
CURRENT YEAR

As regards the current year, we shall have to face the full effect of increased raw material and wage costs, and it must be borne in mind, as I pointed out last year, that your factory is a mass production factory, and consequently the rate of profit obtained can be very largely affected by comparatively small changes in the total output. However, the factory has been very fully employed during the first three and a-half months of this year, and we have no reason to look for other than another satisfactory year.

The report and accounts were unanimously adopted and resolutions authorising the increased capital were duly passed.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED

DIVIDEND OF 7½%

The nineteenth ordinary general meeting of this Corporation was held, on the 28th instant, at Winchester House, London.

Capt. the Rt. Hon. C. C. Craig, D.L., the chairman, said that in the fire account interest amounted to £2,460 and premiums to £88,642. After meeting all claims, etc., and transferring £5,000 to profit and loss account, there remained a fund of £49,184, equal to 55.5 per cent. of the premiums received during the year. In the general accident and miscellaneous account premiums were £78,484 and interest £3,557. After paying losses, etc., and transferring £12,000 to profit and loss account, there remained a fund of £126,000, which was 161 per cent. of the premium income.

The income of the marine account was increased by about £13,000, or 12½ per cent. over that of the preceding year, but claims had materially increased and amounted to 38.2 per cent. The claims for 1936 account were also somewhat higher than in former years, but the year should still leave a reasonable profit.

On the hull side of the business efforts had been made to obtain agreement, and in March last year an understanding had been come to between companies and Lloyd's that no further reductions in rates or values should be granted on renewals. That was supplemented in June by a further agreement to apply a general increase in premiums where the results over a period of years had made such an increase necessary. Those agreements and understandings had been loyally carried out.

The company's commitments were necessarily made some time ahead and policies on hulls generally ran for twelve months. As a consequence the improvements which he had mentioned had not become operative until the middle of last year, and then only to a limited extent. Whether those increases were sufficient time alone would tell, but the current year should show the result of the market's efforts to improve the hull position and was the first year in which they would obtain the full advantage therefrom.

In the profit and loss account, after paying sundry charges, reserving £12,000 for Government taxation and transferring £10,000 to investment reserve account, there remained a balance of £167,904, from which the directors recommended the payment of a dividend of 7½ per cent., free of income tax.

The report was unanimously adopted.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY, LIMITED

YEAR OF SUBSTANTIAL PROGRESS

The seventy-seventh annual general meeting of The Royal Mutual Insurance Society, Limited, was held, on the 26th instant, in London.

Mr J. K. Wiseman, the joint managing director, who presided, said:—The directors again have the satisfaction of reporting substantial progress. The total income for the year amounted to £8,539,424, an increase of £315,212 over the previous year. The total assets amount to £41,065,867, an increase of £2,854,698. The combined premium income of all branches amounted to £6,909,885, an increase of £271,811.

Our development is shown by the following remarkable figures:—

Year.	Total Premium Income		Total Assets.
	of all Branches.		
1907 ...	£990,000	...	£2,100,000
1917 ...	£1,650,000	...	£5,430,000
1927 ...	£4,450,000	...	£18,020,000
1937 ...	£6,900,000	...	£41,060,000

The premium income in the ordinary life branch for the year (including consideration for annuities granted) amounted to £1,836,489, an increase of £103,227 over the previous year. This branch of the Society's business has grown rapidly in recent years.

The ordinary branch fund amounted at the end of the year to £12,654,232, an increase of £1,088,402 during the year. The total amount paid in respect of claims amounted to £906,553, an increase of £89,975. The rate of interest earned (excluding the auxiliary life fund) was £3 19s. 5d. per cent. net, after deduction of income tax.

The directors have decided to continue the interim bonus during the current year at £2 per cent. per annum, the full rate allocated at the last two quinquennial valuations.

In the industrial life branch the premium income for the year amounted to £4,992,425, which is an increase of £159,375 over the previous year. The funds of this branch at the end of the year amounted to £26,670,965, an increase of £1,776,133. Claims and surrenders paid amounted to £2,335,741.

The increase of £1,776,133 in the Fund, which includes £1,124,552 interest on investments, is money put aside as a provision for future liabilities. Adding this item to the actual disbursement to policyholders during the year the total is £4,111,874. Thus the actual amount paid to policyholders, plus the amount added to the fund, which provides for future payments to policyholders, together make up a sum equal to 82½ per cent. of the premiums received. This figure serves to show the advantage of the system of industrial assurance.

A regular bonus system has been introduced in this branch on lines similar to the ordinary branch. The bonus at the last valuation under tables which participate at the full rate, where the qualifying period was completed, was £1 per cent. per annum.

The premium income in the fire account amounted to £76,566, an increase of £2,722.

In the accident and general account the premium income amounted to £32,996, an increase of £2,106. Both accounts are in a strong position and offer a high degree of security. The sum of £23,719 has been transferred from profit and loss to the general branch reserve fund, increasing it to £89,299.

In conclusion, I wish on behalf of the directors to thank the chief officials and the head office staff and all grades of the outside staff for excellent services during the past year.

The report and accounts were unanimously carried.

CITY DEEP LIMITED

INCREASE IN ORE RESERVES

PROGRESS WITH NEW SHAFT

DR HANS PIROW'S REVIEW

The annual meeting of the City Deep, Limited, was held, on the 22nd instant, in Johannesburg.

Dr Hans Pirow, the chairman, who presided, referred to the severe loss the company had sustained through the resignation from the chairmanship, owing to his departure from South Africa, of Mr C. L. Read. To his personal efforts the success achieved in surmounting many difficulties with which the company had been faced since 1931 had been largely due.

YEAR'S RESULTS

Moving the adoption of the report and the accounts, the Chairman said the benefits of the increase of 16,000 tons in tonnage milled and of 0.1 dwt. in yield per ton milled had been offset by the increase in working costs of 11d. per ton milled, and consequently the working profit had decreased by £9,370 to £240,658.

Capital expenditure during the year had totalled £172,683. Of this amount £12,549 had been provided from the proceeds of freehold property sales, leaving £160,134 to be taken from capital funds and reducing the balance of working capital to £159,696 at the end of the year.

Proceeds from the sales of freehold property, as set out in the directors' report, would, in due course, be shown as accruals to the capital funds of the company.

Practically the whole of the remaining freehold was being used or would in future be required for mining purposes.

It had been necessary to provide only £534 for taxation last year. As foreshadowed at the last annual general meeting, allowances for accumulated losses and for amortisation of capital expenditure had extinguished the liability of the company for Government taxation of profits derived from gold mining during 1937.

It was, however, estimated that, assuming the continuance of the present conditions, income tax assessed loss would be extinguished during the second half of 1938. After that date the company would therefore require to make provision for income tax on the basic rate of 3s. per pound of taxable income, but the present ratio of profits to revenue was not likely to create any liability for income tax under the formula during 1938.

PROGRESS WITH NEW SHAFT

Good progress had been made with the sinking of the new No. 5 vertical shaft, which had reached a depth of 3,524 ft., at the end of the year.

During the first quarter of the current year a further 797 ft. were sunk. If that satisfactory rate of progress could be maintained the first connection with the underground workings should be made about the middle of next month and the shaft sinking should be completed before the end of the year.

It was expected that before the end of the year considerable benefit would be obtained from the improved ventilation which the new shaft

would bring about. Unless unforeseen difficulties arose, the new shaft should be in commission by the middle of 1939.

Reviewing development results, the chairman said the percentage of payable South reef had been low, and, with the gradual completion of the development in known favourable areas in the upper levels of the mine, footage developed on South reef was being decreased. Exposures of the main reef leader had been generally satisfactory, particularly in the central portion of the mine, but less satisfactory towards the eastern and western boundaries.

ORE RESERVES

The available ore reserve at the end of the year was estimated at 3,532,200 tons of the average value of 5 dwts. per ton over the stoping width of 50 in.—an increase of 134,800 tons, with the decrease of 2.6 in. in the estimated stoping width and no change in the estimated value. In addition, 587,600 tons of the average value of 6.5 dwts. per ton were contained in the shaft and safety pillars not at present available for stoping.

"It must be borne in mind," said the chairman, "that the ventilation and transport difficulties, together with the fact that a number of higher grade ore reserve blocks are in the remnant stage, have exerted a detrimental influence both on our working costs and on the average grade of ore mined. In addition, the shortage of native labour during the latter part of 1937 and the need for new equipment to replace the obsolete and worn-out machinery and materials, which are usually found at a mine that has passed through a prolonged difficult period, have also increased our working expenditure."

FAVOURABLE FEATURES

"In the circumstances, the increase in available ore reserves, maintenance of the steady rate of development and the good progress made in sinking and equipping No. 5 shaft must be regarded as satisfactory features; and, although it cannot be said that our difficulties have been solved, there is good reason to believe that, with the completion of No. 5 shaft, a considerable improvement in underground conditions will be effected."

During the first quarter of the current year tonnage remaining to be extracted from old dumps on the surface had been practically exhausted. It was not expected that much additional ore could be obtained from that source.

The report and the accounts were adopted unanimously.

SAN PAULO (BRAZILIAN) RAILWAY, LIMITED

CONTINUED GROWTH OF TRAFFIC

The ordinary general meeting of this company was held, on the 26th instant, in London.

Mr Oliver R. H. Bury, M.I.C.E. (the chairman), said that the results of the year revealed a continued growth in the traffic of the railway. The receipts in currency of the railway as a whole, that was including the Braganina section, amounted to 136,307 contos of reis in comparison with 130,195 contos of reis in the previous year. In sterling those receipts were equivalent to £1,691,778, converted at the average rate of 2.97877d. to the milreis, a rate slightly higher than in 1936, when the equivalent in sterling was £1,550,096, or an increase of £141,682, or 9.1 per cent. The working expenses were 94,589 contos of reis, against 85,886 contos of reis, or expressed in sterling £1,174,000 in 1937, compared with £1,022,556 in the previous year. The net profit resulting, after deduction of London office expenses, interest on stores and pension fund Brazil, was £410,637, compared with £426,927 in 1936. The directors proposed a final dividend of 2 per cent., free of income tax, on the ordinary stock, which made 4 per cent. for the year.

With regard to the prospects for the current year, the traffic receipts to date were 40,720 contos of reis, or in sterling £450,635, compared with 38,644 contos and £479,669 for the same period last year. Their superintendent said they were at present entitled to expect that the gross traffic offering this year would at least be as great as that of last year.

An outstanding feature of the year had been the publication of the New Constitution which had come into force on November 10th last. Out of that far-reaching enactments had been put into force in relation to the freedom of the coffee and exchange regulations. It was not to be anticipated that regulations such as those would fructify without a lapse of time, and at present the low prices prevailing for commodities had undoubtedly led to the necessity of exchange restriction and strict control of all exchange by the Bank of Brazil. They were making daily their applications for exchange which were being met by the Bank of Brazil in the order of such applications as and when exchange was available.

The report was unanimously adopted.

RAND MINES, LIMITED

YEAR OF DIFFICULTIES AND ALARMS

PROGRESS AND PROSPERITY MAINTAINED

EXCELLENT RESULTS OF GROUP

MR W. H. A. LAWRENCE'S SPEECH

The annual meeting of Rand Mines, Limited, was held, on the 25th instant, in Johannesburg.

Mr W. H. A. Lawrence, deputy-chairman, presided owing to the unavoidable temporary absence of the chairman, Mr John Martin, on other business.

In moving the adoption of the annual report and accounts, the Deputy-Chairman said that the year that had passed since the last annual meeting had at different stages witnessed changes, difficulties and alarms.

Because of the world situation it had throughout seen nervous periods from whose anxieties South Africa had not escaped.

STRENGTH OF GOLD-MINING INDUSTRY

Nevertheless, he continued, South Africa had cause for gratitude that progress and prosperity had been so well maintained—a condition of affairs that was primarily due to the strength and stability of the gold-mining industry.

The producing mines, he said, had milled a record tonnage of ore and had achieved a record output of gold, both in quantity and in value, and an unprecedented amount of work had been done by many new companies that were still in the stage of prospecting and development.

YEAR'S PROFIT

Reviewing the year's accounts, the Deputy-Chairman said that the profit for the year, excluding profits derived from the sale of investments, had been £960,400. That profit was practically the same as that for the previous year and the rate of the dividend was unaltered at 160 per cent. per annum. In accordance with established policy, the profits accruing from investment realisations had not been utilised for dividend purposes, but had been reinvested in the undertaking.

The balance sheet disclosed that the amount realised by the sale of investments less their book value and the net amount written off investments generally had been £271,092. That sum, together with £154,654 from the appropriation account, being excess of expenditure on investments purchased over receipts from investments sold, had been added to the investment reserve account, which had thus been increased to the substantial total of £3,886,698.

The balance of the appropriation account showed a reduction of £44,474 at £564,606, represented by cash and cash assets less all liabilities except contingent liabilities. Contingent liabilities were considerably less than they had been at the end of the previous year and the resources of the company were fully adequate to meet all commitments of that kind as and when they matured.

VALUE OF INVESTMENTS

Investments in shares and debentures appeared in the balance sheet at £4,347,574, an increase of £433,438. All shares, interests and investments for which the share market quotations were available appeared in the books at or under cost but in no case above the market price at December 31, 1937.

It had been deemed expedient to write down the book value of certain holdings both below cost and below market value. Unquoted securities had been taken into account in accordance with conservative valuation fixed by the directors and in no instance at a valuation exceeding cost. It was evident from the schedule of investments included in the accounts that the market value largely exceeded the book value shown in the balance sheet.

The market value of the company's gold-mining interests at the end of the year had represented 84.2 per cent. of the market value of all its investments and of those gold-mining interests 89.6 per cent. had been dividend producing. The company was, of course, substantially interested in various gold-mining companies which had not yet reached the milling stage.

It must not be overlooked, the Deputy-Chairman went on, that the large proportion of the company's revenue which accrued in the form of dividends on its gold-mining investments contained an element which represented the return of capital. Gold-mining shares were wasting assets but, nevertheless, as had been pointed out at a

previous annual meeting, they had served the company well and would undoubtedly continue to serve the company well in future.

Regular reinvestment of some part of the revenue derived from them was in the circumstances an essential policy to be pursued by a company like Rand Mines.

PROSPERITY OF GOLD MINING

The gold-mining industry had continued to progress, and its prosperity had been well maintained. The industry's requirements of native labour had increased and would continue to increase steadily and substantially. Concurrently with that expansion of requirements, available supplies of labour had shown a marked falling off during the latter part of the year, due mainly to the improved agricultural position in the native territories. The mines as a whole had temporarily experienced a serious shortage of native labour. The inflow of natives had increased satisfactorily during the first few months of the current year.

The experimental employment of tropical natives from areas north of latitude 22 degrees south continued to give encouraging results in all respects, including health, which strengthened the prospects of the industry being able in due course to obtain substantial additional supplies of labour from such sources.

The decision of the industry to introduce the "closed shop" principle had been brought into effect without difficulty—a pleasing indication of the satisfactory relationship that had been maintained between industry and the recognised trade unions.

EMPLOYEES' PROVIDENT FUND

At the instance of the South African Mine Workers' Union, a conference had been held during the latter part of the year between representatives of that union and of the Gold Producers' Committee of the Chamber of Mines, presided over by the Minister of Mines, as a result of which already a large volume of existing phthisis legislation had been added to by another amending Act providing for certain further increases in payments made to beneficiary miners.

Since the inception of the Witwatersrand Gold Mines Employees' Provident Fund in January, 1934, the industry had subscribed £2,631,882 to it. The membership had increased from 26,321 at the outset to 37,628 in December, 1937, and benefits already awarded amounted to over one million pounds.

Following recent discussions with representatives of recognised unions, the industry had offered to establish a savings department of the fund into which mines would make payments at the rate of £13 per annum in respect of every adult European employee, to be credited to the individual employee's account and to be withdrawable by him under certain stipulated conditions. The offer was contingent upon existing agreements being brought up to date as covering present conditions affecting employees and industry.

MINING OPERATIONS OF THE GROUP

The Witwatersrand gold-producing mines of the Central Mining-Rand Mines group had milled 18,590,000 tons of ore, an increase of 458,500 tons on the previous year's record figure. The average yield of gold per ton milled at 4.104 dwts. showed a further small reduction of .087 dwt., but owing to the larger tonnage treated the working revenue of the mines of the group had increased by £262,280 to £26,921,008.

The last-mentioned figure included the amount of £82,639 in respect of special declarations made by the East Rand Proprietary Mines, Limited, and Geldenhuis Deep, Limited, in connection with certain abnormal recoveries of gold at their respective reduction plants. Working costs had been higher by 1.2d. per ton milled, and consequently the total working profit decreased by £269,453.

Dividend declarations totalled £4,990,519, as compared with £5,315,457 in 1936.

INCREASED ORE RESERVES

It was satisfactory to note that, despite the increase in total tonnage milled, the average residue value had been reduced to the

record low level of .204 dwts. per ton, as against .234 dwts. per ton in 1936. Although the development of footage totalling 693,555 ft. had been 52,281 ft. less than the previous year's record figure, available payable ore reserves of 11 producing mines had shown, according to latest re-estimates, a substantial increase of 3,573,960 tons, compared with the preceding year's total, and aggregated 74,653,580 tons.

It was gratifying, Mr Lawrence continued, to record that the mortality rate from diseases among groups of native employees had been the lowest in the history of the group, and the group mining accident mortality rate had decreased from 2.04 to 1.97 per thousand.

The present valuation of the outstanding phthisis liability of the mines of the group was practically unchanged at £4,963,501. The mines concerned had provided with accrued interest up to the end of the year the aggregate sum of £2,495,859 towards meeting that liability.

Non-producing companies of the group included the Blyvooruitzicht Gold Mining Company, Limited, which had been formed last year to acquire and exploit a mining lease which the South African Government had agreed to grant over an area of approximately 3,034 mining claims on the farm at Blyvooruitzicht No. 71, on the Far West Rand.

As was evident from the schedule of investments in the balance sheet, the company had important interests in a number of Witwatersrand gold-mining companies outside the Central Mining-Rand Mines group.

INDUSTRIAL INTERESTS

Various South African industrial concerns in which the company was interested had been maintained in a sound position and had earned satisfactory profits.

They included important coal-mining and lime, piping and cement manufacturing enterprises.

Before concluding, Mr Lawrence referred with deep regret to the death of Mr Frank Raleigh, who had been intimately associated with the gold-mining industry of the Transvaal for more than 50 years. Mr Raleigh had been appointed secretary of Rand Mines, Limited, in 1896 and had become in 1921 its managing director, the post which he had occupied with distinction until his death.

The report and accounts were adopted unanimously.

CROWN MINES, LIMITED

DIVIDEND DISTRIBUTION MAINTAINED

RECORD WORKING REVENUE

MR W. H. A. LAWRENCE ON DEVELOPMENT OPERATIONS

The annual meeting of Crown Mines, Limited, was held, on the 22nd instant, in Johannesburg.

Mr W. H. A. Lawrence presided in the unavoidable absence of other business of the chairman, Mr John Martin.

In moving the adoption of the report and accounts Mr Lawrence said that operations had continued on the same large scale as in the preceding year and that two dividends had been declared totalling 190 per cent., which equalled the record distribution of 1936.

After reviewing the accounts he said that the tonnage milled had been approximately the same as in 1936. The average yield per ton milled, at 4.803 dwts., had been .021 dwts. higher than the average yield of the previous year. The average price realised for their gold had been slightly higher than the average price in 1936; in consequence the total yield of gold—namely, 1,022,572 fine ounces, though 53 fine ounces less than the total yield in 1936, had produced working revenue totalling £7,184,957—£22,235 more than the working revenue realised from gold in 1936 and the highest total in the history of the company.

The total working revenue, including the proceeds from sales of silver and osmiridium, had been £7,195,059. Working costs had increased by £99,057 to £4,060,150, and the working profit, at £3,134,909, had been £76,964 lower than in 1936.

LARGER NET AMOUNT AVAILABLE

Expenditure on capital account, on the other hand, had been £88,907 less than in 1936. Consequently, after making allowance for the difference between other items of revenue and expenditure, the net amount available for distribution showed on balance an increase compared with the corresponding net figure in 1936; and it was possible not only to maintain the dividend at the rate of the

previous year but to increase the amount carried to the credit of the appropriation account by £35,886.

As already mentioned, the average yield of gold per ton milled at 4.803 dwts. had been .021 dwts. higher than in 1936. In that connection it was interesting to note that, following improvements to the reduction plant, the average percentage of extractions had increased to 96.1 and the average value of residues had fallen by .053 dwts. per ton to .195 dwts. per ton. It would thus be seen that if allowances were made for the improvement of .053 dwts. in residue value per tons, the yield would be .032 dwts. lower in 1937 than in 1936.

The improvements to the reduction plant had consisted of an addition to "B" section of four tube mills and accessories to achieve finer grinding and thus facilitate the treatment of a larger percentage of slimes. The reduction of .053 dwts. in average residue per ton milled represented saving—or addition to working revenue—of approximately £79,000.

CONTINUANCE OF NORMAL REEF CONDITIONS

Reviewing development operations, Mr Lawrence said that, in view of restrictions placed upon development by the shortage of native labour during the year, the results achieved might be regarded as very satisfactory. The percentage of payability (68.5 per cent.) reflected a continuance of normal reef conditions in the mine. The company drew its tonnage principally from two reefs—Main Reef Leader and South Reef. A small tonnage, however, had always been obtained from the Main Reef, varying from 1 per cent. in 1931 to 5.5 per cent. in 1937. Thirty years ago the tonnage drawn from that source had been as high as 25 per cent. of the total, but a considerable falling off in the value of the reef resulted in a rapid decline in the amount of payable ore obtainable therefrom.

Conditions since 1932, and particularly the reduction in the pay limit, had justified a revival of interest in the Main Reef and the tonnage mined from it had increased considerably. At the same time more activity in the exploration of the Main Reef had been undertaken, and in the vicinity of No. 4 Shaft down to the Sixth Level some encouraging values had been encountered. The work was being continued and might eventually result in a not inconsiderable tonnage becoming available for inclusion in ore reserves. The area in which those favourable indications had been found was, however, limited, and possibilities of any great extension of operations on the Main Reef must be discounted until more information was available.

Prospecting work on another reef—Bird Reef—had been started on a small scale in 1935. The results of the prospecting conducted in the vicinity of No. 12 Shaft had been consistently unpayable, and last year prospecting had been abandoned.

THE MAIN REEF LEADER

Much of the development on the Main Reef Leader during the year had been carried out in the far western section of the mine served by No. 17 Shaft. The reef disclosures in that section had hitherto been disappointing, but during the past year values encountered towards the western boundary had improved and a higher percentage of payability had been proved. In other sections of the mine developments on the Main Reef Leader had given generally satisfactory results.

The footage accomplished on the South Reef had been approximately the same as in the preceding year, and further considerable tonnage of payable, but low grade, ore had been proved. On both reefs the total ore developed and classed as payable had been 3,956,520 tons, with an average value of 4.8 dwts. per ton. The tonnage thus developed had been 263,460 tons less than the tonnage developed in 1936, and the value of the ore disclosed had shown a decrease of 0.5 dwts. The total ore reserve, as re-estimated at the end of the year, was 25,559,000 tons of an average value of 5.2 dwts. over the estimated stoping width of 48.8 in. This included 4,951,500 tons of an average value of 5.7 dwts. in shaft and safety pillars not at present available for stoping.

The available reserve was therefore 20,607,500 tons, which had an average value of 5.0 dwts. The available reserve showed an increase of 536,100 tons, the average value being fractionally lower.

NATIVE LABOUR

The shortage of native labour which had prevailed throughout the greater part of the year, and had been particularly serious in December, had been a limiting factor in mining and development operations of the company. It would be appreciated that for the company, as for all other mining companies on Witwatersrand, that maintenance and improvement of native labour supplies was of fundamental importance.

Various experiments with a view to economising in native labour had been made. The mechanical scraper equipment for lashing ore in stopes and mechanical devices for loading rock in drives had been

used on a limited scale, with results which afforded some encouragement for more extensive use of them in order to maintain development, footage, and tonnage output in the event of more serious shortage of native labour.

The report and accounts were unanimously adopted.

STATE ASSURANCE COMPANY, LIMITED

SATISFACTORY RESULTS

FURTHER EXPANSION OF BUSINESS

The forty-seventh annual meeting of the State Assurance Company, Limited, was held, on the 25th instant, at the Head Office of the Company, State Insurance Buildings, Liverpool.

Mr A. W. Willmer, J.P. (chairman of the company), presided.

The Chairman, moving the adoption of the report and accounts, said:—The total transferred to profit and loss account in respect of our trading operations for 1937 amounts to £61,856, a figure in excess of the average earnings of the company, and as expansion is indicated by the premium incomes of all departments I accordingly commend to you as satisfactory the report and balance sheet.

FIRE DEPARTMENT

The profit for the fire account is £40,148, the figure available for transfer to the profit and loss account. The premium income is steadily increasing, which justifies our hope in this direction expressed at the annual meeting last year. Our energies, directed upon the lines then indicated, have to some extent been nullified by the experience in the foreign fields where it is becoming increasingly difficult to counteract the unfavourable effects of world conditions.

The fire loss ratio of the company at 46.5 per cent. is some 4½ points better than in 1936, while there is little variation in the total expense ratio, including as it does the heavy incidence of foreign and colonial taxation.

ACCIDENT DEPARTMENT

The accident and general department continues to expand, and it is pleasing to know that this expansion is not confined to one particular type of accident business, but is very evenly distributed. The income has materially increased and there is a slight reduction in the ratio of expense.

The loss ratio at 53 per cent. is slightly higher than that for the preceding year, but cannot be considered unsatisfactory having regard to the effect of recent decisions in the Courts. I feel I must emphasise this latter point as it is difficult to anticipate how these decisions will affect the loss ratio of the current year. There is an amount available for transfer to the profit and loss account of £13,085.

Marine Account.—Last year the chairman voiced the anticipation that the anxieties and difficulties of recent times would reflect themselves in the underwriting accounts, and in the circumstances the transfer to profit and loss of £8,622 in respect of the year 1934 cannot be considered other than satisfactory. It will be observed that the premium income is £16,945 greater than the preceding year, which represents an increase of no less than 20 per cent.

PROFIT AND LOSS ACCOUNT

Reviewing our operations as a whole it will be observed that the transfers to the profit and loss account from the various trading departments aggregate £61,856; the addition of interest not carried to other accounts and other items makes the total amount available £84,871, against £69,331 for the previous year.

After deducting the various charges in the profit and loss account, providing £6,500 for accruing income tax and National Defence Contribution, £7,500 for general contingencies, and transferring £7,000 to the staff superannuation fund, there is a credit balance forward of £222,501. This represents an increase of £17,581 in the balance brought forward from the previous account.

THE INVESTMENTS

When addressing you three years ago the chairman told you of our cautious investment policy and indicated that in the substantial appreciation in the investments at that time we had the satisfaction that this figure provided a sum sufficient to meet any very considerable depreciation if and when this should take place. It is therefore with some measure of satisfaction I now tell you that, in spite of the severe fall in securities generally during the year 1937, the value of our investments exceeds by a substantial sum the conservative figure at which it appears in the balance sheet.

The total assets of the company standing at £3,216,254 reveals an increase of £87,615 over the preceding year.

The report and accounts were adopted.

CUNARD STEAM SHIP COMPANY

POLICY OF NEW SHIPS

BIG INCREASE IN ATLANTIC TRADE

The sixty-first ordinary general meeting of the Cunard Steam Ship Company was held, on Tuesday, the 26th instant, at Cunard Building, Liverpool.

Sir Percy E. Bates, Bart., G.B.E., chairman, presided.

The Chairman, in his address, said:—The Cunard profit and loss account, after providing the usual depreciation, is £1,700 better than last year. On paper the company is still marking time, but in fact there is real progress.

For the first year since the formation of our major subsidiary, Cunard White Star, Limited, both companies have a clean certificate from the auditors, and this is a fact of importance to you because, without it, making money available for dividend by either company is very difficult. The reason for the clean certificate lies in the Atlantic, where the 1937 results of Cunard White Star have enabled that company to retrieve a substantial portion of the past and the directors to present figures which should form a firm basis for the future. Operating expenditure is up by £623,315, due to increases in the cost of every item. As we have done more business on the Atlantic, carried more passengers and more cargo, operating receipts are higher by £1,340,722, and the working improvement amounts on balance to £717,407, showing a total operating profit of £1,305,829.

SUBSTANTIAL DEPRECIATION

Consideration of the figures encouraged the directors of Cunard White Star to try to set out on a policy of depreciation which would be sound; £135,143 has been written off the "Queen Mary" in respect of 1936 and £976,280 has been written off the fleet as a whole in respect of 1937. The balance of profit and loss account carried down is £146,351, against £546,659 last year, when no depreciation was written off the ships at all.

Dealing with the Cunard White Star balance sheet, cash is lower by £465,056, mainly because the whole of the money spent during the year on ships No. 552 and No. 1029 has been provided out of current cash. The amount so expended was £1,535,595, which during the year was gradually added to last year's fleet figure of £18,717,400. The gross total has been reduced; first by the depreciation written off in cash in the profit and loss account amounting to £1,111,423, and second by £6,348,662 from the share premium account, leaving a figure for ships and payments on account of No. 552 and No. 1029 of £12,962,148.

By itself this means little, but taken in conjunction with the profit and loss account it means a good deal. No. 552 and No. 1029 obviously will not be included in any depreciation account until they are delivered—No. 552 in 1940 and No. 1029 in 1939. If the company maintains a yearly allocation out of earnings of £976,280 in respect of the older ships and the "Queen Mary," the balance-sheet figures now reached for these ships will be reduced to scrap values when the "Queen Mary" attains the age of 25 years and when each of all the other ships attains the age of 20 years. We believe this to be an attainable target as well as a correct one in the sense that further annual shipbuilding of an order approximate to our annual depreciation figure should enable the company to maintain its place in the Atlantic.

MONEY FOR NEW SHIPS

There are other points on which you should be informed, notably that depreciation written off the "Queen Mary" has been remitted to H.M. Treasury in cash, to be held by them in accordance with the terms of the agreements and relative trust deeds. Such money is available on the application of the company, but at the discretion of the Treasury, to be applied in or towards the acquisition by purchase or otherwise of steamships or other vessels suitable for the company's business. We have not yet had occasion to ask for this money to be made available to the company for shipbuilding, and for the time being it is lying with the Treasury and will be invested for the account of the company. I am satisfied that on a slight adjustment of anticipatory arrangements already completed in respect of finance for No. 1029, the "Queen Mary" depreciation money remitted or to be remitted to the Treasury would be available to take its proper place with our free money or with finance provided by others.

To sum the matter up, the Cunard White Star profit and loss account and balance sheet provide £223,151 towards carrying on for 1938 a plan for depreciation on balance-sheet figures which have logic behind them, and for these we claim your commendation.

In the Cunard Company's own balance sheet the mortgage on our Liverpool building now stands at £300,000, £120,000 having been

paid off during the year and the remainder renewed at a lower rate of interest. Deposits with the company are lower at £691,019. On the credit side shares in other companies standing in the books at £119,346 have returned over 7 per cent. I have kept till the last the large figure for shares in subsidiary companies, £13,675,225. The pledged security, Port Line shares, T. and J. Brocklebank shares, and our Liverpool building can be relied upon to provide for our mortgage debt, and, I think, with a good margin. The book value of our Cunard White Star shares remains unchanged at £9,181,777.

LARGEST LINK WITH U.S.A.

This represents our permanent stake in the Atlantic, and we are concerned alone in what it can be made to yield. The figures show clearly what it produced last year; what it may produce this year depends mainly on factors outside the company. The company is the largest link between Europe and North America, and its prosperity is entirely bound up with the prosperity of these two continents. Up till recently the prospects have not been encouraging. There have been political disturbances in Europe and economic disturbances in the United States. I think in both respects matters are improving. There is still time for 1938 to make a good showing if conditions in Europe and the United States continue to improve.

I think you are in as good a position as I am to forecast the future. That you have a good organisation working on both sides of the Atlantic is shown by the large increase in the business handled in 1937 without corresponding increase in organisation expenditure. If the business is there we can get it.

The policy of building new ships is in no way responsible for the absence of dividends, and indeed, in my view, is the only policy which can lead to their resumption. Shipping of any kind is a highly competitive trade, and Atlantic shipping is perhaps more keenly competitive than any other form of it. We must continue building or our business will be taken by others. There are two ships building at the present time, No. 552, to be called "Queen Elizabeth," and No. 1029, to be called "Mauretania." Contracts for both ships were most fortunately placed before the recent rise in prices. Both ships are absolutely needed for the company's business, and, indeed, I am very glad that the new "Mauretania" will be in service next year.

The report and accounts were adopted.

JAMES W. COOK AND COMPANY, LIMITED

SATISFACTORY YEAR'S TRADING

The forty-first annual general meeting of this Company was held, on the 22nd instant, in London.

Mr W. J. Clarke (chairman and managing director), who presided, said: The year just passed has been one of unremitting pressure, which has been crowned with success because we have been able to redress the balance by somewhat increased dividends from our subsidiaries.

As I foreshadowed last year the gross profit on trading shows very little improvement, which is due to another short crop in dried fruit handled at our wharves and, in the case of lighterage, to rising costs which we were unable to recover by any commensurate rise in rates. I am glad to say that a revision upwards took place generally in the port but only at the end of the year, so that we could not feel the benefit we are enjoying in 1938.

I may say that the opportunities presented to us will require a substantial capital expenditure. How this will be met will be a matter of earnest consideration by your board so that it can be financed in the wisest possible way and of which you will hear at some later date.

With regard to the subsidiaries, the Bulk Oil Steamship Company has had another successful year. It has paid a dividend to the parent company and carries forward in their accounts more than they brought in.

Eastern Roadways—This company has continued its policy of enlargement. It again has been able to pay a dividend to the parent company, and after writing off its heavy depreciation carries forward more than it brought in.

Days Transport—This business works in the Ipswich and London area. They paid us this year their first dividend, and that has not absorbed the whole of their profit, so that they carry forward to this year more than they brought in last.

You will see, therefore, that in the main I can give you nothing but a satisfactory report of our activities which I hope and believe we shall continue to enjoy.

The report and accounts were unanimously adopted and a final dividend of 7½ per cent., less income tax, on the ordinary shares, making 10 per cent. for the year, was declared.

HUDSON'S BAY COMPANY

EFFECT OF FALL IN PRICES

The two hundred and sixty-ninth annual General Court of the Governor and Company of Adventurers of England Trading into Hudson's Bay was held, on the 26th instant, at Beaver Hall, Garlick Hill, London, Mr Patrick Ashley Cooper (the Governor) presiding.

The Governor, in moving the adoption of the report and accounts, said: When I addressed you last year I expected that our results this year would be no worse than last year, and, therefore, I am disappointed that I have to submit to you to-day a profit and loss statement which shows that our profits are £57,000 less than in the previous year. The reasons are not far to seek. Trading conditions in all countries in which we operate, with perhaps the exception of Great Britain, are now definitely worse than they were this time last year. During the earlier part of the year there was a general maintenance of trade, but, with falling commodity prices, a wave of lack of confidence spread over the world. We first felt it in the international markets of the fur trade, then in our operations in the United States, and finally in our stores department in Canada. It is there that we have our largest operations, and therefore, although the recession reached Canada last, we felt it sharply when it did arrive.

On the question of a dividend, we were faced with considerable difficulty. In the last two years we have paid to the preference shareholders dividends amounting to 37½ per cent. on their shares, wiping out the arrears and bringing payments of dividend up to date. We were thus clear to deal with the question of a dividend on the ordinary shares. This year we were faced with a much reduced profit, but after providing for the preference dividend we are left with a balance of £110,000 on the year's working, and in all the circumstances we felt justified in recommending to you a dividend of 3 per cent., less tax, from trade on the ordinary shares. On the land account you saw that we had only earned £13,000, but we felt justified in recommending a dividend of 1 per cent.

GENERAL CONDITIONS

On the whole 1937, and particularly the earlier part of it, was a good year for Canada. With the single exception of wheat, the output of every major commodity was greater than in 1936.

But against this cheerful picture there were dark spots. Construction still lagged behind. The value of Canadian field crops was 10 per cent. lower.

When we look at the major crop disasters in Saskatchewan, we must not be too discouraged, for you will notice that, while 1937 was by no means a satisfactory year from the point of view of moisture, nevertheless Manitoba and Alberta showed marked improvement, and an extension of the better moisture conditions to Saskatchewan would, I have no doubt, bring similar sharp recovery.

Canada is dependent on conditions in other countries, and particularly in the United States, and if economic conditions in that country do not improve the outlook for Canada is not reassuring. If before long there is an improvement in the United States we may well be saved from a serious recession in our business activity, but at this moment it is impossible to foretell what may happen.

The set-back in our profits was mainly due to the fur trade. The sharp decline in the profits was due to the severe fall in fur prices during the year.

THE OUTLOOK

During the year the deputy governor and I visited Canada and had the opportunity of seeing Mr Allan and the other members of the Canadian committee and the principal officers. As to the future, as I have told you, up to the middle of the autumn the recession in business in the United States had not caused any serious decline in our Canadian business, but we cannot ignore the fact that events in that great country have a very direct effect on our operations. If there is an improvement in the United States, then we may be able to sustain our progress. If, on the other hand, the recession in the United States should continue, or, as some fear, develop into a major depression, then our situation will indeed be difficult.

In these circumstances I cannot hold out to you any hope of marked improvement in the results of the current year and, indeed, I think we shall be fortunate if we are able to maintain even the reduced profit which we show to-day.

At the same time, taking the longer view, I believe that you can look forward to the future with confidence and with expectation of further improvement, efficiency and greater profits.

The report and accounts were agreed to.

OLYMPIC PORTLAND CEMENT COMPANY, LIMITED

DIVIDEND OF 7½ PER CENT.

TAXATION CONDITIONS IN U.S.A.

The twenty-seventh annual general meeting of the Olympic Portland Cement Company, Limited, was held, on the 22nd instant, at 7 Gracechurch Street, London.

Mr John Lawson (the chairman) said that the net profit for the year was about £12,000 less than in the preceding year, but the directors felt justified in recommending a final dividend of 5 per cent. (making 7½ per cent. for the year) as the distribution in the preceding year was on a conservative basis.

Last year he referred to the doubt which existed as to the method of charging the 10 per cent. U.S.A. Withholding Tax from dividends distributed to British shareholders. Two days ago they received a cable from their agents that the Inland Revenue authorities had now decided that the tax was applicable on net dividends and not on gross. The company would respond for the Withholding Tax on the present dividend, but it was expected that future distributions to United Kingdom shareholders would be subject to deduction of British income tax and 10 per cent. United States Withholding Tax. The directors had under consideration measures whereby somewhat more than 15 per cent. of the total profits of the company would be earned outside of the United States, which would free the company of its obligation to deduct 10 per cent. United States Withholding Tax on dividends distributed to British shareholders.

Work at the factory proceeded smoothly during the year. Mr Krabbe, the works manager, in his annual report, referred to the economies effected.

The company's first contract for deliveries of cement to Coulee Dam was almost finished in December last, and there remained only about 10,000 barrels still to be delivered. He was pleased to report that the quality of cement delivered on this contract had met with complete acceptance.

Cement business in the U.S.A. during 1937 was well maintained in comparison with the preceding year. Production and deliveries for 1937 showed a small increase of 3.4 per cent. and 1 per cent. respectively over the totals for 1936. It was noticeable, however, that in the last month of the year production was 21½ per cent. and deliveries 23½ per cent. lower than December, 1936.

CONDITIONS IN THE U.S.A.

Conditions in the U.S.A. had been for some years increasingly dominated by domestic politics. The full effects of the Undistributed Profits Surtax Bill passed in 1936 were not realised by industry until income tax returns were made at March 31, 1937, and the criticism by President Roosevelt in April of the rapid rise in the price of durable goods, including cement, was almost immediately followed by the "gold scare."

It seemed probable that the Undistributed Profits Surtax Bill would be substantially amended in spite of the President's protest, and only a short time ago his Administration Reorganisation Bill had been defeated, and it was not clear at the moment whether his latest proposal to spend several billion dollars in various relief measures would have the approval of Congress so far as the direction in which the money should be spent was concerned.

The President's reference to cement last year was followed up by his recent attack on what he called "administered prices" covering steel, cement or other materials with which the spending of Government money was concerned. It appeared to be aimed at collusive practices supporting building material prices, and it was proposed that all bids on Government work were to be based on the f.o.b. prices at the factory and the same price must be available to any contractors bidding on Government work. He did not think this would affect the company materially as their prices hitherto on Government work had been on an f.o.b. basis.

Having in view also the large spending programme proposed by the President, the company's agents indicated in their latest advices that they did not fear the completion of the Coulee project would not be proceeded with, and some weeks ago a meeting was held in Denver with the Bureau officials to discuss the quality and quantity of the cement required. It was then estimated that a total of about six and a quarter million barrels would be required, of which the company should get its fair proportion, but it was thought that it would be some time yet before bids were called for.

The same spending programme would no doubt include highway construction, but as to what proportion affecting the State of Washington their agents were as yet unable to say. They advise that the outlook in regard to general business in their territory should be about the same as last year.

The report was unanimously adopted.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY, LIMITED

FURTHER EXPANSION

The forty-fourth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held, on the 26 instant, at the Great Eastern Hotel, London.

Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (chairman of the company), in the course of his speech said: The net revenue of the company for the year amounts to £114,147, as against a corresponding figure of £103,842 for the year 1936, or an increase of £10,304. The directors recommend a final dividend of 8 per cent. for the year (free of tax) on the ordinary shares.

The Singapore branch shows progress, having added 387 exchange lines during the year. I regret to say, however, that the application made some time ago for permission to introduce a message rate has again been refused by the Government of the Straits Settlements, although several modifications to its original suggestions have been put forward by the company. Your directors are, however, giving the matter further consideration, and I hope when I next address you that a solution of the difficulty will have been found.

The working of the Mauritius branch has again shown a loss. This has been our experience in Mauritius for some years past, and has been the subject of long and earnest consideration by the directors. The Government maintains a telephone system of its own, and the conclusion we have been driven to is that there is not room on the island for two separate telephone systems.

We decided, therefore, that the best plan would be for us to suggest to the Government that they should purchase our system, and some time ago we opened negotiations in this sense. I am glad to inform you that an agreement in principle has now been arrived at, and that during the course of the current year the Government will take over our system. Final arrangements have not yet been completed, and it is too early to lay details before you. I shall be in a position to do so next year. In the meantime I am sure that you will agree with us that the course we have taken is in the best interests of the company.

BOMBAY, BENGAL AND MADRAS

I come now to our subsidiary and associated companies. The Bombay Telephone Company continues to make good progress with the addition of 2,268 new exchange lines during the year. As I indicated last year, the chief preoccupation of this company has been to devise means for meeting the rapid expansion which has been taking place and which, I think you will agree, is by no means an unsatisfactory state of affairs. They are doing this very successfully, as is indicated by the additional growth of exchange lines to which I have already referred. They have paid the same dividend as for 1936, namely, 8 per cent.

The Bengal Corporation has also had a good year and has added 1,399 new exchange lines. That company has paid an additional 2 per cent. by way of bonus for the year ended June 30, 1937, making a total distribution of 10 per cent. and, although conditions are not quite so favourable at the moment as we could wish, there is reason to hope for steady progress and expansion in the future.

The Madras Company has put on 276 new exchange lines and pays the usual dividend of 8 per cent. plus a bonus of 1 per cent., or 9 per cent. in all. As already mentioned, a further issue of shares was made by this company during the year to meet the requirements necessitated by the expansion of its system, and generally this company may be regarded as being in a very healthy and prosperous condition.

RANGOON AND HONG KONG

The Rangoon Company has also made some progress, though not, perhaps, quite as much as could have been desired. But a new method of charging was introduced as from January 1st this year, incorporating a system of message rate and as the results so far have been decidedly encouraging, we may look for greater expansion as soon as the system and its advantages become more generally known and appreciated. The dividend is the same as last year, namely, 6 per cent.

The China and Japan Telephone and Electric Company and the Hong Kong Telephone Company.—The Hong Kong Company has made excellent progress during the year, with an addition of 1,085 new exchange lines, in spite of the conditions prevailing in China during the latter half of the year. The Hong Kong Company has paid dividends amounting to 12 per cent. and the company has enabled the China and Japan Telephone and Electric Company to make its usual distribution of 6 per cent.

The report and accounts were unanimously adopted.

Volume and Value of Departmental Store Sales

The following charts show the course of the volume and value of department store sales since 1935 on the basis of the indices calculated by the Retail Distributors' Association. The value indices relate to a constant sample of department store sales, and the volume indices have been obtained by correcting the value of sales by means of an index of prices. The first five charts show the course of the volume and value of sales in the principal sections of department stores, while the sixth diagram compares the course of total sales with changes in the volume of transactions. It will be seen that the volume of sales took a downward turn last year when their value was still rising. The trends of retail trade and general business activity are analysed in an article on page 243.

Finance

GOVERNMENT RETURNS

For the week ended April 23, 1938, total ordinary revenue was £13,594,000, against ordinary expenditure of £9,076,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £9,089,000, against a deficit of £1,937,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On April 22nd, applications at £99 17s. 5d. per cent. for bills to be paid for on any day of the following week were accepted at to about 41 per cent. of the amount applied for. Applications at higher prices were accepted in full. £45.0 millions of Treasury bills are being offered on April 29th.

operate from now onwards on the broad plane of European diplomacy remains to be seen; but neither Herr Hitler nor Signor Mussolini can safely ignore their manifest import.

Moreover, they have had a sequel. The Italo-French Pact, also discussed in London last week-end, is apparently to be ready by mid-May. So Herr Hitler's discussions with the Duce would need to be firm, frank and fearless. Not, of course, bluntly intimidating like those he had had with Signor Mussolini's late *protégé*, ex-Chancellor Schuschnigg, at Berchtesgaden eleven weeks ago. In Rome, do as Rome does; the punctilio of the occasion should be preserved, if only to reassure Signor Mussolini and confound French and British observers. Besides, there was that telegram the Fuehrer sent when first he invaded Austria: *Mussolini, Ich werde Ihnen dies nie vergessen*. Perhaps the Duce would never forget it, either.

But even if these conjectures be not far from the truth, and even if Fuehrer and Duce plaster over the cracks in the Rome-Berlin axis, what of the divergences between that axis and the new one: the London-Paris axis? It is scarcely likely, as some reports aver, that the Fuehrer will demand a military alliance with Italy. To their Foreign Ministers, Herr von Ribbentrop and Count Ciano, will probably be left all detailed discussions, while the two principals take the limelight. The net result, however, would seem to be that the Duce's rôle must be that of "the daring young man on the flying trapeze," swinging between Berlin and London. For, since the Anglo-Italian Pact, a London-Rome axis is in process of being forged; and although the Anglo-Italian Pact will not become effective until Signor Mussolini is satisfied that General Franco has won in Spain, the London-Paris axis is already in process of prolongation to Rome.

Signor Mussolini, in his outwardly successful Abyssinian and Spanish adventures, has given valuable hostages to Herr Hitler. There was the Rhineland, which enabled Germany to push south-eastwards with impunity; there was the division of powers in Spain, which left Italy with the dangerous military and submarine operations while the Germans took over the organisation and the economic resources; there was the rape of Austria and the enforced betrayal of Schuschnigg by the Duce, because he was still at loggerheads with the Western Powers; and there was Abyssinia itself, which not only aroused Anglo-French hostility but let Italy in for great military and financial commitments far from home and Libya. In all these ways Signor Mussolini has been forced into a dilemma: to choose between a settlement with Britain and France or to pull down the Austrian dyke and let the National-Socialist flood beat across all Central and South-Eastern Europe even to the peaks of the Brenner.

The purpose of the English and French Italian conversations can only be realised if Signor Mussolini acts as a brake on unreasonable German pretensions; the Berlin-Rome axis is only useful to Herr Hitler if the fear of a possibly hostile Italy restrains Britain and France from offering effective opposition to German ambitions. Neither the Fuehrer in Rome this week, nor Mr Chamberlain and M. Daladier after their London talks, can be certain that the Duce will in reality perform the European rôle for which each of them has respectively cast him. This is not to impugn his intentions—in both European directions at once. It is an ineluctable fact, inherent in the European circumstances which Signor Mussolini himself, as much as Herr Hitler, has contrived to bring about.

Holidays With Pay

IT has long been a common distinction between the so-called black-coated workers and manual wage-earners that, whereas the former have received payment for their holidays, the latter have been left to budget for themselves. There have been notable exceptions: the large retail houses of London's West End have provided paid holidays for fifty years; and, even before the war, holidays with pay were granted to certain workers on the railways, in public utility service and newspaper printing. But, twelve months ago, when the Amulree Committee began its investigations of this problem, only 1,750,000 manual workers received holiday payments under collective agreements.

The present position, however, is very different from this. Since March, 1937, the number of manual workers receiving holiday payments under collective agreements has risen to about 3,000,000. Another 250,000 manual workers are covered by holiday arrangements other than collective agreements. Nearly half a million employees on standing wages (i.e. foremen and overseers) enjoy paid holidays. And some 2,250,000 clerks, draughtsmen, typists and shop assistants take their holidays with pay. Finally, there are about 1,750,000 workpeople in public administration, defence and miscellaneous services who receive holiday payments. In all, out of 18,500,000 persons not in receipt of more than £250 a year, the Committee estimates that some 7,750,000, or over 40 per cent., are already provided with paid holidays.

The Amulree Committee's task, therefore, was not to find a means of thrusting a novel reform upon industry. Their problem was to determine how far legislation might be useful in speeding up the existing powerful tendency, in order to provide the outstanding 10,750,000 wage-earners

with holiday payments. The desirability of a general extension of paid holidays was not questioned by any of the Committee's witnesses, though its practicability in specific cases was frequently questioned. There was, however, general opposition on the employers' side to enforcement by statute. It was strongly argued that payment for holidays "could not be divorced from the general question of wages"; and that legislation would in effect be State intervention in the terms of the wages bargain.

The Committee recognised that the establishment of paid holidays through the medium of collective bargaining was greatly to be preferred to statutory enforcement. Accordingly, their proposals, published last week, constitute a judicious compromise between voluntary action and enforcement by law. They recommend that an annual holiday with pay should be established, in due course, as a condition of employment, for all workers covered by the compulsory State insurance schemes, but not immediately. They propose that, during the Parliamentary session of 1940-41, legislation should be passed to make provision for paid holidays in industry generally. But they hope that, in the interval, paid holidays will be very widely embodied in voluntary wage agreements, and recommend that Trade Boards and Agricultural Wages Committees should be empowered by statute to incorporate holidays with pay in the wages arrangements they make.

But the critical question arises how this is to be paid for. Is it to be a net addition to the wages bill, or is it to be financed by spreading the wage payments more thinly over the remaining weeks of the year? The Committee have much to say on this matter, but, broadly, they hope that, by treating the problem in an elastic rather than a rigid manner, the cost can be absorbed from the rising

product of industry, and that some of the increasing share which would naturally go to the wage-earner will go in the shape of their additional holiday payments. In some industries, indeed, there may already be an available margin; in others, such as certain hard-pressed export trades, there is no such margin. In tiny concerns, again, with one or two employees, there are difficult problems. The additional cost cannot, therefore, be crudely and abruptly added to the wages bill forthwith. Hence, the Committee desire to see the problem tackled in the main by collective agreements, and in any case by special scheme adapted to different kinds of employment.

It will be recognised that the Committee's plan will involve considerable adjustments and carefully thought out administrative devices, particularly in cases where employment is intermittent or constantly changing; for holiday pay on the scale contemplated by the Committee involves over 3 per cent. of the wages bill paid to insured workers, or, say, £40 millions, of which existing arrangements account for £16 millions. The ease with which the remainder can be dealt with depends on economic conditions. The tempo of industrial activity, which until recently made it easy for many firms to absorb the cost of paid holidays, has lately been abated. Moreover, the incidence of holiday payments is not uniform over all industries, whose labour charges vary from over 70 to as low as 4 per cent. of total costs. Nevertheless, recent experience suggests that, in the absence of grave depression in trade, the relatively low cost of holidays with pay for all insured workers should be absorbed with comparative ease in the next few years. In

industries with intermittent or casual employment, such as building or port transport, it may be necessary (as the Committee suggest) to introduce some such system as the stamping of employees' cards, so that the cost may be proportionately shared by the worker's various employers. These are practical problems, and the goodwill of both capital and labour will be needed to solve them. But, in the last resort, the years proposed by the Committee for definitive legislation should, according to prophecy, be years of reviving trade, when the trend of wages will be upward.

The Committee's proposals echo the authentic voice of our times. A notably enhanced national interest in questions of health and physical fitness has added powerful arguments to the case for paid holidays; and industrial efficiency cannot but gain by their general provision. Indeed, the greatest obstacles to this most desirable reform may, in the event, prove to be outside rather than within the industrial field. There will be need for the Ministries of Labour and Education to encourage the spreading of holidays over the whole period between May and October to prevent congestion; and for local authorities and other bodies to supervise the cheap, efficient and adequate provision of holiday facilities.

Difficulties of this sort, however, are far from insuperable, and they should not be allowed to obscure the fact that paid holidays will probably provide as great a dividend of individual happiness for as low an addition to labour cost as any other social reform on the immediate agenda of politics. And to achieve it by agreement will be a triumph for moderation.

Scotland's Exhibition

ON Tuesday, amid the tumultuous cheers of an enthusiastic crowd, His Majesty the King opened the Empire Exhibition in the "Second City of the Empire." This is the fourth, and much the most ambitious, of Glasgow's exhibitions, surpassing those of 1888, 1901 and 1911 both in size and in the breadth of its conception. The Exhibition has a setting of rare beauty in Bellahouston Park, at the outskirts of Glasgow, and its design is a testimony to the skill of its organisers and the good taste of its architects.

A multitude of modern pavilions (not forgetting churches and a Highland village) is grouped around a hill which dominates the Exhibition. Industrial products are displayed in three great palaces and in more than forty pavilions of individual manufacturers. Empire countries have their own palaces, with Eire's pavilion peacefully surrounded by those of the other Dominions. The Exhibition, however, is much more than a shop window for industry. In a Concert Hall visitors will hear some of the world's finest orchestras. In the Palace of Arts they will find masterpieces from many of the best of Britain's public and private collections. Some £10 millions have been expended on the hundred pavilions which house the Exhibition and on their contents. The organisers of the Exhibition expect an attendance of fifteen to twenty million

people; and if the Exhibition is as successful as it deserves to be, no small measure of credit will go to them for their zeal, their wide imagination and their skill in organisation.

On the highest point of the Exhibition grounds stands a 300-foot steel tower, the view from whose summit, extending over Glasgow's environs towards the mountains, will naturally turn the thoughts of many visitors to Scotland, past, present and future—to all for which Scotland has stood and yet shall stand. An economist seeking the appropriate symbols of her industrial greatness will find them in the gleam of furnaces, the whirr of machinery, the clang of shipyards. How far has Scotland shared in Britain's trials and prosperity in recent years? What are her peculiar problems to-day? And how can she best meet them?

To the first of these questions the accompanying chart provides an answer which, it must be admitted, is not wholly encouraging. The diagram compares the trends of unemployment in Scotland and in the United Kingdom as a whole, on the basis of the annual average proportion of insured persons unemployed since 1929. Clearly, the impact of the recession in business activity between 1929 and 1932 was more marked in Scotland than in the United Kingdom as a whole. During this period an increase of 11.7 per cent. in the proportion of insured persons un-

PROPORTION OF INSURED PERSONS UNEMPLOYED IN SCOTLAND AND IN THE UNITED KINGDOM (Annual Averages)

employed in the United Kingdom was accompanied by a rise of 15.6 per cent. in Scotland. And as yet, despite a substantial measure of recovery, Scotland has not regained all the ground she lost in 1929-32. In 1937, when the proportion of insured unemployed in the United Kingdom averaged 10.9 per cent., it was still 15.9 per cent. in Scotland. Nor can the persistence of a higher proportion of unemployment in Scotland be attributed to a relatively greater growth in her working population. Between July, 1929 and 1937, the number of insured persons aged 16 to 64 increased by 13.2 per cent. in the United Kingdom but by only 10.1 per cent. in Scotland.

That Scotland has been a laggard in recovery reflects in no way on the industry of her people or the skill of her workers. The causes are to be found largely in the balance of her trades and the nature of her chief markets. For the coal, iron and steel, metal and shipbuilding industries count for more, relatively, in Scotland than elsewhere, and an unusually large share of her prosperity depends on export trade. Moreover, in some of Scotland's leading industries—particularly coal—mechanisation has considerably increased the output of the average worker, but the extent of the market for the products of those industries has shown no proportionate increase. On the whole, the loss of exports is probably the most important single factor responsible for the lag in Scotland's recovery. Last year, for example, the volume of mercantile tonnage launched by Clyde shipyards was only 443,966 gross tons, against 588,336 gross tons in 1929. During the same period, the output of coal fell from 34.2 million tons to 32.3 million tons, while the average number of persons employed declined from 100,000 to 89,500. And the decline in exports of jute goods from £5.3 millions in 1929 to £3.3 millions last year, was, in fact, a reflection of increased competition from India's jute industry, which Scottish enterprise so largely fashioned in its early stages.

Scottish industrialists are well aware of these problems and their implications. Specialisation, profitable in the past, carried its own peculiar disadvantages, and the trend of world economic developments has accentuated them. Re-armament, admittedly, is only a palliative, which leaves unanswered the question whether events will not force upon Scotland, sooner or later, a broadening of her industrial structure. The implications of such a problem would be far-reaching, but this would not be the first time that Scotland had faced—and overcome—difficulties.

The first steps, indeed, towards increased diversification of Scottish industries have already been taken. The Exhibition itself is an excellent shop window for Scotland, and the recently established trading estate at North Hillingdon is designed to attract and facilitate the setting up of new enterprises, particularly in the "light" trades. But these major economic adjustments cannot be made in a day or a year. Scotland's basic problem is concerned not only with industries but with markets.

As Mr C. A. Oakley has shown in a survey of recent industrial developments carried out for the Scottish Development Committee,* formed during the depression, much has already been accomplished. Much more, however, remains to be done. Any large-scale economic re-adjustment is bound to cause much social distress and wastage of human and material resources. And the difficulties are all the greater when, as at the present time, the outlook for British industry as a whole is distinctly less confident. But Scottish industrialists are far from pessimistic, and, given the sterling qualities of the Scottish people, there is every reason for their hopefulness. If this week's Exhibition proves one thing more than another it is that the determination of the people of Scotland is as strong as ever and that their vitality is undiminished.

* "Scottish Industry Today." C. A. Oakley. The Moray Press. 292 pages. 7s. 6d.

Europe's Minorities

THE problem of minorities has always been with us. It was recurrent even in the early Middle Ages, when communities were nearest to uniformity. The mediæval church could never quite get rid of its heretics and Jews; and from the dark ages to the early modern age religious minorities were the victims of an intolerance which, to-day, is mainly directed against national minorities. In the sixteenth and seventeenth centuries religious uniformity, in the nineteenth and twentieth centuries national uniformity, has been the paramount aim of every sovereign Power in the sphere of domestic policy. The minorities problem as we have it in Europe arises from struggles to impose, and to resist the imposition of, the stamp of the dominant nationality upon the subject nationalities within the frontiers of this or that sovereign State.

Actually the term minorities is not very exact, for we are really concerned with a problem of subject and dominant elements in local sovereign States. For example, in the present United Kingdom the Welsh-speaking and Gaelic-speaking elements in the population are in the literal sense linguistic minorities, while the Scots as a whole and the Ulster Irishmen are two national minorities. Yet no minorities problem has arisen, because none of these minorities is conscious of serious grievances against which it is up in arms. There is only one minority in the United Kingdom which is to-day in this state of mind, and which therefore constitutes a minority problem in the practical sense. That is the Catholic minority in the Six Counties.

Conversely, of course, a minority problem in the practical sense may exist even though the aggrieved subject element in the population of the State happens to out-

number the oppressive dominant element. The Turks, for example, were numerically a minority in pre-War Turkey; so were the German Austrians in pre-War Austria, i.e. in the non-Hungarian parts of the pre-War Dual Monarchy. Yet in both pre-War Turkey and pre-War Austria there were minority problems in which not the Turks, and not the German Austrians, but the Greeks, etc., in the one case, and the Czechs, etc., in the other, were the aggrieved and discontented parties.

Thus the problem of minorities is really one of "where the shoe pinches." The shoes with which Europe is uncomfortably shod to-day are the four peace-treaties that were worked out, and imposed on the vanquished countries, in 1919-21 at the Peace Conference of Paris. The first test of the post-War political map of Europe is a comparison with the pre-War map. On this test the present map comes out well. The statesmen at Paris did make a genuine attempt to re-draw the map more in accordance with the principle of nationalities, which is recognised to-day by most people as the proper basis for the articulation of Europe into local States. The peace settlement brought back on to the map a number of nations (Poles, Czechs, Lithuanians, Hungarians, Finns, etc.) which for generations had possessed no independent national state of their own, while to others (Jugoslavs, Roumanians, etc.), which had been partitioned between different sovereignties, it gave national unity under their own flags. As a result, and it is an admirable result, the subject populations with a grievance—or, in the current term, the "minorities"—on the post-War map represent a much smaller proportion of the total population of Europe than they amounted to on

the pre-War map. More than that, the status of minorities has been juridically recognised, and their rights defined and guaranteed, in the minority treaties or declarations which a number of successor-States (the Little Entente countries, Greece, Albania, Poland and the Baltic States) have concluded with the principal Allied and Associated Powers or made to the Council of the League of Nations.

Unfortunately, however, there have been changes for the worse as well as for the better. While, on the one hand, the aggregate minority element in the population of Europe has been substantially reduced in numbers and has been given legal protection (on paper), on the other hand, the bitterness of feeling has been accentuated by an intensification of the national fanaticism of both the subject and the dominant elements. It has been further aggravated because there has been a widespread reversal of roles—the pre-War top-dog becoming the post-War under-dog, and *vice versa*; e.g. as between Magyars and Roumanians in Transylvania and between Germans and Czechs in Czechoslovakia. These new post-War difficulties have been aggravated by the rise of a totalitarian form of State with which the whole conception of toleration for minorities is virtually incompatible—as is forcibly illustrated by Herr Henlein's minimum demand of territorial autonomy under a Nazi dispensation for the German minority in Czechoslovakia, as part of the Czechoslovak State.

The German minority in Czechoslovakia is the largest and most dangerous piece of the largest and most dangerous minorities problem in Europe to-day: the problem of the German populations whom the peace settlement left outside the frontiers of the Reich. If we leave out of account the German-speaking Swiss and Alsacians, who are not Germans in national feeling or aspiration, the Germans outside the Reich on the pre-Anschluss map amounted to more than 13 millions, of whom nearly half were in post-War Austria (6,500,000). Of the remainder, nearly half, again, are in Czechoslovakia (3,123,000), while the other half is distributed between Poland (1,059,000), Roumania (713,000), Hungary (551,000), Yugoslavia (505,000), Danzig (306,000), Latvia (201,000), Italy (199,000), Memel (59,000), Denmark (35,000), Lithuania (29,000), Estonia (18,300). There are also remnants of once flourishing German settlements in Southern Russia, as far east as the Volga.

These German outlanders (*Auslandsdeutsche*) may be classified in several ways. The Germans in Italy (South Tyrol) have been perhaps the worst treated, those in Denmark perhaps the best treated, subject minority in post-

War Europe. Again, the Germans in Poland, Danzig, Memel, Denmark, Czechoslovakia, Italy and Yugoslavia have undergone the painful change of status from top-dog to under-dog, since all these minorities were formerly included in either pre-War Germany or pre-War Austria. The rest were under-dog before the War, when they were included either in pre-War Hungary or in pre-War Russia; yet even these have changed their status for the worse, since they used to be the next-most-favoured nationality after the Magyar or the Russian ruling race, while some of them—e.g. the Baltic German barons and the Transylvanian German burghers—used to be in a position of privilege. Finally, we may contrast the German minorities in Czechoslovakia, Poland, Danzig, Denmark, Memel and Italy, who are contiguous to the Reich, with the rest, who are scattered so thinly and flung so far and wide that they could only be united to the Reich through an outright annexation of the whole of Central and Eastern Europe.

Herr Hitler is using these German outlanders as Joseph Chamberlain used the British uitlanders in the Transvaal before the South African war. He is playing upon the feelings of the Reich Germans by harping on the misery of their brethren under foreign yokes. But he is not making the most of the really worst cases. He is silent on the grievous Italian oppression of the Germans in the South Tyrol and on the rather serious Polish oppression of the Germans in the lost Prussian Ostmark. He is vocal about the less unhappy Germans in Czechoslovakia, and he is also making trouble for Denmark, whose treatment of her tiny post-War German minority has been exemplary. For Herr Hitler the existence of the German outlanders is primarily a lever for the political aggrandisement of the Reich along the line of least resistance; and along this line Denmark and Czechoslovakia come before Poland and Italy.

Politically, Czechoslovakia is a splendid field for German manoeuvres, since there is a Hungarian and a Polish, as well as a German, minority within the Czechoslovakian frontiers. Thus, in browbeating Czechoslovakia, Germany can enlist the sympathies of two allies. There is also a Hungarian as well as a German minority in Roumania, and a Jugoslav as well as a German minority in Italy. In all these cases, Herr Hitler can, if he chooses, find associates in exploiting minority grievances. Indeed, in his hands, championship of minorities, in skilfully chosen order, may be the key to the establishment of Germany's domination over Europe.

Topics of the Week

Food and Aeroplanes.—Hardly a week passes without some new announcement of intensified preparations for war. The past week has seen two important stages in the British effort for preparedness. The need for more rapid production of aircraft has been officially recognised by the appointment of a Supplies Committee of the Air Ministry to organise and accelerate production. The Chairman of the Committee, it is perhaps significant to notice, is not Lord Swinton, the Secretary of State for Air, but Lord Winterton, the Chancellor of the Duchy of Lancaster. The other members include not only the heads of the departments directly concerned at the Air Ministry, but also the chairman of the Society of British Aircraft Constructors and a representative of the Treasury, who is to have authority to sanction expenditure. This Committee is part of a big scheme to work double shifts in the aircraft factories and to carry out, as rapidly as possible, an expansion of the metropolitan force of the R.A.F. from the present programme of 1,750 first-line machines to a figure almost twice as large. On the side of

passive defence, a report of the Food (Defence Plans) Department of the Board of Trade—the embryo Ministry of Food—shows that considerable progress has been made in building up a shadow control organisation. The chief lesson that has been learned from the experience of the last war is that control is necessary before a shortage of food appears. Accordingly, plans are being made for the institution of complete control over the purchase of foreign foodstuffs, imports, distribution and retail sales, including prices, in the first weeks of a war. These plans are being worked out in consultation with the trades affected and for every commodity or group of commodities, a shadow organisation is already being called into existence. These two developments of the week are, in the circumstances of the times, welcome evidence of the energy that is being devoted to the defences of the country. But they are not enough to allay the dissatisfaction with the state of the re-armament programme, which seems to grow rather than decline with time. The two chief points for criticism are the slowness of expansion in the air and the

continuance of muddle and delay in the preparations for ground defence against air raids. The Government will have to face a sustained attack on these points in the House of Commons in the next few weeks, and the critics will by no means be confined to the ranks of the Opposition parties.

A Long-Service Army.—Another stage has been reached in the reorganisation of the terms of service in the Army which Mr Hore-Belisha is carrying through. Last year's experiment of allowing selected men, after serving their seven years with the colours, to re-enlist for a further period to qualify for pension, is apparently deemed enough of a success to warrant a further step in the same direction. Men are now to be allowed to enlist for 12 years with the colours, with the absolute right of re-enlisting for a further nine years, and of then qualifying for pension. The age limits for enlistment are to be 18 and 30, so that the oldest of these long-service soldiers will be 51. The new recruit thus has two quite distinct alternatives to choose between. He can enlist in the new long-service army and make a life's career of being a soldier. Or he can enlist for a short period with the colours and a further period with the reserve. At present, these terms are seven years and five years respectively, but it would be a logical development of the new scheme for them to be somewhat shortened. The great defect of a long-service army is that it creates no constantly replenished reserve of young, trained soldiers. For this reason the number of long-service recruits is to be limited to 5,500 a year. But a shortening of the short-service term, with perhaps a corresponding lengthening of the reserve period (say, five years with the colours and seven with the reserve) would automatically increase the ratio of the reserve to the serving army. These changes provide further evidence of the existence in the War Office of a lively spirit of self-examination and of willingness to admit that changing circumstances may induce the need for alterations even in the well-tested principles on which the British army has hitherto been organised.

Labour's Policy.—After some weeks of cogitation, the leaders of the Amalgamated Engineering Union have decided to meet representatives of their employers to discuss the Government's recent appeal for co-operation in the speeding-up of rearmament. This is the latest phase of a confused campaign on the part of labour against recent developments in the Government's foreign policy, which found voice in vehement protestations by Labour Party spokesmen in Monday's Commons Debate; and furnished the occasion for demonstrations of protest on May 1st. Allied with Labour's uneasiness about foreign policy are doubts concerning the progress of air defence. The Trades Union Congress have requested the Prime Minister to discuss the international situation and the arms programme with a deputation; and, on Tuesday, the Labour Party issued a statement expressing anxiety about the Government's inefficiency and delay in the air. Apart from these official steps, proposals for a Popular Front or a Peace Alliance, embracing Liberals and even Communists, as well as Socialists, are rife. A conference of the Allied and Distributive Workers, for instance, last week expressed disapproval of the Labour Party's tactics in foreign policy, recommended that the Communists should be re-admitted to the official fold, and endorsed the idea of a Peace Alliance. Several trade unions, including the powerful Mineworkers' Federation, have called upon the T.U.C. to summon a conference to discuss Spain; and a militant minority has spoken of strike action against present trends in diplomacy.

The Labour Party and the T.U.C., however, are unmoved. No conference of unions on foreign policy will be called; and, while unrelenting in their opposition to the Government's policy, the Labour Party will only move alone. There must be no unauthorised strikes or

illicit affiliations with strangers from the Left or Right. The arguments on both sides of this controversy are familiar. Communist, Labour and Liberal are not one, either in ideas or ultimate intentions, and the Labour Party's status as His Majesty's Opposition is one which many of its leaders and personnel prize very highly. On the other hand, the Labour Party offers no likely alternative government, whereas the foreign policy of the diverse elements of the Left has not only its main objects in common, but is of over-riding importance to those who hold it. Misgiving is moreover widespread in quarters outside all party circles, and this critical opinion will be far more effective on the course of events if proclaimed from a common sounding board, rather than through a multitude of loud speakers in divergent keys.

Coal in the Lords.—The House of Lords has this week subjected the Government's Coal Bill to the ordeal of a three days' debate on second reading. An ordeal it has been, since the tone of the debate has been distinctly hostile. Lord Munster and the Lord Chancellor have been almost apologetic, and almost the only definitely favourable speech has come from Lord Samuel, who was able to lend his very great authority to a plea for the public interest. Other peers, such as Lord Crewe and the Archbishop of Canterbury, declared their regretful intention of supporting the Bill, but the great majority of the speeches have been definitely hostile and the fact that the Bill received its second reading is no augury of unscathed passage through committee. The Lord Chancellor, in a speech of most commendable frankness, suggested that the reason for this hostility was to be found in the fact that the peers, among whom royalty owners and mineowners are very heavily represented, were allowing their private interests to influence their judgment of the public interest. Unfortunately, there is only too much reason to believe that this is true. It is significant, for example, that Part I of the Bill—the part dealing with the nationalisation of royalties—which received less attention in the Commons than either of the two other parts, has almost monopolised the attention of the Lords. Titled royalty owners have attacked this conservative measure of a conservative government as a precedent dangerous to the established order of society. They have criticised the arbitral award of 15 years' purchase as the capital valuation of the royalties (forgetting that royalties have for many years been valued for purposes of death duties at considerably less than 15 years' purchase). They have even wished to withdraw the agreement of their representatives to the figure of £4,430,000 as the annual value of royalties. This sort of argument will, of course, carry conviction only to those who use it. In general, the three days of debate have done less damage to the Bill than to the Lords' own reputation for disinterestedness. Of the other important proposals in the Bill—those relating to compulsory amalgamations, for instance, or those continuing the monopoly selling arrangements—there has been almost no discussion at all. The Lord Chancellor did, however, make the admission that he did not think there was going to be much successful resort to the compulsory amalgamation proposals. This, of course, merely confirms the view of those who have criticised the Bill, not, like the Lords, because it gives insufficient ransom to the royalty owners, but because it provides insufficient hope of reorganisation in the public interest.

Italy, Germany and Britain.—The courteous and festive Italian people have given Herr Hitler a great welcome; but it has not been as warm as the official reports suggest. In a country where opinion is prepared in advance for major changes of policy, the very unexpectedness of Austria's destruction was proof that it had not been foreseen and approved in Rome, as was officially stated. An English visitor to Italy, lately returned, writes that Mussolini's reference to the Rome-Berlin axis as the only reason for his acquiescence was well received. But the

prestige of the regime in foreign affairs, as well as the popularity of the axis, suffered a shock—not merely in the North, where the Germans have never been liked. Signor Gayda, who attempted recently to address a gathering of students in Rome, was heckled; and when he finally observed that the Duce was pursuing a "personal" policy altercation brought the meeting to a premature end. In such circumstances the conclusion of the Anglo-Italian agreement had an easy and genuinely popular reception. The crowd which cheered the arrival of Lord Perth at the Palazzo Chigi was remarkable for the absence of the usual blackshirt claque; and the immense Press publicity lavished on Anglo-Italian relations to the detriment of the Rome-Berlin axis is sure evidence of the importance attached thereto for internal reasons. Though the visit of Herr Hitler is unlikely to mark the end of the German association, it is equally unlikely to lead to its permanent consolidation. As far as relations with Britain are concerned, the reactions to the Anglo-Italian exchange of letters on Spain have been somewhat curious. Although Italy reaffirms her adhesion to the British formula for the proportional evacuation of foreign volunteers under the auspices of the Non-Intervention Committee, nothing would cause more amazement in Italy than if the occasion for giving effect to this obligation should soon arise. The popular and official view is represented by Signor Gayda's description of the conditions to be satisfied before the agreement can come into force as "the withdrawal of the Italian forces from Spain, which is naturally being prepared together with the decisive victory of Franco and the British recognition of the Italian Empire." In fact, restoration of friendly relations with England has enabled the Press to be more blatant than ever in publicising the exploits of the legionaries. On the other hand, some surprise has been expressed at the explicitness of Count Ciano's assurance that Italy seeks no privileged economic position in Spain. Many people find it hard to believe that Italy will reap no other reward than glory for her vast expenditure of money, munitions and men.

Central Europe and the Powers.—Last weekend Herr Henlein, titular Leader of the Sudeten German Workers' Party, went one worse than the week-end before when he declared that his previous eight-point demands on Prague as a basis for discussion represented not a maximal but a minimal programme. He also reiterated that it was the only basis on which he would even negotiate. This has gravely embarrassed the British Government, which, after the discussions with the French Prime Minister and Foreign Minister at the end of last week, was preparing to put considerable pressure on President Benes and the Czechoslovak Cabinet to meet what Mr Chamberlain on March 24th called "the reasonable wishes of the German minority." As Herr Henlein's "wishes" include the virtual partition of the State, which in fairness would have to be followed by partition for the Hungarians and other minorities, the British Government, as controlling the French allies of Czechoslovakia, have placed themselves in an invidious position. They cannot want to force *felo de se* on the Czechoslovak State as a "reasonable" suggestion; but it looks as if nothing less will satisfy the Nazis, and even the mere announcement of British readiness to mediate has at once incurred the wrath of General Goering and his *Essener Nationalzeitung*. Meanwhile, the British representations in Prague and Berlin have caused the Czech Right-wing Agrarians in the Cabinet to call off even the most elementary measures for the protection of public order and individual citizens' rights in the Sudetenland—ostensibly to show London that they are actuated by goodwill. This is a dangerous, though comprehensible, policy, in present circumstances. We should feel happier—and certainly the Czechs would—if the British mediators would say openly what limit of concessions on the part of the Czechoslovak State they consider "reasonable," and what "unreasonable."

On Wednesday the Council of the Little Entente met at Sinaia. The President, on this occasion the Foreign Minister of Roumania, M. Petrescu-Comnen, said the Entente was prepared to envisage all measures to maintain European peace provided the sovereignty of the Little Entente States was respected. Though he added a friendly reference to Hungary, his earlier words may serve to remind the Hungarian extremist groups that, in the present critical state of Central and South-Eastern Europe entire, any Hungarian attack upon Slovakia, timed to coincide with an attack upon Czechoslovakia from any other quarter, would constitute the only *casus belli* specifically inscribed in the Little Entente Treaties. In this connection, the recent re-orientation of King Carol's domestic and foreign policy should not be overlooked in the West. Welcome news is provided from Prague, which announces that new negotiations with Berlin over the transport of Czech goods through what was Austria are to open next Monday. It is interesting to note that, at the same time, news from Warsaw indicates that a strong and growing movement for better relations with Prague has developed. The sponsors of this movement in the Polish Press, no doubt influenced by the recent organisation of all groups of the German minority in one organisation, have suggested that more favourable transit rates for Czech goods by Polish-Silesia to Gdynia might help both Poland and Czechoslovakia. The recent Polish and Roumanian developments need close scrutiny in Western Europe. They may prove to be decisively important if the situation deteriorates on the Danube.

New Party and New Policy in America.—The American political scene, already confused by the quarrel between the President and a large portion of his Democratic Party, has been further complicated by the foundation at the end of last week of the National Progressive Party. This new party is the creation of Mr Philip La Follette, Governor of Wisconsin, and his brother Robert, Senator from the same State. The La Follette family have long been the leaders of a Progressive party which has dominated the politics of their own State, and the brothers' father, "Old Bob" La Follette, was a candidate for the Presidency on the Progressive ticket in 1924. The new movement is thus little more than an attempt to repeat the previous sally of Progressivism outside the borders of its native State, and its political ideas clearly reveal its origin in a farming State. It is interesting, nevertheless, to inquire just why it has been revived at this precise moment. At first sight, the existence of a third party with liberal views might appear to weaken Mr Roosevelt. But the real effect may well be the opposite. The new party may attract more recruits of liberal views from the Republicans than from the Democrats, who, under Mr Roosevelt's leadership, obviously provide a much more effective way of writing the principles of

progressive thought into the statute book than a third party whose ability to win votes is problematical. Moreover, the dissident conservative Democrats may think better of their revolt if the intervention of a third party makes it certain that the result would be to put the national Administration, with its powerful patronage, the life-blood of parties, into the hands of the Republicans. Thus it is difficult to say more at the moment than that the new party is clear evidence of the shifts that are going on in political alignments behind the façades of the two traditional parties.

It is not merely parties that are changing. Policies are also being revised. On the home front, the rapprochement between President Roosevelt and the embattled representatives of business continues to make very slow progress. The President has not been deterred from sending a message to Congress on the subject of monopoly (a word which business is inclined to interpret as meaning attacks on profits), but he has been persuaded to couch it in the mildest terms. In the foreign field, however, the change in policy is moving fast. The Administration has decided to lend its support to a Congressional resolution which would rescind the application of the Neutrality Act to the Spanish Civil War and thus open the way to shipments of arms to the Spanish Government. The fact of this resolution and its official support is hardly more remarkable than the circumstance that it is sponsored by Senator Nye, the author of the Neutrality Act and one of the strongest supporters hitherto of complete isolation. The policy of Neutrality is beginning to look very sick.

American Taxes.—For months past the spearhead of the opposition by the business community to President Roosevelt and the New Deal generally has been concentrated on the tax policies of the last five years, and particularly on the taxes on undistributed profits and capital gains. In the final version of the Revenue Bill, as it emerged from the conference between the two Houses of Congress, the principle of both taxes has been retained as a concession to the President, though their practical incidence is reduced towards the vanishing point. In the pre-Roosevelt era, undistributed profits of companies carried a lower burden of taxation than dividends, and a large amount of income undoubtedly escaped taxation in this way. The mistake was made, however, of imposing penalty taxes on sums put to reserve, the rate of tax rising with the proportion of earnings withheld from the shareholders (and incidentally from the tax-collector). This was done with the object of forcing the earnings of closely-held corporations out into private pockets where they could be taxed at the higher rates of the personal income tax. But it also had the effect of penalising the conservative policy of "ploughing back" earnings. In a new Bill, the tax on earnings of corporations is to be fixed at 16½ per cent., plus a small supertax of 2½ per cent., representing the President's "principle," on undistributed profits.

The objectionable features of the Capital Gains Tax are also due to an excessively zealous New Deal attempt to correct the obvious defect of the previous system by which capital gains were added to, and capital losses deducted from, taxable income, with the surprising result that eminent Wall Street figures, enjoying all the outward and visible signs of considerable wealth or income, actually paid no income taxes at all in the depression years. But instead of taking what would seem to be the rational course of entirely excluding capital gains and losses from income taxation, the New Deal remedy was, in effect, to tax all capital gains, but to prohibit the deduction of capital losses. This is now being altered. Only those capital gains which come from the sale of assets held less than eighteen months will be treated as ordinary income and subjected to the normal rates of income tax. Gains resulting from the sales of assets held between eighteen months and two years will be taxed at a flat rate of 20 per cent., or 15 per cent. if the assets have been held more than two

years. This is an improvement so far as the larger incomes are concerned. But it still leaves a rate of tax more than half the British standard rate of income tax on a source of "income" that is entirely exempt in Great Britain, except for special cases such as professional dealers or speculators.

The I.L.O. Loses its Chief.—The resignation of Mr Harold Butler brings to an end the second chapter in the history of the International Labour Office. During the first phase of that remarkable attempt to raise and bring some international uniformity into labour standards Mr Butler's great experience as a British civil servant was associated in happy combination with the drive and imagination of M. Albert Thomas. If that charming and vivacious Frenchman sometimes seemed to his critics to overstep the bounds of officialdom into the realm of politics, Mr Butler was at hand to smooth things over and to keep a hand on the administration of the great office set up at Geneva. Since 1932, when the partnership was broken by M. Thomas's premature death, Mr Butler has not merely shouldered the full burden of responsibility but has contrived to fill the gap left by his predecessor's dynamic personality. If the I.L.O. has not achieved the ambitious hopes placed in it fifteen years ago the reason is to be found not in the qualities of its loyal servants but in events, and in the short-sighted policies of the nations which have destroyed for the time the practice of international collaboration. Mr Butler was not merely a sincere believer in the experiment in world government to which he has given the best years of his life—he was one of its creators; for while at the Ministry of Labour he was largely instrumental in persuading the British Government to support the Labour Chapter of the Treaty of Versailles at the Peace Conference, he helped to frame the constitution of the new organisation, and went to Washington in 1919 to organise the first International Labour Conference. If the conventions of the I.L.O. have made little headway in the last few years, Mr Butler's annual reports have at least served to present to the nations a clear picture of the chaos into which their affairs had fallen and to suggest some of the ways out. Mr Butler, who is a Fellow of All Souls, will be warmly welcomed back in Oxford where he is to take up the headship of the new Nuffield College.

Australia's Defences.—Australia's re-armament plan, the biggest defence scheme adopted by any Dominion in peace-time, is gradually taking clearer shape. It is essentially related, as Mr Lyons told the House of Representatives, to the wider pattern of Imperial defence, its fundamental basis being sea-power. Its close connection with the Singapore base has been re-emphasised, not only in the naval plans, but also in the invitation to Marshal of the Air Force Sir Edward Ellington to visit Australia and advise on the problem of co-operation between all Empire defence forces in an emergency, and particularly on the co-ordination of the Australian air force with the Singapore defences. Among other noteworthy developments, a committee representing the Services, employers and the trade unions is to be formed to consider questions of manpower; and the Government will provide £1,000,000 towards the organisation of civil industry in preparation for war emergency, the plant thus erected remaining the property of the Government. The Labour Opposition, which in general supports the re-armament programme, has raised its voice against the creation of new vested interests in the armaments industry, and has proposed the utilisation of State railway workshops as a source of munitions supply—a proposal which the Government has promised to consider sympathetically. The re-armament scheme involves nearly £25 millions of new expenditure in the next three years and will raise the annual cost of maintenance from £6 millions to £10 millions. A Bill has been introduced authorising borrowing for defence up to £10,300,000. Of the £7 million loan raised in London this week (which is the subject of an Investment Note on page 308), some £2 millions is to be used for purchases of defence material from the U.S.A.

Bombs and Customs Receipts at Shanghai.—Last Sunday night a bomb-throwing incident brought Japanese armed forces into that section of the International Settlement at Shanghai south of the Soochow Creek which they have not yet occupied. The bomb was thrown at a Japanese naval truck in the Nanking Road. It missed its target and wounded, instead, a Sikh policeman and six Chinese civilians; but the Japanese sent in a detachment of police and posted sentries. A platoon of Seaforth Highlanders was then sent to the spot, and eventually the Japanese were induced to withdraw. On Monday, in Tokyo and London, a *communiqué* was issued announcing the result of "unofficial conversations," which have been taking place since February between the British Ambassador in Japan and the Japanese Government, on the disposal of China Maritime Customs receipts in Chinese territories under Japanese military occupation. It has been agreed that all Customs revenues collected in the ports in these territories shall be deposited with the local branches of the Yokohama Specie Bank, and that, out of these deposits, the service of foreign loans and indemnities will be paid as a first charge. (The implications of this agreement are discussed in an Investment Note on page 308.) The Anglo-Japanese arrangement has, of course, only been made "for the period of hostilities." Meanwhile the Japanese military positions in Shanghai have been gravely jeopardised by swift and unexpectedly strong Chinese troop movements. A big Chinese offensive is in preparation; and it would seem that Japanese mastery of the Lunghai railway is by now more remote than ever. On Wednesday, in Tokyo, an Imperial Decree inaugurated the new powers obtained by the Cabinet under the National Mobilisation Act. The new powers, which extend throughout the range of industry and trade, may be an earnest of the Prime Minister's, Prince Konoé's, speech last Monday, in which he declared that Japan would not cease military operations in China until the Chinese National Government had been crushed. It is gradually becoming obvious in Japan that the country has embarked on an incalculably long and costly adventure.

Replanning Britain.—Various departments of State have spoken with authority about the present position of Britain's industry and population to the Barlow Commission. The voice of industry and of politicians has been heard. This week it has been the turn of the reformers and planners. The Council for the Preservation of Rural England argued on Wednesday that existing powers of town planning were used too late when developments, which might be destructive of amenities, had already been begun or designed. What was needed was a breathing space, during which the development of new regions would be halted until their use could be comprehensively planned, in the widest interests of economic utilisation, social welfare and amenities. The Town Planning Institute, on the same day, endorsed this plea for positive planning; and, on Thursday, a noteworthy document, put in evidence by the Garden Cities and Town Planning Association, was discussed by the Committee. The Association's evidence surveyed, with all the latest devices of political arithmetic, the facts of urbanisation, described the consequent disadvantages, and recommended a closely reasoned and detailed programme of national planning and town development. The Association has an axe to grind; but this public statement of its proposals shows how sane, practical and free from romantic futility enthusiastic advocates of a better Britain can be. If the Commission are by now convinced by months of testimony that urban life has many evils, then this week's advice from the reformers must carry appreciable weight.

Profits: a Nine Months' Comparison.—In a leading article in *The Economist* of April 23rd (page 175) we suggested that, judged by the reports of some 646 companies, issued during the first three months of this year, the rise in British industrial profits which began in 1933-34 was still continuing, but was tending slightly to lose its momentum. This conclusion is broadly supported by the

results of a supplementary analysis of 1,532 company reports issued during the nine months ended March 31 last. The latter sample of corporate earning power showed total profits (after debenture interest) of £186,366,235, against £163,482,314 earned by the same companies in their preceding financial year. Thus, the rate of increase for the nine months' sample was 13.9 per cent., whereas the companies reporting in the last three months of the period (whose profits represented slightly more than half the nine months' aggregate) disclosed an average growth in earnings of only 9.4 per cent. Details of total profits and their distribution are given, for our nine months' sample, under numerous industrial group headings, in the following table:—

Group	No. of Cos.	Total Profits (after deb. interest)	Change since preceding year (same companies)	Division of Total Profits (= 100)			Av. Rate of Div.
				Prof. Div.	Ord. Div.	To Res., etc.	
Breweries	92	17,503,301	6.7	11.6	61.8	26.6	15.4
Canals and docks..	7	522,935	16.6	42.4	29.8	27.8	1.8
Electric lighting and power	33	12,227,753	8.5	15.9	36.3	47.8	7.6
Financial, land and investment	146	8,441,873	18.4	21.8	56.8	21.4	7.2
Gas	36	3,975,137	1.6	19.6	75.9	4.5	5.6
Hotels and restaurants	21	751,356	1.2	33.6	40.5	25.9	5.2
Iron, coal and steel	98	20,433,100	34.6	15.0	39.0	46.0	7.7
Motor, cycle and aviation	48	8,767,184	24.2	7.5	51.1	41.4	16.5
Oil	9	2,495,249	60.0	1.9	61.2	37.1	18.2
Rubber	210	4,716,150	105.6	3.0	65.7	31.3	7.9
Shipping	19	4,574,495	31.1	11.6	19.5	68.9	3.8
Shops and stores..	65	13,795,651	5.9	24.0	50.4	25.6	15.8
Tea	31	462,955	42.2	17.3	52.1	30.6	5.7
Telegraphs and telephones	4	433,507	13.8	6.4	67.4	26.2	10.2
Textiles	59	6,484,736	13.5	23.6	47.1	29.3	5.5
Tramway and omnibus	11	1,244,841	3.9	14.4	88.7	Dr. 3.1	7.2
Trusts	140	7,193,916	13.5	39.5	43.3	17.2	5.2
Waterworks	14	760,222	0.8	31.7	61.3	7.0	8.1
Building materials	48	6,273,338	5.0	12.2	53.0	34.8	15.2
Food, confectionery and drink	52	6,594,936	6.2	20.5	57.2	22.3	10.9
Electrical equipment	16	4,252,735	19.9	10.9	38.8	50.3	11.2
Newspapers, printing, etc.	45	4,781,145	6.1	32.1	33.7	34.2	8.1
Tobacco	12	21,228,342	3.8	9.1	85.9	5.0	20.8
Warehouse and trading	27	1,050,365	5.7	39.8	42.9	17.3	4.2
Miscellaneous	289	27,401,013	11.8	17.1	47.7	35.2	9.9
Total	1,532	186,366,235	13.9	16.5	53.5	30.0	10.2

The companies included in our nine months' analysis, like those whose statements we discussed last week, followed a conservative dividend policy; for they "reserved" nearly one-third of their latest earnings. The highest percentage rates of ordinary dividend were paid (in descending order) by the tobacco, oil, motor, cycle and aviation, retail trading, brewing and building materials industries; and the lowest (in ascending order) by the canal and dock, shipping and warehousing concerns. High earning power, in fact, is located mainly in the consumption trades and certain beneficiaries of re-armament and the building boom, while profits are lowest in textiles and in the "servicing" of foreign trade.

Influences at Work

NEW YORK, April 26.—The month of April brought not an upturn but a downturn in both production and commodity prices. The hope that April would bring definite evidence of revival has been cancelled. For all practical purposes our economy has continued on an extremely low but level plane for the past five months—about 30 per cent. below the level of the corresponding period of a year ago.

Recently, and mostly in April, a number of factors were introduced into our economy, which may be expected to exert an influence upon subsequent developments. All these were of political (legislative or administrative) origin; and four may be mentioned as outstanding. First, the revision of the Housing Act reduced margin requirements on cheap homes to 10 per cent., and provided more liberal mortgage terms to builders of multiple family dwellings.

Secondly, in the monetary and credit field, excess reserves, already very large, were increased by the release of all gold in the Inactive Fund, and by a reduction in reserve requirements. Thirdly, a spending programme, estimated at \$4,250 millions, and taking a variety of forms (including provisions for loans by the Reconstruction Finance Corporation) was introduced, and, for the most part, has already been made law. Almost one-third of this programme is to be covered by realisation of the Inactive Gold Fund, one-third by increase in the public debt, and the remaining third by taxation. The President's forecast given over the radio, estimated the increase in the public debt by the end of June, 1939, at \$1,500 millions.

Fourthly, a Joint Conference has reported a compromise Tax Bill which substantially follows the Senate Bill (see comment on page 292 of this issue). It is likely, although not yet certain, that the Conference's Bill will become law. This Bill all but eliminates, for a period of two years, the Undistributed Profits Tax on corporations, but probably raises the average effective rate slightly; and considerably reduces the Capital Gains Tax on assets sold eighteen months and two years after purchase.

It is, of course, too soon to expect tangible evidence of the consequences of any of these innovations. It is sufficient for the moment to recognise in them a more or less integrated Recovery Programme, reflecting a variety of recommendations from different quarters.

New Views on Money

In two major respects, this depression is unique. Other depressions have been marked by a great contraction in bank deposits. The demand deposits of the reporting member banks on April 20th were only 6 per cent. below the level at the corresponding date last year; but the turnover of those deposits, measured by the debits to individual accounts, has fallen almost 20 per cent. That is, there is, and has been, no shortage of money; there is, however, an absence of incentive to utilise available money.

Usually, during depressions, a scarcity of liquid capital is shown by high rates of return, whether on obligations or equities. At the present time, it is the unanimous opinion of Wall Street that there is an unusually large accumulation of free capital awaiting investment.

From the standpoint of monetary or economic management, these considerations are important. The whole corpus of theory about managed currency rests upon the assumption that velocity is a constant; and the emphasis in the technique of currency management has been laid upon the applications of quantitative controls. The dominant monetary fact which has lately emerged in the United States is that velocity is not a constant; with the supplementary fact that velocity does not lend itself to the type of control commonly advocated by sponsors of managed money.

Observation of these data has led to the formation in this country of a considerable body of theoretical opinion, which disputes the intrinsic desirability of "cheap money" or "low money rates," and thinks in terms of an "optimum" rate, not necessarily "low" or "high," but certainly not so low

as the prevailing quotable rates. This opinion goes so far as to think in terms of the "deflationary" effects of extremely low money rates, operating through the factor of velocity.

Taxation and Investment

If the low velocity of bank deposits is one side of the shield, the other side is the plethora of accumulated funds awaiting investment, which is the burden of Wall Street's complaint. Obviously, not all idle deposits are investment money; but idle investment money is included in these sluggish deposits. To borrow the current metaphor, this is the well capable of feeding the pump, which has been so vigorously primed in recent years, and which is being primed again. While pump-priming is usually specifically related to the spending programme, it is probably more accurate to think of the composite programme outlined above as being designed, as a whole, to tap these resources of idle capital and idle enterprise.

It is possible that other influences may be added before Congress adjourns. On April 25, the President sent a Message to Congress urging an Act to deprive future issues of Government securities (Federal, State, and local) of their present exemption from income tax; and also to subject State and municipal officials to Federal income tax. It is estimated that there are upwards of 4 million local officials, of whom a large proportion would be liable to file returns, who are now exempted from Federal income tax.

The Sixteenth Amendment to the Constitution (which gave authority for the Federal income tax) provides for the taxation of income "from whatever source derived"; but the Courts have always pronounced in favour of these exemptions, and the Treasury has provided, on its own initiative, specific exemptions for its own securities. All the Federal debt is more or less exempt from income tax, and almost half is wholly exempt. It has been argued that this situation could be met only by a Constitutional Amendment. The President proposes an Act of Congress. This would be subject to test in the Courts, and only in the event of the Court overruling the Act would an Amendment become necessary.

Enterprise or risk-bearing capital can only be supplied to an economy by those rich enough to afford the hazards of industry; but the conjunction of the Capital Gains Tax and high surtaxes has put so high a premium on the tax-exempt security that it has become an irresistible magnet to the capital of the wealthy. There are, therefore, strong reasons for believing that the abolition of tax-exemption would in itself induce an uncertain but probably substantial amount of risk capital to flow into industry, leaving the market for Government securities to those investors less capable of bearing the hazards of enterprise.

France

The Immediate Problem

PARIS, May 4.—The pressing problem in France is to find money for the Treasury, overwhelmed by various deficits, and for private enterprises, overwhelmed by "price" reforms and taxation. Dear money, scarce labour and diminished purchasing power have paralysed business. The first decree laws of the Daladier Cabinet are designed to prepare the way for the issue of a large loan for the Government, and to enable industry to increase production. The Treasury, and to

Two years ago, the slogan of the Left was to "revive business and restore budgetary equilibrium by a vast public expenditure. The new proposals are intended to secure these ends by the expansion of credit and a moderate increase in taxation.

The re-inclusion in the ordinary Budget of 3,700 million francs of expenditure (such as the fund for war pensions), previously taken out of it to secure an artificial equilibrium, added to the deficit for 1937, to secure an artificial equilibrium, makes up a total deficit of 1938, estimated at 4,000 millions, has been decided to levy, for 1938 and 1939, an extraordinary national contribution of 8 per cent. on all direct and indirect

taxes: this will cover the deficit up to 3,200 million francs. Later, new taxes to yield 500 million francs will be decided upon, mainly on the profits of civil and military manufacture. The balance of the deficit, amounting to 4,000 millions, will have to be met by an increase in fiscal receipts arising from the promised revival of business; and taxpayers will pay their taxes monthly instead of twice a year, in July and September. The Government hopes that this new budgetary effort will facilitate the issue of a great national defence loan by the *Caisse Autonome*, which was set up by the previous Cabinet to cover by borrowings all military expenditure not included in the ordinary Budget.

Increased Production Sought

Other measures deal with credit and production. Building and foreign trade will be assisted by fiscal reliefs; and the tourist industry by the issue of special cards to travellers, enabling them to obtain petrol and transport facilities at cheap rates—following the example of certain totalitarian States and the temporary measures adopted by France during last year's Exhibition. Fiscal relief will be accorded to enterprises which can prove that an increase in production or in exported manufactures has been obtained by their new investments in capital or their measures for social welfare.

In order to improve the financial position of private undertakings, a decree law authorises industrial and commercial concerns to draw on their debtors, who will be obliged to pay in this way. Finally, undertakings working for the State or public enterprises will receive their payments more promptly through the organisation of a more rapid procedure by the *Caisse Nationale des Marchés*, whose financial resources will be considerably increased. Previous delays of from one to two years in making payments prevented concerns of secondary importance from accepting public orders, and, together with the 40-hour week, made it difficult for the State to find firms to undertake armament work.

A decree concerning foreigners in France has been particularly applauded. Too many refugees are active in extremist political circles. The police, since the formation of the Daladier Cabinet, have already expelled a number of undesirables, who have been active in promoting strikes and riots in industrial centres.

The Outlook

The new decrees have been generally well received in business circles. The increase in taxation did not evoke any considerable protests. The need for further taxation had been widely expected, as a necessary result of the cost of re-armament. Indeed, the reproach commonly addressed to the Cabinet is that its reforms are too mild, notably in regard to the revision of the 40-hour week. Finally, the opinion is that international peace remains the best way of bringing about the repatriation of capital—which is still the main problem of the French economy.

The fresh increase of 4,500 million francs in expenditure on the army, navy and air force seems to be the sequel of the recent accords with London. Optimism would certainly prevail if the energy being spent on re-armament was applied to the revival of production. The necessary decrees, which will come next week, are therefore awaited with impatience, and will probably deal with strikes and production as well as the national defence loan. Their reception by the Stock Exchange, on the eve of the issue of the loan, will, moreover, mainly depend on two factors: the movements of the franc-pound rate; and the development of events in Prague after the Hitler-Mussolini meeting.

Germany

France, Britain and Germany

BERLIN, May 4.—The Anglo-French discussions were not well received here. The attitude to the "General Staff contacts" is, of course, formally unimpeachable. Great Britain is only committed to action in case of an attack on France or Belgium, but no German, it is declared, dreams of such an attack. These "contacts," however, envisage an armed conflict with Germany. Such a conflict could arise only out of Central or East European issues. But, in this case, the attack would have to be on Germany and by the Western Powers. Germany's view, made clear in her replies to the protests about Austria, is that Central and Eastern European issues do not concern England or France in any way.

No person who observes what is now under way can doubt that the Czechoslovak question will be solved in the Reich's way and ultimately by a second *Anschluss*. It is not

at all necessary to attack Czechoslovakia. The initiative lies with Herr Henlein's party. This party has become so powerful and audacious that it can, without any overt Reich assistance, provoke a crisis that can end only in one way.

Jews, Debts, and Foreign Interests

The Reich's latest economic measures will raise international questions. The ordinance requiring Jews to declare their property, for the purpose, according to some authoritative sources, of investment in the national interest, and, according to others, for seizure, concerns foreigners. "Jews of foreign citizenship" must declare and value their property within Germany. The official journal justifies this with the complaint that "foreign Jewry has so violently attacked National-Socialist Germany." The existing Anglo-German Treaty of Commerce and Navigation seems to forbid such differentiation between German subjects (Aryans, who need not declare) and any kind of British subjects, and consequently to forbid discrimination against one kind of British subject. Further, it is impossible to decide whether a foreigner in Germany, much less a foreigner resident abroad (who must also declare), is Jewish or not, in the German legal sense.

The question of Austrian debts will presumably also raise difficulties. In view of the unification of Austrian and Reich currencies, it was inevitable that the German veto on unsanctioned payments to abroad should be extended to Austria; and this was promptly done. But the Reich Minister of Economics, when announcing on March 18th that Germany's transfer regulations would be applied to Austria, added that (as summarised in the official *Beobachter*) "negotiations with foreign countries about the foreign loans given to Austria would be necessary."

By an ordinance of April 30th, which took effect immediately, the law of June 9, 1933 (together with two later laws), which declared a moratorium for long-term debt service, has already been applied to Austria; and the whole Austrian debt-service is suspended, in the sense that monies due must be paid into the Conversion Fund in home currency, wherewith the debt is discharged. That by no means excludes later negotiations with creditors. But, according to the letter of the ordinance, Austria's debts are already defaulted. The financial Press has almost entirely ignored this important measure; but the *Frankfurter Zeitung* interprets it in the above sense, declaring that, in particular, "the three foreign loans of the Land Austria which, under political pressure, contained extraordinary clauses," are already "embraced by the moratorium on interest and amortisation transfers. Imports of pig-iron are still heavy. Better reports from Belgium and Luxembourg are interpreted as promising for the international steel outlook.

Increased Revenue from Taxation

Gross Reich tax revenue in the financial year ended March 31st totalled Rm. 13,958 millions, against Rm. 11,492 millions in the financial year 1936-37 and Rm. 6,646 millions in 1932-33. Of the increase, approximately Rm. 2,000 millions came from direct taxes and taxes on business, and Rm. 500 millions from customs and excise. Since 1932-33, total tax revenue has risen 110 per cent., direct 119 per cent., and customs and excise 58 per cent. The more important figures are:—

	1932-33	1937-38
	(Millions of Marks)	(Millions of Marks)

and with its numerous branches offers special facilities in Canada,
Newfoundland and the United States

The great revenue increase, it will be seen, was due to the business improvement and to the rise in company earnings and in incomes.

Industry's Social Policy

An unofficial publication contains statistics of voluntary social expenditure by industrial undertakings. Since 1933, there has been much official emphasis on the duty of business concerns to spend in excess of the compulsory contributions for the benefit of employees. The last Company Law prescribed, though only in principle, that such expenditure should stand in a reasonable relation to the share of profits going to directors and boards of supervision. Figures from the last available annual returns show that 26 companies, which paid out Rm. 187 millions in dividends and Rm. 145 millions for compulsory social contributions, paid Rm. 165 millions voluntarily for the benefit of employees.

In one company, a worker, after 35 years' employment, gets a monthly pension of Rm. 98 marks, which, together with his Social Insurance pension of Rm. 65 marks, makes up about 70 per cent. of his normal wage. Financial help for marriages and births is also given, and a good deal is spent on the improvement of housing and on stipends for promising workers. This aspect of the Third Reich deserves study. That the companies, after such voluntary expenditure on top of heavy compulsory contributions and taxation payments, can pay tolerable dividends indicates that their profits are large.

In addition to such taxes as count as a part of production costs, a company pays a 30 per cent. Corporation income tax on net profits. On what goes to the shareholder, the personal, progressive income tax, which may be anything up to 50 per cent., is levied, so that a very small part of the profits remains to him.

In Berlin, a shortage of office buildings is reported as a result of the reconstruction policy and the movement of business administration to the capital. Industry now depends so much on State permits and rationing that it has to be on the spot; and Krupps, Farbenindustrie, and other important provincial concerns are erecting imposing office buildings.

Ingot-steel output in March was 1,949,000 tons, and in the first quarter of the year it was 5,531,500 tons, against 4,643,100 tons in 1937. The quarter's iron ore output was 2,528,400 tons.

Italy

Employers' Individualism

TURIN, April 9.—Some view of the forces behind the corporate system is provided by the Report of the Senate's Finance Committee on the Budget of the Corporations Department for 1938-39. The following table summarises the figures relating to employers' membership of syndicates on December 31, 1937:—

	"Firms" represented by employers' syndicates (Numbers in thousands)	"Firms" actual membership ship (Numbers in thousands)	Contributions compulsory (Value in lire)	Voluntary (Value in lire)
Industry:—				
Industrialists	155.9	85.1	99,634.3	11,480.1
Artisans	798.4	349.2		
House proprietors	4,373.2	101.2		
Agriculture	4,168.9	991.9	78,667.9	4,676.4
Commerce	898.8	615.8	48,126.7	14,204.4
Credit and insurance ...	19.6	7.6	7,157.5	548.3
	10,414.8	2,150.8	233,586.4	30,909.2

Membership of the syndicates is free. But the various syndicates represent all the employers (or employees) working in their respective fields, and collective bargains, entered into by them, are binding upon all. Therefore, all firms (or, on the employees' side, all workers) pay compulsory fees, but only members pay voluntary contributions. The ratio between the number of employers and employees in membership and the number of employers or employees automatically represented by the syndicates is an index of the extent to

which the corporate system is permeating the various economic groups.

House proprietors seem to be the social group in which the associative tendency is felt least: only 101,227 owners have sought syndicate membership, compared with a total number of 4,373,157 proprietors of houses in cities and villages. There are, of course, no employees in this group, of which to take account; the great majority of proprietors live in their own houses and have no tenants.

Workers' Organisation

The associative tendency is, on the other hand, at its highest in the trade, industrial and artisan groups. There, employers' syndicates are daily in discussion with employees' syndicates about wages and conditions of labour. In all sections, however, voluntary contributions figure in a minor role, compared with compulsory fees.

On the employees' side the picture is somewhat different:

	Number of men represented by employees' syndicates (Numbers in thousands)	Men in actual membership ship (Numbers in thousands)	Contributions compulsory (Value in Lire)	Voluntary (Value in Lire)
Industry	3,667.9	2,633.4	48,609.0	20,026.1
Agriculture	3,087.0	2,595.0	33,195.5	23,251.9
Commerce	527.3	473.3	13,042.3	4,019.3
Credit and insurance ...	62.0	53.5	2,723.2	359.2
	7,344.2	5,755.2	97,570.0	47,656.5
Arts and professions ...	184.6	123.7	9,054.5	7,582.0
Co-operative bodies ...	11.9	10.1	11,560.0	

Arts and professions make up a special group, where there is no distinction here between employers and employees; and co-operative bodies have a membership mostly overlapping with employees' syndicates. The striking feature in the employees' syndicates is the much more complete identification between the number of men represented and the number of men in actual membership. In the commercial group almost all employees are also members; and in the industrial section only a strong minority still remains out of the organisation. In the employers' syndicates the voluntary contributions are less than 14 per cent. of the compulsory contributions, but in the employees' syndicates they are almost 50 per cent. over the whole field, and as much as 70 per cent. in agriculture.

The difference may be partly due to the greater age of employees' organisations. The workers were organised as far back as the 'seventies and 'eighties of last century; and the need of organisation was always more keenly felt by employees than by the more individualist employers. Membership of the syndicates, moreover, is, or is held to be, a legal pre-requisite, or at least a preferential condition, for employment. In so far as State intervention in economic matters and the need for keeping in touch with Government Departments is steadily increasing, however, membership is bound to increase on the employers' side.

