gasoline)	Kerosene	Lubricating Oil	Gas Oil	Fuel Oil
Venezuela/Dutch West Indies	534.3	1,988.9	217.1	...	114.0	1,312.1
Iran	296.9	984.2	250.5	...	92.8	565.8
U.S.A.	562.9	161.8	342.1	...	55.3	272.9
Trinidad and rest of the Empire	58.3	255.7	6.4	1.1	16.1	240.9
Mexico	40.5	36.8	46.4	49.5	...	384.5
Roumania	...	249.0	61.6	...	171.7	16.3
Iraq	481.9	...	...	...	...	...
Peru	320.3	...	...	...	...	...
U.S.S.R.	...	169.6	30.3	60.6	18.5	23.6

The headings are similar to those of the tables in our article on Italy's supplies last week, so that a comparison of the position in the two countries can be readily effected. Actually, nearly half the crude oil treated in British refineries is supplied by Venezuela and Iraq. The chief supplier of gasoline is the Dutch West Indies, followed by Iran and the United States of America. The same countries contribute large quantities of kerosene and supply the bulk of Britain's gas oil and fuel oil requirements. The chief supplier of lubricating oil is the United States. Mexico supplies mainly fuel oil, while our imports from Roumania take the form largely of gasoline and gas oil. The contribution of the Soviet Union is shown by our table to be much less than is popularly believed. In the event of war, special importance would attach to increased supplies from Iran on the one hand and from U.S.A. and Venezuela on the other. In the case of both the Western Hemisphere countries, British requirements represent only a fraction of the total production, and considerable elasticity of supplies could be reckoned upon in time of emergency—given the tonnage to transport them and the wherewithal to pay for them.

Flat Rate Cables for the Empire.—A further step in the co-ordination of the telegraphic communications of the British Commonwealth of Nations has been taken by a new agreement between the Imperial Communications Advisory Committee, representing the Empire Governments, and Cable and Wireless, Ltd. Cable and Wireless was formed, as a result of the Imperial Wireless and Cable Conference of 1928, to bring under one control and ownership the various cable systems of the Empire and to operate the beam wireless stations built by the United Kingdom Government. These beam stations were leased to the company for an annual rental of £250,000 plus 12 per cent. of the surplus profits of the company (which have, in

fact, been non-existent). The company was also subjected to certain restrictions, i.e. in the appointment of the chairman and in the use to be made of profits over a defined standard revenue, which were considered appropriate to its public utility status. In the new agreement the company is to be granted the freehold of the beam stations, and the rent is therefore to lapse. In return, the United Kingdom Government is to be granted 2,600,000 £1 shares in the company. More striking than these financial arrangements is the decision to institute a flat-rate charge for all telegrams between different countries of the Empire. The flat rates are to be 5d. a word for letter-telegrams, 7½d. a word for deferred telegrams, 10d. a word for code, and 1s. 3d. a word for full-rate telegrams. For the greater part of the Empire these rates represent a very considerable reduction. There are, however, a few services (e.g. between London and Eastern Canada) where the existing rates are lower, and these are to remain as exceptions until the flat rate can be brought down to their level. The ideal of a flat rate throughout the Empire, for telegrams as for letters, is one that will immediately commend itself to the various publics. When, in addition, the flat rate is a surprisingly low one, the authors of the scheme deserve the warmest congratulations. The financial details, in so far as they affect the stockholders of Cable and Wireless (Holding), Ltd., are discussed in our Investment section on page 146. From the public point of view, however, it can be said that the particular form of organisation which is emerging, by which the Government regulates, and participates in the profits of, a private company, appears to be particularly well adapted to a business which is international as well as imperial and, in some of its services, highly competitive.

"No Change" in Australia.—After Mr Lyons and Mr Stevens, Mr Forgan Smith has performed the political hat-trick by being returned to office for a third successive term. In the Queensland elections his party lost only three seats, and it retains an ample majority in the new House. The fact that within a few months a Labour Government has thus emulated the United Australia-Country party coalitions of the Commonwealth and New South Wales is remarkable, but perhaps less significant than appears on the surface. There is no great gulf between Mr Stevens' expansionary policy of the Right and Mr Forgan Smith's moderate policy of the Left. And it is clear that, on the whole, the Australian voters to-day prefer stability of government to experimental changes. Mr Butler's position was rather shaken in South Australia, but he has now formed a new Government and is assured of sufficient Independent support to carry on. If business recession and drought simultaneously attack the economy of the Dominion, this political contentment may perhaps be shaken, but for several years such a swing "agin the Government" is unlikely to have a chance of expressing itself through a General Election either in the Commonwealth or in any of the larger States.

The Bengal Land Revenue Inquiry.—Under British rule, as under its predecessors, land revenue has been the foundation of Indian public finance. In Bengal, for nearly a century and a half, the land revenue assessments have been stabilised under Lord Cornwallis's famous Permanent Settlement, which in its infancy was regarded as a model for the rest of India. Its purpose was to encourage land-holders to make improvements by assuring them that the full financial benefits of their investment would accrue to them. Its actual effect has been to make of the land-owning class a wealthy vested interest, which has frequently been oppressive to the tenant-cultivators. The Permanent Settlement has hitherto been regarded as sacrosanct, and it is protected by a clause in the Government of India Act which provides that no Bill for the extinction or modification of right in any land shall be introduced without the previous sanction of the Governor-General or the Provincial Governor. A first step towards reform, however, has been taken by the Bengal Government by the

appointment of a Commission to review the whole system of land revenue and land tenure in the province. The British Government's commendation of this move is sufficiently proved by the release of Sir Francis Flood, High Commissioner for the United Kingdom in Canada, to act as independent chairman of the Commission.

Easter and the Railways.—Easter is late. Spring is, to an unusual degree, in the air. Only sombre believers in the law of averages doubt that the fine weather will last over the week-end. And the railways have made record arrangements to transport holiday-makers far and wide. Both the London and North-Eastern and the London, Midland and Scottish Railways have planned over 1,000 extra long-distance trains for the week-end. On all four main lines, the peak of travelling was looked for on Thursday, when more than 400,000 passengers were expected at the three London termini of the L.N.E.R. alone, and 94 expresses left Paddington. Nor will the crowds be less on the roads. More motor cars were licensed at the end of February than ever before. In the air, too, increased activity will be evident. With the introduction of summer-time, North-Eastern Airways added a Glasgow service to their services to Edinburgh and Perth; and British Airways augmented their services to Paris and accelerated their schedule on the Scandinavian mail route. With the onset of increased travel on land and in the air, the railway companies' policy of compelling agencies to accept bookings only for their allied air lines has once more evoked severe criticism. The railways' reply, laying stress upon the financial importance of railway ticket bookings to the agencies, is not wholly convincing. Their rigid attitude is in striking contrast with their growing readiness and ability to cater for the demands of travellers.

The Fight for Catalonia.—The fighting in Spain has not been by any means as one-sided during the past week as in the earlier phases of General Franco's drive towards the sea. The insurgent forces have continued to advance at the extreme northern end of their line in the shadow of the Pyrenees, and they have succeeded in capturing, at Tremp and elsewhere, several of the hydro-electric stations that supply Barcelona with power. The main thrust of the advance towards Tortosa and the sea, however, is still held up, and the narrow corridor between Catalonia and the rest of Government Spain is still, though precariously, open. The morale and resistance of the Government troops is considerably stiffer, and counter-attacks have been launched. The Government have also acquired some dozens of new aircraft, which will do something to lessen their inferiority in this vital arm. The rebels still have a powerful advantage in artillery, especially of the heavier guns, which may yet help them in blasting their way to the sea. This material comes from their Fascist allies. Not even the British Government disputes that fact any longer, though Mr Chamberlain still holds that the reinforcements that have reached General Franco from Italy in recent weeks have not "materially altered the position" and are thus not a breach of the Italian undertaking on the basis of which the negotiations for an Anglo-Italian Agreement were begun. If a "material alteration" means the end of the war, then, indeed, it has not yet been brought about.

Riots in Tunis.—The native Muslim population of the French Departments and Protectorates in North-West Africa has been restless for some time past, and at the end of last week trouble boiled up in the Protectorate of Tunisia. On Saturday one of the Tunisian Nationalist Party leaders was being examined by a magistrate in the Palais de Justice in the capital on a charge of having incited the population to violence. An angry crowd gathered, and when the police were reinforced by troops the crowd attacked them and drew the troops' fire, with the result that

eight or nine rioters were killed and about forty wounded. Martial law has now been proclaimed throughout Tunisia; military courts are in permanent session; the streets of the cities are being patrolled; and the European community are being advised to stay indoors. Of the three North-West African territories under the French flag, Tunisia has the strongest tradition of Islamic culture and is the most closely in touch with the main body of the Islamic world. The Tunisians are particularly open to influences from Egypt, and they are demanding a treaty with France on the lines of the Anglo-Egyptian treaty of 1936. As the French have already found in Syria, this is a problem which sheer repression can never solve. There is, however, one element in the Tunisian situation which may still bring the Tunisians and the French together, and that is a common fear of Italy. In the considerable European colony in Tunisia the French colonists are outnumbered by the Italian; Sicily is less than a hundred miles away; and the rapidly increasing population of Italy is still threatening to burst its native bounds, whereas the stationary population of France presents no threat of submersion to the Arab and Berber populations of the African territories under French control. Here is a hard and menacing fact which ought, in the end, to move Frenchmen and Tunisians to make common cause. At present, however, there is some good fishing for Signor Mussolini in these troubled Tunisian waters. The European country that is the Tunisian Nationalists' present bugbear is, inevitably, the paramount Power, France, whereas Signor Mussolini has put on Kaiser Wilhelm's boots and has proclaimed himself the protector of Islam.

Chinese Successes.—The steady accumulation of reports from the Chinese side, and of embarrassed silences from the Japanese, makes it quite clear that the Japanese army has suffered a severe reverse in its attempt to drive southwards down the Tientsin-Pukow railway. The Chinese have not merely held up the Japanese advance, but forced the invaders to retreat. What is more, in addition to this reverse at the front, the Japanese communications are daily harassed, and a Chinese brigade was even reported to have occupied the city of Tsinanfu, the capital of Shantung, which is many miles behind the front. Elsewhere the same story is reported of Chinese troops appearing in the rear of the Japanese, and even the country round Shanghai is apparently not entirely safe for the Japanese. Reinforcements are being rushed up, and the sheer weight of metal will doubtless push the Japanese forward. But they are clearly being enmeshed in a huge spider's web, from which they will be able to break out only with the most gigantic efforts. The strain may prove too great for a nation that is not only tightening its belt at home, but has to keep a careful and heavily-armed watch on Russia. The Japanese have only themselves to thank if the whole world rejoices at every evidence of their discomfiture.

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

Through its London Administrative Office, the Company pays every year to policy holders on Matured Endowment Policies, Death Claims and Annuities over

£2,000,000

Total Assurances in force on November 15th, 1937 in the British Isles

Decline in Securities

NEW YORK, April 5.—Last week was marked by little change in business indicators, and there was a sharp decline and equally sharp rebound in the security markets. The index of business activity for March, when it becomes available three weeks from now, will probably be almost identical with the February and January figures—that is, for some four months, the index of production has hovered at about 80 per cent. of a basic standard established more than a decade ago. This is a level of extreme depression, and only in the early thirties was the index lower.

The violent decline in the security markets during March depressed average prices in the stock market by about 25 per cent. But this gives only a partial picture of the collapse of security prices during the past four weeks. A large number of shares, and not a few bonds, fell by over 50 per cent.; and it was no uncommon thing to see the securities of representative corporations selling for a third of the prices recorded a year ago—and in many cases for less.

This disparity between the comparative stability of business during the past four months and the recent sharp decline in markets, whether for securities or commodities, can be explained in one of two ways: either the decline in markets anticipates another decline in business activity; or the markets had, for some five months previously, been anticipating a sharp recovery in the spring, which did not materialise. At the end of last summer, and in the early autumn, there were strong reasons for believing that the decline in the security market forecast a decline in industrial activity; and such an interpretation was verified by subsequent events. In March, it may be that the decline in the market represented no more than a more realistic appraisal of current facts, and had no forward-looking significance.

Capital Movements

The Treasury has issued its quarterly report on international capital movements. This report covers the final quarter of 1937, and shows a net outward movement of short-term funds in that quarter of \$575 millions. Every week of the quarter showed a net exit of "short-term banking funds"; in most weeks, and in the aggregate, on balance, there were net purchases of securities by foreigners. The increase in such purchases amounted to \$127 millions during the quarter.

In the whole of 1937, foreign deposits here increased by \$256 millions, and foreign holdings of securities by \$512 millions. As usual, there was a substantial repatriation of foreign securities issued in the American market. The net effect of the movement was to reduce the total of foreign balances in this market from \$2,305 millions at the end of September, 1937, to \$1,730 millions at the end of December.

These data throw much light on the balance of trade figures presented in this column on April 9th (page 82). Towards the end of 1937 there were rumours about the withdrawal of foreign funds from this market, but in the last three months such rumours have been absent. Nevertheless, there is some reason to suppose that the movement has continued. It is interesting to note, further, that, while this capital was originally accumulated mostly through the medium of gold imports, the withdrawal seems to have taken the form of a shift in the merchandise trade balance, and a reduction in gold imports, rather than an export of gold.

The Plight of the Railways

As the second quarter of 1938 opens, the focus of attention is the railway crisis. With a third of the railways in receivership, another third on the brink of receivership, and the earnings of the remaining third problematical, the situation in this industry is more critical than in 1932. The repercussions of this state of affairs cannot be ignored. Railway obligations, which have for years been regarded as prime investments, are

largely held by institutions; and the ramifications of this crisis extend widely through the entire financial system.

At the end of 1936 railway rates were reduced, and programmes of capital expenditure were necessarily curtailed. In the summer of 1937, after long negotiations, railway wages were increased, and even maintenance expenditure had to be cut to the bone. The first definite increase in unemployment came in August, when the roads began to skimp maintenance. Traffic, however, held up through the autumn, and in the late autumn a small increase in rates revived hope.

At the turn of the year the receivership of the Erie was a blow, the force of which was mitigated by the expectation of favourable action on the main rate application, then dragging its weary way through the Interstate Commerce Commission. Meanwhile, traffic had fallen off badly, and it was announced in the middle of March that an increase of less than 6 per cent. had been granted, whereas a 15 per cent. increase had been asked for. The collapse in railway securities led the markets into their recent slump, and brought the desperate illness of the railways to its crisis. The President then called upon a committee of the Interstate Commerce Commission to prepare a comprehensive programme to rehabilitate the railways.

The Problem of American Industry

The railway crisis is important in itself, since the railroads represent an appraised physical investment of over \$20,000 millions, and in its institutional implications. But the railway problem illustrates a general problem in our economy. Railway traffic, like the index of production, are above the lowest levels of 1932. But railway earnings are below the levels of 1932 and, in addition, the companies' predicament is more acute. Taxes are higher, labour costs are higher, financial resources are lower and, probably, the general efficiency of the plant is lower, by reason of long under-maintenance.

These problems are not confined to the railways. Although the level of production is substantially above the average of 1932, the capacity of the economic framework to endure adversity is lower than in 1932, and for very much the same reasons as harass the railways, except that, whereas the railways have a large structure of bonded indebtedness, American industry, by and large, has little bonded debt, and only a relatively small burden of bank debt. It has been financed by equity capital; and this affords a degree of protection against the violent alternations of boom and depression which have been characteristic of our economy in recent years.

A Correction

The table printed in the New York Letter last week (April 9th, page 82), which recorded the recent movements of the Federal Reserve Board's business indices, was incorrectly set out, owing to a printer's error. The four columns of figures were inadvertently transposed, and the table should have read as follows:—

	BUSINESS INDICES (1923-25=100) ADJUSTED FOR SEASONAL MOVEMENTS			
	Feb., 1937	Dec., 1937	Jan., 1938	Feb., 1938
Industrial Production (total).....	116	84	80	79
Manufacture	116	79	76	75
Minerals	115	114	108	101
Construction Contracts (total).....	62	62	52	48
Residential	47	30	26	30
All other	75	88	74	64
Factory Employment (total)	99.8	89.0	84.2	83.1
Durable Goods	93.9	84.4	76.8	74.4
Non-Durable Goods.....	105.8	94.0	92.1	92.4
Factory Payrolls (total)	95.8	80.9	71.6	73.5
Durable Goods.....	92.5	77.0	63.8	64.2
Non-Durable Goods	99.9	85.8	81.5	85.3
Freight Car Loadings	82	67	65	62
Dept. Store Sales	95	89	90	88
Dept. Store Stocks	76	72	71	70

France

M. Blum Falls

PARIS, April 13.—M. Blum resigned after the Senate had, for the second time in twelve months, voted against his plans to deal with the financial crisis. The task of the Senate was made easier by signs of division in the Popular Front in the Chamber, by the renewal of stay-in strikes and by Socialist attacks against the Upper House.

M. Gardes, rapporteur of the Senate Finance Committee, applauded M. Blum's proposal to return to the principle of budgetary unity. He admitted that further steps were needed to meet the needs of the Treasury, but he rejected exchange control and the capital levy. Finally, M. Gardes deplored the absence of confidence and the unequal treatment of capital and labour, respectively, with regard to the sacrifices required by the proposals.

The problem of finding a new Government to succeed M. Blum's administration was difficult. A Thorez-Reynaud Cabinet was an impossibility, because the majority of the Moderates side with M. Flandin against M. Reynaud in their opposition to the inclusion of the Communists in the Government. A Blum-Reynaud Cabinet was similarly impossible. The Socialists were not ready to break with the Communists. While most of the trade union leaders are Socialists, very many of their followers are Communists. A Daladier-Radical Socialist Cabinet was also impossible, because the Socialists had refused full powers to a previous administration of this kind under M. Chautemps' leadership. A Daladier-Reynaud Cabinet was finally formed.

M. Daladier's Majority

It remained an open question whether the Socialists and Communists would return to the Opposition, so that M. Daladier would have to obtain the plenary powers he needed from the Right. Actually, on Tuesday, M. Daladier received almost unanimous support from the Chamber (the vote is discussed on page 134).

The new Government heralds a change in French foreign policy. M. Bonnet is a staunch supporter of an improvement of relations with Rome. If this new policy has some measure of success, the German danger will be correspondingly weakened, and the atmosphere will be much better for the issue of a large loan for National Defence. Meanwhile, however, the Left remains firmly attached to the cause of the Republican Government in Spain.

Better Trade Returns

Foreign trade shows some signs of improvement. The figures for March were as follows:—

	March, 1937	February, 1938	March, 1938
(In million francs)			
Imports—			
Foodstuffs	784	1,139	901
Raw materials	1,892	2,536	2,076
Manufactured goods	538	612	549
Totals	3,214	4,287	3,526
Exports—			
Foodstuffs	266	310	295
Raw materials	607	869	684
Manufactured goods	954	1,272	1,251
Totals	1,827	1,694	2,230

The value of imports in the first quarter of 1938 increased by 14 per cent., compared with the same quarter of 1937. The comparison is rendered difficult, however, by the rise of 46 per cent. in the pound-franc exchange and the fall of 23 per cent. in world prices between the first quarters of last year and this.

The total value of exports, on the other hand, was 32 per cent. higher than in the first quarter of 1937. The import surplus in the first three months of this year was 4,700 million francs, compared with 4,922 millions in the same months of last year, or, excluding trade with French colonies, 3,600 millions against 4,159 millions. This apparent improvement can, however, be partly explained by the renewed recession in French industry, which has entailed a decline in imports. The number of unemployed on April 2nd was 398,254, against 401,056 in the preceding week and 386,254 a year ago.

Germany

Investment, Finance and the Anschluss

BERLIN, April 12.—The Reichstag Election, the course and result of which were foreseen, had little influence on business. Last week's share-market was firm. Austrian events are now a material Bourse factor. Some electricity companies' shares have risen in expectation of the development of Austria's water-power.

The market for foreign loans, including those which, for native holders, have been converted to a reichsmark basis, has not recovered. Last week Dawes dollar bonds again weakened slightly; while the reichsmark section of the Young Loan advanced by 1/10th of a point. No new light has been thrown on the treatment of Austria's foreign debts or on the official drive for a general revision of foreign debts.

For the second time since the Anschluss, the Reichsbank's weekly return, dated April 7th, does not show the Austrian National Bank's gold and exchange reserve. The return is again materially influenced by Anschluss transactions, showing in particular an unusual increase of coins among the assets. Official comments clearly imply, though they do not directly state, that Austrian gold played no part in the recent great increase in "Other Assets."

There is much comment, which is relevant to the question of debt service, about the outlook for the balance of trade of the extended Reich. Omitting trade between Austria and the old Reich, the figures for 1937, in reichsmarks (Austrian figures at old exchange), were as follows. Austrian imports were valued at Rm. 572 millions, and exports at Rm. 487 mill. German imports were valued at Rm. 5,375 mill., and exports at Rm. 5,788 mill. Taken together, the combined imports were Rm. 5,947 mill., and the combined exports Rm. 6,275 millions. The combined export surplus was therefore Rm. 328 millions, compared with the old Reich's export surplus (including trade with Austria) of Rm. 443 million. The outlook for this year, in the first two months of which both the Reich and Austria had import surpluses, is not promising.

Greater Germany's Food Supplies

In the matter of food supply Greater Germany is weaker than the old Reich. Austria's population is one-tenth of that of the old Reich, but her net food import stands, it is calculated, in the ratio 1.3:10. Her deficiency of cereals and flour is one-fifth of the old Reich's, and of meat one-half. In the matter of fats (without butter), fish and fruit, her deficit is relatively about the same as the Reich's; and in eggs and condiments it is smaller. The cereals deficiency is made up largely of wheat, of which about half the consumption is imported.

Austria's exportable surplus of dairy products, of which about two-thirds went to Germany last year, has in recent years increased. Payments for food imports just about equal the deficit on the whole trade balance, which means that imports and exports of other commodities about balance. The yield of vegetable foodstuffs per unit of cultivated land is, without exception, considerably smaller in Austria than in the old Reich, and smaller even than in Bavaria, which physically greatly resembles Austria. The wheat yield in Austria (average of recent years) is roundly 28 per cent. smaller than in the Reich, of rye 17 per cent. smaller, of oats 29 per cent., of potatoes 19 per cent., and of sugar beet 14 per cent. smaller.

Austrian consumption of chemical fertilisers is insignificant, but the stock of cattle is relatively larger. The wheat crop has of late increased, but the crop of rye has fallen sharply.

The NATIONAL BANK of NEW ZEALAND, Limited

Established 1872

Head Office:—8 MOORGATE, E.C.2

Subscribed Capital - £6,000,000

Paid-up Capital - £2,000,000

Reserve Fund - £1,000,000

Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

The whole cereal crop last year was smaller than in 1936, and 7 per cent. smaller than the average for 1931-35. The Food Ministry announces several measures for improving Austrian agriculture, including the provision of farm machinery.

Industry and the State

Various measures for the improvement of Austrian industry were announced last week, including the guarantee of a Rm. 150 millions credit, to be supplied mainly by banks under the leadership of the Oesterreichische Creditanstalt. The Reichswerke Hermann Göring (the State iron corporation, founded in 1937) will increase its nominal capital of Rm. 5 millions to Rm. 400 millions, to be subscribed by interested private capitalists; and will found a daughter company for smelting at Linz.

In March, the number of unemployed in Germany fell by 439,000 to 508,000, which is 740,000 fewer than a year ago. The spring revival of industry has so far been satisfactory. Industry is, however, increasingly stimulated by Reich or Reich-enforced construction undertakings, which become ever more grandiose and costly, and are in great part ornamental. The building industries are taxed to the limit of their capacity. The value of new building (including surface and underground works) last year is estimated at Rm. 9,000-10,000 millions, compared with Rm. 2,200 millions in 1932; and the proportion of works by public authorities was estimated at nearly 80 per cent. In the present year building activity will increase still further.

Conditions in the heavy industries are little changed. A more optimistic view is taken of world steel prospects. The steel Press approves strongly of the resolute policy of the International Cartel in regard to prices; and it is assumed, now that the Belgians have settled their internal question, that the Cartel will be smoothly prolonged.

German exports of heavy iron and steel continue to be smaller than in 1937, and imports are considerably larger. Machinery exports have only increased slightly. The number of persons engaged in machinery manufacture had risen by the beginning of this year to 700,000, against 250,000 in 1933. The value of machinery production in 1937 was Rm. 4,500 millions against Rm. 1,546 millions in 1933; of home sales Rm. 3,700 millions, against Rm. 1,012 millions; and of exports Rm. 800 millions, against Rm. 535 millions.

The value of the gross output of chemicals in 1937 was Rm. 5,000 millions, compared with Rm. 4,200 millions in 1936, and Rm. 2,700 millions in 1932. These figures include synthetic motor-fuel, artificial rubber, and "cell-wool."

The shipping Press deals at some length with the British proposal for a Tramp Pool on the lines of the Tanker Pool, and describes present conditions as propitious, in view of the decline in rates during the last twelve months and the present marked insufficiency of freight. The view is taken, however, that an International Tramp Pool could only succeed with the co-operation of the liner concerns, in so far as these compete as freight carriers. For Germany, with her important liner undertakings and small tramp fleet, this aspect of the proposal is the most important.

Switzerland

Effects of the Anschluss

GENEVA, March 26.—The absorption of Austria by Germany has caused much uneasiness in Switzerland, who now has three neighbours instead of four, two of whom—Italy and Germany—are allies. The end of Austria as an independent State will have some effect on Swiss trade, but during the past few years Austro-Swiss trade has been hindered by currency restrictions. In 1937, the value of imports from Austria reached Frs. 44,163,000, or about 2.4 per cent. of total Swiss imports, while exports to Austria were valued at Frs. 37,855,000, or nearly 3 per cent. of total exports.

Trade relations with the former Austrian territory will probably be reduced to some extent, while the important interests of Swiss industry and capital in the Vorarlberg may be ruined. Another consequence may be the diversion, from the Swiss St. Gotthard railway line to the all-German Brenner line, of the greater part of the traffic between Germany and Italy. Switzerland will be compelled to build, at a cost of about Frs. 30 millions, a double line on an important section of the St. Gotthard route.

The disappearance of Austria is more important from the political point of view. Switzerland is now bordered on

two sides by Germany, with whom her common frontier is increased from 278 to 438 miles. As the common frontier with Italy is 428 miles, these two allies now border Switzerland for 866 miles, against a Franco-Swiss frontier of only 310 miles. The fact that Germany and Italy are directly connected lessens the threat to Switzerland in the event of war, since troops could be transported through the Brenner so quickly and easily that it would be folly to fight a way through Switzerland.

Neutral and Independent

The end of Austria involves no change in the political situation of Switzerland, which remains—and is resolved to remain—neutral and independent. The mission of Switzerland is to watch the Alpine passes in the interest of Europe. The President of the Confederation recently made a definite and solemn statement in Parliament to the effect that Switzerland would defend the passes.

The President's statement was unanimously approved by Parliament—as well as by the country—and all parties, including the Socialists, declared their readiness to accept all the sacrifices necessary to ensure their independence and neutrality. Party controversies will be set aside to permit all the efforts of the people to be devoted to the reinforcement of national defence.

Will the three million German-speaking Swiss be included among those Germans living outside the frontiers of Germany whom Herr Hitler intends some day to unite to their mother country? First, a great number of them are not of German race, but are Germanised Celts. Secondly, the great majority of them are staunch democrats and, therefore, as firmly opposed to German rule as they were in the past to the Habsburgs.

No Trojan Horse

The annexation of Austria was facilitated by the presence in that country of a strong and well-organised National Socialist Party. The position is different in Switzerland, where Nazi ideas have but a few supporters. The so-called "Front Movement," which had many adherents some years ago, has lost much of its importance. Even those who proclaimed themselves to be Pan-Germans have openly and strongly disapproved of the invasion and annexation of Austria. So far there is no danger of a strong party advocating the union of German-speaking Switzerland with Germany and requesting Germany—as the Austrian Nazis did—to intervene on their behalf. Events in Austria have brought the Swiss closer together.

Since 1921 Switzerland has had an economic union with the Lichtenstein Principality, now an independent State, but previously a member of the Holy Roman Empire and the German Confederation. Swiss legislation has been adopted by Lichtenstein as well as Swiss currency, while the Customs and postal services are assured by Switzerland. The Lichtenstein Diet has definitely declared that the Principality is determined to remain independent and united with Switzerland in the economic domain, so that no difficulty is likely to arise with Germany in regard to Lichtenstein.

Jugoslavia

Satisfactory Year's Trade

BELGRADE, March 14.—The commercial year 1937 was extremely favourable. The volume of trade increased 30 per cent., because of a bumper maize harvest, the reopening of the Italian frontier, new trade treaties, and the continued demand for raw materials for re-armament. Total exports were 4,557,400 tons, valued at 6,272 million dinars: 58.89 per cent. more in volume and 43.33 per cent. more in value than in 1936. Total imports were 1,105,000 tons, valued at 5,234 million dinars, an increase of 13.76 per cent. in volume and 28.37 per cent. in value.

The abundance of foreign devisen due to better exports and the change from clearing to cash transactions with several countries, has led to a further reduction in the proportion of foreign bills which must be submitted to the National Bank. This is the fourth reduction from the 80 per cent. quota established in 1934, the last having been to 33.3 per cent. in February, 1936. The present quota is 25 per cent.

Debt Settlements

The abundance of foreign currencies has enabled the Yugoslav Government to conclude agreements with the French, British and Swiss holders of its loans, by which the present payment of debt services in funding bonds is aban-

doned and normal service resumed. The agreement with the French bond-holders, however, provides that in future, payments shall be made in paper francs instead of in gold. The total French debt thus regulated amounts to 2,038,840,000 French francs, and the sum to be allotted annually in the Yugoslav Budget to its repayment is 175,550,000 francs, of which 150 millions will be devoted to interest charges, and the remainder to the redemption of bonds by purchases in the open market.

The British loans are smaller, comprising only the 4 per cent. loan of 1895, with £180,000 outstanding; the 5 per cent. Montenegrin loan of 1909, with £20,500 outstanding; and the 5 per cent. British funding bonds, with £40,000 outstanding. These agreements are expected to be followed soon by the conclusion of a similar one with the American holders of the 7 and 8 per cent. Blair loans, and the 7 per cent. Seligmann loan. As soon as these negotiations are completed, all the agreements will be ratified. It is possible that later on, further negotiations for the consolidation and conversion of all Yugoslav foreign loans may be opened.

Bulgaria

A New Parliament

SOFIA, March 28.—Elections for National representatives were held on March 7th, 14th, 21st and 27th, after the country had been for four years without a Parliament. In spite of the fact that the old political parties had been virtually dissolved, the majority of the deputies elected are members of the former political groups. Out of 160 elected representatives, as many as 104 have declared their readiness to support the policy of the present bureaucratic Government. It is not certain, however, whether they will do so when Parliament meets on April 15th, for it appears that some of the declarations of approval were obtained from the candidates as a condition for greater freedom in their election campaigns.

In spite of a slight fall in prices and a less favourable economic atmosphere, Bulgaria's foreign trade developed satisfactorily during the first two months of the year, because of the large stocks held from the 1937 crop. The trade figures are as follows:—

Year	Imports	Exports (Million leva)	Export Surplus
1937	604	921	317
1938	650	1,079	429

Exports have increased by 17 per cent., against 7 per cent. in the case of imports. The export surplus has made possible further additions to the stock of foreign exchange at the National Bank, which was 915 million leva on March 15th, against 540 million leva a year ago. The comparatively calmer season has resulted in a decline in the short-term advances of the National Bank and in increased liquidity in the position of State and private banks.

The ordinary State Budget for 1937 has closed with a visible surplus of 642 million leva. Receipts amounted to 9,348 million leva, compared with 7,831 millions in 1936, and expenditure to 8,706 million leva, compared with 7,548 millions in 1936. Actually, this surplus has already been expended in the course of 1938, and its announcement was made for political reasons, to influence the elections just held.

State receipts from direct taxes during the first two months of 1938 showed a slight increase, while Customs receipts declined. Total receipts in the two months were 1,195 million leva, against 1,043 million leva in the same period of 1937, which is satisfactory, though it is 121 million leva below the Budget estimate.

China

Japan's Interests in China

SHANGHAI, March 22.—In all stages of the present conflict there have been repeated and emphatic Japanese assurances that foreign economic and financial interests in China would be respected. No responsible Japanese is prepared, however, to give similar assurances about future developments. One of the main reasons why the Japanese always wanted to secure control of China is the desire to promote the development of China under Japanese guidance and in conformity with Japanese economic interests.

Even in the midst of a sanguinary and protracted struggle the Japanese have started exploiting Chinese resources. The output of the Lung-yen iron mines in Hopei, at present under

Japanese occupation, has been considerably increased, and exports to Japan raised to 600 tons of ore per day. Japan hopes to obtain about 700,000 metric tons of Lung-yen iron ore in 1938. At the same time, the Hai-lung coal mines in Hopei have increased their output and exports of coal to Japan.

Survey work for the long-proposed railway line from Chih Chia-huang in Hopei Province to Tientsin has also begun. All these transactions are concentrated in the hands of the China Development Corporation, a branch of the South Manchurian Railway Company; and the so-called Provisional Government of the Republic of China in Peiping has granted a franchise for railway development to this body.

Chinese Resources

Most of China's resources of coal and iron are concentrated in the five Northern Provinces and Manchuria. The official Geological Survey of China estimates China's iron ore reserves to be about 1,133 million metric tons, two-thirds of which are in Liaoning Province in Manchuria. The coal reserves are believed to be about 250,000 million metric tons, of which about 90 per cent. are concentrated in Shansi, Shensi, Kansu and Honan. Prospects of developing this region, considered one of the big coal reserves of the world, must be considered remote, since it is in the midst of mountains and very poorly situated for water transportation, markets, labour and metal deposits.

Large financial investments by Japan in North China are not to be expected in the near future. The Japanese capacity for capital export has definite limitations. The heavy strain on the country's financial resources caused by the war has arrested even the small capital exports to Manchuria. A general standstill in Manchuria has been the result, especially in trade and building activity.

The haste shown by Japan in exploiting Chinese resources is largely due to the difficulty of securing foreign exchange to pay for raw material imports. To avoid expenditure of foreign exchange on additional imports of Chinese raw materials it has been found expedient to exclude the areas now under Japanese occupation from the sterling bloc, and to include them in the yen bloc by the creation of a new North China currency dependent on the yen.

Tokyo's Plans

Tokyo plans a more systematic organisation of the development of Chinese natural resources. The main idea of the Japanese North China Planning Board in creating the North China Corporation was to consolidate all Japanese economic interests and financial investments in North China, much as the South Manchurian Railway has been doing in Manchuria.

No final decision about the structure of the North China Corporation has been reached, due to conflicting interests between Japanese banks and industrial concerns. The formation of the Corporation at the present moment is not greatly important, as there are now no means in Japan available for large financial investments. For the moment, the exploitation of China's resources does not take the form of sound economic development, but rather of intensive utilisation until exhaustion point is reached. Thus Japan is securing desperately needed raw materials at the expense of efficiency and future possibilities.

Those of China's resources which have not been captured by the Japanese have also been greatly affected by the war. South China produces antimony and tungsten, in both of which China dominates the world market; and there is a considerable output of manganese. In many cases communications have been completely disrupted, because Japan holds most of the China littoral. This dislocation has naturally affected prices.

Meanwhile, the Chinese Government is strenuously trying to develop the resources of the Far West, notably in Szechuen. This province is sufficiently remote to be practically immune from Japanese military action, but the difficulty of establishing connections with the outside world are enormous.

Finally, China's agriculture has also been influenced by the war. In the provinces immediately affected considerable numbers of peasants have fled, leaving the fields untilled. In

the Shanghai area the Japanese for a long time prohibited the farmers from returning, which has had disastrous effects upon farming; and the prohibition has only recently been lifted.

Enormous quantities of machinery and other iron goods have been removed from Shanghai's war-torn suburbs to Japan for scrapping.

Eire

The Anglo-Irish Negotiations

DUBLIN, April 8.—The long delay in arriving at a settlement with Great Britain is having a rather disturbing effect on business in Eire. While farmers are living in hope that any agreement that is reached will be to their advantage, industrialists in the protected industries are not free from apprehensions regarding the possible effects of a reduction of import duties. There is no doubt that any agreement providing for a freeing of trade between Great Britain and Eire would be beneficial to Irish interests in general. The Budget would be relieved of the necessity of finding large sums for export bounties, and the increase in prosperity that might reasonably be expected would doubtless increase the yield of many taxes. The stimulation which agriculture would derive from the improved export position would have favourable repercussions on other sections of the community.

It would be a mistake, however, to conclude that any agreement, even the most satisfactory, would put an end to all the economic ills from which the country is suffering. The growing passivity of the balance of payments is the subject of some anxiety in official circles, and there is no reason to believe that a trade agreement would do much to close the ever-widening gap. Agricultural exports would no doubt increase, but imports would also increase if there were any relaxation of the Irish tariff. The fact is that the present condition of the balance of payments is a reflection of the internal expansion that has taken place, largely financed by borrowing. The housing programme alone is responsible for the demand for large quantities of imported raw materials and wage earners' consumers' goods, unaccompanied by any corresponding increase in exports.

Folly of Self-Sufficiency

Public opinion is at last waking up to the folly of attempting a policy of self-sufficiency in a country of the narrow range of natural resources possessed by Eire. The Labour Party has been blaming the Government for the failure of its industrial policy to stop emigration or to cure unemployment, and it is becoming clear, even to the man in the street, that a revival of exports is necessary "to get some money into the country." While an expansion of agricultural exports may be legitimately hoped for, there is very little hope of any increase in industrial exports. The new protected industries rely almost entirely on the home market, and some of the older exporting industries are gradually reducing their activity in this country. Guinness's Brewery, for example, is producing more of its output in its English branch, with serious effects on the balance of trade. The only expanding export industries are the tourist trade and the sweepstakes.

Industrialists will always shun areas with high costs of production, and, unfortunately, Eire is rapidly becoming such an area. Wages are high, output is low, and the legislation in regard to employment is found burdensome and expensive. Local rates are rising, and may be expected to rise still further, and the protective tariff raises many prices. Elaborate machinery for controlling prices has been established, but even the most perfect administrative device will not succeed in preventing increases. It is not sufficiently understood that the only way to keep down prices is to keep down costs, and that costs can best be kept down by the maintenance of reasonable freedom of trade, by the encouragement of efficiency and by the avoidance of all unnecessary public expenditure.

The last-mentioned condition certainly does not prevail in Eire. The estimates for the Supply Services for the financial year 1938-39 amount to £30,322,710, an increase of £579,646 over last year and £9,552,986 over the year 1929-30. Expenditure on Central Fund Services has also increased. The estimates of the Dublin Corporation for the coming year amount to £1,817,960, an increase of £218,460, necessitating an increase in rates from 17s. 6d. to 19s. 7d. in the £. The full significance of these figures will not be appreciated, unless it is realised that the population of the country is steadily falling, and that the *per capita* burden of a given amount of taxation is consequently growing year by year.

Letters to the Editor

The Trade Cycle

TO THE EDITOR OF THE ECONOMIST

SIR,—The social importance of reducing the amplitude of cyclical fluctuations in trade cannot be exaggerated, and yet we are making no attempt to formulate a rational trade cycle policy. I believe that it would be possible to decide on a trade cycle policy which would be better than no policy at all, if a representative committee of economists sat fairly continuously for about two years.

The fundamental problem would be to discover the extent to which general agreement on causation was possible. The possibilities of synthesis are shown by considering two views which appear irreconcilable. These views correspond more or less to those of the Austrian school, and of Mr Keynes and his disciples. According to the first, the crisis or turn of the trade cycle is due to an excess of investment over voluntary saving; and, according to the second, to an excess of saving over investment. We have in the one theory the diagnosis of too great a production of capital goods and, in the other, of too small a production of these goods.

The first theory might be modified as follows. Starting from slump unemployment of resources it is possible to envisage increases in the supply of money, the output of capital goods, and the output of consumption goods which will not necessarily lead to a reaction. The increase in the output of capital goods could be counterbalanced by the increase in voluntary saving resulting from the higher level of income.

On the other hand, the Keynesian group might agree that the Austrian school's emphasis on the distribution of the factors of production between consumption and capital goods industries is after all important. While unemployed resources are being re-employed, there is the problem of securing a balanced expansion of output.

Is it not possible that the committee would decide that both the explanations of the turn are correct, and that only careful statistical investigation can determine which explanation is relevant to a particular trade cycle?

If the above two explanations of the turn were accepted, opposing views on public works would be largely reconciled. Public works would be recommended as an appropriate policy to be adopted at the beginning of a slump when, and only when, the turn was due to a lack of investment opportunities.

Yours faithfully,

J. C. GILBERT.

School of Economics, Dundee.

The Anschluss

TO THE EDITOR OF THE ECONOMIST

SIR,—You refer in your issue of April 2nd, in accordance with English opinion, to "the tragic mishandling of the proposal for the Austro-German Customs Union." In spite of the juridical strangulation of the 1931 proposal for political reasons—which may rightly be condemned—one ought not to be blind to its real meaning.

The motives then actuating Austria and Germany can be described as follows. In 1931 the economic crisis reached a high point in Austria. For the first time voices raised against autarky could gain a hearing, and their effect was to decide Chancellor Schober to take steps to remove trade barriers. This was opposed by two groups: the autarkists and the Pan-Germans, who put difficulties in the way of furthering trade with other Danubian countries and saw in Austria's economic strength a threat to their ambitions.

It was this latter group which launched the Customs Union plan and interested Germany in it, although the autarkists, realising how impossible the scheme was, in the contemporary balance of power, but hoping through the proposal to obtain a new Geneva loan all the quicker, had no real objections. The economically inexperienced Schober was taken unawares by von Curtius.

While the rulers of post-war Austria destroyed the economic bonds with the Succession States, the Pan-Germans prevented their restoration, and the real aim of the Custom Union project of 1931 was to hinder the freeing of trade undertaken by Chancellor Schober.

Yours sincerely,

LEO GESTETNER.

Hotel Vanderbilt,
London, S.W.7.

Books and Publications

Mathematics for the Few

THE days when the principles of economics—apart from footnotes and appendices—could be grasped without knowledge of either calculus or cartesians are, regrettably, passing, and to apply the term "mathematical economists" to a particular school of theorists is mainly a distinction of degree. Diagrammatic presentation is fairly easy for the non-mathematical mind, and it is now a feature of the most elementary class-room. But recent advances in economics have gone much further in the use of both geometry and, more difficult, of functional analysis. As a consequence, the modern economic theorist finds the luxury of mathematics fast becoming a conventional necessity, and one difficult to obtain if he does not already possess it.

This difficulty has now been solved by this book.* Demanding from the beginner no more than "matric. maths.," Mr Allen has provided a textbook of pure mathematics "developed in the directions most useful to students of economics," which has all the neatness and clarity of argument which is the fascination of the subject itself. The choice of illustrations, the definition of the simplest terms and the provision of a special table of symbols are all marks of the care which has gone into the work.

"Examples" are provided at the end of each chapter to be worked by the student. But the book is much more than a course to be completed. Mr Allen has managed to include most of what is essential in mathematical economic theory, and, though the demonstration of "mathematical methods" has involved some loss in logical sequence, a separate index of "economic applications" has successfully turned the book into a permanent source of reference.

The completeness of the book may, in fact, be a defect. To provide a textbook was the primary intention, and the most important. But the price is very high for those most likely to put it to much use. This defect could be remedied by the publication of a shorter "Introduction." No one could do it better than Mr Allen himself; and it would increase the appetite for the bigger book, which will doubtless become the standard work on the subject.

* "Mathematical Analysis for Economists." By R. G. D. Allen. Macmillan. 548 + xvi pages. 31s. 6d.

Shorter Notices

"Stocks and Shares." By Hartley Withers. John Murray. 381 pages. 6s.

Mr Hartley Withers' work on stocks and shares was first published in 1910, and it is rightly established as a classic. As the author points out, in the preface to this third edition, the technique of security dealing has in many respects changed curiously little during the intervening twenty-seven years. The major change, in fact, arose from war-time inflation, and the consequent post-war discovery of the investment merits of the equity share. Mr Withers has written a new chapter which underlines this new-found importance of the equity share in modern investment policy.

"Financial Instruments and Institutions." By Robert L. Masson and Samuel S. Stratton. McGraw-Hill. 494 pages. 24s.

The Harvard case books on finance are less widely known in this country than they deserve to be. Perhaps the pragmatist may object that corporation finance is an art which can only be studied in the counting house. His answer is to be found in the fact that this addition to the Harvard series of case books contains actual problems, fully documented, which have, in recent years, confronted 55 financial institutions in the United States. They involve problems of capitalisation, the money markets, the maintenance of the investor's income, and questions arising from public control. Much of the ground is of primary interest to American students, but the British reader will find that many of the problems are worth study.

THE BUSINESS WORLD

Post Office Savings Bank

TO many modern economists, savings, like umbrellas, appear more useful on some occasions than on others. To the plain man, however, they spell security at all times. The immense funds of friendly and co-operative societies, insurance companies and savings banks demonstrate how it has become possible in the last few generations for the less well-off majority of the community to safeguard themselves against the vicissitudes of their livelihood. Thrift has deep roots in history, but only in modern times, when most men have earned more than a subsistence wage, has it fully flowered. And not the least encouragement to this tendency has come from a Government Savings Bank.

The Post Office Savings Bank, as we know it, is only seventy-seven years old. But its origins lie further back in English history. About 250 years ago, the author of "Robinson Crusoe" conceived the idea that savings might be entrusted to the Government, subject to the payment of interest. In Daniel Defoe's time, however, the poor had little or no savings, and the Government lacked the facilities to implement his plan. Nevertheless, the savings movement gathered momentum; and late in the eighteenth century, when great changes in Britain's industry and agriculture were under way, private savings banks, on Continental models, were projected.

The first successes came, not unnaturally, in Scotland. Savings banks were established at Ruthwell, Dumfriesshire, in 1810, and at Edinburgh in 1814. In 1818, after an Act of 1817 had empowered savings banks to invest their surplus funds with the National Debt Commissioners at $4\frac{1}{2}$ per cent., over 500 more banks were founded on both sides of the border. The relatively high interest paid by the savings banks attracted wealthy people, and the Government in 1824 made £200 the total deposit limit, and permitted depositors only one account. The investment of surplus funds with the National Debt Commissioners was made compulsory. In 1828, the deposit limit was reduced to £150 and interest to £3 16s. per cent.

To Mr Gladstone we owe the final establishment of the Post Office Savings Bank. Following a Government inquiry, a proposal that every money order post office should conduct savings bank business was mooted; and in 1861 this plan was embodied in the Post Office Savings Bank Act. Interest was to be $2\frac{1}{2}$ per cent. The bank started with 300 post offices transacting savings bank business; by the end of 1861 the number had increased to 1,676, and by 1870 to 4,000. At the end of 1862 there were 178,000 depositors with £2,000,000 to their credit; and by 1900 deposits were £135,000,000, having doubled in only ten years.

With the turn of the century the rate of expansion slowed down and it took thirty years for deposits to double again. In the last six years, however, progress has once more been phenomenal. Between January 1, 1932, and December 31, 1937, deposits rose from £272,110,000 to £470,000,000. The following table shows the increases

which have taken place during each of the last six years. A proportion of the increases arises from the accruing of interest, and this item is shown separately:—

INCREASE IN POST OFFICE SAVINGS BANK DEPOSITS
(000's omitted)

Year	New Money	Accrued Interest	Total Increase in Deposits
1932	8,415	7,000	15,415
1933	12,500	7,500	20,000
1934	18,800	8,000	26,800
1935	24,900	8,500	33,400
1936	54,700	9,900	64,600
1937	27,300	10,800	38,100

The advance contrasts sharply with conditions in the years between 1928 and 1931, when deposits rose by only £6,683,000, from £265,427,000 to £272,110,000.

There would seem, in fact, to be a direct relationship between the rate of increase in deposits and the attractiveness of the $2\frac{1}{2}$ per cent. paid by the Post Office Savings Bank relative to rates obtainable elsewhere. During the years 1928-31, when savings bank deposits grew very slowly, the monthly average of the Bank of England's discount rate ranged between $3\frac{1}{2}$ and $5\frac{1}{2}$ per cent., while the average yield on gilt-edged stocks was about £4 10s. per cent. During the last five years, Bank Rate has been 2 per cent. and the average yield on gilt-edged is now under £3 10s. per cent., after having been, for a time, below £3 per cent. The Post Office Bank's $2\frac{1}{2}$ per cent. has become proportionately more attractive; and deposits have increased apace.

It may well be, therefore, that the big yearly increases in the Bank's deposits since 1932 have been mainly due to the $2\frac{1}{2}$ per cent. interest which the Bank pays, combined with the stability, security and liquidity of the capital sum, compared with the low rate of interest obtainable on deposits placed with commercial banks, or with the return on money invested in gilt-edged, where there is some risk of capital depreciation. Between 1932 and 1936, deposits increased more and more the longer cheap money lasted. In 1937, when interest rates were slightly higher, the movement was checked. Indeed, the large growth in the Bank's deposits during the last six years suggests that two points may merit the attention of the authorities.

First, the credit of the Government for long-term borrowing is now well under $3\frac{1}{2}$ per cent., while the Treasury bill weekly allotment rate during 1937 averaged only 0.563 per cent. There may be grounds, therefore, for asking whether a corresponding adjustment is not desirable in the rate of interest payable on Post Office Savings Bank deposits—although it must be remembered that the rate offered is intended to be some inducement to the poorer sections of the community to be thrifty. A $\frac{1}{2}$ per cent. reduction in the rate would save the country about £2,400,000 a year, with deposits at their present level. It is doubtful whether such a reduction would mean any falling off in the deposits of those people for whom the P.O. Savings Bank is intended, though it might check the inflow

of deposits from those whose primary object is to take advantage of the relative attractiveness of the present rate. At present, the amount of new deposits which may be made by a single individual in any year is only limited to £500, and there is no regulation against the opening of several accounts by the same depositor. As things stand, the Government is paying $2\frac{1}{2}$ per cent. for the use of money which substantially it invests in gilt-edged securities. The last balance sheet of the Bank showed that, against deposits of £432 millions, it held around £260 millions in gilt-edged. Although these vast funds are of great value in helping the Government to control the gilt-edged market, and, thereby, the terms of national borrowing in other directions, $2\frac{1}{2}$ per cent. may be an unjustifiably high rate to pay for money withdrawable at short notice.

In this connection, a second question arises. If most of the considerable increase in deposits in the last six years has been due to the Bank's special attractiveness in a period of low money rates, what will happen if and when the epoch of cheap money comes to an end? Any sum, no matter how large, can be withdrawn from the Bank at ten days' notice. If the Bank should no longer be so attractive as a haven for money, there might be substantial withdrawals over a very short period, necessitating, *pari passu*, sales by the Bank of gilt-edged securities. Forced liquidation on this

scale might cause a sharp fall in the prices of British Government stocks, which, with dearer money, would in any case be moving downward. And this might happen at a particularly unfortunate moment for the national credit. The situation could, of course, be met by modifying the withdrawal terms, but this line of action would also have undesirable repercussions.

Meanwhile, the problems to which these large increases in the Bank's deposits have given rise are being steadily accentuated. Already, in the first two months of this year, deposits have risen by a further £12 millions to £482 millions. In five years of cheap money, the Bank's deposits have increased by £200 millions. Is there a case for a moderate adjustment of the rate of interest on new deposits, which, while insufficiently serious to discourage thrift among those for whom the Bank is primarily designed to cater, would deter others from using its facilities as a convenient financial cloakroom? The Treasury has not hesitated repeatedly to vary the average rate of interest obtainable from another instrument of thrift *par excellence*—the National Savings Certificate. The Savings Bank is a bulwark of British democracy, and cannot lightly be tampered with. But it can scarcely be suggested that its policy should have no reference whatever to changing events and tendencies.

Hire Purchase Bill—II

Case for the Bill

MISS ELLEN WILKINSON'S Hire Purchase Bill has emerged safely from the Committee stage, but it is likely to suffer substantial alteration before reaching the Statute Book. Few Bills have been more warmly supported and more strongly attacked in the course of their parliamentary career. In the Bill's drafting, Miss Wilkinson received not only the services of a number of skilled lawyers, but also the backing of the Hire Purchase Traders' Association. Having been introduced as a private member's measure on a non-party basis, the Bill obtained a second reading without a division. At that stage, the Government, in the person of the Attorney-General, stepped in and gave professional assistance. The greater part of the Bill was rewritten, with the intention of strengthening it and closing up various legal loopholes.

From this point dates a sharp change in the attitude of the big hire-purchase firms and organisations to the proposed measure. Although the Bill is not intended to undermine legitimate hire-purchase business, its critics contend that some of its re-drafted clauses, which have been designed to eradicate abuses, may in practice prove a handicap to hire-purchase trading in general. To what extent is this criticism justified? To appreciate the effect of this new legislation a clear understanding of the rudiments of hire-purchase finance is necessary. In the first place, hire purchase must be distinguished from deferred payment and the various other forms of non-cash trading. Until all the instalments of a hire purchase agreement are completed, the goods remain the property of the owner, and can be reclaimed by him if the hirer defaults. Hire purchase is, in fact, a renting agreement with an option to purchase after a certain period, provided the payments have been kept up. Most agreements are made by the purchaser of the goods with specialised hire-purchase firms, who pay cash to the dealer or the manufacturer. The latter then disappears from the scene, and the purchaser (or, more correctly, the hirer) pays direct to the finance firm. Alternatively, the dealer may make the agreement himself and finance it either out of his own surplus resources or through one of the hire-purchase finance firms, who may also collect the instalments for him.

The volume of retail trade transacted on hire-purchase terms is considerable, in spite of the fact that its growth is

largely a post-war development. The motor, radio, and domestic appliances trades have been largely built up on hire purchase. The bicycle trade was constructed on a cash basis in its early days, but has now been taken over to a great extent by the hire-purchase firms. The equipment of industry has also been effected by hire purchase. Railway wagons, for instance, have been bought on hire-purchase terms since the middle of last century. The wagon companies, indeed, were the pioneers of hire purchase. Machine tools and medical equipment are also bought on hire purchase. Finally, mention must be made of livestock, which the original Bill ignored, but which were incorporated during the Committee stage.

It is a matter for astonishment that so integral a section of the national economy should have remained for so long free from legislative control; and it is a reflection on a whole succession of Governments that it should be finally dealt with in a private member's Bill. What abuses is the Bill designed to check? Many of them have their origin in ignorance and lack of financial experience on the part of hirers, who do not always understand or even read the agreements they sign. Poverty, or relative poverty, among hirers is a secondary factor, although an important one. Most firms, in fact, take steps to ascertain beforehand the credit-worthiness of the hirer. Abuses arise when unscrupulous sellers endeavour deliberately to exploit poverty, counting on the inability of the hirer to pay all the instalments, and on their ability to repossess themselves of the goods as soon as the agreement is technically broken by non-payment.

This "snatching-back," in its various forms, is the most serious of all hire-purchase abuses. It has undoubtedly caused widespread hardship. In some cases, families have lost thereby practically all their possessions. As a remedy, the Bill, as it now stands, proposes that, once a third of the hire-purchase price has been paid, the goods can only be recovered by action in the County Court. The powers to be accorded the County Court judges are fairly extensive. The Court may determine the agreement; order the goods or part of them to be returned to the owner; postpone their return, provided the unpaid balance is repaid in such instalments as the Court thinks equitable (that is, extend the agreement); or order the title of part of the goods to be

transferred from the owner to the hirer, taking into consideration their value, the amount paid, and the depreciation on the remainder. Reinforcing this clause is another which permits the hirer to end the agreement and return the goods provided a third of the hire-purchase price has been paid. If reasonable care has not been taken of the goods, he is liable for the damage caused. This clause has wider implications, which we propose to consider in a second article.

A more general protection for the hirer is the stipulation that the agreement shall contain a statement of the hire-purchase price and the cash price of the goods. This will eliminate the pretence that the goods are being obtained at cash price on hire-purchase terms.

Other safeguards are laid down in the Bill. A copy of the agreement is to be sent to the hirer within seven days of its being signed. On the payment of one shilling, the hirer is to be entitled to receive within four days a copy of the agreement showing the amount paid, the amount unpaid, the dates and amounts of the instalments payable. These two clauses are designed to prevent misunderstandings, accidental or wilful.

One of the more conspicuous abuses of hire-purchase trading is the system of "linking-on" agreements. This is a perfectly legitimate device under certain circumstances. Some firms, however, have made a practice of approaching a hirer when the instalments on one set of goods have been almost paid off, and persuading him to buy more goods on the same terms. These goods are added on to the earlier agreement. In the event of default by the hirer, all of them—and not merely the additional goods—are liable to be seized. The Bill provides that where agreements are linked on in this way the goods covered by the second agreement shall not be seized without County Court action,

whether a third of the hire-purchase price has been paid or not.

A complaint frequently made against hire purchase as a whole arises from the fact that, being initially technically a hiring (with merely an option to purchase after the instalments are completed), it is not legally subject to the implied warranties and conditions stipulated in the Sale of Goods Act, 1893. The majority of branded articles sold by hire purchase are, in fact, covered by manufacturers' guarantees, but in other cases the hirer at present has no legal redress against a trader who supplies him with an article which proves defective. The Bill closes up this loophole in the law by providing that, where the hirer "makes known the particular purpose for which the goods are required, there shall be an implied condition that the goods shall be reasonably fit for such purpose."

It has hitherto been possible for a hire-purchase firm to refuse to take responsibility for anything their canvassers, demonstrators or salesmen may have said. Many housewives have been trapped by misrepresentations of such agents, who themselves are frequently forced to exaggerate in order to obtain results on which they are paid on a commission basis. The Bill makes it impossible for firms to deny their responsibility for the actions of their agents.

Finally, it is provided that there shall be no escape from the provisions of the Bill by means of special agreements, even though these may be signed by the hirer. And the Bill, when it becomes law, is to be made retrospective as far as is possible.

So much for present abuses and their remedies under the terms of the Bill. We reserve for a succeeding article our consideration of the objections raised by the hire-purchase firms and the probable effect of the Bill on the hire-purchase trade as a whole.

Cable and Wireless Finance

THE new agreement between the Government and Cable and Wireless, Ltd., marks the end of another stage in the development of imperial communications. The imperial and strategic implications of the agreement are discussed on page 136. But its financial aspects are highly important for the stockholders of Cable and Wireless (Holding). The weaknesses of the original structure of 1928 were exposed by the depression of 1930-33. It soon became evident that the tendency to over-capitalisation, which seems inherent in mergers, was in this instance more than usually pronounced. Again, the financial arrangement between the Government and the company represented a heavy burden in time of depression. As soon as the recovery in cable traffics began, the holding company drastically wrote down its capital. And it has been well known that the directors for some years have sought a revision of the 1928 agreement.

The financial structure of the group, resulting from the merger, was a highly complicated three-decker arrangement. At the base was the operating company, Imperial and International Communications, Ltd. (now called Cable and Wireless, Ltd.). This concern took over the assets of the cable companies, in exchange for participation in its £30 millions capital. These cable companies—Eastern Telegraph, Eastern Extension Australasia and China Telegraph, and Western Telegraph—constitute the second tier. Their ordinary shares, and the shares of Marconi's Wireless Telegraph, are held by the holding company, now called Cable and Wireless (Holding). The holding company originally had a capital of £52,687,046, which has now been reduced to £23,649,693, consisting of £16,766,591 in 5½ per cent. cumulative preference stock and £6,883,102 in ordinary stock. The holding company's stocks have always been in the hands of the public investor, who thus participates, at the second remove, in the profits of the operating company. These profits are supplemented by the earnings of the Marconi's manufacturing company

and by income from the group's large investment holdings.

Under the 1928 agreement, the relation between the Government and the operating company was simple. The Government leased its beam wireless stations to the company, at a fixed rental of £250,000 per annum, together with a share in any excess of the operating company's profits above a "standard revenue," fixed at £1,865,000. In practice, this standard has never been approached. No sooner had the merger been established than the slump came, and by the summer of 1931 the volume of traffics had fallen to 65 per cent. of the 1929 level. The net revenue of the operating company dropped in 1931 to £75,535—a mere ¼ per cent. on its capital. In these circumstances, the fixed rental of the beam stations became a wholly uneconomic burden. Moreover, the company was required, for strategic reasons, to maintain unremunerative services which would otherwise have been scrapped.

The case for a new settlement was obvious and unanswerable. Last week's agreement is, in fact, an endeavour, which lacks nothing in boldness, to cut the Gordian knot. The new arrangements, however, fall into three parts. First, the beam wireless stations are ceded to Cable and Wireless, and the rental of £250,000 a year is abolished. In exchange, the second-tier cable companies will surrender to the Government some £2,600,000 of their £30 millions holding of the capital of the operating company, thus giving the Government 8.67 per cent. of the equity. This transfer covers the settlement of all matters outstanding between the company and the Government, including, for example, the question of strategic cables. Secondly, cable charges, which were previously based upon cost of service, are reduced to a uniform flat rate throughout the Empire. This reform will greatly facilitate inter-Imperial communications, though, from the financial aspect, it is undoubtedly more speculative. The annual cost of the reductions is estimated at nearly £500,000, of which perhaps as much as four-fifths will fall to be borne

by the company. The reduction and standardisation of charges should, in time, substantially increase the volume of traffic. In order to make good the cost of the concession, however, the volume of traffic will need to increase by 10 per cent., and the volume of inter-Imperial traffic specifically affected by the reductions must increase in appreciably greater proportion. In the long run, such increases are possible and even likely: a strong body of technical opinion believes that the demand for cable traffic is decidedly elastic. But, in the short run, it is less certain that the volume of traffic will increase sufficiently quickly to offset the loss of receipts based on existing traffics.

The third part of the scheme relates to standard revenue provisions. In future the standard revenue will be reduced to £1,200,000 or 4 per cent. on the communications company's capital. One-third of any excess of the latter's profit over this figure will be applied to further reduction of charges, one-third to the staff, and the remaining third will be available for distribution among the stockholders. This ratio may be related to recent and current levels of earnings. In 1936, the communications company's net revenue, after payment of the £250,000 beam rental, was £842,945. On the new basis, net revenue would have amounted to £1,092,945, equivalent to 3.6 per cent. on the capital. In 1937, the average level of traffics was some 6 per cent. higher than in 1936, and in our issue of January 22nd we estimated that the net revenue for 1937 would be some £300,000 higher. Thus, in 1937, the company may have earned more than its standard revenue, but this year earnings will probably fall. Apart from the short-term effect of the reduced charges, traffics have fallen already to the levels of 1936. Standard revenue, therefore, may not be attained this year unless an unexpected revival of international trade occurs. But in a year of moderately good international trade, it should be achieved.

The third part of the agreement is thus very significant. It clearly emphasises the underlying principle of the whole agreement, which is to increase the "public utility" element in the structure of Cable and Wireless at the expense of the "commercial" element. The Government's direct control is increased, by exchanging its position as lessor for that of shareholder. A price policy has been adopted which evidently owes as much to Imperial as to financial motives. The standard revenue is fixed at a level which, in effect, limits dividend prospects on the holding company's ordinary stock to some 5 per cent. If, therefore, at some future date further capital were required, it is difficult to see how anyone but the Government would be willing to subscribe it on an equity basis. In other words, non-commercial considerations are playing, and will in the future play, an increasingly important part in the group's organisation. Doubtless the principle is right and proper; but whether the group's financial structure is really well adapted for its application is open to question. The financial provisions under which the operating company will work in future may be applicable to such undertakings as the railway companies or London Transport, whose net revenues fluctuate within relatively narrow limits. They may be applicable to a gas or electricity company, which must employ an effective monopoly for the public service. But Cable and Wireless is not a stable, domestic, quasi-monopoly undertaking. It is highly sensitive to wide fluctuations in international trade. The group would be unable to exploit consumers by raising prices even if it wished to do so. Consequently, it is difficult, on purely financial grounds, to make a case for a sliding scale of profits based on as low a datum dividend as 4 per cent. on the operating company's capital. Although the position of the ordinary stockholders in the holding company is still exposed to depression, and their dividends have no bottom limit, short of zero, they are offered strictly limited participation in even moderate prosperity. If the group has no future need to appeal for capital, these arrangements are irrelevant to its internal financial strength. But, failing that unlikely contingency, it may reasonably be asked whether the details of the new arrangement—as distinct from its main principle—are wholly satisfactory either for the stockholders or for the company itself.

How do these arguments affect the position of the

holding company and its stocks? The limitation of the operating company's dividend is evidently of considerable importance for the very highly geared Cable and Wireless (Holding) ordinary stock. There are other constituents in the holding company's earnings, such as income from general investments and from Marconi's Wireless Telegraph. But that is little more than a cushion against depression, and quantitatively it is not very responsive to upward movements in trade. In the last resort, the ordinary dividend depends primarily upon the fortunes of the operating company. It is possible in a rough and ready manner to relate the standard revenue to the ordinary dividend. If the operating company paid a standard dividend of 4 per cent., the cable companies would receive £1,096,000, the Government's share in the equity being £104,000. This is £346,000 more than they received in 1936. If we assume that the whole of this increase was passed on by the cable companies to the holding company, and that the group's other sources of revenue provided the same income as in 1936, then the holding company, after providing interest and sinking fund on the funded income stock and dividend on the preference stock, would earn £305,000, or 4½ per cent., on the ordinary stock. Variations in "other income" would probably not affect this rate by more than 1 per cent. in either direction. The increase in Marconi's Wireless Telegraph dividend from 7 to 9 per cent., announced on Wednesday, represents an addition of £37,403 in the holding company's income, or little more than ½ per cent. on the latter's ordinary capital.

The following table gives some idea of the "gearing" on these assumptions, as the operating company's earnings rise above or fall below the standard:—

	Operating company's earnings	Corresponding dividend on Holding company's Ordinary
	£	%
Below standard	900,000	0.5
	1,100,000	3.2
Standard	1,200,000	4.5
	1,300,000	4.9
Above standard	1,500,000	5.8

On this showing, the holding company's ordinary stock is clearly vulnerable to depression in international trade, and has only limited prospects even in conditions of booming world commerce. If gross traffics fall back this year to the 1936 level—a fall which is not unlikely in view of the first two months' trend and of the reduction in charges—then the stock may receive not more than 3-3½ per cent. Certainly a repetition of the 4 per cent. dividend declared this week is the most that can be expected. In that case, the stock looks amply valued at a price of 63½, cum 4 per cent. dividend.

Finance and Banking

M. Daladier's Financial Proposals.—Early on Wednesday morning the French Chamber gave M. Daladier special powers to carry through financial measures by decree up to the end of July. M. Daladier previously gave the Chamber an outline of his proposals, which briefly comprise the less controversial part of M. Blum's abortive financial programme. M. Daladier intends to introduce a moderate increase in taxation, including a special tax on monopoly profits and on industries profiting from re-armament. The customs tariff is to be revised upwards so as to improve the trade balance. Tax concessions are to be given in respect of undistributed profits used for extensions to works and other capital expenditure, and more generally to *entrepreneurs*, artisans and labourers who contribute towards raising production. National defence industries are to be authorised to draw upon the Government for money due to them. Finally, the limit of Treasury borrowing from the Bank of France is to be raised by Frs. 10,000 millions, and a National Defence Loan is to be issued as soon as possible. M. Blum's proposals for exchange control and a capital levy have been dropped. The proposal for "re-armament" bills to be drawn by the defence industries is, to some extent, a move in the German direction of undisclosed borrowing, without the German frame-work of exchange and price control. Much will depend on the extent to which these bills are created, and whether they will be available for rediscount at the Bank of France. For the answer to the all-important question whether French capital will be tempted back from abroad and into the envisaged National Defence Loan, M. Daladier can only wait and see.

"Pump Priming" and the Dollar.—The plans for "pump priming" in the United States, however nebulous they may still be, have had unmistakable reactions in the foreign exchange market where the dollar has been under persistent pressure during the past week. Backed by impressive figures of estimated Government expenditure—varying from \$3,000 millions to \$4,500 millions—these plans have carried a suspiciously inflationary suggestion for the average Continental operator; and much of the selling of dollars during the past week has come from Continental sources. Some of the hottest of the hot money which flew to the United States during the recent political scares in Europe has been returning home, driven back by the joint influence of the "pump priming" plans and of the recession of immediate war fears on the Continent. A special factor which also helps to explain the renewed weakening of the dollar has been the resumption of Japanese sales of this currency. These operations suggest that gold has again started to flow from Japan to the United States. In the face of the change in the underlying trend of the dollar-sterling exchange, the British Exchange Equalisation Account has been a much more diffident seller of gold during the past week. With the rate constantly running away from arbitrage operators, the amount booked for shipment to New York from this country has been very small.

Anglo-Italian Clearing.—Late in 1936 an Anglo-Italian Clearing Agreement was concluded, which, briefly, provided that all debts due in both directions should be paid into special sterling and lire clearing accounts. All sterling paid by British debtors into the sterling account is allotted as to 27 per cent. for the discharge of the accumulated arrears of commercial debts due by Italians to British creditors; 3 per cent. for the liquidation of arrears of financial debts; and 70 per cent. for the discharge of current trade debts,

covering transactions since July, 1936. This agreement has worked so satisfactorily that practically all the commercial arrears have been discharged. The House of Commons last week, therefore, passed an Amendment Order, re-allocating the 27 per cent. The allotment for current trade is to be increased from 70 to 87 per cent., of which 46 per cent. is ear-marked for the payment of British coal exports to Italy (on an f.o.b. basis), and 41 per cent. for general exports and for freights other than coal freights. The allocation for financial transfers is increased to 6½ per cent., and the remaining 6½ per cent. is allocated first to the discharge of the small quantity of commercial arrears now outstanding, any balance being at the free disposal of the Italian authorities. The British Government's calculations are that the new Order will result in an increase in 1938 of £1,000,000 in British coal exports to Italy, over those for last year. In view of the complexity of these arrangements, certain Members desired an assurance that the new Order did not imply the provision of fresh financial credits for Italy, and this assurance was at once forthcoming.

Clearing Bank Averages.—The March returns of the ten English clearing banks reflect the further collection of revenue and redemption of the floating debt. Deposits have fallen since February by £26·7 millions and discounts by £49·4 millions. There was an increase of £15·5 millions in advances, which is in part due to borrowing by taxpayers. Our usual table follows:—

	(In £ millions)					
	Mar., 1937	Nov., 1937	Dec., 1937	Jan., 1938	Feb., 1938	Mar., 1938
Capital and reserves	132·5	132·5	133·3	136·0	136·0	136·0
Acceptances, etc.	122·2	114·9	114·0	111·0	108·9	111·7
Deposits (including undivided profits, etc.)	2,206·6	2,272·9	2,293·3	2,292·4	2,243·4	2,216·7
Total liabilities	2,461·3	2,520·3	2,540·6	2,539·4	2,488·3	2,464·4
Cash	222·4	231·6	241·0	247·8	239·3	240·8
Cheques, balances and items in transit	67·3	65·8	77·9	64·5	65·4	63·4
Money at call	164·8	154·8	158·5	149·0	139·9	146·2
Discounts	246·2	296·0	298·5	329·8	286·4	237·0
Investments	651·9	619·4	620·4	621·2	618·4	619·7
Loans and advances	918·8	969·8	962·5	948·8	962·6	978·1
Investments in affiliated banks	23·5	23·6	23·7	23·9	23·9	23·9
Cover for acceptance premises, etc.	166·4	159·3	158·1	158·4	152·4	155·3
Total assets	2,461·3	2,520·3	2,540·6	2,539·4	2,488·3	2,464·4

Since December, there have been reductions of £76·6 millions in deposits and £61·5 millions in discounts, this period comprising the last quarter of the financial year which is the period of heavy revenue collection. During the same three months tender issues of Treasury bills were reduced by £110 millions, mainly out of the proceeds of the quarter's revenue surplus. These figures are sufficiently of the same order of magnitude to suggest that revenue collection—a temporary and seasonal movement—played a considerable part in the quarter's shrinkage in deposits. Incidentally, the banks' cash ratio has risen from 10·5 to 10·9 per cent.; an increase in cash being particularly noticeable in the figures of one or two banks. Now that the new financial year has opened, however, seasonal influences favour expansion rather than contraction in deposits.

Competition for Deposits.—The big banks' competition for deposits in general—and foreign deposits in particular—is waxing stronger. The floating supply of foreign funds in London is abnormally large at the moment. Some of the recent additions to the total

represent genuine refugee money, while others represent Continental banking resources which have been attracted to sterling by the discounts at which currencies like French francs and belgas are quoted in the forward market and by the attractive return which can be earned on a "swap." A new feature of the technique of competition for these funds is the employment of firms of brokers, who act as intermediaries in return for a commission of ¾ per cent. Another comparatively recent innovation has been the utilisation by clearing banks of one or other of their affiliated banks as a direct instrument for attracting foreign funds. Call money, for example, can be deposited with these institutions at ¾ per cent. and money for one month at 1 per cent. to over. If these figures are compared with the mere ½ per cent. obtainable on three months' Treasury bills their abnormality is immediately apparent. Some foreign agencies have been induced by these attractive rates to deposit with their clearing banks the whole of the funds which they would normally employ in the short loan market or in Treasury bills.

Foreign Capital in the United States.—The United States Treasury has just published its compilations of international capital movements affecting the United States, brought up to the end of 1937. They show an exceptionally large efflux of short-term foreign funds from the United States during the third quarter of the year. At the end of September, 1937, the short-term liabilities of all United States banks to foreigners amounted to \$2,304·8 millions. By the end of the year they had been reduced to \$1,729·6 millions—a fall of \$575·2 millions. This measures the impressive size of the flight from the dollar, which occurred during the last two months of the year. This owed its origin to rumours that the United States were about to resort to another devaluation of the dollar in terms of gold as a way of combating the rapidly increasing business depression. The substantial withdrawal of foreign short-term funds was accompanied, however, by further net additions to foreign holdings of dollar securities. The aggregate of such investments increased during the third quarter of the year by \$126·8 millions, after having risen by \$384·8 millions during the first three quarters of the year. These figures include net purchases of both United States and

foreign securities in the American market. The following table shows some of the more important sources from which foreign purchases of domestic American securities were made during the course of 1937:—

FOREIGN PURCHASES OF AMERICAN SECURITIES, 1937 (Million dollars)				
From—	Jan. 1 to Sept. 29	Sept. 29 to Dec. 29	Total	
Great Britain	64·4	16·6	81·0	
France	5·3	0·3	5·6	
Netherlands.....	51·0	5·3	56·3	
Switzerland	72·0	3·1	75·1	
Latin America.....	2·1	0·6	2·7	

Purchases from Great Britain head the list, closely followed by those from Switzerland—both countries having acted, doubtless, to some extent as *entrepôts* for these big capital movements. Direct French purchases, it will be seen, were of negligible proportions.

Shanghai Exchange Arrangements.—A report has been received this week to the effect that the Chinese authorities are establishing an exchange office in Shanghai. As a result of the war, the central bank and other authorities moved to Hankow, to keep in touch with the Finance Ministry, though some subsidiary organisation has moved into the French Concession, where it is occupying the "Tote" offices in the Greyhound Racing Track. When the system of exchange rationing and control was set up last March, the Shanghai banks could only obtain their foreign exchange allotments by applications via Hongkong to Hankow. This was a most inconvenient and dilatory arrangement, and the Shanghai banks at once suggested the need of an exchange office in Shanghai. This suggestion is now being met. On the whole, foreign exchange allotments have been adequate, though the temporary lapse of the rate a fortnight ago indicated that the supply then fell short of the demand. The main region of anxiety is North China, where the Japanese are busy introducing a new currency, virtually based on the yen. The ultimate objective would seem to be to bring China within the ring-fence of the Japanese exchange restrictions—a consummation hardly to be desired by British traders.

MONEY MARKET NOTES

The Money Market

IN spite of Easter currency withdrawals by the public, money remains very easy. The floating debt return for April 9th shows £5·0 millions of Ways and Means borrowing from the Bank. This is probably the remains of a larger sum borrowed to finance the April 1st dividend payments, but it helps to explain the prevailing ease. This week some of the clearing banks were keen buyers of bills, but others were not so anxious to buy. The market is still short of bills available for re-sale, and the banks bought mainly early July maturities.