Rising Import Surplus

In the first two months of 1938, the import surplus in foreign trade (not including colonial trade) increased compared with 1937. Imports were valued at 2,088.0 million lire, compared with 1,795.2 millions; and exports at 1,257.3 million lire against 1,105.2 millions. The surplus has thus risen, for January and February, from 689.9 million lire in 1937 to 830.7 millions. In trade with the Italian colonies, on the other hand, there was an export surplus of 400.6 million lire compared with 307.7 millions in the first two months of 1937. Exports to the colonies, however, are mainly paid for by the Government and are needed for civil servants and the army or for the economic development of the colonies.

Industrial employment is running at a high level. The general monthly index of industrial production (1928=100) was 105.2 in January, 1938, against 99.4 in January, 1937. Group indices were as follows: for textiles 84.7, against 78.8 in the corresponding month of 1937; for iron and steel and engineering 130.2, against 122; for paper 139.8, against 119.7; for gas and electricity 150.7, against 129.4; for mining 117.7, against 105.7; and for chemicals 127.6, against 94.8. The only exception to the general rise was in the building industry, where, owing to the abolition of the 25-year tax exemption and competition for iron and steel and other materials, the index fell from 95.1 in January, 1937, to 81.4 in January, 1938.

Jugoslavia

Slackening Trade

BELGRADE, April 11.—Although economic indices are still favourable, there now are signs that Yugoslav foreign trade is beginning to be affected by the general recession. This year, for the first time since 1932, exports in January and February were less than those of the corresponding period of the preceding year. They amounted to 508,882 tons, worth 750.9 million dinars, against 542,111 tons, worth 821.1 million dinars in 1937, a drop of 6.12 per cent. in volume and 8.57 per cent. in value.

Imports, however, have not suffered, but have increased to such an extent that the total volume of trade for the two months is larger than in 1937 by 5 per cent. Imports were 210,322 tons, worth 801.8 million dinars, against 129,260 tons, worth 655.1 million dinars in 1937.

This increase may be largely explained by heavy imports from Germany in order to diminish the clearing debt. Thus, imports from Germany in January and February, 1938, amounted to 112.3 million dinars and 150.3 million dinars, compared with 84.3 millions and 101.2 millions in the same two months of 1937. It is worth noting, however, that no similar influx of goods from Italy is taking place, the value of imports from Italy in the first two months being 68.4 million dinars in 1938, against 87.3 million dinars in 1937.

Industry Active

Industry has not yet felt the recession, except for a small halt at the beginning of the year. Mines, especially of pyrites and iron ore, foundries and metallurgical works are producing at an increased rate. The number of employed workers, which reached 718,285 in October, against 646,285 in October, 1937, has since dropped a little, but not more than is usual at this season. The timber industry alone may slacken, since Germany is likely now to cover more of her timber needs from Austria.

The financial position is satisfactory. Bank deposits in February reached 11,457 million dinars, against 10,455 millions in 1937. New money flowed fairly equally into State-guaranteed and private banks. State receipts during the first eleven months of the 1937-38 budgetary year were 11,652.2 million dinars, and expenditure was 9,475 million dinars.

In view of the prevailing easy money conditions, the Government is planning the issue of an internal loan of 4,000 million dinars, of which 1,500 millions is to be devoted to defence, 1,500 millions to the construction of new railways, and the rest to other public works. The loan will be issued in the course of the next four years, and would be the first internal loan floated since 1921.

Japan

Slow Progress in China

TOKYO, April 6.—Japan's present policy in China might be summed up in the tag *festina lente*. "Protracted struggle" has become a commonplace in speeches by Government leaders. Despite the fact that it has been generally assumed that Japan would aim at swift and overwhelming victory, because of the dangers of economic exhaustion and financial crisis, the Konoye Cabinet is acting as if Japan had unlimited time at its disposal—as if, indeed, time were on Japan's side rather than on China's.

This tendency to make haste slowly is visible in both the political and military fields. The contrast with the situation three or four months ago is striking. At that time, there was a spate of anti-British articles in the newspapers and periodical Press, and of anti-British mass meetings. There were widespread rumours of an early descent on Canton, with possible unpleasant consequences for Hongkong.

The Japanese armies had swept from Shanghai to Nanking with a speed that seemed to forecast easy and decisive success in any other theatre of operations. General Iwane Matsui, Commander-in-Chief of the Japanese forces in the Shanghai-Nanking area, was periodically throwing the essentially defenceless International Settlement at Shanghai into spasms of apprehension by intimating that he might feel obliged to take over complete control of the Shanghai administration. The high point of Japanese militant aggressiveness was perhaps reached immediately after the fall of Nanking, when the American gunboat "Panay" and two oil tankers were sunk by bombs from Japanese aeroplanes, several

British merchant ships on the Yangtze were bombed, and Japanese shore batteries fired on the British gunboat "Ladybird."

To-day the atmosphere has greatly changed. Public expressions of anti-British feeling have subsided. The much-publicised attack on Canton has failed to come off. There seem to have been several reasons for this: the miscarriage of an uprising in Canton which the Japanese attempted to stimulate; the reluctance of the Army to disperse its forces so widely; and the desire of the moderate civilian element in the Government to avoid threatened international complications.

The exuberant and politically minded General Matsui has given way to a new Commander-in-Chief, General Shunroku Hata, who has the reputation of being a soldier whose sole interest is in the military side of his duties. The pace of Japanese military advance has notably slowed up.

Chinese Resistance

To some extent, this slowing up of Japan's advance is attributable to causes outside of Japanese control. There can be no doubt that Japan's military leaders, while they correctly estimated the slight chances of foreign intervention on China's behalf, underestimated the strength and persistence of the resistance which China would offer.

Even now, one often encounters among Japanese the conviction that Chinese resistance would crumble immediately, if it were not for the alleged support of the Chiang Kai-shek regime by Great Britain and by the Soviet Union. Actually if one excepts a few hundred Soviet aeroplanes which have apparently been sold to China and provided with pilots on some kind of long-term credit basis, foreign help to China has been slight. It has been no more than any belligerent power might expect from countries not in alliance with Japan.

At the same time, it is doubtful whether there is any place in China, within geographical reason, which the Japanese could not take, if they were willing to mass enough men and guns and to incur fairly heavy losses. China's armed forces have improved since 1931 and 1932, but they are still almost hopelessly inferior to the Japanese in such respects as staff work, heavy artillery, training and equipment.

To some extent, therefore, the leisurely course of recent military operations may be considered deliberate, and it is apparently prompted by several considerations. The first of these is the necessity of consolidating the gains which have already been made. The area of the five provinces of North China which are nominally under Japanese occupation—Hopei, Chahar, Suiyuan, Shansi and Shantung—is almost 400,000 square miles.

But one advisedly characterises the occupation of these districts as "nominal," because only the Peking-Tientsin area, Inner Mongolia and East Hopei are under normal administration at the present time. The mountainous regions of Shansi are full of guerilla bands which frequently raid the Japanese lines of communication. Between the two main north-south railway lines, the Peking-Hankow and the Tientsin-Pukow, there are extensive districts which have never been brought under effective occupation.

War of Waiting and Attrition

Japan's present go-slow tactics are also partly based on the belief that there are forces of internal disintegration in the Chinese Nationalist regime, which will become increasingly apparent with the passing of time and greatly ease Japan's problems. There are high hopes of disagreement between the Kuomintang and the Communists. There is still some expectation of a separatist movement in Kwangtung Province.

THE COMMERCIAL BANK OF SCOTLAND LIMITED

Incorporated by Royal Charter and Act of Parliament

PAID-UP CAPITAL - - - £2,250,000

RESERVE FUND - - - £3,100,000

ESTABLISHED 1810

Meanwhile, Japan is preparing economically for a long struggle by enforcing a rigid balance between imports, on one side, and exports, *plus* newly-mined gold, on the other. This has apparently worked out pretty well during the first quarter, although it is hard to estimate the future effect on Japan's export trade of the severe restrictions on imports of cotton and wool.

Criticism of the Government's "too weak" policy *vis-à-vis* foreign Powers and demands for swifter action to bring the war to a close are sometimes heard. But the majority of the present Cabinet is apparently convinced of the final effectiveness of a policy which seeks to avoid sharp clashes with foreign Powers, and aims to sap Chinese resistance through processes of attrition.

India

Income-Tax Changes

BOMBAY, April 20.—The interest of business men will centre for some months round the Income-tax Amendment Bill, introduced in the Central Assembly at the beginning of April. The Bill is the sequel to the appointment of three officers, in 1935, to report on the income-tax system in all its aspects, its incidence and the efficiency of its administration. Their Report was published in January, 1937, and opinions were invited from Provincial Governments and commercial bodies. A special Session of the Assembly will be held in November to deal with the Bill.

There are several reasons, apart from fraud, which make the yield from income-tax very much less than it should be. First comes the state of the law about liability to make returns, which it is proposed to remedy under the Bill. Except in the case of companies, there has been no obligation on anyone to make a return, unless served with a notice to do so by an income-tax officer. Since the onus of notifying liability to tax was not placed on the citizen, there was no penalty for failure to make returns. This premium on evasion will be removed by requiring everyone who has an income liable to tax to notify the fact, as in Britain. There has also been a loophole in the fact that when an assessment was made it could only be for the year in question and the preceding year. Thus, many who escaped the income-tax officer's net for years were not adequately mulcted even when caught. Assessments will in future be legal retrospectively for a period of six years. The Bill will also limit drastically the scope offered to the wealthy to escape taxation by keeping capital (and income arising from it) abroad.

Europeans and Taxation

The preliminary views of the European group in the Central Assembly were put forward in the introductory debates by Mr L. C. Buss. Mr Buss pointed out that the Bill includes a new definition of dividends, and that this definition includes distribution out of accumulated profits made, on the liquidation of a company, to shareholders. A new formula has been devised for assessing allowances in respect of depreciation so that they shall not exceed written-down values instead of, as hitherto, the original cost. This change, according to Mr Buss, may have far-reaching effects, and care will be necessary to see that it does not result in heavier taxation.

Under the new Bill, the maximum allowance in respect of life insurance is to be limited to Rs. 6,000. Under the existing law, the amount of allowance is limited to one-sixth of the total income of the taxpayer. A clause in the Bill proposes that companies should be required to submit returns of the names and addresses of persons to whom they have paid annual interest of Rs. 200 and upwards, instead of Rs. 1,000 and upwards, as required by the existing law.

A point not dealt with in the Bill, which was put to the Finance Member for consideration during the course of the debate, concerns the exclusion of holding companies from participating in the benefits of super-tax exemption conferred upon investment companies. The business community has pressed for some time for the concession to be conferred upon holding companies. In December, 1933, the Government of India exempted from super-tax as much of the income of any investment trust company as was derived from dividends paid by any other company, which has paid, or will pay, super-tax in respect of the profits out of which such dividends have been, or will be, paid. Representations have been made to the Government that it is unjust to exempt investment trust companies, which are new to India, while the older holding companies, which have contributed largely to Government revenues in the past, continue to bear double taxation.

Argentina

The Government's Majority

BUENOS AIRES, April 16.—Biennial elections were held in March for the replacement of one-half of the Federal Chamber of Deputies, except in the little province of San Luis, whose representatives are not due for re-election until 1940. The independent newspapers of Buenos Aires strongly condemned the manner in which the elections were conducted in the majority of provinces. In the case of San Juan, the Federal Government accepted the accusations, and sent a Federal Commissioner to take over the administration of the province.

The Government won everywhere, except in the provinces of Córdoba and Tucumán, and in the city of Buenos Aires. In the capital, rather unexpectedly, the Government won second place and the minority representation of five seats, as the result of a split in the Socialist Party. In the new Chamber, the *Concordancia* (Government Coalition) will have a majority of seven over the combined forces of the Opposition and Independents. This is a working majority, but not a very comfortable one, especially as parliamentary attendance in Argentina is not always good.

The Government should be able on important occasions to muster the greater part of their supporters. The recovery of the Government's majority in the lower Chamber is very important, in view of the number of Bills held up in the last two years, including those for the purchase of the Córdoba Central and Transandine Railways. In the Senate, the Government has a large majority. The parliamentary deadlock during the past two years forced the Government to rule mainly by decree, a procedure criticised in many quarters as contrary to the spirit if not to the letter of the Constitution.

Exports Still Falling

In March, there was another very sharp fall in Argentine exports, whose volume was only 627,732 tons, against 2,048,352 tons in the same month of last year. Their value was 118,274,495 pesos, compared with 281,070,585 pesos a year ago. The remarkable steepness of the decline in shipments is due not only to poor crops, but also to the tendency of Argentine producers of wool and hides, as well as of wheat and linseed, to refrain from selling, in the hope of better prices.

Maize, usually an important item in Argentine exports, has hardly been shipped at all this year, because there was practically no carry-over from last season after provision had been made for domestic requirements. The recent collapse of Argentine exports would have affected the national economy much more seriously, had it not been for the fact that prices are now much higher than in the worst years of the world depression. This is illustrated by the following table showing exports during the last ten years:—

First Quarter of each Year	Volume (tons)	Value (pesos)
1929	4,417,128	637,233,906
1930	2,888,153	431,788,286
1931	4,011,622	375,139,913
1932	4,874,005	399,429,102
1933	3,720,374	295,594,361
1934	3,973,621	397,883,118
1935	4,265,557	437,928,129
1936	3,418,126	410,404,665
1937	6,693,132	837,673,515
1938	2,313,803	391,982,527

Comparing the first quarters of 1937 and 1938, the total value of exports has fallen by 53.2 per cent. and the total volume by 65.2 per cent. Agricultural products declined in value by 65.4 per cent., and pastoral products by 24.6 per cent. (chiefly due to big falls in wool, hides and dairy products, both in price and volume). Comparison with 1937 is not altogether fair, since that was a boom year, when high prices coincided with huge exports.

The growth in the second half of 1936 and the first half of 1937 gave Argentina great purchasing power, which provoked abnormal orders abroad for goods which are still coming into the country, causing a dramatic change in the trade balance. The chief increases in imports have been in machinery, vehicles, building materials, textiles, tobacco and food, while falls have been recorded only in rubber, iron and drinks.

Depression Again

The first official estimate places maize production at 4,500,000 tons, which leaves an exportable surplus of roughly 3,000,000 tons, and confirms the most pessimistic calculations. Argentina exported 7,051,460 tons of maize in

1935, 8,381,690 tons in 1936, and 9,087,363 tons in 1937, while, in the current year, maize shipments will fall short of four million tons. Exports of wheat and linseed will be much lower in 1938 than in previous years, owing to smaller crops and the absence of a carry-over. Although events in other agricultural countries may bring a rise in prices, it is evident that Argentina cannot look for a notable improvement until the next crops are harvested—that is, until 1939.

One of the results of the return of depression, which may be only temporary, has been a general decline in railway receipts. Two British-owned railways, the Buenos Aires Pacific and Buenos Aires Western, have found it necessary to reimpose the wage cuts, instituted under the Presidential award of 1934, and removed following the prosperity of 1937. The railwaymen's unions protested, and a 10-minute strike occurred on the suburban section of the Buenos Aires Pacific Railway. The Government issued a resolution approving the action of the companies, and negotiations are still proceeding.

The value of the Argentine peso in the free market declined steadily, reaching 20.8 to the £, on March 28th, where it remained until April 2nd, after which there was a substantial recovery to 19.75 on April 11th. The decline caused fears that the value of Argentine currency in the official market might also be reduced, to the detriment of the railway companies, among others. The moderate recovery which has taken place is attributed to natural factors and not to support from the Central Bank, the previous decline having gone too far.

Australia

Anglo-Imperial Trade

MELBOURNE, April 8.—Discussion at the British Empire Producers' Conference at Sydney turned largely on the question of voluntary regulation or restriction by legislation of imports of primary products into the United Kingdom. The leader of the British delegation, Sir Reginald Dorman Smith, M.P., dwelt upon the need for the former alternative. He pointed out that Empire producers could not expand their British sales without limit at the foreigners' expense, because Great Britain had still to retain a certain amount of trade with foreign countries.

Letters to the Editor

Cotton Exports

TO THE EDITOR OF THE ECONOMIST

SIR,—The Manifesto against the Cotton Industry Enabling Bill draws attention to the increase in the cost of production which will result if the Bill is passed in its present form, and states that this will inevitably cause a further decline in the export trade. It proposes that costs should be reduced by financial assistance from the Government for the replacement of obsolete machinery, and the employment of specially trained technicians. Neither of these schemes, however, effectively deals with the export trade itself.

Both Germany and Japan have been able to expand their exports of cotton fabrics by coming to reciprocal agreements with the minor growing States, by which raw cotton is imported in exchange for preferential treatment of exports of finished goods. It is felt that it might pay Lancashire to look beyond the traditional cotton lands of the United States and Egypt, and to import supplies from South America if similar reciprocal agreements can be made.

Brazil is in process of changing from coffee to cotton—production of raw cotton has risen from 49,000 metric tons in 1929 to 200,000 tons in 1936—and other South American States have increased their output of cotton. It would pay Lancashire to take a larger proportion of her cotton from these new producers, if their local markets for British goods could be expanded in sympathy.

The recent imposition by Egypt of a penal tariff on imports of manufactured cotton goods provides an additional argument for the establishment of a strong organisation with power to bargain for the industry as a whole. In 1936, Great Britain took approximately 38 per cent. of Egypt's total exports (two-thirds of which consist of cotton), yet, in face

Sir Reginald stated that the British Government had announced its desire that the producers themselves should take the responsibility for regulating the market. As he put it to the Conference—were they going to attempt to regulate their own products or to leave the whole thing in the hands of the politicians? A similar question was also put by other speakers; and Mr Cleveland Fyfe (representing the National Farmers' Union of England and Wales) stated that legislation would probably be on the British Statute Book by the end of the summer at the latest to provide, among other things, for the control of imports of dairy produce.

Under that legislation, assistance to be given to United Kingdom producers would fall under two heads. There would be a price insurance scheme for butter and cheese, supported by the quantitative regulation of imports; and imports from the Empire would have no contractual claim on preferential treatment, as regards quantitative regulation, in the event of supplies being controlled for the purpose of restoring stable conditions in the United Kingdom market. Empire producers' preference would be the tariff preference which they now enjoyed.

Producers' Co-operation

While the Australian and New Zealand delegates were opposed to restriction in any form, Mr Cleveland Fyfe pointed out that the Dominions had no more right of free entry into the United Kingdom market than the United Kingdom had into the Dominions' markets—a statement which led to a lively discussion. Finally, after the matter had been considered by a sub-committee, a set of five resolutions was passed, the main point of which was in the fourth resolution, recommending that Empire producers' organisations should co-operate to establish such commodity councils as might be deemed necessary, controlled and financed by producers.

The Conference passed a resolution on tariffs, requesting the Governments of the Empire to re-examine their tariff policies in relation to their foreign and Imperial trade commitments. A resolution was also passed that Empire Governments should be approached to pass legislation to provide for the setting up of marketing boards, financed and controlled by producers. And, by another resolution, the Conference urged the setting up in Empire countries, where necessary, of a system of rural credits, designed to meet the needs of agriculture.

of the new tariff, the cotton industry seems devoid of any real bargaining power to gain more equitable treatment for imports of British finished goods.

The committee responsible for the Manifesto has taken the first step to rehabilitate the cotton industry by stating as its aim the reduction of costs of production. It is now necessary to organise the export trade, so that lower costs will in fact result in larger sales of Lancashire's goods abroad.

Yours, etc.,

"LANCASTRIAN."

Stockport.

Milk Distribution

TO THE EDITOR OF THE ECONOMIST

SIR,—It is not quite sufficient to leave this subject of recent comment by you blanketed in the theoretical statement of the theory of competition in Mr Kahn's letter in last week's issue. First, the actual price at which milk is sold is not fixed by the Milk Marketing Board. Only the minimum is fixed, and a majority of distributors in any area can decide to sell at prices below the minimum if they choose. In practice prices ruling are generally higher than the minimum, and a survey of 943 towns in England and Wales, representing 75 per cent. of the population, shows that in 1937 46 per cent. sold above the minimum prices.

There is no evidence to show that if the minimum provisions were removed the retail prices would be reduced, because when "competition" was free prior to 1933 the margin between the wholesale and the retail price in London was greater than it is now.

Neither is there any evidence to show that what you call "all manner of expensive and unnecessary additions to

distributive service" can be connected with the control of minimum retail prices, but these, as the trade knows full well, were the direct result of "competition," and they existed in most of their present forms before the introduction of the Milk Marketing Scheme.

It is difficult to understand, therefore, how this panacea of "free competition" can offer any real solution, and both the Government and the farmers must have taken this view in refusing the recommendations in regard to retail prices of the latest Reorganisation Commission.

There has been much investigation and criticism of the distribution of milk in recent years, which tends to show that the service is in need of more controlled planning than "free competition," which is undoubtedly responsible for the present chaos.

I am, etc.,

4 Campden Mansions,
The Mall, W.8.

J. L. DAVIES.

What are We to Do?

TO THE EDITOR OF THE ECONOMIST

SIR,—I am well aware how foolish it is to protest against a review, especially against one which was in many respects so generous as the review of my recent book, "What Are We To Do?" which appeared in your issue of April 23rd. Yet I want to protest against your reviewer's statements first, that I would wish "to court violence as inevitable," and, second, that "Mr Strachey is not afraid!"

Books and Publications

The Arithmetic of Population

WHEN the echoes of Mrs Wootton's lament for contemporary economics have scarcely died away, Professor Hogben has voiced another protest in the same cause. He is impatient of *la misérable philosophie de l'école* which, in his view, disfigures the work of academic economists and renders their researches sterile. He would go back to the vigorous days of the seventeenth century, when Boyle could write that he valued no knowledge "but as it had a tendency to use"—when the Royal Society emerged from the meetings of Boyle and Petty, Christopher Wren, Seth Ward the astronomer, and Hooke at Oxford, vowed to pursue the objectives of experimental philosophy laid down by Bacon.

"The roads to human power and human knowledge lie close together," and Professor Hogben believes that the metaphysical preoccupations of modern economists, within the scholastic tradition of our universities, have frustrated the usefulness of economic science, as launched by the political arithmeticians of the seventeenth century. Seeking to prove his point by demonstration, he has taken a problem of especial importance to any man "prudent in the affairs of State," and

Neither statement, I assure your readers, has the slightest foundation. In my view, anyone who courted violence to-day would be a criminal, and anyone who, in the present-day world, was not afraid, would be a criminal lunatic.

What I do believe is that our inevitable fears are not good counsellors; that we shall escape violence just in so far as we analyse its causes, and face with resolution those forces which have to be overcome if the causes of violence are to be eradicated. *The Economist* has played a fine part in attempting to persuade the nation to take the resolute course in international affairs, precisely, of course, because you believe that this was the one way to avoid international violence.

I only ask you to believe that those of us who plead with the Labour movement to be resolute, both in this field and in its other struggles, do so for exactly the same reason: namely, that violence may be avoided.

I am, Sir, yours, etc.,

JOHN STRACHEY

[Our reviewer expresses his deep regret if he has misinterpreted Mr Strachey's views; and would in no way quarrel with the gloss which Mr Strachey gives above on his own opinions. If, however, Mr Strachey believes that *the root and branch transformation of society for which he calls* can be accomplished without violence, through the regimented New Model Party which he advocates and without the compromises and concessions which he condemns, then he indeed shows more optimism than the Marxist books and History would seem to permit.—ED., *Econ.*]

called together a team of statisticians and sociologists to set down the conclusions of their skilled analyses.*

These modern political arithmeticians have done their work with conspicuous success and this collection of population studies by R. R. Kuczynski, Enid Charles, Pearl Moshinsky, D. V. Glass, David Morgan and Allison Davis is of outstanding value. Only a reader learned in statistical technique can fully assess the niceties of its excellence, but anyone concerned with social questions can easily see how ably the searchlight of science has been shed on a painfully practical and pressing problem. If it is true that "the goods of mankind may be much increased by the naturalist's insight into the trades," then Professor Hogben's demonstrators have, at the same time, served the society and their science well.

The burden of their story is familiar. Nothing can arrest a continuous decline in the total population of the Western world unless something happens to increase fertility above its present level—not even an increase in marriages or a change in the distribution of wealth. The background and the details of this problem are fully painted; the relations between fertility and employment, between population trends and economic changes, between reproduction and environment.

But the population's social milieu is by no means uniform. There are social classes and income grades; and this book turns in its second part to consider how the graded personnel of society is recruited from these different strata. What relation is there in England between ability and educational opportunity, between parental occupation and ability, between economic environment and chances of employment? How are the scales of opportunity weighted between rich and poor, educated and uneducated? No better analysis of the social structure of our country within this field has yet been done.

Professor Hogben has proved his point that realistic researches can afford a public justification for economic studies. But these essays stand rather apart from his assault on syllogistic economics. It is not, for instance, by any means certain that Professor Hogben's definition of plenty as "the excess of free energy over the collective calorie debt of human effort applied to securing the needs which all human beings share" is more useful or more endowed with meaning than Dr Hicks' derided "concession curves." This book has not revolutionised economic science. It is an invaluable and comprehensive collection of population studies.

Shorter Notices

"Biologists in Search of Material." An Interim Report on the Pioneer Health Centre, Peckham. Faber and Faber. 104 pages. No price stated.

A proposal to extend the medical services to cover the nation widely has been recently made. The biologists' work at Peckham is designed to show us, not only how such a service could be organised, but also how it could be efficiently and economically run. Their style and phraseology make remarkably difficult reading; but their comparative study of the physical processes of health and well-being will repay examination in these fitness-minded days.

"The Crumbling of Empire." By M. J. Bonn. Allen and Unwin. 432 pages. 15s.

Dr Bonn comes close to the heart of colonial problems in his cogent and comprehensive examination of the resources and economic vulnerability of present empires. He states the claims of Italy, Japan and Germany to colonial equality; and lays stress upon the extent to which the rational economic value of colonies has been exaggerated. He is sympathetic to German resentment, but not sentimental. The way to world peace is not through intensified empires, however divided, but by freer trade and migration. The mission of the European Powers in colonial places "implies the ultimate liquidation of domination."

WORLD FINANCE 1937-1938

Paul Einzig author
of *Monetary Reform in Theory and Practice*

The author treats his subject in the same way as he did in *World Finance Since 1914* and *World Finance 1935-1937*, laying stress on the close connection between financial and political developments. The past year has furnished much material for investigation: gold scare, franc crisis, dollar scare, flight to gold, Wall Street slump and dramatic developments in Spain and the Far East.

THE BUSINESS WORLD

The Daladier Franc

M. DALADIER has wasted no time since his return from London, and events in France have moved rapidly this week. On Tuesday evening, there appeared the first series of decrees issued by virtue of M. Daladier's special powers. These were in three groups, dealing, respectively, with public finance, the stimulation of production, and the provision of better credit facilities to the world of commerce. They are summarised by our Paris correspondent on page 294. Wednesday was a day of rumour in London, Paris and New York, but it was clear by then that a fresh depreciation of the franc was contemplated. On Wednesday evening, M. Daladier confirmed this in a broadcast address to the French nation, in the course of which he promised the stabilisation of the franc on a basis which would be defended effectively. All that day a new rate of Frs. 175 to the pound was expected, but on Thursday morning the Banque de France pegged sterling at Frs. 179, with the three months' rate at only 50 centimes discount. This foreshadowed M. Daladier's decision, announced at midday on Thursday, fixing the limit of Frs. 179 to the pound, below which the franc will not be allowed to fall. On Thursday afternoon, Sir John Simon informed the British House of Commons that the ultimate aim of French policy was a rate corresponding to the economic position and giving France no competitive advantage, and that the Tripartite Agreement continued "with full force and effect."

It is clear from the spirit of the decrees and also from M. Daladier's Wednesday broadcast that one of his principal objectives is an expansion of France's real national income. It has been currently estimated that no less than 40 per cent. of the total national income is absorbed by the needs of the Government. This percentage is probably too high, as the general disposition is to under-estimate the national income, but there is no doubt that French Government expenditure is an extraordinarily high proportion of the present value of France's national production. Nevertheless, the first step needed was a general clean up of the Budget, at the cost of swelling the total amount of ordinary expenditure to be covered out of revenue. This was necessary also because of the decision to accelerate re-armament expenditure. These changes in turn have forced M. Daladier to impose a general increase in taxation, and also to admit that the final balancing of the ordinary Budget must await an expansion in national production and the national income, and the consequent increase in the buoyancy of the revenue.

The concrete proposals comprised in the last two groups of decrees are designed to stimulate production. They embody specific encouragement to the tourist traffic, subsidies to building, the partial exemption from taxation of profits and overtime wages derived from any future expansion in production, and a promise of further decrees designed to modify temporarily the forty-hour week. Steps are also proposed to relieve creditors from the delays often experienced in collecting their debts, this being one of the consequences of the recent depression. The use of cheques is to be stimulated; debtors, including Government departments, are to be bound to accept bills of exchange presented by their creditors, and fresh funds are to be provided for the *Caisse Nationale des Marchés* to enable it to discount bills more freely.

The general impression left by this list of proposals is that they were palliatives which by themselves could not restore confidence and tempt the expatriated French capital home again. Still less could they raise the total volume of production to the point needed to make the present level of Government expenditure more tolerable. They did not solve the even more pressing problem of how the French Treasury was to obtain its immediate cash needs without further inflationary borrowing from the Banque de France. They did not in themselves replenish by one ounce of gold the depleted resources of the French Exchange Fund, or provide any guarantee that the franc would be held at its recent level of Frs. 160 to the pound. Last but not least, unless all these conditions could first be fulfilled, there was no prospect that the proposed Defence Loan could be successfully floated.

Many reasons, therefore, impelled M. Daladier towards undertaking a fresh and immediate depreciation of the franc. First and foremost, given an empty Exchange Fund and the reluctance of the expatriated capital to return to France, he was anything but a free agent in the matter.

Electricity Companies

AN industry which, half a century after its birth, can show a growth, within a mere three years, of nearly 50 per cent. in its output and in the number of consumers which it serves, is clearly still in full vigour. In recent weeks we have reviewed in these columns the achievements of the leading electricity companies, and have given detailed consideration to their output, profits and dividends. We now propose to relate these results to a broader industrial and investment context, in which the possibility of important and far-reaching legislative changes necessarily plays a part.

With this object in view, we have analysed the results of nineteen important concerns, whose names are given in a footnote to the second table overleaf. Our sample includes all major companies, with the exception of the Edmundsons Electricity group, although the latter's important subsidiary, "Three Counties" Electric, is included. These companies, in 1935, accounted for 90 per cent. of the number of units sold by company undertakings. In our first table, which appears at the head of the next column, we have extracted particulars of consumers connected, units sold, and gross and net revenues in cases where such information is available. The scope of the particular samples is expressed as the proportion which the net operating profits of the companies concerned bears to the corresponding total for the whole group of nineteen companies.

Judged by consumers connected and by sales, the industry has continued to make handsome progress. Since the end of 1934 consumers have increased by 47 per cent. and sales by 48 per cent. in the case of the companies included in our survey. It is not surprising, therefore, that the rate of progress (as distinct from the absolute advance) showed a slight tendency to decline last year—though it is being maintained at a rate which the majority of other

Assets exceed £42,000,000

General Manager: VERNON E. BOYS

Next, the stimulus likely to be given to higher internal prices promised to bring about a speedy expansion in the national income measured in francs. This in turn would reduce the burden of outstanding debts, both public and private, and so would be tantamount to a general relief of debtors at the expense of their creditors. This would obviously help both the Treasury and industry generally, but whether it would restore the confidence of the investor is another question. Finally, M. Daladier probably wishes to ensure that the fresh rise in internal prices and costs—which his new taxation proposals alone are calculated to bring about—will not produce a serious risk of the franc's becoming over-valued.

If, however, a fresh depreciation of the franc was inevitable, it was equally imperative for M. Daladier to give to the world the assurance that this latest depreciation would be final. From the purely French point of view, this assurance of finality is the only way in which the expatriated capital can be induced to return home. Even here, it is not sufficient for M. Daladier merely to give the assurance. The French investor must be convinced of his ability to give practical effect to it, not for a short space of time, but for an indefinite period. Much, therefore, will depend upon the authorities' ability to hold the franc at its new level, especially during the next few critical weeks, while the French investor is deciding whether or not to risk repatriation. With an empty Treasury and Exchange Fund, this will not be an easy task. M. Daladier must maintain and enhance the prestige of his own Government at home, and, even so, he may need the active market co-operation of London and Washington. He has probably resigned himself to the impracticability of obtaining definite credits in either centre, but it would be of some help to him if, for a short time at least, the British and American exchange controls were prepared to buy and hold francs, without immediately using them to draw fresh gold from France.

M. Daladier's need for external assistance, however, at once raises the bearing of this fresh depreciation upon the letter and spirit of the Tripartite Monetary Agreement. It is clear that both London and Washington were made acquainted last week-end with M. Daladier's decision to make a fresh devaluation; and as we suggested last week, the onus must have lain upon M. Daladier to show that his decision did not imply competitive currency depreciation and so contravene the terms of the Tripartite Agreement. The difficulty of his task must have been increased if there is any truth in the general assumption that at Frs. 160 to the pound the franc had ceased—for the time being, at least—to be over-valued.

Obviously, with France in her present state of economic flux, it is impossible to make any valid calculation of the real purchasing power parity of the franc against sterling or the dollar. The answer is to-day, and must remain for some time, a matter of guess-work. No doubt both London and Washington needed some convincing, and no doubt M. Daladier himself in London and his representatives in Washington found it the easiest course to adduce some of the arguments hinted at above. The Agreement, however, stands, although upon a very different basis from that existing in the autumn of 1936 at the date of its conclusion.

The question to-day is whether M. Daladier can repeat the "Poincaré touch" under conditions which are much more difficult than those of ten years ago. If so, he will restore stability and bring the expatriated capital back home again—though if he follows the Poincaré precedent, the franc may once more be under-valued, notwithstanding the Tripartite Agreement. The resulting inconvenience to other nations, however, should be a small price to pay for a strong and prosperous France. Clearly, M. Daladier is keenly aware that if France is to keep level in the re-armaments race, she must produce more, tolerate a high level of taxation and postpone for the present her hopes of a higher standard of living for her people. To be successful, the action of the French Government must be drastic; and it can only be made drastic if the policy put forward simultaneously wins the active acceptance of the vast mass of the French people. These are the crucial issues for France to-day; and for their outcome the developments of the next few weeks will be anxiously awaited.

CONSUMERS, SALES AND REVENUES 1935-37

	1935	1936	1937
Consumers connected (68 per cent. sample):—			
Number	1,302,429	1,476,783	1,657,297
Increase (%)	15.4	13.4	12.2
Units sold (70 per cent. sample):—			
Number (millions)	3,719	4,292	4,882
Increase (%)	12.7	15.4	13.8
Revenues (63 per cent. sample):—			
Gross revenue	13,450,409	15,073,766	16,482,502
Net revenue	6,003,855	6,738,744	7,374,579
Net as per cent. of gross	44.5	44.8	44.7

industries might well envy. In terms of revenue, moreover, progress is still highly satisfactory. The rate of increase in gross and net revenues has been, in fact, 12 per cent. for 1936 and 9½ per cent. for 1937, in each case. Actual reductions of tariffs, and the general prevalence of systems of charge by which the average price per unit is reduced as individual consumption increases, explain why these increases are lower than those of output itself. The net revenue totals, however, include such items as miscellaneous income and dividends from subsidiary companies, and consequently the relation between gross and net revenues, which we have expressed as a percentage at the foot of the table, affords only a general indication of the movement in the industry's "operating ratio." But its relative stability last year, when the movement in gross revenue might appear to have justified a somewhat improved ratio, must evidently be attributed to rising direct operating costs, and perhaps to higher current expenditure involved in serving newer areas of supply, where an optimum load has yet to be built up.

In our second table we have set out the revenue and appropriations of all nineteen companies, deducting interest and preference dividends from total net revenue, and showing the percentage distribution of the residual revenue between depreciation, ordinary dividends and free reserves. The table strikingly illustrates the expanding profitability of the industry:—

PROFITS AND APPROPRIATIONS OF 19 COMPANIES* 1935-37

	1935	1936	1937
Net revenue	£ 9,766,351	£ 10,948,238	£ 12,008,369
Interest and preference divs.	2,646,603	2,787,263	2,909,605
Net rev. after fixed charges	7,119,748	8,160,975	9,098,764
Depreciation	3,606,408	4,008,468	4,663,874
Ordinary divs.	3,245,458	3,505,833	3,556,914
To free reserves or c.f.wd.	267,882	646,674	877,976

* County of London; London Associated; London Electric; City of London; Metropolitan; North Metropolitan; Bournemouth and Poole; Midland Electric; Midland Counties; Shropshire, Worcestershire and Staffordshire; Northampton British Power and Light; Mersey Power; Electrical Dist. Yorkshire; Yorkshire Electric; N.E. Electric; Lancashire Electric; Clyde Valley; Scottish Power.

Examination reveals, however, that the ordinary shareholder has participated to a relatively small extent in the recent progress of the industry. Throughout the three years, rates of ordinary dividend declared by the leading companies have remained unchanged. The only exceptions, indeed, are increased payments by Midland Counties in 1936 and British Power and Light in 1937, and a reduction of the "B" ordinary dividend by the Shropshire, Worcestershire and Staffordshire company. In practice, the increase in available earnings has been principally used to strengthen depreciation provisions, and to increase free reserves and balances carried forward. The allocation of net earnings, so far as it rests upon the discretion of directors, has been conservative. The provision for depreciation, in particular, might have seemed no less generous in 1937 if it had absorbed the same proportion of the disposable earnings as in 1935. Actually, ordinary shareholders last year received only 39.2 per cent. of disposable revenue, after fixed charges, compared with 45.4 per cent. in 1935, although revenue had itself increased by 28 per cent. in the meantime. If net earnings had been distributed in the same proportion between depreciation and free reserves on the one hand, and ordinary dividends on the other, in 1937 as in 1935, the amount applicable to ordinary dividends

would have been increased by some 16 per cent.—a result which would have represented a potential increase in the basic 8 per cent. dividend rate, paid by many large undertakings, to over 9 per cent.

The question of depreciation, however, is more complex than the summary figures suggest. For the nineteen companies as a whole, allocations for depreciation are approximately equivalent to the residual earnings available for the ordinary capital. But there is very considerable difference of practice between different units in the industry, and it is evident that the actual size of the provision in any particular instance has a close bearing upon dividend policy. In view of the possibility of legislation in future, it is desirable to obtain a closer estimate of the "true" level of earnings for individual companies. It is with this object that we have, in recent notes, attempted to obtain some degree of standardisation which, whatever its absolute validity, is of service for comparative purposes. The basis adopted is the scale of depreciation prescribed by the Electricity Commissioners for use in connection with the Electric Supply Act of 1926, by which the "Grid" was constituted. Insufficient data are available to make our "standard scales" precise; but it is unlikely that the scope for error is sufficient seriously to affect the conclusions.

In view of the importance of depreciation as a determining factor in dividend policy, the electricity shareholder is not usually in a position to assess future dividend prospects merely on normal economic considerations. There are, however, two matters which should be taken into account, on a near-term examination of the industry's outlook. The first is the prospective expansion in load. In the industry as a whole expansion will almost certainly continue, if not, perhaps, at the same pace as in recent years. But it is possible to distinguish between companies which are primarily dependent on the industrial prospects of a given locality and others with a more diversified load. Lancashire Electric, for example, serves an area in which cotton predominates, while the Clyde Valley and North-Eastern Electric undertakings are "heavy industry" suppliers, whose rate of growth is conditioned to some extent by fluctuations in the steel and constructional industries. Secondly, all companies are now forced to meet increased charges for coal, which in particular instances may constitute an appreciable burden. Yet the experience of 1937—in which a considerable increase was already being borne—is on the whole reassuring. This conclusion may be supported by a very rough calculation based on the nineteen companies whose reports we have examined. Their total sales (excluding sales to the Central Electricity Board) were probably of the order of 7,250 million units, and the cost of coal required for the generation of this amount of energy might be placed at £3 millions. An increase of 20 per cent. in the price of coal, therefore, would be equivalent to £600,000. Even if the whole burden of this increase were to fall on the companies, the effect would not be catastrophic. In fact, an appreciable part of the excess cost may be passed on to the consumer under bulk supply and power contracts. Indeed, if it is permissible to guess at the effective extra burden, a figure between £100,000 and £200,000 for the companies as a whole might well be representative. But it would still be true that certain concerns might be more considerably affected.

In estimating the longer-term outlook, the investor must needs take account of legislative possibilities. Legislation has been postponed a second time, and its ultimate nature may well be less drastic than that envisaged in the "draft proposals" circulated last year. But sooner or later the State is likely to enact the consolidation of undertakings into larger units, and the revision of franchises under which statutory powers are exercised. The method of consolidation may not, perhaps, embody the thoroughgoing compulsory provisions of the draft proposals, or even the less drastic recommendations of the McGowan Committee. The problem of franchises, however, is more complicated, and it involves careful consideration of the "true earnings" position we have already discussed. There are, of course, significant differences between the terms of existing franchises in many cases. And it is necessary to distinguish between the perpetual powers granted by separate Acts,

under which electricity companies give bulk supplies, and powers to give detail supplies for lighting and general consumption. In most instances a considerable part even of the typical power company undertaking operates under this second type of franchise. But these powers, with few exceptions, have limited periods of tenure, which are usually 42 years from the grant of the Order. At the end of their term the local authorities have the right to acquire the physical assets of the undertakings at a valuation which, as a rule, includes no provision for goodwill. Whether or not such powers are eventually exercised, it is reasonable to suppose that they would be taken into account in determining the level of earnings on the basis of which consolidated and extended franchises might be given, if they were decided upon. If, therefore, a substantial part of any undertaking is operated under special orders which have a short unexpired life, and the rate of return on the capital

expenditure is high, the investor would do well to satisfy himself about the possible effects of legislation standardising the tenure, permissible dividends, and termination clauses of franchises.

Such is the general prospect for the industry, from the economic and legislative standpoints. To-day there is less reason than a year ago to fear far-reaching changes prejudicing the position of shareholders (and particularly preference shareholders). But the eventual possibilities of legislation deserve separate treatment for every company. We have indicated, in broad terms, some of the main considerations which should guide the investor's judgment. Their general effect is to reinforce the considerations limiting the equity in electricity company shares, which have already been emphasised by the remarkable stability of ordinary dividends in a period when the size and scope of the industry have increased with phenomenal rapidity.

Finance and Banking

Strain on the Belga.—The strain on the belga, which has been apparent ever since the beginning of this year, has been considerably intensified this week. It has been apparent in a widening of the discount at which the Belgian currency has been quoted for forward delivery and in an acceleration in the outflow of gold from Belgium. The discount on three months' belgas has this week reached 35c., equivalent to a rate of interest of 4½ per cent. per annum. This, for a currency which is on a rigid gold standard, must be regarded as a wholly abnormal rate. Since the beginning of the year Belgium has exported £17,300,000 of gold to Great Britain. Over the same period the gold reserve of the National Bank of Belgium has fallen by some £13 millions, or by 12 per cent. The balance represents gold exported from the hidden reserves of the Belgian Exchange Fund. The pressure on the belga derives from two sources. The first is the psychological pull of the French franc, which, for some weeks past, has (for the first time in history) been at a discount in terms of Belgian francs. The creation of the belga—equal to five Belgian francs—was intended in part to sever the psychological and traditional link which has bound the two francs. But despite the growing political and economic independence of the two countries, the mutual bonds that link their currencies remain an appreciable factor in the exchange market. Most of the French money which found refuge in Belgium has now left that country. A moderate flight of Belgian capital has been confirmed by the recent announcement of a drastic increase in taxation, following the resignation of the former Finance Minister, M. De Man. The impression has gained ground that the national finances may be subject to a somewhat extensive process of overhaul.

The "Dego" Mark.—The newest member of the lusty and growing family of German marks is the "Dego" mark, whose name is formed by the initials of the Deutsche Golddiskontbank, the supplier of the new currency. Its creation is the result of the incorporation of Austria into Greater Germany and of the extension of the facilities for using Travel marks to the new province. Had the extension been made without any alteration in the arrangements for the creation of Travel marks, the whole benefit of the foreign exchange proceeds of tourist traffic in Austria would have gone, not to the Reich, but to its foreign banking creditors, who hitherto have been the sole providers of Travel marks. These foreign creditors, consequently, would either have been able to accelerate the liquidation of their standstill commitments and/or to obtain better rates for the registered or Travel marks which they received on the repayment of their credits. Such a condition would obviously have been unacceptable to the German authorities. It has, therefore, been decided, that, from May 1st (when the Travel marks became available for tourist expenditure in Austria),

Travel marks must be made up as to 75 per cent. from registered marks (the proceeds of standstill credit repayments) and as to 25 per cent. by Dego marks purchased against free devisen from the Deutsche Golddiskontbank at the current rate quoted for registered marks. The ratios chosen are at best a rough approximation of the proportion of tourist expenditure in Germany and former Austria, respectively. If the *Anschluss* results in a slump in tourist traffic to Austria, the demand for Travel marks will not increase sufficiently to compensate the creditor banks for the 25 per cent. share of the devisen proceeds of Travel mark sales transferred to the German authorities. Experience alone will prove whether the creditor banks have made a good or bad bargain. Messrs J. H. Schroeder and Company have been made sole agents for the sale of Dego marks in the London market, and dealings began this week on the basis of about 51 per cent. discount.

United States and Silver.—At the week-end it was announced that the Administration had revoked the regulation of 1934 compelling all American holders of silver (otherwise than in the form of coin or required for the arts) to sell their silver to the American Treasury at a fixed price of 50.01 cents per ounce. The revocation of this regulation in itself is of little significance, for it had already become obsolete. Also the American Treasury is still buying newly-produced American silver at 64.64 cents and other silver at 42½ cents an ounce. There are, however, further reports, as yet unconfirmed, that the regulations forbidding the exportation of silver or its transport within the United States are also being revoked. It may be that Washington is seeking to re-establish the New York silver market, though little can be done in this direction so long as the 50 per cent. tax on silver profits remains in force. More generally, the Administration is not displaying quite the same enthusiasm for silver as it did four years ago.

Silver in Canton.—It appears from recent reports from Canton that the Currency Control, introduced on November 7, 1935, to withdraw the 20 cent silver coins

The OCEAN

Accident & Guarantee Corporation, Limited
Head Office: 36-44 Moorgate, London, E.C.

FOR ALL CLASSES OF INSURANCE

from circulation has not been entirely successful. The Mint authorities of Kwangtung estimate that there is still 250 millions dollars (Canton) worth of silver in the province. Fears were expressed before the conversion was attempted that hoarding of silver would take place on a large scale and that the 20 cent paper bills would not everywhere enjoy popular confidence. However, a 20 per cent. premium was offered on silver exchanged for notes and the Government banks of the province rapidly acquired over 100 million dollars of the white metal. After the first few months, however, the rate of conversion slackened greatly. By the beginning of this year the amount of silver

collected by the banks was 187 million dollars. Although the American silver purchase policy caused a marked drain on Chinese silver resources everywhere—even after the remedial measures to stop export—it is estimated that in the province of Kwangtung there is still 250 million dollars of silver hoarded by the people. The provincial authorities have recently started a campaign to mobilise this silver as a reserve to buy foreign exchange, of which there is much need in the present national emergency. It is still too early to tell the effect of the Government's appeals to the patriotism of the people, but moderate success is hoped for.

MONEY MARKET NOTES

Foreign Exchanges

THE depreciation and subsequent pegging of the franc, discussed in a leader on page 302, have made the London market very active. From Frs. 162½ ten days ago sterling gradually rose to Frs. 170½ on Wednesday evening, and on the following day the new rate of Frs. 179 took effect. All Thursday there was a very strong demand for francs, mainly from those anxious to cover short positions. The Banque de France sold francs heavily, and is estimated to have gained £40 millions of sterling by the middle of the afternoon. One month's francs strengthened to a small premium, for the first time for a very long time indeed. Three months' francs were at a discount of only Frs. ½-¾, and this narrow margin is easily explained by the higher level of interest rates in Paris. Belgas were weak as a result of the change in the value of the franc. The New York-Brussels spot rate was held inside the gold export point, but only through official support given to the belga in London. It is possible that Belgium lost gold to the British Control. Three months' belgas were offered at 80-85 cents discount. Swiss francs were also weak, partly because of sales against French francs and partly because of rumours that Switzerland would be affected by the depreciation of the French franc. Dollars were erratic. They were offered on Wednesday at \$5.00, owing to rumours that the dollar as well as the franc was going to be devalued; and they were bid down to \$4.99 on Thursday, when the absurdity of these rumours became apparent. Late on Thursday afternoon an official denial of any intention to devalue sterling or the dollar was given in the House of Commons.

The Bank Return

Last week's increase in the note circulation was only £1.2 millions which is less than that of the end of April in either 1936 or 1937. A year ago the note circulation was beginning to ex-

pand under the influence of the approaching Coronation.

	May 5, 1937	Apr. 20, 1938	Apr. 27, 1938	May 4, 1938
Issue Dept.:	£ mill.	£ mill.	£ mill.	£ mill.

Notes in circulation	475.2	495.6	489.3	490.5
Banking Dept.:				
Reserve	39.4	31.6	38.0	36.7
Public Depts.	16.4	18.0	10.9	10.7
Bankers' Depts.	97.2	106.5	113.3	117.5
Other Depts.	37.7	36.1	36.5	36.0
Govt. Secs.	103.1	117.6	114.0	117.8
Discounts & Advances	5.4	8.2	7.1	8.2
Other Secs.	21.0	20.8	19.4	19.3
Proportion	26.0%	19.7%	23.6%	22.3%

In the banking department, bankers' deposits are £4.2 millions higher than a week ago, mainly because of the May 1st dividend payments on Conversion and Funding Loans. It looks as if there had been some Ways and Means borrowing from the Bank in order to cover these payments, for public deposits remain at the low level of April 27th, while during the subsequent week there was an increase of £3.8 millions in Government securities.

The Money Market

Money remains easy, with very little calling by the clearing banks. Bond-money from outside lenders is once more quoted at ½-¾ per cent. The banks remain keen buyers of bills, but have only been able to secure July dates.

	May 6, 1937	Apr. 28, 1938	May 5, 1938
Bank Rate	%	%	%
London Deposit Rate	½	½	½
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	1½-5½	1½	1½-5½
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	1½-9½	1½-9½	1½-9½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

So far as maturities are concerned, the market has now reached its lean period. Three months ago, allotments of Treasury bills were only £30 millions, and only 18 per cent. of the market's applications were proving successful. It is

these bills which are now maturing. On the other hand, current allotments are £45 millions, and the market is securing 60 per cent. of its applications. Thus market payments for new bills are well in excess of maturities, a development which makes the market rather readier to sell bills to the banks.

The Bullion Market

The fresh depreciation of the franc, together with rumours that other currencies might be affected, stimulated a new demand for gold. On Wednesday purchases were very general, being made not only against francs but also against dollars, belgas, and even guilders. This demand was met from official sources. Thursday witnessed an unusually large volume of business, the amount dealt in reaching £1,178,000. About 25 per cent. of this sum represents offerings from hoards, the remainder again coming from official sources. The fact that this large quantity was absorbed at a premium of 6d. shows that, in spite of some dishoarding, the demand for gold from hoarders remained very keen. Indeed the price rose to 139s. 8d. soon after the fixing.

" 5	139	7	6 pm	1,178	18½

* Above or below American shipping price. The New York price of silver remained at 43 cents per ounce .999 fine during the week.

There is little life in the silver market. The revocation of the American regulations, referred to in a Financial Note, on the whole had a depressing influence. Buyers were holding off, but sellers were not disposed to press silver on the market.

	1928-1932	1933-1937
Surplus earned during quinquennium	£ 1,281,442	£ 942,759
Brought forward	421,536	425,994
	1,702,978	1,368,753
Allocations:—		
Bonuses to policyholders	1,083,010	1,112,917
Shareholders	193,974	163,725
Carry-forward	425,994	92,111
	1,702,978	1,368,753

The amount of interim bonuses paid on claims during the past five years is not mentioned in the Report, and the allocation to policyholders, consequently, is greater, by its amount, than appears in the table. The rate of bonus is again 43s. per cent., calculated on the sum assured.

New sums assured increased from £3,761,000 to £3,849,000 and death claims showed a reduction of £71,000 to £451,000. The net rate of interest earned on the life fund was £3 19s. per cent. (allowing for special income tax items in the Revenue Account), against £3 15s. 7d. per cent. in 1936. Fire premium income was slightly smaller at £992,000. The underwriting results, while satisfactory, were not so favourable as those of the previous two years. Combined Accident, Employers' Liability and Miscellaneous premiums amounted to £323,000, against £311,000. It is the practice of the company to reserve 50 per cent. of the premium income for unexpired risk, but in arriving at the results below the more usual figure of 40 per cent. has been used. Marine premium income expanded from £326,000 to £387,000, but claims increased from £229,000 to £301,000 and no transfer is made from this branch to Profit and Loss. A transfer of £70,000 has been made from Profit and Loss to strengthen Miscellaneous Assurance Account.

The whole of the allocation to shareholders, as a result of the quinquennial valuation of the life and sinking fund branches, has been credited to Profit and Loss Account in 1937.

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums
Fire	134,008 13.4	115,841 11.7
Accident	3,623 14.9	4,815 21.6
Employers' liability	762 1.4	1,149 1.9
Miscellaneous	71,876 31.2	25,164 10.4
Marine	25,000	170,660
Life	89,993	265,003
Less items debited to profit and loss	89,492	73,772
Total net trading surplus	501	191,231

Last year the chairman mentioned that the heavy loss in 1936 in the Miscellaneous Branch was due to losses sustained in respect of bonds issued in guarantee of loans by banks to members of the medical profession. Probably the much smaller loss last year was due to a similar cause, but as the result of certain rearrangements the position should be more normal in future. Some £100,000 has been credited to the "Maritime" Reserve Fund. Total assets amount to £17,183,000. Loans are smaller at £1,544,000, against £1,740,000, but British Government securities again increased from £2,109,000 to £2,490,000, while Foreign and Colonial Government securities showed little change. Debenture stocks and Ordinary stocks were smaller at £3,513,000 and £298,000 respectively, but Preference shares showed an increase from £2,756,000 to £2,941,000. Stock Exchange securities have been taken at or under middle market prices on December 31st last. Reserve and Contingency Funds amount to £600,000 and there is a Profit and Loss

balance, after payment of the dividend, of £550,000. In addition, the departmental reserves are strong. The dividend is again 65 per cent. and costs £148,000, compared with interest earnings of £142,000.

Motor Union Insurance.—This company, like the Car and General, is controlled by the Royal Exchange, which, through these two subsidiaries, holds an important position in the motor insurance world. Total premium income, at £1,815,000, was slightly smaller last year, but the fall was more than accounted for by a reduction in the accident department from £1,615,000 to £1,562,000. The underwriting results of the last two years are shown:—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums
Fire	24,504 13.2	27,914 14.3
General	146,265 9.1	114,709 7.3
	170,769	142,623
Less items debited to profit and loss account	89,845	90,028
	80,924	52,595
To general reserve	93,000	104,000

Out of total assets of £2,971,000 Stock Exchange securities amount to £1,964,000, with a market value on December 31st last of £2,308,000. An amount of £104,000 (against £93,000 in 1936) was transferred last year to general reserve, which now amounts to £690,000. The rate of dividend is repeated at 37 per cent. and costs £56,000, contrasted with available interest earnings of £80,000.

Atlas Assurance.—New sums assured in the Life Department last year amounted to £4,536,000. This figure, which was a record, was £221,000 in excess of the previous year's total. Annuity consideration moneys increased from £419,000 to £454,000 and premium income by £46,000 to £1,167,000. Death claims showed a substantial reduction of £47,000 to £307,000 and surrender values fell from £156,000 to £124,000. The net rate of interest on the Life Assurance and Annuity Fund was 8d. lower at 4½ 7s. 10d. per cent. An annual valuation of the liabilities is made, the results of which are published each year in the Report. The 1937 Report is of particular interest since it marks the occasion of another triennial distribution of surplus. The same rate of bonus has been declared as on the previous occasion, namely 42s. per cent. calculated on the sum assured and bonuses. The results of the triennial period are given below:—

	1935-37
Trading surplus	957,707
Profit on Investments	43,262
Brought forward	18,146
	1,019,115
To Policyholders	594,684
" Shareholders	86,072
" Actuarial reserve	290,000
" Carry forward	48,359
	1,019,115

Fire premiums at £1,802,000 were greater by £42,000 and premiums in the Accident Department, in which there was a distinct improvement in results, increased from £588,000 to £636,000. Marine premiums increased from

£127,000 to £154,000 and the Fund now amounts to £252,000.

The results of the various branches are shown below:—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums
Fire	175,465 10.0	174,713 9.7
Accident	36,175 6.2	51,039 8.0
Life	28,720	30,198
	240,360	255,950
Less items debited to profit and loss	86,581	192,547
	153,779	63,403

The dividend is again 32 per cent., free of tax, and costs £176,000, compared with interest earnings of £128,000. The total assets of the company and its subsidiaries exceed £20½ millions and the General Reserve amounts to £2,000,000. Stock Exchange securities stood in the books at the end of 1936 at £1,637,000 below market values. By the end of 1937, however, the margin had been reduced to £851,000, equal to 10.4 per cent. of their book values. Mortgages and loans amounted to £4,380,000, compared with £3,481,000 a year ago, but British Government securities decreased by £197,000. Combined Foreign and Dominion Government securities showed little change in total. Debenture stocks, however, increased from £3,533,000 to £3,754,000, while Preference stocks rose from £1,056,000 to £1,079,000 and Ordinary stocks from £1,472,000 to £1,732,000.

London and Lancashire.—Apart from the Life Department, which is carried on by the Law Union and Rock, total premium income last year increased from £6,225,000 to £6,732,000. Of this increase of £507,000, some £26,000 is due to the Fire Account and £171,000 to the Accident and General Department. Marine premiums increased by £311,000, equal to 28 per cent. of the previous year's premiums. As usual, the Fire results were very satisfactory. The Marine results did not make the same excellent showing as before, and claims rose from £769,000 to £1,104,000. The underwriting results are given below:—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums
Fire	357,202 13.0	366,720 13.2
Accident	107,025 4.6	100,629 4.0
Marine	129,520 11.5	35,852 2.5
Life	17,078	17,078
Capital redemption	1,379	1,060
	612,204	521,339
Less items debited to profit and loss	198,699	227,486
Net trading surplus	413,505	293,853

The departmental reserves are very strong. Apart from the usual reserve for unexpired risk, additional reserves, which are unchanged on the year, amounted to £2,400,000, £1,000,000, and £1,000,000 in the Fire, Accident and Marine accounts respectively. Total assets shown in the consolidated balance sheet, exclusive of the life assets of the Law Union and Rock, amount to £17,928,000, and there is a General Reserve of £2,000,000. The dividend is again 50 per cent. and costs £564,000, contrasted with interest earnings of £485,000. The Profit and Loss balance,

after payment of the dividend, is £2,680,000, against £2,461,000 in 1936.

World Auxiliary Insurance.—Premium income increased from £277,000 to £282,000 last year. Underwriting profits are shown below:—

	1936	1937
Amount Percent- Profit Premiums age of Profit Premiums age of	Amount Percent- Profit Premiums age of Profit Premiums age of	Amount Percent- Profit Premiums age of Profit Premiums age of
Fire	£ 349 ... 6,922 7.8	£ 349 ... 6,922 7.8
Accident and General	7,888 9.7 7,598 9.7	7,888 9.7 7,598 9.7
Marine	15,356 ... 10,667	15,356 ... 10,667
	23,593	25,187
Less items debited to profit and loss account ...	10,783	15,869
Net trading surplus	12,810	9,298

Total assets amount to £1,199,000. The aggregate market value of Stock Exchange securities is £1,030,000, com-

pared with a market value on December 31st of £1,057,000. A transfer of £10,000 to General Reserve (which now amounts to £200,000) is not included in the net Profit and Loss movement shown above. Other free reserves, including the Profit and Loss balance, amount to £205,000. The dividend is again 7½ per cent., free of tax, and costs £22,500, contrasted with interest earnings of £28,000.

Car and General Insurance.—This company, which is controlled by The Royal Exchange, obtains the great bulk of its premiums from motor insurance. In 1937 total premiums increased from £1,472,000 to £1,540,000, of which total £1,365,000 was derived from the accident department. The underwriting

results for the past two years are given below:—

	1936	1937
Amount Percent- Profit Premiums age of Profit Premiums age of	Amount Percent- Profit Premiums age of Profit Premiums age of	Amount Percent- Profit Premiums age of Profit Premiums age of
Fire	£ 13,628 14.1 15,597 15.4	£ 13,628 14.1 15,597 15.4
General accident	55,378 4.2 76,668 5.6	55,378 4.2 76,668 5.6
Marine	616 1.1 ...	616 1.1 ...
	69,622	92,265
Less items debited to profit and loss account ...	52,898	78,351
	16,724	13,914

Some £24,000 has been transferred to general reserve, which now amounts to £533,000. The total assets are £2,203,000, of which Stock Exchange securities account for £1,606,000, against an aggregate market value on December 31st last of £1,713,000. The dividend is again 50 per cent., and costs £40,000, against interest earnings of £51,000.

Investment

Course of Share Values.—The course of prices for equity shares last month went far to confirm the view that, since the beginning of this year, politics rather than economics have determined the trend of the market. In London, as the accompanying chart shows, Sir John Simon, with his spartan Budget, did not upset the partially restored equanimity of investors, which originated with the announcement of the Anglo-Italian Agreement. Consequently, April produced the largest recovery in *The Financial News* ordinary share index that has occurred

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS
(July 1, 1935=100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

since the main downward movement began at the end of 1936. In New York, the recovery was also well marked though, in fact, its extent was not equal to that of the "false recovery" of the summer of 1937. Both movements, however, had lost their impetus before the end of the month and at present the markets seem altogether to lack the courage of their convictions. The absolute extent of the ground regained, moreover, is as yet relatively inconsiderable. Wall Street recovered in April about half its decline of March, while London recovered the whole, but

very little more. America's response, indeed, to the President's new pump-priming programme is not impressive, while British investors are now being confronted, each week, with accumulating evidence of cyclical trade recession. The possibility of a substantial secondary market revival in the summer still remains. More immediately, however, looms the possibility that any early and undue manifestation of Hitlerian interest in the affairs of Central Europe, might provoke a fresh falling away of share values.

Australia's New Loan.—Few borrowers could match the success of the Commonwealth's fourteen conversion offers to the British investor since 1932. This week Australia has appeared as a borrower of new money for the first time since the depression. Both the reason for and the nature of the latest loan are of more than ordinary interest. The issue consists of £7 millions of 3½ per cent. stock, dated 1952-56, issued at £99 per cent. Its terms are not significantly dissimilar from those adopted for the conversion issues of June and November last year, for this week's issue offers £3 16s. 6d. per cent. to redemption, compared with £3 16s. 3d. and £3 15s. per cent. respectively for the two conversion issues. Of the total, £2 millions are specifically earmarked towards financing the Australian defence programme (discussed on page 292), while the balance will be devoted to funding Australian Treasury bills at present held by the Commonwealth Bank in London, and will thus augment the Dominion's sterling resources. Thus Australia takes a leaf out of the British re-armament ledger by meeting part of her £24.8 millions programme for new re-armament expenditure by borrowing, and she has sought the funds in the country which will supply much of the essential materials. The market's response to the announcement was to mark down comparable Australian stocks by nearly a point, but the mid-week improvement in gilt-edged was generally considered to improve the chances of a warm, rather than a merely dutiful, response. The absence of Australian stocks from a general investment list must be rare, but this week's new loan has the advantage that, in the interval since the Commonwealth last appeared for new money, she has been able to build up satisfactory sterling reserves in London against any decline in her favourable trade balance.

Chinese Customs Agreement.—Following negotiations between the British and Japanese authorities since last February, "temporary measures" have been announced this week to protect the service of the Chinese Customs

loans during the period of hostilities. These arrangements do not imply recognition of Japanese claims in China, but they have been devised to protect the Chinese creditor in a situation where the facts are hard, and the solution necessarily calls for expediency. The agreement, which is subject to reconsideration in the event of a radical change in economic conditions, may be briefly summarised. All Customs revenues collected in ports now under the control of the Japanese forces will be remitted to the Yokohama Specie Bank. Foreign loan quotas will then be remitted to the Inspector-General of the Customs, sufficient to meet in full the service of foreign loans and indemnities secured on the Customs. These quotas will rank as a first charge on the revenues, after certain collection expenses have been allowed. The foreign loan quotas will be determined monthly, in proportion to the share of the port in the gross collections of the preceding month. Arrears on certain Chinese obligations held in Japan are to be met and balances now held by the Hong Kong and Shanghai Banking Corporation are to be transferred to the Yokohama Specie Bank.

The agreement contains no reference to the personnel or the administration of the Chinese Maritime Customs. In fact, the Inspector-General will now be a participant in the revenues from these ports, rather than the original receiver. Nor are the Salt and Railway obligations covered by its terms. The fact is, of course, that in the absence of such a compromise the bondholder would be dependent on the Chinese Government's ability—and willingness under heavy financial pressure—to meet the service from revenues collected from other ports still in Chinese control. Its importance may be assessed from the following table, which shows the principal sources and allocations of the Customs revenues last year:—

Customs Revenues	(In \$ millions)	Appropriations	
Shanghai	142.1	Foreign loans, etc.	76.9
Tientsin	33.4	American loans	8.7
Tsingtao	24.3	Domestic loans	129.1
Other Ports	143.1	Surplus to Government	128.2
Total	342.9	Total	342.9

The three ports named are all under Japanese control, and they accounted for well over one-half of the revenues last year. The figures this year, of course, will be largely affected by the course of trade in Shanghai—which shows a reduction of 70 per cent. for the first two months of 1938 compared with 1937. Calculations that the external and internal Customs obligations would be approximately covered on the basis of the receipts of the last five months of 1937 were, of course, irrelevant to a situation where a substantial part of the revenues was no longer being received directly by the Customs Administration. The new agreement holds out a promise of its own fulfilment, and appears to express a certain concern on the part of the Japanese Government to maintain amicable relations with other interested powers in China. The investor, therefore, will welcome the prompt response of Chinese issues to the news, although he may regret that the position of the existing personnel of the Chinese Customs Administration is not more clearly defined.

Foreign Bond Movements.—The recovery in the foreign bond market in April is reflected in each section of the index of bond prices compiled by Municipal and General Securities Company. After the heavy blows recorded in March some recovery was to be expected, and the calmer political atmosphere has been assisted by rumours and sometimes positive proposals regarding certain debt services. The measure of recovery in the component indices is shown at the head of the next column. Despite the over-all rise in the Far Eastern group, Japanese bonds were slightly lower at the end of April, but Chinese issues rose sharply in anticipation of the Customs agreement, which is discussed above.

N.B.—Figures in brackets denote number of bonds included.

Brazilian issues also responded to President Vargas' announcement that a "readjustment" of Brazil's economy is being carried out, which should permit of the early resumption of "all payments" on Brazil's foreign debt. Apparently, this intention is governed by the availability of a sufficiently large trade balance after the economic changes have been effected, and the alternative to the plan is to convert the foreign debt into Brazilian currency. Following the reduction of the Danzig Tobacco Monopoly payment to 4½ per cent., this bond had been transferred from the fully served to the defaulted group.

Accountants and the Investor.—Mr F. Lindsay Fisher's presidential address at the annual meeting of the Institute of Chartered Accountants this week tactfully surveyed the functions of the Institute and its members in relation to two matters which have engaged the attention of investors in recent months. The first, and most topical, of these matters is tax evasion, and here Mr Lindsay Fisher personally drew the distinction between legitimate tax avoidance within the law, and illegal evasion, with which, of course, no professional adviser would be willing to associate himself. But a more general and perennial issue was raised in the president's reference to company law reform. At previous annual meetings it has been disclosed that the Institute has examined the problem in order to be in a position to submit its views at such time when the Government considers that an inquiry has become necessary. It is clear, however, that there is no immediate likelihood of far-reaching amendment to the 1929 Act, although the need is generally admitted. It is interesting to speculate on the question whether the slow process of reform would be assisted by a more positive approach to the problem by the professional societies interested. A lead from these

organisations might tend to reduce the inevitable delays between the discovery of holes in existing company legislation and their stopping-up by amending Acts. Such a lead, quite evidently, is not inimical to the accountant's position as a watchdog over the interests of the shareholder.

Company Notes

Disappointing Railway Receipts.—The recent trend of the weekly figures suggests that railway traffic receipts are among the first indices of the arrival of general trade recession. In view of the relatively optimistic tenor of some chairmen's speeches, little more than a couple of months ago, it would seem either that history's repetition of itself, in this connection, has taken the railway world by surprise or that the eminent spokesmen were not averse to a little whistling to keep their spirits up. The following table suggests that in the opening weeks of the year gross railway receipts under all headings were still running ahead of their counterparts in 1937, but that, except in the case of coal traffic, the excess was less, rather than more, than was accountable to last year's increase in fares and charges. Before the end of the first quarter of the year, however, it was evident that goods traffic, as a whole, was beginning to fall below the preceding year's level and only passenger traffic was being well maintained. The railways' experience during more recent weeks has confirmed this discouraging tendency:—

CHANGES IN 1938, COMPARED WITH 1937.

* 17 weeks to May 1st.

For the first seventeen weeks, aggregate receipts still show a modest gain, due entirely to a 2½ per cent. increase in passenger revenue; for receipts from coal and coke are back to last year's level and those from general merchandise show a decline of 1½ per cent. If the current tendency is maintained, what remains of the increase in total receipts will have been wiped out before the turn of the half-year. Expenses, however, will on balance be heavier than last year. Marginal stockholders, clearly, have a strong vested interest in the early checking of the present cyclical downturn in British trade activity.

Marks and Spencer Progress.—A year ago, when costs were rising fast, many investors interpreted the fact as a bear point for fixed-price store shares. The preliminary profits and dividend announcement for the year to March last sets such fears at rest. Net profits have increased from £1,433,251 to £1,602,450, after providing £351,891 for depreciation and repairs, against £290,238 in 1936-37. Ordinary and "A" ordinary shareholders receive a cash distribution of 42½ per cent., against 40 per cent. in the previous year, and the customary 10 per cent. scrip bonus is maintained. Earnings are equivalent to some 73½ per cent., against 75.3 per cent. in the previous year, after making a provision of £325,699 for taxation, compared with £238,544. Two points of major interest to the investor stand out in these results. The first is that the rate of earnings on a constantly increasing share capital is being well maintained, despite the repeated fears of saturation and rising costs. Increasing popular purchasing power seems to have laid these bogeys

effectively. Secondly, the increased cash distribution, though not a radical departure, is a matter for pleasurable surprise. The rate was increased in 1931 and again in 1936, but most estimators would probably have guessed that 40 per cent. represented a "ceiling." Marks and Spencer ordinary have fallen severely over the past year. But on results of this kind, the present valuation of 57s. 6d. (which corresponds to an ex-all earnings yield of £7 2s. per cent.) does not appear extravagant.

Ford Motor Profits.—The Ford results present a contrast to those of Morris Motors. Trading profits have reached a new record of £1,576,966, against £1,558,990, but the dividend is reduced from 6 per cent. to 5 per cent. The ordinary capital has no gearing, but several of the charges on trading profit tend to produce the same effect. Taxation provision has been increased from £174,209 to £229,641, while depreciation and obsolescence has absorbed £815,065 against £749,571. In consequence, the amount earned for dividends is reduced somewhat sharply from £511,767 to £375,065, and the 5 per cent. dividend is covered by earnings of no more than 5.7 per cent. The latest profits are analysed below, while the company's sharp experience in depression and subsequent recovery is illustrated in the subsequent diagram:—

	1935	1936	1937
Gross profits, less fees*	1,392,787	1,549,524	1,565,465
Depreciation, etc.	714,370	749,571	815,065
Taxation	59,903	174,209	229,641
Employees' funds, etc.	77,517	116,412	145,296
Exchange differences	Cr. 63,106	Cr. 6,912	Cr. 176
Loan interest	6,950	4,477	574
Earned for ordinary	597,153	511,767	375,065
Paid	348,750	405,000	326,250
Earned (%)	8.6	7.6	5.7
Paid (%)	5	6	5

Carried forward 771,486 864,179† 912,994
* £7,000 each year. † After £14,074 net debit adjustments.

It may be mentioned that, between 1931 and 1935, exchange differences played an appreciable part in the determination of net profits.

As in previous years, the profits do not include any income on shares held in subsidiary companies, which have been transferred, where currency regulations permitted, to the Luxembourg Holding Company, or capitalised in share bonuses. The latter company, in turn, has made available cash resources for financing the expansion programme at Dagenham, on which £1,200,000 was expended last year. The Ford Motor balance sheet shows that loans from subsidiary and associated concerns increased last year from £77,984 to no less than £1,187,124. In sum, the past year's results appear satisfactory. The current state of business would not find all motor manufacturers ready to undertake large-scale

expansion schemes, but it is evident that the Ford undertaking, robbed by depression of its intended position in the European market, has found a secure place in this country. This fact appears to be readily recognised in a yield of £5 4s. 6d. per cent. on the £1 ordinary shares, which stand at 19s. 1½d.

Morris Motors Setback.—The reverse in the rapid growth of Morris Motors earnings since 1933 accords with general expectations that the profitability of the motor industry was lower as a whole last year. A reduction in gross profits from £2,372,082 to £2,168,530 is significant, but it is not serious, and even after providing £529,483 for taxation compared with £336,036 in 1936, the 45 per cent. dividend is still covered with a margin of over 10 per cent. The major problem for the investor, indeed, is the probable trend of profits during the current year, and he may regard the transfer of £200,000 to dividend equalisation reserve as a frank response to the problem of fluctuating earning power. In the following table we analyse Morris Motors profits during the past three years.

	1935	1936	1937
Gross profit	1,650,636	2,372,082	2,168,530
Maintenance	271,832	311,030	323,341
Depreciation	176,154	182,017	186,392
Net profit*	1,167,736	1,703,306	1,292,179
Preference divs.	225,000	225,000	225,000
Ordinary shares:—			
Earned	942,736	1,478,306	1,067,179
Paid	340,350	894,375	864,563
Earned (%)	41.5†	74.4	55.5
Paid (%)	15‡	45	45
Reserves	600,000	500,000	200,000§
Carried forward	238,531	272,462†	275,078

* Including other income, after charging taxation and staff pensions. † Tax free. ‡ After £50,000 staff pensions. § Dividend equalisation.

The chart below illustrates the profits and appropriations of the past decade:—

It should be pointed out that we have included under "reserves" amounts written off patents and goodwill from 1929 to 1932, in order to retain a more comparable basis for total profits.

The directors regard the latest results as satisfactory, for costs rose considerably, and the value of the company's products was increased more rapidly than selling prices. The effect of higher costs of materials, coupled with increased purchases intended to ensure continuity of production, are reflected in an advance of £855,700 in the value of stocks held by the company and its subsidiaries. The effect has been substantially to reduce the group's cash holdings from £2,621,611 to £1,112,885, although

the current position as a whole remains strong. In view of the trend of sales in recent months, the outlook for motor shares must be regarded with a certain caution. However, Morris Motors shares, which yield £8 5s. per cent. at the present level of 29s. 6d., have the benefit of a strong reserve position.

Canadian Pacific Meeting.—The many British holders of Canadian Pacific Railway securities in this country will welcome the frank and detailed comments of Sir Edward Beatty at the annual meeting, held in Montreal this week. Sir Edward's speech was mainly occupied with the physical condition of the railway system and its ancillary branches, which include steamships, hotels and communications. His case, made with customary vigour, was evidently addressed to certain critics who have misinterpreted the present position of the condition of the property, and its theme was that renewals expenditure has been made with the object of maintaining net revenue, and has succeeded in preserving the physical condition of the undertaking in satisfactory shape. The current earnings outlook, however, is of a rather different character. Gross earnings during the first quarter of 1938 are \$1,500,728 lower, owing almost entirely to the setback in industrial activity in the United States and Eastern Canada. Yet working expenses have increased by \$893,735—an increase which is more than accounted for by the full restoration this year of the residual 4 per cent. of the 10 per cent. cut in basic wage rates in 1931. If these rates are maintained this year, they may increase working expenses by \$5 millions (or 4.1 per cent.) over the 1937 figure. In sum, net earnings have fallen during the first quarter of the year by \$2,394,463. The complete restoration of pay cuts has given a hostage to the current year's crop prospects, which are fortunately favourable at the moment.

Rubber Trust Report.—Although it has substantial tea interests, Rubber Plantations Investment Trust earnings reflect, with a short time lag, the general tendency of rubber companies' profits. The Trust's latest total profits amount to £265,938—a trifle more than in 1929, and nearly double the level of 1936, after deducting an exchange loss of £42,814. The company has meanwhile disposed of its tea estates to Sumatra Tea Estates, whose purchase price forms part of a new item of £678,235 in the balance sheet, while the former entries for stocks and loans have disappeared. Results for 1937 are thus highly satisfactory, but the report does not refer specifically to N.D.C., which must be in part responsible for the sharp rise in provision for taxation from £20,647 to £60,664. The amount earned for dividend is thus only £88,000 higher at £189,805, but for the first time since recovery began, the dividend (raised from 7½ to 10 per cent.) is fully covered by current earnings, with a margin of some £7,500, which is added to the carry-forward. Owing to drafts made upon it in past years, the dividend equalisation reserve stands now at £50,000, and does not represent much more than 2 per cent. gross on the increased capital. The reserve account, however, totals £500,000, and, as in recent years, the market value of the investments exceeds book values. Since it is an investment company, the Trust's income for 1938 is to some extent protected by the operation of the time-lag, and rubber company results for 1937 recently published continue to show substantial improvements in profits. Tea companies, moreover, have made a better showing in their latest reports than a year ago, and including the holding in the Sumatra Tea Estates subsidiary, the

Trust had 28 per cent. of the book cost of its securities in tea as at December 31st last. On a short view, a current yield of £8 12s. 9d. on the £1 units at 24s. 4½d. appears adequate. Prospects for 1939 are, however, less cheerful, and it is useless to look further ahead than that until the outlook for both commodities is clarified.

* * *

Other Company Results.—Some seventy companies contribute to our usual analysis of profit and loss accounts appearing on page 340. This list includes a number of miscellaneous industrial companies, but the best represented group is rubber, while further investment trust results are also available. The results are discussed on page 315 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—Reports of company meetings begin in this issue on page 324. The president's address at the annual meeting of the Institute of Chartered Accountants is referred to on page 309. Sir Frederick Pascoe Rutter disclosed that the profits made abroad by *London and Lancashire Assurance* had for many years been almost twice the amount earned in this country. During the last twenty years the company had paid over £2,500,000 in taxes out of the profits on foreign business. Shareholders in *Scottish Union and National Insurance* were informed by Mr H. Geo. Younger that he understood the combination of the new mortality table with interest at 2½ per cent. (instead of 3 per cent.) provided the most stringent valuation basis used by any British office. Mr H. J. Morland announced that owing to the severe setback in security values last year *Friends' Provident and Century Life Office* had decided to re-establish a margin of market over book values by transferring £250,000 to investment reserves. Improvement in sales and the reduction of power rates were discussed in Lord Meston's speech at the *Calcutta Electric Supply Corporation* meeting. Mr Charles V. Sale disclosed to members of *Amalgamated Metal Corporation* that returns of the constituent companies for the present year were about the same as for the corresponding period in 1936. Mr Philip

E. Hill announced that *Philip Hill and Partners* were pursuing a policy of spreading interests over a wide field of industrial activity. At the *Timothy Whites and Taylors* meeting Mr Hill referred to the possibility of seeking further capital in the near future. At the meeting of *Kasintoe Rubber Estates* Mr Eric Macfayden pointed out that the company would be helped by forward sales of 140,000 lbs. at 10½d. per lb., c.i.f. Mr H. J. Welch, at the *London Asiatic Rubber and Produce* meeting, discussed the board's policy of replenishing the general reserve. The company would benefit in 1938 from forward sales of 756 tons, although present prices, if continued, would seriously affect the profits. Mr H. A. Barrett informed members of *United Sumatra Rubber Estates* that the gross average price received during the year was 8.35d. per lb., compared with 7.94d. per lb. for the previous year. Addressing the *North British and Mercantile Insurance* meeting, Viscount Wakefield of Hythe referred to signs of increasing interest rates, and expressed the hope that the company might thus be able to invest its funds to greater income advantage. Mr A. A. Wallace Cowan, at the *Caledonian Insurance Company* meeting, recorded with satisfaction that the valuation of securities still showed an appreciation over balance-sheet values. Mr G. Leslie Wates informed shareholders of *Johnson and Phillips* that the rubber cable and engineering departments had been working to the limit of capacity. Sir John N. Barran reported to *Barry and Staines Linoleum* shareholders that an appreciable increase in returns from the main subsidiaries and higher selling prices had more than offset extra wages and raw material costs. The composition of the *English and Caledonian Investment* portfolio was discussed by Mr Henry S. Loeb. Some 73 per cent. of the capital was invested within the Empire. "The politico-financial policy of Burgos" in its relation to the company was criticised by the Rt. Hon. Sir Auckland Geddes at the *Rio Tinto* meeting. Mining had proceeded smoothly, but masses of pesetas had been immobilised. Viscount Nuffield informed *Morris Motors* shareholders that the companies' models continued in vigorous demand in spite of the decline in car registrations, and he reported continued progress in the export markets.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
MAY 10	MAY 12

THE only distinction in this week's markets has been the continued firmness of the gilt-edged group during the first half of the period. The Rome talks and the Czech problem, coupled, perhaps, with restiveness regarding our position in aerial defence, made for caution, and the palpable shortness of stock in the gilt-edged market gave a heightened impression of the influence of small business. This has been in no sense a decisive week in the London market.

Gilt-edged stocks took the news of the Australian new borrowing calmly—indeed, its chances appeared to have been improved by the further gains recorded in trustee issues in the middle of the week. At first, the undated stocks made the major part of the running, but in mid-week the National Defence bonds reached 100½—the highest price recorded since the issue, and the possibility of a further instalment was naturally not being overlooked. The Australian loan caused a fairly sharp marking-down in existing issues, but they were later assisted by the firmness of the Funds, although the lists remained open all day.

Most prominent in the foreign bond

market were Chinese issues, which responded readily to the terms of the agreement covering the Customs loans service (discussed on page 308). The salt and railway loans were also affected sympathetically. Brazilian issues received little support at first, but conditions were firmer in mid-week.

Home rails have reflected the growing nervousness regarding the traffic outlook (discussed on page 310). The volume of selling was not large, but in the face of another poor list of traffics, it tended to increase slightly, the marginal preference issues being affected together with the ordinaries. In a dull Argentine rail group, Central ordinary was particularly flat.

The industrial market was generally uninteresting, although irregular movements gave place to a firmer tendency in mid-week. Iron and steel shares opened dull at first, with a steadier tone on Wednesday. Late last week and on Monday Richard Thomas were depressed by reports regarding conditions in the tinplate industry and the company's new finance, but recovered on Tuesday, the improvement becoming still more pronounced later, especially in the debentures. Babcock and Wilcox were firm on expectation of satisfactory statements at the meeting. Coal shares were dull, with small declines. Electrical equipment shares were inactive, while motors were irregular, though Ford was a firm exception. Aircraft shares, on the other hand, were

one of the brighter sections, and prices moved upward. Engineering issues followed the general trend, Laurence Scott responding to the excellent report. Textiles were almost consistently neglected. In the stores group there were some good features at first, Marks and Spencer being in demand, but the tone became easier. Brewery shares came on offer on Monday, but improved in mid-week on provincial support. The miscellaneous group was in undecided mood, with no specific trend in either direction. Shipping issues were dull on small realisations, while profit-taking affected Clan Line.

In the *oil market*, a dull start was followed in mid-week by a better tone. Unsatisfactory American prices over the week-end, coupled with Continental sales, depressed prices on Monday, but a reversal of these influences brought an improvement in mid-week.

Prices of *rubber shares* eased on Monday, though they resisted better than might have been expected the decline in the commodity. A firmer tendency followed its recovery, but business remained quiet. Tea shares shook off some of their early lethargy as the week progressed.

The mining market had some special pre-occupations apart from the tone of the markets generally. On Monday Kaffirs were listless, but interest broadened after a dull start and small gains were frequent. Business in mid-week was dominated by rumours about

the franc and, in particular, by fears that the sterling price of gold might be affected. Uncertainty, however, rather than belief in the more extreme rumours, was responsible for a weakening of quotations. Rhodesian coppers started quietly, but turned firmer later in the week. Tin shares, which were irregular at first, became prominent on Wednesday, and went ahead on the recovery in the commodity following reports that the Malayan referendum on the buffer pool might be held shortly. Other base metals also became more cheerful in mid-week.

ACTUARIES' INVESTMENT INDEX

Though it is of small extent, a fall has occurred in the Actuaries' index of 151 industrial equity prices, which on Tuesday last (May 3rd) stood at 68.7, against 69.3 and 65.0 a week and a month ago respectively. The corresponding yields are 5.42, 5.36 and 5.68 per cent. A selection of the component indices appears in the next column.

New York

WITH turnover still sub-normal, Wall Street's movements this week have not been spectacular, although stocks have reached higher levels. The market, still of the opinion that pump-priming would be beaten by deflationary factors, at least in the immediate future, found little encouragement in the industrial situation, and the later improvement seemed to be due as much to technical as to other causes. Some section of the market interpreted the reduction in the value of the franc as an inflationary pointer and bought gold shares, but cheerless forecasts of the future demand for steel did not prevent steel stocks from sharing in the rise. Aviation issues

were also strong in the middle of the week. *Iron Age* estimates steel activity this week at 30½ per cent. of capacity, against 32 per cent. last week. Evidence of the effect of the current recession continues to accumulate. The National City Bank computes the profits of 280 leading corporations for the first quarter at \$100 millions, compared with \$309 millions for the corresponding quarter of 1937. Class One railroads in February showed a net deficit of \$44½ millions, against \$5 millions in February, 1937. Meanwhile the prospects for the automobile industry are not regarded optimistically.

GENERAL MINING AND FINANCE CORPORATION, LIMITED

(Incorporated in the Union of South Africa)

ABRIDGED REPORT OF THE DIRECTORS FOR THE YEAR 1937. To be submitted at the Annual General Meeting to be held in Johannesburg on 7th June, 1938

Working profit for the twelve months ended 31st December, 1937, after deducting administration expenses, amounted to	£527,589	8	6
Unappropriated balance brought forward from 1936 was	130,694	12	2
Making the total available profit	£658,284	0	8
Which has been dealt with as follows:—			
Interim Dividend No. 23 of 10 per cent., equal to 2s. per share, paid to all Shareholders registered on the 25th September, 1937	£126,457	18	0
Final Dividend No. 24 of 15 per cent. (making a total of 25 per cent. or 6s. per share for the year)	189,686	17	0
Amount provided for taxation	10,000	0	0
Amount placed to General Reserve	200,000	0	0
	£26,141	15	0
Leaving a balance of unappropriated profit to be carried forward of...	£132,149	5	8

Investments are shown in the Balance Sheet at or under market prices ruling at the end of the financial year, in accordance with the usual practice. If valued at market prices a large surplus over Balance Sheet figures would be revealed. Stocks and Shares, British, South African and other Government and Municipal Securities, at the close of the year, amounted to £2,630,048, and exceeds the previous year's valuation by £735,323, representing additional investments made during 1937, mainly in gold mining shares.

Dividends have been maintained at a total of 25 per cent., and after providing for taxation, a further £200,000 has been placed to General Reserve. £132,149 has been carried forward to next year's accounts.

The principal interests of the Corporation are in the following companies: Van Ryn Gold Mines Estate, Ltd., West Rand Consolidated Mines, Ltd., East Rand Proprietary Mines, Ltd., Durban Roadport Deep Ltd., Phoenix Oil and Transport Co., Ltd., and Metal Traders, Ltd. The Corporation also holds various mining properties, real estate and leasehold property, &c.

Paris

THE Bourse passed through a wide range of moods in April. The month opened in a mood of optimism, helped by rumours of an Anglo-Italian pact. Preceding M. Blum's resignation, the market adopted a waiting attitude, which was increased by an extension of strikes and by further borrowing from the Bank of France. This mood persisted for a short time after M. Daladier took office, but the votes of the Chamber and Senate transformed the atmosphere. The volume of business expanded, prices moved sharply upwards, and something like boom conditions were approached in the two days before Easter. After the holidays a further sharp rise helped by the week-end accumulation of orders invited profit-taking, and quotations then reacted. Uneasiness was increased further by

weakness in the franc, the exchanges being the dominating factor for some days. The new financial proposals, however, were well received, and this influence, together with the London talks, eased the tension. This week's stabilisation reports provided the signal for a boom in rentes and ordinary shares.

Berlin

SHARE quotations moved in April within narrow limits, being stable or slightly upward until the last week, when there was a general but moderate reaction. The market was notable for substantial rises in specialities outside the category of standard industrials, in particular shipping issues (on somewhat vague dividend expectations for the two chief liner concerns), certain breweries, the hotel combine Hotelbetriebs A.G., and Westdeutscher Kaufhof. Most potash shares improved, though in a smaller degree. A sharp advance of General Electricity was not fully maintained, but certain engineering companies like Demag and Orenstein und Koppel were firm. Reichsbank and most of the commercial banks were slightly lower. The month closed with a minor recovery. Home fixed-interest securities were dull, reflecting the Reich Loan flotation, and ended slightly below the end-March level. The German section of the Young Loan, which had been very weak, recovered to 104.125. The decline of this loan, though it is in German currency, seems to have been due to apprehensions, since the *Anschluss*, of a general curtailment of the transfer service. The dollar-currency (certificated) foreign loans, influenced by the same sentiment, failed to recover. Dawes and Young certificated both lost on the month, in an entirely inert market. The official shares index (1924-26=100) for March was 113.85, as against 113.61 for February, and the bond index 100.05 against 99.94.

Amsterdam

THOUGH neither active nor eventful, April was on the whole satisfactory on the Amsterdam Bourse, and prices in all sections showed useful gains. The upward trend of quotations, however, had spent much of its force by Easter, improvement being most marked in the first two or three sessions in the month and a little later on U.S.A. reports of pump-priming. After the holidays there were occasional gains, but the tone was irregular and the impetus had been lost. The last week of the month, in fact, witnessed a small deterioration, commodity issues, in particular, being weak. The volume of transactions was never very large, and in the latter half of the month became extremely quiet.

Canada

LATE in March, the Canadian markets experienced the worst break since late September, and stocks of all classes were carried steadily lower. A check to the recession came early in April, but the recovery, though substantial, did not regain all the ground lost in March. The buying movement was based largely on the latest Roosevelt programme of "pump-priming," but as its endorsement by Congress seemed uncertain, markets again turned sluggish and hesitant. Then, in spite of occasional setbacks, prices improved markedly in all sections, owing to greater confidence in the United States financial programme, with some expansion of business. In the last three days of the month, however, quotations sagged slowly. Western grain companies' stocks have risen on the good moisture conditions in the prairie country, and the mining market, which also experienced a severe setback in March, has now shared in the recovery. At the end of April, newsprint shares weakened on the announcement of a reduction in price for the second half of the year by Great Northern Paper. The Bureau of Statistics "Investors" Index for common stocks stood at 101.4 on March 19th, at 87.9 on March 31st, at 93.1 on April 7th and 99.7 on April 14th. The bond market remained surprisingly firm and even showed an upward tendency; the Bureau's index for long-term Dominion bonds rose from 114.9 on March 18th to 117.1 on April 14th.

PUBLIC OFFERS

Australia, Government of the Commonwealth.—Issue of £7 millions 3 1/2 per cent. registered stock at 99, redeemable at par December 15, 1956, or from 1952 on notice. A trustee stock. Proceeds to meet Australian defence expenditure in the United Kingdom and to redeem Commonwealth Treasury Bills in London. Population, 1937: 6,831,363. Public debt per head, £stg. 164 17s. 7d.

BY STOCK EXCHANGE INTRODUCTION

Courage and Company.—Particulars of issue of 600,000 5 per cent. cumulative second £1 preference shares. Redeemable from 1960 at 2s. premium. Messrs Cazenove, Akroyds and Greenwood and Company and Govett, Sons and Company take issue at 21s. 3d., and also £500,000 4 per cent. redeemable debenture stock, 1979, at par.

Moore's Stores, Ltd.—Particulars of 150,000 7 per cent. redeemable cumulative £1 preference shares which Federated Trust and Finance Corporation have taken at par. Redeemable by 1964 at 21s. 6d. Total combined profits after depreciation: 1935, £50,986; 1936, £48,650; 1937, £52,016.

CONVERSIONS AND REPAYMENTS

Holt Brewery Company.—This company has given notice of redemption of £490,006 5 per cent. redeemable second debenture stock on August 1, 1938, at 102 1/2. For the redemption and for developments, the company will issue at 101, £1,000,000 4 per cent. guaranteed debenture stock. Holders of the 5 per cent. stock may convert. A public offer of the balance not required for conversion purposes will be made on May 10th.

BONUS ISSUES

Beechams Pills, Limited.—It is proposed to create 300,000 5 per cent. redeemable cumulative preference shares of £1 and to capitalise £300,000 of general reserve by issuing these shares to deferred holders in the proportion of one new preference for every four 5s. deferred shares held.

Marks and Spencer.—Shareholders are to receive a capital bonus (involving £164,730 of extra capital) of one "A" ordinary share for every 10 existing ordinary and "A" ordinary shares held.

ISSUES TO SHAREHOLDERS ONLY

Clyde Valley Electrical Power.—Issue of 1,050,000 £1 ordinary shares to ordinary shareholders at par in proportion of one new share for two shares held on April 12th.

Luipaards Vlei Estate and Gold Mining.—This company is to issue 1,415,529 2s. shares at 15s. in the proportion of one for two held.

DIVIDEND ANNOUNCEMENTS

Rates are actual, unless stated per annum or shown in cash per share. Rate for previous year refers to total dividend, unless marked by asterisk to indicate interim dividend.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend.	(b) Final dividend.	(c) Dividends for full year.	(d) Paid in £N.Z.	(e) Allowed for exchange.	(f) Flat yield
(h) Yield on 3½% basis.	(m) Based on payment of 2½%.	(n) To redemption at par, in year shown.	(o) Yield on 15½% basis.	(p) Yield based on 45% of coupon.	(q) Yield based on 45% of coupon.
(i) Yield worked on a 5½% basis.	(w) Yield based on 40% of coupon.	(x) Yield worked on a 14% basis.	(y) 1% paid free of income tax.		

* Bid and offered prices are free of Commission and Stamp Duty. (a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield on 20% basis.
(m) Including bonus of 5% free of tax. (n) Yield worked on a 2 per cent. basis. (r) Calculated at 18½ annas per share of Rs. 9. (p) Annas per share.
† Free of Income Tax. (i) Yield worked on 35% basis. (s) Highest price 132½ and 25 per cent. dividend. (q) Dividend before 1947. (t) Dividend after 1947.
50 per cent. capital bonus. Yield at 25 per cent. = £6 2s. 6d.; at 16 per cent. = £3 18s. 0d. (u) Paid on £30,000 more capital than in preceding year.
(d) 17½ per cent. cash dividend and 7½ per cent. in deferred ordinary stock. (v) Dividend before the 20% capital bonus 4s. per share.

Industry and Trade

Hours in Coal Mines.—Under the auspices of the International Labour Office, representatives of coal owners, mine workers and Governments from nine or ten countries are discussing at Geneva the question of equalising and reducing working hours in coal mines. No country has yet ratified the convention drawn up in 1935, which laid down a maximum working day of 7½ hours and a 46½-hour week, although the British Government have stated that they are prepared to ratify the convention simultaneously with the other six main European suppliers—Belgium, Czechoslovakia, France, Germany, the Netherlands and Poland. In recent years the majority of these countries have, in fact, reduced the length of the working week, but the existing differences are still considerable; a 45-hour week is worked in the United Kingdom, Belgium and Poland, while the hours of French miners average 38½ per week. This variation was one of the difficulties which prevented the adoption, in 1936, of a convention for a 38½-hour week; a transitional scheme is now suggested under which an 85½-hour fortnight should be worked for three or four years. The competition for European markets among the coal-exporting countries makes the question of such a further reduction in hours an international one, and a solution is rendered more difficult by the absence from the conference of any representatives of Germany.

—**And International Control of Exports.**—It is, therefore, unfortunate that the recent discussions in Paris between the principal European coal exporters have apparently had little result. Since January, 1935, there has been a working agreement concerning exports and export prices of coal between this country and Poland, but recently there have been complaints of breaches of the agreement from both sides. In addition, the German producers have stood outside, and the growing competition of German coal has intensified the dissatisfaction of producers in the United Kingdom and Poland. No account has been issued of what occurred at these discussions, but it is stated that they will be resumed at an early date. It is improbable that the convention to shorten the length of the working week will be ratified unless the export markets can be regulated, but the downward trend of consumption in importing countries and the difficulty of obtaining German support for an international agreement does not render regulation easy to obtain.

The Drought.—It is many years since Britain was afflicted by a spring drought of such length. In some country districts, there is already a shortage of water for stock and for domestic purposes; in most areas,

except in low-lying water meadows, pastures are bare, and cattle are still being fed on roots and cake. Ewes are also suffering from the shortage of young grass and the growth of lambs may soon be affected. Fields laid up for hay have been used to supplement the lack of grazing, which is another reason for expecting a light hay crop. Fortunately, many farmers still have hay from last year's splendid harvest, which will help to make up the deficiency. Autumn-sown crops, particularly on light land, are also reported to be suffering and the early growth brought on by the sun in March and April is being checked. Spring sowing is much delayed, since seeds have little chance of satisfactory growth unless the soil is reasonably moist, and many farmers are holding back from drilling their roots.

Cotton Trade Enabling Bill.—After many months of discussion and keen controversy it seems likely that some definite decision will be reached very shortly with regard to the Cotton Industry Enabling Bill, which has been submitted to the Government by the Joint Committee of Cotton Trade Organisations. The executive members of that body have made arrangements to visit the Board of Trade on Thursday next week. This week the opposition party has met the Lancashire Members of Parliament in London, when their case was presented by Sir Thomas Barlow, Sir Kenneth Lee, and Sir Thomas Higham. It is significant that the cotton trade unions, at their annual conference at Blackpool this week, have strongly supported the proposals. The promoters hope that the Government will indicate their attitude to the Bill without delay, especially as the cotton industry has again relapsed into a condition of severe depression.

Building and Wet Weather.—Inclement weather is the great enemy of the building trades. Ever since the war there has been agitation in the industry for some means of insuring workers against the loss of pay due to wet weather. There is now every chance that over 1,000,000 employees in Britain will benefit from a plan to provide payment for time lost on this account. The scheme emanates from long discussions between the building workers, the employers and the Ministry of Labour, and will be supplementary to the general Unemployment Insurance scheme, and therefore compulsory. If the agreed draft of the proposals is approved by the Minister of Labour, he has power under the Unemployment Insurance Act of 1935 to set it in force. Employers and workers will make equal contributions—6d. a week for craftsmen, 4½d. for labourers and

SHORTER COMMENTS

(continued from page 315)

Clan Line Steamers.—Trading profit for 1937 £712,099 compared with £666,964. To depreciation £269,935 (£253,012). Ordinary dividend 20 per cent. as before. To reserve £200,000 (£250,000); pensions from £97,065 to £94,820. The fleet at the end of 1937 numbered 42 vessels with a gross tonnage of 268,669 tons. Fleet valued at £3,243,659 against £2,578,927.

Roan Antelope Copper Mine.—Net profit for quarter to March 31, 1938, subject to taxation, totals £284,000 compared with £359,000 for the quarter to December 31, 1937, and £615,000 for the quarter to March 31, 1937. Nine months' profit £1,329,500 against £1,096,000. Reserve for replacements, etc., again receives £50,000.

Walker (John) and Sons.—Profit for 1938, after depreciation, £855,343 compared with £805,245. Ordinary dividend and bonus 42½ against 37½ per cent. Warehouse rents reserve receives a further £100,000, and £16,453 against £25,000 is placed to property reserve. Carry forward reduced from £143,159 to £134,198.

Kitchen and Wade.—Net profit for year to March 31, 1938, £71,256 compared with £45,972. Dividend 45 against 25 per cent. Goodwill reduced by £5,000. For tax and N.D.C. £21,655. Carry forward increased from £3,531 to £6,960.

Beechams Pills, Ltd.—Total income for year to March 31, 1938, £600,908 against £541,410. Deferred dividend 85 per cent. absorbing £186,765 against 60 per cent. absorbing £120,761. To development reserve £86,583 against £70,000. Carry forward raised from £58,352 to £81,986.

Investments in subsidiaries have been revalued at £2,500,000; resulting surplus of £1,147,536 has been placed to capital reserve.

United Molasses Company.—This company is selling the ordinary share capital of its subsidiary, Messrs. Macfie and Sons, Ltd. of Liverpool, to Messrs. Tate and Lyle. Negotiations are in progress for the transference of Macfie's sugar refining business to the Liverpool refinery of Tate and Lyle.

J. and J. Colman.—Trading profit for 1937, after depreciation, etc., expanded from £522,761 to £540,189. The net amount is slightly lower at £514,399 compared with £518,809, owing to increased provision for taxation, including N.D.C. Ordinary dividend and bonus maintained at 16 per cent. To general reserve £120,000 against £82,742 and £40,000 to contingency and development reserve. Carry forward £83,843 against £85,347.

2½d. for juniors—to a common fund, from which benefit will be paid to men who arrive at work and are sent away because of bad weather, to compensate their loss of daily wages. No benefit will be paid during the first twelve months after the inauguration of the fund, to permit of the accumulation of resources, estimated to amount in a year to £2 millions. The scheme has been approved by both parties, and now waits only upon final drafting and the Minister's endorsement.

Glasgow's Changing Industries.—In an article on page 287 we discuss the economic problems of Scotland which have arisen as a result of the decline in the export trades. The table below shows how the leading industries in the Glasgow area—the principal industrial district of Scotland—have been affected by the economic changes since 1929. It shows the estimated number of insured persons in certain industries, as well as the number recorded as unemployed in 1929, 1932, 1937 and April, 1938.

EMPLOYMENT AND UNEMPLOYMENT IN GLASGOW
(INCLUDING RUTHERGLEN)

	Estimated Numbers Insured			Numbers Recorded as Unemployed			
	July, 1929	July, 1932	July, 1937	June, 1929	June, 1932	June, 1937	April, 1938
Building	20,240	22,720	24,050	2,735	6,669	3,866	3,452
Shipbuilding and ship repairing	21,090	19,900	17,230	5,477	15,517	4,925	4,312
General engineering...	28,620	27,830	27,720	5,161	14,602	3,302	3,269
Hotel, etc., service ...	7,120	8,460	9,600	1,005	2,475	2,365	3,210
Tram and omnibus service	7,840	8,970	10,590	301	559	414	734
Road transport not separately specified	7,980	8,560	8,820	1,434	2,828	2,002	1,880
Shipping service	7,620	9,160	7,850	1,184	2,943	1,792	1,987
Printing, publishing, etc.	12,050	12,890	13,910	676	1,716	1,411	1,499
Tailoring	8,380	9,090	9,870	360	1,235	1,147	1,358
Bread, biscuits, etc. ...	11,940	13,720	14,880	1,112	2,170	1,835	1,961
Distributive trades ...	74,360	85,160	90,440	6,461	14,826	12,433	13,139
Local Government service	9,220	8,630	12,610	1,063	2,272	2,902	2,596
All other industries and services	159,960	166,410	176,120	21,662	50,895	28,871	31,646
Total	376,320	402,500	423,690	48,731	118,707	67,265	71,043

It will be seen how severely the majority of Glasgow's industries were hit by the depression. In June, 1932, when 19,900 persons were insured in the shipbuilding and repairing trades, only 4,383 were in employment. Even in general engineering, more than half of the total number of persons insured were without employment six years ago. Between July, 1929 and 1937, the total number of insured persons in the Glasgow area increased by 47,370 to 423,690. No fewer than 15.9 per cent. of these were unemployed last July, compared with 10.1 per cent. in the country as a whole. Between 1929 and 1937 the number of persons insured in the shipbuilding and repairing and general engineering trades actually showed a decline. On the other hand, there was a substantial increase in a number of other trades, especially services, which are less dependent on the export markets. As the figures for April show, unemployment is again increasing.

Further Decline in Shipping Rates.—Our index of tramp shipping freight rates continued its downward trend during the past month, when it reached the lowest level since November, 1936. The rate of decline of shipping freights, however, has tended to diminish.

The Economist INDEX OF FREIGHT RATES
(1898 = 100)

	Average, 1913	Apr., 1937	Jan., 1938	Feb., 1938	Mar., 1938	Apr., 1938
European waters	110.0	157.9	124.6	117.6	109.3	108.2
North America	113.1	121.0	118.5	109.3	110.6	114.0
South America	123.4	145.6	110.6	122.4	129.6	131.7
India	106.3	147.7	142.6	130.3	120.0	106.0
Far East and Pacific	117.4	162.0	128.6	120.4	111.8	109.2
Australia	127.9	167.7	130.0	113.4	111.6	113.0
Total	116.3	150.3	125.8	118.9	115.5	113.7
1913 = 100	100.0	129.1	107.9	102.1	99.2	97.7

As the next table shows, the decline in freight rates has not been uniform, rates on some routes having shown a slight increase.

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	96.0	- 1.8	South America :—	109.2	+ 2.9
Bay—outwards...	99.1	- 5.5	Outwards	154.3	+ 1.3
Bay—homewards...	145.2	- 3.2	Homewards	96.8	- 4.3
Mediterranean :—			India—outwards...	115.2	- 23.8
Outwards	83.2	+ 0.4	India—homewards...	109.2	- 2.6
Homewards	134.9	+ 2.3	Far East, etc.	113.0	+ 1.4
North America...	114.0	+ 3.4	Australia		

There are no indications of an early and sustained improvement in freight rates, for the trend of world trade is still downward, and the volume of idle shipping tonnage, consequently, is increasing.

The International Sugar Council.—At the meeting of the International Sugar Council, held in London at the end of last week, the consumption of sugar on the free market for the current year was estimated at 3.31 million metric tons. The export quotas allotted to the signatory countries for the year ending August 31, 1938, aggregate 3.5 million metric tons. The Council therefore decided to exercise the powers given to it by the agreement of last year of reducing these quotas by 5 per cent., thus lowering permissible exports to 3.2 million tons. It was decided to hold another meeting in July, when the situation will again be reviewed. If, during the interval, consumption in the free market should fall further, the Council will then be faced with a serious problem. It cannot reduce quotas by more than 5 per cent. without the unanimous consent of the contracting Governments, and the negotiations involved are therefore likely to be difficult and prolonged. If prices fall, there will possibly be a danger of a pressure for higher tariffs from importing countries, and there will certainly be dissatisfaction among the exporting interests. Present world economic tendencies, however, do not encourage the expectation of an increase in consumption. Consequently, the decisions of the Council last week have only postponed the difficulties.

Meeting of Copper Producers.—Important international conversations have taken place this week in London on the subject of the copper market. The

Agencies in: New York, Bradford, Manchester

discussions were attended by representatives of the leading Rhodesian and Belgian producers, as well as by the chairman of the Anaconda group and the vice-chairman of the Kennecott concern. The two United States concerns control the bulk of the Chilean and Mexican production as well as the greater part of the American domestic output, so that the meeting was virtually a conference of the world's leading copper producers. The only absentee was the International Nickel Company of Canada, which, however, has recently reaffirmed its willingness to restrict its copper sales in times of slow demand. So far no statement on the course and the results of these discussions has been published and no details of the conversations have leaked out. It is practically certain, however, that the unsatisfactory state of the United States market and the problem of American copper exports were the main subjects discussed. The United States is not a direct partner to the international copper scheme, but its exports of domestic copper have been limited to 8,000 tons per month under a special gentlemen's agreement between the big American concerns and the restricting producers. Last March this limit was surpassed for the first time since the introduction of the copper scheme in 1935, and, in view of the slump in the American domestic demand, that country's exports may remain high for some time. A limitation of American exports is essential if a serious slump in prices outside the United States is to be averted. The outcome of this week's discussions, therefore, may be of considerable importance for the trend of copper prices.

Agricultural Wages.—The wages and hours of agricultural workers in England and Wales have been regulated, since 1924, by Orders of Committees composed of representatives of farmers and labourers, with independent members nominated by the Ministry of Agriculture. There are ten such local committees whose decisions are ratified by a central committee, the Agricultural Wages Board; the wages so laid down are statutory minima for workers of the grade and age to which they refer, and can be enforced in the courts. Between June, 1926, and June, 1933, when agricultural prices fell by 29 per cent. and the cost of living by 18 per cent., the average minimum weekly wage, according to the Ministry of Agriculture, fell from 31s. 8d. to 30s. 1½d., or about 3 per cent.

INDUSTRIAL REPORTS

This week's reports from industrial centres do not indicate a change of trend in business activity. Although steel consumption, especially of heavy materials, remains at a high level, the volume of new transactions continues small, for stocks in many sections are still excessive. The Welsh tinplate industry remains depressed, last week's shipments from Swansea amounting to only 3,914 tons, compared with 9,928 tons during the corresponding week last year. The position of the coal trade also tends to deteriorate; export business remains small and demand for heating purposes is declining. Anxiety in the cotton industry is growing, for, despite the severe curtailment of the output of yarns and piece goods, current sales continue below production. The market in jute goods was again dull, though Dundee manufacturers are now more hopeful of a settlement of the dispute between the rival groups of manufacturers in India.

Coal

Cardiff.—There has been a further deterioration this week in the shipment position. An abnormal number of the coaling appliances were idle, and shipments early in the week were lower than

at any other period this year. Shipping movements may partly explain this lull, but the volume of inquiry is extremely small and the new import restrictions in France and Belgium are beginning to make their influence felt. Merchant firms as well as foreign buyers are strenuously endeavouring to exploit these conditions in their efforts to reduce prices, but there has been no change in the policy of the Control Board, and there is little or no modification reported in the permit prices. Last week's shipments at the South Wales ports totalled 400,500 tons, compared with 425,765 tons in the corresponding week last year. The South Wales Executive Board is pursuing an independent course over the decision of the Board of Trade authorising the resumption of the trade sharing provisions of the district schemes. The market in coke is weak and patent fuel quiet.

Glasgow.—The Scottish market continues to show a sagging tendency. New orders are tapering off in nearly all branches of the trade and short-time working has been necessitated in many cases. Coastwise trade has been affected by the smaller tonnages taken up by the public utility undertakings, partly

The minimum wages given in the table below are those in force during the later half of 1933. Those given for 1937-8 are those in force in March-April, 1938, some of which are now due for revision; the majority, however, came into operation in the autumn of 1937. The average

minimum wage increased from 30s. 6d. in 1933 to 34s. 6d. in 1937-8, an increase of about 11 per cent. Between June, 1933, and January, 1938, agricultural prices (including subsidies) rose by 33 per cent. and the cost of living by 17 per cent. The working week has been shortened by about one hour in summer and half an hour in winter. It is probable, however, that these figures under-estimate the increase in weekly earnings. In times of depression, statutory minima tend to become maxima, while the recent shortage of agricultural labour has definitely tended to hasten the rise in wages. For the same reason, a larger proportion of workers than formerly are now included in the better-paid classifications as shepherds, stockmen, etc.; the reduction in hours has probably also increased overtime payments. The conclusion, therefore, is that the agricultural labourer, when in employment, was little affected by the depression, and the increase in earnings since has roughly equalled the subsequent rise in the cost of living.

owing to the long spell of mild weather and partly owing to the dullness of the market, which has encouraged buyers to postpone deliveries in certain cases. Local trade generally remains satisfactory, but without showing the same briskness as formerly. The price trend remains easy.

Sheffield.—Domestic demand for industrial steam coal is well maintained and best hards are moving freely under contract. South Yorkshire and Derbyshire hards are quoted around 22s. per ton at pits. Last Monday South Yorkshire and Derbyshire collieries reduced the prices of house coal, the cuts varying from 8d. to 1s. per ton at pits for selected qualities and from 1s. 4d. to 1s. 8d. per ton in other qualities. Some pits have reduced prices all round by 1s. 4d. and 1s. 8d. per ton. No price reductions were made at this period last year, and this policy caused a reduction in consumption, householders turning to greater use of gas and electricity. By the present step the collieries are attempting to regain their former position.

The market in coke continues quiet. Export business remains very slow in spite of lower prices. Inquiry for forward delivery is very restricted.

Newcastle-on-Tyne.—The North-East coal market is quiet, except for certain grades subject to contract. Foreign buyers are only interested in their immediate requirements. In the home market the Northumberland steam coal sections have lost trade to other districts with the result that they are experiencing one of their slackest periods for a number of years. Prime grades of steam coals move very slowly; in some instances collieries are being compelled to stock. In the Durham section collieries producing manufacturing coal are comfortably placed, but others would be glad of business.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that, although the iron and steel markets continue quiet, production remains at a high level, particularly in the case of heavy materials. Several steelmaking firms are still in arrears with deliveries; but for some time past the volume of new orders has been much less than the tonnage of completed work, and it is now possible to obtain near delivery of most descriptions of steel.

Business in pig iron has been quiet, partly because buyers are awaiting an announcement regarding the prices which will rule in the second half of the year. Considerable stocks of most kinds of iron exist at the producing and consuming works and the demand is not likely to revive until these have been reduced. Some improvement in the demand has been noticeable of late, but most of the business passing has consisted of small supplementary parcels.

Requirements of semi-finished steel are at a low ebb owing to the heavy stocks held by consumers. It will be some months probably before the position is readjusted; but in the meantime substantial tonnages are passing regularly into consumption.

In the lighter branches of the steel trade conditions are quiet, and production has slowed down somewhat. Export business has been irregular, but the inquiry from some of the overseas markets has expanded and there appears to be a tendency on the part of buyers to make larger purchases.

Sheffield.—The iron and steel market remains quiet, but the undertone is quite confident. So far as pig iron is concerned, consumers are well stocked and are disinclined to enter into new contracts pending the expiration, at the end of June, of the period for which prices have been fixed, the general opinion being that there may well be some revision of quotations in favour of consumers.

The volume of business in steel has not shown any significant decline, buying of basic and acid billets being on a substantial scale. Wire rods, strip and bars are in good request, and the call for stainless steel sheets is as strong as ever. Production of steel ingots and castings in March in this area, at 160,200 tons, was the second highest on record.

There are no signs of a slump in this district; steel furnaces are operating at capacity and engineering works are fully employed. There is a good flow of

new orders from overseas, and the armament programme will serve to keep industry busy for some time.

Middlesbrough.—The output of foundry iron is going mainly into stock at the furnaces. Foundries are not using the iron which was delivered some time ago from the Midlands and the Continent as rapidly as was anticipated. Sales of East Coast hematite pig iron are slow, and difficulties are being experienced in getting consumers to take up full deliveries under contract. Three blast furnaces which have been producing hematite iron will go out of operation at the end of this week.

Export trade is almost negligible, and unless there is some revival more plant will have to be laid idle.

Heavy steel plants continue to be well employed, but the position of the departments producing sheets and lighter steel material remains the same. Contracts are being readily executed, and plant is working well below capacity.

Glasgow.—Steelmakers in the West of Scotland are still very busy and the tonnage of plates already on books will absorb several months' output at the present rate of production. As regards sections and bars, there is a fair amount of work on hand, and a steady output is being maintained for practically all such material. Light bar makers are not so happily placed, as stocks in the hands of consumers are still heavy, and it is anticipated that it will be at least another month before stocks are normal and buying activity is resumed. Local sheet makers are keeping quite a considerable proportion of their mills in operation. Overseas business continues to show some improvement, while the home demand, particularly for high-grade sheets, is exceedingly good.

Cardiff.—It appears that the recent decision of the Tinplate Cartel authorising the reduction of the schedule price from 22s. 6d. to 20s. 3d. per basis box was subject to the confirmation of the contracting parties to the Cartel, but the Swansea manufacturers have refused such confirmation and have been quoting at 21s. 6d. per basis box for export and 21s. 1½d. for the inland trade. The output position shows no material change, and shipments at Swansea last week totalled only 3,914 tons, compared with 9,928 tons in the corresponding week in 1937. The sheet trade is quiet and more steel furnaces have closed down. The increased import duties on foreign steel products have been accompanied by a decline in the volume of Continental material arriving at South Wales ports.

Textiles

Cotton (Manchester).—Business remained dull. Buyers have restricted their purchases to immediate requirements and, despite the severe curtailment of production in spinning and weaving centres, sales have been below output. Anxiety amongst producers is increasing. Raw cotton prices have favoured buyers; demand has been limited, and in the Liverpool futures market there has been a disposition to liquidate contracts, part of the selling

being due to the hedging of non-American cotton. More favourable weather advices have been received from the American belt, and the new crop appears to be making a good start.

The yarn market has been idle. It has been quite exceptional for orders to be obtained for anything more than retail lots. The price-fixing committees have made certain revisions in the schemes, the chief alteration being the change of the basic month for futures from May to July.

Manufacturers of piece goods have had another disappointing week.

Jute (Dundee).—Strenuous efforts are being made by the Indian jute mills to bring about an agreement on the question of working hours. Ninety-six per cent. of the mills are willing to sign the agreement drawn up by the Associated mills, but it provides that production in all mills shall be curtailed to 45 hours per week, excepting the smaller mills with less than 250 looms which would be allowed to work 54 hours per week. The latter are endeavouring to obtain permission to work 81 or 72 hours at least, and it is understood that this counter-proposal of theirs is holding up the signing of the agreement. Meantime, the Indian mills are producing far in excess of the world's requirements and stocks are mounting to great heights, particularly in the case of hessians. At the end of April these stood at 296 million yards and sacking stocks at 131 million yards, compared with 353 million yards and 112 million yards, respectively, at the end of March.

New jute crop prospects are quite satisfactory from all districts, but sellers are none too keen to lower their prices. The full group of Daisee-2/3 is still held for £17 per ton, and Tossa-2/3 at £17 12s. 6d., both old and new crop fibre, with spinners here showing little or no interest owing to the lack of demand for jute yarns. The price of common 8-lb. cops is 1s. 10d. and of 8-lb. spools 1s. 11d., but buyers are unwilling to pay more than 1s. 9d. and 1s. 10d., respectively. The cloth market rules dull and prices are more or less nominal at from 2½d. for 10 oz. 40 in. and 1½d. for 8 oz.

Calcutta goods have slightly improved recently owing to more favourable prospects of an agreement. Formerly, they were very weak and prices are still ruling at low and uneconomic levels.

THE COMMODITY MARKETS

The prices of primary products continued their downward trend this week. In view of the continued stagnation of business activity in the United States, this is scarcely surprising, especially as the output of many commodities is in excess of current requirements. Consumers, realising the weak position of sellers, continue to cover only their immediate requirements.

Among non-ferrous metals, copper, tin, lead, and spelter were all marked down during the week ending Wednesday, though tin prices rose sharply

COMPANY MEETINGS

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

TOTAL FUNDS REACH £17,000,000

RECORD NEW LIFE BUSINESS

MR H. G. YOUNGER'S ADDRESS

Mr Harry Geo. Younger, chairman, presided at the 113th annual general meeting of the shareholders of the Scottish Union and National Insurance Company, held at Edinburgh on May 4, 1938. In moving the adoption of the report and accounts for the year 1937, he stated:—

It will be noticed that we have passed another milestone of progress. The total funds have reached the £17,000,000 mark and, for the tenth year in succession, the new life business is greater than ever it was before. The quinquennial valuation of the assets and of the liabilities of the life department was made as at December 31st last. The results show a very large profit from mortality amongst the early bonus policies. Since the valuation in 1932, new mortality tables, based on the recent mortality experience of British offices, have been brought out jointly by the Institute of Actuaries and the Faculty of Actuaries in Scotland. Advantage was taken of the opportunity of making the present valuation by this table, which reflects the lighter mortality of recent years. In view of the fall in the general level of interest rates, the valuation rate of interest was reduced from 3 per cent. to 2½ per cent. I am told that the combination of this new mortality table with interest at 2½ per cent. provides the most stringent valuation basis employed by any British office.

The surplus disclosed by the valuation is sufficient to maintain the bonus at the high rate of £2 3s. per cent. per annum on the sum assured under "Scottish Union and National" early bonus policies declared in 1927 and repeated in 1932. The interim bonus to policies becoming claims before January 1, 1943, is at the rate of £1 18s. per cent. per annum. New policies effected subsequent to December 31, 1937, which become claims in the current quinquennium will be entitled to participate in this interim bonus. It is a satisfaction to the directors to be able to place before you so favourable a report. The maintenance of our high rate of bonus ought to be a source of great encouragement to our agents. I may say that the directors look to the shareholders, in their own interests, not only to place with the company all their own insurance business but to recommend their friends to do likewise.

ACCIDENT AND MISCELLANEOUS

The personal accident and employers' liability accounts do not call for any special comment. The profit transferred from the former is £5,600, or nearly £1,000 better than last year, whilst the E.L. account, despite an increase of £3,500 in premium income, is just able to make ends meet. There is little scope for profit-earning in employers' liability insurance.

The miscellaneous account shows an increase of £10,000 in premiums now totalling £241,000, but the result of the year's working on the combined account is a loss of £20,211. Two sections are responsible for this loss.

In common with the majority of the offices whose accounts for the past year have already been published, our experience in the motor section has been unprofitable. The standard of damages awarded to injured parties by judges and juries continues to increase and the recent decision in the House of Lords in the case of *Rose v. Ford*, whereby it was laid down that loss of expectation of life may be included in awards for fatal accidents, has added materially to the difficulties of the companies transacting motor insurance. It appears obvious that the rates of premium must be increased if this section of our activities is to be placed on a profit-earning basis.

MEDICAL INDEMNITY AND MARINE

During the year we have been engaged in a further clearing up of the situation in the medical indemnity section, to which my predecessor in the chair referred last year. Ample provision has

been made in our accounts for outstanding claims, and the special reserve in the miscellaneous assurance account has been further strengthened by a transfer of £50,000 from the profit and loss account. The special reserve now stands at the substantial figure of £100,000. We have ceased to transact medical indemnity business, and I regard the arrangements made for the running off in due course of our remaining commitments as satisfactory and adequate.

The marine account shows an increase in premiums of £60,655, but the year has not been profitable. Indeed, 1937 has been a very unfavourable year for marine underwriters generally. So far as we are concerned, we have been relatively fortunate as regards total losses but, owing to the heavy storms which were prevalent during the autumn and winter months, claims for minor casualties were very heavy. During the year a minimum increase of 15 per cent. in the rates for hull renewals was adopted by the entire market. This was followed by later agreements tending to improve the position from the underwriters' point of view, although it is doubtful whether the steps already taken are adequate to put the business on a sound basis, particularly in view of the continued heavy losses of first-class steamers. Competition for cargo business, on the other hand, continues more keen than ever and lines are being freely accepted at rates which are proving by experience to be inadequate to meet the normal losses which inevitably occur.

FIRE ACCOUNT

Now, let me turn to the fire account. Here we have results which are very satisfactory, although not quite so good as the previous year's excellent figures. The premium income is down by £5,600, due to the falling off in premiums in the United States of America. Intensive competition in that country, in conjunction with a period of years showing comparatively light loss ratios, has resulted in reductions in rates of premium. Notwithstanding the drop in premium income, our experience in the United States of America has again been very satisfactory. Indeed, it is once again evidenced that our fire business is of excellent quality all round by the fact that the claims' ratio is 41.4 per cent. of the premiums. The profit transferred to the profit and loss account is £173,126.

PROFIT AND LOSS

As regards the profit and loss account, the interest appearing in that account is practically identical to last year's figure, being only £200. The profits realised from the various revenue accounts total £349,918, against which must be set £20,211 transferred to the miscellaneous assurance account. The net profit, therefore, is (in round figures) £330,000. This profit includes £170,000, being the shareholders' proportion of the life and annuity and also sinking fund profits which falls to be added to the shareholders' funds as a result of the quinquennial investigation already referred to.

A sum of £100,000 has been transferred to the "Maritime" general reserve fund and, as already mentioned, £50,000 has been transferred to the special reserve in the miscellaneous assurance fund, bringing that special reserve up to the figure of £100,000.

It is proposed to pay the same rate of dividend as was paid last year. This will absorb £147,875, leaving a carry forward of £550,013. I shall inform you very shortly how the directors propose to deal with this carry forward. Since the report was issued the rate of income tax has been increased to 5s. 6d. in the £, and the figures I have just referred to will require to be adjusted.

I would now refer you to the balance sheet of the company. The total assets exceed £17,000,000, being an increase over the previous year of more than £273,000. Stock Exchange securities are all stated in the balance sheet at or under the middle prices quoted on December 31st last, and a valuation of our Stock Exchange securities as at that date shows a very substantial appreciation over the book values.

PROPOSED CAPITAL REORGANISATION

The directors have recently had under consideration the question of a reorganisation of the company's capital, and they feel that it is right that you should have early knowledge of their intentions to bring forward for your consideration, towards the close of this year, certain proposals to that end. Your present shares are either "A" shares of £20 each (£1 paid up) or "B" shares of £10 each (£3 15s. paid up). It is suggested that we take powers to split our shares and, subject to our obtaining such powers, to apply £300,000 out of the company's profit and loss balance to reduce the uncalled liability of the shareholders. Under the proposals we shall submit to you, each "A" share of £20 (£1 paid up) will become two new "A" shares of £10 each (£1 paid up), and each "B" share of £10 (£3 15s. paid up) will become two new "B" shares of £5 each (£3 15s. paid up).

As our Acts of Parliament presently stand, we do not have the necessary powers to carry through these changes in capital, but we propose to take action in that direction and, as I have said, we shall submit the proposals in a concrete form for your approval later in the year.

I should like to express the directors' appreciation of the services rendered to the company by the members of all local boards of directors, and by the officials and staff at the head office and at all the outposts of the company, both at home and abroad.

RETIREMENT OF MR NICOLL

Now, I have one other important matter to which I wish to refer. You will have observed the reference in the report to the change in the management of the company. Mr James Gibson Nicoll has filled the position of general manager since 1925, and having, by a year or two, exceeded the usual retiring age, it is natural that he should wish to relinquish his office. Under Mr Nicoll's management, the company has prospered. His energy and power are evidenced by the record figures which, year by year, we have been able to show in the life department. In 1924 the premium income of the company was £2,259,000 and the total funds were £13,249,000. In 1937 the premium income amounted to £2,685,000 and the funds totalled £17,182,000. These figures, attained in the comparatively short period of 13 years—and not exactly years of national prosperity—express more effectively than any words of mine can do what Mr Nicoll's management has meant to the company. Of this, I am sure, you will be glad to express your sincere appreciation and join with me in hoping he may long enjoy his well-earned rest.

Mr Thomas Edward Stevens, who succeeds Mr Nicoll as general manager, has been trained in the Phoenix Assurance Company, Limited, and at present holds the post of Liverpool manager of that company as well as being on the head office board of the Union Marine and General Insurance Company, Limited.

The report and accounts were unanimously adopted.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

NEW ASSURANCES AT RECORD LEVEL

The annual general meeting of the Friends' Provident and Century Life Office was held, on the 4th instant, in London.

Mr Harold J. Morland, M.A., J.P., F.C.A. (the chairman), said: The new assurances of our two companies once more established a record at £2,852,217, which was £134,246 more than for 1936. The annuity premiums received were £1,217,023, and show a slight decrease, more than accounted for by some falling away in the demand for immediate annuities. The sinking fund new business of the Friends' Provident and the Century together amounted to £955,950, and this class of assurance has become an important section of our operations, the funds amounting to £2,690,955, an increase in the year of £276,183.

The annual premium income advanced by £34,205, but as the single premiums were only £73,144 compared with £167,652, on balance the premiums received in the year were £60,303 less than for the previous year. This violent variation naturally affected the expense ratio, which became 16.79 per cent. compared with 15.14 per cent. for 1936.

EXCELLENT YIELD ON INVESTMENTS

The gross rate of interest earned by our investments has fallen by only 1s. 3d. per cent. in the past two years (£4 15s. 4d. against £4 16s. 7d. per cent.), but the rise in income tax in successive years has considerably accentuated the reduction in the rate after deduction of income tax, which for 1937 was £3 19s. 10d. per cent. This rate may be reasonably considered an excellent yield, especially as we do not take credit, in computing the rate, for the income tax deducted from annuity payments as a set-off against the income tax deducted from interest income.

Were we to adopt this alternative method, in accordance with the practice of a number of other life offices of the first rank, our rate of interest for 1937 would be stated as being £4 6s. 7d., after deduction of income tax, a difference of 6s. 9d. per cent. I have made this explanation in fairness to ourselves, and to prevent as far as possible any disappointment which members might feel in noticing that the net rate of interest stated in our report was less than the rate quoted by some of the other life offices.

CENTURY REVENUE ACCOUNTS AND DIVIDEND

The premium income in each of the trading departments, fire, accident, and marine, advanced substantially, but the underwriting experience in certain sections was unfavourable.

I am glad to say that the experience of the fire department in all parts of the world, with the important exception of the United States, was satisfactory, and the outcome of the accident department, notwithstanding the setback in the motor section, was excellent.

The marine account of the Century and, apparently, of most companies, is going through a difficult period at the present time, and substantial prospective losses have been provided for in part out of the group contingency fund, which is maintained to deal with occasional untoward occurrences in any underwriting department.

After provision for all liabilities and contingencies, the accounts of the company show profits for the year, including interest, at £43,209; £10,000 was added to the additional reserve in the general section of the accident department, a dividend of 15 per cent. on the £400,000 capital ranking for dividend was paid, costing £45,000 net, and a balance of £132,480 is carried forward to 1938 as compared with £144,271 brought forward from 1936.

The upward movement in Stock Exchange securities during the previous four years was changed into a severe retrogression during 1937, amounting in our case to about 6 per cent. of the aggregate funds of approximately £20,000,000. It has been considered advisable to re-establish a margin of market values over book values by transferring £250,000 to investment reserves, of which £100,000 relates to the Friends' Provident and £150,000 to the Century.

IMPORTANT CONSTRUCTIVE STEP

An important constructive step taken at the end of 1937 has been for the Friends' Provident to add £500,000 to its investment in Century shares, thus making the total investment £1,500,000. We have had evidence that the directors' policy has met with the appreciation of our members and the insuring public generally. From an investment standpoint, too, the policy has justified itself to the Friends' Provident.

The report was unanimously adopted.

LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED

SATISFACTORY RESULTS OF A DIFFICULT YEAR

SIR FREDERICK PASCOE RUTTER'S REVIEW

The seventy-sixth ordinary general meeting of the London and Lancashire Insurance Company, Limited, was held, on the 4th instant, in London, Sir Frederick Pascoe Rutter, governor and chairman, presiding.

Sir Frederick, in his address, said: May I direct your attention to how we—this country—stand financially, i.e. as regards the "sinews of war," as to the country's true financial position, based largely upon our international trading, and essentially to the saving factor of our invisible exports, without which we should have been bankrupt?

Ten years ago our exports were £854 millions and our imports £1,206 millions, leaving a hiatus of £352 millions. Five years ago our exports were £422 millions and our imports £685 millions, a much more satisfactory hiatus of £263 millions. But the difference has since so developed that in 1937 our exports were £606 millions, whilst our imports were actually £1,049 millions, leaving the serious hiatus of £443 millions. This is a matter of real gravity, accentuated by the cost of the continuous re-armament undertaking. If goods are being manufactured for armament purposes, those goods cannot be exported, and, further, in order to continue the process, other goods must be imported. Consequently there is no early hope for any improvement in the lacuna between our exports and imports.

INVISIBLE EXPORTS

Let us consider our invisible exports, which consist of foreign lending, shipping, banking and insurance. Whilst the balance between our direct exports and imports had been growing worse, our invisible exports, as indicated by the steady rise since 1932, had been recovering. All the same, in 1937 these invisible exports were still £84 millions less than they were ten years ago, and are inadequate to cover the deficiency. The puzzle is how are we going to rectify this.

What encouragement is there now to lend abroad, in America, where you have an uncertain condition of markets, and the future financial position for at least another two years cannot be predicted, or on the Continent or in several more distant countries where we have met with discouragement, reverses and even repudiation? It would be fallacious optimism for anybody to assume that our foreign lending is likely, in the early future at any rate, to recover. Shipping and banking I will not dwell upon, but insurance is more important than many people imagine.

I am not sure whether our Chancellors of the Exchequer have ever realised how much the revenue of this country has been indebted to British insurance companies for their successful enterprise throughout the world. Our profit abroad has for many years been almost twice as much as the profit we have made in this country. Consequently the income from taxation which the Government have received from us has been correspondingly very much greater than if we had confined our operations to our home shores. During the last twenty years of our operations the taxes which this company has paid to the British Government upon the profits of our foreign business alone have amounted to more than £2,500,000. But our efforts are by degrees becoming more cramped. Country after country from which we used to make good profits has gradually been wiped off our map, or so emasculated that the power of production has been seriously minimised.

YEAR'S RESULTS

Whilst 1937 was not the company's best year, it falls into line with what we have been accustomed to when circumstances were not very favourable. The feature which will doubtless have struck you most is the considerable advance of £507,028 in our premium income, which had receded. The increase is welcome. I must confess I could have wished that the progress had been more largely due to the fire section, but actually £170,610 falls to the Accident department, and no less than £310,690 to the Marine. Having in mind the conditions of Marine business, it would be a reasonable inquiry how and why that increase has come about. It has been quite natural, consequent upon the increased trade activity, the growth and development of old and valuable connections, and the premiums (adventitious as they may be) from war risks.

Taking the three departments together—with the handsome profit of £366,720 for the Fire, £100,629 for the Accident, and (in a year when one scarcely expected any profit at all) £35,853 for the Marine

—we arrive at a total profit, after making provision for our unexpired liabilities, of £503,202 or 7.47 per cent. To make half a million at all in 1937 had been really beyond my own expectation.

Interest improved to a small extent last year. The enhancement would have been greater except for taxation in the United States, and of course in our own country. But apart from the National Defence Contribution, the draft on underwriting, the difference between dividend and the interest and life profits, is £12,000 better than last year. We have felt it necessary to increase the annual provision for pension fund from £35,000 to £40,000. After deducting the sum required for the dividend of 20s. a share, which we have been paying for many years past, and making all reserves necessary for increased liabilities, there remains an improvement in our funds which is reflected in the balance carried forward of £219,420.

THE FUNDS

Financially our strength is significant, for our total reserve funds now amount to £12,224,479, or 181 per cent. of our premium income.

At the moment our funds are really more than this, because they are so much larger than the book values notwithstanding what happened during 1937. The end of 1936 was the peak in the value of our investments, and the margin amounted to well over two million pounds. Although a million of this vanished in 1937 and there has been further recession this year, this buffer or financial cushion still amounts to more than a million.

CONDITIONS OF MARINE BUSINESS

The history of our underwriting in the Fire and Accident departments has been uneventful, but the conditions of Marine business were the most trying I remember. In 1937 shipping revived, many less seaworthy ships were employed, and there was an undoubtedly increased hazard. This was coincident with reduced rates and inadequate premiums as a consequence of competition which had been rife, with the increased cost of repairs, and finally, almost an avalanche of total losses which seemed to come without rhyme or reason. 1937 was actually the worst year for total losses since 1929. Fortunately we did not show a loss on our operations but a comparatively small profit, and I think that result must confirm your confidence in the soundness of our Marine business as a whole.

May I briefly summarise how I regard the world-wide aspect so far as we are concerned. Our home business is static. It is consistently profitable. But the scope for really permanent progress is naturally limited.

In the United States we have had quite a fair year. It was good for companies generally, and although we do not, as we have done so often, produce a result better than the average, we have no reason to suppose that we shall not do so again. Canada did very well for us, and our profit was appreciably more than in the previous year.

Australia has recovered politically and economically, and the anxieties of 1931 have given place to an increased measure of confidence. Our own results have been quite satisfactory, with an increased premium income and a larger profit than in 1936. In South Africa we have made moderate progress, and our handsome record of the past has been well maintained. India is still a lucrative contributor to our general foreign results.

Accident business, whilst progressive, is more difficult. There is no immediate prospect of appreciable, if any, profit from either motor cars or workmen's compensation, which constitute the chief sections of our Accident department. The business as a whole, however, does help to weld and consolidate our other departments, and you will appreciate that it demands and is given much watchful attention.

1937, therefore, whilst not the best year which we have ever had, produced a result in regular conformity with the record which you have had before you so consistently during the past, and, although one's efforts to expand in premiums and profits have not the same scope and freedom as was the case thirty or forty years ago, I retain the same unvarying confidence in the prospects and future of our company.

Report and accounts were adopted.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY, LIMITED

GOOD RESULTS IN ALL DEPARTMENTS

The one hundred and twenty-eighth annual general meeting of the North British and Mercantile Insurance Company, Limited, was held, on the 5th instant, in Edinburgh.

The Rt. Hon. The Viscount Wakefield of Hythe, G.C.V.O., C.B.E., LL.D. (the Chairman), said that on the life side of their operations they again had a very satisfactory year, and for the third year in succession the total new sums assured exceeded 5½ millions. This indicated a steady consistency in the flow of business, the average for those three years being £5,587,109, while for last year the actual figure was £5,619,779. Their mortality experience was again on the light side. The factor which caused them the greatest concern was the rate of interest. In recent years they had been passing through a period of falling rates, and if that downward tendency were to persist for any lengthy period it was obvious that the bonus prospects of life policyholders would be seriously affected. However, rates generally were now showing signs of turning upwards, and they had a compensating factor in that they might hope to be able to invest their available funds to greater income advantage than had been possible for some time past. On the annuity side, too, the flow of business had been most consistent, the total purchase prices received during the year being £645,050, against £658,872 in the previous year.

In the fire department the premium income had increased by the substantial amount of £159,000 and exceeded £3,500,000. The steady expansion since 1932 had continued to an even greater extent in the past year, both home and foreign business participating in the advance. The surplus on fire business for the year, after providing £63,000 as reserve for unexpired risks in respect of the increased premium income, amounted to £356,938, which was only slightly less than the 1936 total and represented 10 per cent. of the premium income. They considered that this result was very satisfactory. They had transferred a further £1,000,000 from profit and loss account to the additional reserve in the fire insurance fund, making that reserve up to £3,000,000. Figures of their home and general foreign business were both rather better than in the previous year, as regarded loss and expense ratios and contributions to underwriting surplus. An important contribution to the increase in total premium income was received from the United States, where they had a very substantial fire business.

ACCIDENT BUSINESS

Their accident business was conducted through the Railway Passengers Assurance Company, whose shares were owned entirely by this company. The results had again been most satisfactory, both as regarded premium income and underwriting profit. Premiums amounted to £1,346,456, the highest total in the history of that company and an increase of £91,598 over those for the preceding year. After making full provision for outstanding claims and reserve in respect of unexpired risks, the underwriting profit was £143,055, which was 10.62 per cent. of the premium, and in amount rather more than the profit of the previous year. Net interest on investments, at £105,618, showed a small increase, and the combined figure of profit and interest amounted to £248,673.

The premium income of the marine department (Ocean Marine Insurance Company) for the year amounted to £297,933, an increase of more than £61,000 over the income of the previous year. Once again the "Fine Art and General" had produced very good results. The premium income had increased by over £13,000, which was only slightly less than the increase shown in the previous year, and the underwriting profit amounted to £54,344.

With regard to the profit and loss account, starting with an aggregate balance brought forward of £7,091,490 they carried forward, subject to dividend for 1937, £6,520,979 after making not only their customary allocations but also after providing for the transfer of £1,000,000 to fire fund additional reserve and a grant of £15,000 to the Widows' Pension Fund.

Summing up, he felt it would be agreed that the most satisfactory feature of what was an excellent account as a whole was that in times that continued to be very difficult they had been able once again to maintain such evenness of good results in all the main departments of the business. It was proposed to pay the same dividend as last year, namely, 6s. 3d. per share, less income tax, payable one-half on May 16th and the other one-half on November 11th.

The report was unanimously adopted.

CALEDONIAN INSURANCE COMPANY

FRESH RECORD IN NEW SUMS ASSURED

The one hundred and thirty-third annual general meeting of this company was held, on the 5th instant, in Edinburgh.

The chairman, Mr A. Wallace Cowan, J.P., in moving the adoption of the report, said: The net new life assurances granted during 1937 amounted to £2,166,349, the premiums thereon being £78,174, including £25,156 by single payments. The net new sums assured constitute a fresh record and compare with £2,039,320 for 1936, which was itself a record.

The death claims for the year 1937 were £228,895 as compared with £236,764 in the previous year. Surrenders amounted to £94,147 as compared with £65,151 in 1936, but this increase is more than accounted for by certain large deferred annuities having been surrendered for cash on attainment of the ages at which the annuities would have commenced.

The expenses for the year 1937, excluding those applicable to annuities, showed a ratio of 16.7 per cent. as compared with 15.8 per cent. in 1936, but the 1937 expenses include special items in connection with the triennial valuation as at December 31, 1936.

The average rate of interest on the combined life assurance and annuity fund (excluding reversions purchased) was £3 19s. per cent. after deduction of income tax, as compared with £4 0s. 4d. per cent. for the previous year, the reduction being partly accounted for by the increase in the rate of income tax from 4s. 9d. to 5s. per £.

The valuation of our Stock Exchange securities as at December 31st last, despite the heavy general fall in the value of such securities during the latter part of the year, still shows an appreciation over the values at which the securities stand in the life balance sheet.

The directors have resolved that the same rates of interim bonus be paid in the case of policies becoming claims during the year 1938 as were paid in the previous year, namely, £2 2s. per cent. on whole life assurances and £2 per cent. on endowment assurances and double endowments.

FIRE DEPARTMENT

As shown in the report, the premium income for the year 1937 was £697,490 compared with £714,938 in the previous year, and the profit was £65,472 compared with £70,289. The fire fund on December 31, 1937, amounted to 112 per cent. of the premium income for the year.

ACCIDENT DEPARTMENT

The combined account shows that the total premium income for 1937 was £514,201 compared with £521,323 for the previous year, and that the profit was £10,963 compared with £16,415 for the year 1936. The total accident fund on December 31, 1937, amounted to 80 per cent. of the premium income for the year.

MARINE DEPARTMENT

The premium income for 1937 was £96,985 as compared with £86,208 for 1936. The first year's claims for 1937 were £28,182, being 29 per cent. of the premium income.

After a transfer of £10,000 to the profit and loss account, the marine fund at December 31st last amounted to £173,293, representing 179 per cent. of the premium income for the year.

GENERAL RESERVE FUND

This fund, which is additional to the departmental funds previously mentioned, has been increased as at December 31st last to £600,000 by a transfer of £25,000 from the trading profits of the year.

PROFIT AND LOSS ACCOUNT

The balance at credit of profit and loss account at December 31, 1937, including the sum brought forward from the previous year, amounted to £278,140. Out of this sum the directors recommend that £17,500 be carried to the staff pension fund as at January 1, 1938, and that a dividend be declared at the rate of 15s. per share, subject to deduction of income tax, to be paid by equal half-yearly instalments on May 16th and November 11th next, leaving a balance of £174,906 to be carried forward.

I am pleased to state that our provision for British income tax is sufficient to cover our liability at the increased rate of tax. You will observe that we have included provision for the National Defence Contribution. Whilst we are quite prepared to pay our due share of any tax required for national defence, we are not alone in holding that the inclusion of investment income is an unfair discrimination against insurance companies.

The report was adopted.

AMALGAMATED METAL CORPORATION, LIMITED

BASE METAL SITUATION

MR CHARLES V. SALE'S SURVEY

The ninth ordinary general meeting of this Corporation was held, on the 29th ultimo, in London, Mr Charles V. Sale presiding. The Chairman, in the course of his speech, said:—If we exclude, as I think we may, the period of the Great War, the turning wheels of vicissitude never moved more swiftly in the course of our trade than during 1937. Although there had been a sharp upward movement in the preceding months, the opening prices in January were not unreasonably high; generally speaking, they were little above those prevailing in the pre-war period; the next ten weeks, however, were weeks of feverish advance culminating in a high peak on March 11th. The severe fall which followed, save for a brief period of wavering in midsummer, continued until December, when the market closed at prices closely approaching the level from which the advance first began in 1936.

There have been three years which rank for comparison: 1907, the United States crisis; 1920, the crisis after war inflation; 1929, the United States crash. But the fluctuations in 1937 were greater within a shorter space of time than in any one of the three, an indication of the perplexities accompanying our particular trade throughout the twelve months.

There is no doubt that in certain quarters the strength of the rising consumption in 1936 was not fully realised, and that some users encroached on their normal stocks and at the same time failed to make sufficient provision for their future needs. That undisclosed position concealed an accumulating demand, and when re-armament cast its shadow before, the elements for a great advance were assembled—insatiable buyers and limited supplies. In these circumstances it was unfortunate that the White Paper outlining the cost to this country of the five-year defence programme, was so generally construed as a new outlay of fifteen hundred millions on re-armament, whereas, nearly half the sum was due to normal expenditure.

The race to cover was intensified. Russia concentrated almost the whole of her purchases for the year—they were much larger than ever before—in the space of the first three months, and individual purchasers in this and other countries acted in like manner. In the United States the statistics show the extent of demand in the early part of the year; during the first four months the tonnage of deliveries, taking all base metals together, was 50 per cent. greater than in the corresponding period of 1936. Thus, as you will have realised, a forward buying movement of universal extent was in progress in the first quarter of the year.

Looking back, it is plain to see that, apart from the special influences I have described, the course of our market was dictated by a world-wide wave of activity, raising the prices of all primary commodities—the crops of the farm no less than the products of the mine. When that activity subsided prices fell.

I stress these facts because the violence of the price fluctuations attracted an unmerited degree of criticism to the non-ferrous metal trade in general, and the London Metal Exchange in particular. They were ascribed to speculation, to gambling in the necessities of key industries. Actually, of course, the broad stream of daily transactions on which the Metal Exchange depends for its existence is in the nature of insurance against the risk of rising or falling prices—the seller covering his production, the buyer covering his sale; the stream derives from the exercise of prudence. Undoubtedly there was speculation, that is to say, buying and selling, not in the ordinary course of genuine business activity, but by outsiders seeking a chance profit. It was unduly magnified, both in influence and extent, by public opinion as expounded in Parliament and Press. It was of minor importance in the play of greater forces.

The year 1937 stands out not only as one of confusion in prices but also as a year in which production and consumption substantially surpassed previous experience. Excluding the United States, the increase since 1929 is all the more striking. The figures may, of course, conceal some increase in invisible stocks either of metal or manufactures. Undoubtedly this is so in the case of tin, particularly in the United States and in Russia, but in the other metals it is less easy to form a judgment. Throughout the second half of the year manufacturers were drawing on the excess stocks acquired in the first quarter. This policy of reducing stocks has continued into the current year, and in the interval since the decline began, now over twelve months ago, the volume of new buying has not kept pace with consumption.

Visible stocks as we see them to-day, while larger than a year ago, are lower than in three or four of the last seven years. The tin and copper restriction schemes, while leaving reasonable latitude

as regards price, are working effectively toward the equation of supply and demand. There are no such schemes for either lead or spelter, but, generally speaking, it seems probable that stocks will not be allowed to become such an unwieldy and depressing influence as they were in the slump of 1930 and onwards.

Prospects for higher prices during the current year depend largely on conditions in the United States. At our last meeting I suggested that the cumulative need for extensive building and equipment would make for prosperity in that great country; the need still exists, if anything in more pressing degree, but when will the remedy be applied? The present situation is one which might just as easily make for rapid improvement as for a further decline.

Turning now to other subjects, we continue our study of mining possibilities in the United Kingdom. The exploration of the Green-side mine, of which I spoke to you last year, revealed an ore-body of good promise, both in grade and extent, and, in co-operation with our partners, a milling plant is now in course of erection for the treatment of 250 tons of ore per day. At the present rate of progress we hope the plant will be ready for operation within the next few months.

While the rubber department of Henry Gardner and Company held its own, the trade, which began the year so hopefully, suffered in its course the fluctuations both in price and demand which affected other primary products. You will remember that the control committee raised the quotas for 1937 to 75 per cent., 80 per cent., 90 per cent. and 90 per cent. for the respective quarters. When demand began to fall, these enlarged quotas were already on the way to market, and the net result of the two factors was a continuous decline from the peak of 1s. 1½d. in March to 7d. at the end of the year, compared with 10½d. in December, 1936; moreover, world stocks increased within the 12 months from 460,000 to 560,000 tons.

The control committee fixed the quotas at 70 per cent. and 60 per cent. for the first two quarters of 1938, but it is still too early to say whether the reduction for these periods will be sufficient to offset the decline in consumption.

In view of the official announcement, the renewal of the control scheme for a further period of five years from the end of 1938 seems to be assured. It is, however, subject to ratification by the Governments concerned.

A review of the accounts was given in the directors' report circulated a week ago, and I have very little to add. The application of £100,000 from the general reserve fund to writing the value of the Canadian mining property down to £35,000 was made in consequence of the relapse in the price of spelter. The property was acquired in December, 1926, after an investigation extending over two years, when spelter averaged about £34 per ton. By the time production became possible, the price had already fallen by £10, the beginning of a continuous decline to an average level of only £14 per ton during the six years ending in 1936. In that year, production was started in anticipation of a rising market, but the advance, when it came, was of short duration, and with prices again approaching the slump levels, it was decided to reduce the book value of the asset to a figure which would leave no room for doubt.

We could not expect to pass scatheless through a year in which almost every month witnessed a crisis of some kind, which would have shaken the business world of the last century to its foundation, and the misfortunes of clients of many years' standing, unable to fulfil their contracts, are reflected in the net profits of the constituent companies. They have fallen, as you will have noticed, from £461,000 to £397,000. I need hardly tell you that the result was obtained after writing off all losses in full and writing down the dividends at the same rate as last year with a margin of £32,716. Of this, £20,000 was transferred to the reserve for contingencies and the remainder to increase the carry-forward. Though the reserve fund for contingencies has been increased, there are no hidden liabilities to become a charge on the fund.

So far as the present year is concerned, I may tell you that the constituent companies of your corporation are making satisfactory progress, with returns about the same as for the corresponding period in 1936, and that we look hopefully to the future.

I have pleasure in moving:—

"That the directors' report, balance sheet and profit and loss account for the twelve months to March 31, 1938, as now presented be and are hereby approved and adopted and that a dividend of 7 per cent. payable less tax in respect of the year to March 31, 1938, upon the ordinary shares of the Corporation be and is hereby declared payable on May 10, 1938, to the members now on the register."

Mr Henry Gardner seconded the resolution, which was carried unanimously.

The alterations in the articles of association were unanimously approved.

ENGLISH AND CALEDONIAN INVESTMENT COMPANY, LIMITED

INTERNATIONAL OUTLOOK

The eleventh annual general meeting of English and Caledonian Investment Company, Limited, was held, on the 5th instant, at 23 Blomfield Street, London.

Mr Henry S. Loebel (chairman of the company), who presided, said that their investments had a book figure, less contingency fund, of £1,032,026, which was approximately some £50,000 more than a year ago. That increase was explained principally by the issue of £50,000 3½ per cent. debenture stock. A valuation of investments at March 31st last showed them to be worth £833,538, a depreciation of 19.23 per cent. on the book figure appearing in the balance sheet. That depreciation compared with an appreciation of 5.6 per cent. a year ago.

Their experience in the depreciation of the value of their investments was shared by other investment trusts and was primarily a reflection of the general feeling of insecurity engendered by recent events in Europe and elsewhere. Too much importance should not be attached to the market value of an investment portfolio at any given moment, as that was a constantly fluctuating factor. For example, two days ago a valuation of the investments had shown an appreciation of about £34,000 over the valuation at March 31st.

At March 31st last, their portfolio consisted of 254 holdings, with an average book value of £4,060, compared with 238 in the previous year, with an average book value of £4,100. The classification of the company's investments according to security was:—British Government stock, 4.39 per cent.; debentures, bonds and foreign Government stocks, 10.42 per cent.; preference shares, 25.09 per cent., and ordinary shares 60.10 per cent. Seventy-three per cent. of their capital was invested in Great Britain and countries within the British Empire. That position was the result of the policy which they had deliberately pursued even since it became clear that the epidemic of economic nationalism was spreading over a great part of the world. The countries who professed that creed in its more acute form almost invariably gave expression to their nationalism by dishonouring their obligations to their foreign creditors.

The general reserve of the company had been increased to £20,000 by the appropriation of a sum of £2,500 from net revenue. Last year they had transferred £5,000 to general reserve, but this year they had, in addition to the appropriation to general reserve, applied £2,819 from revenue in writing off the discount and expenses on the issue of debenture stock. The board intended to increase further the general reserve from time to time as the company's revenue permitted.

From the revenue account it would be seen that their income was £4,200 higher at £52,003. This increase was due principally to the higher average invested capital over the year and also was due to increased dividends from some of their investments. The net revenue for the year was £31,863. An interim dividend of 1½ per cent., less income tax, had already been paid on the ordinary stock, and it was now proposed to pay a final dividend on the ordinary stock of 3½ per cent., less income tax, making 5 per cent. for the year, leaving £3,289 to be carried forward.

THE FUTURE

In view of the events of the past year and the continued unsettled state of European politics, he thought they had reason to be satisfied with the results of the past year. As to the future, with current events as a background, shareholders would readily understand any hesitation on his part to assume the role of prophet. At the moment the tension in one sphere appeared to have been relieved by the conclusion of the Anglo-Italian Agreement and promised to be relieved further by the prospective agreement between France and Italy. The full value of these Agreements in the amelioration of the international situation had yet to be proved, but they were at least steps in the right direction. Meanwhile, they were fortunate in having 73 per cent. of their capital invested within the Empire. In the Empire overseas economic conditions continued to be favourable on the whole, whilst at home, although there was some recession in trade, it was unlikely that it would go very far in the near future in view of the stimulus given to many industries by the increasing expenditure on armaments, the necessity for which must be faced, however much they might deplore it.

As a consequence of that enormous expenditure, a great portion of which would require to be financed by borrowing, it was difficult to avoid the conclusion that a measure of inflation would, in due course, be experienced. As the company had 60 per cent. of its capital invested in equity stocks, they were well placed for such an eventuality.

The report was unanimously adopted.

INSTITUTE OF CHARTERED ACCOUNTANTS

CONTINUED PROGRESS

MR F. LINDSAY FISHER'S ADDRESS

Mr F. Lindsay Fisher, C.B.E., the president of the Institute of Chartered Accountants in England and Wales, delivering an address to the members at the annual general meeting of the Institute, held, on the 4th instant, in London, referred to the accounts for the year 1937 and to continued progress, the total number of members being 12,568, as against 12,092 in the previous year, an increase of 476.

He then proceeded as follows:—

My two predecessors in office have referred to the question of the need for revising legislation in connection with the Companies Act. As stated by them, the Council have taken no steps publicly to advance the views of the Institute regarding particular matters which we consider ought to be dealt with in an amending Act, because it is felt that the views of our Institute will certainly be asked for when the Government consider that the appropriate time for an inquiry has arrived. Our silence upon this subject must not, however, be interpreted either by our members or by the public as an indication that the Institute does not consider amending legislation necessary, or that nothing has been done as regards investigation of the subject in anticipation of inquiry sooner or later.

COMPETITION BY BANKS AND OTHERS

The subject of competition by banks and others might well be described as a perennial topic. Correspondence on the subject appears from time to time in "The Accountant" and specific instances of what are felt to be undue activities of banks in connection with income tax matters have been brought to the notice of the Council and have been taken up by them with the banks concerned. The attitude of the banks may, perhaps, be summed up in their contention that the work they do results from a demand made on them by their customers, and that it consists largely of the preparation of repayment claims and cognate matters on behalf of customers possessing comparatively small incomes.

Representations have recently been made to the leading banks which I hope may result in their deciding not to advertise that they undertake income tax work.

Our members may rest assured that while the leading banks will continue to undertake income tax work for their customers, when desired, it is not their policy to take such business away from us. And the Council will continue to watch instances in which local managers in their zeal exceed what we believe to be the instructions issued to them.

Competition is also felt keenly, more particularly by members in small provincial centres, from retired income tax officials, accountancy bodies who are not adequately controlled by their executives, and free-lance persons who make claim to expert knowledge. These persons in many cases advertise, whereas our members are not permitted to do so.

To combat this advertising, which may sometimes amount to deception of the public, by allowing our own members to advertise, is of course out of the question.

TAX EVASION

The ethics of our position in relation to a client who is seen to be doing things of a nature repugnant to a chartered accountant constitute a difficult question. I am, of course, not referring to anything that is illegal, we should not in any case wish to act for a client who was known to be guilty of anything of this nature. My remarks are naturally at this moment directed chiefly to the subject of tax evasion, which is in everyone's mind.

Speaking for myself alone, I feel that, however much we may disapprove of a client's avoiding taxes in a legal manner, a member is doing nothing morally reprehensible in giving his client the benefit of expert knowledge. All taxation is the exercise of a country's prerogative in calling upon its citizens to contribute the funds necessary for carrying on the government of the country, and Finance Acts lay down the way in which this burden is to be borne by individuals.

Just as a judge frequently states that it is not his business to make laws, but to administer them, so, I would argue, it is a chartered accountant's duty to see that the provisions of the Finance Acts are observed, and to assist his client, when called upon, to contribute to the National Exchequer only the minimum sum required by such Finance Acts.

MORRIS MOTORS LIMITED

Gross Profit £2,167,616 14s. 11d.

THE Twelfth Annual General Meeting of Morris Motors Limited was held at Cowley, Oxford, on Friday, May 6, 1938. Viscount Nuffield, the Chairman of the Company, presided. The Secretary read the notice convening the Meeting, and the Auditors' Report to the Members.

The Chairman said:—
The Report and Accounts for the year ended December 31, 1937, have been in your hands for some days, and may I therefore presume that it is your desire that they be taken as read?
The figures in the Accounts have been set out in a manner which I think will be readily understood, and I do not think it will be necessary for me to comment upon them at any length.

TRADING PROFITS

The results of the combined group are clearly shown, and your Directors think there can be no doubt that the position of the Morris Motors Group at the present time is stronger than it has ever been before.

The Net profit on Trading and Interest received for the year ended December 31, 1937, totalled £1,821,602 3s. 4d. after making full provision for depreciation of Assets, and all contingencies. In accordance with the Company's usual practice, Investments in Government Securities and Corporation Stocks have been valued at the Market prices ruling at December 31, 1937. This has resulted in a depreciation of £100,648, which has been provided for out of Reserves for Contingencies. These Reserves, including those of the Subsidiary Companies, now stand at £426,468, a figure which the Directors consider sufficient to cover all contingencies.

CURRENT ASSETS

The liquid position remains excellent, as will be seen on the Assets side of the Consolidated Statement of Assets and Liabilities, being represented by the Market Values at December 31, 1937, of Investments in British Government and British Dominion Stocks, English Corporation Stocks, together with Advances secured by First Mortgages on London Freehold and Leasehold properties, the Company's holding in 4½ per Cent. Debentures in the Pressed Steel Company, Limited, and Cash; together totalling £5,248,408.

I will now deal with the Directors' proposals for the distribution of profits. The balance of profit available after deducting Income Tax and National Defence Contribution, and dividend on Preference Stock, and bringing in the carry forward from last year, amounts to £1,339,040 11s. 2d.

This sum the Directors propose should be dealt with by the payment of a dividend of 45 per cent. on the Ordinary Stock, less Tax at 5s. 6d. in the pound, which amounts to £864,562 10s. 0d.; by creating a Dividend Equalisation Reserve Account and transferring thereto the sum of £200,000, and by carrying forward to next year the sum of £275,078 1s. 2d.

You will see that we have this year created a Dividend Equalisation Reserve Account, as the Board considered it prudent to make some provision by which the earning capacity of the money invested in the Company's Ordinary Stock could be supported by stabilisation.

SALES

I have pleasure in informing you that the Company's products continue to be in vigorous demand despite the fall in car registrations in this country. Last year added trading burdens were created by all-round increases in prices of Material and Labour Awards, and although some small increases were made in List prices in July last, it was thought a wise policy not to pass the whole of this burden on to the buying public, but rather to improve our products generally by incorporating the overhead valve engine and many other attractive features.

I feel sure it will be of interest to you to learn that up to date we have actually delivered well over 200,000 of our deservedly popular Eight h.p. Model.

It gives me great pleasure to pay tribute to our Distributor and Dealer Organisations for their contributions to a very satisfactory year's Trading.

OVERSEAS TRADE

It is very pleasing to me to report continued progress in the Export Markets by our Subsidiary Company, Morris Industries Exports Limited. Having recently returned from another visit to Australia and New Zealand, I take this opportunity of expressing my sincere appreciation of the courtesy and hospitality again accorded to me. I would like the many to whom I am indebted in this respect to know how sincerely grateful I am to them for the renewed warmth of their welcome. It is particularly gratifying to me to record that the most noticeable increases are in our Dominion Markets, and I look particularly in that direction to a further expansion of our Export business.

The marketing of British cars abroad becomes an increasingly difficult problem, owing to subsidised foreign competition, the restriction of imports by quota, and the difficulties in exporting sterling to this vitally essential to our National prosperity, and I am pleased to inform you that for the first three months of the present year the Company's Export business shows an increase over the corresponding period last year, which I hope is a clear indication that we may look forward to another successful year in the export markets of the world.

EMPLOYEES' SHARE IN THE COMPANY'S PROSPERITY
I do feel that the Stockholders will be glad to learn of the many benefits derived and greatly appreciated by the Company's employees.

HOLIDAYS WITH PAY

There is a charge for this in the Accounts under review of over £100,000 payable to the workers in the Organisation.

MORRIS EMPLOYMENT BENEFIT SCHEME

Payments have been made to Dependents of deceased members during the year of over £7,000.

MORRIS MOTORS LIMITED Cowley OXFORD

STAFF PENSION FUND

The Company's contribution to this Scheme for the year amounted to over £34,000.

EMPLOYEES' PROVIDENT AND SAVINGS CLUBS

The Company's contribution for the year for the purposes of relief during sickness and the encouragement of thrift amounted to £10,000.

It will thus be seen that the total contributions to Schemes for the general benefit of the Company's employees exceed £150,000. I think that it is desirable at this juncture to draw attention to the reduction in the Company's liability under the heading of the Employees' Provident and Savings Clubs as shown in the Consolidated Statement of Assets and Liabilities. The bulk of the moneys previously held by the Company has been paid over to the Trustees of the Club for investment, as the Board considered it prudent to separate as far as possible the contributions and Members' savings from the moneys of the Company.

Whilst on the subject of benefits granted to the Company's employees I may perhaps remind you that your Vice-Chairman mentioned at last year's Annual Meeting that at my own expense I had founded a Trust under which the workpeople would receive each year the dividends declared on One Million Ordinary Stock units of the Company. It may interest the Stockholders to know that under this Scheme £112,500 was paid last year, which gave an average return per worker of £7 4s. 0d.

GENERAL

Having now concluded my observations on the Accounts, may I make a brief reference to current National affairs?

As the Budget Speech has not yet had time to fade from our memories, I imagine that you may expect me to comment upon, and perhaps criticise, the added burden of taxation that has been laid upon industry and those who are dependent upon it. Nothing could be further from my mind. In normal times, I might have felt constrained to observe upon the fact that our own Trade would appear to be loaded with more than its share. But, in these most abnormal times, when everyone must realise the paramount importance of making our defences secure, it should surely be the primary urge of all of us to stifle our grumbles, and to continue to discharge our obligations to the State in a manner which will increase the reputation for good citizenship of which we are so justly proud, and which has so deservedly gained for us the unstinted admiration of the whole world.

Doubtless, I shall also be expected to offer some comments on the Trade outlook in general. The times through which we have been passing during the last few months have been so complex and difficult, that to attempt anything in the nature of a definite forecast would be certainly unwise and possibly misleading. My own view, however, which I have so often expressed recently, is that those engaged or interested in the Industries of this country have no cause for uneasiness, and panic or alarm should be out of the question. My advice to them is to ignore altogether the dismal forecasts of a slump in trade which have been so widespread and which, unfortunately, continue to be made and which engender a spirit of depression which in my opinion is entirely unjustified.

In this connection, I would like to make a special appeal to the Press, and to implore them to ensure that their immense influence in swaying public opinion be not misapplied. There have been occasions recently on which they have not only appeared to lose opportunities of stimulating optimism but, on the other hand, have adopted an attitude calculated to give rise to gloom.

Far from fearing a slump, I consider that our National prosperity is readily capable of being increased, and it may be expected with every certainty that the Motor Trade will enjoy its full share of an expansion to which I look forward with confidence.

Once again I am desirous of expressing the Board's appreciation of the loyal and enthusiastic co-operation of all those charged with the administration of the Company's affairs, and by the Staffs and employees of the whole Organisation.

With these observations I have much pleasure in moving the following resolutions:—

1. That the Balance Sheet and Accounts for the year ended December 31, 1937, be approved and adopted.
2. That a dividend of 45 per cent. less Tax at 5s. 6d. in the £ be paid on May 21, 1938, on the Ordinary Stock of the Company for the year ended December 31, 1937, to the holders of such Stock appearing in the Register of Members on the 2nd day of May, 1938.
3. That an account to be called the Dividend Equalisation Reserve Account be created and the sum of £200,000 transferred thereto from Revenue Account.
4. That the balance of £275,078 1s. 2d. remaining on Revenue Account be carried forward.

I will now ask Mr Oliver Boden, the Vice-Chairman of the Company, to second the resolution.

Mr Oliver Boden, the Vice-Chairman, seconded the resolution, which was carried unanimously.

The following were duly re-elected to the Board of Directors:—Mr A. E. Keen, Mr C. Kimber, Mr H. Landstad, Mr T. C. Skinner, Mr S. G. K. Smallbone, Mr W. M. W. Thomas, Mr H. W. Young. Messrs Thornton and Thornton, of Oxford and London, were re-elected Auditors for the ensuing year.

BARRY AND STAINES LINOLEUM, LIMITED

INCREASED SALES AND PROFITS

The ordinary general meeting of Barry and Staines Linoleum, Limited, was held, on the 5th instant, at Winchester House, Old Broad Street, London. In the absence, through illness, of the chairman, Mr William Sutton, J.P., Sir John N. Barran, Bt., presided.

The Chairman, having referred to the death of Mr Harold Ostlere, which took place on February 17th, said that, in spite of the continuous state of tension in Europe which had prevailed during the year and which had undoubtedly exerted an unfavourable effect on trade generally, the returns of their main subsidiaries, both in yardage and value, showed an appreciable increase; this, combined with higher selling prices, more than counteracted extra wages and raw material costs, and resulted in satisfactory additions to trading profits as compared with the previous year.

In France, general conditions had been extremely unsettled, and recurring political crises, coupled with the further devaluation of the franc, seriously affected business and profits. In the Runnymede rubber flooring department sales for the year again showed an increase. During the year the first dividend from the Canadian investment had been received, and negotiations had been completed for the acquisition of the works and business of the Corticine Floor Covering Company, Limited, at Ponders End, with a view to closing them down. A profit had been made on the realisation of the assets.

Some time ago they had to take into consideration the question of renewing the power plant at the main sections of the factories at Kirkcaldy, and after careful deliberation it had been decided to erect a new boiler and electric generating plant on a new site. That was expected to be in full operation by the middle of next year, and economies in power costs justifying the large expenditure were confidently anticipated.

At the Staines factory a number of important extensions to buildings and additions to and improvements in plant had been carried out or were in progress in order to provide further manufacturing capacity and increased warehouse accommodation.

The profit and loss account showed an increase in income from investments of £10,973, which practically represented the Canadian dividend; the amount received from subsidiary companies for dividend and management expenses, etc., was £5,702 less, but in that item there was this year a deduction in respect of interest charged by the subsidiary companies on advances. The management expenses were £585 less, and the income tax item was increased from £114 to £2,139, due mainly to provision for income tax payable on the Canadian dividend, and for National Defence Contribution.

DIVIDEND OF 12½ PER CENT.

The balance of profit carried to the balance sheet was £3,786 more at £213,339. After paying the preference dividend and the ordinary dividend as proposed at 12½ per cent., less tax, and transferring £25,000 to special reserve, the amount to be carried forward to the current year would be £8,527 up at £95,566, and the special reserve now £100,000, as against £75,000 last year.

In the consolidated balance sheet, cash at banks, etc., was £154,292 less at £56,703, but that was more than accounted for by an increase of £176,746 in stock in trade, while debtors also showed an increase of £47,725. Investments in British Government securities were increased by £16,367, and as the great bulk of the £726,799 held was redeemable at book value there was no need to provide for the small difference that existed between cost price and market value. The reserves and profit and loss balance stood at £1,491,414, or £89,962 higher than last year.

The unsettled international situation in the early part of the currency year had undoubtedly interfered with business generally, and, while the general outlook was somewhat better now, it was impossible to forecast what the remainder of the current year might bring, but, apart from any serious general upheaval, the directors saw no reason for any feeling but one of confidence as to the company's prospects. The difficulties caused by tariffs, quotas and exchanges in certain departments of the export trade were no less, and there seemed little likelihood of any improvement in that direction taking place in the near future. The directors constantly kept before them the necessity of maintaining and, where possible, improving the quality of their company's goods, and no expense or effort was spared in that direction.

The report was unanimously adopted.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED

YEAR OF PROGRESS

The forty-first annual general meeting of this company was held, on the 2nd instant, in London.

Lord Meston, K.C.S.I. (the Chairman), in presenting the report and accounts for 1937, described them as indicating a year of active progress and extending business in which the sales of electrical energy had improved all along the line. That there was no corresponding increase in revenue was due to reductions in the domestic and kindred charges, which had now covered all the recommendations of the recent committee of inquiry. The industrial supply had improved so much as largely to counter-balance the drop in domestic revenue, and the gross revenue for the year was only £8,000 less than in 1936. Working expenses, however, had risen by £16,000, mainly owing to the increased consumption and the higher price of coal. As an offset to the £24,000 decline in the company's trading results there had been a considerable reduction in overhead charges, due largely to the redemption of the £500,000 debenture last August. Divisible profits were £230,876, as compared with £211,454 in the previous year. It was proposed to add £25,000 to the general reserve, £12,000 to the retiring gratuity fund, which had been considerably depleted of late, and to pay a dividend on the ordinary stock of 10 per cent., tax free. This compared with 12 per cent. last year, but was being paid on a capital enlarged by the £400,000 which the ordinary stockholders had subscribed in the interval.

The year's capital expenditure was £620,000, largely spent in the erecting and equipping of the new super-station at Mulajore. The buildings would be completed and roofed before the rains, and the station would be in operation by the winter of 1939.

In addition to the reductions already made in the domestic rate, it was now proposed to lower the power rates, at a cost of nearly £70,000 a year; the new schedule would come into force before the end of 1938.

During the year there had been considerable labour unrest, largely engineered from outside. Strikes, although threatened, had not actually taken place, and all legitimate grievances were now being dealt with.

The report was unanimously adopted.

RIO TINTO COMPANY, LIMITED

POSITION IN SPAIN

The sixty-fifth ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 30th ultimo, in London.

The Rt. Hon. Sir Auckland Geddes (the Chairman) said that from the mines at Rio Tinto they extracted during 1937 about 1½ million tons of ores and were able to maintain their programme of overburden removal. They were able to export with difficulty approximately 1,200,000 tons of pyrites and about 200,000 tons of iron ore.

Under the Franco Authorities mining operations had proceeded smoothly, but the lack of understanding shown in the way of controlling business had occasioned considerable avoidable loss. In spite of such difficulties the production and delivery of pyrites were not unsatisfactory, and they should have made a very reasonable profit which would have enabled a dividend on the ordinary shares to be recommended but for the politico-financial policy of Burgos. Instead of having sterling to pay out they had masses of pesetas immobilised—temporarily it was hoped—in Spain.

They had accumulated during the year 11 million pesetas, bringing the total to 22 millions, all of which, but for 2,500,000, were in Franco territory. This was equivalent to £500,000, which normally would have been available for dividends.

What they had called the net profit was £195,151. That was a profit in sterling after providing £350,000 approximately to write down the peseta balances. The company, therefore, in its trading, did quite well in the circumstances.

In his view their investments, including 425,000 shares in Rhokana, 425,000 in Nchanga Consolidated Copper Mines, and at market value well over a million pounds' worth of good-class miscellaneous investments, provided adequate cover for the service of their debentures, both interest and redemption, for the dividends on, and capital value of their cumulative preference, and a substantial balance for their ordinary shares.

As to the future in Spain, it looked as if victory would ultimately rest with General Franco. As to irresponsible statements published to the effect that the mines might be expropriated, he said emphatically that they had heard nothing of such suggestion.

The report was adopted.

TIMOTHY WHITES & TAYLORS,
LIMITED

EXPANSION IN PROFITS

The ninth ordinary general meeting of this company was held, on the 29th ultimo, in London.

Mr Philip E. Hill (the chairman), in the course of his speech, said:—Following the change in our accounting period, the accounts before you cover an extra quarter, and are not therefore strictly comparable with those submitted last year. For the fifty-two weeks ended September 26, 1936, profits amounted to £327,369, which included a non-recurring item of £13,368 profit on sale of investments. For the five quarters now under review our trading profit amounted to £460,332. These figures show that the expansion I foreshadowed last year has started to materialise. The results have justified our recommending a final dividend of 10 per cent., less tax, making with the interim dividends of 30 per cent. already paid a total of 40 per cent. This makes your dividend equivalent to a rate of approximately 31½ per cent. per annum, as compared with 30 per cent. for the previous year.

Our freehold and leasehold properties stand in the books of the company at the figure of £1,810,951 14s. 10d. As the majority of these were acquired many years ago the capital accretion in connection with this is to-day very considerable.

Our business generally, I am glad to state, is still improving, and during the period under review we served almost 66,000,000 customers at the 764 shops owned by the company and its subsidiaries. I believe the prospects for the current year to be bright. Our national re-armament proposals indicate increased employment. Increased employment means increased spending power, and this in turn means increased trade—particularly for a business such as ours.

It might be necessary in the near future to consider the advisability of providing further capital, and should your directors ultimately decide on anything of the sort existing shareholders will, of course, be given priority rights.

I am hopeful that next year I shall be able to again refer to expanding profits and increasing dividends, and I can assure you that no efforts on my part or that of my fellow directors will be spared in endeavouring to prove my optimistic forecast to be justified. The report and accounts were unanimously adopted.

PHILIP HILL AND PARTNERS, LIMITED

SATISFACTORY PROFIT

The sixth annual general meeting of Philip Hill and Partners, Limited, was held, on the 4th instant, at the May Fair Hotel, London.

Mr Philip E. Hill (chairman and managing director) said that the profit amounted to £502,456, which, in a difficult year, could only be regarded as satisfactory. The directors had adopted a conservative dividend policy by recommending a final dividend of 12½ per cent., making a total of 25 per cent. for the year. The balance they recommended should be utilised in increasing the dividend equalisation account by £50,000, by placing £50,000 to reserve for taxation account, and by increasing the carry forward by nearly £17,000 to £46,676.

The quoted securities held by the company at March 31st last figured in the balance sheet at £3,356,314, while the market value of those investments and those held by their wholly-owned subsidiaries at the date of the balance sheet exceeded the aggregate book value by over £200,000. Owing to acute depression on the London Stock Exchange during March, security values with very few exceptions had been seriously depreciated—in many cases prices ruling had borne little relation to intrinsic merits and earning capacity. In view of the improvement in prices which had occurred since the end of the company's financial year, he would point out that the surplus represented by the aggregate or market value of the company's securities as compared with the book value had by now increased to over £370,000.

The board were pursuing a policy of spreading interests over a wide field of industrial activity. While, owing to general conditions, the making of satisfactory public issues had been very difficult, the company had been instrumental during the past year in raising over £8,000,000, a figure which, under the circumstances, was satisfactory.

To summarise, the company's income was derived partly from the dividends, interest, etc., received on investments and loans, and partly from its business as a finance house. He would not attempt to make any forecast as to the future other than to say that the results shown by the companies in which they were closely interested indicated increased revenue from that source.

The report was unanimously adopted.

JOHNSON AND PHILLIPS, LIMITED

STEADY EXPANSION

The thirty-third annual general meeting of Johnson and Phillips, Limited, was held, on the 5th instant, at Winchester House, London.

Mr G. Leslie Wates, J.P. (the chairman), said that the year had been noticeable for a steady and satisfactory expansion of the business of the company, and a consequent increase in the profit figures. The progress in the trading profit as shown by the accounts in the last four years exceeded £80,000, and the figure of the year under review represented the largest profit since the company was formed. After adding the amount brought forward, and deducting the interim dividend paid last November, there remained £198,000 to the credit of profit and loss account. After making various allocations they proposed to pay a dividend of 7½ per cent., which made 12½ per cent. for the year, and represented an increase of 2½ per cent. on that paid during recent years.

With regard to orders booked and sales invoiced, their manufacturing departments had had a satisfactory year. Their rubber cable department and their engineering departments, in particular, had worked to the limit of their capacity. Their mains cable department had attained practically the same output of work as in the previous year, but there had been a slight falling off in orders booked, probably owing to the uncertainty as regarded the future felt by many supply undertakings pending knowledge as to the fate of the Electricity Distribution Bill.

Last year he had stressed their realisation of the importance of their export business and had expressed their determination not to let it suffer more than they could help from the prevailing shortage of labour and materials. That they had been successful in their efforts in that direction was proved by the fact that their main overseas organisations had all enjoyed a record year of business in 1937. An unfortunate exception had, of course, been China, but their stocks in Shanghai were intact and their agents were carrying on "business as usual."

Each of the electricity distribution companies had shown steady progress during the year in units sold, revenue recovered and the number of customers connected.

The report and accounts were unanimously adopted.

LONDON ASIATIC RUBBER AND
PRODUCE COMPANY, LIMITED

BEST RESULTS FOR TEN YEARS

The thirtieth ordinary general meeting of this company was held, on the 2nd instant, in London.

Mr H. J. Welch (the chairman) said that the accounts were definitely more satisfactory than those for the previous year, and, indeed, for any of the last ten years. The improvement in the price obtained in 1937 over that of 1936 had had less effect on the accounts than the increase from 7,921,562 lbs. to 10,982,581 lbs. in the amount of rubber which they were allowed to produce and export.

The board had continued the policy of replenishing the general reserve, which was reduced five years ago by £79,826, when that sum was utilised to write down the buildings, machinery and plant to the present nominal figure. Since that date they had expended out of revenue on new buildings and equipment a total of £32,013. This amount, however, was less by £10,000 than what would have been normally debited to revenue for depreciation under the old practice. During the same period (with the allocation now proposed and without deducting expenditure on replanting) they had added £36,000 to reserve, so that in the net result they had up to date provided the normal amount of depreciation, plus a sum of £26,000 towards amortisation of the planted areas or for expenditure on replanting.

The board recommended the transfer of £25,000 from the profit and loss account to a dividend equalisation reserve, and they had every intention of drawing readily on this reserve if and when occasion arose. It was proposed to pay a final dividend of 7½ per cent. making a total for the year of 12½ per cent.

The issued capital of the company was now equal to £31 13s. per planted acre, but as the net surplus liquid assets amounted to just £10 per planted acre, the net capital cost of the estates per planted acre was £21 13s.

The present low price and exportable percentage, if continued throughout the year, must seriously affect their profits, but they should benefit this year by the very satisfactory forward sales they had effected of 756 tons (or 1,693,440 lbs.) at an average price of 11.3d. per lb. London equivalent.

The report was unanimously adopted.

KASINTOE RUBBER ESTATES,
LIMITED

IMPROVED POSITION

At the twenty-fourth ordinary general meeting of Kasintoe Rubber Estates, Limited, held on April 29th, Mr Eric Macfadyen, chairman of the company, said: The elimination of the adverse balance in the Java company's profit and loss account has set free the reserve against these losses in the English company's accounts, and £8,500 from this source is restored to the English company's profit and loss account. The Java company has this year paid us a small dividend on our ordinary shares for the first time since 1929. After charging home expenses we have a credit balance of £10,521. Our recommendations are to repeat the interim distribution already made, bringing the dividend for the year 1937 up to 8 per cent., and to add £1,250 to the reserve account, which stands at present at £10,000.

Mr Macfadyen then referred to the company's holding of 15,000 shares in Namoe Tongan Rubber Estates, Limited, which was formed in 1926 and which paid a maiden dividend of 8 per cent. in January of this year.

He then said: When one has allowed for the time it takes for new clearings to attain maturity, investors in a new rubber company must, with all technical factors as favourable as possible, and with rubber fetching the prices which have ruled in recent years, face ten blank years before they can hope for a return on their capital of fully £50 per acre. Fresh capital outlays in the rubber industry are likely to be limited to the rounding off of existing plantations unless and until there is a prospect of sustained higher prices for the commodity.

In addition to our interest in Namoe Tongan, equivalent to 174 acres, 366 acres of the 2,668 acres we have planted at Kasintoe are young modern rubber. Their standard production was assessed at 1,128,210 lbs., or about 440 lbs. per mature acre.

It would be too much to look for the same average price for rubber in 1938 as in 1937, although they would be helped some-

(Continued from page 321)

on Thursday. The downward trend of rubber prices continued, and American raw cotton was again cheaper. Wheat prices also continued to sag under the influence of favourable crop reports from North America.

The trend of the prices of primary products in the United States was also downwards. Thus, Moody's index of the prices of staple commodities (December 31, 1931=100) fell from 138.3 to 136.6 during the week ended last Wednesday. A month ago the index stood at 140.4 and a year ago at 208.2.

Metals

Copper.—Although recent restrictions in output are now affecting production, copper prices have again fallen, to £38 3s. 9d. per ton on Tuesday, Wednesday's price closing somewhat higher at £38 12s. 6d. per ton, or 21s. 3d. below last week's close. Demand is very slow and the seasonal decline is beginning to be felt.

★

Tin.—The market has been erratic, owing to the uncertainty concerning the buffer pool proposals. Tuesday's price closed at £153 5s. per ton, the lowest level since 1933, but a sharp rise occurred subsequently to nearly £170 per ton, when it became known that the International Tin Committee had decided, if the proposals for a buffer pool were accepted, to accumulate the necessary stocks from the existing output. This would leave the rate of production unchanged at 55 per cent. of the quotas, but would reduce the amount available for immediate disposal in proportion, roughly, to a 15 per cent. cut in the export quotas. The reaction of the Malayan producers to this amendment is not yet known.

Lead and Spelter.—Prices of both metals fell in sympathy with other markets and reached a lower level than has been seen in recent years. Lead closed at £14 17s. 6d. per ton, 2s. 6d. per ton cheaper than last week; the price of spelter lost 13s. 9d. per ton to close at £12 17s. 6d.

Grains

The demand for wheat has been dull and prices have sagged, under the influence of large world shipments and continued favourable crop reports from America. The market would welcome further details concerning the volume of the Government's reserve stocks. A fair demand for maize has left prices unchanged.

Other Foods

Provisions and Meat.—There is little to report in the provisions market. The demand for meat has been slow and prices are little changed. Prices of bacon have moved irregularly with a downward tendency. A good demand for butter has raised prices by about 1s. per cwt. except for Danish, which rose by 4s. per cwt. to close at 130s. Dutch cheeses rose in price at the end of the week, Edam 40 per cent. closing at 52s. to 60s.

★

Colonial Produce.—A good demand ruled for tea in the latter part of the week and prices tended to rise, after a slight fall last week. The markets for coffee and sugar were slow.

★

Fruit.—The Fruit Grower reports good demand and short supplies; prices rose generally, particularly for lemons and other imported fruit.

what by forward sales of 140,000 lbs. at 10½d. per pound c.i.f. The further outlook was far from gloomy.

The report was unanimously adopted, and a resolution converting the shares into stock was approved.

UNITED SUMATRA RUBBER ESTATES,
LIMITED

The twenty-ninth annual general meeting of this company was held, on the 3rd instant, in London.

Mr H. A. Barrett (the Chairman) said that the crop of rubber harvested for the season under review was 531,701 lbs., which had been obtained without any alteration in the conservative tapping system hitherto employed. The quantity of rubber which the company had been permitted to export during the year was 566,218 lbs., which had realised net proceeds of £17,864, the gross average price being 8.35d. per lb., as compared with 7.94d. per lb. for the previous year. That rubber had cost £8,105 to produce, which compared with an expenditure of £7,451 on production of 413,289 lbs. in the previous year's accounts.

The outturn of copra was 615 tons, which had realised net proceeds of £6,787, a net average sale price of £11 0s. 8d. per ton, as compared with £10 8s. 6d. for the previous year. That copra had cost £5,256 to produce, which compared with an expenditure of £5,136 on production of 540 tons in the previous year's account.

The result of the year's working was a profit of £15,878, and they now recommended the payment of a dividend of 10 per cent.

For the current financial year the company's exportable quantity—based upon the average of the international releases announced, viz. 65 per cent. from January to June, and assuming an average of 60 per cent. for July to December—would be approximately 423,390 lbs. There were no forward sales for 1938.

As to the market in their products, it was not possible to make any forecast for the present year, and they could only hope that there would be some change for the better during the remaining months of 1938.

The report and accounts were unanimously adopted.

Vegetables.—The continuation of coldish weather has advanced the price of old potatoes for which there is a keen demand; the price of King Edwards rose by 1s. 6d. per cwt. to 8s. 6d. or 9s. per cwt. Vegetables generally met a brisk demand, and sold at higher prices, except for salads and cucumbers, the demand for which has somewhat fallen with the colder weather.

Miscellaneous

Oilseeds and Oils.—Rather more interest has been shown in the last week and prices generally are higher. Considerable business has been done in Indian shipments of linseed at £13 per ton ex Calcutta for Hull in July, but demand from the United States is small and a revival is not immediately expected. Linseed oil has sold steadily at somewhat lower prices. Refined cotton seed oil is now being quoted at £20 15s. per ton ex Hull, an advance of 15s. per ton on the week. The slow growth of pastures, due to the drought, has kept up the demand for oilcakes and prices are firm.

★

Rubber.—Demand continues quiet, although a better tone appeared towards the end of the week. Prices have tended towards a slightly lower level.

★

Furs.—The London Spring Fur Auctions began on Monday with the sale of the Hudsons Bay Company. Although the sale was well attended, demand was slack and a considerable number of lots were withdrawn. As Paris is one of the main buyers, the uncertainty regarding the franc necessarily curtailed the demand.

OVERSEAS BANK RETURNS

NOTE.—The latest return of the Bank of International Settlements appeared in *The Economist* of April 9th; Denmark of April 16th; Bulgaria, Canada, Hungary, Portugal and Roumania of April 23rd; Federal Reserve Reporting Members, Czechoslovakia, Danzig, Estonia, Finland, India, Java, Lithuania and Poland of April 30th.

CENTRAL AND SOUTH AMERICA

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of those of Bolivia and Paraguay, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate.

Bolivia.* Decree of March 7, 1938, fixed official rates at 100 bolivianos per £ for importation of articles of prime necessity, and at 120 for public utility requirements, raw materials and certain specified imports. By a further Decree of March 30th, general imports, excluding all luxury goods, are payable at a new "bank exchange" rate which, on March 31, was 121.20 bolivianos per £.

Colombia.* Sight selling rate on New York was 183.30 pesos per 100 U.S. dollars on April 5, 1938. This rate applies to holders of permits buying in the "open" market.

Ecuador. Sight selling rate on New York was 13.80 sucres per U.S. dollar on April 4, 1938.

Guatemala. Sight selling rate on New York is maintained at one quetzal per U.S. dollar, but a commission of 1 per cent. is charged by the Central Bank for the sale of drafts.

Nicaragua.* Sight selling rate on New York (including tax and commission) was 5.80 cordobas per U.S. dollar on April 6. This rate applies to approved sales of exchange by exporters to importers. The "free" rate on the same date was about 6.30.

Paraguay. Exchange is quoted on Buenos Aires; the sight selling rate was 70.50 Paraguayan pesos per Argentine "free" paper peso on April 9, 1938.

El Salvador. Sight selling rate on New York was 2.51 colones per U.S. dollar on April 5, 1938.

Venezuela. Sight selling rate on New York has been maintained at 3.19 bolivars per U.S. dollar since April 27, 1937.

now running away with him. "There has been created in Europe," says Herr Hitler, "a bloc of 120 million people who are resolved to safeguard their eternal right to live and to defend themselves against all forces which might venture to oppose their natural development" (the italics are ours). In other terms, Germany rejoices in again becoming dynamic, while Italy wonders uncomfortably whether she might not have done better to stay static.

On a concrete point, this inward difference of rhythm arises again over the question of the Alpine frontier between the two partners in the Rome-Berlin axis. "It is my irrevocable will and my bequest to the German people," says Herr Hitler, "that the frontier of the Alps, which Nature has erected between us, shall be regarded for ever as unchangeable." In order to satisfy Italy's hankering after a quiet life, the saviour of Deutschland proclaims the unconditional and permanent surrender of 200,000 Tyrolese, whose treatment as a minority has, by general admission, been harsh. That is the price of the Italian collaboration which the Fuehrer needs. But what, precisely, does he need it for? "The natural frontier," the German dictator tells his Italian colleagues, "will give Italy and Germany not only the possibility of peaceful and permanent collaboration through a clear division of their spheres of activity, but will provide a bridge for mutual help and support." For Italian ears, this phrase must almost cancel that promise of a quiet life which is contained in the Fuehrer's other phrase about the permanence of the Alpine frontier. If the Brenner Pass is a German-Italian bridge for "mutual help and support" against "all forces which might venture to oppose" somebody's "natural development," and if it is Germany rather than Italy who is still lusting after expansion, then it seems to follow that the Italian peninsula is destined, in Hitler's mind, to become, in case of need, a German pier.

If Germany, having built up her power in Eastern Europe, were ever to decide to challenge France and Great Britain for the domination of the overseas world, the function of the Italian peninsula would be readily apparent. From this pier, projecting three-quarters of the way across the Mediterranean, German forces might leap the straits between Sicily and Tunis and break into Africa by a back door which Anglo-French sea power could not close. No doubt, in revenge, the baffled Western navies might

bombard Naples, Genoa, and sacred Rome herself, but that would be Italy's affair.

A military alliance with Germany, clearly, might have unenviable implications for Italy, and we may well believe that this, at any rate, is a suggestion to which Signor Mussolini will always turn a deaf ear so long as France and Britain are still powerful. He presumably promised nothing more last week than friendly neutrality towards Herr Hitler if the latter were drawn into a war with other Great Powers over Czechoslovakia. In a sense this has cost the Duce nothing; for, when he flinched from fighting the Fuehrer over Austria, he thereby gave him a free hand in Czechoslovakia by implication. All the same, Italy would lose indirectly if Germany conquered Czechoslovakia—and especially if she succeeded in conquering her in the teeth of the three Great Powers of the former Triple Entente. For if Czechoslovakia fell in face of such opposition, there would be left neither the power nor the will to resist in Central and South-Eastern Europe and perhaps a large part of Hither Asia as well; and what happens then to Italy's Balkanic sphere of influence and her Anatolian field of ambitions?

There have been rumours that the two dictators discussed, last week, a partition of spheres in the region east of the Axis. The lines of partition are diversely reported, and, for all we know, there may be no truth in the story. But we can be sure that no Italo-German agreement on paper will preserve for Italy any genuine continental sphere of influence at all, if Czechoslovakia once falls into Germany's hands.

If that were to happen, Italy might succeed in escaping from the race, but escaping empty-handed. If the Axis spells the death of Italian ambitions on the Continent, the Italo-British and the now imminent Italo-French agreement between them must set a limit to the Duce's more extravagant ambitions in the Mediterranean. The hopes of domination for Italy are somewhat fading in Europe, in the Mediterranean and even in Africa. Thus, on the morning after the ball, Signor Mussolini may well be reflecting on the advantages of that system of greater freedom of trade and of political detachment under which modern Italy first attained her manhood. The Duce may yet discover that, in spite of all he has said in praise of militarism, it may pay after all to be a good internationalist.

South Africa's Election

THE Union of South Africa goes to the polls in a general election on May 18th, within a day of five years after the last election. In order to understand the position in 1938 it is necessary to recall the events of 1933. Early that year, after the political crisis caused by South Africa's suspension of the gold standard, General Hertzog, who was Prime Minister of a Nationalist Government, made a coalition pact with General Smuts, then Leader of the Opposition at the head of the South African Party. The pact was originally only a *modus vivendi*, in which common acceptance of certain fundamental points of policy was mingled with agreement to differ over others. The two parties retained their separate identity and merely agreed not to oppose each other's candidates at the election. As a result, in the new House of 150 members no less than 138 were nominally supporters of the coalition. The two generals had previously formed a joint Government.

The virtual unanimity of South African politics, however, clearly could not last long. From the first there had been small groups opposed to the coalition—the Labour Party, a few Nationalists headed by Dr D. F. Malan, formerly a member of General Hertzog's Cabinet, and some Imperialist die-hards. The lines of division were

accentuated by the proposal to fuse the two Government parties, which was eventually carried out at the end of 1934. Dr Malan campaigned the country at the head of a party which inherited the name and much of the political tradition of the old Nationalists. Colonel Stallard, on the other wing, formed the Dominion Party to uphold "the maintenance of the British Empire as a united whole." These two groups are to-day the main opposition force to the Government. At the dissolution, the "United South African National Party" held 116 seats, the Malanite Nationalists 21, the Dominion Party 5, the Labour Party 4 and others 3; one seat was vacant. In addition to the 150 ordinary members, the House included three representatives of the native constituencies in the Cape. These members, elected on a separate roll, are not affected by the dissolution, but hold their seats for five years.

The primary issues between the Government and the two main wings of the Opposition are constitutional. The Nationalists are republicans, though the extremists have been disappointed at their leaders' refusal to pledge themselves to the cutting loose of South Africa from the British Commonwealth, in the event of a Nationalist Government's attaining power. The leaders, indeed, recognise that with

an out-and-out secessionist policy they could not hope to gain a majority. In foreign affairs, the doctrine of the Nationalists is isolationism. The Dominion Party, on the other hand, appeals to the British patriotism of the English-speaking element, especially in Natal and the eastern Cape, and bitterly deplores the Statute of Westminster and South Africa's "Status of the Union" Act. Both these parties, however, have had to augment their electoral armoury by playing on other causes of discontent with the Government. The Nationalists have raised the racial cries of anti-Semitism and colour. They have accused the Government of pandering to native interests at the expense of the white man, and have declared that Communist black unions are being organised with Jewish influence. There are signs that these racial slogans, by their very extremism, have recoiled upon their users. The Nationalists have also taunted General Hertzog with his inability to secure from the United Kingdom the transfer of the native protectorates, but the recent arrangement for a joint British and South African advisory council has weakened this particular Opposition plank. The Dominion Party has been making the best of economic discontent in the towns. Trade has receded since the gold scare started a series of Stock Exchange slumps in South Africa, and the cost of living is high, partly on account of various direct and indirect subsidies to the farmer. The Labour Party, with only local strength, is a house divided against itself.

The United Party stands on its record in office. Mr Havenga has been able to present "prosperity Budgets" year after year, and a good deal of constructive legislative

work has been performed. The native legislation, which was so much criticised by liberal thought in Great Britain, was from the point of view of the average South African a fair and generous compromise, which successfully settled a question that had vexed the Union's politics for many years. By-elections and provincial elections have suggested that the Government retain the support of the bulk of the South African people, and there is no hint that their majority is in peril. That they will lose some seats, however, after filling four-fifths of the House for five years, seems inevitable.

The chief interest of the election, to those who stand outside the immediate arena of South African politics, lies in the indication it may give of the future trend of political division in the Union. If either the Nationalist or the Dominion Party gains substantially, there will certainly be a reaction on the other side, and the conflict between the Afrikaans and English-speaking sections will once more become prominent. Alternatively, the result may be the beginning of new cleavages, possibly on economic lines. The long-term future is unpredictable. Dr Malan's position to-day was General Hertzog's position a generation ago, when he split from General Botha and formed the original Nationalist Party. General Hertzog himself cannot have many years longer in active politics; for he is 71. And General Smuts is only four years younger. With a rising generation of South African statesmen, and with the old hates and fears fading into history, the politics of the Union are in a fluid condition, which this general election may do much to mould.

Rising Wages and Earnings

ALTHOUGH industry has lately been active in most countries, the growth of prosperity has been by no means proportionate, especially in States where heavy expenditure on armaments has made serious inroads on the standard of living of the people. Even in Great Britain, increased wages have been accompanied by higher prices. The Liberal Party recently collected more than 800,000 signatures to a petition of protest against the rise in prices, and the Labour Party has made the high cost of living an issue at by-elections. Has the British worker also sacrificed his butter in exchange for aeroplanes and guns? What progress has actually been made in his welfare during the last ten years?

These questions are easy to pose but difficult to answer. In a leading article in *The Economist* on September 4th of last year, we concluded that, in October, 1935, the industrial worker in employment was earning a bigger real income than ever before. But between that date and the summer of 1937 trade recovery entered on a second and swifter phase, in which wages, employment and prices all competed for the largest rise. Fortunately, we have at our disposal important new information on wage rates* which enables us to draw provisional conclusions about the situation as recently as at the end of last year.

We may begin by summarising the position by means of index numbers for every year from 1928 to 1937. The necessary data appear in the first table below.

The story told by the table is as paradoxical as it is spectacular. Costs of living fell so rapidly during the last slump that the real income of the worker in employment was not merely maintained but actually raised. On the other hand, the recovery which began to be perceptible in 1933 scarcely raised the index of wage rates by as much as the cost of living. Consequently, the worker in employ-

* "Wage Rates in the United Kingdom, 1934-37." By E. C. Ramsbottom. Journal of the Royal Statistical Society, 1938. Part I.

WAGES AND COST OF LIVING, 1928-37

End of December	Index Number: Average of 1924 = 100			Percentage of Insured Persons Unemployed
	Wage Rates	Cost of Living	"Real Wage Rates"	
1928	98.9	95.4	103½	11.1

* Adjusted for new method of counting.

Note.—The index number of wage rates is Mr Ramsbottom's. The figures of "real wage rates," obtained by dividing the index of money rates by that of the cost of living, are approximate. The index of wage rates covers agriculture, but otherwise is less comprehensive than the unemployment insurance statistics, which include retail distribution, professions and services.

ment, though he was still better off than in 1929, appeared to be slowly but surely losing ground. As we shall show in a moment, this impression is not quite accurate. What is undeniable, however, is that the substantial and welcome increase in the real income of British workers during the last decade was due, until quite recently, less to rising money wages than to falling prices. Even though the cost of living reached its lowest point at a time when well over a fifth of the insured population was out of work, it is still true to say that the real income of wage-earners as a whole was on balance rising during the depression, while in recovery the rising tide of employment tipped the balance in favour of greater consuming power, despite the upward trend of living costs.

Wage rates, however, are not a comprehensive guide to actual earnings. Reliable data, which take account of the actual time which was worked, exist only for certain years. By drawing on the results of official inquiries, how-

ever, and making suitable adjustments for purposes of comparison, we find that, if average money earnings in 1924 be represented by 100, in the autumn of 1931 they were 97 to 98, while in the autumn of 1935 they were 99 to 100. As the corresponding figures for wage rates were 95.7 and 95.6 (in December, 1931, and December, 1935, respectively), it will be seen that the latter index has understated the actual takings of those in employment, both during depression and in recovery.

That such a result should have occurred in the years of depression, when short time was being worked in many trades, seems paradoxical at first sight. The explanation is that the years between 1924 and 1931 saw a decline in the proportion of workpeople employed at low and falling wages in the textile trades and an increase in the proportion engaged at high wages in producing consumption goods. Such changes as these cushioned the contraction in the national wage bill without causing any variation in the index of wage rates. The argument that the real income of the worker in employment rose during the slump is perceptibly strengthened. And when we reach the recovery period, between 1931 and 1935, it is clear that a measurable rise in money earnings coincided with movements of prices which left the cost of living index the same at the end of 1935 as in 1931. In fact, at the end of 1935 the British worker in employment was earning a higher real income than ever before.

What of subsequent years? Unfortunately, there are no statistics of earnings for 1937. But from the detail of wage rates given by Mr Ramsbottom, it is possible to make appropriate allowance for the effects of further shifts in employment. This has been done in the next table, which shows wage rates and employment, with rough "wage bill" figures (a combination of the two) for December, 1937, expressed as percentages of (a) December, 1935, and (b) December, 1928.

Between the end of 1935 and the end of 1937 average wages (ignoring short time and overtime) rose by 7.6 per cent. against a rise in the cost of living of 8.2 per cent. The difference between the two is not considerable, and on balance it is true to say that the real income of the worker in employment has been roughly maintained but not greatly augmented since 1935. Actually, real wages have risen in some industries and fallen in others. Money wage rates in coal mining and the metal trades (including engineering) have risen more, and in the other principal groups rather less, than the cost of living. In the printing trade, rates hardly rose at all between 1935 and 1937. In all the other eleven groups, however, there was some rise;

WAGES AND EMPLOYMENT AT THE END OF 1937

	Dec., 1937, as percentage of Dec., 1935			Dec., 1937, as percentage of Dec., 1928		
	Average Wage Rates	Employment	Wage Bill	Average Wage Rates	Employment	Wage Bill

but only in mining and metals (industries employing about a third of those covered by the index) was the rise greater than that of the cost of living.

We are now in a position to summarise our conclusions for the whole period from 1928 to the end of last year. Broadly, by December, 1935, the money income of the British worker in employment had recovered to the 1928 level, while the cost of living was still 12 per cent. lower than in 1928. Between the end of 1935 and of 1937 money income and prices rose *pari passu*, leaving the real income of the worker in employment at something in the neighbourhood of 13 per cent. above the level of December, 1928. Unemployment was slightly but not substantially more marked in 1937 than in 1928, while the number of persons employed in the industries covered by Mr Ramsbottom's index had risen by about 4½ per cent. Thus, at the end of last year the British working class as a whole was considerably better off than in 1928. If the actual improvement had been evenly spread over the nine years the advance would have been nearly 1½ per cent. per annum.

During the past two years, when the re-armament programme has been going forward, the British worker has apparently had both butter and guns, but no more butter than in 1935. Allowing for the rising costs of living, it is clear that such curtailment in purchasing power as has occurred has been suffered, not by workers in armament factories (who have, in fact, had their real wages increased) but by their less fortunate colleagues in the cotton, boot and shoe and food producing trades.

Chaos and Third Party

IN the year 1930, Parliament decreed that every motorist should insure his liability to people whom he might injure. Since then, Parliament, judges, insurance companies, underwriters, solicitors, barristers and even journalists have been trying, each in their own sphere, to make out exactly what this liability, which must be insured, may be. Who, in short, is liable for what? The hare that was cooked eight years ago is still being hunted. And the legal profession, which acts as huntsman and whipper-in, does very nicely out of this exciting sport.

These reflections arise out of three cases which have been decided in the Courts during the past fortnight. As the muddle in which the third-party law now lies is very largely due to the uneasy marriage of common law and statute law, and as one of these muddling cases turns mainly on common law, while the other two hinge on statute, the three together will serve well enough to point the need for a restatement and a clarification of the whole law relating to negligence and third-party liability.

First for Miss Merle Oberon. Miss Oberon, as a film star, earns in an incredibly short time an incredibly vast

income, and when she was so unlucky as to be injured in a motor smash near Marylebone Station it was obvious that large sums would be at stake in the resulting lawsuit. The facts were that she was being driven in her own car by her own chauffeur (Mr Digby) when it collided with another car driven by Mr Bundy. Mr Digby said Mr Bundy was driving too fast and Mr Bundy said Mr Digby was driving too fast. And Miss Oberon, to be quite safe, brought an action against both of them, leaving it to the judge to decide who was in the wrong. His lordship decided that both were negligent, but that the plaintiff's chauffeur, Mr Digby, was the less blameworthy of the two. He also held that the proper damages for Miss Oberon were £5,000.

By whom shall these damages be paid? A layman might give various answers to that question. He might say: "Part by each," or "All by Mr Bundy," or "Part by Mr Bundy and none by Mr Digby." He would be wrong in every case. Indeed, it is most unlikely, unless he had a lawyer's knowledge of the common law, that if he guessed again, many times over, he would ever guess right. For

the correct answer is that Mr Bundy pays nothing and Mr Digby, who was the less negligent driver—the one person who was almost certainly not insured—must pay the lot. The reason for this extraordinary ruling is that by common law a plaintiff who has himself been guilty of negligence, however small, cannot recover from a tortfeasor who has been guilty of negligence, however great; and that Miss Oberon—as between herself and Mr Bundy—was identified with her chauffeur. On the other hand, as between Miss Oberon and her chauffeur there was no identification, and she can recover from the chauffeur all that she fails to get from the third party. Five thousand pounds against the chauffeur.

But that is not all. While she has a claim in common law against her chauffeur, her chauffeur, if he had himself been injured, would have had a claim in workman's compensation against her; and if he had actually been killed in the collision, his dependants could have recovered £600 from Miss Oberon. So the account would have stood thus: £5,000 due from Mr Digby's estate to Miss Oberon, and £600 due by statute from Miss Oberon to Mr Digby's estate.

Let us now pass to the two other cases which have been decided in the past fortnight. Both are statute cases, and in justice to the common law of England, it is fair to say that they are more confusing even than the case of Miss Oberon and her chauffeur. Both are what are known as *Rose v. Ford* cases, and they spring from a statute passed in 1934 under the title Law Reform (Miscellaneous Provisions) Act. This law gives to the personal representative of a dead person the right to claim on behalf of the deceased's estate damages against a negligent third party for the dead person's loss of the expectation of life—or more clearly, the rights the dead man would have had if he were alive after he had been killed. The first case was of a boy of three who met his death through being run over by a lorry. His father claimed under the statute for his son's loss of expectation of life, and was awarded by the jury £80 of damages. Being dissatisfied with the amount, the father appealed, and the Appeal Court—a particularly strong bench—held that £80 was so inadequate for a life cut short at three

years, that a new trial was justified. They therefore sent the case back to be retried by a jury which would give the father heavier damages, not for his own loss but for his dead son's.

Five days later came the other *Rose v. Ford* case. A little girl of three was killed in her pram by a car and her father claimed against the motorist for her loss of expectation of life. She was exactly the same age as the little boy. She had no greater right than he and no smaller right than he to look forward to many years either of happiness or the reverse; but, whereas the first jury gave the little boy's father £80, the second jury gave the little girl's father £1,000. And whereas the Court of Appeal said that £80 was much too small for the boy's father, Mr Justice Charles said that £1,000 was far too much for the girl's father, and declared that the proper damages were £150. Eighty pounds, a hundred and fifty pounds, one thousand pounds. Was ever the law reduced more foolishly to the semblance of a sweepstake?

There is something, one may feel, rather nauseating in a law which encourages parents to obtain cash for a child's death. Quite apart from that, however, it is obvious that Parliament and the common law between them have produced such a muddle as to make sweeping reforms of this branch of the law inevitable. It is absurd that a plaintiff killed or seriously injured by another's negligence, which was 99 per cent. to blame for the accident, should have no redress because he or his chauffeur was 1 per cent. to blame. It is absurd that, if the personal representative of a dead man or a dead child is entitled to hard cash for the loss the dead person suffered through having his life cut short, the jury, without help or guidance, should have to assess in pounds sterling the respective values of the remaining lease of life to children of three, adults of twenty, middle-aged folk of fifty, and old persons of ninety. And Parliament, which placed on motorists the duty of insuring their liability, may surely be asked to express in clearer and more reasonable terms the nature of that liability. If the cause of action must continue Parliament should at least lay down some standard for arriving at the loss sustained.

Topics of the Week

Trouble in the Air.—For many weeks past a storm of discontent has been brewing over the conduct and tardy progress of the aerial re-armament programme. The storm has not been provoked, this time, by Mr Winston Churchill. To do him credit, he consistently warned the Government of the then Mr Baldwin—from the end of 1934, when Mr Baldwin announced the first expansion in our air defences, onwards—and then the Government of Mr Chamberlain, that their programme, its extent, and the personnel in charge of it, were alike inadequate to the country's needs. The storm which has gathered in recent weeks is one of anger, not of sorrow. It has rapidly become obvious that neither on the side of aircraft production, nor on that of defence for the civil population, has there been anything approaching the requisite degree of vision, organising ability, and efficiency in execution. This feeling has been intensified in all parties by a realisation that a Government with a crushing majority, working on aerial re-armament for over three years, has arrived at a point where, by reference to possible contingencies in Europe, we are far from that "parity with the air force of any European Power within striking distance of our shores" which Earl Baldwin promised us nearly two years ago.

The errors in the conduct of the air programme seem to be of two kinds: those of omission, i.e. lack of preparation for those dislocations in industry familiar at the

outset of the last war, and those of commission, i.e. the conferment of responsibility upon men unsuited to it and lacking the requisite experience. Both errors seem to have been perpetrated on the industrial side and on the side of Air Ministry's organisation itself. As a result, the programme appears to have become temporarily bogged by reason of lack of skilled labour in certain sections, lack of machine tools, etc., and undue complexity and multiplicity of designs. Some sections of the industry and of the Air Ministry are cutting across the bows of others. In such a situation, widely criticised in the City in recent weeks, those responsible at the top have the duty to set things in order first. The personal relations between the Prime Minister and Lord Swinton, the Air Minister, are known to be of the most friendly and intimate kind and Sir Thomas Inskip, Minister for Co-ordination of Defence, has stoutly withstood, and been equally stoutly supported by two Prime Ministers in resisting the charges of disorganisation and lack of co-ordination that have long been made against his domain. But now the entire press, including *The Times*, admits that "something is rotten" in the state of our aerial re-armament; and they call for new methods, and new men.

The Air Debate.—The debate initiated by Sir Hugh Seeley, the Opposition Liberal Whip, on Thursday showed both the vigour and outspokenness of the Govern-

ment's critics and the seriousness with which the Government viewed the charges. Sir Hugh, a serving officer in the Auxiliary Air Force, described the public's alternation between reassurance over the Government's periodic pronouncements, and alarm at such news that the Government is seeking to buy American aircraft. To Lord Winterton fell the task of replying, which he did in an expository speech of an hour and forty minutes' duration. The Prime Minister, Sir Thomas Inskip, and Mr Churchill did not speak. Lord Winterton explained that the men recently turned out of employment in aircraft factories had already been mainly re-engaged; and announced that the Austin shadow-factory was beginning production. The most important announcements were that the programme for 1,750 first-line machines at home would probably be complete before next March, and that the total first-line force—exclusive of reserves in the ratio of three or four to one—would be doubled, i.e. raised to 3,500 by March of 1941. The Government spokesman's explanation did not seem to carry much weight in certain respects: for instance, it was not clear whether the Government were as fully aware as the Opposition of the dangers of large-scale dislocation in production due to unforeseen shortages of certain components. On the question of competence to cope with the situation, Lord Winterton rather gave the impression that nothing could possibly go seriously awry since the Government knew all about the difficulties and dangers. His remarks on progress of training and intake of pilots were reassuring; but on the question of instrument-supplies, not so satisfactory. The Opposition showed their discontent with paper promises, scheduled once more for remote fulfilment, by giving notice of motion to appoint a committee of inquiry. Meanwhile, there the matter rests for a week, during which Lord Winterton's detailed statement may be more closely examined.

League Council Meeting.—The meeting of the League Council which opened at Geneva last Monday has been mainly concerned with the political aftermath of the Anglo-Italian agreement. The most awkward questions on its agenda were the Spanish aspect of that agreement and the decision whether the League itself was to give its members any ruling on the question of the recognition of Italian sovereignty over Abyssinia. Lord Halifax, it is true, made no reference to either topic in the speech in which he commended the agreement to his colleagues on Tuesday. "The agreement," he contended, "might be said to deal solely with Anglo-Italian affairs," and he studiously confined himself to the exclusively Anglo-Italian parts of it. Nobody, of course, would dispute that it is a good thing at any time for two Powers whose empires interlace to list their respective fortresses, possessions and spheres of influence and to subscribe to a military and political standstill agreement on the basis of the *status quo*. Indeed, if this were all that was contained in the agreement, world-wide approval would have been as unanimous as Lord Halifax tentatively claimed it to be. On Wednesday, however, this construction of the agreement was torn down by the Spanish delegate, Señor del Vayo, who demanded "real non-intervention" and pilloried "certain democracies which had conspired with the aggressor" and had "signed agreements" with him "which legalised his intervention." To this Lord Halifax made a vague reply; and in the ensuing debate the Spanish delegate received support from New Zealand as well as from the Soviet Union.

On the question of the recognition of Italian rule in Abyssinia, Lord Halifax relied frankly on the argument of expediency. Those who sought to establish a better world on the basis of acknowledgment of League principles were "really right to feel reluctant to countenance action . . . by which they might appear to be infringed." But the Italian Government had obtained control of virtually all the former territory of Abyssinia; the only means by which her position could be challenged by League members would be by going to war; and "the strongest claim was that of peace." M. Taczaz, in his reply on behalf of the Negus, who was present at the meeting, demolished this "realist"

argument in a firm and dignified rejoinder. "There is," he declared, "the maintenance of peace by law, and there is the maintenance of peace at any price," and he asked the Council to reject any proposal which would encourage aggressors. We go to press before the Council has reached a decision on the British Government's desire for a resolution which would leave every member of the League free to make a separate bargain with Italy and with its own conscience.

America and Non-Intervention.—There has suddenly and unexpectedly arisen a possibility of a reversal of American policy in regard to non-intervention in the Spanish War which may have far-reaching effects. The United States Neutrality Act does not apply to civil wars; but a special resolution of Congress, imposing heavy penalties on any American citizen who supplied war materials to either side in Spain, was passed on January 6, 1937, and signed by the President two days later. On May 5th it was announced that a new resolution for repealing that of January, 1937, is now to be brought before the Senate. The mover is, of all people, the isolationist Senator Nye, and his move is being made with the acquiescence of the chairman of the Senate Foreign Relations Committee, Mr Pittman. The State Department is preparing a comprehensive report on the implications of the proposed step, but the administration has not yet given any indication of its own policy—beyond making it clear that it will not try to put any obstacles in the Senate's way.

The motives behind Senator Nye's action remain obscure. That the immortal feud between Senate and Administration, however, has something to do with the new resolution is indicated by the fact that there is said to be a majority in favour of it in the Senate, whereas the sense of the House seems on the whole to be against it. A more powerful motive, however, seems to spring from the anti-Fascist feeling which is now rapidly gathering head all over English-speaking North America. The unhappy Administration at Washington, who have been labouring like convicts in chains to execute Congress's non-intervention policy, are now being accused on this account in the American Press of being "un-American" and "crypto-Fascist." For a long-harassed Administration this charge must be the last straw; for it is notorious that the President and the Secretary of State have both been ploughing the sands of public opinion for months, and even years, past in an apparently vain attempt to make their countrymen realise that the United States is not, and cannot be, insulated from the rest of the world. Nor is it easy to detect the pro-Fascist taint in an address, given at Washington on May 6th, to the American Chamber of Commerce by the Secretary of War, Mr Woodring. The speaker declared that the march of aggression must be halted; otherwise a wave of indignation might sweep over the democratic countries and it might be difficult to keep the peace. On the surface, American opinion is, for the moment, at sixes and sevens. Is it possible that some rapid and important change is taking place in the depths?

Public Works.—There are two opposing tendencies at work in the field of building and construction. On the one hand, the demand for houses is abating and private activity is perceptibly slackening; and the public works, national and local, upon which the constructional trades at present depend for approximately one-third of their employment, seem likely to be of growing importance for the maintenance of industrial activity. On the other hand, the increasingly imperative demand for building resources, to implement the re-armament efforts of the Services and to facilitate the more rapid progress of Air Raid Precautions, makes it more and more necessary that civil public works should not compete with these developments, and that some settled scheme of priorities should be worked out. Sir Kingsley Wood's recent invitation to local authorities to submit a programme of their proposed capital works for the next five years can, therefore, be variously

interpreted. It is clearly a welcome departure that local authorities should be encouraged to take a long view of their capital expenditure, and, in particular, to take advantage of slack periods in industry to press on with their public works. The reminder of the Ministry of Health that authorities could in this way assist in the stabilisation of industrial conditions is proof that economists' proposals for slump precautions have not gone quite unheeded. It is, however, unlikely that the Minister's circular in fact portends a planned campaign to arrest the downward trend of trade. The immediate probability is rather that the Government are anxious to obtain data to assist them in the formulation of plans to secure the unhampered acceleration of the defence programme. And it is not outside the bounds of possibility that, on the basis of the five-year plans submitted, civil public works will be damped down rather than expedited. To plan and co-ordinate capital works in advance is wholly commendable; but defence is to-day the dictator of policy.