Others	12-5*	12	12-5*
Discount Rates:			
Treasury bills	12	12	12
Three months' bank bills	17½-9½	17½-9½	17½-9½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

On April 8th the market tendered for Treasury bills at £99 17s. 5d. per cent., and secured an allotment of 56 per cent.

of the applications at this rate. In view of the opening of the new financial year and the impending increase in the volume of tender Treasury bills, this was regarded by some as a disappointing result. It is, however, much better than the results of the early part of the year when the allotment at the minimum rate fell to only 18 per cent., and the market ought not to be too displeased.

Foreign Exchanges

There was some demand for dollars from nervous Continental interests immediately preceding the German plebiscite, but these fears have now subsided, and this week dollars came on offer. The rate has consequently moved from \$4·96¼ to \$4·97¼, so that nervousness last week has so far ended in a loss of 1½ cents. French francs were offered up to Tuesday evening at either side of Frs. 161, but M. Daladier's victory in the Chamber was followed by a strong demand, which brought the spot rate down to Frs. 158½, and enabled the French Control to replenish its resources. Three months' francs have also been bid from Frs. 5 down to Frs. 3 discount. This demand probably represents only the covering of short

positions, and not as yet a genuine repatriation movement. Spot belgas have weakened slightly from bel. 29·49 to bel. 29·55, this being due to sales against franc purchases and also to the weaker tendency of the dollar. Forward belgas are a little stronger, the three months' rate having come in from 19 to 13½ cents discount. Guilders were bid down to Fl. 8·95½ early in the week, and Swiss francs to Frs. 21·63, but the latest rates are Fl. 8·96½ and Frs. 21·65. A month ago, at the time of the Anschluss, there were heavy sales of one month's guilders and Swiss francs, inspired by fears of the international outlook. These forward sales had to be covered this week, and this explains the temporary demand for spot guilders and Swiss francs. Otherwise the market has been quiet, though with a fair business in dollars.

The Bullion Market

Dealings in gold have been of limited volume and much of the business consisted of "marriages" declared after the fixing. There was a fair amount of general selling on Wednesday, but no attempt by the authorities to press gold on the market. The premium of one penny, current on Tuesday and

Wednesday, was too high to leave any scope for arbitrage purposes, especially on Wednesday, when the dollar itself was inclined to weaken.

★

The silver market has lacked strength, and the price has weakened as a result of Continental and speculative offerings. The current price is exactly at parity with the New York price of 43 cents. In spite of the low level of Bombay stocks, there has been little Indian demand, and Bombay may be expect-

ing to carry through until the monsoon breaks, when the up-country demand is due to contract. Practically no Mexican silver has been offered in London during the past fortnight, and indeed Mexico only came in for the two days immediately following the American decision to cease buying. Nor does the market expect any offerings of Chinese silver, for this could not be sold in quantities sufficient to meet China's needs without breaking the market. For that reason it is unsuitable as collateral to loans to the Chinese authorities.

INSURANCE NOTES

Legal and General Assurance.—

In 1919 this society discontinued the issue of participating policies, but existing with-profit policyholders became entitled to a maximum reversionary compound bonus of 38s. per cent. per annum. That rate has, in fact, been declared at each subsequent distribution of surplus. Last year the office returned to the practice of granting also policies with right to participation. In 1937 the Legal and General issued 21,000 policies, of which 8,424 were decreasing term assurances (generally in connection with house purchase loans through building societies) and group assurances. Total new sums assured under ordinary policies amounted to £7,267,000 against £7,113,000, and under decreasing term and group assurances were £11,282,000 against £9,784,000. In addition, sinking fund assurances amounting to £1,518,000 were issued, compared with £1,355,000 in 1936. There was also a large addition in group pensions, a new type of contract in which the society is a very energetic pioneer, while consideration moneys for annuities increased from £1,577,000 to £1,648,000.

There was a considerable fall in death claims from £1,003,000 to £858,000. The net rate of interest earned on the life assurance and annuity funds rose by as much as 5s. 10d. per cent. to 4s. 6s. 7d. per cent. Fire premium income increased from £315,000 to £338,000, but accident premium income fell from £221,000 to £207,000. In both branches the underwriting results were satisfactory. Total assets increased from £39,725,000 to £42,735,000. Mortgages and loans amounted to £14,927,000 against £13,598,000 in 1936. British Government securities, at £5,850,000, showed some increase, but Dominion and Foreign Government securities fell from £1,859,000 to £1,768,000. Debenture stocks increased from £3,076,000 to £3,263,000, preference stocks from £1,770,000 to £1,954,000, and ordinary stocks from £3,816,000 to £4,344,000. Since the last accounts were published, there have been certain changes in the share capital. A sum of £50,000 was applied to reduce the amount of uncalled capital by 5s. per share, making the shares £5 each with £1 5s. paid up. Each share was then sub-divided into five shares of £1, each unit 5s. paid up. The dividend for 1937 is 40 per cent., free of tax, costing £100,000; in addition, a bonus of 3d. per share, free of tax, costing £12,500, has been declared. Total net interest earnings, exclusive of those belonging to the life and annuity class, amounted to £86,000.

Eagle Star and British Dominions Insurance.—New sums assured, which in 1935 amounted to £2,755,000 and increased to £5,734,000 in 1936, last year again showed remarkable expansion to £10,465,000. The number of policies issued, however, increased much less rapidly, at 2,454, 2,690 and 2,792 in the three years, respectively. It is almost certain that much of the extraordinary expansion in sums assured was due to a vigorous policy in pension and group assurance. This assumption seems to be confirmed by the fact that the new premiums last year increased by only £71,000 to £231,000. The rate of interest on the life assurance and annuity fund increased by 1s. 2d. per cent. to 4s. 2d. per cent. No valuation of liabilities and distribution of surplus was due to take place in 1937, either for the life assurance contracts of the company or of any of its subsidiaries, and so no transfer from the life assurance fund was made to profit and loss.

★

In the Fire branch, premiums increased from £796,000 to £819,000, and underwriting results were satisfactory. In the Marine branch premiums amounted to £279,000 against £252,000, but claims rose disproportionately from £184,000 to £226,000, and no transfer was made to profit and loss account against £20,000 in 1936 and £25,000 in each of the three preceding years. In the accident and general branches four separate revenue accounts are given, of which the most interesting is the motor insurance account. Here premium income was practically unchanged at £1,631,000, but claims increased from £885,000 to £994,000. In order to maintain the customary reserve of 40 per cent. of premium income for unexpired risk, it has been necessary to transfer £44,000 from profit and loss, against £6,000 in the previous year. A further £50,000 has been taken from profit and loss and applied as an additional claims reserve. The results of the last two years are given below:—

	1936		1937	
	Amount of Profit	Percent- age of Premiums	Amount of Profit	Percent- age of Premiums
Fire	74,073	9.3	89,099	10.9
Accident	9,749	10.3	14,222	14.2
Employers' liability	4,027	2.0	1,447	.7
General	98,544	21.3	102,072	21.4
Motor	5,683	0.3	43,744	2.7
Marine	20,000	...	...	...
Life	110,447	...	...	...
Less items debited to profit & loss	311,157	...	163,096	...
	260,483	...	129,994	...
	50,674	...	33,102	...

During 1937 there was a further issue of capital. The net premium on the issue amounted to £1,108,000, of which £100,000 has been utilised to increase the provision for pensions from £200,000 to £300,000, and the balance of £1,008,000 carried to general reserve. The same amount, £1,008,000, has been credited to profit and loss from general reserve (which remains at £2,500,000) "in respect of past accumulations of revenue." Some £1,000,000 has been transferred to contingency fund, out of which £298,000 has been set aside to provide for depreciation in Stock Exchange securities. The total assets of the company and its subsidiaries increased from £25,502,000 to £27,504,000. The life department's assets alone amounted to £16,256,000, of which £3,899,000 is invested in British Government securities (against £4,123,000 in 1936) and £2,455,000 (compared with £2,527,000) is in debenture stocks. Preference stocks increased from £1,942,000 to £2,153,000, and ordinary stocks from £983,000 to £1,667,000. The dividend on the ordinary shares, the paid-up amount of which is now £1,165,000, is 30 per cent. and costs £240,000. In 1936, when the rate was 27½ per cent. on a smaller capital, the cost of the dividend was £186,000. Net interest earnings, after deducting the cost of the preference and preferred ordinary dividends, are £266,000.

★

British and Foreign Marine Insurance.—This company, which is exclusively concerned with marine insurance, except for a small fire (reinsurance) account, is a subsidiary of the Royal. It has enjoyed consistently good results. Marine premium income, after remaining for a number of years at a little under £400,000, increased sharply last year to £470,000, and £15,530 has been transferred to profit and loss from the 1936 underwriting account. First year's claims amount to 32.5 per cent. of the 1937 premium income, against the corresponding result of 26.6 per cent. in the previous year. Fire premiums showed little change at £23,600, and there was a satisfactory underwriting profit of £3,700. Total assets amount to £3,510,000 against £3,463,000, and the balance-sheet position is strong. In addition to adequate departmental reserves, there is a reserve fund and a contingency fund, and these remain unchanged at £1,000,000 and £233,000, respectively. The dividend is maintained at 13½ per cent., and costs £139,000 compared with interest earnings of £127,000.

Investment

Wall Street and President.—To be a "bear" of President Roosevelt is axiomatically to become a "bull" of Wall Street. There has been nothing so stimulating to the market for many months past as the decisive defeat of the President's Reorganisation Bill at the end of last week. On this major reverse for the Administration, the Dow Jones index jumped 5½ points in Saturday's short session, amid excited buying. The trend this week has been less consistent, though on balance favourable. Evidently, the President has now reversed the "orthodoxy" which formed the basis of his industrial policy last year; pump-priming is again the order of the day. But the market appears to fear that Congress will not prove so malleable an instrument in the President's hands, even in the matter of increased public expenditure in an election year. Mere spoiling tactics, however, are unlikely to be allowed to prejudice the ballot in November, and the prospect of substantially increased Federal spending appears, in fact, to be Wall Street's primary hope for some degree of industrial recovery this year, even if it is forced in the Treasury hot-house. The President has passed to Congress the problem of providing for assistance to the railroads, for which the Interstate Commerce Commission recommends equipment loans totalling \$300 millions, together with a temporary relaxation of conditions for loans from the Reconstruction Finance Corporation. But the total expenditure envisaged under the pump-priming programme is of the astronomical order of \$4,000-\$5,000 millions. Whatever effects such a programme might have upon business confidence—if it can still be said to exist—the Administration should be able to count on some inflationary return for its money. And if the President's personal prestige is further dented, Wall Street will doubtless seize the fact as good in itself. That may well be reasonable short-term tactics, but more convincing evidence of industrial progress than is at present available will be required if recovery is to be maintained.

★ ★ ★

Austrian and Brazilian Debts.—The market is still concerned with the fate of the Austrian 7 per cent. loan. The possibility has been canvassed this week that, as a result of the plebiscite, the German Government will take steps to reduce the rate of interest. In consequence, the bonds, which had recovered from their recent "low" of 26½ to 47 during last week, have now reacted to 40½. Last week's rise, however, was associated with the receipt of service moneys due on April 1st. Neither this fact nor the statement of the Bank of International Settlements that no change has so far been made in the service of the Austrian loans, for which it acts as trustee, is really indicative of the eventual fate of the 7 per cent. issue nor, it may be added, of the 4½ per cent. guaranteed loan. In point of security, the 7 per cent. loan rivalled the best loans of the Reich, and it is this fact which has prompted

★ ★ ★

Stock Exchange Report.—The report of the Trustees and Managers of the Stock Exchange for the year ended March 25, 1938, confirms our suggestion last week that the decision to reduce the dividend to £14 for the year, as against £15 for 1936-37, is due almost entirely to the provision for N.D.C., for which £17,000 has been allocated. There was also higher expenditure on maintenance, superannuation charges, wages, the Share and Loan Department, and rates and taxes. These are the principal factors in the reduction in the year's revenue account credit balance by £27,129 to £295,887. There was a fall of £14,448 in Entrance Fees received, but this was largely balanced by an increase of £12,259 in Subscriptions. Since both these items are likely to suffer during the current year, the justification for a conservative dividend policy is evident. The number of Members elected and re-admitted for the year 1937-38 was 4,209, the net number at the end of the year, allowing for resignations, etc., being 4,048, an increase of 13 compared with the number at the end of 1936-37. The number of non-Member clerks, authorised and unauthorised, declined by 35 to 2,158.

★ ★ ★

With the report the proprietors have received notice of an Extraordinary General Meeting to consider Special Resolutions conferring new borrowing powers to the extent of £1,000,000 above the limit of £750,000 imposed in 1896. There are £294,800 of 3 per cent. debentures outstanding, which fall due for repayment on January 1, 1939. The restrictions imposed on the Trustees and Managers by Clause 81 of the Deed of Settlement preclude the redemption of these debentures out of income. Moreover, an alteration of the Deed needs the difficult achievement of an affirmative vote of two-thirds of all the proprietors. It is, therefore, proposed to proceed by way of Special Resolution—calling for a three-quarters majority of those present

TENOVA SOCKS stay up

Tenova socks are sock and suspender all in one piece. The band at the top, containing Lastex yarn, keeps them always comfortably up. And naturally, when the socks go to the laundry, the band goes too. For town 3/6, 4/6, 5/6 and 7/6. For tennis, from 3/6. For golf 7/6. For evening, 7/6 and 12/6. Obtainable from good shops for men.

TENOVA
self-supporting socks
Patent No. 323457. Reg. Design 748974.
Tenova Ltd., 157-161 Regent St., London, W.1
Regent 2424

—to extend the borrowing powers sufficiently in advance of the redemption date of the 3 per cent. debentures to enable arrangements to be made for repayment. The Trustees and Managers will, however, also endeavour to obtain the requisite approval to delete the present Clause 81 in the Deed of Settlement and substitute therefor a new clause giving power, in effect, to apply profits to capital purposes including the redemption of debentures and loans. Thus, should both the borrowing resolution and the proposed amendment to the Deed be adopted by the requisite majority, the Trustees and Managers will have power to repay the 3 per cent. debentures either out of revenue or out of the proceeds of a further issue, as may be found expedient.

Union-Castle Report.—Union-Castle Mail Steamship made further progress in 1937, though not at the rapid rate recorded in the previous year. Voyage profits increased from £473,450 to £510,258, but the latter figure was, in fact, struck after meeting special outlays in connection with the re-engining programme and also after N.D.C. Investment income was some £10,000 lower—further holdings have, of course, been realised during the year—and total income thus shows a moderate advance from £593,728 to £620,166. As they anticipated a year ago, the board have been able to pay all accrued dividends on the 6 per cent. "A" preference shares, leaving a surplus of £151,537. The profit and loss accounts of the past three years are analysed below:—

	1935 £	1936 £	1937 £
Profit on voyages, after depreciation	351,119	473,450	510,258*
Other income	111,326	120,278	109,908
Total profits	462,445	593,728	620,166
Interest and fees	32,530	58,359	74,314
Debt interest	100,000	99,542	99,019
Preference divs.	124,620	133,916	295,296†
Surplus	205,295	301,911	151,537
Special provisions.....	240,000‡	200,000‡	150,000‡
Carried forward	47,444	149,355	150,892

* And after special outlays incidental to re-engining.

† Includes 2½ years' dividend on "A" preference shares.

‡ Special depreciation on vessels being re-engined.

§ Depreciation on investments.

By careful husbandry in recent years, the board has thus brought the company back to a position where ordinary dividends can be resumed. No dividend, of course, was anticipated in respect of 1937, and while normal preference charges would have left a surplus equivalent to 15½ per cent. on the ordinary stock, this is a rate which exceeds any likely payment in the immediate future. The modernisation of the fleet is being successfully undertaken, but it is not yet complete, and its finance involved a further increase in advances last year from £1,967,149 to £3,063,020. Heavy repayments are involved on these commitments during the next few years, and they may, in fact, be dealt with on a more permanent basis. During the past two years, some £350,000 has been applied from revenue towards special depreciation on vessels being re-engined and £85,000 from insurance reserve. In addition, as much as £1,290,323 was utilised from reserves in 1936 to make comprehensive provision against investment depreciation. As a result of these provisions, the operating and financial position of the company has been greatly strengthened. Caution, however, is required in estimating future dividend prospects, for on the best assumptions regarding its business the company must still make repay-

ments in respect of recent advances, and its current financial position will doubtless be strengthened as far as possible. The £1 ordinary stock units are quoted at 14s. 10½d.

Steel Company News.—Satisfactory dividend announcements have been made by two very differently situated concerns in the steel industry. Stewarts and Lloyds have declared a dividend of 12½ per cent. on the deferred shares, compared with 7½ per cent. for the previous year. During 1937, further extensions at the Corby plant appear to have provided an increased return, and the condition of the export trade in tubes is fairly indicated by an increase in the value of exports last year from £3.6 millions to £5.8 millions. Pending the report and accounts, it would be premature to judge the results of the past year, or the prospects for the future. Confident statements have been made regarding the stability of agreements covering export business, but their powers of resistance may be more fully tested if demand should fall. The announcement of a 2½ per cent. payment on the ordinary shares of Barrow Haematite Steel is the first since 1920, when 5 per cent. was paid. This concern has persevered through more than a decade of poor trading, and carried through a reorganisation scheme in 1932. Its recent improvement appears to be adequately recognised, for the shares stand on a yield basis of 6.2 per cent., compared with 6.6 per cent. for Stewarts and Lloyds. Hadfields 10s. shares have made further progress this week from 31s. 9d. to 33s. 9d. At the meeting on Tuesday, it was disclosed that the company had entered the year with a record order book, and while further commercial work could be satisfactorily undertaken, the ordnance branch is evidently employed to capacity. Hadfields, indeed, is the leading projectile equity in the Stock Exchange list, and the lowering of its yield basis to approximately 6½ per cent. gives fuller recognition to its re-armament equity.

S. Instone Scheme.—Following their announcement last October, the directors of this coal merchanting concern have now published a capital scheme as a first step towards a complete reconstruction, which involves the co-operation of the company's bankers. The proposals are simple. The existing capital of £1,297,192 (consisting of 871,942 7 per cent. cumulative participating £1 preference shares and 425,250 £1 ordinary shares) is to be reduced to £256,760, all in 5s. ordinary shares. Each £1 preference share is to be converted into one 5s. ordinary, while 37,500 ordinary shares held in trust for the company are to be cancelled entirely and the remainder written down by 18s. per share. In compensation for the surrender of dividend arrears (amounting last December to nearly 19s. gross per share) and participating rights, the preference shareholders receive about 85 per cent. of the new capital. Even this proportion may not appear excessive to preference shareholders, who have received no dividend since June, 1924, and may have felt that any return to ordinary dividends, under the existing capitalisation, was unlikely. But such doubts are somewhat academic in relation to a profits figure for 1936-37 of £24,241, compared with arrears of £823,985 gross. Moreover, the claim of the ordinary shareholders to 15 per cent. of the equity is not based on *ex gratia* considerations alone. The greater part of the ordinary capital is in fact held by founders of the business, who are personal guarantors in respect of its indebtedness. At the Amalgamated Anthracite meeting this week, the chairman disclosed that proposals for a capital reorganisation will be submitted during the next few months.

Rand Leases.—Progressive expansion has been recorded by this concern, in which the Johannesburg Consolidated Investment is co-operating with the H. E. Proprietary group. Additional finance was required for a comprehensive scheme of expansion, and the former company participated in guaranteeing an issue of £900,000 of new

capital towards the end of 1936. The capacity of the mill has been gradually increased from about 55,000 tons in June, 1936, for 121,000 tons were treated last month, and capacity is to be raised to 125,000 tons. Last year's profit of £341,760 compares with £107,200 in 1936, dividends being respectively 15 per cent. and 5 per cent. Out of last year's earnings, £43,000 was required for taxation and the Union Government's share in profits. The balance carried forward amounts to £97,960, against £24,200 brought in. Development work amounted to 69,830 ft. (an increase of 26,200 ft.), and this expanded the available ore reserves by 1,785,000 tons to 4,826,000 tons. Values, at 4.7 dwts. over a stoping width of 43 ins., showed little change. The balance sheet shows a surplus of cash assets over liabilities amounting to £155,340. On the basis of last year's dividends the 10s. shares, at the current price of 33s. 9d., yield 4½ per cent. There is some prospect that distributions may reach 20 to 25 per cent. in the not very distant future.

Vogelstruisbult.—The extent to which the prospects of this new Rand producer were over-discounted last year is emphasised by the current quotation of 17s. 6d. for the 10s. shares, against a high of 12s. 6d. in 1937. A substantial proportion of the ore milled during the first few months consisted of low-grade material from the dumps, and the yield averaged no more than 28s. 4d. per ton. Costs amounted to 23s. 7d., and profits to 4s. 9d. per ton, the total being £155,500. The company's funds having become exhausted, practically the whole of this sum was applied to capital expenditure. Moreover, requirements are being financed by advances from Gold Fields, the amount owing at the date of the balance sheet being £33,000. Despite disappointing results in No. 2 Shaft area, the ore reserves show some improvement to 1,151,000 tons, averaging 5.8 dwts. With ore of normal grade supplied to the mill, earnings have lately increased; and will be further expanded by slight additions to the plant. Even so, a premium of 7s. 6d. on the 5,028,570 shares in issue appears to discount this factor.

Other Company Results.—Some fifty company reports are analysed in our usual table of profit and loss accounts on page 172. Several breweries have recently issued reports, while the accounts of ten further rubber companies are available. The results are discussed on page 154 under the heading "Shorter Comments."

APRIL 26	APRIL 28

TURNOVER showed little increase this week, but the improvement in prices was widely welcomed. Once again on Tuesday the market revealed its recent propensity for dramatic improvement in the last minutes of business. Investment turnover remains small, although a certain amount of bargain hunting is still in progress. The main explanation of the improvement, however, appears to be due to the miscalculation, by the market, of the public's attitude towards the current level of prices. Stock has indeed been short, and the recovery has been assisted by covering.

Gilt-edged opened with the advantage of greater political confidence on the progress of the Anglo-Italian negotiations, and prices responded markedly to a small volume of buying. On Tuesday the improvement was continued

after a pause, but the dated issues made better progress than the "irredeemable" issues. Funding loans, in particular, made good headway. Renewed advances were recorded in mid-week. Dominion loans, except New Zealand, improved.

Reported military successes stimulated *Chinese bonds*, while Japanese issues continued to fall. Austrian issues registered somewhat premature relief on the result of the plebiscite, but became nervous later. South American bonds were irregular, but moderate improvements were recorded by Argentine issues.

The *home rail* market anticipated the holiday traffics by marking up the stocks smartly at the beginning of the week, and these improvements were well maintained. In the foreign market, San Paulo jumped several points on the dividend, and Argentine rails were more confident than of late.

Greater confidence was evident in the *industrial market*, although business re-

Company Meetings of the Week.—In this issue, reports of company meetings appear from page 161. It was reported by Mr Ernest E. Bird to the members of *Legal and General Assurance Society* that in 1937 the total of net new sums assured exceeded £20 millions. Viscount Elibank, addressing the *Southern Areas Electric Corporation* meeting pointed out that while output in units had risen by 18 per cent., revenue from the sale of current was only 8½ per cent. higher. At the *Alliance Trust* meeting in Dundee, Mr James Prain drew attention to the high degree of security offered by the Trust's prior charges, the Alliance and Second Alliance Trusts having between them some 14,000 debenture, debenture stock and preference shareholders. It was further disclosed by Mr Prain that 60 per cent. of the Trust's holdings were in Great Britain and the Dominions. The opinion was expressed by Mr Walter W. Parish at the *River Plate Trust Loan and Agency* meeting that the gradual passing of large estates into the hands of smaller proprietors would lead eventually to a growing demand for loans. Major-General Guy Dawnay informed shareholders of *Gordon Hotels* that in the first half of 1937 turnover in the English hotels rose by 13½ per cent., though in the second six months there was a falling-off as compared with 1936. It was explained by Mr F. W. Baker at the *Camp Bird* meeting that while profits were sufficient to justify a dividend under normal conditions, the depreciation of assets below book cost made it inadvisable to make a distribution. At the *Champion Reef Gold Mines* meeting, the Hon. A. T. J. Fraser expressed satisfaction that ore reserves had increased by over 25,000 tons, despite the policy of curtailing development in order to push forward with Gifford's shaft. Mr C. T. Pott explained at the *British Enka Artificial Silk* meeting that the improvement in selling prices at the end of 1937 would be of help in 1938, immediate effects having been damped down by forward contracts. Sir Alexander Roger, addressing the *Anglo-Portuguese Telephone* meeting, said that current information confirmed the view that, on a full year's operation, the company's revenue would be maintained under the new system of tariffs. At the *Army and Navy Stores* meeting, Brigadier-General Sir Frederick Gascoigne reported that while trade in the latter six months of 1937 had been disappointing, Christmas trade had been excellent. The chairman referred to the progress of the rebuilding plans. The Hon. A. T. J. Fraser, at the *Oreogum Gold Mining* meeting, discussed the satisfactory implications for the company of developments on neighbouring Champion Reef property. Members of *Nirmala (Java) Plantations and Lands* were informed by Mr Walter Hilliers that by forward selling of rubber satisfactory average prices had been realised, and that similar benefits would operate in 1938 and 1939.

Oil shares received some increase in support, and showed small but general improvement in prices. Later the easier trend on Wall Street was reflected in a temporary reaction, but the upward tendency was soon resumed. The rubber share market was at last shaken out of its lethargy, and Monday's session was the most active for some weeks. While the initial rate of improvement did not last, quotations were again marked up.

Helped by Wall Street's spurt last week, mining shares became quite cheerful. Support, however, was still mainly professional, though public interest was more evident than in recent weeks. Kaffirs began briskly, and held their ground well after a quiet period in which the tone was fairly satisfactory. Activity was renewed in mid-week. West African issues did not share fully the general improvement. Rhodesian coppers provided a strong feature, and other base metal shares were more active than of late.

New York

HERALDING the President's major defeat on the Reorganisation Bill, rather than any immediate hope of its own salvation, Wall Street bought stocks with both hands in last Saturday's session, driving the Dow Jones index up by no less than 5½ points. This negative basis for buying has remained no less valid this week, but pivotal stocks have not recovered last week's best levels after an opening setback. The market's reticence appears to be due less to any fears of the economic effects of pump-priming itself than to the danger that Congress should, even in this matter, exert the whip hand over the President. Rails have tended to ease, for the prospective wage negotiations are more depressing than the I.C.C.'s recommendations for increased loan facilities, which the President has passed to Congress. Steel activity is merely maintained this week at 32.7 per cent. of capacity. Motor shares continue heavy, but some of the building stocks improved at first.

STOCK EXCHANGE INTRODUCTION

SOUTH-EASTERN GAS CORPORATION, LTD.—Particulars of issue of £350,000 3½ per cent. debenture stock, redeemable at par September, 1963, or from 1958 on notice. Messrs. Cohen, Laming, Hoare take this stock at 99½ net.

BONUS ISSUE

PAIGNTON ELECTRIC LIGHT.—It is proposed to make a bonus distribution of one share for nine held on April 29th. This involves the capitalisation of £7,500 of reserves and £2,500 of cash in hand.

SHORTER COMMENTS

Company Results of the Week.—A satisfactory increase in profits is recorded by CHARRINGTON AND COMPANY and JAMES SHIPSTONE AND SONS, the former earning £912,883, against £833,862. **WHITBREAD AND COMPANY**, however, while maintaining the 18 per cent. dividend, have earned £15,000 less at £331,827. Among estate companies, **SLOUGH ESTATES** have made good progress, development both at Slough and Birmingham having proceeded satisfactorily; the dividend is raised from 12½ to 15 per cent. Rubber companies continue to record sharp increases in profits. Thus **SUNGEI SALAK** have earned £27,363, against £15,138, and the **AMHERST (SELANGOR)** dividend is 5½ per cent. higher at 12½ per cent. Improvement is again shown by shipping companies. **HOULDER BROTHERS AND COMPANY** report net profits of £55,076, against £45,184, and the directors express the opinion that balance sheet values of the general investments are below real values. **COURT LINE** profits have jumped to no less than £341,276, against £51,705, and dividends are resumed with a 25 per cent. payment. In 1936, however, an additional amount of £45,000 was paid in discharge of debenture interest arrears. While **HORNE BROS.** report an increase in turnover, net profits, at £51,308, are £5,000 lower; no ordinary dividends are payable, though their resumption is foreshadowed. **SECOND SCOTTISH NORTHERN INVESTMENT TRUST** reports net profits of £40,685, which are 13 per cent. higher than in 1936-37, and the valuation of securities discloses only a small depreciation below book values. Among the miscellaneous industrial results, satisfactory profits have been shown by **METAL CLOSURES**, whose dividend is more than doubled at 12½ per cent., and by **NORTH BRITISH RUBBER**, whose net profits amount to £61,138. **SOUTH AFRICAN DRUGGISTS** have issued their second annual report, which shows net profits of £72,122, against £65,722. The dividend, however, is reduced by 2 per cent. to 10 per cent., and the carry forward increased by £12,000.

MISCELLANEOUS

National Bank of India.—In our last week's leading article on Indian Banking Trends, the chairman of the National Bank

of India was inadvertently described as Mr Langford Tanner, instead of Mr R. Langford James. We desire to express our regrets for this error.

Carpet Trades, Ltd.—Profit for 1937, after depreciation, tax and N.D.C., was £18,284 against £89,632 in 1936. This fall is due to the fall in price of raw materials and in the price of carpets. The £20,000 reserved in 1936 for price fluctuations has been transferred to profit and loss account. Ordinary dividend reduced from 7½ to 5 per cent. Carry forward increased from £23,907 to £29,066.

John I. Jacobs and Company.—The 1937 report shows that profits of the company and its subsidiaries were more than trebled at £196,209 against £64,469. Ordinary dividend raised from 7½ to 17½ per cent. Transfer to reserve raised by £35,000 to £50,000; also £10,000 to staff fund. Carry forward raised from £12,304 to £24,115.

Court Line Limited.—Profits for 1937 £372,195, an increase of £237,619. To depreciation £150,000, an increase of £115,000. Ordinary dividend 25 per cent., the first for seven years. Carry forward raised from £33,365 to £52,141.

Charrington and Company.—Profits in 1937 rose by £79,021 to £912,883. Tax requires £50,000 more at £150,000; £42,750 again written off debenture issue discount. To reserve and properties rebuildings reserve £200,000 and £50,000 respectively, as before. Ordinary dividend raised from 14 to 15 per cent. Carry forward £15,524 higher at £247,841.

Houlder Brothers and Company.—Profit for 1937 £61,661, compared with £51,848 for 1936. Tax free ordinary dividend raised from 4 to 5 per cent. To tax reserve £5,000. Carry forward raised from £25,252 to £29,829.

Albion Motors.—Profit for 1937 £184,549, an increase of £37,157 on 1936. For income tax and N.D.C. £38,000, against £25,000. Benevolent fund £5,000, against £2,500. To reserve £50,000, against £35,000. Ordinary dividend reduced from 15 to 12½ per cent. Carry forward raised from £34,776 to £56,118.

Hydro-Electric Securities.—Income for 1937 was \$813,613 (£162,722), an increase of \$9,686. Expenses and fees expanded by \$25,217 to \$85,564 (£17,113). Net income \$15,532 down at \$728,048 (£145,609). Common dividend, 20 cents—the first payment since 1932. Net balance of \$95,739, added to standing surplus of \$2,361,468, makes \$2,457,208 (£491,441).

James Shipstone and Sons.—An advance of £13,995 to £183,442 in net profit for 1937 is shown. Final dividend on £1 ordinary is 15 per cent., £80,845. The interim was 4½ per cent., tax free, taking £34,134. For 1936 both the 5 per cent. interim and 10 per cent. final were free of tax, absorbing £35,931 and £71,862 respectively. To reserve £40,000 (same) bringing that account to £630,000. Carry forward £108,005, against £103,385.

Warne, Wright and Rowland.—Accounts for 1937 show profit of £17,841 after provisions for depreciation, etc. Final dividend of 10 per cent. less tax, on the ordinary shares, making 20 per cent. for the year and a cash bonus of 5 per cent., less tax, leaving £8,291 to carry forward.

Horne Brothers.—Trading profits for year to January 31, 1938, £86,173, against £80,103. After 7 per cent. preference dividend, and depreciation and interest, the carry forward is raised to £60,920, against £48,112. The general reserve account stands at £100,000. The directors foreshadow the possibility of a resumption of ordinary dividends during the coming year.

Ideal Building and Land Development Company.—Profits for 1937 £137,774, before tax, against £81,371 for 1936. To general and other reserves £67,625. Ordinary dividend maintained at 5 per cent. less tax.

Industry and Trade

Proposed Tramp Shipping Pool.—Owing to the impossibility of adjusting the supply of shipping tonnage to rapid changes in the volume of international trade, tramp freight rates are notoriously subject to wide fluctuations. For example, between the middle of 1936 and the autumn of 1937, when the volume of world trade took a sharp upward turn, the *Economist* index of freight rates rose by 87 per cent. Conversely, the decline in world trade since last autumn was accompanied by an equally sudden fall in freight rates, our index for March showing a decline of 32 per cent. since September. The problem of shipowners, consequently, is very similar to that facing producers of primary products, in that supplies of tonnage, as of raw materials, are comparatively inelastic in the short run. It is not surprising, therefore, that tramp owners are now attempting to apply the principle of restriction to their particular branch of activity. A few days ago, the Tramp Shipping Administrative Committee circulated the draft of a scheme for the formation of a compensation pool. The object of the scheme, as of the restriction schemes for primary products, is to even out fluctuations in prices and to enable shipowners to operate at a profit. The scheme itself is quite simple. It involves the formation of an association, the members of which will pay into a common pool a percentage of all freights received by them on charters made after the scheme becomes operative. From this pool an agreed allowance is to be paid in respect of vessels which are laid up, thus providing an inducement for owners to refrain from accepting uneconomic rates. The scheme closely resembles the Tanker pool, which, so far, has been fairly successful in raising freight rates, though not in evening out fluctuations. As in all restriction schemes, the success of the proposed tramp pool will depend on the extent to which it will be supported by the world's tramp shipowners, and on the ability of its administrators to retain the support of individual shipowners during periods of depression. An attempt to use the scheme merely as a device for an inordinate rise in freight rates would hardly be successful. Everything will depend, therefore, on the policy pursued by the pool.

Shipbuilding Orders Decline.—The persistent decline in freight rates since last autumn is reflected in the sharp fall in orders for new mercantile shipping tonnage placed by shipowners with shipbuilders. Thus, according to *Lloyd's Register*, the tonnage of mercantile shipping on which work was commenced declined from 368,000 during the second quarter of 1937 to 217,000 gross tons in the last quarter and 173,000 gross tons during the first three months of the current year. Owing to the time lag between the placing of shipbuilding contracts and their completion, the amount of work on hand, though declining, remains substantial. The tonnage under construction at the end of last month was 1,089,000 gross tons, against 1,125,000 at the end of last year and 1,200,000 at the end of June, 1937. In the absence of an early and sustained improvement in freight rates, shipowners in this country are unlikely to place many new orders, and as the bulk of the tonnage now under construction will be completed by the end of the year, the outlook for shipbuilders next year seems unpromising. To some extent, however, the decline in mercantile shipbuilding will be compensated by an increase in the volume of new naval construction. The least satisfactory feature of the latest returns is the relative increase in the proportion of the world's shipping tonnage constructed abroad. At the end of last month only 28 per cent. of the tonnage commenced in the world was being built in Britain's shipyards, compared with 34 per cent. a year

ago. Moreover, Britain's proportion of the world tonnage under construction declined from 41 per cent. to 38 per cent. during the past year.

Iron and Steel Production in March.—The steady expansion of home production of iron and steel, coupled with rising imports and declining exports, has resulted in a heavy accumulation of stocks. Congestion has been increased by the lull in the expansion of home consumption. The volume of new orders, consequently, has shown a serious decline. Even a few months ago, it became apparent that, in the absence of a revival of new orders, some curtailment of production this spring was unavoidable. The output figures for March still show an increase over the corresponding month a year ago, though the margin has narrowed considerably, especially in the case of crude steel. The output of pig iron last month was 714,600 tons, compared with 693,300 tons in February and 680,300 in March, 1937. The production of steel ingots and castings was 1,115,800 tons, compared with 1,057,600 in February and 1,109,500 tons a year ago. So far there have been few indications of a sustained revival of demand. In the absence of such a revival, the industry may have difficulty in disposing of its output at the current rate of operations during the next few months.

Industrial Activity in the United States.—The accompanying diagram, based on the indices calculated by the Federal Reserve Board, shows the trend of the production of consumption and investment goods in the United States during the past two years. The indices are adjusted for seasonal variations.

INDICES OF PRODUCTION (1929=100)

The diagram clearly shows that the production of consumption goods turned downwards as long ago as the beginning of 1937. The output of investment goods however, stimulated by orders placed in the winter of 1936-37, continued to expand until the autumn, when the

OTARD'S

EST. 1795

V.S.O.P.

LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

absence of replacement orders caused a sudden and catastrophic decline. The time lag between the placing and completion of new orders for investment goods thus masked the deterioration of the position which commenced at the beginning of 1937. It will be interesting to watch the effect on the trend of production of consumption and investment goods of President Roosevelt's decision to come once more to the rescue of private enterprise by large-scale Government expenditure.

* * *

Holidays with Pay in Wales.—It is estimated that the scheme providing for a week's holiday with pay in the South Wales coalfield, which is to come into operation this year, will affect about 120,000 workmen and will add between £300,000 and £350,000 to the annual wages bill. Under the old conditions of employment in the coalfield, the men were given twelve general holidays without pay, including all Bank holidays and demonstration days; but under the new arrangement six of these days are merged into a week's holiday with pay, to be taken between June 1st and September 30th each year, and the other six will be distributed as follows: one day at Easter, Whitsun, August Bank Holiday, and May 1st respectively, and two at Christmas, without pay. The maximum weekly holiday allowance will be £3 for adults over 21 years of age, £2 for youths between 18 and 21 years, and £1 for boys under 18 years. This year, the employers are paying the maximum holiday allowances to all persons who were in employment at the end of March last. But, in future, qualifying conditions will be imposed, and by these one-twelfth of the holiday allowance will be deducted in respect of each month of commencing employment after June. In addition there will be deductions of 1s. in the case of persons over 21 years of age, 9d. for persons between 18 and 21, and 6d. for boys under 18 in respect of each week in which a workman loses more than one shift without authorisation.

* * *

Egyptian Cotton Tariffs.—The reported increase in tariffs on cotton piece goods entering Egypt caused a painful surprise throughout the Lancashire cotton industry. Messages from Cairo state that the duties on heavy grey and white goods, and on heavy printed and dyed fabrics and cabots, will be doubled, thus raising them to 50-60 per cent. Egypt is one of Lancashire's most important customers, the total cloth exports in 1937 to that country amounting to 51,575,000 square yards, valued at £944,577. Pending further details, it is impossible to say how the duties will affect Lancashire trade. It is noteworthy, however, that the increased duties are on heavy cloths. The bulk of these are manufactured from American and Indian cotton, whereas a large proportion of Lancashire's trade is in fabrics made from Egyptian cotton, which weigh considerably less. It is taken for granted that the Egyptian Government will not take any steps which are likely to reduce world trade in piece goods made from Egyptian cotton, for that would react adversely upon her own cotton growing industry. It would appear that India and Italy will be chiefly affected by the increased tariff, for these countries have during the past few years shipped increasing quantities of heavy goods. But many Lancashire firms will suffer from the increase in duties.

* * *

Wool Textile Unemployment.—British wool textiles are passing through a period of severe unemployment. In Bradford recently many people have been registered as out of work who had been in continuous employment for years, and a disused chapel has been taken over as additional accommodation for the employment exchange. It is probable that, out of a total personnel of about

450,000 in the British wool textile industry, some 50,000 are wholly or temporarily unemployed. Credit traders, most of whose accounts are in working-class districts, report restricted turnover during the past six months, and retailers whose customers are mainly operatives have during this winter put some of their staff on part time. All manner of reasons have been advanced for the decline in working-class retail business, with considerable criticism of the diversion of a growing proportion of wages into football pools. In Bradford alone, there were 8,982 wholly unemployed workers on March 14th, or twice as many as in March, 1937, unemployment having increased again compared with February. While the setback appears to have been temporarily arrested by the firmer tendency of raw wool prices, a sustained improvement is not yet in sight.

* * *

Wholesale Prices Firmer.—International prices have shown a slightly firmer tendency during the past fortnight. The complete *Economist* British index number is practically the same as at the end of March, while prices of primary products, both in England and the United States, are fractionally higher. The complete Irving Fisher American index number is a shade lower, while movements in France and Germany were very narrow.

1924 = 100	52.2	75.0	64.0	64.0

The past fortnight witnessed a decline in wheat, and a moderate rise in maize and bacon. There was a sharp increase in butter. Cotton, flax and jute were slightly lower, but wool was unchanged. Non-ferrous metals were only subject to minor fluctuations, and there was a moderate recovery in rubber.

* * *

Co-operative Trading Progress.—The sales of the Co-operative Wholesale Society for the twelve months

ended January 8th amounted to £119,851,542, of which £40,994,814 were from sales of the society's own productions. Compared with 1936-37, there was an increase of 11½ per cent. in total turnover and 11½ per cent. in the output of the various works and factories. The directors are recommending the strengthening of reserves by the addition of over £250,000 from current profits. They are also committed to a building programme amounting to £2½ millions in the extension of the productive enterprises. The net surplus of the trading departments for the year amounted to £2,799,095, from which dividends of £2,396,445 have been allocated to society-members at the rate of 4d. in the £ on purchases and 3d. in the £ as additional dividend on purchases of C.W.S. productions. The supply of foodstuffs is still the main factor in co-operative trade. Grocery and provisions supplied by the C.W.S. during 1937 accounted for £89,731,438; coal for £5,604,079; furnishing for £5,668,512; drapery for £5,296,360; men's wear for £3,598,601; boots and shoes for £2,815,501; sales of tea, coffee, etc., via the English and Scottish C.W.S., for £5,009,838; building and engineering for £1,528,793; and exports for £508,420. To the society's own productions, valued at £40,994,814, the nine flour mills contributed £10,981,801. The accelerated rate of the progress of co-operation in the South of England continues to find expression in the balance sheet of the C.W.S., particularly in regard to drapery and men's wear. The sales from the London branch in those two sections are now greater than those at the Manchester headquarters; while the grocery trade of £36,263,354 from the London branch is approaching the Manchester turnover of £44,515,311. New rules to come into operation during the present year are calculated to give the South fuller representation on the directorate.

INDUSTRIAL REPORTS

THERE has been little change in the position of the principal industries this week. In addition to the persistent decline in export orders, the coal industry is now faced with the seasonal decline in household demand. The volume of new transactions in iron and steel remains at a low level, for stocks are still excessive. In the West of Scotland, exceptionally, there has been a slight increase in new orders for finished materials. In South Wales, on the other hand, it is feared that the setback in the tinplate industry may lead to the suspension of operations at additional steel furnaces and at one or two blast furnaces during the next few weeks. The latest shipbuilding returns, discussed in a Note under "Industry and Trade," show a further decline in the volume of tonnage commenced. There has been no improvement in business in cotton goods, and the increase in the Egyptian import duty on piece-goods has caused alarm. The firmer tendency of raw wool prices appears to have arrested the deterioration in wool textiles, though new business remains small in volume.

Coal

Cardiff.—With the approach of the Easter holidays, there has been an increase in the supply of prompt tonnage and a larger number of coaling appliances have been occupied. The collieries will continue working throughout the week, although the docks will be closed for traffic on Friday; but owing to the acceptance of the scheme providing for holidays with pay the collieries will be idle next week only

on Easter Monday instead of, as in previous years, on three days in Easter week.

*

The business position on the Cardiff market has shown no appreciable change. There have been few new orders, and prices are at their recently modified prompt figures. In view of the agreement over holidays with pay, the workmen have withdrawn their application for a 10 per cent. increase in wages till next year. Shipments at the South Wales docks last week totalled 398,900 tons, compared with 394,200 tons the previous week and 398,098 tons in the corresponding week last year, while up to April 10th the current year's volume of traffic exceeded that for the same period last year by 228,000 tons, or 4 per cent.

*

Sheffield.—Business in the coal market has tailed off this week, but the tone is quite firm, with prices unchanged. The approach of the Easter holidays has reduced industrial requirements, and the mild weather has resulted in an accumulation of stocks of house coal. Lower prices are forecast next month. Gas coal is dull, and small coal is moving much less freely than of late. Coke is steady at the reduced prices. With fewer furnaces in blast, demand for blast-furnace coke is dwindling, and new contracts will possibly be arranged below the existing price of 30s. per ton.

There is no change in the position of the export market, and there is little business either in prompt or forward shipment. It is hinted that there may be concessions shortly which will enable exporters to meet foreign competition more easily.

Grassland Improvement.—Suggestions for the improvement of the country's grassland are put forward by Professor R. G. Stapledon of Aberystwyth in the *Journal* of the Bath and West and Southern Counties Society. Prof. Stapledon, who is an untiring advocate of grassland regeneration, estimates that there are 16 million acres of rough grazing and permanent grass in England and Wales waiting to be brought to a higher standard of production. He therefore welcomes the Government subsidy in favour of lime and basic slag, though he thinks the policy should have been carried much further. Greater attention should, he thinks, be given to the possibilities of temporary grass and the ploughing up of poorer grassland under a system of alternate husbandry. On the problem of rushy pastures, Prof. Stapledon points out that, although most rushy fields need draining, rushes, like bracken, are sensitive to cutting or hard grazing. Such pastures have been practically cleared of rushes by a drastic process of cutting four or five times in one year, followed in subsequent years by hard grazing and cutting in June. The worst weeds, in the author's opinion, are buttercups, which interfere with proper grazing and thus not only represent thousands of tons of wasted herbage, but cause just as much waste of high-class palatable herbage. If pastures were mown before the seeds were set, the spread of the buttercups would be prevented and the swards would be encouraged to make growth later in the year, when grass is urgently needed. Besides keeping the grassland in trim by such methods as these, it is equally important to plan the stocking of the pastures to ensure balanced grazing and to improve the quality of the growth. Thus, on thin land overlying chalk, poultry, run in pens, may double the feeding value of the herbage. British agriculture would surely benefit if Professor Stapledon's suggestions were more generally applied.

Glasgow.—The feature of the Scottish trade is the persistent dullness of export business. Shipments last week, at 190,000 tons, were again poor, showing a drop of 71,000 tons on the corresponding week a year ago, while the year's total to date, at 2,609,000 tons, shows a reduction of 510,000 tons. All overseas markets have suffered a setback. The main reason would appear to be the recession in most of the importing countries, but at the same time there is little doubt that German and Polish competition remains a factor of importance. So far as the Scandinavian markets are concerned, the growing use of hydro-electric power has tended to restrict the demand for coal. Land-sale is still fairly satisfactory as a rule. The price trend remains dull.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that, partly as a result of the approach of the Easter holidays, business remains dull. There are factors, however, which indicate a moderate revival in business in the not distant future.

In the pig iron market little new business has been transacted. Consumers are working upon stocks and they are receiving deliveries against current contracts. Most users are fully covered to the end of June, until when prices have been stabilised, and, although there has been some inquiry for further forward delivery, little of this has developed into business.

The demand for semi-finished steel is very light, except for certain special qualities of British material. Owing to recent heavy imports, large quantities have accumulated at consumers' works, and until these are reduced there can be no improvement in the demand. The continued heavy consumption, however, is absorbing considerable tonnages of these stocks and steadily bringing more normal conditions nearer.

Production of finished steel continues at a high rate and, although some of the lighter sections of the industry would like more new business, large quantities of steel of all descriptions are being used.

Sheffield.—On the eve of the holiday, business has shrunk to very small proportions. Supplies of pig iron are abundant. Stocks have accumulated at furnaces to such an extent that output is being curtailed. To all appearances users will pursue a policy of buying only as need arises until nearer the end of the period during which prices are fixed. Foundry requirements are heavier than for forge, transactions in which are on a very small scale. There is a fairly steady demand for special qualities of hematite, but not much inquiry exists for mixed numbers.

Basic steel billet business continues on a good scale. Structural steel needs are now being more adequately met. There are plentiful supplies of iron and steel scrap on offer, and where there is no control of prices quotations are inclined to ease.

Middlesbrough.—Consumers of foundry pig iron still have large stocks, and transactions in Cleveland iron are limited. More than sufficient hematite is being produced to meet requirements, and it is expected that one furnace will be put out this week.

The heavy steel departments continue to operate at capacity, constructional steel and bridge material being in demand. Prices are unchanged. Shipments of steel, mostly to Empire countries, are being well maintained. Most of the local foundries will close down for the Easter holidays, and steelworks generally are having two days. There is no change in the position of blast-furnace coke or foreign ore.

Glasgow.—The improvement recently noticeable in several sections of the iron and steel industry in the

West of Scotland is well maintained, and the amount of new business placed is, on the whole, satisfactory. For finished material, export orders are definitely on the increase, while home demand is good in practically all branches of the steel trade. The very large amount of work now on hand at the Clyde shipyards is providing employment, not only for shipyard workers, but also for many skilled tradesmen in Glasgow and district as, in addition to the steel material, the bulk of the machinery and equipment is to be supplied by local makers.

Cardiff.—The general position in the tinplate industry shows no improvement, and it is feared that more of the steel furnaces, and possibly also one or two of the blast furnaces, may suspend operations during the next few weeks. At a meeting at Swansea on Saturday last of the tinplate section of the Iron and Steel Trades' Confederation, it was decided to ask for a special meeting of the Joint Industrial Council "to examine the possible detrimental effect of the introduction of strip mills on the tinplate industry, and to ascertain what steps may be taken to alleviate any hardships that may ensue." Prices are unaltered. There was a sharp increase last week in shipments of tinplates. They totalled 8,483 tons, compared with 4,873 tons the previous week and 4,885 tons in the corresponding week last year; stocks have consequently been reduced by nearly 3,300 tons to 8,537 tons.

Textiles

Cotton (Manchester).—The past week has brought no increase in business, and spinners and manufacturers who have secured orders for more than retail lots have been exceptional. There have been no indications of a definite change in the policy of buyers.

After an easier movement in raw cotton prices a firmer tone has prevailed. A good deal of the recent weakness in cotton prices has been due to Bombay selling. From a supply point of view, the position remains bearish. Reports have recently been received of a larger output of outside growths. The area under cultivation in the United States will be larger than anticipated a little time ago.

It has been another very unsatisfactory week for spinners. Some leading employers are becoming much concerned at the state of affairs. Despite big curtailment of output, stocks tend to increase at the mills. Depressing reports have again been received from manufacturers of piece goods. Numerous firms have decided to extend the usual Easter holidays. The improved demand for India has been maintained and some Blackburn and Preston firms have sold more freely. Poor prices, however, have had to be taken. Miscellaneous sales have been put through for Egypt, South America, the Continent and the Dominions, without individual contracts being at all important. In the home trade section goods continue to move off rather more freely.

Wool (Bradford).—The past fortnight has not witnessed any important developments. Primary wool markets remain firm, and this is having some effect upon consuming centres. Trade in the West Riding is no worse, but most mills are still on short time, with deliveries far below normal. There is still a lack of confidence, particularly among wholesale fabric buyers. Most spinners are fairly well sold forward, and some have at least twenty weeks work in hand, provided they could obtain delivery instructions. The need of spinning particulars is holding up production. Manufacturers are feeling the absence of orders for piece goods, but many wholesale piece merchants seem to be content to clear their stocks, rather than place new business. There does not seem anything to favour still lower raw wool prices. Any sustained advance would stimulate the entire industry into a greater degree of activity.

During the past six months, there has been a marked decline in the price of home grown wools, and many country merchants are carrying big stocks of dearly bought wool, which, in many cases, are 6d. per lb. cheaper than they were last July and August. Whether to sell at current prices or hold is a question which many firms are faced with, and prospects are none too bright for British sheep farmers if prices remain where they are today.

THE COMMODITY
MARKETS

PRESIDENT ROOSEVELT's decision to come to the rescue of business by the resumption of large-scale Government expenditure has caused a stir in the commodity markets. The majority of commodities sensitive to changes in market psychology registered an increase in price. Thus, non-ferrous metals, rubber, vegetable oils and wheat are all dearer than a week ago. On the other hand, raw cotton remained unchanged in price and raw sugar, exceptionally, was marked down. Apart from an advance in butter, the provision markets showed little change during the past week. The improvement in prices, however, has not been fully maintained.

In the United States, Moody's index of the prices of staple commodities (December 31, 1931 = 100) declined slightly from 139.8 on April 6th to 139.3 on April 12th. A month ago the index stood at 150.3 and at 219.5 a year ago.

Metals

Copper.—The copper market improved substantially this week. Under the influence of political developments in the United States and the better trend on Wall Street the market rallied, and on Monday the three months' quotation touched £40 per ton for the first time since March 22nd. On Tuesday, however, a reaction took place in sympathy with Wall Street. The standard cash price closed the period under review at £39 8s. 9d. per ton, a net gain of £1 on the week. The demand for copper rose considerably on the increase in prices, indicating that consumers are not well stocked. In the absence of a change in the general industrial position, copper prices are unlikely to rise in the near future, for activity will shortly show a seasonal decline which will deter consumers from restocking now.

Tin.—Tin was particularly affected by the spell of activity in the United States, and on Monday the cash quotation rose to £173 10s. per ton. On Tuesday there was a reaction to £170, but even at this level the price showed a net gain of £2 on the week. The market was again adversely affected by the absence of any news regarding Malaya's attitude towards the buffer pool. There is an increasing feeling in market circles that Malaya will either reject the pool plan or use it as a bargaining weapon for an increase of its standard tonnages under the control scheme. Either move is likely to have an adverse influence of the market, according to the views prevailing in London metal circles.

Lead and Spelter.—Lead rose by 7s. 6d. this week to close at £16 per ton, while spelter closed at £13 12s. 6d. per ton, a net gain of 2s. 6d. on the week. The demand for lead was quite satisfactory this week. The market was favourably influenced by the good weather, which stimulated building. At the same time, reports of declining production helped to improve sentiment. These reports, however, appear to be based on a misunderstanding. According to Metallgesellschaft, the daily rate of world smelter production actually rose from 4,398 metric tons in January to 4,525 tons in February. The spelter market suffered somewhat from liquidations by tired speculators, but the U.S.A. zinc statistics had a favourable influence on sentiment.

Miscellaneous
Commodities

Oilseeds and Oils.—After a period of extreme weakness and falling prices, markets rallied towards the close of last week. But the improvement in linseed prices has not been fully maintained. The continuance of pressure by shippers to sell Calcutta seed has been a determining factor, but it is less insistent. Plate seed has offered more resistance, though it is still subject to American trade influences. Demand comes mainly from the Continent, English crushers being more interested in Indian offerings, particularly Bombay, in which a good business for shipment has been done in recent weeks. Favourable conditions for seeding operations in the United States may lead to a greater acreage being put under linseed than officially estimated. Consequently the yield of the crop may exceed the 200,000 tons previously expected. There has been an improvement in Egyptian cottonseed of 3s. or so per ton.

Vegetable oils are steadier. Following a severe setback, linseed oil advanced 25s. per ton, but has not completely regained the ground lost since the beginning of the month. Trade demand is fair for early delivery, but slow forward. In sympathy with seed, cotton oil has rallied and is 15s. per ton dearer.

Furs.—The London silver fox sales, mentioned in *The Economist* of April 2nd, closed in an easy fashion at the end of last week. In the second week of the sale, only 30 to 35 per cent. of the skins offered found ready buyers, while the remainder had to be withdrawn. In spite of the large withdrawals, however, prices continued to sag, and the closing quotations were 5 to 10 per cent. lower than the prices paid in the first week of the sale, which, in turn, were 5 to 10 per cent. below the January levels. Since the end of the sale, business on the open market has come practically to a standstill owing to the approaching holidays and the unsettled political position on the Continent.

The next London fur sale (Australian furs) will begin on April 28th. It will be followed on May 2nd by the opening of the Hudson's Bay Company's spring sale. The prospects of the forthcoming sales are judged with pessimism in London fur circles, owing to the financial and economic difficulties of the United States and the uncertain political position on the Continent.

COMPANY MEETINGS

THE ALLIANCE TRUST COMPANY, LIMITED

RECORD GROSS REVENUE—DIVIDEND OF 25 PER CENT.

VALUE OF SERVICES OF INVESTMENT TRUSTS

MR JAMES PRAIN'S REVIEW

The annual ordinary general meeting of the Alliance Trust Company, Limited, was held, on the 12th instant, in the company's registered Office, Meadow House, 64 Reform Street, Dundee.

The chair was taken by Mr James Prain, and after formal evidence of the proper calling of the meeting had been submitted, the Secretary, Mr Alan L. Brown, read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said:—

TRIBUTE TO LATE COLLEAGUES

I cannot proceed to the main business of this meeting without referring to the heavy losses which we have suffered in the last few months. In September our secretary, Mr John P. Bruce, died with tragic suddenness when to all appearance he had many years of life and work before him. He entered the office of the company as a boy in 1896 and had, therefore, served the company for over forty years. His real natural ability, no less than his loyalty and devotion, made him an official of singular value. His heart was in his work and his true interest was in the success of the company. To us all the sincerity and kindness of his disposition made him a friend, and we mourn the loss of one whose rule of life was service and whose reward was the esteem and affection of all with whom he had to do.

Then, in December, the terrible accident at Castleary took from us our colleague, Mr Hugh F. B. Sharp, in the very prime of life. Possessed of an intellect as keen as it was versatile he had actively interested himself in many spheres, but his principal attention had been devoted to the problems of finance and investment. There his abilities found a field in which he was specially fitted to excel, and this fact and his enthusiasm and devotion to the company's interests made him a most valuable director. Of his personal qualities it is impossible to speak too warmly. His sensitive kindness of disposition expressed itself in a fine courtesy and consideration for all those with whom he came in contact, and it is of this characteristic that we desire at this time to record our appreciation and to preserve the memory.

Within the last few weeks the sum of our losses has been added to by the death of Mr Norman Boase after many years of public service as willingly rendered as it was widely valued. His long business experience, his knowledge of men and affairs, combined with a naturally sound judgment, made him a valued colleague, and we join with his many friends in all walks of life in paying a tribute to his memory.

I am sure that you will wish to associate yourselves with the tributes I have paid to these colleagues and with an expression of sympathy to those to whom they were dear.

NEW DIRECTOR AND SECRETARY

You will observe from the report that Mr Harold S. Sharp has joined the board on the invitation of the directors. At a later stage in the proceedings I shall ask you formally to confirm this appointment. Mr Sharp's wide experience of business, I feel confident, will be of great advantage to us. It gives me great pleasure to welcome a member of a family which has been closely associated for so many years with the fortunes of the company.

We are very pleased to have been able to fill the vacancy in the secretaryship by the appointment of Mr Alan L. Brown, C.A., Edinburgh. Mr Brown has had much experience in the management of investment trusts, and we are confident that in him we have made a valuable acquisition to the company's personnel.

REVENUE AND DIVIDEND

Turning now to the accounts, which have been in your hands for the statutory period, and which you will no doubt as usual hold as read, I think you will agree that they make a most satisfactory showing. The year with which they deal has, of course, been an

exceptionally favourable one for investment trusts from a revenue point of view, and our gross revenue has advanced from last year's figure of £659,780 to £707,013. This is a record for the company, and if we deduct debenture interest and all other expenses we find that we have a net revenue available for our shareholders larger than any in the company's history. We are, of course, very much alive to the uncertainties of the future, and in times like these you will not expect us to make any prediction or even indication as to the years to come. But we felt with such figures we would be justified in restoring our dividend to the highest figure it has reached in the past, viz. 25 per cent. We are particularly pleased to show such figures and recommend that dividend in this the jubilee year of the company's existence.

You will also, I am sure, approve of the appropriation of £100,000 to contingent fund. True, our valuation at January 31st is, in the circumstances, most satisfactory, but it is already out of date, and the situation of the world to-day is essentially one which calls for the strengthening of the fund which provides against contingencies.

The geographical distribution of our investments in bonds and stocks is as follows:—In Great Britain and the Dominions, 63 per cent.; in the United States, 17 per cent.; and in other countries, 20 per cent.

I shall not trouble you this year with any discussion on world conditions. These have been, and are every day, the subject of comment so exhaustive that nothing remains to be said except that no prediction of any certainty or value can be made. We must just wait and hope.

SOUNDNESS OF INVESTMENT TRUST PRINCIPLES

I might, however, at this stage in the company's history refer for a few minutes to the discussion which has recently taken place as to the value of the services rendered by an investment trust and the soundness of the investment trust principle. Well, in my view, that principle is an entirely sound one and the services rendered of real value. At times like these when the world concert proceeds in a ruthless crescendo from one crashing discord to another, the legitimate investor seeks a place where he can be safe from the noise. He can find that nowhere so satisfactorily as in the prior charges of such an investment trust as this.

Take first our terminable debentures maturing at an average period of from three to five years. This form of security appeals particularly to those investors in charge of trust funds. Here they find (1) virtually absolute security, (2) a fair rate of interest for the party entitled to the income, (3) a certain 20s. in the pound for the owner of the capital, and (4) freedom from any expense in connection with either purchase or realisation. We have frequently received acknowledgments of the satisfaction which trustees and their advisers have found in this vehicle of investment and their cordial desire that we should continue to make it available. In more recent years we have issued borrowed capital in the form of debenture stock. The security offered is, of course, equally beyond peradventure, and this form of investment is welcomed by that section of the public which desires to invest its money permanently and be called upon to bestow neither thought nor anxiety upon the security.

Next you have our preference stocks. These, of course, rank behind our debenture issues, and are chosen by those who desire a slightly higher return without any apprehension, for all practical purposes, as to the safety of their investment. There is at all times a constant and active demand for those stocks by genuine investors. Now, in this company, and in its sister company, the Second Alliance Trust, there are nearly 14,000 debenture, debenture stock and preference shareholders, and we have, therefore, served the true interests of a large body of persons—trustees and others whose main object is complete safety and freedom from anxiety—a very real service in times like these.

I now come to our ordinary stock, and I do not for a moment suggest that it is entirely immune from the dangers and difficulties

of the times. But I do contend that if the funds of the company are dealt with on the sound investment trust principle—the principle I mean which places the earning of revenue, as distinct from speculating for a rise in market values, as our true object, the ordinary stock of a company such as this need fear comparison with no other form of investment of its kind. I shall say no more than this, that whether our ordinary stockholders consider the dividends and bonuses which they have received, or the capital value of their stock—in these times so testing for capital values—they will agree that they have no reason to be dissatisfied with their investment.

SERVICE TO COUNTRY'S FINANCIAL SYSTEM

It is also permissible to look at the matter from another point of view—that of the service which investment trusts render to the financial system of the country. Under that system industrial concerns are constantly coming to the market for capital to enable them to carry on and expand their businesses. Now, issuing houses and others concerned will be the first to admit the great assistance they get from investment trusts in the placing of issues of capital. If the issues be sound and such as appeal to those whose business is to devote time and experience to investment, they can rely on a large proportion being taken up by investment trusts. Indeed, for such issues to be a success they must appeal to the trusts, and this fact tends to the encouragement of sound issues and the discouragement of the unsound. Again, in times of uncertainty, so common in late years, the holding of large quantities of bonds and stocks by such institutions prevents their being thrown on the market by persons who are afraid or cannot afford to hold them. This contributes a steadying factor to a market which may be much in need of it. I shall not dilate further on this subject, nor try to put the case too high, but I think I have said enough to show that an investment trust run on sound lines renders a real service to its stockholders and to the community.

Before concluding my remarks I must acknowledge the loyal services rendered by our staff here and by our agents in America during the past year.

I now beg formally to move that the directors' report and accounts be adopted and that final dividends be declared as therein recommended, viz.: On £700,000 preference stock at the preferential rate of 4½ per cent. per annum; on £650,000 preference stock at the preferential rate of 4 per cent. per annum; on £750,000 preference stock at the preferential rate of 5 per cent. per annum; on £100,000 "A" preference stock at the preferential rate of 4 per cent. per annum; and on £1,050,000 ordinary stock at the rate of 14 per cent. actual, making 25 per cent. for the year, all subject to deduction of income tax.

The report and accounts were adopted, and resolutions declaring dividends, re-electing the retiring directors and appointing auditors were unanimously passed.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED

EFFECT OF FALL IN PRICES.

The thirteenth ordinary general meeting of shareholders of the British Enka Artificial Silk Company, Limited, was held, at 20 Aldermanbury, E.C., on the 13th instant, Mr C. T. Pott presiding.

The Chairman said: Gentlemen, the working profit for the year amounted to £44,214 and is £639 more than that of the previous year. Unfortunately, after deducting the usual depreciation and overheads, there is a loss of £14,364, which is £1,463 more than was lost in 1936, but for the past year provision is made for income tax amounting to £2,028, the major portion of which is in dispute. Both our production and sales of rayon were somewhat greater than last year, and as a matter of fact our sales were in excess of production.

Last year I mentioned that our profits had been reduced owing to the fall in selling prices. This fall continued in the year 1937, and it was not until the middle of the year that some stabilisation took place. Even then, stabilisation was on the low level which had been reached by that time. At best, therefore, it merely prevented further reductions in prices. At the end of the year prices rose, but owing to our contract positions with customers we received no immediate benefit from this price improvement. The economies we were able to make in our production costs during the year were, in fact, all neutralised by the lower selling prices as compared with those ruling in 1936. The improvement in the selling price at the end of 1937 will help us in 1938, although we have to face higher material costs, particularly in the matter of wood pulp.

During the year the British Viscose Association was formed. We have become members of this Association believing that in co-operation with other manufacturers opportunity is offered to

bring about a more stable and satisfactory position in the viscose industry. In fact, it is partly through the formation of this Association that the prevailing somewhat more stable and better conditions in the industry have been brought about.

IMPROVEMENT OF QUALITY

We have still further improved the quality of our product. We know it is much appreciated by our customers, and we believe that at the present time there is no better rayon on the market. We have not failed to make all necessary alterations to our plant in order to achieve this high standard of quality.

There has been a further slowing up in the expansion of the industry, the increase in British demand being about 2½ per cent. as against 4.1 per cent. for the previous year. Export trade is still negligible and generally unprofitable. We do not believe, however, that the home market has yet reached saturation point, and when the present somewhat severe depression in the textile trade has passed away we believe there will be a still greater increase in rayon consumption. As Mr Samuel Courtfield has pointed out, rayon represents only 4 per cent. of the textile trade of this country, and there is, therefore, a very large field as yet untouched. In that connection, it is proper to mention that we believe that there would be a big advance in the consumption of rayon in Great Britain if the excise duty of 6d. per lb. were removed. This very heavy tax is a great hindrance to the natural development of the industry in competition with other textile fibres which are entirely untaxed. The report and accounts were adopted.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED

AN ENCOURAGING DISCOVERY

The ordinary general meeting of this company was held, on the 13th instant, in London.

The Hon. A. T. J. Fraser, D.S.O., the chairman, who presided, said that during the twelve months 42,571 ozs. of fine gold had been won from 154,863 tons of current ore and 7,762 ozs. from re-treated tailings, the supply of which had run out in August, since when all gold had had to be won from the current ore taken from the mine. With certain small additions the total gold produced had amounted to 50,776 ozs., which had realised £354,329, or £6 19s. 4d. per oz. Adding £9,374 brought forward and £1,881 dividends, the total at profit and loss account amounted to £60,604. A preference dividend of 1s. per share had already been paid, and the board now recommended a final dividend for the year of 6d. per share on both classes of shares.

The development of the mine had been pushed ahead as fast as possible, and the ore reserves at December 31st last were 233,712 tons of an average grade of 10.11 dwts.—an increase of 14,000 tons and of 0.16 dwt. in grade—with, in addition, a further amount of 90,000 tons of probable ore of low grade.

During the year no outstanding discovery had been made in the mine, but one feature of development which had occurred recently outside the boundaries of Ooregum was distinctly encouraging. Just across the boundary of their mine to the south the Champion Reef Company had been developing a series of folds on the main and west reefs which showed a very decided pitch to the north. If they continued in depth, as there seemed every prospect of their doing, they would eventually come into the area belonging to the Ooregum. The deepest point at which that discovery had been opened up in Champion was some 400 ft. above Ooregum bottom level, and while it was not yet possible to calculate the exact depth at which that body should begin to show in their own ground it should not be more than a level or two below their lowest level.

Taking developments all round, he thought they might describe them as not unhelpful for the future. During the last few years the board had been trying to build up their ore reserves to meet the situation which had now arisen when profit from the old tailings should cease. Their ore reserves as a result were higher than four years ago, and while they still had to go very cautiously, the board hoped to be able to pay a small dividend while development at the bottom of the mine was pushed ahead with all speed. There was, he was sure, every indication of a considerable addition to their stopping ground when they reached the point in depth at which the recent discovery in Champion came into their own territory.

Mr Kenneth B. Taylor, M.C., in reviewing the operations of the mine, said that since August, when the re-treatment of tailings came to an end, it had been necessary to make a heavier call upon the mine. It was really very satisfactory that, in spite of poor developments in the northern section, the mine itself should now be in a position to return about 4,000 ozs. a month.

The report and accounts were unanimously adopted.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED

INCREASED PROFIT

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 12th instant, at Southern House, Cannon Street, London, the Hon. A. T. J. Fraser, D.S.O. (the chairman), presiding.

The Chairman, in the course of his speech, said:—The year ended December 31, 1937, may, I think, once more be described as a thoroughly satisfactory one.

Outside the normal development and exploitation of the mine, both of which have been eminently satisfactory, the main effort has been concentrated on preparing the way to that deep development for which fresh capital was provided just two years ago.

During the year 151,050 tons of ore were milled for a total recovery of 70,014 oz. fine gold, worth £488,363. The sale price was £6 19s. 4d., or 1½d. less than in the previous year. The assay value of the ore milled was 9.4 dwt., and the percentage of extraction reached the very high figure of 98.3 per cent. Working costs amounted to £252,779, to which has to be added £41,835 royalty to the Mysore State. This gives a profit, after adding some £8,000 interest and other receipts, of £201,708, or nearly £4,500 more than last year.

Your board declared a final dividend of 2s. 6d. per share, which was paid on March 19th, and the carry-forward is increased by about £600 at £14,380. The distribution for the year therefore amounts to 42½ per cent., or 4s. 3d. per share.

ORE RESERVES

According to the policy previously outlined, mine development has been considerably curtailed in order to push forward the sinking of Gifford's Shaft and general preliminary arrangements for what we call layout to depth. In spite of this curtailment, it is most satisfactory to find that our ore reserves have increased by more than 25,000 tons, and that the grade is slightly higher. Ore reserves now amount to almost 500,000 tons, of an average grade of 11.5 dwt.

At the northern end of your property, at no great distance from the Ooregum boundary, there have been during the year some very definite and extremely encouraging results from development. It now appears that at each level from the seventy-sixth to the eighty-first we have a very considerable effective length of ore shoot averaging some 6 to 7 dwt. in value and varying from 6 in. to over 5 ft. in width. Very little of this has been taken into ore reserves. Without going into further detail I think you will appreciate that the bottom of the mine, on which our future developments depend, is at the moment looking very well indeed, and that the ore reserve position is most satisfactory.

GIFFORD'S SHAFT

During the year Gifford's Shaft was sunk a further depth of 1,508 ft. The remaining 138 ft. to complete to the 70th level horizon has now been finished, and this shaft now extends from surface to the 70th level, a distance of 6,556 ft.

As regards the cost, it now looks as though there would be a considerable saving on the estimate made for the actual shaft sinking and other work in the mine. This, however, will be more than offset by the increased cost of the plant over the estimate. As you know, the estimate was made early in 1936, before the rise in prices had assumed serious proportions. Had it been possible to make contracts at once all would have been well, but a considerable interval had to occur between the time general agreement to the plans and final details and specifications could be fixed and tenders asked for.

Mr Kenneth Taylor said that the scheme decided upon two years ago for carrying the mine to greater depths was now taking shape, and the first important stage—that of deepening Gifford Shaft—had just been completed. There remained the equipment of the shaft and main station at the 70th level, both of which were well in hand. Meanwhile, the manufacture of the new winding engine was progressing. The past year's development work had yielded excellent results. There was no lack of ore in the mine, and the outlook for the development of further ore continued to be very satisfactory.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Boulevard Street, Fleet Street, London, E.C.4.

Another New Business Record

established by the

"LEGAL & GENERAL"

LIFE & SINKING FUND POLICIES FOR SUMS ASSURED OF OVER £20,000,000 WERE EFFECTED DURING 1937

ASSETS NOW EXCEED £42,000,000

At the Annual General Meeting, held on April 12th, the Chairman, Mr. Ernest E. Bird, said that during the year 1937:

21,082 New Life Policies were issued

The Net New Life Sums Assured amounted to £18,549,226

The Total Net New Sums Assured amounted to £20,067,546

The amount received by way of consideration for Immediate Annuities was £1,647,917

New Deferred Annuities effected amounted to £2,214,403 per annum

The Net New Life Premium Income was £1,204,020

The Net Fire & Accident Premium Income was £544,807

Total Income from all sources amounted to £6,659,043

A copy of the Annual Report and Accounts for the year ending 31st December, 1937, will be sent on request.

General Manager: Vernon E. Boys

CAMP BIRD, LIMITED

LIST OF WELL SELECTED HOLDINGS

The thirty-sixth ordinary general meeting of Camp Bird, Limited, of 49 Moorgate, E.C., was held, on the 11th instant, in London.

Mr F. W. Baker (the chairman) said that a year ago they were at the apex of a very definite bull market. The downward trend, particularly in gold shares, developed as a result of the "gold scare," followed by economic depression in America with its reaction on values in world markets.

Their investments, quoted and unquoted, and properties and ventures which stood in the balance sheet at December 31, 1937, at £1,223,000, showed a depreciation of £178,000 at that date, since increased by a further £112,000 at the end of last week. In the opinion of the Board this depreciation, due entirely to abnormal conditions, could, they hoped, be looked upon as of a temporary nature. The profit and loss account showed, from dividends and profit on realisation of investments, a sum sufficient to have justified, under normal conditions, the declaration of a dividend, but having regard to the depreciation of assets below book cost price no such distribution could be made and they had been compelled to carry the credit balance to profit and loss of £86,000 forward to the current year.

THE COMPANY'S HOLDINGS

Their quoted holdings stood at the date of the balance sheet at £938,900 as against £503,000 in last year's report, or nearly 100 per cent. increase, while their unquoted holdings which stood at £630,000 last year now stood at £258,000. Of their total investments, 50 per cent. was represented by investments in gold mining undertakings, and 50 per cent. in base metal and miscellaneous undertakings.

In reviewing the company's holdings, the chairman said that good progress was being made at the Lake George Mine in the erection of a plant to treat 500 tons of ore per day, constructed so that the tonnage treated could be readily increased to 1,000 tons a day at relatively small additional cost. The mine was being prepared for production and it was expected that milling operations would commence at the end of the year. With the completion of the plant and active operation started by the end of the year, and having regard to the large reserves of ore already developed at the mine, he felt they might look in the future to some substantial return on their large holding in that company.

Their next large interest was in West Witwatersrand Areas Limited; they looked upon this interest as a very valuable one, giving them the opportunity to participate in any further subsidiaries promoted by the Parent Company, their participation in the past in the three companies already floated by the West Witwatersrand Company having proved very profitable. The Parent Company had continued to explore its properties by diamond drilling with favourable results.

THE FRESNILLO GROUP

For the year to June 30, 1937, the Fresnillo Company reported an operating profit of £928,000 and distributed dividends totalling 60 cents per share. For the six months to December 31st last the operating profit amounted \$404,000, and an interim dividend of 15 cents per share was paid. The position in connection with the Fresnillo interest had been rendered recently very disturbing as a result of the American Government's decision, for the moment, to discontinue the purchase of Mexico's production of silver. They could only hope that America, if and when any satisfactory understanding was arrived at with the Mexican Government on major issues, might decide to resume its silver purchases. Meanwhile advice had been received that the Mexican Government had decided to purchase the April output of silver, payment to be made on the basis of the London silver quotation in dollars. The Mexican Corporation, which held 497,000 shares of the Fresnillo Company out of 1,050,000 shares, paid dividends totalling 12½ per cent. for the year to June 30, 1937, and an interim of 5 per cent. for the current financial year.

The chairman then dealt with the position with regard to Golden Queen Mining Company, the Gold Fields Australian Development Co., the Australian Selection Trust, Amalgamated Banket Areas, Marlu Gold Mining Areas and Yukon Consolidated Gold Corporation, in all of which they had interests. He said he would like to point out that they held 29 well-selected separate interests which, with the exception of their Mexican holdings, at the moment under a cloud, represented holdings in amply financed and well organised and managed operating and development companies whose shares, with the apparently improved world conditions, should normally in the future show them a substantial appreciation more in line with their values at this time last year.