Colliery Accidents.—The sympathy of the entire nation has gone out this week to the stricken villagers of Duckmanton, in Derbyshire, where, for the second time in sixteen months, disaster and death have visited Markham Colliery. In January, 1937, nine miners lost their lives in an accident at this pit; and last Tuesday 72 men were killed as the result of an explosion. The occasion calls for more than regret. The Royal Commission appointed over two years ago to inquire into colliery accidents have now completed the hearing of evidence. This week's terrible disaster was not needed to remind the Commission of the vital importance of their task, or to bring home to the Government and the public the urgent necessity of taking action to render coal-mining more safe. Some danger is inseparable from the miner's calling; but it has been officially stated that 40 per cent. of pit accidents are preventable, even under present conditions. Between 1928 and 1936 8,362 miners were killed and 1,296,317 injured in British mines. Only a small proportion suffered through explosions of firedamp and coal-dust. The greatest toll of life and limb is taken by daily mishaps which escape general notice, falls of ground, shaft, haulage and machinery accidents. Coal-mining accounts for nearly one-third of all accidents in industry. So long as it can be stated that over 900 miners and more than 6,000 road-users lose their lives in this country every year, and that over 140,000 miners and more than 200,000 road-users are injured annually, the prosecution of measures to increase public safety, at work and on the highways, will remain as urgent a task as the protection of the community against war-time risks from the air.

Assisting the Unemployed.—As the result of considerable agitation concerning the hardships imposed upon the unemployed by last autumn's increase in the cost of

living, the officers of the Unemployment Assistance Board were empowered last October to give extra weekly payments up to 5s. to men who could show that their families were in special need. Last week, it was announced that these "winter" allowances would now lapse. Winter conditions had ended and the official index of the cost of living, which was 160 on November 1st, had fallen to 154 at the beginning of April. In opposition to this step, it was argued that the fall in general prices was due in the main to bacon and eggs, which the impoverished did not consume in large quantities, while meat, bread and milk were as dear as they had been five months before. On Monday, the Minister of Labour defended his action, but described a new plan to empower the Board to meet additional expenses in special cases arising out of winter conditions. Elasticity, within set financial limits, should be the essence of unemployment assistance. The present payments leave no margin for special hardships; and to fix any rigid relation between the Board's payments and an admittedly inadequate measure of the cost of living would be unjustified.

Belgian Government's Success.—The Budgetary crisis in Belgium, which we discuss in a leading article on page 363 of this issue, looked for a few days as though it might bring a major political crisis with it. There was talk of the Government falling, and fear of the political and financial uncertainties reacting upon one another in a vicious circle. Middle class organisations proposed to hold demonstrations throughout the country last Sunday against an increase in taxation, and they were only restrained by a definite veto from the Government. The debate on the Budgetary position began in the Chamber on Tuesday afternoon, and the Government's proposed financial compromise, which was expounded by the Minister for Finance, M. Soudan, and the Prime Minister, M. Janson, was well received. Even some of the Catholic Deputies showed signs of approval. At midnight on Wednesday, the Government secured a vote of confidence by 101 votes to 67, with eight abstentions. The crisis tax is to be restored; duties on tobacco, beer and petrol are to be increased; but on the other hand the existing social welfare legislation is to be left untouched. Ways and means of raising the rest of the money required for balancing the Budget are to be examined by a parliamentary committee in consultation with the Government. The political conditions, at any rate, are now not unfavourable for the discharge of a difficult financial task.

Abortive Putsch in Brazil.—Just after midnight on Tuesday, there was an attempt at an insurrection in Rio de Janeiro against the regime of President Vargas, who eclipsed the exploits of his German and Italian confreres by putting down the revolt with his own hand. At one moment the President's position was

serious, since part of the palace guard seems to have been in the plot. But Dr Vargas has been more fortunate than Dr Dollfuss. At the head of sixteen loyal soldiers, he was able to hold out until a rescue party arrived. Apart from this dramatic incident, the failure of the revolt seems to have been a foregone conclusion, since the insurgents' plans were no secret to the Government. For the world at large, the interesting question is whether these Brazilian Greenshirt Integralistas, whom President Vargas has now once more foiled, have or have not any association with a foreign Power. The domestic situation in Brazil is not unlike that in Hungary. In Brazil there is a large German minority, thickly clustered in the southern states of the Union. In Hungary, Nazi propaganda has been active, and, though there is an anti-Nazi element among the German population, these non-Nazi German-Brazilians are subject to pressure and even intimidation. In Brazil again, there is a native Nazi movement (the Greenshirt authors of this week's unsuccessful Putsch); and this native Nazidom is suspected of being a hot-house plant. Brazil, however, is in one important respect more fortunately placed than Hungary. Instead of being Great Germany's immediate neighbour, she is separated from her by the breadth of the Atlantic. She is at one with the United States and all other American countries in being determined to keep the aggressor Powers of the Old World at arm's length from the American Continent. And she has a resolute ruler, as President Vargas demonstrated once again this week. Though we may not have heard the last of the Integralistas, this week's events in Brazil must count as a check to the drive towards Fascism.

Hire Purchase.—Miss Ellen Wilkinson's Bill to eliminate some of the obvious evils of hire purchase has passed through the House of Commons. The success of this measure has been welcomed by reputable hire purchase firms; and hirers who depend upon this method of purchase for amenities they could not otherwise afford will be deeply grateful for the safeguards provided by the Bill. In its final form, the Bill has been adjusted to meet some of the criticisms advanced by interests who were, in general, sympathetic. In particular, as a leading article in *The Economist* on April 23rd (page 192) showed, it had been argued that the defrayment of one-third of the total payments due was too small a proportion in many cases to permit the hirer to terminate his agreement by returning the hired goods. This objection was especially cogent in the case of the second-hand motor trade, in connection with which it was also maintained that the increase in the scope of the Bill to include agreements worth up to £100 would have an unfortunate effect. Accordingly, in the Bill passed on May 6th amid general applause, the right of the hirer to determine his agreement is limited to cases where one-half of the sums due has been paid; and when the agreement relates to a motor vehicle (or railway wagon or other railway rolling stock) it will only come under the Bill if the sum involved does not exceed £50. These, and other amendments relating to livestock, cash prices and the whereabouts of hired goods pending court orders, have notably enhanced the Bill's value and practicability in the eyes of the trade. Under the Bill as it now goes to the Lords, hirers, broadly, may terminate their agreements on terms reasonable to both parties; and sellers may not repossess themselves unfairly of hired goods. All parties, interested and disinterested alike, have united to commend Miss Wilkinson's pertinacity and good sense.

Agricultural Policy.—On May 7th, a conference of the National Union of Agricultural Workers criticised the Government's agricultural policy. Their resolutions laid stress upon the need for cheap money for agricultural development; and the inadequacy of existing rates of unemployment benefit for agricultural workers under the insurance scheme instituted in 1935. More generally, the conference complained that the drift of skilled farm workers

to the towns was due to the failure to provide suitable houses, and to successive governments' neglect to provide for the proper cultivation of the land. An attempt is being made to cope with the housing difficulty in country districts, and a Bill with this objective received a second reading in the House of Commons on Monday. It is certainly true that the acreage under arable cultivation in Britain has steadily fallen for sixty years (except for the war years); and that, although there has been an appreciable change-over from arable to grass land on soils of intermediate quality, some 1½ million acres have been wholly abandoned in that period. And, in recent years, the home production of oats, barley, beef and eggs has been declining. The Government's decision to store food against the eventuality of war gives point to criticisms of these trends in British agriculture. At present the official policy, apart from the established subsidies for beef, wheat and oats and marketing boards for milk and pigs, is to build up the fertility of the soil for extra cropping in time of need, by subsidising the use of lime and basic slag. But these fertilisers are, not unnaturally, being largely applied to arable and good quality pasture. The real problem is to bring the poor grassland, into which so many acres of mediocre arable have degenerated this century, back into profitable and productive use. Britain cannot live of her own; but (as the N.U.A.W. conference urged) farming is among the most important of war-time defences. And, moreover, nutrition and public health require that Britain's urban populations should have freer access to fresher foods than at present.

Industry in Greater London.—The striking nature of the recent expansion in many of Greater London's industries, and its disparity with the average rate of growth in the country as a whole, have been a subject of widespread comment—and in some instances, it may be added, of appreciable embarrassment to public authorities, like London Transport, who have been responsible for the provision of special facilities in response to the new demand. To prevent misunderstanding of the extent of London's industrial growth, we take this opportunity to point out that the diagram showing "Percentage Increases in Numbers Insured, 1928-36," which formed part of a series of charts illustrating Greater London's population and industries, in *The Economist* of April 16 (page 167), set out a number of increases which, for Greater London, were the resultant of two separate factors. The first was the growth in the specified industries proper; while the second was the enlargement of the area covered by the Ministry of Labour's figures for Greater London in 1936. In the chart accompanying this present Note, we have eliminated the second factor (whose basis is statistical rather than dynamic), by showing percentage increases, in 1936, in the same area as was comprised in the Ministry's figures for 1928. As the areas added in the Ministry's 1936 computations are those in which, for the most part, industrial development has been more rapid than in Greater London as a whole, a comparison of the "old" area above tends to give a conservative impression of progress in the London region as a whole. Nevertheless, the revised chart, like the original one, gives a vivid impression of the remarkable expansion in London's engineering, vehicle and metal industries (excluding iron, steel and shipbuilding), relative to those of the country as a whole.

EUROPE BEYOND GERMANY

When independent Austria foundered on March 11th, scuttled from within by Austrian members of the German National-Socialist Party and abandoned by the Government of Dr von Schuschnigg under a German threat of war, Greater Germany became the arbiter of much more than Austria's destinies. The Nazis' Third Reich engulfed the nodal point of all Central and South-east European commerce and communications; established new and common frontiers with Italy, Hungary and Yugoslavia; doubled its existing land frontier with Switzerland; surrounded Bohemia and Moravia (the more important half of Czechoslovakia), down to Bratislava, the capital of Slovakia; and came within fifty miles of the Adriatic. Its new boundaries gave it command over the Westward trade of the four remaining Danubian countries using that internationalised river: Hungary, Yugoslavia, Roumania, and—though to a less extent—Czechoslovakia. The collapse of the Austrian dyke allowed not only the Nazi political regime to overflow Austria and to percolate the political systems of her erstwhile neighbours, it also choked the conduits of their commerce with the outside world. Overnight, their economic systems became forcibly and far more extensively integrated with the arbitrarily determined domestic and foreign trade, as well as with the currency and exchange controls, of Germany. The removal of Austria from the map of Europe has aroused acute domestic discussion in Hungary, Yugoslavia, Roumania and Czechoslovakia. The facts, fears, and influences now conditioning these countries' reactions to the fate of Austria are set forth in the following survey, the outcome of recent observation in each country.

Introductory

"SIR," said Dr Johnson, "it concentrates a man's mind wonderfully to know that he is to be hanged in a fortnight."

Since the incorporation of Austria in the Third Reich, there has been much concentration of mind in Hungary, Yugoslavia, Roumania and Czechoslovakia. On the face of it, it might be expected that the reaction of these four countries to the disappearance of Austria might differ according to their political sympathies. For instance, since 1921 the three Little Entente States—Czechoslovakia, Roumania and Yugoslavia—have been linked together by a system of Treaties, which was from the beginning devised as a mutual defensive alliance against Hungary or Bulgaria, two of the defeated Central Powers of South-eastern Europe. On the other hand, Hungary herself had been since the War the loudest claimant for Treaty revision, in which she was actively supported after 1926 by Signor Mussolini, and after 1933 by Herr Hitler. The taking of Austria has removed the linch-pin of the entire Central European equipage; and Hungary, long desirous of making a geographical change, finds herself in the invidious position of

Mr H. G. Wells' character who found the Last Trump in an antique shop, bought it, and blew it. The Danubian world, and perhaps more besides, has been so violently blown topsy-turvy since March 11th that neither Hungary nor the three Little Entente States can henceforth count on pursuing their traditional policies in consistency and safety.

Till the removal of Austria, the trend in the foreign policies of Hungary, Yugoslavia and Roumania had been towards adherence to the Rome-Berlin axis; whereas after March 11th, and still more so after the signature of the contingent Anglo-Italian Pact, signed in Rome on April 16th, both the uncertain consistency of that axis and the great increase in German political and economic pressure throughout Central and South-eastern Europe, plunged public opinion and politics in all four Danubian countries into a welter of disputation. From this welter, however, certain landmarks are beginning to stand out clearly.

In order of importance to the general European situation, we may proceed to examine the factors dominating Czechoslovakian, Hungarian, Yugoslav and Roumanian policy.

Czechoslovakia

Economically, Czechoslovakia is less bound up with Great Germany than any of the other three Danubian States. In 1937, 18 per cent. of her total exports went to Great Germany (4.2 per cent. to former Austria), while 21.8 per cent. of Czechoslovakia's total imports came from Great Germany (7.3 per cent. from former Austria). These totals will almost certainly not be achieved from now onwards, as Great Germany will absorb most of Austria's output and fill most of her needs. Czechoslovakia alone among Danubian countries enjoys the virtual absence of any foreign indebtedness, an ample and fluid money market, a well-founded banking structure, a national economy almost exactly balanced between agriculture and industry and a foreign trading position which can be made to respond rapidly to sharp variations in world prices.

Difficulties are now imposed on Czechoslovakian transit traffic towards world markets. Czechoslovakia can, it is true, send her manufactured products to world markets via Polish Silesia and the French-built, French-financed Silesia-Gdynia Railway through the Polish Corridor; or she can also use the downstream Danube route to the Black Sea; or the Budapest-Zagreb-Trieste Railway to the Adriatic. These routes, however, would naturally only come into question on two suppositions; first, that the transit negotiations with Germany this very week prove fruitless, or fruitful only at great cost—which need not be expected

since Germany needs the traffic; and secondly, if Czech-Polish, and Czech-Hungarian, relations improve.

Parties and Politics

The Czechoslovak Republic had its origin in the two-fold aim at the Peace Conference (a) to restore to Czechs and Slovaks their right to existence as a nation, and (b) to restore to the Czechs the old natural frontiers of the Bohemian crownlands. This second part of the programme involved the incorporation of Sudeten German and other minorities who, through three and more centuries, had filtered, or had been deliberately transported by the Habsburgs, within the frontiers of the old crownlands. The structure of the post-war Czechoslovak State also contained other weaknesses. For example, there was no Slavonic aristocratic, industrial, or ruling class ready to run things. Accordingly, this reborn nation's will to defend its own existence manifested itself, in common with the wills of the other Danubian countries, including Austria, in economic protectionism; in Czechoslovakia's case, of an agrarian kind, as in Austria.

The Czechs found themselves the heirs of one of the most highly industrialised areas of the Old Monarchy. The Czech and Slovak peasants, by the post-war land reforms, formed the basis of a big Agrarian Party. It was directed

by a group of "new men" in the Republic: the new chiefs of the agrarian monopolies, who became the loudest champions of that agrarian protectionism which shored up their finance, commerce, monopoly boards (e.g. for wheat, potatoes, cattle) and private estates. All Czechoslovak Coalition Governments during the last few years, therefore, have had to face a widening gulf between the Czech Right-wing Agrarians and their business friends, on the one hand, and the vast mass of small peasants, traders, social democrats, workers, etc., on the other.

The chief problems of the present Prime Minister, Dr Milan Hodza, a Slovak Agrarian, are, first, to keep his more liberal Slovak Agrarian wing in step with the Rightward Czech Agrarians, thus preserving Agrarian predominance; and, secondly, to prevent the Right-wing Czech Agrarians from pushing their policies so far as to break up the entire Coalition. If the latter occurred—as, for instance, nearly did happen last year over the conduct of foreign policy—Dr Hodza and M. Beran, Czech leader of the entire Agrarian Party, might precipitate another Coalition still further to the Left, which would widen the breach between Czechoslovakia and Germany. Or it might force President Benes to do what his predecessor, Masaryk, did in 1923: form a non-party Cabinet of officials, drawn from experts of any party.

Government and the People

The dispute over Czech internal politics came to a head in the vernacular press during the last few weeks, as the demands of the Sudeten Germans became more and more extreme. The climax was reached on April 24th, when Herr Henlein, leader of the Sudeten German Party, made his speech at Carlsbad. His recognition of Nazidom as the inspiration and objective of his party may have been a shock to some; but it represented a slap in the face to those Agrarian leaders, like Dr Beran, who had long advocated and worked for political collaboration between the Sudeten Germans and the Czech Agrarians. The shock was intensified by Herr Henlein's other two extreme de-

mands; for the complete reorientation of Czechoslovak foreign policy, and for territorial autonomy over all the German areas. Herr Henlein's declaration a week later that his demands were a minimum, even for negotiations with Prague, was the final shock.

The naturally strained situation in the German areas has now been aggravated by the Government's decision to hold the postponed local elections in 11,000 out of 15,000 districts at the end of this month and the beginning of next. The Government's critics maintain that to hold these elections at a time when, with the other hand, the Government is patently not enforcing its full and required authority in these areas (so as to avoid even giving the pretext to Great Germany for charging it with "repressive measures") amounts to a capitulation to the familiar procedure of the Nazis in all small and neighbouring countries. This procedure is the ruse of the "Trojan wooden horse" which worked so eminently successfully in Austria, and before that in the German Government of Herr von Papen. If the Czech Cabinet, say the critics, are hoping to secure French and British sympathy by not opposing even the illegal and terroristic activities of the Sudeten Germans against their German and Czech political opponents, then they are really offering up, as a barren sacrifice to incalculable foreign politicians, not only the security and integrity of the entire Czechoslovak State, but also the lives and liberties of many thousands—indeed, many hundreds of thousands—of its citizens.

Minorities and the State's Existence

This is not to say that public opinion in Czechoslovakia is intransigent towards the Sudeten Germans. Czech critics of their own Government admit that every concession compatible with the security of the State, and with the equal treatment of all its citizens without exception, should be made. They add that if Great Germany intends in any case to destroy Czechoslovakia either by war or by peaceful garotting, the agency will at first be that of Herr Henlein. Consequently, the Czech Government should take

its stand now on fundamental principles, and leave to Great Germany and its agent in Czechoslovakia the onus, not only of declaring their intention, but also of manifesting the will to achieve it by methods which no democratic Government could countenance.

The overwhelming conviction among all Czechoslovaks is that the German Nazis and their Sudeten agents do not desire anything but complete separation of the Sudeten areas from the Czechoslovak State. The same observers expect the German demands to be backed up by force. Thus, many competent Czech observers say, it will probably come to a fight, or else to the obliteration of Czechoslovakia from the map of Europe. They realise that Great Germany has no desire to contain the Czech and Slovak peoples, who amount to 10,000,000; but, they say, once the Sudeten area is taken by Germany, there is no reason why the entire region should not fall to separate claimants, as Poland did at the time of the Partitions. As will be seen below, there is a considerable portion of Hungarian opinion which is only waiting for the opportunity to restore Magyar rule over Slovakia entire; and the minority of 80,000 Poles are demanding autonomy round Teschen. Once you allow the principle of blood relationship to decide State frontiers, the entire map of Europe would be changed—but only at the cost of creating a "crazy patchwork" of States, probably far worse than the present frontiers of Europe. As it is, in Czechoslovakia the very demarcation of possible boundaries between Germans and Czechs cannot be achieved without the creation of equally large new minorities or transfers of population on an enormous scale.

The Military Factor

It should be noted that there are rumours this week of the introduction in Czechoslovakia of three years' compulsory military service. The Czech land army at present ranks fourth in importance in Europe after those of Russia, France and Germany. It is highly trained and excellently equipped

by the important Skoda works, in which both French and British armament firms are financially interested. It is at present about one-quarter of the German army's strength; but as the German army in the event of a general European war would need to be split up as between the western, eastern and southern frontiers of Great Germany, it is to be expected that the efficient full strength of the Czech army would be available in the ratio of 2 to 5 against any possible set of concerted attacks from Great Germany. As, however, strategists assert that the attacking force in modern warfare must be at least five times as strong as the defence in order quickly and completely to swamp it, it is highly probable that even a local conflict involving Great Germany and Czechoslovakia would last many weeks, and perhaps months, before Czechoslovakia were completely overrun.

It is just this "pause" which contains the greatest threat of a general European war. For Czechoslovakia's Pacts with France and Russia are valid, and have recently been reaffirmed by the French and Russian authorities, for such a terrible contingency. As to the extent of possible military assistance, the air weapon is immediately the most important. Germany's industrial areas are vulnerable to aerial attack from the South-east. The question, which has been greatly disturbing the co-ordinated German Press, of assistance to Czechoslovakia from Russia by land and air, is still open. It depends on the attitude of Hungary towards Slovakia (see below), and on the attitude of Roumania and Poland to the possibility that Russian *matériel* and men might attempt to "run" the Bukovina corridor which joins northern Roumania to south-eastern Poland. Such conjectures are common topics of discussion throughout Europe beyond Germany; but their realisation, even only in part, would obviously call into play a constellation of military forces in the proverbial "cockpit of Europe", from which the Continent as a whole could not hope to be isolated.

Hungary

Hungary's foreign trade is now more bound up with that of Great Germany than the trade of any country but Bulgaria. In 1937 41 per cent. of her exports went to Germany and Austria, and 44.2 per cent. of her imports came from what is now Great Germany. But Hungary has now an added economic problem, in that the removal of Austria has broken the economic system known as the Rome Protocol system; this system having been erected by Signor Mussolini in 1934 in order to consolidate the economic relations of Austria, Hungary and Italy. The overwhelming bulk of Hungary's exports to Austria, Germany and Italy was composed of cereals and other agricultural produce.

The Agricultural Problem

The predominant economic problem in Hungary since the depression began in 1930 has been that of agriculture. Land reform in Hungary after the war was not carried as far as in most European agrarian States. This meant that there was always a vast difference in technique, financing, costs and yields on the remaining estates of the big landowners as compared with conditions on the smaller estates—especially the very small holdings, often amounting merely to allotments. The big estates which were run on large-scale lines could be organised to meet greatly reduced incomes during depression; but the small estates could not. Thus, a large group of subsistence farmers was pushed into penury, at the same time as, out of a total population of under 9,000,000, at least one million were landless peasants. The upshot has been that about 3,000,000 small holders and landless peasants now constitute a desperate phalanx of discontented citizens.

In addition, this agrarian problem has bequeathed a

financial problem; the encumbrance of a heavy internal mortgage debt borne by the banking structure and dependent for its alleviation on the eventual achievement of a higher price level for agricultural produce and of greater proceeds from agricultural exports. It looked as if these achievements might have been secured up to the spring of 1937; but the downturn in world prices, coupled with the elimination of Austria has decreed otherwise.

Hungary's Fascists

In the background of Hungarian domestic politics—as, indeed, in that of Yugoslav and Roumanian and Czechoslovak politics—there is an extremist Right-Wing movement. Capitalising economic discontent, anti-democratic, anti-Semitic, it is bent on securing power by obtaining the support of the suffering lower middle class and of young people who cannot immediately find those good positions to which they think they have a right. In Hungary's case, this movement is composed of many elements, united only in their use of the "arrow-cross" as a symbol and in their extreme racialism. This *Nyilos* movement has its sympathisers in some higher officers of the Army, in one particularly highly-placed officer of the General Staff, and in certain permanent officials in certain Ministries. It holds advertised meetings, addressed by its various leaders, of whom Major Szálasi is by far the most important. This retired officer, formerly on the General Staff, is held responsible for a considerable amount of disruptive propaganda. If the *Nyilos* movement goes on gaining ground unchecked, it will do so at the expense of the Government Parties and of M. Tibor Eckhardt's Little Landowners' Party.

Anti-Semitism and Depression

In face of the external pressure now exerted by Great Germany and of the internal pressure generated by this extremist movement, M. Darányi's Government has had recourse to a somewhat dangerous, and in any case dubious, expedient. It has attempted to forestall the "arrow-cross" organisations by introducing a long-heralded but long-delayed anti-Semitic Bill which provides for the gradual elimination of Jews from businesses, the professions and public service in five years. For this purpose—which may also have been calculated to please Great Germany—a Jew is defined as one of Semitic origin who was not baptised before August 1, 1919. This definition is not as logical as that of the German authorities, which is a definition by blood. It has therefore caused widespread uncertainty among Jews; and the Bill's requirement that only 25 per cent. of any business or organisation should be run by Jewish staff, so defined, has led to an almost complete paralysis of economic activity on the part of the entire Jewish population, racially defined.

It must be remembered that the Hungarian Cabinet was reshuffled early this year to admit the inclusion of Dr. Imrédy, president of the National Bank, to whom was entrusted the task of carrying out his own Five Year Plan for the expenditure of 1,000 million pengő for public works and re-armament. The task of raising this sum would have been great, in any case, for 600 million pengő were to be raised by a capital levy and 400 million pengő by internal loan. Now, since the *Ausgleich* with the Habsburgs in 1867, the industrialisation of Hungary was left by the traditionally proud Magyars to the Jews. Trade, commerce, industry, even banking, were looked on by the most cultivated Magyar families as unfitting occupations for their sons. Consequently, to-day, and after the intense pre-war and post-war industrial protectionism of successive Hungarian Governments, the Jews are predominant in the technique of industry and skill of commerce and finance. The Regent recently adjured young Hungarians to give up this attitude to business in his radio broadcast. The Darányi Government's anti-Semitic Bill aims, perhaps naturally and perhaps even justifiably, at "rehabilitation of the national life" and a more even balance between Jew and Magyar in the national economy. But that has not prevented its immediate economic effect, in conjunction with the down-swing of world prices and business activity, from narrowly approaching a disaster.

Magyar and German

As the Opposition Liberal Party leader, Dr Charles Rassay, said in a noteworthy and widely quoted speech in Parliament against the Bill, to relegate so important an economic element in the nation to the rank of second-class citizens, to threaten the future incomes of a great part of them, and yet to repose hopes for the Five Year Plan's funds upon their contributions by loan and levy, is to strain sanguineness to the point of folly. Moreover, besides greatly adding to the inevitable difficulties facing Dr Imrédy at this juncture, the Bill has had the comprehensible effect of causing many of the purest Magyars to nurse misgivings. The reason for this is, in the main, that, as Dr Rassay aptly said: "You can dress this Bill up in the national colours, but on the paper is the trade mark 'Made in Germany.'" Magyars, whose long and proud history is part of their life to-day, and whose forbears fought for independence against Austrians, are far from happy at the prospect of losing control of their political and economic destinies to a Prussianised Great Germany. And their misgivings have been heightened by the feeling that both towards the uprush of the "arrow-cross" extremists and towards the most urgent problems of foreign policy, the Darányi Cabinet is betraying a certain nervelessness and indecision.

Hungary and Czechoslovakia

Since the abolition of Austria, and since the focusing of German animosity against Czechoslovakia, Magyar revisionism has, in certain influential quarters, taken an

ominously dangerous twist. The leading Hungarian journals, almost without exception, have recently been even outdoing those of Great Germany in anti-Czech ferocity. With this quite recent intensification of anti-Czech feeling goes the really dangerous trend: a tendency to canvass the possible profit to Hungary of an immediate "adventure" against Slovakia if once the Czechoslovak State should be engaged in war. The outstanding statesmen in Hungary—men like Count Bethlen, M. Kánya (the Foreign Minister), Dr Imrédy, Dr Rassay, M. Tibor Eckhardt, and others—have too wide an experience of European and world politics ever to countenance such perilous counsels. But the counsels are there; they are not controlled, even in the otherwise controlled Press. Public opinion has been bred up for nearly twenty years to reckon with revision; rearmament is now beginning to go ahead; and it might well tax the powers of a Sisyphus, let alone a Hungarian statesman to-day, to withstand a popular clamour, fomented by extremist movements, for a desperate adventure. Desperate it would indeed be, for Hungary as much as for Europe; since such an irresponsible act is the only joint *casus belli* explicitly stated in the Little Entente Treaties. Once Roumania and Yugoslavia were put upon their mettle to conserve their own territories, the pressure upon France and Russia would be scarcely resistible. Voluntarily to turn the Danubian plain into a European battlefield would be suicidal for Hungary, if not at the outset, then within weeks or months. It might do more than anything to realise Hungary's greatest fear: the entry of Russia into the Balkans.

What can Hungary do?

The prospect before Hungary's statesmen, therefore, is not rosy. How could it be? But it would be grossly false to conclude, as many French and English newspapers have already concluded, that "after Austria, Hungary is finished." Though Hungary has now an indefensible frontier with Great Germany, though she may become dependent even as to more than 44 per cent. of her trade on her colossal new neighbour, her ambit of manoeuvre, if only she can find wise and firm hands at the controls, is of no mean amplitude. Great Germany needs the best of economic and political relations with Hungary as well; and a Hungarian policy of irreproachable neutrality on all sides would undoubtedly better serve her own destinies—as well, perhaps, as those of her erstwhile friend, Italy—than one of irretrievable self-immolation in a cause whose victory could only spell thralldom for the proud and individualistic Magyar people, and whose defeat might well spell utter destruction. Every Magyar learns "Lord, remember this people, who have suffered enough in the past to atone for all the future!" In essence, the problem before Hungarians is precisely that before their avowed "best enemies," the Czechs: namely as a small and long-oppressed nation, acutely race-conscious, to devise a *modus vivendi*, not with many equally small neighbours, but with the towering Teutonic colossus.

Before a problem of this magnitude—and it is by far the most serious problem for Hungary since the time of Rákóczi, or of Kossuth, Déak and the rebuilders of modern Hungary—it would seem that no single-party Cabinet could capture the complete confidence of the nation. There have been many rumours in recent weeks that one or other of Hungary's leading statesmen, both in and out of office, would be called on to perform this task.

In any case, such a Concentration Cabinet would have, from the outset, to tackle two Herculean tasks: first, to assert with all firmness the internal authority of the State against those elements which the Regent in his broadcast last month characterised as "untimely" or "disorientated" or "revolutionary"; and secondly, to put the very able Minister of Economy, Dr Imrédy, in a position to combat the threat of serious economic depression and to carry out his Five Year Plan. Neither of these immediately imperative tasks can be accomplished without the other. Together, they constitute a more immediately pressing problem than that of Hungary's alignment in a necessarily friendly *modus vivendi* with Great Germany. In short, Hungary's independence can be lost abroad, but it can only be won at home.

Yugoslavia

Foreign Policy

THE establishment of the Rome-Berlin axis impelled the Government of Yugoslavia, under M. Stoyadinovitch, to improve relations both with Germany and with Italy. The Italo-Yugoslav Pact was hurriedly completed just over a year ago. It was highly unpopular. The Italo-British Pact mitigated this feeling in Yugoslavia; but it could not in any way reconcile Croats, Slovenes and Serbs to the sudden dislocation of the Rome-Berlin axis, caused by the destruction of Austria's integrity. The new frontier; the small but Nazi-orientated German minority round Maribor (Marburg); the antipathy of the Catholic Croats and Slovenes to what transpired in Vienna (strengthened by the attitude of the Vatican); all these forces drove the erstwhile anti-Serb Croats and Slovenes back upon Belgrade, and forged a new kind of popular clamour for unity.

Yugoslavia and the Axis

If Hungary's problems in foreign policy are crudely and uncomfortably stark, those of Yugoslavia are wreathed in complicated and conjectural mists. In 1937, while Yugoslavia sent 35 per cent. of her total exports to Great Germany and took 43 per cent. of her total imports from that big new constellation, Yugoslavia sent only 9 per cent. of her exports to Italy, and took only 8 per cent. of her imports from her Western neighbour. In the last two years, Italy has been unable to supply sufficient of Yugoslavia's needs in manufactures and raw materials—a drain on Italy's own resources—and the 1937 figures above show enormous reductions from those of 1932, when Yugoslavia sent no less than 23 per cent. of her exports to Italy and took 13 per cent. of her imports from Italy. The reason for this remarkable change lies in the inability of the Italian authorities effectively to unfreeze the blocked lire which mounted up in 1935, 1936 and 1937, as Italy's own needs of raw materials for other purposes did not permit of "civil" exports of manufactures to Yugoslavia. Consequently a political tug-of-war beside the economic tug-of-war has been going on in Yugoslavia, between the two partners on the Rome-Berlin axis, for the good graces of M. Stoyadinovitch and his Cabinet.

Domestic Politics

Yugoslavia, therefore, enjoys more economic latitude, as against Great Germany, than Hungary or Roumania; her rail communications to the West are short; and she has a sea-coast nearer to Western Europe. Her peoples are frugal, unpretentious, adaptable and tough; and, like their Czechoslovak cousins to the north, they live with an ever-present consciousness of having had to fight for their independence. This combination of qualities is perhaps responsible for their strong attachment to the Czechoslovaks. And it is perhaps responsible for the radical cleavage of opinion between Government and people during the last year or more. The gulf has been manifested by various events: the Government has had to tighten up the press censorship to a more rigid degree than obtains in Hungary and than obtained, until a few weeks ago, in Roumania. Public meetings on matters of foreign policy are nearly always banned. The almost comic result is that the arrival of a French or Czechoslovak statesman, even of a lecturer, has been the signal for such a demonstration of affection in the streets that the police have had to clear them. The younger generation in particular is most strongly pro-Czech, pro-French, and anti-German; which has led to difficulties in the Universities.

The meeting of the dictators at Rome last week has caused fresh perturbation in Belgrade; for reports have circulated that the Duce handed over Czechoslovakia and Hungary to the Fuehrer as spheres of German interest, but retained Yugoslavia as an Italian sphere. This has not exactly evoked jubilation in Belgrade.

The problem of Yugoslavia's foreign relations is thus exceedingly complex. If Belgrade takes to its bosom the anti-Italian phobias of Croats and Slovenes, it must play the game of Great Germany. On the other hand, Croats and Slovenes themselves, after nursing secret pleasurable emotions about Imperial Catholic Vienna, now see a Power enthroned there against which the speech of the Vatican has been very plain indeed. If Germany and Hungary become involved in a joint "forward policy" against Czechoslovakia, Yugoslavia's position becomes extremely delicate; for she holds hundreds of thousands of Magyars as a minority herself, along her Hungarian frontiers; and if Yugoslavia—not, perhaps, her present Prime Minister—were to decide to implement the Little Entente alliance on Czechoslovakia's behalf, she would have to look to France. So, of course, would Roumania. But neither of them can look to France for direct assistance without bumping against the Rome-Berlin axis at the precise points where Italy now joins Great Germany. Consequently, Yugoslavia's policy has to be drawn up on some kind of supposition about the real validity of this Rome-Berlin axis in the event, not of a general European war, but of the outbreak of a conflict in Central Europe. Now, no one can presume to advise Yugoslav statesmen what they should say, beforehand, about such a contingency. But it is understandable that eminent Croats and Serbs should refuse to say what they will *not* do: e.g. that they will *not* implement the Little Entente and French alliances. For that would be suicidal for Yugoslavia. Thus, M. Stoyadinovitch's policy has recently tended towards a strengthening of the ties between his country and Czechoslovakia, Roumania, and France; ostensibly with the hope, common to Roumania also, that Britain and France in resuming good relations with Italy will stay the advance of Pan-germanism at its newest frontiers. In this respect, Italy's eventual position is crucial.

Meanwhile, profiting by a liquid money-market, the Yugoslav Government have advanced a little more along the road of recovery than the Hungarian, and are issuing a 50-year 6 per cent. internal loan of 5,000,000,000 dinars (nominal) to produce 4,000,000,000 dinars, for re-armament, public works, and railways. In economic conditions, Yugoslavia is in a more favourable relative position than the other three Danubian countries to profit by a redirection of foreign trade. The prospects before her seem better than those ahead of Hungary or Roumania.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

Head Office: 41 Lothbury, London, E.C.2

Roumania

DURING the last six months Roumanians have lived under a series of surprises, at home and abroad. As the New Year opened they were looking forward to a General Election on January 20th. For four years the so-called Liberal Party, on whom the mantle of the Bratianu dynasty had descended, had contrived to control Parliament. It was openly criticised for the quite abnormal degree of corruption associated with its rule; and its leaders were out of touch with newer trends in Roumanian thought. At the General Election the Liberals counted on being able, by means of an alliance with two small splinter-parties to carry 40 per cent. of the electorate and thus secure 60 per cent. of the seats in the Chamber. To the Right and Left were, respectively, the Iron Guard (then called "All for Fatherland") and the Peasant Party.

The first shock came when the Right and Left made an electoral alliance: an unprecedented phenomenon. Their common aim was to oust the Liberals—which they did by reducing the Liberal *bloc's* poll to 37 per cent.—but it was reinforced by a common dislike of King Carol's hand in politics and of his personal *entourage*. The electoral result was a stalemate; the King appointed the late M. Goga as Prime Minister, who had less than a tenth of the poll; and his violently Right-wing, anti-Semitic regime lasted only 45 days. Instead of proceeding to new elections, the King then superseded all Parties; appointed a Palace Cabinet headed by the Patriarch; and proclaimed a new Constitution in which he was supreme.

On the face of it, all this might seem highly illiberal. In fact, King Carol, observing the moral disarray into which domestic politics had fallen, and acutely embarrassed and disturbed by the development of the Iron Guard's foreign relations, rallied round himself the leading men of his generation and entrusted to them the Government.

The Iron Guard

The effect of this was quickly seen. On Easter Sunday, when no one suspected it, King Carol personally took the offensive against the Iron Guard and M. Codreanu. With his trusted officers he reorganised the administration of two large towns in Western Roumania on a surprise visit; the police raided Iron Guard premises (especially the Green House on the outskirts of the capital); and documents of an extremely incriminating kind were found. The Iron Guard press was banned; and a conviction for libel imprisoned M. Codreanu for a few months while, according to official reports, a criminal case is being prepared against him. The Iron Guard's supporters in the country were also arrested, to the number of 200 or so; and the ex-Premier, M. Goga, fled to Hungary. (He died last week.) The unravelling of the Iron Guard's domestic and foreign relations will take much time; but it is already clear that its former changes of name—one was after the murder of the then Prime Minister, M. Duca, in 1934—have made no change in its activities or leadership. It is still strong with certain sections of public opinion; but the King's *coup de main* has been widely popular.

Foreign Policy

In the front rank of Roumania's problems stands that of foreign relations. Great Germany took 27 per cent. of her exports in 1937 and sent her 38 per cent. of total Roumanian imports. Germany needs oil from Roumania—at least until the new drillings at Nagy Kanizsa in Southern Hungary become workings. Roumanians realise this; and, while recalling the Carthaginian Peace of Bucharest when Roumania collapsed before Germany in May of 1918, they are, like the Poles and the Yugoslavs, in the invidious position of a smaller Power directly in the line joining two great and antipathetic Powers. The Little Entente treaties still hold Roumania to Czechoslovakia and Yugoslavia in the event of a disturbance of the Danubian *status quo* on the part of Hungary. But where

will Hungary soon stand? What if Russia, seeing Czechoslovakia involved in conflict and German military power rolling up to the Carpathians and Transylvania, decides to ask Roumania to invite her in for the defence of Roumanian frontiers—and of the oil wells? The Roumanians once destroyed their own wells to prevent the German forces from obtaining oil in the last war; and it takes two years to re-equip them and resume operations.

What, on the other hand, can Roumania now do to appease both Russia and Germany and keep them at arms' length? The dilemma is hard to rebut. The new Foreign Minister, M. Petrescu-Comnen, has so far reaffirmed the integrity of the Little Entente, improved relations with Russia (which the supplanters of M. Titulescu since 1936 have done so much to upset), and tried hard to improve the rather strained relations between both Poland and Yugoslavia, Roumania's allies, on the one hand, and another of her allies, Czechoslovakia, on the other.

Undoubtedly the overwhelming desire of most Roumanians is to avoid being drawn into the orbit of even a Central European conflict. To this end, many "official" Roumanians point to the possibility of erecting a *cordon sanitaire* between Russia and Germany, composed of the two contiguous allies, Roumania and Poland. Unhappily, for them, neither of the latter States is quite a free agent; both are bound by French alliances; both are contiguous with Russia; and neither can remain aloof if war in Europe should ever become general.

Roumania and Russia

The Bessarabian dispute between Russia and Roumania has almost ceased to exist. It can be easily solved by agreement. The Russians have kept it technically open, in order to be able the better to bargain up to the last moment. But Roumanians realise that their army could not hope to hold up a real Russian thrust towards an encroaching antagonist in Central Europe; and—a fact which must never be left out of account—the meagreness of Roumania's finances has never enabled her to raise the standards of living of her population along the Russian frontier to levels comparable even with those of the Russians on the other side. This is a strong rein on any violently anti-Russian counsels in Roumania. As one Roumanian of wide experience said to the writer: "Well, if it comes to a scrap, we can hope to get by with the Nelson touch. We can affect not to see the nationality of aeroplanes above our soil. We can look in vain for signs of foreign soldiery. Isn't that what the London Non-intervention Committee has successfully been doing for two years? Why shouldn't we adopt your brand of Non-intervention? Could you blame us?"

The Immediate Prospect

Such arguments, however, cannot alter the situation inside the country. Oil stocks are mounting; production in the world may have to be curtailed again; prices are falling. The peasants face the same problems, caused by falling prices, as those of Hungary. Great Germany offers a market—of a sort. The sort of market is by now familiar: one in which export proceeds become blocked until Germany herself decides she can safely unfreeze them by delivering a limited variety of manufactured goods. Thus, Roumania is already caught up in the wave which spread outward over Europe after March 11th. King Carol and his advisers have executed a daring stroke on behalf of their country. That this stroke hit the Fascist Iron Guard at once, and with force, shows on which side their sympathies may in future tend. That the King thought it imperative thus to throw even the reversion of his crown into the European arena is proof of the perilous extremity to which things had gone in Roumania. But of herself, and by herself, Roumania cannot hope to steer clear of the currents that are now sweeping throughout Central and South-eastern Europe.

The Economic Factor

THE incorporation of Austria in Germany is henceforth not so much of a threat to communications as it is to those traders in Czechoslovakia, Hungary, Yugoslavia and Roumania—indeed, in Italy, France, Switzerland and Britain as well—who actually competed with German traders for a share of the Austrian market. There is a shortage of workmen in several German industries; and it is doubtful whether in these cases Germany will make an effort to raise her own production in order to supplant former Austrian imports from third countries. She will have to subject the population of Austria to the same restrictions in consumption which are in force in Germany in similar cases; but for some time she may leave the Austrian market—at least provisionally—open to some of its former suppliers. Finally, it is extremely difficult to foresee how far wholesale rationalisation of production in the two countries will increase their *aggregate* output, and to what extent the shortage of workmen in Germany will be remedied by using the Austrian unemployed.

The table below shows the role played by Germany and the Danube countries in the foreign trade of Austria and the limits to which Germany may be able to fuse the two distinct economic areas. Of the figures of Austrian foreign trade only those referring to imports have been examined, since it is presumed that Germany will carefully avoid any measure which may hamper exports by former Austrian industry.

The figure of Austria's total imports in 1937 was 1,461 million schillings, compared with 1,268 millions during 1936 and 3,263 millions in 1929, the best of the last ten years. The share of each of the Danubian and Central European States was as follows:—

From	1936		1937	
	Million Sch.	Percentage of Total Imports	Million Sch.	Percentage of Total Imports
Czechoslovakia ...	144.0	11.4	160.3	11.0
Hungary	118.3	9.3	131.7	9.0
Yugoslavia	76.8	6.1	115.3	7.9
Roumania	101.5	8.0	87.4	6.0
Danube Area ...	440.6	34.8	494.7	33.9
Germany	216.5	17.1	233.6	16.0
Italy	59.0	4.7	80.3	5.5

Imports from the Danube area were in both years nearly exactly double the imports from Germany. Germany had a practical monopoly in Austrian imports of musical instruments, dyestuffs, electrical apparatus and machinery, apparatus and machinery in general, metal products, paper and paper goods, and tools. Her share in total imports of Austria has exceeded 60 per cent. in all these seven groups of commodities. For fertilisers,

shoes and leather goods, furs, glassware, pottery, iron products, motor cars, chemical raw materials, the share of Germany varied between 40 per cent. and 60 per cent. of Austria's total imports.

On the other hand, Czechoslovakia has an outstanding interest in Austrian imports of silk goods and pottery, where her individual share was higher than 50 per cent. of Austrian imports of these goods; and more than 30 per cent. of Austria's imports of coal, mineral products and earths, cotton yarns, cotton goods, wool yarns, woollen goods, glassware and metal products came from Czechoslovakia. There are six items—coal, mineral products and earths, glassware, pottery, iron products and metal products—in which Germany and Czechoslovakia each supplied more than 20 per cent. of Austria's needs in each category. In these latter cases Czechoslovak deliveries will probably recede.

Dislocation of Austria's Trade

In many cases—banks, glass factories, chemical works, etc.—long-standing business agreements between Austrian and Czech firms have now been dissolved. Again, of Austria's imports of coal, amounting to an annual 2,500,000 tons, Czech mines supplied 1,000,000 tons and the Polish-Siberian mines about 900,000 tons. Before the absorption of Austria, Germany demanded that the Austrian imports be cut down in favour of German mines. The Austrian financial and commercial authorities could not do this without upsetting their exports to Czechoslovakia and to clients of Czechoslovakia. Now it is in process of execution. Further, imports of meat into Austria from Hungary, Yugoslavia and Poland are being reduced.

The relations between Czech and Austrian textile industries were always very close. They were one industry before the war. They co-operated closely after the war, the Czechs sending half-finished goods to Vienna, whence they were exported all over the world, ranking as Austrian by origin under commercial treaties embodying the most-favoured-nation clause. Now this trade is being interrupted in favour of Saxony's industry; but Great Germany's exports take place through clearing agreements that do not benefit by that clause; and her imports of textile material must be accommodated to other and prior needs.

The Hirtenberg and Enzesfeld arms factories have been taken over by the Sulzer works in Berlin; and a branch of the new Hermann Goering steelworks has been started in Linz. Accordingly, it may be presumed that the former international participations in the output of iron ore and steel from the famous Alpin-Montangesellschaft—Austria's mountain of iron ore—will be modified in favour of Germany, which formerly, through the Stahlverein, controlled the concern through a majority shareholding.

Great Germany and South-Eastern Europe

WHEN Austria was swallowed by Germany something more important than a refashioning of Danubian trade statistics occurred. In future, as official German publications pointed out, Austria's nodal economic position will be turned back to front: i.e. instead of serving as an *entrepôt* centre for all Europe—east, west, north and south—Austria is to become the economic as well as the political and military Ostmark of Great Germany. Her foremost economic duty is to act as a conduit leading towards Saxony, Thuringia and the Rhineland, the centres of German industry. The trade and transportation of all Central and South-Eastern Europe has for so long been centred upon Vienna that Germany, in addition, can proceed to levy what the transit traffic will bear; negotiations with Hungary, Czechoslovakia and Yugoslavia have already been opened on this account; and Germany has announced that she will construct a great Danube port at Vienna, proceed with the Rhine-Danube canal at top

speed, and put an armed flotilla on the Danube, which is still an internationalised river.

The foregoing gives some indication of the extent to which the incorporation of a small but economically and geographically important country within a neighbouring Great Power may affect the trading relations of a Continent. It may be advisable at this point to consider the trade of Germany and of her competitors with all Central and South-East European countries. These trading relations can be gauged from the following figures:—

TOTAL TRADE OF HUNGARY, ROUMANIA, JUGOSLAVIA, BULGARIA AND GREECE TOGETHER (in 1936 and 1937)

From or to—	Imports %	Exports %
Great Germany	42.3	36.8
Czechoslovakia	7.1	6.7
Italy	2.9	5.8
U.K., France and U.S.A., together	16.7	19.4

The next table sets out the percentage share of each country's imports and exports falling to the industrial countries competing in Central and South-Eastern Europe:—

FIGURES IN PERCENTAGES OF EACH COUNTRY'S TOTAL TRADE

	Im- ports from	Ex- ports to	Im- ports from	Ex- ports to	Im- ports from	Ex- ports to	Im- ports from	Ex- ports to
	Great Germany		Italy		Czecho- slovakia		U.K., France, U.S.A.	
(1) Hungary:								
1929	33.2	42.1	4.7	9.7	21.5	16.4	9.7	5.9
1932	38.0	45.3	15.6	7.8	10.4	6.8	12.7	12.5
1937	44.2	41.0	7.3	15.9	5.5	2.5	11.3	11.3
(2) Roumania:								
1929	36.6	37.0	6.9	7.7	13.6	6.2	18.9	11.0
1932	28.6	18.7	11.0	10.6	12.2	7.0	28.3	27.3
1937	38.0	26.9	4.4	7.4	10.1	8.4	21.0	16.4
(3) Yugoslavia:								
1929	33.0	24.1	10.8	24.9	17.5	5.4	14.3	6.9
1932	31.1	33.4	12.7	23.1	15.6	13.2	16.3	5.7
1937	42.7	35.2	8.2	9.4	11.1	7.9	15.5	17.4
(4) Bulgaria:								
1929	29.8	42.4	10.7	10.5	9.0	4.8	20.4	8.4
1932	31.9	41.0	15.6	12.5	8.4	3.1	18.8	6.0
1937	58.2	47.1	5.0	4.2	5.0	5.6	10.0	19.3
(5) Greece:								
1929	10.6	25.6	5.6	18.3	3.4	1.1	35.0	33.8
1932	11.9	18.7	5.7	16.5	3.4	1.6	32.4	38.5
1937	29.6	32.2	3.0	6.0	1.9	4.5	16.7	28.2
(6) Czechoslovakia:								
1929	46.2	37.9	3.6	3.8	...	...	13.4	15.7
1932	40.8	33.5	3.7	3.4	...	...	19.4	17.3
1937	19.7	21.0	2.3	3.9	...	...	20.4	21.7

Great Germany's share in these countries' imports increased quicker than her share in their exports. But that is because, meanwhile, they have been unable to unfreeze their proceeds in Germany.

The most important fact shown by this table is the decline in trade between Great Germany and Czechoslovakia. Between 1929 and 1937 Germany's share in Czechoslovakia's foreign trade has been nearly halved. Although their shares increased considerably, the three great democracies have not even been able to balance the losses which Czechoslovakia has sustained in her trade with Great Germany.

Italy, who tried to get a foothold in Central Europe by means of the Rome Protocols, is now largely dependent on Great Germany, as shown by the development of Great Germany's percentage share in Italy's foreign trade.

Conclusion

THE forcible fusion of Austria with Germany eight weeks ago has uncovered problems of European magnitude. The extent of these problems can now, for the first time, be roughly gauged; their implications weighed; their possible effects on Europe assessed.

Not the Rome-Berlin axis as we have hitherto known it, but the new Berlin-Balkan axis is that round which Continental politics and economics may soon be making new revolutions.

The going may not be easy for Great Germany, either politically or economically, in the next few months. But none but the wilfully blind can now mistake its direction. Something uncomfortably like a politico-economic *sortie* by Great Germany has already advanced fast and far into Central Europe. Economically, an entirely strange, arbitrary, productive, financial and commercial system has ramified into the farthest recesses of the Continent with incredible velocity; in fact, in four years. It has forced a whole series of European countries into varying degrees of economic servitude—a situation from which they cannot now escape by normal, orthodox trading. The system is tending towards a gradual freezing-out from those regions of nearly all States whose trade is conducted on orthodox lines. In that process, the national economies and industrial populations of France, Holland, Scandinavia, Switzerland and Britain are as likely to feel the pinch as inevitably, if not as fast, as those of Czechoslovakia.

Readers of *The Economist* during the last fifteen years are familiar with the advocacy of proposals to free and to

In other words, nearly one-quarter of Italy's foreign trade is now dependent upon that of Great Germany.

Naturally, Germany's foreign trade now depends to a steadily increasing extent on all other Central and South-Eastern European countries. To gauge this dependence it is necessary to trace back Great Germany's *real* foreign trade—i.e. the aggregate *foreign* trade of Germany and Austria, *minus* imports and exports between Germany and Austria themselves. It then appears that the percentage shares of Czechoslovakia, Hungary, Roumania, Yugoslavia, Bulgaria, Greece and Italy in Great Germany's foreign trade developed as follows:—

GREAT GERMANY'S IMPORTS FROM, AND EXPORTS TO, SEVEN COUNTRIES; PER CENT OF TOTAL GERMAN IMPORTS AND EXPORTS

	Imports from	Exports to	Imports from	Exports to	Imports from	Exports to
	All Seven Countries		Czechoslovakia		Italy	
1929	15.4	17.2	5.7	5.9	3.5	5.1
1932	17.2	14.3	4.8	5.0	4.2	4.4
1937	22.1	20.3	3.7	3.1	4.4	6.3

In spite of the decrease of Czechoslovakia's share in Great Germany's total foreign trade, Germany's dependence on other Central and South-Eastern European countries has considerably increased. Roughly one-fifth of Great Germany's total foreign trade is now bound up with Central and South-Eastern Europe entire. Both these last two tables (i.e. Germany's share in the foreign trade of Central and South-Eastern European countries, as well as the share of all these countries together, in Great Germany's foreign trade) are conclusive. They show that Germany's penetration of Central and South-Eastern Europe has assumed, with the incorporation of Austria, the character of a drive towards a self-sufficient Central and South-Eastern Europe under the political and economic tutelage of Great Germany. And Italy emerges as being four or five times more economically dependent on Great Germany than is Great Germany upon her. The political and strategic implications need no emphasis.

increase the trade, first between the Danubian and Balkan States themselves, and secondly between them, Germany, and the Western Powers. To-day, and for four years past, a Great Power, whose own trading system is the antithesis of free, has extended a system of commercial domination beyond what would have been the bounds of reasonable conjecture four or five years ago. To-day, at the fifty-ninth minute of the eleventh hour, possibly those responsible in the remaining democracies of Europe for commercial policy—and, unhappily, for preparing to feed populations and equip armies in wartime—may pause to consider what economic measures may be taken to provide the countries of Central and South-Eastern Europe with, at any rate, an increased amount of latitude in disposing of highly valuable and strategic products in markets where free foreign exchange is still obtainable.

But we must be under no illusion. Such facilities will not substantially modify the importance of the market and the products of Great Germany for Central and South-Eastern Europe. It is neither possible nor desirable for the Western countries to contemplate doing anything which would seek to isolate Germany economically beyond the degree that her present regime implies. This means that if Germany so chooses, these countries can be subjected to increasing pressure, not merely of a political but of an economic kind. But by taking a liberal view of their trade relations, the rest of the world can do much to make the strain more bearable. Common prudence as well as equity demand that it should do so, and do it promptly.

Freight car loadings	83.0	62.0	60.0
Department store sales	93.0	88.0	86.0
Department store stocks	76.0	70.0	69.0

* Preliminary.

April brought no evidence of improvement compared with March. The automobile and steel industries appear to have experienced some recession, but the date of Easter gave retail trade a relatively good appearance.

With production about 30 per cent. below the first quarter of 1937, corporate earnings in the aggregate have declined severely. The National City Bank has computed that 280 corporations, which earned \$309 millions in the first quarter of 1937, earned \$100 millions in the first quarter of 1938—a decline of 67 per cent.

This decline was not at all evenly distributed, and the totals are greatly affected by the figures of very large corporations. It is, however, rather exceptional to find a corporation whose earnings are down by less than 50 per cent. The aviation industry is a conspicuous exception—its earnings were, in the first quarter, well above those of the same period of 1938. The utilities, as usual, fared better than industrials; but, among railways, earnings are all but non-existent.

At the end of April there was still no tangible sign of upturn. On the other hand, there is little evidence that there has been any actual retrogression since December. The rapidity of the descent from prosperity to extreme depression in four months was extraordinary; but the stabilising of the depression at this level for the past four or five months has been hardly less remarkable.

Large Export Surplus

While export trade now appears to be declining, imports, which fell continuously from March, 1937, to February, 1938, show some signs of being stabilised. The following table shows the course of trade during the past thirteen months:—

	MERCHANDISE TRADE OF U.S. (\$ 000,000)		Balance (+ = export surplus, - = import surplus)
	Imports	Exports	
March, 1937	\$ 307	\$ 257	- 50
April	287	269	- 18
May	285	290	+ 5
June	286	265	- 21
July	265	268	+ 3
August	246	277	+ 31
September	233	297	+ 64
October	224	333	+109
November	223	315	+ 92
December	209	319	+110
January, 1938	171	289	+118
February	163	263	+100
March	173	276	+103

Imports reached a peak in March, 1937, and by February, 1938, had fallen by nearly 50 per cent.; but March showed a slight upturn from February. Exports continued to rise virtually to the end of 1937, and then declined until March. The consequence of these movements has been a remarkable surplus of exports, which during the past six months has averaged \$100 millions a month.

It would appear that this trade balance had been largely met by drawing upon foreign balances in New York. In the March quarter gold imports figured in the movement: net gold imports in January were \$27 millions, in February \$51 millions, and in March \$53 millions. Silver imports in the first quarter amounted to \$58 millions—about half as much as the gold imports; and if gold and silver imports are subtracted from the active trade balance, the total visible balance in the first quarter comes almost into equilibrium.

Credit Expansion and the Banks

It could not be expected that the credit expansion programme launched in April by the reduction of required reserves and by the release of the Inactive Gold Fund would produce statistical consequences immediately, but it must be remembered that the programme had been preceded by a series of manoeuvres. The following table shows the variations in demand deposits in the reporting member banks during recent months:—

	DEMAND DEPOSITS (Reporting member banks)	
	Outside New York City (\$ 000,000)	New York City (\$ 000,000)
1936		
Dec. 30 ...	9,123	6,448
1937		
Sept. 8 ...	8,812	5,999
		\$300 millions released from I.G.F.
1938		
Feb. 16 ...	8,638	5,847
Mar. 30 ...	8,168	6,100
		Change in I.G.F. policy. Prior to end of I.G.F. and reduction in reserve requirements.
Apr. 27 ...	8,528	6,070

Between the end of 1936 and the end of March, 1937, the demand deposits of the reporting member banks outside of New York fell almost \$1,000 millions; between the end of 1936 and the middle of February, demand deposits in the New York banks fell \$600 millions. But the data show that, from September, 1937, to April, 1938, demand deposits in the New York banks have been steady with some tendency upward; and, outside New York, they decreased through March and rose in April.

During April, all reporting member banks increased their demand deposits from \$14,268 millions to \$14,598 millions,

NEW YORK PARIS BRUSSELS HAVRE ANTWERP

or \$330 millions, the entire increase occurring outside New York City. Total loans and investments increased slightly by \$34 millions; "other securities" declined by an equal sum; but holdings of Government securities rose by \$200 millions, and of Government guaranteed securities by \$43 millions, more than cancelling the decline of \$184 millions in loans.

In other words, the big increase in deposits was mostly a reflection of increased cash reserves, and this in turn is largely a consequence of the release of gold from the Inactive Fund. The month of April, therefore, is the first month in which one can note positive consequences of the expansionist policy (described in *The Economist* on April 23rd, page 191).

The following table reviews the changes in reporting member bank assets since the inauguration of the policy.

	(\$ 000,000)	
	Sept. 8, 1937	Apr. 27, 1938
Total Loans and Investments	22,315	20,844 — 1,471
Loans	10,041	8,587 — 1,454
U.S. securities	8,190	7,987 — 203
Guarantee securities	1,132	1,199 + 67
Other securities	2,952	3,071 + 119
Reserves	5,162	6,060 + 898
Demand deposits	14,811	14,598 — 213

In eight months, our economy has had to repay almost \$1,500 millions of bank loans—about evenly divided between brokers' loans and commercial loans. In this period, the net investment position of the banks shifted, but did not change in the aggregate. The expansionist programme produced an increase in reserves with reserve banks, and limited the decline in deposits to a small figure; but it will be recognised that the repayment of \$1,500 millions of loans reflects the severity of the strain under which our economy has been labouring during that period.

It is arguable, if not demonstrable, that the reserve policy mitigated the severity of the strain, by maintaining approximately a given level of deposits. And it is decidedly worth noting that April is the first month in that period when total loans and investments of the reporting member banks showed an upturn, although small.

France

The Return of Capital

PARIS, May 11.—The first measures of M. Daladier's Cabinet, judged by their psychological effect, have been very successful. The devaluation of the franc and the increase in taxation led to a great wave of confidence; and, as a result, there has been a very large repatriation of exported capital (much greater than after previous devaluations), and Treasury bonds have been bought up to the rate of 1,000 million francs a day. The Minister of Finance, after having twice lowered the rate of interest on these bonds, from 4 per cent. to 3.5 and 3.25 per cent., was compelled to suspend subscriptions.

At the same time, there was a sharp rise in public funds, as the following table shows:—

	Lowest, 1938	May 5th	May 10th
3%	65.5	76.0	76.5
4% 1918	62.4	74.6	76.4
4% 1932	68.05	81.3	82.4
4% 1925 (exchange guarantee) ..	104.0	123.1	131.5
4% 1937 (exchange guarantee) ..	103.85	123.7	128.0

On May 7th, the index of 300 French stocks stood at 230, against 190 on April 9th. The Government's success, so far, may be explained by the clever technical execution of the monetary decisions (on the lines of the *expérience Poincaré* in 1926), and by the improved political atmosphere. Fears of disorder after the rupture of the Popular Front were not realised; competition between the Communists and Socialists, with the 1940 elections in view, seems to have begun; and these two parties may come more and more to assume the rôle of a Parliamentary opposition.

Collaboration with Labour

On the other hand, M. Daladier is keeping in touch with the workers' organisations. There is no real break with the policy of previous Governments, but, rather, new possibilities of collaboration in a more realistic application of the 40-hour week and in a programme to increase production.

Negotiations are already on foot to fix a working year of 2,000 working hours; and representatives of the coal-miners have accepted the principle of the 42-hour week.

This collaboration is one of the chief reasons for the success of the Daladier Cabinet, together with the return of capital, which, for a time at any rate, has restocked the Equalisation Fund and the Treasury. The steps taken to devalue the franc and to increase taxation are, however, no more than necessary measures to ease immediate pressure. The fundamental problems of economic and financial recovery and the further return of exported capital will be solved by the more constructive and long-sighted portions of the Daladier programme.

The second batch of decrees may, for instance, include important steps to stimulate building activity, which is at the lowest level since the War. Considerable results might be obtained in this direction, because there is a great need of modern buildings. But to do this would necessitate a complete reversal of the policy followed for many years. To-day the landowner is strangled, not only by the rise in prices and taxation, but also by the constant menace of measures in favour of debtors, which greatly reduces the security of investment in building. It is certain, however, that steps to stimulate building would greatly assist general recovery. Meanwhile, following the fall of the franc, foreign trade and tourism have begun to revive.

Improvement in Foreign Trade

The April trade returns show signs of this improvement:—

	April, 1937	March, 1938	April, 1938
	(in million francs)		
Imports:—			
Foodstuffs	830	901	994
Raw materials	1,991	2,076	2,270
Manufactured goods ...	477	549	611
Total	3,298	3,526	3,875
Exports:—			
Foodstuffs	277	295	385
Raw materials	733	684	710
Manufactured goods ...	961	1,251	1,288
Total	1,971	2,230	2,383

Comparison with March shows a slight increase of 10 per cent. in imports and a less marked increase of 6 per cent. in exports, both of which changes may be explained by the fall of the franc. Taking into consideration the fact that the rate of exchange against the pound was 160 in April, compared with 110 in April, 1937, there has been a slight increase since last year in the import surplus.

Imports of foodstuffs and raw materials (with the exception of materials for re-armament) and of manufactured goods show a decline. The volume of exports of manufactured goods show an increase. Imports from the colonies have been maintained, while the decline in exports to foreign countries is less marked than that of imports.

Wholesale prices, which had been stable for many weeks, showed a further rise after the latest devaluation of the franc.

	April 30th	May 7th
General index (1914 = 100)	619	638
Domestic products	662	673
Imported products	543	576
Foodstuffs	623	637
Industrial products	617	640

Fresh warnings have been given by the authorities against speculation and unwarranted increases in price. In their efforts to keep prices down, the authorities will be helped by the heaviness of world prices and the diminishing purchasing power of the French people.

Germany

Austria's Foreign Debts

BERLIN, May 11.—The problem of Austria's foreign debts, which has been almost entirely ignored by the German Press—indeed, some financial journals did not report the moratorium decree of April 30th—seems to have been ill-understood abroad. Until the Reich opens negotiations for the revision of loan contracts (as the Minister of Economics recently foreshadowed would be done for Reich loans generally), the problem of Austria's foreign debts is purely one of transfer.

Abroad, the question has been treated as one of the Reich's liabilities for the debts themselves—of whether the foreign

loans "have been accepted as a liability by Germany." This is certainly not the question. Austria is now a state (*Land*) of the German federation, like Bavaria and Saxony; and it seems that its foreign loans are state, not Reich, loans. This is not necessarily their ultimate status, but it seems to be the present legal position, automatically brought about by Austria's incorporation. The Reich merely regulates the transfer of money for the service of these debts, and, for the moment, only this question is relevant to Austria's loans.

As reported last week, the Reich extended to Austria its law of June 9, 1933, which suspended, without any qualification, the direct transfer of the service on foreign loans. Under that law, interest and amortisation were to be paid (in German currency) into the *Konversionskasse*, the debtor thereby fully discharging his liability to the creditor.

But the law of 1933 also empowered the Reich Minister of Economics and the Reichsbank, acting together, to make exceptions; that is, to permit transfer. Under this empowering clause, and usually after negotiations, under clearing agreements and so on, exceptions were made for the Dawes, Young and other loans. The empowering clause, as part of the 1933 law, applies to Austria; and the competent Reich authorities can, without any further law or decree, transfer money for the service of Austrian debts. They did, according to official information, transfer money for the service of international loans due on May 1st, but not for other loans; and reports from New York mention two particular bond defaults.

The legal position is, therefore, that all Austrian loan transfers, including those for the three international loans, are defaulted, but that the Reich, under the empowering clause, has made a partial exception, by which, however, it is not bound for the future. How far it will bind itself for the future will depend on negotiation, and ultimately on the amount of pressure the creditor countries bring to bear.

The Reich Loan

Of the Reich's Rm. 1,000 millions 4½ per cent. Treasury certificate loan, the Rm. 750 millions offered to the public through a banking syndicate was over-subscribed. In consequence, the publicly subscribable part has been increased by Rm. 450 millions. Including the Rm. 250 millions taken in advance by the banks, the new loan amounts to Rm. 1,450 millions. With the Rm. 500 millions railway loan of January, 1936, the consolidation loans floated since early 1935 have totalled Rm. 10,000 millions. It seems that Austrians contributed to the new loan to a considerable extent.

Current company reports are satisfactory. The Bemberg Rayon Company resumed the payment of dividends with a dividend of 6 per cent. The Vereinigte Glanzstoffe raised its dividend from 5 to 6 per cent. The Westdeutscher Kaufhof (formerly Leonard Tietz), whose shares were almost valueless a few years ago, paid 5 per cent. This last payment is noteworthy because it marks the end of the Nazi campaign against the department stores; instead of being dissolved, they have been Aryianised.

Of 118 industrial companies, about 62 per cent. maintained their dividends unchanged in 1937, while 36 per cent. raised them. Of 100 banks, 31 per cent. maintained their dividends, and 68 per cent. increased them.

The index of the cost of living for April was 125.6, against 125.5 for March. The index of wholesale prices on April 27th was 105.5, against 105.6 on April 20th. Further measures are foreshadowed for "combing out" the independent petty trading and producing class in order to compel its members to take industrial wage employment. In some cases, such as that of street traders, the procedure is to withdraw their licences.

Increased National Income

A return of the Reich Bureau of Statistics shows that the nominal gross income from wages and salaries in 1937 totalled Rm. 38,333 millions, against Rm. 35,010 millions in 1936, and Rm. 25,960 millions in 1933. Of the gross income in 1937, Rm. 20,915 millions went to manual workers, Rm. 8,922 millions to compulsorily insurable employees (technical, clerical, etc.), and Rm. 8,496 millions to non-insurable employees and officials.

The share taken by manual workers has risen substantially since the industrial recovery, and is about the same as that of the pre-depression period. The real national income from wages and salaries is estimated to be 9 per cent. higher than in 1929, the average real income for manual workers to be 4 per cent. higher than in 1929, and for non-manual employees 23 per cent. higher.

Industry is active. Railway goods traffic in March was 6.6 per cent. more than in March, 1937. The official steel report for April states that large consumers were in general sufficiently supplied, but that complaints of shortages were

still heard. The export market improved, orders increased, and stocks decreased. Semis, bars, joists and wire rods were more in demand for export, in particular to Scandinavia.

Coal sales both at home and to abroad were unsatisfactory. The latest returns of foreign trade—for March—show increases in both exports and imports of heavy iron and steel. Imports of pig iron are steadily increasing, and exports of machinery reached 35,860 tons, which is the highest recent figure. Of the increase of Rm. 395 millions in the capital of the Hermann Göring Iron Company, the Reich (the founder) will take up Rm. 265 millions in ordinary shares. The remaining Rm. 130 millions, in the shape of 4½ per cent. preference shares, is to be divided among iron consuming concerns, according to a schedule under which each concern must subscribe Rm. 50 per employee.

The glass industry reports better home and foreign business, but adds that, in certain branches, exports have been entirely killed by Czechoslovak and Japanese competition. The length of Reich motor roads open to traffic on April 1st was 2,026 kilometres.

Discussing shipbuilding policy, the President of the Hamburg-American board of directors, Dr Hoffmann, emphasised that Germany will not build any luxury liners of the largest size. When the Norddeutsche Lloyd built the "Europa" and "Bremen" ten years ago, the company accepted the calculation of experts that a size of about 50,000 tons best combined profitability with speed. Giant ships, at first greatly successful, become increasingly unprofitable. The new Hapag ship of 36,000 tons, with a speed of 23 knots and a seven days' passage from Hamburg-New York, will not compete with the great English and French vessels, but rather with vessels of the class of the "Nieuw Amsterdam" and the British ship which is to replace the "Mauretania."

Japan

Legislation for War

TOKIO, April 8.—The record of the annual Session of the Diet, which ended on March 28th, is exceedingly good. In addition to the Finance Bills, the National Mobilisation Bill, the Electric Power (Control) Bill, the Aircraft and Machine-tools Bills, the Bank Bill, the North China Company and the Central China Company Bills, and some seventy other Government measures were carried through both Houses, almost in their original form.

In the Budget estimates for 1938-39, approved by the Diet, estimated expenditure totals 3,514.5 million yen, including supplementary estimates of 646.7 million yen. Besides these ordinary estimates, supplementary war expenditure of 4,886.5 million yen was also voted. The total national expenditure for the fiscal year 1938-39 thus amounts to no less than 8,400 million yen, of which 5,628 million yen is to be borrowed. This gross total is 2,812 million yen higher than the comparable figure for the fiscal year just closed.

State Control

The National Mobilisation Act provides for the wholesale State regimentation of the national economy and the conscription of both capital and labour, in the event of war or any similar emergency. The Electric Power Act empowers the Government to take over the main transmission lines and fuel-power electric plants from private firms, and manage the production and distribution of energy through a semi-official company. The Bank Act authorises the increase of the fiduciary issue from 1,000 million yen to 1,700 million yen.

The NATIONAL BANK of NEW ZEALAND, Limited

Established 1872

Head Office:—8 MOORGATE, E.C.2

Subscribed Capital - £6,000,000
Paid-up Capital - £2,000,000
Reserve Fund - £1,000,000
Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

The Aircraft and Machine-tools Acts aim at the development of these two sections of the engineering industry. The North China Company and the Central China Company Acts contain regulations for the organisation and management of the semi-Government organs to be established for the economic exploitation of North China and the rehabilitation of the lower Yangtse valley.

Satisfactory Railway and Company Results

The gross operating receipts of the Imperial Government Railway, for the fiscal year ended on March 31st, show that passenger receipts were 360.1 million yen and goods receipts 279.2 million yen, making a total of 639.3 million yen. This was the largest total of receipts ever recorded, and is 67.4 million yen larger than the actual receipts of the preceding year. The increase is larger in passenger than in freight receipts.

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese industrial undertakings, the aggregate net earnings of 1,000 companies, for the half-year ended last December, amounted to 556.5 million yen, an increase of 37 million yen on those earned by the same concerns in the preceding half-year. Except for electricity and gas, breweries, trading companies, and stock and produce exchanges, all groups—and particularly the steel, engineering and armament trades and shipping—showed a considerable increase in profits; and even textile results were not so disappointing as might have been anticipated. The ratio of net profits to capital was 12.6 per cent., and that of amounts put to reserve was 3.6 per cent. In the preceding half-year the profit percentage was 12.6 per cent., and the reserve percentage was 3.7 per cent.

Imports in March, valued at 244 million yen, fell by 156.5 million yen, or 39 per cent., compared with March, 1937; while exports, valued at 225.7 million yen, decreased by 50.2 million yen, or 18.2 per cent. In the first three months of 1938 imports showed a heavy fall of 383 million yen, or 38 per cent., compared with the corresponding quarter of last year, and exports a decline of 131 million yen, or 18.7 per cent. The shrinkage in imports is explained by import restrictions and exchange difficulties, while the contraction in exports is presumably attributable to the world recession in general and, to some extent, to boycott.

Canada

Parliament's Programme

OTTAWA, April 25.—The Federal House of Commons has reassembled after a fortnight's Easter recess. The date of the Budget, which the Government has been holding back in the hope of being able to include the tariff changes necessary to implement the new trade agreement with the United States, is uncertain. The latest news from Washington is that the process of bargaining about the detailed schedules is likely to occupy some time. It would cause inconvenience if the Budget were postponed until June. The present intention is to wind up the session at the end of June, in order that the Conservatives may be free to attend their national convention, which is due to be held in Ottawa from July 5th-7th.

Full financial returns for the fiscal year, which ended on March 31st, are not yet available, but preliminary figures show that the yield of income tax, at \$120,365,531, was up by 18 million dollars and the Customs and Excise, at \$319,046,053, by 44½ millions. The Government has reintroduced in a modified form the Bill, rejected by the Senate a year ago, designed to transform the present Railway Commission into a Transport Commission with enlarged authority. It has met some of the provincial objections to the original measure by exempting highway traffic from the supervision of the Commission. Rates on the inland waterways for bulk traffic in such commodities as grain are also excluded. In view of the opposition manifested by at least three provincial Governments, it is likely that the Federal Government will not proceed this session with its proposed legislation about unemployment insurance. Before framing its Bill, the Government will wait for the Report of the Royal Commission on Dominion-provincial relations.

Considerable interest will attach to the proceedings of the Senate's special committee, appointed to investigate and report upon the railway problem. It has to inquire particularly

into the reasons why the plans for co-operation between the Canadian Pacific Railway and the Canadian National Railway, drafted by the Duff Commission some years ago, have borne so little fruit.

Satisfactory Wheat Outlook

Almost summerlike weather now prevails. Farmers are busy everywhere and seeding conditions are excellent in most places. In the prairie provinces, reserves of subsoil moisture available at the end of the winter were larger than in any recent year, and have been supplemented in the past month by good rains at intervals. The result is that the prairie grain-growers are planting their grain on a really moist seedbed—an experience denied them over a wide area since 1930—and, even in the drought-stricken regions, the new crop is getting off to a good start.

Owing to the complete poverty of many farmers, large quantities of seed are being distributed at the public expense, but, even with this assistance, some reduction in grain acreage is anticipated. The price situation for cash wheat, improved recently by a strong export demand, remains satisfactory, and, on March 31st, visible stocks of Canadian wheat were placed by the Bureau of Statistics at 84,160,585 million bushels, which was 31 million bushels below the figure for the corresponding date in 1937, and the lowest total at this date since 1920.

The general level of business is perceptibly lower than it was a year ago; but the recession has not attained the serious character of the slump with which the United States has been struggling; and there are now signs that, during the present month, the decline has been checked. The following table shows the movements of the major components of the general economic index of the Bureau of Statistics:—

Week Ended	Car-loadings	Wholesale Prices	Bank Clearings	General Economic Index
April 17, 1937 ...	82.4	86.0	108.4	111.8
April 2, 1938	71.5	83.3	90.4	106.0
April 9, 1938	71.6	83.3	92.9	106.8
April 16, 1938 ...	74.7	83.0	93.9	107.8

The curtailment of foreign orders continues to affect purchasing power adversely, and sales of department stores in March averaged 6.6 per cent. lower than in March, 1937—but the real decline was substantially smaller, if allowance is made for the fact that Easter did not fall this year until April.

Business Marking Time

Many industries are working on a reduced scale of operations, and unemployment has been rising. During March, however, the majority of Canadian manufacturing firms were able to maintain their February scale of activity, which was an encouraging sign. The heavy iron and steel industries are being kept reasonably busy with orders for railway equipment. In March, the production of steel ingots was 113,897 tons, compared with 95,025 tons in February (a short month) and 118,451 in March, 1937. Sales of new cars in the first quarter of the year were disappointing; and the motor manufacturing plants have curtailed their output.

On the other hand, there is a much better demand for farm implements and other industrial products from the prairie provinces, and there has been no abatement of mining activity. Higher prices for base metals are likely, while several promising gold mines have come into production since the beginning of the year. The newsprint industry is still struggling with the difficulties created by the heavy accumulation of stocks by American publishers; but the price of sulphite pulp has improved.

Prospects of Recovery

The general impression is that business will more or less mark time during the present quarter, but should, if good crops are assured by July, move forward in the second half of the year. Meanwhile some stimulus is expected from at least a partial recovery of American business as the result of "pump-priming."

Hopes are also cherished that the British Government, after the mission which is now on this side of the Atlantic makes its Report, will place substantial orders for aircraft with Canadian firms. Representatives of twelve companies, which claim to have equipment for manufacturing aircraft in Canada, conferred at Ottawa, on April 23rd, with the Minister of National Defence, and asserted that they could easily expand their operations, and were willing to place their services at the disposal of the British Government. One difficulty about the expansion of aircraft manufacture in Canada, however, is the shortage of skilled labour.

Letters to the Editor

Germany and the Basque Country

TO THE EDITOR OF THE ECONOMIST

SIR,—Although German intervention in Spain has been considerably less than Italian, it has been distinguished by greater ability and efficiency. Germans have maintained stony silence as regards their military activities and have pursued, with all their energies, a successful acquisition of the chief economic undertakings of the country.

Nowhere has this policy been pursued with greater vigour than in Euzkadi (the Basque country), where they are quietly but thoroughly endeavouring to secure dominance in all the industries and banking houses. There is a highly skilled and efficient industry, engaged in the production of guns and shells of all calibre. During the last months of Basque resistance, in the area of Bilbao alone, without the ability to import raw materials or machinery of any kind, it turned out considerable quantities of munitions for the small Basque army. Its production, by virtue of low overhead costs and an almost negligible transport problem, can be carried on at a considerably lower expenditure than in most other countries. The skill of the Basque worker is beyond reproach; his work and output compare very favourably with that of Belgian, French and American workers in similar industries.

To prove the importance of other Basque industries, I need only give the following figures:—

	Proportion in Spain which is Basque. Per cent.
(1) Capital of Mercantile Companies ...	60
(2) Economic banking power ...	70
(3) Profits of the Bank of Spain ...	32
(4) Small Public Savings Banks ...	33
(5) Production of metallurgical coke ...	65
(6) Production of steel billets ...	74
(7) Production of iron blooms ...	77
(8) Paper industry ...	70
(9) Explosives industry ...	69
(10) Mercantile Marine ...	53
(11) Fishing Fleet ...	30
(12) Wages paid in the construction of fishing vessels ...	28

NOTE.—The sources of the figures for each item are:—(1) See below. (2) Balance sheets of the private banks, whose publication is obligatory. (3) Annual reports of the Bank of Spain. (4) Official Bulletin of the Confederation of Savings Banks of Spain. (5), (6) and (7) "Mining and Metallurgical Statistics of Spain," published by the Mining Board of the Directorate-General of Mines and Fuels. (8), (9), (10), (11) and (12) "Anuario-Financiero," published by Señor Ibanez; "Anuario Estadístico de España," published by the Directorate-General of the Geographical, Cadastral and Statistical Institute.

In short, the Basque country is the wealthiest part of Spain. Apart from its mineral resources and the skill of its workers, its harbours and mercantile trade would make it a valuable asset to any country. For centuries past the Basque people have been the close friends of ours. An age-old democracy themselves, their sympathies have always been directed towards Great Britain and France. Unless some arrangement or agreement can be formulated, however, whereby their independence and freedom is still guaranteed, they will no longer be able to play their part in maintaining world peace.

I am, Sir,
Your obedient servant,
FRANCIS L. TOWERS.

London, S.W.1.

Milk Distribution

TO THE EDITOR OF THE ECONOMIST

SIR,—In reply to Mr J. L. Davies' suggestion (based on the experience of London) that the abolition of the minimum retail price for milk would not lead to a fall in the actual price, it might be well to quote the Reorganisation Commission of 1935: "The opinion that we have formed is that, in general, the position of distributors has been improved during the period of the operation of the schemes." The Food Council, in their Report for 1937, point out that, in a number of those cases where minimum prices have been

exceeded, it has happened "in one or two months only" in the course of the year.

I should not like to appear to hold the view that any industry will achieve the maximum possible efficiency under so-called free competition. But if, in the interests of efficiency, we are to have a Government-controlled monopoly in milk distribution, it would be unfortunate to adopt as a norm the current level of profits, bolstered up as they are by minimum prices. A spell of uncontrolled competition would modify the views of the distributors as to the profits to be ensured to them by the Government under its scheme of rationalisation—and I still hold it would secure some (though by no means all) of the economies to be derived from rationalisation.

Why the Government retain the minimum price is a mystery. The views of the farmers (to which, together with those of the Government, Mr. Davies attaches importance) have been published. "Free competition in retail prices would . . . lead to serious undercutting, with the result that the collection of payment from buyers would become difficult. There would be a bigger volume of bad debts, and distributors would inevitably seek to force a reduction in the producers' wholesale price." (*The Home Farmer*, official organ of the Milk Marketing Board, May, 1937.) An odd argument, which incidentally accords ill with the view that the abolition of the minimum price would not lead to a reduction in the distributors' margin.

I am, Sir, etc.,
R. F. KAHN.

King's College,
Cambridge.

Britain's Oil Supplies

TO THE EDITOR OF THE ECONOMIST

SIR,—When Commander Bowles talks of "the beneficent revolution in our national economy" that would result from substituting coal for fuel oil "in all spheres," he is employing words in a sense unfamiliar to the ordinary man. The amount of fuel oil used annually in this country is under two million tons, and its equivalent in coal would not be more than three million tons—in other words, one-sixtieth of a year's ordinary coal consumption on the inland market.

His argument that, because the Navy does not burn coal, it is "in pawn to people like the Shah of Persia and the politicians of Mexico," is simply a stock phrase in a campaign which has lately been described by our foremost authority on naval construction as "public nuisance." A nuisance to the Admiralty, no doubt. By gad, Sir, Commander Bowles is right. The Admiralty are a pack of Bolsheviks who want our ships to go faster than they ought to.

I am, Sir,
Your obedient servant,
ROBERT BYRON.

Books and Publications

Economists and Taxation

PROFESSOR EINAUDI has written an exceptionally interesting book*. It is no doubt too much to hope that it will be translated. It is not too much to hope that it will have many English readers, because it is in effect an attack on the whole English tradition of thought and policy about the principles of taxation.

In the introduction, the author explains that he nearly called his study "A Defence of the State against the Doctrinaires." The first chapters are, in the main, an onslaught on common conceptions about double taxation, unearned income, the "exemption" from tax of capital appreciation, and the National Debt.

Then, in succeeding chapters, the author falls upon the empty pretences of utilitarianism and accountancy. All our accepted notions and conclusions, based upon assumptions that "such and such is reasonably true," having been shown in all their naked deformity, Professor Einaudi can conclude with an eloquent apologia for the traditional methods of Italian taxation.

It is not, of course, suggested that, in less than three hundred pages, Professor Einaudi has shown—to take two eminent names—Marshall and Pigou to be impostors. Far from it: his book is not a treatise, and will not appeal to those who expect a book to consist of great gobbets of the final truth. What he has done is to raise in a challenging form the vital question whether economists should give detailed advice about the criteria of taxation before they are entirely certain of the bases of their arguments. Professor Einaudi answers this query with a loud negative.

To him the doctrinaire is an individual to whom wisdom is the solution of theoretical riddles—who pursues the "phantoms" of justice and equality, until there is no certainty, no stability and few incentives left for the unfortunate taxpayer. The wise economist, on the other hand, is he who, when writing for the statesman's benefit, eschews advice if the advice cannot be definitive, and aims only at keeping the statesman's applications of principle efficient and consistent.

For this view there is obviously much to be said; and Professor Einaudi says it in his trenchant exposure of "myth" and his delighted *reductions ad absurdum* of many accepted principles. Sometimes he overstates his case—as when he claims that the supporters of the argument that minimum sacrifice is secured when the State raises money exclusively from the rich would advocate the elimination of all incomes above a certain maximum, and thus impoverish all by the destruction of a potent incentive. And sometimes he provokes easy retorts—by, for example, assuming that the capital value of the return from a certain instrument is reduced by the same percentage as that of the tax to which the return is subjected.

* "Miti e Paradossi della Giustizia Tributaria." By Luigi Einaudi. Giulio Einaudi, Turin. 278 pages. 50 Lire.

It makes no difference that Professor Einaudi's old Italian system (which is recommended in place of our more subtle laws), with its emphasis on fixing a stable sum to be raised from each member of each class of producer, based upon the periodically ascertained average earnings of that class, raises many and difficult problems of its own. The pot's answer to the kettle says nothing.

Finally, it should be added that Professor Einaudi writes with great clarity and a pretty taste in invective. His argument is easily comprehensible, even to those with a limited knowledge of Italian, and the polemics well repay resort to a dictionary.

Shorter Notices

"Brighton's Co-operative Advance, 1928-1938." By W. H. Brown. The Co-operative Union. 2s. 6d.

This book is a small contribution to two important and neglected branches of economic study, namely, the history of working-class movements and the publication of business records. The Brighton Equitable Co-operative Society represents the latest phase of a movement which has passed through several well-marked stages. It was first an association which aimed at founding an Owenite community and took to retail trading as a side-line; then a Joint Stock Co-operative Friendly Society patronised by Christian Socialists; and finally a retail trading association of the modern type. With it have been associated some of the greatest personalities of co-operation, including Dr William King, whose series of tracts in *The Co-operator*, 1828-30, remain an outstanding exposition of the nature and objects of the movement, and G. G. Holyoake, the historian of co-operation. Mr. Brown's present volume includes much valuable material, but suffers from the fact that it is produced partly to celebrate a centenary. The necessity for entertaining casual readers has no doubt prevented the author from making full use of the statistical material to which he has obviously had access.

"Stock Exchange's Ten-Year Record." Compiled and published by F. C. Mathieson and Sons. 588 pages. 20s.

That this is its thirtieth appearance is sufficient proof of investors' wide appreciation of Messrs Mathieson's standard work of reference. The "Record" is on lines that are now familiar; a list of companies classified as in the Stock Exchange Official List, with the highest and lowest prices and dividends paid in each of the last ten years; and particulars of shares or stock outstanding at the beginning and end of the period. For the ready study of prices and dividends over a long series of years, this book with its predecessors is almost unrivalled.

Books Received

Britain and the Dictators. By R. W. Seton-Watson. Cambridge University Press, 460 pages. 12s. 6d.

Brilliant survey of post-war British foreign policy, against a full and sharply defined European background. Reassesses the Peace Settlement and Germany's grievances. Explains the rise and world implications of dictatorships in Russia, Italy and Germany, and the importance of small States. Examines the Abyssinian and Spanish questions, and evaluates British diplomacy.

An Island Community. Ecological Succession in Hawaii. By A. W. Lind. (London) Cambridge University Press. 337 pages. 13s. 6d. net.

Foreign Exchange and Foreign Bills. 11th Edition. By W. F. Spalding. (London) Pitman. 336 pages. 10s. 6d. net.

The History of the Clydesdale Bank, 1838-1938. By J. M. Reid. (London) Blackie and Son, Ltd. 299 pages. No price stated.

Les Opérations des Banques d'Emission sur le Marché libre. By M. Kriz. (Paris) Librairie du Recueil Sirey. 280 pages. 35 francs.

The Principles of Rational Industrial Management. By J. J. Gillespie. (London) Pitman. 229 pages. 10s. 6d. net.

When Capital Goes on Strike. By A. Dahlberg. (London) Harper and Bros., 90 Great Russell Street, W.C. 218 pages. 10s. 6d. net.

THE BUSINESS WORLD

Background of the Franc

THE new Daladier franc has now been in existence for over a week. The motive behind M. Daladier's devaluation is easy to perceive. Whereas M. Blum tried to bully the French investor into repatriating his capital, M. Daladier has held out to him both a bribe and a threat. In effect he has said, "If you bring your money home at once, you can secure all the profit arising from a rate of approximately Frs. 179—which is a better rate than you had any right to expect, and also a rate rather below the franc's present intrinsic value. But if you delay, I warn you that I will do my best to reduce the rate, franc by franc, and day by day."

So far, this technique has worked, apparently, with fair success. At a rough guess, by the middle of this week some £100 millions sterling (or 18 milliards of Daladier francs) had been repatriated. Over half this sum probably came from London, the remaining withdrawals being divided equally between the Continent and New York. There have also been significant repercussions abroad. In London, the Exchange Equalisation Account has been selling gold to Paris in exchange for sterling, and has so far been unable to use the whole of the proceeds to take over Treasury bills. In consequence, the withdrawal of French funds has temporarily depleted the cash, first of the French banks' London offices and then of the British banks generally. Thus money has had to be called from the market, and so the official buying of bills, which has been in evidence, has come as a welcome easement to the market, as well as providing employment for some of the Exchange Account's cash. Ultimately, the French withdrawals of funds, covered by Exchange Account sales of gold, will entail a diminution both in London bank deposits and in the volume of Treasury bills in the London Market. The final result is the paradoxical one of rendering the banks more liquid, but this week shows that this dual process of contraction cannot be made to keep pace with so rapid an efflux of funds and gold. The immediate effects are described in our Money Market Notes below, which also show that there has been some French dishoarding of British currency.

French funds have also been repatriated from Belgium, and while that country also has ample gold reserves out of which to meet withdrawals, the outward movement comes at an awkward moment. The Belgian Government have been allowing a budget deficit to accumulate without making any attempt to deal with it. Within the last few days this question has suddenly come to a head, but the ensuing political crisis has, happily, now been resolved. From the economic angle, there may have been some tendency to over-emphasise the effect on Belgium of the fresh depreciation of the franc. France is Belgium's neighbour, and admittedly Frs. 160 represents the present-day intrinsic value of the franc better than Frs. 179. Yet Belgian and French trade are complementary as well as competitive, and Belgium to-day attaches far more importance to the relation of the belga to sterling than she does to its relation either to the franc or to gold. Again, a fresh rise in French prices, due to M. Daladier's taxation and other proposals, appears inevitable. This may well amount to at least 6 per cent., which would raise the intrinsic value of

the franc to the equivalent of Frs. 170. This last consideration may equally be commended to British industrial interests.

A new devaluation of the belga appears, on the whole, unlikely. It is true that Belgium is on the gold standard, and that her gold stocks are, consequently, vulnerable. Against this, she has ample gold reserves, both disclosed and undisclosed. At a rough guess, she held at the New Year the equivalent in gold of £150 millions sterling, of which about one-third has since been lost. The brunt of the loss, however, fell on the Belgian Stabilisation Fund. The National Bank only sustained a loss of about £14 millions, and still has in gold and devisen a cover of practically 100 per cent. of the note circulation. Apart from this, Belgium is unlikely to decide to devalue without careful thought, especially as her wages are now at a low level. In any case, she will await the outcome of the negotiations initiated last week in Paris, and will probably also elect to see if the Daladier devaluation is offset by a fresh increase in French prices. The pressure of an under-valued franc will at the worst only develop slowly, and so Belgium can well afford to postpone any crucial decision. It is therefore easy to see why she has contented herself with raising her Bank rate from 2 to 4 per cent., and the rally in the belga suggests that the exchange market has taken the hint.

The real interest of the present position lies in the future of France herself. Already, the Bank of France's discount rate has been reduced from 3 per cent. to 2½ per cent. The Daladier franc has had a flying start, but an answer has still to be given to the question whether it is ushering in a period of stability or sowing the seeds of a new instability. It has given the Government a fresh opportunity for putting the country's finances in order. Thus it affords leeway for a fresh rise in internal prices. It gives the French owner of expatriated capital a bait, and has made the early issue of a Defence Loan practical politics.

BARCLAYS BANK (CANADA)
MONTREAL & TORONTO

This raises from a new angle the perennial question of French Government finance. On April 9th, we published a summary of M. Blum's estimated needs, and this is repeated below, with slight amendments:—

	Frs. millions
Ordinary budget deficit	4,000
Extraordinary defence expenditure	15,900
Other extraordinary expenditure	6,800
Railway deficit	8,700
Miscellaneous	4,300
Impending debt maturities	10,000
Total	49,700

These requirements, broadly speaking, hold good to-day, but there are already certain off-sets. Thus, M. Daladier's taxation proposals are to raise additional revenue of Frs. 4,000 millions. Since April 9th, Frs. 8,000 millions has been raised in the market and another Frs. 8,000 millions has been borrowed from the Bank of France. A further Frs. 2,000 millions can still be borrowed from the Bank of France, while fresh borrowing powers of Frs. 10,000 millions are envisaged. Thus in one way or another, a total sum of Frs. 32,000 millions has either been obtained or is in sight, reducing the year's prospective deficit to a round figure of Frs. 18,000 millions.

The amount already repatriated has already been estimated at £100 millions, or, again in round figures, Frs. 18,000 millions. How much of this will be available for the new Defence Loan, and on what terms? Part of this repatriated money may be required by its owners as working capital, though in many cases they will be able to rely upon the Government re-armament disbursements for the replenishment of their working capital. Besides, in the absence of a fresh flight of capital, the sums being borrowed from the Bank of France will increase the nation's stock of liquid funds. But M. Daladier is not bound to stake everything upon the single throw by issuing immediately a Defence Loan for anything like Frs. 18,000

millions. He may well choose to see how a smaller initial loan is received. As regards terms, the odds are against M. Daladier including an exchange guarantee, for the implication that the Daladier franc was suspect would be disastrous psychologically. There are rumours of a 4½ per cent. loan at 95, but it might be considered prudent to offer slightly more generous terms.

Can M. Daladier keep French capital at home after he has induced its return? The recent stability of both French wholesale prices and the cost of living suggests that the French price structure is reasonably sound. The main doubt in the mind of the French manufacturer is whether he can keep to the delivery dates laid down in his contract, or whether labour troubles will defeat him. Without such an assurance, the French investor would not be over-disposed to venture his repatriated capital in French industry. This may defeat M. Daladier's fundamental aim of raising French production. For this reason, M. Daladier's proposals regarding labour conditions, and indeed his general attitude to labour, ought not to be long delayed. They are indeed urgently needed to round off his programme.

The United Kingdom and the United States have already accepted the Daladier franc as coming within the terms of the Tripartite Agreement. This is a valuable decision, both in itself and as a gesture of goodwill. How much further this country can go in expressing its sympathy with France's desire to put her financial house in order is at the moment uncertain. That France should be strong and prosperous is undoubtedly in Britain's best interest, but the initial movement towards recovery must come from France herself. We trust that M. Daladier will not be weary in well doing; that he will vigorously continue the reconstruction which he has well begun; and, in particular, that he will announce and initiate the remainder of his recovery programme without undue delay.

Mars and the Stock Exchange

We may well hope that Europe's statesmen will be equal to the task of ensuring that the subject of the following article from a correspondent of "The Economist" shall have only a historical relevance. If, however, there is substance in the current market assumption that a comprehensive political settlement on the Continent would produce a substantial rise in security prices, then "war risks" are clearly one of the factors which the markets discount to-day. A review of the course of values in the last war may thus help investors to measure the extent and probable incidence of those "risks."

WHAT is likely to happen to security prices in the event of war? Are there any principles which would serve to give guidance on the behaviour of stock markets in such circumstances? Can we reach any conclusions on the question whether fixed interest securities are likely to fall more—or less—than ordinary shares? The best method of approaching the problem posed in these questions may be to analyse the experiences of the stock markets during the Great War of 1914-18.

The first and one of the most striking phenomena of that period was the substantial depreciation of prices for Government securities, though it may be argued that in view of the vast borrowings that were taking place, the fall was, on the whole, less than might have been expected. The decline in long-term fixed interest securities may be illustrated from the behaviour of 2½ per cent. Consols:—

AVERAGE PRICE OF CONSOLS, 1913-1922	
1913	732½
1914	742½*
1915	651½
1916	58
1917	541½
1918	567½
1919	541½
1920	471½
1921	48
1922	56½

* Seven months only; Stock Exchange closed on outbreak of war till beginning of 1915

By 1918 Consols had lost a quarter of their value, and they lost considerably more just after the War. But they recovered in 1922, and ten years later were on their way to surpassing the pre-War level. Taking all in all, investors who, playing for "safety," kept to gilt-edged stocks fared reasonably well.

What happened, however, to the general investor? An approximate answer may be based on the indices of security values, under various headings, published in the *Bankers' Magazine*. The table below shows certain figures for July 20, 1914, just before war alarms affected the market; on July 30, 1914, and January 20, 1915, before and after the prolonged closure of the Stock Exchange, and at the end of 1915 and succeeding years:—

INDEX OF SECURITY PRICES, 1914-20
(July 20, 1914 = 100)

	July 30, 1914	Jan. 20, 1915	Dec. 1915	Dec. 1916	Dec. 1917	Dec. 1918	Dec. 1919	Dec. 1920
British and Indian Funds ...	94	91	84	76	75	81	71	63
Foreign Government Stocks	94	90	76	71	71	74	60	49
British Railway Ord. Stocks	95	94	80	76	72	78	71	59
American Railway Shares ...	92	94	109	109	69	81	87	91
Commercial and Industrial...	94	85	73	63	88	100	112	66
South African Mines	84	75	75	80	80	93	125	76

It is a striking fact that in the early period of the War commercial and industrial holdings (mainly equities) depreciated more than Government securities. From 1916 onwards, however, the trend veered in favour of commercial and industrial securities. Their real gain, however, came not during, but after, the War; for it was in the post-Armistice boom that industrials rose and Government securities fell most rapidly. Once the boom was over, there was a complete reversal: ordinary shares suffered a somewhat catastrophic fall in value, while in due course Govern-

ment securities began to revive as Bank rate was reduced. It would seem that any investor who had not acquired the technique of selling somewhere near the top of the market would have found Government securities, on the whole, a better investment than industrial shares during and after the last War. If he had missed the significance of the post-War boom he would have lost heavily in ordinary shares, especially if he had had large holdings in the old-established British export industries.

The moral would appear to be that while, in general, equities are likely to appreciate in periods of inflation and rising prices, this is not necessarily true during war time, when trading conditions are abnormal. At such a time markets are disturbed; industries are taken over; costs may rise faster than prices, owing to shortages of labour or raw materials; and output may be limited or rationed. In any future war, even more than in the last, the output of necessities is likely to be nationalised or rigidly controlled by the authorities, while the output of luxuries may be severely curtailed. In such conditions the investor in industry and commerce will need to exercise great care and discretion if his choice is to be wise and profitable.

To give these considerations a definite application, we may suppose that, at the beginning of any international conflagration, like that of 1914, there would be a fall in industrial shares as great, or greater, than that in gilt-edged stocks. Until war-time profit records begin to be released, there would be no really satisfactory basis of valuation for industrial shares, and the general uncertainty would be bound to have a depressing effect. At the same time, one would expect the authorities to be supporting the gilt-edged market. Subsequently a recovery in equities might be looked for, owing to the rise in the shares of companies which were particularly favoured by the new conditions; and at the same time gilt-edged values would probably be slowly weakening. But at this point unexpected factors would begin to assume increasing importance. Many industries would be taken over, lock, stock and barrel, and the value of their shares might well follow a curve similar to that, say, of railway stocks in the last war. Other industries, including armaments, would probably be sensitive to profit taxes or public attacks on profiteering. Altogether, the rise in industrial ordinary shares might not, while war conditions continued, be very great, particularly as the authorities would have a species of public vested interest in keeping the market for industrial shares as quiet as possible, to minimise its possible interference with their operations in the gilt-edged market.

Finance and Banking

Gold Ban Removed.—The Bank of England notified the bullion market, towards the end of last week, that the ban on forward dealings in gold and on bank loans secured by gold had been lifted. This ban, together with an embargo on dealings in gold coins at a premium over their bullion value, was one of a series of measures taken by the authorities in this country as a contribution towards the defence of the Poincaré gold franc. The Bank's "requests" to the market were intended to discourage the hoarding of gold by French nationals. Another objective was the prevention of speculative sales of francs against purchases of gold, which at the time had become a favourite "hedge" operation with French interests. The various bans failed altogether in achieving their ultimate purpose, and succeeded only in transferring the market in coins to Continental centres, such as Amsterdam, and in driving forward gold operations underground. The ban on dealing in coins was removed during the gold scare of 1937, when the wholesale dishoarding of gold obviously destroyed the last vestige of its justification. The latest decision, which restores virtual freedom to the London gold market, has immediately followed the devaluation of the French franc and is clearly connected with that development and its related phenomena. The return flow of funds to France, and the sales of gold effected this week from

What would be likely to happen immediately after a war, when the authorities had, to some extent, relaxed their grip, and accumulated demands were swinging into action with exceptional force? Some inflationary tendencies there would doubtless be; but it is uncertain if history would repeat itself on anything approaching the scale of 1919 and 1920, with its fantastic financing of cotton and shipping. And there would be at least a possibility that post-war taxation plans would involve a capital levy or some similar measure which would depress industrial markets more than gilt-edged.

It is important, therefore, to stress the dangers involved in any generalisation that if war comes investors should buy industrial shares. There would, however, be two factors in favour of a carefully selected purchase of equity securities. First, in the event of a substantial rise in commodity prices and the cost of living, equity holdings in any industry which was able to share to some extent in the rise would have possibilities as a "hedge," which would be absent from fixed-interest securities. Secondly, an unusually discriminating—and fortunate—investor might be able to find undertakings of secondary importance which, under war-time conditions, would develop into market leaders. One can lay down, fairly closely, the essential conditions for such an investment. The company concerned should be producing something necessary but not vital (for in the latter case it would probably be taken over and controlled). It should be sufficiently important to make the Government encourage it to increase output by maintaining a strong profit motive, but it should be not too conspicuous in the public eye. It should also have an imaginative management which would successfully switch over its operations from war to peace needs when the time came. These requirements are stringent, and the choice of war-time beneficiaries would call more for the qualities of the turf than of the investment adviser.

On the whole, our survey suggests that the task of investing in equities, in time of war, is more delicate and difficult than is generally realised. That equities have a rising trend in a period of rising general prices is a truism; but, in the abnormal conditions of a war, the choice of individual counters would require the utmost discrimination and a decision on the right moment to sell would be even more important. For any major upheaval involves three periods of interruption with the normal flow of business: the first, when hostilities begin; the second, when they finish and "restocking" starts; and the third, when "restocking" is over and normal conditions again emerge.

French quarters, provide sufficient indication that no official measures are needed at present to discourage hoarding of gold. While the ban was in force, forward dealings in gold in London were made conditional upon the provision by the buyer of a statement that he needed the gold for commercial purposes. Although "commercial" requirements of gold, not unexpectedly, showed a considerable increase while the ban was in force, the freeing of the market is none the less expected to lead to a considerable increase in forward gold business.

the discount market is likely to find itself short of Treasury bills.

The Bank Return

This week's Bank return has been revolutionised by the heavy withdrawals of French funds. The note circulation is reduced by £8.3 millions, part at least of which is due to French dishoarding. The Reserve is equally strengthened by £8.3 millions, but so far as French dishoarding is concerned there has been no corresponding addition to bankers' deposits, as the money in question has passed straight through to the Exchange Equalisation Account.

	May 12, 1937	Apr. 27, 1938	May 4, 1938	May 11, 1938
Issue Dept.:				
Gold	318.7	326.4	326.4	326.4
Notes in circulation	479.9	489.3	490.5	482.0
Banking Dept.:				
Reserve	39.6	38.0	36.7	45.2
Public Deps.	32.5	10.9	10.7	36.9
Bankers' Deps.	87.7	113.3	117.5	87.9
Other Deps.	37.2	36.5	36.0	35.5
Govt. Secs.	108.3	114.0	117.8	105.7
Discounts & Advances	5.9	7.1	8.2	7.6
Other Secs.	21.3	19.4	19.3	19.4
Proportion	25.1%	23.6%	22.3%	24.1%

There have also been very heavy transfers of cash from both the British banks and the London offices of the French banks to the Exchange Equalisation Account. The latter had to cover the repatriation of funds to Paris by

means of gold sales to the French authorities, and in payment for its gold received the sterling actually withdrawn, francs being paid out by the Bank of France against its gold purchases as the counterpart. The Bank return shows that the Exchange Account has not yet been able to invest all this sterling in bills, though the week's drop of £12.1 millions in Government securities suggests that the Account may have bought bills from the Bank. The special buying of bills noticeable in the market early this week may also have been on behalf of the Exchange Account, for the Bank return shows no sign of this operation. Even so, last Wednesday the Exchange Account still had considerable surplus cash at its disposal, as public deposits registered an increase of £25.9 millions. The drop of £29.6 millions in bankers' deposits must under-estimate the French withdrawals from banks domiciled in Great Britain, for there are various offsets, including the cash derived from the special buying of bills and also from such part of the contraction in the note circulation which was not due to French dishoarding.

The Bullion Market

Some dishoarding of gold has been noticeable this week, but as a rule it has

been fully offset by fresh hoarding, with the authorities a seller on balance. On Tuesday, however, when the West African and Rhodesian gold was offered, the authorities had to buy. The demand has come partly from Holland and Switzerland, and gold has been bought in fairly large quantities. Sales, on the other hand, have been more of retail dimensions.

* Above or below American shipping price. The New York price of silver remained at 43 cents per ounce - 999 fine during the week.

The only feature in the silver market is a slight widening of the premium of cash over forward. This is due to the relative shortage of spot silver in London. There have been attempts to sell forward at 18 1/2 d., with no buyers, but Indian reselling of forward position at a lower price made the market more active on Thursday.

INSURANCE NOTES

Included in the profit and loss debits in the above table are transfers to contingency fund of £50,000 in each of the two years. Total assets of the Northern (excluding associated companies) amount to £17,287,000.

There was a moderate increase in mortgages and loans. Holdings in British Government securities increased from £1,796,000 to £2,045,000 and Foreign, Dominion and Colonial Government securities were somewhat larger. Debenture stocks at £2,327,000, compared with £2,270,000 in 1936. Preference stocks, at £1,204,000, fell by £26,000, but ordinary stocks (excluding shares in subsidiary companies) increased from £1,247,000 to £1,428,000. The market value of the Stock Exchange securities held on December 31, 1937, was "substantially in excess" of book values. Shares in subsidiary companies remain unchanged in the books at £2,742,000. There is a general reserve of £2,000,000 and a substantial profit and loss balance. Total assets in the consolidated balance sheet amount to £25,438,000, of which London and Scottish life assets account for £4,717,000. The dividend is 75 per cent. and costs £228,000, contrasted with available interest earnings of £192,000.

North British and Mercantile Insurance.—New sums assured in the life department were slightly smaller at £5,620,000, and annuity consideration moneys fell from £659,000 to £645,000. The net rate of interest was £3 11s. 9d. per cent. against £3 12s. 10d. per cent. Death claims amounted to £1,002,000, a figure £101,000 smaller than in 1936. Premium income increased from £2,434,000 to £2,527,000 and annuities

paid from £482,000 to £497,000. The fire department premiums amounted to £3,561,000, against £3,402,000, and the underwriting results, although very satisfactory, were not quite so favourable as in the last few years. The premium income of the Railway Passengers, which constitutes the accident department of the company, increased from £1,255,000 to a new record figure of £1,346,000. In the marine department (Ocean Marine) premiums increased from £236,000 to £298,000, while claims were £263,000 against £157,000.

The underwriting results are shown below—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	
Fire	369,286	356,938
Railway passgrs.	138,019	143,055
Fine art and gen.	91,193	54,344
Ocean marine	40,000	40,000
Life	67,460	67,460
	665,958	661,797
Less items deb. to profit and loss account	158,848	238,617
Net trading surplus	507,110	423,180

£1,000,000 has been transferred from profit and loss to increase the additional reserve in the fire account to £3,000,000. Life assurance, annuity and sinking fund assets amount to £32,165,000, £8,263,000 and £534,000 respectively. The total assets, including those of the Railway Passengers, Ocean Marine, Fine Art and General, amount to £62,189,000. In the life balance sheet, there is a further large decrease in policy loans from £2,216,000 to £1,870,000. British Government securities are £130,000 smaller at £9,085,000 and foreign and Dominion Government securities amount to £3,301,000, against £3,526,000. On the other hand, debenture stocks have increased from

£5,016,000 to £5,492,000, preference stocks from £1,211,000 to £1,436,000 and ordinary stocks from £842,000 to £1,148,000. The dividend is 6s. 3d. per share (whether partly or fully paid), which is equal to 25 per cent. of the nominal amount of each share, and costs £520,000, compared with interest earnings, after deducting the cost of the preference share dividend, of £526,000.

General Accident Fire and Life Assurance Corporation.—New life assurances, which are transacted by the Central Life Assurance Company, whose figures are combined in the accounts of the Corporation, amount to £2,844,000, compared with £2,854,000 in 1936. The net rate of interest on the life assurance and annuity funds increased from £3 19s. 3d. per cent. to £4 2s. 6d. per cent. Total premiums in the other branches increased from £8,887,000 to £9,704,000. In the fire branch, premium income was £721,000, against £675,000, and the underwriting results were better even than usual. The accident and general department, which is the most important of the branches, showed an increase of £723,000 in premium income to £8,745,000, and in spite of a heavy loss ratio in motor insurance the results were quite satisfactory for this class of business. Marine premiums, at £238,000, revealed an increase of £47,000, but the results were unfavourable:—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	
Fire	135,754	183,213
Accident & Gen.	405,874	345,583
Marine	22,231	46,219
Profit on sale of investments	30,054	10,144
	549,451	492,721
Less items deb. to profit and loss	421,986	353,933
	127,465	138,788

The total assets, including subsidiaries, increased in the year by £1,544,000 to £19,667,000. After taking into account the investment reserve the book values of current assets (including investments), less liabilities, is £415,000 in excess of market value on December 31, 1937, using rates of exchange ruling on that date. This amount, however, is amply covered by the general reserve fund of £2,000,000. The profit and loss balance, after payment of the final dividend, is £806,000. Among the investments British Government securities increased from £1,265,000 to £1,514,000 and Foreign Government securities from £2,218,000 to £2,843,000. Deben-

tures decreased from £3,998,000 to £3,734,000, but increases were shown in preference and ordinary stocks. The dividend is 70 per cent., compared with 68 per cent. in 1936, and costs £264,000, against available interest earnings of £285,000.

Alliance Assurance.—Fire premium income showed an increase in 1937 from £2,149,000 to £2,176,000. As usual, the underwriting results were extremely good, claims falling from £830,000 in 1936 to £746,000 last year. No fire insurance is transacted in the U.S.A. and a large proportion of the business is in high-class risks in this country. Premiums in the accident department expanded by £122,000 to £1,427,000 and marine premiums by £68,000 to £412,000. The underwriting results are given below:—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	
Fire	354,652	432,613
Miscellaneous	163,430	146,315
Marine	45,070	37,009
Life	51,061	51,481
Trans. Fees, etc.	17,844	19,534
	632,057	686,952
Less items deb. to profit and loss	258,468	344,627
	373,589	342,325

In addition to the profit and loss items included above, £150,000 was transferred in 1936 and £100,000 last year to the reserve fund.

In the life department, new sums assured increased from £3,526,000 to £3,836,000, but annuity consideration moneys were £62,000 smaller at £252,000. The net rate of interest was £3 13s. 10d. per cent. against £3 15s. 6d. per cent. Strong departmental reserves are held. In addition to the usual 40 per cent. of premium income, there are reserves of £2,500,000 and £540,000 in the fire and accident department, while the marine fund is now nearly three times the premium income of 1937. The total assets exceed £41 millions, of which £26 millions refer to the life and annuity funds of the Alliance and its subsidiaries. There is a general reserve of £1,750,000 and the free profit and loss balance, after deducting the cost of the 1937 dividend, is £730,000. Loans and mortgages fell by £785,000 to £11,263,000, but British Government securities increased by £506,000. Debenture stocks amount to £7,146,000, against £6,625,000 and preference stocks to £2,399,000, against £2,179,000. Exclusive of holdings in subsidiary companies, ordinary stocks

increased by £417,000 to £1,823,000. For the eleventh successive year, the dividend is 18s. per share and costs £474,000, against net interest earnings of £356,000.

Yorkshire Insurance.—New life assurances reached a record total of £2,855,000 last year, compared with £2,780,000 in 1936. The net rate of interest earned on the life assurance fund was 4d. per cent. lower at £4 3s. 8d. per cent. Annuity consideration moneys fell from £155,000 to £123,000. Fire premium income was practically unchanged at £894,000, but underwriting profits showed considerable expansion and were very satisfactory. In the accident department, premium income increased from £1,336,000 to £1,470,000, but the results were disappointingly small. Marine premiums increased by 26 per cent. to £427,000, but only the amount of interest credited to the marine fund was transferred to profit and loss. The results of the past two years are shown below:—

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	
Fire	117,923	142,825
Accident & Gen.	28,885	23,843
Marine	10,129	13,570
Life	13,570	13,570
Profits from Reversions	8,000	8,000
	178,507	188,238
Less items deb. to profit and loss	112,793	119,590
	65,709	68,648

In each of the last two years, £30,000 was transferred to general reserve, which now amounts to £1,195,000. There is also an investment reserve of £100,000. The total assets of the Yorkshire now amount to £16,580,000, against £15,848,000 in the preceding year. The only noteworthy change among the assets was an increase from £3,658,000 to £4,314,000 in mortgages and loans. The dividend is again at the rate of 47 1/2 per cent., free of tax, and costs £139,000, compared with interest earnings of £103,000.

Guardian Assurance.—In the life department, new sums assured last year increased from £1,760,000 to £1,816,000. The rate of interest was 9d. less at £3 16s. 8d. per cent. Annuity consideration moneys showed little change at £86,000. Fire premiums amount to £1,116,000, against £1,137,000, and underwriting results

TENOVA SOCKS need no suspenders

Tenova socks have a band at the top containing Lastex yarn, which is part of the sock itself. The band holds them gently but securely up. For town, 3/6, 4/6, 5/6 and 7/6. For tennis, from 3/6. For golf, 7/6. Black silk for evening, 7/6 and 12/6. Obtainable from good shops for men.

TENOVA
self-supporting socks
Patent No. 323457. Reg. Design 748974
Tenova Ltd., 157-161 Regent St., London, W.1. Regent 2424.

	1936	1937
Amount Percent- of age of Profit Premiums	Amount Percent- of age of Profit Premiums	
Fire	177,854	212,910
Accident	126,633	146,112
Marine	25,000	50,529
Life	...	...
	329,487	409,551
Less items debited to profit and loss	151,106	220,493
Net trading surplus	178,381	189,058

were very satisfactory. The reserve for unexpired risk is 50 per cent. of the premium income, but 40 per cent. has been used in the table given below. In the accident department premium income increased from £1,185,000 to £1,253,000 and a small loss in 1936 (due to motor insurance) was replaced by a substantial profit of £66,000. Marine premiums showed considerable expansion at £331,000 and a small net profit emerged. It is the practice of the Guardian to include investment and exchange profits and losses in the departmental accounts. This practice lacks nothing in soundness, but we have, for the sake of uniformity of treatment, followed the more usual practice of including these items as though they appeared in the general profit and loss account.

The results of the last two years are given below—

	1936		1937	
	Amount of Profit	Percent- age of Premiums	Amount of Profit	Percent- age of Premiums
Fire	158,583	14.0	171,542	15.4
Accident	6,391	0.6	6,559	5.2
Marine	8,256		4,250	
Life	18,545		18,545	
	178,353		259,896	
Less items deb. to profit and loss	117,619		111,548	
Net trad. surplus	60,734		148,348	

The departmental accounts are strong, the fire, accident and marine funds amounting to 156 per cent., 83 per cent. and 155 per cent. of premium income, respectively. The total assets of the Guardian and its subsidiaries amount to £16,467,000, of which £8,687,000 are accounted for by life funds. There was no noteworthy change in the distribution of investments, but some reduc-

tion occurred in British, Dominion and foreign government securities respectively and increases in debenture, preference and ordinary stocks. The ordinary dividend is 110 per cent., compared with 100 per cent. in 1936, and costs £184,000 contrasted with net interest earnings, after deducting the preference dividend, of £150,000.

★

Sea Insurance.—Premiums increased from £139,000 to £149,000 in the fire department, and from £103,000 to £112,000 in the accident department. Losses have been in the normal course of events in the accident department, but last year there was a profit of £2,956, against a loss of £3,105 in 1936. Marine premiums expanded by £105,000 to £570,000, but (as was foreshadowed in the chairman's speech last year) the 1936 account closed less favourably than the accounts of recent years. The results of the last two years are shown below:—

	1936		1937	
	Amount of Profit	Percent- age of Premiums	Amount of Profit	Percent- age of Premiums
Fire	7,456	5.4	4,502	3.0
Accident	3,105	3.0	2,956	2.6
Marine	57,875		34,986	
	62,226		42,444	
Less items deb. to profit and loss	22,524		20,789	
Net trading surplus	39,702		21,655	

Total assets amount to £2,408,000. The profit and loss balance, after payment of the dividend, is £211,000. The dividend is at the usual rate of 17½ per cent. and its cost is covered by interest earnings.

The State (including the British Equitable) Assurance.—The State, which owns the British Equitable, is a subsidiary of the Royal Exchange. It transacts various classes, but not life assurance, and its accounts include the transactions of the British Equitable. The total life assurance premiums of the latter company were £170,000, and the life funds amount to £1,746,000. The expense ratio, although very high at 22.5 per cent. of the premium income, is explained by the relatively large volume of new business, which last year amounted to £835,000. The net rate of interest fell from £4 2s. 10d. to £4 1s. 10d. Fire premiums were slightly larger at £528,000, accident premium income increased from £228,000 to £246,000, and marine premiums from £84,000 to £101,000. The underwriting results are given below for the past two years:—

	1936		1937	
	Amount of Profit	Percent- age of Premiums	Amount of Profit	Percent- age of Premiums
Fire	18,537	3.5	30,802	5.8
Accident	12,148	5.3	8,374	3.4
Marine	3,347	4.0	6,845	6.8
Life	1,814		1,814	
Profit on Invest.	...		2,604	
Less items deb. to profit and loss account	35,846		50,439	
	<u>41,080</u>		<u>47,954</u>	
Net trading surplus	- 5,234		2,485	

Total assets amount to £3,216,000, of which the life assets of the British Equitable account for £1,784,000. A detailed list is still given by the British Equitable of its individual investment holdings. The dividend declared by the State is again at the rate of 25 per cent., and costs £19,000, compared with interest income of £34,000.

Investment

L.C.C. Loan.—The London County Council has become a fairly regular visitor to the London market for large amounts of new money. On Tuesday, the market learned, with a certain regret, that lists were to be opened on Thursday for an issue of £10 millions of 3½ per cent. stock, dated 1968-73 at 101½. Coming after the Australian £7,000,000 issue, of which some 66 per cent. remained to be digested by the underwriters, the announcement proved the signal for an all-round setback in trustee securities. The decision to make so large an issue at this moment, indeed, provided a test of the market's absorptive capacity, which, in the view of many, might have been judged excessive in advance. In the "thin" market conditions of recent weeks, relatively small factors have produced relatively significant effects, and a £10 millions issue to-day is a formidable amount for the market to take in its stride. Yet the loan marks the abandonment of the experimental period of 3¼ per cent. issues, and in terms of redemption yield it offered an appreciable advantage compared with the L.C.C. 3½ per cent. stock, 1952-62, which stood at 104½ before the announcement, to return £3 3s. 6d. to redemption date. The yield on the latest issue, to earlier redemption date, is £3 8s. 6d., but since the first interest payment is not due until January next year, the trustee who requires a fairly immediate return may be attracted to the issue after, rather than before, allotment. In respect of dates, the loan is distinctly "long," and many investors are tending to show a preference for the shorter, rather than longer, dated stocks.

The fate of the loan, therefore, has been received with interest, although a limited response was expected, and the lists remained open for the full time. It does not follow that a smaller issue, on similar terms, would necessarily

provoke the same response, particularly if its life were shorter. But it is evident that the question of size is a highly important consideration at present, which must be treated discreetly if the best response is to be obtained for trustee issues. It would be hasty, however, to reach any inferential conclusions regarding the prospects of new defence borrowing from this week's experience. The modern Treasury technique by which new issues are "nursed" pending their ultimate absorption by the public, is a weapon which other trustee borrowers lack. And the recent strength of the National Defence Bonds, which have now reached 104½, provides a striking illustration of the success of this method. Whether such successes can be repeated indefinitely is another matter, but that they will be attempted again may be regarded as certain.

P. and O. Winding-up Rights.—A question first raised some ten years ago, and revived at the last P. and O. meeting, has now been clarified. The company's charter and regulations are silent regarding the respective rights of preferred and deferred stockholders in the event of liquidation. Opinion was taken ten years ago, which held that preferred stockholders would not enjoy preferential rights as to capital, but would rank rateably with the deferred stockholders in surplus assets. This view has been confirmed by other authorities, who, at the same time, have discussed the division of reserves which might otherwise have been available for dividends. In their opinion, any surplus arising from excess provision for depreciation would not fall exclusively to the benefit of the deferred stockholders. In this case, the ordinary rule of *pari passu* distribution would apparently apply. But counsel suggest that different considerations would apply to free reserves (within

the definition of Article 95 of the company), which would otherwise have been available for dividend; such sums appear to be exclusively applicable to the deferred stockholders. Counsel advise that, so long as the company is a going concern, neither class of stockholder has any right to profits as such, but that the preferred stockholders are entitled to priority distribution of a 5 per cent. cumulative dividend from such part of the profits as the directors deem available for distribution. The directors have circulated these opinions to stockholders; most of the points, of course, would only arise, and could only be finally settled, in the event of a liquidation.

★ ★ ★

Capital Market Doldrums.—During April the capital issue market came to a standstill. In fact, no public issues were made, and our figures show that a number of offers to shareholders were more than offset by apparently large net repayments of National Savings Certificates, which consisted mainly of end-of-year transfers. The following table gives our usual analysis of new money subscribed in recent months:—

(000's omitted) Excluding Conversions					
Monthly Average 1937	United Kingdom	British Possessions	Foreign Countries	Total	
Old basis	£18,603	£1,842	£525	£20,970	
New basis	32,296	5,283	592	38,171	
Monthly Total (Old Basis)	Govt.	Other			
Feb., 1937	150	7,998	1,242	Nil	9,390
Feb., 1938	150	12,001	4,095	Nil	16,246
Mar., 1937	Dr. 200	7,339	2,261	Nil	9,400
Mar., 1938	300	4,266	80	2,399	7,045
Apr., 1937	99,154	8,786	3,129	Nil	111,065
Apr., 1938	Dr. 1,300	125	Nil	Nil	Dr. 1,175
(New Basis)					
Feb., 1937	150	26,416	13,714	1,057	41,337
Feb., 1938	150	13,900	5,422	Nil	19,472
Mar., 1937	Dr. 200	25,672	5,507	Nil	30,979
Mar., 1938	300	10,194	140	2,399	13,033
Apr., 1937	99,150	12,485	11,495	Nil	123,130
Apr., 1938	Dr. 1,300	3,110	478	Nil	2,288

Precedents for a net debit for new capital issues would be hard to find.

★ ★ ★

Industrial Profits in April.—Company reports published last month show that profits continued to increase at a satisfactory rate. April's aggregate net profits for 225 companies were 17.19 per cent. higher, but for the third successive month the rate of advance was not so great as a year ago. The record of net profits and percentage increases is shown in the following table:—

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year
1936		£	%	1937		£	%
April	254	38,660,148	9.66	May	255	25,053,946	14.09

* After debenture interest.

Results for April, 1938, were somewhat affected by the excellent performance of the shipping group, whose exclusion would reduce the rise in profits to 12.1 per cent. The next largest individual group—iron, coal and steel concerns—contributed 9 per cent. to total profits and 12½ per cent. of the increase. Substantial proportionate rises were also reported by electrical equipment, rubber, and tea companies. The general evidence suggests that the rate of increase in industrial profits is tending to slacken.

Company Notes

Stewarts and Lloyds Advance.—The full accounts of Stewarts and Lloyds are very satisfactory. The increase in the dividend on the deferred stock from 7½ per cent. to 12½ per cent. on a larger capital had justified the most optimistic hopes of the market, and the accounts reveal a position which is even stronger than had been anticipated. Trading profits have increased from £1,392,310 to £2,506,882, an increase big enough to double the rate of earnings on the deferred stock, despite considerably larger appropriations for taxation and special depreciation. Both sides of the balance sheet show a considerable expansion, the increase in the fixed assets from £9,516,672 to £10,330,826 reflecting the further expansion which has taken place at Corby. The following table analyses the profit recorded during the last three years:—

	Years to December 31		
	1935	1936	1937
Gross profit	£964,685	£1,392,310	£2,506,882
Fees, pensions, etc.	62,150	73,213	76,487
Debiture interest	102,000	127,500	127,500
Depreciation	308,519	418,802*	623,581*
Taxation reserve	—	225,000	550,000
Preference dividend	102,244	100,581	100,443

Deferred shares:—

Earned	389,772	447,214	1,028,871

Paid (%)	5%	7½%	12½%

Contingencies reserve	180,000	150,000	150,000
Stock reserve	—	—	300,000
Carry-forward	168,952	170,756	170,159

* Including £100,000 special depreciation in 1936 and £250,000 in 1937. † Tax payable reduced by special claim for obsolescence. § On deferred capital of £4,626,740 in 1935 and 1936 and £5,669,650 in 1937.

Some phrases seldom ring true

"You could have knocked me down with a feather."

but

YOU CAN BE
SURE OF SHELL

The substantial changes in the company's profit-earning capacity are graphically illustrated in the chart below:—

STEWARTS AND LLOYDS PROFITS, 1928-37.

The latest accounts forcibly demonstrate the importance of timing in new capital development. The company has been able to use the new Corby plant to the full in a period of increased demand. Last year, the tonnage of tube sales actually increased by 11.2 per cent., despite an increase of 6.8 per cent. in the price charged in the home market, and an increase of 31.8 per cent. in export prices. Such a high level of demand can, of course, hardly be maintained indefinitely. The decline in domestic building activity must have some effect upon the company's business. In the export markets, moreover, the fall in purchasing power of primary producing countries, coupled with the "high price" policy of the International Cartel, has already caused a decrease of 29 per cent. in the tonnage of tubes exported in the first quarter of the year, although the value of that tonnage is still higher than a year ago. At the same time, however, the company is progressively developing new uses for steel tubes, and investors may expect the continuance of a satisfactory level of profitability. At 36s., the deferred stock units yield nearly 7 per cent., which appears to discount any reduction in profits which can be foreseen in the near future.

British Oxygen Progress.—The market displayed some disappointment with the announcement, last week, of an increased dividend of 17 per cent. on British Oxygen ordinary. The units, in fact, fell sharply to 3½, on the presumption that, although the company enjoyed a good year, distribution policy had been conservative. The full report and consolidated profits statement confirm this impression. Total profits attributable to the parent company amount to £1,160,181, compared with £995,781—an advance of 16 per cent. Of this sum, increased amounts of £336,294 and £115,212 respectively have been appropriated for depreciation and subsidiary companies' reserves, and the net profits of the parent company (including net amounts received from subsidiary companies in dividends) have increased from £600,279 to £698,774. A doubled appropriation of £100,000 for taxation (in addition to a supplementary charge of £27,500 shown in the parent company's profit and loss account, which has been taken into account in striking the consolidated profit figure) has restricted the increase in ordinary earnings to £53,392, and the 17 per cent. dividend is covered by

earnings of 19.8 per cent. The course of recent profits is set out in the following table and chart, the latter covering a full ten-year period:—

	Years to March 31

BRITISH OXYGEN PROFITS, 1929-37.

(The chart covers years to March 1929 and 1930, nine months to December 1930, and calendar years from 1931 onwards.)

In recent years, the British Oxygen group has made rapid strides. Such acquisitions as Quasi-Arc, Ferro-Arc Welding and the Odda Smelteverk carbide undertaking, coupled with the parent company's extensions of plant, have raised the total book values of fixed assets from £2,319,020 at the end of 1935 to £3,258,602. Since the report records that business showed a continued expansion last year, both at home and abroad, it is evident that the extension of interests has been well justified. It has, moreover, been consolidated by provisions for depreciation which appear generous. Nor have the technical limits of expansion in the company's trade yet been approached. It is true that the rejection of the Caledonian Power Bill, for the third time, appears to set the seal on the establishment of a carbide plant in the Highlands, but from the stockholders' point of view, a development of this magnitude would have required several years for fruition. The company is not immune from depression—in 1931-32, earnings averaged less than 5 per cent.—but it has become more firmly established among the new industries with a rising trend of consumption. Yet the shareholder may still be required to exercise his patience before these ultimate benefits are distributed. The new carbide plant in South Wales will require further expenditure, and since a bank loan of £200,000 appears in the latest balance sheet, the possibility that further capital may be raised cannot be overlooked. As a long-term holding, British Oxygen ordinary, at 3½, appear reasonably valued, to yield £4 16s. 6d. per cent.

J. and P. Coats Report.—After three successive years of declining profits, stockholders were gratified to learn that total earnings increased by 16 per cent. in 1937. Although the 10 per cent. dividend is unchanged, it is covered by the best margin since 1933. The course of profits in the last three years is shown in the table below:

	Years to December 31		
	1935	1936	1937
	£	£	£
Profits after depreciation	2,116,102	1,925,137	2,230,007

Preference dividends	330,000	330,000	330,000
Ordinary Stock:—			
Earned	1,676,340	1,464,744	1,747,459
Paid	1,475,000	1,475,000	1,475,000
Earned %	11.8	9.9	12.5
Paid %	10	10	10
Exch. Diff. Reserve	250,000	...	50,000
Carry forward	339,365	329,109	551,568

In the following chart, however, the relation of the latest year's improvement to a declining trend of profits, is more clearly evident:—

J. AND P. COATS' PROFITS, 1928-37

The latest results, perhaps, are better than might have been expected. The chairman last year expressed the hope, with inevitable reservations, of some recovery in 1937. But although some export markets improved, the international situation generally has deteriorated, depression in America has deepened, and the effects of war in China must be serious. Such factors are obviously of first importance for a concern which conducts four-fifths of its trade overseas. And if the English Sewing Cotton figures are any guide to home conditions, little benefit was obtained from domestic markets. Last year's recovery was appreciable, yet total profits were not so high as in 1932. Until 1931, a basic rate of dividend of 15 per cent. was declared, usually with a bonus. In 1931, the basic rate was reduced to 10 per cent., and though bonuses were paid between 1932 and 1934, none has been distributed in the recovery period. The interpretation of the company's balance sheet position is necessarily hampered by the fact that interests in subsidiaries account for nearly 75 per cent. of total assets, but a further fall in stocks has reduced their book value during the past two years from £2,301,000 to £1,899,000. The company's position and immediate prospects suggest that the £1 ordinary stock units, at 39s. 6d., are fairly valued to yield £5 1s. 6d. per cent.

Bowater's Paper Developments.—According to reports this week, negotiations between Bowater's Paper Mills and International Paper Company for the purchase by the former of the Corner Brook Mill (which is owned by a subsidiary company of International Paper) have been virtually completed. If the transaction is carried through, it will transfer the control of additional newsprint capacity,

hydro-electric power supplies, and important timber limits in Newfoundland to Bowater's Paper Mills. The negotiations must be regarded as a first stage in the company's development programme in Newfoundland; for it has been engaged for months past in negotiations for the very extensive timber limits in Gander River area, to which the chairman referred at the annual meeting last December. It would, therefore, be premature to assess its potential importance in terms of earnings for Bowater's Paper Mills shareholders, particularly since no details have been divulged regarding the purchase consideration which is contemplated in the Corner Brook deal, and the method by which it may be financed. Shareholders, however, will fully appreciate the background of the negotiations. During 1937, the Bowaters' group was seriously menaced by a sharp increase in pulp prices, and the Newfoundland development scheme is designed primarily to provide it with supplies of raw materials outside the Scandinavian pulp market, in which prices have been effectively controlled by a cartel agreement. In fact, the deal is, to a large extent, an insurance against the possibility of famine prices in the future, and its potential benefits, therefore, are essentially of a long-term character.

Odhams Press Setback.—The recent reduction in the ordinary dividend from 15 per cent. to 12½ per cent. had prepared the market for a setback in Odhams Press profits. Trading profits are, in fact, reduced from £455,246 to £412,521, and other income—mainly dividends and interest receipts—from £154,289 to £94,417. After taking into account a reserve provision of £85,000 in respect of subsidiary companies in 1936, the company's total income has been reduced from £524,886 to £507,266. In their report, the directors state that the reduction is due mainly to the disturbance of trading arising from the Coronation celebrations. The reduced dividend is satisfactorily covered by earnings of £149,115 (against £165,139), which are equivalent to 22.3 per cent. on the ordinary capital. Shareholders may note that the directors' references to the circulations of the principal publications of the group are satisfactory, but they appear to be couched in rather more restrained terms than a year ago, and no reference is made to advertising revenue. The balance sheet reflects the high gearing of the ordinary capital, of which £750,000 is in issue, compared with total prior charges of £2,625,000. A substantial increase in debentures held in subsidiary companies, accompanied by a comparable reduction in amounts due on current account, is presumably associated with the funding of the *Daily Herald* indebtedness to the parent company. A consolidated profits statement would undoubtedly be welcomed by shareholders, in view of the importance of the earnings position of the subsidiaries, several of which have issued prior charges to the public. A yield of 7.4 per cent. on the 4s. ordinary shares, which stand at 6s. 9d. ex dividend, suggests that the immediate earnings prospects are regarded with a certain degree of caution.

Reckitt and Colman Merger.—The meetings of Reckitt and Sons and J. and J. Colman, held at the end of last week, were distinguished by the announcement of a preliminary agreement for amalgamation between the two companies. Full details are not yet available, but the scheme broadly entails the transfer to a new operating subsidiary, Reckitt and Colman, Ltd., of the trading assets of the two companies, whose already close relations are marked by a pooling and joint trading arrangement for all foreign trade, made in 1920, and for trade in South and Central America since 1913. The board of the new company will be nominated by the holding companies in an agreed proportion (the first directors consisting of the two existing boards), and its capital will be owned entirely by J. and J. Colman and Reckitt and Sons, the latter having a substantial majority interest. The former company, according to Sir Jeremiah Colman's speech last week, has trade connections dating back nearly a century, but the company's shares only became available to the public investor in January, 1935. The short profits record, however, is satisfactory. Book values of the company's assets total nearly £5½ millions, and the issued capital consists of £1,495,620 in 5 per cent. preference shares and £2,007,012 in ordinary shares. Dividends of 16 per cent. have been paid in each of the past three years, covered by earnings of between 23 and 24 per cent. Reckitt and Sons' steady profits record has been familiar to investors for a longer time. The company's total assets are roughly £8,700,000, but the issued capital consists of £372,989 in 4 per cent. debentures and bonds, £500,000 in 4½ per cent. and £909,695 in 5 per cent. preference shares and £3,648,000 ordinary capital. Distributions of 22½ per cent. have been made on the latter since 1929, covered recently by earnings of 26 to 27 per cent. Some products, such as starch, are made by both companies, but in many ways their products are complementary. Sir Jeremiah Colman warned shareholders against expecting too much from the amalgamation in the immediate future, although he anticipated that substantial economies would ultimately be secured. Shareholders of each concern will await the terms of participation in the new operating company with interest. It is a merger which is almost axiomatic, by reason of the coincidence of business interests and of the investment ranking of each of the constituent equity shares.

Union Cinemas Position.—The revelations in the Union Cinemas report to December last (on which we commented in our issue of April 30th, page 251) clearly suggested that the outlook for all classes of shareholders was bleak. At the meeting last week, Mr John Maxwell outlined the new board's policy for the future. It is proposed to carry on the business for a year on the present basis, in order to obtain an indication of the real earning power of the assets, assisted by the utmost economy of management. This decision has been taken with the assent of committees representing both preference and ordinary shareholders. No further capital expenditure will be undertaken, apart from the completion of existing contracts. According to Mr Maxwell's statement, the investigation of certain transactions points towards the possibility of legal action by the company. A considerable improvement has been shown in the recent earnings of the cinemas, but in any estimate of future earnings, it is necessary to take into account a depreciation provision of £50,000, while an amount of £13,000 in respect of interest charged to capital on the construction of new cinemas last year will become chargeable to revenue as the properties are opened. It is clear to-day that the values at which the shares of the original company stood in the market before the merger were inflated beyond reasonable bounds. The case vividly illustrates the inherent weaknesses which may be associated with an amalgamation based largely on comparative share values.

Spillers' Prospects.—Sir Malcolm A. Robertson at last Saturday's meeting provided a full explanation of the recession in Spillers' profits last year, which we discussed

on page 251 of *The Economist* of April 30th. Owing to violent fluctuations in prices, 1937 was one of the most difficult years ever experienced in the grain trade. Since exporting countries no longer had heavy surpluses, a closer adjustment between supply and demand produced unusually sensitive markets. At different periods, grain prices felt the unsheltered force of large Continental purchases, poor Canadian and Argentine crops, Russian sales and good crops in the United States and Australia. Spillers do not speculate in wheat cargoes, but such changes produce serious difficulties in making purchases for day-to-day requirements. In addition, the maize market proved particularly difficult. Nor have trading conditions been comfortable in the animal foods section, for here the company's interests are closely associated with those of the agricultural producer, who has been faced with a sharp rise in foodstuff prices. Deliveries of animal foods, however, reached new records, and the outlook is regarded favourably, especially in view of the proposed Pig Marketing Scheme and the possibility of a poultry scheme. The impression left by the chairman's survey is that the past year's difficulties were exceptional in character and that the company's long-term earnings prospects are unimpaired.

Rhodesia Railways Progress.—Striking improvement is recorded in the results of Rhodesia Railways for the year to September, 1937—the first to cover the amalgamation with the Mashonaland Railway. The broad outline of the year's results was provided in the "Chartered" report last February, which showed that gross revenue increased from £3,637,197 to £4,709,069. After deducting working expenditure totalling £2,776,407 (against £2,519,789) net earnings amounted to £1,932,662, compared with £1,117,408. An advance of 10·18 per cent. in working expenses compares favourably with an increase of 28·54 per cent. in the volume of goods and mineral traffic handled last year. Of the increase of £1,071,872 in gross receipts, £643,404 was derived from minerals traffic, £398,208 from general goods, and £41,050 from passengers. Net revenue amounts to £916,772 compared with a profit of £117,174 (after accounting for a loss of £100,364 on the Mashonaland undertaking) for 1935-36. Of this profit £53,084 has been apportioned to rates stabilisation account, and £863,688 to reserve account, raising the latter to £1,675,657. Since the debenture service requires £1,100,702, an ordinary dividend will now be permissible, under the terms of the 1935 agreement. During the first five months of the current year, gross revenues amount to £2,101,534, and net earnings to £941,871. If the remaining seven months' earnings continue to run at the recent rate, net earnings may exceed £2 millions during the current year. A dividend of £75,000 on the ordinary capital (which is largely held by Rhodesia Railways Trust) is, in fact, virtually assured, and the augmenting of the reserve to the minimum of 2½ times the debenture service would, if these estimates are fulfilled, still leave a substantial balance of approximately £1 million for rates reduction and other purposes. The results will therefore be regarded as encouraging by shareholders in Rhodesia Railways Trust and "Chartered."

Central Mining.—Last year's results of Central Mining and Investment were affected both by reduced income and increased charges, which entailed the resumption of a 12½ per cent. dividend. There was some diminution in dividend income from the shareholdings, and an increase of £25,000 (to £100,000) in the income tax provision, while N.D.C. absorbed £35,000, which was only partially offset by a reduction of £14,000 in general expenses. No revenue appropriation is made to reserve, although this fund is raised to £1,675,000 by the transfer of £125,000 at the credit of preference shares premium account. A depreciation reserve, however, has been opened with an appropriation of £100,000 from profit and loss. The outstanding balance sheet change is an increase in cash to nearly twice the previous year's figure, resulting partly from an expansion of £1,629,720

in the funds of associated companies at the Johannesburg office, and partly from the virtual halving of gilt-edged holdings. By contrast, shares, investments and interests (of which all but 9½ per cent. are quoted) are rather more than £500,000 higher, and their market value, as usual, is "very substantially" above book value. We summarise below the profits and balance-sheet movements of the past three years:—

	1935	1936	1937
Shares, investments, etc.	5,405,000	6,537,010	7,061,990
Gilt-edged securities	2,146,230	3,808,830	1,990,250
Debtors, less reserves	1,895,940	413,210	74,290

To reserve fund	175,000	150,000	100,000
For income tax	60,000	75,000	100,000
Brought forward	182,380	177,560	176,120
Carried forward†	177,560	176,120	179,700

* On ordinary capital. † After deduction of directors' percentage. ‡ Adjusted; less Dominion income tax.

During the year the corporation took up its proportion of new capital raised by associated mining companies, and held rights or options on shares in Blyvooruitzicht, City Deep, Durban Deep, Marievale, Palmietkuil, Rietfontein No. 11 and Holfontein. The results of the Australian interests were of a varied character. A record dividend was paid by the Trinidad Leaseholds, and the Venezuelan Oil made broadly satisfactory progress. On the basis of 12½ per cent. dividend, the £8 ordinary shares at £21½ yield 4·7 per cent.

General Mining.—The General Mining report does not add appreciably to the information published in the preliminary summary, discussed in our issue of April 3rd. It is emphasised, however, that the increase in the portfolio of £735,300 to £2,630,050 chiefly represents gold mining shares. Dividend receipts upon these holdings may account for the relatively small decline in profits last year, despite unfavourable market conditions. No details are given regarding the new acquisitions. The Phoenix Oil has been unable to pay any dividend since March last year, but the normal 12½ per cent. dividend of Metal Traders was supplemented by a 17½ per cent. bonus. It has been understood for some time that Central Mining and General Mining have collaborated in certain interests, and that, in certain circumstances, a closer union might be expected. Recent appointments to the directorates of several associated companies mark the completion of these arrangements. On the 25 per cent. dividend paid during the past two years, General Mining £1 shares at £4½ yield slightly over 5 per cent.

Other Company Results.—Our usual analysis of profit and loss accounts on pages 399 and 400 presents the results of more than ninety companies. Rubber company reports are the largest group, but the list includes the results of several important miscellaneous industrial concerns, such as *British Match Corporation* and *Ever-Ready Company*. On page 377 we discuss the results under the heading "Shorter Comments."

THE STOCK EXCHANGES

London

SETTLING DAYS
TICKET ACCOUNT
MAY 24 MAY 26

THE market's first inclination this week was to look on the bright side of the Rome conversations, to anticipate Thursday's air debate by buying air-

craft shares, and to maintain quiet but firm conditions in gilt-edged. But the tone has subsequently become easier. The large fall in rail traffics, compared with the pre-Coronation week of 1937, disturbed the ordinary and junior preference stocks, and the announcement of the L.C.C. loan (discussed on page 370) produced a setback in the gilt-

edged market. Turnover has been restricted and price movements of small extent, though generally downward.

Small business was accompanied by steady prices in the *gilt-edged* market at first. On Tuesday morning a modest advance had been recorded before the announcement of the L.C.C. loan, which was followed by small net falls

Company Meetings of the Week.—Reports of the company meetings held this week commence on page 387 of this issue. Sir A. Steven Bilsland discussed the industrial development of Scotland at the *Union Bank of Scotland* meeting. Sir Steven pointed out that the success of the Scottish industrial estate at Hillingdon demonstrated the eager response to facilities for new industries, and he emphasised that the need for new markets had become more urgent with the development of trade restrictions in recent years. Mr Lionel N. de Rothschild devoted particular attention, at the *Alliance Assurance* meeting, to the unsatisfactory position of motor insurance, arising from increased accidents, and costlier claims. Figures cited by Lord Middleton in evidence of the growth of *Yorkshire Insurance* showed that the company's total funds had increased by £691,696 to £15,353,360 and the total assets by £790,546 to £17,323,194. At the *Guardian Assurance* meeting, Colonel Lionel Hanbury disclosed that, at the end of last year, the market value of investments showed a surplus over book values exceeding £1,000,000. The Hon. W. B. L. Barrington, at the *Gresham Life Assurance* meeting, dealt with the adjustment of the Society's Spanish assets in the books; this is reflected in a reduction of the total assets from £10,661,326 to £10,430,134. At the *Gresham Fire and Accident* meeting, Mr Barrington referred to the increased burdens placed upon insurance companies by the recent *Rose v. Ford* decision, and by the inequitable incidence of N.D.C. At the *Licences and General Insurance* meeting, the Hon. Reginald Parker reported that premiums had improved in the motor section, which had contributed a profit to the profit and loss account. The *Spillers* meeting is discussed on page 374. At the *London Electric Wire* meeting, Mr W. J. Terry disclosed that the unspecified contracts brought forward into 1938 were higher than those brought into 1937. Sir Thomas Keens reported at the *Ideal Building and Land Development* meeting that operations were still being carried out on 34 estates in or near London; the company was now operating in Birmingham and Southampton, and enquiries were on hand for other provincial districts. At the *Calcutta Tramways* meeting, Sir Geoffrey R. Clarke expressed the belief that the expenditure of £355,000 on new rolling stock in the past few years had been amply justified. Reviewing the trading position of *Indian Copper Corporation* in 1937, Sir Godfrey Fell reported that, after September, demand revived briskly, and in the current year there had so far been no cause to complain of slack business. Mr C. F. Bell pointed out at the *Boulder Perseverance* meeting that the maintenance of an average value of about 8 dwt. was a wonderful achievement after some forty years' working. A further decrease in mining costs of at least 10d. a long ton is expected from the full operation of the new compressors and winder. At the first meeting as a public company of the old-established business of *F. Francis and Sons*, Mr John Ismay reported that nearly all the different departments showed increases over the corresponding period last year. Presiding at the *Anglo-American Debenture Corporation* meeting, Mr Richard S. Guinness expressed satisfaction that the value of the company's investments remained in excess of book cost. At the *Pataling Rubber Estates* meeting, Mr Eric Miller reported that forward sales had been made for 1938 for 228 tons at just under 11d. a lb. Addressing members of the *Ford Motor Company*, Lord Perry emphasised that to-day the motor industry in this country ranked third in importance, yet nowhere was competition more fierce.

on the day. With this operation overhanging the market, price movements remained small and business became restricted. Modest initial improvements in home corporation scrips were checked for the same reason, and prices were adjusted to conform with the L.C.C. loan terms. Further selling of New Zealand loans was again evident. Among foreign bonds, Austrian issues improved at first, but the entire European list suffered a reverse in mid-week. Far Eastern loans were also offered, while Brazilian bonds were affected by the reports of a revolt against the Vargas Government.

★

Throughout the week, the home rail market has been dismal. Selling has gathered momentum with the adverse traffic trend, and the heavy setback in this week's return—after all explanations of the pre-Coronation comparison—affected the preference stocks to the extent of as much as two points. Argentine rail stocks remained dull.

Except for activity in aircraft shares, the industrial share market experienced a small turnover and slight losses. Iron and steel shares were subdued, most shares shedding a few pence each day. Before succumbing to general influences, Stewarts and Lloyds were a firm feature on Monday on the good report, and Ruston and Hornsby resisted the downward trend in mid-week. Staveley fell after the Markham pit accident. Coal shares were consistently dull, and electrical equipment issues little better. Motor shares were firmer on Tuesday following the March registration figures; Ford improved on the meeting, but the week generally was not satisfactory. Aircraft shares were in active demand on Monday and Tuesday, and most issues went ahead, with Handley Page, Bristol, and de Havilland in the lead. Hawker-Siddeley orders were also active. Some profit-taking, however, occurred in mid-week on the approach of Thursday's debate, and many of the earlier gains were partly lost. Breweries started well on provincial support, but later moved irregularly. Stores continued dull, with narrow movements. The Reckitt-Colman merger was the chief point of interest in the provisions group. Textiles were listless, some support for Coats being followed by a small reaction. Shipping shares were brighter in mid-week, under the lead of Union Castle ordinary. The miscellaneous group was in uncertain mood; price changes were small, and no marked trend was evident. After a fair start, British Oxygen reacted slightly on Wednesday, despite the good report.

★

Though prices were satisfactory, very little business was passing in the oil market. On Monday, however, interest broadened when fears of French selling proved unfounded. Activity slackened later, and in mid-week Paris turned sellers. Burmah Oil responded to the share bonus on Thursday. Despite the small turnover, rubber shares were firm. In the mining market conditions were firm, although activity was at a lower ebb than ever. Kaffirs started quietly, one of the few bright features being Western Holdings on development news. Interest broadened on Tuesday, with some local demand for dividend-payers and Paris support, but

dwindled again in mid-week. Rhodesian coppers started quietly, but with a firm undertone, and on Tuesday provided one of the chief features of the market with good gains. Turnover, however, was small, and conditions quietened later.

ACTUARIES' INVESTMENT INDEX

Another small fall has occurred in the Actuaries' index of 151 industrial ordinary share prices. On Tuesday last (May 10) it stood at 68.3, against 68.7 a week ago and 67.5 a month ago. The yields are 5.44, 5.42 and 5.46 per cent. respectively. A selection of the separate indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices, 1938 High
	Apr. 12, 1938	May 3, 1938	May 10, 1938

New York

FOR the Wall Street speculator, the market's inability to break decisively through the April resistance points may be disappointing. Market conditions have continued irregular and indecisive. On Friday last week and again on Monday stocks advanced briskly, on a rising turnover, but the readiness to take profits, on an equal volume of trading, is apparent after every recovery. The prospect of Senate opposition to the Wages and Hours Bill heartened the market, and the Tax Revision Bill, which was sent up for signature this week, marks a further movement of the legislative tide in Wall Street's favour. The latter's difficulty in deciding whether the bear market is at an end or not is heightened by the lack of positive industrial evidence pointing towards potential recovery in the near future. Steel output remains unchanged at 30½ per cent. of capacity, according to Iron Age, while power output is run-

ning nearly 11 per cent. below last year's level. Utilities, however, were assisted by the reported agreement between the T.V.A. and the utility companies in its area. New York traction issues advanced, and some demand was reported for speculative rail bonds. Oil shares reflected the unsettled price conditions in certain crude markets.

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(w) Interim dividend. (x) Final dividend. (y) Dividends for full year. (z) Paid in £N.Z. (aa) Allowing for exchange. (ab) Flat yield.
 (ac) Yield on 34% basis. (ad) Based on payment of 2½%. (ae) To redemption at par, in year shown. (af) Yield on 15½% basis.
 (ag) Yield worked on a 5½% basis. (ah) Yield based on 40% of coupon. (ai) Free of Income Tax. (aj) Yield based on 45% of coupon.
 (ak) Yield worked on a 14% basis. (al) 1% paid free of income tax.

* Bid and offered prices are free of Commission and Stamp Duty. (a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield on 20% basis. (e) Including bonus of 5% free of tax. (f) Yield worked on a 2 per cent. basis. (g) Calculated at 18½ annas per share of £1.9. (h) Annas pershare. (i) 8½% paid free of income tax. † Free of Income Tax. (j) Yield worked on 35% basis. (k) Highest price 132½ = £225 per cent. dividend on old shares, before 50 per cent. capital bonus. Yield at 25 per cent. = £5 14s. 6d.; at 16 per cent. = £4 6s. 0d. (l) Price on £300,000 more capital than in preceding year. (m) 17½ per cent. cash dividend and 7½ per cent. in deferred ordinary stock. (n) Dividend before the 200% capital bonus 4s. 6d. per share.

Industry and Trade

British Steel Developments.—The returns of iron and steel production in April confirmed our view that, in the absence of a revival in demand, a contraction in output was unavoidable. The output of steel ingots and castings in April was lower than in any corresponding month since 1935. Production last month was 938,600 tons, compared with 1,080,400 tons in April, 1937, and 984,200 tons in April, 1936. Calculated on a daily basis, the output of steel last month was 6 per cent. below the level of a year ago. The output of pig iron, at 661,000 tons, though 19,700 tons lower than a year ago, was still above the level of April, 1936. Unfortunately, there are no signs of a sustained revival in demand. And as stocks, swelled by the heavy imports from June, 1937, to March, 1938, remain substantial, it is difficult to see how the industry will be able to dispose of its output even at the level to which it was reduced last month. The reversion of the steel duties to the higher level at the end of March has now been followed by the removal of pig iron from the free list, to which it was added on March 3, 1937. The former duty of 33½ per cent. was reimposed on May 12th. It remains to be seen whether the re-imposition of the import duty on foreign pig iron will enable producers in this country to maintain the current rate of output.

—And the Steel Cartel.—The decline in the demand for iron and steel has not been confined to this country. In the United States, for example, the output of steel has fallen to 30.5 per cent. of capacity as a result of the lack of new orders. Moreover, many importing countries have substantially curtailed their purchases. Considerable significance attaches, therefore, to the forthcoming

meeting of the Joint Co-ordination Committee of the European Steel Cartel in Rome on May 24th. It is expected that the renewal of certain Comptoir agreements within the Entente Internationale D'Acier will be confirmed at the meeting. It is understood that progress has been made towards a settlement of the dissensions among Belgian producers—caused by the demand of two concerns for higher quotas—which had stood in the way of a renewal of the agreements after June 30th. If the Comptoir agreements be renewed, as is confidently expected, the prolongation of the Entente Internationale D'Acier, and of the latter's agreement with the British industry, will follow automatically. In addition to the meeting of the Joint Co-ordination Committee of the Steel Cartel, the Tinplate Cartel, the Rail Makers' Association, and the International Scrap Convention will also hold conferences. These Cartels undoubtedly face a difficult period, especially as capacity is still being extended in a number of countries.

Lancashire Hit Again.—During the last few months the Lancashire cotton industry has been adversely affected by a number of developments in export markets. The cocoa dispute in West Africa has led to a sharp reduction in exports and, more recently, manufacturers have had to face a substantial increase in Egypt's tariff on cotton goods. This week the suspension of import licences by Colombia for a wide range of textiles has caused alarm. Colombia is an important market for Lancashire cotton goods, the exports of cloth last year being 62,634,000 square yards, valued at £1,477,616. Meanwhile, production in both the spinning and weaving sections is very irregular; some mills have closed down for an indefinite period and others are running only during

SHORTER COMMENTS

(continued from page 377.)

Boots Pure Drug Company.—Net profits year to March 31, 1938, £762,625 (after N.D.C.), against £799,898. Dividends, 24 per cent., less tax, plus 5 per cent., tax free bonus (same). There is also a capital profit from sales of securities of £56,140; a special cash capital distribution of 2d. per 5s. share (not subject to tax) is recommended.

Lake View Investment Trust.—Revenue for year to March 31, 1938, £120,977 (£110,177). To interest and expenses £47,669 (£46,205). To reserve £15,000 (£10,000). Ordinary dividend raised from 8½ to 9 per cent. Carry forward raised from £37,835 to £44,212. Valuation of investments at March 31st showed depreciation of 4 per cent.

Edmundsons Electricity Corporation, Ltd.—The results of the operations of the Edmundsons group of companies during April, 1938, as compared with April, 1937, show an increase of 5 per cent. of units sold.

British Match Corporation.—Net revenue from subsidiaries and associated companies for year to April 30, 1938, £468,242, a decline of £7,843. Ordinary dividend maintained at 7½ per cent. Written off goodwill, etc., £60,000, as before. Carry forward £50,175. Cash stands at £413,823 (£351,822); Government securities at £683,916 (£700,512).

Smith's Potato Crisps.—Profit for year to March 31, 1938, £164,031 (£130,627). Ordinary dividend raised from 27½ to 32½ per cent. To taxation reserve, £15,000; reserve, £10,000 (£20,000); staff pensions, £1,000 (same). Carry forward raised from £43,978 to £48,148.

British Electric Traction Company.—Total revenue for year to March 31, 1938, £669,404, an increase of £83,731. Net profit £55,576 higher at £446,472. Deferred

dividend maintained at 5 per cent. but is on a capital increased by the previous year's 10 per cent. bonus. This bonus of 10 per cent., tax free, is repeated, in £1 deferred shares. This leaves £185,323 to be added to undivided profits account, against £138,659, making £1,721,277.

Eno Proprietaries.—Profits for 1937 fell from £210,724 to £186,535. Transferred from tax reserve, £17,000, no longer required, making £203,535. To income tax and N.D.C. £50,153 (£52,404). Ordinary dividend reduced from 13 to 11 per cent. To reserves: for foreign assets, etc., £6,872; advertising, £10,000; depreciation of British Corporation Stocks, £3,268. Carry forward £43,426, against £32,529.

Ever Ready Company (Great Britain).—Profit for year to March 31, 1938, £531,575 or £4,242 higher. To reserves: £146,721, against £112,059. To staff fund £6,229 (£8,958). Ordinary dividend maintained at 35 per cent. on increased capital. No bonus distribution, against 10 per cent. a year ago. Carry forward raised from £63,417 to £68,402.

British-Borneo Petroleum Syndicate.—Net profit for year to March 31, 1938, £48,462, a reduction of £20,128. From taxation reserve, £5,000. To reduce book value of investments, £43,875. Ordinary dividend reduced from 17½ to 12½ per cent. Carry forward reduced from £44,758 to £21,533.

Ocean Coal and Wilsons.—It is proposed to write down issued ordinary capital from £5,000,000 to £4,000,000. The £1,000,000 thus available will be used to write down holdings in United National Collieries by £881,430 to £279,553 (equal to 5s. 4d. per ordinary and 20s. per preference share) and in other subsidiaries. Remaining capital of United National Collieries is to be acquired, to facilitate merging of subsidiaries

into one operating company. United National preference holders offered per £1 share 12s. preference and 8s. ordinary shares in Ocean Coal reorganised capital, and ordinary holders, 5s. 4d. ordinary. The Ocean Coal Report, 1937, shows balance for disposal £388,990, as compared with £311,725. Ordinary dividend raised from 2 to 3½ per cent.

International Nickel Company of Canada.—Net profit first three months of 1938 \$10,113,764, or 66c. per common share after preferred dividend. This compares with \$11,355,243 for the last quarter of 1937 (74c. per common share) and \$11,714,956 (77c. per common share) for the first quarter of 1937. Consolidated balance sheet at March 31, 1938, shows current assets at \$87,912,635 (including \$50,609,125 cash). Total of earned and capital surplus now \$133,898,367, against \$131,557,162 at December 31, 1937.

Radio Corporation of America.—Consolidated statement for March quarter, 1938, shows net income of \$2,820,547, against \$3,503,766 for first quarter of 1937. After interest, depreciation, amortisation and taxes, net profit was \$1,437,801, against \$2,243,056, and after preferred dividends, balance for Common Stock was \$631,708, against \$1,436,964, equal to \$0.045 per common share, against \$0.103.

Burmah Oil Company Limited.—The directors of the Burmah Oil Company have decided to write up its holdings of Anglo-Iranian Ordinary stock and to distribute a capital bonus of one new £1 share for every two £1 units held, ranking for dividend as from January 1, 1938. The final dividend is 17½ per cent., and, with a cash bonus of 7½ per cent., the year's total is raised from 27½ per cent. to 30 per cent. Profits have risen from £3,488,035 to £4,162,285. Reserve receives £960,513 (against £500,000), and £637,271 will go forward, against £647,155.

alternate weeks. Output is now at very little more than 50 per cent. of capacity. Moreover, stocks are heavy and there are no signs of an early improvement.

Road Transport Wages.—The Government's Bill to regulate the wages of more than 600,000 road transport workers engaged in the carriage of goods is being pressed forward with commendable speed. This measure, which was analysed in *The Economist* on April 23rd (page 181), received a second reading in the Commons on Wednesday without a division. It substitutes the Ministerial enforcement of decisions arrived at by a Central Board representing both employers and employed, including independent members, and advised by eleven area boards, for the inadequate conciliation machinery established in 1934 to deal with the employees of 62,000 public and limited carriers. These workers, who are largely organised in trade unions, are also to be the first recipients of statutory paid holidays. The men who work for the 186,000 private carriers, whose haulage activities are ancillary to other trades, are almost wholly unorganised, and were excluded from the tentative wages provisions of the 1933 Act. Only 60,000 of these private carriers are covered by wages agreements. Under the new Bill, private carriers' employees may apply, individually or through a trade union, to the Minister of Transport for the adjustment of their wages, and the Minister may then refer the matter to the Industrial Court. The Court's duty will be to enforce collective agreements where they exist, and, in the case of the 126,000 private carriers not so covered, to fix reasonable rates of wages when appealed to, using the remuneration given for corresponding work in the same trade as their criteria. On the one hand, the Bill, which has been welcomed by all parties, will strengthen collective bargaining; and, on the other, by including the employees of private carriers, it will strike in a salutary fashion at the basis of unregulated conditions and low wages, on which much road competition still rests to the detriment of industrial welfare and public safety.

Volume of Overseas Trade.—The course of the volume and value of our overseas trade reflects the interplay of domestic and international economic developments. The accompanying diagram, based on the Board of Trade's quarterly indices, shows the trend of the volume of retained imports and domestic exports since 1927. The volume of exports, it will be seen, never fully recovered from the setback experienced in 1929–32, but imports have not only reached, but surpassed, their pre-depression level. The lag in the recovery of exports is due, in a large measure, to the widespread restriction of the international flow of commodities and to the growth, in importing countries, of the manufacture of cotton goods and other commodities formerly exported on a large scale by this country. The marked increase of imports, on the other hand, is a reflection of the expansion of domestic activity between 1932 and 1937.

In the summer of 1937 world production and new civil investment for commercial purposes in the home market took a downward turn. The change of trend was not immediately reflected in the volume of retained imports, which continued to expand until the end of the year. The volume of domestic exports, on the other hand, did not show its usual seasonal increase in the last quarter of 1937. But in the first quarter of 1938, both imports and exports showed a sharp decline which cannot be explained by seasonal influences alone. Compared with the corresponding quarter last year, the volume of domestic exports in January–March, 1938, showed a decline of 8 per cent., but retained imports, despite their fall, were still 5.1 per cent. higher. The persistent downward trend of new orders secured by industrialists points to a further decline in both imports and domestic exports.

The Terms of Trade.—The trend of average import and export prices, reflecting changes in the terms of trade, is shown by the second diagram, based on the Board of Trade's quarterly indices. The average value of retained imports, consisting largely of foodstuffs and raw materials, declined much more heavily in the depression than that of domestic exports, which consist mainly of manufactured goods. Neither import nor export prices fully recovered from the decline in 1928–33.

In the summer of last year average import prices took a sharp downward turn, which, by reducing the purchasing power of overseas countries, led to the fall of the volume of exports shown in the first diagram. The cheapening of the raw materials of British industry has slowed down, but not yet arrested, the rise in average export prices. British conversion costs, in other words, showed a further, if modest, increase in the first quarter of this year. Last summer, the terms of trade thus again changed in favour of this country. And, since falling import prices are usually accompanied by a reduction in the volume of exports, we have again entered the period of rising real wages and falling employment.

Control of Hops Production.—Of the various Marketing Boards dealing with milk, pigs, potatoes and hops which have been established in Great Britain by the Agricultural Marketing Acts, only the two latter control

OTARD'S EST. 1795
V.S.O.P.
LIQUEUR BRANDY
MATURED AND BOTTLED AT CHATEAU DE COGNAC

the output of the individual producer. When the Hops Marketing Scheme—the earliest to be formed—was established in 1932, the dislike for any form of production control was sufficiently strong to cause the deletion of the original clauses providing for basic quotas for each producer. Two years later, the scheme was amended to include such powers for an experimental period of five years, which ends in July, 1939. A Committee was appointed last February to consider the future of these provisions and its Report has just been published. The Committee is of the opinion that some control of production was essential in the peculiar conditions of the hop industry. There is only one outlet for hops—breweries—and the brewers' demand is highly inelastic. Consequently, even a small surplus or deficiency in production is likely to cause enormous variations in price. Further, a hop plant does not bear fully until its third season and has a productive life of 10-15 years. Hence, adjustment of productive capacity to changes in demand is slow. During the last four years the hop growers have in fact been assured a stable market at a fixed price for all the hops the brewers will buy, and both parties seem satisfied with the existing arrangements. The Committee has therefore recommended that the quota provisions should be continued on the present basis, with minor modifications, for a further seven years until 1946.

Employment in Agriculture.—The trend of wages in agriculture was discussed on page 320 of last week's issue of *The Economist*. The course of employment, shown in the table below, is equally interesting. Although the earnings of agricultural labourers fell little during the depression and have since increased with the rise in the cost of living, there has been a continuous fall in employment on the land. Between 1929 and 1933 the total number employed fell by 7 per cent. and the rate of decline increased during the subsequent recovery from the depression.

Total Workers ...	770,252	715,546	631,100	- 7	-18

* Excluding the occupier, his wife and domestic servants. † Provisional figures.

The drift from the land has been most marked in the case of youths under 21 years and casual workers.

But the decline of 18 per cent. in employment during the past eight years has not been accompanied by a reduction in production. The latest figures of the Ministry of Agriculture show that the agricultural output, when valued at the prices ruling in 1930-31, increased steadily until 1934-35. Since then there has been a slight reduction in livestock and products and a more marked fall in farm

AGRICULTURAL OUTPUT VALUED AT 1930-31 PRICES					
	1930-31	1933-34	1934-35	1935-36	1936-37
Live stock and products	100	114	115	119	117
Farm crops	100	110	118	105	102

crops, due largely to smaller wheat, oats, and potato harvests. But the output of livestock products is still much, and that of farm crops slightly, larger than in 1930-31. This high output has been achieved by an increase in the

production per man employed, which has been rendered possible by the growing use of machinery and by better organisation of farm work.

Slump in Oil Tanker Rates.—The 1932-4 slump in freight rates for oil was partly responsible for the formation, in February, 1934, of the Oil Tanker Pool. The main object of the Pool was declared to be the stabilization of freight rates, but in this respect its operations have not apparently been successful. Freight rates remained at a low level until early in 1936, when a rise took place which culminated in the spring of last year.

TANKER FREIGHT RATES
(Per long ton)

	Gulf to U.K. and Continent		Black Sea to U.K. and Continent	
	Clean	Dirty	Clean	Dirty
1933—Lowest	s. d. 8 1	s. d. 7 0	s. d. 6 6	s. d. 6 1
1936—Highest	15 0	14 6	13 6	14 6
1937—Highest	35 0	35 0	30 0	30 0
1938—Early January ...	32 6	25 6	20 0	20 0
1938—End April	16 0	16 0	13 6	12 0

Since then rates have again fallen to about half the peak level. As the demand for tanker space is very small at the moment, it is quite possible that the lowest level has not yet been reached, although the recession seems already to have been carried far. According to Lloyd's Register of Shipping, the oil tanker tonnage last June was only 16.5 per cent. larger than in 1930, although the world demand for oil has more than doubled in the interval. Recent launchings and the tonnage under construction are not large, so that any sustained revival in international oil shipments may easily lead to another abrupt jump in rates. The market is definitely unstable and the Tanker Pool seems to have little control over the situation.

Wholesale Prices Lower.—The past fortnight has witnessed a further weakening of wholesale prices in both England and the United States. The movement is not very pronounced, but it has sufficed to carry most of the indices to new low levels since the beginning of the present recession. *The Economist* index number of British primary products, however, is still no lower than it was at the end of March. The French index for May 6th registers an advance of 3.1 per cent. during the previous fortnight. This index just pre-dated the advent of the Daladier franc, and so a further advance may be expected.

The following table shows the movement of the various groups comprised in *The Economist* index number:—

	The Economist INDEX (1927 = 100)			
	Sept. 18, 1931	May 19, 1937	Apr. 27, 1938	May 11, 1938
Cereals and meat...	64.5	94.6	85.5	87.5
Other foods	62.2	68.4	60.2	59.8
Textiles	43.7	73.8	54.0	53.2
Minerals	67.4	107.1	92.0	91.8
Miscellaneous	65.8	86.7	76.5	76.1
Complete index	60.4	86.0	73.3	73.2
1913 = 100	83.1	118.4	100.8	100.8
1924 = 100	52.2	74.3	63.3	63.3

British grain and potatoes have risen in price during the past fortnight, and maize and rice are also dearer, but Canadian wheat is cheaper. Beef and bacon prices have fallen. There were declines in tea and cocoa and a further advance in butter. Textile prices are generally lower, while non-ferrous metal prices have also fallen, with the exception of tin. Among miscellaneous materials, hides are firmer, but Swedish timber, leather, linseed oil and creosote were all cheaper.

INDUSTRIAL REPORTS

The general trend of industrial activity remains slightly downwards. Moreover, there has been no improvement in the volume of commercial domestic or export orders. The output of coal and iron and steel is now below the level of a year ago. As our Cardiff correspondent reports this week, collieries in South Wales are unable to dispose of their current output and stocks are already substantial. The lull in new orders for iron and steel persists, and stocks remain heavy despite the curtailment of output. It remains to be seen how far the re-introduction of duties on pig iron on May 12th will relieve the position. There has been no improvement in the cotton textile trade, and current production of yarns and piece-goods is at only 50 per cent. of capacity. As a result of the steadier tendency in raw wool prices, the wool textile trade is a little more confident.

Coal

Cardiff.—Conditions on the Cardiff coal market are more depressed than they have been at any other period this year. Current business is almost exclusively limited to long period contracts; but owing to the expiration of some of these and the extreme scarcity of new orders, collieries are unable to dispose of their current output, and stocks are abnormally heavy. At the South Wales ports last week shipments in the foreign and coastwise trades totalled only 330,400 tons, compared with 385,360 tons in the corresponding week last year, and with the peak weekly total in 1937 of 492,400 tons in July. Loading, however, has been a little more active during the past few days. Prices are nominally unchanged, though it is understood that a little more elasticity has been introduced into the policy governing new permit prices.

Glasgow.—The export market has brightened a little during the week. So far not much new business has been booked, but increased inquiries, chiefly from Scandinavian markets, have given encouragement to the collieries. In the local market the feature has been the sharp contraction in the household trade caused by the extraordinary run of good weather. This has caused a glut

Commodity Statistics: A New Service.—The attention of our readers is directed to the page of commodity statistics which appeared for the first time in last week's issue of *The Economist*, and will henceforth be a regular feature of our Industry and Trade section. This week's table appears on page 385, and includes tables of coal production by districts, of raw cotton delivered to spinners, of the turnover on the London Metal Exchange, and of stocks of the principal metals in the official warehouses in this country. In addition, there are tables showing the origin and destination of world wheat shipments, exports of maize and linseed, and sales of British cereals. Other commodities for which statistics will be given regularly include bacon, cocoa, coffee, meat, pepper, sugar, tea and rubber. These weekly tables supplement the monthly statistics on commodities which have been given in our monthly *Trade Supplement* since January, 1937. They are presented in pursuance of our desire to provide a regular, comprehensive and up-to-date summary of information likely to be of service to the merchant, the industrialist and, last but not least, to the general reader of *The Economist*.

of supplies in various directions, and prices have only been upheld by official control. Coastwise trade to London and other centres is slackening. The price trend remains easy.

Sheffield.—The reduction in the pithead prices of house coal has had little effect so far, demand continuing to be poor. The lull in the lighter steel trades and at rolling mills has weakened the demand for industrial coal, but this is regarded as temporary. One South Yorkshire colliery working the Barnsley seam has been closed indefinitely. It is understood that work is to be concentrated on a neighbouring pit which has been completely modernised. Domestic coke orders are fewer, and with reduced production of pig iron, demand for blastfurnace coke is weak. Prices of patent-oven coke are barely steady. Interest in graded coke for works and central heating is quiet.

The export market continues unsatisfactory, although a few more inquiries have been attracted by the general lowering of prices. Supplies of all grades of steam coal are ample, but they are not much inquired for in the face of foreign competition. Prices are unchanged.

Newcastle-on-Tyne.—A certain amount of business continues to be booked in North-East coals with countries subject to trading agreements, but the market generally is quiet, the easier trend being a great disappointment to producers after the active conditions experienced last year. North-umbrian collieries producing steam coals have difficulty in securing trade to provide a full week's work; in Durham, collieries producing coking coals have good order books, but others are short of business. The coke market is inactive, there being no inquiry from abroad.

Iron and Steel

London.—According to the weekly report of the London Iron and Steel Exchange the iron and steel markets continue rather inactive, although the principal consuming trades are taking large tonnages of material. The lull in

new business, however, persists, and in most departments orders are being disposed of much more quickly than fresh contracts are being obtained. Whilst this applies to the trade generally, the position at the heavy steelworks is somewhat better than in the lighter branches where the demand is affected by substantial stocks.

In the pig iron department large accumulations exist at both producers' and consumers' works, and new business is not likely to be transacted upon an important scale until these have been considerably reduced. Imports of foreign pig iron have practically ceased and home production has been restricted.

Similar conditions rule in the semi-finished steel department. The demand for finished products is slack, and as a consequence the stocks of semi-manufactured goods at the consumers' works are being only slowly absorbed.

In the finished steel market the demand is steady, but is showing few signs of developing fresh strength. Most of the steel works have sufficient orders in hand, however, to keep them well occupied for some months. Export business is quiet; but the recent interest shown by overseas buyers appears to have been maintained.

Sheffield.—There has been little business in the iron market this week, and pending some announcement regarding prices consumers are pursuing a waiting policy. Such transactions in foundry and forge as take place are of small importance, consisting of limited parcels for early delivery. Stocks at furnaces are increasing in spite of reduced output, and the decision of the Government on the suggested national reserve of pig iron is awaited with a certain amount of anxiety. A good many contracts will expire in June, but so far there have been few renewals. There is a quiet but fairly regular demand for hematites, particularly for special qualities. There is no change in the finished iron position.

Good business continues in the steel market, although the demand for basic billets is somewhat less pressing than

(Continued on page 386)

(Continued from page 383)
earlier in the year. Demand for steel strip continues strong, and that for stainless steel sheets is as insistent as ever.

With ample supplies of iron and steel scrap in hand, consumers are disinclined to enter into fresh commitments. The majority of prices are subject to control, but where there is a free market quotations are inclined to show weakness.

While the heavy industries here are well employed, some of the lighter branches are experiencing a decline in orders. Armament work is increasing. One Sheffield firm is laying down a new plant for the production of stainless steel at an outlay of about £90,000, and several others are extending their works—evidence that the future is regarded with confidence.

★

Middlesbrough.—There is no change in the local position of the iron and steel trade. Production of Cleveland foundry iron is still intermittent and part of the small output is being put into stock. The output of hematite pig iron will be reduced this week by three furnaces and in the absence of an early change it is understood that output will be further reduced.

Supplies of semi-finished steel are plentiful; re-rollers have better reserves and are not seeking further supplies.

Constructional and heavy steel departments are busy, and have good order books, but sheet makers are on reduced output.

The demand for blast-furnace coke is easy with supplies plentiful, and although market quotations are understood to be 36s. per ton delivered at the furnaces on Tees-side, it is probable that forward business could be negotiated at a lower figure. Foreign ore imports, though smaller, are ample for requirements. Heavy steel melting scrap is now in good supply.

★

Glasgow.—The position in the iron and steel trades continues to improve, although in some directions new business is not so plentiful as is desired. Production is maintained at a very high level at the heavy steel-making plants, and there is still work for many months on the books. While orders for lighter material are not very satisfactory, there seems to be an exceptional amount of work under negotiation calling for a considerable tonnage of lighter sections, and the outlook is considered not unpromising. Sheet makers also indicate that inquiries for galvanised material are more numerous than for some time past, and they, too, are hopeful that bookings within the next few weeks will cover a fair tonnage.

★

Cardiff.—The position in the iron and steel trade shows no improvement. A second blast-furnace has been closed down, and the output of pig iron has been reduced by approximately 40 per cent., while the latest returns of the tinplatepool give a production of 43.13 per cent. of allotted capacity. Shipments of tinplates last week totalled 6,192 tons, compared with 3,914 tons the previous week and 10,345 tons in the corresponding week last year; stocks in warehouses and in vans were reduced from 7,211 tons to 5,759 tons, compared with 3,687 tons in the corresponding

week in 1937. Prices were slightly firmer, and were quoted at from 21s. 6d. to 21s. 9d. per basis box for export.

Textiles

Cotton (Manchester).—Demand has remained restricted and there has been no change in the attitude of buyers. The opinion is held that there is little likelihood of higher prices in the near future, and in the circumstances customers are disposed to purchase from hand to mouth. It is estimated that production in spinning and weaving at the present time is at only about 50 per cent. of capacity.

Although there has not been any distinct decline in raw cotton prices sentiment has been rather bearish. Weather advices from the American belt have continued favourable, and there have been no indications of an improvement in world consumption.

American and Egyptian spinners have experienced another dull week. All counts and qualities have been purchased in limited quantities. Spinners continue to be harassed by stocks at the mills.

There have been no signs of increased activity in the cloth section and manufacturers have found it a struggle to secure even comparatively small contracts.

★

Wool (Bradford).—The third series of this year's Colonial wool sales opened in London last Tuesday. The most satisfactory feature is the increase in competition, supported by a considerable expansion in consumption. The additional competition from the Continent is welcome, but the home trade is still the mainstay of the London market.

Prices did not show much change compared with the close of the March series, though the best combing merinos sold slightly in favour of the grower. This is by no means unwelcome, for an all-round advance would stimulate the placing of orders for fabrics for next winter, besides benefiting every section of the wool textile industry. Crossbreds are inclined to be slightly in buyers' favour, but there is nothing to indicate any further serious decline, although an easier tendency would certainly suit the trade in view of the approach of the season during which the domestic clip is marketed. It is significant that so far there has been no evidence of any increased khaki orders, which points to a limited consumption of crossbreds.

THE COMMODITY MARKETS

THE steady downward trend of the prices of primary products was arrested during the past week. The recovery, however, has not yet gone very far, and since there has been no change in the underlying conditions of supply and demand, the slight improvement does not necessarily portend a change of trend. Indeed, there is no evidence of a significant increase in purchases by consumers.

Among non-ferrous metals, copper, tin and spelter are slightly dearer than a week ago, but lead was again marked down. Raw cotton was slightly cheaper, but raw wool prices at the auctions in

London were steady. Rubber registered a slight improvement. Wheat was again cheaper, but raw sugar was marked up a little.

The commodity markets in the United States also showed a steadier tendency. Thus, Moody's index of the prices of staple commodities (December 31, 1931 = 100) rose from 136.6 to 137.0 during the week ended last Wednesday. A month ago the index stood at 139.9 and a year ago at 204.7.

Metals

Copper.—Prices fluctuated considerably during the week; the cash price closed at £38 17s. 6d. per ton, 5s. per ton higher than last week. The meeting of copper producers held last week decided to continue the present output restriction, but the discussion of the exports from the United States was apparently fruitless, so that the situation remains obscure.

★

Tin.—Consumer demand continues small, but speculative buying raised the price by £7 10s. to close at £167 10s. per ton. There is apparently a belief that the problems of the buffer pool are being solved, but the Malayan demand for an increase in standard tonnage remains a major difficulty.

★

Lead and Spelter.—Demand for both metals was poor and the small price movements were irregular. The production of both metals in March was in excess of consumption; American output of zinc fell from 43,400 short tons in March to 38,035 short tons in April, but deliveries have fallen off again and stocks of zinc amounted to 135,238 short tons at the end of March, against 11,227 short tons at the end of August, 1937.

Grains

The wheat market has been quiet, with prices for Australian and Canadian wheat somewhat lower, while prices of American wheat rose slightly. Stocks of maize in Europe show a further decline, and prices of American maize show a further rise. A wider demand was noticed for feeding and malting barley.

Other Foods

Provisions and Meat.—Bacon prices fell by about 2s. per cwt. during the week, Danish No. 1 selling at 104s. per cwt. Butter prices continued their rise; New Zealand fetched 131s. to 133s. per cwt. at the close of the week and Danish about 131s. per cwt. The market for meat was dull and prices unchanged.

★

Colonial Produce.—A good demand for medium teas was noticed at the auctions, and prices were slightly higher. Other markets were quiet and prices of coffee, cocoa and sugar show little change.

★

Fruit.—Imported supplies continue light, and prices are well held, except
(Continued on page 393)

COMPANY MEETINGS

THE UNION BANK OF SCOTLAND, LIMITED

DEVELOPMENT OF NEW INDUSTRIES

The annual meeting of shareholders of The Union Bank of Scotland, Limited, was held, on the 11th instant, in Glasgow. Sir A. Steven Bilsland, Bt., M.C. (the chairman of the bank), presiding.

The chairman, in submitting the directors' report, said that they would observe from the balance sheet that deposits stood at £33,436,000, which was an increase of £600,000 on last year's figure. Notes in circulation had increased by £21,000. The bank's capital at £1,200,000 and the published reserve at £1,800,000 remained unchanged.

On the assets side cash and money at call amounted to £7,754,000 and showed an increase of £1,092,000. Bills under discount, at £1,416,000, which included £765,000 Treasury Bills, showed a reduction of £87,000. These items, together with British Government Securities standing in the books at £15,970,000, amounted to £25,140,000, and they were in the strong position of having 68 per cent. of the liabilities to the public available in the form of cash or easily realisable assets.

Notwithstanding the increase in deposits, the amount of their investments showed a decrease of £1,389,000, and he was glad to say that was due in large measure to an increase in loans and advances of £1,022,000. For some years a steady drop in banking advances had presented them with difficult problems in regard to the suitable and remunerative employment of their funds, and the present increase in advances, following upon the increase of £1,500,000 reported last year, was very welcome. The profits of the bank were arrived at after taking into account every known liability, including allowance for the payment for the full year of National Defence Contribution, and the figure of £312,624 might be considered satisfactory.

It was gratifying to record that some progress had been made during the past year in the development of new industries. Scotland had suffered from lack of balance in her economic structure through being too much dependent on the heavy industries which had made her very vulnerable in a time of depression. The heavy industries would always be their mainstay, but it was essential that they should have a greater variety of industry to provide a counterpoise during periods of depression and to employ the labour displaced by the modernisation which had taken place in our heavy industries.

INDUSTRIAL FACILITIES IN SCOTLAND

The success which had been met with at the Scottish Industrial Estate at Hillington, where over 60 new businesses in a large variety of industries had been secured since last autumn, had clearly shown that the facilities now available for the first time in Scotland to cater for new industries on modern industrial estate lines were meeting with a ready response. The large number of further inquiries being received for factories gave promise of continued development. It was gratifying to record also, that the Commissioner for the Special Areas was promoting three small similar estates in the depressed areas of Lanarkshire to provide employment in those areas where coal pits had been worked out.

Some complaints had been made from other districts where the facilities of the Special Area legislation were not available that all this development resulted in unfair discrimination. This complaint was understandable, but it might be assumed that the question would receive attention from the Royal Commission on the Distribution of the Industrial Population, and it might be that the developments taking place in the special areas which were most in need of them would be a prelude to planning on a wider scale.

The outstanding event in Scotland this year was the great Empire Exhibition in Glasgow opened by His Majesty the King. The Exhibition was striking evidence of the resilience of Scotland and showed that she had not lost her courage, her spirit of enterprise, nor her faith in the future. It was certain that the Exhibition would bring a very large number of visitors to Scotland from all parts of the world during the next six months. They would be welcome and the fullest opportunity must be taken of their presence to develop business connections overseas, as it was vitally necessary to maintain export trade. The general tendencies of export trade had altered materially in the past few years and they must take every chance of opening new markets to recompense for those in which they found difficulties in the form of restrictions. The Union Bank had the honour to act as bankers for the Exhibition, and in this capacity a special office had been opened in the grounds at Bellahouston Park.

The report was unanimously adopted and a dividend at the rate of 18 per cent. per annum declared.

ALLIANCE ASSURANCE COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

MR LIONEL N. DE ROTHSCHILD'S REVIEW

The annual general Court of the Alliance Assurance Company, Limited, was held on the 11th instant at the Head Office, Bartholomew Lane, London.

Mr Lionel N. de Rothschild, O.B.E., the chairman, said that there had been a substantial increase in the new life business transacted during the year; the net total of £3,836,336 was nearly a quarter of a million in excess of the highest figure reached in any previous year. The demand for all the normal types of policy had been steady and it was gratifying that the "Alliance" Family Protection Policy continued to be popular. The premium income during the year had increased to £1,460,737, and the life and annuity funds now exceeded £22,000,000.

Their quinquennial investigation would be made at 31st December next and, although their mortality experience during the past year had been less favourable than in the previous year, the net rate of interest obtainable might fall and the market values of securities had been reduced, he was of opinion that the results of that investigation would be quite satisfactory.

Owing to restrictions on their operations imposed by Governments outside their own country, and to fluctuations in exchange, the income they derived from the foreign field tended to diminish, but activity in the home field had more than counterbalanced that loss and their income in both the fire and accident departments showed a substantial increase over 1936. The fire business had been even more profitable than usual and the surplus was the largest since 1928.

THIRD-PARTY AWARDS

In the accident department there had been a considerable expansion, especially in home business, and the increase in premium income exceeded £122,000. Sometimes surprising results of legislation occurred. A recent example was the decision of the courts that the legal personal representative of a person killed as the result of a tortious act by another could recover damages for the shortening of the deceased's life. One thing was certain, and that was that the awards of damages to injured third parties were continually rising.

The ratio of profit on the motor vehicle account in 1937 was only about 2 per cent. of the premium income. That was not unexpected for, while the number of road accidents had not diminished and the cost of claims continued to rise, the rate of premium which the motorist had to pay had not been increased. Unless the number of road accidents in relation to the number of vehicles on the roads could be substantially reduced, the cost of insurance protection must rise.

The results of the workmen's compensation business had been very satisfactory and they had had an increase in the fidelity guarantee account. The marine premium income for the year was some £68,000 higher, due to trade activity at home and abroad, which had had a favourable influence on the income derived from insurances on cargo. The premiums on hull business had been favourably affected by the increase in the value of ships and the application of the new joint hull understanding. The position with regard to cargo rates did not look so favourable; the tendency was still to reduce rates.

NATIONAL DEFENCE CONTRIBUTION

The profit and loss account contained a new item, National Defence Contribution, £40,000. They felt that the extension of the contribution to the interest on their reserves was an unfair discrimination between insurance companies and other trading concerns, and they were pressing that that injustice should be removed. The income tax at £93,536 was about £18,000 more than in the previous year and they had written £40,323 off the value of their buildings as against £27,257 in the previous year. Owing to those heavier charges the available balance on profit and loss account was about £38,000 less than last year. They had transferred £100,000, as against £150,000, to reserve and £50,000 to the pension fund, and increased their carry-forward by some £12,000. But for the National Defence Contribution, their available surplus would have been even larger than last year, and the results of the year could not be regarded as other than entirely satisfactory.

Owing to the various shocks to confidence experienced during 1937, there had been a general fall in the prices of Stock Exchange securities and as a consequence the margin between the market values and the book values of the company's holdings had been reduced. That margin, however, was still considerable.

The report and accounts were unanimously adopted.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED

RECORD HOME BUSINESS

The eighty-ninth ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on the 5th instant, at the head office of the Society, 188-190 Fleet Street, London.

The Hon. W. B. L. Barrington, the chairman, in the course of his speech, said: During the twelve months under review the society granted 7,916 life and endowment policies, assuring the sum of £3,538,303, after deducting reassurances.

The number of new policies and the net new life sums assured for the first three years of the present quinquennium—namely, 23,711 policies assuring £10,667,037—compare very favourably with the figures of 14,726 policies assuring £6,070,826, for the corresponding years of the previous quinquennium. The net new premiums for the year, after deducting reassurances, amounted to £173,599, including single premiums of £18,589. Sixty-four leasehold or sinking fund policies for £150,172 sums assured were issued during the year, and the consideration for annuities granted by the society amounted to £112,996.

The total net premium income in the life assurance fund amounted to £1,164,664, an increase of £67,941 over the previous year's figure. The total income of the society from premiums, interest, dividends and rents was £1,627,789. Death claims amounted to £265,721. The mortality experience generally has again been favourable, and that of our Spanish branch has been surprisingly little affected to date by the hostilities in that country. Policies which matured during the year amounted to £398,911, and surrenders paid amounted to £129,807. It has been considered advisable to strengthen the staff pension fund by the sum of £50,000.

In the balance sheet it is shown that the total assets amount to £10,430,134, as compared with £10,661,326 at the end of 1936. This reduction is consequent upon the adjustment in the rate of exchange at which the book value of the society's Spanish assets has been converted into sterling. The necessity for this adjustment was foreshadowed in my speech last year, and I feel sure you will agree that in the present circumstances it is desirable that the Spanish assets should be represented in the society's accounts at a figure which bears a closer relation to their actual value in terms of sterling. Whereas this step has involved a reduction of £767,397 in the book value of our assets, I need not remind you that the sterling value of our Spanish liabilities has been reduced proportionately. But for this adjustment, the life fund would have shown an increase of £480,486.

The average net rate of interest earned on the society's funds was £4 3s. 8d. per cent., compared with £4 6s. 3d. per cent. in the previous year. This reduction is not surprising having regard to the lower rates obtainable on new investments during 1937. The usual valuation of assets has been made as at December 31st last, and I am glad to record that this again showed a value in excess of the book values appearing in the balance sheet.

This completes my review of the work of the society during a year in which the international situation has introduced many complications affecting both the production of new business and the investment of our funds. It is, I think, a matter for congratulation that we are able to-day to present a report which confirms the continued progress of the society both in the home and foreign fields.

Before I conclude I must make brief reference to some interesting personal changes. We were fortunate to secure the services of Viscount Davidson, who joined our board in November last and whose election will be submitted for your confirmation. To succeed Mr Maltby, the directors have appointed as actuary Mr H. G. Jones, F.I.A., who has been in the service of the society since 1919, and as consulting actuary Mr H. E. Raynes, F.I.A., the actuary and life manager of the Legal and General Assurance Society.

I referred last year to the retirement of our manager, Mr Stebbing, which took effect from June 30th last. Mr David McAfee duly succeeded Mr Stebbing as manager and secretary, and I think we have every reason to congratulate him on the results shown in the report and accounts now presented. Further, I should like to offer our congratulations on the results of the year to our assistant manager, Mr Highton, to our investment manager, Mr Thiemann, to our assistant secretary, Mr Mogenssen, to all our chief officials and members of our staff, both at home and abroad, and to our agency managers and all our branch managers, agency representatives, and connections.

Lastly, I should like to refer to the services of our managing director. Mr Workman's pre-eminent qualities and experience render him quite invaluable to our society.

The report and accounts were unanimously adopted.

GRESHAM FIRE AND ACCIDENT INSURANCE SOCIETY, LIMITED

DIVIDEND MAINTAINED

The twenty-eighth annual general meeting of the Gresham Fire and Accident Insurance Society, Limited, was held, on the 5th instant, at the head office, 188-190 Fleet Street, London, E.C., the Hon. W. B. L. Barrington (the chairman) presiding.

The Chairman said:—My Lord, ladies and gentlemen,—I have to record, with deep regret, the loss by death since the last annual meeting of our colleague on the board, Mr J. E. W. Rider, and to express our appreciation of the valuable services rendered by him to the society. I must also mention the election during the year of Viscount Davidson to a seat on the board. Since our last meeting Mr R. E. Richley, the secretary and joint manager, has retired on pension. Mr C. S. Johnson, hitherto joint manager, has now become manager, Mr C. G. Potter has been appointed deputy-manager, and Mr S. E. Rider has been promoted from the position of assistant secretary to secretary. Mr Richley had completed forty years' insurance service, the last twenty-five of which had been with the society. The directors appreciate his valuable services during that time and wish him all happiness in his retirement.

You will notice a small decrease in the premiums in the fire account of £2,811. This is due to a reduction in the amount of reinsurance from other companies accepted by the society, our direct business having increased during the year. The claims, on the other hand, are less by £5,969, and represent 46.8 per cent. of the premiums, the lowest ratio which we have experienced for many years. The expense ratio is approximately the same as a year ago, and the profit at £9,494, is £2,597 higher.

In the accident account the premium income has increased by £15,140, to £227,525, but the claims have risen by £18,973, and while the expense ratio has remained stationary, the profit has diminished to the nominal sum of £415. This unsatisfactory result is due to two sections of our accident business—employers' liability and motor insurance—and both have been adversely affected by the very pronounced upward trend in damages for personal injuries.

In addition to this, a new burden has been placed upon the shoulders of the insurance companies by the recent decision in the House of Lords, in the *Rose v. Ford* case, entitling the legal representatives of a person killed as a result of an accident to claim for loss of expectation of life. Following these developments, we have raised our standard of provision for outstanding claims.

The valuation of the society's investments still shows an excess of market value over book value, in spite of the fall in prices generally, and our investment reserve, consequently, remains intact. Although the gross income received from interest and dividends was slightly larger than last year, yet owing to the higher rate of income tax the net income from this source was less by £155 than in 1936.

The underwriting profits, as shown in the profit and loss account, are smaller by £7,926 than in the preceding year, this being wholly due to the unsatisfactory results in the accident account already referred to. On the other side of the account, we have this year had to provide for a heavy item under the heading of "Balance of Profit and Loss on Investments and Exchange." This is mainly loss on exchange, the largest item being in respect of France.

We have also out of this account written down to current rates of exchange investments in foreign currencies deposited with Governments abroad under local laws. Provision has also had to be made for the first time for National Defence Contribution in respect of the last nine months of the year. In this connection I would like to add my voice to the many that have been raised in protest against what appears to us to be an unfair basis of the assessment for fire and accident insurance companies, a basis which discriminates unfavourably against us as compared with commercial trading concerns, and we venture to hope that the Chancellor of the Exchequer will see his way to adjust this inequality.

The total balance available in the profit and loss account at the end of the year is £26,369, and the directors have applied £5,000 as a further allocation to the staff pension reserve which we established last year. They again recommend the payment of a dividend at the rate of 6 per cent.

I have, on each occasion that I have had the privilege of addressing you, stressed the importance of raising our reserves to the highest possible point, and during that period a total sum of £50,000 has been added to the general reserve, which now amounts to £80,000. It is naturally a matter of some regret that we are not able this year to make a further allocation to this reserve, but our policy will be to continue to make the augmentation of reserves our first consideration.

The report and accounts were unanimously adopted.

YORKSHIRE INSURANCE COMPANY, LIMITED

NEW RECORDS IN LIFE BUSINESS

The annual meeting of the Yorkshire Insurance Company, Limited, was held, on the 10th instant, in York.

The Rt. Hon. Lord Middleton, M.C. (the chairman), said:—

Our funds have increased by £691,696 to £15,353,360, and our total assets by £790,546 to £17,323,194. The gross and net rates of interest earned on our total funds are £4 10s. 11d. per cent. and £3 15s. 4d. per cent. respectively, as compared with £4 11s. 6d. per cent. and £3 15s. 10d. per cent. last year. The premium income of all departments is higher by £214,407, being £3,811,889, as compared with £3,597,482 in 1936, and there is a satisfactory reduction in the over-all ratio of expenses of management to premiums.

In the life account the net new sums assured amounted to £2,855,127 and constitute a fresh record, an increase of £75,355 over last year's record figures. The amount of the fund at the end of the year is £10,780,646, an increase of £607,025 on last year. The net rate of interest earned was £4 3s. 8d. per cent. and is only 4d. per cent. less than that earned in the previous year.

The fire results are again excellent. The loss ratio has still further improved to 41.33 per cent. and this, with the slight decrease in the expense ratio to 42.8 per cent., has enabled us to transfer to profit and loss account £166,772.

In the accident and general account, the premiums amount to £1,469,529, an increase on the previous year of £133,725. There has been transferred to profit and loss account £50,184.

In the marine account, the net premiums for the year amount to £426,778, an increase of £87,802 compared with the previous year.

The general reserve fund amounts to £1,194,553. We have also £100,000 in our investment and contingency reserve and the substantial free balances of £320,000 and £220,000 respectively, which are carried in the fire and accident accounts. The financial strength of the company is therefore unquestionable.

The directors recommend that the dividend again be at the rate of 9s. 6d. per share on the fully-paid £1 shares, 4s. 9d. per share on the £2 10s. (10s. paid) shares and 2s. 4½d. per share on the fully-paid 5s. shares, free of income tax.

The report and accounts were unanimously adopted.

LICENSES AND GENERAL INSURANCE COMPANY, LIMITED

FURTHER PROGRESS

The forty-eighth ordinary general meeting of this company was held, on the 11th instant, in London.

The Hon. Reginald Parker (vice-chairman) presided in the unavoidable absence through indisposition of the chairman, Lord Ernest Hamilton, and said:—Throughout the whole twelve months of 1937 our progress was maintained and in the beginning of 1938 we still see no need to lessen our energies. We find business perfectly responsive.

Personally, I cannot think that the outlook generally need really be clothed with too many misgivings. There have been previous occasions in our country's story when depression was replaced by prosperity on receipt of an outside impetus. We had already dragged ourselves out of the depths of post-war depression—climbed some way towards prosperity until people saw in the misfortunes of the United States warranty for a trade recession ahead of us. I suggest it may not be so and that the additional assistance required to steady our upward trend must be found in the manifold reflections of our armament programme, to carry us forward during the next few years until such times as a general betterment in world conditions warrants a further step forward.

In respect of the Licenses and General there are two milestones to be noted. The total income has passed the £600,000 mark, an increase on the previous year of £39,597, and the total of the assets for the first time also in your company's history exceed £800,000—an expansion on last year of £49,290.

The life department gives a good account of itself, the second year's experience still further justifying our original venture. The growth is consistent, and the first few months of 1938 continue the upward trend.

In the fire department there has been a recession in income and a higher claims ratio. The gross direct business of the company has advanced this last year by over £5,000, but has evidently created the necessity for a much larger volume of reinsurance so as to leave us much as we were in the previous year in respect of net retained business.

The personal accident account reveals a small profit on this occasion to replace the slight adverse balance of last year.

In the employers' liability account a heavier call for unexpired reserves reduces the amount available for profit, but taking reserves into consideration the account is more favourable even than last year.

In the motor section, premiums have improved, bringing the total income to £209,472. After leaving nearly £15,000 in the account for added claims reserve and for unexpired risk reserve, there remains a profit of £6,462 to transfer to profit and loss.

In the marine account the interest earned of £2,149 remains in the fund, which is increased in all to £36,206.

Our general account again follows the upward trend of the previous year, the premium income having gone forward in 1937 by almost £10,000.

The report and accounts were adopted and a final dividend of 14 per cent., less tax, making 20 per cent., less tax, for the year, approved.

BOULDER PERSEVERANCE, LIMITED

SATISFACTORY RESULTS AND PROSPECTS

The fourteenth ordinary general meeting of Boulder Perseverance, Limited, was held, on the 10th instant, at Winchester House, Old Broad Street, London.

Mr C. F. Bell (chairman and managing director) said that the board felt the shareholders would share with them their satisfaction in the results for the past year. The realisation of bullion and exchange was up by £54,565, due in part to the increased tonnage of 12,343 tons, the increase of 5d. per ounce in the price of gold, and to the increased extraction of 5.6 per cent., which accounted for £16,660 of the increase. Mine expenditure, on the other hand, having regard to the tonnage treated, had decreased through savings in the cost both of ore treatment and extraction. The balance of £127,826 was higher than that of the previous year by £49,000. The directors would like to emphasise the fact that this was obtained with the old capital of £150,000, equivalent to some 85 per cent., the new capital not having come into bearing during the year. After providing for Australian and United Kingdom taxation and depreciation the net profit for the year was £82,057, as against £55,241. An interim dividend of 20 per cent. was paid in December last, and the directors now recommended a final dividend of 20 per cent., less tax.

As to the present position on the mine, the average value still kept up at about 8 dwt., a wonderful achievement after some 40 years of working. When the full benefit of the new compressors and winder was felt they expected a further decrease in mining costs of a minimum of 10d. per long ton, which on a yearly tonnage of 110,000 tons represented some £4,550.

Development and diamond drilling, maintained at a rate compatible with increased tonnage, continued to show ore bodies of considerable values.

The Kalgoorlie Enterprise Mine, in which Boulder Perseverance out of the proceeds of an issue of capital in 1937 had acquired approximately a two-thirds interest, commenced production in April, 1938, at the rate of approximately 3,000 tons per month, which was to be increased to 5,000 tons within a few weeks. The opening up of this mine had been according to plan and was satisfactory. A very extensive area was waiting to be explored.

In the absence of labour trouble and material decrease in the price of gold, everything pointed to an equally satisfactory result for 1938.

MR K. B. EDWARDS'S REMARKS

Mr K. B. Edwards, B.Sc., Ph.D. (London), F.I.C., said that the development results on the Boulder Perseverance Mine for the first four months of this year had been extremely satisfactory. The prospects of this remarkable mine were still very good indeed. On the north-eastern boundary there was still a large portion of the lease unexplored, but some promising developments had already taken place. How big these would be it was too early to say, but the Perseverance Mine still continued and was likely to continue.

With regard to the treatment, the recovery had for six months been over 95 per cent. by the most rigid methods of calculation. That was equivalent to an 8 per cent. increase in the recovery of gold at little or no extra cost. That 8 per cent. extra recovery meant 5s. 4d. per ton in Australian currency and on their present tonnage £24,000, or rather more than a 10 per cent. dividend. He thought that justified the policy of what he might call "penny chasing."

With regard to the Enterprise Mine, everything there had gone to schedule as far as the mine was concerned. The shaft had been sunk to approximately 1,100 ft., it had been equipped with a winder, the stopes had been opened out, and they were all ready at the beginning of April to produce 5,000 tons per month.

The report was unanimously adopted.

SPILLERS LIMITED

NEW RECORD IN ANIMAL FOOD DELIVERIES

SIR MALCOLM ROBERTSON'S REVIEW OF A
DIFFICULT YEAR

The Right Honourable Sir Malcolm A. Robertson, chairman of Spillers, Limited, presided at the annual general meeting of the company, on the 7th instant, at Cardiff.

Dealing with the accounts, he said that the reduction in the amount of investments as compared with the previous year was represented, for the most part, by a substantial increase in cash balances. That was due to the fact that the board had thought it wise to realise a portion of the company's investments and to hold the proceeds in a more liquid form until such time as the political situation should appear to be more stable. Investment had now been resumed. The trading profit for the year had fallen by some £45,000, while net profit, after provision for taxation, was about £40,000 less than that for the previous year. In view of the difficult conditions of the milling industry during the year, the result could be regarded as satisfactory.

There was no need to indicate the heavy burden which the company, in common with other industrial enterprises, was now called upon to bear in the way of taxation. In addition to the increase in income tax, the profits of the company were also subject to the new National Defence Contribution. It was quite clear, however, that the continued increase in taxation represented the price that had to be paid for national security, and while it was true to say that the company derived no direct benefit from the armament programme, the general prosperity and security of the country must in the long run reflect on any enterprise.

With regard to the Wheat Act, 1932, under the operation of which the flour milling industry played a considerable part in assisting farmers and in promoting an increase in home-grown wheat, it was understood that the Government intended to amend the Act chiefly in an endeavour to define flour in more precise terms.

GRAIN TRADE

The year 1937 had been one of the most difficult ever experienced in the grain trade owing to exceptionally violent price fluctuations and highly sensitive markets, due no doubt in large measure to the fact that there were no longer burdensome surpluses in the exporting countries and that supply and demand were more evenly balanced than they had been for some years. In the early part of the year the market was influenced upwards by large Continental purchases, and downwards later by excellent U.S.A. and Australian crops, with violent intermediate fluctuations caused by the poor Canadian and Argentine crops on the one hand and sales of Russian wheat on the other. Particularly difficult conditions had also been experienced in the maize market, with important fluctuations on a generally higher level of price than had been recorded for seven years. The Argentine, with a crop of ten million quarters less than the previous season, had been able to dispose of two-thirds of her exportable surplus during the first six months of the year, with the assistance of unusually heavy sales to the U.S.A. and Canada. The later months were marked by an entire reversal in the activities of the U.S.A. inasmuch as a heavy crop in that country enabled substantial exports to be made for the first time since 1928. In the barley market the highly seasonal nature of the demand was again in evidence, and some most erratic marketing took place in July and August.

THE NEW MILLS

With regard to the new mill at Newcastle, wheat had now been taken into the silos, and it was hoped that by the end of the month a beginning would be made in the production of flour. The new mill with its deep water, rail and road facilities, was the most up-to-date mill in the country, and in addition to flour, provision had been made for the manufacture of animal foods and dog biscuits. In London, owing to increased business, further extensions were being made to the silo accommodation, and it was hoped that the work would be completed in about twelve months' time. The remodelling of the dog biscuit factory at Bermondsey had been successfully carried out, and would give increased production at a reduced cost. In Birkenhead the transfer of Vernon's business from the old mill to the Beaufort Road Mill had followed the remodelling of the latter mill, and the extension of the silos there, which had been completed in the previous year. During the last few years new mills had been built in Cardiff, Avonmouth and New-

castle, while extensive remodelling had taken place in Birkenhead and considerable extension of the silo facilities in London. In the opinion of the board the company's mills and factories were second to none in the British Isles, and were capable of making products of the highest quality at the lowest possible cost.

FURTHER RECORDS IN ANIMAL FOODS

The record figure had again been exceeded in animal food deliveries, despite difficult trading conditions such as the high level of foodstuff prices, the collapse of the pig marketing scheme, and a marked decrease in the pig and poultry population. This had been done in spite of the availability of cheaper rations, which, in the directors' view, was due to the company's policy of openly declaring the ingredients of its foods, with their composition and digestible analysis; and also to the fact that, owing to the higher standards required under Government schemes, the farmer was showing greater discernment in the purchase of his balanced rations. The company's advisory department continued to play a leading part in the animal foods trade. A new high record had also been created in the deliveries of dog foods. Contact with dog owners was continually maintained through Spillers Dog Journal and the company's free information bureau.

Perhaps the saddest part of his task was to announce that Mr Edgar Baker, deputy chairman, was due to retire in October under the age rule incorporated in the company's Articles of Association. His coming departure would be a severe loss to all his colleagues on the board.

The report and accounts were adopted.

F. FRANCIS AND SONS, LIMITED

CONTINUED DEMAND FOR COMPANY'S PRODUCTS

The thirty-seventh general meeting of F. Francis and Sons, Limited, was held on the 12th instant at Southern House, Cannon Street, London.

Mr John Ismay (the Chairman) who presided, pointed out that although it was their first annual general meeting as a public company, it was the thirty-seventh since the company was incorporated, while the business itself had actually been established nearly seventy years ago. One of the chief reasons why it had been turned into a public company was to provide the necessary finance to increase the factory accommodation. The chief extension of approximately 50,000 sq. feet had by now been completed and was being equipped with the most up-to-date plant to enable them to increase production on the most economical basis. The costs of the new issue had been written off from the reserve account.

With regard to the present year, he was pleased to say that the company's different departments which produced a very wide and varied range of articles used by many dissimilar trades, nearly all showed considerable increases over the corresponding period of last year, which gave a very favourable indication with regard to the current year's results, and the Board saw no particular signs of any falling off. He could only assure shareholders that the company possessed an excellent business and extensive factories equipped with well maintained plant, which could not be replaced to-day under any amount greatly in excess of the balance sheet figures. The directors, he thought had acted wisely and conservatively in only recommending a 9 per cent. dividend. They could have paid more, seeing that they had divided approximately only two-thirds of the available balance, but they had strengthened the carry-forward by the net amount of over £7,000. Generally, he would say that unless something unexpected happened shareholders could look forward to the dividend for the present year being at least maintained.

A shareholder, in congratulating the board on the results disclosed, expressed his satisfaction at noting that the prospectus estimates had not only been fulfilled, but actually exceeded.

The report and accounts with a final dividend of 5 per cent., making 9 per cent. for the year, was unanimously adopted, and the chairman intimated that the dividend would be paid on the 14th instant.

A hearty vote of thanks to the chairman, directors and staff, closed the meeting.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

INDIAN COPPER CORPORATION,
LIMITED

SATISFACTORY RESULTS

The fourteenth ordinary general meeting of the Indian Copper Corporation, Limited, was held, on the 16th instant, at 20 Aldermanbury, London.

Sir Godfrey Fell, K.C.I.E., C.S.I. (the chairman), in the course of his speech, said:—Turning to the profit and loss account, you will notice that the net proceeds of sales rose by over £100,000. Interest and sundry receipts are higher by £8,500, representing chiefly larger sales of Kyanite.

We have a balance carried down of £211,423, as against £177,976 the previous year. We recommend a final dividend at the rate of 9 per cent. per annum actual. This will take, gross, £76,212, leaving £49,353 to be carried forward.

This year there has been a marked increase in costs. It is development expenditure, costing over £24,000, and charged on revenue, that accounts for the greater part of the increase. This is due to the fact that the footage driven during the year was some 50 per cent. in excess of the previous year's footage. A vigorous development programme is absolutely essential if we are to keep our ore reserves well ahead of the mill.

I mentioned last year that we had decided, in view of the rise in the price of copper, to lower the grade of ore mined.

Another direct consequence of the reduction in the grade of ore mined has been the lower output of refined copper—6,830 long tons, against 7,200 long tons in 1936. With a lower output of copper, the production of Y.M. sheets and circles was also, of course, less. These lower outputs were fortunately compensated for by the higher prices obtained for our products, which rose by £7 16s. 3d. in the case of copper ingot (the sales of which were, however, negligible), £9 19s. 10d. in the case of Y.M. sheet, and £10 9s. 4d. in the case of Y.M. circles.

SALES

When we met a year ago I mentioned that, although we started the year 1937 with a well-filled order book, demand had at that date become slack. The next few months showed an almost complete cessation of demand. From May to September we made very few sales; but demand then revived briskly, and in the last three months of the year our deliveries were so large that the stocks of sheets at December 31 were only about 135 tons higher than they had been on January 1.

During the current year we have had so far no cause to complain of slack demand. We have actually sold, including forward sales, about 7,000 tons of sheet and circles, and although there may be the usual seasonal reduction of demand during the next few months, we have every reason to hope that we shall be able to dispose of our whole output by the end of the year.

During 1937 the world price of standard cash copper fluctuated between a high of £78 2s. 6d. and a low of £36 5s., a variation of well over 100 per cent. In no year for the last 60 years has the price varied to such an extent as this. The net result, thanks to the abnormally high price prevailing in the early spring, was an average for the year of £54 10s., compared with £38 9s. in 1936.

Our ore reserves are equal to about four years' supply for the mill at the present rate of production, and we have therefore plenty of time in which to increase them by a vigorous development programme.

THE OUTLOOK

Although the results will, I hope, be regarded as satisfactory, and although we have been able to maintain, subject to your approval, the steady arithmetical progression in the amount of the dividend to which I referred last year, the continuance of our prosperity depends largely on two factors—the world price of copper, and the loyal co-operation of our Indian labour force. With regard to the former, the price to-day is very low, and we have already sold more than half our year's output at a figure considerably lower than the average price realised last year. Some increase in the world price would, therefore, be most welcome. As regards labour, we can only hope for the best. We shall continue to give to our employees of all classes the same just and sympathetic treatment which has been accorded them during the past 12 years; but we will not yield to force, nor grant unreasonable demands which would make it impossible to operate at a profit. For eight years shareholders in this Corporation received no return on their capital, and the average gross dividend during the past five years is only 9½ per cent., not an excessive return for a mining venture which is all the time using up its wasting assets.

The report and accounts were unanimously adopted.

GUARDIAN
Assurance Company Ltd.ANNUAL GENERAL MEETING—
9th MAY, 1938

Extracts from

COLONEL LIONEL H. HANBURY'S Speech

LIFE DEPARTMENT

New life assurances were completed during 1937 for a net amount of £1,815,725, which exceeded by £56,001 the new business secured in 1936.

Claims by death were exceptionally light.

FIRE DEPARTMENT

The experience of the year was very favourable. The net premium income amounted to £1,115,728 and the underwriting profit amounted to £173,719, representing 15.6 per cent. of the net premiums. The sum of £176,977 has been transferred to the Profit and Loss Account, and £47,600 to the department's general reserve, which now stands at £1,182,600.

ACCIDENT AND GENERAL DEPARTMENTS

The net premium income of the year was £1,252,549, being £67,288 greater than for the previous year. The sum of £47,900 has been added to the department's general reserve, bringing it to £473,400, and £72,397 transferred to the Profit and Loss Account.

MARINE DEPARTMENT

The premium income for the year amounted to £330,753, showing an increase of £57,649 over that of the previous year. The fund at the end of the year was £511,324, after transferring the sum of £19,344 to the Profit and Loss Account.

VALUE OF INVESTMENTS

There was at the end of the year a surplus of over £1,000,000 in the aggregate market value of the Stock Exchange investments over the values at which they appear in the Balance Sheet. No such investment appears therein at a figure in excess of its market value at 31st December last.

PROFIT AND LOSS ACCOUNT AND APPROPRIATION

The balance on this Account is £196,124 after transferring £25,000 to Staff Pension Fund.

A dividend was declared of 11s. on each Ordinary Share (against 10s. for the previous year), leaving a balance to be carried forward of £95,927, as compared with £78,655 at the end of the previous year.

FORD MOTOR COMPANY LIMITED ANNUAL MEETING

At the ninth ordinary general meeting of Ford Motor Company, Limited, held, on May 10th, at Dagenham, Essex, the Rt. Hon. Lord Perry of Stock Harvard, K.B.E., LL.D., in the course of his speech said: Gross profits at £1,576,966 slightly exceed the 1936 figure of £1,558,990. The net profit is £604,706, which, with the amount brought forward, provides £1,468,885 for distribution, subject to income tax.

Business throughout Europe during 1937 showed a marked improvement, but the unbroken record of expansion and progress of the motor industry in this country has not been maintained since last autumn. I am happy to say that we have been less affected than the industry generally, but 1937 has been a year of intense competition.

DOMESTIC MARKET

In September we introduced the greatly improved "Eight" which met with immediate and continued response. Earlier, our new "Ten" was put on the market, with lengthened wheelbase and a re-designed body. With these two models we are fully represented and hope to maintain our position in the light car market. Our 22 h.p. and 30 h.p. models bring *de luxe* motoring within the reach of the man of moderate means. During 1937 we introduced 4-cylinder engines as optional in our commercial vehicles; also the newly designed 5-cwt. commercial vehicle, which is dominant in its class. A 10-cwt. commercial vehicle, with 10 h.p. engine, has now been produced and I am confident that this will quickly establish itself in favour. Tractor business shows an improvement on the previous year and normal development of the service organisation has continued.

Export shipments in 1937 were 26 per cent. greater than in 1936. The increasing influx of foreign cars, particularly into the light car market of Britain, is a matter of serious concern. During the first two months of this year, German cars were imported at more than three times the rate of 1937, which in turn was ten times greater than 1936. More cars are now imported from Germany than from all other countries combined. Urgent Government action is needed to counter the enormous subsidy granted to its exporters by a country whose markets are totally closed to the British automobile industry.

Another means by which our Government could give effective help is by the development of our national road system. In 1935 the Government declared that £100 millions would be spent on a Five Year Road Development Plan. After three years, only £15 millions has been spent. A national adequate road system is the only effective means of reducing the dreadful casualty list on our roads.

TAXATION

It is no exaggeration to assume that upwards of £80 millions is calculated as the estimated receipts from the taxation of motorists for the forthcoming year. Car taxation, direct and indirect, for a light car running 8,000 miles in a year, is £5 10s. in U.S.A.; £19 in France and £25 in the United Kingdom. The tax on petrol exceeds 300 per cent. *ad valorem*; motor transport is subjected to rules and persecutions not imposed on any other form of public service; cyclists and horse traffic are free from direct taxation and control.

The motor industry in this country ranks third in importance to-day. Its prosperity is essential to the national economy. Nowhere is there fiercer competition. This is evidenced by the continuous efforts made by manufacturers each year to attract the public eye by new models, refinements and accessories.

We do not manufacture any specialised vehicle for military purposes. However, our standard products are available for and cover the complete range of vehicles required by all forms of road transport. This has been recognised by the Defence Services of this country.

The report was adopted, and a dividend of 5 per cent., less tax, declared.

DAGENHAM, ESSEX

CALCUTTA TRAMWAYS COMPANY, LIMITED

STEADY GROWTH OF TRAFFIC

The ordinary general meeting of this company was held, on the 10th instant, at 1 Queen Victoria Street, London, E.C., Sir Geoffrey R. Clarke, C.S.I., O.B.E. (chairman of the company), presiding.

The Chairman, in the course of his speech, said:—The earnings of the undertaking for the year to December 31, 1937, amounted to £112,412 after setting aside £80,000 to the depreciation fund, compared with £70,000 per annum provided in recent years.