The report was adopted.

GORDON HOTELS, LIMITED

COMPANY'S IMPROVED RESULTS

MAJOR-GEN. GUY DAWNAY'S SPEECH

The forty-eighth ordinary general meeting of the Gordon Hotels, Limited, was held, on the 12th instant, in London.

Major-General Guy Dawnay, C.B., C.M.G., D.S.O. (the Chairman), who presided, in moving the adoption of the report and accounts said that the loss on the realisation of the investment in the Dorchester House Syndicate had been written off the general reserve and balance of capital reserve. The final balance of profit for the year was £22,589, which, added to the balance brought forward from last year, brought the profit balance to £44,300. The business done was again reduced during the year under review by £27,000, but the 1936 figure included an amount of £45,000 attributable to the Hotel Metropole, Northumberland Avenue; so that actually, comparing like with like, the business done in their present hotels in 1937 increased by £18,000. In any case, the trading profit showed an increase of over £16,000.

The first half of the year 1937 was a period of improved business, partly attributable to the Coronation and partly to general conditions. At the end of June that improvement amounted to an increase of 13½ per cent. in the turnover of the English Hotels. From the month of July, however, business showed a falling off, and the turnover of the English Hotels during the second half-year was 7½ per cent. less than in the corresponding period in 1936. The Paris Exhibition adversely affected business in the English Hotels. The devaluation of the franc also influenced a large number of their English and American clients to visit France that year, and at the same time considerably curtailed the number of visitors from France and the Continent to this country. The Coronation period itself fell short of expectations, in that its stimulus to the business was not of long duration. When that stimulus had run its course, certain less favourable factors made themselves felt—in particular, a shortening of the length of stay in Hotels and some falling off in restaurant business. There was also a general advance in the price of foodstuffs, furnishings, and other items connected with the business. On the other hand, they were able to introduce countervailing economies in their overhead expenses.

BETTER YEAR FOR FOREIGN HOTELS

On the whole the year under review was satisfactory. The London hotels in the aggregate showed an increased profit of about 15 per cent. as compared with the previous year, while the seaside hotels in the aggregate showed a reduced profit for the year amounting to a little over 4½ per cent. The foreign hotels had a very much better year than in 1936, or indeed for a number of years past. The Hotel Metropole at Monte Carlo in particular had a very satisfactory year from all points of view. That hotel had been opened for six weeks during the summer season as an experimental innovation. While that did not actually add to the profit, as was hardly to be expected on the first occasion and when they had no summer goodwill to work on, the result was encouraging enough to decide the board to repeat the experiment during the current year.

Expenditure on repairs and maintenance during the year was somewhat reduced, though not by nearly so much as it had been increased during 1936. The reduction was not in any way due to deferring the normal necessary work, nor to a skimping policy on the part of the Board. On the contrary, there had been progress in modernisation and improvement in decoration in accordance with up-to-date standards. Special mention should be made of the work done in the Hotel at Brighton where not only had the work on the floors been much appreciated by the clients, but also the renewals on the ground floor and in the Winter Garden.

As regarded the prospects for the current year, there had been a quite considerable falling off in business which seemed to be general in the Hotel business as a whole. London appeared to be particularly affected, especially in what was called the "luxury hotel" class; and that also involved their Brighton business. It was true that the Grosvenor and Victoria Hotels had been nearly holding their own, while the foreign hotels showed further improvement; but on the whole the prospects could not be said to be favourable, and unless the general situation improved they must face the likelihood of a less satisfactory year than in 1937.

Subject to no licensing regulations, no entertainment tax, no L.C.C. building or police regulations, "Bottle Parties" competed piratically, irresponsibly and illegitimately with the legitimate and severely controlled restaurant business of the hotel industry. It was to be hoped that means would be found to restrain that unfair competition.

The report and accounts were unanimously adopted.

ANGLO-PORTUGUESE TELEPHONE COMPANY, LIMITED

CHANGE-OVER TO THE MEASURED-RATE TARIFF

The fifty-first ordinary general meeting of the Anglo-Portuguese Telephone Company, Limited, was held, on the 13th instant, at the Incorporated Accountants' Hall, Victoria Embankment, London.

Sir Alexander Roger, chairman of the company, who presided, said that operating revenue had amounted to £313,318, and showed an increase of over £6,000. Operating expenses had increased by £15,000, including some non-recurring costs, and after providing an additional sum of about £7,500 for income tax and National Defence Contribution the net profit at £78,000 was less by £11,000 than that of the previous year.

A year ago they had announced that a measured rate tariff, which had met with the complete approval of the Portuguese Government, was in process of being introduced into the system, and as from July 1st last the whole of the subscribers had operated under the new rates. Owing to the fact that the complete change-over had taken place in the middle of the year, the incidence of the issue of accounts and collection thereof under the new tariff had had the effect of showing a temporary decrease in net revenue in the accounts before them.

He had expressed the view that development would be encouraged and that revenue would be at least maintained. The information they were now receiving confirmed that view. Over a full year's operation they anticipated that the net profit at the end of the year would overhaul the temporary reduction experienced in 1937.

THE DIVIDEND

The directors recommend a final dividend of 5 per cent., less tax, on the ordinary stock, making 8 per cent., less tax, for the year, and a dividend of 8 per cent., less tax, on the "A" ordinary shares, leaving to be carried forward a slightly increased amount of £27,069.

A net gain of 3,021 stations compared with 3,165 added last year, representing a growth of over 6.8 per cent., which was a normal basis and which they regarded as satisfactory. The total number of stations had now reached 48,181.

The change-over to the message rate had been accomplished smoothly. Wherever the message rate had been introduced it had been extremely successful in expanding the telephone system and encouraging its use, and they did not anticipate that Portugal would prove an exception to the rule.

In regard to new development, the outstanding event had been the inauguration in September last of the new automatic exchange in the Estrella district of Lisbon. In pursuance of their policy, the new exchange represented the latest development in telephone technique and design and would facilitate plans for future expansion. It was equipped to provide immediate service to 4,700 subscribers' lines, with an ultimate capacity of 10,000 lines.

CAPITAL EXPENDITURE

A progressive modern telephone system called for the constant supply of new capital and the availability of specialised technique. The development of the areas in Portugal in which the company operated had not by any means reached saturation point, and their plans were ready for meeting further demands for expansion. The current expenditure programme, which was now well forward, provided for substantial extension to exchange equipment and consolidation of the company's line and cable plant.

The Portuguese Post Office had in preparation a comprehensive scheme for the reorganisation and modernisation of the Government trunk and local system, and it was pleasing to record that cordial co-operation existed between the Post Office service and the company's officials for the purpose of co-ordinating the future operation and development of the two systems on similar lines.

The year under review had afforded further proof, if such were needed, of the sound financial position which Portugal continued to enjoy. The tenth successive Budget surplus had been achieved, and that fine record—unequalled, he supposed, anywhere in the world during recent years—had put the country in possession of a substantial national reserve wherewith to pursue a progressive policy of development in public works and the rehabilitation of the country's defences. During the year all existing restrictions on exchange and on the free circulation of capital had been removed. The company was indeed fortunate to have the scene of its operations in a country so stable and progressive as Portugal.

The company preserved the most friendly relationship with the Government and public authorities, based on mutual understanding and confidence.

The report and accounts were unanimously adopted.

SOUTHERN AREAS ELECTRIC CORPORATION, LIMITED

INCREASED DIVIDEND

The Right Hon. Viscount Elibank, presiding at the fifth ordinary general meeting of the Southern Areas Electric Corporation, Limited, held, on the 8th instant, in London, said that the board were able again to present accounts which show expansion, both of business and profits. The dividends receivable from all subsidiaries amount to £38,266, as compared with £33,038 in 1936. Owing to the fact that advances from the bank had been repaid in June, 1936, interest charges in 1937 were substantially reduced and the saving in interest became available for dividend. In the result the net profit for 1937 was £37,953, as compared with £26,501 for the previous year, a net increase of £11,452, which shareholders might agree was a not unsatisfactory improvement.

The issued and paid-up share capital remains unaltered, but at December 31st £48,727 was owing to the bankers, this sum having been required to take up further shares in their subsidiary companies and for the acquisition of the Peacehaven Electric Light and Power Company, Limited, a small undertaking in Sussex.

During the year the number of consumers connected was increased by nearly 11 per cent. and the units sold by 18 per cent., the latter figure being again considerably above the average for the country. The average price received per unit sold fell from 2.233d. to 2.053d., a reduction of 0.18d. per unit. This reduction represented an advantage to consumers of £9,006, and as during 1936 our tariff reductions made in that year gave consumers an advantage of £6,360, tariff concessions in the two years 1936-37 amounted to £15,366. This figure demonstrated that the corporation had not been unmindful of the interests of its consumers, for the net result was that while output in units had increased by 18 per cent., the increase in revenue from sale of current was only 8½ per cent.

The balance of profits available for distribution was £37,953, to which was added the carry-forward from last year, making a total of £45,410. An interim dividend of 2 per cent., already paid, absorbed £11,752; the final dividend recommended of 3 per cent., making 5 per cent. for the year, compared with 4½ per cent. paid last year.

The report and accounts were unanimously adopted.

RIVER PLATE LOAN TRUST AND AGENCY COMPANY, LIMITED

INCREASED PROFIT AND DIVIDEND

The fifty-seventh ordinary general meeting of The River Plate Loan Trust and Agency Company, Limited, was held, on the 11th instant, at 52 Moorgate, London.

Mr Walter W. Parish (the chairman) said that the profit and loss account showed a credit balance of £221,625 as compared with £199,012 in 1936. The directors recommended a final dividend of 9 per cent. on the "A" shares, making 14 per cent. for the year, and 3 per cent. on the "B" shares, making 4 per cent. for the year, both less income tax, distributions which compared with 13 per cent. and 3½ per cent. in the preceding year.

The increase in the past year's revenue was to a great extent due to non-recurring factors. During the maintenance of the mortgage moratorium there were bound to be such items in their annual revenue, while investment income during 1937 benefited from the economic improvement in Argentina, which was reflected in improved distributions by the British railways in that country.

The chance of any considerable development in the immediate future of mortgage business did not look very promising, but, taking a longer view, the gradual passing of large estates into the hands of smaller proprietors would lead in due course to demands for loans in, he believed, a growing volume.

Having mentioned that the investments had a market value slightly above the book figure, the chairman went on to say that an abundant harvest and higher prices for cereals brought increased prosperity to Argentina in 1937; unfortunately, the outlook for the current harvest could not be said to be promising. It would be absurd not to realise that Argentine prosperity had had a setback, but if the tendency to spend without thought of financial return, and to be ultra-modern and up-to-date, even perhaps at the expense of time ahead, was kept in check, this slowing down in progress and development would be perhaps a blessing in disguise for a country which had at its disposal so much that the world annually had need of, and a partial harvest failure would have but a passing effect on such a country where the fruits of the earth were the main products.

The report was unanimously adopted.

ARMY AND NAVY STORES, LIMITED IMPROVEMENT IN SALES TOTAL

The annual general meeting of the Army and Navy Stores, Limited, was held, on the 13th instant, on the company's premises, Howick Place, Westminster, S.W.

Brig.-Gen. Sir Frederick Gascoigne, K.C.V.O., C.M.G., D.S.O. (chairman and managing director), in the course of his speech said: Ladies and Gentlemen, when I addressed you last year I finished my speech by reminding you—perhaps I should say warning you—that the year 1936—the year we were then dealing with—was abnormal in that it contained fifty-three trading weeks, whereas in the year 1937 we should only have fifty-two trading weeks. Notwithstanding this reduced trading period, we have more than maintained the gross profit earned in the longer year, though the net profit is down by a little over £9,000. No less than £8,838 of this reduction is accounted for under the heading of rates and taxes.

Moreover, a full year's contribution to the Employees' Retiring Allowance Fund was borne for the first time, and this, with the Coronation bonus, added a further £8,000 to our working costs. Without these additional expenses, amounting to nearly £17,000—one of which is non-recurring—we should have again shown an increased net profit, which, with the shorter trading period at our disposal, would have been a better result than I encouraged you to look for when I addressed you last year.

STAGGERING TAXATION

Sales were very good during the first half of the year, but, except for an excellent Christmas trade, they were disappointing during the latter six months. For the whole year they showed a slight relative improvement, a gratifying fact in view of the increase in income tax and the corresponding reduction in private incomes.

For there is no good closing our eyes to the fact that the staggering taxation of the present day, unavoidable as it may be, must have a great effect on the spending power of our clientele, and I am afraid this must be reflected eventually in our sales. You will remember that at our last meeting we were considerably worried about the National Defence Contribution—a new tax which had been sprung upon us. We hoped for modifications, and, fortunately, they came. Nevertheless, this tax has cost us about £6,000 for the ten months and will cost us more for the full year. This, of course, means so much less money at our disposal to distribute.

DIVIDEND AND BONUS

There remains for distribution a sum of £271,387 10s., after adding £124,870 14s. 1d.—namely, the amount brought forward from last year—and deducting £34,166 13s. 4d. already paid as interim dividend. I told you last year that in regard to the 3d. bonus recommended for payment in addition to the 12½ per cent. dividend, it was a completely open question as to whether it could be repeated and that this must depend on the results and circumstances of future years.

In spite of the extra expenses entailed and the consequent decline in our net profit the fact remains that we still had a good year, and your board, after careful consideration, came to the conclusion that in all the circumstances they would be justified in again recommending payment of the bonus on the present occasion, and we therefore propose to ask you to allocate £88,833 6s. 8d. to provide a final dividend of 10d. per share plus a bonus of 3d., which, with the interim dividend of 5d., will make a total dividend for the year of 1s. 6d. per share, or 15 per cent.

Since the slump period of 1932 our profits have gradually risen year by year from £120,756 to £180,000. That could not have been

brought about without the economies I have mentioned and the closest attention to the details of management. I have referred on previous occasions to the plans which your board had for improving and bringing up to date your premises.

Our chief objectives are to get all the food departments together on the ground floor of this building in which we are now assembled; all our soft furnishings together on the first floor; all our sports goods on the second floor of the Victoria Street premises; to provide more room for women's wear, and to give easy access to all parts of our establishment. These plans were launched three years ago, and a great deal of work has already been done to give effect to them. We are now about to embark on what is perhaps our biggest undertaking—the demolition and rebuilding of our Howick Place premises. When this work is completed the result will be a very up-to-date stores.

We have got a sound balance sheet, good reserves, an establishment which is getting more and more up-to-date every year, both in its structure and the services it provides, and it only requires the continuance of ever-increasing development of your goodwill to ensure the maintenance and progress of its prosperity.

The report and accounts were unanimously adopted.

NIRMALA (JAVA) PLANTATIONS AND LANDS COMPANY, LIMITED

DIVIDEND OF 2½ PER CENT.

The annual ordinary general meeting of the Nirmala (Java) Plantations and Lands Company, Limited, was held, on the 13th instant, at The Rubber Growers' Association, 19 Fenchurch Street, London, Mr Walter Hilliers, chairman of the company, presiding.

The representatives of the secretaries (Messrs Rowley, Davies and Company, Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—All our five estates are reported upon favourably as to their upkeep and general condition, and we consider that our costs do not compare unfavourably with those current elsewhere.

As you know, rubber has during the year given us all a series of surprises and a continuous reduction in values was the order of the day. Last year I referred to circumstances by which we think we ought to be guided in considering forward sales, and events have shown this to have been justified. We were thus enabled to realise a satisfactory average selling price for the year, and, of course, we can look forward to similar benefits as regards the current year and also in 1939.

As regards tea, we had to contend with certain unfavourable conditions, namely, that part of our estate licences had to be used at the end of the previous year and other licences were purchased, as it did not appear to be in the interests of the company to curtail production in view of the new period of restriction and of any possibility of a higher assessment, to which we think we are justly entitled. As a consequence also, a rather large proportion of the crop had to be sold locally at nominal prices.

Referring to the accounts, these, as you know, now show the effect of the reduction of capital, and full particulars are embodied in the report. The preference dividends have now been brought up to date, all arrears and the dividend to December 31st last having been paid.

As you will see from the resolution which I shall put before you, it is proposed that a dividend of 2½ per cent. on the ordinary stock be paid, and the directors have also resolved to pay a similar percentage by way of interim for the current year.

The report and accounts were unanimously adopted.

OIL OUTPUTS

Kern Oil Company, Ltd.—The total production during February amounted to 136,220 barrels, or approximately 19,460 tons. The total output during March amounted to 160,241 barrels, or approximately 22,892 tons.

Venezuelan Oil Concessions, Ltd.—Total output, week to April 2, 1938, 972,950 barrels.

Trinidad Petroleum Development Company, Ltd.—Output for March, 259,922 barrels; deliveries for March, including purchased oil, 303,561 barrels; output for week ended April 2, 61,331 barrels. Output for week ended April 9th, 58,199 barrels.

Attock Oil Company, Ltd.—Output for March, 38,482 barrels.

Lobitos Oilfields, Ltd.—Output of the Peruvian Company for March 29,953 tons.

Phoenix Oil and Transport Company, Ltd.—The gross production of crude oil of the Phoenix Group for March was 64,513 tons.

Trinidad Consolidated Oilfields, Ltd.—Output for March 65,435 barrels, an increase of 3,305 barrels, or over 5 per cent. above the output for February.

Anglo-Ecuadorian Oilfields, Ltd.—Output for March 23,686 tons.

Trinidad Leaseholds, Ltd.—Oil produced during March, 42,798 tons; oil

purchased during March from other companies, 76,107 tons.

British Controlled Oilfields, Ltd.—Total output for March, 63,080 barrels; shipments for March, 35,082 barrels. Total output week ended April 2, 1938: 14,182 barrels. Output for week ended April 9th, 14,552 barrels.

The British Burmah Petroleum Company, Ltd.—Output of crude oil, 40,203 barrels for March, 1938.

Tampico Oil, Ltd.—The total output from the company's properties in Mexico during March was 13,379 barrels, in respect of which the royalty due to Tampico Oil, Ltd., was 1,004 barrels.

GREATER LONDON: Population and Industries

The following charts illustrate recent movements in Greater London's population and industries, which are especially interesting in view of the Royal Commission on Population Distribution now sitting. The upper panel shows a fall in the population of the twelve central boroughs and, less marked, in the rest of the London County Council area, counterbalanced, however, by a rapid expansion in Outer London (the area between the L.C.C. boundaries and those of the Metropolitan Police District). The lower panel contrasts the industries and occupations of Greater London with those of the whole of Great Britain. The figures of insured persons were specially prepared by the Ministry of Labour for the L.C.C.; and have been taken from *London Statistics* (volumes 39 and 40).

Finance

GOVERNMENT RETURNS

For the 9 days ended April 9, 1938, total ordinary revenue was £18,771,000, against ordinary expenditure of £26,824,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1 last is £8,053,000, against £10,860,000 for a 10-day period a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills. On April 8th, applications at £99 17s. 5d. per cent. for bills to be paid for on Monday, Tuesday, Wednesday, Thursday and Saturday of the following week were accepted as to about 56 per cent. of the amount applied for. Applications at higher prices were accepted in full. £43.0 millions of Treasury bills are being offered on April 14th.

(a) No comparable figure.

Aktiebolaget Volvo.—In 1937 6,325 vehicles were sold for Kr. 36,359,691, against 4,176 for Kr. 23,845,828 in 1936. Total assets, December 31, 1937, Kr. 25,706,267. Profit for 1937, Kr. 2,116,422. To reserve, Kr. 520,000. Dividend 5 per cent., absorbing Kr. 910,000. Carry forward increased from Kr. 433,168 to Kr. 1,119,591.

Swedish Ball Bearing Company.—Results for 1937 show net profit of Kr. 24,017,005 after depreciation of Kr. 5,887,063 and taxes provision of Kr. 7,200,000. A dividend of Kr. 10 per share totalling Kr. 13,000,000 is proposed, as last year. To pensions, Kr. 1,300,000, balance of Kr. 9,717,005 transferred to available surplus account, which will then be Kr. 78,388,717. The general meeting will be held in Gothenburg on May 23, 1938.

THE ROYAL BANK OF CANADA

DIVIDEND NO. 203

NOTICE IS HEREBY GIVEN that a DIVIDEND of 2 per cent., being at the rate of 8 per cent. per annum, upon the Paid-up Capital Stock of the Bank, has been declared for the three months ending 31st May, 1938, and will be PAYABLE at the Bank and its Branches on and after 1st June, 1938, to shareholders of record 30th April, 1938.

By Order of the Board,

E. B. MCINERNEY, London Manager.

6 Lothbury, London, E.C.2.
14th April, 1938.

ALEXANDRIA, EGYPT
PAYMENT OF DIVIDEND

NOTICE IS HEREBY GIVEN that a DIVIDEND of Ten Shillings and Ninepence per £5 Share will be paid without deduction of British Income Tax on Coupon No. 99 on and after the 16th April, 1938, at the National Bank of Egypt, in Alexandria at Rue Toussoum, or in London at 6 King William Street, E.C.4.

Dated, Alexandria, Egypt, the 11th April, 1938.

By order of the Board,

K. B. WOODD SMITH,
Managing Director.

Back to the Old Diplomacy

THE Anglo-Italian Agreement signed in Rome by Count Ciano and Lord Perth last Saturday, April 16th, is an historic landmark; for, whatever view may be held as to its wisdom, its justification or its inevitability, it unquestionably marks in a most spectacular manner the departure by Great Britain from the collective settlement of world affairs which was set up after the Great War. It is, for the time being at all events, an abandonment of the attempt to establish an international order, based on justice and reason, which was to govern the relations between the citizens of civilised countries. It proclaims that the gulf between public and private morality is not, after all, to be closed, and that a shifting balance of power, collapsing periodically into war, is to return to a world in which the application of science has made war suicidal. The aggression of great States in Manchuria, Abyssinia, Spain, Austria and China were blatant violations of the new order. Last week's agreement is an acquiescence—to be followed shortly in the case of Abyssinia by formal recognition—in two of those acts of aggression; and it is offered to the aggressor by a country which has been one of the principal architects of the League, and until recently was one of its most active sponsors.

The agreement goes even further. Great Britain not merely condones the Duce's aggression in Abyssinia and Spain. She comes to terms with him and seeks to build up good relations on the basis of these *faits accomplis*. True, the agreement is not to come into effect until the Italian men and material are withdrawn from Spain, but it is

tacitly accepted that, before it is ended, the intervention will be allowed to complete the final destruction of the Republican Government; while in Africa the Italian occupation is to be eased by a "good neighbour" agreement in return for a recognition of British interests in the waters of Lake Tsana. In short, we are back to the old diplomacy—in the atmosphere of the ten years immediately preceding August, 1914. The Anglo-Italian agreement of 1938 is a diplomatic instrument of the same character as the Anglo-French agreement of 1904 and the Anglo-Russian agreement of 1907. The kinship is unmistakable. Two Powers of unequal strength and appetite, which have been at odds with one another, simultaneously take alarm at the behaviour of a third Power which is hungrier and more ambitious than either of them. They decide that, in face of this common danger, their own quarrel is a luxury which must be renounced, at least till the German clouds roll by; so they strike a bargain. Great Britain purchases from Italy a promise not to go on twisting the lion's tail in the Mediterranean and the Red Sea. Great Britain pays Italy for this relief at the expense of other parties who are too weak to defend themselves.

But with all its defects, the agreement of 1938, like those of 1904 and 1907, mixes good with bad and creates a breathing space in which saner forces may make themselves felt. In those pre-war agreements the bargain was paid for by helpless victims. Egypt, Morocco and Persia were sacrificed then, as Abyssinia and Spain are being sacrificed now, as the cement of an alliance against the power and ambi-

tion of Germany. But in those agreements, as in this, a major evil was accompanied by a minor good. The Anglo-French and Anglo-Russian friction that had been produced by a clash of rival imperialisms was industriously, and more or less effectively, planed out; and this, at any rate, was something to the good. Study of the terms of the Agreement (which are summarised on page 178) reveals a similar element of good in it; and for this M.M. Chamberlain and Mussolini may be decorated with an olive leaf apiece. The various detailed arrangements—other than the clauses that deal with Spain or Abyssinia—are all useful steps which will relieve tension, and at least they have the merit that they are not made at anyone else's expense.

Even here, the new Anglo-Italian agreement does not go very far, if measured by our (now abandoned) post-war standards. Like the similar Anglo-Italian agreement of last year, which it reaffirms, it does not provide for any quantitative limitation of the two parties' respective naval, air or land forces. Limitation of armaments and the old diplomacy are mutually exclusive. The old diplomacy provides no end to competition in armaments except ultimate war. Short of this, however, the agreement does provide, as between Italy and Great Britain, for the qualitative limitation of naval armaments that is agreed to in the London Treaty of 1936, and it also provides for an exchange of military information; for the non-militarisation of natives (except for purposes of local defence) in Italian East Africa and in British South-East Arabia; for a stand-still, on the part of both Powers, in the fortification of points on the Red Sea and in the acquisition of political influence over either of the two independent Arabian States of Saudi Arabia and the Yemen; for abstention, on both sides, from hostile propaganda; and for the preservation, for each party, of an important facility: for Italy her freedom of passage through the Suez Canal, and for Great Britain and Egypt the use of the waters of Lake Tsana for the irrigation of Egypt and the Anglo-Egyptian Sudan.

These provisions mean (if we may assume that they are being adopted *bona fide* on both sides) that, for the duration of the agreement, the British and Italian Empires will be content to exist side by side within their present limits, without either of them trying to steal a march on the other. This is, of course, an achievement of value. But it is not, by itself, sufficient to justify the high claims that are being

made for the Agreement as a major contribution to the pacification of the world. If the Agreement is of this importance it must carry implications far wider than its actual terms. To be specific, it will prove to have been of real value only if it implies at least a partial detachment of Italy from the German alliance and the end of the sharp division between the dictatorships and the rest of the world.

The matter will not, of course, be put in such brutal terms. There will be fervid assurances of devotion to the Axis when Herr Hitler visits Rome. But there are some signs that, in fact, Signor Mussolini is now more concerned to halt than to assist the advance of Germany. There is the obvious haste to have the agreement concluded before Herr Hitler's arrival. There is the willing alacrity with which parallel negotiations with France have been started. There is the fact that those shrewd observers, the Czechs, have thought this the right moment to recognise the conquest of Abyssinia and to recall the wartime comradeship of the Czech Legions and the Italian Army. There is the widespread realisation in Italy, which no brave words of the Duce's can dispel, that the annexation of Austria was a victory over Italian interests and a blow to Italian ambitions. There is the equally widespread fear that neither the South Tyrol nor Trieste has been permanently removed from the list of German desires.

This is impressive evidence. But it is not in itself convincing. Italy has as good reason to fear Germany's hostility as to resent her expansion; and the detached benevolence with which Berlin has commented on the agreement may cover the conviction that Italy can be brought to heel when necessary. A victorious alliance with Germany is, indeed, the only possible means of realising Signor Mussolini's Mediterranean ambitions; and the mutual attraction of Fascist regimes is powerful.

Thus the final judgment on last week's Agreement, even as a piece of old diplomacy, cannot yet be given. It will be given in the coming months by Italy's behaviour. If she is found in the crises on the side of peace, then there will at least be a major gain of expediency to set against the major sacrifice of principle. But if it turns out that Signor Mussolini has merely for the time being deflected his aggressive intentions away from British preserves in order to direct them elsewhere, then Mr Chamberlain's agreement will prove to have been a bad day's work alike for the British Empire and for the world's hopes of even temporary peace.

Budget Horoscope

THE Budget which Sir John Simon is to open in the House of Commons on Tuesday—the first for which he has been responsible—has been awaited with less interest, and certainly with less apprehension, than a sober study of the figures might justify. The usual flood of guesses and anticipations has been a mere trickle this year, and the indifference undoubtedly reflects the general conviction that, for one more year at least, the taxpayer will be spared from carrying significantly heavier burdens.

How far is this widespread assumption correct? The published estimates of the Supply Services amount to £696 millions, but the necessary provision for Supplementary Estimates will bring the figure to, say, £704 millions. It is unlikely that the Chancellor will allow less for the Consolidated Fund Services than was allowed last year, so that the total for all ordinary expenditure will be about £940 millions. This does not, of course, include the £90 millions that is to be borrowed for defence expenditure. Nor does it include any provision at all for the acceleration of the defence programme that has been decided upon since the Estimates were published. It may be guessed that the Chancellor will decide to increase the authorised

total of borrowing to include this undefined new liability.

The figure of expenditure to be met out of revenue is thus about £936 millions. The total of revenue in 1937-38 was £872½ millions. It has already been estimated in *The Economist* (March 12, 1938, page 544) that there will be an automatic increase in revenue, derived partly from the delayed effect of last year's new taxes, and partly from the natural buoyancy of direct taxation that is collected one year in arrear, of about £41 millions. The present basis of taxation can therefore be expected to bring in an amount that can be put at £914 millions.

The gap between revenue and expenditure with which Sir John Simon will be faced thus appears to be of the order of £22 millions. It would, of course, be quite possible to fill the gap entirely by increased income taxation. A standard rate of income tax of 5s. in the £ is not the highest rate that has been levied in peace-time. But it has a certain symbolic importance, and it would probably be neither popular nor prudent (especially in a period of uncertain business confidence) to increase the standard rate, except as part of a large programme to meet a very urgent financial emergency. Sir John Simon will indeed be surprising

the prophets if he alters the standard rate of tax. What other expedients are open? One which has been frequently mentioned is the device of calling for three-quarters of next year's income tax (on those schedules which are divided into two instalments) to be paid in January and one quarter in July, instead of half in each instalment as at present. This would bring in about £15 millions. But it would be a non-recurring £15 millions, and it is very questionable whether it is worth while inflicting considerable inconvenience on the smaller taxpayers when the emergency itself is not non-recurring. Nevertheless, what was done in 1931 may be done again.

There has also been considerable discussion of the problem of checking tax evasion, especially among surtax payers. That there is such evasion on a large scale is unquestionable. The rates of income tax and of surtax were both at the same levels in 1937-38 as in 1931-32. Nevertheless, the yield of income tax in 1937-38 was over £10 millions, or 3.7 per cent., higher than in 1931-32, while receipts from surtax were nearly £20 millions, or 25.6 per cent., lower than in the earlier year. This difference—which can be seen very clearly in the diagram on page 213—is much greater than can be explained by the fact that there is a longer time-lag with surtax between the earning of income and the payment of tax upon it.

To establish that surtax is being avoided, however, is one thing, and to devise methods of stopping the evasion is another. All known methods of evasion should, wherever practicable, be stopped, and a further instalment of the Inland Revenue's counter-attack on the evading taxpayer may be expected this year. Some advocates, however, have gone farther than this and suggested that the whole legal principle of tax gathering should be changed. The *onus* of proof, they maintain, should not be on the tax collector to prove that a given device is illegal, but on the taxpayer to prove that his business arrangements have not been adopted with the main purpose of lessening his liability to taxation. Such a change would come very close to an abolition, for tax purposes, of the principle that every man is innocent until he is proved guilty, and it raises points of law and ethics that require far more extended discussion than is possible in the debates on the Finance Bill. And, in any case, the more radical the measures taken against tax avoidance, the less likely are they to contribute anything substantial to this year's revenue. So far as next week's Budget is concerned, there is, at most, only a million or two to be obtained from measures against tax avoidance.

What other sources of revenue are there? The Select Committee on Medicine Stamp Duties reported last year in favour of changes that would bring in about £2,500,000 more of revenue, and it may be guessed that this recom-

mendation will be accepted. Almost the only remission of taxation in the last few years that has not already been reversed is the reduction of motor licence duty by a quarter in 1934. A return to the old rate of duty would produce nearly £12 millions in a full year and perhaps £8 millions in the current year, unless there were a marked tendency to change over to smaller cars, which would not, in any case, be apparent at once. It would perhaps be sounder policy to raise the same sum by an increase of 2d. per gallon in the petrol duty. Additional sums could also be raised in case of need from other Customs and Excise duties. The taxes on alcohol and tobacco alone bring in over £112 millions, and could be made to yield a few millions more with slight adjustments, though it is doubtful whether increases in these duties would be acceptable without corresponding new burdens of direct taxation. Luxury taxes are not open to the same objection, but, as a class, they involve much administrative difficulty for small returns. The examples given above, however, are quite sufficient to show that there should be no great difficulty in raising by taxation the £22 millions of which the Chancellor will be in need.

Part of the sum required may, however, be found from sources other than taxation. The Road Fund is no longer there to raid, but there are other similar autonomous funds with tempting balances. Mention has recently been made of the Victory Loan Suspense Account, but this is only one of several. The Exchange Equalisation Account has accumulated a jobbing profit which is believed to be about £12 or £15 millions. Another large potential source of windfall revenue is in the gold stock of the Bank of England. If this were re-valued at the present market price of gold there would be a net profit, after making all the necessary adjustments, of something of the order of £50 millions, which would accrue to the Government. Sooner or later this profit, or the larger part of it, will have to be taken, but the possibility of balancing this year's accounts without recourse to this device would perhaps make it more prudent to wait until next year, when rising expenditure and (very probably) falling revenue, will create a very difficult budgetary problem.

The general expectation thus appears to be broadly justified. The probability is that, for one more year, it will be possible to balance the Budget—or that part of it that is allocated to revenue—by small increases of the miscellaneous taxes and by drawing on various reserves, and without any sensational new imposts or large increases in the main taxes. But if the Chancellor solves his problem in this way it will only be prudent of him to warn the public that we are entering on a period in which the financial problems of the State will not be capable of solution save by much more heroic measures than will be necessary this year.

High Industrial Profits

AS every accountant knows, the last day of December is as popular a date for the closing of financial records as is the month of August for British holiday-making. The first quarter of each year, consequently, always produces a rich harvest of company reports, whose significance is both historical and anticipatory. Their figures are a measure of economic progress in the year which has passed and of taxable capacity in the financial year to come.

Between January and March of this year we analysed the reports of 646 British companies, with a total share capital of £837 millions. The results of our inquiry are striking. Beyond all question, 1937 was a prosperous year. The first of the tables given on page 176 shows that since 1934 the increase in industrial earning power has been uninterrupted, and that profits represent a higher percentage return on paid-up share capital to-day than before the Great

Depression. Our sample of companies is not identical from year to year, and to preserve an element of continuity we have contrasted the earnings of each year's batch of companies with those of the same concerns in their preceding financial year. On this basis it is possible to compile a chain index of profits reported in the first quarter of every year since 1929, which gives the following results:—

CHAIN INDEX OF TOTAL PROFITS
(1929=100)

Profits earned in Year*	Profits	Profits earned in Year*	Profits
1929	100.0	1934	84.1
1930	89.3	1935	95.3
1931	76.5	1936	106.7
1932	69.7	1937	116.7
1933	73.4		

* Reported in succeeding year.

PERCENTAGE RETURN ON TOTAL SHARE CAPITAL, 1929-38
(Companies reporting in first quarter of each year)

This series of index figures suggests that recovery from depression opened inconspicuously in 1933 but was well under way by 1934. Since then, its pace has been remarkably even. Between 1934 and 1935 the index rose 11.2 points. Between 1935 and 1936 it rose a further 11.4 points, but last year showed a very slight slackening; for the increase, as compared with 1936, was 10.0 points. In view of the fact that 1937 was a year in which prices and business activity alike reached a peak and began to decline, it is both significant and gratifying that the check to the rate of growth of industrial earning power was hardly perceptible.

In Table II we have set out various figures showing the method of division of profits during each of the last ten years. For some years past, the relative burden of debenture interest has been slowly but steadily decreasing. This tendency still persists, and it represents a long-term factor in favour of ordinary shareholders. There has been no similar decline in the average rate of preference dividend, which has even tended to increase as certain companies have caught up with the arrears of preference payments accumulated during depression. Ordinary shareholders have benefited indubitably from industrial recovery; for their current average rate of dividend is nearly half as high again as it was in the depths of depression. But that rate is still slightly below the level of 1929, although the percentage earned for ordinary shares is higher to-day than in the pre-depression year. The explanation is clear from even a cursory inspection of the first four columns of Table II. The proportion of total profits "ploughed back," by way of additions to reserves, etc., was 21.1 per cent. in 1929, 9.6 per cent. in the depression year 1932, and 29.7 per cent. in 1938. In other words, a large proportion of the fruits of recovery has been earmarked not for shareholders but for the "kitty." Much of the increased capital required to finance an increasing business has come from within rather than from without.

The average figures for all industries, which have been so far considered, cover a multitude of differences in the experience of individual trades. The first of the two charts on

DISTRIBUTION OF PROFITS, 1938
(Companies reporting in first quarter; percentages of total share capital)

this page shows that the earnings of all companies reporting in the first quarter of this year averaged just under 12 per cent. on total share capital, against 11.1 per cent. in 1929 and 7.6 per cent. in 1933. But the second chart shows that the ratio, for the latest year, is well below 8 per cent. in the case of textile companies, and over 16 per cent. in that of the prosperous retail trading group of concerns. Although the iron, coal and steel companies, again, are enjoying greater prosperity for many years past, the return on their total share capital is actually a little more than the average for all companies. The "pillars" in the chart have been shaded to show the division of profits between preference and ordinary dividends and reserves. Significantly, the companies in the textile and the food and drink groups, which have a profits ratio below the average, are putting a smaller proportion of earnings to reserve than the other groups. Reserve policy in the shops and stores group is adequate rather than generous, but the iron companies and the electric light and power concerns distinguished by the large proportion of their total earnings which they are "ploughing back." Detailed figures of earnings, and their distribution, in a large number of industrial groups, will be found on page 217.

On the whole, our analyses suggest that although the rise in industrial earnings did not quite retain its momentum last year, profits should make a noteworthy contribution to the buoyancy of the revenue, of which Sir John Simon's first Budget will doubtless take its full toll next week. *Per contra*, our figures afford at least a partial explanation of the conservatism with which the Stock Exchange is viewing future dividend prospects. The policy of directors is tending increasingly to stress the importance of reserve allocations. It is unlikely that, in the event of a trade setback, they would be prepared to allow reserves, rather than dividends, to take the full brunt of any decline in total earning power.

TABLE II.—DIVISION OF PROFITS (FIRST QUARTER COMPANIES)

Reports issued during First Quarter	Proportion of Total Profits* (= 100)			Rate of Payment on Each Class of Capital			
	Paid in Pref. Div.	Paid in Ord. Div.	Put to Reserve or "Carried Forward"	Debt-interest	Preference	Earned for Ordinary	Paid on Ordinary
1929	18.2	60.7	21.1	4.89	5.3	14.7	10.9
1930	19.7	61.9	18.4	4.89	5.8	13.0	10.0
1931	21.7	62.1	16.2	4.82	5.6	10.7	8.5
1932	21.5	68.9	9.6	4.80	4.9	9.9	7.5
1933	24.0	63.8	12.2	4.77	5.0	8.9	8.7
1934	22.1	59.4	18.5	4.73	4.9	9.8	7.5
1935	20.8	59.8	19.4	4.64	5.1	11.0	8.3
1936	19.1	58.7	22.2	4.51	5.3	12.6	9.2
1937	19.8	56.6	23.6	4.39	5.8	14.4	10.1
1938	17.0	53.3	29.7	4.22	5.5	15.8	10.2

* After debenture interest.

West Indian Problems

(By a Correspondent)

NEARLY four thousand miles across the Atlantic lies a beautiful chain of islands forming a crescent from Florida in the United States to Venezuela in South America and enclosing the blue waters of the Caribbean Sea. Though the British public hears little of them, the British West Indies are among the oldest and were once the most highly prized of British domains.

Since Columbus stumbled across them in his search for a westerly passage to India, the islands have had a chequered history. After Columbus came settlers from Europe, seeking with the help of black slave labour to make their fortunes in cocoa, coffee, cotton, tobacco and, above all, sugar. For two centuries the islands were a scene of great prosperity, and, being much coveted by European Powers, the theatre of numerous wars. But with the coming of the nineteenth century that prosperity vanished, and with it the islands, fading into obscurity, ceased to be a turbulent concern of European politics.

Not least of the factors which contributed to the decline of the West Indian planter was the abolition of slavery in 1834. But what spelt ruin to a handful of planters brought rebirth to the hundreds of thousands of Africans whom they had enslaved. By raising them to free and equal citizenship, the abolition of slavery turned the West Indies into a black community. If the ghost of an old planter roamed through the islands to-day, he would see the descendants of his slaves filling positions of high responsibility, prospering as merchants and planters, and revealing themselves, with doctors, lawyers, clergymen, engineers and scientists, the intellectual equals of the white man. These, however, are a minority, the *élite* of their race; the vast majority remain poor and untutored.

The task of extending the fruits of progress to as wide as possible a circle has been rendered particularly difficult in recent years by the economic situation. The two and a half million inhabitants are mainly agricultural; they earn their living by exporting sugar, cocoa, copra, bananas and citrus products, and they import manufactured goods in return. So severely, however, and for so many years, have the prices of West Indian products been depressed, that neither the increased preferences granted by Great Britain nor the achievement of technical improvements have sufficed to restore the islands to prosperity.

Trinidad, with its population of 450,000, is an exception, because it has an expanding oil industry which contributes much to its well-being. Jamaica, also, with its population of 1,100,000, has had an expanding banana industry which, though it is now menaced by plant disease, has done much to improve the standard of living of its people. But the smaller islands—Barbados, the Windward group (Grenada, St. Lucia, St. Vincent and Dominica) and the Leeward group (Antigua, St. Kitts, Montserrat and the Virgin Islands)—each depend almost exclusively on sugar, citrus or cocoa. They have endured so many economic difficulties that the occurrence, in recent years, of a large number of serious disturbances need occasion little surprise. Barbados, especially, which has a rapidly expanding population of over 1,000 to the square mile, is a centre of extreme and increasing poverty, which can only be alleviated if new outlets for emigration are found.

There is some hope in the islands that the new international sugar agreement may prevent the market from collapsing as badly in the future as it has in the past. Further, experiments are being made in growing and exporting fruit

and vegetables for the Canadian and United Kingdom markets in order to reduce the present dependence on sugar. Hope has been expressed, also, that the forthcoming Anglo-American trade agreement will include substantial concessions to the West Indies. The proportion of West Indian exports taken by the United States fell from 26 per cent. in 1930 to 7 per cent. in 1933, partly as a result of heavy American restrictions; and it was still only 11 per cent. in 1936. Anything which tended to restore the natural outlet for West Indian products, would be welcome.

The instability of agricultural prices has also helped to shake confidence in the agricultural future of the West Indies, and possibilities in other directions are being eagerly canvassed to-day. Serious efforts are being made to develop a tourist trade, for which the islands, by their beauty and equable climate, are admirably suited. Greater emphasis, however, has been laid on the prospects of industrialisation. In this connection, the decision of Messrs Tate and Lyle to establish refineries in certain islands was warmly welcomed; and it is hoped that other companies will choose to take advantage of the combined presence of large supplies of labour and of raw materials to establish factories in the West Indies for processing other products.

Simultaneously, the case for land settlement is being urged more strongly than ever before. The present structure of West Indian society is still largely the legacy of the days of slavery, when a handful of white planters owned all the land and drew upon the rest of the population merely as a source of labour. The immediate effect of Emancipation was to create a large rural proletariat. Though in the succeeding century a substantial peasantry has emerged, especially in Jamaica, the distribution of land still bears the stamp of slavery. The social consequences of the plantation system have shocked every Commission which has visited the islands since 1897. There is now a vast body of official literature condemning the low rates of wages paid to agricultural labour, the deplorable housing conditions on the plantations, and the inadequate medical, educational and other social services which are directly attributable to it. Forty years ago, a Royal Commission urged in the strongest terms that the last vestiges of slavery should be removed by buying and breaking up some of the large plantations and settling the people on the land as co-operative peasant proprietors. Their recommendations have been repeated by all successive commissioners, including last year's Trinidad Commission, but they have hitherto been largely ignored.

A great responsibility rests with the Colonial Office to press forward with the policies so authoritatively commended. And it is equally important that the constitutions of the islands should be liberalised. There is an insistent demand for a broader franchise and wider representation of the people on the Legislative Assemblies.

The children of the liberated subjects of the West Indies have already behind them a record of solid progress and achievement in co-operation with the children of the liberators. Unhappily, this progress has recently been set back and this co-operation has been marred by poverty and by the serious disturbances which have originated in poverty. It is the duty of British statesmanship to help to remove the obstacles which stand in the way of further advance. Given sympathy and sound assistance, the West Indies will remain among the most loyal, as well as the most ancient, of British Colonies.

The Anglo-Italian Agreement

A Summary of the text of the Rome Agreement signed on April 16th by Lord Perth and Count Ciano on behalf of the British and Italian Governments, respectively.

Protocol

The two Governments state their desire to reach agreement on questions of mutual concern in order to contribute to the general cause of peace and security. The questions involved are listed as: *the Mediterranean; Military Information; the Middle East; Propaganda; Lake Tsana; the Military Duties of Natives in Italian East Africa; the free Exercise of Religion in Italian East Africa; and the Suez Canal*. On each topic a separate and self-contained Declaration is annexed, these instruments to take effect on such date as the two Governments shall together determine. When the instruments take effect, the two Governments will invite the *Egyptian Government* to participate so far as questions affecting Egypt or the Anglo-Egyptian Sudan are concerned, including boundaries and commerce. And the British and Italian Governments agree to negotiate as soon as possible about commercial relations between Italian East Africa and the United Kingdom, India and British colonies, dependencies and mandated territories.

Eight Annexes are then appended.

Annex One

The Rome Declaration of January 2, 1937, regarding the maintenance of the *status quo* in the *Mediterranean* is reaffirmed.

Annex Two

The two Governments agree to exchange military information in January of each year regarding the movements and distribution of military, naval and air forces stationed in or based on (a) overseas possessions in or with a seaboard on the Mediterranean, Red Sea or Gulf of Aden or (b) territories in Africa bounded by longitude 20° east on the west and latitude 7° south on the south. They also agree to notify each other of any decision to provide naval or air bases in the Mediterranean east of longitude 19° east and in the Red Sea or approaches thereto.

Annex Three

To ensure that there shall be no conflicts of British and Italian policy in the *Middle East*, it is agreed that:—

(1) *Neither party* will impair the independence or integrity of *Saudi Arabia or the Yemen*; obtain or seek a privileged position of a political character in these territories; acquire, fortify or defend islands in the Red Sea; or intervene in any conflict in *Saudi Arabia or the Yemen*. They further recognise that it is in their common interest that no other Power should seek a privileged position in these territories or intervene in any conflict therein. (*Articles 1, 2, 3, 4 and 5.*)

(2) In the territories of the Arab rulers east and south of the present (or future) boundaries of *Saudi Arabia or the Yemen*, the *Government of the United Kingdom* agree to take no action likely to impair the independence or integrity of *Saudi Arabia or the Yemen*; not to undertake any military preparations other than purely defensive, or enrol the inhabitants in military forces other than forces for local defence or to preserve order; and to maintain the autonomy of the Arab rulers under their protection. *The Italian Government* declare they will not seek political influence in this zone. (*Article 6.*)

(3) *The Government of the United Kingdom* guarantee freedom of entry, travel and residence and the free exercise of their trades to Italian citizens and companies in the *Aden Protectorate*. (*Article 7.*)

(4) Provision is made for the revision of this Annex, which may be terminated upon notice by either party, after the expiry of 10 years. (*Article 8.*)

Annex Four

The two Governments agree not to use publicity or propaganda to injure the interests of each other.

Annex Five

The Italian Government confirm their assurances (given in 1936) that they have no intention of overlooking or repudiating their obligations in the matter of *Lake Tsana*.

Annex Six

The Italian Government confirm their assurance of 1936 not to compel Italian East African natives to undertake military, as distinct from police or local defence, duties.

Annex Seven

The Italian Government guarantee freedom in the exercise of religion to British nationals in Italian East Africa; and will look with favour on humanitarian and benevolent activities by British religious bodies.

Annex Eight

The two Governments re-affirm their intention to respect the Constantinople Convention of 1888, guaranteeing free use of the *Suez Canal* to all powers at all times.

In addition to the above formal Agreement, Notes were exchanged on April 16th between the British and Italian Ministers on the following topics:—

Libya: Count Ciano informed Lord Perth that withdrawals of Italian troops from Libya had been begun at the rate of 1,000 a week, and would be continued at this rate until the Italian Libyan effectives reached peace strength.

* * *

Spain: Count Ciano informed Lord Perth that the Italian Government fully adhered to the United Kingdom's formula for the proportional evacuation of foreign volunteers from Spain, which they would carry out when and how the Non-Intervention Committee might determine. He further stated that all Italian volunteers and war-material would, in any case, be withdrawn on the termination of the Spanish Civil War; and that the Italian Government again disclaimed any territorial or political aims and sought no privileged economic position in Spain, the Balearic Isles, the Spanish Overseas Possessions or Spanish Morocco.

* * *

Abyssinia and Spain: Lord Perth informed Count Ciano of H.M. Government's intention to take steps, at the meeting of the Council of the League of Nations, to clarify the situation of member States in regard to the recognition of Italian sovereignty over Ethiopia. . . . H.M. Government also regarded a settlement of the Spanish question as a prerequisite of the entry into force of the Agreement between the two Governments.

* * *

London Naval Treaty: Count Ciano informed Lord Perth that the Italian Government had decided to accede to the Naval Treaty signed in London on March 25, 1936.

Also on April 16th another Agreement was signed between the British, Italian and Egyptian Governments, as follows:—

Desiring to provide for friendly relations in *East Africa*, the three Governments undertake, in addition to discussing detailed frontier questions, at all times to co-operate for the preservation of good neighbourly relations in that region; to prevent raids and other unlawful acts across their respective frontiers; to prevent the evasion of the anti-slavery laws of the respective territories; and not to enrol the nationals of the other parties (including deserters or refugees) in forces of a military nature.

Topics of the Week

Speeding up Rearmament.—The acceleration of the defence programme proceeds slowly. The Minister for Defence has again written to the employers and unions in the engineering industry in the strictest confidence and, it is reported, still in general terms. It is clear that the Government have laid no quantitative proposals before the industry, but are rather urging the two parties to prepare a speeding-up programme autonomously, and then to state their utmost capacity to augment the production of munitions and material. The Confederation of Engineering and Shipbuilding Unions have proposed a joint meeting with the Amalgamated Engineering Union. When this has taken place, joint or separate meetings will be held with the employers. The greatest immediate need in the revised arms programme is for aircraft, and here a new possibility is suggested by Lord Winterton's recent announcement that the British Government are investigating the possibility of obtaining aircraft from America. A small mission has now left to pursue the inquiry.

Hitherto, it has been the official British view that military aircraft could be obtained more expeditiously from the British than from the American industry. This view has been based partly on the fact that the production of military aeroplanes in America has hitherto been small, and partly on the existence of an American Government ruling that prohibits the export of the latest types. But now it is understood that the American Administration is disposed to put no obstacles in the way of the export of aeroplanes to Britain, while the differences experienced in obtaining a rapid enough supply at home are making the Air Ministry look with a more kindly eye on the possibilities of American production. Another angle to the matter is the possibility of setting up factories in Canada which could manufacture aircraft of either British or American design, out of reach of the enemy's attack and the American Neutrality Act respectively. But in whatever way it proves practicable to bring in the industries of the New World to redress the balance of the Old, it is obviously common sense that something of the sort should be done. We have now accepted the melancholy fact that the accumulation of monstrous armaments by the peaceful States is a necessity if peace is to be preserved, and the democracies should exploit to the full all their advantages, of which the ability to buy from America is not the smallest.

American Armaments.—Meanwhile, America is concerned with her naval armaments. The Naval Affairs Committee of the Senate has favourably reported the Bill embodying President Roosevelt's recommendations, and there is every indication that it will go through. It will authorise the construction of no fewer than forty-six new vessels, including three battleships of 45,000 tons, two aircraft carriers and nine cruisers. It is doubtful whether this is the answer that the Japanese expected to receive to their behaviour of recent years and months, but it is an answer that will give them food for thought. The fact is that American public opinion is changing, in spite of the furious rearguard action put up by the isolationists. Europeans should resist the temptation to exaggerate the extent to which the conversion has already been achieved. It is salutary to remember that the Neutrality Act is still on the statute book, and that the movement to repeal it has not yet thought it prudent to challenge a vote in Congress. But the events in the Far East that culminated in the sinking of the "Panay" last December, and the events in Europe that culminated in the seizure of Austria, have made as profound an impression in America as anywhere else. The conviction is growing that if another world conflagration breaks out, America will certainly be unable, and possibly unwilling, to keep out of it. From this conviction to the belief that it would be better to help prevent the conflagration from occurring

is only a short step in logic, but in the practical realities of American politics it is a long road, on which only the first milestones have yet been passed.

* * *

Cinema Operators' Strike.—The approach of Easter was heralded last week by threatened strikes of cinema projectionists in London and the Home Counties, South-East Lancashire, Northumberland, Durham, Tyneside and North Yorkshire. In London, the Electrical Trades Union, which was responsible for the threatened stoppages in all these districts, claimed recognition from the Cinematograph Exhibitors' Association. In Lancashire, the operators were insistent upon securing the 48-hour week previously agreed upon by the local Conciliation Committee, although the exhibitors alleged that the larger cinemas with long programmes could not guarantee a working week of less than 52 hours. Elsewhere, the Union's demand was, more generally, for shorter hours, higher pay and improved conditions. Strikes actually took place in London, Lancashire and Hull during the week-end, and on Tuesday spread to film studios at Islington and Shepherd's Bush. As a whole, the stoppages were unsuccessful. The public went to the pictures as usual, unmoved by the projectionists' grievances; and the machines were operated by members of the National Association of Theatrical and Kinema Employees, pooled among the exhibitors. Actually, the E.T.U. has no formal status in the cinema industry. The workers' representatives on the Joint Conciliation Board and its local committees, whose agreements are ostensibly the basis of cinema working conditions, are drawn from the N.A.T.K.E. The E.T.U.'s action has been in part merely a declaration of inter-union war. On the other hand, although the E.T.U.'s proper procedure was first to approach the Conciliation Board, a majority of operators are their members; and, most important, the current agreements about wages, hours and conditions, which are by no means generous, are far from being effectively and generally applied. In the last resort, however, the operators are the aristocrats of their trade. The young people cited at this week's conference of the National Union of Teachers as working 70-80 hours a week, are the real victims of the unorganised character of Britain's most popular industry.

* * *

Milk Distribution.—Reports have appeared in the Press in the last few days of a forthcoming Government scheme to experiment with the rationalisation of the retail distribution of milk. As in the case of the very similar Government proposals for rationalising the retail distribution of electricity last year, the public's information is based

only on what has leaked out through the indignation of the interests affected, who have apparently been consulted by the Ministry of Agriculture. This is particularly unfortunate, as it tends to create an atmosphere of prejudice against the proposals, which the full revelation of their purport will be unable to overtake. In point of fact, the Government's proposals, in so far as they are known, seem to be moderate and praiseworthy. Almost every inquiry into the milk trade has reported that the price of milk is very high in this country—high relative both to the price of milk in other countries and to the prices of other foods in this country—and that part at least of the explanation is to be found in the high cost of distribution. There is good reason to believe that the present state of competition in the trade contributes to the high cost—both directly, by ensuring that few of the facilities of distribution are used to capacity, and also indirectly, by stimulating distributors, whose prices are fixed, to indulge in all manner of expensive and unnecessary additions to distributive service. The Government's object is apparently to experiment in a number of areas with unified distributive services, in order to see whether costs can be reduced and consumption expanded. It may be presumed that these experiments will be carried out with the consent of the persons affected and that there is no question of compulsion either on the distributor or on the consumer at present. The aim, it is said, is to reduce the retail price of milk by 1d. a quart. If this scheme could be combined with reform of the Marketing scheme, on the lines suggested by the Cutforth Commission, so that the price of milk for liquid consumption would not have to bear the cost of subsidising a larger surplus than is strictly necessary to ensure a level supply, it might be possible to reduce the retail price by almost another 1d. a quart. A reduction of about a quarter in the price of a vital foodstuff would be an achievement large enough to warrant the public in disregarding the clamour of aggrieved interests that is now being worked up.

New Confidence in France.—M. Daladier is settling himself into the saddle with a greater air of permanence and effectiveness than has been seen in Paris for a long time past. After the Chamber had given him almost unanimous support, the Senate went one better and gave him a vote of 290 to 0. Both houses then adjourned until May 31st, and as M. Daladier's plenary powers extend until July 31st, he should be safe for at least three months. His advent has been greeted with enthusiasm on the Bourse; both the franc and French securities have been in strong demand and prices have risen sharply. This was partly due to the new Government's success in settling the strikes that had been the cause of so much apprehension in M. Blum's last days. We recorded last week the settlement of the strike in the State aircraft factories, and this was quickly followed by a resumption of work in the great majority of the privately

owned factories as well. The improvement hitherto has been largely psychological, as the Government has not yet made any use of its plenary powers or even indicated in detail what it proposes to do. There have, indeed, been warning voices against the temptation to enjoy in inaction the temporary improvement in confidence, which has postponed the necessity for raising the limit of borrowings from the Bank of France. But the indications are that M. Daladier is using the breathing-space only for more mature consideration of the measures that will have to be taken.

It is not merely in France that M. Daladier has inspired confidence. The reaction to his advent in Germany, which greeted M. Blum with a pitying smile, has been both friendly and respectful, and both London and Rome have taken steps which indicate their conviction that France once more has a real Government. M. Daladier and M. Bonnet have been invited to London at the end of the month to strengthen the personal contacts between the French and British Governments and to concert the foreign policies of the two allied Governments. As for Rome, the French suggestion that the time had come to heal the differences between France and Italy has been accepted with alacrity by Count Ciano and negotiations are to begin at once. They will presumably follow lines parallel to those that have produced the Anglo-Italian Agreement, though it may be supposed that the French anxieties on the subject of Spain will be far sharper than Mr Chamberlain's. The French cannot afford to forget that, even if the Italians now in Spain are eventually evacuated, nothing has been done to get rid of the Germans, who have made themselves both more useful and less obnoxious to the Spaniards than the more numerous Italians. But since Britain has decided to make an agreement with Italy and to recognise the conquest of Abyssinia, France has nothing to gain by standing out. On the contrary, there is much to be gained if France and England can contrive to keep in step in their diplomacy.

Mexican Oil.—Since the Mexican Government returned their *non possumus* to the British Government's demand that the oil companies should be reinstated in their properties, there has been no further news of diplomatic action. The position, obviously, cannot remain in its present state, with Great Britain standing on her dignity while Mexico sits on the oilfields. But what the next move will be is not clear; for the British and United States Governments, unfortunately, are not at one in their demands on Mexico. Britain demands the oil, the whole oil, and nothing but the oil, while the United States would be satisfied with an equivalent financial consideration, of as yet undefined dimensions. The Mexican Chamber of Deputies has now approved an issue of internal bonds, to the extent of 100,000,000 pesos. Meanwhile, a British financier is rumoured, in Mexico City, to have secured a contract for the purchase of 15,000,000 barrels of Mexican petroleum. The logical policy for the British Government should be to refuse to recognise the validity of any transaction arising out of such an arrangement, having regard both to the Government's expressed policy and to the interests of British investors the world over.

Czechoslovakia's Fight for Peace.—A timely and courageous stroke for peace was struck by President Benes on Easter Saturday. He proclaimed an amnesty—which is to include the discontinuance of prosecutions under the Czechoslovakian Defence of the Realm Act—for all political offences other than military treason; and even sentences for this offence may be subject to reconsideration in special cases. The number of the beneficiaries is announced as 1,235 Germans, 485 Magyars, 187 Ruthenes, 30 Poles, as well as 930 Czechs and Slovaks. The number of persons serving sentences or awaiting trial on charges of military treason is stated to be 1,320. To these the amnesty does not apply, but they may petition for a revision of their sentences or for abandonment of the

case against them. These figures will not be surprising to observers who have been following Czechoslovakia's domestic affairs closely; an act of clemency was due on grounds of humanity as well as political expediency. But Czechoslovakia may justly claim that her police-work will bear comparison with that of most of her neighbours, and that her President has had the courage and vision to take the initiative in a policy of liberality and mercy which might be followed with advantage all over Central and Eastern Europe from Hamburg to the Urals. Equally notable was the speech which the President delivered on the same day, in the Chamber of Deputies at Prague, on the occasion of the annual ceremony of the proclamation of an Easter Peace Week. Dr Benes declared that Czechoslovakia was determined to avoid anything that might increase the tension between the Great Powers. She believed especially in an understanding with Germany in the spirit of the latest assurances that had been given by the German Government. The President went on to express his wish that all questions at issue affecting the nationalities in the Republic, and in particular the question between Czechs and Germans, should be discussed objectively and amicably in an endeavour to arrive at a compromise acceptable to both parties. He repeated the assurance that Czechoslovakia did not intend to join any ideological front, and the warning that she would resist any attempt to force her into one. He added that it was clear that any conflict arising out of a local quarrel in Europe would inevitably become general. If all the statesmen of Europe were as statesmanlike, the rest of us might sleep easier.

A Plot Foiled in Roumania.—At long last the Roumanian Government has taken stringent measures against the notorious Fascist organisation, the Iron Guard—and has done so, moreover, in circumstances of European significance. At the time of the formation of the first Cabinet under the Patriarch and the creation of the new royal dictatorship in Roumania, M. Codreanu, the leader of the Iron Guard, sought refuge in Italy, where he announced his intention of retiring from politics. Since then, however, a second Patriarchal Government has been formed, whose anti-Fascist tendencies, both in domestic and in foreign politics, are thoroughly distasteful to M. Codreanu and his external abettors. Shortly before Easter, he returned to Roumania from Italy, well supplied with arms and money, and, according to the Roumanian Government's announcement, plotted a *coup d'état* which was to set up in Bucharest a regime that could be relied upon to make Roumanian oil available to the hungry military powers of the Rome-Berlin axis. The plot, however, was discovered, the ringleaders were seized and are to be put on trial, M. Codreanu among them. Thus one more proof is provided of the fact that Roumania, under King Carol's leadership, is now firmly set upon a course which, while hardly democratic, is certainly more firmly opposed to the diplomacy of Rome and Berlin than at any time since M. Titulescu left office. The peaceful penetration of South-East Europe is not going to be so easy for the new masters of Vienna as has sometimes been supposed. The domestic implications of the affair are no less satisfactory. No post-war private army in any country has a blacker record of lawless violence than the Iron Guard (one of the discoveries of the last few days has been proof of M. Codreanu's implication in the murder of the Liberal Premier Duca in 1934). The Iron Guard has derived its strength from the dissatisfaction of the new intellectual proletariat that is being turned out by the post-war secondary schools and universities of Greater Roumania. In pre-war Hungary, no doubt, the Roumanian part of the population was starved of higher educational facilities, and a redressing of the balance was overdue. But that is no excuse for the gross intolerance of more educated minorities, especially of the Jews, which the Iron Guard has preached, on no better ground than that they still occupy a large place in the commercial and professional life of the country. Racial hatred is poisoning life throughout Central Europe, and the Iron Guard, in its smaller sphere, is as much responsible as the Nazi Party in its larger. It will not be mourned.

Road Wages Bill.—The text of the Government's eagerly awaited Bill to regulate the remuneration of workers on motor goods vehicles has been made public. Ever since the licensing of goods vehicles was determined by the Road and Rail Traffic Act of 1933, there has been an obligation upon licensees under statute to pay reasonably high and uniform wages and to provide reasonably good working conditions. For reasons examined in a leading article in *The Economist* on April 2nd (page 17) attempts to establish effective standards of remuneration through a joint Conciliation Board representative of employers and workers have largely failed. The Baillie Committee reported last year that the enforcement by Ministerial Order of agreed decisions relating to wages and conditions was desirable. In March of this year a strike was threatened on the temporary breakdown of the existing voluntary conciliation machinery. The new Bill follows the Baillie Committee's recommendations. A Central Wages Board, representative of operators and men, will be set up for Great Britain, with Area Boards for Scotland and the ten Traffic Areas of England and Wales. The Board's proposals will be submitted to the Minister of Transport, who will be empowered to give effect to them by Order. This scheme follows closely the proposals recently made for retail trade by a Committee set up under the *aegis* of the Ministry of Labour, and is symptomatic of the current movement to apply established Trade Board methods to large and relatively unorganised industries. This system of Boards will apply only to the employees of public and limited carriers (holders of A and B licences). The employees of private carriers, using vehicles in connection with their own business, were excluded from the 1933 Act, though such operators number nearly three-quarters of all carriers. Under the new Bill these workers may appeal to the Minister for improved wages. The Minister may refer the complaint to the Industrial Court, which will decide the appeal according to existing collective agreements if the employer and/or the workers concerned are so covered or, if not, according to trade union agreements or Industrial Court decisions regarding remuneration payable for similar work. No new principle is introduced by this measure, but it reflects a desirable trend towards making effective collective agreements and uniform standards in the great disparate industries. Retail distribution is ripe for similar action.

Wars East and West.—Both in Spain and in China weight of metal is telling against mere human devotion. General Franco, aided by the artillery and the aircraft of his abettors, has reached the Mediterranean. Government Spain was cut in two on Good Friday, when the insurgents occupied the coast town of Viñaroz, immediately to the south of the mouth of the Ebro. Since then, Government attempts to dislodge them have failed, and General Franco is now in occupation of almost thirty miles of the coast. That this gives him a decisive advantage is

all too clear. But if he expected his arrival at the sea to produce instant collapse in the Government ranks he has been disappointed. Barcelona and Madrid, now cut off from one another, are showing equal determination. The Government have remained in Barcelona, while General Miaja is in civil and military command of what is now known as Central Spain. In both regions the resistance is being intensified and solidarity between the different squabbling factions is being achieved. It will take something approaching a miracle for the Spanish Government to be saved. But they are going about their work as if they were confident of the miracle's arrival.

* * *

In China the main battle is raging in southern Shantung. This is the region in which the Chinese have successfully held off the Japanese attack for two months, and have latterly inflicted severe reverses on the invaders. The Japanese have now brought up heavy reinforcements, and are smashing their way through to their objective, which is the Lunghai Railway. The Chinese, however, are very far from defeated, even in this single battle of what is clearly going to be a long-drawn war. They are showing themselves increasingly resourceful in waging guerilla war behind the Japanese lines, and they are also showing an ability to take advantage of the Japanese concentration on the Shantung front by attacking some of the weakened outposts of the wide Japanese invasion. China should borrow not merely her tactics but her grand strategy from Parthia. She is doing so very successfully, and in a very true sense even a Chinese retreat is a victory for China, if the Japanese can be forced to achieve it only at the cost of precious weeks lost and precious troops drawn from the garrisons of Japan and Manchuria.

United States

A Needless Defeat

WASHINGTON, April 13.—Unless President Roosevelt finds his political touch, the United States faces two years and eight months of steady decline. This is the remaining period of the President's second term. From his point of view, it is his final opportunity to complete the New Deal, and to consolidate the control of New Dealers in the Democratic Party. From the country's point of view, his most important duty is to combat the new business depression.

The defeat of the President over the Reorganisation of Government Bill was a needless ignominy. If the Bill had been passed, it would have contributed next to nothing to the President's chief objectives. He could have withdrawn it at the first rumblings of revolt without losing face. It became a major issue only by becoming a question of confidence. This the President and his party leaders in the House chose to make it.

So the defeat produced the first successful anti-Roosevelt coalition in Congress. And there the coalition stands, waiting to do battle over the remainder of the President's programme. If it functions, the New Deal will not be completed, and Mr Roosevelt will not dominate the next election and help put his successor into office. And necessary steps to combat the depression may not be taken.

There is no comparison between this defeat and the failure last year of the Bill to enlarge the Supreme Court. However distasteful the thought may be to most Americans, the President's attack on the Court was logical and strategically sound. The New Deal represents a shift of political and economic power in America, and the Supreme Court stood athwart the change.

But the Reorganisation Bill was not fundamental. True, the executive branch of the Government is hopelessly

Italy and the Suez Canal.—Italy's interest in the Suez Canal, which has played a part in the recent discussions at Rome, has a financial as well as a political bearing. During the Abyssinian campaign Italy paid in dues from 100,000 to 200,000 gold francs for every vessel carrying war materials which proceeded through the Canal. From June 25 to December 25, 1935, the total payment for the passage of her transports was nearly £1½ millions. After the war, the number of Italian merchant ships passing through the Canal increased considerably. According to Italian statistics, the total (in both directions) increased from 891 in 1934 to 1,987 in 1935, the net tonnage from 3.7 to 7.8 million tons, the total cargoes from 0.7 to 1.8 million tons and the number of passengers from 23,000 to 126,000. In 1937, it may be estimated that Italy paid, in foreign currency, the equivalent of about 300 million lire in Canal charges for "peace-time" traffic in connection with the colonisation of Abyssinia. Adding payments for purely military traffic, and for the transport of Italian passengers and materials in foreign ships, the 1937 total may have been as high as 500 million lire. British traffic still holds first place in the list of Canal users, but Italy has already replaced Germany for second place. Though Italians may regard that fact as strengthening their claim for a share in the administration of the Canal, it can scarcely be a sound argument for the expectation of a substantial reduction in the scale of charges. Alternatively, Italy might find some compensation for her payments if she were in a position to acquire a fair holding of Suez Canal shares. But their acquisition would be anything but easy. Meanwhile, the Anglo-Italian Agreement, signed on April 16th, has reaffirmed the Convention of 1888, guaranteeing the free use of the Canal to all Powers at all times.

cumbersome and inefficient. The hundred and thirty Government agencies overlap, and the White House itself is understaffed, so that some of the finest recruits in the Government have had their hearts broken under the New Deal, waiting for decisions on administrative measures, decisions which only the President could give, and which he did not have time to give. Part of the fault has been the President's enjoyment of power and his reluctance to delegate it. But most of the trouble has been a poor administrative structure.

There were features in the Reorganisation Bill which needed debate and modification. Congress was right to examine the change from the system of the Comptroller-General to the post-audit in Government expenditure, though it probably would have agreed to the theory of the proposed system, if carefully applied. Congress was also entitled to ask for the power of veto over changes by a majority vote, instead of by the two-thirds majority called for by the original Bill. It might have strengthened the Civil Service section of the Bill—though that would be expecting a loftiness of civic virtue new to an American Congress.

The President Loses Touch

The President's loss of political touch was shown in his fighting for the Bill at all. Probably he was taken aback by the resistance the proposals aroused. And he was misled by his victory in the Senate. There he had a margin of six votes. Heretofore the House has not revolted, and the President must have thought that his troubles were over when the stubborn Senate passed the Bill.

The loss of political touch has been shown, too, in the whole timing of the President's actions during past weeks. The new spending programme, which he now feels is needed to arrest the business decline, might just as well have been decided upon a fortnight earlier. If it had been, the country would have felt that the Roosevelt of old was again at the helm, and Congress would have sensed his leadership.

It rebelled against him, partly because he was doing nothing to cope with the depression, and partly because, in a moment of great national anxiety, he seemed to be without a policy.

It may be unjust to blame the President for not deciding to spend sooner than he did. He had been told by some of his economists that March would see the upward turning of the business curve, and he had been won over to Secretary Morgenthau's fervour for a balanced Budget. It may have been sensible to wait to see what the March index would reveal before abandoning all hopes for the Budget.

But if it was sensible, it was also poor political intuition. It must be that the President did not know how much he had lost ground with the vocal section of the public and with his own followers in the House, due in the main to the depression. He did not foresee that 400,000 telegrams would descend on Congress demanding the defeat of the Reorganisation Bill, all motivated by the same reason, the fear of him and the new importance he was giving his office.

The Opposition's Future

It is too soon to say that the new House coalition will survive its birth and grow in power and influence. The President can decide that possibility for himself. If he chooses to fight the coalition, then the great overhaul of American politics will have begun, and the effort will be made to unite Conservatives of both parties against the New Dealers in both parties.

Then the next election would see a coalition of Republicans and Conservative Democrats lined up against a coalition of progressive Democrats (for want of a better name), progressive Republicans and the Committee for the Industrial Organisation wing of Labour. If the country were still in a depression, the Rooseveltians would be sure to lose. If recovery should be under way, the outcome looks now like a toss-up.

But the President has not yet chosen to fight, and he may take his defeat in the House as a warning, not as the end of his leadership in Congress. He may now be ready to compromise with the utilities, for one thing, and give his blessing to the deletion of the taxes on capital gains and surplus profits. In other words, he may revert to the practice of his first term, when he was quick to retreat and take half-measures, as long as the general direction remained forward.

In his second term Roosevelt has been a fighter, whose chief fights have gone against him. If he stops fighting he will be able to get his spending programme through Congress at a price—principally concessions to business—and that will be the end, for the present, of the coalition.

Government Spending

NEW YORK, April 12.—For the past week the Press has been so pre-occupied with the spending programme that it has given comparatively little attention to the Senate's revision of the Tax Bill. The proposals of the so-called spending programme include the usual relief appropriation (\$1,250 millions), an authorisation (passed and signed) to lend \$1,500 millions to business enterprises, and a proposal to lend \$1,500 millions to states and municipalities, for 50 years without interest. In addition, there are the usual agricultural subsidies, and the naval programme.

Government spending programmes are usually advocated on the ground that they are necessary because of a stoppage or reduction in the required flow of capital into the normal channels of private or corporate enterprise. That such a stoppage exists in our economy is patent, and the Tax Bill just passed by the Senate is intended to open channels of individual and corporate investment. Tax bills, of course, originate in the House; and the so-called Senate Bill is a radically amended version of a Bill already passed by the House. Both bills are now in conference, and it is likely that the form adopted by the conference will be passed by both Chambers.

Three features of the Senate Bill deserve special attention. First, the Undistributed Profits Tax (on Corporations) is replaced by a straight 18 per cent. tax. In the House version the "principle" of the Undistributed Profits Tax was retained by providing a sliding scale from 16 per cent. to 20 per cent. In either form, the distinctly punitive features of the existing tax would be repealed. This tax has been unpopular, partly because of the fact that its imposition immediately preceded the depression, and so became associated with it; but specifically because it constituted a disproportionate burden on corporations weakened by the depression, heavily indebted, or with characteristically irregular earning power.

Secondly, the Senate Bill provides a maximum capital gains tax of 15 per cent. on property held over 18 months, replacing the present sliding scale, which for persons in the

upper surtaxes, averaged much higher. Thirdly, the Senate Bill provides that tax exemption should be withheld from Treasury securities to be issued in the future. This provision was introduced at the last minute, just before the Bill was passed by the Senate.

Tax Exemption

Under the present system, incomes from Treasury bonds owned by individuals are (with minor exceptions) liable to full income tax; but the 3-5 years notes (about half the public debt), and bills, are fully tax-exempt; as is also the income from obligations of states and their political subdivisions. When the surtaxes were relatively low, and the public debt small and shrinking, the tax-exemption feature of these Treasury securities made little difference. With each rise in the surtaxes in recent years, tax-exemption has commanded a proportionately higher premium; with the result that capitalists in the higher income grades were encouraged to liquidate their taxable securities and concentrate their holdings in securities exempt from taxation.

The markets tended to equate the differences, so that one might imagine that what the Treasury lost in revenue, it made up in the cheapness with which it could borrow. The important consequence was that it "compartmented" the capital market, and exerted a considerable influence upon the canalisation of capital.

Capital Gains

The capital gains tax has had a varied history. In the twenties, capital gains were considered as income, and capital losses were deducted from taxed income. This was modified, and, in its present form, capital gains are counted as income, but capital losses are deductible from other income (except capital gains) only to a maximum of \$2,000. However, income from capital gains is computed on a sliding scale which gives alleviation in the case of the realisation of assets held more than one year. The Senate Bill in effect puts capital gains in a separate category of income, permits the carrying forward of capital losses for one year as an offset for capital gains in the ensuing year, and imposes a maximum tax of 15 per cent. on capital gains derived from the sale of property held for more than 18 months; sales in under 18 months are subject to full income tax.

Combined with the availability of tax-exempt securities, the capital gains tax had proved to be a powerful force in discouraging large capitalists from investment in private enterprise. That is, entrepreneurial undertakings could offer no attraction competitive with the tax-exempt security. Even complete non-investment became relatively attractive. Nor was the capital gains tax successful in producing revenue; for the higher taxes were applied against a much shrunken aggregate of taxable capital gains, as reported in the Statistics of Income.

The Senate Bill is therefore supported by solid statistical argument. What the Treasury gained from lower rates it lost by tax-exemption; the capital gains tax had passed the point of diminishing returns; and the net effect was to divert capital from enterprise, thus creating the unemployment which called for the deficit to be financed by higher taxes and by tax-exempt Treasury securities, and so on in a vicious circle. Opinion generally rates the Bill as a constructive measure of the first importance; and of more potential influence than the glamorous spending programme.

Building Revival

Business activity in the first half of April has not differed materially from the flatness of the preceding four months. Concrete evidences of recovery are few and inconclusive, and commonly matched by data or observation of continued degeneration in other forms of business.

BANK OF MONTREAL

(Incorporated in Canada in 1817 with Limited Liability)

Financial Agents of the Government of the Dominion of Canada in London.

CAPITAL PAID-UP \$36,000,000

REST AND UNDIVIDED PROFITS \$40,164,863

TOTAL ASSETS IN EXCESS OF \$800,000,000

London Offices: 47 Threadneedle Street, E.C.2 (Edward Pope, Manager)
8 Waterloo Place, Pall Mall, S.W.1 (J. H. Pangman, Manager)

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

There is, however, one conspicuous exception. Building in March appears to have shown signs of revival. Reports from Washington indicate a lively and widespread interest in the new Federal mortgage plans; and, for some types of building, costs are said to be substantially lower than the prohibitive levels of a year ago.

One development of particular interest has recently been announced in New York City. Formerly, life insurance companies in New York State were not permitted to operate real estate, except that acquired under foreclosure. Recent State legislation gives a general authorisation, and one insurance company has assembled a tract of 120 acres, on which it intends to erect flats for about 18,000 families, at an estimated cost of about \$35 millions.

France

Temporary Unity

PARIS, April 21.—The Socialists refused plenary powers to M. Chautemps and the Radicals to M. Blum. But, this time, even the Communists voted for M. Daladier, who was supported by M. Reynaud and M. Mandel, advocates of the Franco-Russian pact and of a Government of union with the Communists. The Socialists then followed suit. They voted for a policy of union in the place of a Government of union.

Moreover, the Moderates agreed to a programme which entails inflation, but only as a preliminary to the issue of a loan for national defence, instead of the systematic inflation, accompanied by exchange control and a capital levy, proposed by M. Blum. The Government's success so far, with such mixed support, is far from representing real unanimity in the Chamber. And confusion is great among the Left groups.

It is notable that, after some doubts, public opinion now seems much impressed by the *détentes* at home and abroad. The country is tired of internal conflicts, and at last realises the need to bar the incursions of the "hereditary enemy." Moreover, the British Prime Minister's double policy of treating with Italy while consolidating Britain's military accord with France, and the coming visit of the British Sovereigns to Paris, have been contributory factors of first importance in this change of atmosphere.

France now has a Government which should last until the autumn. Meanwhile, it will enter into negotiations with Rome. It holds 10,000 million francs of advances from the Bank of France and has plenary powers until May 31st, which should enable it to take measures favourable to the success of a large loan—probably for 15,000 million francs—and to a revival of business activity. Even though the economic recession abroad and the size of the French deficits do not justify the hope of a complete recovery, there is no doubt that a series of wise decisions should obtain practical results of no mean importance. Moreover, the demonstration that the way of autarky and nationalisation is barred, the end of the unpopular strike in metallurgy and the initiation of conversations with Rome have had an immediately favourable reaction on the exchange market, on the money market, on the public funds and on industrials (which have registered a rise of 20 to 25 per cent. in four days).

Breakers Ahead

The Treasury is partially insured against the requirements of 1938, amounting possibly to 35,000 million francs, by the Bank's advances of 10,000 million francs and the prospect of 15,000 million francs raised by a loan. The main task of M.

Daladier's Government is now to bring about a revival of economic activity. The real danger is that the new francs put into circulation will cause a fresh rise in prices and a further slump in the franc.

The desired increase in production is rendered more difficult by economic troubles abroad and by the forty-hour week, which is still staunchly upheld by the Left. And M. Marchandau will have to resolve the difficult problem of increasing production by an alleviation of the tax burden, while at the same time restoring confidence by more nearly balancing the Budget though increasing certain taxes or Customs duties.

In social policy, the Government must draft and pass a new law relating to strikes. In financial policy, the agreement with the Bank of France to increase the limit of its advances by 10,000 million francs must be carried out, together with the preparation of the loan for national defence. In foreign policy, the consequences of the preliminary negotiations with Rome will be eagerly awaited.

Production and Prices

The Statistique Générale has just published its monthly figures showing industrial production in France:—

	(1928=100)			
	Feb., 1937	Dec., 1937	Jan., 1938	Feb., 1938
General index	92	91	87	85
Mines	89	99	89	91
Chemical industries...	107	107	105	102
Paper	198	183	166	163
Textiles	89	91	83	82
Leather	83	70	69	69
Iron and steel	83	87	83	79
Engineering	89	92	89	87
Automobile	95	87	90	92
Building	80	58	58	58
Gas and electricity ...	120	130	131	130
Miscellaneous	112	112	107	104
Old general index (1913=100)	103	102	98	96

The figures for the cotton industry were as follows:—

	Nov., 1937	Dec., 1937	Jan., 1938	Feb., 1938
Spinning (average per spindle in kilograms):—				
Production	2,071	2,210	1,914	1,811
Deliveries	1,999	2,124	1,780	1,729
Stocks	1,813	1,938	2,079	2,074
Unfulfilled orders	6,198	5,810	5,900	5,797
Weaving (average per loom in pieces of 100 metres):—				
Production	4.91	5.31	4.67	4.48
Deliveries	4.67	5.35	4.37	4.16
Stocks	7.32	7.67	8.32	8.31
Unfulfilled orders	16.62	15.72	16.11	16.10

Unemployment on April 9th was 395,335, against 398,254 in the preceding week and 381,855 a year ago. Prices have moved slightly upwards:—

	March, 1937	Jan., 1938	Feb., 1938	March, 1938
Prices				
Wholesale prices (1914=100)				
General index	536	612	613	617
Domestic products	553	653	656	654
Imported products	506	537	538	552
Foodstuffs	518	620	624	613
Industrial products	552	605	605	622
Retail prices (1914=100) ...	576	691	692	690
Lighting & heating (1930=100) {	93.8	115.6	116.0	116.4
Clothing... }	87.7	100.0	100.0	100.0

The number of bankruptcies in March was 417, against 370 in February and 421 in January.

Germany

Italy and Austria

BERLIN, April 20.—Judged by Press (which means official) comments, the Anglo-Italian agreement has caused no apprehension in authoritative circles. Probably much time will pass before the consequences for the Berlin-Rome Axis, if there are to be any, will be visible. The agreement may possibly be sincerely welcomed as an introduction to an Anglo-German deal, from which the Reich, as the only complainant, would probably be the only beneficiary.

Austrian economic questions have fallen into the background, or been obscured by the vast unceasing public

demonstrations, which swallow much time, money and materials, and are monotonous, unanimity being, if sometimes virtuous, always tiresome. The economic frontier is gradually disappearing. Germans may now visit Austria and take with them what money they will. Austria's import duty on agricultural machinery has been removed, in order to facilitate the mechanisation of farming.

The veto on the establishment in or transfer to Austria of business undertakings by citizens or companies of the old Reich (or by foreigners) has been embodied in an Austrian State Law, which holds good, however, only until October 1st. The Reich taxation system is inevitably being extended to Austria. Already the two fiscal systems and the method of distributing tax revenue between Central and local governments are similar. Austria, like the Reich, has income, corporation-income, property and turnover taxes, and stamp duties, all of which, together with customs, are Federal, while the real estate taxes of various kinds, including increment tax, certain taxes on consumption (including electrical and motor-vehicle taxes) are provincial or municipal.

Part of the Federal revenue goes to local Treasuries. The highest rate of income tax in Austria (for individuals) is 45 against the German 50 per cent. The corporation income tax in Austria is 25 per cent. of the taxable net profit, and in the Reich 30, and until recently 20, per cent. The German turnover tax, being easy to introduce, will replace the Austrian on May 1st.

Austria has no flight tax. The introduction of the Reich flight tax, which is 25 per cent. of the property of persons going abroad for good, has been already decreed.

The Reich Unemployment Board states that the 400,000 Austrian unemployed do not constitute a reserve from which the general labour deficiency can be met. These will be needed for local reconstruction. "We cannot allow," says the President of the Board, "Austrian agricultural labourers to leave the countryside in order to take industrial employment."

It is noted here that Italian journals predict that the port of Trieste will lose from Austria's accession to the Reich. This is contrary to early German comments; but the Italians adduce certain convincing reasons for their view. A minor reason is that nearly all Austrian traders or agents who use Trieste are Jews.

In the Reich, the exclusion of Jews from all kinds of gainful occupation is going on rapidly, in particular among the so-called "private banks," which until recently numbered about 1,000, the most substantial being Jewish. There is no law compelling Jews to surrender their banks, but official and officially dictated pressure is irresistible.

Good Reports of Agriculture and Industry

The official crop report for April 1st is satisfactory, all cereal and fodder crops being better than in April, 1937. The area under maize this year will be about doubled, and will then be nearly seventy-fold that of 1932. The area under maize, "Turkish wheat" as it was first called, was considerable in the nineteenth century, but this cereal was driven out by potatoes and sugar-beet. The results since the revival have been good. The import of wheat in the first quarter year was 282,400 tons, valued at Rm. 38,720,000, and there was a substantial import of oats and barley.

Retail turnover in January-February was 8 per cent. higher than in the same months of 1937. The Ministry of Justice, discussing prison labour in industry, states that of 115,000 prisoners, 85,000 are already at work, some 17,000 on land amelioration and water regulation, and 3,000 in building and metal industries. The occupation of all these is permanent. The remaining 34,000 must be put to work at their special trades if they have any.

Railway-wagon loadings in February were 3.4 per cent. higher than in February, 1937, and were the highest since 1929. Pig-iron output in March was 1,521,500 tons; and in the first quarter 4,307,900 tons, against 3,786,800 in the same quarter of 1937. Coming after a period of stagnation at a very high level, this increase is considerable. The Reich-owned Vereinigte Aluminium-Werke A.G. reports production since the autumn of 1937 at the rate of 100,000 tons a year, which is tenfold the production of 1933.

The electro-technical industry is working at its full effective capacity, though some shortage of certain materials and of labour prevails. The cutlery trades are doing well, and are replacing silver and nickel with rustless steel and light metals. An attempt is being made to restrict the term "Solingen cutlery" to quality wares.

The Reich Ministry of Economy has taken over exchange control from the Board hitherto in charge. In the main, this is merely an organisational change. Owing to Reich loan marketing, which began yesterday, the demand for money is

considerable. The official *Volkische Beobachter* implies that the Reich Debt will continue to increase, by less, however, than the private capital-creation expected. Savings deposits in the savings banks in March totalled Rm. 16,546 millions, against Rm. 14,838 millions in March, 1937.

Holland

Higher Taxation

AMSTERDAM, April 9.—The political disturbances of the past month have inevitably been of great influence on financial and economic affairs in Holland. The unsettled conditions dominated events on the local stock exchanges, and security values fell appreciably. The reluctance to trade was more widespread than ever, and even first-class investment material, such as State loans and leading local securities, declined substantially. Several conversion loans had to be withdrawn in view of the political tension.

The Prime Minister, Dr Colijn, broadcast a reassuring message to the nation, making it clear that the Government were fully mindful of their responsibility to provide for any eventuality. The strengthening of the national defences calls for additional revenue and new and increased taxation. It is estimated that the proposed increases in income and dividend taxes will provide over 10 million guilders in extra revenue.

Opinion is practically unanimous about the need to augment defences, and the increased tax burden will not presumably encounter any very serious opposition—although, in the Second Chamber, the alternatives of a capital levy or a large-scale National Defence Loan at a low rate of interest have been advocated. Voluntary contributions towards the cost of our means of defence are already reaching the Defence Department in large numbers.

Foreign Trade below 1937 Level

Increased taxation would be the easier to meet if national economic recovery had not come practically to a standstill, giving place, in some cases, to a slight recession. The foreign trade returns for March show a decline compared with March, 1937, as the following table, compiled by the Central Bureau of Statistics, shows:—

VALUE OF TRADE (Excluding gold and silver: in millions of guilders)					
	IMPORTS			EXPORTS	
	1936	1937	1938	1936	1937
January	79	106	119	50	73
February ...	74	105	118	50	79
March	79	125	120	55	95
April	81	142		57	101
May	76	128		53	90
June	77	140		53	95
July	80	146		60	102
August	82	123		63	99
September...	82	130		72	113
October	92	149		75	106
November...	101	130		77	98
December...	114	128		80	98
Total	1,017	1,552		745	1,148

The value of imports from Great Britain fell from 30 million guilders in January-March, 1937, to 27 millions in the corresponding quarter of this year, while the value of exports to Great Britain in the first quarter rose from 50 million guilders to 56 millions.

Unemployment Again Serious

Simultaneously with these indications of declining prosperity, the problem of unemployment is again coming to the fore. After the depreciation of the guilder in September, 1936, a gradual decline in unemployment set in. The returns for 1937 up to September showed about 60,000 fewer unemployed persons than in 1936. Since then, however, the improvement compared with the previous year has gradually shrunk, and in February, 1938, the total number of unemployed, at 420,700, was only 19,000 fewer than twelve months before. Actually, unemployment is now at about the same level as in 1935; and apprehension lest unemployment should exceed the 1937 level in the course of the current year is a source of great anxiety to the Government.

On the foreign exchange market, the temporary pressure on the guilder brought about by the political disturbances has abated. Since the middle of March, the influx of gold has come to a standstill; and the Equalisation Fund has been able to cease its purchases of sterling.

The annual company reports for 1937 are now being issued. They continue to show that many companies booked larger profits and are distributing higher dividends; and the view is confirmed that 1937 was a favourable year for many branches of commerce and industry in the Netherlands.

U.S.S.R.

New Economic Policy

MOSCOW, March 28.—With the most sensational of all the Soviet Union's treason trials completed, and the traitors "liquidated," the Kremlin has now begun a propaganda campaign to turn the patriotic energies of Communists from continued purging to more constructive economic effort. Under the leadership of M. Kaganovich, Commissar for Heavy Industry, who has had significantly little to do with the political purge, a series of national conferences have been held in nearly every industry to launch the newest New Economic Policy and to inaugurate the third Five-Year Plan.

Preparation of this plan was ordered last June, but it has not yet been published. Two of its chief authors, Valery Mezhlauk, former head of the State Planning Commission, and Ivan Kraval, former chief of the Central Statistical Department, are among the Soviet Union's "missing persons." They are believed to have been arrested, but there has been no mention of them, even in the long tale of treason told at the Rykov-Bukharin trial.

The recent conferences of factory directors and industrial managers have shown the new policy to which the third Five-Year Plan will now be shaped. It calls for a concentration on quality, costs and labour productivity instead of the quantity and speed indices with which Soviet success has until now been measured. "Cultured production" has become the nation's new slogan.

According to *Pravda*, the Communist party's official newspaper, "political vigilance now demands neat, careful 'cultured' working conditions; where work is clean, the stain of sabotage will be more quickly visible." There is ample evidence that not only political vigilance, but also economic necessity has dictated the change. Although even recession is too strong a word for it, Soviet industrial progress has struck a snag, and the few control figures for 1938 which have been published indicate that the Communists will try to overcome it by reducing speed, especially of new construction, and by concentrating on problems of organisation.

Industrial Growth Checked

How far this new policy has slowed up the rate of Soviet industrial growth in 1938 is shown by the following figures (in millions of tons):—

	1935	1936	1937 Plan	1938 Plan
Pig iron	12.49	14.40	16.1	16.28
Steel	12.59	16.40	20.1	20.2
Rolled metal	8.9	12.40	15.6	15.0
Coal	109.2	126.4	150.1	139.0
Cement	4.46	5.84	7.43	6.25

Production figures for 1937 have not yet been made public, except for a few commodities. In steel, it has been announced, production in 1937 amounted to 17,810,000 tons instead of the planned 20,100,000 tons. In rolled metal, 12,930,000 tons were produced, against the plan figure of 15,600,000 tons. Light industry has reported a production of 14,600 million roubles, some 11 per cent. more than the 1936 figure, but only 92 per cent. of the 1937 plan. The increase in 1938 has, accordingly, been planned at only 13 per cent., to make a total production in light industry during the year of 16,560 million roubles.

In spite of the statistical demoralisation caused by the purge, and the further confusion resulting from the transfer of important metallurgical units from the Heavy Industry Commissariat to the Red Army, it is possible to conclude that this picture of light industry holds good, with minor changes, for almost all Soviet industry. Production increased during 1937, but at a rate significantly slower than in preceding years or than called for by the plan. Whatever the reason for this, the Kremlin has apparently accepted the slower annual increment, at least for this year, and has determined to drive forward major reforms in socialist management, which have been long recognised as overdue.

One of the most important of these is a shift of emphasis inside the system of "Stakhanovism," the Soviet variant of labour rationalisation. Record-breaking coal-miners or weavers, fulfilling several hundred "norms" in a single day, have disappeared from news in the Press. "Stakhanovist brigades" or entire "Stakhanovist factories" have replaced them in official favour. The cyclical character of most modern industrial processes, which require even-paced co-ordination more than the "shock troop" spirit of the Civil War, has now been recognised by the Bolsheviks.

The new policy has begun to show results. On March 25th, for the first time in many years, each branch of the iron industry, from ore mining to rolling mills, reported fulfilment of its daily plan. Planned co-ordination, inside any factory or in Soviet industry as a whole, is still blocked most seriously by difficulties of transport and fuel supply, which continue to lag. Until these problems can be overcome the rise in labour productivity, which is the chief objective of the Bolshevik's new campaign, is likely to be slow.

China

The Balance of Payments

SHANGHAI, March 15.—The Chinese Government has decided to introduce a system requiring applications for allotments of foreign exchange. This decision brings China into line with many other countries, including Japan, that have found it necessary to ensure by such methods the maintenance of an even balance of international payments. Independent observers have expressed considerable surprise that China has been able to maintain exchange stability for so long, while her coast line has been blockaded by the Japanese navy, her revenue and administrative services disorganised by invasion, and her territory laid waste by military operations.

Fortunately for China, when hostilities with Japan began, in July of last year, there had already been a noticeable improvement in economic conditions, and the currency was supported by considerable reserves of foreign currencies and large holdings of silver. Danger and uncertainty in and around the large ports of Shanghai and Tientsin resulted in a substantial decrease in commercial imports from abroad during the second half of last year, and the demand for foreign currency was reduced. At the same time, efforts were made to maintain the flow of exports by diverting goods through the ports of South China. Invisible exports were augmented by an inflow of patriotic and philanthropic contributions from abroad. Thus, until now, the rate of exchange has been maintained with little to indicate any appreciable strain on currency reserves.

Exchange Control

It is largely because of the formation in Peiping of the Japanese-controlled Federal Reserve Bank of China that the new measures of exchange control have been so suddenly introduced. Already there are signs that the Japanese wish to bring North China into the Japan-Manchukuo yen bloc, and they are exerting pressure to establish the yen in general circulation in the North on a par with the Chinese dollar. There was good reason to fear that supplies of the notes of the three Chinese Government Banks might be shipped by the Japanese to Shanghai and used to obtain foreign currency. The National Government objects to assisting Japan to finance her military operations against China at the latter's expense, and the new exchange restrictions are the result.

The efforts made in recent years to unify the national currency will now have to be abandoned, and remittances between the parts of North China under Japanese control and the rest of the country may become increasingly difficult. It is reported that restrictions on the supply of foreign currency are already in operation in North China, making it almost impossible to purchase non-Japanese foreign goods on a large scale.

Shanghai is in a peculiar position. It is cut off from the

interior by an area under Japanese military occupation. The river Yantsze is still closed to commercial navigation, and neither by road nor by railway is it possible for Shanghai to carry on trade with the hinterland. The head offices of the Chinese Government Banks were transferred from Shanghai when the Japanese occupation of this area was completed, and, despite the importance of Shanghai as a financial centre, the detailed measures of monetary control have to be arranged with the authorities at Hankow via Hongkong.

It is, perhaps, not surprising that some criticism was aroused in foreign banking and commercial circles by the failure to arrange for applications from Shanghai for allotments of foreign exchange to be dealt with in Shanghai, and more frequently than once a week; but it is hoped that these difficulties will be solved, and that the spirit of co-operation between Chinese and foreign banks that has prevailed since China adopted a foreign exchange standard of currency in November, 1935, will survive this new test. A "gentlemen's agreement" on the one side to observe the spirit of the new regulations, and on the other, to avoid inquisitorial or bureaucratic formalities would be most helpful in present circumstances. The future of the Chinese dollar will depend on a number of considerations, such as the duration of the present hostilities, the extent and nature of the assistance China receives from abroad, and the policy Japan adopts in China.

Canada

Politics and European Alarms

OTTAWA, April 3.—The Federal Parliament, on the eve of its adjournment on April 8th, has very little to show for the two months since it reassembled. The Government has passed through the Commons its Bill to strengthen parliamentary control over the export of power. But the need for the measure has largely disappeared since the intimation of the Roosevelt Administration that it is opposed to the Ontario Government's plan to export its surplus power to private interests in the United States.

The Government and people have been following with anxious interest developments in Europe, and the King Ministry has been receiving regular communications from Downing Street. These have been in the nature of information and not consultation; and Mr King has explicitly stated that his Government has offered no opinion about the foreign policy pursued by the British Government. On the whole, to judge by Press comments, probably a majority of the Canadian people supports Mr Chamberlain's temporising policy towards the Fascist dictatorships. There is a general realisation that the emergence of the issue of participation in another European war would split Canada from end to end, and there has been a rapid growth of isolationist sentiment—in part, because Liberal elements, who would support the maintenance of a system of collective security, would not favour Canadian co-operation in any purely Imperialist war.

A recent Federal by-election in the East Edmonton division of Alberta resulted in a great disappointment for the Liberal Party which made a determined effort to wrest the seat from the Social Crediters. The Social Credit candidate won by an increased majority of over 2,000. Meanwhile, word comes from Alberta that the Aberhart Ministry, finding further progress with a plan of Social Credit impossible for the present, has worked out a drastic reorganisation of the economic life of the province on co-operative lines.

Downward Trend of Business

Winter is now in its final stages and, in the more southerly areas, farmers have begun to cultivate the land. Reports from the prairie country indicate that the supply of water is much better than it has been at this date for several years and, in some parts of the drought-stricken area of Saskatchewan, floods, which have been unknown there for nearly a decade, are causing inconvenience—but also rejoicing.

The downward trend of business persists, and the general index of economic activity, published by the Bureau of Statistics, stood at 109.1 in the week ended March 19th, against 115.2 a year ago. Data about three major components of the index are given below:—

Week ending	Car Loadings	Wholesale Prices	Bank Clearings	General Index
March 20, 1937 ...	80.5	85.2	127.1	115.2
" 5, 1938 ...	79.6	83.5	107.4	110.9
" 12, 1938 ...	76.9	83.2	95.8	109.7
" 19, 1938 ...	77.9	83.2	94.3	109.1

Both the level of business activity and wholesale prices are lower than they were a year ago. At the same time, Canadian business is holding its ground better than business

in the United States. Unfortunately, just when some encouraging influences, like the prospect of a better Western grain crop, were being counted upon, the outlook has been further darkened by developments in Europe. Leaders of business are now faced with disturbed conditions overseas which have led to some hesitancy in making heavy forward commitments ahead.

Fall in Exports

The intensification of the armaments race promises to help the export sales of metals for the manufacture of munitions, but the export trade in other products continues to decline. There was little encouragement in the trade returns for February. Exports were valued at \$60,981,203, compared with \$75,681,324 in February, 1937, and imports at \$46,951,619, compared with \$48,680,842.

The shrinkage in export trade reduces the purchasing power of large numbers of producers and creates unemployment. The latest employment bulletin of the Bureau of Statistics shows that, in February, nearly 25,000 people were struck off the payrolls of reporting firms, and the index of employment on March 1st was 107.8, compared with 110.4 on February 1st and 102.8 on March 1, 1937. There has been a fairly good sale for seasonable spring goods like lighter clothing, but, in other lines, merchants have only been able to sustain their volume of business by heavily advertised sales and by cutting profits.

While the heavy industries are estimated to have suffered a decline of 10 per cent. in their business in February compared with January, the lighter industries are not experiencing any such recession and, in some cases, have not reduced operations. The newsprint mills are still operating far below their capacity, and their output for February fell to 202,601 tons, compared with 275,532 tons in February, 1937.

The mining industry still flourishes and exports of copper, nickel and zinc in February were 327,727 cwts., 193,022 cwts. and 277,798 cwts., respectively, compared with 257,154 cwts., 159,312 cwts. and 142,429 cwts. in February, 1937. Hopes of improvement in the building industry have not been realised. The value of contracts in February was only \$6,551,000, compared with \$9,140,000 in January and \$8,728,000 in February, 1937.

Letters to the Editor

The Trade Cycle

TO THE EDITOR OF THE ECONOMIST

SIR,—I have just seen Mr J. C. Gilbert's letter to you in this week's *Economist* (April 16th, page 142). I suggest he is mistaken in thinking that a committee of economists could determine the causation of trade cycles.

I think it is improbable that statistics will ever do more than systematise the symptoms of cycles. When this has been done we may be in a position to predict the future course of trade with moderate accuracy and still be very little nearer to the causes of what we are observing.

The movements of the sun and moon were known and the tides made use of before ever the law of gravity was formulated. Winter and summer were known by their signs before man knew the shape and movements of the earth.

A committee consisting of an astronomer, a meteorologist, a chemist, a physicist, a biologist, a psychologist, an historian, an economist and a professional philosopher may one day determine the causation of trade cycles; but any less wide inquiry than such a body might make must fail. As far as one can see, until we do know the causes of trade cycles, all attempts to reduce fluctuations are a matter of trial and error.

Yours faithfully,
C. M. B. RENSHAW.

Piccadilly,
London, W.1.

TO THE EDITOR OF THE ECONOMIST

SIR,—The interesting letter from Mr J. C. Gilbert on the need for a trade cycle policy emphasises the importance attached to the equation of investment to saving by the Austrian and the Keynes schools of thought, and suggests a reconciliation of their conflicting views. Each school, in envisaging either a too great or a too small production of capital goods, has common ground in the implied postulation of an inversely proportionate demand.

Neither view, however, makes it clear that the volume of world trade is determined more by actual purchasing power than by potential production. In our view a recession in trade is the result of a distortion of the international credit and currency structure, brought about by the unequal expansion of purchasing power in the various trading nations during the upward swing of the trade cycle. The distortion has the appearance of an excess of voluntary saving over investment or *vice versa*, according to the needs and resources of each nation.

The *pari passu* increase in purchasing power necessary for continued expansion of trade cannot take place under the present method of developing the raw materials of the world (e.g. tin, copper and rubber), whereby the whole profit of the enterprise, after the payment of wages and local expenses, reverts to a lender nation. During the last century the rapid growth of the population of Europe and America, and the

great increase in the standard of living thus made possible, counteracted the comparatively small increase in purchasing power elsewhere; and, further, foreign lending was more often financed through the medium of a fixed interest loan. Under present conditions, with these mitigating factors absent, one can only expect an intensification of the trade cycle which purely internal public works can do little to remedy.

If, however, a larger proportion of the revenue derived from the development of raw materials in a borrower country could be retained in that country, the inhabitants would be in a position to increase their purchases from the older industrial nations; and it would be possible during this century to raise the standard of living in these more remote countries to a level comparable with our own. In this way, any disproportion between investment and saving would be adjusted; a growing volume of trade in both directions would be maintained; and a higher level of prosperity would be established throughout the world.

Your obedient servants,
ROLLO VILLIERS,
WINSTON DRAPKIN.
95 London Wall Buildings,
London, E.C.2.

Sea Power, Oil and Battleships

TO THE EDITOR OF THE ECONOMIST

SIR,—Your article on "Italy's Oil Supplies" (April 9th, page 77) shows how Italy is dependent on the sea for her oil. The answer to your very pertinent question "What will happen if war or any other international complication cuts off sea-borne supplies from the Italian refineries?" is that, in that case, Italy would quickly be beaten in war, as Germany was when once her cargoes of all kinds were stopped.

The statement that "Italy's petroleum supplies in wartime will depend on her political relations with the petroleum-producing countries" applies equally to England. We, like Italy, have practically no oil of our own, and, even with the command of the sea that we take for granted, we can only get oil by leave of the foreigners whose countries contain it.

Accordingly, when choosing between coal and oil for our Navy, strategic and, above all, political considerations are far more important than technical and engineering considerations, and therefore the Government must bear the responsibility for the grave threat to the unfettered use of our sea power caused by using a foreign fuel. It is for engineers to burn fuel, not to choose it. Many new merchant ships now burn coal in the modern way without any manhandling from the collier to the ash ejector; in fact, without stokers or shovels or coal dust or smoke.

The present obsession for foreign oil has put the British Navy in pawn to people like the Shah of Persia and the politicians of Mexico, and it is for the Government to redeem our Navy and to free England from the grip of the foreign oil octopus by reverting to the use of our own coal from under the feet of our own distressed miners for our own Navy. In *The Economist* there is no need to emphasise the beneficent revolution in our national economy that would be caused by using English fuel for our power in all spheres instead of foreign fuel.

Your Note, on the next page (page 78, April 9th), on "Larger Battleships," follows naturally on the article about Italy's oil. Because two ships can fire at one ship, but one ship cannot fire at two, two "half-Nelsons" with six 14-inch guns in each could beat one of our monster "Nelsons" with her nine 16-inch guns, and the two smaller ships together would cost less than the one monster they could beat. Both ships and guns should be comparatively small and many instead of huge and few. "Jumbomania" hails from America, and it is not for us to copy America in naval matters. Our battleships are far too big already.

For two-hemisphere strategy, which we may have to adopt, it is easier to divide up many smaller ships than a few huge ships; also smaller ships can dry-dock in many places, huge ships in a few places only. In short, what we need in battleships is many "half-Nelsons" driven by our own coal.

Yours faithfully,
GEOFFREY BOWLES.

Books and Publications

Two Voices*

"THE transformation of the world," remarked Joseph Stalin to H. G. Wells, "is a great, complicated and painful process." Mr Strachey, no less than Stalin himself, is undeterred by the blood and tears of revolution. True, his Marxism is a pliant growth, shorn of many of the knots and gnarls which disfigure the parent tree. True, too, his exposition of Labour history in Britain is succinct and clear—even when he is hardly fair to the movement's Fabian fathers. But, for the future, he can see nothing but turbulent change. Socialism must be empirical; but all its *ad hoc* devices must lead to the root and branch transformation of society, which can only be done violently. Mr Strachey is not afraid.

Mr Voigt is afraid—afraid of the amoral brutality, the intolerant ruthlessness of the secular religions of Communism and National Socialism, whose arrogance threatens the spiritual values which are to him alone worth preserving in civilisation. Mr Strachey's Marxist masters teach him that the crash will come and the workers win with the inevitability of a scientific process. What he calls science, Mr Voigt, with a wealth of learned citation in a brilliant, circumstantial and thought-provoking book, seeks to expose as myth—potent to sway human masses in the mouths of demagogues, based on the reality of class as Nazism is on the reality of race, but myth none the less.

To Mr Voigt, Marx was "perhaps the greatest journalist who ever lived." "His wrath was a prophetic wrath; and his voice will never be silenced—by the booming, screeching voice of a Hitler, or by the prisons and concentration camps of Germany, Italy and Russia." Lenin was "incomparably the greatest strategist of the Great War," but what he and Stalin have done in Marx's name has left the truth at the heart of Marx's prophesying still unfulfilled.

Yet Mr Strachey would have us follow the path of "scientific" Socialism. His immediate objectives—"peace, democracy and the standard of life, the three vital bridge-heads held in Western Europe by the working class and their allies"—would appeal to Mr Voigt. But what are his methods? To rest Britain's future on the Marxian myth, to court violence as inevitable, and to create a New Model Party of secular Jesuits, "not tolerating within their ranks the co-existence of more than one ideology," and subject to "an omniscient centre disposing of the party members as of screws or cogs."

Mr Voigt cannot distinguish this creed and policy from the messianic and chiliastic gospel and programme of National Socialism. Personalities differ. Mussolini is "a kind of modern condottiere," Hitler first and last a revolutionary, a stage-manager, mystic, hysterical and unscrupulous. But, from Leningrad to Rome, they all believe in violence, and are aware of the popular power of myth. Mr Strachey's analysis of Labour policy, his plea for a Popular Front to protect peace and democracy with "sobriety, integrity, earnestness and calmness," and the lucid reasonableness of his latest model of shrewd, fluent exposition, all these are founded on common sense and disarming of criticism. But the stars to which he would hitch his wagon are composed of Mr Voigt's graphically painted hell-fire.

What then are we to do? Mr Strachey's Popular Front may, indeed, be made, but Mr Voigt's Pax Europica, which he would add to the Pax Britannica and the Pax Americana lest they in their turn should falter and fall, bringing down Mr Strachey's peace and democracy in the ruins, must be erected as well. Mr Voigt is not sure how to do this. Britain must be strong at heart to resist secular religions and dangerous myths; and strong on land and sea and in the air to resist the onward march of the greatest military power on earth. Her diplomacy must rest on the triangle of London,

* "What are We to Do?" By John Strachey. Gollancz. 286 pages. 7s. 6d. "Unto Caesar." By F. A. Voigt. Constable. 359 pages. 10s.

Washington and Geneva; and her greatest danger is not the Comintern, despite Mr Strachey's plausible menaces, but the Anti-Comintern pact. In the long run, however, peace is a problem of civilisation, not of diplomacy, and Mr Voigt can only hope for the best.

Shorter Notices

"The Forum." Independent South African Weekly. Volume I. Number 1. Maritime House, Loveday Street, Johannesburg. 6d.

The importance of South Africa in British history, in British trade and in the Commonwealth of Nations renders it wholly desirable that British people should know more about the Union and its people than is commonly the case. This new weekly, for the unsectarian and non-partisan expression of South Africa's views on national and world topics, will fill a wide and unworthy gap in the knowledge of world affairs possessed by most of us. The first number of *The Forum*, ranging widely, shrewdly and informatively over the continents from a South African base, augurs well for its future. It is well presented and well written, and should amply fulfil its purpose.

"Hungarian Expert, 1938." Annually by the Hungarian Economy, Budapest. Obtainable from E. Hajos, 8 Devonshire Terrace, London, W.2. 2s. 6d. (post free).

This annual is deservedly well known. It surveys very completely Hungarian trade and finance, and gives most useful information about transport, communications, clearing agreements and credit operations. Business men with interests, actual or potential, in Hungary, will find this work almost indispensable.

THE BUSINESS WORLD

Building Society Outlook

FLEXIBILITY is the hall-mark of British institutions. The British building society movement, whose recent achievements and future problems are examined in a survey published with this issue of *The Economist*, has itself demonstrated its capacity for orderly adaptation to momentous economic and social changes. Its constituent societies are governed by statutes, of which the most recent dates from 1894. In that year, the total assets of the incorporated societies amounted to £42½ millions, shared among well over 3,000 societies. The official figures for 1936 showed that the number of societies had been reduced to 985 (owing largely to the winding-up of terminating societies), but that these controlled total assets to the prodigious amount of £656 millions.

The movement, which was founded, like all friendly society institutions, on a basis of civic self-expression, has developed from modest beginnings into a leading financial and economic force of our time. Its liabilities to shareholders and depositors amounted to £609 millions at the end of 1936, compared with total deposits for the "Big Five" banks of £2,016 millions. A more relevant comparison is, perhaps, with other media employed by the small investor. Balances with the Post Office and Trustee Savings bank amounted to £432 millions and £248 millions, respectively, at the end of 1936. At that time there were about £390 millions outstanding in Savings Certificates, and probably £70 millions invested in unit trusts. The building societies are thus responsible for some 35 per cent. of the total funds administered by the typical institutions which cater primarily for the small investor.

It is, perhaps, in the building society movement that the concepts of saving and investment are most intimately related. Of the £609 millions saved in the form of building society shares and deposits at the end of 1936, no less than £586 millions was invested in mortgage advances, predominantly on moderate sized residential properties. From our own computations, it may be estimated that by the end of 1937 the movement's total shares and deposit liabilities had exceeded £655 millions and its mortgage assets £630 millions. The total amount advanced on new mortgage business in 1936 amounted to £140 millions for all societies. The movement obviously exerts a powerful influence on the scale of new residential building operations and, in addition, it has facilitated dealings in existing properties.

Its contribution to the biggest building boom of modern times is evident throughout our survey. Convenient mortgage facilities have provided a positive stimulus to building activity in recent years which may well be as important, qualitatively, as the favourable basic factors of rising incomes and cheap money, and such environmental influences as the demand for improved housing accommodation and the supply of efficient transport. In particular, the reduction of the borrower's initial cash stake, through the operation of the "builder's pool," coupled with lower interest rates, has greatly broadened the scope for building society business since the depression. But new problems have also been created, which may require the increasing attention of the societies in future years. Either the movement must maintain its total new mortgage business or it must squarely face the serious implications of a future reduction. The former alternative seems the less likely, on a broad reading of the future, unless the societies are to enter the non-residential property field, with its risks and special problems, to a greater extent than hitherto.

This, of course, is a long-term problem in essence, but its significance becomes the more immediate since heavy mortgage repayments are due to the societies in future years, in respect of new advances made during the boom period. The societies appear to be nearing the point at which, granted the maintenance of their share and deposit capital, their mortgage business will become self-financing. Will there be a common policy, already worked out, to meet the very important changes which this situation will imply? Should not the movement's task be to formulate, even now, a broad conception of its future role in a country where the major re-housing movement in the middle and the upper artisan classes may be losing its impetus, and where the population may be tending towards stability?

It is not the function of our survey to pass any hard and fast judgments on a problem whose solution must be provided by the societies themselves. But our inquiry clearly emphasises certain factors affecting lending policy and the demand for houses in the future. In the first place, the movement's responsibility, as always, is to maintain the fullest confidence of its shareholders and depositors. Not the least remarkable of its achievements during the depression of 1931-33 was the continued increase in shareholders' and depositors' balances. But to-day the total resources entrusted to its keeping greatly exceed those even of five years ago, and there is some evidence that, owing to the relatively attractive rates which the societies have been able to offer on new money, the volume of "cloak-room" deposits has tended to increase.

Public confidence has been continuously and well maintained since the pre-war Birkbeck crisis, and there can be no doubt that the leaders of the movement are fully conscious of their greatly increased powers and responsibilities to-day. Yet, at a time when new advance business is tending to fall—we compute the decline last year at 3¼ per cent.—and a perceptible, though still slight, economic recession is in train, it would be more advantageous if there were greater evidence of common policy within the movement. Local individualism has served it well in the past; but its measure of success is implicit in the practical difficulty of co-ordinating different methods of business, all of which, in their own context, may be supported by the experience of many years of successful working. To-day, the movement is more than a series of local units. It is, rather, in a stage of transition from local growth towards national organisation. The original conception of building society activities did not include the modern, multi-branch undertaking, with assets rivalling, and even exceeding, those in the care of the largest industrial companies. Our own sample of leading societies includes only one-tenth of the total number, but covers as much as 85 per cent. of the movement's total assets. So far, however, the different societies in the movement have not found it possible to agree on a common lending policy in the granting of loans, and to-day there are, in fact, two organisations representing different viewpoints on this issue.

Building society well-wishers will surely hope that this situation will be remedied at the earliest moment. Yet it is difficult to reach agreement, with the best will in the world, in a movement in which small, but democratically-minded, societies exist in considerable numbers. Is the solution to be found in a process of amalgamation? Recently there has been remarkable stability in the numbers of societies. Since

1928, only 50 societies have disappeared from the register, and many of these were of the old "terminating" type. The remainder are "permanent" societies, and the bulk of them, by numbers, are small. Considerations of local prestige are still powerful in the movement; and, in any case, the legal arrangements for amalgamation between existing societies are far less convenient than those which apply to companies. Amalgamation must needs be voluntary, in every instance, but the question remains whether more efficient service could not be given by the larger societies in territories at present covered by the smaller units. Already the former have widely spread their catchment area through the branch office system. Judicious amalgamation seems a logical corollary to this trend in the movement's organisation and internal relations.

As a contribution towards the achievement of common policy, the consolidation of the movement would be important, but it is necessarily a long-term factor. Meanwhile, unless there is to be an undignified scramble for a poten-

tially reduced volume of future new business, some measure of co-ordination is evidently highly desirable, though its complete achievement may have to wait upon statutory amendment. Finally, the relationship between the capital of the societies and their principal assets deserves serious consideration. To many observers it seems that the movement might obtain some advantage if it could attract a greater proportion of its resources without an obligation to make repayment at short notice, thus offsetting the relative fixity of its mortgage assets to some extent in its capital structure. Deposits with a term of, say, up to five years might suit the societies' purpose more conveniently than a fixed capitalisation of the company type.

Such considerations as these will doubtless engage the best future endeavours of the movement's leaders, whose task it is to administer its funds efficiently, profitably, and securely. It has been our task to measure the height and depth of that responsibility, in the hope of assisting building society executives and investors alike.

Priming the Pump Again

PRESIDENT ROOSEVELT has never been a man to do things by halves. Having resolved that the United States must spend its way out of the recession into which, much to the country's surprise and the President's embarrassment, it has fallen in the past six months, he has now proposed a programme which all too clearly "rejects the lore of nicely calculated less and more." The President's proposals fall into three divisions, which may conveniently be characterised as Spending, Lending and Expanding:—

1. *Spending.* The President has proposed to Congress that \$1,250 millions should be appropriated for general relief through the Works Progress Administration and \$300 millions for special relief by the National Youth Administration, the Civilian Conservation Corps, etc.—both sums to cover the first seven months of the fiscal year beginning July 1st. In addition, \$1,462 millions is to be allotted for various forms of public works. The total of additional spending is thus \$3,012 millions or, if relief expenditure continues for the whole year at the rate of the first seven months, about \$4,100 millions per annum.

2. *Lending.* The Reconstruction Finance Corporation, which is wholly financed by public funds, has already been authorised to make loans to private business up to a total of \$1,500 millions.

3. *Expanding.* The restrictive credit policy of 1936-37 is definitively reversed. The reserves which member banks of the Federal Reserve system are required to keep against their deposits are reduced by one-eighth, thus transferring about \$750 millions of reserves from the "required" to the "excess" category. In addition, the Inactive Gold Fund has been abolished and the \$1,183 millions of "sterilised" gold in it, plus enough more from the Stabilisation Fund to bring the total to \$1,400 millions, has been added to the Treasury's working balance. This will enable the Treasury to expend \$1,400 millions, either in ordinary expenditure or in meeting debt maturities, without raising funds either by taxation or borrowing. As this sum is spent, or as it is deposited in member banks, it will accrue to the excess reserves of the member banks, which thus stand to gain by \$2,150 millions. In addition, the Securities and Exchange Commission is liberalising its rules to assist the raising of capital in the open market by small businesses.

These astronomical figures convey little meaning until they are related to the existing state of affairs. As for the spending, the presumptive annual rate of expenditure on relief and public works of about \$4,100 millions next year compares with actual expenditures in the eight months to February 28, 1938, of \$1,338 millions—spending at the rate of \$2,007 millions per annum. The R.F.C., which is authorised to advance \$1,500 millions to private business, had \$1,712 millions of previous loans outstanding on February 28th. It does not, of course, follow that loans will be granted to the full amount of the authorisation, as the R.F.C. has paid careful attention in the past to solvency

and security. But if the whole amount is lent, there will clearly be a much larger stream of public funds going out from Washington to swell the circulation of credit. In January the President estimated the 1938-39 deficit at \$950 millions. But that allowed only \$1,226 millions for relief, so that the new proposals may increase the deficit to about \$3,800 millions. This in itself would be the largest deficit of any year save only 1935-36, when the soldiers' bonus raised the total to \$4,361 millions. But as a measure of money "created" by Government finance there must be added to the Treasury deficit the amount that the R.F.C. succeeds in lending to private business. The net result is clearly likely to be gigantic.

The expansion of the cash base of the credit structure is also on a generous scale. It may be recalled that the excess reserves of the member banks of the Federal Reserve system, at the level reached in July, 1936, immediately prior to the first increase in requirements, stood at just over \$3,000 millions. They were reduced by the successive increases in reserve requirements to \$773 millions in August, 1937. Since then they have slowly increased, owing to a variety of causes, to a figure of \$1,580 millions on April 7th. They are now to be increased immediately by \$750 millions to \$2,330 millions and proximately by a further \$1,400 millions to \$3,730 millions. The clock is being put back with a vengeance.

The programme as a whole is thus a thoroughgoing attempt to reflate the American economy. What will be its effects? Apart from its obvious effect in postponing to the Greek Kalends any hope of balancing the budget, can it be expected to stimulate a recovery of business activity? In retrospect over the last eighteen months, it is easy to see that the restrictive policies initiated in the summer of 1936 made a very large contribution to the present recession. The decision to mop up the excess reserves seemed reasonable and moderate at the time it was taken. But it failed to take account of the relative indebtedness of different parts

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

of the country to each other. The story of its effects has been told in detail in *The Economist* (October 16, 1937, page 117) and it need only be said here that the result was to impose a severe strain on the money markets of New York and Chicago and severely to depress the bond market. Between July, 1936, and August, 1937, the reporting member banks of the Federal Reserve system sold \$1,707 millions worth of securities. This pressure was felt at its severest in the spring months of last year, which was just the time when the deficit of the Federal Budget began to decline rapidly. The combined effect was startling. In January, 1937, the sums being borrowed on the market by the Federal Government and by business combined were running at the rate of over \$6,000 millions a year. From that time the total fell off sharply. It was as low as \$4,500 millions by the middle of the year and only about \$2,500 millions—less than the lowest figure of 1933—by the end of the year. The utilisation of savings was reduced by more than half in less than a year.

This was the dual effect of a movement towards credit restriction, which depressed the security markets, and of a movement towards budget balancing, which lessened the amount of public borrowing. It does not, of course, follow that a mere reversal of both influences will automatically restore the *status quo*. The horse can be stopped from drinking, but no amount of leading him to water can compel him to drink if he remains stubbornly unwilling. Nevertheless, the experience of the United States in the years after 1933 is encouraging. When *The Economist* published its full-dress appraisal of the New Deal, which was published as a supplement to the issue of October 3, 1936, the conclusion was reached that "pump-priming" and monetary ease together played a very important part in turning the tide and stimulating recovery.

Thus the evidence of the recent past, both from 1933-35 and from 1936-37, encourages the belief that the new programme will exert a considerable reflationary influence in the coming months. It is being put into force on such a generous scale that it can hardly fail to have some effect. It would be a great mistake to underrate its potentialities. But even if it be given the full benefit of the doubt, is it likely to be enough to cure the recession? Should there not be other elements in a complete programme of "re-recovery"?

Much has been heard recently of the need for restoring business confidence. Is not this a necessary accompaniment? In ordinary times there is much to be said for the New Deal view that "confidence" is a product rather than a cause of the state of trade. When profits are good confidence is high. When profits are failing the unhappiness of business men is rationalised—or irrationalised—into a demand on the politicians to create business confidence. Now whether this argument is generally true or not, it is certainly supported by the evidence of, say, the year 1936. In the months before the Presidential election of that year, the hostility of the business community to the President, and their fear of his politics, rose to a pitch that shocked the European visitor. It hung like a cloud over the towers

of Wall Street and exerted a depressing monopoly over the conversation of business men. But it did not then prevent a very rapid movement of recovery. It is at least arguable that, if Mr Roosevelt's monetary policies restore the volume of profits, "confidence" will return even without any abandonment by him of his obnoxious philosophy. But it is one thing to create bitterness between Government and business when recovery is in full swing, and an entirely different thing to allow it to continue when recovery has vanished. The onlooker may be permitted to hope that the argument will never be put to the test of experience. For, whether or not it is true that recovery can come without "confidence," it is certainly true that its return would be powerfully assisted by even a partial and temporary reconciliation of aims between the reformers and the business men.

Even the combination of monetary reflation with political reconciliation, however, may not be enough, for there was another element in the misfortunes that overtook the American economy last year, in the shape of a "consumers' strike." Ever since the beginning of the New Deal, the Administration has been trying to raise wages and reduce hours. The effect can be seen in the following figures, compiled by the National Industrial Conference Board and referring to factory workers in 22 industries:—

	August, 1929	August, 1935	August, 1937
Average hourly earnings...	\$0.578	\$0.616	\$0.713
Average weekly earnings...	\$27.94	\$24.66	\$27.76
Average hours worked per week	48.4	40.0	38.9

Although the dollars-and-cents income of the average wage-earning family was the same in 1929 and 1936, labour costs, as measured by hourly earnings, had increased by nearly 24 per cent. The inevitable effect of such a policy is to make prices higher, and the purchasing power of the average income lower, than they would otherwise be. For a time this effect was masked, but it appeared with full force between the middle of 1936 and the middle of 1937. In that period retail prices increased by more than 9 per cent. Some other prices rose much more rapidly—construction costs, for instance, by 18 per cent. The natural result was that the dollar incomes of the American people bought less, retail sales fell off and the activity of the consumption goods industries actually started to decline from the very beginning of 1937. If the American people want to make and consume more goods, it would seem, for a magic formula by which the average man can produce less and yet consume more should be abandoned.

Last week's pump-priming programme is therefore no more than a promising beginning with the work of rebuilding American recovery. Moreover, it is the easiest part, for it has cost the President neither the effort of reconciliation with his critics nor the sacrifice of abandoning cherished but disproved theories. The path of economic statesmanship leads on to these more difficult endeavours.

Hire Purchase Bill—II

Criticisms of the Bill

IN an article in our last week's issue we enumerated the main provisions of the Hire Purchase Bill now before Parliament, and described the abuses which it was designed to remedy. We now propose to consider certain objections which have been raised to the measure in its present form.

The most influential voice which has been heard in criticism of the Bill, so far, has been that of Mr Gibson Jarvie, chairman of the United Dominions Trust, the largest single hire-purchase finance firm in the country. In a letter published in *The Times* during the earlier stages of the Bill, Mr Gibson Jarvie contended that, under the clause preventing repossession of goods, after one-third of the price had been paid, without a County Court order, the owner would "to all intents and purposes be denied the

security of his goods" and would not be able to carry on hire-purchase business. Mr Gibson Jarvie's views command widespread respect and attention, but his argument, in this instance, is somewhat difficult to follow. It may be urged that County Court orders will not be impossible to obtain, where justice is on the side of the hire-purchase trader. And, except in cases where there is hardship and the Court orders a lengthier period of payment, the owner will be no worse off after a County Court judgment than before. The sanction of repossession remains under the Bill, though its operation may be delayed. In any case, reputable hire-purchase firms do not seize their goods from hirers. Mr Jarvie himself pointed out that nearly all the transactions of his firm—whose methods stand out as an

example to all others—were completed to the satisfaction of both dealer and buyer, and that only a fraction of 1 per cent. resulted in losses.

In any case, it is not against the repossession clause, as such, that the hire-purchase organisations as a whole are agitating. They appear to have accepted it, for the most part, as necessary to prevent the abuse of "snatching-back," without being detrimental to sound business. The main attack of the hire-purchase organisations is directed against two other clauses of the Bill. The first makes the Bill applicable to goods to the value of £100. In the case of single articles the limit originally laid down in the Bill was £50, but it was raised to its present figure in Committee. The objection is that the raising of the limit brings practically the whole of the second-hand motor business within the scope of the Bill. Second-hand cars are nearly all bought on the hire-purchase system, and they present certain problems of their own. Being mobile, they are easily concealed to prevent repossession. And, for various reasons, the instances in which buyers of second-hand cars tend to be less responsible and creditworthy than the average hirer are sufficiently numerous to invest this type of business with special risks.

The second clause to which the hire-purchase firms raise objection—namely that which allows the hirer to return goods once a third of the price has been paid—also has special relevance to the second-hand motor-car business. Traders argue that the proportion of one-third is far too low for practical purposes. In the case of second-hand motor-cars, and many other articles, it is insufficient to cover the cost of repossession and reselling, to say nothing of depreciation. Most goods depreciate in value by as much as one-third as soon as they change hands and cease to be "new." Depreciation due to wear—i.e. to ordinary use—is almost as rapid. Consequently, goods which have been in the hands of hirers long enough for a third of the instalments to have been paid, frequently have very little marketable value.

In a few cases, when the goods are returned fairly quickly, and the balance of the instalments, up to a third of the hire-purchase price, is paid in cash, the owner may be able to save himself from loss over the transaction. In other cases the advantage will be very much on the side of the hirer. An unscrupulous hirer might terminate every agreement when one-third of the price had been paid, and take out a new agreement on a new set of similar goods. By this means, the system would in effect be not hire purchase, but plain hire. The former is devised to enable easy payments to be made on goods which last for a reasonable time, though not indefinitely; the latter is applicable only to goods which last for a very considerable time. It is true that the Bill includes a sub-section allowing the owner to sue for damage to the goods, apart from fair wear and tear. Traders claim, however, that this will afford them only limited protection, for such damage is frequently far from easy to discover or define.

There is, in fact, a strong case for the raising of the proportion from one-third to an appreciably higher ratio. Most hire-purchase agreements have hitherto contained a clause allowing the termination of the agreement and the return of the goods, provided a certain proportion of the instalments have been paid. The proportion has usually been two-thirds, though occasionally it has been as high as 100 per cent. The hire-purchase organisations suggested a proportion of one-half during the Committee stage of the Bill, and something near this figure would probably be considered equitable. Full justice could be done only if there were a different proportion for different classes of goods, depending on their rate of depreciation, their second-hand marketability, and other factors. Such a policy, however, would hardly be practicable.

Objection is also made by the hire-purchase firms to the wide discretionary powers given by the Bill to County Court judges in making orders. In all really sound hire-purchase contracts, factors like the size of initial payments, the amount of instalments, and the length of payment, are carefully worked out in advance on an actuarial basis. Too drastic a revision of the size and frequency of payments, such as the judges are empowered to make, might turn the transaction into a loss. Traders, however, may rely upon the County Court judges to produce a fair compromise in all feasible instances.

The question of distraint upon hire-purchased goods, however, cannot be so readily dismissed. As the Bill stands at present, landlords are prevented from distraining upon such goods from the moment when an owner has begun an action for re-possession; and the goods are exempted from bankruptcy distraint during the period prescribed by a court for the payment of remaining instalments. The hire-purchase organisations are hoping that a clause may be inserted in the Bill exempting goods under hire purchase from landlords' distraint at all times. There is here an obvious clash of interests, and it is doubtful whether the view of the hire-purchase traders will prevail.

The hire-purchase organisations also maintain that there should be some provision to prevent a hirer from removing hire-purchased goods pending a court action, during which time the owner is powerless to interfere. A sub-section to this effect appeared in the original draft of the Bill, but was removed as being impracticable. The discretionary powers of the County Court judge to order the return of the goods to the owner should, however, be sufficient to cover this point.

A technical difficulty arises, finally, over the clause stipulating that where an agreement is "linked on" to a previous one, the goods in the second agreement shall be returnable whether one-third of the price has been paid or not. In the case where one item in a list of goods is changed and a new agreement drawn up covering the new list of goods, this new agreement provides virtually no defence against default. If the clause is not modified, it will become impossible to change goods included in a hire-purchase agreement.

Such are the main objections which have been raised, from the traders' side, against the Bill as it now stands. All in all, the strongest count in the indictment appears to be against the clause allowing termination of an agreement when a third of the price has been paid. Most of the other objections depend upon this clause. If it were modified, the passage of the Bill would apparently leave the hire-purchase firms with few grounds for complaint. And it would undoubtedly do much to obviate the abuses which have threatened to bring the hire-purchase trade into disrepute.

No clause in the Bill, incidentally, precludes voluntary compromises on special terms between hirer and owner. Action on these lines will in all probability continue to be the general practice where possible, as it has been hitherto among the reputable firms. The vast body of hire-purchase business is based upon goodwill and the desire of both parties to complete the transaction, and this will remain unaffected by legislation. Considering the wide range of abuses that need to be eliminated, it is remarkable that their removal will involve so limited an infringement of legitimate business as is envisaged by the present Bill. If, therefore, it is found possible to introduce amendments, covering the points mentioned in the course of this series of articles, either in the later stages of the Bill in the Commons, or in another place, it may be hoped that they will obtain the largest possible measure of support from the institutions whom the Bill chiefly affects.

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

Easter Currency Withdrawals.—Comparison of Easter currency requirements by the public in different years are always complicated by extraneous factors. First there is the variation in the date of Easter itself. In 1936 Easter fell on April 12th, and this year on April 17th, but last year it fell on March 28th, and so coincided with the end of both the month and the quarter, when the public are always in need of additional currency. A second factor is the state of the weather, not only during the holiday but also during the fortnight or so preceding it, when individual plans are being made. Easter fell late this year and was preceded by a prolonged period of fine weather. Actually the Easter expansion in the note circulation during the past three years has been as follows:—

	Million £
1936	17.0
1937	10.0
1938	17.7

The figures leave a general impression that a late Easter is conducive to freer spending by the public, while an Easter falling in March is too early to stimulate the full holiday spirit. Broadly, general trade recession so far has not been serious enough to damp down holiday spending. If allowance is made, however, for the rise in prices generally, and of railway fares in particular, since 1936, the comparison with a couple of years ago suggests a slight check to the volume of holiday spending.

Return of Funds to France.—For the first time for many months, the French Exchange Fund authorities have been enjoying the luxury of selling francs against purchases of foreign currencies. Ever since M. Daladier obtained his special powers and with them his impressive vote of confidence in the French Chamber, the trend of the foreign exchanges has been favourable to the franc. It is estimated that since Wednesday of last week the French Exchange Fund—first by braking the appreciation of the franc then by holding the rate at about 158½—has been able to re-acquire about £15 millions of gold. The greater part of this total represents the over-sold professional position in francs, which was covered with great alacrity after M. Daladier's resounding victory last week. Every exchange dealer and arbitrage operator has for many months past maintained, almost as a matter of course, a short day-to-day position in francs. The reversal of this position, more than any other single factor, explains the sudden purchases of francs which descended on the market in the middle of last week. In addition, the pump-priming plans of the United States, and the fears of inflation and even of currency devaluation which they appear to have initially engendered in some quarters, have helped the franc by inducing the repatriation of certain funds, held temporarily in the form of dollar balances by French firms. A smaller contribution to the flow of returning funds has been provided by the resale of dollar and sterling notes, which in recent years had found their way into French mattresses and *bas de laines*. Most London banks have this week received appreciable consignments of these homing Bank of England notes. It is significant, however, that, despite the encouraging showing of the

Paris bourse this week, there is as yet no sign that really large blocks of French capital are returning home for investment. Holders are apparently awaiting more specific tokens of the policy of the new Government than have yet appeared. On Thursday, indeed, the franc was appreciably weaker. After opening at 158½ the rate fell to 160½, and recovered only to 160½.

Decline in the Rupee.—An article on "Indian Banking Trends," in *The Economist* of April 9th last, called attention to the way in which India's external balance of payments was tending to become more passive. Her exports, as a primary producing country, have recently suffered from the world recession and falling prices, while her imports are still high as the result of the purchasing power created by the preceding period of relative prosperity. Our article called attention to one symptom of this change for the worse, namely the contraction during the past year in the Indian Reserve Bank's balance abroad. Now the warning implied in this analysis of India's current position has received further and more definite justification. After having been held at 1s. 6½d. for several years, early this week the exchange rate for the rupee was lowered to 1s. 6½d. At the tender of April 20th, however, the Indian Government rejected the offer of £70,000 of sterling at the low rate of 1s. 6d. The difference between the old and the new rate may not appear very great, but as the essence of the Indian monetary system is the link between sterling and the rupee at a mean rate of 1s. 6d., even a small movement in the rate has significance. Though there is certainly no need to apprehend any fundamental deterioration in India's economic position, the fall in the rupee suggests that India cannot escape the normal vicissitudes of a primary producing country.

United States Silver Policy.—Immediately before Easter, Mr Morgenthau announced that the United States Treasury was buying all the spot silver offered to it in New York—though he was careful to add that this was not a fixed policy. In particular Mr Morgenthau declared that he was not differentiating against Mexican silver; on the contrary, he would buy any Mexican silver offered on a spot basis in New York. As for silver bought through London, he neither knew nor cared about its ultimate origin. The implication is that there is no reason why increased offerings of Mexican silver in the world markets should not be balanced by an increased American demand, but this is by no means equivalent to the former agreement under which the United States bought each month a definite quantity of Mexican silver according to a pre-arranged schedule. This announcement, however, has imparted some slight degree of strength to the forward market, since it means that Mexican silver may not be entirely the dead weight on the market which had originally been feared. The spot price, conversely, is weaker; but this is due to the appreciation of the pound against the dollar, which has reduced the sterling equivalent of the New York spot price.

MONEY MARKET NOTES

Foreign Exchanges

THE main movements this week have been a certain withdrawal of foreign funds from New York, as a result of President Roosevelt's new programme; and a general repatriation of French capital. The consequence was a weakening of the dollar from \$4.98½ to

\$5.01 at Easter and a rally in the franc to Frs. 158. Profit-taking has since brought the dollar rate back to \$4.99½, while the franc has also returned to Frs. 160½. Up to Thursday, however, the French authorities were able to buy sterling. The position is discussed in a Note above. It is thought that, owing to the recent improvement in the Paris market, the reports of an impending

French desire to borrow in London may be premature. Belgas followed the dollar, and guilders were bid down to Fl. 4.98½ owing to movements of funds from New York to Holland, but Swiss francs weakened to Frs. 21.69 as a result of the repatriation of funds to France. The free rate for the Argentine peso, which was over Pes. 20 in March, has now rallied sharply to Pes. 19.

There were reports this week of an impending Dutch-Swiss loan to Argentina, consisting of Fl. 20 millions in 3½ per cent. three months' Treasury bills, with renewals up to a maximum of two years. It is not easy to see why Argentina needs such a loan, for the position of the central bank is very strong. Nor do the Argentine authorities desire a further appreciation of the free rate, for the recent reduction in the surcharge would then become effective, with a consequent growth in imports financed by free pesos. Still, this report probably explains the last stages of the recent improvement in the free peso.

The Bank Return

This week the note circulation has fallen by £1.6 millions. Usually the week including Easter witnesses a slight increase in the circulation, for the notes do not begin to return until after the lapse of a few days. Probably this week's contraction indicates a certain amount of French dishoarding.

	Apr. 21, 1937	Apr. 6, 1938	Apr. 13, 1938	Apr. 20, 1938
Issue Dept.:				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	464.0	489.7	497.2	495.6
Banking Dept.:				
Reserve	50.7	37.6	30.0	31.6
Public Depts.	25.6	12.8	17.7	18.0
Bankers' Depts.	91.2	112.4	104.0	106.5
Other Depts.	38.9	36.8	36.0	36.1
Govt. Secs.	94.1	111.9	116.1	117.6
Discounts & Advances	4.6	10.1	9.6	8.2
Other Secs.	24.0	20.1	19.6	20.8
Proportion	32.5%	23.1%	19.0%	19.7%

Both the Reserve and Government securities are slightly higher on the week, and as a result bankers' deposits have risen by £2.1 millions. It may be

presumed that French dishoarding, followed by the repatriation of French funds and gold sales by the British Exchange Account, would lead to a reduction in the Treasury bills held by the British banking system, offset by a replenishment of the banks' cash.

The Money Market

While money is still very easy, several of the clearing banks have had to call this week. The general expectation is that though money will remain easy this month, it will become slightly tighter in May. The reason is that the market obtained very poor Treasury bill allotments in February and so will be short of May maturities. But much depends upon how the market fares at the May Treasury bill tenders.

	Apr. 22, 1937	Apr. 13, 1938	Apr. 21, 1938
Bank Rate	2%	2%	2%
London Deposit Rate	1½	1½	1½
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	5½-3½	1½-5½	1½-5½
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	1½-2½	1½-2½	1½-2½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ½ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

On April 15th, the market obtained a 41 per cent. allotment of Treasury bills at £99 17s. 5d., or one penny better than ½ per cent. Some £45 millions of bills were allotted. This was a fairly good result, but the banks remain keen buyers of July bills, and the market is not always able to meet the banks' needs. There is little definite news yet

of the City's inclination to take up Italian commercial bills at cheaper rates.

The Bullion Market

In spite of the improvement in Paris, there has been a fair Continental demand for gold all the week, which may imply a tendency to switch funds over from dollars into gold. All supplies have come from official sources. The premium this week has been too high to permit of arbitrage operations.

Date	Gold		Silver, price per oz. standard	
	Price per fine oz.	Prem. or Dis-count *	Cash	Two Mths.
1938	s. d.	d.	£'000	d.
Apr. 14.....	139 8	2 pm	143	181½
" 19.....	139 6	7 pm	357	181½
" 20.....	139 6	5 pm	375	181½
" 21.....	139 6½	2½ pm	333	181½

* Above or below American shipping price. The New York price of silver remained at 43 cents per ounce .999 fine during the week.

The silver market has been narrow and early influenced by passing events. India has been both a buyer and seller with no sign of any replenishment of Bombay stocks. There has been further Continental and speculative selling. In spite of Mr Morgenthau's Easter statement, referred to in a Note above, it is still true to say that the market is feeling the shock of the American suspension of purchases from Mexico. Thus prices must still be regarded as unstable, whenever they are at or above the American parity.

Investment

Firmer Markets.—Although the stock markets took a reactionary turn in the middle of this week, both in London and in Wall Street, their behaviour has continued to afford evidence of a tentative return of interest, particularly among institutional investors. Since *The Financial News*' index of British ordinary shares touched its lowest level for this year, at 79.4 on March 16th, there has been, in London, a phase of fairly sharp recovery which carried the index to 86.0 by March 25th, a phase of renewed indecision during which the index sagged to 83.8 on March 30th, and a spell of buying which has taken the index to a present level of 91.0. In New York, the Dow Jones industrial index rose from 98.95 on March 31st to 121.00 on April 16th, but closed on Wednesday no better than 114.90. There would appear to have been enough in the news, during the last two or three weeks, to produce a recovery, but not enough to induce a real return of confidence. The closing of bear positions revealed a potential shortage of stock, but the really firm new buying necessary to exploit this condition has so far failed to materialise. And in London the fact that the Easter holidays came only a week before the end of a long Stock Exchange Account and only ten days before the Budget, induced a good deal of professional "evening up" before, instead of after, Easter.

A good Budget ("good" in the sense that it bridged any gap in the revenue by increased borrowing rather than by new direct taxation) might provide the bulls with an argument for continued recovery in share values. Without putting too optimistic a construction on the Anglo-Italian Agreement, the Stock Exchange believes that it has appreciably lessened immediate political tension in Europe.

Meanwhile, trade at home is holding up, on the whole, better than many people expected. A dangerous position in France has been alleviated by M. Daladier's advent. And the American President has moved his foot from the brake to the accelerator pedal. If every one of these possibilities were to develop as the markets would like, the depression of 1937-38 might turn out to be V-shaped after all; and in the summer or early autumn security prices might rise impressively. But there are at the moment rather too many "ifs" in the hypothesis. The Italian Agreement touches only indirectly the real European problem, whose crux is the future relationship of Great Britain and France with Nazi Germany. The volume of new industrial orders is insufficient to maintain indefinitely the present activity of British trade. M. Daladier and his Government are enjoying only a respite, and not a victory. And whether pump-priming will produce a sustained recovery in the United States, so long as the feud between the President and Big Business retains its present bitterness, is open to grave doubt. On the whole, investors are unlikely to abandon their ingrained caution until the horoscope has become clearer.

I.C.I. Meeting.—The report of Imperial Chemical Industries is so fully documented that the annual meeting provides admirable opportunity for broader review. And Thursday's meeting assembled with the knowledge that two highly important general matters might come up for consideration—the recent management changes and the problem of the group's investments. Lord McGowan added little to the details of the changes in the organisation of management, which were fully described and charted in the report. He did emphasise, however, his conviction

IMPERIAL CHEMICAL INDUSTRIES, LIMITED
CONSOLIDATED BALANCE SHEET

			15,761,321
			110,588,149

NOTE.—The full statement also includes notes on various figures and a statement of contingent liabilities existing at December 31, 1937.

that this further development of the policy of decentralisation would be "of great benefit" to the company. Again, the account of the board's stewardship over its marketable investments should disperse market misgivings regarding the effect of recent losses on the company's financial position. The net balance of capital profit on original merger values of investments amounts to £3,700,000, and the net loss on post-merger investment transactions is no higher than £100,000. This basis, of course, is a legitimate criterion for judging the success of investment policy, although the directors would no doubt agree that it is not the only consideration involved. The major part of the depreciation of £1,824,066 on the book value of investments last December related to the valuation of the German investments, which are still to be retained, while the unaccounted depreciation of £324,066 outstanding after the transfer of £1½ millions from general reserve at the end of last year has since been reduced to £214,594.

Points emphasised in the review of trading conditions include the repeated declaration that a "very small percentage" of the group's activities are concerned with armament orders. The defence programme, for the most part, exerts an indirect influence on the company's business, but certain works have been carried out by the company, largely as agents for the Government. The review of foreign conditions, indeed, leaves little doubt that peace and not war best serves the company's widely-dispersed interests. Reviewing the prospects for 1938, the chairman stressed the importance of conditions in the United States, but he made the significant statement that, even if British industrial activity in 1938 showed some decline, the company should not be affected in comparable measure. Widespread interests, secular expansion in certain products, and greater productive efficiency appear to justify this expectation. In

terms of dividends it has long been recognised that the board's distribution policy is designed to assure the optimum degree of stability, through good and bad years alike. The past year, however, was one of "exceptional activity and profit," and was so recognised in the dividend. The ordinary stock can consequently be valued on the assumption that, if dividend changes occur, they will normally be of small dimensions in either direction.

I.C.I. Group Assets.—In future years the company will include a consolidated balance sheet in the report. The first statement of the group's assets and liabilities, at the end of 1937, was, however, distributed at this week's meeting, and is reprinted in full at the head of this page. It shows a balance sheet total of £110,588,149, compared with £97,999,454 for the parent company. Of this total, fixed assets, less obsolescence and depreciation reserve, account for £51,846,874, and intangible assets, such as patents and other rights (represented by the excess of purchases considerations over the net worth of subsidiary companies) amount to £15,699,000. This sum appears substantial, but it represents just over two years' purchase of the 1937 net profits. In addition, investments in associated companies total nearly £7½ millions. Current assets, including marketable investments, are entered at £35,606,609, and after providing for current liabilities and other provisions, net liquid assets amount to £19,845,288. Of this sum £2,693,048 is represented by cash. Inspection of the liabilities side of the statement reveals that the surplus of assets over liabilities and share capital for the subsidiaries amounts to no more than £684,836, which appears to confirm the directors' contention that no appreciable prior reservation of profits has been made by the subsidiaries before the parent company's revenues are struck. Obsolescence reserves represent 12 per cent. of the book values of land, property and machinery. During the past four years, however, the company has expended over £13 millions on new physical assets, and it would appear that the increase in the obsolescence allocation in 1937 from £1 million to £1½ millions may be a permanent feature, in view of the larger volume of fixed plant which the group must now provide for. All told, the directors may be congratulated on the publication of a consolidated balance sheet which both reflects their cautious financial policy in the past and underlines their high responsibilities for the future.

Lever and Unilever Dividends.—The re-arrangement of the British and Dutch interests of the Unilever group last year had among its objectives the payment of more generous dividends than had been possible under the

original arrangement between its two branches. These expectations have now been realised. Lever Brothers and Unilever, which declared an interim of 4 per cent. in November, have announced a final payment of 6 per cent., making 10 per cent. for 1937, compared with the equivalent of 7½ per cent. for the previous year, when earnings amounted to 15.6 per cent. on the former Unilever shares. Lever Brothers and Unilever N.V. have also raised the dividend on the Fl. 1000 shares from Fl. 55 to Fl. 75, in similar proportion. To what extent this increase in payments is due to the rearrangement of the group, and how far it has proceeded from an actual increase in earnings last year, the forthcoming accounts may reveal. From the reports published by the British subsidiaries, it would seem that a significant increase in earnings was achieved in 1937. The re-division of profits within the group, based on equalitarian distribution of profits by both British and Dutch companies, has quickly proved its advantages.

Cunard Group Position.—Conditions in the North Atlantic passenger trade in 1937 were the most favourable since the depression, and Cunard White Star earnings, assisted by a full year's operation of the "Queen Mary," have responded very satisfactorily. Total revenue increased by £1,340,723 to £8,222,042, and after deducting operating expenses, gross profits have advanced by no less than £717,407 to £1,305,830. The course of operating profits set out in the following table proves yet again that shipping operations are distinctly highly geared, since a substantial proportion of operating costs is of a fixed character:—

	1935	1936	1937
	£	£	£
Total income	5,956,929	6,881,319	8,222,042
Operating expenses	5,984,595	6,292,897	6,916,212
Operating profit	Dr. 27,666	588,422	1,305,830
Depreciation of fleet	...	...	1,111,423*
Fees	10,950	7,750	7,750
Depreciation of plant	11,903	13,213	14,055
1st debenture interest	11,250	20,800	26,250
Net profit	Dr. 61,769	546,659	146,352
Carried forward	Dr. 469,859	76,800	223,152

* Covering depreciation on S.S. "Queen Mary" from May-December, 1936, £135,143, and depreciation of fleet for 1937, £976,280. In addition, £6,348,663 written off ships (except S.S. "Queen Mary") from share premium account, including £2,466,410 depreciation to 1936.

This scale of profits, however, has served to cover depreciation on the "Queen Mary" for part of 1936, and for the full fleet last year. The total provision, which requires £1,111,423, seems by no means ungenerous, and the fact that it has been earned may be regarded as the first major step in the company's progress towards fuller prosperity. In addition, the balance of £6,348,663 on share premium account has been applied to writing down the fleet from £18,717,400 to £12,962,149. Incidentally, the expenditure to date on the as yet unnamed "Queen Elizabeth" is not separately distinguished. This transfer, however, is of little more than accounting significance, for when the Cunard and Oceanic fleets were transferred to the company in 1934, the share considerations were taken at a 100 per cent. premium. Yet the amount available for distribution on the income debentures and share capital is no higher than £146,352, a fact which, for a prosperous year, underlines the necessity for Government financial assistance in the Atlantic passenger trade.

Perusal of the complicated financial provisions governing the service of the prior charges—they have yet to be increased when the "Queen Elizabeth" is completed—proves very plainly that the Cunard Steam Ship's 62 per cent. equity in the operating company is of a deferred character. This company's income last year amounted to £355,382—a slight reduction on the 1936 figures of £361,719. After depreciation and debenture service, the balance available for dividends amounted to £24,516 against £22,740, and the surplus has again been added to the balance carried forward. These results, it would seem,

scarcely reflect the improvement achieved by the principal subsidiaries. Despite various operating difficulties, both the Port Line and Thos. and Jno. Brocklebank companies doubtless earned more satisfactory profits in 1937, although the directors refer to "an unfortunate reaction" in the Indian trade this year. The company's preference dividends are in arrear since 1931, and the prospect of early and adequate remuneration on the holding of Cunard White Star shares is quite uncertain. A more immediate matter, perhaps, is whether the setback in shipping conditions will affect the introduction of the long-awaited reconstruction scheme. Meanwhile, the first preference stock at 44½ and the ordinary shares at 3s. 7½d. stand at little more than half the level recorded a year ago.

Shipping Results.—Reports published recently by three other shipping companies—of which Court Line and King Line are carriers of general cargo and John I. Jacobs owns tankers—emphasise the remarkable rate of recovery in 1937. The three concerns necessarily differ in the measure of their achievement, but all have been able to reward the stockholder for patience in lean years, to increase their depreciation, to improve their liquid position, and in two cases to reduce indebtedness. Earnings for the past three years are analysed in the following table:—

Company	Total Profits	Earned for Divs.	Ord. Div.		Current	
			Earned	Paid	Price	Yield
	£	£	%	%	s. d.	%
Court Line—						
1935	98,837	Nil*	Nil	Nil	15 9	11 51
1936	134,705	12,097*	3 5	Nil	(6 8)	
1937	372,668	191,275	43 7½	25		
King Line—						
1935	52,793	Dr. 3,160	Nil	Nil	18 9	8 53
1936	103,794	10,147	2 7	Nil	(4 1)	
1937	215,748	64,411	17 2½	8		
John I. Jacobs—						
1935	56,114	26,924	10 0†	5	24 6	8 88
1936	64,468	41,947	20 0	7½	(12s.)	
1937	196,209	124,518	66 2	17½		

* After 1½ years' debenture interest in 1935 and 2½ years' in 1936. † After charging only one year's preference dividend. ‡ Before charging premium on debenture or loan redemption.