It may interest shareholders to know that during the past few years we have expended £355,000 in the provision of new rolling stock. These cars, running on welded rails, are most comfortable and smooth running, and the expenditure has been amply warranted.

During the past year the Corporation of Calcutta has granted the company the right to lay tramway tracks on the Upper Circular Road between Raja Bazar and Shambazar. This extension will relieve the congestion on Cornwallis Street and will greatly add to the convenience of the travelling public. A further ten new cars have been ordered for the service of this extension. Application has also been made to the Corporation for the right to install tramways on the new road in the Ballygunge district, linking up Park Circus with the Rash Behari Avenue.

It is interesting to note the steady growth of traffic over the tramway system since the year 1930. Although the system has not been in any way extended, the number of passengers has steadily increased from about 80 millions to more than 103 millions, which is an indication of the increasing popularity of the service.

The suggestion made in certain quarters that some of the proposed extensions of the tramway system should be effected by means of trolley buses is not one that it is possible for us to entertain in the interests either of the public or of the company. The new trams we are putting on the roads are second to none in the world. They are specially suited to the conditions that prevail in Calcutta, where they enable large numbers requiring transport at certain hours of the day to be conveyed with the greatest possible safety, efficiency and economy.

The report and accounts were unanimously adopted, and a dividend of 5 per cent., less income tax, making, with the interim dividend, a total dividend of 8 per cent. on the ordinary shares, was approved.

IDEAL BUILDING AND LAND DEVELOPMENT COMPANY, LIMITED

INCREASED PROFIT

The annual general meeting of this company was held, on the 10th instant, in London.

Sir Thomas Keens, D.L., the chairman of the company, who presided, said that the net result of the operations of the group for the past year was a profit of £137,704, or an increase of £56,403 on the previous year. The profit had arisen partly through increased trading, more houses having been built and sold.

The board proposed to pay a dividend on the ordinary shares of 5 per cent., leaving, after various allocations, just over £2,000 to go forward.

The directors of the principal building societies with which the company did business continued to pay visits of inspection to the company's estates, always expressing great appreciation of the condition of the estates generally.

Operations were still being carried out on thirty-four estates in and around London, but they had now gone farther afield; they now had extensive operations at Birmingham and Southampton, and inquiries were on foot in various other provincial districts which might afford favourable openings. As to the current year's work, sales for the first four months had been exceptionally good, showing a substantial increase over the corresponding figure.

During the year the company had branched out into two phases of business—contracting for public works and the handling of rented estates. The increased borrowing powers asked for would enable the board materially to expand the latter class of business. Tenders for various public works had been submitted. In four cases the company had been successful tenderers, for a total value of approximately £160,000. The board had every reason to hope that the contracting department would prove to be profitable. They had also proved, on a small scale so far, that weekly renting some of their properties brought in a very satisfactory percentage on the outlay, and that was a phase of the business the board wished to expand.

The report and accounts were unanimously adopted, and at a series of meetings which followed, the borrowing powers of the board were increased by £500,000, and certain alterations to the articles of association were unanimously approved.

LONDON ELECTRIC WIRE COMPANY AND SMITHS, LIMITED

RECORD SALES

The twenty-ninth annual general meeting of this company was held, on the 11th instant, at the Hotel Victoria, London.

Mr W. J. Terry (chairman and managing director) said that all the liabilities of the company were amply provided for by their liquid resources. Cash at bankers and in hand, standing at £125,971, showed an advance of £23,278 over last year. Stock in trade showed a large increase in value over last year—namely £116,074. That increase was occasioned by a sudden falling off in the demands of the trade which had started without warning in the last few months of 1937. All of the company's stocks had been conservatively valued and the total shown on the balance-sheet represented a sound asset. The profit and loss account showed an increase of £7,961 over the previous year and would have certainly shown further improvement if a recession in trade had not developed.

The sales of the company during 1937 had reached record figures in spite of the contraction in business towards the end of the year. The unspecified contracts carried forward into 1938 were higher than the unspecified contracts brought forward at the commencement of 1937, but the rate of deliveries required as against existing contracts had been reduced for the time being. The export sales of the company were slightly increased during last year.

The welcome relief in income tax afforded to manufacturers by the additional allowance for depreciation to plant and machinery was unfortunately partly offset by the steady increase in local taxation.

It was felt to be prudent to recommend the same final ordinary dividend of 5½ per cent. as last year, making a dividend at the rate of 7½ per cent., less tax, for the year under review. It was considered to be desirable to conserve the company's resources in existing circumstances, and to maintain a strong position.

The amount carried forward in the profit and loss account and the balance-sheet had increased by £22,088 over last year, and the total brought forward into 1938 amounted to £76,634, which provided a measure of security in respect to dividends to be declared on the trading of the current year.

The report was unanimously adopted.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED

INCREASED REVENUE

The forty-eighth ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 12th instant, at Winchester House, Old Broad Street, London.

Mr Richard S. Guinness (the chairman) said that the directors submitted the report and accounts for the year ended March 31st last, a year in which event had rapidly followed event, many of them unfavourable to the investor. It was with satisfaction that the directors were able to record that their revenue showed an improvement and that the value of their investments at March 31st, despite the heavy fall in securities generally, remained in excess of their book cost. The total gross revenue was £146,848, an improvement

(Continued from page 386)

for apples, which are arriving in good quantities from Australasia and South Africa. Many districts report further damage to fruit, particularly strawberries, from the week-end frost.

Vegetables.—Prices generally showed a further rise during the week, according to *The Fruitgrower*. The price of King Edwards was again advanced, but increasing imports of new potatoes have steadied the market. Considerable damage to the home crop is expected from last week's frost.

Miscellaneous

Oilseeds and Oils.—The improved demand noticed last week has not been maintained, and prices of linseed ex-

of almost £4,000, and showed a return of over 7 per cent. on the amount of issued capital and debenture stock totalling £2,025,000. They recommended a final dividend of 8 per cent. on the ordinary stock, making 12 per cent. for the year, as last year.

The main support of their income was from their holdings in the United Kingdom, which accounted for over £87,000, or an increase over last year of some £6,000. Their income from that source constituted just over 60 per cent. of their total revenue and showed them a yield of £6 12s. 9d. per cent. upon the book cost.

Changes in their holdings had resulted in a slight increase in their investments in the United Kingdom, which now amounted to £1,139,807, or 53.2 per cent. of the total, as against last year's figure of £1,266,698, or 51.4 per cent. The analysis and comparative figures of their investments were to his mind a strong justification of the advantages which the investment trust principle offered to investors of every class. All were catered for.

The report and accounts were unanimously adopted.

PATALING RUBBER ESTATES, LIMITED

GOOD RESULTS BUT OUTLOOK UNCERTAIN

The eighteenth annual general meeting of the Pataling Rubber Estates, Limited, was held, on the 13th instant, at 19 Fenchurch Street, London.

Mr H. Eric Miller (the chairman) said that with such satisfactory accounts it was a matter for regret that current prospects were much less favourable for reasons which were, however, beyond their control. Aided to a small extent by purchased export rights, they had accounted for a crop of over 4½ million lbs., as against something over 2½ million lbs. in 1936. Including the unsold balance at a conservative valuation, their sale price averaged 9.16d. per lb. and the all-in cost was only fractionally higher than in 1936, increased wage rates to native labour being responsible therefor.

After debiting the profit and loss account with £2,500 for National Defence Contribution, the year's working resulted in a profit of £66,739, almost 22 per cent. on the issued capital. They recommended shareholders to increase the reserve for cultivation and replacement by £11,638 odd, making a total of £17,500. A final dividend of 7½ per cent. was recommended, making 15 per cent. for the year. The results for 1938 were likely to be leaner, but they had made forward sales for 1938 shipment totalling 228 tons at a price of just under 11d. per lb., which looked an attractive figure. He hoped, however, that before they met again next year there would be substantial improvement to record.

An event of some importance to the rubber industry was the paving of Lombard Street with the Gaisman improved Bramble block, the laying of which was completed last week. While it was not possible to eliminate engine noise, the benefits which were likely to accrue to the frontages from the damping-down of wheel noise and vibration should soon manifest themselves and he was sure the attractiveness of that type of paving would receive wider recognition. The speedy and efficient completion of that job, following on the laying of Cornmarket Street in Oxford last year, had brought rubber road paving from the experimental stage into the field of wider application on commercial lines. He had personally been a staunch advocate of that development, not solely in the interests of the rubber industry, but in the hope that they might be spared some of the distracting noise and vibration arising from heavy motor traffic.

The report was unanimously adopted.

Calcutta have again fallen, while those of linseed oil fell sharply to the lowest level recorded this year. Markets for other oils and oilseeds have been quiet, though the demand for oilcakes continues good.

Rubber.—A better tone prevailed at the end of the week and prices showed a slight rise, influenced by a steadier market in Wall Street.

Furs.—Most prices at the London Fur Sales showed a fall of 5 to 10 per cent. from those ruling last February, demand being unsatisfactory; the exception was provided by Persian lambs, for which prices have been well maintained.

Petroleum.—With the opening of the season of expanding petrol con-

sumption, the outlook for the oil markets would be favourable, were it not for the existence of a top-heavy stock position in the United States; but crude oil production in that country is still being maintained at too high a level. Thus, American stocks of crude oil and of petrol now amount to some 306,700,000 and 89,500,000 barrels, respectively, against only 300,700,000 and 81,500,000 barrels at this time last year. Although consumption of motor spirit in coming months is still expected to exceed last year's level, demand for other petroleum products is being adversely affected by the trade depression. It is therefore scarcely surprising that prices at the Gulf, and also on the Roumanian export market, have tended to weaken recently. The decline in world prices is reflected in the reduction of British petrol prices by ½d. per gallon on May 13th.

Home Consumption per Head

In the following charts we have attempted to show recent changes in the consumption per head of certain commodities in the United Kingdom. In the upper panel the available annual figures have been expressed as percentages of their 1913 level and plotted on a ratio scale in order that variations from year to year in the consumption of different commodities may be compared. The figures for tea consumption are based on retained imports during the period of the abolition of the duty (1929-32) and probably exaggerate the real consumption. In the lower panel we show for the years in which statistics are available changes in the consumption of other important foodstuffs. The percentage drop shown for milk and cream between 1909-13 and 1934-5 may be somewhat too large. It should be emphasised that while the figures are the best estimates available they are subject to a margin of error. In particular, the pre-war figures with which comparison is made include Southern Ireland. [Sources: Statistical Abstract, 1936, and First Report of Advisory Committee on Nutrition, 1937.]

Finance

GOVERNMENT RETURNS

For the week ended May 7, 1938, total ordinary revenue was £12,481,000, against ordinary expenditure of £26,679,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £38,090,000, against a deficit of £21,632,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On April 22nd, applications at £99 17s. 5d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 29 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 6d. per cent. and above were allotted in full. £30.0 millions of Treasury bills are being offered on May 13th.

OIL OUTPUTS

Trinidad Petroleum Development Company, Ltd.—Output for week ended April 23rd, 58,334 barrels. Output for week ended April 30th, 56,623 barrels.

Lobitos Oilfields, Ltd.—Output of the Peruvian company for April is 28,469 tons.

Anglo-Ecuadorian Oilfields, Ltd.—Output for April is 22,524 tons.

Trinidad Leaseholds, Ltd.—Oil produced during April, 45,548 tons; oil purchased during April from other companies, 73,365 tons.

Phoenix Oil and Transport.—The gross output of crude oil of the Phoenix Group for April was 65,883 tons.

Attock Oil Company, Ltd.—Production for April, 35,574 barrels.

SUEZ CANAL COMPANY

GENERAL MEETING OF SHAREHOLDERS TO BE HELD IN PARIS ON MONDAY, JUNE 13, 1938

Holders of not less than twenty-five shares, who are desirous of being present or represented at the meeting must prove at the Head Office of the Company, 1, Rue d'Assolvi, Paris, before 2 p.m. on June 8, 1938, that they have deposited their shares with the Company or with any of the Company's appointed Agents.

Shares may be deposited in London with Messrs. N. M. Rothschild and Sons, who will in due course deliver a card of admission for the meeting.

Le Directeur Général,

GEORGE EDGAR-BONNET.

Paris, May, 1938.

diplomacy was almost a sealed book to the British public. To-day it is the very heart and centre of politics, dominating every domestic issue. While, therefore, Lord Halifax continues to command a very great measure of public confidence and esteem, his tenure of the Foreign Office can hardly be more than temporary; for the House of Commons will not in the long run be satisfied until a Foreign Secretary again sits upon the Treasury bench.

Such considerations, however, are overshadowed by the fact that while in the Cabinet as a whole there has been a relatively unimportant shuffling of offices, there has been a clear sweep at the Air Ministry, which involves the departure of all the political heads, including Lord Winterton. This important change was undoubtedly precipitated by the debate on the Air Estimates last Thursday, on which it was only possible to comment very briefly in last week's issue. In his speech on behalf of the Air Ministry, Lord Winterton announced a great expansion of the Air Force which involved the doubling of our first line strength from the 1,750 machines of the present programme to a strength of 3,500 machines to be achieved in 1940. This latter figure, of course, involves a very much larger number of modern machines; for the addition of reserve and training machines multiplies this total three or four times. This is an immense Air Armada, and Lord Winterton informed the House that the plans for training the necessary personnel, and for aerodrome construction, etc., are all in hand. But the Government statement quite clearly failed to satisfy the House of Commons. For this critical reception, which came indiscriminately from all parties, there are two main reasons. In the first place, the Government spokesman was unable to give any sort of indication how this new strength would compare with Germany's rapidly-growing Air Force. This was no doubt inevitable, for neither we nor other countries publish statistics of our military aircraft production. But from such facts as leak out or can be deduced from indirect evidence, the public have gathered the impression not only that Germany's current output is much greater than ours, but that even the expansion adumbrated by Lord Winterton would not suffice to overtake it. During the last ten months of the Great War, British factories delivered over 30,000 aeroplanes as compared with a few hundreds in 1915; and though the aeroplanes of 1918 cannot compare in complexity or size with those of to-day, the rapid rise of the figures from practically zero shows how rapidly an industry can expand under the authoritarian conditions that apply in war time. The House of Commons was not convinced that the Government's plan will fill the bill.

But if the ultimate programme must remain a matter of opinion, the other reason for dissatisfaction rests on more specific grounds. In spite of Lord Winterton's reassurances, it was felt in all quarters that there have been unnecessary delays and faults of organisation in carrying out the present programme. If, for such reasons, we are behindhand with our present programme, what chance have we of realising this much greater "paper" expansion? Something has been done to prevent interruptions of production by the placing of big fresh orders under the direction of the new Inter-Departmental Supply Committee but there are still disquieting stories from the aircraft industry of lack of balance between engine and air-frame output, of engines waiting for magnetos and other evidence of unsatisfactory planning or control. Such difficulties—which held back munition production in every country during the Great War—are inevitable when production is being rapidly expanded; and it is significant that German comments on our air progress discount something of these gloomy misgivings. In Germany, where production troubles are also not unknown, it seems safer to assume that the British Air Force is growing rapidly in numbers and efficiency.

At the same time, Parliament is rightly concerned at

the slow rate of production in an industry which may be described as only semi-mobilised in comparison with one which is on a war footing; for public opinion is beginning to demand that, whatever it may cost, we must achieve parity. Significance attaches in this connection to the resignation of Lord Weir, whose war and post-war experience in these matters is unequalled. Lord Weir, who has served since 1935 not in an administrative but in an advisory capacity, is understood to have advised the Government that we could achieve all that was necessary in the field of air rearmament without going to the length of imposing on British industry as a whole the handicap of sweeping priority for all rearmament orders. Shortly after Sir Thomas Inskip was appointed he told the House that the Government would attempt rearmament without imperilling our normal production and trade. Experience seems to have shown that even the present programme could not have been fulfilled by the dates laid down without something approaching war-time control of the allocation of material, and regulations governing the operations not only of direct armament contractors, but also of sub-contractors.

If, therefore, we are to have an immense air expansion, not only on paper but in achievement, Sir Kingsley Wood may quickly have to take some sweeping decisions and shoulder heavy responsibilities. And in this task he will need behind him the full support, not only of the Cabinet, but of Parliament. But at this point we encounter the difficulty that in a matter of this kind where rumour is so rife it is difficult to create confidence without revealing facts which are to-day kept secret. In the rearmament that preceded the Great War, the public knew what progress was being made in the building of battleships and cruisers both here and in Germany. Aircraft production does not disclose itself in the same way; and it might be a help to a possible enemy if we put all our own cards on the table. There may, therefore, be a case for revealing in confidence to the leaders of the Opposition and select members of the House all the information which the Government possesses in order that criticism and comment, which so greatly influence the morale and opinion of the public, should be based on most reliable information. By this or some similar device, opinion should be truly guided and instructed; for if this is not the case, the one thing that can be foreseen with certainty is that the regime of Sir Kingsley Wood at the Air Ministry will inevitably meet the same fate as that of Lord Swinton.

Next Week's Issue of
THE ECONOMIST
will include a
SPECIAL SURVEY
of the position and prospects of
UNIT TRUSTS

The Survey will devote particular attention to the developments of the past year and will include articles on new topics including

Marketability of units	Unit trust conversions
Analysis of certificate holders	Flexible trust yields
New trust formations	Effects of falling security prices

The Survey will contain a directory of all unit trusts formed in this country, and will again include an estimate of total sales. It will be the fourth survey of the movement published by *The Economist*.

Britain and the Dictators

AT this moment the possibility of being overtaken by a second Great War within the span of a single lifetime confronts the people of this country; and they know that the coming war, if it does come, will be much more searching than the last. Every physically and mentally fit person in this island will be directly or indirectly a combatant; and every living man, woman and child will be a target for hostile attack. The possibility of such a recurrence and such an intensification of an unprecedentedly vast calamity is bewildering. What fearful fault can we have committed to have brought ourselves into danger of this awful retribution? Or is the fault somebody else's? Or is the responsibility distributed? Or is it impossible to fix it at all? Are we the victims of impersonal forces which use as their puppets great nations as well as puny individuals, and would-be omnipotent dictators as well as the confessedly human and law-bound constitutional rulers of the still democratically governed States? In this painful bewilderment the intelligent citizen to-day is eagerly looking for light to guide him on the perilous path along which he is trying to feel his way. Such light will be found in a book just published—under the title at the head of this article—by a British scholar with a deservedly great reputation for honesty, disinterestedness, learning and grasp in the crucial domain of international affairs.*

Dr Seton-Watson's present work could not have been published last week if it had not been completed before the latest events in an international drama that is now unfolding itself at a terrifying speed. The fall of Mr Eden, the negotiation of the Chamberlain-Mussolini agreement, and the annexation of Austria by Germany, have all had to be discussed in an annex. But, momentous and sensational though they are, these most recent occurrences have not affected the substance of the book. The picture is still in focus; the judgments still hold good; in other words, the author has given his countrymen the means of information and guidance of which they are so sorely in need.

This book will help the reader to take his share in the forming of those grave national decisions—to act or not to act, to be or not to be—which will perhaps have to be made in the near future. He will find here all the principal relevant facts; he will find them placed in relation to each other and set, with a masterly art, against their respective historical backgrounds; and he will be shown the bearing of these facts upon the questions that he himself will have to answer.

What, for example, of the peace-settlement of 1919-21? Was it the iniquity that Herr Hitler declares it to be? Or was it an honest attempt to apply certain enlightened principles? Or if, as is no doubt more probable, it is neither wholly black nor wholly white, to which of these two extremes does its colour more nearly approximate? In a particularly penetrating and dispassionate piece of analysis Dr Seton-Watson arrives at a shade of grey which is whitish, not blackish. He starts methodically from those items in the Fourteen Points and other pronouncements of President Wilson's that were accepted by Germany in the armistice negotiations as the basis for the terms of peace. His conclusion is that this basis was substantially preserved in the peace treaties save in the three matters of the removal of economic barriers between States, the reduction of armaments by all parties (victors as well as van-

* The book (pages xviii + 460, Cambridge University Press, 12s. 6d. net.) of which this is the title, and Dr R. W. Seton-Watson the author, was noticed shortly in the last issue of *The Economist*. Dr. Seton-Watson's work is so timely and so authoritative that it demands the fuller consideration that we are happy to be able to give it in the present article.

quished), and the impartial adjustment of colonial claims. He further points out that, in the territorial part of the peace settlement in Europe, the one wantonly flagrant violation of the principle of national self-determination was the handing over of the German population of the South Tyrol to Italy. Yet Signor Mussolini has posed for years past as the apostle of treaty-revision, and Herr Hitler, whose self-conferred mission is the liberation, and reunion with the Fatherland, of all Germans under alien rule, committed himself only the other day in Rome, and this in the most emphatic terms, to leaving the Southern Tyrolese for ever fast bound in the misery and iron of Italian oppression!

Dr Seton-Watson goes on to discuss the wasted opportunities and the perverse follies of our ten years of grace between the peace settlement and the slump. He goes into the relations, past and future, between Britain and each of the three "totalitarian" European Powers; he takes up the problem of national minorities—now forced upon everyone's attention by the danger, for us all, of the critical position in Czechoslovakia—and he deals in separate chapters with the tragedies of Abyssinia and Spain. The common note of all these chapters is the discriminating and level-headed judgment which is indeed the chief excellence of the book. For example, in examining the rival "ideologies," he brings out the significant similarities underlying the alleged contrasts between them. He weighs up the pros and cons of supping with the devil wherever situated—be it in Berlin, Rome or Moscow. In passing, he is informative on the riddle of Stalin's army purge. He establishes the incompatibility of Signor Mussolini's Roman Empire, as he dreams of it, with Mr Chamberlain's British Empire as it is. He gives a valuable sketch map of "Mein Kampf"—a jungle of words into which the serious student of international affairs must venture if he wants to see Hitler in Hitler's own native mental environment and to gain some idea of the Fuehrer's true intentions. Again, Dr. Seton Watson judiciously differentiates between the Abyssinian and the Spanish issue.

The key chapter is one in which British policy of to-day is considered as "a problem of ethics, psychology and strategy." Here the author brings out already the two alternative reactions to the crisis between which Great Britain is hovering: on the one hand Cain's "Am I my brother's keeper?" and on the other hand St. Paul's "No man liveth under himself." And he leaves us in no doubt about what is the proper choice for a British statesman.

He must aim not merely at *Pax Britannica* but at World Peace (they are not far apart!): he must, above all else, seek to keep or bring British interests into line with the new International World Order, and the real test of his statesmanship will come when the two are in conflict and he fails to find a means of reconciling them.

Turning from the general to the particular, Dr Seton-Watson finds that "for the two Western Powers the crux of the whole European situation is the German problem"; and he prophetically disposes of the policy which Mr Chamberlain has put into practice since this book went to press.

An agreement with Italy is no substitute for an agreement with Germany: it is hardly even a palliative of the existing situation. Its attainment would certainly force Germany to alter her tactics, but it would not bring her to her knees or even induce her to renounce her designs: it would at most lead her to postpone them, but incite her to further effort in the consciousness of a real, and no longer an imaginary, encirclement.

But, on probing the foreign policy of the Third Reich, Dr Seton-Watson comes unhappily to the conclusion that Hitler, though he may be willing from time to time to do a deal on this point or that, has no intention of entering into a general settlement with a view to "settling down" and joining the rest of us in what President Roosevelt has called the policy of behaving as "the good neighbour." On this question, Dr Seton-Watson suggests, Herr Hitler's Reichstag speech of February 20th last removes all shadow of doubt.

In demanding that we shall scrap all the machinery of peaceful international accord and accept as a permanence the "European anarchy" to which his policy of unilateral repudiation has brought us all—for this, in almost so many

words, is what he demands—he is asking too high a price for a settlement.

From this the author argues that this country is faced with a choice between two, and only two, practical courses—

the honourable one of banding together all pacific elements in a final effort of conciliation, based on World Order, or the craven one of divesting ourselves of the possessions which our fathers have brought together, and of the responsibilities and duties which have accrued from them.

The reader may, of course, choose differently from the writer; but he certainly cannot read the book without being led to ask himself the vital questions in the light of the knowledge provided for the answering of them.

Our Overseas Markets

ECONOMIC events have moved rapidly in recent months. Only a year ago world prices had risen steeply, and British production and trade, in common with those of the majority of other countries, seemed bound for new high levels. Prosperity had come and, according to all but a few "dismal Jimmies," had come to stay. That was

twelve months ago. To-day it can be seen that the spurt in economic activity, which began to gather headway in the middle of 1936, had, even then, largely outrun itself. Prices had already passed their peak, and in summer British business activity itself began to turn downwards, as the decline in new civil investment for commercial pur-

poses in the home market and the shrinkage of export business began increasingly to offset the continued rise in defence expenditure.

The interplay of these developments at home and abroad is now being reflected in the course of our overseas trade. Though it was only in April that the value of imports began to fall below the level of last year, British exports have been running below those of corresponding months in 1937 since last February. For the first quarter of this year the leeway in exports was only 0.2 per cent., while the value of imports was still 6.6 per cent. higher than in the first quarter of last year. Exports thus began to fall earlier than imports. The figures are still less flattering to British industry if we look at volume instead of value; for the Board of Trade's analysis of quantitative changes shows that, while the volume of domestic exports in the first quarter was 8 per cent. lower this year than last, the volume of retained imports was actually 5.1 per cent. higher. To what extent has the geographical distribution of our overseas trade been affected by these developments?

An answer to this question may be found in the tables at the foot of the preceding page, which show details of our trade with the principal overseas countries. Taking first, our trade with Europe, it will be seen that the increase in our imports from Continental European countries, between the first quarters of 1937 and 1938, was 11.1 per cent., compared with an increase of 6.6 per cent. in our purchases from all countries. The fall in our exports to Europe, at 2.9 per cent., was more marked than the decline in total British exports, which amounted to only 0.2 per cent. The decline in exports, however, has not been general; for 14 out of the 25 countries listed in the table increased their purchases of British goods this year.

As in the case of Europe, the increase in our imports from foreign countries outside Europe between the first quarters of 1937 and 1938, at 7.5 per cent., is above the average, while the fall in our exports to them, at 18.3 per cent., far exceeded the decline in total shipments. The increase in our purchases from this group of countries exceeded 10 per cent. in the case of the United States, Cuba, Mexico, Colombia, and Bolivia. Our imports from the United States showed an increase during this period of no less than £13.7 millions, or 57.8 per cent., but this was offset, in a large measure, by a reduced intake from some of the other countries in this group. The decline in our shipments to the United States, which was partly offset by increased exports to some of the remaining countries, amounted to no less than £3,984,000, or 44.4 per cent., a reflection of the recession in that country. In addition, the Dependencies of the United States, China, Japan and her Dependencies, and Peru reduced their purchases from us by more than 10 per cent. A number of other countries, however, including Turkey, Iraq, Iran, Uruguay,

Bolivia, and Argentina, increased their imports from us by more than 10 per cent.

In contrast to the trend of our trade with foreign countries, the increase in our imports from British countries between the first quarters of 1937 and 1938 was only 2.4 per cent., while the heavy decline in our sales to foreign countries was practically offset by the increase of 6.3 per cent. in the value of our exports to the Empire. While we reduced our purchases from four of the nine geographical areas shown in the table—Eire, West Africa, West Indies and Ceylon; only two—Eire and West Africa—purchased less from us in the first quarter of 1938 than in the corresponding period of last year. With the exception of Australia, which increased her purchases from us by 31.6 per cent., the rise in exports was small.

As a result of these tendencies, the proportion of our total exports going to the Empire rose from 47.2 per cent. in the first quarter of 1937 to 50.3 per cent. in January-March this year, against 45.1 per cent. in 1929; and the share of our total imports derived from British countries fell from 40.1 per cent. to 38.4 per cent., compared with 32.1 per cent. in 1929. The proportion of our total imports from European and non-European foreign countries rose from 30.6 per cent. to 31.9 per cent., and from 29.3 per cent. to 29.7 per cent., respectively. Compared with the first quarter of 1929, the share of our total imports from European countries in January-March, 1938, was only 0.7 per cent. lower; but in the case of non-European foreign countries the decline amounted to 5.6 per cent. The share of our total exports going to European and non-European foreign countries declined from 31.9 per cent. to 31.0 per cent., and from 20.9 per cent. to 18.7 per cent., respectively. But, as in the case of imports, the proportion of our total exports consigned to Europe in January-March this year was practically the same as in 1929, when it amounted to 30.9 per cent. On the other hand, the proportion of our exports sent to non-European foreign countries in the first quarter of this year was 5.3 per cent. smaller than in January-March, 1929. The increase in our trade with the Empire, while scarcely affecting the proportion of the total business done with Europe, has thus been achieved at the expense of a fall in the proportion of trade done with non-European foreign countries.

On the whole, the returns for the first three months of this year show the irregularities characteristic of a period of transition, when a new trend has had insufficient time really to establish itself. The nature of that trend, however, is only too clear. In the absence of wholly unexpected developments, it seems likely that, in ensuing months, the decline in imports will become more marked as a result of falling domestic business activity, while export orders will reflect the reduced purchasing power of overseas countries.

New Roads for London

ALL roads, proverbially, lead to London, but once they have reached it their passage through the capital becomes cramped and tortuous. Recognition of this fact led to the commissioning of Sir Charles Bressey by the Minister of Transport in 1934 to study Greater London's need for improved road communications. Sir Charles sought the aid of Sir Edwin Lutyens, and their Report was made public last Monday.

The skein which Sir Charles and Sir Edwin were set to unravel is woefully tangled. The London Traffic Area occupies one thirty-second part of the area of England and Wales and contains one-fifth of Britain's population. To-day, the population of the London area is over 9½

millions; in 1951, it may be 10½ millions. Twenty radial roads from all points of the compass thrust their way into the widening rim of swollen London; and, to ease their approach, close upon thirty arterial by-pass and improvement schemes have been executed since the war. These approaches are dangerously built up; they are often unduly narrow, and they are scattered with blind corners and "bottle-necks." But even these impediments, wasteful as they are of life and limb and time, are small in contrast with the central chaos into which the arterial roads debouch.

Turning inwards off the approach ways of Western Avenue, the North Circular Road, the Great North Road and Eastern Avenue, traffic is jammed and delayed by

inadequate junctions. Nearer London's centre, the flow of vehicles is clogged in the West End at Oxford Circus, in the East End at Gardiner's Corner, Aldgate, in the North at the Archway Tavern and the Angel, in the South at the Elephant and Castle, and in the West at Hammersmith Broadway. And on the river's edges the bridge-heads are notorious sites of congestion and stoppages. Nowhere in London is there relatively free and unimpeded access from the outskirts to the centre. To cross London, at any point, is a slow, dangerous and vexatious journey.

In the Bressey Report, these traffic deadlocks are stated and measured. For five days, four chosen routes were traversed by car. On three cross-London routes the average speed was 12.5 miles per hour. On the North Circular Road the average was 23.6 miles. Through the City of London speed was painfully slow; and special delays were noticed at the Bank, Ludgate Circus, Tower Bridge Road, Elephant and Castle and Cambridge Circus. A census of dock traffic was taken, and revealed the remarkable pressure which exists upon Commercial Road East, East India Dock Road, Silvertown Way and East Smithfield. To cross the river, Tower Bridge and the Rotherhithe Tunnel were most frequently used by lorries; and the Thames tunnels were shown to be gravely overtaxed.

In fine, the problems observed in Outer and Inner London were four in number. First, there is need to improve existing facilities; to clear and free the routeways which link London and Britain, and to loosen the flow of traffic on the capital's present highways by efficient roundabouts, widening and safer junctions. Secondly, access to central districts and riverine areas must be given by new roads. Thirdly, the barrier of London must be pierced to allow traffic to traverse the conurbation from East to West

and North to South. And, finally, ring-roads, within and without the city, must be planned and executed to ease the pressure on London's facilities. The Report ranges widely over all these problems; and some seventy schemes make up a bold plan of through-ways and loop-ways.

On an inspection of the annexed map, which epitomises the main proposals, the great ring-roads leap first to the eye. To relieve the pressure around St. Paul's and the Mansion House, a City Loop Way (too small to be shown on the map below) will take off from Blackfriars Bridge eastward along an extended Embankment to the Tower, turning via Crutched Friars and London Wall to Wood Street to regain Blackfriars down Farringdon Street. The second circular route will complete the loop already begun by the North Circular Road. It will run from a new tunnel at Woolwich through Streatham to a reconstructed Wandsworth Bridge, whence it will be carried northward through Kensington, Notting Hill and Cricklewood. The third loop, from which national motorways will run outwards, will encompass London, eighteen to twenty miles away from the crowded centre; the North Orbital will swing from Egham to Brentwood through Uxbridge and Hoddesdon; and the South Orbital will complete the circle from Egham through Oxted to Dartford. In the very heart of the City, in the suburbs and on the green rural outskirts, these three ring-roads will carry traffic away from the centres of deadlock and delay.

Cross traffic also will be notably catered for in this remarkable plan. "A spacious and unmistakable thoroughfare," about twelve miles long, will connect the Wood Lane, Hammersmith, end of Western Avenue with the Leytonstone extremity of Eastern Avenue. It will run from

East to West through North Kensington and Paddington to the Marylebone and Euston Roads; avoiding the tangle of Islington by a tunnel, it will pass through Bethnal Green to Hackney Marshes and Wanstead. Roads to the North will spring from Stepney and the tunnels at Blackwall and Woolwich. A new south-easterly outlet will run from Vauxhall Cross through Norwood to Westerham; while a new road to the South will originate at a duplicated Rotherhithe tunnel and run on a viaduct through Deptford and Brockley to Forest Hill. Finally, a great North-South way will be provided by a road from Holloway to Blackfriars Bridge, and thence on a viaduct to Brixton.

The sum total of the Report's proposals is a vast and integrated plan to remodel London's highways. Some details are drastically novel, and not always impervious to considered criticism. Viaducts and tunnels are important links in the scheme. It is proposed to build a road beneath Kensington Gardens; to reconstruct Piccadilly Circus and Hyde Park Corner; to complete an Embankment eight miles long from Fulham to the Tower; and to duplicate the river tunnels in the eastern reaches of the Thames. It was not the task of these experts to count the cost—which may well be astronomical, when widening City roads may cost £2,000,000 a mile—but merely to show ways to solve

problems which press hard and urgently upon London's life and livelihood. Their scheme is but the beginning of policy: "if due advantage is to be derived from the expenditure which these projects will involve, it is essential that areas . . . should be drastically replanned."

Precedent, it is true, augurs ill for their labours. Wren and Nash failed to refashion London because of the cost of compensating property owners. The Duke of Bedford's eighteenth-century ring-road through the country fringes of Marylebone was engulfed by the spreading out of Cobbett's Wen.

This Report, altogether, is a great achievement. It shows vision and imagination. But it is somewhat saddening. That so much ingenuity and foresight should be applied, perforce, to the problem of maintaining in running order a great urban concentration, where millions must needs lack fresh air, fresh food and country sights, may be an inevitable consequence of present trends in many countries besides Great Britain. But it is no real tribute to our civilisation that the disposition of the work and homes of great masses of the people requires them to spend long hours of every day on the latest form of speedway, and thereby to sacrifice many of life's deeper and more permanent satisfactions.

Topics of the Week

Cabinet Changes.—Sir Kingsley Wood's translation to the Air Ministry has enabled Mr Chamberlain to fill the Ministry of Health by translating Mr Walter Elliot from the Secretaryship for Scotland: a wise and fitting new appointment, for Mr Elliot has not only a long administrative record behind him, but also the training and interests of a medical man. In his chair at the Scottish Office now sits Lieut.-Colonel Colville, who, after being Financial Secretary to the Treasury, now attains that Cabinet rank which common report had long predicted for him. As Mr Malcolm MacDonald has occupied Lord Harlech's vacated position at the Colonial Office, Lord Stanley, M.P., brother of the President of the Board of Trade, has been made Dominions Secretary, thus doubling the traditional representation of the Derby family's ability in a Conservative Cabinet. Lord Stanley's former post as Under-Secretary for India and Burma has been taken by Lieut.-Colonel Muirhead, the former Under-Secretary for Air, to which latter post Capt. Harold Balfour, a pilot and specialist in aircraft manufacture, succeeds. Capt. Euan Wallace, well-known for his masterly report on the special area of Northumberland and Durham, and hitherto Parliamentary Secretary to the Board of Trade, is now Financial Secretary to the Treasury *vice* Lieut.-Col. Colville; and Mr Ronald Cross, formerly Vice-Chamberlain of the Household, and with experience of the cotton industry, becomes Parliamentary Secretary to the Board of Trade *vice* Capt. Euan Wallace. Thus, the changes in the *dramatis personae* of the Government result much more from a recasting of the whole Ministerial company than from the introduction of new talent.

The Lords on Foreign Policy.—On Wednesday Lord Snell introduced a motion in the House of Lords deprecating the Government's sacrifice of Abyssinian independence and of Spanish democracy. Lord Brocket's amendment was the flat contrary, approving the Anglo-Italian agreement and non-intervention by Britain in Spain—though, as we record in a Note (page 408), Signor Mussolini implied last week-end that the Anglo-Italian agreement was only purchased by British connivance at Italian intervention in Spain. The debate was notable for many things. First, the Archbishop of Canterbury made a speech remarkable for its combination of sorrowful acquiescence in accomplished facts with advocacy of conciliation

between Britain and France on one side and Germany and Italy on the other. In it, the Primate warmly supported Lord Lugard's proposal that the Emperor Haile Selassie might be accorded a limited area of Abyssinia in which he would enjoy internal autonomy under Italian suzerainty; and he said he was "not without hope that the Emperor might be willing to consent." The next remarkable speech was that of the Bishop of Durham; an outspoken challenge to the view of Lord Brocket and of the Primate. Lord Halifax's *apologia* was cool, detached and stoutly in defence of peace at almost any cost. It was based, however, on one dubious premise: his initial statement that the League's acts and sanctions had been "collectively" taken and abandoned. He accepted no discredit for Earl Baldwin's Government's policy in leading fifty nations into sanctions "collectively," and then of leading the way out of sanctions unilaterally. By the same token, his excuse for the Government's policy at Rome and Geneva was that it left each country free to take its own decisions. Lord Halifax denied the inevitability of war; stoutly declared his belief in the necessity for an understanding with Germany and Italy; and refused to see any dangers in the connection between the outcome of the Spanish conflict and the Government's agreement with Italy. He concluded with a strong plea for domestic unity on foreign policy—an admirable aspiration, the attainability of which was rendered improbable by the utter sunderance of views expressed throughout the debate.

The Tail End of the League Council.—In last week's issue we were in time to record Lord Halifax's speech and the Abyssinian delegate's reply, on the question of giving diplomatic recognition to the Italian conquest of Abyssinia. We have now to chronicle the equally undifying and depressing sequel. The Abyssinian spokesman had no difficulty in showing that what Lord Halifax had represented as a conflict between two incompatible ideals was really just a conflict between principle and expediency. What Lord Halifax had asked of the Council was their concurrence in the view that States-members of the League should be regarded as being free to accord or withhold recognition of the Italian *fait accompli* at their individual discretion. And it was a foregone conclusion that considerations of expediency would prevail over an Abyssinian case which neither Lord Halifax nor any other delegate on

THE CHIEF PROPOSED ROUTES

the Council knew how to answer. In the ensuing debate Lord Halifax was supported by the representatives of France, Roumania, Poland, Sweden, Belgium, Poland, Ecuador, Iran and Latvia, while he was opposed by those of New Zealand, Bolivia, China and the Soviet Union. The chairman refrained from taking a vote which would manifestly not have been unanimous. He wound up the proceedings by a declaration from the chair that it was evidently the wish of most Council members to be left free to recognise or not recognise the conquest as they thought fit. It seems a strange inversion of the constitution of the League to circumvent the unanimity rule by "taking the sense of the meeting," and it was particularly strange in view of what was the subject at issue. The purpose of the unanimity rule is to safeguard the sovereignty of States-members; and there could be no greater infringement of sovereignty than to declare, over a sovereign State-member's head, that its sovereignty, and its very existence, has been extinguished! On Friday, the 13th, the Council, by four votes to two—all the rest of the members abstaining—rejected a resolution, proposed by the Spanish delegation, inviting the League to envisage forthwith the ending of the policy of non-intervention. It might have been thought that, at this 101st session of the Council, the League had been shedding its duties rapidly enough to satisfy even the most impatient advocates of "League Reform"; but the pace proved still too slow for Chile; and on the closing day of the session the Chilean delegate announced his country's decision to withdraw from the League because the League had not yet achieved universality! On the same day, the 13th, the Council passed a platonic resolution of sympathy with China, and took note of Switzerland's declaration of intention to revert to complete neutrality. Really, Chile need not have been in such a hurry. When all League obligations are repudiated or ignored, the distinction between members and non-members will cease to be discernible.

* * *

Mussolini and France.—Mussolini's speech at Genoa last Sunday displayed friendliness towards Germany, coolness towards Great Britain, and hostility towards France. These differentiations of tone are, of course, deliberate, and are nicely calculated to suit the speaker's policy at the moment. They are no guide to what he will do in an international crisis. Still, the speech brings out some points in the Italian dictator's policy which are not the less interesting for being just what we expected. Once again Signor Mussolini has disclaimed any intention of lining up with any other Powers to challenge Germany's ascendancy on the Continent. "The whole diplomatic episode connected with the name of Stresa is now dead and buried"—and with it, presumably, all the hopes which inspired Mr Chamberlain to woo Mussolini's friendship by giving him presents at Abyssinia's and Spain's expense. Italy "could not assume the mantle of Austria under the Habsburgs and Metternichs and try to prevent the movement of nations towards unity." Taken seriously, this would signify an intention of ceding to Germany and Yugoslavia the Tyrolean and Slovenian territories which Italy obtained in the peace settlement in violation of the Fourteen Points; but we take it that the speaker was referring, not to the beam in his own eye, but to the mote in Dr von Schuschnigg's and Dr Benes's. As for the Anglo-Italian agreement, Italy intends to respect it scrupulously, i.e. not to place it in the same category as the Italo-Abyssinian non-aggression pact of 1928; and since the Duce thought the British Government intended to do the same, it might be considered a durable agreement. He did not know, however, whether the Italo-French negotiations would reach a conclusion, "because in one extremely vital matter, the war in Spain, we stand on opposite sides of the barricade. Their desire is for the victory of Barcelona; we, on the other hand, want Franco to win." In other words, France is guilty of the, for Italy, unpardonable offence of objecting to an interpretation of the Non-Intervention Agreement which makes this instrument binding on the democratic Powers while leaving the Fascist Powers free to break it. And if this French attitude is an insuperable obstacle to

the negotiation of an Italo-French agreement, then the fact that an Italo-British agreement has been initialled must mean that, in Mussolini's estimation, Mr Chamberlain has in effect consented to allow Italy to break the Non-Intervention Agreement unilaterally to whatever extent may be necessary to make Franco win. It is now for the Prime Minister to refute this interpretation of the agreement. Silence will mean consent.

* * *

Armaments and Industry.—Estimates of economic possibilities, made by well-known City firms and institutions, have not frequently erred through an overdose of the hope that springs eternal. That charge, however, certainly does not lie against a review circulated this week by an important stock-broking firm. This survey, after considering the favourable and unfavourable factors in the present situation, reaches the conclusion that, while re-armament may prevent Great Britain from suffering anything like the severe depression which afflicts the United States, it will not in itself obviate the possibility of a further decline in trade activity. This judgment is founded on a table which brings up-to-date the firm's earlier estimates of the distribution of the nation's defence expenditure. The figures are reproduced below:—

DEFENCE EXPENDITURE—£ MILLIONS
Financial Plans to March 31st

	1934-35	1935-36	1936-37	1937-38	1938-39

Repair work	6.1	7.8	9.2	10.1	13.5
Other dockyard work, stores, etc. (d)	3.8	5.9	8.1	10.0	14.6
	20.2	25.8	34.6	45.7	62.9
Total (inc. miscellaneous items)	120.8	146.2	195.2	286.5	351.7

Notes.
I. (a) Includes all pay of all sections of the troops, and all salaries, including administrative salaries. Also includes social and health insurance.
II. (b) All goods of a metal nature—lorries, armaments, aircraft, ammunition, tanks, electrical apparatus, etc. The 1937-38 figure includes a large item for machine-tools, including an estimate of machine-tools needed for new Royal Ordnance Factories.
III. (c) Includes cost of land for new factories, both private and Government.
IV. (d) This item represents the provision of naval stores—steel, timber, armour, etc.—in excess of actual construction needs.

The conclusion drawn from these figures is that the concentration of increased re-armament expenditure in heavy industries, which are already working at or near full capacity, may have an adverse effect on other industries, in proportion to their dependence on iron and steel for their raw materials. Steel prices are still high, but steel output, as we show in a Note on page 443, is falling. There is force in the contention, which the review makes, that, while high steel (and fuel) prices may tend to check "civil" building, cargo tonnage construction and factory re-equipment, the iron and steel industries may themselves become dangerously dependent on re-armament and liable to be left high and dry, if and when re-armament expenditures are reduced.

Trade Unions and Re-armament.—The two bodies representing Britain's 500,000 skilled engineers, the Confederation of Shipbuilding and Engineering Unions and the Amalgamated Engineering Union, have at last agreed to meet the employers on May 25th to discuss the speeding-up of re-armament. There has been delay, especially on the part of the A.E.U., but that delay has been less striking than the Government's own delay in

this matter. Two years ago, a White Paper laid stress upon the need for trade union co-operation in the defence programme. Only this year, when the programme had fallen behind in important instances and general criticism was growing, were steps taken by the Government to secure the corporate aid of organised labour—or, indeed, of the employers of labour. Thereupon, there was need for the unions to formulate conditions for their co-operation in the best interests of their members. On Tuesday, the C.S.E.U. conference discussed this question and, without binding their delegates to meet the employers with cut-and-dried terms, emphasised a number of important points to be considered: the recognition of shop stewards; the payment of uniform and, in certain circumstances, higher rates of wages; and the employment of wholly union labour. It is the function of the trade unions to safeguard industrial standards, and if the price of national emergency is to be some surrender of their privileges, then there must be sacrifices *pro tanto* from employers and shareholders, and some security for the future when re-armament slackens off. The unions' concern, however, has not been wholly with wages and conditions of work. A newly-articulate criticism of the Government's foreign policy has won notable converts among trade union leaders as well as the rank and file; and there is no more enthusiastic material for the proposed Popular Peace Alliance than among many of the members of labour organisations, despite the Labour Party's *ex cathedra* condemnation of the project. The propriety of the injection of foreign politics into union decisions is disputed; but a major portent in the present situation is the unions' eagerness for a democratic front of nations to defend peace and free institutions.

* * *

Civil Aviation.—In the Commons on Wednesday, the new Air Minister, Sir Kingsley Wood, moved the second reading of the Air Navigation (Financial Provisions) Bill, and, in so doing, turned down the Maybury and Cadman Committee's recommendations against subsidising internal air lines in this country. The aim of the Bill was to raise the total subsidy of civil aviation by the State from a maximum of £1,500,000 per annum to £3,000,000, in the shape of payments for services under agreements made with the Air Minister. Till now, most of the annual subsidy has fallen to Imperial Airways; and only a few years ago did British Airways obtain a subsidy for carrying mail on their Scandinavian route. The recent Cadman Report recommended, *inter alia*, the confinement of Imperial Airways services to Empire routes and routes outside Europe, e.g. the possible new route to South America in which British Airways are understood to have long been interested. Sir Kingsley told the House on Wednesday that of the *additional* financial assistance, the bulk of £1,000,000—i.e. nearly two-thirds—would be allotted to the Empire routes outside Europe, i.e. to Imperial Airways, and the balance to services within the frontiers of the United Kingdom. Of the remaining £500,000 increase, £400,000 would be allotted to improving, modernising and speeding-up the European services. Hitherto these have been mainly operated by Imperial Airways; but if the Cadman Report is implemented, British Airways will in time probably take over most of the European passenger services, and may well absorb yet other independent small operators working freight and passenger lines to the near-Continental airports. An extra £100,000 would be set aside this year, diminishing in succeeding years, for services in the United Kingdom. Capt. Harold Balfour made a good impression in his new post as Under-Secretary. He gave two welcome assurances: that pilots' pay would not be calculated with so great a ratio dependent on "results"; and, secondly, that the railway companies' ban on air bookings would be removed within a month or two.

* * *

Government and the Unemployed.—The gradual worsening of trade conditions was reflected in the sharp

criticism of the Government voiced by the Opposition in Tuesday's Commons debate on the Vote for the Ministry of Labour. Clearly, the Government cannot justly be saddled with all the responsibility for the existence of 1½ million workless. Criticisms of the official treatment of the unemployed were more to the point. The device of wholesale industrial transference, especially of juvenile workers, is liable to create grave social problems in the absence of some comprehensive plan of labour distribution. And the continued existence, through bad days and good, of an unprecedentedly large number of long-term unemployed presents a problem which may be intractable, but is none the less pressing. Moreover, no effort should be spared to meet the complaints which have been registered against the methods and status of the Unemployment Assistance Board. It has been argued that the Board's responsibility to Parliament is not sufficiently close, and its functions too rigidly delimited to permit of the elasticity in operation which is essential to the treatment of human misfortunes and disabilities. It may be true that the average rate of benefit paid by the Board, at 24s. 5d. per head, is as generous as financial circumstances will permit. It is equally true that this sum leaves no margin for special cases of hardship; and the Minister's proposal to give the Board statutory powers to pay extra sums in individual cases of distress is wholly desirable. So, too, are measures to remove any suspicion of bureaucratic methods from the Board's work, admirable in many respects. Inquisitorial supervision of applicants' political views has no proper place in the administration of unemployment assistance. And, when the Board's administrative expenses have risen from £3,750,000 in 1934 to £4,413,000 in 1937, though the number of its clients fell from 951,000 to 600,000 in the same period, it is especially important that no charge of unsympathetic treatment should lie against the Board. In the absence of economic and financial measures to cushion the consequences of the deepening recession, the Government would do well to examine with care the human aspects of official policy. A member's statement in the debate that "it is always winter for the unemployed," is unfortunately only too true in many ways.

* * *

Journalists' Freedom.—Libel is the major bogey of British journalists. Lately, however, a second menace to their traditional liberties has emerged in the wide use made of the Official Secrets Acts. Recent cases in the courts have suggested that the special powers accorded to officers of the law by the Statute of 1920 are capable of being employed to prevent newspapers acquiring and publishing news of a kind for which the Act was never designed. Initially devised to prevent the disclosure of military and naval secrets, the exceptional powers of interrogation provided by these measures have, in fact, been used in cases wholly civil in character. Replying to a number of parliamentary questions on May 12th, the Home Secretary

SKANDINAVISKA
KREDITAKTIEBOLAGET

regretted his inability to amend the law in such a way as to confine its operation narrowly to its original purpose. He laid stress upon the fact that certain civil secrets were as important to the State as purely military matters. Since 1930, however, the fiat of the Attorney-General had been necessary to sanction the use of special powers of interrogation under the Acts; and, in future, such authorisation would only be given in cases of serious public importance. On the other hand, Sir Samuel Hoare pointed out that "leakages of confidential information of an official character might assume such proportions as to raise an issue of serious public importance, even though the matter disclosed was not in itself of this character." Sir Samuel's definition of official secrets did not reassure the journalistic profession, who voiced their uneasiness at meetings in Manchester and London on May 14. The Press is broadly content with the freedom afforded it by the law of the land. But the degree of discretionary power given to the executive arm by the Official Secrets Act in its present form is dangerously wide. *Raison d'état*, undefined, is an element foreign to Britain's juridical tradition.

The Breach with Mexico.—A Note handed to the Mexican Government by the British Minister on the 11th of this month has moved Mexico to break off diplomatic relations with this country. The British demand was for a four-months-overdue instalment of payments that are being made in compensation for losses suffered in Mexico by British nationals during the revolutionary years of 1910-20. The Note breaking off relations was accompanied by the overdue cheque, and contained a pointed reminder that Great Britain had not in recent times met all her monetary obligations. The formal ground for rupture is that the overdue payments which were the subject of the British Note were not an international obligation as between Governments, but were an *ex gratia* payment by the Mexican Government to private individuals; and that therefore the British Note was an unwarrantable interference in Mexico's internal affairs. The Mexican Minister has been recalled from London, and the British Minister in Mexico, Mr O'Malley, has arrived in Washington. The Mexican Government's action seems capricious; the British Note was only sent after the failure of repeated attempts to obtain payment of the overdue instalment by private and informal representations. Moreover, the corresponding instalment of payments due to United States nationals had been punctually discharged. This breach is also a pity from a wider point of view. The opportunity has been taken by the Mexican Government to break off relations at a time when a much greater dispute—that over the expropriated oil companies—is unsettled. Now, the principal protagonist on the oil concerns' behalf must be the Government of the United States. That Government is not too well disposed towards the oil companies, least of all foreign

concerns; and no British action can now be taken on behalf of the Anglo-Dutch interests without involving the Monroe Doctrine's application. Indeed, as was really always the case, the paramount influence on Mexican domestic and foreign relations can only come from Washington; and if the Mexican economic situation deteriorates much further, developments in Mexico might take awkward shapes for the State Department. Closer relations between Mexico and Germany, Japan or Italy would be one problem; and internal trouble in Mexico, the possibility of which increases as economic conditions there get worse, another. In any case, the end of the Mexican story is not yet even in sight. The State Department's demand for "adequate compensation" on behalf of expropriated American oil concerns has still to be met; and it is hard to see how it ever can be.

The American Scene.—Events have crowded thick and fast on the American stage during the last few days. The amended Tax Bill has now gone through. In the evening of Thursday of last week, the virtually intact \$3,119,425,000 "lending and spending" programme of the President passed the House of Representatives by 329 votes (291 Democrats, 25 Republicans, eight Progressives and five Farmer-Labour) to 70 (59 Republicans and 11 Democrats), and now goes to the Senate. The announcement of the result of the unemployment census, conducted on the basis of voluntary registration by Mr Biggers of Toledo, Ohio, at the request of the Government, may have impelled the Democrats to stand firm behind the Administration's programme. There were 5,833,000 totally unemployed, 2,000,000 on relief work, and 3,200,000 partly unemployed; and even the affirmative votes of the 25 Republicans show that some of the Opposition were attracted, as they nearly always are in every country, by the power of the public purse during a recession. The Works Progress Administration, despite Republicans' attacks, retains its right unimpaired to expend \$1,250 millions of the total sum in the programme. On Monday the Supreme Court recorded three decisions which bluntly upheld the powers of the often-criticised National Labour Relations Board. An order by that Board for the reinstatement of strikers was upheld; a Circuit Court's issue of an injunction against would-be strikers was reversed; and, most important, three members of the Philadelphia Circuit Court were summoned before the Supreme Court for May 23rd to justify their refusal to the Labour Relations Board of permission to withdraw the suit it had filed against the Republic Steel Company for alleged contravention of the labour code. This set of decisions by a body more venerated than any other in the United States has had a powerful effect in rallying the President's supporters and their flagging optimism and energy; and, more important, it reinforces the sane view of many American employers that something like the Board would be necessary, whatever kind of Administration sat in Washington.

On Wednesday the result of the Pennsylvania primary election of candidates for the General Election in November showed that the Old Guard Republicans ran away with the Republican candidacy for the Governorship—that of Judge Arthur H. James, who defeated the Progressive Republican nominee, Mr Gifford Pinchot. The present Republican Senator, Mr James Davis, was renominated. On the Democrats' side, the candidacy for Governor fell to the State Democrat Committee's nominee, Mr Charles Alvin Jones, over the head of the present Lieut.-Governor Thomas Kennedy, who was openly, but unsuccessfully, backed by Mr John L. Lewis's Committee for Industrial Reorganisation, and more recently by the chairman of the Democrats' National Committee and the Postmaster-General, Mr "Jim" Farley. On the other hand, in the primary election for the Democrats' senatorial candidate, the present Governor

of the State, Mr Earle, defeated the present Mayor of Philadelphia, Mr Davis Wilson; and Governor Earle also had the backing of Mr Farley. Pennsylvania is among the three most Conservative States in the Union; it has always been a law unto itself in its political party life; but this week's primary election results show that, in Pennsylvania, Republicans are staunchly Conservative—no room for Progressives there—while Democrats and Labour are far from united, still manoeuvring for position.

Unity in the South African Union.—The South African elections have had a surprising result, for, according to the early returns, the Government has suffered neither the expected losses to the Dominion party in the towns of Natal and the Cape nor the expected losses to the Nationalists in the country districts. If, as appears possible, the Government emerges with a net gain of seats, the result will be comparable to what would have occurred if, at the 1935 election in Great Britain, the National Government had increased its 1931 majority. The leader and deputy leader of the Dominion party have both been defeated, the latter by Mr B. K. Long, the former editor of the *Cape Times*, who had an astonishing majority. The Nationalists have also suffered some unexpected reverses. These results entirely upset the almost unanimous forecast that the election would show the national unity achieved in South African politics since 1933 to be crumbling under the erosion of racial propaganda. General Hertzog, in his eve-of-the-poll message, declared that the elections would reveal whether South Africa desired national unity or not. The answer of the electors, so far, is unmistakably clear.

The Change of Government in Belgium.—Notwithstanding the Parliamentary success of M. Janson's Government which we recorded last week, unbridgeable differences within the Cabinet brought the Ministry to the ground, after all, on the 13th. The task of trying to form a new Ministry was entrusted by the King to M. Spaak, the Socialist statesman who had been M. Janson's Minister for Foreign Affairs. On Sunday, M. Spaak's endeavours achieved success. The new Belgian Ministry consists of eleven members, six of whom held office under M. Janson. The keynote is its representativeness. Three of the new Ministers are Catholics; four, including M. Spaak himself, are Socialists; two are Liberals; and two are non-partisan experts. Again, four of them are Flemings, four are Walloons, and three are Bruxellois. This composition of the Cabinet that has been brought together by the first Socialist Prime Minister that Belgium has had gives hope that M. Spaak and his colleagues may enjoy a long term of office.

A New Government in Hungary.—On the 13th of this month M. Darányi's Government resigned and a new Government was formed by Dr Imrédy, the late President of the National Bank, who joined M. Darányi's Government two months ago in order to put into execution a Hungarian Five-Year Plan, of which he was himself the author. The reasons for this change of Government in Hungary are not primarily economic. They are to be found rather in the political repercussions upon Hungary of the annexation of Austria to Germany. In Hungary, ever since then, the pressure of an indigenous Fascist movement, allied to National-Socialism, has been rising; and for some time M. Darányi has been under criticism for remaining too passive in face of a growing danger. Dr Imrédy appears to be grappling with this danger in two ways. On the one hand, he has taken into his Ministry an element—though not a preponderant element—that is to some extent sympathetic towards the Hungarian National-Socialist movement. On the other hand, he has announced his determination resolutely to repress any attempt to achieve National-Socialist aspirations by illegal methods. This latter point in his programme was laid down in vigorous

words by the new Prime Minister in a speech in the Chamber on the 14th, and the words were followed by action in the shape of two Bills: one providing for the vigorous repression of attempts at forming secret societies or political parties imposing oaths of allegiance on their members; and the second Bill reinforcing the existing measures for the repression of subversive political activities. The timeliness of these steps was illustrated on the same day by a clash between ex-servicemen and the Nazi followers of Major Szálasi. The ex-servicemen were holding an anti-Nazi demonstration, and a Nazi counter-demonstration led to a scuffle in which the Nazis were roughly handled. In the field of foreign policy, Dr Imrédy declared in the Chamber on the 14th that there was to be no change; and in fact he has retained M. Darányi's Foreign Minister, the experienced M. De Kánya. Dr Imrédy went on to say that Italy "continued to hold the first rank" among the nations closely united to Hungary by ties of friendship and mutual interest. He also had friendly words for Great Britain, for France and, most significant of all, for the Little Entente. "Normal relations" leading to "friendly collaboration" were what he hoped for the peoples of the Danube Basin. Dr Imrédy has courageously shouldered an onerous task.

Japan in China.—The Chinese "push" into Shantung, beyond the Suchow junction of the Lunghai Railway with the Tientsin-Nanking line, looks as if it were going to end in yet another of those military defeats of the Chinese forces which, in reality, because of Chinese superiority in numbers, have only proved Pyrrhic victories by the Japanese. An army of over 200,000 Chinese is reported from Japanese sources to be trapped in this sector, with Japanese divisions concentrating upon it from all directions round Suchow. On the other hand, the Chinese deny that the strategic railway from the coast, known as the Lunghai Railway, has been cut further inland than Suchow; and rains are impeding operations; so the Chinese may yet manage to escape from the trap into which they rushed. More than ever does it seem that this war is going to be a very long affair; and its effects more likely to cripple Japan than China.

Motor Cars from Germany.—The endeavour in certain quarters to work up an agitation against the increased imports of German cars into this country is readily comprehensible; for the jump in imports during the first three months of this year, as compared with the first quarter of 1937, from 295 private cars valued at £34,349 to 2,974 cars valued at £266,006, touches the British industry in a tender place. In the first quarter of last year, imports from Germany represented only 5 per cent. in value of a total of £715,629. In the first three months of this year they were equivalent to 33 per

7, CHANCERY LANE, LONDON, W.C.2

cent. of a total of £800,093. It is understood that something like nine-tenths of the German cars which have come in this year are made by the Opel Company, which belongs to the General Motors group. Unlike the American and Canadian cars, which have hitherto formed the bulk of British imports, they come mainly into the 11 horse-power class. Thus, they mark the first serious incursion of the foreign manufacturer into the light car market which, largely as a result of the peculiarities of the British taxation system, has hitherto been the preserve of the domestic manufacturer. Estimates made in the trade claim that a retail selling price, in this country, of £135 for the Opel "Cadet" car (which compares with prices ranging from £205 to £245 for 12-horse-power models of leading home manufacturers) represents a net value of less than £60 to the German manufacturer. Although the evidence which has been hitherto secured is not conclusive, it appears to show that substantial payments are made by a semi-official body in Germany to car exporters out of a levy (said to amount to 3 per cent. of annual turnover) on all German manufacturers of automobiles.

If these statements were correct, one would surmise that the policy of those in control in Germany was designed in the first place to ensure that the industry obtained sufficient foreign exchange to finance all its own imports of raw materials, and, in the second place, to secure "additional exports" as a general contribution to Germany's general exchange needs under re-armament and the Four-Year Plan. But what action Great Britain could, or should, take, if all this were true, would be another matter. The technique of an internal levy to finance an export bounty is anything but new in Germany, and is certainly not unknown in other countries. And it would seem to be right and proper that, if the British Government were asked to clap special anti-dumping provisions on top of a 33½ per cent. duty on cars of any particular horse power, they should ask whether British cars, of equivalent quality and class, were in fact being produced under the cheapest possible conditions. They might inquire, for example, whether retail prices in Great Britain could not be substantially reduced, if the home industry, taking a leaf out of the Opel Company's book, concentrated its efforts on a greatly reduced number of models.

Collision on the Underground.—News of a head-to-tail collision between two east-bound trains on the District Railway between Charing Cross and the Temple, at the end of the Wednesday morning rush hour, was received by the public with some surprise. For it is a generally accepted fact that the signalling system on London's Underground is as safe and as efficient as any in the world, as is shown both by the intensity of daily traffic and by the system's immunity from a fatal collision for over thirty years. Each train automatically places a signal to danger behind it, and holds it there until it has passed the next signal. It also raises a train-stop in the line, which automatically applies the brakes to any following train attempting to over-run a danger signal. If that apparatus breaks down, the signals and train-stops automatically assume the danger position. This system is operated with complete success, even during the rush-hour periods. On the other hand, if a failure or suspected failure of a signal occurs, then either the whole traffic of the line must come to a standstill while the fault is located and rectified, or traffic must be allowed to proceed slowly and under caution past the signal which has ceased to function. In the latter event, each train would depend upon the "human element" for its safety instead of upon automatic control. Comment on the cause of Wednesday's accident must necessarily await the outcome of official inquiry; but assuredly a system which leads to disaster only once in thirty years and which safely looks after many thousands of passengers every day, can be said to be as

near to complete security as anything is in an uncertain world.

Manchester—and Cardiff.—This week, while London has been presented with a sweeping plan to remodel its system of roads, two other important and influential cities, metropolitan in their own provincial settings, have also figured prominently in the news. Manchester has been celebrating the centenary of its incorporation, to the accompaniment of a notable Royal Progress through the County of Lancaster. Cardiff has had a different experience. For a hundred years, the Bute family has been closely associated with Cardiff's growth. The second Lord Bute launched the city's first Dock Act in 1830, and the Bute Trustees added to the West Bute Dock, opened in 1839, the East Bute Dock in 1855, the Roath Dock in 1887 and the South Bute Dock thirty-one years ago. Until this week, the present Lord Bute, the largest individual owner of coal royalties in Britain, owned half of the city of Cardiff. On Tuesday, this long-standing link was broken. An un-named syndicate negotiated the purchase of the Bute properties in South Wales. Ground rents to an annual value of £150,000 are involved in the deal; and in Cardiff, the sites of the Shipping Exchange, Guest, Keen, Baldwin's works and the Mount Stuart dry docks have changed hands, with 20,000 houses, 1,000 shops and 250 public houses. Part of Penarth, many villages and agricultural acres have passed into new ownership. There has been concern in Cardiff about the future, but Lord Bute has rebutted all reports that the city's interests may be adversely affected. The Bute family have done so much to ensure Cardiff's place in British trade and industry that this week's break with tradition will be a matter for genuine regret. Much of their land, however, has already passed into the safe keeping of the city's fathers; and there is no reason to believe that the city's future well-being will be prejudiced by the present sale.

Italy's Finances.—In the course of a review of Italy's financial situation before the Chamber of Deputies last Wednesday, Count Thaon di Revel, the Italian Finance Minister, put at a total of 36,000 million lire the extraordinary expenditure incurred between July, 1934, and the end of March, 1938, for the Abyssinian war, the re-armament programme and the initial outlay for developing the Empire. The peak of extraordinary expenditure had been reached in 1936-37, and no more than 9 milliards would be required for the year ending next June. For 1938-39 the figure would certainly be lower. A summary of Italy's total revenue and expenditure for the last four years is given below:—

ITALIAN BUDGET Million Lire Years ending June 30th				
	1935	1936	1937	1938 Estimated
Revenue	18,817	20,371	24,702	20,596
Ordinary Expenditure.....	14,670	16,142	23,413	23,769
Extraordinary Expenditure ...	6,177*	16,915*	17,519	9,000
Total Expenditure	20,847	33,057	40,932	32,762
Surplus (+) or deficit (—)	— 2,030	— 12,686	— 16,230	— 12,166

* Of which 1,685 millions in 1934-35 and 11,919 millions in 1935-36 were spent by the Colonial, War, Marine and Aviation Ministries.

Total expenditure for the year 1937-38 is expected to be in the neighbourhood of 33 milliard lire, which is the equivalent of 20 milliard pre-devaluation lire. This was the usual figure at which the Budget was balanced before the Abyssinian war and, once incomes have adjusted themselves to the new level, it should not impose any undue burden on the taxpayer. But the deficit will still be considerable, though Count Thaon di Revel was confident that the greater yield of taxation and the proceeds of the loan on real estate would reduce the current year's figure below the anticipated level.

New Hopes of Recovery

NEW YORK, May 10.—Industrially, the first week in May brought no evidence of change; financially, the behaviour of both the bond and stock markets reflected renewed hope of an early and decisive improvement. Seasonal influences are not propitious for an early upturn in production. Between April and midsummer, there is usually a seasonal recession of just under 10 per cent., largely reflecting the decline of the motor industry from its spring peak. The first four months of this year failed to produce a spring peak; but a failure of production to decline from its spring "plateau" would be accepted as a promise of autumn upturn.

In general, optimistic opinion lays great stress on the spending programme. In the current quarter, the Federal deficit may run close to \$1,000 millions; and thereafter at a comparable figure for some time. This forecast is at variance with the President's statement a month ago that, in the 15 months ended June 30, 1939, the public debt would rise by only \$1,500 millions.

The revised figure is largely derived from the forecast of Mr Hopkins, of the Works Progress Administration, that relief expenditure will be about double the earlier estimate, and approach \$3,000 millions. While Mr Hopkins is convinced that the spending programme will produce recovery, one would infer his opinion to be that the upturn will not be so rapid as to reduce unemployment in the near future; and that the full impact of the present low level of activity has not yet been registered.

Inadequate Unemployment Statistics

The term "relief" is comprehensive, and rather difficult to define. The Public Works Administration, of which Mr Ickes (Secretary of the Interior) is administrator, is distinct from the Works Progress Administration, of which Mr Hopkins is administrator. The W.P.A. is classed as relief; the P.W.A. is not—although the projects may sometimes be of similar type. The W.P.A. is Federal "work relief"; but in addition there is simple "relief," provided by the local agencies, commonly the municipality.

The so-called "relief rolls" refer to the W.P.A., and carry between two and three million names; the numbers on local relief are probably greater. The number of unemployed is commonly given as 12 millions; but it would appear that only about half this number is on Federal or local "relief." An unstated proportion of the remainder is covered by unemployment insurance, which became generally effective in this calendar year.

It is remarkable that a country which loves statistics for their own sake, is not provided with more than the sketchiest data about unemployment. Information is fragmentary and irregular. For example, the City Relief Commissioner estimates that of Cleveland's population of 1,200,000 between one-third and one-fourth are dependent on either direct (local) relief or on the W.P.A. Some 87,000 persons are listed on local relief, but whether these are totals or heads of family groups is not specified. As a centre of heavy industry, it is not unlikely that Cleveland has been more severely affected than the average; but it must be fairly typical.

Income in 1936

The Treasury recently published its preliminary returns of individual income tax data for the calendar year 1936. They show a large increase over 1935, as the table below shows.

Returns are required from single persons with a net income exceeding \$1,000, and from married persons with incomes exceeding \$2,500—incomes below these figures being exempt from tax. There is, further, an allowance of \$400 for each child under 18 years of age. The normal income tax rate is 4 per cent. Of the returns under \$5,000, the great majority are non-taxable; and the actual tax collected on taxable incomes under \$5,000 in 1935 was 1.11 per cent.

In 1935, combined rate of normal and surtaxes did not

reach 10 per cent. until beyond the \$25,000-\$30,000 limit, after which it climbed rapidly to a maximum effective rate

Tax	654	1,210	

of 58 per cent. While there was a general growth in all kinds of returned income, the largest proportionate gain came in the income from fiduciaries (trust funds) and in dividends. The rise in dividends was nearly 50 per cent. The growth of "fiduciary" income is less indicative of the change in economic conditions than of the growing popularity of this form of holding property, whether the trust is created by will or by deed.

Capital Gains

The item of capital gains is of special interest in view of the proposed (and probable) legislation for the application of special schedules rather than general rates to capital gains.

Net Income Classes :—	Dividends	Capital
	Received	Gains
	— (\$'000,000)	
Under \$5,000	682	177
\$5,000–10,000	403	159
\$10,000–25,000	653	233
\$25,000–50,000	499	162
\$50,000–100,000	411	114
\$100,000–150,000	164	41
\$150,000–300,000	181	40
\$300,000–500,000	84	14
\$500,000–1,000,000	86	18
\$1,000,000 and over	82	17

If the receipt of dividends is evidence of proportionate corporate property ownership, one would expect the capital gains to run parallel with dividends. Actually, capital gains run, relatively, somewhat higher in the lower income grades, which suggests that the effect of recent taxation has been partly to immobilise the investments of owners of large equities.

For some time, the short-term public debt has been virtually non-interest bearing. This does not mean merely that the rates are extremely low; they are literally unquotable. On one or more occasions, the Treasury has received bids on bills without discount; but, recently, there have been occasions when market transactions have been made at negative interest. In the last offering of Treasury bills, a bid for \$10,000 ninety-day bills was made at \$10,001—the first instance of an initial bid at negative interest. The reason

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

given is that some States now impose a tax on non-interest-bearing bank deposits. The average bid on the issue was about 0.03 per cent. It is a fact of some significance that our "cheap money" policy has literally carried our market into the area of negative interest.

France

Defence Loan's Success

PARIS, May 9.—The Treasury has been authorised to make special advances in francs to the Equalisation Fund, whose resources (14,000 million francs) seemed too small in view of the new low level of the franc in relation to the pound. The Fund for the support of Rentes has been authorised to invest its liquid resources in gold.

When the new Defence Loan was offered for subscription, some 15,000-20,000 million francs of exported capital had returned. The interest on National Defence Bonds had been reduced from 4 to 2.75 per cent., and the Bank rate from 3 to 2.5 per cent. The new loan amounted to 5,000 million francs, and was a 5 per cent. loan, issued at 98, redeemable at 120 by annual drawings, with the option of repayment at par every third year, beginning May 15, 1941.

The rapid subscription of the loan marked the peak of the successful financial policy of M. Daladier's Cabinet. This success made it unnecessary for the Government to have recourse to advances from the Bank of France and possible to renounce the launching of a further great loan, the first effect of which would have been to absorb the fresh liquid resources of the money market and thus to close its doors to private treasuries, which are now very low.

The position of the franc has been consolidated. The return of capital now seems to have lost its first impetus. But the technical position of the franc is now such as to make practicable a certain inflation of credit to promote the revival of business.

Need for Increased Revenue

An increase in national revenue is still the chief condition for complete recovery. Annual public expenditure is estimated at 110,000 million francs. A portion of this expenditure (public debt service and pensions) represents fixed charges. These were devalued with the franc. An increase in fiscal receipts should follow immediately any rise in prices. An increase in other charges will also follow from a rise in prices, but with a certain time-lag. It is essential that the impoverishment of the country, caused by successive devaluations, should not lead to a further contraction in the community's purchasing power and a consequent slackening in business turnover—which actually seems to be happening.

If the rising trend of French prices is partly counter-balanced by the inertia of world prices, the economic difficulties abroad are likely to be unfavourable to the revival of French visible and invisible exports. The main question now is whether the new decree laws will produce the desired results at home, notably through a revival in building.

A New Atmosphere

Meanwhile, after its financial success, the Government has gained in stability. Public opinion, after the deflation of the Conservatives and the inflation of the Left and the ideological struggles about foreign policy, is now ready for a more realistic policy. Capitalists—private persons or companies—in need of revenue or liquid assets are no longer in such a hurry to send their funds abroad. The workers, faced with the rise in the cost of living and the resistance of the authorities to an increase in wages, are more ready to work extra hours.

The markets, however, are still nervous. They have suffered disappointments before, and there is still a persistent fear of

external conflict. There is a great shortage of savings and, altogether, the key to the future lies more than ever in a rapid and considerable increase in production.

The Statistique Générale has just published its monthly figures of industrial production:—

	1928	1937	1938	1938	1938
		March, 1937	January, 1938	February, 1938	March, 1938
General Index	93	87	85	84	84
Mines	93	89	91	96	96
Chemical industries	106	105	102	96	96
Paper	198	166	163	157	157
Textiles	90	83	82	81	81
Leather	83	69	69	69	69
Iron and steel	83	83	79	73	73
Engineering	91	89	87	83	83
Automobiles	89	90	92	88	88
Building	76	58	58	59	59
Gas and electricity	123	131	130	133	133
Miscellaneous	114	107	104	102	102
Old general index (1913=100)	104	98	96	94	94

The figures for the cotton industry were as follows:—

	December, 1937	January, 1938	February, 1938	March, 1938
Spinning (average per spindle in kilograms):—				
Production	2,210	1,914	1,811	2,002
Deliveries	2,124	1,780	1,729	1,937
Stocks	1,938	2,079	2,074	2,126
Unfulfilled orders	5,810	5,900	5,797	5,633
Weaving (average per loom in pieces of 100 metres):				
Production	5.31	4.67	4.48	4.89
Deliveries	5.35	4.37	4.16	4.94
Stocks	7.67	8.32	8.31	8.13
Unfulfilled orders	15.72	16.11	16.10	15.79

Rising Prices

Unemployment on May 7th was 391,983, against 393,054 in the previous week and 363,569 a year ago. And the rise in prices is noticeable:—

	April, 1937	Feb., 1938	March, 1938	April, 1938	May 14, 1938
Wholesale prices (1914=100)					
General index	533	614	619	619	643
Domestic products	558	656	657	662	678
Imported products	487	538	552	543	579
Foodstuffs	522	625	617	623	641
Industrial products	542	605	623	617	645
Retail prices (1914=100)	580	692	690	691	...
Lighting and heating (1930=100)	94.8	116	116.4	117.4	...
Clothing (1930=100)	93.7	100	100	100	...

Bankruptcies numbered 444 in April, against 417 in March and 370 in February; bankruptcies and judicial liquidations together were 625 in April, compared with 703 in March and 565 in February.

Germany

Rising Prices

BERLIN, May 18.—The chief economic organ of the Nazi Party foreshadows new pressure to compel the reduction of prices. It admits that the rise in prices is still going on, which is usually denied in official circles. Industry, it is remarked, must realise that, in view of the increase in the public debt, the volume of State orders must some time be reduced. In that case, the increase in earned income (as distinct from wage rates), which has counterbalanced the rise in prices, will cease; and then an appreciable general reduction in prices will be needed to ensure good sales and employment.

The reduction in prices ought to be met out of the improved financial resources of industry. This kind of price-cutting would not be new. The prosperous nitrate and potash industries were recently compelled to cut prices by 30 and 25 per cent., respectively; and, since then, there have been numerous enforced, or virtually enforced, reductions in the prices of manufactured goods, largely of metal goods, but also of rayon and other goods. Undoubtedly, assuming continued full employment, a general cut in prices would be possible at the expense of manufacturers' profits, which are substantial. But it would probably not be possible to reduce prices at the expense of wholesale and retail trade, upon whom a good deal of recent losses due to price cuts was imposed.

The rise in prices has lately been very rapid. It is not shown either in the movements of the index of wholesale prices, which has risen since 1932 from 96.5 to 105.5, or in those of the cost-of-living index, which has risen from 120.6 to 125.6. As indications of price movements, these indices, however conscientiously compiled, are worthless. The components of the wholesale index are a few agricultural products, whose prices are officially fixed, and certain materials whose prices are also fixed by joint State and cartel measures, or which, being imported, have fallen in price since early 1937. The cost-of-living index is based largely on those few, if important, foods whose prices are fixed and on rents, which are also fixed.

Apart from price-fixing measures for individual commodities, there is in force a general "Price Stop Ordinance," which forbids all increases in price whatever—though exceptions have had to be made. In general, Germany is by law a country where all prices are theoretically stabilised. Yet prices, as the Party journal admits, continue to rise. A main cause is that rigid price-fixing of this kind is impracticable. It is practicable in the case of rents, bread, butter, and certain commodities produced in few and standardised sorts. But a decree which prescribes that a hat or a pair of boots must not cost more than in 1936 cannot be enforced. The great and inordinately rapid rise now under way is mainly in the prices of manufactured goods or in those of numerous foods which, owing to their variety and quality, can no more be controlled in price than hats or boots.

High Cost of Living

The following list of prices (which has been personally verified) is on the basis of the sterling exchange (1 mark = 1s. 8d.), there being no other standard for comparison with foreign prices. The aim is to illustrate the divorce between the German and the international price levels. All the prices mentioned are either individually fixed or are supposed to come under the General Ordinance, and therefore not to have risen of late.

FOODSTUFFS (lbs. metric)	
White bread (wheat, potatoes and maize)	9d. per lb.
Butter	2/8 "
Beef	3/1 "
Veal fillet	4/4 "
Apples (medium quality)	1/- "
Dried fruit (apples and prunes)	1/6 "
Carrots	2/4 "
Grape fruit	1/- each
Cauliflower (very small)	1/4 "

Most other foodstuffs are priced at similar levels. The prices of vegetables, fruit, and foods of varying sorts and quality, which cannot be controlled, are relatively much the highest.

In the case of manufactured goods, owing again to the innumerable sorts and qualities, comparisons are of doubtful validity. Ready-made clothing, and in particular underclothing, is three to five times dearer than in New York. Ready-made substitute-flannel trousers cost £2 to £2 10s.; a ready-made sports jacket (corresponding to the English blazer but of bad material) costs £3 10s. to £4. Fairly good ready-made shirts (material uncertain) cost about £1; ready-made pyjama suits of corresponding quality cost £1 15s. to £2.

The price (actually paid) for 12 plain overcoat buttons of plastic material is 4s. The price of one centimetre-thick boat-rope is 7d. a metre (5d. a year ago). One lb. of office gum costs 3s. 4d.; 100 sheets of best carbon copying-paper 6s. 8d. The standard letter-post rate (for the whole Reich) is 2½d.; a telegraphic address costs £2 10s. per annum.

In general, the above figures give a fair idea of the German price-level—from the international viewpoint only, and not from the domestic and social. On the mere exchange basis German rents are about double the pre-war, but in marks they are only 20 per cent. higher. What the purchasing power parity of the Reichsmark is it is hard to say. But even foreign visitors who spend registered marks, acquired at about the former exchange of £1=20 marks, find prices here very high. At the official £1=12 marks, they are inordinately high, and, indeed, represent a level entirely independent of world prices, like prices in Russia.

Austria in the Reich

No fresh statement has appeared about Austria's foreign debts, but the British official statement is noted that the matter will be dealt with during the negotiations, late this month, for the revision of the Agreement of November, 1934. An important point is that the German law of May, 1937, was extended to Austria on April 29th. Under this law,

foreign creditors for already matured debts must either prolong the loans at a reduced interest rate (4 per cent.) or have them paid in domestic currency into a blocked account.

The Reichsbank's return for May 14th states expressly that the Austrian National Bank's gold and exchange reserve, with other Austrian National Bank assets, is included in "Other Assets," which now stand at Rm. 1,244 millions, against Rm. 801 millions at the beginning of March. The liquidation of the National Bank is virtually complete. Since the *Anschluss*, the Reichsbank's note circulation has risen from Rm. 4,949 to Rm. 5,804 millions, or by more than might have been expected on the basis of Austria's population and financial conditions.

Austrian unemployment is stated to have fallen to 416,000, against about 600,000 two months ago. Austrian iron prices, which were higher than Germany, have been reduced by between 20 and 50 per cent. The first Reich drilling for oil in Austrian territory has been reported. The purchase and sale of Austrian shares by citizens of the old Reich have been prohibited. Under a new Reich law the Rhine-Main-Danube Canal is to be completed by 1945.

The number of unemployed in the old Reich area declined in April by 85,000 to 423,000. Pig-iron output in April was 1,442,400 tons; and in the first four months it was 5,749,800 tons, against 5,093,000 tons in the same months of 1937. New restrictions have been imposed on the use of iron and of zinc.

Norway

Activity Sustained

OSLO, May 2.—It would be useless to try to disguise the fact that repercussions of the depression already long in evidence in most countries of the world are at last becoming rather persistent in Norway. Nevertheless, domestic trends, in general, are still surprisingly favourable.

The official index of industrial production in February was 134, against 121 in January and 123 in February last year, but there are indications of some recession in March and April, for which official figures are not yet available. This may prove to be especially pronounced in industries producing for export, where such trades as wood, paper and canning have had to curtail their output because of reduced demand.

Activity in these two months in industries catering for the home market, however, is likely to compare favourably with that in February—if the comparatively high level of turnover in retail trade during recent weeks is any guide. Bank deposits rose by about 91 million kroner in the first quarter of the year, against a rise of only 50 million kroner in the corresponding months of 1937. Part of this increase, however, was probably due to the influx of idle money from investors, who have preferred to accept cash for redeemable bonds instead of converting them at the sometimes considerably lower rate of interest offered for new issues.

Active Foreign Trade

Further evidence of fairly well maintained activity is derived from the figures of foreign trade during March, compared with the preceding month and with the position a year ago:—

	March, 1937	Feb., 1938	March, 1938
		(Kroner, 000,000's omitted)	
Imports	99.8	93.6	111.6
Exports	62.9	63.9	66.0
Import surplus	36.9	29.7	45.6

The rise in imports was chiefly due to heavy purchases of raw and semi-manufactured minerals, ships, motor cars and machinery. Exports of wood pulp increased by nearly 10 million kroner during March. The import surplus in the first quarter of the year amounted to 94.1 million kroner, against 99.9 million in 1937.

Unemployment was about 3.5 per cent. lower in March than in February, but compared with March last year the position was slightly worse. The downward movement in wholesale prices which began last July seems to be gaining momentum; and the index of the cost of living, after having resisted obstinately hitherto, fell at last by one point in March.

The freight markets remain dull, and operations on the Bourse, both in shipping and other shares, have lately been on a rather limited scale. The nervousness characterising foreign centres has affected our domestic market more than would seem reasonable—at least as far as industrial and miscellaneous shares are concerned.

The money market continues easy. The example of loan conversions initiated by the Government at the turn of the year is still being followed by several public, semi-public and private institutions. The national accounts for the first eight months of the fiscal year indicate that there has been an increase in receipts from taxation of about 34 million kroner (including indirect taxes) compared with the same period of the preceding Budget year.

Spain

Industrial Supervision in Catalonia

BARCELONA, May 2.—More than twelve months have now elapsed since the collectivisation of the greater part of Catalan industrial concerns. The Catalan Government, on the experience acquired with regard to the working of this system, has issued a new decree with such "supplementary regulations and alterations as are necessary for the consolidation of the economic system inaugurated by the original decree."

Under the earlier system, a delegate representing the Catalan Government (or Generalidad) controls the management of all collectivised establishments, as well as all plants under official control. In order to invest these official delegates with the necessary authority, by the new decree they are to be regarded as representatives of the State, to watch over the interests of the community and the welfare of the establishment or group of establishments to which they are attached. Their appointment is proposed by the workers of each establishment to the Technical Department of Economic Control of the Generalidad.

Procedure of Control

The delegates have to approve or reject all business transactions embodying payments of money; to be present, with voice but without vote, at all meetings of the board of directors or the committee of workers; to serve as mediators between the undertakings and official bodies; and to ensure strict compliance with the law relating to collectivised enterprises.

At the end of every quarter (and, in special cases, more frequently), the delegates have to draw up and submit to the Department of Economics a report, stating the technical and commercial activities of the enterprise, giving figures of output and sales as well as a balance sheet, showing the amount of cash in hand and in the banks. The delegates have the right to veto any decision taken by the board if against the law; and all cheques and documents referring to financial transactions must be countersigned by them. In case of a measure being vetoed by a delegate, the committee or the owners of the establishment have the right to appeal to the Department of Economics within eight days.

The agreement between the Spanish Government and the Compañía Arrendataria de Tabacos de España which, up to the present, has had the sole right to handle tobacco business in Spain, has not been renewed. At the expiration of this agreement, the Government will run the monopoly direct. At the same time, the Government has authorised the cultivation of tobacco in peninsular Spain, which has hitherto been prohibited.

Strict supervision will be exercised, however, and only trustworthy and efficient farmers will be allowed, on application, to cultivate tobacco.

Books and Publications

New Houses for Old

EXPERIENCED for eight years in London housing, Miss Denby toured Europe to survey Continental post-war building. This book* is the remarkable fruit of her labours. She states the housing problems of European countries; outlines the various technical, financial and organisational methods used to solve them; and describes exhaustively every facet of rehousing in Sweden, Holland, Germany, Vienna, Italy and France. As an expert, objective record Miss Denby's study stands alone; as an essay in social philosophy it is shrewd and telling.

When the war ended, twenty years ago, there was urgent need to rebuild a shattered Europe. Nowhere was this need more acutely felt than in the field of house-construction. For four years in many countries housing had stood in abeyance. Each nation set about the task in its own way. On the Continent perennial wars and invasions had caused the age-old planning of cities compactly behind walled and water defences. Towns could not spread easily, and tenements reached up to the skies. In peaceful England, houses and cottages with gardens—and then without—sprawled unevenly into the countryside. The waxing industrial populations of the nineteenth century tested contrasted styles to the uttermost. Light, air and space in the towering Continental flats became unattainable luxuries for the poor; the English cottages were built closer together, massed in dreary regiments, "their gardens gone, trees gone, all beauty gone." "Vertical slums abroad, horizontal slums in England."

After 1918, there was added cause to tackle the housing problem; to catch up fresh arrears of under-building; to demolish and re-plan the "worn out and unhealthy parts of

* Europe Rehoused. By Elizabeth Denby. Allen and Unwin. 284 pages. (32 illustrations.) 14s.

cities"; and to organise a regular and adequate supply of satisfactory dwelling places. The cost of materials, labour, land and money had soared. The initiative inevitably lay with governments; by restricting the rents of old dwellings and subsidising for a time the erection of new, they set the ball rolling.

Special taxes on existing houses were levied in Vienna, in Germany, and in Scandinavia. The Swedish, Dutch, German, and French Governments issued or guaranteed loans to approved societies at low interest. Co-operative housing organisations evolved in the Scandinavian countries. New buildings were exempted from taxation in Italy and France. In Holland, Germany and Austria, land was often municipally owned and inexpensive. In France and Britain, private speculation in land was a serious obstacle to adequate rehousing. Municipalities were in the forefront of the campaign, to plan and assist, though only in Britain, Vienna, and parts of France did they actually build houses. The key agencies were public utility and co-operative building societies.

Quantitatively, European rehousing has been widely successful. Only in France has the housing shortage not been "technically" overcome. Actually, however, the shortage of low-cost houses is still generally acute, and the crux of the problem is still the housing of the poor. In every country the greater part of post-war rehousing, largely for the middle classes, has been done by private enterprise, and in most places without public funds. Great Britain, however, has maintained for two decades the costly policy of direct subsidy for land and buildings, and spent far more per dwelling than any other country.

Which of the countries surveyed by Miss Denby has got the best value for money? Human health and happiness must figure in the answer. "Shelter is not enough," Miss Denby plumps for Vienna; "the greatest housing achievement of the century," where companionship, recreation, education and environmental beauty were allied to the provision of houses. And she perceives "right vision and right action" in the flexible policy of Sweden, suited to a "prosperous, free

and vigorous" people, in the new estates of Holland and Germany, in the "renewed beauty" of Italian cities, and the new satellite towns around Paris.

Two things are essential—really informed and sensitive standards of urban planning and of taste, and adequate protection of the community against land speculation.

Britain's claim to success, in the broadest sense, Miss Denby rates very low: there has been no directing plan, no intelligent control, no sense of the proper limits which should be set, for the sake of health, culture and good living, to the growth of towns. The living tradition of British housing resided in our gardens; and it has been largely lost. "Traffic is the first consideration in re-planning, industry the second, humanity only third." Public taste is lamentably low, and the price of land obstructively high.

The indictment is grave; and Miss Denby looks with longing at the real democracy and lovely, happy cities of the Scandinavian countries.

THE BUSINESS WORLD

French Money Goes Home

(By Our Banking Correspondent)

DURING the week ended May 11th a sum of money estimated at around £100 millions was repatriated to France from foreign centres, and the major portion is thought to have come from England. The exchange transactions arising out of this huge movement of funds were handled by the various official Exchange Controls. Broadly speaking, what happened was that the sterling previously held on French account was taken over by the British Exchange Equalisation Account (described hereafter in this article as the E.E.). In return, the E.E. sold gold to the Banque de France, which completed the cycle by giving francs to those who were repatriating their money. Thus, the French owners of sterling obtained their francs and the Banque de France secured its gold, while the E.E. acquired sterling. These movements obviously caused no lasting disturbance to the foreign exchange market.

Naturally, transactions of this magnitude caused some disturbance in the London money market. Money became a little tighter than usual. There was a certain amount of calling by the banks. And the authorities had to give relief by making open-market purchases of bills. As is shown later, this "special buying" also served another purpose. Some indication of these movements was given in the Bank of England's return of May 11th, which showed the following changes in comparison with the preceding week:—

	Million £
Note Circulation	- 8
Public Deposits	+26
Bankers' Deposits	-29
Government Securities	-12
Reserve	+ 8

The purpose of this article is to suggest what may, in fact, have been happening behind the scenes. With this object in view, the accompanying table has been prepared, in which all the different transactions which were in progress are shown separately, column by column. The figures given are in most cases purely illustrative and hypothetical. Their sole purpose is to facilitate clarity of exposition, by showing what might have occurred. They are based on an assumption that, of the total French Funds repatriated, some £74 millions came from London.

The initial section of the table shows the assumed distribution of these French funds before their withdrawal, whether on deposit at the banks, invested in Treasury bills or British securities, or hoarded in British currency. Then come relevant extracts from the balance sheets of the French banks in London and the British joint-stock banks. The next section relates to the discount market, with its call and short loans set against its bill portfolio. Next come certain items from the Bank return, followed by the various assets of the E.E. The table concludes with an analysis of the Floating Debt. A word of explanation is necessary in the case of the E.E. and of the Floating Debt. Treasury bills are issued either by tender (mainly to the banks and the money market) or through the "tap" to the E.E. and other Government departments and official bodies (including, it is here assumed, the Bank of England). It may happen that bills originally issued by tender are subsequently acquired by the E.E. or other bodies who normally obtain their bills through the "tap." The total size of the

floating debt depends solely upon the Government's needs, and is independent of the E.E.'s operations. The total size of the E.E. is constant. To the extent that it does not hold gold, it holds either Treasury bills or cash (lodged in public deposits at the Bank of England); or it may re-lend to the Government its surplus funds, in which case the loan ranks among Ways and Means Advances from Public Departments.

The various assumed operations, in connection with last week's movements, may now be explained, column by column.

Column (1). The week's contraction of £8 millions in the note circulation probably was not entirely the result of French dishoarding. In the absence of any information, it is assumed that half the contraction was due to the return of currency into the banks from the hands of the British public. This added £4 millions to deposits at the joint-stock banks, to the joint-stock banks' cash, to bankers' deposits at the Bank of England and to the Bank's Reserve.

Columns (2) to (6) analyse the various forms the French repatriation might have taken, and a combined total for these five columns is shown in column (7).

Column (2). It is assumed that £25 millions is withdrawn from the French banks in London, its repatriation being covered by the E.E. This entails a £25 millions reduction in the French banks' balances with the British banks acting as their agents, and also in the latter's cash and deposits. Thus the £25 millions finds its way to public deposits, to the credit of the E.E.

Column (3). Some £20 millions is assumed to be drawn from French deposits at the British banks. The latter lose £20 millions in cash, all of which goes into public deposits, to the credit of the E.E.

Column (4). assumes that £10 millions of British securities is sold by Frenchmen to British investors, who pay for their purchases by means of cheques on their banking accounts. Again the British banks lose cash to the E.E., which lodges it in public deposits.

Column (5) covers the assumed dishoarding of £4 millions of British currency. The notes pass through the British banks into the Reserve of the Bank of England.

Column (6). French holders sell £15 millions of British Treasury bills, originally issued by tender. These are ultimately bought by the E.E. and, in effect, are paid for in gold.

As *Column (7)* shows, the net result of all these movements is: (1) A heavy loss of cash by the British and French banks; (2) a £74 millions loss of gold by the E.E., offset so far mainly by the acquisition of cash; and (3) some redistribution of "tender" Treasury bills.

Obviously the cash losses of the London banks require rectification. This is the next stage, which for clarity's sake is shown separately from the "repatriation" stage, although in fact the two proceed simultaneously.

Column (8). On May 7th, the Government owed the Bank £8 millions on Ways and Means. It is assumed that the E.E. took over this debt, and also bought £4 millions of "tap" Treasury bills from the banking department of the Bank. This absorbed £12 millions of the E.E.'s cash, but did not help the British or French banks to replenish

their cash. It merely involved a further redistribution of the floating debt.

Columns (9) and (10) assume "special buying," on account of the E.E., of £21 millions of "tender" Treasury bills, comprising £8 millions from the French banks (*Column 9*), and £13 millions from the discount market (*Column 10*). The market proceeds to repay £13 millions of its call and short loans, of which £6 millions are repaid to the French banks and £7 millions to the British banks. The French banks lodge the cash which they receive (£14 millions in all) with the British banks acting as their agents. Thus the British banks gain, altogether, £21 millions of cash, and the Bank return shows the consequent transfers from public to bankers' deposits. The E.E. and Floating Debt sections of the table reflect the consequent redistribution of tender Treasury bills.

Column (11) is the sum total of the ten previous columns. It agrees with the only available information, given in the Bank return of May 11th, and shows how the

assumed withdrawal of £74 millions of French funds might have been handled, together with the possible effect upon the London market. The banks, it will be seen, are all left relatively short of cash. The E.E. is still glutted with cash, but only to the extent of £26 millions against gold sales of £74 millions. The banking system has lost £36 millions of tender Treasury bills to the E.E., which has also taken over £12 millions of the Bank of England's assets. The total size of the Floating Debt remains unchanged, but there has been considerable alteration in its distribution.

Columns (12) to (16) represent an attempt to carry illustrative analysis into the future, and are, consequently, even more hypothetical than *Column (11)*.

Column (12) assumes that the British joint-stock banks do not buy fresh Treasury bills to replace all their maturities. Instead, the E.E. takes up £5 millions of "tap" bills. The joint-stock banks' cash is reinforced by £5 millions, derived from their excess maturities.

Column (13) envisages further special buying, out of

	REPATRIATION, ETC., OF FRENCH FUNDS Covered by E.E.A. Gold Sales						RECTIFICATION (Partial) IN LONDON		FUTURE POSSIBILITIES							FINAL RESULT

the E.E.'s funds—comprising £6 millions of tender Treasury bills from the French banks and £5 millions from the market.

Columns (14) and (15) look forward to the War Loan dividend payment on June 1st. The full amount of £35 millions is assumed to be paid to British investors, who in turn pay it into their banking accounts (hence the increase in deposits at the joint-stock banks). To finance the payment, the Floating Debt is increased by £35 millions, made up of £10 millions of "tap" bills taken by the E.E., £13 millions of tender bills sold to the discount market, and £12 millions of tender bills purchased ultimately by the joint-stock banks.

Column (16). By this time the E.E. has bought £47 millions of tender Treasury bills. It is assumed that as they mature they are replaced by "tap" bills issued to the E.E.

Column (17) gives the final result. It will be seen that in the end the condition of the Bank of England, the British joint-stock banks and the London discount market need only undergo a change which is very small in comparison with as large a withdrawal of French funds as the assumed total of £74 millions. Some incidental disturbance has occurred in the money market, and there has been a certain depletion of bank cash.

The primary need is to continue and complete the process of "rectification." To meet this need, the E.E. must find some way of restoring its idle cash to the banking system. In effect, it must take up fresh Treasury bills, and it would be highly advantageous if this could be effected by some means additional to "special" buying. The simplest course would be to wait until there was a

deficit of current Government revenue below expenditure, and to cover that deficit by issuing "tap" Treasury bills to the E.E. instead of tender Treasuries to the market.

As it happens, the payment of the June 1st War Loan dividend will present such an opportunity, and it may be strongly urged that advantage should be taken of it. If so, the reduction in the tender issue will not take place abruptly, but will be gradually spread over the rest of the financial year, as revenue overtakes expenditure.

A further suggestion may be made, having for its object the prevention of any fresh depletion of bank cash, in the event of a further repatriation of French funds. The E.E., instead of lodging its surplus cash in public deposits at the Bank of England, might decide to lodge it on deposit at the joint-stock banks. Such a decision would obviate any transfer of money from bankers' deposits to public deposits, and would relieve the banks of any necessity to call from the market. As the E.E. turned its cash into "tap" Treasury bills, there would be a gradual and balanced contraction in deposits at the banks and in their discounts and/or call and short loans against Treasury bills. Thus, disturbance would once again be minimised.

The key to the success of the whole series of operations has been the E.E.'s abundant gold reserves. The fact that, without them, the whole machine must have broken down shows the wisdom of sterilising a sufficiency of gold reserves to cushion the eventual withdrawal of foreign hot money. The magnitude of the gold reserves which we still hold is commensurate with the new strains the machine may be called on to bear. This month's events, as a whole, however, emphasise the desirability of considering every practical suggestion for increasing the machine's efficiency.

Investment Trust Outlook

INVESTMENT experience in many fields is crystallised in the results of British investment trusts. The present is an appropriate moment for attempting to put their recent achievements into financial and economic perspective; for, so far, the winter of 1937-38 has resembled that of 1929-30 in showing the earlier symptoms of a general trade recession. Without suggesting that history is

likely precisely to repeat itself (*absit omen!*), we may ask whether the trusts are better or worse equipped to face the possibility of moderate depression than they were eight years ago. In what way has the basis of earning power changed in the interim?

In the tables at the foot of this page we have summarised the figures of twelve trusts for 1929, 1933 and 1937.

Although a growing number of trusts include in their reports various analyses of their holdings, the number who did so in 1929 was not large. Hence our sample is necessarily arbitrary, though the results shown are reasonably representative.

In the first place, the investment trusts cannot escape the effects of medium- or long-term changes in interest rates. Normally, when interest rates are steady, revenue should slowly expand, owing to the constant investment of funds put to reserve. But between 1929 and 1937, the experience of the companies of our sample shows at least some permanent loss of revenue. While recovery since the depression years has been satisfactory, only four of the twelve trusts had a larger total revenue in 1937 than in 1929, and two of these four were new companies whose results in 1929 were too close to their dates of formation to be representative. So far as the decline in revenue is due, however, to the conversion of securities held in investment trust portfolios to lower interest rates, the risk of continuing loss is diminishing; for the number of high interest-bearing securities which are "callable" in the near future is now relatively small. Foreign bonds have proved anything but a stabilising factor in investment portfolios, and here the risks of further loss are greater.

Another factor in investment trust revenue is the proportion between fixed and variable yield securities in a trust's portfolio. Since 1929, there has been a widespread tendency to switch from fixed-interest securities into equities, the average proportion of the latter having risen, according to our sample, in eight years, from 26 per cent. to 40 per cent. How far is the altered distribution a result of deliberate policy, and how far is it an automatic rearrangement as a result of changing values?

These two factors can be separated only by a detailed study of investment lists, or by an analysis based on original cost, as distinct from either book value or market value. But certain broad inferences are possible. On the whole, the rise in equity holdings has been more at the expense of bonds and debentures than of preference shares. Yet since 1929 the values of undefaulted loans (particularly those of British Empire countries) have risen; and there is no obvious reason why equities should have been bought with the proceeds of encashments of debentures rather than of preference shares. Defaults on foreign government securities can only afford a partial explanation; for the 12 trusts in our table held only a relatively small proportion of their portfolio (say, 15 per cent. at most) in foreign government bonds in 1929. It is significant, nevertheless, that between that year and 1937 the proportion of European securities of all classes fell heavily. At the end of 1929, the proportion of European holdings varied between 13 and 33 per cent., whereas the latest reports show a proportion in excess of 9½ per cent. in one case only. There is also evidence of a smaller, though well-marked, decline in South American holdings. For example, the U.S. and General Trust held 12.9 per cent. in South Americans at December 31st last, against 19.8 per cent. eight years before. These considerations, taken together, suggest that a significant part at least of the reduction in the proportion of bonds and its converse, the rise in the proportion of equities, can be explained by reduced market values, reflecting currency and international trading difficulties. Whatever its cause, however, the fact that an increased proportion of revenue-producing assets consists of equities, has implications, in the event of a setback in general industrial activity and profit-earning power, which neither investors nor trust managements can afford to neglect. Indeed, in more than one chairman's speech, recently, reference has been made to a desire to secure steadier revenue by holding more fixed-interest securities.

So far as conditions overseas affect the trusts' revenue the future is more difficult to predict than for many years past. And individual companies vary widely in their vulnerability. On the whole, more assets are now domiciled at home than in 1929, and there is no doubt that foreign holdings, outside the United States and the British Empire, have sharply contracted in value. Such overseas investments (excluding those of the Debtenture Corporation) accounted for anything between 32 per cent. and 53 per cent. of the portfolio eight years ago. To-day, the range is from 9 per

cent. to 31 per cent., something under 25 per cent. being the most common proportion. The incidence of conditions in the United States varies considerably between the different companies. Trusts with large American holdings made useful exchange profits on their dollar interests until 1933, and received exceptionally large dividends in 1937 owing to the tax on undistributed profits. Income from America will be less satisfactory in 1938. The effect of the setback in the United States prospects, indeed, may extend, indirectly, to the trusts' holdings in the British Empire, which frequently include substantial blocks of Canadian securities.

On the whole, it is unlikely that any deterioration of trust company earnings, in the immediate future, will affect the dividend status of debenture and preference stocks—war risks alone excepted. The position of ordinary stockholders, however, may well deserve closer examination. It is plain from the figures shown in our table that, owing to the high gearing of the trusts' capital structure, earnings available for ordinary stocks have fallen more steeply than total revenue since 1929. The average rate (unweighted) of ordinary earnings in 1937 was only 8.5 per cent., against 14.0 per cent. in 1929. The small scope for conversion of trust debentures, and the substantial amount of preference capital, have in fact thrown the full burden of lower interest rates upon the somewhat highly-g geared ordinary shares of trust companies. According to a sample inquiry made by *The Economist* in 1934, about one-third of trusts then existing had debentures whose earliest redemption date was, on the average, some thirty years ahead. In the six years from 1932 to 1937, only twelve investment trusts converted any of their capital to lower interest rates, and the amount of capital affected was only £10 millions nominal. In 1929, the trusts included in our present table paid out roughly 48 per cent. of their total earnings for debenture service and preference dividend. In 1933 the proportion was nearly 70 per cent., and even in 1937 it was still as high as 62 per cent. In 1933, the effect was

THE CANADA LIFE Assurance Company

1937 Report

The net new business written during the year amounted to £11,442,000, an increase of £1,793,000 over the 1936 figure. The share of the British Isles Division of the Company amounted to £2,160,000, an increase of £145,000 over that for the previous year.

The Company's income during 1937 was £7,818,000, while in settlement of claims, bonuses, annuities and surrender values, the Company paid during the year £4,831,000. The assets of the Company increased during 1937 by £1,402,000 to £53,288,000 and include special reserves and undivided surplus totalling £2,092,000.

THE CANADA LIFE Assurance Company

(Incorporated in Canada as a Limited Liability Company)

ESTABLISHED 1847

W. P. BRAUND, Manager

2 ST. JAMES'S SQUARE, LONDON, S.W.1

article on page 418). In September, 1936, the French Exchange Fund was created with resources of Frs. 10,000 millions, but at the present level of the franc these are equal only to £56 millions sterling, and they have proved inadequate to cover the recent French repatriation. The French Fund, in fact, found itself unable either to buy all the gold offered to it by the authorities abroad or to pay out all the francs demanded of it. One remedy would be for the Fund to re-sell gold to the Banque de France, but this would have exposed part of the operation of the Fund to the publicity of the Banque's weekly return. And last winter the Fund had an unfortunate experience, when it first sold gold to the Banque and then had to buy it back again. It has been decided, therefore, to keep the Fund's gold resources intact, by borrowing francs from the Banque de France and from the Rentes Stabilisation Fund and by lodging gold as collateral. Thus, France is following the British precedent of holding a reserve of sterilised gold against future emergencies. At the same time, the decision protects the Banque de France's gold reserves from the buffets of international capital movements. This procedure, however, throws a new strain on the Banque de France and also directs part of the Rentes Fund's resources from their normal purpose; and this may explain, in part, the reaction in the rentes markets which has occurred this week. France has still to follow the British method of financing Exchange Fund gold acquisition by means of short-term borrowing in the money market. The present glut of funds in Paris might, indeed, offer a convenient opportunity for the adoption of the British practice.

Slump in the Shanghai Dollar.—The Shanghai dollar rate has recently fallen to a new low record since it was pegged at 1s. 2d., following the demonetisation of silver in China in 1935. It has fallen during the past week from 12½d. to 10½d. and even at the latter figure the quotation has been nominal. The break from the pegged rate first occurred last March, following the withdrawal by the Central Bank of China of its facilities for conversion of notes into foreign exchange at its Shanghai office. The market in that city, deprived of its centralised foreign exchange reserve, was for a time thrown back on the play of current supply and demand. At the same time, the gentlemen's agreement, under which foreign banks in Shanghai had undertaken to keep the rate steady at the official level, was abandoned. The rate immediately slumped to 11d., but recovered to about 1s. 1d. after the grant by the Chinese authorities of conditional conversion facilities to the Shanghai market. The more recent sagging of the Shanghai rate is due, not to any technical defect in the mechanism of the market, but to the fact that the drain on the exchange reserves of the Central Bank is forcing that institution, in self-defence, to lower its official conversion rate. The hostilities in the interior have considerably interfered with the flow of export materials to the ports, while imports continue to be inflated by purchases of considerable quantities of war material. Over and above all this, a considerable export of capital has been effected from China for some months past. In view of the paucity of China's exchange reserves, this combination of adverse factors is bound to be reflected in the exchange rate.