Unfortunately, the sharply rising trend of freight rates so prominent in the first part of 1937 has for some time been reversed, but while the outlook for the current year is much less cheerful, it is assisted, in part, by some carry-over of business arranged at last year's more favourable rates. These companies, moreover, can face the more difficult circumstances of the current year with a much strengthened financial position. Court Line, for instance, have provided £150,000 against £35,000 for depreciation, though this is partly balanced by the payment in 1937 of only a year's debenture interest instead of 2½ years' as in 1936. The heavy reconditioning, Lloyd's survey, and laying-up expenses, which absorbed some £45,000 in 1935, have been saved, but the conservatism of the distribution is in part explained by the provision of £50,000 for the premium on £500,000 debentures redeemed last December. King Line have done even better than the profits figures suggest, since earnings in 1935 and 1936 included an unstated amount of subsidy. Some £63,000 for arrears of depreciation still remain, but ground lost in the depression has been overtaken, and in 1937 as much as £133,716 was written off the fleet from profits, together with £49,312 from profits on the sale of vessels, while a loan of £444,000 has also been repaid. John I. Jacobs

and Company, who own tankers, report total profits in 1937 which are over 25 times as great as in 1932. Dividends were resumed in 1935, when a capital reconstruction was effected, but last year about £88,000 was added to reserves and carry-forward, compared with net ordinary dividends of £31,500. All told, shipping results for 1937 have been satisfactory, but their vulnerability to a setback in trade and freight rates is reflected in current yields.

* * *

Walsall Conduits Report.—This electrical manufacturing company has followed up its announcement of a 55 per cent. dividend with a good report. Few newcomers to the market have distinguished themselves so satisfactorily. Already in 1936, earnings had outstripped the rising trend of prospectus profits, and last year's profits have further jumped to £156,384, against £118,344. After-tax and N.D.C. have absorbed £44,000, the amount earned for dividend is £112,084, compared with £12,462 in the last seven weeks of 1936 (after deducting certain expenses), and pre-incorporation profits of £101,802. The 5 per cent. preference dividend absorbs £7,505 net, and £104,579 is consequently available for the ordinary shares, equivalent to no less than 93 per cent. The 55 per cent. distribution is thus liberally covered, and leaves £22,700 to be added to the carry forward, and an inaugural reserve allocation of £20,000. Evidence of progress is also to be found in the balance sheet, for considerable increases are shown in stocks, debtors and creditors. Holdings of Government securities, which were formerly quite small, have risen to over £65,000, the increase of £60,000 more than offsetting a £10,000 drop in cash. The company's ability to take full advantage of general trade conditions has been demonstrated, but current yields of 14.9 per cent. on earnings and 8.9 per cent. on dividend suggest that the market does not overlook the possibility that the concern may be sensitive to business recession.

* * *

British Celanese Preference Surprise.—The announcement, over the Easter holiday, that the directors of British Celanese had decided to pass the payment of the 7 per cent. cumulative first preference dividend, due on April 30th, came as a distinct shock, and the £1 shares which fell to 10s., were unable to maintain this lower level. The directors refer in their statement to the unfavourable trading conditions which have prevailed. A clear indication of difficulty in maintaining profits was also given in the chairman's speech last November, which disclosed that, while the trading volume for the first quarter of the financial year commencing in March, 1937, was higher than in the preceding year, estimated profits were not quite so good. Unfortunately for the company, the indications of a desire for co-operation within the industry, to which the chairman also referred,

have not apparently been followed by positive achievement. It is difficult, in view of the current problems of the textile trades, to assess the prospects for the first preference shares. During the two financial years ending in February, 1936, 3½ years of dividend arrears were overtaken, and the full dividend for 1936-37 left a balance almost sufficient to cover six months' dividend on the second preference shares to October, 1930. First preference shareholders will await the full report with some anxiety, to discover whether the process of accumulating heavy dividend arrears must again be repeated. Meanwhile, it would appear that the board's intention, expressed in the last report, to deal with the arrears on the second preference shares "in a manner which would not entail any sacrifices by any class of shareholders" has for the time being been frustrated.

* * *

W. T. Henley's Profits.—In 1936 this company simultaneously reached its centenary and record profit levels. In 1937, however, these records were broken, for total profits exceeded £450,000 for the first time. After charging income tax, N.D.C. and contingencies, total profits amount to £451,839, against £402,491; depreciation is little changed at £60,602, and preference dividends and other expenses require about £27,000. Ordinary earnings, however, are £62,000 higher at £364,112. On the new capital, increased by the 100 per cent. capital bonus, earnings amount to 30.7 against 24.4 per cent., and the full 20 per cent. dividend is payable on the £1,300,000 of ordinary stock now outstanding. For 1936, 22½ per cent. in all was paid, but the interim dividend of 7½ per cent. was paid on the old capital, and the year's payments included a 3½ per cent. centenary bonus, which was essentially of a special nature. The hopes of satisfactory profits in 1937, expressed at the meeting a year ago, have thus been fulfilled. It is probable, however, that part of the increase in profits in 1937 is due to the high level of activity prevailing in the early part of the year. New orders placed in the first four months constituted a record. Moreover, the rise in stocks from £616,216 to £680,078 and in debtors from £855,818 to £957,313 suggests continued expansion in business. But the current position of orders and prospects for new business must be left to the chairman's speech at next Friday's meeting. The outlook for 1938 is not wholly favourable for electrical manufacturing companies, but a current price of 19s. 9d. for the 5s. ordinary shares fairly values the company's earning ability on a 5 per cent. basis.

* * *

San Paulo (Brazilian) Railway.—The results and recent dividend of this concern for 1937 have caused some recovery in the stock, for the tax-free dividend has been reduced by no more than 1 per cent. to 4 per cent., although a draft upon general reserve has been necessary to provide for the payment. Gross currency receipts on the main line rose by 4.79 per cent. (compared with 19.27 per cent. in 1936), and working expenses absorbed a higher proportion of receipts. Operating receipts rose from £1,550,322 to £1,691,984, and expenses from £1,123,394 to £1,281,346. Net operating revenue, in fact, amounted to £410,638 against £426,927. Ruling out a transfer of £200,000 from general reserve (which may be offset against a similar transfer to Bridge Renewal Fund), the total disposable balance of net revenue was £528,874 compared with £491,450. Both figures, however, include certain smaller transfers from reserve funds, whose effect is difficult to eliminate. The full 4 per cent. dividend is covered, on this basis, with a margin of £28,195. If the Bridge Renewal Fund allocation being, in effect, met from reserve, is excluded from charges, 4.4 per cent., tax free, was earned for dividend, against 5.4 per cent. The railway has paid ordinary dividends regularly, except in 1932, but it has been compelled to reduce its payments without having approached pre-depression levels. With rising costs and obscure prospects both for coffee and cotton, the outlook for a continued improvement in receipts is not too bright, and the current yield on the ordinary stock is as high as 12.7 per cent. gross.

Other Company Results.—Our usual analysis of profit and loss accounts on page 218 contains some 75 companies in all. Rubber company results for 1938 are appearing in increasing numbers, and several new concerns have issued their first reports. The results are discussed on page 202 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 209. The proceedings at the *Imperial Chemical Industries* meeting are discussed on page 195. Reviewing the opera-

tions of the *Eagle Star Insurance Company*, Sir Edgar Mountain revealed that only £3,000 of the sum of £10,680,819 assured last year represented business outside the United Kingdom. He referred to the increased burdens placed on the motor department in recent years. Sir Harry Goschen, at the *Agricultural Mortgage Corporation* meeting, disclosed that the total amount advanced by the Corporation was increased by £447,809 last year to a total of £12,416,218. Payments of interest and principal continued to be promptly met. At the *Oxendale and Company (Proprietors)* meeting, Mr A. Stanley Smith expressed satisfaction that turnover in all sections had been increasing, in spite of growing competition.

THE STOCK EXCHANGES

London

SETTLING DAYS
TICKET ACCOUNT
APRIL 26 APRIL 28

The promise which the markets showed on the resumption of business this week was not maintained. A moderate amount of new buying, associated with the Anglo-Italian agreement, put prices higher in every section on Tuesday, but it was clear on later days that the market's chief pre-occupation was the Budget. In addition, Wall Street and the rail and cable traffic lent no assistance to a market which was in any case disposed to react.

Gilt-edged opened firm, but a moderate amount of realisation on Wednesday proved that little support was available. Budget factors were largely responsible for this reaction, which chiefly affected the dated stocks. A continuing demand for corporation stocks, however, was in evidence. Renewed selling of New Zealand stocks was reported.

In the *foreign bond market*, further support was accorded to Austrian issues, and most of the Central European bonds responded to the Anglo-Italian agreement. German issues rose further. Brazilian and Japanese bonds received better support, but Chinese issues lost part of the gains recorded in the previous week.

*

Home rail stocks found the holiday traffic far from welcome, falls of 1½ in Great Western and 1 in L.M.S. ordinary being recorded. Business in Argentine issues was small, and limited to prior charges.

Hesitancy in advance of the Budget was evident in the *industrial market*, which opened firm, but lost momentum from mid-week. Cable and Wireless were especially weak on the March index number, and international stocks lost ground in sympathy with New York. Steel shares showed initial gains, but failed to maintain the best prices. Walsall Conduits rose on the profits (discussed on page 198), but Henley's Telegraph were steady. Gains were common at first in the motor share list, but prices reacted later. Profit-taking also affected the aircraft group, and the popular engineering counters lost ground. Brewery shares again showed confidence regarding the Budget at first, but also reacted later, in some cases significantly. Tobacco shares were also easier. Interest in textile issues was small, but I.C. Gas responded to the improved outlook in France. Miscellaneous industrial shares generally

made further progress on Tuesday, but their best levels were not held as the account closed. Building shares were also easier.

*

Oil shares opened firm, though Mexican Eagle were sold from Paris and the British Controlled results were not to the market's liking. The leaders, however, displayed firmness, but conditions became easier in mid-week. Rubber shares were initially supported, and after a pause made further moderate headway on Thursday, assisted by the commodity.

Firmer conditions were evident in the Kaffir market, both dividend-paying shares and developing mines making a consistent showing until the end of the account. French interest and local investment support assisted the "heavy" shares, and interest tended to spread to West African issues. Copper shares advanced further at first, but declined later, in company with other base metal issues.

New York

WALL STREET's active session last Saturday was the only occasion during the past week when the President's pump-priming and reflationary measures found any response in market prices. Reduction of reserve requirements by 12½ per cent. and the sterilisation of the inactive gold fund have been unable subsequently to offset Wall Street's fears that a recovery programme will take time and may involve political discord. *Iron Age* has reported in frank terms that the near-term trend in steel operations is likely to be down rather than up and that public expenditure will not provide any immediate stimulus. Current operations are maintained at 32 per cent. The net effect of these factors was a consistent fall in stock prices throughout this week. With the possibility of Congressional face-spiriting on the pump-priming proposals and the President's undefined attitude towards the Tax Revision Bill, all sections of the market, including rail and utility bonds, reveal the pursuit of caution. Turnover remains small and professional interest is even smaller.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

STOCK EXCHANGE INTRODUCTION

Jamaica Government.—The 3 per cent. inscribed stock (a Trustee stock) now issued amounts to £340,000, of which £50,000 has been sold to the market at 98½, and the balance taken up by Crown Agents on behalf of other Colonial Governments. Secured on general revenues and assets. To be repaid at par May 1, 1949.

Sierra Leone Government.—The 3 per cent. inscribed stock (a Trustee stock) now issued amounts to £306,834, of which £50,000 has been sold to the market at 96½ and the balance taken up by Crown Agents on behalf of other Colonial Governments. Secured on general revenues and assets. To be repaid at par April 15, 1954.

PRIVATE PLACINGS

Blackburn Aircraft.—This company has issued 16,812 10s. ordinary shares ranking for dividend from April 1, 1938.

Property and Reversionary Investment Corporation.—£200,000 4½ per cent. first mortgage debenture stock has been privately placed at 101½. The new stock ranks *pari passu* with the previously existing issued £300,000 stock except that the first interest payment on August 1st will amount only to 15s. 8d. per cent., subject to tax.

BY TENDER

Tamworth Gaslight and Coke.—Tenders are invited for £16,000 4½ per cent. redeemable preference stock, at a minimum of 102.

ISSUES TO SHAREHOLDERS ONLY

Woking Electric Supply.—Debenture and shareholders are being offered at par £100,000 4½ per cent. debenture stock.

DIVIDEND ANNOUNCEMENTS

Rates are actual, unless stated per annum or shown in cash per share. Rate for previous year refers to total dividend, unless marked by asterisk to indicate interim dividend.

Bolivia and the Tin Committee.—The Bolivian tin industry is potentially the world's second largest supplier of the metal, but since 1935 it has been hampered by technical difficulties and by the aftermath of the Chaco war. As a result, the export quotas allotted to Bolivia by the International Tin Committee have not been fully used; exports in the first and last quarters of 1937 amounted to 5,750 and 7,499 long tons, compared with the 11,488 and 12,636 long tons allowed under the international control scheme. The unused quotas have been transferred to other countries and have served to sweeten the pill of the recent cuts in exports ordered by the International Tin Committee. The figures just published of the Bolivian tin output in the first quarter of 1938 show that the position has been reversed; the reduction in quotas and the recovery of Bolivian production led to an excess export of 1,202 long tons above the quota of 6,570 long tons. For the second quarter of the current year, the export quotas have been cut from 70 per cent. to 55 per cent. of the standard output, so that it is probable that Bolivia will continue to export in excess of the amounts allotted to her and will not be able to surrender part of her quota to the other tin-producing countries. This change in the situation is likely to create new problems for the International Tin Scheme in the near future.

End of Gold Coast Cocoa Boycott.—The Gold Coast cocoa boycott, which has been in operation since last October, came to an end this week, writes a correspondent. The Gold Coast Department of Agriculture has introduced an Export Ordinance to secure an orderly liquidation of the huge stocks accumulated in the Colony, which are estimated at 245,000 tons. Certain quantities of the stocks are of inferior quality, but it is believed that about 200,000 tons are marketable, to which must be added the current year's minor crop of about 20,000 tons. The origin of the farmers' selling strike was discussed in *The Economist* of February 12th, page 361; in the first six months of this season (October to March) exports of cocoa beans from the Gold Coast amounted to only 49,365 metric tons, compared with 216,097 metric tons in the corresponding period of the previous season. It is not known whether the Gold Coast Government intends to hold back part of the supply, but such a course might be wise in view of the recent fall in price. The three months' Accra quotation on the London Terminal Market is now less than 25s. per cwt., compared with 30s. per cwt. at the beginning of the boycott and over 46s. per cwt. in March of last year. Consumption is declining, and the world's requirements during the current season are unlikely to exceed 650,000 metric tons, compared with last season's figure of nearly 700,000 metric tons. The report of the Cocoa Commission, which has been appointed by the Colonial Secretary to examine the organisation of the West African cocoa trade, will probably be published in the summer.

★ ★ ★

Restriction of Woodpulp Output.—The price of woodpulp, the raw material for paper and for artificial fibres, has fluctuated widely in recent years. Largely because of speculative buying, the price during 1936 and the first half of 1937 rose to about twice its former level, but a large volume of re-sales from America brought a relapse at the end of last year. Twelve months ago, some sections of the trade were discussing the possibility of a general woodpulp famine; at a Conference in Stockholm last week the Sulphite Pulp Suppliers' Convention decided to reintroduce a restriction of exports, after a lapse of 14 months. The Convention, concluded eight years ago, is comprised of representatives from Sweden, Finland, Norway, Lithuania, Czechoslovakia, Germany and Austria, and the restriction

WORLD OUTPUT OF WOODPULP (ALL GRADES)
(In 1,000 tons)

★ ★ ★

	1929	1932	1936
U.S.A.	4,342	3,357	5,103

Norway	943	886	935
Japan	609	542	773

Total (including other countries)...	16,941	13,969	20,704
--------------------------------------	--------	--------	--------

of exports by 20 per cent. for the current year makes a reduction in the output of the members from 2.7 million tons to 2.45 million tons. Canada is the only country producing a large volume of sulphite pulp who has not taken part in the agreement ; of her production of about one million tons annually, about half is exported. The agreement covers, therefore, a large part of world exports and may succeed in lifting prices from their present low level.

Under President Roosevelt's spending programme some £60,000,000 is to be provided for the railways for the

Expansion of German Fisheries.—One of the objectives of the second German Four Years' Plan is to double the yield of the fisheries; it is hoped by this means to supplement domestic supplies of albumen and to alleviate the shortage of fats. The authorities also hope to increase the German production of industrial oils and of meal for feeding livestock and so to lessen the demand for imported products. The output of German fisheries in 1936 was estimated to be nearly 600,000 tons, compared with a British catch of more than a million tons; the *per capita* consumption is estimated at 12 kilogs. in Germany and 24 kilogs. in England, so that there should be little difficulty in stimulating home consumption. The main problem is one of increasing production; but to double the catch of fish within a year or two will not be an easy task.

Exports in March were generally lower than a year ago, the shrinkage being most obvious in textiles, iron and steel scrap and manufactures, and locomotives, but

Great hopes were placed on the resuscitation of the German whaling industry after a lapse of seventy years. Germany has imported about 200,000 tons of whale oil annually for the manufacture of margarine, but it is doubtful, in spite of official enthusiasm, if the German fleets can supply such a quantity. The first whaling venture in 1935-36 is said to have yielded about 10,000 tons of first quality whale oil, and the catch for the present season is estimated to be between 85,000 tons and 90,000 tons. During the last two seasons Germany agreed to conform to the restrictions both of time and of territorial limits which were arranged by the London Agreement, with the aim of conserving the supply of whales. As the largest importer of whale oil, Germany is vitally concerned to prevent the exhaustion of supplies, but it seems likely that her adherence to the system of international control will seriously hinder the attempt to double the output of her fisheries.

Increasing Use of Molybdenum.—Molybdenum is a metal used chiefly with steel to which it gives a high elastic ratio, strength at high temperatures and great toughness and ductility. In the past year, the high price of tungsten has led to the increasing use of molybdenum as a substitute and the rising tide of world re-armament has stimulated its output. The Climax Molybdenum Company, an American concern, which controls more than four-fifths of the world's output, produced 22 million lbs. in 1937, more than four times as much as in 1933. In the first two months of 1938 sales have been well above those in the corresponding period of 1937. Moreover, the company has planned to produce between 28 and 30 million lbs. in the current year in order to satisfy the expected demand.

INDUSTRIAL REPORTS

BOTH industrial operations and new business have been interrupted by the Easter holidays. Domestic consumption of coal continues fairly satisfactory, but export business remains small. Exports last month, at 2,960,000 tons, showed a decline of 77,000 tons on the corresponding month last year. Stocks of iron and steel remain heavy and new transactions are still scarce. The value of building plans passed by 142 local authorities last month was 12.4 per cent. smaller than a year ago. In the case of factories and workshops, the decline amounted to no less than 50 per cent. The slight rise in raw cotton prices has stimulated inquiry for cotton goods, though the volume of transactions has been small. There has been no improvement in the volume of commercial orders placed with the Dundee jute industry which is now working at less than 50 per cent. of capacity. There are no indications of any significant change in the general trend of business during the next few weeks.

Coal

Sheffield.—The stoppage over the week-end has given the coal market an easy appearance, but this will disappear next week, the inland position being very sound. There has been a slightly better demand for household coal, due to the colder weather. The railways have been taking considerable supplies of locomotive fuel, but their demand will probably decline during the next few weeks. Small coal is well taken up. The export market shows no improvement, and business is difficult to negotiate.

Newcastle-on-Tyne.—Most collieries are comfortably placed for this week. But while there is a little more inquiry from abroad, the forward position is causing some anxiety, especially among prime Northumberland steam collieries who feel the lack of home trade. The Durham section is fairly steady: coking and gas coals continue to be well absorbed, but business in second-class steams is insufficient. The market in patent oven coke is quiet, there being no inquiry from abroad, with the result that producers, whose stocks have increased, have to curtail production.

Glasgow.—The Scottish coal market remains dull. Local business is fairly satisfactory, although there is not the same pressure for supplies as formerly, but export business is not yet showing any real signs of improvement and the collieries catering for this market are all in need of new orders. Some short-time is now being experienced in various districts. Danish trade has improved a little this week. Business with London and other coast markets is tending to taper off owing to the seasonal contraction of requirements of the gas and electricity works. Prices are steadier, but are still being shaded for prompt business.

Cardiff.—The holidays have restricted business on the Cardiff coal market this week. Collieries were idle

on Monday and coal loading operations were not fully resumed until Wednesday. A number of inquiries were circulating, including one for the supply of 100,000 tons for Dublin and 30,000 tons for the Ghent Electricity Works, but hardly any new business has been transacted. Quotations are nominally unchanged. Shipments at the South Wales docks last week (five working days) totalled 329,939 tons, compared with 398,900 tons in the previous week, 455,447 tons in the corresponding week last year, and 390,772 tons in the 1937 Good Friday week. The aggregate shipments in the current year are still 100,000 tons in excess of those in the corresponding period last year.

COAL OUTPUT AND EMPLOYMENT

Iron and Steel

Sheffield.—Owing to the holidays business has been small this week. As consumers are well stocked, a rapid revival of the demand for iron is not expected. The smaller volume of production is equal to the demand for forge and foundry iron. A slightly better inquiry is about for hematite mixed numbers, and special qualities are in steady request. The bar iron position is unchanged.

There is every indication that business in steel will be fully resumed immediately after the holidays. There is a good demand for basic billets, and there are still some arrears of delivery. Makers find little difficulty in meeting the demand for acid billets. Stainless steel sheets are a good feature, and there is substantial business in structural steel and wire rods. All prices are fully maintained. The price of high-speed steel, exceptionally, has fallen to 3s. per lb. for material with a 14 per cent. tungsten content, and to 3s. 10d. per lb. on 18 per cent. tungsten content.

There has been very little business in the iron and steel scrap market, and there is a tendency to shade uncontrolled prices.

Middlesbrough.—Owing to the holidays the Cleveland iron market was very thinly attended this week. Until foundries have absorbed the Midland and Continental iron purchased some time ago, there is no inducement for

them to come on to the market. The usual spring inquiry has not yet developed, although it is hoped that this will not be long delayed. The reduced output of hematite pig iron is sufficient for requirements. Export business is slow, although a small parcel of pig iron has been shipped to Germany recently. The reduction in the number of furnaces now in blast in this area has had the effect of reducing requirements of both blast-furnace coke and foreign ore.

Supplies of semi-finished steel are ample and consumers have adequate stocks. Finished steel departments, particularly the heavy sections, continue busy, but there is a paucity of demand for lighter sections and sheets. Heavy steel melting scrap is in good supply and demand is regular.

Glasgow.—While steelmakers have still work on hand for many months, they seem to have overtaken some of the arrears of deliveries, and users of both plates and sections are now able to obtain deliveries within a fairly reasonable period. Business is rather quiet this week owing to the Easter holidays. In Glasgow itself there was only a one-day holiday, Monday, but the effects of the holidays elsewhere are felt in most branches of the iron and steel trades. At the same time, there is much work on hand and it is anticipated that by the end of this week there will be a revival of buyers' interest.

Cardiff.—The tinplate branch of the iron and steel industry has been observing its usual holiday period output restriction, and there was no meeting of manufacturers on the Swansea Metal Exchange on Tuesday. Prices are nominally unchanged. Shipments of tinplates at Swansea last week totalled 5,304 tons, compared with 8,483 tons the previous week, and 14,632 tons (normal working week) in the corresponding period last year. Stocks have been reduced by about 1,000 tons.

Textiles

Cotton (Manchester).—Business has been interrupted by the Easter holidays. There have been hopes of a rise in raw cotton prices as a result of the change in the financial policy of President Roosevelt, but the response in Liverpool to the advance in New York at the end of last week has been disappointing. It is recognised that the Anglo-Italian Agreement is a favourable factor and should help to stabilise the political situation in Europe. Raw cotton news from the United States has been rather featureless, but advices are now being received of more favourable conditions in the belt for farm work. It seems likely that the area under cultivation will be about 28,500,000 acres, compared with 34,000,000 acres a year ago.

The offtake of ordinary counts and qualities in the yarn market has again been poor, but rather more business has been done in specialities. An improved demand has been experienced

for the Midlands and quite favourable delivery instructions have been received from the Continent, especially Germany.

A rather more cheerful feeling has prevailed in the cloth market. Without there being any important increase in the turnover, more buyers have displayed interest in prices. The improved inquiry for India has been maintained, and a fair amount of business has been done in regular styles. The news relating to the increased tariff in Egypt has been a blow for Lancashire, and strong representations are being made to the Government in London. A little more demand has been mentioned for South America and the Continent. Some moderate lines have been booked in home trade fabrics. This week and last numerous spinning and weaving mills have been closed down owing to the shortage of orders.

Jute (Dundee).—During the Easter holidays business has been very slow. Prices are more or less nominal. A further decline in prices of Calcutta goods has shaken the confidence of buyers, and there is no inclination to purchase more than sufficient to meet immediate needs. One important development has been the Government's decision to make arrangements for the continuance of the supply of sand-bags by Dundee manufacturers for an indefinite period at the rate of 1,750,000 bags per week, but a decided increase in other business is required to prevent an extension of short-time.

Exports are falling. During the first three months of this year only 19,079,000 square yards of jute manufactures were shipped from this country, compared with 34,813,000 square yards in the same period last year, while exports of jute sacks and bags amounted to 216,853 cwts., against 270,405 cwts. last year. Imports from India, however, remain heavy. The intake of piece-goods during the first quarter was 49,382,000 square yards, against 46,116,000 square yards during the same period last year. On the other hand, imports of sacks and bags from India declined from 286,517 cwts. to 198,299 cwts. during this period.

As the result of the severe competition, Dundee manufacturers are working at less than 50 per cent. of capacity, and they are anxiously awaiting the conclusion of the negotiations between the Indian Government and the Home Government for some form of protection against the heavy imports from India. Despite the huge increase in stocks of goods in India, particularly hessians, the Indian jute mills continue to produce on a scale very much in excess of the world's requirements, and there are still no signs of any agreement being reached between the Association and the "outside" mills on the question of curtailment of output.

Raw jute has wavered in sympathy with the weather conditions affecting the new crop, advancing when reports were unfavourable and declining on news of rain.

THE COMMODITY MARKETS

LAST week's improvement on the commodity markets, due to the resumption of "pump-priming" in the United States and the conclusion of an Anglo-Italian agreement, has been maintained. Although buyers have shown a little more interest, there are as yet no signs of an early and extensive re-stocking movement.

Compared with Tuesday last week, the prices of copper and spelter last Wednesday showed a slight improvement. Tin remained unchanged in price, and lead registered a slight decline, partly as a result of the disappointing returns of building plans passed in this country last month. Rubber prices were marked up, but quotations for oilseeds and oils were scarcely changed on the week. Cotton was slightly dearer and wheat prices continued to advance.

The improvement in the United States is reflected in Moody's index of the prices of staple commodities (December 31, 1931=100) which rose slightly from 139.6 to 140.1 during the week ended last Wednesday. A month ago the index stood at 148.1 and a year ago at 214.5.

Metals

Copper.—Prices have shown little variation during the week, and the closing cash price at £39 18s. 9d. per ton was unchanged compared with the previous week. Nevertheless, the undertone of the market has improved considerably, owing to the better political outlook in Europe, the expectation of inflation in the United States and the

favourable copper statistics for March. Production shows little change, and although stocks in the United States showed a further increase to 342,780 short tons (of 2,000 lbs.) compared with 259,900 short tons on December 31st last, demand in that country has improved; stocks elsewhere have again fallen, and totalled on March 31st 197,470 short tons, against 211,850 short tons at the end of last year.

Tin.—There was little activity on the market during the last few days and the cash price closed at £170 per ton, showing a further fall of 15s. per ton on the week. The opposition from Malayan producers to the proposals for a buffer pool and their demand for a higher standard tonnage had a depressing effect on the market; if this request is granted, tin prices may show a renewed decline.

Lead and Spelter.—Owing to the holidays, there were few dealings in these metals. The cash price of lead closed at £15 15s. per ton, a fall of 8s. 9d. per ton during the week; the fall in the value of building plans passed last month helped to depress the market. The production of spelter in the first two months of the year is now given as 271,809 metric tons, an increase of 34,769 metric tons compared with the same months of last year, and this news, combined with the knowledge that consumption has fallen in the last twelve months, brought the spot price of the metal down by 1s. 3d. per ton to close at £13 18s. per ton.

Grains

The wheat market has generally been quiet and prices unchanged. The news of rain in the drought areas of Australia has offset the reports of damage by frost to the American winter wheat crop. Flour prices were slightly reduced after the Easter holidays and prices of maize and barley

COMPANY MEETINGS

IMPERIAL CHEMICAL INDUSTRIES, LIMITED

PROGRESS AT HOME AND ABROAD

SUCCESS OF BOARD'S INVESTMENT POLICY

LORD MCGOWAN'S REVIEW

The eleventh annual general meeting of Imperial Chemical Industries, Ltd., was held, on the 21st instant, at Queen's Hall, London. Lord McGowan, K.B.E., D.C.L., LL.D. (chairman of the company), in the course of his speech, said: For seven years now as managing director I have borne the main responsibility for the many decisions necessary in the administration of this great business. Day by day questions crop up demanding early action. They touch affairs at home and abroad. Almost any commercial or economic event may affect our interests or our policy; nor can we in these days neglect political matters, for they are so intertwined with business relations that we have learned to regard them as the forerunner of industrial consequences. Some rest has been afforded me during the sea voyages incidental to my visits to our overseas companies—a course which my colleagues and I favour so strongly—but once at the scene of these interests, I have never found any lack of problems.

REORGANISATION OF DIRECTION

The time has come, in my mind as well as in that of my colleagues, for a step which will enable the immediate problems arising from the ever-increasing breadth of your company's business to be handled with the rapidity the future is sure to demand. The change centres round one key point. I have freed myself from the task of taking every-day decisions on current business. That responsibility has been handed to seven of our colleagues, the executive directors now entrusted with the several sections of administration, namely, commercial, financial, overseas, personnel, research, technical and the groups central committee.

With the exception of the groups central committee, each director has associated with him three of his colleagues. By this means we have formed links of responsibility and co-ordination on larger issues. This change is not so great as it may appear, for these gentlemen have now for a number of years shared in all important decisions through their co-operation with the president and myself in the general purposes committee, the functions of which I described in April, 1932. That committee has been reconstituted as a management board, over which I preside. It will meet regularly and will carry out collectively the duties I have hitherto executed as managing director. So far as they feel it proper within prescribed limits, these executive directors will act independently on their own or their committee's responsibility. Beyond those limits they will bring major problems to the management board, which will also be made aware of their individual decisions. On that board Lord Ashfield, Lord Weir and Colonel Pollitt will serve. Standing apart from the day-to-day administration, they will help us on general policy more intimately than is possible at the full board, while constituting a valuable link with the other non-executive directors.

The functions of the operating groups and the powers of the delegate boards which control their activities were also described in 1932 and remain unchanged. The board regard the new structure as a natural development of its policy of decentralisation. Under the new scheme of management both the president and I will have more time for judging the company's major policies, and I have no doubt that the scheme will be of great benefit to the company.

EXCELLENT YEAR AT HOME

Conditions in this country were good throughout the year, and the company, with its interests closely linked with the general level of trade activity, had an excellent year. Practically all plants were running at capacity, and our only anxiety was whether peak demands would over-strain our ability to supply. The Government's defence programme has affected the demand for our products, but we cannot define its measure; most of it is indirect. Only a very small percentage of our activities is concerned with armament orders.

With regard to the petrol plant at Billingham, the Government concluded that as a means of providing employment the hydrogenation and synthetic processes do not at present offer hopeful prospects in comparison with the cost involved, but recommended that

preference at the rate of 8d. a gallon should be continued for twelve years from 1938.

Every operating group continues to devote attention to research and development. The discovery of "Velan" by the Dyestuffs Group was a remarkable chemical achievement. "Velan" forms a water-repellent compound with textile fibres and can be applied to silk, cotton, rayon, wool and other materials without altering their appearance or character, except for the better. The reception given to this new fabric finish has been highly gratifying, and it has also created very great interest both on the Continent and in the United States. Active research on new products for the control of pests is proceeding, and we are working on the development of specialised pharmaceutical and medicinal products.

We shall be participating in the Empire Exhibition at Glasgow and the company will have its own pavilion. The architectural design, by Mr Basil Spence, of Edinburgh, features three pylons symbolising earth, air and water, illuminated by a central symbol of fire. Although these no longer represent the four elements, they are the chief sources of the raw materials and energy of the chemical industry. All the materials used in it, down to the electric light conduits, will have been made by the company with the exception of eight steel girders and the woodwork. Even the wood will be rendered fireproof by one of our products.

OVERSEAS ACTIVITIES

International trade during 1937 has been largely under the influence of two opposing factors. During the first quarter commodity prices continued to rise, confidence was growing and industry was making plans entailing the increased consumption of raw materials. The Government's re-armament programme gave assurance of heavy and continuous demand for basic materials for some time to come. In America also conditions appeared to justify the expectation of a period of expanding business. In spite of the subsequent partial and, I hope, temporary setback, the overseas trade of your company has made progress in many directions. Development plans in China had to be postponed indefinitely.

Japan is facing a great emergency, with the result that ordinary commercial activities are more or less suspended. Comprehensive import restrictions have been imposed and purchases from abroad are limited to bare necessities. The trade of your company in that market has inevitably suffered, but the diversion of Japanese factories from industrial to war purposes has diminished supplies available for export, so that Japanese competition throughout the world has in most of our products fallen to negligible proportions. In many important markets increased sales of our products have followed at better prices. In the Near East the industrialisation of Turkey has continued and has, on the whole, brought about a larger demand for our products. Our Empire companies—Australia, Canada and South Africa—all prospered in 1937.

INVESTMENT POLICY

After dealing with the accounts, in the course of which he said that the available sum was £6,503,849 and that they recommended a final dividend of 5½ per cent. on the ordinary stock, making 8½ per cent. for the year, the Chairman said: Some comments have been made on the company's policy of keeping its marketable investments in ordinary stocks of industrial companies at home and abroad. When I.C.I. was formed it took over large blocks of such holdings from the merging companies. The past experience of those companies and the subsequent experience of your company itself has, when regard is paid to the primary revenue test of annual yield and the secondary capital test of net profit on realisation, fully justified that policy. Nevertheless, we do not follow that course blindly but continually keep under review the current state of the investment markets and their future probabilities.

These marketable investments form a reserve source for conversion into liquid resources as may be required by our capital expenditure programmes. When the company was formed, such investments amounted to £16½ millions, against an issued capital of £58 millions. At the end of last year these investments had fallen to

£7½ millions, while the issued capital is £74 millions. In the meantime we hold them as permanent investments, not lightly subject to change and, therefore, not as speculative counters. We know that their market values are subject to fluctuation, but, as we only draw on them from time to time, we have so far been able to do so when the sale has yielded us a net capital profit. The only exception concerns the German investments and even of them we do not yet know the end.

CAPITAL PROFIT

The proof of the pudding is in the eating. Let me give you the facts. I shall speak in round figures and shall confine myself to the actual facts and exclude, for the sake of simplicity, all inter-company book-keeping transactions. When the company was formed it inherited from the merging companies marketable investments of a value at that time of £16½ millions. During the eleven years ended last December, £13 millions of these investments, taken on the same basis of valuation, have been sold and a capital profit realised of £4,300,000. At December 31st last we still held of these original acquisitions £3,500,000, again taken on the same basis of valuation, of which the market values at that date showed a depreciation on that original value of £600,000. Taken together, therefore, the result on original merger values of investments both sold and still held is a capital profit of £3,700,000. During the eleven years of the company's existence we have in addition both bought and sold gilt-edged and marketable investments. The total purchases during this period amounted to £13 millions and the total sales at cost value were £10 millions, the greater part of which related to gilt-edged, leaving in our hands at December 31st last investments of a cost value of £3 millions.

On these sales there was a capital profit of £600,000, but on the investments still held at December 31st last there was a depreciation on the cost of £700,000, so leaving in respect of the post-merger investment transactions a net loss of £100,000. Summing up the whole of these investment transactions, we have therefore a net capital profit of £3,600,000. These capital profits have on no occasion been brought into the annual profit and loss account, but have all been used for capital purposes.

RETURN ON INVESTMENTS

Turning now to the rate of return on these investments, the average yield on those which were acquired from the founding companies on the inception of the merger is 7 per cent. on the original merger values. On the post-merger marketable investments still held at December 31st last, the average yield on the cost value has been 4 per cent. This lower rate of return is largely attributable to the very low rate of return on the German investments by reason of the heavy sacrifice suffered on the conversion of dividends in marks into sterling.

On the whole I am sure that these figures will convince stockholders that the board's investment policy has not been unjustified by its results and that the suggestion that the stockholders have suffered in their dividends through losses on investments is entirely without foundation.

During recent months a new factor has been introduced by the fundamental economic changes which are taking place in the United States. The differences between labour and capital and those between business and the President seem so deep seated as to throw some doubt upon the future trend of earning capacity of American industry. Possibly these changes are so fundamental that an investment policy which was right in the past may now need revision. We have been strongly urged to hold all our investment reserves in cash and gilt-edged securities on the assumption that no loss can arise from such holdings. But cash yields a negligible return and is subject to a fall in the purchasing power of money such as was in evidence in 1937. Gilt-edged investments are not only subject to this latter influence, but also to movements in the rate of interest. Judgment of these and other factors is by no means easy and at the present time your board is giving anxious consideration to the whole position. The board's duty, as they conceive it, is not to be influenced by day-to-day movements, but to follow the widest course over a period of years. That has been their endeavour in the past, not unsuccessfully, I hope you will agree, and it will continue to be their aim in the future.

CONSOLIDATED BALANCE SHEET

You have been handed a consolidated balance sheet for Imperial Chemical Industries, Limited, and all its subsidiaries other than three small companies referred to in the notes thereon. The total assets and liabilities of 125 companies are included in that account. It was not possible this year to incorporate this statement in the

directors' annual report, but in future the meeting will be held in May in order that this can be done.

On the last page you will find an analysis on non-technical lines of the position disclosed. The total assets aggregate £110½ millions, including intangible assets of £15½ millions. The latter item represents the book value of patents, processes, mineral rights, trade marks and goodwill, being the excess of the share purchase consideration over the value of net tangible assets of the various subsidiary companies less amount written off. This sum equals just over two years' purchase of the net profits of the company for 1937. The liquid position is strong, for the current assets exceed the current liabilities by £19½ millions.

The obsolescence reserves of £5½ millions represent 12 per cent. of the book value of the freehold buildings, plant and machinery. The total amount provided last year by way of appropriation to the Central Obsolescence Fund and sums charged in the trading accounts of the subsidiary companies which are not wholly owned is £1,643,000, or 3.5 per cent. of the aggregate book value of freehold buildings, plant and machinery. Investments in associated companies in Africa, Canada and elsewhere stand at £7½ millions. In the opinion of your board both these investments and the fixed assets generally are valued on a very conservative basis.

PROSPECTS FOR 1938

After paying a tribute to the company's staff and workers throughout the world, he went on to say: The profits of the company, and indeed of British industry as a whole, have now been moving steadily upwards for five years. In almost every phase of British industrial activity the volume of production in 1937 was a record. In the nine chief manufacturing industries production in 1937 as a whole showed an increase of no less than 38 per cent. over 1930. This high figure was largely caused by abnormally active conditions in the iron, steel and non-ferrous metal industries, the Board of Trade Index for which reached the high increase of 66 per cent. over 1930. The chemical, oils, etc., industry showed a more moderate rise, namely, 24 per cent.

Yet the same year has recorded the first general interruption in the long upward movement. The initial signal of a change was given by a marked jump in the wholesale prices of industrial materials and manufactures. Until towards the close of 1936 prices of basic materials were still below 1930 levels. By the end of the year they had risen 10 per cent. above it, and in April, 1937, the increase was over 32 per cent.

It was this psychological moment that President Roosevelt chose to announce his opinion that prices were too high. A decline quickly followed, until in December last year the level was back to 7 per cent. above 1930. In this country the new impost of a National Defence Contribution was almost simultaneously proposed by the Government. But before either of these events had occurred the Stock Exchange, with an anticipation almost uncanny in its accuracy, had begun as early as November, 1936, to reflect a change in public opinion of the future prospects for industrial equities, despite still active conditions of trade and a continuous flow of excellent company reports and balance sheets. The fall in their market values has proceeded steadily ever since, and towards the close of 1937 business indices tended to show that the peak of activity had been passed. No one has fathomed the mystery of these waves of industrial and commercial activity, which bear the name of trade cycles, but if it is true that a cyclical movement extending roughly over nine years is to be expected then the general outlook for the next two or three years would not be prepossessing.

IMPORTANCE OF UNITED STATES CONDITIONS

Much of the future must depend on the United States. Despite its policy of political isolation, that country is still so important, both as an exporter of agricultural and industrial goods and as an importer of raw materials, that sound or unsound business conditions there are of major significance to the world as a whole. You will be aware of the precipitate decline of business there last autumn. It was quicker and steeper than on almost any previous occasion. Yet we remain firm believers in the resilience of the American economy and its latent power of recovery. When an upward movement does occur, it will, no doubt be reflected in world, and therefore British, trade.

Even if British industrial activity in 1938 shows some decline, it does not follow that your company will be affected in the same measure as general business. Our interests are widespread, not only by products but also by markets. Your company was never in a sounder position. As trade currents have changed, as one source of demand has shrunk and another expanded, we have adjusted our manufacturing resources and values accordingly.

The report and accounts were unanimously adopted.

EAGLE STAR INSURANCE COMPANY, LIMITED

RECORD YEAR'S OPERATIONS

The annual general meeting of the Eagle Star Insurance Company, Limited, was held, on the 13th instant, in London.

Sir Edward Mountain, Bart., J.P., in moving the adoption of the report and accounts, said they had had an excellent year in the life department. 2,792 policies were issued for sums assured of £10,680,819, of which £216,038 was reassured. Of the sums assured, only £3,000 represented business outside the United Kingdom. There was a substantial increase in all sections of their life assurance business, but especially in their group pension and group life schemes. The rapid expansion of that class of business proved that employers were realising more and more that, by taking advantage of the schemes which the company were able to offer, by which provision was made for their employees and their dependents, they were helping to secure the goodwill, contentment and greater efficiency of their staff.

The expansion in their new business was reflected by the increased premium income of the combined life funds, which now exceeded £1,000,000 per annum, notwithstanding the normal shrinkage in the closed life funds. This year, so far, they had done a larger business than for the same period last year.

The fire account showed a profit of £89,099, which constituted a record. The premium income was £819,464 against £795,917 in 1936 and, after making the customary reserve of 40 per cent. for unexpired risks, the profit of £89,099 was transferred to profit and loss account.

The premium income in the accident department showed further expansion during the year, the income being £81,258 as against £76,756 for 1936. After providing for all outstanding claims and the customary reserve of 40 per cent. of the premiums for unexpired risks, a profit of £14,221 was transferred to profit and loss account.

The premium income in the general insurance department again showed an increase, the year's income figure standing at £476,874 as against last year's figure of £461,044. Claims paid and outstanding amounted to £154,563, and after providing the usual reserve of 40 per cent. for unexpired risks, a profit of £102,072 was transferred to profit and loss account, showing a satisfactory increase.

MOTOR RISKS

The premium income in the motor department of £1,631,238 showed a small decrease of £1,993 as compared with 1936. The claims paid and outstanding amounted to £1,043,579, and after provision for expenses, they transferred from profit and loss account a sum of £43,743 to meet the loss at the end of the year and a further sum of £50,000 to strengthen their claims reserves.

Other insurance companies were having a similar experience. During recent years, as the result of legislation, they had found large additional responsibility put on their shoulders. One of the additional burdens, the full force of which had not yet been felt, was a decision given in the House of Lords in the case of "Rose v. Ford," by which they had to give compensation for what was termed "Expectation of Life."

The increased dividend of 30 per cent. amounted, with the preference and preferred ordinary dividends, to £314,087, which was more than covered by the net interest earnings. Provision for British and other taxation and expenses absorbed £163,371. Special non-recurring expenses, capital reorganisation, etc., written off, were £19,241, and reserve for National Defence Contribution was £13,500. They transferred to motor insurance account £43,743 and to additional claims reserve in the same department £50,000.

After these adjustments there remained a sum of £1,394,521, of which £100,000 was allocated to provision for pensions, bringing the total up to £300,000, and £1,007,562 to general reserve fund. They had transferred from the same account a corresponding sum in respect of past accumulations from revenue, thus leaving the general reserve at the same round figure of 2½ millions. Over and above the full reserve which they had in the various departments, they had built up this general reserve of £2,500,000 to ensure that, should any catastrophe arise, their capital of £5,406,618 would remain intact.

They now proposed to create a further fund to cover general contingencies, and for that purpose they had transferred £1,000,000 to a contingencies account. Of that amount £297,515 had been earmarked to meet the depreciation at the end of 1937 in the investments of the general fund, and the balance, with the carry forward of £294,521 in the profit and loss account, left them with nearly £1,000,000 that could be used at any time should any special contingency arise.

The report and accounts were unanimously adopted.

AGRICULTURAL MORTGAGE CORPORATION, LIMITED

IMPROVED FARMING POSITION

The ninth ordinary general meeting of this Corporation was held on the 20th instant, in London, Sir Harry Goschen, Bt., K.B.E., chairman of the Corporation, presiding.

The chairman, in the course of his speech, said: Further long-term loans of £447,809 were granted during the past year, bringing the total amount advanced up to £12,416,218, secured on 846,860 acres of land which, together with the farm-houses and buildings erected on it, has been valued on our behalf at £19,541,826. The total of loans granted under the Improvement of Land Acts has increased to £104,632, secured by rent charges of £7,412 per annum on land of an estimated rental value of £56,546 per annum.

During the year we have accepted special repayments of loans to a total of £589,995, which accounts mainly for the fall of £183,527 in the balance of loans outstanding. Payments of interest and repayments of principal continue to be promptly met, and it is satisfactory to note that 93.9 per cent. of the amount which fell due had been received within seven days of the close of our financial year. Something of the improved cash position of farmers as a whole is reflected in the fall this year of 22.4 per cent. in our outstanding arrears of interest, as compared with an increase of 9.5 per cent. for the year to March, 1937.

FARMING POSITION

The past year presented many difficulties to farmers, but a certain amount of real progress has been made and there were many features of outstanding interest. The weather of the early part of 1937 was almost disastrous, the spring season being one of the wettest since records have been regularly kept. As a result, work on heavy land farms was much delayed, and in many cases the land intended for spring corn could not be planted, so that the area under bare fallow showed an increase of some 200,000 acres. On heavy land winter wheat suffered badly, and yields down to two quarters per acre were common in many districts. Barley, too, was disappointing on heavy lands, and good-looking crops often threshed out little more than half the estimated yield.

The acreage of land under sugar beet fell appreciably from that of 1936, due partly to the unfavourable spring weather and to some extent, no doubt, to labour difficulties. This fall is to be regretted since the crop has a special value in arable farming, particularly on the medium or poorer classes of soil. The year has been fairly satisfactory for potato growers, although there has been some dissatisfaction owing to reduced prices during the past two or three months.

Grassland occupies an important place in the agriculture of Great Britain, as about two-thirds of the country is under temporary or permanent grass. In recent years the study of grassland management has made rapid strides, and this progress will be accelerated by the Government Land Fertility Scheme, under which agricultural lime and basic slag can be obtained at greatly reduced rates.

LIVE STOCK

The improved price level of live stock has benefited rearers and feeders of cattle. Fat and store sheep and lambs held their values well until the close of the year, but there has recently been a substantial fall in prices, which will bear hardly on those dependent on fattening sheep. Pigs, although deprived of the bacon scheme, were able to show a profit to those who feed with efficiency and care. The Agriculture Act of 1937, in addition to putting into effect the Government's plans for improving the fertility of the land, has introduced further measures for the control of animal diseases. The prompt steps taken by the Ministry of Agriculture to prevent any spread of the recent outbreaks of foot-and-mouth disease afford ample evidence that these problems will be tackled with energy.

The value of agricultural land, which showed an upward trend in 1936, continues steadily to improve, and there is a general feeling of increased security within the industry. Large arable holdings are somewhat difficult to dispose of, but there is a good demand for well-equipped medium-sized farms.

The balance of the profit and loss account, after bringing in £6,799 3s. 7d. from last year, is £23,541 3s., which has been carried to the balance sheet and allocated as follows: Transferred to special reserve, £2,664; written off discount on issue of £2,000,000 4½ per cent. Debenture Stock 1961-1991, £3,333 6s. 8d.; income tax and National Defence Contribution, £13,551 17s. 9d.; leaving a balance of £3,991 18s. 7d. to carry forward.

The report and accounts were unanimously adopted.

OXENDALE AND COMPANY (PROPRIETORS), LIMITED

A PROSPEROUS YEAR

The eleventh annual general meeting of Oxendale and Company (Proprietors), Limited, was held, on the 21st instant, in London.

Mr A. Stanley Smith (the Chairman) said that their main interest was centred in the accounts of the operating company, Oxendale and Company, Limited, of which they were proprietors, and the ownership of which constituted their sole asset. The cash position was favourable and in the profit and loss account they had striking evidence of a prosperous year. The trading profit and the dividend received from a subsidiary company together amounted to £53,937, being a clear £10,000 more than in the previous year. Unfortunately, the claims of their reserve funds and of taxation reduced that increase to rather less than £4,000. The directors recommended a dividend on the deferred ordinary shares of 2d. per share, or 16½ per cent. actual, less tax.

He thought it would be agreed that the past year's trading had

been eminently satisfactory. They had continued that steady progress which had been a reassuring feature of their accounts during the past five years, and they were able at last to reinstate the deferred ordinary shares, which had been without dividend since 1930, on the dividend list.

While the past year had been in the main a favourable one for business and had evidenced a state of general prosperity in the country, there had been periods of reaction which had at times rather upset their calculations. Nevertheless they had succeeded in making progress and had increased their turnover in all sections in spite of keen and increasing competition. As to the coming year, it could not be gainsaid that there had been a recession in retail trade recently. He attributed that entirely to the uncertainty of the international situation. That would pass, and indeed there were signs that it was already passing.

The business which they controlled was one of long standing. It had direct contact with its customers, numbering some hundreds of thousands and spread over the length and breadth of the country. He looked forward with confidence to a continuation of the gratifying progress which they had made in recent years.

The report was unanimously adopted.

(Continued from page 207)

have fluctuated within a narrow range; the small shipments of maize in recent weeks and the few stocks held in Europe have given near futures a premium.

Other Foods

Provisions and Meat.—The bacon market has been quiet and the official prices show little change. English and Danish prices at the end of week were 104s. and 105s. per cwt.; Dutch and Irish bacon were some 2s. a cwt. cheaper at 100s. and 98s. respectively. Hams were in good demand, but prices were unchanged during the week. Butter prices showed a further rise of about 4s. per cwt.; at the end of the week Danish was sold at 126s. to 128s. per cwt. and New Zealand (salted) at 125s. per cwt. Cheese prices have altered little and the market has been steady. The seasonal fall in egg prices has been checked; English (15-15½ lb.) ended the week at 10s. 9d. to 11s. per 120, some 3d. per 120 higher than in

the previous week. The meat markets have been quiet; prices for English beef have fallen slightly, while those for Argentine chilled hinds have advanced. English mutton fell in price towards the end of the week and New Zealand lamb was slightly dearer.

Colonial Produce.—Prices of raw sugar showed little change during the week, and the markets have been quiet. Coffee prices were unchanged. The price of Accra cocoa fell slightly to 28s. to 31s. per cwt. with larger arrivals.

Fruit.—Sales of all kinds were brisk before the Easter holidays, but have slackened since the markets re-

opened. The price of oranges, however, was well maintained, as was that of pears. English forced strawberries arrived in increasing quantities and were sold at 4s. to 8s. per lb.

Vegetables.—All salads were in keen demand before Easter, according to *The Fruitgrower*, but the cold weather after the holidays brought a fall in prices. The supplies of cauliflowers and savoy were light and prices were firm; the shortage caused better demand for spring greens and carrots. New potatoes sold steadily, but the market for the old crop was slow, with the exception of good quality King Edwards. Forced rhubarb sold well, as supplies of the outdoor product were small.

Miscellaneous Commodities

Oilseeds and Oils.—After the rally in prices recorded at the end of last week, the markets have generally been unchanged. Supplies of linseed from India have somewhat slackened and shipments from River Plate ports amounted to 23,000 tons; allowing for arrivals, the quantity afloat for Europe is estimated at 103,500 tons, compared with 147,800 tons a year ago. Prices have been maintained. The market for cottonseed is unchanged.

Linseed oil is in fair demand and the reaction in prices has been checked; prices are still below those ruling at the beginning of the month, but some 20s. a ton above the lowest figures. Business in cottonseed is slow and prices are unchanged; Egyptian refined ex Hull is sold at £20 per ton. The drought which has hindered the spring growth of grass has strengthened the demand for oilcakes.

Rubber.—The market in rubber was a little more cheerful, and prices advanced on the publication of President Roosevelt's recovery programme.

National Income and Expenditure

The following charts illustrate the background of the fiscal problem, for which the annual solution, in the shape of the Budget, will be presented by the Chancellor of the Exchequer on Tuesday. The left-hand side of the diagram shows the course since 1912 of revenue and expenditure under the main heads. It is particularly noticeable that direct and indirect taxation have now reassumed their pre-war relationship. The right-hand side of the diagram presents some data on the taxation of incomes. The top curve shows the changes from year to year in the total of incomes assessed to tax. The next two curves show the actual yield of the income tax and the surtax. The failure of the year in the total of incomes assessed to tax. The final group of figures illustrates the graduation of surtax. The people with incomes of over £20,000 are a very small fraction even of surtax payers. But they have about one-sixth of the total incomes and pay nearly half of the surtax collected.

Finance

GOVERNMENT RETURNS

For the week ended April 16, 1938, total ordinary revenue was £9,736,000, against ordinary expenditure of £15,291,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £13,607,000, against a deficit of £5,995,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On April 14th, applications at £99 17s. 5d. per cent. for bills to be paid for on Tuesday, Wednesday, Thursday, Friday and Saturday of the following week were accepted as to about 41 per cent. of the amount applied for. Applications at higher prices were accepted in full. £45.0 millions of Treasury bills are being offered on April 22nd.

MONETARY GOLD RESERVES OF THE WORLD

The figures below have been extracted from the April issue of the League's *Monthly Bulletin of Statistics*. They show changes in the monetary gold reserves since 1933 (in terms of pre-devaluation U.S.A. dollars) of all countries whose stocks in December, 1937, exceeded \$50 millions.

Country	December				
	1933	1934	1935	1936	1937
Union of South Africa	83	108	125	120	112
Canada	127	129	114	112	109
U.S.A.	4,012	4,865	5,980	6,649	7,536
Argentina	238	238	262	296	277
British India	162	162	162	162	162
Japan	212	232	251	273	254
Belgium	380	348	346	373	353
France	3,015	3,218	2,598	1,769	1,516
Italy	373	306	159	123	123
Holland	371	338	259	549	549
Roumania	59	62	65	67	71
United Kingdom	933	938	977	1,529	1,592
Sweden	99	94	109	142	144
Switzerland	386	368	268	387	3

RIO TINTO COMPANY, LIMITED

NOTICE IS HEREBY GIVEN that the Sixty-Fifth Ordinary General Meeting of the Shareholders will be held at Southern House (formerly Cannon Street Hotel), Cannon Street, in the City of London, E.C., on Friday, the 29th April, 1938, at Eleven o'clock in the forenoon, for the purpose of receiving the Directors' Report and Statement of Accounts, for the Declaration of a Dividend, for the election of Directors and for other purposes.

Holders of Share Warrants to bearer who desire to attend can receive a Ticket of admission, on depositing their Warrants in accordance

with the Articles of Association at least three days prior to the Meeting, at the Company's Offices in London.

The retiring Auditors are Messrs Turquand, Youngs, McAuliffe and Co., who, being eligible for re-appointment, offer themselves accordingly.

The Transfer Books will be closed from Saturday, the 30th April, to Saturday, the 14th May, both days inclusive.

By order of the Board,

R. H. BECHER, Secretary.

Offices of the Company,
11 Old Jewry, London, E.C.2.
21st April, 1938.

A Grim Budget

SIR JOHN SIMON has confounded the prophets. Attempting last week to outline the alternative possibilities with which the Chancellor of the Exchequer would be faced in presenting his Budget, we noted the very general expectation that he would find ways and means of closing the gap without imposing heavy new taxes, and in particular without raising the standard rate of income tax; and we gave reasons for believing that such a course would be practicable if the Chancellor chose to follow it.

He has chosen, however, the strait and narrow path of increased taxation. Even as large a prospective deficit as the £30 millions which emerged from the estimates of revenue and expenditure could probably have been covered without increased taxation by non-recurrent expedients, such as demanding three-quarters of the year's tax on the divided schedules in January or taking into the Exchequer the profit which, as the House of Commons was once more assured, has accrued on the Exchange Equalisation Account. But the Chancellor has rejected all such ideas; and though he has taken the surprising course, he has also unquestionably taken the right course.

He posed the question, it is true, as a blunt alternative between taxing and borrowing, and did not discuss the compromise course of balancing his accounts by expedients of accountancy. The strongest argument—indeed, the only argument—for such a policy is that it would avoid the

imposition of fresh burdens, and, in particular, the psychological shock of raising income tax above 5s. in the £, at a time when the hesitancy of business makes confidence doubly necessary and doubly hard to come by. But if we are to judge by the Chancellor's estimates of revenue—especially the yield expected from income tax, stamps and death duties—he does not anticipate any further decline in activity or in the level of markets. He is clearly of the opinion that the state of trade is strong enough to stand the shock. And in any case, the present Budget cannot be considered in isolation from its successors. The use of non-recurrent expedients is permissible only when they are used to surmount an emergency that is itself non-recurrent. But the present enormous total expenditure, so far from being non-recurrent, will certainly be exceeded next year. The resort to items—such as the profit of the Exchange Fund or calling for an earlier payment of income tax—which can only be used once should be reserved for the peak year. The balance of arguments is thus strongly against the policy of expedients. There was a striking consensus of informed opinion that this was, nevertheless, the policy that Sir John Simon would most probably adopt. The more honour to him for putting it aside.

conclusive. The Exchequer is already proposing to borrow £90 millions in the course of this year for defence purposes, and the acceleration of the defence programme will greatly increase this figure before the year is out. To have added a further £30 millions to the total of borrowing would have been to admit that our State finances were already out of control, with the peak of expenditure still one, and most probably two, years distant. After all the efforts that have been made by the British people in the past seven years to keep their finances on a sound footing, after all the hopes that have been built upon the demonstration that, if peace can be had by taxation, Britain can out-tax her rivals—to have weakened at this early stage would have been a surrender.

So far as can be told from such indications as the behaviour of the markets and the comments of the Press, the nation has accepted, though with very natural regret, the Chancellor's determination to balance his Budget at the taxpayer's expense. The public has also concurred in his decision to raise the greater part of the sum needed by direct taxation, a smaller part by one of those indirect taxes whose burden is widely spread, and the remainder from the oil duty, which, though nominally indirect, has no regressive incidence on the incomes of the poorest. So far the agreement is general. The first point at which criticism has been levelled—and may justly be levelled—is at the particular choice of taxes that the Chancellor has made within the direct and indirect categories.

To place an additional sixpence on the standard rate of income tax was by far the simplest measure both for the Chancellor to adopt and for the public to apprehend. It also has the merit of bringing home to the taxpayer in a very direct manner the difficult position into which the country is moving—though that is almost exactly the same thing as saying that it administers the largest shock to business confidence. But the objection that can be raised to an increase in the standard rate is that it diminishes the progressive character of our direct taxes. The blow was softened to the smallest incomes by the decision to leave unaltered the rate of tax on the first £135 of taxable income. From the point at which the standard rate comes into play up to the surtax limit of £2,000, the increase is just short of 10 per cent. of tax payable. But from £2,000 upwards, since the surtax rates have not been raised, the proportionate increase in tax payable falls away. This is, of course, an objection that can be brought against any increase in the standard rate that is not accompanied by proportionate increases in the rates of surtax. But it gains additional point this year from the fact that, while the standard rate is now higher than in the crisis Budget of 1931, the surtax rates—and the rates of death duties—are not. It is possible that the rates on the highest incomes, which reach 68½ per cent. of income at the top of the scale, could not be further increased without destroying the incentive to produce the incomes on which the tax is levied;

but no such objection could be brought against the proposal to lower the level of incomes at which surtax begins to be payable. Without sketching a precise scheme, it may be said that some combination of increases in the standard rate of income tax with increases in the other direct taxes could have been devised to bring in the same revenue with more equity and probably less disturbance to industry.

The tea duty, selected by Sir John Simon to represent the indirect taxes in his list of increases, can also be criticised as a poor choice. The tea duty has the peculiar characteristic that an increase in its amount affects the family budgets of the very poorest, not only in the largest proportion to their income, but also in the highest ratio to their consumption of tea, since those who buy any grades of tea but the lowest can escape by taking a slightly inferior blend. To have laid the burden on some other duty—tobacco would seem to be the most obvious candidate—would have caused less hardship and yet have carried the consciousness of the nation's financial needs into very nearly as many households.

Sir John Simon's first Budget is thus open to criticism on the details of his proposals. But in its main outline it should command the respect of all who realise the necessity for limiting to the smallest practicable degree the departure from sound principles of finance that has been forced upon us by circumstances. The Budget is not fertile in imagination; nor was any attempt made to present it in a manner designed to appeal to the patriotism or emotions of the people. The recounting of its grim figures was not even illumined by reference to the problem of harmonising very heavy taxation with the need of continued expansion of national economic activity, by any survey of the prospects of trade or of the ultimate taxable resources of the country. The Budget's outstanding merit is that it makes no attempt to conceal the stark prospect before us—coupled with the fact that by grappling with the problem now it will ease the task of coping with what we may hope will be the maximum demand to be made on our resources in the next two years. The prospect is grim indeed. We are back in war finance without a war. Indeed, it is not only the preparations for war that are straining our resources, for, as was demonstrated in *The Economist's* Budget Supplement three weeks ago, the purely civil expenditure of the State has increased to a very high level. There is the fullest justification for the proposal made by Sir Archibald Sinclair on Wednesday to revive the war-time measure of a Parliamentary committee of private members charged with keeping a close and continuous watch on expenditure. But no radical change in the proportion of the national income that is spent on government and on the social services in the widest sense is possible; there is no prospect—at a moment when the Government is borrowing for current expenditure—of reducing the cost of the National Debt, which is certainly at a minimum for the present at all events. There remains only Defence which can be reduced if—but only if—the world returns to sanity. We have therefore to reconcile ourselves to a series of budgets in the region of £1,000 millions, and the problem of financing them without prejudice to economic progress will require all our ingenuity and skill.

Meanwhile, the Budget has had a good and respectful reception abroad. If the Stock Exchange after a moment of hesitation refrained from hastily putting down prices, it was no doubt influenced by the consideration that the shouldering of these heavy burdens is not only a sign of our national determination but also a testimony to British credit. It has given the world food for thought; and may conceivably help to promote mutual restraint and accommodation between the nations. If so, the occasion should be eagerly seized, for though our financial standing is outstanding in a world nearly all of which is arming on credit, the mad race might at any moment precipitate a crash from the effects of which none could hope to escape.

Peace with Eire

ON Monday last, April 25th, the son of Joseph Chamberlain, that great champion of Unionism, on the one hand, and the only surviving leader of the Dublin Easter rebellion, on the other, signed in the name of their respective Governments a far-reaching agreement between the United Kingdom and her Irish partner in the British Commonwealth, now known as Eire. The warm approval with which the agreement has been greeted, both in London and in Dublin, by all save extremist circles, is a tribute alike to the wisdom of its articles and to the futility of the Anglo-Irish quarrel.

The agreements (a detailed summary of which appears on page 226) have three main features. First, the defence of the three Irish ports over which Great Britain held a strategic lien under the treaty of 1921 is to be handed over entirely to Eire. Secondly, the disputed land annuities and other payments claimed to be due from the former Free State to the British Exchequer are finally compounded for a lump sum of £10 millions, in addition to the continued payment of £250,000 a year by Eire under an agreement of 1925 relating to damage to property during the "troubles." Thirdly, the so-called economic war between the two countries is ended, and a Trade Pact is signed similar in general content to the Ottawa agreements.

These three items are not formally connected with one another, and are contained in separate documents, but in fact they are closely inter-related. From the Irish point of view, at least, the financial settlement must be examined in conjunction with the Defence Pact. On the face of it, the payment of £10 millions in composition for annuities amounting to some £4 millions per annum is an excellent bargain for Eire; but it must be remembered that Mr de Valera has consistently denied both the legality and the justice of the British claims. He could hardly have appeased either his own conscience or his extremist supporters had he not brought back some extraneous trophy to show for Eire's money. The trophy is the complete rendition of the three ports to Irish sovereignty, an aim which has ranked second only to the ending of partition in the Irish political catalogue. Moreover, the Admiralty is handing over, lock, stock and barrel, the shore defences of the ports, including stocks of munitions. From the British point of view, also, it is natural to regard the sum of £10 millions as containing a payment for this valuable material. At the same time, of course, the British Exchequer is relieved from future responsibility for maintaining those shore defences. Every help will be given to the small but efficient Irish Army in discharging its new duties, and the signature of the agreement is itself sufficient proof of the Imperial Defence Committee's belief that the task will be well performed. The rendition, however, is justified by a much wider and more important strategic consideration. In time of war, the security of the Irish naval anchorages—which is vital to the whole scheme of British defence by sea—would be dearly bought in face of a hostile Ireland. Irish friendship is strategically far more valuable than the paper rights of occupation which the 1921 Treaty assured.

The ending of the financial dispute is even more closely connected with the trade pact. To the Irish Government's refusal to pay the land annuities were directly traceable both the failure to conclude an Ottawa agreement with the Free State (with the consequent application of the general tariff to Irish goods), and the imposition of special British duties on certain exports from Eire and of retaliatory duties on the other side. The liquidation of this quarrel on terms which might be represented by either party as a reasonable compromise was therefore a condition precedent to a commercial agreement. The British special duties and the Irish retaliatory duties are abolished altogether. Irish

goods will now enjoy the full measure of imperial preference guaranteed to the overseas Dominions at Ottawa; on eggs, poultry and game, butter and cheese and other milk products, minimum margins of preference are guaranteed until August, 1940, when similar pledges to other Dominions expire. Ireland agrees to co-operate with British policy in maintaining the prices of agricultural products (particularly eggs and poultry) by the regulation of supply. Both parties reserve the right to impose anti-dumping duties. The Irish export subsidies—part of the response to Britain's special duties—will be withdrawn.

The concessions granted by Ireland in exchange are more complicated. They include reductions in import duties on twenty-five specified classes of British manufactures, subject to modifications in her quota system; the admission of certain products duty free, with certain quota provisos; the maintenance and extension of preferences; and the free entry of British coal, coupled with a minimum duty of 3s. a ton on foreign coal. In addition, Ireland undertakes, in words similar to those of the Ottawa agreements with Canada, Australia and New Zealand, that her protective duties shall not exceed such a level as will give United Kingdom producers full opportunity of reasonable competition, while affording local industries adequate protection, having regard to the relative cost of economical and efficient production, subject to special allowance for infant industries. The necessary review of the tariff will be performed by the Prices Commission, before which British producers will have the right of audience.

The exchange of concessions may be regarded as a very reasonable one, if national protective policies are taken for granted. The two countries are naturally complementary markets; the gist of the agreement is that Ireland will buy as high a proportion as possible of her imports from the United Kingdom, in return for liberal entry for her exports into what is virtually their only market. It was not to be expected that Ireland would go back on her policy of nursing home industries, which dates from long before Mr de Valera's regime, though it has since been intensified. The limitations to that policy will in the end be set, not by the exertion of the United Kingdom's bargaining power, but by the success or failure of the policy itself in a country which has relatively little aptitude, either in size of the home market or in resources or in skilled labour, for the development of manufacture, while it has every prospect of profitable agricultural production, so long as the United Kingdom market remains open.

Thus by a bare mercantilist criterion the trade pact is unlikely to bring in a net gain to Great Britain, though its advantage in restoring a natural flow of mutually profitable trade, and in expanding a near-by source of supply of foodstuffs for an emergency, will be great indeed. A similar judgment may be made of the other two sections of the pact, and of the agreement as a whole. On the narrower view, Great Britain is heavily the loser by selling her claims on £4,000,000 per annum of potential revenue for £10 millions cash down, and by making a free gift to Eire of important strategic footholds with all the equipment that goes with them. On the broader view, however, both countries gain immeasurably by the cementing of good relations, by the removal of old causes of bitterness, and by the demonstration, in the face of a world hypnotised by the doctrine of force, that peaceful negotiation and common sense still have their victories. Not the least valuable result of the Anglo-Irish agreement is the assurance it will convey to Europe and America that the British people desire to act in accordance with the fundamental principles of civilisation.

The Budget Accounts

BUDGET speeches, as Sir John Simon pointed out, follow a regular three-act pattern. The crisis is reserved for the third act, not merely for the sake of dramatic suspense, but also for the more practical reason that announcements of changes in taxation are best made after the markets, and the bonded warehouses, have closed for the day. The Chancellor consequently spends the first sixty or eighty minutes of his speech in reviewing the past year and in drawing up a purely hypothetical balance sheet of the coming year, as it would appear if there were no changes in taxation. We may conveniently follow this example in the present article, and present first the details of expenditure and revenue as they stood before the Chancellor's recommendations for increased taxes.

The figures of expenditure are given in Table 1. The totals for last year and the estimates for the Supply Services, which take three-quarters of the total, were, of course, known before the Budget speech. The Chancellor decided, however, to add to them a provision of £10 millions for eventual Supplementary Estimates, to cover the cost of the purchases of wheat, sugar and whale oil, which were revealed for the first time in his speech, and also to cover other increased expenditures that can be foreseen. He also increased the fixed debt charge, which has stood at £224 millions for the past five years, to £230 millions. This is a necessary precaution if the sum is to meet the statutory

sinking funds as well as interest and management. These items required £226.8 millions last year, and may well require slightly more this year. These additions brought the total of expenditure to be met out of revenue up to the enormous total of £944,398,000. Even this total includes neither the self-balancing items of the Post Office and broadcasting nor the amount to be borrowed for defence expenditure. This last item is put at £90 millions, but the Chancellor issued a warning that there might be heavy additional borrowings later in the year to finance the acceleration in the defence programme that was decided upon after the Estimates were published. But if this factor is left aside and only the known expenses are totalled, the figure comes to no less than £1,114,840,000.

The task of raising such a gigantic sum, even when £90 millions is allocated to borrowing and £80 millions is of the self-balancing type, is clearly one to strain the resources of any country. Table 2 gives the Chancellor's estimates of the yield of revenue on the existing basis of taxation. The figures do not give the impression that the Chancellor is estimating with excessive caution. The estimated increase in income tax and surtax together, for example, is put at £25,954,000 (including £1,200,000 to come from the measures to be taken against evasion, which are discussed on page 230), compared with a similar estimate last year of £22,223,000. Both stamps and

* Exclusive of amounts, estimated at £90,000,000, to be met out of loans under the Defence Loans Act, 1937.

death duties are expected to bring in almost as much as last year, although the level of Stock Exchange prices, which affects both, is likely to be considerably lower on the average for the year. The estimate for customs, it was explained, allows for the loss of £4,000,000 revenue from the special duties on Irish produce which have been abolished by the Anglo-Irish Agreement. The £10 millions that is to be paid by Eire on or before November 30th, however, has apparently not been brought into account, since the expected receipts from sundry loans and miscellaneous are £3,000,000 less than in 1937-38.

These estimates left the Chancellor with a prospective deficit of £29,998,000, which he proposed to cover by increases in the income tax, in the duty on hydrocarbon oil and in the tea duty. The increase of 6d. in the standard rate of income tax would bring in £28 millions this year, but this sum is reduced by £2,500,000 by the increase in the allowed deduction for wear and tear; by £1,250,000 by the concession made on the first £135 of taxable income (which is to continue to be taxed at 1s. 8d. in the £, or one-third of last year's standard rate); and by £2,000,000 through the permission given to tenants to defer by three months part of their Schedule "A" liability. The net gain from the income tax changes is therefore £22,250,000 this year and £26,500,000 in a full year. The increase of 1d. per gallon in the duty on hydrocarbon oils (petrol and fuel oil) will bring in £5,000,000 this year and £5,300,000 in a full year, while the duty on power alcohol (the only brand-new tax in the Budget) is expected to provide £350,000 this year and £375,000 next year. Finally, the increase in the tea duty from 6d. to 8d. per lb. (with a preferential margin of 2d. in each case on Empire teas) will bring in £2,750,000 this year and £3,250,000 in a full year.

The prospective deficit was thus covered in the following manner:—

Income Tax	£ 22,250,000
Hydrocarbon oils and power alcohol	5,350,000
Tea	2,750,000
.....	30,350,000

This sum was sufficient for the Chancellor to balance his accounts with a minute prospective surplus. The final figures are shown in Table 3. To have reached a balance at all with such astronomical figures is a very considerable achievement, in which the Chancellor and the taxpayer can take rueful pride. But there can be little real satisfaction for either in a Budget which provides only a scant £10 or £12 millions for debt redemption, while at least £90 millions is to be spent out of borrowed money.

Millions from Smoke

TO most of us, the ideal tax is the one that falls on the next man, and one can readily imagine the satisfaction brought by this week's Budget to a coffee-drinking, tobacco-smoking railway stockholder with an income below the taxable limit. Among the industries to which the same consideration of negative gratification applies, pride of place may be given to tobacco, for the convincing reason that, of all commodities subject to indirect taxation, tobacco already makes the largest contribution to national revenue. In the financial year 1937-38, the tobacco duties were estimated to produce £79,750,000. Actually, their yield was £82,837,000, and for 1938-39 their estimated receipts have been put at £83,700,000. Even the oil duties, after this year's increase, are expected to yield no more than £57,550,000, and the tea duty only £10,050,000; while beer (ousted by tobacco from its premier position some years ago) is expected to bring in £67,000,000, and spirits (which "drooped" last year) some £35,000,000.

Both the Treasury and the investor, indeed, owe much

to the prevalence, among all classes, of the smoking habit, which has survived all the social and economic changes of the last hundred years. How far-reaching these changes have been may be appreciated by comparing the present status of tobacco with the position a century ago. At that time, the sign of the "Black Boy" still commemorated the rôle of a slave-manned tobacco cultivating industry in the prosperity of Virginia; for nearly a quarter of a century was to elapse before the outbreak of the American Civil War, which brought emancipation to the negro of the South. In London, tobacco smoking had earned recognition *de facto*, but scarcely *de jure*. On the new railways it was anathema; in the home it was scarcely a habit for mixed company. London tobacconists had parlours for regular customers whose womenfolk objected to domestic smoking; and the more enterprising carried on a profitable trade, as a side-line, in perfumes for smokers who were unable to change their clothes before returning home. In more advanced households, smokers donned a special

jacket and cap, lest the reek of tobacco should cling to their cloak or hair. Pipe-smoking was the rule, cigar-smoking a luxury and cigarette-smoking unknown.

The latter-day prosperity of the tobacco industry, indeed, owes much to two developments: the popularity of the cigarette, and the growth of the smoking habit among women. The latter development, which is much the more recent, has been, in part, a consequence of the former, which owed much, in turn, to the association of the British soldier with the cigarette-smoking Turk in the Crimean War. In 1913-14, before the outbreak of another war (when the total yield of the tobacco duty was £18,284,000), there were 396 tobacco manufacturers and 399,000 retailers in the United Kingdom. By 1937, amalgamations and combinations had reduced the number of manufacturers to 199, but the number of licenses issued to tobacco dealers had increased to 533,000, of which some 101,000 were retailers of intoxicating liquors. It is estimated by the trade, indeed, that there are only 25,000 tobacconists in the country who sell tobacco alone, for the majority combine the business with confectionery or newspaper selling. Nevertheless, it is true to say that there exists, to-day, one shop where tobacco is purchasable for approximately every eighty members of the population.

The trend of consumption has been rising in recent years of industrial recovery. The amount of tobacco retained for home consumption in the last three years is shown in the following table:—

	(Thousand lbs.)		
	1935	1936	1937
Preferential category	35,391	38,758	44,079
Non-preferential category ...	129,215	136,201	139,011
Total	164,606	174,959	183,090

The principal Empire sources of supply are British North Borneo, Canada, India, Nyasaland and Rhodesia. The clearances of Empire tobacco have increased steadily under the stimulus of Imperial preference. The preference on Empire tobacco was stabilised, under the Finance Act of 1926, at 2s. 0½d. per lb. on the main rate of duty for ten years from July 1, 1926. Under the Ottawa Agreements Act, 1932, the stabilisation period was extended until August, 1942.

Even to-day, however, less than one-fourth of the total tobacco consumed in Great Britain is of Imperial origin. America remains the most important source of supply, and over four-fifths of America's total exports of

tobacco to European countries go to Great Britain. In 1936, our imports of American tobacco were valued at £14 millions. Thus the United States Government has every incentive to press for the maintenance of America's share of the total market, in any trade treaty which may be concluded with the United Kingdom.

Meanwhile, the industry in Great Britain maintains a high standard of prosperity. *The Economist's* analyses of industrial profits show that 12 tobacco companies whose figures were issued during the nine months to March 31st reported an increase of 3.8 per cent. in net profits in their latest financial year, and paid average dividends on their ordinary shares of 20.8 per cent. The industry may congratulate itself on its immunity, for another year at least, from increased taxation, coupled with the reflection that, in any case, consumption has been well maintained in spite of increased taxation in the past. The profits of the tobacco companies have attained their present level despite the fact that, according to Lord Dulverton, the chairman of Imperial Tobacco, nearly three-fifths of the sixpence paid by the consumer for a packet of ten cigarettes is handed over to the tax-gatherer.

The chief difficulties of the industry, at the present time, are in the domain of distribution rather than of production. The manufacturers, naturally, are interested in the maintenance of every practicable outlet for their products, while the retail tobacconists are equally desirous of limiting the competition of the automatic machine in places such as canteens, clubs and non-tobacconist shops. Another problem hinges on the establishment of more uniform wages and hours conditions in the retail tobacco trade—a consummation, whose attainment is rendered more difficult by the fact that many confectionery-cum-tobacco shops claim to do the best part of their business in the evenings or during week-ends.

Meanwhile, though these problems are formidable, and as yet unsolved, the outlook for the tobacco trade as a whole remains satisfactory. Cigars with the well-to-do and cigarettes with the less wealthy are firmly established as "conventional necessities." Pipe-smoking is increasing, but cigarette-smoking is advancing more rapidly, partly because of the convenience of the "packet" as contrasted with the bulging pipe and pouch. Unlike the brewing industry, the tobacco trade has not been called on, as yet, to face the implications of a declining long-term trend in total consumption.

Anglo-Irish Agreement

Summaries of the three Agreements signed on April 25th between the Government of the United Kingdom and the Government of Eire. (Significant phrases are in italics.)

Defence Agreement

The Government of the United Kingdom agree to transfer to the Government of Eire, not later than December 21, 1938, the *Admiralty property and rights at Berehaven, and the harbour defences at Berehaven, Queenstown and Lough Swilly.*

Financial Agreement

1. The Government of Eire agree to pay to the Government of the United Kingdom, on or before November 30, 1938, £10 millions sterling, in final settlement of all financial claims except (a) liabilities incurred in respect of agency services or inter-governmental services, (b) the payment by the Government of Eire of £250,000 a year for damage to property under the Agreement of 1925, and (c) any payments in respect of unredeemed bank notes, withdrawals of United Kingdom silver coin from Eire, Trustee Savings Banks and double taxation. (*Articles 1, 2, 3.*)

2. The Government of the United Kingdom undertake to abolish the customs dues imposed on goods from Eire under the *Irish Free State (Special Duties) Act, 1932*; and the Government of Eire to abolish duties on United Kingdom goods known as *Customs (Emergency) Duties* (Tariff list ref. Nos. 280, 281 and 288). (*Articles 3 and 4.*)

Trade Agreement

Article One: Goods grown, produced or manufactured in Eire, now liable to duty only under the Import Duties Act, 1932, or Section One of the Ottawa Agreement Act, 1932, shall enter the United Kingdom free of duty.

Article Two: Minimum preferences, set out in *Schedule One*, are guaranteed by the United Kingdom Government to the produce and manufactures of Eire enumerated in that Schedule (including butter, cheese, eggs in shell, condensed milk, cream, live poultry and game, dead guinea fowl and game birds).

Article Three: The Government of Eire declare their readiness to co-operate in the United Kingdom Government's policy of orderly marketing of agricultural products (including fish and fishery products). The United Kingdom

Government will not regulate the quantity of imports from Eire of agricultural products unless necessary, and, if necessary, only with regard to Eire's past position in the trade or to any special conditions affecting Eire's exports to the United Kingdom.

Article Four: The Government of Eire will consult with the United Kingdom Government to control egg and poultry exports to the United Kingdom. If such imports from Eire endanger the stability of the United Kingdom egg and poultry market, the United Kingdom Government will have the power, after consultation, to regulate those imports quantitatively or to impose such duties as may be necessary.

Article Five: The Government of Eire undertake to admit free of duty (a) United Kingdom goods, enumerated in *Schedule Two, Part I*, not liable now to duties other than Customs (Emergency) Duties (Tariff ref. Nos. 280, 281 and 288) or quantitative regulation, and (b) United Kingdom goods of the classes or kinds set out in *Schedule Two, Part II*. [The goods cited in *Schedule Two* include a wide range of iron and steel manufactures, other metal manufactures, tools, hardware, machinery and chemicals.]

Article Six: The Government of Eire undertake to reduce the minimum charge of customs duty from 2s. 6d. to 1s.; to repeal the Stamp Duty in respect of customs entries for United Kingdom goods not charged with customs duty; to abolish the *Post Office delivery charge* of 6d. per parcel for United Kingdom goods not liable to duty; to reduce *Package Duty* on United Kingdom goods to not more than one penny per pound or per pint; and to remove *Package Duty* from goods imported for personal use and gifts imported for use or enjoyment of consignee.

Article Seven: Where licences are issued to admit dutiable goods into Eire free of duty or at a reduced duty, United Kingdom goods shall be free and, normally, goods from non-Empire countries shall be liable to a 10 per cent. *ad valorem* duty (or specific equivalent).

Article Eight: The Government of Eire undertake to review existing protective duties and other import restrictions and replace them with duties calculated to afford United Kingdom producers full opportunity of reasonable competition and give adequate protection to Eire industries.

Article Nine: The Government of Eire undertake to admit free of duty United Kingdom goods set out in *Schedule IV* (including pigs, bacon and hams, fish, seed oats and wheat, grain, malting barley, feeding stuffs, fruit, trees and flowers), but the United Kingdom Government recognise their right, after consultation, to regulate the imports of certain agricultural products by quantitative restriction, or even by agreed rates of duty.

Article Ten: The duties charged on United Kingdom goods enumerated in *Schedule V, Parts I and II* (including jams, biscuits, confectionery, linen goods, shirt, various wearing apparel, blankets, paper bags, boxes, stationery, woollen tissues, boots and shoes, soap and candles), imported into Eire, shall not exceed the rates there set out unless

control of such imports by quantitative restriction is abolished. If any such imports should increase, because of these reductions in duty, so as to endanger the production of such goods in Eire, quantitative restrictions may be imposed after consultation between the two Governments.

Article Eleven: The Government of Eire undertake (a) not to reduce existing preferences on United Kingdom goods, (b) not to charge non-Empire goods of the kind set out in *Schedule VI* (including silk and artificial silk woven piece-goods) at rates less than those specified, and (c) not to reduce the difference between the full and preferential rates, in the case of new or adjusted duties, to less than one-third of the rate on non-Empire goods or 10 per cent. *ad valorem* (or its equivalent), whichever is the greater.

Article Twelve: The review of duties under Article Eight will be held first on the goods requested by the United Kingdom Government.

Article Thirteen: United Kingdom producers will be entitled to full hearing before the Prices Commission considering the review of duties.

Article Fourteen: The Government of either country may, after consultation, impose special duties or restrictions on goods from the other country which are being imported and sold at less than their comparable home price.

Article Fifteen: The Government of Eire undertake to withdraw export bounties or subsidies on goods exported to the United Kingdom, except where they are necessary to maintain economic production in Eire or the orderly marketing of agricultural products.

Article Sixteen: The Government of Eire intend that United Kingdom coal, coke and manufactured fuel shall continue to be imported at not less than their proportion of total Eire imports in 1937; and undertake to abolish control by licence of coal imports, and to admit United Kingdom coal, coke and manufactured fuel free of duty, and to charge a duty of not less than 3s. per ton on coal, coke and manufactured fuel of other origin.

Article Seventeen: The Government of Eire undertake that complete or substantially complete parts for motor vehicles, motor vehicle bodies or motor vehicle chassis, manufactured in the United Kingdom, shall not be subject, on importation, to quantitative restriction (not including completely assembled motor cars, motor cycles, chassis, bodies and shells, tyres and tubes, and sparking plugs, set out in *Schedule III*).

Article Eighteen: Should either Government conclude that the objects of the Agreement are not being attained or that circumstances require its variation, the other Government will immediately consult with the first to find an equitable solution.

Article Nineteen: The Agreement shall come into force on a date to be mutually agreed, and shall remain in force for three years.

Topics of the Week

Anglo-French Discussions.—MM. Daladier and Bonnet flew to Croydon from Paris on Wednesday afternoon for two or more days. They are on an official visit, mainly to elaborate a common Anglo-French policy in European affairs; and the French Prime Minister and Foreign Minister have been warmly welcomed on that account. The conviction is rapidly spreading, in this country as among all the smaller countries of Europe, that a clear, firm and detailed assimilation of the British and French Government's foreign and defence policies is the best augury for Europe, as well as for the security of the two Western democracies and their Imperial possessions. On concerted defence by air, sea and land agreement has apparently been reached. The talks have ranged from the situation in Central Europe—greatly aggravated by the Sudeten German leader's, Herr Henlein's, extreme demands upon the Czechoslovak Government last week-end—to the recognition of Italy's Abyssinian conquest, North Africa, the Levant, the German penetration of the insurgents' territory in

Spain, an assurance that Switzerland would not be used by any Power as a corridor for invasion, co-ordination of British and French air defences, as also of the two countries' purchases of American aircraft, the possibilities of commercial support to Hungary and other Central and South-Eastern European States whose national economies are now threatened by the German "closed" trading system, and various financial and currency questions. The talks will be followed with the keenest attention, here and abroad.

* * *

Czechoslovakia and the Germans.—On April 24th, in Carlsbad, Herr Konrad Henlein, leader of the Sudeten German Party of Czechoslovakia, violently tore the Czechoslovak mask off the face of his party in making, *inter alia*, three extreme Nazi demands upon the Czechoslovak Government at Prague. Speaking as the leader of a minority in the State—but, be it remembered, only of

five-sixths of that minority, since the Sudeten German Social Democrats have not joined Henlein—he openly acknowledged *Reichsdeutschum* as the goal of his party, by recognising the identity of his party's outlook with that of Nazidom, by proclaiming Nazi race-policy as one of its tenets, and—most extreme demand of all for a self-confessed minority in the State—by serving notice on Prague that no negotiations with Prague could even be undertaken unless Czechoslovakia's entire foreign policy were changed, i.e. unless the French, Little Entente, and Russian pacts were denounced. It thus becomes clear that Herr Henlein and his party do not want to put forward what Mr Neville Chamberlain in his speech in the Commons on March 24th described as "the reasonable wishes of the German minority." No one who is not himself a National Socialist could contend that Herr Henlein's demand for a full-blooded autonomous Nazi State, complete with race-laws and totalitarian administration, would constitutionally (or even unconstitutionally) exist for more than a day or two as a federated partner inside the democratic constitution of the Czechoslovak State.

What we are in fact now facing in Henlein's demands is not "reasonable wishes"—viz. that greater percentages of Germans should go into the civil service, that more public money should go to public works in the Sudetenland, that German should be an official language, or that the Sudeten German Party should go into a coalition government. All these could constitutionally be met. But how can any kind of constitutional and democratic government at Prague allow its foreign policy to be dictated by a minority; allow Czech, Jewish and German Social Democrat minorities in an "autonomous" Sudetenland under Herr Henlein's totalitarian rule to be robbed of their constitutional rights and liberties as citizens; or allow the Czechoslovak Cabinet and State, still a democracy, to be overruled from within by the "Trojan horse" policy which overruled even the authoritarian regime of Schuschnigg's Austria? This realisation has since last week-end been forced on even those Czech Agrarians who had hoped to do a deal with Henlein and his party (*à la Hugenberg* in the last days of Germany's Von Papen Cabinet) and to rule at Prague by their help. Herr Henlein would not have gone so far, we may be sure, if Berlin had not so instructed him; such is, at least, the evidence of the chorus of denunciation which has been whipped up in the German newspapers since last Saturday. Thus, if neither Berlin nor the Sudetenland want a compromise with Prague, but secession from, and perhaps decimation of, the Czechoslovak State, President Benes and Prime Minister Hodza will be helpless, for the demands upon them are being made "unreasonable," even on Mr Chamberlain's definition. They have to work under, and preserve, the State and its constitution. They are now told, in effect, either to abandon both altogether, or to make them conform to external models and to alter their entire domestic and foreign policies. This is a more immediately dangerous position in Central Europe than many had believed possible. It is a good thing that the Prime Ministers and Ministers of Foreign Affairs of Britain and France have discussed the possibilities inherent in this issue during the last two days.

Mexico Stands Pat.—Too late for comment in last week's issue the British Minister in Mexico City on April 21st presented to the Mexican Government a new protest on the expropriation of oilfields by that Government. In this second Note the British Government "maintains integrally" the opinions adopted in its first Note; denies once again that its representations have been made at the request of the Mexican Eagle Company; affirms that they are actuated by the interests of "the very large majority of shareholders who are of British nationality"; and, continuing to show a firmer attitude than that of the United States Government, reiterates its demand for the return of the properties to the Mexican Eagle Company. The Note also pointed out that the Mexican Government itself had virtually deprived shareholders of any recourse

to Mexican law or the process of equity by its immediate confiscation of the properties and the effective termination of the company's existence in Mexico. The Note finally promised further and better particulars in reply to the Mexican Government's first Note rejecting the British Government's protest. On April 28th the text of the Mexican Government's second Note, rejecting the second British protest, was published. The Mexican Government take their stand on the nature of alien ordinary shareholders' rights under Mexican law in companies exploiting subsoil resources, which, they say, expressly commits such shareholders to a waiver of their right to invoke their Governments' aid. They also aver that such ordinary shares confer no right, in law or equity, to any assessable property of the company until the company is liquidated—which, as yet, the Mexican Eagle Company is not. Finally, the Mexican Government point out that no "manifest denial of justice" can be justifiably said to have occurred until the Mexican Eagle Company has exhausted every legal means of redress under Mexican law, and, accepting the Mexican Government's invitation, proceeds to negotiate for compensation with the Ministry of Finance and Public Credit. Three things at least are clear. First, a major conflict of laws has broken out over the Mexican Government's pretension that alien shareholders can be legislated by a Mexican Government out of their own Government's protection. Secondly, the British Government has rapidly become as involved in the intricacies of Mexican expropriatory policies as the United States. Thirdly, if the company does negotiate for compensation, its assets will have vanished long before any compensation is received—if, indeed, to go by precedents in Mexico's dealings with foreign landowners in Mexico, it is paid at all. Meanwhile, as if to point the unwisdom of President Cárdenas's administration in pushing Britain and the United States into a common antagonism to Mexico, economic affairs in that country, as we predicted in our article in the issue of April 2nd, are steadily going from bad to worse.

Eire and the Agreements.—The agreements between the British and Irish Governments (whose details and broad implications are examined on earlier pages) are a hopeful augury of improved relations between the two countries. So far as Eire herself is concerned, the principal benefit will be the reopening of the agricultural export trade. Both the balance of payments and the Budget will benefit, while the cost of living will be to some extent reduced by the relaxation of the protective programme. Our Dublin correspondent declares that the raising of the £10 millions to be paid to Great Britain will present no difficulty in view of the country's financial strength, and the transfer problem will be avoided if, as is thought likely, a large part of the sum is expended in Eire for purposes of imperial defence. The agreements, however, will not in themselves solve all the economic problems of Eire, many of whose difficulties are internal. The expansion of expenditure on housing and other public works has caused a disequilibrium between costs and prices that is being reflected in chronic labour trouble, and at the same time public expenditure and indebtedness are growing annually. The most useful service rendered by the trade agreement, next to its assistance to the agricultural exporter, is its suggestion that the policy of self-sufficiency is no longer considered sacrosanct by the Government. In view of the willingness of the two leading parties to sink their differences in the choice of Dr Douglas Hyde as the first President under the new Constitution, it is not too much to hope that they may come together again to try to agree on an economic policy based on realities rather than on shibboleths. The acceptance by Mr de Valera of a pair of field glasses, with historical associations, as a gift from Mr Chamberlain may perhaps symbolise his willingness to take the long view.

Rates of Income Tax.—The income tax is not merely the largest single item on the revenue side of the Budget; to the great majority of taxpayers—even to those who do not pay it—it is the tax *par excellence*. This was true even

in the pre-war days when its incidence was, by our post-war standards, laughably low. Budgets tend to be remembered by the standard rate of income tax which they impose. Actually, the standard rate is, at best, an imperfect guide to the real weight of the tax. To the great range of middle incomes, especially those accruing to the fathers of families, the level of the personal allowances, children's allowances, earned income allowances and the rest are of much greater importance in determining the proportion of income which is taken in tax than the standard rate itself. The allowances, however, are complicated, and the changes in them defy simple tabulation. This year, the only change in the allowances is, by an Irishism, the decision to leave unchanged the tax on the first £135 of taxable income. For the past three years tax has been levied on this initial amount at one-third the standard rate; but it is to remain at 1s. 8d. in the £ this year. The Chancellor also made a concession on the deductions from taxable income that can be made by business concerns for the wear and tear of plant and machinery. Complex schedules have been in existence for years to determine the permissible rate of depreciation of different varieties of fixed assets. These schedules were increased by a uniform 10 per cent. in the "crisis" Budget of 1931, and they are now to be increased by a further 10 per cent. The benefit of this concession varies, of course, from business to business according to the amount of fixed capital employed, but it represents a substantial concession to the heavy industries to set against the increase of 6d. in the standard rate. (The effect of this change is discussed in more detail in our Investment section on page 249.) The following table shows the changes that have been made since 1914 in the standard rate of income tax:—

Year ended March	s. d.	Year ended March	s. d.
1914	1 2	1926-30	4 0
1915	1 8	1931	4 6
1916	3 0	1932-34	5 0
1917-18	5 0	1935-36	4 6
1919-22	6 0	1937	4 9
1923	5 0	1938	5 0
1924-25	4 6	1939	5 6

The new rate, it will be seen, is the highest ever charged except in the last few months of the war and in the immediately following post-war years. The post-war minimum was the rate of 4s. charged in the Budgets of 1926 to 1930.

The combination of allowances with the standard rate of tax makes it a matter of some skill to calculate the exact proportionate rate of tax applicable to any income. The following table gives, for a few selected incomes, the percentage of total income that is taken in income tax and surtax combined.

Income	Single Person	Married Couple with One Child	Married Couple with three Children
	All Income Earned	All Income Earned	All Income Earned
£150	1-04	2-71	Nil
£250	3-33	6-25	Nil
£500	11-25	16-88	3-54
£1,000	16-67	22-08	12-92
£2,000	20-63	24-79	18-75
£5,000	31-46	33-13	30-83
£10,000	41-25	42-08	41-04
£50,000	59-17	59-38	59-16
£100,000	63-96	63-96	63-96

The highest rate of surtax is applied to all income in excess of £50,000, so that the graduation above that figure arises out of the steadily larger proportion of income that is charged at the highest rate, which for income tax and surtax combined amounts to 13s. 9d. in the £ or 68½ per cent. It will be noticed that the effect not merely of the family allowances but also of the distinction between earned and unearned income is very small except in the lower ranges of income.

Composition of British Budgetary Expenditure.—The appended chart shows how British budgetary expenditure was distributed, in 1913-14, and in each financial year from 1928-29 to the current year, as between national defence, interest and management of the national debt

(inclusive of sinking funds as realised at the end of each year), and all other expenditure. The borrowing shown in all other expenditure between 1928-29 and 1931-32 was by the Unemployment Fund; and that in defence expenditure in 1937-38 and 1938-39 is under the Defence Loans Act of 1937:—

The first outstanding feature is the decline until 1933-34 in expenditure for national debt and sinking funds. After that year, allocations for the American debt and for sinking fund were suspended, though nominal sinking funds emerged at the close of each year's accounts as the cost of interest on the national debt required less than the £224 millions allocated each year. Secondly, defence expenditure remained virtually constant from 1928-29 until 1931-32, after which—despite the fall of a Labour Government—it was reduced in 1932-33 to its lowest point and then began to swell visibly to its present peak. Thirdly, however, the reduction of £136 millions in debt and sinking fund services between 1928-29 and 1933-34 enabled the National Government first to cut down total expenditure until 1933-34; and then, secondly, almost to cover the £145 millions increase in budgetary expenditure on defence between 1933-34 and 1938-39. Nevertheless, finally, many readers may be surprised to note that after the 1933-34 low point for all budgetary expenditure, "other expenditure" has also steadily increased from £382 millions to £461 millions, i.e. by £79 millions, of which £36 millions comes between last year and this. Allocations for education, old age pensions, Air Raid Precautions, Unemployment Assistance, roads, central government and Home Office, Special Areas, broadcasting, subsidies for beet sugar, livestock and oats and barley, and

other subsidies to particular industries, all share in this estimated increase of £36 millions. Thus, it is not justifiable to conclude that all of the steady increase in "other expenditure" during the last five years is for social services, though some of it is.

Purchases for Food Storage.—The chief surprise in the Budget that was not of a strictly fiscal character was the Chancellor's announcement that the Government have been engaged in the secret purchase of stocks of wheat, sugar and whale oil sufficient "to ensure that the stocks in this country shall be maintained at a level sufficient for the needs of the civil population during the early months of an emergency." The reason for making this announcement in the Budget speech was that the purchases had been made without statutory authority, and that both legislation and a Supplementary Estimate would have to be voted. This announcement has naturally excited considerable interest, as the Chancellor gave only the vaguest details of the time and amount of the purchases. As for time, he said only that the decision was made "early this year," but that the announcement that the purchases had been made could not be given before the House adjourned on April 14th. The only clue to the amount is in the words quoted above. When they are examined closely, it will be seen that they do not state that stocks sufficient for a few months have been bought, but merely enough to guarantee no depletion of stocks for a few months, which may be a different thing. The Government may be assuming that, in the event of war, imports will not be entirely cut off. If they were reduced to, say, half the previous level, and the Government had six weeks' supply in special storage, then this would be enough to guarantee no depletion of the normal working stocks for three months. It would therefore seem to be premature to leap to the conclusion that anything of the order of three months' supply of these commodities has been purchased.

This conclusion is supported by consideration of the other known data. The average imports of these commodities during the last three years have been as follows:—

	Volume (tons)	Value £
Wheat	4,981,364	39,419,509
Sugar, refined	42,077	328,003
Sugar, unrefined	2,115,396	15,677,957
Whale oil, unrefined	139,464	2,328,416

Three months' imports of the three commodities (excluding refined sugar) would therefore weigh about 1,800,000 tons and cost something of the order of £14 millions. It is safe to say that, if purchases of this magnitude have been made, which is very doubtful, they have certainly not yet been imported into the country in addition to the normal supplies. In fact, the various markets concerned doubt whether quantities of anything like this magnitude have been bought. The only buying of wheat that can be traced to Government account is the purchase of about 200,000 tons on April 8th, though there have doubtless been other small purchases. No abnormal buying of sugar has been noticed, and it is not believed that the Government's purchases can exceed 500,000 tons at the most, though it is thought possible that arrangements have been made to take over the domestic production this year. The whale oil market has had a strong tendency for some months past, and the market thinks it possible that the Government has bought about 30,000 tons. There is also the factor of cost to be borne in mind. Sir John Simon allowed only £10 millions for Supplementarys, to cover these purchases and a variety of other contingencies, of which the Air Raid Precautions alone may require a substantial sum, although it must be remembered that there will be savings on other estimates that will be available. Taking the evidence as a whole, it does not appear likely that the Government have yet bought the large quantities of these foodstuffs that have been mentioned in the Press. They have certainly not bought the stocks, equivalent in shipping space to one year's supply of wheat (i.e. about 5 million tons), which Sir Arthur Salter has made the basis of his proposals (*The Economist*, October 2, 1937). Their action, therefore, deserves the provisional blessing appropriate to a good beginning.

Tea and Oil Duties.—Both the duty on tea and that on hydrocarbon oils have had a checkered history. Both were in existence before the war, both were entirely removed in the post-war period of diminishing burdens, and both have subsequently been re-imposed. The tea duty was abolished by Mr Churchill in his Budget of 1929, re-imposed by Mr Chamberlain in 1932 and increased in 1936. The excise duty on motor spirit was removed in 1919 and the customs duty on January 1, 1921. It was revived, as a duty on hydrocarbon oils, by Mr Winston Churchill in 1928 as part of the finance of the de-rating scheme, and was twice increased by Mr Snowden in 1931. The actual changes in rates (excluding preferential rates) have been as follows:—

	Tea Duty d. per lb.	Motor Spirit Duty d. per gallon
Outbreak of war, 1914	5	3
End of war, 1918	12	6
Budget of 1920-21	12	Abolished
1922-23	8	...
1924-27	4	...
Hydrocarbon Oil Duty		
	Light	Heavy (Road Fuel)
1928	4	4
1929-30	4	4
1931—First Budget	6	6
Second Budget	8	8
1932	4	8
1933-34	4	8
1935	4	8
1936-37	6	8
1938	8	9

This year's Budget also includes a new tax of 9d. per gallon on power methylated spirits. The tea duty is now at the second highest level ever reached. The petrol duty is higher than ever before. Moreover, road transport users now have the heavy motor licence duties to pay, which were not in existence when the petrol duty stood at only 6d. per gallon immediately after the war.

Tax Evasion.—In his campaign against the tax evaders, the Chancellor, in his Budget speech this week, announced an advance on six fronts. He will attack them on revocable trusts, on transfer of assets abroad, and at four other less important points, including the strange trick of turning income into capital by keeping open a deceased estate. A fairly big yield will come from the abolition of revocable trusts and a still bigger yield from the stopping of the foreign company device. Revocable trusts were dealt with first in the Finance Act of 1922, and were thereafter thought to be dead. But they revived when an ingenious mind thought of a trust revocable by some one other than the settlor, and so started a fashion which spread as quickly as the football pools. In 1936, a move was made against this new expedient, but by an absurd anomaly a parent (forbidden to use the trust in connection with a schoolchild, costing him in education a large annual sum) was allowed to continue it for an adult child who was self-supporting. Similarly a revocable trust was permissible in an illicit love affair. The change which is now to be made was clearly inevitable sooner or later. The Chancellor's proposed action against the transfer of assets abroad relates to the practice of starting a company or a chain of companies overseas, which receive a rich man's income and hand it back to him by way of non-interest bearing loans. These companies were dealt with in the 1936 Act. Section 18 of that Act however, imputed the question of motive, and where some motive other than tax-evasion could be shown the device could not be stopped. Evasion by way of deceased estates resulted from a court judgment, and dividends accruing to deceased estates before the grant of probate, were not income and consequently were not liable to sur-tax. The Chancellor has given an earnest of the Treasury's zealous intention to close all loopholes, as and when they are discovered, without questioning the rights of free British subjects to devise new schemes affording the tax evader anything up to a year's "for his—or the State's—money. Whether the

authorities will ever catch up fully, however, with the ingenuity of the pioneers of new expedients is doubtful, so long as the inducement offered by high rates of taxation is substantial. The Treasury's task, nevertheless, might well be simplified if income tax and surtax were ultimately to be amalgamated.

Trade Fluctuations.—The trade cycle is back in the news, in less comforting guise than in the piping days of last year's prosperity. The latest returns of unemployment for April show that the usual spring upturn in employment is not yet visible and, together with the latest drop of 1½ points in *The Economist's* index of business activity between March and April, suggest that industry and trade are still pursuing the downward course which began last autumn. The continued absence of more optimistic news about the volume of new orders in important industries makes our monthly Trade Supplement, published with this issue, uneasy reading. No sudden or deep drop in industrial activity is suggested, and building operations have been substantially maintained; but the existence of a measurable recession is clearly indicated, and discussions of trade cycle policy take on a new importance. It may well be that last year saw a peak in employment, not likely to be repeated for some time to come. The features of 1937, recorded in the Annual Report of the Ministry of Labour, just published, were an expansion of the numbers of insured persons in industry to the record level of 13,400,000, and the attainment of a new high watermark in the numbers employed in industry of 11,672,000 in August (or, under the revised method of counting the unemployed, of 11,706,000 in September). On April 4th this year 11,390,000 insured persons (exclusive of agriculture) were in employment, or 130,000 fewer than on April 19, 1937. This is the first occasion, since recession began, on which the numbers actually employed have been lower than they were a year earlier. To a limited extent, the re-armament programme in its accelerated form will serve instead of the slump works proposed in vain to the Government from many quarters, but, over-riding fiscal obstacles apart, further steps to fill the gap left by the diminution in private activity may be desirable in the near future. Experience of Government efforts in the United States is not, perhaps, encouraging; and it may be, as a series of contributors to our correspondence columns in recent weeks have pointed out, that we do not yet understand the nature of industrial fluctuations. It may even be, as Dr E. C. Snow stated to the Royal Statistical Society on Tuesday, that the term "trade cycle" is a misnomer, since academic economists' examinations of the incomplete employment data of pre-war years have revealed nothing like a really regular periodicity in the statistical swings of industry and trade. Nevertheless, trade does patently move up and down at intervals; and whatever nomenclature be applied to its vicissitudes, their social and economic consequences are sufficiently serious to warrant preventive measures, if possible.

Outlook in the Air.—There can be no question that secrecy about the details of progress in national armament can commonly be justified on grounds of policy. It can hardly be denied, however, that the doubts widely expressed about the Government's air programme detract unfortunately from general confidence in the nation's security. The visit of an exploratory mission to the United States, to investigate the purchase of aircraft or frames, has furnished an occasion for an outburst of criticism and questioning. Whatever arrangements may be made in the United States, they cannot appreciably alter the need to bring home manufacture to the highest pitch of production and co-ordination. The American industry could, of course, be expanded over a period of years to meet large demands from Europe; but, at the moment, its capacity is probably not so much greater than that of its British counterpart. In Canada, on the other hand, the mission may formulate proposals within the considered scope of the newly-evolved decentralised pattern of Imperial defence. In the main, however, the air problem

is, and must be, domestic. Lord Winterton's recent announcement in the Commons that it was the Government's intention to press all factories capable of aircraft manufacture into the service of the accelerated and expanded programme was reassuring. The most frequent criticism, however, is that the complementary output of engines, frames and accessories has fallen out of step; and that, in consequence, the total programme is lagging behind its objectives and not keeping pace with, say, the Reich's rate of production. Exaggeration is rife, in the not unnatural absence of specific figures. But even the aircraft industry hardly seems satisfied; and the Debate on the air programme projected for next week should at least reveal the extent to which manufacture has been hampered by lack of planning, undue red tape, shortage of tools and instruments, lack of labour or other considerations.

Aircraft production, however, is only one part of air defence. Equally important (to use Commander King-Hall's phrases) are "moral re-armament," in the shape of a general determination to press on successfully with air-raid precautions, and "passive defence," through the organisation of safety schemes, the provision of shelters, the ensuring of food supplies, and even the decentralisation of urban populations and administrative services. To these civilian considerations the Home Secretary turned on Monday, when he met representatives of 1,700 local authorities to discuss A.R.P. He laid stress upon the fact that progress so far had been patchy; and on the need to secure speedily the 1,000,000 volunteers needed and to complete adequate plans for all areas. In particular, dealing with a point which had exercised the minds of many observers since A.R.P. began, he announced that precautions were perhaps too much weighted towards safeguards against gas attacks, while, in fact, high-explosive and incendiary bombs were probably the more immediate dangers. The recruitment and training of auxiliary firemen were therefore urgent requirements, as were the surveying of available accommodation for shelters and the provision of safety trenches in the open spaces of big cities. In general terms, Sir Samuel expressed his faith in the dispersal of urban populations in the face of attack from the air. It may well be that more specific proposals in this direction may eventually emerge as part of a considered policy.

Films: A Budget Concession.—What is described as a "concession to the film trade" in Sir John Simon's Budget is, perhaps, small beer to the trade as a whole, though it is of some importance to the very limited interests affected by it. The Chancellor's explanation of his concession may not have been wholly clear—indeed, he himself seemed hardly to have understood the implications of his concession. Briefly, the art of "dubbing"—as the substitution of one language for another in a "talkie" film is called—has been developed to a higher pitch of perfection in France than in any other country. Moreover, in France the law insists that the "dubbing" of French on any imported picture shall be recorded in that country. In the case of ordinary black-and-white films the foreign picture negative is imported into France, and the processes of "dubbing" and the subsequent printing of any required copies are completed there. But in the case of colour films, the necessary facilities for printing positives do not exist in France, and the process of incorporating the new French sound-track into the prints from the original negatives can be completed only in London or Hollywood. The importa-

tion of the French negative, however, has hitherto been charged with an import duty of fivepence per foot, and of the three separate colour-negatives from America three times as much. By permitting the whole of this processing to be done in bond, a comparatively large charge is saved in the case of prints of foreign colour subjects for export to France or other Continental countries. It is hoped therefore, that this concession to an industry "struggling to be free" of hampering Customs duties may divert some work from Hollywood to London, and to that extent prove advantageous to the colour companies established here.

Labour Day Topics.—Last year the wages of all workers in Britain were increased by some £50 millions—an increase greater than in any year since 1920. In the first quarter of this year the rise has continued at a reduced rate equivalent to about £11 millions a year. Among the workers who will celebrate Labour Day next Sunday, however, there will undoubtedly be numerous complainants. In general, there will be demonstrations against the Government's policy of non-intervention in the Spanish war. In particular, the dissident voices of engineers and cinema operators will be heard. On Monday, the Executive of the Amalgamated Engineering Union met without discussing the proposed meeting with the employers to expedite the Government's re-armament programme. Exaggerated rumours about the breakdown of aircraft production have not increased the engineers' willingness to commit themselves. It is increasingly alleged in labour circles that the Government's approach to the engineering industry was not so well conceived as their approach a year ago to the building trades, which resulted in the setting up of an effective joint body representing trade unions, employers and Government departments. Meanwhile, the A.E.U. have filed a claim, affecting 20,000 skilled men in Government shops, for an increase of 8s. in weekly wages and 14 days' holiday with pay.

* * *

The London film projectionists of the Electrical Trades Union are now less recalcitrant than when their strike began at Easter. The stoppage has had little noticeable effect, and the strikers are now willing, on the advice of the secretary of the London Trades Council, to confer with the exhibitors and the chairman of the Joint Conciliation Board, on which the E.T.U. are not represented, provided that the exhibitors withdraw their demand for a minimum 60-hour week and recognise that the projectionists' objective is a 48-hour week. On the whole, none of the industrial grievances noised abroad on Sunday can conceal the wide sense of comparative satisfaction which outside of politics still characterises the labour world. The Chancellor's new tea duty will not inspire the workers' gratitude; but the Home Secretary's reported intention of dealing forthwith with the scandalously long hours worked by young persons will evoke general congratulation; and the Amulree Committee have approved a general week's holiday with pay.

* * *

Another Crisis in Egypt.—The trouble between the present Prime Minister of Egypt and the Palace may be a more serious symptom than the foregoing breach between young King Farouk and the late Prime Minister, Nahas Pasha. The responsibility for that previous crisis might reasonably be placed at Nahas Pasha's door, at least in very large part. The Wafd, of which he succeeded the founder, Zaghlul Pasha, in the leadership, was intransigent in principle; it was spoilt by success; and the very attainment of the Anglo-Egyptian settlement which was the Party's *raison d'être* had quickly resulted in a split in the Party's hitherto tightly closed ranks. Thus, while the King's dismissal of Nahas Pasha might be criticised for its unnecessary brusqueness, it did not in itself amount to evidence that the King had set his face against the whole system of responsible parliamentary government. The difficulties which Nahas Pasha's successor, Mahmud Pasha, is now having with the Palace are another story, for neither the personality nor the policy of Mahmud Pasha is such

as to make him impossible for the Crown to work with. After all, this is not the first time that Mahmud Pasha has stepped into the breach when the Crown and the Wafd have been at loggerheads. The invitation to form a Ministry in succession to Nahas Pasha, which Mahmud Pasha has accepted at King Farouk's hands this year, was accepted by him on a previous occasion, at King Fuad's hands, in 1928, and at that time he went a long way to meet the Crown in ruling Egypt on the lines that the Crown desired. In 1930, however, after he had been compelled to give place once more to the Wafd, Mahmud Pasha showed that there were definite limits to his complacency. For example, when King Fuad arbitrarily replaced the advanced constitution of 1923 with his own reactionary constitution of 1930, Mahmud Pasha went into opposition, side by side with the Wafd, instead of taking the opportunity to come back into office as a colleague of the King's friend, Sidki Pasha. Mahmud Pasha appears to have carried his point against the Palace, for his new Cabinet list includes an increased proportion of members of his party, the Liberal Constitutionalists, whose demand for larger representation was the occasion of the disagreement.

Taxes and Trusteeship in Northern Rhodesia.—The report of Sir Alan Pim's Commission on the economic and financial position of Northern Rhodesia, coming so soon after the disturbing inquiry into the Trinidad riots, will cause misgiving about the way in which our colonial duties are being discharged. The gist of the report is that social services for the native population are grievously backward, and that finance must be found to bring them up to a proper standard, partly through administrative economies, partly through heavier taxation of the mining industry, partly, if need be, through grants-in-aid from the British Treasury. Among the points made are that the recently instituted native treasuries are starved, that native housing in urban areas is unsatisfactory, that the mines make inadequate provision for the welfare of their native workers, that native education is backward and cannot progress without advances in health and nutrition, and that the standard of health is low and the hospitals poor. The main fiscal burden of improvement must needs fall on the mines, which furnish 95 per cent. of the colony's exports and pay 78 per cent. of the income tax, the main source of revenue. The mines are, in fact, the only really valuable economic asset of the colony. Land is plentiful but poor, and is deteriorating in many areas, while the Zambesi forests are also in need of State protection. So long as the price of copper remains relatively high, however, the immediate financial prospect is regarded as good. The report can hardly make satisfactory reading for copper shareholders, but it is equally disquieting to those who believed that the principle of native trusteeship was being generously carried out in the British colonial empire.

Australian Public Finance.—The latest meeting of the Australian Loan Council followed familiar lines by providing a three-cornered contest between the Commonwealth, the States and the Commonwealth Bank, but on this occasion a new issue of the greatest importance dominated the discussions. Given the Bank's rigid refusal to endorse more than limited borrowings, how was the available loan money to be apportioned between re-armament expenditure by the Commonwealth and unemployment works expenditure by the States? The Commonwealth actually claimed that its defence works also helped to relieve unemployment; to which the States replied that while the Commonwealth was in a relatively satisfactory position, their own circumstances were straitened and their needs increasing. The decision taken represented a compromise. An internal loan of £10,250,000 is to be raised in June, of which £4,000,000 will be for defence and the remainder for public works and adjustment of farmers' debts. The defence loan is additional to money raised in London to pay for sterling purchases. The loan programme for the year from July, 1938, to June, 1939, has been fixed at £14,000,000, excluding defence works, the cost of which cannot yet be estimated. This means a cut of £2,000,000 in the States' projected borrowing next year.

The Government Steps In

NEW YORK, April 19.—In his "fireside chat" on the eve of Good Friday, the President reminded his audience that, in his Message last November, at the opening of Congress, he had stated "that if private enterprise did not provide jobs this spring, the Government would take up the slack." The spring came, and brought no evidence of business recovery. A revival of Federal activity was to be expected. Rumours preceded its announcement, and its statement to Congress came before its formal exposition to the public over the radio. In March, the stock market gave up its hopes of the "natural forces of recovery" asserting themselves decisively in the visible future; and, in April, Washington reached the same conclusion.

While the spending programme had been anticipated for some time, the method of financing it had raised questions. During March, the market in Government securities became decidedly heavy, and was supported by the Reserve Banks, and probably by Treasury funds. The announcement that the programme would be financed in large part by the use of the Inactive Gold Fund, and that additional borrowing would be relatively small, relieved these apprehensions.

The President, in his radio address, said:—"The net effect on the debt of the Government is this: between now and July 1, 1939—fifteen months away—the Treasury will have to raise less than \$1,500 millions of new money." In the past 12 months, sales of "baby bonds" have amounted to about \$500 millions, and the implication is that the market will only be called upon for about \$1,000 millions—a figure far smaller than the vague sums mentioned in March and early April.

Monetising Inactive Gold

The net effect of monetising the gold in the Inactive Fund is exactly the same as the effect of monetising the gold in the British Equalisation Fund to cover part of the British armament programme would be. The Inactive Fund on April 13, 1938, was reported to be \$1,183 millions—exclusive of gold in excess of \$1,800 millions held in the Stabilisation Fund (representing the "gold profit" of 1934). The gold in the Inactive Fund, mostly accumulated in the first eight months of 1937, was bought by the issue of Government securities, and, from the fiscal standpoint, the effect was that we borrowed in 1937 sums which will cover a deficit to be incurred in 1938.

From the monetary standpoint, the \$1,183 millions of gold released by the Inactive Fund are to be added to the member banks' excess reserves, which on April 13, 1938, amounted to \$1,730 millions. This will raise the reserves to a figure just under that of August 15, 1936, when the programme of reducing excess reserves by increasing required reserves was inaugurated. In addition, the Reserve Board has reduced required reserves by 12½ per cent.—a factor which, it is estimated, increases excess reserves by about \$750 millions.

Required Reserves Reduced

The reduction in required reserves has already become effective; but the method or rapidity of releasing the gold in the Inactive Fund is not yet indicated. The reserve position may be summarised as follows. In August, 1936, excess reserves were above \$3,000 millions; in August, 1937, at their lowest point, they had fallen to about \$750 millions; and on April 13, 1938, they had been raised to \$1,730 millions. The 12½ per cent. reduction in required reserves will immediately raise them to about \$2,500 millions; and the prospective release of the Inactive Fund would increase them to about \$3,700 millions.

As the member banks were virtually free of debt to the Reserve banks (only \$13 millions on April 13th), the increase in excess reserves resulting from the reduction of require-

ments will have little or no visible effect on the statements of the member banks or the Reserve banks. The release of the Inactive Fund will increase the item of "gold certificates" held by the Reserve banks, and (initially) the Treasury deposits at the Reserve banks. As the Treasury balances are spent, the cash and deposits of the member banks will, of course, increase.

Deficit Financing Again

The quantitative effects of the spending programme are roughly measurable. In the calendar year, 1937, the Government debt publicly offered increased by an amount only a little greater than the requirements of the Inactive Gold Fund. Under the present programme, the current deficit expenditure could run as high as \$300 millions or \$400 millions a month; and, actually, in the current quarter (before the programme gets under way) it may be running at \$300 millions a month.

The transition from the relatively nearly-balanced Budget of 1937 to a deficit expenditure of close on \$1,000 millions a quarter in 1938 obviously introduces a substantial factor into our economy. Looking back at the pre-1937 deficits as pump-priming, it appears that they enjoyed a measure of success up to the critical period—the change-over from deficit expenditure to normal private expenditure.

By early 1937, our economy was apparently at a prosperity level, and it was judged feasible to reduce deficit financing practically to the limits of the Inactive Gold Fund. But private financing failed to "take up the slack" or, to change the metaphor, when the Government stopped priming the pump, the pump stopped flowing. To all appearances the well was empty.

Taxation and Investment

Yet there is a considerable amount of statistical evidence that the well of private capital is not empty. The formation of capital in our economy since 1930 has been relatively small, but the amount that has flowed back into enterprise has been still smaller. The basic question of our economy is: what has stopped the flow of capital into private enterprise?

The theory of the Senate Tax Bill is that certain forms of taxation have been largely responsible for this stoppage or diversion of the capital flow. Persons holding this view put more emphasis on tax reform than on spending to promote revival. Actually, at the moment, there is some evidence of capital going into building, both residential and commercial, and the building statistics are the only series that yet suggests any upturn.

The Keys to Confidence

PARIS, April 28.—M. Daladier's Radical Cabinet is the latest attempt to persuade capital to collaborate in bringing about financial recovery. If it fails to achieve its objectives, the parties of the Left will launch a great campaign for the use of the compulsory methods which M. Blum proposed and the Senate condemned. If M. Daladier should be checked by the Stock Exchange after M. Blum has been overthrown by the Senate, what would be the upshot? This possibility explains the nervousness of the markets during the last days. It may be that the Left extremists are relying on this check taking place, while, at the same time, affording "chivalrous" support to the Cabinet. Meanwhile, M. Daladier is taking the greatest care in drafting the various measures to define the legal status of strikes and to stimulate business.

There are two keys to the restoration of confidence: one domestic and the other external. At home, production must be revived, within the framework of monetary prudence and the Tripartite Agreement. The headings of the Three Year Plan drawn up by the Minister of Finance, M. Marchandeau, include: the balancing of the Budget by a mild increase in taxes and customs duties; the expansion of credit; the lengthening of working hours where necessary; public works; development of the tourist industry; exploitation of colonial resources; and the protection of foreign trade. The coal industry especially must increase its yield, which is just 76 per cent. of the British; and in metallurgy only 107 of out 211 furnaces are in use.

Paris and London

The necessity of expanding revenue by increasing fiscal receipts and of securing a successful loan for military expenditure is the keynote of M. Daladier's recovery plan, as it was of M. Blum's plan. In each case expansion of credit was the chief feature; and modification of the 40-hour week the main obstacle. The unknown factor is still the possibility of collaboration between capital and labour. The first decrees to implement the new plan will be issued in the *Journal Officiel* on May 3rd, after the return of MM. Daladier and Bonnet from their visit to London.

These Franco-British talks, which will principally concern the negotiations with Rome, raise the second problem affecting public confidence, namely, foreign policy. Will the Left extremists be ready to support a policy, with regard to Spain and Czechoslovakia, in line with that of Mr Chamberlain? If financial aid from Great Britain is obtained to guarantee the progress of the economic plans of M. Daladier, it is still to be feared that any countervailing concessions on foreign policy will meet with difficulties. The new German threat to Prague comes, by a strange "coincidence," just between the French visit to London and Herr Hitler's trip to Rome.

Decline in Coal Consumption

The import quota of foreign coal has been just reduced from 95 to 80 per cent. as from May 1st. This is a consequence of the decline in consumption by 1,933,000 tons, or 10 per cent., compared with the first quarter of 1937, and by 2,500,000 tons compared with the last quarter of 1937.

Coal production in the first quarter of 1938 was 11,854,000 tons, or 150,000 tons more than in the same period of 1937, with 65.4 working days against 66.5. Stocks, which declined by 154,800 tons between January 1 and April 1, 1937, have increased during the same period of 1938 by 280,000 tons.

Coal imports, which were 7,846,000 tons in the first three months of 1937, were 6,193,000 tons, a decline of 21 per cent., in the first three months of 1938. The lowering of the import quota is thus a direct consequence of the new situation created in the French coal market by economic recession.

Germany

Crisis in Czechoslovakia

BERLIN, April 27.—The Sudeten-German question is at present obscuring all others. That it would become more acute after the annexation of Austria everyone foresaw. That it would also become more urgent and threatening was not expected, for it seemed that the enlarged Reich would for many months have its hands full, and might desire a respite from foreign criticism and suspicion.

Formally, of course, it is the Sudeten-Germans who have brought things to the critical stage. But it is inevitable that their policy should be pursued in accord with the Reich. The

Reich Press treats the Sudeten-German question as critical, giving it front-page prominence and imposing headlines; and emphasising the allegedly unnatural, because unnatural, composition of the whole Czech Republic, and the "revolt of the peoples," not merely of the Sudeten Germans, against Prague. Newspaper treatment ominously resembles that applied to Herr Schuschnigg's Austria on the two days preceding the German invasion.

While it is difficult to predict developments, Herr Henlein's demands, whether intrinsically reasonable or unreasonable, are inconsistent with his view that they would provide a basis for harmony within the present frontiers. The outlook is very uncertain.

An instance is his claim that Czechoslovak foreign policy should be diverted from present allies and associates, which inevitably means that it should be conducted in the Reich's interests. Obviously this is impossible, and, indeed, unreasonable, because if the Sudeten-Germans were to become loyal and satisfied citizens of the Republic, as Herr Henlein professes to hope, they could not simultaneously demand a foreign policy that would make the Republic a German dependency.

This item of the programme recalls Herr Schuschnigg's concession of a "German" policy in July, 1936. It seems that the Sudeten-Germans will not get all the concessions demanded, and certain that, were they to get them, the quarrel would continue. Behind the quarrel is not the Sudeten-German grievance, but a National, Irredentist problem of a familiar kind not to be satisfactorily solved by bargaining.

Course of the Anschluss

The Gauleiter Herr Bürckel, already in Austria as re-organiser of the Nazi Party and plebiscite agent, has been appointed "Reich Commissar for the Reunion with Austria" for one year, to be responsible to Herr Hitler and independent of intermediaries. General Göring declares that Berlin desires no centralisation of Austrian business and that Austria will achieve her own recovery.

In connection with the currency settlement, the Reich Bureau of Statistics compares Austrian and Reich prices. On the basis of the new exchange rate (Sch. 1.5 = Rm. 1) some Austrian prices are lower and some higher than German, those for most cereals being about the same, and for other agricultural products lower. In Austria, the cost of living varies locally much more than in Germany; and the Austrian index of rents (1914 = 100) is only 33, against 120 in Germany. At the old exchange, therefore, practically everything in Austria was cheaper.

Schilling bank-notes ceased to be legal tender on April 25th, but will be accepted by public treasuries until May 15th and will be exchangeable by the Reichsbank or Austrian National Bank until the end of the year. The National Bank's power to issue notes has been withdrawn. Small Austrian token coins remain in circulation for the present, but have become Reich coins.

The Austrian National Bank

Shareholders in the Austrian National Bank will be compensated at the rate of Rm. 125 in Reich Treasury certificates for nominal Sch. 100 shares. These certificates will bear the customary Reich 4½ per cent. interest, the dividend rate of the bank. Allowing for certain adjustments, this settlement constitutes compensation at about par. An article by Dr Schacht implies that Austrian business will get considerable credits. All exchange restrictions between Reich and Austria will ultimately be removed.

Austrian National Bank Clearing accounts have been taken over by the Reich Clearing institution (Deutsche Verrechnungskasse), and will be administered by it without change pending further regulation. The Clearing rights and obligations of the National Bank have been abolished; and payments by debtors must be made to the German institution. So far, an agreement to cover Austrian Clearing accounts has been concluded only with Greece.

The new Reichsbank office at Vienna will buy gold at the German price of Rm. 2,784 per kilogramme fine. Although the Reichsbank's return for April 23rd shows a substantial repayment of March-end credits, it continues to show also a very large circulation—a consequence in the main of the *Anschluss*.

Industry Active

Industry is active. Coal production in the first quarter of the year was 47,793,000 tons, compared with 44,238,000 tons in the same quarter of 1937. The question of the resumption of dividend payment by shipping companies has been under discussion, and, on the Bourse, shares of the Hamburg-

America and North-German Lloyd companies have been firm. The finances of shipping in general have materially improved; but the largest companies have still questions of indebtedness and reconstruction financing. Their advantage is very low capitalisation, since the scaling-down after the depression.

The Germanische Lloyd returns the commercial fleet at 4,158,933 gross tons at the end of 1937, against a depression lowest of 3,718,909 tons in 1935 and 4,299,919 tons in 1931. Germany's share of world tonnage is put at 6.25 per cent., and has risen slightly. Of the increase of 325,000 tons in 1937, some 108,900 tons was derived from purchases from abroad. Construction orders at the end of 1937 were 929,854 tons, of which no less than 753,942 tons were motor vessels.

Export Surplus Again

After two months of import surpluses, foreign trade in March yielded an export surplus of Rm. 16 millions, against Rm. 54 millions in March 1937. The figures were as follows:

	Feb.	March	Jan.-Mar.
Imports	Millions of Marks		
I. Foodstuffs	170.7	172.0	522.1
(a) Livestock	11.0	9.7	29.6
(b) Animal foodstuffs ...	41.8	40.2	131.6
(c) Vegetable foodstuffs...	88.7	93.2	273.0
II. Industrial goods	278.3	285.6	864.3
(a) Raw materials	166.2	158.9	503.4
(b) Semi-manufactured...	78.4	89.3	256.1
(c) Manufactured	33.7	37.4	104.8
Total	453.2	461.8	1,398.7
Exports			
I. Foodstuffs	5.4	6.0	18.0
(a) Livestocks	0.1	0.1	0.5
(b) Animal foodstuffs ...	0.6	0.6	1.8
(c) Vegetable foodstuffs...	2.6	3.4	9.0
II. Industrial goods	430.7	471.4	1,341.3
(a) Raw materials	43.1	48.3	135.1
(b) Semi-manufactured...	37.0	34.8	111.8
(c) Manufactured	350.6	388.3	1,094.4
Total	436.2	477.7	1,359.8

Gold imports and exports were small and practically equal.

Belgium

Financial Proposals

LOUVAIN, April 19.—The Janson Government seems fairly stable, and the Opposition is not very active. It is said sometimes that the head of the Government is not sufficiently attentive to economic questions; but so far he has adhered to the principles laid down by the van Zeeland Government. M. de Man, Minister of Finance, was compelled to resign his office in conditions which did not increase his prestige. True, he was ill, but it is plausibly argued that he waited too long before taking the necessary measures to put the finances in order. Last year he made the mistake of approving expenditure which the Budget could not cover. Nevertheless, M. de Man is a sociologist of the first rank and a very independent spirit.

M. Soudan, the new Minister of Finance, is a distinguished jurist belonging to the Socialist Party. His financial knowledge is not great, and he has been fortunate to find a collaborator of the competence of M. Frère, who was prominent in the drafting of the van Zeeland Report.

Up to the end of 1937, the financial situation was undoubtedly sound. The ordinary Budgets of 1935, 1936 and 1937 left a slight surplus. In 1937 extraordinary expenditure on armaments and public works reached 1,700 million francs, while repayment of public debt absorbed 600 million francs. The financial year 1938 has begun in less favourable conditions. The first forecast of the new Minister foreshadowed a probable deficit of 1,900 million francs on the ordinary Budget. Half the deficit is due to the diminution of receipts, as a consequence of the economic depression, and the rest must be ascribed to the increase in expenditure, mainly on unemployment. These estimates are probably too pessimistic in the present economic situation. Nevertheless, drastic financial reforms could not be avoided much longer. The Minister of Finance is aware of this, and has planned to increase taxation and reduce expenditure.

The new taxation measures deal mainly with direct taxes. First, the late Crisis Tax, abolished in July, 1937, will be restored. The tax on dividends will thus be increased, for dividends will also bear the Crisis Tax; thus the tax charge

will be raised from about 24 to 29 per cent. Finally, estate duty and super tax will also be increased.

The new plan also provides for the establishment of a progressive tax on men who escape military service, and for an increase in the duties on beer, tobacco and motor spirit. These indirect taxes are designed to yield (as they stand before Parliamentary amendment) some 300 million francs.

These proposals, which have not yet been made law, will probably be altered by Parliament. The tax on those who have not fulfilled their military obligations will probably be abandoned. In all, the financial proposals were estimated to bring in about 1,350 million francs in new taxes. Parliament will probably cut the extra taxes to yield 1,200 millions.

Politics, Currency and Banking

The depreciation of the French franc caused some fear that the belga would also fall. These feelings were more current abroad than in Belgium, where the difference between the economic situation of France and that of Belgium is more specifically realised. Belgium would suffer much more from even a slight fall in the sterling rate than it has from the decline of the French franc. The French depreciation has led to some increase of competition only in certain textile products.

The annexation of Austria by Germany was much more alarming news. It has been estimated that 2,000 million francs were exported after the *Anschluss*, but the withdrawals took place mainly for the account of foreigners.

The way in which the Belgian banking system weathered the crisis is worth mentioning. The gold bullion standard operated perfectly. The banks were able to carry out these large withdrawals by using their liquid deposits at the National Bank. They were not compelled to rediscount any of their portfolio or to ask for collateral loans—which the Central Bank would have been able to grant very easily.

The National Bank has published the exact amount of the gold reserve which was previously hidden, in part, under the general item "Portfolio." It is now shown on the balance sheet, and is composed entirely of gold bullion except a few millions. The latest statement shows that the National Bank has 15,700 million francs under the heading "Gold reserve" and 5,650 millions of "Gold values," or about 21,350 millions in all.

In addition, the Belgian Government holds, in bullion over 1,000 million francs derived from the re-evaluation of the gold reserves of the Central Bank in 1935. Altogether, the gold reserves of Belgium, available for payments abroad over and above exports visible and invisible, amount to more than 22,000 million francs, or £150 millions.

Spain

(From a Correspondent, returned from Barcelona)

Dr Negrin's Tasks

FRANCE, April 13.—The new Negrin Government has full powers in waging the war and defending the Republican form of government. But Dr Negrin is not quite a dictator, for constitutional formulæ are preserved. He has the fullest support of the parties represented in the new National Government. The presence of the

NATIONAL BANK OF GREECE

Established in 1841

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000.0

labour unions in the administration is having the effect of solidifying labour behind the Government.

One of Dr Negrin's principal tasks is to suppress a wide system of espionage. Insurgent sympathisers are being arrested in large numbers. They constitute the boasted "Fifth Column" of Franco, and derive their name from the fact that, when four Franco columns were marching on Madrid in November, 1936, Insurgent radio stations boasted that a "Fifth Column" was waiting in Madrid to help Franco at the opportune moment.

Dr Negrin must also find ways of securing arms and munitions. The Republican army is fighting with very little war material by comparison with the vast supplies sent the insurgents by Italy and Germany. One everywhere hears the refrain that, if Republican Spain had only one-half the war material of the enemy, it would yet win.

The food supply is low and is being rationed. The poor are the worst sufferers. One sees nothing to suggest starvation, but there is undoubted hunger. The Insurgent advance in the East has aggravated the situation for a double reason. It has sent thousands of refugees to Barcelona and other congested centres, and that means more mouths to feed. But these same refugees, coming from country towns, had in the past sent food to friends and relatives in Barcelona. Now they must rely for food on those very friends whom they helped to feed. In addition, there is profiteering, as there always is in such situations. Courts against profiteering function daily and impose fines and sometimes prison sentences. The food rationed by the Government is distributed at the legal prices, which are low.

Catalan Loyalty

The disaffection among the Catalans, frequently reported in the Press, is not evident. There is a great bourgeois population in Catalonia of shopkeepers and business men. Although basically Liberal, they have never been strong Catalan Nationalists, when Nationalism was found to conflict with their material interests. They accepted and collaborated with the anti-Catalan dictatorship of Primo de Rivera, and would accept and collaborate with Franco, if they felt their material interests would be served. That is not the same, however, as saying they are Franco sympathisers. Fundamentally, they are not.

The great majority of Catalans, however, are staunch Republican supporters. They realise that the Republic gave them that self-government always denied them by the Monarchy. In 1933, when the country was swinging toward the Right, Catalonia returned a heavy majority for the Left Republican wing. They believe that the Franco regime is the enemy of all that is liberal and Catalan.

On the other hand, many Catalans feel that the recent entrance of the Central Government into Catalonia has been somewhat too high-handed and that the horde of Government functionaries and employees have been riding roughshod over Catalan feelings. That such functionaries should receive favoured treatment in food and housing has proved irksome and has aroused resentment. Many Catalans have wondered whether Catalonia would not do best to save itself; and there was an ill-considered movement to seek the protection of France. But Dr Negrin now seems to realise the necessity of cultivating Catalan goodwill.

British Interests

The most considerable British interest in Barcelona is the Light and Power Company, known as "Riegos y Fuerzas del Ebro," which supplies light and power to all Catalonia, including Barcelona. In the beginning, this industry was seized in a rather high-handed way by the syndicates. The personnel were invited to depart, and did so. One cannot help but contrast their attitude with that of the American personnel of the American-owned telephone company, who refused to depart and maintained staffs at Barcelona, Valencia and Madrid, notwithstanding that the syndicates had in similar manner seized the telephone company.

The Government is now, however, fully cognisant of the fact that the seizure of the Light and Power Company and its funds was high-handed. True, the Catalan Government, which issued the decree, said the Company would be compensated, but such a saving declaration was not too reassuring. For some months a complete technical plan for recapturing the Light and Power Company from the hands of the syndicates and protecting the rights of the owners has been in course of elaboration. The decree has only been delayed until the proper technical organisation has been prepared.

Czechoslovakia

Effects of the Anschluss

PRAGUE, April 17.—The most important event recently has been the *Anschluss*. The political implications of this event have been explained by the Premier, who laid special stress upon the Government's will to come to some understanding with the minorities. Public opinion has, on the whole, remained calm.

The Government are preparing a legal codification of all regulations relating to the status of minorities. The Minister of Finance recently gave a number of interesting facts about the support given to German banks and financial institutions, German communities and German industry during the crisis. The magnitude of this assistance, in relation to total expenditure on such objects, has far exceeded the proportion of the German population in Czechoslovakia.

Before, during and after the world depression Germany always figured first in Czechoslovakia's imports and exports. In 1929, Austria still occupied the second place in imports and exports, but since then has fallen to seventh place in imports and to fourth place in exports. Germany's trade with Czechoslovakia also declined in actual amount and value during these years. During the depression both Germany and Austria were moving away from Czechoslovakia commercially.

Trade with Austria

The *Anschluss*, and the economic assimilation of Austria to Germany, will mean certain changes in the structure of the trade of Czechoslovakia with these countries. As a result of the disappearance of Customs barriers between Austria and Germany, some of the former Austrian imports from Czechoslovakia will now be purchased from Germany, and some of the goods which Germany bought from Czechoslovakia will be taken now from Austria. These changes will affect not only quality goods, but also bulk exports, such as coal and wood.

Before the *Anschluss* a major commercial treaty between Czechoslovakia and Austria was in force. This treaty had, on Austria's request, been frequently revised in recent years—always on a narrower basis and with a higher Customs level. Nevertheless, this treaty, revised for the last time in 1936 and still not repudiated, remains the most important Czechoslovak commercial treaty.

Although, as officially announced from Germany, the old commercial status is still in force in Austria, it is an open question how long Czechoslovak goods will enjoy treaty advantages in Austria and *vice versa*. The introduction of the German tariff in Austria would considerably impede Czechoslovak exports. On Czechoslovakia's side it would, in all probability, then be necessary to adjust certain items in the Czechoslovak tariff.

Imports into Austria were relatively free, especially of exchange control, while imports into Germany are extensively controlled. The assimilation of the two systems will involve several difficulties, as will the settlement of clearing balances. All these questions are to be the subject of commercial negotiations between Czechoslovakia and Germany in May.

Industrial Relations with Austria

Commercial connections, however, are only one aspect of the present economic relations with Austria. There is another important problem in the organic relations between Czechoslovak and Austrian industries. Many Czechoslovak firms have had their offices in Vienna since the Empire. Czechoslovak industry has interests in Austria and *vice versa*. The industries of the two countries had sometimes direct working agreements, and, in some branches, the manufacturing and finishing of goods have been divided between them.

Vienna was also an important commercial centre for Czechoslovak export industries, especially for trade with Central Europe and the Balkans. A number of Czechoslovak firms had permanent representatives in the Austrian capital for export purposes and it is now uncertain whether Vienna will retain this important function under the new regime.

Owing to Czechoslovakia's geographical position, her most important export routes went via Germany to Hamburg or the Western ports, or via Austria to Trieste. The competition between Hamburg and Trieste resulted in a favourable adjustment of tariffs. The Adriatic tariff may now be devised in the interest not only of Czechoslovakia, but also of Italy, and Czechoslovak goods may be burdened with the application of the Reichsbahn tariff.

German tariff policy will exert its influence also on the Hamburg route. Czechoslovakia will have probably to look with more attention for other outlets, possibly through Polish, Yugoslav and Roumanian ports; and Danube traffic may be further developed.

Germany on the Danube

By the *Anschluss* Germany became the greatest Danubian country, and this means a completely changed situation. Formerly there were five or six relatively small Danubian States, of which only two were mainly industrial—Czechoslovakia and Austria. The solution of Central European problems was only possible through agreements with the great neighbours, Germany and Italy. To-day Germany occupies first place among the Central European States and Italy has receded to second. With Germany, the industrial States of Central Europe preponderate overwhelmingly against the agrarian States of the Danube.

The influence of political events in Austria and the danger of the Polish-Lithuanian conflict were reflected in the money market. The Stock Exchange weakened and share values declined. Only gilt-edged securities remained relatively stable. The Stock Exchange index, which stood at 122.6 at the end of February, fell at the end of March to 113.4.

February and March again showed progress in employment. The number of unemployed persons at the end of February was 510,655 and at the end of March 435,126, against 627,258 in March, 1937. Coal, iron and steel output has slowed down a little, but the engineering industry is still well occupied, as before. In the export industries, such as glass and porcelain, however, no improvement took place; and in textiles there was only a slight improvement. Building activity, on the other hand, is increasing.

On April 16th a new and extensive commercial treaty with the United States of America came into force. It was concluded on March 7th, and brings considerable advantages to Czechoslovak exports. The United States stands second among purchasers of Czechoslovak goods.

Palestine

Economics of Partition

JERUSALEM, April 20.—The departure of the fact-finding Commission, whose mission it is to draw up a practical scheme for the division of Palestine into three States, directs attention to the difficulties in the way of any such scheme. Undivided Palestine is a small country of the size of Wales, with no raw materials, apart from the chemicals of the Dead Sea and a little sulphur in the south. It has hitherto been entirely dependent, in so far as it has been self-supporting, on fruit production, mainly of oranges and grape fruit, and on the visits of tourists.

Larger and wealthier States, such as Austria, have in the past found great difficulty in existing. Still smaller ones, such as the three into which Palestine is to be divided, must encounter still greater obstacles.

The Burden of the British Area

Of the three, the British State—the permanent Mandated territory—must always be a burden to the Home Country. Wider boundaries than those suggested by the Royal Commission are obviously out of the question. If those provisionally drawn are varied, the variation can be only in the direction of reducing the taxable basis of the territory. Such a territory cannot possibly support the garrison it will require.

It is doubtful whether it will be able to provide the costs of its administration. It will have no industries, outside of Haifa, and little agriculture; but it will enjoy the luxury of five Holy Cities. Excluding the manufactures of Haifa, which is temporarily to remain under British control, it can export nothing—apart from the small invisible exports derived from tourists—but will be dependent even for necessities on imports.

Arab State's Poverty

The Arab State, by far the largest of the three, will also be the poorest. Again basing one's argument on the Royal Commission boundaries, this State will consist mainly of mountain and desert, with very little of the fully cultivable land of Palestine. According to recent trade statistics, the

exports of the proposed Arab part of Palestine amount to about £200,000, a large portion of which is produced by the Jewish-owned Palestine Potash Company, whose works the Zionists demand shall be added to their territory.

To this £200,000 must be added an unknown but small amount derived from the export of citrus fruit grown in the Tulkarm and Gaza regions. These also are claimed by the Zionists on strategic and other grounds. Normally, the Arabs should export fruit and vegetables to the Jewish State, but the latter—eager to build up an agricultural economy of its own and pressed by the necessity of balancing its imports and exports—will, without the incentive of Arab-Jewish hostility, which partition will certainly in the first years intensify, reduce its imports of agricultural produce to the lowest possible minimum.

The Jewish State

There remains the Jewish State. The Jews of Palestine are responsible for the lion's share of the exports, and thus the exports of the Jewish State, including practically all the Arab-grown oranges, will exceed those of the two other States combined. But the Jews, if they provide most of the exports, also consume most of the imports. For Arabs, practically only luxuries are imported. The Jews, however, are dependent to a large extent on outside sources for their necessities.

The import surplus in recent years has been in the neighbourhood of £10 millions, about three times the normal Government revenue of the undivided country. The Jewish State, in order to exist, will have to reduce this unfavourable balance, but can only do so at the expense of their standard of living.

Jewish industries in Palestine, with the two advantages of plenty of capital and high protection, are still unable either to meet the internal needs or to secure sufficient foreign currency to pay for foreign necessities. A larger population, if it could support itself, would help to relieve the strain, but the proposed Jewish State will, at its inception, have a population of about 250 to the square mile, compared with 224 in Denmark, 213 in Poland and 197 in France. Its problems, different from those of the other States, will be obdurate.

Letters to the Editor

Milk Distribution

TO THE EDITOR OF THE ECONOMIST

SIR,—To argue that part of the explanation of the high price of milk "is to be found in the high cost of distribution" (*The Economist*, April 23rd, page 180) is to put (perhaps appropriately) the cart before the horse. The retail price of milk is set by the minimum fixed by the Marketing Board. The abolition of this minimum would not only lead immediately to a lowering of the retail price under the influence of competition, but it would result fairly rapidly in an improvement in the efficiency of distribution. Some of the retailers would be driven out of business, so that the remainder would work on a more economic scale, while competition between retailers would, as you imply, no longer be confined to indulging in "all manner of expensive and unnecessary additions to distributive service."

If the Government really desire to reduce the gap between the retail and the wholesale price of milk, and incidentally to improve the efficiency of distribution, all that they have to do is to abolish the minimum retail price, in accordance with the recommendation of the Reorganisation Commission of 1932. Such a step would clearly be in the interests, not only of the consumer, but of the farmer.

Cambridge.

I am, Sir, etc.,
R. F. KAHN.

Nazi Propaganda

TO THE EDITOR OF THE ECONOMIST

SIR,—One does not have to be in Switzerland for more than a few days to find evidence of Nazi propaganda. The Swiss, naturally, fear the Germans. They are a neighbouring State, with now a larger frontier than they had a few weeks ago. Most of the Swiss people speak German; and the fact that their language is different enough from that spoken in Germany to make a German sometimes incomprehensible to a Swiss provides but a poor assurance that Switzerland will not one day share Austria's fate.

It was announced here that a lecture was to be given yesterday evening entitled "Austria, and its Effect on Switzerland." The lecturer spoke almost entirely about Czechoslovakia and the Bohemians (whom he wrongly called Germans). He also spoke about National Socialism, Austria and the Jews. The speech might have been made by Herr Hitler himself.

When, about half-way through the lecture, the speaker announced that he would now discuss the "Jewish Problem," a sigh went round the room, and the Swiss audience shuffled and settled down to listen to another hour and a half of the usual cruel and fanatical nonsense.

In a few years we shall probably hear that the unfortunate Swiss have at last been freed (by the threat or use of force)

from the oppression under which they have been suffering for centuries; and also that they have just been saved at the last moment from a bloody Communist revolution.

Yours faithfully,

St. Gallen,
Switzerland.

ENGLISH OBSERVER.

Britain's Oil Supplies

TO THE EDITOR OF THE ECONOMIST

SIR,—In my opinion, it is a completely crazy policy to depend, to the extent of 94 per cent. of our total liquid fuel requirements, upon foreign countries, thousands of miles away. In the first place, taking the year 1936 (latest figures available), the world production of crude oil is 1,790 million barrels, of which less than 2 per cent. comes from within the British Empire. Even apart from vulnerability to aeroplanes and submarines, we have no control over circumstances in oil-producing countries, such as revolutions, strikes, lock-outs, fires, and earthquakes, and individual countries might refuse to export oil in war time.

The British Navy, aircraft services, most of the army and road transport, equipment such as excavators and tractors, and a very large proportion of the mercantile marine depend entirely upon liquid fuel, of which only 6 per cent. is produced at home by high temperature carbonisation in gas retorts and metallurgical coke ovens, low temperature carbonisation, hydrogenation and oil shale carbonisation. Great Britain is importing the gigantic amount of approximately 3,000 million gallons of oil products per annum, which includes 1,350 million gallons of petrol as well as kerosene, lubricating oil, gas oil, and fuel oil, costing over £48 millions.

Of motor spirit there is produced in Great Britain only 92 million gallons per annum, about 6½ per cent. of the imports. The bulk of this very small production comes from gas works and coke ovens, amounting to a total of about 52 million gallons; there is an extremely small production from oil shale carbonisation (about 6,700,000 gallons); and a negligible source is the low temperature carbonisation of coal, producing, say, 800,000 gallons. The hydrogenation plant at Billingham, treating not only bituminous coal, but also creosote and low temperature carbonisation tar, designed for a maximum output of 45 million gallons per annum, is believed now to have reached the stage of an actual production of about 33 million gallons per annum.

There are two methods that would have been adopted over a quarter of a century ago, if any idea of national co-ordination and control of fuel and power had obtained: increasing the home production of liquid fuel; and, at the same time, reducing imports by substitution. Examples of substitution are the producer gas driven motor vehicle, the electric storage battery vehicle, the trolley bus, dual firing for the Navy, and mechanical stokers and water-tube boilers for the mercantile marine.

For increasing home-produced liquid fuel, high temperature carbonisation is hopeless, as coal tar is an inferior product, containing only a very small proportion of valuable liquid fuel. Oil shale carbonisation is also of little value, because of the low-grade quality of the oil and the fact that shaft mining is required. Hydrogenation of bituminous coal, as apart from creosote and low temperature tar, is doubtful.

The chief methods are low temperature carbonisation of coal and the manufacture of synthetic liquid fuel by the "Fischer-Tropsch" or similar process. There is still no plant of the latter type in Great Britain, while the total amount of coal carbonised under low temperature conditions is only about 350,000 tons per annum, in spite of the vast field available for smokeless fuel in general domestic use.

If scientific methods were adopted it would be possible within a very few years to produce at least 50 per cent. of the liquid fuel requirements of Great Britain.

Yours, etc.,

DAVID BROWNLIE.

Outlook Unsettled

"We sail a changeful sea through halcyon days and storm." Professors Condliffe, Ohlin and Heckscher, Mr Loveday and Señor de Madariaga have tried in these printed lectures* to chart the next stages of our voyage. "There is only one thing certain with regard to the future," declares Professor Heckscher, "that is its uncertainty." But economists and public men are without honour unless they are also prophets. They are the "modern wizards" (in Señor de Madariaga's phrase) whose wand may not stay the sun, or arrest the trade cycle, but through whose glass the course of economic development may be darkly foreseen.

Their theme is the day after to-morrow, but the trends they describe are to-day's. Economic life has lately become increasingly susceptible to disturbances. The decline or slowing-down in the growth of Western populations and a century and a half of increase in the average income per head have shifted demand from essential and short-lived goods to non-essential and durable goods. Demand has become less certain, more sensitive and less stable; economic activity is less smooth and insecurity is magnified.

The individual, however, is not less secure economically. He has more chance of unemployment, but less chance of distress when he is unemployed, for the State has stepped in to cushion his insecurity and to collectivise the risks of economic life. The State's assumption of social and industrial responsibility finds expression in devices to insure against these risks: in the protection and diversification of industry and agriculture, in Government spending to avert depressions, in autarky and economic nationalism.

The advance of the State is only one aspect of the growth of central organisation and control. Trusts and cartels, large-scale industry and business, are the private counterparts of Government enterprise. They have emerged together from changes in technique and social outlook; and the world we live in, based on large-scale production, large financial units, controlled wage levels, controlled migration, managed currencies, and central management, public or private, contrasts widely with the fluid, individualist world of our grandfathers. "Fixed capital and overhead costs incessantly grow in importance." And "people have come to believe in the wisdom of Governments."

The dangers of centralisation are hardly less than those of insecurity. Rigidity and restrictionism do not iron out fluctuations; nor are flexibility and initiative always combined easily with central management. "To give society a cast-iron form is dangerous," and, with the hands of Governments so enormously strengthened, their power to shape men's minds, as well as their lives, is terrifying. Depression and rumours of war have enhanced autocracy and autarky alike. Technical and economic forces have killed the optimistic individualism of a bygone age. The world is changing. Industry is being rapidly developed in Eastern Europe, Russia, South America, China, Japan and India. A new economic system is emerging outside the orbit of Western Europe; and economic leadership may even now be passing to the United States of America.