Anglo-Turkish Trade.—For several weeks rumour has been insistent on the impending conclusion of an agreement whereby Turkey will obtain a credit of £16 millions for the general industrial development of the country, and more specifically for the purchase of British goods and the employment of British contractors. As a necessary corollary to such an agreement, the existing Anglo-Turkish clearing agreement will be improved in the direction of freeing British money now blocked in Turkey. Inquiries in official circles in London suggest that it is premature to assume that the negotiations are yet complete, and until an official statement

is made it is impossible to determine or discuss the details of the agreement, or to know whether it will go beyond a guarantee by the Exports Credits Guarantee Department. In principle it is to be hoped that such an agreement is imminent. Its conclusion would provide fresh scope for British trade in a country where German commercial activities have long been noticeable, and it would also establish British relations with Turkey upon an even more friendly basis.

Irish Budget.—The Budget which Mr McEntee introduced last week came as a pleasant surprise to taxpayers who had feared that the standard rate of income tax would be raised from its present level of 4s. 6d. In fact, the Budget contained only a few minor changes in taxation, and the Minister, by means of charging certain non-recurrent items to capital account, estimated for a small surplus. In view of the agreement with Great Britain and of the forthcoming loan of £10,000,000 necessary to carry out the financial clauses of that agreement, it was wise to avoid the increase in taxation that strict financial orthodoxy might demand. There is, indeed, reason to hope that conditions in Eire will improve as the result of the cessation of the economic war, and that the yield of existing taxes will therefore increase. As the Minister quite properly pointed out, the relief which the Anglo-Irish Agreement promises the taxpayer is indirect rather than direct, the only direct benefit being the reduction of the export bounties. Indeed, the handing over of the three Treaty ports will involve increased expenditure on defence.

There are signs that many types of public expenditure will continue to rise in future years, and it is, therefore, a matter of prime importance that every effort should be made to expand the national income. Such an expansion depends upon an increase of exports, and, since Irish exports are for the most part agricultural, this will necessitate intensifying production and increasing efficiency on the land. Costs of production are at present rather high and are capable of being reduced provided that the most modern technical processes are adopted. The Government is being urged to set up a commission of agricultural experts to study the latest developments in agriculture, especially in the utilisation of grass, in relation to Irish conditions. An inquiry of this kind, together with the review of the new industries by the Prices Commission which is provided for in the Anglo-Irish Agreement, would do much towards re-establishing equilibrium in the Irish economy. Hence, it would tend to increase the income and the taxable capacity of the country.

Indo-Chinese Piastres.—One of the less evident but none the less important results of the devaluation of the French franc has been a currency difficulty in the French colony of Indo-China. The monetary unit of the colony is the piastre, the parity of which is 10 French francs. The circulating medium consists partly of paper currency, issued by the Bank of Indo-China, and partly of silver. The complications which have arisen are due to the fact that since the devaluation of the franc, the contents of the silver piastre coin have been worth about 10 per cent. more than the exchange value of 10 francs. Arbitrage operators have profited by this discrepancy, and considerable traffic in silver piastres has developed. The coins are obtained from the Bank of Indo-China, melted, and sold as refined metal in the bullion market. The abnormal demand for piastres to be converted into silver coins has already caused the currency to rise to 10.05—a rate well above the normal range of fluctuations of this currency in terms of its French franc parity. The problem presented by the drain of silver coins from the colony is causing the authorities concerned a good deal of difficulty. One suggestion which is being considered is the revaluation

of the piastre by 10 per cent., which would give it an exchange value approximately equivalent to its existing bullion parity. As this would disturb a traditional link between the franc and the piastre, the authorities would be reluctant to have resort to it. The alternative would be to withdraw all silver currency from circulation and to retain for the authorities the profit provided by its demonetisation. The objection to this course of action would be that the native population has been accustomed to handle silver for generations, and its readiness to accept paper currency has been due to the knowledge that paper and silver, circulated jointly, were mutually convertible. This trust in paper currency might disappear if silver were withdrawn from circulation. Obviously, the problem involves a nice dilemma for the French authorities.

America's Balance of Payments.—The preliminary estimates by the Bureau of Foreign and Domestic Commerce of the United States' balance of payments in 1937 have recently been published in Washington. They are as follows (a plus sign indicates a net credit or in-payment, a minus sign a net debit or out-payment):—

BALANCE OF PAYMENTS OF THE UNITED STATES (in \$ millions)		
	Revised 1936	Preliminary 1937
Merchandise	+ 33	+ 261
Freight and shipping	— 61	— 110
Tourist expenditures	— 364	— 455
Immigrant remittances, contributions, etc.	— 180	— 175
Interest, dividends, etc.	+ 330	+ 345
Other current items	+ 82	+ 85
Balance on current account	— 160	— 49
Gold movements (net)	— 1,030	— 1,386
Silver movements (net)	— 174	— 83
Total gold and silver	— 1,204	— 1,469
Net movement of short-term funds	+ 404	+ 290
Net movement of long-term funds	+ 773	+ 512
Currency movements	+ 22	...
Miscellaneous capital movements	— 12	+ 5
Total capital items	+ 1,187	+ 807
Residual item	+ 177	+ 711

The increase in the residual item, for corrections, will not escape attention. It is very high, and probably offsets the gap caused by a sharp increase in gold imports, with an equally sharp reduction in classified capital imports.

On trade account, exports increased in 1937 by over \$100 millions more than imports, the export surplus arising in the last quarter of 1937; tourist traffic, of which almost one-half of U.S. citizens' payments abroad was in Canada, rose; and out-payments for freight increased. In 1937, therefore, the current account virtually balances, compared with a net debit of \$160 millions in 1936 and a net credit of over \$200 millions in 1935. When we examine the bullion figures, we find that the net increase of \$350 millions of gold imports in 1937 is reached by a real increase of \$470 millions in gold imports reduced by earmarkings to foreign account, which rose from \$86 millions to \$200 millions during the year. These bullion imports reflect the long- and short-term capital movements in the lowest section of the table. The U.S. Treasury's figures of capital movements show that, for the first three quarters of 1937, there was an almost complete correlation between net gold imports and inward capital movements; but in the last quarter, virtually no gold came in, while \$500 millions of capital flowed out. The net inward short-term capital movement in 1937 was below that of 1936 or 1935, mainly due to an abnormally heavy outflow in the last quarter, amounting to \$650 millions. Dr Amos Taylor's comments accompanying his estimates contain these observations:—

It constituted one of the heaviest withdrawals of short-term funds from the United States ever experienced in so short a period of time and was the first heavy withdrawal since the

banking crisis of February–March, 1933. Just before this outward movement, reported short-term foreign liabilities of American banks stood, on September 29, at \$2,305 millions. This was the highest total since England's suspension of gold payments in 1931 became the signal for the first of three foreign "runs" on American banks which occurred during the 16-month period between suspension in England and the banking crisis of February–March, 1933, in the United States.

Net purchases of U.S. securities by foreigners were only 40 per cent. of their 1936 figures and two-thirds of such purchases occurred in the good first quarter of last year; yet despite the Wall Street slump "foreigners continued to acquire American securities in moderate amounts." These latest American estimates, and Dr Taylor's commentary, are most illuminating. The rapidity of their publication and the amount of detail provided, stamp our Board of Trade's laconic and tardy "hit-and-miss" guesses at one or two items in our own balance of payments as woefully inadequate.

Irish Banks' Returns.—The returns for the banks operating in Eire for the March quarter, published by the Currency Commission, are as follows:—

(Thousand £s)					
	March Quarter, 1937	Dec. Quarter, 1937	March Quarter, 1938		
			In Eire	Elsewhere	Total
Liabilities:—					
Capital, reserves, etc.	17,338	17,408	10,279	7,166	17,445
Notes in circulation	8,769	8,966	5,133	3,772	8,905
Current deposit and other accounts	165,133	161,114	117,358	43,987	161,345
Other liabilities	5,232	5,727	2,730	2,340	5,070
Total	196,472	193,216	135,501	57,266	192,767
Assets:—					
Cash and balances with London agents and other banks	12,471	13,950	4,933	7,064	11,997
Money at call and short notice	10,230	9,869	5	9,586	9,591
Bills	6,346	6,752	6,266	1,113	7,379
Loans and advances	69,048	70,679	47,113	25,473	72,586
Investments:—					
(a) Government	80,087	73,475	3,507	69,967	73,474
(b) Other	10,622	10,584	3,672	6,431	10,103
Other Assets	7,668	7,814	3,106	4,527	7,633
Total	196,472	193,216	68,605	124,162	192,767
Excess of Assets outside Eire over liabilities outside Eire	73,429	67,826	...	...	66,897

The decrease in deposits during the year is the result partly of withdrawals for investment in some of the new industrial flotations, partly of the more attractive rates of interest given on savings certificates, and partly of the dispersion of savings to tide farmers over bad times. The increase in bills reflects the additional issue of Irish Exchequer Bills made during the year. The increased volume of loans and advances indicates that the worst of the agricultural depression is over, and the reopening of the export trade will doubtless lead to a further demand for accommodation. The additional loans and advances have been financed by a slight reduction in liquid assets and the sale of Government securities. The anxiety to which the decline in the banks' net sterling assets would otherwise have given rise is allayed to some extent by the hope of a revival of exports following the conclusion of the agreement with the British Government.

The Economist's Banking Supplement.—The latest of our semi-annual surveys of British and overseas banking is published with this issue of *The Economist*. Our Supplement contains a review of recent British banking trends, with special reference to the recent business recession. Other articles discuss the present direction of British monetary policy and also describe banking conditions in France, Germany, Scandinavia, the United States and South America. The Supplement concludes with a complete statistical summary of the past few years' balance sheets of the British banks and of all overseas banks with London offices.

MONEY MARKET NOTES

8

Foreign Exchanges

UNTIL last Tuesday the French Control continued to buy dollars in London, in order to dispose of part of its sterling acquisitions, and so the New York rate remained firm at \$4.964. On Wednesday there was no French buying; for the French Control was losing sterling, and the rate eased to \$4.974. On Thursday the French authorities had sterling offered to them again, and operators, sensing the change in the position, came in as buyers of dollars and made the rate stiffen to \$4.968. Francs have strengthened during the week from Frs. 177.70 to Frs. 177.60, with the French Control operating both ways. Three months' francs widened to Frs. 18 discount on Wednesday, but have since come back to Frs. 1—1½ discount. There are obvious reasons why the French authorities do not wish to see the forward rate go to such a discount as would bring it above the declared limit of Frs. 179, and support in the forward market is always forthcoming in case of need. Belgas weakened on Friday on the fall of the Belgian Government, with the one month's and three months' rates at Bel. 1.45 and Bel. 2.30 discount, respectively. These rates tempted some speculative buying from those who did not believe in an early Belgian devaluation. The formation of the new Government strengthened the market, bringing the forward rates back to Bel. 0.45 and Bel. 1.00, respectively. This improvement led to fresh selling as last week's buyers were taking their profits. The spot rate with the dollar has remained at the gold export point without gold losses.

*

The Money Market

The market has still to recover all the funds of which it has been deprived by French repatriation, and money this week was described as "usable"—from the lender's point of view. There was also calling by one or more of the clearing banks on most days of this week. New loans against bonds can now be obtained at ½ per cent., but ¾ per cent. remains the rate for old loans.

	May 20, 1937	May 12, 1938	May 19, 1938
Bank Rate	2	2	2
London Deposit Rate	2	2	2
Short Loan Rates:			
Clearing Banks	12-1*	12-1*	12-1*
Others	12-58	12-34	12-58
Discount Rates:			
Treasury bills	12	12	12
Three months' bank bills	1732-916	1732-916	1732-916

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Discount rates are unchanged. The clearing banks, with their depleted cash reserves, are naturally not ready buyers, especially as maturities are also smaller than usual. There has been a little more special buying, but here again the market has not many bills to sell. In spite of the change in the position, due to the French repatriation, there is no serious shortage of money, which previously had been very abundant.

*

The Bank Return

This week has witnessed a further though limited drop in the note circulation, which may represent the continuance of French dishoarding. Otherwise the Bank return largely bears out the suggestion made in a leading article on page 418, on the effect of the French withdrawals.

	May 19, 1937	May 4, 1938	May 11, 1938	May 18, 1938
Issue Dept.: £ mill.	321.3	326.4	326.4	326.4
Notes in circulation	481.4	490.5	482.0	478.6
Banking Dept.:				
Reserve	40.7	36.7	45.2	48.5
Public Depts.	19.2	10.7	36.9	28.5
Bankers' Depts.	97.4	117.5	87.9	93.2
Other Depts.	37.6	36.0	35.5	36.0
Govt. Secs.	103.3	117.8	105.7	98.3
Discounts & Advances	6.6	8.2	7.6	7.8
Other Secs.	21.4	19.3	19.4	20.7
Proportion	26.4%	22.3%	28.1%	30.7%

The fact that public deposits remain on the high side, with only a drop of £8.4 millions since last week, shows that the Exchange Account is so far not finding it an easy matter to dispose of all its surplus cash. Indeed, the drop of £7.4 millions in Government securities suggests that it is mainly doing so by tak-

ing over Treasury bills from the Bank itself—a procedure not envisaged in our article, which will ultimately lead to some contraction of the credit base. Bankers' deposits are only £4.3 million on the week. As stated in the previous Note, there was some further special buying of bills early in the week, though only of a very limited amount; that of course, would be one explanation of the increase in bankers' deposits. Apart from this, the contraction in the note circulation may not entirely represent French hoarding. This would equally explain the increase in bankers' deposits.

*

The Bullion Market

Continental buying met by sales from official quarters has remained the chief theme of the London gold market. On one day, however, it proved possible to equate buying and selling, and in accordance with the usual practice, the price was fixed at a point sufficiently low to absorb all offerings, while buyers were rationed, only 20 per cent. of their demands being satisfied. There are signs that the authorities wish to keep the price around 140s. per ounce, and are not prepared to enter the market as buyers when the price is above that limit.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Disc. %	Amt. dealt in	Cash	Two Mths.
1938	s. d.	d.	£'000	d.	d.
May 13 ...	139 11	1½ pm	177	181½	187½
" 14 ...	139 11	1½ pm	434	184	187½
" 16 ...	140 1	1½ pm	274	184	187½
" 17 ...	140 1½	1½ pm	259	184	187½
" 18 ...	140 0	1 pm	451	181½	187½
" 19 ...	140 1½	1½ pm	584	181½	187½

* Above or below American shipping price. The New York price of silver remained at 43 cents per ounce - 999 fine during the week.

The silver market remains very quiet. There has been some American trade demand, especially whenever the dollar becomes firmer. There has also been a little Indian buying. Sales have come from Indian and speculative sources.

INSURANCE NOTES

Marine premiums amount to £926,000 compared with £807,000 in 1936, and the profit on 1936 account, amounting to £41,000, has been carried to profit and loss. The corresponding transfer a year ago was £53,000.

*

The results of the past two years are given below:—

	1936	Percent-Amount age of Profit Prem. of Profit Prem.	1937	Percent-Amount age of Profit Prem. of Profit Prem.
Fire	559,695	10.1	628,499	11.4
Personal accident, employers' liability and general	340,708	6.2	490,761	8.3
Marine	52,756		40,927	
Life	50,000		50,000	
Less items debited to profit and loss	1,003,159		1,210,187	
To general reserve	417,155		521,012	
	250,000		...	
	336,004		689,175	

Royal Insurance.—New sums assured in the life department increased from £4,924,000 to a new record of £5,158,000, but there was a decrease in annuity consideration moneys from £190,000 to £125,000. Death claims fell from £814,000 to £708,000, and the net rate of interest was 8d. smaller at £3 17s. 3d. per cent. Fire premiums were slightly larger at £5,539,000, and the underwriting profits were very satisfactory at £628,000. Experience in the accident department (like that of the Liverpool, London and Globe, whose share capital is held by the Royal), was extremely favourable. Underwriting profits in 1936 amounted to £341,000 and were said by the chairman to have been only twice exceeded in the history of the company. Last year, against an increase of 8.2 per cent. in the premium income to £5,946,000, underwriting profits increased by 44 per cent. to £491,000.

There was a large fall in "Municipal, county and public boards stocks" from £1,343,000 to £884,000. Against this decrease, there were increases in debenture stocks from £8,753,000 to £9,779,000, in preference stocks from £4,034,000 to £4,629,000, and in ordinary stocks from £5,479,000 to £7,508,000. The dividend is again 65 per cent. and costs £1,356,000, compared with available interest earnings of £1,239,000.

*

Phoenix Assurance.—New sums assured in the Life Department increased from £4,859,000 to the new record total of £4,921,000. The net rate of interest was 9d. smaller at £4 0s. 3d. per cent. Fire premiums, at £2,746,000, showed an increase of £56,000 in the year and the underwriting profit was satisfactory. In the Accident Department, premium income, which in 1935 amounted to £3,444,000, and in 1936 to £3,737,000, increased by a further substantial sum to £4,061,000. The profit realised was the best for many years. In the Marine Department, premium income was £686,000, against £548,000, but the amount transferred to Profit and Loss has been reduced from the usual £30,000 to £20,000. First year's claims account for 34.3 per cent. of the premium income, compared with 29.5 per cent. in 1936. The results of the last two years are given in the following table:—

	1936	Percent-Amount age of Profit Prem. of Profit Prem.	1937	Percent-Amount age of Profit Prem. of Profit Prem.
Fire	224,089	8.3	272,654	9.9
Personal accident, employers' liability and general	162,393	4.3	191,433	4.7
Marine	30,000	5.5	20,000	2.9
Life	20,000		40,000	
Sinking fund	20,000		...	
Less items debited to profit and loss	456,482		524,087	
	336,674		333,109	
Net trading surplus	119,808		190,978	

The consolidated balance sheet shows assets of £36,942,000, of which £19,291,000 are attached to the Life Department.

*

Among the life assets, loans increased from £3,442,000 to £3,619,000, and British Government securities from £3,595,000 to £3,912,000. Dominion and Foreign Government securities decreased from £2,486,000 to £2,185,000. Debenture, preference and ordinary stocks all showed moderate

increases at £4,704,000, £1,775,000 and £414,000, respectively. General reserve remains at £2,500,000, and Investment reserve £1,961,000, while the Profit and Loss balance, after deducting the cost of the dividend, is £1,589,000. The dividend is again 60 per cent. and costs £452,000, compared with available interest earnings of £370,000.

*

Friends' Provident and Century Life.—New life assurances of the Friends' Provident in 1937 amounted to £2,680,000 against £2,502,000 in the previous year; in addition policies assuring £172,000 were issued by the Century. In recent years annuity business has been transacted on a large scale, and consideration moneys last year amounted to £1,217,000 compared with £1,291,000 in 1936. Death claims were £201,000. The mortality profit would appear to have been very satisfactory, as this figure is only 67 per cent. of that expected by the A1924-29 table. The net rate of interest earned on the life assurance and annuity fund fell from £4 1s. 11d. per cent. to £3 19s. 10d. per cent. The chairman pointed out that, if credit were taken for the income tax deducted from annuity payments as a set-off against income tax deducted from interest income, this rate would be increased by 6s. 9d. per cent. to £4 6s. 7d. per cent. The Friends' Provident owns the whole of the share capital of the Century, which transacts all the main classes of insurance business, including permanent sickness insurance, in which the Century was the principal pioneer. During the year, with a view to the further strengthening of the financial equipment of the Century, the directors decided to subscribe, as at the close of the year, for 50,000 shares of £1 each at a price of £10 per share. The paid-up capital is thus increased to £450,000 and £450,000 is added to the general reserve, which is increased to £700,000 from which £150,000 is taken to investment reserve.

*

Premium income in each of the trading departments of the Century showed an increase, but some of the results were unfavourable. In the fire branch, which is the largest department, premium income amounted to £422,000 against £343,000. In the marine branch premiums increased from £55,000 to £99,000 and claims from £36,000 to £72,000, after crediting £46,000 from

the group contingency fund. This contingency fund is maintained to deal with "occasional untoward happenings" in any underwriting department. The results of the last two years are given below:—

	1936	Percent-Amount age of Profit Prem. of Profit Prem.	1937	Percent-Amount age of Profit Prem. of Profit Prem.
Fire	28,010	8.2	31,095	2.6
Accident	1,171	5.3	2,099	8.2
Motor	4,313	3.8	14,794	12.3
General	17,834	18.8	30,752	30.4
Employers' liability	1,743	2.7	5,710	7.7
Marine	2,600		2,762	
Less misc. profit and loss items	53,329		5,713	
	17,337		9,802	
	35,992		4,089	

*

Gresham Life Assurance.—This society, the share capital of which is held by the Legal and General, is one of the few British life offices transacting business overseas to any considerable extent. Problems of exchange and investment in foreign countries are much more difficult in the case of life assurance, owing to the large reserves required, than in fire and accident insurance where, broadly speaking, each premium is exhausted by the current year's risk and expenses. Changing foreign conditions and legislation also are more disturbing in their effects on life assurance contracts, which are measured in generations, than on short-dated indemnity policies. It is thus not difficult to understand the reason why British fire and accident insurance is familiar in every part of the world, but British life assurance is transacted abroad only to a minor extent.

*

The effects of the present Spanish situation on the accounts of the Gresham are interesting. In 1936, Spanish securities were taken at their quoted values on July 17th of that year (the last date for which prices were available), and exchange was taken at the rate on December 31, 1936, namely, 60 pesetas to the £. In 1937 the sum of £767,000 has been written off the book values of these assets, resulting in a reduction in the life assurance and annuity fund from £10,140,000 to £9,853,000. Spanish law requires the investment of the actuarial reserves of local contracts to be invested

IT IS NOT GENERALLY REALISED THAT A WITH-PROFIT ENDOWMENT POLICY PROVIDES AN INVESTMENT YIELDING UP TO 4½% ON THE ANNUAL OR MONTHLY PREMIUMS, WITH ABSOLUTE SECURITY AND INSURANCE PROTECTION IN ADDITION.

FUNDS EXCEED £46,000,000

in Spanish currency securities. As the actuarial liabilities are also in depreciated pesetas, however, there is little likelihood of any serious net capital loss to the company. Had it been possible to retain the assets in British securities, a handsome fortuitous profit would have accrued to the company. Interest receipts in Spain have been reduced, and probably the effect of the depreciated currency will be to increase the burden of expenses in relation to premium income. The assets deposited in Spain fell last year by £564,000 to £381,000.

★

Total new sums assured, which in 1934 amounted to £2,603,000, increased to £3,370,000 in 1935, and to £3,759,000 in 1936. Last year, there was a fall to £3,538,000, and this setback in new business development is almost entirely due to complete cessation of new business in Spain. It is, however, pleasing to note an increase last year in new business in this country from £1,219,000 to £1,517,000. The proportion of foreign to total new business last year was 57 per cent., against an average of 65 per cent. in each of the preceding four years. The net rate of interest is £4 8s. 7d. per cent. against £4 7s. 8d. per cent., but the increase is illusory owing to the reduction in the fund at the end of the year by the drastic writing down of the Spanish assets. Had no such entry been made in the revenue account, the net rate of interest last year would have been £4 5s. 2d. per cent.

★

Mortgages on property, both inside and out of the United Kingdom,

showed increases, but policy loans fell by the substantial amount of £112,000 to £872,000. British Government holdings at £2,674,000 were slightly larger, while Foreign Government securities fell from £1,954,000 to £1,645,000. Debenture stocks were also smaller at £1,503,000 against £1,698,000, but preference shares increased from £486,000 to £502,000 and ordinary stocks from £245,000 to £355,000. Stock Exchange securities were taken at middle market prices on December 31st last (except in the case of Spanish securities) using exchange rates ruling on that date. Spanish securities are again taken at July 17, 1936, values.

★

Liverpool and London and Globe Insurance.—New sums assured last year amounted to £2,886,000. This figure is a record exceeded only in 1936, when an appreciable share of the increase was due to a large pension scheme. The net rate of interest fell last year by 7d. to £3 17s. 2d. per cent. Fire premiums amounted to £3,926,000, against £3,910,000; the results in the department were satisfactory. Accident and Miscellaneous premiums showed a substantial increase of £271,000 to £4,899,000. The underwriting profits at £491,000 were the largest in the history of the company, the previous highest figure being in 1928, when the profit was £259,000. Marine premiums increased from £294,000 to £330,000; but for the first time in very many years there was a loss in this department amounting to 13.6 per cent. of the year's premium income. The results of the last two years are given below:—

	1936		1937	
	Amount of Profit	Percent- age of Premiums	Amount of Profit	Percent- age of Premiums
Fire	<u>£</u> 410,985	10.5	<u>£</u> 422,244	10.8
Accident	230,177	5.0	491,391	10.0
Marine	21,017	7.1	44,769	13.6
Life	26,000		26,000	
	688,179		894,866	
Less items debited to profit and loss	215,050		700,000	
Net trading sur- plus	473,129		194,866	

Included in the 1937 profit and loss item above is the sum of £450,000 written off investments and house property. No corresponding item appeared in 1936.

★

Total Fire, Accident and Marine funds amounted to £6,987,000, of which £3,662,000 consists of unexpired risk reserves of 40 per cent. of the premium income and £3,325,000 of additional reserves. Total assets in the consolidated balance sheet amount to £32,742,000. Loans at £1,618,000 showed some increase, but British Government securities fell by £145,000 to £5,450,000. Dominion Government securities increased by £215,000 to £1,857,000, but Foreign Government securities decreased from £7,213,000 to £6,483,000, at which figure they still represent nearly 20 per cent. of the assets. This large proportion is no doubt a consequence of the company's world-wide insurance-business. A moderate decrease in debenture stocks was more than offset by an increase in preference stocks, while ordinary shares increased sharply from £2,389,000 to £3,524,000. The dividend on the share capital, which is held by the Royal, is 67½ per cent. for the eighth successive year, and costs £533,000, compared with available interest earnings of £401,000.

Investment

Stagnant Wall Street.—Wall Street at the moment resembles an aeroplane whose tail obstinately refuses to leave the ground. The Dow Jones industrial index, which has been fluctuating this week between 115 and 117, remains comfortably above the low of approximately 99 on March 31st and, *de minimis*, the same condition applies to the railroad index, which has been fluctuating around 23, against a year's low of 19. But the volume of trading is attenuated. Sentiment, which is up one day and down the next, lacks conviction and direction, as it has done all this year. And there is more than a suspicion that the Administration's state of mind is itself somewhat similar. The President's right hand appoints Mr John Hanes, a convinced and conciliatory advocate of helpfulness towards business, to be Assistant Secretary to the Treasury, approves of the President's willingness to sign the Tax Reversion Bill, and even connives at his conservatism in limiting his Anti-Monopoly message to a demand for investigation without immediate legislation. But the market is not convinced; for Mr Roosevelt's left hand, which goes inside the Presidential pocket whilst the right is being waved in the air, has always had a habit of re-emerging disconcertingly. The reverse suffered by the Democrats in the Pennsylvania primary elections this week is, presumably, a bull point in Wall Street's scale of values—but it is only a bull point in the long term, and a doubtful one at that.

★

★

★

It is now clear, in any case, that the Stock Exchange cannot hope to stage a major revival on negative evidence alone. Even if the President, like the villain of transpontine drama, were wholly converted to good works in the penultimate Scene of the final Act, a spectacular recovery in Wall Street would still pre-suppose a whole-

hearted revival in American business. And of that, as yet, there is no sign. Steel output remains obstinately at about 30 per cent. of capacity. Building, though slightly more active, is still disappointing, and machine-tool orders—one of the most closely watched pointers to activity in the capital trades—are falling. The railroads have no money with which to buy steel. Few of them are operating at a profit, and in default of a further increase of charges the Association of American Railroads is asking for a wage cut of 15 per cent. Altogether, the best that can be hoped is that the Administration's pump-priming measures will ensure that the secondary revival in business, already postponed from the spring to the autumn, may have some possibility of maturing then. Even the hopes of the optimists go no further, while more pessimistic commentators ask whether pump-priming, which was relatively successful when trade outside America was on a rising trend, will necessarily be as potent at a time when evidence is accumulating, in Great Britain and elsewhere, of a recession in consumption and new capital investment, despite the increased pace of re-armament. In these conditions, although a fresh Stock Exchange slump is improbable, the omens seem unfavourable to any substantial appreciation of American security values in the immediate future.

Eire Loan.—Under the financial agreement reached between Eire and the United Kingdom on April 25th, the Eire Government undertook to pay £10 millions sterling in final settlement of financial claims, apart from certain reserved liabilities. A loan is to be raised for this amount in Eire, which takes the form of 3½ per cent. stock to be issued at par. It will be redeemable on September 15, 1958, at par, or from 1953 at the option of the

Government. The loan is a trustee investment in Eire. Interest will be paid without deduction of income tax, and stock held in the beneficial ownership of persons outside Eire will be exempt from all taxation of Eire. The Government undertakes to provide, in effect, a cumulative sinking fund of one-half of one per cent. each half year, to be applied to the purchase of the loan for cancellation when the price is at or below par, and either applied or invested when the price is above par. Of the total issue of £10 millions, the Minister for Finance will subscribe, on behalf of various funds, for £4 millions. Although the stock does not come within the permitted degrees of the Trustee Act of 1925, so far as the British investor is concerned, it may be of interest to those who are not restricted to trustee stocks, in view of its higher yield basis. Interest will not be subject to income-tax deduction at source. There is, of course, some disadvantage to the British investor in the fact that the stock will be officially quoted only in Dublin and Cork, but the recent appeasement between this country and Eire appears to have removed the major political disability attaching to Eireann loans. The issue price appears to compare favourably with the price of the 3½ per cent. Fourth National Loan, 1950-70, which has recently been standing at 102, *cum* 4½ months' interest.

★

Vendors and Promoters.—"Someone, sometime and somewhere ought to say precisely what the duty of an Issuing House is. . . . It is difficult to say precisely what it is." With these words, Mr Justice Singleton granted an adjournment in an action brought against the London Industrial Finance Trust by certain vendors in connection with the flotation of Wellworthy Piston Rings, Limited, as a result of which a settlement was reached. The precise details of the case are perhaps less important than the broad principles involved. How far does an issuing house act as a principal on its own account when sponsoring a flotation, and how far is it in a fiduciary position towards the vendors? Normally, an issuing house acts in a dual capacity. When a vendor wishes to sell all, or part, of his interest in a company (or to raise further capital) the flotation involves the skilled and specialised services of experts, who combine a knowledge of technique, market conditions and City "placing power." Such advice cannot be obtained by vendors from their solicitors, who are not in a position to gauge market imponderables. To negotiate with more than one financial house, or to seek advice from one when conducting discussions with another, runs counter to City etiquette and may jeopardise the successful conclusion of the deal. In practice, therefore, vendors find themselves compelled to take advice from, and to negotiate with, the same firm at the same time.

★

★

★

In this case, the plaintiffs, in effect, alleged that the Trust was under a duty to the old company and its shareholders, and that the relationship was that of agent and principal. The Trust contended that it bought the block of shares in question outright, and was entitled to make what it could from the transaction, since the relationship was that of vendor and purchaser. The Trust actually followed a practice common to such deals. It resold most of the shares purchased to the market and its placing circle, and retained a small number for itself, making a profit of between £5,000 and £6,000 on the transactions, which by any standard of custom appears reasonable in relation to the size of the flotation. The plaintiffs, however, contended that the Trust was to receive a fixed remuneration of only 1,500 guineas and that they were induced to part with more shares than were, in fact, necessary for market purposes. Although the case has been settled out of Court, it has brought to the fore the very real problem of the relationship between vendors and issuing houses. The latter are, and must be, *entrepreneurs*, and however a flotation is arranged they must bear important and inescapable risks. Only in quite exceptional cases can an issuing house act throughout in a fiduciary capacity, and the majority of vendors would hardly care to stand liable for all the adverse contingencies which would inevitably be associated

with such a position. It may well be that in future issuing houses will take care that their contracts with vendors leave no doubt that, in the main financial transaction, the relationship is that of vendor and purchaser, without any recourse, in that connection, arising from advice or discussion which may have taken place during the negotiations.

★

Week's Bond News.—On Tuesday next discussions will be opened with the German Government on the question of revising the Anglo-German payments agreement of November, 1934, following the absorption of Austria into Great Germany. It was announced in the House of Commons last Monday that the future service of the Austrian Debt would be included in the subjects for discussion. This question has provided anxiety in plenty for the holders of the leading loans. The 7 per cent. issue, which stood at 76 before the invasion of Austria, is now quoted around 38; while the 4½ per cent. guaranteed issue has fallen from 71 to 53 in the same period. The British Government is understood to take the view that Germany should negotiate a settlement on an international basis for all Austrian loans—a point which significantly affects the guaranteed issue, since bilateral agreement would not, presumably, absolve this country from its 24½ per cent. guarantee if default occurred on other *tranches* of the loan. There is some fear that the German authorities may contend that, with the relegation of Austria's status to that of a mere *Land*, the bonds should be treated under the moratorium law, and their service arranged by the *Konversionskasse*. In answer to this contention, the creditors should have no difficulty in proving that these loans, being the primary direct obligations of Austria, well secured and fully served, should rank in no way inferior to the Dawes and Young issues, whose full service was secured with the weapon of exchange clearing in reserve. The news that the service for the Shanghai-Nanking Railway 5 per cent. loans of 1904 and 1907 have not been remitted has further depressed the Chinese bond market. It is difficult, however, to see what other outcome could have been envisaged at the present stage of hostilities. The fact will at least serve to emphasise that the recent agreement between the British and Japanese authorities is limited to the Customs loans, and that (as we pointed out a fortnight ago) it in no way covers the salt and railway obligations. The episode underlines the impossibility, under present conditions, of attempting to assess the long-run investment merit either of Chinese or Japanese bonds.

Accountants and Expenditure.—Although some considerable part of Mr Walter Holman's address to the annual meeting of the Society of Incorporated Accountants was necessarily concerned with domestic professional affairs—including the important matter of professional etiquette, which closely affects the interests of the investor—his main theme was concerned with the stability of national and local finances. The accountancy profession is schooled to distinguish, with the utmost rigour, between revenue and capital, and this training provides a safeguard making for economy and efficiency in expenditure. Mr Holman argued for the same system of checks in public finance, not only in connection with the re-armament programme, from which a degree of unproductive outlay is inseparable, but also in connection with the financial programmes of local authorities. He appealed, in fact, for "the conservation of local resources for use in well-considered schemes on improvement and development when the stimulus of re-armament is past." The majority of investors would doubtless echo this view, and it gains the more point from the five-year plan which has lately been introduced by the Ministry of Health. It would appear, incidentally, that the Society, like the Institute of Chartered Accountants, has inferred from the debate on company law amendment last December that immediate moves toward revision would be out of season. The Society, however, is assembling information for presentation in evidence when the time is ripe.

Company Notes

Cable and Wireless Results.—In a Note in *The Economist* of April 30th (page 250) we set the profits of Cable and Wireless—the operating company of the group—at a minimum level of £1,255,000 last year. The accounts, published this week, disclose that the net profits were actually £1,256,919, compared with £842,945 for the preceding year. Net message receipts increased from £4,446,098 in 1936 (when £122,520 was provided against doubtful collections) to £4,745,050. The dividend has already been announced, at 3½ per cent. compared with 2½ per cent. for the previous year, which provides £1,050,000 against £750,000 for the communications companies, and thence towards the Holding company's profits. The latter's total income, including increased receipts from Marconi's Wireless Telegraph, has increased from £986,276 to £1,355,738, and its distribution is analysed in the following summary table:—

	Years to December 31st		
	1935	1936	1937
Total income	1,120,234	986,276	1,355,738
Administration, taxes and fees ...	69,122*	43,539	72,579
Funded income stock service.....	...	...	61,512
Preference div.	922,143§	922,162§	922,162

Ordinary stock:—			
	1935	1936	1937
Earned	Nil	Nil	299,485†
Paid	Nil	Nil	275,324†

Carried forward 167,762†† 188,337 199,097‡
 * Includes £11,822 loan interest. † Earned, 4·5 per cent.; paid, 4 per cent. ‡ After £13,401 reduction expenses.
 § Years to March, 1934 and 1935, respectively; arrears to December, 1936, satisfied by issue of funded income stock.
 †† After charging £64,534 interest on preference stock cancelled during year, and £25,071 expenses.

The chart below shows the trend of the Holding company's profits since 1930:—

It should be added that the service of the funded income stock is included in the preference dividends for the latest year.

The group balance sheets reflect the capital reorganisation scheme introduced last year, the principal changes (apart from capitalisation) being a reduction in the shares of subsidiary companies in the Holding company's balance sheet from £44,007,000 to £21,419,000, and the elimination of the item of £11,965,336 for goodwill from the consolidated balance sheet. The prospects for the Holding company's ordinary stock, as we have recently suggested, are dependent upon the results of the new Empire rates scheme, and on the course of international trade. The market is now taking a more cautious view of these possibilities, for the

ordinary stock is quoted at 54½ to yield 7½ per cent. In view of its appreciable gearing under the new standard revenue arrangement, and of the fall in the receipts index from an average level of 86.2 for the first four months of 1937 to 72.8 for the corresponding months of 1938, this caution is probably warranted.

Marks and Spencer.—The dynamic progress of Marks and Spencer was fully maintained last year. As we showed in a Note in our issue of May 7th, the rate of increase in net profits belied all apprehensions on the score of rising costs and the suggested tendency towards saturation point in fixed-price store operations. In the following table we analyse the company's progress for the past three years:—

	Years ended March 31st		
	1936	1937	1938
Trading profit, etc.	1,612,388	1,868,388	2,106,507
Debt and loan service ...	113,322	153,066	160,927
Fees	2,085	3,000	3,000
Depreciation, etc.	243,121	290,238	351,891
Tax reserve	167,165	238,544	325,699
Staff funds	...	25,000	25,000
Preference dividend	105,000	105,000	105,000

Ordinary shares:—			
	1936	1937	1938
Earned	981,697	1,053,540	1,134,990
Paid	573,986	633,884	742,605
Earned per cent.	77·3	75·3	73·5
Paid per cent.	40	40	42½
Capital bonus: per cent. ...	10	10	10

Reserves*..... 393,496 370,302 389,328
 Carry forward 87,684 82,584‡ 85,641
 * General reserves and properties contingencies. ‡ After £54,454 discount, etc., and expenses written off.

The chart below provides a vivid illustration of the consistent progress registered by the company during the past decade:—

This unexampled progress in profit-earning capacity provides full justification for the company's share bonus policy.

The market, however, has not reacted markedly either to the announcement of an increased cash distribution, or to the full accounts. The latter show the effects of expansion at almost every point. The total value of properties now stands at £7,994,598, compared with £7,279,595 at the end of March, 1937. Stocks, moreover, have jumped from £1,179,141 to no less than £1,505,802. Compared with a year ago, cash balances have been reduced from £1,492,226 to the more normal level of £872,139—last year's figure was, of course, inflated by the unabsorbed proceeds of the debenture issue in June, 1936. Side by side with the

EIRE

FINANCIAL AGREEMENT LOAN

(£3.15.0 per cent. Registered and Inscribed Stock, 1953-1958.)

ISSUE OF £10,000,000 STOCK.

The Minister for Finance, on behalf of various Funds under his control, is applying, on the terms of this Prospectus, for stock of this issue to the amount of £4,000,000.

PRICE OF ISSUE
£100 per cent.

Interest payable half-yearly 15th March and 15th September.

Principal repayable at par on 15th September, 1958, the Government of Eire having the option to redeem the stock in whole or in part, at par, on or after the 15th September, 1953, on giving three calendar months' notice in *Iris Oifigiúil*. Both the Principal and Interest of this Issue will be a charge on the Central Fund of Eire.

The following banks are authorised by the Government of Eire to offer for subscription £10,000,000 of the above Stock authorised to be issued under the Agreement with United Kingdom (Capital Sum) Act, 1938:—

BANK OF IRELAND.	NATIONAL CITY BANK.
GUINNESS MAHON & CO.	NORTHERN BANK.
HIERNIAN BANK.	PROVINCIAL BANK OF IRELAND.
MUNSTER AND LEINSTER BANK.	ROYAL BANK OF IRELAND.
NATIONAL BANK.	ULSTER BANK.

Applications must be for sums of £10 or multiples thereof. Applications may be either—

- (1) Fully paid applications, when the whole sum payable must be lodged on application; or
- (2) Instalment applications, when instalments will be required as follows:
 £10 per cent. on application,
 £20 " " " allotment, 10th June, 1938,
 £20 " " " 13th July, 1938,
 £20 " " " 19th August, 1938,
 £30 " " " 15th September, 1938.

The first interest, payable on 15th September, 1938, will be as follows:—

On allotments fully paid on application	£1 2 6 per cent.
On instalment allotments	£0 10 0 per cent.

Payment of instalment applications may be made in full at any date after allotment, no discount being allowed. In case of default in the payment of any instalment at its due date the amount previously paid will be liable to forfeiture. In the case of a partial allotment, the balance of the amount lodged with a fully paid application will be returned and the balance of the amount lodged with an instalment application will be applied towards the payment of the subsequent instalments. Instalments may be paid without additional charge through any of the offices of the banks mentioned.

The stock of this issue is a trustee investment in Eire authorised by the Trustee Act, 1893, and trustees may invest therein even though the price at the time of investment exceeds the redemption value of £100 per cent.

Dividends on stock of this issue will be paid without deduction of income tax, but the income derived from such dividends will be assessable to income tax in the hands of recipients at the rates of tax appropriate to their respective incomes. Stock of this issue and the dividends payable thereon will be exempt from all taxation of Eire, present or future, if it is shown in the manner directed by the Minister for Finance that the stock is in the beneficial ownership of a person who is neither domiciled nor ordinarily resident in Eire.

Subject as hereinafter provided, the Government of Eire undertake to set aside on 15th March and 15th September of each year a sum equal to £2 7s. 6d. per cent. of the total nominal amount of the loan. After deducting therefrom the amount required for payment of interest, the balance of the sum so set aside will be carried to a Sinking Fund which will be applied to the purchase of the loan for cancellation when the price (excluding accrued interest) is at or under par, and, when such price is above par, will be either so applied or otherwise invested for the benefit of the Sinking Fund. The sum to be set aside on 15th September, 1938, shall be such an amount as after deduction therefrom of the interest due on that date will enable a balance of £30,000 to be carried to the Sinking Fund.

The Books of this issue will be kept as separate Registers at the Head Office of the Bank of Ireland, Dublin, and at the principal Office of the same bank in Cork, and transfer between the Register in Dublin and the Register in Cork will be free of charge. Stock may be inscribed as transferable in the Stock Transfer Books or may be registered as transferable by Deed. Inscribed Stock will be exchangeable for Registered Stock or vice versa, without payment of any fee. Stock will be transferable in any sums which are multiples of a penny. Powers of Attorney for the transfer of Inscribed Stock and Deeds for the transfer of Registered Stock will be free of Stamp Duty. The Stock will be officially quoted on the Dublin and Cork Stock Exchanges.

A Commission of five shillings per cent. will be allowed to Banks, Stockbrokers and Financial Houses on allotments made in respect of applications bearing their stamp.

Forms of application may be obtained from any office of the Banks previously mentioned or from any Post Office; from Messrs. Butler and Briscoe, 16-17 College Green or from any stockbroker; from the Department of Finance, Dublin; from the High Commissioner for Eire, 33 Regent Street, London; from Messrs. Guinness Mahon & Co., 53 Cornhill, London; from the National Bank, Ltd., 13 Old Broad Street, London; or from the Provincial Bank of Ireland, Ltd., 8 Throgmorton Avenue, London.

21st May, 1938. Department of Finance, Dublin.

£3.15.0 per cent. Financial Agreement Loan, 1953-1958.

TO THE BANK OF IRELAND.	NATIONAL CITY BANK.

MUNSTER & LEINSTER BANK.	ROYAL BANK OF IRELAND.
NATIONAL BANK.	ULSTER BANK.

In terms of the Prospectus dated 21st May, 1938,

(1) I/we hereby apply for a "Fully paid Allotment" of £....., say pounds of the above-mentioned issue. The sum of £....., being the amount of the required payment at the rate of £100 for every £100 of the Loan applied for, is enclosed herewith.

(2) I/we hereby apply for an "Instalment Allotment" of £....., say pounds of the above-mentioned issue. The sum of £....., being the amount of the required deposit at the rate of £10 for every £100 applied for, is enclosed herewith.

And we hereby engage to pay the instalments as they shall become due on any allotment that may be made in respect of this application, as provided in the said Prospectus.

Either (1) or (2) above must be selected, but not both.

I request that any allotment made in respect of this Application may be—

no dividend since \$4 per share was paid for 1931. In present circumstances of higher costs and adverse revenues, it is difficult to take a favourable view of the outlook for the stock, whose rehabilitation depends on a really convincing economic recovery in the industrial states.

* * *

Griffiths Hughes Dividend.—In 1935, the £1 ordinary shares of Griffiths Hughes Proprietaries reached 62s. 6d. To-day, they are quoted at 11s. 3d. The profits and dividend record of the company since that year has shown an unmistakable downturn, which is further confirmed in this week's dividend announcement. The Proprietaries company is to pay 6½ per cent. for the nine months' accounting period from June, 1937, to March, 1938. According to an official statement issued last December, the change in accounting period does not affect the profit of the holding company, which has received the benefit of a full year's profit from the operating company to March. The 6½ per cent. dividend, therefore, is comparable with the payment of 11 per cent. for 1936-37, and 17½ per cent. for the preceding year. The sharp fall in dividends reflects the recent change in the operating company's profitability. For the year to March, 1936, the latter recorded a total profit of £454,121; during the succeeding year, profits fell to £234,026, and for the past year a further setback has occurred to £162,196. Such a persistent and substantial decline in earnings must evidently be regarded as disturbing. The setback in 1936-37 was explained at the last meeting as being largely due to currency devaluations, together with the constitutional crisis and the effect of the projected medicine tax. Shareholders will await with some concern a fuller explanation of the company's present trading position.

* * *

General Refractories Position.—Investors will find two features of particular interest in the report of General Refractories for 1937. The first is the intimation that the board considers that the process of expansion has come to an end. Future policy will be directed towards the consolidation and development of the resources acquired during the past few years. The company's expansion has indeed been spectacular. At the end of 1935, total assets amounted to £543,361, of which £360,982 was represented by plant and investments in subsidiaries. By the end of last year, the total had expanded to £1,461,623, of which fixed assets and subsidiary interests accounted for £780,640. Such rapid expansion evidently called for the full consolidation of assets and earnings for the whole group, and this provides the second feature of the report. The statements disclose the existence of bank loans and overdrafts (partly secured) amounting to £422,194 at the end of December, while the current net assets position reflects the consequences of the recent expansion of the group. Consolidated trading profits amount to £166,436, of which the balance attributable to General Refractories, after charging £15,960 for the subsidiaries' depreciation, and £25,000 for the central depreciation fund, is £81,600. The corresponding net profit of General Refractories itself amounts to £79,726, which covers the 16 per cent. dividend with a margin of £3,026. It appears, however, that sums

totalling £62,177 have been appropriated from general reserve (whose total of £404,752 included share premiums to an amount of £213,948). In particular, some £25,000 has been transferred to obsolescence and depreciation reserve, and £15,000 to income tax reserve. To what extent, if any, these provisions are of a special nature (since they have been charged against accumulated, and not current, profits) may perhaps be explained at next week's meeting. Meanwhile, the group has the advantage of a surplus (subject to £37,700 final dividend) of £405,612, but last year's dividend was covered with a relatively small margin of earnings, before taking account of the special charges.

* * *

Yorkshire Amalgamated Collieries Report.—The rapid expansion of profits recorded by this colliery concern in recent years at one time encouraged hopes of a generous increase in earnings and dividend for 1937-38. The increased distribution of 5½ per cent. tax free, however, suggested that the rise in profits would not be as generous as in 1936-37. An 8 per cent. increase in income, to £305,587, is satisfactory in itself, but seems modest compared with the expansion shown in recent years. The course of profits is analysed in the following comparative table:—

	Years ended March 31		
	1936	1937	1938
Income.....	£151,828	£282,161	£305,587
Expenses	3,245	3,761	3,803
Debt interest	40,554	39,394	38,558
Preference dividend	...	8,163	11,250
Ordinary shares:—			
Earnings†	108,029	230,843	251,976
Paid	88,913	145,760	160,336
Paid %	4	5½	5½
Special charges	22,500	12,076	1,954
General reserve	...	50,000	50,000
Carry-forward	6,191*	29,679*	70,000*

† Tax free. * After crediting income tax repaid: 1935-36, £475; 1936-37, £481; 1937-38, £635. ‡ Subject to deferred rights.

Actually last year's improvement is somewhat better than the figures for total income suggest, and the latest distribution is made on a conservative basis. Profits in 1936-37 included receipts from subsidiaries to the extent of £41,877 in excess of current earnings. Last year the subsidiaries retained £1,233 of their net profits, and made considerably increased provisions for income tax and N.D.C. The holding company also received no benefit from the new coke-ovens and bye-product plant of the Dinnington Colliery Company, which came into operation only last March, following delays in obtaining materials and plant. Although the group's output was the highest for some years, higher wages and material costs were payable. Shareholders will also note a rise in the group's stocks from £99,025 to £164,274. Expenditure upon the new Dinnington plant presumably accounts for a large part of the increase in properties and plant from £5,906,621 to £6,217,121, though further purchases of new railway wagons are reported. In assessing the prospects for the current year, investors may set against the industrial outlook the group's improving technical efficiency and the advantage of the coal-selling schemes, but at the current price of 17s. 6d. the £1 shares offer the significantly high return of £8 13s. 6d. per cent.

* * *

Siemens Brothers Setback.—Compared with the excellent profits of the previous year, the latest results of Siemens are disappointing. The fact that they fall a little short even of the 1935 level has not affected the ordinary dividends, for with the assistance of some saving in charges, earnings short of the 7½ per cent. distribution by only

small margin. After crediting £28,257 for income in respect of earlier years, the directors have been able to set aside £10,000 to reserve and to increase the balance carried forward by some £8,000. The allocation of profits for the past three years is shown in the following table:—

	Years ended December 31		
	1935	1936	1937
Profit	£236,122	£347,656	£228,520
Prob. service and pensions ...	27,383	17,670	...
Ref. dividend	55,000	55,000	55,000
Ordinary stock:—			
Earnings	153,739	274,986	173,520
Paid	147,000	183,750	183,750
Earnings %	6.4	12.5	7.1
Paid %	6	7½	7½
General reserve	...	86,343	10,000
Carry-forward	339,724	344,617	352,644†

† After crediting £28,257 income of previous periods realised during year.

No comment upon the 1937 results was offered in the report, and Lord Queenborough's survey at this week's meeting was therefore awaited with the more interest. A year ago we suggested that Siemens might be affected by rising costs. It is difficult to estimate how individual manufacturers were affected by the soaring prices in the spring and by the sharp falls in the autumn of 1937, but such information as is available from Siemens' accounts does not suggest that declining orders account for the setback. During 1937 the workshops were fully occupied, and the increased order book has necessitated further extensions. The balance sheet shows, in fact, that fixed assets have risen from £1,033,095 to £1,157,054, and the rise in stocks is greater still—from £1,134,970 to £1,522,094. Such an increase may probably be interpreted favourably, for the company manufactures more for orders than for stock. Since 1932, however, Siemens' profits have seen some degree of fluctuation, and not until 1936 were pre-depression levels re-attained. In view of to-day's uncertain trade outlook, a yield of 6½ per cent. on the ordinary shares at 24s. is probably justified.

* * *

Fine Cotton Spinners and "Stubbers."—The week's textile company news reflects the recent uncertainty which has been apparent in trade reports. Fine Cotton Spinners have followed up the recovery of 1936-37 with a further rise in total profits from £304,421 to £349,445, which, in the circumstances, may be regarded as satisfactory. After provision for charges, including £100,000 for depreciation, which are practically the same as in the previous year, the amount earned for dividend is rather more than 50 per cent. higher at £133,761. The improved earnings, of course, are applied to the reduction of the debit balance carried forward to £212,538. The chairman last year pointed out that a satisfactory earnings basis must be achieved before the balance sheet "slimming" could be undertaken. The latest report states that a scheme is now being prepared, and will be submitted within the next few months. The few changes in the balance sheet, such as a fall from £1,780,789 to £1,704,790 in stocks and an appreciable improvement in cash, do not affect the obvious need for an extensive reconstruction. British Cotton and Wool Dyers, whose ordinary dividends have been satisfactorily maintained in recent years, experienced last year a setback in profits of 16 per cent. to £110,062. The allocation for depreciation is maintained at £35,000 but no further provision is made for obsolescence. It is largely due to this fact that earnings for the share capital are only a trifle lower at 6.2 per cent. The 4½ per cent. dividend (against 6½ per cent.) therefore reflects a more conservative policy than in recent years. Like many established concerns serving the textile industry, "Stubbers" are obviously finding present conditions difficult, and their dividend record, rather than any immediate prospects of recovery, probably explains the present price of 3s. 7½d. for the 5s. shares.

Ocean Coal Scheme.—The reduction of ordinary capital which Ocean Coal and Wilsons is seeking to effect is not directly necessitated by the company's own position. Preference dividends have been regularly paid, an ordinary dividend of 3½ per cent. has been declared for 1937, and the company's income, at £268,005, increased by no less than 41 per cent. over the 1936 total. A subsidiary, United National Collieries (which represents £1,160,553 of the total assets of £7,470,285 in the parent company's balance sheet) has paid no preference dividend since 1926, no ordinary dividend since 1924, and has a debit balance at profit and loss of £394,710. In one operation the parent company proposes to write down the book value of the holding in United National (together with some smaller adjustments for other subsidiaries) by reducing its own capital and also to acquire the remaining capital of United National as a step towards the absorption of the subsidiary colliery companies into one operating company. By reducing its ordinary stock from £5,000,000 to £4,000,000, Ocean Coal will write down its holding in United National by £881,430 to £279,553 (representing 20s. per preference and 5s. 4d. per ordinary share), and will apply the balance to the adjustment of book values for other holdings. There remain 225,814 preference and 304,090 ordinary shares of United National in the hands of the public which the parent company offers to purchase. The basis proposed is 12s. preference and 8s. new ordinary (or 10s. old) in Ocean Coal for each United National £1 preference share; and 5s. 4d. new (or 6s. 8d. old) ordinary capital for each £1 ordinary share. Ocean Coal's issued capital will then consist of £1,733,194 5 per cent. preference and £4,171,417 ordinary stock, against £1,597,706 and £5,000,000, respectively, as at the end of 1937. On the basis of current market values the terms appear reasonable, and, taking the United National Company's assets at their book values, the break-up value of the ordinary shares would be roughly 14s. per £1 share. But on the basis of United National's past earning capacity, they seem generous. At current Ocean Coal market values, United National preference shares are being acquired for about 16s. 3d. and the ordinary shares for 3s. 3d. The position of Ocean Coal shareholders is not altered to any important extent by the scheme, and the proposals as a whole are likely to find acceptance.

Swedish Industrial Profits.—Readers who studied the charts appearing on page 123 of *The Economist* of April 9th will have been impressed by the degree of industrial recovery which Sweden has achieved since the depression. Its translation into profits in 1937 is evident from the announcements of Swedish industrial concerns in the course of this year. These results are compared with those of 1935 and 1936 in the following table:—

Company	Earned for Divs.†	Div.	Shares		"B" Shs. (London price)
			Earned	Paid	
	Kr. 000	Kr. 000	%†	%	£
Separator—					
1935	4,926	4,085	6.1	5	5½ (Kr. 100)
1936	6,228	4,902	7.7	6	
1937	7,251	6,536	9.0	8	
Svenska Kullager-Fabriken—					
1935	20,556	13,000	15.8	10	13½ (Kr. 50)
1936	22,832	13,000	17.6	10	
1937	22,717	13,000	17.5½	10½	
Elektrolux—					
1935	8,451	6,000	14.1	10	7½ (Kr. 75)
1936	8,888	6,000	14.8	10	
1937	9,152	6,000	15.3½	10½	
Volvo—					
1935	844	650	6.5	5	— (Kr. 50)
1936	1,306	650	10.0	5	
1937	2,014	910	11.0*	5*	

† Before legal, etc., reserve allocation, if any. * In 1937, capital increased by issue for cash from Kr.13,000,000 to Kr.18,200,000. ‡ Or 20 per cent. on new capital paid, and 35% earned. § Or 13½ per cent. on new capital paid, and 20-4% earned.

The rate of expansion in profits last year compares quite well with that achieved in 1936, and this total is often close to the 1929 figures. Profits of Separator Company, who make centrifugal apparatus for a variety of pur-

poses, are within Kr. 582,000 of the 1929 figure, while Elektrolux and S.K.F. (whose English subsidiary recently issued a satisfactory report) show the best results for a decade. These two companies may claim the additional merit of having maintained a comparatively high rate of dividend throughout the depression. Earnings of Volvo (makers of motor-cars and engines) have been rising rapidly in recent years, though the real rate of progress is masked by expansions, which last year involved a cash issue of Kr. 5,200,000. For the most part, however, these international trading concerns have achieved their good profits record in the face of currency and other trade restrictions. Having accumulated resources beyond their profitable needs, both Elektrolux and S.K.F. have returned part of the capital to shareholders, of the substantial proportions of Kr. 25 and Kr. 50 respectively on the former Kr. 100 shares. While these Swedish companies have staged a commendable recovery in recent years, the pressure of trade restrictions, which might be intensified if international commerce suffered a decline, is very relevant to their future prospects.

Other Company Results.—Other important results published this week come mainly from miscellaneous industrial companies, though the rubber and the investment trust groups are also well represented. Our usual analysis of profit and loss accounts, on page 462, covers nearly ninety companies, whose results are discussed on page 438 under the heading "Shorter Comments."

Company Meetings of the Week.—In this issue reports of company meetings begin on page 448. Mr. Walter Holman's address to *Incorporated Accountants* is discussed in a Note on page 429. At the *Anglo-Palestine Bank* meeting, Mr. L. Istoric expressed satisfaction that the bank had not experienced any disturbance of business by reason of the present recession. A fairly large amount of additional credit had been required. Mr. Walter H. Brown, addressing *London and Manchester Assurance* members, drew attention to the growth of industrial assurance since 1869, when the company was formed; to-day, there were over 90 million industrial policies in force in the British Isles. Efforts to minimise fire hazards were discussed at the *Liverpool and London and Globe Insurance* meeting by Mr. A. E. Pattinson, who reported that the latest year's underwriting profit was one of the best recorded. In reviewing the latest results of the *British Match Corporation* Mr. Clarence Bartholomew reported that during the year the company's trade had been free from serious disturbance except in Brazil. Home, Dominions and Argentine trade yielded almost the same revenue as in the previous year, but taxation absorbed nearly £50,000 more from the group. Addressing *South-Eastern Gas* shareholders, Sir David Milne-Watson pointed out that, following recent acquisitions, only five gas undertakings were larger than their group. Members of *British Shareholders Trust* were informed by Sir Follett Holt that the trust's 290 investments were in undertakings operating principally in this country or under British control. At the *Rubber Plantations Investment Trust* meeting, Mr. H. J. Welch expressed the view that it would be in the best interests of Empire producers if the preference in this country on Empire teas were removed. Teas displaced from the London market in turn displaced Indian and Ceylon teas in outside markets. Addressing *Lunuvu (Ceylon) Tea and Rubber Estates* shareholders, Mr. Welch declared that the main problem in the tea business was to find the best way of keeping the harvest down to permissible limits. With rubber, however, it was more profitable to sell a proportion of export rights than to produce an equivalent quantity of rubber. At the *Sungei Batu (Malaya) Rubber* meeting, Mr. E. D. Hewan disclosed that forward sales of five tons per month had been effected for 1938 at 1s. 0½d. per lb (landed London). Sir Francis Voules, at the *Kepong (Malay) Rubber* meeting, declared himself sceptical of the value of a buffer pool to the rubber

ustry's well-being. Surveying the *Mining Trust's* recent interests, Earl Castle Stewart expressed the view that the holding in Saudi Arabian Mining Syndicate would be very profitable. Additional shares had been purchased and shipment of plant had begun. At the meeting of *Smith's Potato Crisps*, Sir Herbert E. Morgan referred to a new factory at Lincoln, and the doubling of capacity at Stockport to increased trade. Mr. Walter MacLachlan,

reviewing the interests held by *British-Borneo Petroleum Syndicate*, disclosed that the market value of securities exceeded book values at March 31st. Payment of a dividend in respect of the current financial year was forecast by Mr. Arthur E. Hadley at the *Rhodesia Railways* meeting. Mr. R. Olaf Hambro referred to the excellent financial position of the Scandinavian countries, which account for well over 50 per cent. of *Hambros Bank* business.

London

SETTLING DAYS
TICKET ACCOUNT
MAY 24 MAY 26

The shrinkage of turnover to famine dimensions has continued this week. Apart from speculative activity in certain sections of the Kaffir market, indeed, markets have relapsed into a condition of stalemate, in which holders are prepared to hold, but new buyers are not attracted. The coincidence of this stalemate with a certain restiveness regarding international politics may be significant, but further economic indicators, such as the latest trade returns and the building plans figures, also provide little incentive for the industrial share investor. Such improvement as occurred in the middle of the week appeared to mark the preparatory stages of the closing of an account in which the bears played a greater part than the bulls.

Quiet conditions marked the opening in the *gilt-edged market*, though National Defence Bonds, with a small rise, reached the new high level of 100%. Lack of support, coupled with the announcement of the Kent loan terms, caused a further setback, but in mid-week the tone was distinctly firmer. Fairly large buying of War Loan was reported, and this prompted the inference that "help" was being accorded to the market. Further selling of New Zealand issues caused losses of up to a point on successive days.

In the *foreign bond market* the Shanghai-Nanking default was followed by a setback in Chinese issues, while Central European issues marked the continuance of political uneasiness. Brazilian loans were also a consistently weak group.

The *home rail group*, encouraged perhaps by bear operations, made the most of the prospective traffic losses at the beginning of the week, major falls again being recorded by the junior preference issues. The actual returns provided the signal for a prompt improvement, ranking up to a point, in both ordinary and preference issues. London Transport "C" stock declined, but was not specifically affected by the accident. In the foreign rails section, Cordoba issues alone made headway, on hopes that the Argentine Government would implement the purchase of the line.

Business in the *industrial market*, except for certain special groups, remained at low ebb, although prices appeared steadier in mid-week. The steel group, for instance, showed improvements of a few pence on Wednesday, after two reactionary days in which Dorman Long and Tube Investments were particularly affected. Electrical equipment shares remain an uncertain market, Siemens declining further on the report (see page 434). Supply shares also tended to ease. Aircraft issues

lacked their previous impetus, but prices remained relatively firm. Motor shares proved sensitive to poor support, and, with the exception of Distillers, the brewery share list was not impressive. Tobacco shares staged a late improvement, but little interest was taken in store shares, while textile issues remained friendless. The miscellaneous list showed a limited mid-week recovery, after opening dull.

In the *oil share market*, a somewhat firmer tendency followed a dull and irregular start to the week. Prices sagged at first through lack of interest, and the mid-week improvement was not accompanied by much expansion of business. Mexican Eagle fell on the breaking of diplomatic relations between Great Britain and Mexico. Conditions in the *rubber market* were thoroughly idle, though the tendency towards sagging prices was checked in mid-week, and public sales were small. Tea shares continued thoroughly apathetic, and unresponsive to the good company results recently published.

Although the week began quietly, the *mining market* was rather more active than some other sections. Among Kaffirs, Western Holdings again provided the chief feature, staging a minor professional boom in which profit-taking seemed to be well absorbed. Other issues started with trifling losses, but by mid-week the influence of Western Holdings caused a certain broadening of activity, particularly in developing mines on Cape support. West Africans were neglected on the whole. Until mid-week, Rhodesian coppers were subdued, and firmer quotations did not result in a much higher turnover.

ACTUARIES' INVESTMENT INDEX

The Actuaries' index of 151 industrial equity prices which stood at 66.5 on Tuesday last (May 17th) had fallen to a rather greater extent than in recent weeks though it remained 1½ points above the "low" touched early in April. A week ago the index stood at 68.3, and a month ago at 69.2. The corresponding average yields are 5.62, 5.44 and 5.33 per cent.

A selection of the separate indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High

New York

AFTER an aimless start to the week, Wall Street took a slight turn for the better. Over the week-end trading was overshadowed by the news that Mr. Roosevelt would send a Special Message to Congress reaffirming his opposition to changes in the undistributed profits and capital gains taxes. The continuing gloom of the business outlook was responsible for a poor start this week, and prices sagged in all sections of the market. Then, for no well-defined reason, the tone improved on Tuesday, without bringing any accompanying rise in turnover. The main subject of discussion was the level of third quarter steel prices, the U.S. Steel announcement being expected shortly. The general opinion, however, still favours no change. Steel mill activity is estimated by *Iron Age* at 30 per cent. of capacity, against 30.5 per cent. in the previous week. A further small improvement in prices occurred in mid-week, though the market was in no very decided mood. Some impetus has been given by the results of the Pennsylvania primary elections.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100)

Capital Issues

COMPARED with the poor reception accorded to the London County Council loan last week, this week's *Kent County Council* issue has enjoyed a much better response. A 70 per cent. allotment to large applicants, in fact, underlines several advantages of the loan. Its amount is limited to £1,000,000, and it has a single redemption date in 1968. Otherwise, the terms—3½ per cent. stock issued at £101 10s. per cent.—are

identical. There is, however, the advantage that the first payment of interest will be paid in September. The L.C.C. scrip improved to 1½ discount when the result of the Kent issue was known.

PUBLIC OFFERS

Kent County.—Issue of £1,000,000 3½ per cent. stock at 101½. Redeemable at par March 1968. A trustee stock. Ranks with other loans. Estimated population 1,336,500; rateable value, £10,586,222. General County rate, 4s. 11d.; special, 4s. Net debt, £4,867,372. Lists closed 9.30 a.m. May 19th.

BY STOCK EXCHANGE INTRODUCTION

Fylde Water Board.—Particulars of issue of £250,000 3½ per cent. stock, sold to Messrs Marsden W. Hargreave and Company and Messrs Pember and Boyle at £100 12s. 9d. net. Redeemable at par October, 1958. Proceeds for conversion of short-term loans. Area supplied, 207 square miles, including Blackpool, Fleetwood, etc. Population served over 200,000. Board can levy water rates on a sliding scale from 11½ per cent. down to 7½ per cent. upon the rateable value.

PRIVATE PLACINGS

Spurling Motor Bodies.—Underwriters Trust have placed privately 180,000 4s. ordinary shares of Spurling Motor Bodies at 5s.

Electrical Distribution of Yorkshire.—The directors have placed privately £500,000 3½ per cent. redeemable stock, 1955-65.

ISSUES TO SHAREHOLDERS ONLY

Blackett and Son.—This company is issuing 30,000 £1 6 per cent. cumulative preference shares at 21s.

Commercial Company of Salonica.—Issue of 120,000 new shares 5s (ranking from the year 1936-37) at 5s. 10d. per share (1 new share for every 6 old shares held).

Lawrence, Scott and Electromotors.—Issue of 100,000 5 per cent. cumulative redeemable £1 preference shares at par and 144,398 5s. "A" ordinary shares at 9s. 6d. (one new share

for every ten "A" or "B" ordinary shares held on May 4th).

Simonds (H. and G.), Ltd.—Issue of 37,752 £1 ordinary shares at 60s., in proportion of one for every £20 of ordinary stock held on May 24th. The new shares will rank from October 1, 1938.

St. Austell and District Electric Lighting and Power.—Issue of 10,000 new £1 ordinary shares, at 30s.

United British Oilfields of Trinidad.—Issue to existing ordinary shareholders of 3,000,000 6s. 8d. ordinary shares at 12s. 6d. (2 new for each share held). To rank from January 1, 1938.

Morrell Estates.—Issue at par of £75,000 5½ per cent. debenture stock. Applicants for every £5 of stock will have the right to purchase from liquidator of Morrell (Builders) one 6 per cent. £1 cumulative preference share of Morrell Estates at 5s.

CONVERSIONS AND REPAYMENTS

Norwegian Government 4 Per Cent. Loan 1911.—This loan will be repaid on August 31, 1938. Holders can convert into a new 3 per cent. Norwegian Government loan in Swiss francs at 95. New loan redeemable at par by drawings from 1939 to 1971. The offer is open from May 17 to 27, 1938.

OFFERS ABROAD

Government of India Rupee Loan.—Issue at 98 of a 3 per cent. loan (redeemable at par, 1965, or from 1963 on notice in India) up to about Rs. 15 crores (Rs. 15,000,000). Subscriptions can be in cash; also in 5½ per cent. loan, 1938-40, or 5 per cent. loan, 1939-44, as cash equivalent of Rs. 101 As. 12 and Rs. 104, respectively, per Rs. 100 nominal tendered.

RESULT OF ISSUE

London County Council Loan.—Only £450,000 was subscribed by the public for the issue at 101½ of £1,000,000 3½ per cent. stock, 1968-73. Underwriters had to take up 95½ per cent. of the issue.

SHORTER COMMENTS

Company Results of the Week.—A satisfactory increase in revenue has been achieved by LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, whose profits amount to £396,101 against £392,470, although recently there has been some tendency for expenses to increase. IMPERIAL CONTINENTAL GAS ASSOCIATION net profits are practically unchanged at £427,686. This result, however, is entirely due to increased taxation and expenses, for total revenue is nearly £34,000 higher at £634,595. Among the larger rubber companies which report substantial progress are REMBAU JELAI, STRAITS RUBBER, and UNITED PATANI (MALAY), the latter concern paying 12 per cent. against 8 per cent. Excellent results are also reported by the James Finlay group of tea companies—AMALGAMATED TEA ESTATES, ANGLO-AMERICAN DIRECT TEA TRADING, CONSOLIDATED TEA AND LANDS, and KANAN DEVAN HILLS PRODUCE. A satisfactory rise in profits is recorded by INDUSTRIAL AND GENERAL TRUST, whose profits amount to £306,395 against £263,264, while the dividend is increased from 11 per cent. to 12 per cent. PLATT BROTHERS AND COMPANY (HOLDINGS) pay a 5 per cent.

Ordinary dividend in respect of the first year since the scheme of arrangement was effected, net profits having risen from £54,318 to £80,684. Our table also includes the results of other textile machinery makers, TWEEDALES AND SMALLEY and HOWARD AND BULLOUGH. DERITEND STAMPING have earned £48,803 against £33,536, but although the dividend is raised from 12½ to 15 per cent., the distribution is conservative, for £10,000 (against nil) is put to general reserve. Despite a substantial reduction in output in the last few months of the financial year, RICHARD JOHNSON AND NEPHEW show an increase in profits of 45 per cent. to £76,356. B. LAPORTE, LTD., the chemical manufacturers, maintain the 22½ per cent. dividend, net profits being a little higher thanks to increased turnover. PARKINSON AND COWAN, having earned £60,820 against £44,641, have brought preference payments up to date, and are distributing 3 per cent. on the ordinary capital. The first accounts of SINGER MOTORS since the reconstruction show a trading profit for 15 months to March 31st last, expenses (in particular maintenance c.s. and debenture interest) convert this profit into a net loss of £24,560.

RAILWAYS

A. Agasta (Chili) and Bolivia Railway.—Net revenue for 1937 (including dividend from Andes Trust, income from investments, and after exchange depreciation) was about £400,360, against £368,839 in 1936, when £104,000 was deducted for exchange reserve. A further dividend of 3½ per cent. on 5 per cent. cumulative preference stock is proposed, being balance for 1934 and 1½ per cent. for 1935. The company is thus paying off arrears amounting to 6½ per cent. out of revenue for 1937, compared with 5 per cent. in 1936. Earnings for the quarter ended March 27th were £211,650, compared with £207,670 for corresponding quarter in 1936.

Nitrate Railways Company.—Gross receipts rose by £35,698 to £159,421 for 1937, of £387,108—a rise of £120,825. Dividends are being resumed with 1 per cent. on the ordinary and preferred converted ordinary shares. Carry forward, £186,493.

MISCELLANEOUS

Meux's Brewery Company.—This company is offering to purchase the preference and ordinary shares of Mellersh and Neale, subject to ratification by the latter company's members, before whom the terms will be placed as soon as possible.

London County Freehold and Leasehold Properties.—For year to March 31, 1938, net revenue has risen from £392,470 to £396,101. To N.D.C., £14,000; 11 per cent. dividend repeated; to general reserve, £30,000, against £35,000. Carry forward, £130,852, against £127,050.

Deritend Stamping Company.—Profit for year to February 28, 1938, £49,703, against £34,936. To depreciation, £1,000, against £500. To tax, including N.D.C., £16,324, against £8,401. Ordinary dividend raised from 12½ to 15 per cent. To general reserve, £10,000 (nil). Carry forward raised from £7,964 to £10,303.

Parkinson and Cowan, Ltd.—Net profit for 1937 £60,820, against £44,641. Preference dividend requires £25,405. Ordinary dividends resumed with a payment of 3 per cent., requiring £15,788. To reserve, £13,085 (nil). Carry forward raised from £14,146 to £20,688.

International Paper and Power.—Net loss for quarter to March 31, 1938, \$332,000, compared with a net income of \$1,747,000 for corresponding quarter of 1937. Tonnage deliveries are down 30 per cent. compared with last year. The preferred dividend due in March was passed. For the whole of 1937 net earnings were \$9,134,000, or \$2.47 per share, compared with \$5,020,000, or 22 cents per share in 1936.

International Telephone and Telegraph Corporation.—Net earnings for 1937, \$20,296,866, against \$13,598,053 for

1936 (after depreciation of \$10,971,499, against \$10,267,083). Net income \$10,236,148, against \$4,009,103. Orders on hand at end of 1937 were over \$63,000,000, against \$40,000,000 at end of 1936.

Smethick Drop Forgings, Ltd.—Profit £79,570, against £69,286. Tax and N.D.C. £32,500. Ordinary dividend raised from 30 to 32½ per cent. To general reserve £13,750 (nil). Last year £2,500 was put aside for pensions. Carry forward raised from £14,249 to £14,741.

Industrial and General Trust, Ltd.—Total income year to March 31, 1938, £406,962, against £365,132. Ordinary dividend raised from 11 to 12 per cent. Written off fittings, etc., £500, as before. To reserve £35,000, against nil, but transfer to dividends equalisation account reduced from £100,000 to £50,000. To staff pension fund nil, against special transfer of £12,400 last year. Carry forward raised from £70,064 to £74,857.

Reardon Smith Line.—Trading balance year to March 31, 1938, £536,039, together with £4,952 interest. Net profit for 1936-37 was £241,432. Dividends totalled 10 per cent., tax free, absorbing £123,200, against 6½ per cent., tax free. To dividend reserve, £100,000. Insurance fund £50,000. General reserve £140,000 (making this fund £250,000). Depreciation written off ships is £125,546, also £72,390 profit on sales of vessels, making £197,936. Carry forward £9,208.

Swedish Match Company.—Net profit, 1937, Kr. 14,800,000, compared with Kr. 12,800,000. To legal reserve, Kr. 5,550,000. Carry-forward raised from Kr. 11,500,000 to Kr. 20,823,000. Total assets, Kr. 545,200,000 (Kr. 578,800,000). The directors state that provided there are no unforeseen international complications during 1938, it is considered probable that the company will be able to resume dividend payments next spring.

Finlay Group Profits.—The Consolidated Tea and Lands Company shows a revenue surplus for the year to November 30, 1937, of £387,108—a rise of £120,825. Dividend 13 per cent., against 10 per cent., on ordinary; £119,927 is carried forward, against £69,431. Amalgamated Tea shows revenue surplus £140,168, against £85,393. Ordinary dividend 7 against 4 per cent. £54,858 carried forward against £39,491. Kanan Devan Hills Produce—Revenue surplus of £256,088, compared with £168,178. Ordinary dividend raised from 12½ to 16 per cent. Carry-forward, £88,371, against £65,421. Anglo-American Direct Tea Trading shows revenue surplus £154,000, against £91,306. Ordinary dividend 10 against 6 per cent. £75,479, against £57,596, is carried forward.

Chloride Electrical Storage.—Profits showed a slight advance from £432,442 to £435,700 in the year to March 31, 1938. Final dividend on "A" and "B" ordinary stock again 5 per cent., but the cash bonus is doubled at 10 per cent. The year's distribution is thus 20 against 15 per cent.

Imperial Continental Gas.—Net profits year to March 31, 1938, £427,686, against £427,038. General expenses, etc., were £34,271 higher

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

Building Plans Again Lower.—Contrary to earlier expectations, activity in the building and contracting trades has so far been better maintained than in many other industries. Indeed, apart from the increase in armament work, the buoyancy of constructional activity largely explains the comparatively small extent of the decline in general business activity since last autumn. In April, for example, the proportion of insured persons unemployed in building, at 12.7 per cent., showed an increase of only 1.3 per cent. over the corresponding month a year ago. In public works contracting the proportion of insured workers unemployed was actually 1.1 per cent. smaller than in April, 1937. While there are no indications of an early slump in constructional activity, the persistent decline in the returns of building plans passed by a large number of local authorities does not augur well for the future. Although these returns are by no means comprehensive, the extent of the decline in the value of plans passed must, sooner or later, be reflected in a decline of activity. The returns for April relating to 143 local authorities revealed a decline of no less than 24.1 per cent. in the value of plans passed, compared with the corresponding month last year. The decline was most marked in the case of factories, workshops, shops and other commercial buildings, but plans passed for dwelling-houses were also appreciably lower.

Report of the Milk Marketing Board.—The annual report of the Milk Marketing Board for the twelve months ended March, 1938, gives some interesting statistics on the position of the milk industry. Sales of milk for liquid consumption increased by 51 million gallons compared with the previous year and totalled 721 million gallons. About 6 million gallons of this increase is due to the inclusion in the Board's returns from October last of the sales of tuberculin tested milk, but even so, liquid sales increased by nearly 8 per cent. during the past year. Total sales of milk through the Board showed a small reduction compared with 1936/37; the higher costs of feeding stuffs and labour, and the improved returns from beef production have checked the expansion in milk output. The result of the increase in liquid sales has been to reduce the surplus available for manufacture; in fact, in November and December, when production is at a seasonal minimum, the excess over liquid requirements was barely 20 per cent. of total supplies, and milk had to be hastily diverted from factories and condenseries to the liquid market. If the expansion in the consumption of liquid milk is to be continued, it is essential that winter production of milk should be further encouraged.

Lancashire Cotton Problems.—The controversy in Lancashire with regard to the proposed Enabling Bill for the cotton industry is becoming more bitter, and both sides are holding public meetings and are engaged in propaganda for their respective opinions. Mr Frank Platt, the managing director of the Lancashire Cotton Corporation, Ltd., at a meeting in Manchester on Tuesday last of representatives of about 250 spinning mills, said that the opposition were misleading the trade in rejecting the

proposed scheme. While all firms must necessarily be included in any final scheme, there had been from the beginning an implicit undertaking that every firm in the industry should have an opportunity of registering its opinion as soon as the principles upon which the Government was prepared to legislate were known. The Opposition Committee, at the beginning of this week, announced that they had obtained the support of 650 firms which included spinners and manufacturers controlling over 9,250,000 spindles and 140,000 looms. On Wednesday the representatives of the Committee had an interview with the President of the Board of Trade. Meanwhile it is becoming increasingly important that something should be done to prevent a further decline in the export trade. During the first four months of this year exports of piece-goods were 25 per cent. lower than a year ago, while shipments of yarn were 22 per cent. below those in the corresponding months of 1937. The spinning industry is running at 50 per cent. of capacity, and 100,000 operatives are unemployed.

Industrial Production Declining.—The downward trend of industrial production since the end of last year, revealed by *The Economist's* index of business activity, has now been confirmed by the official index of industrial production, published in this week's *Board of Trade Journal*. The index for the first quarter of this year shows a decline of 2.9 per cent. from the last quarter of 1937, though the volume of industrial production in January-March was still slightly higher than a year ago. *The Economist* index of business activity also remained above the level of a year ago in January and February but fell below that level in March.

BOARD OF TRADE INDEX OF PRODUCTION
(1930=100)

Total of manufacturing industries (2-10)*	129.4	138.3	136.3	141.7	137.2
Total of all groups (1-10)*	124.6	133.1	131.3	136.6	132.7

* Includes also various industries not specified above. † Revised figure.

Of the ten industrial groups for which separate indices are available, five registered an increase, and five a decrease, in production between the first quarters of 1937 and 1938. Since March, however, the downward trend in industrial activity has become more general and the majority of indices for the June quarter are likely to compare unfavourably with those of the second quarter of last year.

Decline in Overseas Trade.—The latest returns show that the fall in the value of imports, which was interrupted in March, has been resumed; imports in April were 13.1 per cent. lower than in March and 11.2 per cent. lower than in April, 1937. Exports also continued their downward trend; the value of domestic exports was 11.6 and 13.3 per cent. respectively below that of March, 1938, and April, 1937. As a result of the greater absolute decline in imports, the excess of imports over exports was somewhat smaller than a year ago. Some of the fall in the value of imports and exports compared with April, 1937,

must be ascribed to the effect of Easter, which last year fell in March.

The Economist index of the volume of raw material imports, adjusted for seasonal variations, shows a rise of 3.4 per cent. compared with a year ago and a fall of 1.1 per cent. compared with the previous month, while the index of the volume of exports of manufactures fell by 9.7 per cent. and 1.0 per cent. compared with the same months. Meanwhile, there are no indications of an early reversal in the trend of overseas trade.

Overseas Trade by Commodities.—The accompanying tables show quantitative changes in the imports and exports of important commodities since April, 1936.

RETAINED IMPORTS—MONTH OF APRIL

Items and Measure	1936	1937	1938
Wheat	'000 cwt.	8,337	7,153
Beef and veal	'000 cwt.	1,039	1,141
Mutton and lamb	'000 cwt.	447	554
Sugar (unrefined)	'000 cwt.	3,034	3,174
Iron ore and scrap	'000 tons	633	655
Raw cotton	'000 cwt.	1,229	1,226
Sheep's and lambs' wool	'000 cwt.	741	575
Flax, hemp and jute	tons	21,963	28,061
Crude petroleum	'000 galls.	38,215	44,530
Hides, wet and dry	tons	163	124
Wood pulp	'000 tons	204	116
Rubber	'000 cwt.	122	236
Unwrought copper	tons	28,298	33,210
Pig lead	tons	30,633	30,515
Tin: Ore and concentrates	tons	4,760	4,702
Blocks, ingots, slabs and bars	tons	3,033	1,284
Iron and steel manufactures	'000 tons	121	88
Machinery	tons	10,211	13,151

Compared with last month, the imports of all except six of the commodities given have fallen; compared with April, 1937, only seven items show an increase. Imports of wool, petroleum, wood pulp, copper and tin were higher in April than in March and in April, 1937; the intake of rubber and of mutton and lamb was larger than a year ago but smaller compared with last month. Imports of the other commodities are lower than those in both the two months of comparison.

BRITISH EXPORTS—MONTH OF APRIL

Item and Measure	1936	1937	1938
Iron and steel scrap	'000 tons	2,537	3,242
Iron and ferro-alloys	tons	8,822	30,971
Railway materials	tons	9,810	17,664
Total iron and steel manufactures	tons	18,131	10,576
Textile machinery	tons	177,519	239,461
Total machinery	tons	4,031	6,402
Cotton	tons	30,807	38,576
Cotton piece-goods	sq. yds.	11,936	14,772
Wool tops	'000 lb.	141,194	164,785
Worsted yarns	'000 lb.	4,338	3,787
Woolen tissues	'000 sq. yds.	2,302	2,230
Worsted tissues	'000 sq. yds.	5,174	5,627
Linen piece-goods	'000 sq. yds.	2,372	2,963
Leather boots and shoes	doz. pairs	25,954	30,829
Leather	cwt.	21,179	33,034
Paper and cardboard	cwt.	304,467	353,760
Locomotives and parts	tons	832	1,514
Motor vehicles and chassis	No.	6,245	7,496

Exports continued their downward trend, and only four items—railway materials, machinery, locomotives and motor cars—showed an increase over the figures for April, 1937. Exports of textiles remained appreciably below those of last year and showed a further fall from March of this

year, except for an insignificant rise in exports of worsted tissues.

Declining Activity in Steel.—Despite the steady increase in stocks, the output of the iron and steel industry was well maintained until March. In April, however, there was a sudden decline in production. Moreover, following the rise in the duties on steel at the end of March, imports have been sharply reduced, but exports of iron and steel last month were also lower than in March.

PRODUCTION AND TRADE IN IRON AND STEEL
(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929	632.4	803.0	235.2	364.9
1932	297.8	438.5	132.7	157.4
1936	643.5	982.1	123.6	183.8
1937	708.0	1,080.3	170.0	214.7
March	680.3	1,109.5	94.3	231.6
April	680.7	1,080.4	88.5	239.5
May	696.3	1,047.3	98.1	228.3
June	699.3	1,106.4	174.8	235.4
July	729.3	1,059.2	202.3	232.2
August	714.0	987.7	213.4	201.4
September	726.7	1,163.0	226.2	193.6
October	769.6	1,133.6	220.5	206.9
November	762.3	1,178.3	272.5	198.0
December	783.8	1,103.8	288.3	196.8
1938—January	761.1	1,081.4	308.7	191.2
February	693.3	1,057.6	230.4	156.7
March	714.6	1,115.8	276.8	176.1
April	661.0	938.6	61.5	168.3

The Economist index of domestic iron and steel consumption, which is adjusted for seasonal variations but not for changes in stocks, continued its headlong decline last month. The index for April (1935=100) is 123½, against 143 in March, 173½ in December and 117 in the corresponding month a year ago. It had been hoped that the increase in the import duties on pig iron and steel, by reducing imports, would enable stocks to be reduced to normal dimensions without any appreciable curtailment of domestic output. It is now beginning to appear doubtful, however, whether these hopes will be realised; for there are no indications at the moment of a sustained revival of demand.

Sea Fishing.—The returns relating to fish landed in Great Britain during the current year continue to show an improvement compared with the prices ruling in 1937. For the first four months of 1938 the total landed, at 5.8 million cwt., was slightly smaller than the catch in the same period of last year, which amounted to 5.9 million cwt., but the value increased by 12 per cent. to nearly £5.2 millions. Cod provided more than half of the total weight, and although the landings fell from 2.8 million cwt. in January-April, 1937, to 2.3 million cwt. in the same period in the current year, the total value increased by £300,000 to £1.5 millions.

Recovery in Coffee Prices.—After six months of continuous decline, coffee prices have shown a slight recovery during the past fortnight. The lack of confidence, which brought the price of Santos Superior down from 47s.

per cwt. last November to 27s. 6d. per cwt. a week or two ago, was primarily due to the expectation of largely increased exports from Brazil after the reduction of the export tax at the end of last year. It has now been learned that the 30 per cent. quota for destruction will be maintained in the coming season, beginning on July 1st, and that the movements of coffee into the Brazilian ports and warehouses will still be controlled. This information steadied the market, and the encouraging increase in world consumption during the past month gave an additional impetus for a rise in prices. Deliveries in April, at 2,560,000 bags (of 60 kg.) were 603,000 bags higher than in April, 1937, and provided a record for the month; total deliveries in the ten months ending in April amounted to 21,092,000 bags, very little less than the corresponding figure for the previous season. Some recovery in prices was therefore to be expected, although it is possible that the decline in world industrial activity may counteract the more hopeful factors in the market.

* * *

Cheaper Wolfram.—The outbreak of war in China, the world's largest supplier of wolfram, led to rumours of a probable shortage of wolfram, and prices rose to 130s. per unit in the autumn of last year. But Chinese exports, as recorded on page 582 of *The Economist* of March 12th, have markedly increased, and prices have fallen steadily from nearly 130s. per unit in the autumn of 1937 to about 40s. per unit at the present time. Even at this level, it is unlikely that the industrial consumption of wolfram will show much recovery; the demand for re-armament purposes continues heavy, but it is understood that China is sending supplies direct to some of the leading European armament firms in exchange for munitions, so that the demand on the open market is limited, and prices are not likely to recover in the near future.

* * *

Agricultural Employment in Scotland.—The exodus of agricultural labourers from the farms has been less marked in Scotland than in England. The table given

on page 382 of last week's *Economist* showed that the numbers employed in agriculture in England and Wales fell by 18 per cent. between 1929 and 1937.

NUMBER OF AGRICULTURAL WORKERS* IN SCOTLAND ON HOLDINGS OF 1 ACRE AND MORE

	June, 1929	June, 1933	June, 1937	Percentage change from June, 1929	
				1933	1937
Males over 21	60,603	59,028	59,300	— 3	— 2
Males under 21	21,471	19,228	19,200	— 10	— 11
Females	19,009	17,807	16,300	— 6	— 14

Total Workers	118,034	112,465	110,200	— 5	— 7

* Excluding the occupier, his wife and domestic servants.

In Scotland the number fell by 7 per cent. between 1929 and 1937, and the greater part of the fall took place before June, 1933, while in England the movement away from agriculture was most marked during the years of recovery. This difference between the two areas is the more striking as Scottish wages, which have not been controlled by Wages Boards, fell more during the depression and rose less during the recovery than English wages. According to the *Scottish Journal of Agriculture*, the estimated wages (cash wages plus cash value of allowances in kind) of married ploughmen, cattlemen and shepherds in June, 1933, were about 7 per cent. lower than in 1929, against a fall of about 2 per cent. in England, while the subsequent rise of 5 per cent. compares unfavourably with the increase of 11 per cent. in England. Probably the persistently higher rate of general unemployment in Scotland has prevented a drift from the land on the same scale as in England, in spite of the greater fall in wages. It is likely that the extension, in July last, of the system of agricultural wages boards to Scotland will stimulate a rise in wages as soon as they begin to function.

INDUSTRIAL REPORTS

THIS week's reports from industrial centres are as unpromising as ever. The volume of new transactions in coal is declining and the trend of prices is downwards. Moreover, output is now below the level of a year ago. The volume of new orders for steel remains small, for stocks are still heavy. In addition, there are indications that some consumers are curtailing their delivery instructions under contract. As a result of the declining demand, the tinplate industry reduced its operations from 43.1 per cent. of capacity during the week ended April 30th to 33.9 per cent. during the first week in May. A year ago the industry was operating at 73.7 per cent. of its capacity. The value of building plans passed in April by 143 local authorities showed a decline of no less than 24.1 per cent. from the corresponding month a year ago. There has been no improvement in the cotton industry, and the yarn market has been upset by rumours that the price agreements may break down under the impact of the depression. There are no indications of an early change of trend.

Coal

Sheffield.—The market in household coal shows a quieter tendency. Price reductions have had little effect, and the warmer weather is reducing sales. Industrial coal is in good request,

although there is some evidence of reduced consumption at works. The seasonal decline in gas coal demand is more pronounced than usual. The increasing use of coke-oven gas has reduced the size of some gas coal contracts. There is a fair demand for blast-furnace coke, but demand for graded sorts for domestic use is smaller.

Dull conditions continue in the export market, which has derived very little benefit from recent price reductions. Forward inquiry is showing a slight improvement. All grades of steam coal are in good supply, but bunker demand is poor.

Newcastle-on-Tyne.—Whilst business continues to be booked with Scandinavian countries under the Trading Agreements, there is little other foreign inquiry and the market in this area displays a dull tone, with supplies of most grades plentiful. Northumberland steam collieries producing prime grades are short of trade and in Durham the position has eased much more quickly than was expected owing to the declining demand from home consumers. An encouraging feature of the coke market is the sale of fairly good quantities to Scandinavian consumers at minimum prices for delivery over next winter.

Glasgow.—The tone of the market remains very dull. Little official price reduction has taken place during the past week, but concessions have in some cases been granted to obtain business. Foreign buyers are still holding off, assisted by ample stocks, free offers of competitive fuel, and the easier prices for Scottish coal. Industrial needs are still fair, but public utility and household consumption has fallen off considerably, so that short-time working has been necessary at the pits. Vessels have been diverted from the Clyde to Welsh ports or to Gdynia for bunker supplies.

Cardiff.—There is little change in the general position of the market. New business is very scarce, and at some pits production has been temporarily suspended. Towards the end of last week the dock position improved appreciably, and shipments in the foreign and coastwise trades at the South Wales ports of the Great Western Railway Company totalled 414,500 tons, compared with 330,400 tons the previous week, and 392,412 tons in the corresponding week last year. Shipments for the current year to May 15th, at 7,285,039 tons, were within 58,000 tons of those in the corresponding period in 1937. Prices of large steam qualities are quite firm, but for some bituminous classes and for

several grades of small and sized coals, quotations are from 3d. to 1s. per ton cheaper. Quotations for coke and coking coals are becoming more stabilised under the contemplated agreement between the coke producers and the iron and steel manufacturers. The patent fuel and the pitwood markets have been featureless.

Iron and Steel

London.—This week's report of the London Iron and Steel Exchange states that dull conditions have continued to rule in the markets, and that the volume of new business has been limited for the most part to hand-to-mouth transactions. The consuming industries are working upon heavy stocks in practically all departments, and until these have been reduced there is small likelihood of any increase in the demand.

In the pig iron department transactions have consisted principally of small parcels for near delivery, and consumers appear to have sufficient material on hand to meet their needs for some time to come. Heavy accumulations of steelmaking iron exist at the steelworks, and the demand from the foundries is restricted by the quantities they already hold.

In the semi-finished steel department of the market business has been quiet, and production has been curtailed to enable the stocks of materials lying at consumers' works to be absorbed.

Inactive conditions characterise the market for finished steel and operations have become somewhat irregular. Generally speaking, the heavy steelworks are likely to remain busy for some time upon the orders in hand; but the lighter branches are experiencing a quieter demand. Export business in most departments has been on a poor scale; but recently the inquiry for overseas markets has shown a tendency to expand.

*

Sheffield.—The volume of business in the iron market is almost unchanged, and there are no indications of improvement. Consumers are curtailing deliveries under contract, and current business relates mainly to small parcels. The reimposition of the 3½ per cent. duty on foreign pig iron is welcomed by producers, but it will take a considerable time to work off the large stocks of material in hand. Demand for foundry iron has weakened further, and there is but little inquiry for forge iron. In hematites activity is confined to special qualities, for which there is a fair market. In finished iron, common and marked bars are in fair request, but crown iron is neglected. Prices are unchanged.

There is an easier appearance about the steel market, but the outlook is regarded with confidence. Good business continues to be done in basic and acid billets. The demand for wire rods is strong, but is being overtaken. Strip, bars and stainless steel sheets are good features.

The heavy steel sections are fully employed, and overtime is being worked in the heavy engineering branches, but quieter conditions are showing themselves in the lighter industries. All the open-hearth furnaces are working to capacity, and demand for the more expensive steels is improving.

Middlesbrough.—The re-imposition of the 3½ per cent. duty on imported pig iron is not having any immediate effect, as imports since March have been small. Consumers of foundry pig iron have large stocks received from the Midlands and the Continent some time ago, and supplies are not being used as rapidly as was anticipated; consequently buyers are not prepared to purchase for the second half of the year, as they expect some reduction in prices. Although the output of hematite pig iron has been considerably reduced there is still a surplus after deliveries have been made against current contracts, for users are not calling for the full supplies due.

The production of semi-finished steel is now ample for requirements, whilst the heavy steel departments continue busy. Works producing shipbuilding material, whilst engaged in fulfilling existing contracts, would like to hear of further orders for new vessels.

Blast-furnace coke is in good supply, whilst heavy steel melting scrap can only be obtained at the official prices; some works are fully covered and are retarding deliveries. Imports of foreign ore continue at last month's level.

*

Glasgow.—Heavy steelmakers in the West of Scotland are still fully occupied. The demand for lighter sections and tubes, however, is not yet showing signs of improvement; consequently it may be impossible to maintain a high rate of production. A good proportion of the local sheet rolling plant is in operation and there is a steady demand for both black and galvanised sheets, much of it for finely finished and specially coated material. Tank makers, sheet metal workers and fabricators are all busy and in many cases have several months' work in hand. It was announced this week that the Greenock Dockyard Company has received an order from the Clan Line Steamers, Limited, for a twin-screw cargo steamer, the engines for which will be supplied by Messrs John G. Kincaid and Company, of Greenock, Messrs Fleming and Ferguson, Limited, of Paisley, have received an order from the Admiralty for another salvage tug of the Brigand Class.

*

Cardiff.—Production in the South Wales branches of the iron and steel industry continues to decline. In the week ended May 7th the output in the tinplate industry was only 33.92 per cent. of capacity under the pooling scheme, compared with 43.13 per cent. the previous week, and 73.73 per cent. in the corresponding period last year. Shipments of tinplates at Swansea last week totalled 4,375 tons, against 6,302 tons a year ago, but owing to the greatly reduced output, stocks in warehouse and

	151,597	102,413	

vans at the docks, at 5,610 tons, show very little change. Prices are nominally unchanged. Consumers' stocks, however, are steadily declining, and inquiry in the market is a little better. Contracts under order represent a total of 2,350,000 boxes for delivery up to the end of the year. The outputs of pig-iron and steel are falling owing to the heavily reduced steel bar requirements of the tinplate and some of the other re-rolling departments.

Textiles

Cotton (Manchester).—Encouraging features have been absent. Spinners and manufacturers have experienced a limited demand, sales being below output. Sentiment in the raw cotton markets has continued bearish, but there has not been any decline in prices. Prices in the Liverpool market have been adversely affected by the hedging of outside growths. It is estimated that the carry-over of all kinds of cotton at the end of July will be about 23 million bales, or about 5 million bales more than the previous record in 1932. Crop advices from America continue generally favourable.

The yarn market has been upset by rumours that the price agreements may break down owing to the depression. Home users and exporters have been more cautious than ever, the week's sales being decidedly small. The cloth market has been inactive, the turnover having consisted of small lots to meet the urgent requirements of customers. Miscellaneous transactions have been put through for India, chiefly in bleaching and printing styles. There are hopes of some modification of the new tariff in Egypt, and, although there is no boycott of Egyptian cotton in Lancashire, many spinners are inclined to use other growths if possible. It is feared that the purchasing power of the West African natives will be affected for a long time as a result of the cocoa dispute. A little more business has been about in heavy materials for the Dominions and in fancies for the Continent. Irregular buying has taken place in home trade fabrics.

*

Jute (Dundee).—The Indian jute mills' failure to settle the working hours problem is a disappointment to the jute trade. Though the owners of 98 per cent. of the looms are ready to sign the agreement, the remaining two per cent. are not, and excessive production continues. Stocks are increasing and, as it will probably be some time before they can be absorbed, the market is likely to remain depressed. There is an attempt in Calcutta to restrict production without reference to the recalcitrant mills, but the majority wish to make the agreement binding on all firms in the industry. Meantime, prices are depressed and occasionally showing further signs of weakness, though the Indian mills are already losing money.

These low prices are naturally affecting other producing centres, and the whole jute industry of the world is in an unhealthy state. Dundee manufacturers have received some encouragement lately through the issue of further orders for sandbags and also for the supply of beet sugar pulp bags for the British Sugar Corporation, but the general trade is very slow. COMPANY MEETINGS

ANGLO-PALESTINE BANK, LIMITED

COUNTRY'S POLITICAL FUTURE

NEED FOR CLEAR-CUT POLICY

CHAIRMAN'S VIEWS

The ordinary general meeting of The Anglo-Palestine Bank, Limited, was held, on the 16th instant, at the offices of the company, 10-12 Walbrook, London, E.C.

Mr L. Istoric (one of the directors) presided in the absence of the chairman (Mr L. Braudo), who resides in Palestine.

The Joint Secretary (Mr S. Costa) having read the notice convening the meeting, and also the auditors' report,

The Chairman said:—Ladies and gentlemen,—The report and accounts for the past year are in your hands, and I assume that I have your permission to consider them as read. (Agreed.)

You will have perceived that our earnings have not been smaller than those of the previous year, and after all you have heard about the deterioration of Palestine's economic condition in recent years the fact will no doubt afford you some satisfaction.

EFFECTS OF UNCERTAINTY

Unfortunately one cannot deny that there is a considerable measure of truth in the general assumption to which I have just referred—that Palestine has received a heavy setback and has not yet recovered from it. It is not the prevalent lack of public security—serious and hampering though it may be—which mainly prevents recovery; it is the lack of certainty about the country's political future which acts as a brake on all initiative and on all spirit of enterprise on the part of investors, manufacturers, planters, and business men generally.

I referred to the matter last year when the Report of the Royal Commission had not then appeared, and I can only say to-day that the report is now more than nine months old, and only during the last few weeks have the first preparatory steps been taken to take action on it. You will not expect me to discuss here and now the problems arising from the Royal Commission's recommendations; but I may say this: What Palestine needs more than anything else is a clear-cut policy in consonance with the fundamental undertakings which form the *raison d'être* for Great Britain's presence in the country, and the sooner such a policy is now framed and carried through the sooner may one hope to find the country on the road to recovery.

BUSINESS OF THE BANK

The bank, I am happy to say, has not found its business disturbed by the present recession. Deposits, as you will have observed from the directors' report, have gone down, but the main reason lies in the fact that the bank is the main repository for immigrants' funds, and the flow of such funds to Palestine has been greatly reduced in consequence of immigration restrictions, currency restrictions in the immigrants' countries of origin, and the political uncertainty. At the same time investment of immigrants' funds by clients of the bank in debentures of the bank's affiliation, the General Mortgage Bank of Palestine, Limited, continued.

Commerce, industry and agriculture were able, in spite of adverse circumstances, to absorb a fairly large amount of additional credit, and we acquired much additional business which we have every reason to expect will prove remunerative.

BETTER ORANGE SEASON

I spoke to you last year about the bad season which the orange industry, Palestine's main export industry, had then suffered. I am happy to say that, while this year's season was certainly far from brilliant, it was in many respects more satisfactory than last year's. The general price level was rather higher, and the quality of the exported fruit showed a great improvement.

Like last year we have, in view of the present somewhat confused circumstances, given serious consideration to the distribution of available profits. We are proposing, as you have seen from the report, to transfer to the contingency fund a somewhat larger amount than last year, and we are recommending the distribution of a dividend of 10 per cent., less tax.

DIVIDEND OF 10 PER CENT.

I therefore take pleasure in moving:—
"That the report and accounts for the year ended December 31, 1937, as circulated among the shareholders, be approved and adopted, and that the payment of interim and final dividends both on the ordinary and "A" ordinary shares amounting to 10 per cent., less tax, for the year ended December 31, 1937, be and the same is hereby sanctioned."

The report and accounts, together with the dividends and appropriations recommended therein, having been approved and adopted, a vote of thanks to the general manager, the officials, and the staff for their services was passed.

The retiring directors were re-elected and the auditors re-appointed.

The proceedings then terminated with a vote of thanks to the chairman.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LIMITED

102ND ANNUAL REPORT

A SUCCESSFUL YEAR

The one hundred and second annual general meeting of The Liverpool and London and Globe Insurance Company, Limited, was held, on the 18th instant, in Liverpool.

Mr A. E. Pattinson, the chairman, said that underwriting profit, £894,866, was one of the best the company had reported. Total premiums had increased by £350,400. Fire, accident and life departments had shown high standards of achievement, but marine for once had been unprofitable.

Total net claim payments since inception of the company now exceeded £200,000,000.

MINIMISING THE FIRE HAZARD

The company had continued its efforts to minimise fire hazards, and its advice had been sought and given in the construction and protection of new buildings. Recent fire losses of unusual severity had emphasised the need for sub-dividing buildings of large areas into units of moderate dimensions. Fires of electrical origin were becoming more numerous. Many older installations fell far short of to-day's standards, and should be periodically examined by competent engineers.

ROAD ACCIDENTS

Motor insurance continued to present many problems, and there had been a consistent upward trend in the average cost of motor claims.

Referring to road accidents, Mr Pattinson suggested that a marked increase in road courtesy was needed. Speed was the dominant factor in a very large proportion of the accidents, and, whilst he did not advocate a fixed limit, he stressed that accidents at speed invariably proved disastrous. He felt a thorough revision of road signs was overdue, and said much remained to be done to bring roads to a standard of safety.

1937 RESULTS

Net Premiums.—Fire, £3,925,852 (against £3,909,518 for 1936); accident and miscellaneous, £4,898,523 (against £4,627,128); marine, £330,080 (against £294,163).

Underwriting Profits were: Fire, £422,244; accident, £491,391; life, £26,000. Marine loss, £44,769. Total, £894,866.

Interest to profit and loss account was £427,627. Net new life sums assured were £2,886,475.

Profit and loss account, after providing for dividend, income tax, and National Defence Contribution, etc., showed a balance carried forward of £682,698.

The report and accounts were adopted, and a final dividend of 13s. 6d. per share was declared, making 27s. per share, less tax, for 1937.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

HAMBROS BANK LIMITED
EXCELLENT POSITION IN SCANDINAVIA

The twenty-sixth annual meeting of Hambros Bank Limited was held, on the 19th instant, at No. 41 Bishopsgate, London.

Mr R. Olaf Hambro, the chairman, who presided, said it was difficult in these times to dissociate the financial aspect from the political. The greater part of their activities were centred in Norway, Sweden, Denmark and Finland, which countries accounted for well over 50 per cent. of their accounts, and with regard to those countries there was nothing but good to report.

The most important thing that had happened in the rest of Europe was the Anglo-Italian agreement, which was the greatest step forward in re-establishing good international feeling which they had seen for many years, and they looked forward to more active dealings with their friends in Italy as a result. He had told them last year that their old-established connections in that country had already started to make use of their services, and that had continued and extended. They must surely all hope that what had been done in Italy would be extended to other parts of Europe, especially to Germany. The restoration of normal trading between that country and theirs would do more than anything else to hasten the day for which every sane man was hoping, when that useless and wasteful expenditure on arms might cease and the world get back to thinking in terms of plough shares rather than of guns.

With regard to the accounts, the trading profit was again good, and, if he might say so, especially good in a year full of difficulties. Shareholders would notice that on this account there was a note which called attention to the fact that a transfer had been made from the contingency account. He had told them last year that their policy with regard to the German accounts governed by the Credit Agreement was to build up reserves against these debts without allocation, but in view of certain clauses in the new Credit Agreement, whereby it was recognised by the German authorities that certain credits originally granted against the movement of produce were no longer being used for that purpose, it became necessary to treat them differently—although the debtor remained a perfectly good and solvent debtor within his own country. The directors had decided to make that transfer from the contingency fund which, as they would see in the directors' report, brought them to the value at which they could be liquidated in sterling.

The report was unanimously adopted.

RHODESIA RAILWAYS, LIMITED

GROWTH OF TRAFFIC AND REVENUE

The forty-first ordinary general meeting of the Rhodesia Railways, Limited, was held, on the 18th instant, in London.

Mr Arthur E. Hadley, C.B.E., the chairman, said that the Mashonaland Railway Company had been absorbed by this company, and he proposed therefore to survey the whole railway position. The gross revenue for the year ended September 30, 1937, amounted to £4,709,069, compared with the combined gross revenue of £3,637,197 earned by the two companies in the previous year, an increase of nearly 30 per cent. That large expansion in business was due to increased trade activity in all directions in the two Rhodesias, particularly in minerals, the increase in gross receipts of over £1,000,000 being distributed as to £643,404 from mineral traffic and the balance mainly from general goods and passenger traffic.

As a result of the year's operations they had a surplus of gross revenue over working expenditure of £1,932,662, an increase of £815,254, a highly satisfactory result and, he believed, the best in the history of the railways. After meeting various charges there was a profit of £916,772, compared with £117,174 in the previous year. Under the legislation of the Territories which the railways operated no dividend could be paid in respect of the year under review, but, if all went well, they should be able to declare a dividend in respect of the year ended September 30, 1938.

He would like to draw attention to the strength of their liquid resources. At September 30, 1937, in addition to £468,699 in cash, they had quoted investments with a market value of over £5,687,000, of which over £4,120,000 was represented by British Government, corporation and colonial stocks. Therefore, their reserve account of £1,675,657, and also the greater part of their depreciation and renewals account of £4,541,176, were in liquid form.

As regarded the current financial year, during the first five months—October 1, 1937, to February 28, 1938—the approximate working results were:—Gross receipts, £2,101,534, an increase of £401,559 over those of the corresponding period of the previous year; working expenses, £1,159,663, an increase of £132,964; surplus of gross revenue over working expenditure, £941,871, an increase of £268,595.

The report was unanimously adopted.