What is to become of us? On one point the experts are agreed: economic nationalism and isolation are of no lasting use; only international co-operation can mitigate our insecurity and save our civilisation from the menaces it has bred. But, concludes Señor de Madariaga, whose words sparkle even when they dazzle and confuse, "mere internationalism is no answer to our economic problem." We cannot flourish in mental anarchy. We must first surrender our dogmas, casting away the rigid husks of our Democracy, Communism, Fascism and Religion, to save their substance of freedom, equality and fraternity. At the end of this notable book, we know where we are; but the future remains as uncertain as ever.

* "The World's Economic Future." The Holley Stewart Lectures, 1937. Allen and Unwin. 134 pages. 4s. 6d.

Shorter Notices

"Tariff Levels and the Economic Unity of Europe." By H. Liepmann. Introduction by Sir Walter Layton Allen and Unwin. 424 pages. 21s.

Much is known in general about the growth of tariffs and the consequences, but very little in factual detail. Dr Liepmann has filled the gap with this admirable study of post-war tariffs and trade in Europe. His careful examination of the shifting distribution and composition of European commerce is as noteworthy as his comprehensive calculations of tariff levels. Not everyone will agree with all Dr Liepmann's conclusions about the policies of particular countries and their effects, but none will deny the great worth of his treatise to the theoretician and practical politician alike.

"Peace Year Book, 1931." National Peace Council 39 Victoria Street, London, S.W.1. 367 pages. 2s.

This annual is at once a record of 1937 and an excellent source of reference for the current year on matters of peace and war. In the former capacity the book is a little belated; in the latter, it will serve admirably as a comprehensive guide to the Peace movement in all countries, informed as it is by documentary and statistical appendices relating to the League of Nations, treaties, colonies, raw materials, trade and production, armaments and arms expenditure.

"World Finance, 1937-1938." By Paul Einzig. (London) Kegan Paul, Trench, Trubner & Co. 7s. 6d.

Dr Einzig continues his serial account of world financial affairs. His account of gold policy, franc movements, alarms and excursions in Wall Street and Paris, the impact of war and war preparations, the setback in trade and the nexus between economics and politics is as exciting and lucid as ever. The author's rôle as an up-to-date chronicler renders his part as analyst and constructive critic necessarily less substantial than it might be. But those who have the earlier chapters of Dr Einzig's diary should buy the latest.

Tariff Levels and Europe's Economic Unity

by DR. HEINRICH LIEPMANN
Foreword by SIR WALTER LAYTON

Here is a detailed study of European post-war tariffs and their influence on the inter-European exchange of goods. Comprehensive calculations have been made of the level of duties upon important export goods, of tariff levels and export movements in Europe. The author presents a mass of statistical material previously unobtainable. 21s. net

The World's Economic Future

by A. LOVEDAY, J. B. CONDLIFFE, B. OHLIN,
E. F. HECKSCHER, S. DE MADARIAGA

This symposium numbers among its contributors some of the world's most distinguished economists. They deal with subjects such as the future relations of Government and industry, the transference from Europe to America of economic power and leadership, and the problems of economic insecurity. 4s. 6d. net

GEORGE ALLEN AND UNWIN

THE BUSINESS WORLD

Insurers v. Insured

LAST summer there came to the High Court an action of very great interest in which Mr Crocker, the well-known insurance solicitor, was sued for negligence by a Mr Groom, who had been defendant in a running down case in which Mr Crocker acted for him. Mr Crocker had been appointed by the insurance company with which Mr Groom's car was insured. For tactical reasons he admitted that Mr Groom had driven negligently, with the result that damages of £1,132 were given against Mr Groom. The latter, however, objected to having his reputation as a careful driver given away; and having been branded as a negligent driver by Mr Crocker, he started a new action on the ground that Mr Crocker was a negligent solicitor, since he had mishandled a case entrusted to him and deliberately sacrificed a client's interests.

Mr Groom's case, in effect, was this: "You may have been chosen as my solicitor by my insurance company, but whoever chose you, you were my solicitor and nobody else's; and you owed as much duty to me, your client, as you would have done if I had chosen you of my own accord. In admitting negligence on my behalf without my consent, you betrayed my cause, and you ought to pay me damages." The jury found for Mr Groom and awarded damages of £2,132 for negligence and £1,000 for a somewhat shadowy libel.

In the mind of the general public there was a considerable measure of agreement with this verdict; for it was widely felt that a motorist defendant is entitled to a say in the conduct of his defence and ought not to have his wrongdoing admitted against his wishes and consent. But, unfortunately, it is the corner stone of every third party insurance that if the insured has an action brought against him the insurers shall have control of the action, with the right to nominate solicitors and with power to fight or settle according to their judgment. That is based on the principle that the man who pays the piper calls the tune; and there is in fact no other principle on which an insured third party claim can be handled. An insured person can hardly be left at liberty to fight an action merely because he thinks (as all colliding motorists do think) that he was in the right. He can hardly be allowed to run up an enormous bill of costs, which his insurance company will have to meet, and, by fighting a hopeless case, court heavy damages which his insurance company will have to pay. No other plan is possible than to give the control of an action to the party which will pay the cost of losing it.

Nevertheless, the solicitor is acting for the insured. The dilemma which *Groom v. Crocker* brought out so sharply in the Court of First Instance can be briefly stated: How is a solicitor acting for A, but protecting the interests of B, to reconcile his duty to his nominal client with his duty to his actual paymaster? The jury, after a somewhat discursive trial, came down heavily on the side of the nominal client and proved the strength of their conviction by the heavy damages they awarded him.

That verdict left the law, from the point of view both of the insurance company and of the solicitor, in an ambiguous and difficult state. The insurance company had to ask itself: "Am I still entitled to conduct an insured's case as I think fit or must I defer to his opinion when it clashes with mine?" The solicitor had to decide, at his

peril, whether to take instructions from the man whom he nominally represented or from the insurance company which was his *de facto* client. From the course of the trial before Mr Justice Hawke it looked as though the solicitor must adopt the wishes of his nominal client or throw up the case, with whatever results might follow to the ultimate liability for costs and damages. Since last summer there has, in fact, been at least one instance in which an insured person has succeeded in inducing a Lloyd's underwriter (mainly on the strength of *Groom v. Crocker*), to accept a settlement which, in the normal way, the latter would have regarded as most unfair and unreasonable.

So the matter stood when Mr Crocker's appeal came recently before the Master of the Rolls and two other Lords of Appeal. The judgment subsequently given by the Master of the Rolls was distinguished both by the skill with which it reconciled conflicting interests and by the ability with which it stated the law as clearly as the inherent ambiguities allow. In a review of the whole case, indeed, it is difficult to resist the conclusion that actions of this kind are not well suited for juries, and would be much better tried before a judge in the commercial court, who is less liable to be swayed by prejudice and more capable of keeping the issues clear before him.

In the first place, the judgment decided that the insurance company is entitled to choose the solicitor who shall act for the insured. In the second place, it decided that a solicitor so chosen has not the same duty to accept the instructions of his nominal client as he would have if the nominal client had actually chosen him, since the whole object of the "take-over clause" in the policy would be defeated if the normal relations of solicitor and client prevailed. In the third place, it decided that there are certain things which an insurance company cannot reasonably ask of its client, certain things to which the client cannot reasonably be asked to submit; and that when a thing of that kind is in issue a solicitor who prefers the instructions of the insurer to those of the insured, does so at his own peril. Lastly, and perhaps most important of all, it reduced the negligence damages from £2,132 to forty shillings.

The effect of the judgment would appear to be that an insurance company may not, in its own interest, sacrifice the obvious interests of the insured; that whether or not there has been such a sacrifice is a matter of fact; and that, if negligence of this kind is proved against the solicitor, the damages given must not be "at large" but must be based on the true damage suffered by the insured. As the law stands at present it could not, perhaps, be more fairly stated. The judgment has done a great service both by establishing a reasonable balance between the rights of insurer and insured and by killing the possibility of future gold-digging actions started in the hope of heavy damages, encouraged by the original verdict in *Groom v. Crocker*.

At the same time, we venture to repeat the suggestion which we made in our issue of July 31, 1937 (page 250), that insurance companies might now be made the *de jure* defendants in motor actions, so that instead of lurking anonymously in the background, they should be recognised in Court, as they already are in the Statute, as the interested party.

Unilever Group Results

IN May last year, the chairman of Unilever, Limited, foreshadowed the amalgamation of Lever Brothers with Unilever, Limited, and the redistribution of assets between the British and Dutch branches of the group. The first fruits of the scheme, which was analysed at length in *The Economist* of August 7th last year, were realised in last week's announcement of increased dividends. Behind all its apparent complexity lay one governing intention—to restore a greater degree of equality between the available profits of the British and Dutch parent companies, and so to enable more generous dividends to be paid, under the distribution agreement between the two concerns.

The details of the scheme are now a matter of history, but they have necessitated such considerable changes in the full report—and, indeed, have provided the opportunity for important accounting innovations—that this document will repay the closest study. This task is facilitated by the fact that the directors have confined their observations to financial rather than trading conditions, which have presumably been reserved for the chairman's annual review. We may, at the outset, borrow the convention adopted in the report, by which figures relating to Lever Brothers and Unilever, Limited, and Lever Brothers and Unilever N.V. are referred to respectively under the headings "Limited" and "N.V." It may also be noted that in converting Dutch florins to sterling the fixed rate of Fl. 9 to the £ was taken last year, against Fl. 8.97 to the £ in 1936. Comprehensive extracts from the accounts are given in the table on the following page.

The first question which the investor will ask is: how far are last year's increased dividends due to a positive increase in the earnings of the whole group, and how far to the reallocation of earning power from Limited to N.V.? Aggregate net profits of the two parent concerns and their subsidiary and allied companies, after charging depreciation, taxation and debenture interest, increased last year from £12,562,783 to £12,749,991. These figures, it may be added, are strictly comparable, and are unaffected by the reorganisation of the two groups last year. They suggest that the evident progress of the undertaking in sterling countries was held in check by transfer difficulties in Central Europe, war in the Far East, and the setback in the United States. For the separate parent companies, comparable figures for the two years are limited to equity earnings (owing to the Lever-Unilever merger), and these have increased in total from £4,581,682 to £5,007,066. These totals represent the sums available for the equity capitals of Limited and N.V. if the subsidiary and allied companies had fully distributed their earnings. Their division between Limited and N.V. is shown below:—

	1936	1937
Limited	3,085,050	2,787,752
N.V.	1,496,632	2,219,314
Total	4,581,682	5,007,066

A reduction in available income for the equity of Limited was, of course, contemplated under the scheme; indeed, the fall of £300,000 is considerably less than was estimated, and it suggests that the British market made very satisfactory progress last year. N.V., on the other hand, has recorded an impressive increase in available earnings, but the transfer of assets last year has played an important, and possibly predominant, part in this achievement. Of the amounts shown above, sums of £540,212 and £195,111 have been retained by the subsidiary and allied companies respectively of Limited and N.V.

In total, the group earnings may be reckoned as equivalent to approximately 14½ per cent. on the guildler capital (on which 7½ per cent. has been declared) and to 19½ per cent. on the sterling capital, which receives 10 per cent.

It is, however, particularly interesting to trace the full significance of the Limited earnings achievement last year. The British company had to meet N.D.C. which we calculated last year as equivalent to about 3 per cent. on the new ordinary capital—say £340,000—on the basis of the 1936 profits. This figure is probably close to last year's actual charge. Secondly, the Limited figures appear to include £710,214 in respect of the Niger Company's profits. It will be recalled that the Niger Company distributed a 50 per cent. share bonus, and made no cash distribution. Thirdly, both Limited and N.V. charged a portion of damages arising from a patent claim in the United States against revenue (the balance being met from contingencies). In short, if we make adjustment for exceptional items specifically affecting the Limited earnings in 1937, as compared with 1936, the result might well be a "true" increase of the order of £500,000-£600,000, compared with a disclosed fall of £300,000.

Such a result would, in fact, be a remarkable confirmation of the improvement in business in the sterling countries last year, and not least in the margarine trade at home. By contrast, dissection of the N.V. figures might well reveal little fundamental change in the realisable, as opposed to the actual, earnings of the original constituents of the Dutch company. The mortmain of blocked currencies is unrelenting. It is well known that the Unilever group, by ingenious special arrangements, has been

This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

able to realise some considerable proportion of blocked profits from Germany; the question remains, however, whether N.V. will be able to obtain exchange to the same extent, say, after the end of this year. If not, it will presumably have no option but to build up the strength of the German undertakings, without being able to obtain an adequate proportion of their fruits in the form of free exchange.

So much for the broad trend of profits last year. We may now consider in closer detail the effect of last year's reorganisation in the report itself. The changes are necessarily complex, but the directors have set them out with admirable detail and clarity in the report. The major introduction is a consolidated statement of earnings, assets and liabilities. The directors have not, however, attempted to give a consolidated balance sheet which, if based merely on the conversion of currency book values into sterling, would be misleading. In any case, the sterling figures must be regarded as approximate, and further, the reserves and undistributed profits held by subsidiary and allied companies, while considerable, could only be computed—and then arbitrarily—by a complete revaluation of over 400 manufacturing units. Armed with a consolidated earnings statement, full particulars of working capital, and long-term claims and liabilities, together with the free reserves of the parent companies, most investors will consider that they have ample and strictly relevant information for assessing the position of the group. The consolidated figures are the more welcome since the changes during the past year vitiate real comparisons with the statutory reports for 1936.

The sterling equivalent of the Limited and N.V. share capitals has been slightly reduced from £121,237,934 to £120,061,212. These figures, however, exclude inter-company holdings, and accordingly do not fully reflect the changes in the organisation last year. The issued capital of Limited, for instance, at £67,445,925 shows a reduction of £12,886,352, compared with the combined capitals of Lever Brothers, Limited, and Unilever, Limited, at the end of 1936. This fall arises largely from the cancellation of £8,500,000 ordinary and £4,500,000 preferred ordinary capital of Lever Brothers, which was formerly held by Unilever or its subsidiary companies. The issued share capital of N.V. has increased by Fl. 100,023,500 to Fl. 299,387,000, owing mainly to the exchange of Fl. 98,822,656 nominal of preference capital in two N.V. subsidiaries—Anton Jurgens and "Hovema"—for preference holdings in the parent company. By this step, N.V. now holds the large majority of all classes of capital in the Anton Jurgens undertaking, and full consolidation will presumably be effected if the proposals to liquidate this subsidiary are carried through.

In relation to the issued share capital of £120 millions for the group, and net long-term liabilities of £13 millions, the free reserves held by the parent companies (which

understate the group reserves) appear satisfactory at £23.3 millions. Net current assets, again, total nearly £42 millions and the detailed figures reflected increased turnover last year. Stocks, indeed, have increased from £41½ millions to £47½ millions, although part of this advance may have accompanied the acquisition of new businesses. Although a complete consolidated balance sheet is not presented—in our view rightly—it is possible to infer from the available figures that the approximate book valuation placed on the interests in subsidiary and allied concerns, is equivalent to £114½ millions. Using this figure as a rough standard for comparison, it is interesting to note that capital expenditure last year amounted to £5,466,000 (against £4,155,000 in 1936), depreciation to £4,061,000 against £4,549,000 (a reduction which may arise from the conversion of the guilder figures, rather than from any change in the rates) and repairs and renewals to £3,039,000 against £2,912,000.

Such is the basic position of the group, and it is to the group's prospects as a whole that the investor must look for guidance, in view of the dividend pooling arrangement which controls ordinary share distributions on both sides of the Channel. What are these prospects for the future? Lever and Unilever is a world trading organisation and is necessarily exposed to fluctuations in world economic conditions and world prices. Even after the transfer of the non-British holdings to N.V., which appreciably widened the latter's trading basis, it is probably true to say that Limited is likely to show greater consistency of earning power, so long as N.V. is forced to accommodate itself to the burden of restricted currencies, and is exposed to major world political and economic movements. This conclusion seems broadly true, even when account is taken of the effect of reduced commodity prices on the West African trading interests of Limited. But the problem of converting the prosperity of the Central European interests into tangible exchange continues to limit the scope for expansion of N.V.'s earnings. On shorter considerations, it is fair to face the possibility that some reduction in available earnings might be experienced during the current year. It is too early to assess its potential extent, and the large damages involved in last year's patent case will not, of course, recur in 1938. It might, indeed, be possible to offset any potential fall in earnings by a more generous distribution policy. That conclusion, however, provides but a modest incentive for speculative interest in the Limited shares, at 38s. 4½d. ex dividend. And it might be at variance with the conservative policy which the directors, seeking to extend their business in free exchange areas to compensate for frozen assets and earnings elsewhere, have practised in recent years. The evidence suggests, in fact, that this price represents a fair investment valuation, under present circumstances, for an equity which is dependent at every turn on international trading conditions and prices.

Retail Trade Trends

BEYOND all doubt, the past year has witnessed a cyclical downturn in British business activity. Our index of activity, given in the *Trade Supplement* published with this issue of *The Economist*, has fallen almost without interruption since last September. Last month, for the first time since recovery began, the index fell below the level of the corresponding month a year earlier. What rôle has the demand for consumers' goods, as reflected in the course of retail trade, played in this major change of trend? The question has special significance, in view of the widely held belief that prosperity can be achieved, and indefinitely prolonged, by the increase and maintenance of consumers' purchasing power.

According to Mr Colin Clark's estimates, Britain's gross national income rose 31.3 per cent. between 1932 and 1937. During the same period the Bank of England's index of the value of retail trade rose 23.8 per cent. A partial explanation of the discrepancy is that the demand for consumption goods is comparatively more stable than that for capital equipment, such as iron and steel, build-

to department stores. For food sales the official figures of value have been corrected by the Ministry of Labour's index of food prices.

In the first diagram these two indices have been combined so as to afford an indication of the volume of retail trade on the assumption that retail turnovers of food and other merchandise are approximately equal. Unfortunately, it is impossible to carry this volume index back to 1929. The chart compares the resulting index with the course of *The Economist's* index of general business activity. That general business activity has shown a relatively greater increase than the volume of retail trade since 1932, the worst year of the depression, is scarcely surprising; for *The Economist* index includes the capital equipment industries, which are subject to wide fluctuations in activity between slump and boom. More significant is the fact that the volume of retail trade remained unchanged between 1936 and 1937, when the index of general business activity showed a further rise of 5½ per cent.

BUSINESS ACTIVITY AND RETAIL TURNOVER

VOLUME OF FOOD AND NON-FOOD SALES

ings, machinery and ships. Between 1932 and 1937, for example, our index of domestic iron and steel consumption rose by 140 per cent., compared with an increase of 33 per cent. in general business activity. Both the national income and the value of retail trade continued to advance until the end of last year, the increase in the last quarter of 1937, as compared with the last quarter of 1936, being 7.5 per cent. and 6.8 per cent. respectively. Last month, for the first time, the value of retail trade was smaller than in the corresponding month a year earlier, but this may be attributed, in the main, to the differing dates of Easter in the two years. It is clear, therefore, that the value of retail sales does not explain the downward trend in the activity of many consumption goods trades since last autumn.

But the picture is different if we examine not values but the volume of retail sales; for, owing to the rise of prices last year, the volume of sales began to decline many months ago. Though changes in the volume of retail trade are difficult to measure, an attempt has been made in the two diagrams accompanying this article to show quantitative changes in retail trade since 1932. Both for food sales and for non-food sales, an index of the value of trade has been corrected by an index of prices to give the volume of sales. For non-food items, both indices are those compiled by the Retail Distributors' Association, and they refer only

A comparison of quarterly indices is even more significant. In the first three months of 1937 the volume of retail trade was still higher than a year earlier; but sales in the second quarter and the third quarter were no higher than during the corresponding months in 1936. In the last quarter, however, the index of the volume of retail turnover actually fell below the figure for the corresponding period of 1936. *The Economist* index of business activity, on the other hand, continued to rise until August last year, and did not fall below the level of the corresponding month a year earlier until March of this year. Altogether, there is strong evidence that the decline in the volume of retail trade preceded the fall in general business activity by several months.

Reference to our second chart, moreover, shows that the decline in the volume of non-food sales preceded the downturn of food sales. Although food sales continued to rise last year, the turnover in other merchandise actually fell. A comparison of the quarterly indices for 1936 and 1937 shows that the decline in non-food sales, which began in the third quarter of last year, preceded the downturn in food turnover by three months. This impression is confirmed by reference to the more detailed charts which appear on page 278.

Despite their inevitable limitations, the indices of the volume of retail trade thus suggest numerous important

conclusions. The first is that the decline in the volume of retail sales, which coincided with a rise in prices, preceded the turn of the trade cycle by several months. The cause of the time-lag between the fall in the volume of retail sales and in general business activity (whose outward and visible sign was the accumulation of stocks of goods last year), may be traced, partly at least, to delay between the placing of orders and their completion, and to the fact that many business men mistook the cyclical decline in sales for a temporary lull in expansion. Secondly, the fall in the volume of retail sales itself suggests that the rate of increase in retail prices last year outpaced the growth of the national income. The rise in retail prices, in turn, may

be attributed partly to higher prices for imported goods and partly to the increase in British conversion costs, which was perceptibly accelerated by the re-armament programme. Although the downward trend in world prices has already produced a cheapening of many imported commodities, British conversion costs are still rising; but the rate of advance is likely to diminish as unemployment of men and machinery is increasing. It may be doubted, however, whether any conceivable fall in import prices, by raising purchasing power, will be sufficient, in itself, to create a general recovery movement this year, though on the basis of past experience it may serve to check the fall in the volume of sales during depression.

Finance and Banking

National Debt.—In accordance with a Chancellor's usual practice, Sir John Simon devoted several passages in his Budget speech to an examination of the position of the National Debt. Among other things he explained the manner in which borrowing for re-armament is being handled. For the current year he has power to finance £90 millions of defence expenditure out of borrowing. He proposes to apply to this end the whole of last year's surplus of £28 millions, which is thus diverted from the payment of debt; and to use £62 millions of new loan money. In addition, the cost of any supplementary estimates for defence expenditure will be covered by new borrowing. While the Chancellor did not give any forecast of the likely size of these supplementary estimates, it is not outside the bounds of possibility that he may require something of the order of, say, £120 millions of new loans this year, in addition to his appropriation of last year's surplus. Meanwhile, he stated that after allowing for the allocation of £10.5 millions to the contractual sinking fund (and after recalling that last year's Budget surplus was being earmarked for defence expenditure during the current year) there was an increase of £257,750,000 nominal in the National Debt during 1937-38. Some £203 millions of this increase was, however, covered by assets—mainly represented by last year's increase of £200 millions in the Exchange Equalisation Account. To the extent that the £200 millions has not yet been used in gold purchases by the Account, the apparent increase in the National Debt is purely illusory. Sir John added that the Exchange Account continued to show a profit, though he did not say whether he was referring to the whole period since the establishment of the Account or to last year alone.

Fixed Debt Charge.—It is obvious that the continuance of new borrowing for re-armament must lead to a progressive increase in the interest and other annual charges arising out of the National Debt. Last year's issue of £100 millions of 2½ per cent. National Defence Bonds alone means a new interest charge of £2.5 millions a year. There is prudence, therefore, in the Chancellor's decision to raise the fixed debt charge, to be provided for in the Budget, from £224 millions to £230 millions a year. Since interest, management and the statutory sinking funds cost nearly £227 millions last year, the increase is an obvious precaution; and, in addition, the Chancellor is once more taking power to borrow to meet the needs of the statutory sinking funds. Justifying his decision to increase the fixed debt charge, Sir John Simon called attention to the gradual accumulation of interest on National Savings Certificates—a charge which has to be met whenever certificates are encashed. In effect, he regarded £230 millions as the best estimate he could make of this year's real burden of debt service. The increase makes an unwelcome addition to a heavy Budget, but it is an inevitable corollary of borrowing for defence purposes. Meanwhile the cost of the floating

debt remains insignificant. Sir John Simon said that the average rate of discount on Treasury bills was only 11s. 2d. per cent., which constituted a new low record. That fact, however, affords no conclusive argument for an increase in the floating debt as an alternative to other forms of borrowing.

Defence Loan Prospects.—All the considerations discussed in preceding Notes invite speculation as to when the next Defence Loan will be issued. Last year the Government raised £99.7 millions and spent £64.9 millions. The balance of £34.8 millions, together with the year's surplus of £28 millions, has for the moment been applied to the reduction of the floating debt. This gives the Chancellor a nest-egg of about £62 millions, against which he envisages expenditure this year, to be met out of borrowing, of at least £90 millions and perhaps £150 millions. With further and heavier defence expenditure envisaged next year, he may well decide to issue a new loan of £100 millions. Nor need he await a favourable trend of the market, for this loan will almost certainly be taken up initially by the departments and re-sold to the general body of investors piecemeal as demand develops. A year ago the first Defence Loan was issued at a time when markets were overshadowed by the National Defence Contribution in its original form; and most of this loan had to be taken up "inside." The real question is whether it will be thought advisable to issue the next loan in advance of the time when it will be required and to apply its proceeds temporarily to a reduction of the floating debt. In that connection, the low cost of the floating debt is a relevant factor, but there are many other factors militating against too long a delay. Undue surprise, therefore, would not be felt if the next Defence Loan were, after all, to make an early appearance.

The Franc and the Tripartite Agreement.—Early this week, M. Daladier announced the main heads of his new financial and economic programme, which are summarised by our Paris correspondent on page 234. M. Daladier's declaration gives the quietus to the previous rumours that he was contemplating a fresh depreciation of the franc. These rumours caused the Paris rate for sterling to rise to Frs. 167 at the end of last week. This week the rate was brought back to Frs. 160, but in doing so the French control probably lost all the gold it had gained during the early part of the previous week. On Thursday morning, when the Control relaxed its efforts, the rate went out again to Frs. 162. Nevertheless, this intervention by the French Control strongly suggests that M. Daladier intends to maintain the rate at about Frs. 160. While any estimate must be a matter of guesswork, it is probable that Frs. 160 would be regarded on this side as a fair equilibrium rate. If so, any fresh depreciation of the franc would be at variance with the clause in

the Tripartite Agreement, under which the signatories undertook to refrain from competitive depreciation of their currencies. Here the onus of proof would clearly lie on M. Daladier to show that at Frs. 160 the franc was still over-valued. The suggestion has been made that these questions are one of the subjects of discussion during the London visit of M. Daladier and M. Bonnet. The visit of the French Ministers, however, is of short duration, and there are sufficient weighty matters of international politics to occupy all the time at their disposal. On the whole, the evidence favours the view that M. Daladier has, in fact, based his policy on a franc valued at about Frs. 160 to the pound.

The Rupee Exchange.—As a result of the weakness of the rupee, the Reserve Bank has ceased accepting tenders of sterling until further notice. On April 12th the Reserve Bank offered to buy £1,000,000 of sterling at the then normal rate of 1s. 6½d. As no offers were forthcoming, it reduced its rate to 1s. 6¾d., and accepted £10,000 at that price. The following week, the Reserve Bank offered to buy £500,000, but no tenders were accepted as the best rate offered by the banks and the market was 1s. 6d. On April 26th, the Reserve Bank again offered to buy £500,000, but no applications were received. The offer was therefore withdrawn and future offers are being discontinued until further notice. The immediate consequence of this suspension of the weekly tenders was a weakening of the rupee exchange rate to 1s. 5½d. On Thursday morning, however, the Reserve Bank announced that it was prepared to buy sterling on tap at 1s. 6½d. This looks as if the Reserve Bank is attempting to hold the rupee at this rate, by making its purchases of sterling on behalf of Government conform to the amount of sterling on offer at this level. Its success will obviously depend upon Government's requirements, for if these can be kept down, the commercial demand for rupees should be sufficient to maintain equilibrium.

Forward Business in Bills.—For some time there has been a "gentlemen's agreement" in the City of London by which the banks bound themselves to refrain from buying the full-dated Treasury bill and to confine their purchases to bills which had run for at least a week. The intention of this agreement was to discourage the growing habit of "punting" in Treasury bills by institutions lacking the means to take up their bills, but operating on the knowledge that they could resell them to the clearing banks at a profit on the day on which they had to be taken up and paid for. This endeavour to prevent intrusion of the technique of "staggering" to the discount market has, however, been severely strained by the scarcity of bills in relation to the banks' demands. In their keenness to obtain bills, certain clearing banks have been resorting more and more to forward purchases of bills from their connections in the discount market—either discount houses or non-clearing banks. The arrangements made are normally for a week ahead. The deals are fixed soon after the weekly tenders for Treasury bills, when the potential sellers know what bills they will be taking up during the ensuing week and what they will be in a position to sell in order to maintain their case at the desired level. The bills thus sold are no longer "hot bills" when they change hands. In market parlance, they have become "tepid." Thus, the letter of the gentlemen's agreement is respected. It is difficult, however, to reconcile these operations with its spirit, the more so because the banks which undertake these forward operations in bills are also prepared to finance the bills for the direct tenderer during the week in which he is running them. With these facilities behind him, the Treasury bill "punter" is again coming into his element. Only the meagre return obtainable on Treasury bills prevents a more considerable extension of his activities.

MONEY MARKET NOTES

Foreign Exchanges

THE main movement this week was the rapid recovery in the franc, followed by its fresh relapse, as described in a Financial Note. The recovery was due entirely to the intervention of the French Control, and was a source of loss to many dealers who were caught short of francs. This caused a weakening of the forward rates, for those who had to buy in spot francs at once resold them forward. There has been a moderate amount of business in dollars. The Budget sent sterling down from \$4.99½ to \$4.98½, but the rate has not moved much since. Guilders have been held by the Dutch Control at Fl. 8.96 Belgas were offered up to Bel. 29.66, but have since returned to Bel. 29.63½. Three months' belgas are weaker, but one month's are stronger. Transfer of Austrian-owned funds from Switzerland to England caused a temporary relapse of the Swiss franc to Frs. 21.72½, but once this operation was complete, the rate returned to Frs. 21.68½. Altogether the wide fluctuations in the franc have had surprisingly little effect upon other currencies.

The Money Market

CONDITIONS have been variable this week. One or two of the clearing banks found it necessary to call, but on the other hand there was not the usual Thursday clearing bank calling. On Thursday, however, several lenders of bond money called their loans in the morning and then when conditions eased, found themselves unable to re-lend in the afternoon. Some banks are reported to be less keen buyers of bills, but discount rates are unaltered. It may be that conditions were slightly disturbed by Stock Exchange borrowing in connection with Thursday's settlement. The result of the Treasury Bill tender of April 22nd was almost identical with that of the week before; £45.0 millions

of bills were allotted, and the market obtained, as in the previous week, 41 per cent. of the bills applied for, the market

price being £99 17s. 5d. per cent. This week a further £45 millions of bills are being offered.

The Bank Return

THE Easter holiday currency is now returning. This week's Bank return shows a contraction of £6.3 millions in the note circulation. This is almost the same as the parallel movement after Easter, 1936, so that apparently the French dis-hoarding of British currency, noticeable at Easter, has ceased.

Proportion	29.9%	19.0%	19.7%	23.6%

In the banking department, the Reserve has increased by £6.4 millions as the result of the return of the holiday currency, but its growth was partly neutralised by a reduction of £3.6 millions in Government securities. Public deposits, however, fell by £7.1 millions. The result of all these movements is an increase of £6.8 millions in bankers' de-

INSURANCE NOTES

£1,714,000; the net rate of interest fell from £4 2s. 4d. per cent. to £3 19s. 3d. per cent. Death claims were £16,000 smaller at £129,000. The bonus declared, as in 1936, is at the rate of 38s. per cent. calculated on the sum assured.

In the industrial branch the number of policies issued was 189,000 for sums assured of £3,681,000, compared with 199,000 policies and £3,815,000 in the previous year. Death claims increased by £20,000 to £499,000 and the net rate of interest fell by 1s. 10d. per cent. to £4 10s. 6d. per cent. The amount allocated to policyholders takes the form of an addition to the sum assured, equal to 2½ per cent. of the sum assured for policies of ten years duration and increasing by ½ per cent. for each additional year up to a maximum of 10 per cent; for policies of forty years duration and over. Total assets increased from £14,734,000 to £15,645,000. The aggregate market value is stated to be considerably in excess of the book value. Loans and mortgages increased from £5,025,000 to £5,303,000, of which £3,947,000 consist of mortgages on property, mainly due to the operation

posits, which now once more stand at a high level.

The Bullion Market

DEALINGS in gold have been comparatively quiet. There was the usual Continental demand, much of which this week came from Holland. This, however, may represent circuitous French buying, for French hoarders often purchase by devious routes. The week's demand for gold was met from official sources, but at a premium just high enough to prevent arbitrage operation.

* Above or below American shipping price. The New York price of silver remained at 43 cents per ounce .999 fine during the week.

The silver market has also been quiet. There has been little support from India and the weakness of the rupee has not stimulated any forward purchases of silver. Apparently there is no desire to hedge against the possibility of a fall in the rupee, which in any case is very remote. There were the usual offerings from the Continent and from speculative sources, but the market at once becomes dull and listless at anything above Thursday's prices of 18½d. for cash and 18½d. for forward. This week, however, has witnessed a shipment of 1,500,000 fine ounces of silver to Bombay, this being the first substantial shipment for a number of months. As there was little Indian buying this week, it probably represents the maturity of forward contracts entered into some time ago.

of the Society's house purchase scheme. There was no special alteration in the classification of investments. As usual ordinary shares are absent from the list, since investment in them is not permitted by the Society's Act of Parliament.

London Assurance.—The new life assurances of this company again showed an increase, in 1937, over those of the preceding year. In 1937 some 3,635 policies were effected, assuring sums of £2,956,000; in 1936 the figures were 3,156 policies, for £2,824,000. The net rate of interest earned on the life fund was 1s. lower at £3 16s. 8d. per cent. In the fire branch the total premium income showed a slight reduction to £2,011,000, but the accident premiums increased to £1,405,000 from £1,319,000 in 1936. Once again the underwriting profits were extremely satisfactory, particularly in the fire branch. The premium income in the marine account showed a substantial increase from £647,000 to £775,000, but the transfer to profit and loss was lower

at £50,000. The underwriting results for the last two years are given below:—

	1936	Per cent. of Profit	1937	Per cent. of Profit
Amount of Profit	£172,321	8.4	£181,328	9.0
Fire	103,389	7.9	98,078	7.0
General Accident	74,928	...	50,000	...
Marine	22,500	...	22,500	...
Life	373,138	...	351,906	...
Less items debited to profit and loss	162,152	...	185,436	...
	210,986	...	166,470	...

This year marks an alteration in the method of presentation of the accounts. In previous years interest has been credited separately to each underwriting account, but this year all interest from miscellaneous branches has been carried direct to profit and loss. At the same time, the various additional underwriting and other reserve accounts have been consolidated in the general reserve fund, which now totals £3 millions. A sum of £150,000, transferred to a widows' provident scheme, has not been included in the net profit and loss figure shown in the above statement. The rate of dividend is again 45 per cent. and costs £225,000, while net interest earnings, after deducting preference dividends of £32,000, amount to £194,000. The balance of the dividend, as in previous years, was amply met from the underwriting profits. The total assets of the London Assurance and its subsidiaries increased from £19,443,000 to £20,238,000, of which the life assurance fund accounts for £10,155,000. Loans and mortgages totalled £2,106,000, against £1,658,000, but British Government securities fell from £4,184,000 to £3,475,000. Debenture stocks increased from £4,078,000 to £4,542,000, preference stocks from £1,081,000 to £1,477,000, and ordinary stocks from £1,154,000 to £1,425,000.

Royal Exchange Assurance.—The accounts of this company are concerned solely with its own activities, although details are given which show that total assets, including those of its affiliated companies, amount to over £30 millions. The aggregate premium income for the group for the first time exceeded £10 millions. The new life assurances of the company for 1937 reached a record figure of £4,655,000, compared with £4,323,000 in the previous year, while consideration for annuities granted showed a small reduction from £195,000 to £184,000. The net rate of interest was £3 19s. 1d. per cent., compared with £4 2s. 9d. per cent. in 1936. The underwriting results of the last two years are given below:—

	1936	Per cent. of Profit	1937	Per cent. of Profit
Amount of Profit	£170,950	12.1	£176,939	12.2
Fire Department	61,684	5.5	63,842	5.3
General Dept.	20,979	3.2	19,561	2.3
Marine Dept.	30,446	...	30,446	...
Life Department	11,174	...	11,174	...
Annuity Dept.	1,288	...	1,288	...
Capital Redemption Department	16,634	...	12,246	...
Trustee & Exec. Department	271,197	...	276,374	...
Less items debited to profit and loss account	147,686	...	151,153	...
Net trading surplus	123,511	...	125,221	...

The premium income in both fire and accident branches showed a slight increase and the underwriting results were

again satisfactory. In the marine branch the premium income increased from £659,000 to £861,000, but, as in previous years, no transfer has been made to profit and loss; the loss shown above is accordingly the amount of interest credited to the account.

Apart from the usual reserves for unexpired risks, the fire and accident branches include additional reserves amounting to £1,100,000, contrasting with premium income of £2,660,000. The marine insurance fund, at £942,000, is equal to 109 per cent. of last year's premium income. The dividend is again at the rate of 30 per cent. and costs £214,000, which is covered by net interest earnings credited to the fire and miscellaneous branches and profit and loss account of £219,000. The total assets of the Royal Exchange increased from £22,891,000 to £23,928,000, of which the life and annuity branches account for £15,555,000. The values of the Stock Exchange investments have been taken at or below market price at December 31, 1937, less accrued interest, and no major movement has taken place in their classification during the year.

Caledonian Insurance.—The new life assurances of this company increased further last year from £2,039,000 to £2,166,000. The net interest earnings of the life assurance account were slightly larger at £312,000, but the net rate of interest fell from £4 0s. 2d. per cent. to £3 18s. 11d. per cent. Death claims amounted to £229,000, compared with £237,000. In the other branches, fire premium income was £697,000 against £715,000 and accident premium income fell from £521,000 to £514,000. Marine premium income rose by £11,000 to £97,000 and £10,000 has again been transferred to profit and loss. The underwriting results of the past two years are shown below:—

	1936	Per cent. of Profit	1937	Per cent. of Profit
Amount of Profit	£70,289	9.8	£65,472	9.4
Fire	16,415	3.1	10,963	2.1
Accident	10,000	11.6	10,000	10.3
Employers' Liability	12,871	...	12,871	...
General	109,575	...	99,306	...
Marine	69,987	...	72,565	...
Life	39,588	...	26,741	...

* Including transfer in both years of £25,000 to general reserve.

Assets in the life department increased from £8,071,000 to £8,258,000. Among the various types of loan there is an increase from £376,000 to £508,000 in loans on "personal security and medical practices." British Government securities increased from £1,860,000 to £1,917,000, but debenture stocks were £72,000 smaller at £1,557,000. Preference stocks showed an increase of £28,000 at £843,000 and ordinary stocks rose from £991,000 to £1,089,000. The assets of the miscellaneous branches amount to £3,315,000. There is a general reserve fund of £600,000 and a profit and loss balance, after payment of the dividend, of £172,000. The dividend is again at the rate of 75 per cent. and costs £89,000, compared with interest earnings of £78,000.

London and Provincial Marine and General.—This company is a subsidiary of the Yorkshire Insurance Company, and has enjoyed consistently good marine results. Last year, marine premium income increased from £101,000 to £122,000, but first year's claims and expenses amounted to 39.3 per cent. of the year's premium income, compared with 30.5 per cent. in 1936. Claims paid on the 1936 and the previous years' accounts amounted to £54,000, compared with the corresponding figure of £42,000 in 1936. The transfer to profit and loss was reduced from £20,000 to £15,000. The marine fund amounts to £194,000, equal to 158 per cent. of the 1937 premium income. Fire and accident premiums showed a small increase at £116,000. The results of the past two years are given below:—

	1936	Per cent. of Profit	1937	Per cent. of Profit
Amount of Profit	£3,798	3.4	£7,307	6.3
Fire and Accident	20,000	19.8	15,000	12.3
Marine	23,798	...	22,307	...
Less items debited to profit and loss	15,034	...	14,330	...
Net trading surplus	8,764	...	7,977	...

Total assets amount to £1,566,000. The aggregate market value of Stock Exchange securities on December 31, 1937, was in excess of the book value of £1,126,000. The investment reserve fund is increased by £10,000 to £100,000 and other specific reserves remain at £600,000. In addition, after payment of the usual dividend of 10 per cent., free of tax (costing £30,000 against net interest earnings of £47,000), the profit and loss balance is £153,000. The financial position of the company is obviously very strong.

Law Union and Rock.—This company, which is a subsidiary of the London and Lancashire, is mainly concerned with life assurance, although it also transacts fire and accident business. New sums assured in the life branch showed a small reduction in 1937 from £2,746,000 to £2,606,000, and the net rate of interest decreased from £3 15s. 11d. per cent. to £3 13s. 6d. per cent. Claims by death were £24,000 higher at £453,000, compared with the preceding year, and surrenders also showed an increase from £76,000 to £121,000. Fire and accident premiums were almost unchanged at £701,000. As will be seen from the following table, while the profit in the fire branch was again very satisfactory the profit in the accident branch showed a reduction compared with the preceding year.

	1936	Per cent. of Profit	1937	Per cent. of Profit
Amount of Profit	£17,078	...	£17,078	...
Fire	69,669	15.9	85,236	19.3
Accident & Gen.	16,073	6.0	4,794	1.8
Less items debited to profit and loss	102,820	...	107,108	...
	49,964	...	39,671	...
	61,856	...	67,437	...

The dividend is again at the rate of 16s. per share and costs £135,000, compared with net interest earnings, after deducting debenture interest, of £44,000. As in 1936, therefore, the cost of the dividend is in excess of the combined net trading surplus and interest earnings and the profit and loss account is reduced from £41,000 to £17,000.

Wesleyan and General Assurance.—The usual annual valuation of liabilities of this society was made as at December 31, 1937, and the results are given below. The bases of the valuation were the same as in 1936:—

	1936	1937
Ordinary Branch		
Surplus earned during the year	124,692	140,725
Investment profits realised	7,423	9,689
Transferred from industrial branch	14,997	15,855
Brought forward	55,064	45,651
	202,176	206,919

Budget and Markets.—On the Stock Exchange, the reaction to the Budget has been much more favourable than most observers would have cared to predict. Anticipations of a "comfortable" Budget, on which the market was inclined to pin its hopes on Tuesday, were belied, yet the reaction to the hard truth showed that investors were, in fact, prepared to tread the sterner path mapped out by the Chancellor. The professional bears who sold short in Tuesday's "Street" market misjudged this response. At the opening of business on Wednesday, it is true, prices were marked down in every department of the "House." But by the end of the day, most of these losses had been regained, and in particular sections net advances were recorded. Possibly the rise was due as much to relief that no disturbing new taxation had been proposed (and in particular that N.D.C. was unchanged) as to the Chancellor's grasping of an uncomfortable fiscal nettle. The common assumption that gilt-edged must be marked down, in order to equalise net yields on an increase in the standard rate of income tax, once more proved fallacious. War Loan, for example, was no more than $\frac{1}{8}$ lower at the close on Wednesday, having recovered from an initial level of 100 $\frac{1}{2}$ to 101. Particular sections of the industrial market, such as brewery and aircraft shares, made distinct progress. And the advance registered by the leading industries such as Imperial Chemical Industries and Imperial Tobacco, compared with Tuesday's "Street" prices, clearly showed that the net investment repercussions of the Budget were relatively slight.

In the following table, we show the movements in selected gilt-edged industrial and commodity stocks, from the mid-March Austrian crisis level, through the Easter account, and the detailed changes this week:—

	Mar. 16	Apr. 4	Apr. 22	Apr. 26	Apr. 27	Apr. 28	Week's change

x Ex dividend.

Since the market has so clearly demonstrated its ability to receive an "unpopular" Budget without flinching, some investors may read into the recent recovery a particular significance. *The Financial News* ordinary share index has recovered 15 per cent. from the mid-March level. That level represented a demand for liquidity at all costs, and over-discounted the available evidence of industrial recession. If first views on the Budget are maintained, the inference may well be that clearer political skies, for the time being, will justify a further downward adjustment of equity yields to a moderate extent. Sir John Simon's first Budget, which spared the market any disturbance arising from new taxes, has yet provided a test whose surmounting may prove a significant pointer to the prospective trend over the next month or two—politics always apart. The possibility that last year's time-table may be repeated by the issue of a further instalment of defence borrowing, may now provide a topic for speculative market discussion.

Chancellor and Stock Exchange Prospects.—That the markets made so relatively satisfactory a meal of the Budget's cold meat may be due, in some part, to the guarded but mainly favourable view of Stock Exchange prospects which was explicit in the Chancellor's statement and implicit in certain of the 1938-39 estimates. The Budget item most closely related to Stock Exchange activity is the revenue from stamp duties, whose total of £24,170,000 last year was some £4,830,000 below the 1937-38 Budget estimate. This shortfall was frankly admitted by Sir John Simon to be "extremely disappointing," and scarcely less so, at first sight, was his decision to budget for no increase whatever in the yield of the duties this year. The Chancellor, however, went out of his way to emphasise the deliberately conservative policy involved in this action and to declare that there was "every hope" of a recovery in Stock Exchange activities. What may, possibly, have escaped market attention is that even an unchanged yield from stamp duties (after allowing for a trumpery increase of £50,000 due to new provisions relating to certain transfers between companies) implies a level of Stock Exchange activity, between now and next March, which is appreciably above the present one. The best available—though admittedly imperfect—measure of changes in the volume of dealings is the *Financial News* computation of the number of bargains marked in the "Lists." The average markings in the last week of every month from April, 1937, to March, 1938, was 37,996; the average for the week preceding Sir John's Budget speech was 36,260, a difference of 4½ per cent. Another item bearing upon Stock Exchange prospects is the yield from death duties, which is in part a function of security price levels. The Chancellor referred regretfully to the effect of last year's slump, and reduced his estimate of the 1938-39 yield of the duties to £88 millions, against an actual receipt of £89 millions in 1937-38. Unless the Treasury, however, is expecting a higher incidence of mortality among the wealthy this year, its decision to reduce the anticipated yield by only a little more than 1 per cent. implies a lively faith that security values will not only cease to fall but will actually rise. The present price of a long-dated gilt-edged stock like 2½ per cent. Consols is certainly no more than 1 per cent. below the mean figure for the past twelve months. But the Actuaries' Index of ordinary shares, last Tuesday, was still as much as 10½ per cent. below the end-month average from April, 1937, to March, 1938.

Income Tax and Yields.—Investment mathematicians have enjoyed the convenience of a 5s. standard rate for only a brief spell. In future, mental arithmetic must give place to the slide-rule in converting gross yields to a net basis and *vice versa*. To calculate net yields from gross it now becomes necessary to multiply the latter by 0.725, or alternatively to divide by 1.38. Conversely, to obtain a gross yield from net figures, the latter may be divided by 0.725 or multiplied by 1.38. These factors, of course, must be recalculated in cases where Dominion income tax relief has to be taken into account. The conversion is of primary importance for calculating the effective return on shares on which the dividends are declared free of tax. In the table at the head of the next column we have selected a number of "tax-free" preference and ordinary issues, and compare net yields with the gross returns, on the basis of 5s. and 5s. 6d. standard rates of tax. Many of the preference issues carry the right to tax-free dividends only up to 6s. in the £—the maximum rate ever levied, from 1918 to 1922. In view of the prospective Budget problem in future years, the rights of these shares afford some cushion against a further rise in income tax. The shelter provided by ordinary shares, on which tax-free dividends are usually declared, is conditioned to a greater

extent by the security of existing rates of dividend. And it is possible that even companies with highly stable dividend records may tend, in the future, to adopt the policy of the directors of Courtaulds, who in 1936 replaced the tax-free dividend basis of previous years by declaring the rate subject to tax.

Oil Duty and Oil Shares.—The reactions of the oil share market this week have been somewhat remarkable. On Tuesday, a smart recovery occurred, on the hope of a "good" Budget. In consequence, the announcement of an additional penny on the oil duty was followed by consternation in the "Street" market, and "Shell" were quoted as low as 4½ at one time. By a remarkable change in sentiment, prices rallied vigorously on Wednesday, as we show in the table on page 248. The additional impost cannot be reckoned as a bull point for oil shares, particularly if any consequential changes in distributors' "ex-duty" prices are involved. And while tanker freights are no longer at their peak, the fall since the distributors made a concession to petrol retailers has been relatively moderate, and the margin for further concessions does not appear substantial. Large consumers, such as London Transport and the Tilling group—and perhaps the motor manufacturers—may in this respect at least regard the Budget as a "railway budget." The additional duty, indeed, seems likely to fall almost entirely on the "C" stockholder of London Transport. It has been reported this week that the Board consumes between 30 and 40 million gallons of fuel, petrol and heavy oil, per annum, and on the lower figure, the additional cost would amount to £125,000—equivalent to about ½ per cent. on the "C" stock.

The new excise of 9d. per gallon on power alcohol is of closest concern to three companies: Petroleum Storage and Finance, which markets Cleveland spirit; Distillers, which manufactures the alcohol; and United Molasses, which provides the raw material. The precise reasons for the new excise have provided the market with much thought but few clear conclusions, although the comparison has been drawn in some quarters between the power alcohol industry and the oil from coal industry, which now enjoys a guaranteed minimum preference of 8d. per gallon. The shilling deferred shares of Petroleum Storage and Finance, of which £75,000 are in issue, fell to 26s. 3d. on Wednesday, and closed at 29s. 9d. on Thursday. Owing to their exceptionally high gearing, these shares must be regarded as extremely sensitive to potential fluctuations in earnings. How far the new excise will affect the Cleveland Discol business, of course, cannot be accurately ascertained. It is possible, however, that some adjustment of the power alcohol content of the spirit may be made—it is understood that the present proportion is 12½ per cent. alcohol to 87½ per cent. petrol—and that the concern may be able to expand its sales of Cleveland No. 1 spirit, on which profit margins will now be relatively better. If these inferences are valid, the ultimate effect upon Distillers and United Molasses should be relatively small. The former company will

inevitably be compelled to pass on as much of the excise as the business will bear, and if its policy regarding industrial solvents is any guide, existing profit margins on power alcohol have probably been modest. Although Distillers ordinary stock units fell to 93s. 9d. at one time on Wednesday, the later recovery to 97s. 3d. appears to recognise the potentially greater equity in the industrial solvents business. The Chancellor's estimate of £350,000 from the new excise corresponds to an annual consumption of 9,300,000 gallons. Last year's total production of methylated spirits, however, exceeded 26 million gallons, and that of industrial solvents also exceeded the same figure. The long-term increase in industrial spirits consumption, it appears, may compensate for any reduction on the production of power alcohol, in the long run. On the other hand, more conservative valuation for Petroleum Storage deferred, which last year received 344 per cent., is perhaps inevitable.

Wear and Tear Allowances.—The equity shareholder will be unable to frame any detailed calculations for particular companies on the Chancellor's further allowance of 10 per cent. on the basic wear and tear allowance, which supplements an existing 10 per cent. additional allowance under Section 18 of the Finance Act of 1932. In certain instances, this concession may broadly offset the effect of the increase of 6d. in the standard rate of tax, but its effects for individual companies' equity earnings will vary, first according to the amount of fixed assets employed in their business; secondly, according to the basic rates of wear and tear allowances agreed with the Inland Revenue in respect of different trades; and thirdly, according to the relative level of profits. From the accounting point of view, the increased additional allowance is equivalent to antedating the eventual allowances in respect of any given asset. On the other hand, companies whose profits oscillate violently during the different phases of the trade cycle will be able to carry forward the increased allowances, if necessary, against the profits of future years without restriction of time. The wear and tear allowances are, of course, not comparable with the depreciation provisions which may be shown in the annual reports of individual concerns to their shareholders. Hence it is difficult to reach more than formal conclusions about the circumstances in which increased allowances will offset the increase in the standard rate of tax. If the wear and tear allowance, on the 1937-38 basis, was already equivalent to 49.72 per cent. of total profits, the new concession will offset the increase in the company's tax liability; companies whose allowance represented less than this proportion of gross earnings, on the other hand, will stand to lose on balance.

To single out particular industries falling within this category, however, is difficult, even on the broadest grounds. Heavy industrial concerns with a substantial proportion of fixed assets are potential beneficiaries, particularly if profits are low. Some additional light on the present figures of wear and tear allowances granted to certain industries may be obtained from the following table:—

WEAR AND TEAR ALLOWANCES			
	%		
Boot and shoe machinery	10	Flour milling.....	7½
Brewery plant	6½	Hosiery	13
Do. washing plant	10	Iron and steel pig breakers, etc. ..	6
Brickmaking plant	5*	Do. converters, etc.	7½
Chemical plant	7½	Do. elec. furnaces	12½
Do. synthetic dyestuffs, etc.	15	Locomotive mfr.—engines, etc.	5
Collieries' wagons and surface plant	6½†	Printing machinery	7½
Do. underground plant	10	Paper mills—day plant	5
Commercial motors	20	Do. —day and night plant	7½
Electric cables	3	Silk—winding plant	7½
Electric plant and machinery	7½	Do.—knitting	10
Engineering	5	Tin plate.....	7½
Do. machine tools	7½		
Do. special precision plant	12½		

* Not kilns. † For railway companies' wagons, cost of renewal is allowed.

These basic rates (now increased, in effect, by 20 per cent.) are applied to asset values as written down for income tax purposes, and not to book values. Moreover, there would be

danger in applying any given rate to the global value of a particular company's fixed assets without fuller dissection of the plant accounts. It may be added that the allowances for ships introduce even greater complication.

Company Notes

Cable and Wireless Results.—The new standard Empire cable rates came into operation on Monday, and on Tuesday the operating concern, Cable and Wireless, Ltd., issued a preliminary earnings statement for 1937. The exact earnings figure is not stated, but the chairman explains that the profits last year exceeded £1,200,000, the "standard revenue" under the new regime, and surpassed the 1936 profit of £842,945 by "over £400,000." The dividend on the ordinary stock—held by the cable companies which constitute the second tier in the group's financial structure—is increased from 2½ per cent. to 3½ per cent., and £300,000 has been put to general reserve. These facts suggest that the profit was at least £1,255,000, and may have been somewhat higher. The results appear very satisfactory, and they emphasise once more the relations of the group's earnings to the level of international trade. For the Holding company stockholder, they mean little at this stage, for the dividend on the ordinary stock has already been declared. Assuming, however, that the cable companies passed on the whole of their extra receipts from the operating company (retaining the same amount of their earnings as in 1936) and that the group's investment income remained at the 1936 level, it would appear that the 4 per cent. dividend on the holding company's equity was earned with a small margin to spare.

* * *

What does this augur for 1938? If the 1937 profits of the operating company were repeated this year, then the net revenue would be over £1,500,000, for the beam rental charge will be eliminated. At this level, the corresponding dividend on the holding company's equity would, according to the table on page 147 of our issue of April 16th, be 5.8 per cent., plus any excess of "other income" over the "other income" of 1936. It has been suggested, however, that our table—which correlated the operating company's "standard revenue" with a dividend basis of 4½ per cent. for the holding company's equity—was too conservative, and that the actual consolidated earnings of the whole group would, in these circumstances, be equivalent to approximately 8 per cent. on the Cable ordinary stock. The discrepancy between these figures is substantial, but, in fact, they measure different things. The latter figure is a consolidated profit, based on the assumption that the cable companies distributed their whole income up to the hilt to the holding company. Our figure, on the other hand, was designed to measure probable dividends: it assumes that the cable companies retain as much income as they retained in 1936. The latter year, however, was marked by a conservative distribution policy, and it is possible that, if the operating company were earning standard revenue, as much as 6 per cent. might percolate through to the holding company's equity. Part of last year's allocation of £300,000 to the operating company's general reserve will be specifically available for dividend equalisation, and consequently the board may, in future, be more liberal than in the recent past. Whatever the distribution policy may be in the future, however, our conclusion still holds good—that the standard revenue has been fixed at a level which provides stockholders with insufficient compensation in good years for their loss of dividends in bad years. The extent of these risks, in a service which is primarily dependent upon the level of international trade, is well illustrated by the movement of the traffic index for the first three months of 1938, for which the average is 15.7 per cent. lower than a year ago.

Babcock and Wilcox Report.—The full report of Babcock and Wilcox discloses a more satisfactory position than the mere maintenance of the 10 per cent. dividend suggested. The rise in total profits, in fact, is at a comparable rate with that of 1936, and manufacturing profits and dividends from subsidiaries are some 29 per cent. higher at £607,293, although investment income is about £39,000 lower at £109,000 owing, presumably, to the substitution of Government securities for certain other investments. The allocation of profits in the past three years is shown in the following table:—

	Years ended December 31		
	1935	1936	1937
Total profits	£525,657	£619,300	£716,293
Expenses and fees	27,569	31,603	37,363
Pension fund	21,083	23,662	26,143
Taxation	14,952	18,358	52,872
Preference dividend	14,952	14,952	14,954
Ordinary shares :—			
Earned	462,053	530,725	559,961†
Paid	343,972	429,966	429,965
Earned %	11.5	13.1	14.0‡
Paid %	8	10	10

Dividend equalisation reserve..... 100,000 100,000 100,000
Carry forward 65,893* 66,652 96,648
* Includes £3,406 from income tax account. † After providing £25,000 for possible fall in stock values. ‡ Or 14.8 per cent. before providing provision against stocks.

Out of a £97,000 increase in profits, no more than £29,000 accrues to the ordinary shareholders. This is largely due to increased tax requirements, and to the special allocation of £25,000 towards any fall in the value of the merchandise stocks. Reference is again made in the report to the international trade difficulties which underline the necessity for conservative distribution of profits. The balance carried forward is increased by £30,000 after a transfer to dividend equalisation fund, which raises the total to £500,000—equivalent to 11 per cent. on the ordinary stock. Substantial additions have again been made to property and plant, while items such as stock and debtors are also higher. While the directors report that the volume of trade in home and export markets alike remained at the high level reached in 1936, the latest profits are still appreciably below those of pre-depression years, and the international outlook is not encouraging. The ordinary dividend, however, is safeguarded by the equalisation fund, and the company's satisfactory financial position may possibly merit the present yield of 5 per cent.

* * *

Higher Cerebos Profits.—A steady growth of sales and profits produced a new high record for Cerebos in 1936. Over the past ten years, indeed, the strong upward trend in profits was affected by the depression to a comparatively small extent. The latest results indicated that 1937 was even more satisfactory than its predecessor, and provide further evidence of the expansionary power of the undertaking. We show below the allocation of profits in the past three years:—

	Years ended December 31		
	1935†	1936	1937
Profits	£404,930	£414,679	£444,022
Fees	2,196	1,352	1,304

Carry forward 133,848 132,602* 106,553

* After charging £4,500 issue expenses. † 13 months. ‡ Actual. § And capital bonus of 33½ per cent. || Investment reserve.

Profits are struck after depreciation, and include interest and dividends on shares in subsidiary and associated companies, which account for no more than £126,093 out of a

balance sheet total of £1,905,375. Receipts in 1937, however, included an appropriation, of unstated amount, from the undistributed profits of a subsidiary. In recent years profits from the sale of investments have been of some importance, but the proceeds have, in effect, been placed to reserves, since dividend distributions have been fully covered by current earnings. In 1937, these capital profits were comparatively small, being derived apparently from the realisation of "other investments" whose book cost now stands at £33,316 against £97,764. In the previous year a profit of almost £90,000 was obtained. The latest balance sheet reveals a number of changes: property and plant continue to expand, shares in subsidiaries at cost stand at £101,621 against £54,784, and the smaller investment holding is partly counterbalanced by a rise in cash, while stocks have increased from £94,783 to £153,239. The company's trade is not markedly sensitive to changes in purchasing power, and the market's high rating of the ordinary shares is reflected in the current yield of £4 18s. per cent. on the ordinary shares, at 8½.

* * *

Spillers' Report.—For the seventh year in succession this milling concern pays an ordinary dividend of 15 per cent., which is comfortably covered with an earnings margin of nearly 2½ per cent. While in recent years the company has shown relative stability of profits, in the latest financial period a setback has occurred, and net profits have been reduced by more than £40,000, despite a saving of £10,000 in tax. Details are given in the following comparative table:—

	YEARS ENDED JANUARY 31		
	1936	1937	1938
Profit	437,629	470,638†	430,224‡

Earned for Ord. and Deferred	15.2	19.5	17.4
Paid %	15	15	15
Reserves	...	100,000	50,000
Carry forward	175,935§	167,505	166,675

* After £50,000 additional provision for obsolescence. † After £185,000 taxation. ‡ After £175,000 taxation. § Includes net profit on sales of investments of £3,481 after £50,000 transferred to investment reserve.

While the reasons for these less favourable results will no doubt be discussed at the meeting on May 7th, the investor must at present take his choice of various possible explanations. Fluctuations in wheat prices inevitably involve difficulties for the manufacturer who must endeavour to maintain the profit margin, determined by the agreed price for flour. It is probable that profits have to some extent been affected by the high wheat prices prevailing during 1937. A year ago the chairman explained that high wheat prices were of no advantage to the company, although profit margins did not suffer. But apart from tying up a larger proportion of financial resources, higher prices for flour adversely affect demand, especially for animal foods, which continue to grow in importance in relation to the rest of the business. The decline shown last year, however, is not very serious, and may well be reversed in a period of reasonably stable prices. The balance sheet reveals certain changes of particular interest. Considerable holdings of Government securities have been realised, and the book cost of these investments has fallen by £1,075,000 to £622,000. Cash, which stood in January, 1937, at £101,000, now amounts to no less than £844,000. As a whole, however, surplus liquid assets are £310,000 lower, a decline which is partly attributable to further investment in properties and plant. Stocks are somewhat lower than a year ago at £1,586,000, but continue to be appreciably higher than in January, 1936. In view of the stable dividend record, the present price of 53s. 1½d. for the £1 ordinary, offering a yield of £5 13s. per cent., appears reasonable.

Union Cinemas' Position.—Investors will recall that, at the annual meeting of Union Cinemas, held last December, the new chairman, Mr John Maxwell, was unable to propose the adoption of the company's report to March, 1937, since the new directors could not accept or support the value of the principal assets as shown in the accounts. The meeting was consequently adjourned, pending the submission of accounts to December, 1937. From the position disclosed in the accounts, published this week, it is evident that Mr Maxwell's comments on the valuation of properties in the previous balance sheet have proved justified. The re-valuation of assets has involved a transfer of no less than £3,192,629 to suspense account, which is not, of course, represented by any available assets. Since the share capital, of all classes, amounts to £3,265,026, it is evident that no class of capital is represented by assets. Loans on mortgage and secured bank overdraft together total £1,656,079, and the company has heavy contingent commitments for the obligations of subsidiary companies. Creditors, including amounts due to associated and subsidiary companies, total £838,416 compared with current assets of no more than £48,910. The profit and loss account reveals that some £55,159 was earned for dividends in the period, but in future years a depreciation provision of some £50,000 will be required. Trading results under the new management, it is stated, show considerable improvement, but the facts of the balance sheet will evidently demand careful management for a considerable time to come. The position will scarcely encourage the investor to change his present cautious rating of the industry as a whole.

* * *

Shipping Company Prospects.—The week's shipping company news gives a broadly hopeful view for 1938. P. and O. Steam Navigation, which distributed 4 per cent. for both 1935-36 and 1936-37 in single payments, has resumed interim dividends at 2½ per cent., which suggests the possibility of an increased distribution for the full year. The resumption in 1938 of ordinary dividends by the Union Castle Mail Steamship Co., given the continuance of present conditions, was foreshadowed by Mr Robertson F. Gibb at last Tuesday's meeting. The key fact in his speech, as in Sir Percy Bates' speech at the Cunard Steam Ship meeting, is that the company is better equipped to-day both financially and with new tonnage, to obtain a full share of available business. Union Castle has ordered 14 new vessels since the beginning of 1934—10 ships before the upward trend of building costs began—and the older ships are being disposed of. The question of more permanent finance for this programme, which has been covered by loans on favourable terms, was referred to, and the directors hope to fund at least a proportion of the total of the amounts now outstanding. In 1937 the company benefited from a moderate increase in passenger traffic and a much larger volume of cargo. But the high freights prevailing gave a false impression of potential earnings, since much of the cargo was carried under contract and certain restrictions exist under various agreements with the South African Government. Comparative independence of fluctuating freights also applies to the Cunard Steam Ship Company, whose improved earnings have arisen from a big increase in Atlantic trade. Commendation for the depreciation policy was rightly claimed by Sir Percy E. Bates at last Tuesday's meeting. In respect of 1937 as much as £976,280 had been written off the fleet as a whole, and a reduction in cash holdings was mainly due to the year's expenditure on two ships which are being constructed out of current resources instead of advances. If the same yearly allocation for depreciation on the older ships and the "Queen Mary" could be kept up—a target which Sir Percy believes to be attainable—the ships would be reduced to scrap value on reaching an age of 25 and 20 years respectively. A shipbuilding programme related to the depreciation allowance would allow the company to retain its position. Sir Percy, however, stressed the fact that the building policy was not responsible for the absence of dividends, though it alone could lead to their resumption.

"Sofina" Improvement.—A company with such wide international interests as "Sofina" cannot avoid the effect of currency restrictions and the growing tendency of Governments to concern themselves with the finance and administration of public utilities. Substantial increases in the output of electricity, however, have enabled them to overcome these difficulties to date and to register further progress. The dividend on the Frs. 500 shares is maintained at Frs. 440, while net profits amount to Frs. 102.2 millions against Frs. 93.3 millions. Total income, at Frs. 124.2 millions, is 8 per cent. higher than in 1936. The size of the cash holdings is as impressive as ever, for it amounts to no less than 38 per cent. of the balance-sheet total of Frs. 2,292 millions, despite a reduction which was due to the acquisition of further interests. The report contains an abundance of detail upon each of the more important of the company's separate holdings, and, as in previous years, those interested in electricity undertakings generally will appreciate the wealth of statistical information. The survey of economic conditions which opens the report will interest a still wider circle. These views are amplified in a supplement to the report entitled "Economic Equilibrium"; the writer of this supplement reveals his opposition to Government intervention, but he gives full credit for constructive assistance to and co-operation with private enterprise.

Rand Meetings.—Kaffir shareholders will recall that 1937 was a difficult year for adequate supplies of native labour. It is not surprising, therefore, that this essential topic has been considered in recent meetings of Rand mining undertakings in Johannesburg. At the Rand Mines meeting, for example, Mr W. H. A. Lawrence reported that the experiment of employing tropical natives from areas north of 22 degrees south had given encouraging results and substantial additional supplies of labour may in due course become available. Mr Lawrence also deputed for Mr John Martin at the Crown Mines meeting, at which he also discussed this problem. Mechanical scraper equipment for lashing ore in stopes and loading rock in drives has been employed on a limited scale, and the results have afforded some encouragement to adopt these devices on a larger scale. Recent work on the Main Reef has been promising and holds out the prospect of a not inconsiderable tonnage. Dr Hans Pirow, at the City Deep meeting, referred to the company's tax position, and pointed out that no liability was likely to arise in 1938 in view of the present relation of profits to revenue. The new shaft, of course, is an important factor for the company; its completion is expected in the middle of next year and should result in a considerable improvement in underground conditions.

Rio Tinto.—The operations of this company in Spain last year repeated the experience of 1936 in accentuated degree. Pesetas due or promised totalled 14,845,400, as against 6,015,400; and this increased sum has again been taken at a purely nominal figure. Although the quantity of ore shipped and the price of copper were both higher than for several years, trading profit therefore shows a sharp contraction. Including dividends and interest receipts of £315,850 against £108,200, total receipts, at £511,030, were very close to the 1936 figure—but, as the appended table shows, the available surplus was wholly insufficient to cover the full preference dividend. Of the investment total, some 89 per cent. is represented by the book value of holdings in Rhodesian copper companies. The directors observe

	1934	1935	1936	1937
Trading profit ...	453,550	527,980	445,560	195,150
Net profit	55,110	174,280	63,270	14,390
Dividends (pref.)...	81,250	81,250	81,250	81,250
Carried forward ...	376,720	469,750	451,770	384,910
Property and plant	3,305,950	3,296,250	3,286,870	3,286,150
Investments.....	2,918,920	2,784,220	2,894,200	3,120,560

that these shares "are paying well," apart from the holding of 420,000 Nchanga shares, and "there need be no fear that in the fullness of time the investment in Nchanga will not also yield a satisfactory income." Rio Tinto ordinary have received no dividend since 1930, yet they command a premium of over 200 per cent., which may be explained partly by the fact that the shares are largely held in France, and partly by the extent of the company's interests outside Spain.

Mawchi Mines.—While the final dividend for 1937 of 80 per cent. recently declared by Mawchi proved fully up to recent more conservative market expectations, the accounts reveal that a much larger total distribution than 120 per cent. could have been paid. Net profits at £397,800 exceeded the previous year's total by £221,950, after allowing for N.D.C. A reserve fund has been opened, with an appropriation of £50,000, and £23,000 is set aside for income tax reserve, leaving a substantially increased amount of £56,100 to be carried forward. The capacity of the treatment plant, which was extended last year, is being further increased. On the other hand, wolfram prices have fallen sharply from the high levels ruling for a large part of 1937. Development on the main property resulted in an appreciable expansion of the ore reserves; but exploration of the outside areas gave little encouragement.

Other Company Results.—Some 70 companies are again covered in our analysis of profit and loss accounts appearing on page 284. Of these, 29 reports come from rubber and tea companies. The results are discussed on page 256 under the heading "Shorter Comments."

Company Meetings of the Week.—In this issue reports of company meetings begin on page 265. Surveys of the position of *Union Castle Mail Steamship* and *Cunard Steam Ship* given at the annual meetings are discussed in a Note on page 251. On this page the position of *Sofina* is reviewed, and we also discuss the speeches given at the *Crown Mines*, *City Deep* and *Rand Mines* meetings. Mr Patrick Ashley Cooper explained to the General Court of the *Hudson Bay Company* that operations, particularly in the fur trade, had been seriously affected by the recession in the United States. In Canada, however, the output of every major commodity except wheat had been greater in 1937 than in 1936. At the *San Paulo (Brazilian) Railway* meeting, Mr Oliver R. H. Bury referred to the superintendent's opinion that they could expect the gross traffic offering this year to be at least as great as that of last. In the directors' report of the *Bank of Athens* presented at the annual meeting, reference was made to the labour and social legislation to raise the purchasing power of the working classes in Greece. At the meeting of the *Ionian Bank* Sir John Stavridi reviewed the considerable economic progress that had been made in Greece. Though there had been no relaxation in exchange barriers, import quotas had been granted more liberally. Mr R. O. Hambro told members of *London Assurance* that the accident insurance account showed a substantial increase in income, the profit arising being 7 per cent. of premium income. Mr J. K. Wiseman, at the annual meeting of *Royal London Mutual Insurance* traced the growth in premium income and total assets over a period of years. The former, for instance, was £6,900,000 in 1937, against £990,000 in 1907. Mr A. W. Willmer had the satisfaction of telling members of *State*

Assurance that in spite of the severe fall in securities the value of the company's investments substantially exceeded the figure appearing in the balance sheet. Sir A. Henry McMahon revealed considerable telephone development in Bombay, Bengal, Madras, Rangoon and Hongkong at the meeting of *Oriental Telephone and Electric*. At the *British Timken* meeting, Mr M. B. U. Dewar discussed the importance of re-armament for the company. They were not, he said, engaged on any actual munition work, but the almost universal applications of the anti-friction bearing implied a larger demand for certain of their products as the programme gathered speed. Mr John Lawson discussed taxation conditions in the United States at the meeting of *Olympic Portland Cement*. Measures were under consideration whereby over 15 per cent. of profits would be earned outside the United States, thus exempting the

company from deducting 10 per cent. Withholding tax. Substantial capital expenditure was foreshadowed by Mr W. J. Clarke in his address to shareholders of *James W. Cook and Company*. At the annual Court of *Royal Exchange Assurance* Mr Vivian Hugh Smith expressed satisfaction that for the second year in succession over £100,000 had been transferred from the accident department to general profit and loss account. Sir Francis Norie-Miller reported to members of the *General Accident Fire and Life Assurance Corporation* that the fire department had yielded the handsome profit of 25.42 per cent. Referring to the hull side of the business of *World Auxiliary Insurance Corporation*, Captain the Right Hon. C. C. Craig discussed agreements governing rates which were reached last year, in March and June. These agreements, he reported, had been loyally carried out.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
MAY 10	MAY 12

The market has absorbed a Budget which, by previous calculations, would have been reckoned discouraging, with exemplary spirit. As we show in a detailed review on page 248, the impact effect of Budget news in Tuesday's street market was to produce consternation in equities and oil shares, and fears that professional "bears" had correctly anticipated the reaction of general investors were responsible for substantial marking down as soon as the market opened on Wednesday morning. The threatened volume of sales, however, failed to mature, and assisted (it would appear) by a certain amount of official support, gilt-edged, and industrials, threw off their earlier losses. Prices on Thursday remained firm, but turnover was extremely limited.

The movement in War Loan was typical of trends in the gilt-edged market. The stock opened lower, after deduction of interest on Monday, responded to mild support, and on the Budget impact was dealt in as low as 100½ on Wednesday. By the close of business, however, this sharp loss had been largely restored, and on Thursday the stock closed at pre-Budget levels.

In the foreign bond market, Chinese and Brazilian issues responded to reports of an agreement regarding the Customs administration and, in the latter case, by prospects of a resumption of debt service. Czech loans were initially depressed by political difficulties, but became quietly steady later.

The Anglo-Eire agreement helped home rail stocks at first, but very disappointing traffics caused a heavy marking down of prices, which also affected the prior charges. Little interest was evident in Argentine issues.

After a quiet opening, which was not lacking in firm features, the industrial market proceeded to anticipate a comfortable budget. The improvements recorded during Tuesday's official dealings, however, were sharply reversed after hours. In mid-week, however, sufficient support was available to correct the sharp initial marking down of prices. Brewery issues, freed from new taxation, responded sharply, and further improved on Thursday, while tobacco

shares showed small gains. The movements in Distillers are discussed on page 249. In an irregular steel share market, Tube Investments made progress on balance, and leading issues like Vickers and United Steel recovered most of the earlier fall.

Motor shares also recovered, except Ford, which were still depressed by the dividend reduction. Good support was reported for aircraft issues, led by Hawker-Siddeley. Among shipping shares P. & O. responded to the interim dividend announcement, and the leading industrials, like I.C.I. and Turner and Newall, recovered substantially the whole of their overnight losses in mid-week.

The Budget did not depress oil share prices for long. Business showed signs of expansion on Tuesday, when prices closed satisfactorily, but a sharp marking down occurred in "Street" dealings on the increased oil duty. In mid-week it was clear that the fall had been overdone, and recovery was rapid, Tuesday's best levels being reached in some cases. A precautionary marking down of rubber share prices early on Wednesday was followed by some recovery. Tea share prices resisted the increased duty well, declines being small and sales easily absorbed.

Without any special justification, the mining market began the week in a more inactive mood than ever, but subsequently small gains became widespread and business broadened. Wall Street rather than the Budget affected prices. On Thursday Vinterspost were active on the new issue rumours. Rhodesian coppers were uninteresting, with slightly more support evident in mid-week, while other base metals were neglected.

ACTUARIES' INVESTMENT INDEX

The recovery in the Actuaries' Index of 151 industrial ordinary shares has slowed down. On Tuesday last the index stood at 69.3, against 69.2 a week ago. A month and a year ago the index was 65.2 and 84.2, respectively. Last Tuesday's average yield was 5.36 per cent., against 5.63 and 4.20 per cent. a month and a year ago. Fixed interest securities have also recovered somewhat from their setback in March. We give below the usual monthly particulars of fixed interest securities, and a selection of the separate ordinary share indices:—

New York

THOUGH prices have given way only slightly, Wall Street has had a dull week. Monday was one of the most inactive sessions in recent weeks, with a tendency for prices to drift downwards. Steel shares were weak on poor industrial news, with an estimated production of 32 per cent. of capacity, against 92.3 per cent. a year ago. Mr Roosevelt's tax message to Congress was without direct effect, and the market's apathetic mood was again shown by a small turnover and comparative indifference to the

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

High: 116.9 January 11th. Low: 83.6 March 31,					

Company Results of the Week.—The **CALCUTTA ELECTRIC SUPPLY CORPORATION** report a large increase of revenue from industrial sources, but a decline from domestic supplies owing to reduced rates. Saving on debenture service, however, raises their net profit from £626,245 to £645,724, though gross revenue is slightly lower. **TIMOTHY WHITES** AND **TAYLORS** and their subsidiaries have issued their reports for the 66 weeks ended January 1st last, which show further progress. The larger rubber company's reports include those of **LONDON ASIATIC**, whose dividend is raised from 10 to 12½ per cent., and **MENDARIS (SUMATRA)**. All tea companies show a substantial improvement over 1936, **LUNUVA**, for instance, earning £122,271, against £72,570. A number of companies have issued their first reports since introduction to the public. Among them, **RED AND WHITE UNITED TRANSPORT** have earned £71,349 in 7½ months; the report contains a consolidated balance sheet and shows the

Johnson and Phillips, Ltd.—Total profit for 1937, £219,488 against £196,154 for 1936. Ordinary dividend raised from 10 to 12½ per cent. To research account £5,000 as before. To dividend equalisation account, £10,000 as before. To special reserve for contingencies, £20,000 against

not been received with the dismay caused by Mr. G. D. N.D.C. proposals a year ago. The increase, from 10 to 20 per cent., in the allowances is likely to be uneven. As shown on page 249, the highly capitalised industries will benefit most from the increased allowances. The petrol tax, from 8d. to 9d. per gallon, will be found favour with motor manufacturers. The present trend of demand for automobiles is such that it is unlikely, however, to have much effect. A decision to extend the petrol duty to private cars, on the other hand, may adversely affect the motor industry, and is unlikely appreciably to influence the demand for alcohol. The increase of 2d. per lb. in the duty on tea is expected to bring about a shift in demand to cheaper grades rather than a fall in total demand. As a whole, however, Sir John Simon's proposals are unlikely to have much effect on the business activity.

Rubber Plantations Investment Trust.—Final dividend of 6 per cent. (less tax at 5s. 6d.), making 10 per cent. dividend for 1937, against 7½ per cent. for 1936. The value of the investments at December 31st

Timothy Whites and Taylors. — Trading profit for 66 weeks to January 1, 1938 (after £30,000 from development account) amounted to £459,841 (or an annual rate of £357,500, compared with £314,001 earned in the previous year). After interest and depreciation, and providing £102,485 for tax and N.D.C. against £57,135, the net earnings are £271,092. Ordinary dividend 40 per cent. for the period, equal to 3½ per cent. per annum against 30 per cent. Carry-forward increased from £42,322 to £48,853.

The Budget and Industry.—While Sir John Simon's Budget has aroused little enthusiasm among industrialists, the increase of 6d. per £ in the income tax has not been received with the dismay caused by Mr Chamberlain's N.D.C. proposals a year ago. The incidence of the increase, from 10 to 20 per cent., in the wear and tear allowances is likely to be uneven. As we show in a Note on page 249, the highly capitalised industries will benefit most from the increased allowances. The increase in the petrol tax, from 8d. to 9d. per gallon, naturally has not found favour with motor manufacturers, especially as the present trend of demand for automobiles is downwards. It is unlikely, however, to have much effect on sales. The decision to extend the petrol duty to power alcohol, on the other hand, may adversely affect demand, though it is unlikely appreciably to influence the total consumption of alcohol. The increase of 2d. per lb. in the import duty on tea is expected to bring about a shift in demand to the cheaper grades rather than a fall in total demand. Viewed as a whole, however, Sir John Simon's new imposts are unlikely to have much effect on the trend of general business activity.

The Anglo-Irish Agreement and Irish Exports.—Under the Anglo-Irish Agreement, the British Government has agreed to remove, at a date yet to be fixed, the duties imposed on the import of Irish goods by the Special Duties (Irish Free State) Act of July, 1932, while the Irish Government will simultaneously suspend the various export bounties designed to counteract the British duties. The most important items of the Irish exports affected by this agreement are given below :—

IRISH EXPORTS TO THE U.K.					
Item	Unit	Average 1929-31	1933	1936	1937
Cattle	No.	774,500	582,174	657,301	640,996
Horses	"	9,873	6,731	15,761	17,557
Pigs	"	401,543	143,970	120,721	42,524
Sheep and lambs	"	507,996	318,299	455,583	311,752
Bacon and hams	Cwt.	390,862	224,509	527,684	525,428
Pork	"	322,744	194,695	116,007	84,010
Cream	"	74,369	49,482	41,801	38,960
Butter	"	489,723	378,662	468,272	319,957
Dead poultry	"	117,311	102,646	104,218	103,076
Eggs	000,000 gt. hundreds	4,790	3,437	2,563	1,949

The total value of imports of food and drink from Eire averaged £34·6 millions in 1929-31; under the influence of the "tariff war," and the general fall in prices, the value fell to £15·6 millions in 1933. The Coal-Cattle Pact of 1935 led to an increase in cattle exports in subsequent years, and in 1936 the total value of British imports of food and drink from Eire had risen to £17 millions. It is impossible to estimate the combined effects on the trade in these commodities of the removal of both British import duties and Irish export bounties; it may be noted that the British Government has reserved the right to regulate quantitatively the imports of agricultural products from Eire if the stability of the British markets cannot be otherwise secured.

—And British Exports.—British exports to Eire suffered less severely than those from Eire to the United Kingdom, but, even so, the exports were valued at only

OTARD'S EST. 1795
V.S.O.P.
LIQUEUR BRANDY
MATURED AND BOTTLED AT CHATEAU DE COGNAC

£19 millions in 1933, against an average of £34 millions in 1929-31. Subsequent years showed a slight increase. In the table below are listed the commodities the export of which to Eire exceeded £1 million in value in 1929-31:

Item	Unit	Average 1929-31	1933	1936	1937
Exports:—					
Grain and flour	000 cwt.	3,236	640	423	(a)
Coal	000 tons	2,450	1,255	2,459	2,578
Clothing	per 000	1,424	604	305	(a)
Boots and shoes	doz. pairs	295,174	208,317	(b)54,971	(b)24,330
Cotton piece-goods	000 sq. yd.	26,222	34,022	39,674	35,257
Machinery and parts	tons	11,771	6,616	11,406	11,782
Iron and steel and manufactures thereof	tons	85,762	46,418	62,969	65,229
Road vehicles & parts	£'000	1,758	1,036	1,162	(a)
Total (including all other items)	£'000	33,695	19,034	21,072	(a)
Re-exports:—					
Tea	000 lb.	21,915	22,595	17,928	17,945
Bacon and hams	cwt.	315,758	1,231	257	(a)
Total (including all other items)	£'000	9,518	4,635	4,902	(a)

(a) Not available. (b) Overshoes, slippers, house shoes and sandals are excluded from this item after 1933.

The exports of all these items fell heavily between 1929-31 and 1933, with the exception of cotton piece-goods, which showed an increase. Coal exports recovered after the Coal-Cattle Pact, and there has been a rise in recent years in exports of machinery and iron and steel and their manufactures. The removal or modification of some of the Irish import quotas and the revision of the tariff promised under this Agreement may enable British manufacturers to revive their exports to Eire.

Reduction in Tinplate Prices.—The International Tinplate Cartel, composed of producers in Great Britain, the United States, Germany, France, Italy and Norway, last week decided to reduce prices from 22s. 6d. to 20s. 3d. per basis box. The rapid advance in price up to 26s. per box in the middle of 1937 has now been cancelled, for prices are once again at the level of the beginning of last year. The position of the market is difficult; a contraction of demand has reduced the output of tinplate in the first quarter of this year by one-third compared with 1937, and the official prices of the Cartel are being undercut by some American and Italian outsiders. Further, new mills are being built, or proposed, in Canada, Belgium, Eire, New Zealand, South Africa and Holland.

Woolcombing in Depression.—The general depression in the wool textile industry, which was noted on page 156 in *The Economist* of April 16th, has not spared the woolcombing section. During the last three months there has been a recovery, but the turnover of merino wool is still 10 per cent., and that of crossbred wool 25 per cent., lower than in the corresponding month of last year. The raising of the woolcombing charges last September has been of little benefit, since it has been followed by reduced turnover. Output in 1937 averaged about 15 per cent. less than in 1936, and almost the whole of the decline occurred after August. The merino section was operating barely 60 per cent. of its capacity between September and November; the crossbred carding section could hardly employ a third of its capacity in November, December and January. During the last two years, this section has not been able to produce more than 60 per cent. of its potential output, and fully one-third of the plant appears to be redundant. The rayon industry has absorbed the lustre lining trade, merinos have been relatively cheaper, and the big export to Germany of crossbred yarns has been severely curtailed during the last few years.

Cotton Employers Reject Holidays with Pay.—The 350,000 operatives in the Lancashire cotton industry have recently pressed the employers to grant holidays with pay. This week, however, the application has been definitely rejected. The employers pointed out that to grant the request would be equivalent to conceding an increase in wages and the present state of trade does not warrant any advance, the situation at present being described as "a most serious state of depression." The employers are in sympathy with the principle of a week's holiday with pay, as part of the terms of contract of employment. They proposed, therefore, that the demand be deferred for six months. After considering this suggestion the operatives asked for the joint conference to be adjourned, and it was arranged that they should meet again on May 4th. It is understood that the granting of a week's holiday with pay would be equivalent to an increase of about 4 per cent. in wages.

Foreign Restrictions on Coal Imports.—During 1937 the general shortage of coal was so acute that most of the European importing countries relaxed or temporarily suspended their regulations on coal imports. But since the beginning of the present year, the fall in demand has brought a relative surplus of supplies, which is now being emphasised by the seasonal contraction in domestic requirements. The French consumption of coal in the first quarter of this year is estimated to have been 2,000,000 tons less than in the corresponding months of 1937, while the domestic output was somewhat larger. On April 24th, the French Government restricted imports of coal to 80 per cent. of those in 1936 (when imports were 8,000,000 tons smaller than in 1937), in order to reduce the stocks of the domestic mines. At the end of March, Belgium's monthly coal import quota was reduced from 520,000 tons to 335,000 tons, of which the German industry supplies more than half. It is probable that under these restrictions sales of British coal to Belgium and France will be reduced by 2,000,000 to 2,500,000 tons per annum.

More Sheep and Lower Prices.—The preliminary returns of the census of livestock held in June, 1937, showed an increase during the year of 78,100, or 1.1 per cent., in the number of ewes kept for breeding and an increase of 756,000, or 10.4 per cent., in the number of sheep under six months of age; the expansion in these two classes more than outweighed the fall in the numbers of the older sheep. Reports of this season's lambing have so far been very satisfactory; the lambs are numerous and the dry weather has reduced mortality, though, if the drought continues, the ewes will suffer from the shortage of grass. It seems likely, therefore, that there will be a large crop of fat lambs coming on to the market during the next few months. Further, in the first quarter of the year imports of mutton and lamb totalled 1,860,000 cwts., against 1,718,000 cwts. in the corresponding months of 1937, the increase of 8 per cent. being mainly due to larger exports from New Zealand. Prices of mutton and lamb at the London markets are not much changed from those in 1937, but the prices of English fat sheep and fat lambs have fallen by 2d. to 3d. per lb. from those recorded in April, 1937. Since the fat lamb season has only just begun, the immediate prospects for sheep farmers are not encouraging.

Gold Coast Cocoa Exports.—The proclamation issued by the Government of the Gold Coast under the Cocoa (Control of Exportation) Ordinance has fixed the export quota for the period April 27-May 31, 1938, at 55,000 tons. The reasons for the issue of this ordinance were discussed in *The Economist* of April 23rd, page 205. The farmers have now stopped the burning of their crops,

and the buying pool agreement, to which the farmers objected, has been suspended by the merchants until October 15th, by which time the report of the Cocoa Commission will have been published.

Prices Still Falling.—President Roosevelt's further reversion to inflation, as embodied in his Easter programme, has not yet served to check the fall in wholesale prices. It is true that the *Economist's* index number of the prices of primary products has remained unchanged for England during the past fortnight, but the American primary products index has fallen by 2.4 per cent., while the *Economist's* complete British index number is 1.0 per cent. lower and the Irving Fisher complete American index number is 0.2 per cent. lower. These movements may be small, but they do not indicate any recovery. French wholesale prices have remained stable during recent weeks.

* These figures relate to April 20th. † Monthly average.

The following table shows the movements of the various groups comprised in *The Economist* index number:—

INDUSTRIAL REPORTS

Coal

The unemployment returns for April, discussed in a Note under Industry and Trade, provide little ground for satisfaction. Similarly, the retail trade statistics for March, published in this week's *Board of Trade Journal*, show a reduction of 3.7 per cent. in the value of turnover compared with the corresponding month a year ago. To some extent the decline was probably due to the fact that Easter fell in March last year. This week's industrial reports indicate little change of trend. Consumption of coal is declining, and there is no sign of an improvement in export orders. Transactions in iron and steel are likely to remain small until stocks have been reduced to normal proportions. In the cotton industry sales still fall short of current output, but there has been a slight improvement in the volume of orders secured by the wool textile trade. A meeting of the British tramp shipowners on April 27th approved in principle the formation of a compensation pool, discussed on page 155 of *The Economist* of April 16th. The trend of activity in the principal branches of business is discussed in greater detail in the accompanying *Trade Supplement*.

Cardiff.—There has been no material change on the Cardiff coal market. The observance of only one idle day during Easter has increased the stocks at the colliery and dock sidings, but prices for practically all classes are unaltered. Small contracts have been placed for the North African market, but there is no active inquiry for long period supplies. Italy is an improving market, but shipments to France are considerably lower than in the spring of 1937, and the new import licensing decree is likely to have a still further restrictive effect. Shipments in the foreign and coastwise trades at the South Wales docks last week totalled 301,300 tons, compared with 281,500 tons in the corresponding Easter week last year, and for the first time this year the aggregate exports since January show a decrease from the corresponding period.

Newcastle-on-Tyne.—The North East coal market is without any particular feature, all classes of coal being

The Economist INDEX
(1927 = 100)

Miscellaneous	65.8	87.1	76.2	76.5
Complete index	60.4	85.7	74.0	73.3
1913 = 100	83.1	118.0	101.9	100.8
1924 = 100	52.2	74.1	64.0	63.3

This week has witnessed a further reaction in wheat prices, but a glance back over the earlier part of the year reveals some indication from time to time of British Government buying. Among miscellaneous food prices, there was a drop in tea and a further increase in butter. American cotton and wool tops are a shade firmer, but there were declines in hemp and jute. In the minerals group, tinplate prices have been reduced. Copper was firmer, but other non-ferrous metals were weak. The rise in the miscellaneous materials index is due to the Budget increase of 1d. a gallon in petrol.

Output of Milk and Milk Products.—The Ministry of Agriculture has published the preliminary results of their census of milk production for the year June, 1935—May, 1936. The previous census was held in 1930-31 and the changes from the figures obtained in that year confirm general expectations. The output of milk (exclusive of that fed to livestock) increased by 4 per cent., to 1,316 million gallons; the dairy herd had increased by 12 per cent. in numbers during the intervening years, so that the average lactation yield per cow fell from 539 gallons in 1930-31 to 502 gallons in 1935-36. It is probable that the long drought and inferior grazing of the latter period was responsible for the greater part of the decline. Although the production of milk increased by only 53 million gallons, the sale of milk off the farms rose by 149 million gallons to 1,098 million gallons, due to a fall of 40 per cent. in the amount of butter made on the farms and to a fall of 69 per cent. in the output of cheese. The guaranteed market and stable liquid milk prices obtained under the Milk Marketing Board have discouraged all forms of the manufacture of milk on the farms.

freely offered. Northumberland steam collieries experience the greatest difficulty in obtaining business. Competition is keener than ever; although prices have been further reduced buyers abroad are taking no interest. Durham collieries continue to work fairly regularly but much more coal is offering, particularly from the coking collieries which are feeling the decline in local industrial activity through the curtailment of coke production. Patent oven coke is a very quiet market, there being no inquiry from abroad.

Workington.—Output, though appreciably bigger than a year ago, is being absorbed. This is due largely to the sustained demand for coking coal and other classes of industrial fuel. It is hoped that the Irish demand will be revived when prices are reduced next month. Landsale is quieter. Prices are steady.

Glasgow.—The market continues depressed, the seasonal decline in demand now having more effect. Short time is being worked in nearly all

collieries, particularly in those supplying the shipping trade. Business with the London utilities has slackened considerably, and it is reported that some contracts for May deliveries have been cut by half.

★

Sheffield.—Demand has improved after the holidays. Industrial coal is moving with some freedom to domestic consumers, but inquiries for household coal have tailed off. The market in coke is easy, with users not in the mood to continue paying present prices. There is, however, a fairly good inquiry for furnace qualities.

The export market shows but little change, with quotations nominal and inclined to ease. Full supplies of most qualities of steam coal are available, but new business is difficult to arrange for Continental users are firmly declining to pay quoted prices.

COAL OUTPUT AND EMPLOYMENT

Iron and Steel

London.—Markets have been quiet since Easter, according to the report of the Iron and Steel Exchange, but the large stocks on hand are being gradually consumed and a revival in demand is to be expected, when stocks have resumed normal proportions.

The pig iron market has suffered from heavy supplies of imported iron ordered during the period of scarcity. Practically all orders have now been filled and stocks should begin to fall.

Stocks of semi-finished steel remain large, but are being gradually reduced. Meanwhile, production is restricted.

Output at the heavy steelworks continues at a high rate and there are still some arrears of orders. Capacity is likely to be fully occupied for some months to come, though the volume of new orders is not maintained. Some of the lighter sections, particularly, would welcome an increase in demand.

★

Sheffield.—Consumers of pig iron, well covered by contract, are holding off the market; the existing slackness may continue until the approach of the close of the second quarter, when prices may come up for consideration. With production still above requirements and consumers in possession of fairly good stocks of material, there is some expectation that prices may then move in favour of buyers.

Business in basic steel billets

continues very substantial, the whole of the output being well taken up. Acid billets are also very firm. There is active business in structural steel, and wire rods are still in good request. Prices generally are unchanged.

Iron and steel scrap business is rather slow. There is plenty of imported material to be worked off, and, until this is absorbed, demand for home supplies is not expected to show much improvement.

★

Cardiff.—The decline in the production of tinplates appears to have been checked; the official returns for the past two or three normal working weeks give an output of roughly 47 per cent. of allocated capacity under the pooling scheme. Exports last week totalled 4,484 tons, against 8,400 tons in the corresponding week last year, but as a result of the stoppages during the Easter holidays the stocks in warehouses and vans have been reduced to 6,939 tons. The slump in demand has compelled a review of price policy and prices at Swansea have been reduced from 22s. 6d. to 20s. 3d. per basis box f.o.b. The heavier branches of the iron and steel industry are suffering from the greatly reduced requirements of the tinplate branch and output both of pig iron and steel ingots were lower.

★

Middlesbrough.—Last month the output of steel in the North-East coast area, at 262,900 tons, marked a record, and indicates that the demand for heavy steel for structural purposes, shipbuilding, etc., continues. Output is at capacity, and it is understood that producers have good orders on their books. Sheet makers, however, and producers of lighter material are in a position to accept orders for early delivery.

Buyers of pig iron are asking for price concessions after the end of the price stabilization period, which, in the case of Cleveland foundry pig iron, is the end of June. This is delaying the resumption of business; foundries have good stocks of other iron to cover their immediate requirements. Deliveries of East Coast hematite against existing contracts are not being taken up at the speed anticipated when sales were made, and further quantities are being put into stock. Further blast furnaces may go out of operation.

Foreign ore imports, whilst still at a high rate, are about 35,000 tons below the figure for the previous month. Blast furnace coke is plentiful, but consumers are mostly covered. The market in heavy steel melting scrap is easy on the basis of the official quotations.

★

Workington.—There is very little demand for North-West Coast hematite pig-iron. Though makers are booked until the half-year end they are not receiving delivery instructions, and stocks continue to rise and are now about 25,000 tons. So far there has been no hint of diminution of production, and it is hoped that before any such step must be contemplated an acceleration in re-armament work may bring about an improvement in business. A disquieting feature is that inquiries are few and that prospective buyers do not

even mention prices. Quotations are unchanged.

The outlook in the steel trade is not bright. The season for the rolling of rails is coming to an end, and soon the plants will have to depend upon orders for products such as billets, hoops and strips. Orders on the books will not ensure a run of activity on the present scale beyond the end of June. It is feared that later in the year the mills may be operated only three weeks in four.

★

Glasgow.—There has been an increase in inquiry and more new business has been placed. At the steelworks output continues at a very high rate, and the bulk of it is passing very quickly into the hands of users. The demand for semis is still somewhat restricted owing largely to the fact that stocks at consumers' works are still fairly heavy. At the same time, re-rollers are in some cases rapidly reducing stocks, and an improved demand for semis is anticipated shortly. Structural engineers are busy, and a gratifying amount of new work has been placed. Other branches of engineering in Glasgow are also working to capacity, and there is a steady demand for finished material.

Textiles

Cotton (Manchester).—There has been no improvement in business. Despite the curtailment of production in both spinning and weaving branches, sales remain below current output. In several sections, stocks are of inconvenient dimensions. An easier movement has shown itself in raw cotton prices. Trade demand has been limited, and speculative interest in futures remains at a low ebb. Rather more favourable advices have been received from the American cotton belt.

Only a small business has been done in yarns. Home users and exporters seem determined to purchase from hand to mouth, and it has been difficult for most spinners to prevent stocks from increasing.

The cloth market remains better supplied with inquiry. Most manufacturers are in need of orders, and now and again wretched prices have been taken. A fair miscellaneous business has been done for India. Operations for Egypt have been practically at a standstill, owing to the higher duties. The trade outlook in West Africa appears to be rather brighter, but stocks of cloth will have to be reduced before fresh business of any importance can be done. Irregular buying has occurred in finishing qualities for South America and the Continent. Stocks in the hands of the home trade are gradually being reduced.

★

Wool (Bradford).—The final auction of the New Zealand selling season of 1937-38 came to an end at Wellington last Friday, the sale being characterised by keen competition. Despite the likelihood of increased armament requirements for clothing purposes, crossbred prices have remained steady throughout the selling season. The following table shows the prices ruling

at the first Wellington sale on December 8th and on April 22nd, the final auction of the season:—

PRICES FOR AVERAGE STYLE TOPMAKING WOOLS, CLEAN, C.I.F. BRADFORD.

† Good style topmaking wools 1 1/2d. per lb. more.

Turning to Bradford, the market is certainly better, and more business has been done during the past two weeks than for several months. The opinion is growing that wool prices have touched the lowest point. Consumption shows signs of a slight improvement, but there is still plenty of standing machinery and a fair amount of short-time. It is felt that a good summer season's trade is going to be done with a developing demand for new garments. The trade generally is not looking for any lower prices unless unforeseen developments intervene.

THE COMMODITY MARKETS

THE firmer tone of commodity prices noticeable earlier this month has again given way to a downward trend. In view of the fact that consumers showed little inclination to cover their requirements for longer periods ahead, this relapse is scarcely surprising.

The principal non-ferrous metals were all marked down, and rubber, linseed oil, and cotton were also cheaper than a week ago. On the other hand, wheat prices remained firm and the decline in raw sugar was arrested.

The decline in the prices of primary products was not confined to this country. Thus, Moody's index of the prices of staple commodities in the

United States (December 31, 1931=100) fell from 140.1 to 138.3 during the week ended last Wednesday. A month ago the index stood at 145.3 and a year ago at 211.5.

Metals

Copper.—The market was easier and the cash price closed at £39 13s. 9d. per ton, a fall of 5s. per ton from last week. Two unfavourable factors were the Japanese restriction of the domestic copper consumption and the increase in March exports from the United States to 9,300 tons, more than three times as much as in March, 1937.

★

Tin.—Unsatisfactory reports from Malaya and an increase in home stocks have weakened the market, and the cash price fell by £5 10s. per ton to close at £164 10s. per ton. The International Tinplate Convention decided to reduce its price from 22s. 6d. to 20s. 3d. per basis box, partly because of the reduction in tin prices, but also because of the poor demand for tinplate.

★

Lead and Spelter.—Demand for both metals was very small; the price of lead fell by 15s. per ton to close at £15 per ton, and the price of spelter closed at £13 11s. 3d. per ton, 7s. 6d. per ton lower than last week. United States stocks of lead again increased during March to 143,511 short tons, but there has been some increase in demand on the American markets.

Rough	24,328	24,328
Tin (London and Liverpool)	4,735	4,904

Other Foods

Provisions and Meat.—The demand for bacon has been steady and prices for English, Danish and Dutch advanced by 2s. per cwt. Hams sold easily at unchanged prices. Butter prices continued to increase, and supplies of Australian and New Zealand

sold steadily at 126s. to 128s. per cwt. A fair demand for New Zealand cheese at the beginning of the week and for English Cheddars later left prices unchanged. The seasonal rise in egg prices continues, and English (15-15½ lb.) finished at 12s. to 12s. 6d. per 120, while Danish showed an equal rise to 10s. 6d. to 11s. per 120. The meat markets have been quiet and prices show little change.

★

Colonial Produce.—Demand for sugar was slow at the beginning of the week, but improved later, when prices were slightly advanced. Coffee and cocoa prices were unchanged, the quotation for Accra cocoa remaining nominal until sales from the Gold Coast are resumed.

★

Fruit.—Reports from the fruit-growing districts as to the frost damage are varied. Early strawberries, plums and Bramley apples are generally reported to be severely cut, while losses on pears, raspberries and other apples

EXTRACT FROM DIRECTORS' REPORT TO THE SHAREHOLDERS FOR PRESENTATION AT THE ORDINARY GENERAL MEETING OF APRIL 28, 1938

THE MEANING OF ECONOMIC EQUILIBRIUM

Last year we tried to show how insecurity of private rights is detrimental to the general welfare; but we were careful to make it clear that adjustments may be necessary even of contractual rights. Change is essential in every form of life, and the economic body can be no exception to the rule.

Yet people go about repeating that equilibrium must be established—or re-established—and then stabilised either throughout the economic system or in some of its branches. Almost every government to-day makes this search for equilibrium one of the main items of its declared policy.

The pursuit of this objective, whether it aims at maintaining or modifying vested rights and existing situations affects the lives of men and undertakings. We therefore think it may be helpful to define the notion of economic equilibrium, to examine the schemes for establishing it, and to see what lessons can be drawn from recent experiments.

Such will be the subject, this year, of the general remarks which it has become a tradition with us to add to our report on the company's operations. Being longer than usual, owing to the many aspects of the subject, they are submitted to you in a separate pamphlet. In brief, they set out the following points.

Economic equilibrium implies a satisfactory fulfilment of mankind's individual and collective wants—satisfactory for those who supply goods or services as well as for those who receive them. Those who seek to establish this equilibrium are often in quest of justice in distribution, and usually they aim at increasing wealth so as to bring about a steady rise in the standard of living. But these designs are dominated by a more immediate objective, which is to ensure the fullest possible utilisation of all resources of goods and labour available for production and at the same time a complete distribution of their products; in other words, to equalise supply and demand, both being raised to the highest possible level.

MALADJUSTMENTS TO BE CORRECTED

Economists have always tried to discover what conditions are most conducive to general welfare; but nowadays some believe that the world's economic structure has radically changed, and that new methods must be devised for setting up a "fair balance" between supply and demand. We find, however, that disparities such as they point to have always existed, though cases vary, and that there is nothing very new in the remedies they propose.

Some of the schemes on which recent attempts to reorganise the economic system have been based assume that means of production are inadequate to satisfy the requirements of the community; others suppose, on the contrary, that the capacity to produce is widely in excess of the capacity to consume.

INADEQUATE CAPACITY TO PRODUCE

The first type of plant invests the government with the power to apply all means of production to those purposes which it considers to be the most useful. This conception finds its most complete expression in the Soviet system under which the authorities assign to everyone his task and decide what will be his share in the joint output. But since State enterprise cannot replace the multiplicity of private initiative, or equal its flexibility, it will at best succeed in supplying staple commodities, with the result that supply and demand will be made to balance only at a low level. Likewise, when "preparedness for war" takes pride of place over well-being, a people must submit to the privations that go with a state of siege; a policy of self-sufficiency implies an all-pervading regimentation that leads to conditions more and more similar to those of the Soviet regime.

INADEQUATE CAPACITY TO CONSUME

Schemes directed to expanding consumption so that it may equal the capacity to produce seek to displace rather than to create purchasing power, even if they do not aim at levelling social inequalities. Transfers of this kind characterise most attempts at State planning; as a matter of fact, governmental intervention in economic activities

seldom amounts to anything else. Their usual effect is to impoverish the community.

Some classes of producers have been granted protection to the detriment of consumers, or subsidies at the expense of the taxpayers; but higher prices have curtailed the demand. Salaries and pensions have been increased at the employers' expense in order to raise the purchasing power of the masses; but only a limited number of goods appeal to the masses, and the undertakings whose profits have been diminished cease to extend their plant; frequently they even refrain from renewing them. Governments decide to replenish order-books in their stead, and thus to create work for the unemployed; they borrow heavily to that end, but public works can replace but a small proportion of the expenditure that private enterprise would devote to purchases of equipment if only it thought the outlay would be remunerative; and the price of the temporary stimulus given to business is a heavy burden placed on the taxpayers' future purchasing capacity, in the form of a debt that is not offset by any lasting increase in the community's total income. Experience has taught that an unbalanced budget does not spell economic equilibrium. Further stimulants have been sought in currency devaluation and in an "easy money" policy; the expected rise in selling prices was to have had the twofold effect of mitigating the debtors' burden—at their creditors' expense—and of creating that illusion of prosperity which, fostered by an apparent increase of incomes, encourages spending; but, contrary to expectation, the rise in prices proved to be by no means general, and where it occurred the cost of production increased as a rule to an equal extent; on the other hand, the buying fever aroused by the expectation of higher prices, and fed by the abundance of available funds, raised demand to a level at which it could not be maintained.

Those who sought by these methods to expand consumption, so that the means of production should be fully utilized, lost sight of the indisputable fact that there can be no real increment in purchasing capacity unless buyers, on their part, furnish goods or services equivalent to the additional income they wish to receive. Moreover, the will to purchase, especially productive equipment, arises only if the outlay promises to be profitable; super-abundant means of payment do not suffice to create this will.

EXCESS IN SUPPLY

Equalisation of supply and demand can be approached by another method; instead of attempting to expand consumption, let production be restricted. This method has in fact been tried in various forms.

The supply of labour has been reduced by shortening hours, so that a greater number of employees should share the work. But as employers could not reduce weekly wages, their costs of production have increased, and some of them have replaced labour by machines, while others have put up their selling prices, thereby checking consumption; in both instances the shortening of hours has led to fresh unemployment.

The supply of commodities has been reduced by prohibiting production or by paying compensation for not producing. These measures, when applied to articles of international trade, have chiefly benefited foreign competitors to whom they did not apply. However, so long as production fully meets the demand, it is unreasonable that there should be an excess. Adjustment is best obtained by means of agreements between producers. Several governments have encouraged the formation of trade associations, and sometimes they have gone so far as to guarantee them a monopoly. Although there may be some danger that these associations might put up their selling prices unduly—as some have done, while raising wages to gain the support of labour unions—it is not difficult to check abusive practices that might prejudice consumers.

In some countries, savings—especially company reserves—have been taxed with a view to discouraging extensions of productive equipment. This has led to increased unemployment in the industries producing durable goods, has endangered the stability of undertakings, and has threatened to dry up the very source of the means of production.

PRICE REGULATION

Some reformers, satisfied that economic equilibrium existed during a given year of business prosperity, have started from the assumption that the prices or price relations ruling at that time were the cause of this equilibrium, and that it would be restored if only those prices or ratios were re-established. They have spread a belief in a veritable magic of prices, and this belief has given rise to a number of attempts to create specific relations between wholesale and retail prices, agricultural and industrial prices, or internal and external prices. The methods applied have consisted chiefly in currency and money market manipulations. They have proved to be of limited efficacy. It is doubtful whether their failure is to be regretted, since the usefulness of the objective is open to dispute.

Currency devaluation, however, may give producers of the country in which it takes place an advantage over their foreign competitors. It may be necessary in order to enable them to recover accustomed markets. While it is to the general advantage that currencies be brought "into line" for the purpose of maintaining and extending trade, it is to-day recognised that a devaluation race is a vain pursuit. Yet the restoration of fixed parities between currencies will not be practicable unless each country is firmly resolved and has the power regularly to meet its external commitments by means of its exports and the foreign capital it is able to attract.

REPERCUSSIONS OF STATE PLANNING ON INTERNATIONAL TRADE

When, as a result of its economic policy, a country is impoverished, and especially when it reduces the quantity of its exportable goods or increases their cost, thereby restricting its capacity to import, its action is detrimental to other countries. Customs barriers are not the only obstacle to a revival of international trade.

In order to avoid practising a sort of negative protection, it may be necessary to impose on foreign products import duties equivalent to the burden of taxes and social benefits that the national production is called upon to bear in excess of that which its foreign competitors must include in their costs. This is one of the reasons why absolute free trade is impracticable under present conditions. Besides, it would be impossible to sweep away customs barriers without throwing world economics into further confusion, unless pre-arranged measures were taken to provide employment for the men and the productive equipment whose occupation was dependent on the protection afforded by tariff walls. Wider markets would undoubtedly make it easier to maintain the balance between supply and demand but the field open to trade cannot be enlarged without a spirit of international co-operation.

How is this co-operation to be promoted?

There can be no question of "planning" world economics. Any attempt to equalise costs, for instance, would be futile; even in the national field all efforts to this end have failed; moreover, disparity of costs encourages division of labour. The first essential is that

governments should become imbued with the idea that they must help each other to provide outlets for the goods and services of their nationals.

LESSONS OF RECENT EXPERIENCE

Recent experiments have not only revealed the disadvantages and weaknesses of "planning"; they have also taught how governmental action can contribute to economic equilibrium. Their role is to open up roads for trade, mark them out with signposts, and prevent traffic from becoming disorganised; but it is not for them to tell each person where to go and how to get there. Governments have successfully intervened in bringing about agreements between producers; some have awakened a spirit of fellowship between employers and employees; others have helped, by means of statistical research, to keep buyers and sellers better informed of market conditions; or they have taken an active part in commercial propaganda directed towards developing demand; or again, they have facilitated the shifting of unemployed populations to regions where there were opportunities for work. Every one of these practices might be extended to the international field.

Nations to-day are like players assembled around a card table, some of whom insist on playing bridge, others nap, and yet others poker. If, under such conditions, international trade cannot be carried on it is because that game also requires agreement on fundamental rules—a set of economic and legal principles. It should not be impossible to define these principles and to embody them in international agreements.

Technical progress opens up infinite possibilities for production and education, causing needs to become more refined and diversified, can increase requirements indefinitely. There is no excess of commodities; on the contrary more and more will be needed in order that man's standard of living may be raised.

The disequilibrium between supply and demand is due to the fact that potential buyers are prevented from supplying, or will not seek to put themselves in a position to supply, goods or services that others desire. Private enterprise is the most effective agency for producing what is demanded and for developing markets; governmental action can protect and stimulate private enterprise, but all too frequently it accentuates the very maladjustments which it seeks to correct, because it hinders production or renders the goods on offer unattractive.

Copies of the complete translation of the Report and Supplement can be obtained from:

The Electric & Railway Finance Corp., Ltd.,

Miscellaneous Commodities

Oilseeds and Oils.—The markets continue quiet and prices, where changed, are somewhat lower. There is only a small demand for linseed, and the quantity afloat for Europe is given as 83,000 tons, compared with 155,000 tons a year ago. Linseed oil and refined cotton seed oil are both cheaper.

*

Rubber.—The improvement in the market noticed last week has not continued, and prices closed somewhat lower than their mid-week level. World stocks in March increased by 122,936 tons, compared with March, 1937, and by 16,815 tons compared with a month ago.

'COMPANY MEETINGS

UNION-CASTLE MAIL STEAMSHIP COMPANY LIMITED

INCREASED AMOUNT OF PROFIT ON COMPLETED VOYAGES

DIVIDEND PROSPECTS OF THE ORDINARY STOCKHOLDERS

SATISFACTORY PROGRESS OF THE SHIPBUILDING AND RE-ENGINEING PROGRAMME

COMPANY'S IMPORTANT PART IN THE DEVELOPMENT OF SOUTH AFRICAN TRADE

MR ROBERTSON F. GIBB'S ADDRESS

PAYMENT OF PREFERENCE DIVIDEND ARREARS

At our meeting last year I indicated the board's hope to be able to deal with the arrears of dividend on the 6 per cent. preference shares out of the profits for that year. This expectation was fulfilled by the payment on December 31st last of the 18 months' arrears of preference dividend, together with the six months' dividend then due. These arrears, together with the dividend for the year on the six per cent. and four and a half per cent. preference shares, absorbed £295,000, leaving a balance of £301,000.

Here I think it desirable that I should reiterate the explanation I gave last year regarding the book loss unavoidably associated with our re-engineing programme. This programme involved the removal of engines which stood in the books at a proper figure but which after removal from the five vessels concerned are no longer of value as assets of the company. The total amount of book loss involved is approximately £435,000, and it was obviously necessary that this loss should be dealt with. For this purpose £200,000 was set aside in the 1936 accounts, and in the accounts before you to-day we have made provision for the balance of £235,000. This latter sum has been found by allocating £150,000 from the profit and loss account and by transferring £85,000 from insurance reserves. This completes the provision necessary fully to write off the value of the old engines of these ships. A credit balance of £151,000 remains in the profit and loss account, which we recommend should be carried forward.

Incidentally, I may mention that all our subsidiary companies continue to show a net profit.

BALANCE SHEET

As regards the balance sheet, there are not many items calling for special comment. On the liabilities side there is only one marked difference between the figures for 1936 and those for 1937—namely, that in respect of the amount of advances on account of new tonnage and re-engineing, which have increased from just under £2,000,000 to rather more than £3,000,000, the actual difference being about £1,100,000. During the current year this figure will be still further increased, involving, of course, a corresponding increase in the amount of interest payable. These advances have been obtained on favourable terms, and if only the question of the rate of interest had to be considered it would clearly be to the company's advantage to leave matters as they are. In addition to interest, however, we shall have to find large sums during the next few years to make the covenanted repayments, and in this connection your directors are still bearing carefully in mind the possibility of placing at least a proportion of these loans on a more permanent basis as and when a suitable opportunity occurs.

On the assets side of the balance sheet you will observe that the book value of the fleet has increased by rather more than £1,600,000 and now stands at £10,135,000, which sum includes expenditure on vessels under construction and being re-engineed. As in past years, depreciation at the customary rate of 5 per cent. has been written off, except in the case of the first of the vessels to be re-engineed, the only one which affects the 1937 accounts. In the case of all the five vessels involved in the re-engineing programme we have, after careful consideration, decided to adopt for the purpose of depreciation the basis of a 25-years' life—i.e., after writing off the book value of the old engines and adding the cost of re-engineing, depreciation will be calculated on the basis that the vessels be written off the books within the period from the com-

PROFIT AND LOSS ACCOUNT

Dealing first with the profit and loss account, I would draw your attention to the moderate increase shown in the amount of profit on completed voyages, after due provision has been made for depreciation on the fleet and on property and plant, for taxation, administration and other expenses, and after allowing for certain special outlays—in the case of the two mail vessels whose re-powering was completed in 1937—for alterations and renovations additional to the main re-engineing contract, which special outlays were in the opinion of the board properly chargeable against revenue.

To this profit on completed voyages of £510,000 has to be added the income from investments and properties, amounting to £110,000. The decrease in this figure of a little over £10,000 compared with the previous year is accounted for mainly by a rather smaller return from some of our investments in subsidiary or associated companies in South and East Africa.

From the total of these two items, amounting to £620,000, have to be deducted interest on loans and on debenture stock and directors' fees, which together come to £173,000, leaving a net profit of £447,000, or £11,000 more than in 1936. The increase of £14,000 for interest charges is due, of course, to the larger amount of advances in respect of shipbuilding and re-engineing during the year. After adding the balance of £149,000 brought forward, the total available for allocation is £596,000.

pletion of re-engining to the date of their reaching the extended age of 25 years.

You will observe from the report that there is a credit balance of £136,842, representing the difference between book values and amounts realised in respect of investments sold and tonnage disposed of. This has been applied towards writing down the cost of the two refrigerated cargo vessels now under construction. Notwithstanding the abnormally high price of new tonnage, these vessels were specially ordered to assist in carrying out our contract with the South African Government for the conveyance of perishable produce, and as they are costing us very considerably more than their four sister ships already in service I am sure you will agree that we have followed a prudent course in thus writing down their value more nearly to a normal figure.

INVESTMENTS

There is one other item to which you will doubtless expect me to refer on account of the marked change in the amount shown in the 1937 accounts compared with the corresponding figure for the previous year—namely, the value of our investments, which now appears in the balance sheet at £566,000, compared with £893,000. This decrease is mainly accounted for by the sale during the year of our holding of shares in the Durban Navigation Collieries, Limited. We obtained a controlling interest in that company many years ago, when it was felt desirable to provide specially for our large requirements of South African coal. Owing to the fact that all our newer vessels consume oil fuel and our coal requirements are now comparatively small, it was thought expedient to take advantage of a favourable opportunity of disposing of this asset.

I think you will agree that on the whole the accounts before you reveal a reasonably satisfactory state of affairs and that the company is in a much sounder position to-day than it was six or seven years ago, when, owing to heavy losses sustained on investments through its association with other companies, under the former regime, its assets were found to be much overvalued. As already mentioned, these losses were provided for in the 1936 accounts, and to-day our investments appear in the books at figures which fairly represent their actual value.

PROSPECTS FOR ORDINARY DIVIDEND—NECESSITY FOR RESERVES

Now that the arrears of preference dividend have been entirely paid off and provision has been made for the special depreciation arising in connection with our re-engining programme, you will naturally expect me to give some indication as to the prospect of our resuming the payment of dividends on our ordinary stock, which has not been possible since the payment made in respect of the year 1929. With regard to this, I may say that it is the hope of the board, if present conditions continue, to be able to pay a moderate dividend on the ordinary stock out of the profits of the current year. At the same time, the board intends steadily to pursue a sound financial policy, and with this object in view it will be necessary to establish and build up reserves appropriate to a company of this standing.

It must also be borne in mind that the company still has heavy obligations for repayments in respect of the advances obtained for its shipbuilding and re-engining programme, and that in order to maintain its position in the overseas trades which it serves it will be essential in due course to order further new tonnage or replace some of the existing older ships.

SHIPBUILDING PROGRAMME

Our shipbuilding programme is continuing to make good progress. During 1937 we took delivery of the cargo motor vessels "Rochester Castle" and "Roxburgh Castle," which are refrigerated throughout and are engaged in the conveyance of fruit and other perishable produce from South Africa to this country. The two further vessels of the same type now under construction are expected to be completed towards the end of this year.

In September last our newest mail vessel, the "Capetown Castle," was launched at Belfast by the Mayoress of Capetown at a very interesting and memorable ceremony, and was delivered to us at the end of March. She is due to sail from Southampton on her maiden voyage next Friday, and as the largest and finest vessel employed in the South African trade we feel confident that she will prove very popular with the travelling public. While similar in most respects to the "Stirling Castle" and "Athlone Castle," she is 1,500 tons larger and embodies a number of improvements upon those fine vessels.

Work on the two intermediate vessels which we ordered at the beginning of last year is now well advanced, and the first of the

ships is due to be launched shortly and to be delivered in November. We are expecting the second vessel to be completed in March of next year.

PROGRESS OF RE-POWERING PROGRAMME

Satisfactory progress is also being made with the re-powering programme. The "Arundel Castle" and "Windsor Castle" have returned to the mail service and are performing the voyage between Southampton and Capetown in the reduced period of 13½ days. The "Carnarvon Castle," "Warwick Castle" and "Winchester Castle" are now at Belfast for re-engining and are expected to be re-delivered to us in July, October and December respectively.

With the delivery of the "Capetown Castle" we have now received ten of the fourteen new vessels ordered since the commencement of 1934. As I mentioned last year, these ten vessels were all ordered before the great rise in shipbuilding costs began. On the other hand, the four vessels now under construction are costing us considerably more, and we shall naturally be reluctant to place further orders until prices fall.

However, even if we do not embark upon further shipbuilding just yet, we shall be able in the course of the next twelve months to dispose of a number of our older ships which have served us very well, and thereafter our various services will be carried on almost entirely with modern tonnage. In the meantime, we have continued to keep all the units of our fleet up to a high standard of efficiency.

During the year we disposed of the coaster "Hansa," formerly engaged in our Continental feeder service, and the launch "Koodoo," these vessels being no longer required.

Unfortunately, two of our vessels were involved in serious accidents last year, although I am glad to say that in neither case was there any loss of life or serious injury. In February the "Llandoverly Castle" struck a mine off the Spanish coast and was out of service for about five months while the necessary repairs were being effected. In June the "Sandgate Castle," which was employed in our America-South Africa cargo service, was abandoned owing to fire and became a total loss. As the result of the recent Board of Trade inquiry into the circumstances attending the loss of this ship no blame was attached to the company in the matter.

Our mail, intermediate, East African and cargo services were all regularly maintained throughout the year, with the exception that the East African service was somewhat affected by the temporary withdrawal of the "Llandoverly Castle" on account of the accident to which I have just referred.

ACCELERATED MAIL SERVICE

The "Stirling Castle," "Athlone Castle," "Arundel Castle" and "Windsor Castle" are now performing the mail voyage to Capetown in 13½ days, as, of course, will the "Capetown Castle" when she sails on Friday. As I have indicated, the remaining three mail vessels that are being re-engined are expected to be re-delivered to us in the course of the next few months, and by the end of the year we expect to have the accelerated mail service in full operation. The service will then be maintained by eight vessels instead of by nine, as hitherto.

As our re-engining programme is completed the "Dunvegan Castle" and "Dunnottar Castle," which have been temporarily engaged in the mail service, will return to the intermediate service, for which they were originally built. They will shortly afterwards be joined by the two fine new intermediate vessels now building, thus enabling us to effect important improvements in our intermediate and East African services.

PASSENGER TRAFFIC

Whilst our passenger traffic last year as a whole might be regarded as satisfactory, seeing that our total earnings from this source showed a moderate increase over the figures for 1936, the results were a little disappointing in view of the fact that it was generally anticipated that the Coronation celebrations would attract much larger numbers of visitors from the Dominions to this country.

Perhaps the most gratifying feature in connection with our passenger traffic last year was a small but none the less welcome increase in our earnings both outwards and homewards in respect of our East African service. Our passenger earnings along the African coast also showed some increase.

CARGO TRAFFIC

The total volume of cargo moving from South Africa last year was considerably in excess of that in previous years, due principally to record shipments of manganese ore to the Continent, and to the large exportable surpluses of sugar and maize.

Seeing that rates of freight generally throughout the world

it might be thought that we and the other lines engaged in the South African trade must have had a very good year so far as the cargo side of our business is concerned. There were, however, several factors which prevented us from benefiting from these conditions. The lines were under contract to lift a great proportion of the cargo to which I have referred at low rates of freight and, as the regular berth tonnage was not adequate to cope with the quantities moving, it was necessary, in order to fulfil our contractual obligations, to charter a large number of additional ships, often at rates appreciably in excess of those received, with the result that substantial losses were sustained. Moreover, as the terms of our agreement with the South African Government restrict us severely in regard to our rates of freight on most of the commodities we carry, whether out or home, the general rise in freights did not benefit us materially. At the same time, the fact that full cargoes were frequently secured by the vessels regularly engaged in the trade was of some advantage, and, on the whole, last year may be regarded as a fairly satisfactory one from the point of view of freight.

Increases in the cargo earnings of most of our services, outwards and homewards and on the African coast, were recorded during the year, but it must be remembered that operating expenses were also mounting steadily, and continue to do so.

SOUTH AFRICAN FRUIT TRAFFIC

As in previous years, we conveyed from South Africa large quantities of perishable produce, especially fruit. This company has been associated with the development of the South African fruit industry since its inception, and has taken the leading part in providing facilities for the overseas transit under refrigeration of the various kinds of fruit exported from the Union.

In our regular mail and intermediate vessels we have, at great cost, provided the special cold chamber accommodation required, and, in addition, have built four wholly refrigerated fast cargo vessels for this service, whilst, as already mentioned, two similar ships are under construction. As necessary, vessels have also been chartered by us to go out in ballast to bring home fruit cargoes, often at considerable loss. The conditions under which these services are rendered are governed by an agreement between the South African Government and the company, and the charges made by us for the conveyance of fruit under the special conditions required are moderate, and compare favourably with those obtaining in other similar trades.

Unfortunately, there has been a fall in the prices realised for South African fruit in the overseas markets, which we hope will prove to be of a temporary nature, and it has been suggested that the rates of freight should be drastically reduced to meet the position of the fruit farmers. Whilst willing and anxious to do all we can to assist, we cannot, of course, contemplate undertaking this costly form of transport on an uneconomic basis.

In the American-South Africa trade it was found practicable last year to bring into operation a general increase in the rates of freight, and, although the year's working in respect of this particular service again resulted in a loss, this was less than that sustained in the previous year.

DEPUTY-CHAIRMAN'S SERVICE TO BRITISH SHIPPING

Towards the end of last year our deputy-chairman, Sir Vernon Thomson, paid a visit to South Africa and was thus enabled to obtain first-hand information in regard to numerous matters connected with our interests in that country. He also had the opportunity of meeting a number of Cabinet Ministers and other important men in Government and commercial circles. As all who know Sir Vernon will readily appreciate, the fresh knowledge which he has acquired from this visit will be used to the fullest advantage in connection with the company's affairs. The primary purpose of his voyage was to assist the recuperation of his health after the strain of his many onerous duties, particularly in connection with the Tramp Shipping Administrative Committee and the Tramp Subsidy Committee, of both of which he was chairman, and we are all glad to have him back with us restored to health.

I should like to take this opportunity of expressing on your behalf our cordial congratulations upon the recognition of his invaluable services to the British shipping industry during the past few years which His Majesty has accorded by graciously conferring upon him a baronetcy.

CHAIRMAN'S FORTHCOMING VISIT TO SOUTH AFRICA

I myself propose to sail for South Africa in the Capetown Castle next Friday in order to introduce this magnificent addition to our fleet to the South African public.

As well as presiding at a number of functions, when I hope to have the pleasure of meeting once again many of the leading

Government and civic officials and business men, I shall take the opportunity, as on previous occasions, of discussing various important matters with our agents at the ports and at Johannesburg. At the latter I shall also be able to see the progress that is being made with the erection of our new office building on our excellent site there, which will more worthily represent our interests in that most important city. The value of such personal visits on the part of responsible representatives of the company is increasingly manifest.

TRIBUTE TO THE STAFF

As in former years, I should like to express on your behalf, as well as on behalf of my colleagues and myself, our great appreciation of the work of our staff at home, abroad, and afloat. During the year under review they have continued to render efficient and willing service, and it is one of my pleasures, as chairman of this company, to receive numerous letters, more particularly from passengers, warmly commending members of the company's personnel for the assistance they have been able to afford in one way or another. When it is remembered that it is not uncommon to find satisfactory service regarded as nothing more than what is due and that only real or imagined shortcomings in this respect call for special comment, it is a matter of gratification to me that the letters and personal expressions of appreciation I receive greatly outnumber complaints.

THE OUTLOOK

The year 1937 was, generally speaking, one of continued prosperity in South Africa, and the other territories in southern and eastern Africa which are served by our vessels also enjoyed improved conditions and recovered much of the ground lost during the depression. In Rhodesia also good progress is being made in many directions.

Provided existing conditions continue, indications generally point to the present year proving a fairly satisfactory one for the company, although the increased expenses with which we are faced on account of wages, fuel, repairs, stores, victualling, insurance, taxation, etc., are bound considerably to affect our profits.

During the past four years we have been engaged upon a shipbuilding and repowering programme the magnitude of which is probably without parallel in the history of any shipping company, and, as you know, this programme is not yet at an end. Our primary object is to provide adequately for the requirements of the overseas trade of South Africa, and when, in the course of the next few months, our present programme is complete, it cannot be questioned that South Africa will be provided with shipping facilities second to none of their kind in the world. For over 80 years this company of ours has been running its ships to and from South African ports, and subject to the continuance of reasonably normal conditions it is now even better equipped than in past times to play its part in the continued development of the trade of that great Dominion.

I now beg to move: "That the Report of the Directors and the Statement of Accounts for the year ended December 31, 1937, now submitted, be and they are hereby received and adopted."

Sir F. Vernon Thomson, Bt., K.B.E. (deputy chairman and joint managing director), seconded the resolution.

THE MAIL CONTRACT

Mr J. H. Gosschalk asked if there was likely to be any serious loss through the letter mail being carried by air in future.

Mr F. Coward said it would be interesting, in view of what had happened during the last year or two, if the chairman could inform the meeting of the number of ordinary shareholders at the present time.

The Chairman, in replying to these questions, said that the carrying of letters by air did not affect the company. The latter had a mail contract, commencing last year, which had 10 years to run. It might not be generally known that although the first-class mail was now carried by air, the actual volume of mail matter carried by the company showed no diminution. In consideration for that contract the company had agreed to reduce the time of the passage from 16½ days to 13½ days, and that would be in full swing by the end of the present year. The number of ordinary shareholders on the books at the present time was something like 11,800.

The report and accounts were unanimously adopted.

The Chairman proposed that the Right Hon. Lord Catto of Cairncatto should be re-elected as a director of the company.

The Duke of Abercorn, K.G., K.P., seconded the resolution, which was unanimously approved.

The Chairman next moved the re-election of Mr C. L. Dalziel as a member of the board.

Sir Ernest Harvey, Bt., K.B.E., seconded the motion, which was carried unanimously.

On the proposition of Mr S. J. Jacques, seconded by Mr W. G. Glover, the auditors (Messrs Deloitte, Plender, Griffiths and Company) were reappointed.

SHAREHOLDERS' APPRECIATION

Lieutenant-Colonel A. E. D. Anderson proposed a vote of thanks to the chairman and directors and said he would like to assure the board, on behalf of many new shareholders, that they had the utmost confidence in the chairman and his colleagues. They had the finest fleet in the world, on what was possibly the best route in the world. The shareholders thought it was due to the board's foresight and courage that they had that fleet. They desired to thank the chairman and the other directors for the skill they had given to the company's business.

Mr D. C. Cooke seconded the resolution, which was carried with acclamation.

Mr A. Hunt, C.B.E., cordially supported the expressions of appreciation of the services of the board.

The Chairman, in replying, on behalf of his colleagues and himself, thanked the proposer and supporters of the resolution for their very kind expressions of appreciation. It was a great encouragement to the directors to know that they had the shareholders' confidence, and it was an inspiration to them to go on doing the best they could for the company. Owing to his life-long connection with the company he was very jealous of its traditions and reputation, and he was sure that his colleagues would endeavour not only to maintain that reputation, but to enhance it. (Applause.)

BREEDON AND CLOUD HILL LIME WORKS, LIMITED

IMPROVED POSITION

MR A. WOOLLEY-HART'S SPEECH

The fifth ordinary general meeting of Breedon and Cloud Hill Lime Works, Limited, was held, on the 27th instant, at 11-12 Pall Mall, London, Mr A. Woolley-Hart (chairman) presiding.

The Assistant Secretary (Mr L. A. Daly) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen, I should explain that Mr Jordan, who has been the secretary all along, is not well, and he is not able to be present to-day. Mr L. A. Daly, his assistant, is taking his place.

There is very little I can add to the information given in the report and accounts. I will point out, however, that the balance sheet before you gives effect to the reorganisation of the company's capital as passed by the shareholders and approved by the court. This did not necessitate any alteration in the total capital, or in any way interfere with the rights of the division of profits between the two classes of shares as they had previously existed.

I might as well give some comparisons of the figures. Comparing last year's figures (1936-37) with those of 1937-38, the capital remains the same, although differently divided, and all the shares are now of a denomination of 5s. The debentures stand at £71,259, as against £74,674. The next item is the 5½ per cent. second debentures, amounting to £21,000. This issue was necessary to enable the finance to be properly carried on, as our bankers had kindly assisted us in a temporary matter in connection with large expenditures which we considered necessary to make in connection with houses for our workpeople. The overdraft remains at about the same figure as in the previous year. The creditors are about £2,000 more, namely, £22,238, against £20,131.

The net profit for the year is £24,124, against £24,862, but that is after providing £1,400 for National Defence Contribution and £2,119 for increased income tax. This, with the balance brought forward, leaves us with a larger sum available than in the previous year, namely, £28,527.

PERFECTLY CLEAN BALANCE SHEET

On the assets side the value of property stands at £188,419, against £176,022, showing a considerable increase. This is principally in connection with the housing scheme. In arriving at the present figure, £8,500 has been written off for depreciation, an increase of £700 on previous years. Sundry debtors are increased by £15,400, and this increase being necessary in view of the requirements for our road contracts for roads in course of construction. Preliminary expenses, which stood in our last balance sheet at £3,886,

have been cleared off out of the allocation of last year's profit, and this year a new item of £1,345 under the same heading will be cleared off by allocation from this year's profits. This leaves us with a perfectly clean balance sheet.

A few figures I have prepared will, I hope, be of interest to you. During the last five years to January 31, 1938, the gross trading profit has risen from £23,561 to £43,093. Out of the gross profits we have made we have paid £24,330 in debenture interest. We have paid off £13,741 on our debentures, written off depreciation to the extent of £37,175, paid off issue expenses including the present allocation, to an amount of £10,632, and are now proposing to carry to reserve £5,000, and to carry forward £4,129. These items, apart from the payments in reduction of debentures, amount to £56,936—all of which represents profit made on the business and left therein.

PROSPECTS FOR CURRENT YEAR

As to the prospects of the present year, and the future generally, we are of the opinion that the company will continue to more than hold its own—no political troubles intervening. It is the intention of the board not to increase the dividend unless the profits in the future exceed by far their expectations, but to increase the reserves and build up as large a fund as possible to consolidate our financial position, and to provide working capital for additions to plant, etc.

You will, however, realise that on the same profit basis as 1937-38 we shall have about £2,000 more available next year than at present, because of there being no further capital expenses to write off.

The chairman concluded by moving that the report and accounts be adopted, and that dividends of 14 per cent., less tax, on the non-cumulative preference shares and of 24 per cent., less tax, on the ordinary shares, be paid, that £1,345 10s. 4d. be written off expenses of capital reorganisation and discount on issue of second debentures, that £5,000 be transferred to general reserve account, and that the balance of £4,129 1s. 5d. be carried forward.

Mr J. H. W. Laverick seconded the motion, which was unanimously approved.

The retiring director having been re-elected and the auditors re-appointed, a cordial vote of thanks was given to the managers, staff and employees of the company, and the meeting closed.

BANK OF ATHENS

DIVIDEND MAINTAINED

The directors' report for 1937 was presented at the annual shareholders' meeting held on March 26, 1938.

The following were among the salient points: The steady improvement in the economic world since 1935 was even more marked during the first months of 1937, owing principally to fresh armament programmes which have become a most important factor in industrial activity.

High prices, together with the development of production, produced a feeling of optimism favourable for business which was accompanied by rising prices on the Stock Exchange.

Then, influenced by new unfavourable conditions, and accentuated by the disquieting change in the international political situation, forecasts soon began to lose their original optimism and the latter months of the year began to show significant symptoms of a new depression.

Moreover, exchange troubles which have characterised the post-war period continued and handicaps to trade were still enforced in many countries in spite of many efforts to abolish them.

In Greece important progress has been shown in all spheres of the national economy. Agriculture has been satisfactory owing to the stimulation given to it by the wise measures of the Government.

Industry had to face increased costs, due to world-wide rise in raw materials and other factors, so that it suffered more than usually from foreign competition. Nevertheless, it maintained its activity and, if exports are not very large at present, it has managed to consolidate its position in the home market.

Various legislative measures, among others, collective contracts, reduction of working hours, social insurance, agricultural laws, have been adopted and, although they entail inevitable sacrifices, they have been deemed necessary for raising the standard of living and the purchasing power of the working classes.

The results for the year 1937, after deducting the usual provisions and amortisations, amount to Drs. 20,958,659 as compared with Drs. 21,116,509 for the preceding year. This allows us to propose a distribution of a dividend of Drs. 12 per share, the same as for the previous year, and to carry forward Drs. 5,043,529, almost the same as in 1936.

IONIAN BANK LIMITED

FURTHER PROGRESS IN GREECE

INCREASED DIVIDEND

The ninety-ninth annual ordinary general meeting of the Ionian Bank Limited was held, on the 27th instant, at the offices of the company, 25-31 Moorgate, London, E.C., Sir John Stavridi (the Chairman), presiding.

The Chairman in moving the adoption of the report and accounts, said that apart from the fact that the accounts covered 12 months, as compared with 16, there was no special feature in the history of the bank, and the year under review had been one of quiet and orderly co-ordination of the bank's operations, coupled with such development as had been possible in the countries in which its activities were situated.

CONDITIONS IN GREECE

For Greece the year had been one of political and social stability, and the Government, in the application of its general programme of reconstruction, had made great progress. Public works, roads, and the productive works of Macedonia had also been pushed forward with energy. With a view to improving the standard of living of the working classes the Government had proposed a new and fixed scale of remuneration for each class of employee in the various trades and businesses, dependent on the years of service. In regard to their own bank, the increased salaries would cost over £8,000 per annum.

During the past 12 months there had been no relaxation in exchange barriers, but import quotas had been granted far more liberally. It was satisfactory to note that notwithstanding extra imports the final balance of payments had been favourable to Greece so that the gold reserve had increased to Drs. 3,489,000,000.

The Budget of 1935-36 had closed with a small surplus; that of 1936-37 was expected to close with a deficit of about Drs. 80,000,000, while as for 1937-38 it was expected that the estimated deficit would finally be reduced to Drs. 200,000,000 owing to the improving yield of taxation.

It was regrettable that no progress had been made in the negotiations for the settlement of the public debt. It was essential for the re-establishment of the credit of Greece that the question of her public debt should be settled without further delay.

EXPORTS AND IMPORTS

As to the export trade, the increased value must be attributed mainly to higher prices paid abroad for Greek products, and to certain special exports to Spain. Exports to Germany represented 30 per cent. of the total and to the United Kingdom barely 12 per cent. Imports from countries with which Greece had clearing arrangements had increased from 54.47 per cent. in 1936 to 64.54 per cent. in 1937. Industry had again been active under the protective tariff of high duties. The total area cultivated in 1937 had amounted approximately to 5,967,750 acres, and marked a new record. Greek shipping had been very active during the first months of the year, the Spanish Civil War having furnished excellent freights for the smaller Greek tramp steamers.

EGYPT AND CYPRUS

In Egypt the bumper cotton crop in America and consequent collapse of prices had come rather as a shock, but the general commercial position of the country was, on the whole, satisfactory. Local political questions had held up road and other construction called for under the Treaty with Great Britain, and constant pressure must be imperative to ensure that work of prime strategic importance would be completed within the specified time. Banking competition in that "overbanked" country had almost become a price war, and banking facilities were available to the public at levels below those of the leading financial centres.

The improvement in the economic conditions of Cyprus noticeable in past years had continued at an accelerated pace, due partly to the development of the mining industry. Good progress had also been made in the organisation of the citrus fruit trade.

PROFIT AND DIVIDEND

From the bank's accounts they would notice there was a net profit of £16,639 for 12 months, which was an improvement on the £21,176 for 16 months. The directors recommended a dividend of 2s. 6d. per share, or 2½ per cent., which was slightly in excess of the 3 per cent. paid for the 16 months, and compared with 2 per cent. per annum paid for the five preceding years.

The report was unanimously adopted.

ROYAL EXCHANGE ASSURANCE

ANOTHER GOOD YEAR

PREMIUM INCOME EXCEEDS £10,000,000

The two hundred and eighteenth annual general court of Royal Exchange Assurance was held on the 27th instant, in London. Mr Vivian Hugh Smith (the Governor), in the course of his speech, said: In our life department the year 1937 saw once again a further increase in our business, the total amounting to £4,734,000. The net sum assured was appreciably higher at £4,655,000. The total premium income of the life department was £1,352,000, which again shows an advance, while the total claims paid and outstanding were £781,000. The gross rate of interest earned on the life fund is £4 16s. per cent. against £4 19s. 2d. per cent. for the previous year. The life assurance fund now amounts to £13,239,000.

FIRE DEPARTMENT AND WAR RISKS

I am again able to report a good result of the year's business of our fire department. The total underwriting profit amounted to £177,000, an advance of some £6,000 over the profit for 1936.

After taking credit for approximately £48,000, being the net interest received there is available for profit and loss account a sum of £225,000. In the case of the home, the general foreign field, and in the United States of America, our loss ratios have been lower than those of the preceding twelve months.

You will, I know, wish me to refer in some detail to the changes that have taken place in our marine department this year. Following the resignation of Mr Magnus, the underwriter, we appointed Mr N. R. Jenkins, formerly deputy underwriter of the Sun Insurance Office, marine underwriter to the Royal Exchange Assurance. It was further arranged that Mr C. C. Turner, marine underwriter to the Sun Insurance Office, should be appointed joint underwriter to the Royal Exchange and likewise Mr N. R. Jenkins has been appointed joint marine underwriter to the "Sun." The two underwriters are now working together, and, as from March 25th last the marine underwriting for both offices has been carried on from our own offices at 37, Lime Street. I wish, however, to make it plain that while a close association and a common underwriting policy now prevails between the "Sun" and ourselves, yet each company will retain its own connection and will continue underwriting for its own account.

ACCIDENT DEPARTMENT

I am pleased to be able to record another good year in our accident department. The net premiums for the year amounted to £1,205,000 and the underwriting profit, together with net interest, has resulted in a sum of £102,500 being transferred to the general profit and loss account. This is the second year in succession that we have been able to transfer a sum in excess of one hundred thousand pounds to our general profit and loss account, and while I naturally hope that we may look forward to a continuance of these satisfactory results, yet we must not forget that there are some uncertain conditions which still persist in the business of writing accident insurance. A large section deals, as you know, with motor vehicle insurance, where the tendency to grant increasing awards by the courts in cases arising out of motor-car accidents shows no signs of abating.

The report of the departmental committee appointed by the Board of Trade to consider the question of compulsory insurance has now been issued and if the recommendations contained are adopted, it would appear that the result is likely to be additional cost of motor-car insurance. I can only assure you that every effort will continue to be made to keep premiums adjusted to the measure of risk.

Your directors have recommended a final dividend of 19 per cent. and this dividend together with an interim dividend of 11 per cent. paid in November last will amount to a total of 30 per cent., less tax, on the capital stock of the corporation for the year 1937.

For the first time in our history the premium income for the Royal Exchange group as a whole has exceeded £10,000,000, while our combined assets exceed £30,000,000. These figures, in the 218th year of the existence of the Royal Exchange Assurance speak, I think, very well of its virility. Dealing with the associated companies, he said: The Car and General Insurance Corporation obtained a net premium income for the year amounting to £1,540,000. The underwriting profit of £92,000 showed an increase of some £22,600. The total assets amount to £2,200,000. The Motor Union Insurance Company received a net premium income of £1,815,000 for the year, resulting in an underwriting profit of £143,000; the total assets of the "Motor Union" now amount to £2,971,000. The State Assurance Company and the National Provincial Insurance Company experienced a satisfactory year.

The report and accounts were unanimously adopted.

THE LONDON ASSURANCE

ASSETS EXCEED £20,000,000

RECORD LIFE BUSINESS

The annual general court of the London Assurance was held, on the 27th instant, in London.

Mr R. Olaf Hambro (the Governor), in the course of his speech, said: The year 1937 stands in many ways as being one worthy of something more than normal comment, and I would like to record the fact that we have now passed the £20 millions assets mark and, in addition, have well exceeded the figure of £5 millions in annual premium income.

LIFE DEPARTMENT

The life department exhibits that same healthy vitality to which I referred when I dealt with the previous year's account. In 1937—and for the sixth year in succession—we have a record in net new life business production, the figure being £2,956,153. The total net premium income of the year, which is after deduction of all re-assurance premiums, amounted to £853,476, and the total income of the department from all sources, which, of course, includes, in addition to the premium income referred to, interest and dividends, certain fees, and an amount of £122,228 being consideration for annuities granted, makes a total of £1,341,915. The fund has increased during the year by £523,547, and the total amount of the life assurance fund as at December 31st last stood at £9,985,741. The net interest yield has fallen from £3 17s. 8d. per cent. to £3 16s. 8d. per cent., but this fall is in large part accounted for by the higher rate of income tax.

The market value of Stock Exchange securities, as compared with book value as at December 31st last, shows a surplus of £493,862.

FIRE AND ACCIDENT ACCOUNTS

The combined fire and accident premium income shows an increase over that of the previous year of nearly £56,000, and this figure is arrived at after taking into account a decrease in income in the fire department of just over £30,000 and an increase in the accident account of £86,000. The fire premium income exceeds the £2,000,000 mark at £2,010,867. Whilst this is a lesser figure than that shown in the previous year, it calls for no comment other than that, in the main, it is brought about by underwriting restriction, which is self-imposed, and premium rate reductions. The virtue of the account from a profit-producing standpoint is evidenced by the underwriting profit being just over £9,000 in excess of that which was achieved in the previous year, and we are able to make a transfer to the profit and loss account of £181,327. The accident insurance account records a substantial increase in its income, the total premium for the year being £1,405,298. The profit emerging from this account is £98,077, representing 7 per cent. of the premium income, which is an exceptionally good profit percentage.

One of the major sections of accident insurance underwriting is the motor department. The business of motor insurance has been aggravated by unduly high awards granted by the Courts in third-party claims, and, furthermore, by claims arising as a result of the *Rose v. Ford* decision, given in the House of Lords last year.

MARINE BUSINESS

In the marine department the increase in premium income over that which obtained in the previous year amounts to £127,662, the total for the year being £774,850. The transfer made to the profit and loss account is £50,000, which compares with £74,928, after deduction of interest, in the 1936 accounts. Owing to the substantial increase in the premium income during 1937 the marine insurance fund of necessity is bound to show a reduction, looked at from a percentage standpoint, the comparative figures in this case being 122.7 per cent. in 1936, as against 115.1 per cent. in 1937, although the total increase during the year of account to the fund, which now stands at £892,155, is £91,642.

We have been concerned for some years with the setting-up of a scheme which will accord a benefit by way of a pension to widows of members of the staff of the "London" and its associated companies, and as a result of an examination of the matter by the actuary we are advised that it is necessary that an amount of £150,000 be allocated to it, and you will note that we are proposing a transfer of this amount. It is our intention that the scheme shall be contributory with a limit of annual contribution on the part of the corporation of £15,000 per annum, the staff affected by the scheme contributing, in the aggregate, a like annual amount. The pensions possible within the ambit of these two figures will be a minimum of £100 per annum and a maximum of £150.

The report and accounts were unanimously adopted.

GENERAL ACCIDENT, FIRE AND LIFE ASSURANCE CORPORATION, LIMITED

A SATISFACTORY REPORT

The fifty-second annual general meeting of this Corporation was held, on the 27th instant, at Perth.

Sir Francis Norie-Miller, Bt. (the chairman), said that all would have noted the Budget which had been introduced the previous day by Sir John Simon. That was most ably conceived, and was a very equitable Budget, which he was sure would be approved by the great mass of the people of this country.

FIRE DEPARTMENT

The report showed very good results, especially in the fire department, which for many years had been their mainstay for profit, and this year gave the handsome profit of over £183,000, or 25.42 per cent. They must not be too elated at that result, because fire insurance in every part of the world had been most profitable during the past four years—1934, 1935, 1936 and 1937. A bad patch might come, but he was of opinion that on account of all the precautions taken for fire prevention, the annual losses might be to a great extent stabilised, and, if that was the case, then the public might think a reduction in premium should be made. The public would not permit that companies should return in losses only about 30 per cent. to 35 per cent. of their premiums and spend over 40 per cent. in expenses.

The results shown by the corporation were obtained after they had by reduced premium or bonus policies received for their cover at least 15 per cent. less premium than was obtained by most of their competitors. They exercised every economy in expense, and would continue that economy and show to the public that it was in their best interests to support a company that charged the minimum premium, gave the best service and had funds of nearly £20,000,000 as security for its policyholders. They did not accept re-insurance in their fire department; therefore their income of £1,127,715 was direct business. They very properly re-insured a large amount of that, making their net income £720,800. He was most anxious to see that net income increased to one million pounds, and would appeal to all shareholders and connections to introduce fire business to their corporation.

OTHER DEPARTMENTS

Their accident and general account, which was the largest and most important of the corporation's departments of business, showed a very satisfactory increase in total premiums, an evidence of the vitality of their organisation. It required a great amount of work to increase an income of £8,021,000 in one year by £700,000, yet they were able to do that in a year which everybody would admit had been a very difficult one.

The directors were pleased at the fact that, notwithstanding a heavy loss ratio in their motor department, their total claims ratio had only increased to 56.94 per cent., as against 55.66 per cent. last year. Their commission and expenses—that was, the whole of their expenses in that department—only amounted to 35.88 per cent., and showed a slight reduction from last year at 36.01 per cent. After making most generous allowances for every outstanding liability they were able to transfer to profit and loss account £345,583.

Their life business, which was transacted by the General Life Assurance Company, continued to be most satisfactory, the funds having risen to £5,000,000. The new business had reached the substantial amount of about £3,000,000 a year, and they really did not want to exceed that sum to any great extent.

In the profit and loss statement they had brought forward from last year £646,411; the trading profits and interest earnings of £293,110 brought the total amount they had to deal with to £1,478,000; after providing for the full dividend, placing £10,000 to pension fund, carrying £45,000 to help the marine account, paying various directors' and auditors' fees, and paying an amount of £288,579 in home, Dominion and foreign taxes—he emphasised that amount because it was becoming a serious burden on all businesses—they were able to carry forward no less a sum than £805,886. Personally, he had always looked upon their carry-forward as a substitute for an equalisation of dividend fund. If they looked upon it in that way they would find that the Corporation had now nearly three years' full dividend in hand. If they would turn to the balance sheet shareholders would find that that was in addition to £2,000,000 of general reserve fund, the paid-up capital of £750,000 and additional reserves in the fire and accident accounts.

The report was adopted and the proposed final dividend of 2s. per share, making 3s. 6d. for the year, less tax, on the ordinary shares, was approved.

BRITISH TIMKEN, LIMITED

RECORD OUTPUT

INCREASE OF CAPITAL APPROVED

The eighteenth ordinary general meeting of British Timken, Limited, was held, on the 25th instant, at the registered office of the company, 65 Cheston Road, Aston, Birmingham.

Mr M. B. U. Dewar (the chairman), in the course of his remarks, said:—During the past year your works have been kept very fully employed and the output was the highest in the company's history. I think you will agree that the balance sheet shows a very satisfactory position, our current liabilities as at December 31, 1937, being more than covered by our cash alone.

BONUS SHARE ISSUE

We are proposing, as we did last year, to capitalise a certain part of our reserves, issuing one new share free for every five old shares held, the necessary meeting to authorise the increased capital having been convened to take place immediately after this meeting ends.

During the past year, not only has there been a very considerably increased demand for the usual applications of your company's products, but also for new applications which necessarily involve considerable capital expenditure on new plant and equipment and it appears to your board that the most satisfactory way of meeting this demand is out of profits if possible, and as I pointed out last year, when a considerable amount of profits is retained for capital expenditure, your directors consider that the nominal amount of capital should be increased and additional shares issued to shareholders.

Last year I mentioned that your company was becoming generally better known in the industrial field. I am glad to be able to report that this progress has been maintained and that our turnover in the railway machine tool and rolling mill fields has steadily increased. In particular, the demand for Timken bearings for railway axle-boxes showed during the year under review a very considerable increase over any previous year.

Our cash at the end of the year amounted to £162,403, which your directors consider an adequate sum to meet not only our dividend but our capital requirements in the direction of still further new equipment required to meet the demand for large rolling mill, railway and other industrial bearings.

INCREASING DEMAND

Last year I referred to anticipated raw material difficulties and suggested that this might have an adverse effect on our output. I am glad to say that this has been avoided, except in the case of railway bearings, where, during a year of increasing demands of the re-armament programme, our demand for machined axle-boxes necessary for our bearings has proved beyond the capacity of our suppliers, with the result that our customers have suffered. By reason of considerable capital expenditure both by ourselves and our suppliers we are confident that these delays are now things of the past whatever the demands may be.

One question which will be in your minds is how far the Government re-armament programme is likely to affect our company.

With regard to our own output, while we are not directly engaged on any actual munition work, nevertheless, the almost universal applications of the anti-friction bearing not only in modern war machines but in the actual equipment for their production, must mean a larger demand for certain of your company's products as the re-armament programme gathers speed.

The increasing development of anti-friction bearings during the past 10 years has been a very speedy one, and by endeavouring at all times to anticipate demand, I am happy to report that your works are now very fully and adequately equipped to deal with any demand that may be put upon them.