LONDON AND MANCHESTER ASSURANCE COMPANY, LIMITED

FURTHER EXPANSION

POPULARITY OF INDUSTRIAL ASSURANCE

The sixty-ninth annual general meeting of the London and Manchester Assurance Company, Limited, was held, on the 18th instant, at the Chief Office, Finsbury Square, London, Mr Walter H. Brown (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Before dealing with our accounts, I wish to emphasise the magnitude to which industrial assurance has grown since 1869, when this company was established. I cannot give the total for all offices in 1869, but at the present day there is a total of over 90,000,000 policies in force in the British Isles. Millions of persons have started with a penny-a-week policy on their lives, and in course of time, additional policies have been effected largely because they have come to appreciate industrial assurance more and more and have observed its beneficial results. From the social standpoint the success of industrial assurance, built up on the voluntary response of the people, is of marked significance. It reflects the sturdy independence of the British wage-earner, and his desire to take a long view of his responsibilities. We may claim with pride that the natural thriftiness of the wage-earning classes has been developed largely under the educational influence of the industrial assurance agents; and that the success of industrial assurance policies, etc., combined with the protection given by the tion of the premiums week by week at the homes of the policyholders, is closely adapted to the circumstances of those to whom industrial assurance policies are offered.

INDUSTRIAL BRANCH

In our industrial branch we have made a substantial premium increase of £46,734, bringing the total premium income up to £1,850,265. Our mortality experience has been moderate, the amount paid out being about £12,000 less than in the previous year. The claims arising by survivorship of the endowment periods happen to have been lighter than in any of the previous four years. Surrenders are again low in amount; and the expense ratio to premium income continues to fall. Some day perhaps actuaries may agree on a more scientific way of measuring expenses. A few months ago the subject was discussed at a meeting of the Institute of Actuaries where the authors of the paper under discussion said "the most popular and, at the same time, the most misleading method of comparing expenses is the ratio as a percentage of the total premium income." In my opinion, a movement towards greater economy in an office may be obscured by considering the expenses merely as a ratio of the premium income.

The net yield on the industrial life fund was £4 6s. 9d. per cent., which is a slight increase on the previous year; and, I think it will be agreed, this indicates meritorious management of the funds entrusted to the directors.

The current sums assured under our industrial policies exceed thirty-four-and-a-half million pounds.

Although none of the policies issued in this branch has any contractual right to participate in any of the profits of the company, we have provided for the repetition of our past performance in allocating the same rates of bonuses. The rates are described in the directors' report.

I may mention that there is now no such thing in this office as forfeiture of benefits paid for. If, owing to unemployment or other cause, an industrial policyholder discontinues payment of premiums after two years, he is granted, after an extended period of free and full insurance cover, an automatically created paid-up policy of a value calculated in accordance with certain rules laid down by Act of Parliament. On March 24th last this company had in force over a quarter of a million of these free policies.

ORDINARY BRANCH

The annual premiums received in this branch show an increase of £49,527 over the corresponding figure of the previous year. This increase is comparable with £54,204 a year ago. As regards our single premium acceptances, these decreased compared with the previous year. The effect of this has been that the aggregate premium increase for the year now under review works out at £20,000, as shown in the accounts. Consideration money for annuities is not much changed. Death claims show an increase appropriate to the increase in business, and it happens to have been a very heavy year for maturities by survivorship. The ratio of expenses to office premiums (adjusting as usual for single premiums) again shows a reduction of about one-half of 1 per cent. The net yield on the

fund was £4 6s. 2d. per cent., which I consider can be regarded as an excellent result, being only 3d. less than a year ago. The bonus has been easily maintained at £2 per cent.

I would add that a considerable amount of reorganising and consolidating work in this branch has been carried out during the last few months, in spite of which it will be noticed that new sums assured again exceeded £4,000,000.

In the Fire and General branch, the premium income, £90,620, shows a satisfactory increase of £11,370; and this branch is beginning to contribute to the strength of the company's activities.

ASSETS

The assets now exceed nineteen million pounds, having increased during the year by over one-and-a-quarter million pounds, which is a record. As I have mentioned before, the security for the assurance funds is a prime consideration and, as usual, our assets have been cautiously valued.

Of Stock Exchange securities no less than 82 per cent. is invested in the United Kingdom, and a further 13 per cent. in the rest of the Empire, thus leaving only 5 per cent. in foreign countries.

As regards the distribution of assets, the principal variations from the previous year are: United Kingdom mortgages and loans on rates have increased from 10.1 to 12.3 per cent. British Government securities have fallen from 25.5 to 24.5 per cent. United Kingdom and municipal securities have fallen from 11.6 to 10.5 per cent. Indian and Colonial Government securities have fallen from 7.8 to 6.1 per cent. Debenture securities have increased from 14.5 to 15.4 per cent. Ordinary stocks and shares have increased from 11.0 to 11.7 per cent.

Two years ago I gave it as my opinion that the future of the company could be looked forward to with the utmost confidence, and that expression of opinion I now endorse without the slightest hesitation.

In conclusion the Chairman announced his retirement from the chair after over 50 years' service.

The report and accounts were adopted and the Chairman was presented by the outdoor and indoor staffs with an album containing the signatures of the whole of the company's staff, and afterwards, at a private luncheon, he was presented with a silver salver and a diamond clip for Mrs Brown, on behalf of the directors, the actuary, the solicitors, and the surveyors of the company.

BRITISH SHAREHOLDERS TRUST, LIMITED

INVESTMENTS WELL SPREAD

The sixteenth ordinary general meeting of the British Shareholders Trust, Limited, was held, on the 18th instant, in London, Sir Follett Holt, K.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said:—The accounts will, I hope, be considered to show a satisfactory result of a year which from the point of view of finance and investments has been one of difficulties. Japan, Spain and Germany have continued to disturb either the peace or the peaceful thoughts and wishes of the rest of the world, and consequently investors, with the added factor of increased taxation, have been called upon to face a fall in the market values of their securities. The lack of confidence that followed caused the severe restriction of new capital issues, and the march of enterprise has been arrested at least for the time being.

These were the conditions which our company, as an issuing house and a large holder of investments, had to meet in the past year, and I think they were met in all the circumstances not unsatisfactorily, for, as you will have seen in the accounts, the result was a net profit of £52,510. Our investments, which number 290, remain well spread and are in the main in companies operating in the United Kingdom or under British control. Since our books were closed there has been some improvement in quotations, which we hope will continue, and, if you approve the proposed allocation of revenue, the value of our assets will exceed the capital of the trust by at least £172,787, the figure given in the report.

The company is, therefore, in a very sound position; it is free from any forward commitments, and has ample funds for the business which it conducts. Now what we look forward to and expect is the gradual return to a feeling of confidence in the public mind, and to the resumption of the spirit of enterprise.

While maintaining our dividend for the year at 7½ per cent., we propose, in view of the stagnation at present ruling in financial affairs, to ask you to agree to limit the bonus to 1 per cent., making the total payment for the year 8½ per cent., less tax. This will enable us to place £5,000 to reserve and to increase the carry-forward by about £1,700.

The report and accounts were unanimously adopted.

INCORPORATED ACCOUNTANTS

STEADY GROWTH OF MEMBERSHIP

MR WALTER HOLMAN'S ADDRESS

The annual general meeting of the Society of Incorporated Accountants and Auditors was held, on the 17th instant, at Incorporated Accountants' Hall, Victoria Embankment, London, W.C.

Mr Walter Holman, F.S.A.A., the president, in the course of his speech, said:—In view of the severity of the examination tests imposed by the society, evidence of which is contained in the summary of past results given in the report, the steady growth in membership is satisfactory. We now have 7,216 members, of whom 1,507 are Fellows, and the fact that there is again an upward tendency in the registrations of new articulated clerks is encouraging for the future of the society and indicates the continued popularity of accountancy as a career.

The need for revision of company law is being increasingly recognised and the Society's committee on this matter is collecting information in order that we may be prepared to give evidence when the time arrives. The co-operation of all members is desired, and the committee will welcome communications on the subject.

PROFESSIONAL ETIQUETTE

During the past year the Institute of Chartered Accountants had under consideration the question of the relations of its members to one another and to other professional accountants, with particular reference to the procedure to be adopted in cases of changes of company auditors, and as a result its council passed the following resolution:—

"Where a change of auditors of a company is proposed it shall be the duty of any member of the Institute before accepting nomination for election to communicate with the existing auditors with a view to ascertaining the circumstances in which a change of auditor is proposed."

An invitation was extended to our council to associate itself with this action and to co-operate in obtaining from all our members compliance with the terms of this resolution.

The council of the society is in complete accord with the spirit of that resolution which in its view represents the procedure generally adopted by members of the society, and I cannot too strongly stress the desire of the council that in this, as in every other direction, our members shall observe the usual courtesy of the profession, not only between themselves but also between themselves and other members of the profession.

Section 132 of the Companies Act, 1929, sets out the procedure to be adopted when a change of auditors is intended. No action is legally called for either by the retiring auditor or the auditor nominated to replace him, but in actual practice both of them are likely to know of the change contemplated and courtesy as well as etiquette demands such action as is laid down in the institute resolution.

My council is of opinion that it would be detrimental to the profession if the obligations of courtesy and etiquette were so closely crystallised and defined as to appear to interfere with the statutory right of the appointment of the auditor by members. In the light of all these considerations I have been asked by my colleagues to make our views known to the members in my presidential speech, and in this way to further the purpose which we share with the institute.

NATIONAL FINANCE

Any review of the past year, either from a professional or a national standpoint, would be incomplete without reference to the subject of taxation. The imposition of the National Defence Contribution, the recent increase in the standard rate of income tax, and the proposals for dealing with tax evasion have all served to focus attention on the growing expenditure of the country in many directions.

As professional accountants, our training and our whole experience teach us the necessity for economy in administration and the adoption of conservative methods of finance, and we know that the time when receipts are expanding is particularly the time when expenditure must be rigidly scrutinised to ensure that funds available shall be administered with the utmost economy and efficiency. These same principles are no less applicable to public affairs than to industry. The fact that increasing expenditure has so far been accompanied by expanding revenue may reasonably be attributed in the main to the application of sound accountancy principles to industry, and it must not be forgotten that industry is the sole source of revenue. But it would be dangerous to assume that such expansion of revenue can go on indefinitely, because taxation at its present level depletes the profits available for capital replacement. The report was adopted.

SMITH'S POTATO CRISPS (1929) LIMITED

RECORD TRADING RESULTS

DISTRIBUTION OF 32½ PER CENT.

SIR HERBERT E. MORGAN ON THE GROWTH OF BUSINESS

The ninth ordinary general meeting of Smith's Potato Crisps (1929), Limited, was held, on the 18th instant, at the Holborn Restaurant, London.

Sir Herbert E. Morgan, K.B.E. (the chairman), in the course of his speech, said:—At the last annual meeting I told you that we had made a flying start for the coming 12 months. To-day the results of our trading for that period are before you. I am naturally proud to preside for the ninth successive year at this meeting of shareholders and to be able to tell you that we have experienced the best period of trading in our history. As you will see from the accounts, our profit is just over £164,000, as against £130,627 last year.

This very satisfactory position is due to increased turnover. Every year in the history of the company one has been able to report that the business is developing and sales are expanding, but in the year under review that expansion was greater than in any previous time. This is not traceable to any one factor other than the Coronation, but to increased demands for our products from every part of the country. An ever-growing multitude are buying our goods, and the numbers of wholesale and retail distributors handling them are always increasing.

HIGH QUALITY OF PRODUCTS

I believe this demand to be the result of the supreme quality of the article we supply. Smith's Potato Crisps are really a triumph of good cooking. The potatoes from which they are made are of the finest quality, and a large quantity of them are grown on our own farms for our specific purposes. The pure oil in which they are cooked is of supreme quality, and these factors, added to the skill and experience of our staff, result in our wonderful product.

It should be emphasised that our potato crisps have great nutritive qualities. The fact that they are cooked in pure vegetable oil by our particular method largely adds to their value as a food. A distinguished authority has said that potatoes are "murdered" in their cooking. We claim by our process to put additional life into them. May I say in passing that the potato is not the only wonderful national product grown in Britain that is butchered.

Of course, the very low price we charge for what is a meal doubtless adds to our popularity. Our commodity is low-priced, bringing it within the reach of the slimmest household budget, but that has not prevented us from supplying many of the most distinguished families in the country. We can claim for our crisps, with some 200,000 retailers interested in their sale, they are one of the most widely distributed food products in the country. "You meet them everywhere."

The pressure on our factories last year owing to the demand was so great that at one time we were quite unable to meet it. We have no reason to believe that the increase in our trade is of a temporary character, and therefore decided to add to our capacity by erecting a new factory at Lincoln and doubling the size of our factory at Stockport. Our new factory at Lincoln is only seven miles from our agricultural estates there, and it will be readily understood that a saving will be effected at this particular spot on the carriage of potatoes, which is a considerable item.

It is one of our proud claims that we never lose a customer, either consumer or distributor; but we are still of the opinion that there are many households that have yet to learn the advantages of our product.

EXPENDITURE ON FACTORY EXTENSIONS

I now come to the accounts. During the year a sum in the neighbourhood of £50,000 has been expended on capital account in respect of the erection and extension of the factories and addition to equipment. It has always been the policy of this company to pay for its extensions out of revenue. You will see from the balance-sheet that we have taken this large amount in our stride this year, and, in spite of it, our cash and liquid investments stand at the end of the year higher, at the total sum of £148,724. This is as against a total at the end of last year of £126,517—£22,000 to the good. I am sure you will agree that this is a sound policy. It answers the rumours in the financial Press just prior to the publication of our report, which

were that we contemplated plans for re-financing in order to pay for our extensions.

As a result of our position I am glad that your directors are able to recommend the payment of a special 5 per cent. Coronation Year bonus, in addition to the same final dividend of 20 per cent. as last year, making a total distribution of 32½ per cent.

Our Cornflakes business has ceased to operate as a separate entity, though we are still maintaining supplies to meet the demand already created.

You will be interested to learn that our wonderful farming estate at Nocton is proving of material assistance to the company. Like the majority of agricultural enterprises, it is subject to many fluctuating conditions, but we are quite satisfied its acquisition has proved of real benefit to the parent company.

I am sure shareholders will be interested to have accurate information with regard to the potato crop for this year. On our own farms at Nocton they have not suffered from the recent cold and dry weather, and latest reports from the estates manager are to the effect that they are showing up well. The possibility of a general shortage of potatoes due to the late frosts has been very much discussed. This may cause a delay in the early lifting in a few districts. I am pleased, however, to be able to assure you from the knowledge I have obtained through the growers with whom we are associated, that given favourable conditions from now onwards, there is no reason to fear that we shall not obtain adequate supplies for all our requirements.

THE POTATO MARKETING BOARD

Agriculture is still one of the most important industries of the country and the very foundation of its existence. We know that the Government is making a constant effort to improve the lot of the farmer, and with that we are in fullest sympathy. I believe, however, improvement in the industry must come through the adoption of more highly mechanised and scientific effort and not through the many attempts that are being made by marketing boards to tamper with the natural laws of supply and demand.

Speaking on behalf of our company, which is one of the largest growers of potatoes in the country, and also the greatest individual consumer, we view with concern the many restrictions that are now being enforced by the Potato Marketing Board on the British grower of potatoes. The acreage they can cultivate is restricted, as well as the riddles controlling sizes. These restrictions are accompanied by the compulsory filling in of innumerable forms which would seem to be the very life-blood of the bureaucrat. One may well ask if we are gradually losing our freedom and binding ourselves in chains.

FRIENDLY RELATIONS WITH LICENSED TRADE

It is always with great pleasure I refer to our friendly relations with the licensed trade and the whole body of wholesale and retail distributors who handle our goods. It may interest you to know that I and my colleagues have presided or attended no less than 16 annual gatherings of licensed victuallers' associations in the past year. We are delighted to be able to give them a full measure of our support because we believe the licence holders of this country to be a fine body of men and women and a great national asset. There is a steady and marked improvement in the personnel, in the premises and the conduct of the trade.

I should like on your behalf to extend our thanks to the management and the whole of the staff for the efficient and loyal service they are rendering to the company. They are a happy and contented band, proud of the product we make and proud of the business, and, may I add, we are proud of them. In this connection you will be glad to learn that from the inception of this business we have always given our staff their holidays with pay.

Our order book for the coming year is well filled—we are still breaking records. Our increased facilities will enable us, I hope, to give again next year a satisfactory account of our stewardship.

The Chairman concluded by moving the adoption of the report and accounts.

Mr. Frank Smith (one of the managing directors) seconded the resolution and it was carried unanimously.

BRITISH MATCH CORPORATION, LIMITED

SATISFACTORY YEAR

The eleventh ordinary general meeting of British Match Corporation, Limited, was held, on the 18th instant, in London, Mr Clarence E. Bartholomew, O.B.E. (chairman and managing director), presiding.

The Chairman, in the course of his speech, said:—Before dealing with the accounts, I must refer to the loss which we have sustained during the year by the death of Mr Andrew Williamson—a man of great personal charm and of exceptional business experience, which was always cheerfully placed at our disposal. He was one of those whose personal modesty almost concealed his great ability and the influence which he exerted in a wide sphere.

We have elected Sir Ralph Glyn to fill the vacancy. We have gained in him a colleague who is unusually versed in affairs.

Although the year's revenue does not constitute a record, we have had on the whole a satisfactory year. I must qualify this phrase because of the position in Brazil. Our friends in that wonderful country have again worked well and successfully, but since the sudden constitutional changes of November last no dividends can be remitted. We can only hope that arrangements will be made by the Brazilian Government in the near future to enable those who have invested capital in Brazil to receive the very modest profits which the depreciated exchange allows them. Only last year I spoke of the improvement in Brazilian finances as having lessened our anxieties. These have now been increased once more, and—as a sincere friend of a land which ought to be rewarding those who have staked their money there in confidence and good faith—I trust that it will soon be found possible to restore that credit without which even naturally rich and prosperous countries cannot thrive.

Otherwise, the year has been free from serious disturbances in our trade.

Our returns from the home trade and from the British Dominions and the Argentine are almost exactly the same as last year, but I must remind you that we have had to suffer the National Defence Contribution as well as the extra 3d. on the income tax. These amounts paid by our subsidiary companies and ourselves total nearly £50,000, and, while we may presumably enjoy increased national security, we have no possible opportunity of earning extra profits.

The N.D.C. is still an unsatisfactory tax. In effect, it takes ordinary share capital only in such companies as ours, and it is, therefore, a tax on enterprise and initiative.

With regard to this year's further increase in taxation, I will only express my fear that even Great Britain may be approaching the point where the high level of taxation will weaken our national finances, as it is already reducing our purchasing power.

THE RED LIGHT WARNING

The decline in the yield from stamp duties must be considered as a red light. Artificially cheap money does not, apparently, create much new business.

Only once before in our history have we had to bear such heavy taxation. At that time—1917-22—money was dear, and profits were easily made, the taxpayer could earn 6 per cent. or more on safe investments, and 3 per cent. or more on his deposits with the bank. Now his limits are about 4 per cent. and 1 per cent. respectively, and when he dies the State takes a heavy capital levy on his savings and spends it on current outlays.

I am not a financial expert, but I cannot help thinking that we are spending our capital and crippling our earning capacity.

I am not concerned, as your chairman, with politics, and I am as eager as anyone that our defences shall be so strong that no one shall dare to attack our Homeland, and that our voice in favour of peace shall be heard with respect throughout the world, but I do wonder whether efficient steps are being—or, indeed, can be—taken to ensure that some of these many millions of expenditure are not being wasted. Can we feel confident that all the money which we pay is being used to the best advantage?

We have been warned in plain language to expect heavier burdens next year and in the year after, and with such a prospect your board can scarcely hold out hopes of increasing profits. We shall, indeed, account ourselves fortunate if we can keep up our present revenues, in view of the growing demands of taxation, not only here but in other countries as well.

In conclusion, I should wish to express once again my best thanks to my colleagues on the board and those of our subsidiary and associated companies for their constant help, and to all the staff and workpeople for their unflinching loyalty and happy work.

The report and accounts were unanimously adopted, and a dividend of 5 per cent., less income tax, on the ordinary shares was approved.

THE MINING TRUST, LIMITED

PROGRESS AT MOUNT ISA

The ninth ordinary general meeting of the Mining Trust, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London.

Earl Castle Stewart, M.C., the chairman, who presided, in the course of his speech, said: Income for the year amounted to £120,258 3s. 6d., and details of this and of the charges against it are plainly shown in the income and expenditure account.

The net amount written off investments is £359,543 12s. 4d., but this reduction will enable the company to claim a refund of income tax deducted at source during the current year.

For the first time Mount Isa has been able to make a small profit after paying all debenture and loan interest, and writing off certain sums against obsolete plant. The recoveries in the mill for the year ended June 30, 1937, were 77.6 per cent. of the lead and 73.9 per cent. of the silver. Recoveries for the months of December, January, February and March improved to 85.8 per cent. of the lead and 81.9 per cent. of the silver.

With regard to the award of the Industrial Court mentioned in the chairman's speech at the annual meeting of Mount Isa Mines, Limited, we have since heard that the lead bonus will commence at £21 sterling price for lead instead of £16 sterling.

There is nothing that I can usefully add to the report of the proceedings of the eighth annual general meeting of New Guinea Goldfields, Limited, which you will have received with these accounts. The Wau Alluvials, to which I referred last year, and which have been examined by Mr Lang, are likely to bring additional revenue to the company in course of time, but before they can be exploited it will be necessary to ensure an adequate water supply. This problem is being examined at the moment.

BIG BELL MINE

With regard to our interest in Big Bell Mine in Western Australia, the authorised capital of this company is £400,000 (Aust.), and there were loans outstanding at December 31st last amounting to £346,931 (Aust.). The plant commenced operations in October last, and since then have made operating profits up to the end of March of £143,012.

The company's loans are a first charge upon profits, and therefore the Mining Trust has already received some £5,000 by way of return on its loan to the company. The average monthly profits earned will indicate to you that our share holding, although it is unfortunately a very small one, is certainly worth several times the amount which was paid for it.

With regard to our share holding in Saudi Arabian Mining Syndicate, Limited, we have purchased additional shares during the year as opportunity offered. The nature of the plant has been decided upon and shipment has already commenced. The intention is to treat 300 tons of ore a day, or roughly 100,000 tons a year. Your directors believe that our investment in this property, amounting, when all calls now due have been paid, to £115,453, will be very profitable.

BRITANNIA LEAD COMPANY

The Britannia Lead Company has again operated successfully throughout the year. The total amount of Mount Isa Lead bullion charged was 36,536 tons, from which 35,885 tons of refined lead was produced. Production of silver for the year was 2,981,977 oz. As by-products there were sold 377 tons of zinc chloride and 1,357 tons of antimonial lead. The silver content of the bullion charged was 83.5 oz. per ton, as compared with 81.1 oz. for the previous year. The Britannia Lead Company paid to Mining Trust £14,036 in fees and commissions and now carried forward a total profit since operations commenced of £33,140.

In conclusion, whilst our large holding in Mount Isa shares has shown a considerable drop in value in conformity with a general fall in share prices and in the prices of lead, zinc and silver, the increase of cash at bank and in hand, amounting to £82,078, the commencement of profitable operations at the Big Bell Mine and the acquisition of additional shares in Saudi Arabian Mining Syndicate, Limited, have all added to the strength of the resources of Mining Trust, Limited. Whilst retaining always a strong cash position, your directors are constantly examining opportunities for the acquisition of new mining properties. It must of necessity be some considerable time before such a policy can bear fruit in the shape of dividends, but your directors believe that with the investments recently made in Big Bell Mines and Saudi Arabian Mining Syndicate a good start has been made towards improving both the immediate and future prospects of the company.

The report and accounts were unanimously adopted.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED

NET PROFIT HIGHEST SINCE 1929

MR H. J. WELCH'S REVIEW

The thirty-first ordinary general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Limited, was held, on Wednesday, May 18, 1938, in the Council Chamber of the Rubber Growers' Association (Incorporated), 19 Fenchurch Street, London, E.C., Mr H. J. Welch (chairman of the company) presiding.

Mr J. E. Ritchie, representing the agents and secretaries (Messrs Harrisons and Crosfield, Limited), having read the report of the auditors,

The chairman said:—Ladies and Gentlemen, two of our colleagues on the board are unable to be present to-day. Unfortunately, Mr John Mackie is absent through ill-health, and I am sure you would wish to join us in sending him our best wishes for his speedy recovery. Our new director, Mr C. C. Stephen, is now on his way home from Ceylon, where he has visited all the company's properties and made reports upon them.

IMPROVED RESULTS

When addressing you last year, I said I was hopeful that the 1937 results would be significantly better than those for 1936. This proved to be the case, and the credit balance for 1937 amounted to £123,086, as against £72,571 for 1936. The net profit realised was the highest since the year 1929. All three of the company's products proved more profitable in 1937 than in 1936; the comparative profits per acre being: for tea, £13 10s. 3d., as against £8 0s. 8d. for 1936; for rubber, £4 9s., as against £2 18s. 9d.; for copra, £3 10s. 7d., as against £2 6s. 2d. The rubber figures include the proceeds of the sale of export rights, and have had debited against them the cost of upkeeping the untapped areas. It is pleasing to be able to report that, excluding the increase in local income tax, all three products were produced in 1937 at a lower cost than in 1936.

As the comparative items for 1936 are set out in the accounts before you, I do not propose to review them in detail, except to draw attention to the facts that the loan account has now disappeared, sundry creditors have been increased by about £20,000 (principally owing to larger reserves for taxation), and once again the book value of the whole of the buildings, machinery, etc., account has been reduced to the sum of £1. Sundry debtors and payments in advance have increased from about £4,000 to £47,387, and this is accounted for by about £11,500 paid in advance for income tax to secure the discount, and a sum of about £33,000 outstanding in respect of sales of tea, which amount has since been collected.

Although, as already mentioned, estate costs were reduced in 1937, this was not done at the expense of the properties; the policy of taking all reasonable measures to maintain and improve their capital value was continued. Our problem, so far as our main product—tea—is concerned, is not that of producing the permitted exportable crop, but of finding the most satisfactory method of keeping the harvest down to permissible limits. Owing to restriction, the yield per acre was kept very low. The crop was taken from the largest planted acreage in bearing this company has ever possessed, and the total crop itself was a record for the company. In the case of rubber, it was more profitable to sell a proportion of our export rights than to produce the equivalent quantity of rubber, and that policy has been again followed this year.

NET COST PER PLANTED ACRE

The net cost per planted acre on December 31, 1937, calculated on the issued capital, was £53 13s. 6d. But we have a surplus of liquid assets over liabilities, after deducting the dividend and other appropriations mentioned in the report, of £10 11s. 10d. per planted acre. The net book cost per planted acre is therefore £43 1s. 8d., as against £47 12s. 2d. last year. Having regard to our valuable tea estates, £43 1s. 8d. is a very moderate figure, and one which we consider below the real value of the estates and their equipment.

Once again it is my pleasure to record the appreciation of myself and my colleagues of the services rendered by the estates staffs, by

our visiting agents, and by Messrs Harrisons and Crosfield, Limited, in London and Ceylon.

PROFITS, RESERVES AND DIVIDEND

The net result of the company's operations in 1937 was a credit balance of £123,085, or just over 15 per cent. on the issued capital. I would draw your attention to the fact that, before arriving at that sum, £27,600 had been provided for Ceylon taxation (the corresponding figure for 1936 having been only £7,650), £5,500 for National Defence Contribution, and £23,724 had been written off buildings, machinery, etc., account. After adding to the credit balance mentioned the carry-forward from 1936, and deducting the interim dividend paid in November, the sum of £169,464 remains. The directors' proposals for dealing with this amount are set out in the report, and I will now deal with them seriatim.

The transfer to taxation reserve requires no comment, but I must explain that as a result of the increase in British income tax the appropriation of £17,500 is approximately £2,000 less than the amount which will now be required to meet assessments this year, calculated upon last year's profits. This deficiency can be adjusted next year.

GENERAL RESERVE

In my speech to you in 1935, in reference to the transfer from the reserve account of the amount of £223,025 for writing down buildings, etc., I said: "In good years we propose to ask you to transfer substantial amounts to reserve. In years producing less satisfactory results, such as 1934, smaller amounts, and in bad years none at all." Since 1933 the profit and loss account has been relieved of any charge for depreciation, and although profits have had to bear the cost of new buildings, etc., for the past three years the amount so charged is considerably below what depreciation charges would have amounted to, in accordance with the old practice, had the reserve account not been used to write off the book value of buildings, etc. The proposed appropriation of £14,875 to general reserve is therefore well justified. It will raise the reserve account to a total of £105,000.

During 1938 some 83 acres of old rubber will be completely replanted on up-to-date lines with high yielding material. This area will have to be upkept and cultivated until it again becomes revenue-producing, and with this, and possible further new plantings in view, it is proposed to transfer £2,572 to rubber replanting reserve account, bringing that reserve up to £5,000.

Out of the 1936 profits a sum of £1,500 was voted to the Employees' Deposit and Retirement Fund. As I explained to you then, this fund suffered during the lean years. This year we propose to vote a special grant of £2,000 to the fund, and in addition we have created a "staff general reserve" of £1,000 for any special purposes relating to the staff for which it may be needed.

THE DIVIDEND

The final dividend recommended is 8 per cent., making 12 per cent. for the year. After giving due consideration to all the relevant facts, the board is satisfied that the allocation of profits proposed is that best calculated to serve the company's permanent interests. The report was issued before British income tax was raised to 5s. 6d. in the £. As a result of that increase we must deduct tax from the final dividend at 3s. 5d. in the £, and not at 2s. 11d. as stated in the report. Income tax was deducted from the interim dividend at 2s. 11d. The average rate of tax deduction over the total distribution of 12 per cent. is thus 3s. 3d., which means that shareholders receive the same net amount from the 12 per cent. as they would have received had the dividend been 13.86 per cent., subject to tax deduction at the full rate of 5s. 6d. in the £.

As a result of the increased income tax, the net amount required for the final dividend is £54,069 and the balance carried forward is thus increased to £77,632, and not to £76,001 as shown in the report.

PROSPECTS FOR 1938

At the annual meeting of members of the Rubber Plantations Investment Trust, Limited, on Monday last, I reviewed at length the position of the tea and rubber producing industries, and my address was published in full in *The Times* of yesterday. I would refer any of you who are interested to my remarks on that occasion.

As to this company's prospects for the current year, we have sold to date 1,316,220 lb. of tea at a price of 1s. 2.02d. per lb. net, equivalent to 1s. 3.89d. per lb. London landed terms. These figures compare with 1s. 2.35d. and 1s. 4.16d. for the whole of last year. The amount of tea we shall be permitted to export is not yet known, but we anticipate it will exceed that of last year by about 300,000 lb.

With regard to rubber, we have sold export rights covering 300,000 lb. for 4.91d. per lb. net, realising a sum of £6,137, and we are again leaving untapped several of our estates. If the present exportable percentage of 60 per cent. is maintained throughout the remainder of this year, we estimate we shall probably be allowed export rights for about 1,188,500 lb. In addition to the sale of export rights just mentioned we have sold forward for delivery during 1938 134,000 lb. of rubber at 9.70d. net, equivalent to 10.62d. London landed terms. Of this, 11,200 lb. of the 1937 crop was used to implement the contract, and the profit thereon is included in the accounts to-day. The profit on the balance of 123,200 lb. will come into this year's accounts. The estimated crop of copra to be produced is at present about 150 tons less than last year.

The estimated estate costs of all our products are higher than the actual costs worked to in 1937, but the 1937 estimates were also higher than the actual figures, so that we hope economies may be made also on the estimates for this year. We anticipate our capital expenditure will amount to £4,000.

IMPORTANCE OF TEA MARKETS

Therefore, notwithstanding our satisfactory forward sales of rubber and of export rights, at present it seems that our profit from rubber and from coconuts will be reduced. But by far the preponderating source of our profit is from tea. Last year it accounted for over 82½ per cent. of our profits, rubber for under 15 per cent. and coconuts under 2½ per cent. The ultimate profit for the year will therefore depend principally upon the course of the tea market, which seems set fair at present; and the facts known to me give me reason to hope that the net amount available for distribution as dividends next year may not be substantially less than that available to-day.

I now beg to move: "That the statement of accounts for the year ended December 31, 1937, and the directors' report and the appropriations therein mentioned be approved and adopted, and that a final dividend for that year of 8 per cent., less income tax at the rate of 3s. 5d. in the £, on the issued capital of the company be paid on May 20, 1938."

Mr H. W. Horner (vice-chairman) seconded the resolution and it was carried unanimously.

The retiring directors, Mr G. Nicol Thomson and Mr C. C. Stephen, were re-elected; and Messrs Turquand, Youngs, McAuliffe and Company were appointed auditors.

TRIBUTE TO EASTERN STAFF

Mr John Bunting said: Ladies and gentlemen, I have recently returned from Ceylon and while there I had the pleasure of seeing many of your staff on the estates at their work, and I feel it a privilege that you allow me to move a vote of thanks to them. They have been mainly responsible for the excellent results you have been able to put before this meeting of shareholders to-day. In going through the estates I was able to visit, one could not help being struck by the extraordinary efficiency of the upkeep on the Lunuva Estates, being equal to anything there is in Ceylon. You can see to-day the result of the work of the directors in making provision for reserves and in looking after the staff. I know personally every man who is in your service in Ceylon and I can honestly and truly say that I have never in the long years of my experience met a more devoted or loyal band than you have in your service in Ceylon.

I think we are all very much indebted to everyone working for this company, both in London and more particularly in the East. I see Mr Clubb there sitting by your side and I want to say to him to-day how deeply grateful I am to him and to everyone for making my trip a real trip of pleasure and one which I will never forget. I should like to move that the best thanks of the shareholders be conveyed to the staff, the visiting agents and Harrisons and Crosfield, Limited, both in London and Colombo, for their work during the past year.

The vote was duly seconded and unanimously accorded.

The special resolution amending Article 91 was proposed by the chairman, seconded by Mr Horner, put and duly carried. The proceedings then terminated.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED

BIGGER INCOME AND DIVIDEND

MR H. J. WELCH'S ADDRESS

The twenty-ninth ordinary general meeting of the Rubber Plantations Investment Trust, Limited, was held, on the 16th instant, in London.

Mr H. J. Welch (the chairman) said it was a pleasure again to report a considerable improvement in earnings and to propose an increased dividend. The gross income from investments was £189,136, or more than double that of the previous year, and the net profit from sale of tea was £76,801, or more than 50 per cent. above that of 1936. The year's net balance of £195,978 was the highest earned since 1928. A final dividend of 6 per cent. was proposed, making 10 per cent. for the year, which would enable £97,095 to be carried forward against £89,614 brought in.

OUTLOOK FOR 1938

As to the prospects for 1938, the Trust would in future depend entirely on investment income, including dividends from Sumatra Tea Estates (the entire share capital of which they owned and which had acquired their four tea estates). Up to Friday last interest and dividend received or declared upon the Trust's holdings exceeded those received and declared up to the same date last year by over 27 per cent. Profits of rubber companies last year were in many cases double or more than double those of the previous year and this was now being reflected in increased dividends. The outlook for their tea investments might not be quite so good as last year, but he thought the Trust's shareholders could look forward to results for the year with a reserved optimism.

With regard to the tea industry, under regulation the abnormally heavy stocks had been reduced, but were now adequate, and consumers could not complain that the International Tea Committee had failed to provide sufficient supplies at a reasonable price. He again emphasised the harmful effect on British Empire teas of the preferential duty applicable to them in this country. Teas displaced from the London market had in turn displaced Indian and Ceylon teas in outside markets, and he was convinced that it would be in the best interests of Empire producers if the preference were removed. The recent additional duty of 2d. would tend to accentuate the demand for commoner teas and diminish the demand for medium and better qualities. Most producers, however, should be able to realise a modest profit during the next few years under regulation.

RUBBER PROSPECTS

The outstanding events of the rubber-producing industry during 1937 had been (1) the satisfactory increase in the total world absorption, (2) the unsatisfactory steady addition each month from the end of June to stocks outside the regulating countries, (3) the continuous fall in the monthly average London price obtained from March to December, and (4) the raising of the exportable percentage under regulation from 75 per cent. in the first quarter to 80 per cent. for the second and 90 per cent. for the third and fourth quarters.

Events had proved that the decisions to raise the exportable percentage to 90 per cent. for the second half of 1937 and maintain it at that figure were too optimistic. The change from 90 per cent. to 60 per cent. to-day created great difficulties for the producer, and the fall in price from 1s. 1½d. to less than 5½d. in twelve months was not good for the producer, the market, the manufacturer or anyone connected with the industry. If it was possible it was obvious that the permissible exports should be adjusted less drastically and more rapidly to changing conditions. Under the new scheme producers would be permitted to carry heavier stocks and they might be utilised to steady the rate of production and to secure a ready response to changes in the percentage of permissible exports. Such holding of stock would be far preferable to a buffer pool and it would be a good thing if permission to hold larger stocks this year were immediately given.

On a long view there was much to encourage shareholders in rubber companies. The industry certainly had no cause to complain of last year's results, and if recent events were placed in their proper perspective, and providing the regulation scheme was continued and effectively administered, the present unsatisfactory conditions should prove to be only a temporary setback. They were, he thought, justified in believing that a reasonable amount of prosperity was in store for the rubber producing industry for some years ahead.

The report was adopted.

KEPONG (MALAY) RUBBER ESTATES, LIMITED

IMPROVED RESULTS

The thirty-third annual general meeting of Kepong (Malay) Rubber Estates, Ltd., was held, on the 18th instant, in London.

Sir Francis Voules, C.B.E. (chairman and managing director) in the course of his speech, said:—We produced during 1937 a crop of 9,333,784 lb. as compared with 6,397,552 lb. in 1936. Our release of exports was for 1937 83½ per cent. as compared with 62½ per cent. for the previous year. We had also the benefit of the crops from the two estates we purchased during the year. The average price realised for the rubber sold was 8.50d. per lb. London landed terms, or slightly better than the previous year's average.

We were fortunate in purchasing on favourable terms two further estates during the year, both of which adjoined existing properties. As a result of these acquisitions the acreages of the Voules and Fraser Estates have been brought up to over 7,000 acres each, and the total planted acreage of the company increased to 26,867½ acres against a capitalisation of £27 10s. per planted acre.

The year's profit of £123,311 compares with £81,011 for 1936. We have transferred £10,000 to reserve account and recommend a final dividend of 7½ per cent. less tax, making our total return for the year 13½ per cent. as against 11½ per cent. in 1936.

The present unsatisfactory price of rubber has been brought about mainly by the decline in the American consumption. The consumption figures for the month of April were only 28,000 tons, as against a figure of 51,800 tons for the preceding year. Suggestions have been made as to the advisability of establishing a buffer pool. From a purely financial point of view I have little doubt that a purchase of rubber by a strong group would ultimately prove a profitable one, but from the point of view of the well-being of the rubber industry I am sceptical as to the value of the suggested remedy. There is a striking example of its failure in the case of Brazilian coffee. I think myself that the suggestion put forward by Mr Welch of allowing producers to carry heavier stocks, all under the control of the International Committee, is the obvious way of meeting some of the difficulties that have arisen in the past without the manifold disadvantages of the suggested buffer pool.

The report was unanimously adopted.

SUNGEI BATU (MALAYA) RUBBER ESTATES, LIMITED

NET EARNINGS AGAIN DOUBLED

The twenty-fifth annual general meeting of this company was held, on the 17th instant, in London.

Mr E. D. Hevan (the chairman), in the course of his speech, said:—We have experienced a very satisfactory year. The net profit for 1937 amounted to £16,896, as against £8,542 in 1936 and £4,077 in 1935. This doubling of profits each year during the past three years might lead one almost to hope for similar progress this year, but the general improvement in the rubber position which we experienced during the years mentioned has, I am afraid, for the time being at any rate, come to an end. We are now working on a greatly reduced quota to that which we enjoyed last year, and the very low price now obtainable for rubber makes the prospect for the current year far from encouraging. I would remind you, however, of the sale I mentioned when I last addressed you, of five tons per month over 1938 at 1s. 0½d. per lb. landed tonnage London, which will help to average up the low price now prevailing.

You will see from the report how, subject to your approval, we propose to deal with the balance available. We suggest a final dividend of 8 per cent., making, with the interim of 5 per cent. already distributed, 13 per cent. for the year, a transfer of £6,000 to reserve and £955 to income-tax reserve, leaving £9,612 to be carried forward into the 1938 accounts.

The 220 acres replanted are making good progress. Our programme is to replant a further 110 acres in 1938. Under the proposed new conditions for the renewal of the International Agreement, it is recommended that estates be allowed to open up in 1939-40 new areas to the extent of 5 per cent. of their total planted acreage. We shall, of course, avail ourselves of this opportunity if permitted to do so.

I do not intend to say anything about the future, as the position is too obscure to form an opinion of any value. Until world conditions show a substantial improvement and the consumption of rubber—particularly in the United States—recovers to a much more reasonable figure, the prospects will, I am afraid, continue to be as unsatisfactory as they are at the present time.

The report and accounts were unanimously adopted.

SOUTH-EASTERN GAS CORPORATION LIMITED

INCREASED GAS SALES

The sixth ordinary general meeting of the South-Eastern Gas Corporation, Limited, was held, on the 18th instant, at the offices of the company, 84 Horseferry Road, London.

Sir David Milne-Watson, Bart., LL.D., D.L., the chairman, presided, and, in moving the adoption of the report and accounts, said that since the last meeting the corporation had obtained control of two more companies by acquiring nearly all the issued share capital of the North Middlesex Gas Company and of the Windsor Royal Gas Light Company. With those additions their associated companies supplied nearly 300,000 consumers with an annual output of gas exceeding 7,500 million cubic feet. There were only five gas undertakings in the country larger than that group. On the whole they could be well pleased with the results of 1937, an average increase of 2.8 per cent. having been secured in the total gas sales.

On revenue account they had received £164,000 from dividends and interest—an increase of £40,000—and after payment of the preference dividends and an ordinary interim dividend the board now recommended a final dividend of 3 per cent., making 6 per cent. for the year.

Many of the industries using coal on a large scale felt apprehension at the prospect of continued increases in coal prices. No one grudged a fair reward to both capital and labour in the coal industry, but there was reason to fear that the very proper concern which the community felt for the miners' welfare was being exploited to win public support for the maintenance of price levels unjustified by anything except the power to charge such prices which the new selling schemes had conferred upon the coal industry.

There was no doubt that if the maximum degree of efficiency and economy was to be attained the same applied to the gas industry as to the electric industry, and larger units must be formed.

Their companies had again been joined in group campaigns for the marketing of gas fires, water heaters and refrigerators, and one of the features of the past year had been the excellent way in which the sales of all appliances had been maintained—a number of companies having reached record figures.

The report and accounts were unanimously adopted.

BRITISH-BORNEO PETROLEUM SYNDICATE, LIMITED

TOTAL DISTRIBUTION OF 12½ PER CENT.

The twenty-fourth ordinary general meeting of the British-Borneo Petroleum Syndicate, Limited, was held, on the 19th instant, at the Chartered Insurance Institute, 20 Aldermanbury, London.

Mr Walter MacLachlan, chairman and managing director, who presided, said that the total revenue for the year amounted to £52,697, consisting of dividends and interest from investments and loans, royalty upon the production of oil from Brunei, and the net profit derived from the sale of investments. The revenue from investments and the Royalty interests showed a satisfactory increase, but this had been more than offset by a substantial falling off in the profits derived from the sale of securities. The net profit for the year was £48,462, and, after applying £43,875 in reduction of the book value of investments, the directors recommended a final dividend of 5 per cent. and a bonus of 2½ per cent., both less tax, making a total distribution of 12½ per cent. for the year.

The abnormal market conditions of the past year had made it exceptionally difficult to earn any material profits from sales of or dealings in shares, in consequence of which the profit from this part of the business was substantially reduced. Market prices of British and other securities, which almost without exception had fallen continuously throughout the year, were approximately at their lowest point at the date of the balance sheet, namely, March 31st, mainly as a result of the severe tension which then existed in the international political situation. The directors were satisfied with the way in which the company's funds were invested, and in no case was any investment realised during the year at a loss. It was a matter for congratulation that they had passed through the common experience of the past year with so little detriment to their financial position.

Oil interests and investments appeared in the balance sheet at £258,640. The operations of Apex (Trinidad) Oilfields, Limited, in which the company held a substantial interest, continued to be successful, and resulted in a record production of 550,000 tons of oil for the year ended September 30, 1937. Dividends amounting to

45 per cent. had been paid for the year. The British Malayan Petroleum Company also had a record production from the Seria Oilfield, in Brunei, and the company continued to derive substantial revenue from the royalty thereon. The company also held investments in securities and shares of British industrial companies, home railway stocks, shares and debentures of mining finance companies and mining companies, and other interests of a similar nature. The market value of these investments at March 31st was in excess of

the amount at which they were included in the balance sheet. The directors were quite satisfied with the general investments, and were confident as to their prospects. They had continued their policy to maintain substantial resources in liquid form, and would therefore be well prepared to take advantage of the recovery in business conditions which should follow the success which they trusted would attend the efforts now being made to restore international confidence. The report and accounts were unanimously adopted.

(Continued from page 445.)

both cloth and yarns are being well maintained and not less than 1s. 10d. is accepted for common 8-lb. cops and 1s. 11d. for 8-lb. spools, while 10 oz. 40 in. hessians are quite steady at 2½d. and 8 oz. at 1½d. There are still large quantities of Calcutta goods entering this country; imports amounted to 72,417,000 square yards of cloth and 256,042 cwts. of jute sacks and bags during the first four months of this year, compared with 63,329,000 square yards and 386,693 cwts. in the same period of last year.

THE COMMODITY MARKETS

A WEEK ago we suggested that the slight rise in prices then noticeable was likely to prove short-lived, for it was not accompanied by any significant increase in purchases by consumers. Quotations for many primary products resumed their downward trend this week, and there are no indications of an early change of trend.

Among sensitive commodities, copper, lead, spelter, and tin were all marked down during the past week. Rubber and linseed oil were also cheaper. Raw cotton, wheat and raw sugar were scarcely changed in price, and tea was slightly firmer.

The general trend of the prices of primary products in the United States was also downwards. Thus, Moody's index of the prices of staple commodities (December 31, 1931 = 100) declined from 137.0 to 136.5 during the week ended last Wednesday. A month ago the index stood at 142.3 and a year ago at 209.3.

Metals

Copper.—Stocks in the United States increased last month by 12,880 short tons to 355,660 tons; consumption shows a further decline, largely seasonal, on both sides of the Atlantic. The cash price fell by £1 6s. 3d. per ton during the week to close at £37 11s. 3d. per ton, the lowest price recorded this year. The absence of any agreement over the American exports has an unfavourable influence on the market.

Tin.—The absence of definite information on the subject of the buffer pool has restricted demand; prices showed a sharp fall of £5 15s. per ton during the week and closed at £161 15s. per ton. A renewed fall is not improbable if progress towards a settlement of the pool proposals continues unsatisfactory.

Lead and Spelter.—Production of both metals is still in excess of demand and prices again fell. Lead closed

at £14 3s. 6d. per ton, a net loss of 10s. per ton, and spelter fell by 7s. 6d. per ton, to close the week at £12 12s. 6d. per ton. Demand may improve if the pace of re-armament is accelerated.

Grains

The wheat market remains dull and prices showed a further decline; No. 2 Manitoba was quoted at 45s., against 45s. 9d. per quarter at the close of last week. Demand for maize and feeding barley is satisfactory and prices are unchanged.

Other Foods

Provisions and Meat.—Demand has been easier for bacon and butter and prices are lower than last week. Danish sides are quoted at 102s. per cwt., with English and Irish priced at 100s. per cwt. Australian and New Zealand butter prices have fallen by 3s. to 4s. per cwt.; the price of Danish is unchanged at 131s. per cwt. Prices of meat show little change.

Colonial Produce.—Demand for tea continues good and prices advanced during the week. The markets for cocoa, coffee and sugar have been quiet; cocoa prices show a slight fall, but prices elsewhere are unchanged.

Fruit.—The Fruitgrower reports a firm demand for all kinds of fruit, and with light imports, prices are good. Oranges are still scarce and dear and larger imports of apples were easily sold. The frost on the night of May 7th-8th was rather sporadic; the Cambridgeshire small fruit crop is reported to be destroyed and there was localised damage to plum and pear trees in other districts.

Vegetables.—Increasing supplies of tomatoes and asparagus have lowered prices, but demand remains good. The revision of the riddle regulations by the Potato Marketing Board has increased supplies of old potatoes which are easily absorbed, together with the offerings of "seconds."

Milk.—The table given here is compiled from statistics issued by the Milk Marketing Board—

	Apr., 1937	Feb., 1938	Mar., 1938	Apr., 1938
Prices (per gall.)				
Liquid	d. 16	d. 18	d. 17	d. 16
Av. manufacturing	5.293	7.586	7.224	6.563
Av. pool	12.32	15.16	13.75	12.46
Contract sales (mill. galls.)				
Liquid	47.8	48.10	52.63	50.9
Manufacturing	25.0	14.46	21.59	30.9
Total contract	72.8	62.56	74.22	81.8
Used by farmhouse cheesemakers	1.3	0.61	0.88	1.6

Miscellaneous Commodities

Oilseeds and Oils.—Demand has been restricted and prices have again tended to fall. Crushers are believed to be well supplied with forward contracts for linseed and little business has been done in this market. Favourable conditions are reported for the growth of the American crop and the total yield from the Argentine is now given at 1.5 million tons. Linseed oil has lost 35s. per ton during the month, yet even at present levels there is little demand. Refined cotton oil ex Hull is quoted at £20 per ton. The sales of oilcakes have been reduced by the appearance of rain.

Rubber.—Rubber consumption in America is estimated at 27,984 tons for April last, which compares unfavourably with the 30,487 tons in March and 51,797 tons in April of last year. World stocks at the end of April are given as 566,572 tons, an increase of 6,198 tons on the month and of 160,164 tons compared with a year ago. With this information depressing the market, prices fell by ½d. per lb. during the week.

Furs.—At the London spring auctions, which closed this week, only half the supplies were sold, and prices were generally below those paid in the winter sales. The outlook for the summer sales is regarded as unpromising. The prices at the Hudson's Bay Company's sales are given below:—

	Spring Sale 1937	Spring Sale 1938	Winter Sale 1938	Spring Sale 1938

Italy's Foreign Trade

In view of the recent Anglo-Italian Agreement and the increased trade, which may be expected between the two countries, we present the following charts. It should be borne in mind that as annual figures have been used, they do not show the full extent of the drop in the sanctions period, as both 1935 and 1936 contained months in which sanctions were not in operation. The figures of value for 1937 have been converted into pre-devaluation lire for purposes of comparison with earlier years. The diagram showing the trade of Fiume and Trieste refers to the first quarter of this year and is based on tonnage of merchandise embarked and disembarked. The term Greater Germany relates to Austria and Germany combined. In the lower panel on the left-hand side the official index numbers of volume have been used by dividing the index of the average value of exports by the index of the average value of imports.

Finance

GOVERNMENT RETURNS

For the week ended May 14, 1938, total ordinary revenue was £8,833,000, against ordinary expenditure of £10,214,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £39,470,000, against a deficit of £23,719,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On May 13th, applications at £99 17s. 5d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 29 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 6d. per cent. and above were allotted in full. £35.0 millions of Treasury bills are being offered on May 20th.

APPOINTMENTS AND PERSONAL

The Right Hon. Viscount Davidson, G.C.V.O., C.H., C.B., has been elected a director of the Buenos Ayres Great Southern Railway Company, Ltd., and the Buenos Ayres Western Railway, Ltd., to fill the vacancies caused by the death of Lieut.-Colonel Woodbine Parish.

Mr W. Howard-Williams has been elected deputy-chairman of Buenos Ayres and Pacific Railway Company, Ltd.

Sir Enoch Hill.—A testimonial fund for Sir Enoch Hill is being opened, to commemorate his work for the Halifax Building Society and his services to the building society movement generally, and also to enable the esteem of personal friends to be voiced. Donations should be addressed to D. W. Smith, Halifax Building Society, Halifax.

Mr Gerald Constable Maxwell has resigned his partnership in G. M. P.

Murphy and Company, members of the New York Stock Exchange, and become a member of the London Stock Exchange and a partner in the firm of Williamson, Fawcett and Stirling. Mr Maxwell has been in charge of the G. M. P. Murphy office in London since it was opened ten years ago.

Imperial Chemical Industries announce that Sir John Anderson, late Governor of Bengal, and Mr Peter F. Bennett, president of the Federation of British Industries are joining the board.

MONTHLY TRADE SUPPLEMENT	

Ebb and Flow

NOBODY who listened to the President of the Board of Trade in the Commons on Tuesday, or who has thrown even the most cursory glance at the chart on the front page of our monthly Trade Supplement this week, can feel very reassured about the immediate economic prospect before this country.

It was three or four months after the recession in American business activity had begun in March of last year that President Roosevelt's Administration and the American people became convinced, by facts and figures, about the reality and extent of that recession. A further six months were to elapse before its worst effects were both visible and recognised. So, in this country, evidence of a recession in business has accumulated. Though official spokesmen at first refused to face the facts, clear and significant proof was given in the New Year's Survey published in our issue of January 1st this year; and by April, as our Index of Business Activity shows in this week's Supplement, the volume of business activity in the United Kingdom had declined by about 7½ per cent. from the level attained a year earlier. Business activity has slipped back to the level reached in April of 1936.

In the House of Commons on Tuesday, Mr Oliver Stanley gave further figures to the same effect. Thus, although the number of insured persons in employment in Great Britain last December was greater by 200,000 than in December of 1936, in April of this year it was 130,000 less than a year earlier. Unemployment last month was nearly 300,000 more than in April of 1937.

Again, the rise of world prices, which had been responsible for our heavy import surplus last year, had been succeeded in the first quarter of this year by a sharp fall in prices; yet our adverse balance in the first quarter of 1938 increased, mainly owing to a sharp decline in exports. How has all this come about, and what does it suggest for the days that lie ahead?

Two documents of international importance have just been published to which we may look for guidance on these questions—viz., the eighth annual report of the Bank for International Settlements, and the report of the Director of the International Labour Office. Both these publications note that the peak of the recovery movement, after the trough of depression had been reached in 1932, was passed in the summer of last year. Mr Harold Butler, soon to relinquish his direction of the I.L.O., points out only that there has not been a constant state of political unrest in the world since 1932, in the course of which four separate wars have taken place, but also that the well-nigh universal intervention of Governments in the domestic economic sphere, undertaken for the purpose of promoting recovery, has created many fresh difficulties. The B.I.S. report says that "the world economy fought its way back to recovery in abnormally adverse circumstances and that the natural forces of recovery were partly strengthened, partly hampered, by the action of Governments." It goes on to observe that, though recovery had shown some signs of stability in 1936, the world experienced a new setback after March, 1937, which originated in the United States.

In no country, except those in which the Government practically controls the whole of economic life, has administrative action been so strong and widely spread. No country is so naturally independent of other countries and so well protected against international political troubles. Nowhere, however, has the reaction been so violent. It has proved to be infinitely more difficult to direct the trend of economic life by Government action, even in a country with a very large home market and an organised banking system, than the weight of well-studied experience and the attentive survey of economic developments encouraged many to believe.

The American recovery was not due to new investment in capital equipment on a great scale, but to a recovery in consumption. There was no widespread increase of productive capacity. The United States fell back into depression owing to the failure of the capital equipment industries to regain their normal activity. The British recovery, on the other hand, which for five years had been very largely due to extensive investment activity in private industry, has apparently succumbed to the combined effects of a fall in world prices, political shocks in British overseas markets and a steep and uneven rise in British costs. These influences have been complicated by the lack of balance in our domestic economy caused by the enormous "public works programme" which we call re-armament.

Thus, for different reasons, the two leading economic Powers in the world have both fallen into an economic recession. Nevertheless, the two movements are closely connected, although our managed currency system no longer links us rigidly together. Mr. Oliver Stanley, who in Tuesday's debate invoked the American recession as the principal cause of our own, might almost have quoted the words of the B.I.S. report:

The interdependence of modern countries is so great that, though economic nationalism and freedom to change monetary parities may allow them to walk out of step (and this is claimed to be one of the main advantages of breaking with an automatic international monetary standard), it does not make them free to move independently of each other. At a certain distance the movements of the more important countries must be followed. It might have been hoped that the difference in the rhythm and the pace of economic development in the world would have a stabilising effect on the trade cycle for the world as a whole, the prosperity in one country offsetting and checking the decline in another. But at the moment experience rather proves that the chief effect of this walking out of step is a greater disorder in the general economic development of the world and a psychosis in which the feeling of living in a depression never leaves the world because it is always justified in one country or another.

This persistent interdependence, in spite of the abandonment of the automatic monetary link, is one of the most important lessons of recent years. Fluctuating exchanges may enable a country to maintain for a while an independent monetary policy; but it cannot prevent trading nations from being affected by changes in the volume of purchases and sales. We are, therefore, still directly interested in the success or failure of other countries' monetary experiments no less than in their political quarrels or their social stability. We do well to remember that the war in the Far East which began last August, the international war in Spain which is now almost two years old, the elimination of Austria, and the lowering spectre of authoritarian economies which during the last year has exercised a dominating influence over the whole of Eastern, Central and South-eastern Europe, are strongly unfavourable influences upon both the foreign trade of Great Britain and on that of almost every one of the chief trading nations of the world.

Experience shows that the steady expansion of the industries making capital equipment is a necessary condition of progress; and it is for this reason, as we have said, that British recovery has been more solidly based than that of the United States. But both of us are experiencing a recession; and there is in our own situation a special cause for concern. We must realise that at this moment only the re-armament programme is maintaining the activity of our

capital goods industries. This fact involves two disadvantages in the economic sphere. One is the burdensome character of re-armament expenditure. It is a truism that, while armament expenditure "keeps money circulating," it does not produce assets which themselves add to the national income. Quite the contrary. It takes away from the country's common stock of productive resources an ever-growing proportion, and immobilises it in barracks, bombers and battleships. In short, industrial mobilisation for war spells immobilisation of many branches of industry that normally work for peace. Even if the products of our arms factories do not aggravate the political menace, they have no economic value; and the hectic rush to produce them has set up strains and stresses in the economic machine.

Secondly, the heavy industries are the characters which must play the principal roles in civil public works. The fact that re-armament has already done much to maintain employment while the tide has been receding justifies the economists who have argued that expenditure on public works should be increased when business is flagging. But in England to-day there is less room than would normally be the case for a public works programme as a tonic to a patient suffering from economic debility. Something can still be done in this direction, but only with great discrimination. We must keep a watchful eye to see that it does not obstruct or compete with the output of munitions. Public works will, however, gradually become more practicable as the arms programme passes from the stage at which plant is being equipped to that at which there is full output of artillery, aircraft and ammunition.

The critics of the President of the Board of Trade last Tuesday complained that, while his facts were indisputable and depressing, he offered little by way of solution. For our part we would put forward two suggestions which emerge from any survey of our present difficulties. The first is that every effort should be made to revive the flow of world trade, and to combine action in the international sphere with action at home. Only by a recovery of exports can we hope to pay for our imports, resuscitate business, revive enterprise, and restore sufficient confidence to lure from their pigeon-holes those plans for capital expansion which have been laid aside. First in this context come the trade negotiations with the United States. The Government must not be frightened from well doing in this matter by the figures of the balance of trade between Britain and the United States. If the Government will "think imperially" they will find that the figures for the trade between the sterling area and the United States present a very different and much more balanced picture. Both American and British business men—as well as their competitors and colleagues in France, Holland, Scandinavia, Belgium and other of the remaining relatively free economic systems of the world—are now more disposed to view with approval any governmental proposals to increase the volume of trade passing between their countries. This disposition should be translated into action to the utmost possible extent.

But this policy will take time to fructify. Meanwhile, to maintain employment is most important. We should, therefore, press forward, to the degree that is possible in the circumstances, with preparations to increase public works expenditure—particularly in the areas where the civil recession is most felt.

Policy is, however, the major consideration and, above all, a policy that will command confidence. More than ever it is now evident that, for the broadest social and political reasons, the great trading democracies should take common economic counsel. If they take it early enough, their economic systems can once more be strengthened to bear the burdens which the unhappy state of the world has imposed upon them.

A Crisis Averted

THERE are times when the vitality of a sick patient is gradually destroyed by repeated crises until finally the end comes through lack of any further strength to resist. There are others when a crisis survived means that the fury of the disease is burning itself out; when each spasm successfully overcome increases the chance of survival and strengthens the power and the will to resist the next attack. The international events of the past week-end seem to fall into the second category.

It is much to the good that what happened on March 11th-13th to Austria has not happened to Czechoslovakia on May 18th-20th. It is also encouraging that the credit for this negative but considerable achievement is shared by a number of European Governments: our own (to whom all praise when praise is due), the French, the Polish and possibly the Russian, as well as the Czechoslovakian. It is also to the good that Germany's action has shown that when she was faced with the choice between drawing back or touching off a European explosion, counsels of moderation prevailed. Europe breathes again and begins to entertain a new hope.

This last spasm was brought on in circumstances which were no doubt intended to be ominously reminiscent of its predecessor. In an independent State which was Germany's immediate neighbour, a vote was due to be taken; the result would be a manifestation of the political feelings and desires of a German-speaking population whom the masters of the Third Reich were undisguisedly eager to incorporate into Grossdeutschland; and the polling was to take place under the auspices of a Government which was one of Herr Hitler's *bêtes noires*. In March the *dénouement* was a military invasion and an annexation before the vote could be taken. In May things have not gone the same way. German troops have been moved, but they have been kept within the German frontiers and have since been withdrawn some distance into the interior. In the threatened country the polling has taken place this time in perfect order, and with no very sensational results. Still better, the leader of the German minority in Czechoslovakia has since entered into negotiations with the Czechoslovakian Government for a settlement of the Sudetic German question within the framework of the Czechoslovakian State. The world has gained a reprieve, though the future is still doubtful.

As seen from the British end, the first symptom of crisis was an inquiry by the British Ambassador in Berlin, acting on instructions from London, last Friday afternoon, about alleged movements of German troops towards Germany's frontiers with Czechoslovakia. The answer was sedative; but the authorities at Prague decided to take no chances; for the idea had been sedulously and truculently spread throughout Sudeten Bohemia that this was to be The Day. During the night of Friday to Saturday the Czechoslovakian Government called to the colours three classes of reservists, amounting to not much less than 100,000 men. At the same time they announced that this move was not directed against any foreign country but was for the purpose of ensuring law and order during Sunday's polling. This assurance was fulfilled; for the troops assisted the police in keeping order on polling day, with the happiest results. On Saturday morning, near Eger, which is Herr Henlein's stronghold in the extreme north-west corner of Bohemia, an incident had occurred which threatened to be a spark on tinder. A couple of Sudetic German farmers, riding a motor-cycle and heading for the frontier, were challenged by a Czech gendarme. They failed to slow down at his warning, and were then shot by him and mortally wounded—according to the gendarme's account,

unintentionally, since he had aimed at the tyres and not at the riders.

On that day the French Government once again declared categorically that, if Germany were to commit aggression against Czechoslovakia, France would honour the Franco-Czech mutual assistance treaty. On Saturday, likewise, the British Ambassador paid two more calls on Herr von Ribbentrop. The first time he apparently repeated his inquiry of the preceding day, and again received the same assurances as before. On his second call he would appear to have made it clear to the German Foreign Minister that, if war broke out between Germany and France in the circumstances envisaged by the French Government, Germany would find both the two West European Powers in the field against her.

Meanwhile, Herr Hitler had summoned his advisers to him at Munich, and by Saturday night he seems to have taken the decision not to cross the Czechoslovakian frontier in these circumstances. No doubt this decision was not arrived at without a struggle. Herr Hitler's military advisers were, it is safe to guess, once again all in favour of caution. As for Herren Goering and Goebbels, a study of their respective newspapers indicates that the former pressed for military action, but that the latter sat tight on the fence. In any case, counsels of prudence prevailed. The next day, Sunday, the first batch of the Czechoslovakian municipal elections duly took place and went off quietly. On Monday afternoon Herr Henlein flew back from Germany to Prague and immediately entered into conversations with M. Hodza. By Tuesday morning it was being reported that the German troops were being withdrawn again from the immediate neighbourhood of the frontier. In Downing Street on Sunday afternoon there had been an emergency meeting of the Cabinet, but in the House of Commons on Monday the Prime Minister was already able to report that the situation was somewhat easier.

After this spate of political transactions, how does Europe's balance sheet stand? It seems certain that the German policy of the *fait accompli*, through a parade—or in some cases the actual use—or force has this time received a setback, the first really serious setback since Herr Hitler's advent to power. But this does not mean that we are out of the wood. In the last chapter of the story, the failure of the Agadir *coup* of 1911 did not avert the catastrophe of 1914, and the foreign policy of Germany is possibly at the mercy of hotter heads to-day than it was then.

This week, as in 1911, the display of the mailed fist has produced the exact opposite of the result that was intended. It has brought out the courage, coolness and competence of the Czechs; the determination of France; and, what is more, the apparently equal determination of Great Britain not to stand by with arms folded if Germany confronts them with the choice of making common cause in the defence of European liberties or suffering Europe to fall under a German military hegemony. Nor can the results of the elections in Czechoslovakia, as far as these have gone, be particularly gratifying to the Nazis. Herr Henlein's party—whose pressure on the electors of the German regions, though severe, has been restrained in the final stages by the presence of the military—seem to be winning, on the average, about 88 per cent. of the total Sudetic German vote. That is an imposing majority. It may not, however, seem so to Reichsdeutsche, whom Herr Hitler has now accustomed to a 99 per cent. standard; and there is the hard fact that about 12 per cent. of the Sudetendeutsche have still sufficient belief in the future

of the Czechoslovakian Republic, to vote against the Henlein ticket.

It is now certain that Herr Henlein can obtain by negotiation, if he chooses, every right and facility that can reasonably be demanded for the Sudetic Germans on democratic principles. The British and French Governments, which have been steadily urging the Czechoslovakian Government to go to the furthest possible extremes of concession, have both now publicly expressed the view that Prague is doing all that they could ask. Every Sudetic German citizen of Czechoslovakia has the prospect of living his life as "a first-class citizen" henceforward. But to the Prague Government's far-reaching concessions there are definite limits. The Sudetic Germans are to enjoy these full liberties within the framework of a democratic Czechoslovakian commonwealth; and this means that there can be no totalitarian tyranny of a Nazi majority over a democratic minority in the German districts, and no tampering with the internal or external security, or the foreign policy of the Republic.

Will Herr Henlein accept M. Hodza's offer on these

terms? If he does accept it, will he keep his side of the bargain? Will Herr Hitler, for his part, renounce his ambition to incorporate the Sudetenland in Germany or alternatively to make the Henleinists into an instrument of the Reich for dominating Czechoslovakia? At the moment, maybe, the answers to these questions are unknown, even to Herr Hitler himself. But at least this week's events will have made him realise that circumstances alter cases. In the case of the Rhineland, and also to some extent of Austria, there has been a strong undercurrent of opinion in many countries—and certainly in Great Britain—that Germany had not been reasonably treated, and that Herr Hitler's breach of treaties was largely brought about by the short-sighted action of the victors of the Great War and their unwise delay in correcting the mistakes of the past. The Czechoslovakian affair is on a different plane. While everyone will wish that the utmost fairness should be done to German communities outside Germany, the forcible coercion of an independent State is not to be tolerated. If external dictation were once permitted to succeed, the basis of international stability would be completely undermined.

The First Minister of Health

THERE is a growing tendency to assume, as a matter of course, that it is the responsibility of corporate effort to guarantee that the basic needs of every citizen will be satisfied. The State allows no one to starve. The existence of unhealthy houses or workplaces is forbidden by law. The Government administers a vast range of services to safeguard public health and industrial welfare and to provide education for the young and maintenance for the aged, infirm and destitute. Charity survives, but is small by contrast with these nationwide social services.

It was not always so. The celebration this week of the two-hundredth anniversary of John Wesley's conversion, at a meeting place in Aldersgate Street, on May 24, 1738, serves to remind us of the tremendous efforts made in the past by private individuals to create a public conscience in matters of health and welfare. The beginnings of the social services of to-day were made by voluntary organisations in the years of industrial revolution and political change. The remarkable campaign in the nineteenth century to keep pace with the sweeping effects of industrialisation upon the life of the people was very largely stirred into action by a great religious motive, spread abroad by Wesley's Methodist Movement. Though John Wesley has been commemorated, this week, mainly as a religious teacher, his place in the annals of social service is well assured. Sir George Newman himself, for long chief medical officer of the Ministry of Health, has ranked Wesley among the great pioneers of the national health movement. And the work of Wesley's disciples and associates in the parallel fields of education, factory legislation, prison reform and general welfare is equally conspicuous.

In 1703, when John Wesley was born, Queen Anne's England stood half-way between the forest wilderness of Anglo-Saxon times and the spreading town life of to-day. When he died, in 1791, the first shock of the Industrial Revolution had been felt. With iron and steam and the factory system had come changes in thought and sentiment. Men were massed together, frequently in distress and discontent; and the hard lot of the urban poor was suffered by more people than ever before.

In these conditions Wesleyanism, and the "species of Anglican Methodism" constituted by the Evangelical churchmen, played a dual rôle. To the poor in the industrial

centres they gave a moral energy which encouraged them in self-help. To the rich they gave an impetus to philanthropy and social reform from which, in the next century-and-a-half, came the movement against slavery, the beginnings of popular education, the reform of prisons, the Factory Code—in a word, the foundations of the vast edifice of social services which, in the modern state, belong to the citizen in his own right.

How much Wesley's pioneer endeavours owe to the work of other leaders of English life and thought, whose religious views were not necessarily his own, it is difficult to estimate. Bentham combined with him to condemn that "execrable villainy," the slave trade. Radical free-thinkers, Whig philanthropists like Fox, Tory humanitarians like Pitt, and Evangelicals like Wilberforce, worked side by side in a united front to eradicate social injustices. Methodists, Churchmen, Quakers, Baptists, Liberals and atheistical Radicals co-operated to breathe the spirit of reform into England's laws after 1800.

The religious and philosophical reformers of the late eighteenth and early nineteenth centuries did not merely inspire humanitarian reforms from above. They generated constructive and constitutional movements among the poor themselves. Wesley's genius for organisation at least equalled his genius for preaching; and every Englishman since his time who has organised a campaign of propaganda has copied, intentionally or unintentionally, his model. Working-class religion became identified with the organisation of working-class politics. The Wesleyans carried on the Franciscan tradition. Their workshops were fields, gardens, streets and market places, fairs and race-courses. "All mines and subterranean places belonged to them," said Sydney Smith. The Ten Hours Movement to reduce hours of work in factories, the Anti-Slavery Agitation and the Anti-Corn Law League owed much of their method and effectiveness to the Methodist tradition and to the Evangelical party's mode of propaganda.

Middle and working-class political activity in the nineteenth century derived its character from these models. Most of the leaders of the early trade union movement were local preachers. The founders of the Labour Party—Burt, Fenwick, Hardie, Snowden, Henderson and MacDonald—were trained in institutions which were the result of Methodism.

It is not the least of the merits of Dr Bready's comprehensive study of Wesley's work* (which has just been published) that it describes the many and varied fields in which the seeds of voluntary organisation and social service have been sown. Sunday schools, day schools and ragged schools, all owed a great deal to Evangelical zeal between 1780 and 1870, before the State stepped into the field of popular education. True, the reform of prisons and the penal code owed much to arguments by Bentham and Romilly; but the visitation of prisoners in "places worse than any this side hell" was among Wesley's earliest labours; and John Howard, whose seventeen years' crusade revealed the hideous conditions of prison life, was an Evangelical. The regulation of working hours and conditions for women and children in factories and mines, the protection of children against the abuses of chimney-sweeping and gang labour in agriculture, the beginnings of decent housing for the working classes, and the foundation of public health legislation—all these were wholly, or in part, the work of a great Evangelical, Lord Shaftesbury.

The "master curse" (Lecky's phrase) of the eighteenth

Essays in Autarky

Germany's Oil Supplies

WHEN Herr Hitler took power, two of his avowed and immediate objectives were to make Germany's fighting services powerful and her industry active. The mechanisation of the Army and the rapid extension of the Air Force have been incidental to the former purpose, while the development of the motor industry and the provision of an entire network of new roads have contributed materially to the latter objective. But fighting forces and motor vehicles alike are paralysed without oil; and Germany's imports of oil, like those of Italy's (whose difficulties in this respect were discussed in *The Economist* of April 9th, page 11) would be liable to interruption in wartime if a hostile Power enjoyed command of the seas. It is therefore scarcely surprising that measures were devised to encourage the production of oil from Germany's substantial coal and lignite resources, and that plants were put down for this purpose, before even the Four Year Plan for self-sufficiency in a wide range of materials was announced. In September, 1936, Herr Hitler announced that within eighteen months Germany "would be under no compulsion to import any petrol at all." Those eighteen months have now passed and we may review the position.

A preliminary warning is necessary. Last year Germany's consumption of all oil products amounted to 5,420,000 tons. Herr Hitler, however, referred only to petrol, and of last year's total oil consumption no more than 2,600,000 tons was of light motor fuels (i.e. petrol or petrol substitutes), the rest being of heavier oils. Since the processes for extracting oil from coal can be varied to produce some of these heavier oils in fairly substantial quantities, and since no figures are published of existing production, it is not possible to do more than estimate whether the capacity of her plants puts Germany in a position to be independent of petrol imports.

Germany's first source of supply is her own wells, which in 1937 provided 453,000 tons of crude oil. The maximum amount of petrol obtainable is unlikely to have been more than 100,000 tons. Production has been steady during the last three years, in spite of intensive search for more fields, and is unlikely to be greatly increased.

The coke ovens and gasworks of the country are a second source of supply, from which was obtained last year about 420,000 tons of benzol—a spirit which may be

century was drunkenness; and from the voluntary educational activities of the Methodists and Evangelicals grew the Temperance Movement. William Booth, founder of the Salvation Army between 1864 and 1878, was an ordained Methodist minister; while it was after a thorough-going conversion in 1862 that Thomas John Barnardo founded his homes for destitute children. The list of nineteenth-century pioneers might be indefinitely extended, but these striking examples are sufficient in themselves to show that, before the elaboration of State social services on the scale on which we know them to-day, public life in Britain had been notably marked by these spontaneous and voluntary campaigns. They are a quality of British democracy, and a distinct derivative of Methodism.

The movement Wesley began two hundred years ago has proved to be a revolution in itself. The dogmatism and emotionalism of Methodism's early days have been more than outweighed by the movement's moral and social achievements. If "Wesleyanism and Industrialism made a new world 'twixt Trent and Tweed," it was a far better world than it might have been because of the leadership of the sincere, courageous, single-minded and determined preacher, whose conversion is being commemorated this week.

mixed with petrol to form a suitable motor fuel. Since benzol is a by-product, however, production cannot be increased very considerably in relation to the country's total requirements, although the further growth of the iron and steel trades may provide some expansion. In common with many Continental countries, again, Germany insists that petrol for sale as motor fuel should be mixed with alcohol. The object of this measure is usually to provide an outlet and a hidden subsidy for agricultural products which can be distilled to manufacture alcohol. In Germany to-day, however, potatoes (the product chiefly concerned) have become too valuable for human and animal consumption to leave any considerable margin for distillation. Consequently last year's total production of 210,000 tons of alcohol will almost certainly not be surpassed.

These three sources, therefore, are unlikely to provide for more than about 750,000 of the 2,600,000 tons which were needed to supply Germany's requirements last year. There remains to be considered the synthetic production of petrol. At the end of 1935, the capacity of plants to produce synthetic oils, either built or building, was about 900,000 tons. There were five hydrogenation plants with a capacity of rather less than 800,000 tons and four plants using the Fischer Tropsch process with a capacity of rather more than 100,000 tons. These should now be completed, and for the purposes of this article we may presume that they are working to capacity. At the beginning of 1937 it was announced that additional plants were to be constructed, but no details were given. However, at the end of the year the International Hydrogenation Engineering and Chemical Company made it known that, on reliable data, the total capacity of hydrogenation plants built or under construction was 1,900,000 tons, and of Fischer Tropsch plants 700,000 tons. The additional plants, however, could not have been in operation in 1937, and production at the end of that year cannot have been at a higher rate than 900,000 tons per annum. This, with other home-produced supplies of light motor fuel, would have placed Germany in a position, at the beginning of 1938, to supply about 1,650,000 tons by her own efforts. For 1938, the Hydrogenation Company estimates that total production by hydrogenation and Fischer Tropsch processes will amount to 1,150,000 tons—only 250,000 tons

more than our estimate of the rate of production at the end of 1937. This would allow a total production for 1938 of rather less than 2,000,000 tons, which is still 600,000 tons short of the total consumption of 1937.

It may be said therefore, with some certainty, that the Fuehrer was over-optimistic in his forecast for the spring of this year. But what of the future? If all the plants announced in 1937 were working to capacity—as they might be, at the earliest, some time in 1939—Germany would be in a position to produce from indigenous materials the following approximate quantities:—

	Tons
By hydrogenation of coal and lignite	1,900,000
By Fischer Tropch process with coal and lignite	700,000
By benzol extraction	600,000
By alcohol production	150,000
By refining indigenous crude oil	150,000
	3,500,000

It may be supposed that if these plants are working to capacity by the end of 1939 this amount would be produced in the year 1940. What is consumption likely to amount to in that year? An estimate has been made recently, in a semi-official German publication, by Major-General Loeb, director of the Chief Department for German Raw and Working Materials in the Ministry of Economics, who has computed that during the course of the Four-Year Plan, from 1936 to 1940, consumption of light motor fuel would increase by about 33 per cent., i.e. to about 3,000,000 tons. Our estimate of domestic production capacity of 3,500,000 tons in 1940 affords ostensibly a margin of 500,000 tons, which would be available, e.g. to meet Austrian consumption. All our figures refer to Germany without Austria.

At the first sight, therefore, it may appear that by the end of 1939 Germany may no longer be "under compulsion to import any petrol at all." But all her production will not be of petrol, nor will her consumption of other

oil products have remained stationary. Major-General Loeb calculates that consumption of Diesel oils in 1940 will be 50 per cent. higher than in 1936, at 1,580,000 tons, and that of lubricating oils will be 25 per cent. higher at 575,000 tons. If we may arbitrarily assume an increase in consumption of other oils of 20 per cent., the total requirements of Germany without Austria in 1940 would be:—

	Tons
Light motor fuel.....	3,000,000
Diesel oil	1,580,000
Lubricating oil	575,000
Other oil products	1,370,000
	6,525,000

In other words, if Germany is to be independent of all oil imports in 1940, the new plants which, it is known, are being built in addition to those announced in 1937, would need to have a capacity very nearly as great as all those built or under construction at the beginning of this year. And it is certain that they have not that capacity.

The merits of the scheme, as an insurance against war-time shortage, may be viewed in perspective by recalling that published estimates of the oil requirements of a Great Power, for all purposes, in any major war, vary from 15 million tons to 30 million tons per annum.

Finally, the factor of cost must be considered. No official figures have been given, but it has been calculated that by tax exemption and preferential railway rates home-produced motor spirit is subsidised in Germany to an extent equivalent to £21 5s. per ton. With this assistance, Germany may be producing sufficient motor spirit for her requirements in 1940. The race between domestic production and increasing consumption, however, will be unending. And on its present scale the industry will be quite inadequate to produce more than a small fraction of the oil supplies necessary for the prosecution of a major war with modern equipment.

Topics of the Week

Another Air Debate.—On Wednesday night Mr Hugh Dalton introduced the Labour Party's motion in the Commons, which was to have been debated on the Thursday of last week. The motion was based on public concern about our air defences and required an immediate independent inquiry into the administration of the departments concerned. The most striking part of Mr Dalton's effective speech was that in which he declared that Time, instead of working for this country was working against it; and that the German Air Force, on the basis of even the latest programmes, was bound continuously to overtake the British. "The Government," said Mr Dalton, "has now retreated from air parity as the purpose of its policy." He went on to catalogue the deficiencies in our programme: lack of blind-flying apparatus, of gun turrets, of machinery to make such equipment, of machine guns, of inspectors, and of technical knowledge at the Air Ministry. The defences of London had been grossly neglected; and as for Scotland and the North of England, if it were widely known how shocking were the provisions for their defence there would be an outburst of indignation. On these grounds he demanded the inquiry, which should cover not only supplies, but organisation of the Air Ministry and all forms of defence against air attack. He chiefly impressed the entire House with his demand for a Ministry of Supply comparable to the Ministry of Munitions during the last war and with complete control over all stages of manufacture. The Prime Minister described the motion as a vote of censure, for it demanded an independent inquiry into the state of our air defences and strongly criticised the Government's actions. He described the existing Air Force as one of which any country might be proud, and he declared that "if it were put to the test to-morrow with whatever deficiencies there might be it would

prove to be one of the most formidable fighting machines in the world." No inquiry, he said, could help to achieve an ideal Air Force. He defended Lord Swinton as being unable to answer for himself in the Lower House; said that many of our difficulties were due to a transition from multi-type manufacture to standardisation of a few types; and rejected the demand for a Ministry of Supply by briefly describing the co-ordinating organisation now in existence, especially in respect of supplies of raw material to manufacturers. "I think in actual war a Ministry of Supply would be essential—indeed, we have plans ready for such a Ministry which could be put into operation at once in such circumstances—I do not believe that a Ministry of Supply in peace-time is going to be as effective as the Ministry of Munitions was effective in the Great War unless you give that Ministry of Supply the same powers as the Ministry of Munitions had in time of war. . . . I doubt very much whether we should be justified in asking for such powers; or whether if we did ask, Parliament would give us such powers in time of peace." Mr Chamberlain did not like comparisons with the German Air Force; he much preferred general statements "which cannot be taken as in any way a challenge to anybody else." Sir Archibald Sinclair rightly pointed out that not only would the Ministry of Supply ensure efficiency and economy, but its wide compulsory powers could always be held in reserve unless absolutely necessary.

Mr Churchill and the Air Minister.—Mr Winston Churchill thought the inquiry demanded by the motion would not really deal with the important trouble, which to him was the question of supply. Supply should be entirely

separated from the Air Ministry; it would have been better were Sir Kingsley Wood appointed Minister of Supply and Lord Swinton left to organise and perfect the R.A.F. He deprecated the change of Ministers without a change of functions; for that would mean inefficiency during the next few months. Mr Churchill chaffed his "unfortunate friend," the Minister for Co-ordination of Defence, who had no executive powers and who moved in a "jungle of committees." Only a Ministry of Supply would solve the problem; and the Prime Minister's suggestion that the Opposition would oppose the granting of the necessary powers was not Mr Churchill's view. Sir Kingsley Wood had little to add to the Prime Minister's remarks, beyond promising to bend all his energies to the task he had assumed. He welcomed Lord Nuffield's acceptance of the Government's invitation to co-operate; and added that Lord Nuffield had undertaken to produce airframes and machines. The debate ended, as it began, in a friendly and co-operative atmosphere. But though the Government treated the motion as a vote of censure and thereby defeated it, the debate did little to allay the growing concern in Parliament and the country over the supply side of the air programme; and very little was said by Government spokesmen about air defences.

* * *

Re-armament and the Trade Unions.—The all-important part of labour in speeding up the manufacture of arms has still to be defined. On Wednesday, the long-awaited meeting between representatives of employers and employed in the engineering industry took place; and, on Thursday, the General Council of the Trades Union Congress met the Prime Minister to discuss "the Government's request for their goodwill and co-operation in acceleration of the re-armament programme." Rejecting proposals for the establishment of a Ministry of Supply in Wednesday's debate on air defence, the Prime Minister made it clear that for the Government to seek "the power of relaxing trade union practices and regulations, the power over strikes and the power over dilution," which were secured during the last war, was in peace time, both impracticable and undesirable. With this assurance, the engineering unions may draft their policy, with no more delay than the time needed to obtain the sanction of their members for the steps they propose to take. On Wednesday, spokesmen for the Amalgamated Engineering Union and the Confederation of Shipbuilding and Engineering Unions informed the employers that they wished to be satisfied that full use was being made of the industry's available labour; and reiterated their demand that any relaxation of union conditions of work should be accompanied by firm guarantees of their restoration. On the face of Mr. Chamberlain's statements in the Commons debate, there need be no immediate apprehension on the workers' part of any move to undermine the status of the unions. On the other hand, the need for some relaxation of union regulations cannot be long delayed if the widespread wish for an adequate speeding up of re-armament is to be fully satisfied. Moreover, it can hardly be disguised that the unions are as anxious about the objects of re-armament as about industrial procedure. On Wednesday, the employers and, on Thursday, the Prime Minister, were plainly shown that organised labour, though more than willing to make arms in greater quantities and more speedily, are not ready to co-operate freely until doubts about the Government's foreign policy have been reasonably allayed. Mr Chamberlain did something to dispel these fears, but left his hearers unconvinced about the Italian agreement and Spain.

* * *

Negotiations in Prague.—The press and people of the Czechoslovak capital warmly responded to their Government's emergency measures last week-end. This explains the strengthening of the Liberal parties, the weakening of the Agrarians, and the great increase in President Benes's popularity. As has long been noted in these columns, the Government's anxiety

to avoid any charge of repression in the Sudetenland had led, by last week-end's elections, to a grave situation in which the police and gendarmerie were paralysed in their activities and subjected to humiliation and abuse. On Friday of last week, on information received, the civil authorities were authorised to restrain acts of provocation and any flaunted illegalities. The Czech Government, fearing a repetition of the Austrian precedent, authorised the General Staff to occupy strategic frontier posts and call up about 100,000 reservists. For the last few weeks the presence of S.A. groups and camps, and of S.S. detachments, on the Czech-German frontier—i.e. within the 15 km. zone outside which General Goering had undertaken to keep the Reichswehr troops when Austria was being invaded—was attested by journalists and travellers. Even tanks were seen. The Czechoslovak population, critical of the former bearing of their Government, breathed a sigh of relief when firmer measures for the security of the State and its frontiers were taken. The young reservists joined their detachments, and the entire military process was quietly and efficiently completed, in the night of Friday to Saturday of last week. As one American journalist remarked: "Czechoslovakia learned a lot from the fate of Austria." The immediate result was to ensure the calmness of the elections and to facilitate the almost superhuman task of the civil officials.

* * *

The attitude of Herr Henlein to the Prague Government has apparently changed for the better. The Minorities Statute is, quite properly, being hammered out on a basis which will permit all minorities, and not only the German, to profit equally and equitably from it, and yet preserve the integrity of the State and its authority. On Wednesday, Herr Henlein and the Prime Minister, M. Hodza, had a long talk, which is a good sign; for Herr Henlein was in German-Austria all the election week-end; and though he may still be forced to stand pat on all his Carlsbad demands of April 24th last, it is now evident that two of them at least—for German control of foreign policy and for German control of the military security of the Sudetenland—cannot be met. They are not, in nature, minority rights at all.

Riots in Jamaica.—Eleven months ago, the British public was shaken from its usual contented ignorance of affairs in the Crown colonies by news of grave riots in Trinidad. Early last February, the report of the Royal Commission appointed to inquire into those events was published. The report censured, not only the handling of the immediate situation, but also the general social and economic conditions in the colony and the administration which was inadequately fulfilling its duty to ameliorate them. This week has brought news of

rioting in Jamaica, another West Indian island. The disturbances arose out of a labour dispute on the water-front, where workers demanded an increase of wages and struck when it was not granted. They then sought to promote a general strike, and many municipal workers in Kingston are refusing to work. In the resulting state of tension, hooligan elements are reported to have fomented disorder, and the police were obliged to fire, killing several people. The exact connection between the rioting and the original labour dispute is not clear, but the example of Trinidad suggests that two simultaneous lines of action are necessary: unflinching use of the law against incitation to violence, and a thorough-going examination of the social and economic needs of the working population whose discontent has taken this dangerous form of expression. The colonial Government has taken due measures to quell disorder, including the summoning of a cruiser from Bermuda. For the moment the situation appears to be quiet; but its deeper causes have yet to be removed.

South Africa United.—The early returns in the South African general election were not misleading. The United Party finally secured no less than 111 seats in a House of 150—a total only 5 less than the number they held at the dissolution, when one seat was vacant. The Nationalists, with 27 seats, have increased their representation by seven, and the Dominion party have now eight seats instead of five. Neither of these groups, however, proved itself to have a nation-wide appeal, and the Dominion party in particular has been exposed as little more than a Natal faction. The Labour party lost one of its four seats, and the Independents were reduced from four in the old House to one in the new. Of the total poll, the United party secured 53 per cent., the Nationalists 31 per cent., the Dominion party 7 per cent., Labour 5 per cent., and others 4 per cent. Hence, even on a proportional representation system the Government of General Hertzog and General Smuts would have obtained an adequate working majority over all others. This is the more evident since on most important issues the Opposition parties are even more opposed to each other than to the Government's middle way. The election results are a triumph for the spirit of national unity in South Africa which cuts across racial divisions—a spirit which General Botha did more than any other man to instil. Since the Government was branded by its opponents as negrophile, the results may also reflect a slow trend towards a more liberal outlook on native affairs in the Union.

Mexican Ferment.—The aftermath of President Cárdenas's expropriation of the foreign-owned oil companies, and of the economic deterioration which set in after the slump of the peso and the official suspension of the American Treasury's silver-buying policy, has come quickly. It looks like a nasty brew. First, despite the President's bearding of General Cedillo in his lair at San Luis Potosí towards the end of last week, and his suspension both of the General and of the Governor of that State, General Cedillo has openly flouted the Federal Government's authority and taken to the hills. In these fastnesses, in the central high plateau which skirts the Pan-American highway and the east coastal strip, General Cedillo and his accomplice, the Governor of the State, have been harrying communications by rail from Tampico to their important mining State, and they have also, so it is reported, over 50 modern aircraft of German and American make at their disposal. San Luis Potosí is a remote State, and it is badly served by communications. It lies on that central escarpment behind which most of the Mexican revolutions since 1910—and a good many before that—broke out. The importance of General Cedillo's revolt lies not in its own strength (which is very limited) but rather in the harassing flood of banditry which it has already begun to let loose. This will gravely embarrass the Federal Government of President Cárdenas

at a time when, owing to the urgent problem of the disposal of Mexican oil and silver, it is vitally necessary to maintain at least the foreign tourist traffic which has grown so rapidly during the last three years. The President may be able to enforce his writ against one recalcitrant General; but if growing economic discontent brings growing political discontent in its train, Mexico might be paralysed by internal dissensions as she has unhappily so often been in the recent past.

Railwaymen's Claims.—The signs of an appreciable recession in British trade are unmistakable, as we show in our Monthly Supplement, published this week. As usual, the railways have been among the first to feel the effects of declining business. In recent weeks, goods traffic receipts have been below the level of comparable weeks last year, despite the 5 per cent. increase in charges imposed in the meantime. Expenditure has increased with the price of commodities, now that the railways' favourable long-term contracts for coal and materials have run out. And the wages agreement negotiated last August involves an extra £2½ millions expenditure in a full year. From the railways' point of view, therefore, the moment may appear wholly inopportune for the lodging of claims for increased wages. The National Union of Railwaymen have, however, asked for a minimum weekly wage of 50s.; the Associated Society of Locomotive Engineers and Firemen for increases of about 1s. a day for drivers and motormen, and corresponding advances for firemen and cleaners; and the Railway Clerks' Association for an increase of £20 in maximum annual salaries and a 40-hour week. All three unions claim a fortnight's holiday with pay and improved organisation of night and Sunday work.

Intrinsically, these demands deserve every sympathy. Financially, they are appropriate to a period of rising rather than of falling revenue. Their cost has been estimated at £3 millions each year, apart from any corresponding concessions to signalmen and shopmen. The railway workers suffered in 1931; and, rightly, the fruits of the recent economic recovery were largely devoted to restoring their wages and improving their conditions. The stockholder has not been similarly cared for, and to concede even a tithe of these demands would involve further sacrifices on his part, for which it would be difficult to find justification in equity. Indeed, it may not be unfair to presume that the unions' main object in making these demands is tactical; that they are designed to forestall any move, in the face of recession, to cut wages, and to stake out a claim for the future. The issue will not be finally decided until the autumn; but financial considerations are likely, on this occasion, to be decisive.

Milk Prices.—The drought has not yet broken. Its destructive effects on hay and grazing have endangered summer supplies of milk. The surplus usually available for creameries at this time of the year is not forthcoming; and prospects for holiday supplies are not encouraging. The Milk Marketing Board has, accordingly, approached the Central Milk Distributive Board with a view to increasing the contract price to be paid to producers during June and July, which was recently reduced from 16d. per gallon in April to 13d. for the ensuing three months. Farmers are already feeding winter rations to their cows in an endeavour to maintain supplies, and the proposed increase in the wholesale price is designed to stimulate their efforts. The advance would be passed on to the consumer in the form of higher retail prices; and would involve, during June and July, a return to the winter price of 7d. a quart, instead of the present summer price of 6d.—or, in some rural areas, 6d. instead of 5d. Existing milk prices are already too high, largely because of the unduly high cost of distribution. The proposed increase, however, is intended to assist producers at a time of unmistakable emergency, and in so far as the drought has made it necessary, cannot be gainsaid. Nevertheless, the need for raising the summer price of

this essential foodstuff at least emphasises the urgent necessity of cutting the cost of milk distribution to the lowest economic level as soon as possible.

Japanese Cabinet Crisis.—On Thursday yet another of those convulsions in Japanese Cabinets, which have generally preceded or followed military surprises on the Asiatic Continent, shook the Administration of Prince Konoye. And this time, again, the aftermath of military disappointment has been a strengthening of the extreme militaristic element in the Government. The military party, led by the younger officers, have been responsible for the invasion of Manchuria, the abortive rebellion of eighteen months ago, and the present war against China. Yet this latter adventure has turned out to be much more formidable, to have lasted longer, and to have been less successful than its instigators imagined. Though Prince Konoye's earlier Cabinets had tried to retain the reins of Government, and especially of foreign policy, in civilian hands, they were forced, only a few months ago, to introduce legislative decrees mobilising the entire industrial and civilian life of Japan. Now it is reported that Mr Hirota, hitherto Foreign Minister, is to be dropped in favour of General Ugaki, a former War Minister; and that General Araki, another former War Minister, is the new Minister of Education. Thus, five of the chief Cabinet posts will be held by officers of the army or navy; and it is rumoured that General Ugaki may soon overstep Prince Konoye's threshold into the Prime Ministry.

The "Underground" Collision.—Although part of the evidence at the official inquiry into last week's Charing Cross accident was taken *in camera*, sufficient was given in public to throw some light on the cause of the disaster. There was no failure in the signalling system as such. And Mr Burgin made it clear, in the House of Commons this week, that considerations of safety had not been in any way subordinated to those of expediting traffic. It appears that, during the night before the accident, certain work on the signalling system was in progress. In the course of this work a wrong connection was made in the wiring at Charing Cross. The normal check test required and provided in connection with such work also failed. Consequently, the east-bound starting signal at Charing Cross failed to give security. It was also stated that there was no explosion or fire subsequent to the accident. Another question which arose was whether the driver of the colliding train had any chance of seeing the tail-lamp of the stationary train in time to avoid a collision. The inspecting officer decided to make the experiment himself at the scene of the accident during a quiet period on Sunday morning. The inspector's report on the accident, with his recommendations for the prevention of a similar disaster, will not appear for some little time, but the evidence already published suggests that every east-bound train that morning, up to the time of the accident, was in turn exposed to danger as it travelled from Charing Cross to the Temple. The implications of the possibility that the apparatus can be connected up wrongly, with such dire results, will doubtless be discussed in the Inspecting Officer's Report.

Spanish Stalemate Again?—The Spanish issue is still unresolved. It now seems clear that, when Signor Mussolini made his overture to Mr Chamberlain, he believed that a complete victory was already within General Franco's grasp, perhaps within the ensuing few weeks. When the time came for the opening of negotiations between Italy and France, the Italians accordingly insisted on excluding Spain from the agenda on the ground that the Spanish war was now virtually over. The French took the Italians at their word, and proceeded to act on the principle that, if non-intervention was to be construed by Italy to mean intervention, France was entitled to secure for herself most-favoured-nation treatment. Accordingly, a French, as well as an Italian, channel seems to have been opened for the passage of arms to Spain—though the material

entering from France appears to have come almost entirely from countries east of her (not excluding Germany, it is said). In order to counter this threat to Franco's military ascendancy, the Italians rushed in arms, for their part, in sufficient quantities to postpone the entry into force of the Anglo-Italian agreement. But these Italian efforts seem to have been in vain. The insurgents' offensive has come to a halt, and now the Government forces are counter-attacking on the northern part of the Catalanian front.

Signor Mussolini is therefore to bring before the non-intervention committee his claim that non-intervention spells non-intervention by non-Axis Powers only. But, in spite of British endeavours to bring the French at least part of the way towards acquiescing in this preposterous view, M. Daladier and the French General Staff may prove unexpectedly stiff in holding out for the principle of most-favoured-nation treatment. Their stiffness will be fortified by the increasing number of reports of German military preparations on General Franco's side of the Pyrenees—particularly the laying out of aerodromes within close bombing range of Southern France. Signor Mussolini's desire that England and France should connive at a quick victory for himself in Spain may be attributed to a wish to give his own people peace without loss of face. Franco is reported to be not unwilling to part with his Italian infantry, but to be by no means enamoured of the suggestion that he should try to take Madrid and Barcelona by storm, in order to end the war quickly for Mussolini's convenience. The Peninsular War seems to be working out entirely according to precedent.

Sugar Beet in Germany.—The first German beet sugar refinery was built at Quedlinburg, near the Hartz Mountains, in the eighteen thirties. During the intervening century, the German beet industry was developed, with the assistance of subsidies, import taxes and export bounties, to such an extent that 2·7 million metric tons of raw sugar were produced in 1913-14, of which 0·5 million tons were exported. Since the war, the area under

Thousand Metric Tons of Raw Sugar				
	1913-14*	1929-30	1932-33	1936-37
Estimated total consumption	1,430	1,655	1,460	1,807
Production from beet.....	2,716	1,985	1,091	1,810

* Pre-war boundaries.

sugar beet has not regained the half-million hectares of 1913, though Germany recovered her position as a net exporter of sugar on a somewhat smaller scale. For this foodstuff, Germany was therefore already self-sufficient before the advent of Herr Hitler, but nevertheless the production of sugar beet is being expanded. It is hoped that the shortage of fats may be alleviated by an increased consumption of sugar, while the beet tops will supplement the limited supplies of fodder. The area under sugar beet, which had fallen from 433,000 hectares in 1929-30 to 221,000 hectares in 1932-33, rose to 400,000 in 1936-37; practically all of the 1·8 million tons produced in this last year was marketed in Germany. Under the influence of better employment, the *per capita* consumption of sugar increased from 21 kg. in 1931 to 22·5 kg. in 1936 and the rise is expected to continue. Even so, consumption is low compared with other countries, largely because the official price is held at a relatively high level. According to evidence laid before the International Sugar Council of last year, retail prices of sugar in Germany are three times as high as in the United Kingdom, where the *per capita* consumption is double that in Germany.

Hope Deferred

NEW YORK, May 17.—The second quarter of the year is now half over, and so far it has recorded another disappointment. When the first quarter showed stability without recovery, the hopes of a speedy revival, which were widespread at the end of 1937, were transferred to the second quarter, and one heard on all sides the confident prediction that, by May at the latest, a pronounced upturn would be under way. May is half gone, and there is not a vestige of tangible evidence of betterment. Now, there is an almost universal belief that, by August, the recovery will commence and business will be good in the autumn.

The actual level of business activity is distressingly low—so low that no one can contemplate its duration without grave misgivings. The current level of the index of production, at about 80, is considerably above that of 1932. But, in at least one major industry, and in many minor and perhaps localised occupations, conditions are worse than in 1932. The major example is the railways. Car-loadings are still above the lowest levels of 1932, although the average of the first quarter of this year was very near to that of the first quarter of that year. But the net income of the companies to date is far below that of 1932; and the total market value of the American railway system to-day is less than in 1932.

Serious Unemployment

Unemployment is estimated at figures comparable to those banded about in 1932; and it is possible that these estimates are broadly correct. On the other hand, the number of employed seems greater, for the index of factory employment has closely followed the index of manufacturing, and stands just above 80, compared with an average of 66 in 1932. Factory pay-rolls, at over 70, are far above the average of 46 recorded in 1932. In short, the depression has affected corporate earnings more severely than it has affected production, employment or pay-rolls, and comparisons with 1932 are complicated by the fact that, although more people seem to be employed than in 1932, it is possible that the number of unemployed may be greater than then, owing to the increase in persons of employable age.

For the unemployed, a variety of relief agencies has been created that was not in existence in 1932. But it appears that the personal resources of the unemployed are lower than in 1932. They were depleted during the previous depression, and were not built up again during the brief period of pros-

perity. The rural population is clearly faring far better than in 1932; and estimates made by the Department of Commerce suggest, for the first two months of 1938, a rate of national income as high as in 1936—a figure difficult to reconcile with published data of either pay-rolls or corporate earnings.

Altogether, it is not easy to make any clear and comprehensive statement about the present position of the American economy. Furthermore, it is questionable if any comprehensive statement would be valid. Conditions vary widely from one place to another. In the south-eastern States, it is said that conditions do not compare unfavourably with the middle twenties. But in business circles actual conditions are those of extreme depression, exceeded only by the worst months of 1932, but with sentiment sustained by the belief that the upturn will come by the autumn at the latest.

Prospects of Autumn Revival

One reason for the emphasis of the prophets on the upturn in the autumn is the tendency to marked seasonal fluctuations in the American economy. Spring and autumn are characteristically strong; summer and winter are characteristically weak. The seasonal activity in the autumn is largely a reflection of the harvests, which affect a considerable proportion of the population; the winter recession reflects the severity of the weather, which causes a suspension or serious interruption of outdoor employment, such as building. The spring revival reflects the resumption of outdoor activity and a busy seasonal trade in the motor industry. The temperature ranges between summer and winter in the United States are far wider than in the British Isles, and these have a real significance in the economic pattern of a year. Consequently, it is entirely logical in a poor winter to pin hope on a good spring; and, when this hope is dashed, to transfer it to the autumn. This may seem like a kind of naive determinism, but it has a fairly solid historical background.

There are other valid reasons for optimism. By the autumn, inventories will have been reduced to the point where replenishment will become urgent. In another three months, the spending programme will have produced visible consequences. The excess reserves will have evoked an expansion of bank credit. Above all, the Tax Bill, which has passed both Houses and is now awaiting the President's signature, will have released a stream of capital for industry.

The national income figures prepared by the Department of Commerce are of recent origin and promise to be of great value. They represent income paid out—i.e. wages and salaries, dividend and interest payments, entrepreneurial withdrawals and net rents and royalties. They are available

in dollar figures, but in the following table they are shown as percentages of the 1929 income:—

INDEX OF NATIONAL INCOME U.S. DEPT. OF COMMERCE
1929=100

	Adjusted for Seasonal			
	1935	1936	1937	1938
January	68.6	75.2	84.8	81.5
February.....	68.9	75.4	85.5	80.8
March	69.4	76.7	87.6	
April.....	68.9	76.7	87.1	
May.....	69.2	77.8	87.6	
June	69.2	79.3	87.8	
July	68.6	80.4	88.1	
August	70.4	80.5	88.6	
September	70.9	80.7	87.2	
October	71.6	81.6	86.4	
November	73.1	83.4	85.0	
December.....	74.5	84.6	83.8	
Average	70.2	79.8	86.6	

This series is much smoother and more continuous than movements of the index of production. Moreover, the decline since last August is vastly smaller than that in the index of production.

France

Stimulating Production

PARIS, May 25.—The second instalment of decrees, numbering 58, has just been published. These measures are classed under three heads: production, credit and social policy. As expected, the steps to be taken to stimulate production relate chiefly to building. The unhealthy areas of Paris are to be cleared. On the outskirts of the capital, speedways and by-pass roads will be constructed. Rural houses will be built, electrical power developed, irrigation schemes carried out and ports and harbours improved. In addition, the production of tea, rum and cotton in the colonies will be encouraged by loans.

Credits will be raised for the execution of these plans, which, before the end of 1940, will entail an expenditure of 11,000 million francs, of which 1,700 millions must be spent at once. Some 6,000 millions will be disbursed by the State, and the remaining 5,000 millions by public undertakings. The Treasury and Caisse des Dépôts, assisted by the Crédit Foncier and the Caisse des Prêts aux Communes, will be responsible for the financing of these enterprises.

In addition, further credits, amounting to some 3,000 million francs, will be made available to undertakings of sound standing at cheap rates. Increased production will be stimulated by the remission of taxes; and the making of payments by cheque is to be encouraged.

The third category of decrees deals with social measures. Seasonal modifications of the 40-hour week are to be instituted, and a maximum working year of 2,000 hours is laid down. Further laws will encourage scientific research, and the technical education of young workers.

Growing Confidence and Unity

The able and determined attempts of the Chamberlain Government to secure a peaceful settlement of the dispute between Berlin and Prague have made a deep impression in Paris. Every day, political realism in the field of foreign affairs, as distinct from merely ideological preoccupations, makes new converts. The markets were well pleased by the efforts of the French Press to avoid presenting the latest international developments as the success of one Axis over the other.

Moreover, the crisis provided the Government and M. Herriot with a further opportunity to emphasise the need for augmenting production. The newly-published decrees become more significant because public opinion now realises more than ever the need for such measures. This is as true of the politicians as of the Stock Exchange. The Left parties are still giving their moral support to the Daladier Cabinet. The trade unions are coming round to accept the need for revising the 40-hour week; and the first step, though it is small, has been taken.

Once more, Germany has awakened France. Where the firmest political speeches, the most eloquent appeals, and the most convincing statistical evidence failed to persuade the nation of the need for drastic action, the audacity of Germany has succeeded.

The Treasury's Task

The need for a great effort is, moreover, underlined by the present position of the Treasury and the latest return of fiscal receipts. In March, the yield of taxes was 300 million francs below the estimated receipts, compared with short-falls of 133 millions and 18 millions, respectively, in February and January. The March yield was only 173 million francs more than in March, 1937, compared with improvements over the corresponding months of last year of 341 millions in February and 724 millions in January. In April, receipts were better, and fell no more than 140 millions below the estimate. In the first quarter of this year, taxes yielded 450 millions less than estimated and 1,350 millions more than in the first quarter of 1937.

The position of the Treasury has, of course, been appreciably improved by the repatriation of capital. The National Defence Loan has brought in 5,000 million francs, and subscriptions to the Defence Bonds have amounted to between 5,000 and 6,000 millions.

But the Treasury's needs, up to the end of this year, have been estimated at close on 30,000 million francs. Even if a further 5,000 millions is covered by funding operations, there will still remain 15,000 millions to borrow. Nevertheless, these figures are a decided improvement on the position during the first three months of the year; and the sum still to be borrowed should not be beyond the capacity of French savings. In the last resort, however, success will depend upon the preservation of peace and the increase of industrial production.

Holland

Amsterdam, the Franc and Sterling

AMSTERDAM, May 15.—The latest developments in the French franc have passed without involving undue repercussions in the Netherlands. This relative immunity would be altered, however, if Belgium, contrary to expectations, were to follow the example of France. Further depreciation of the Belgian currency would be a matter of vital significance, if only because of the close interests which exist between the ports of Rotterdam, Amsterdam and Antwerp.

Early in May, affairs in the foreign exchange market attracted keen interest when it was found that the Netherlands Exchange Equalisation Fund was intervening, notably to support the sterling rate. The Equalisation Fund has repeatedly taken action in the market by absorbing offers of sterling in order to maintain stability in the sterling rate.

In view of the pressure being exerted on sterling, the Fund had been lowering its purchasing rate gradually, mostly in stages of $\frac{1}{2}$ cent, until the level of 8.96 was ultimately reached. On Monday morning, however, the fund intimated that it was prepared to take up sterling at the rate of 8.96 $\frac{1}{2}$, subsequently followed by a rise to 8.97 for amounts of £25,000 or more. This news led to a vigorous rise in sterling which promptly advanced to 8.98 and 8.98 $\frac{1}{2}$, and also resulted in a nervous tendency throughout the market.

Increased Bank Dividends

Now that the annual reports of the four big banking institutions have been published, a general idea can be obtained about developments in banking business during

BANKERS TRUST COMPANY

1937. Bigger profits were recorded by the Rotterdamsche Bankvereening, Twentsche Bank, Incasso Bank and Amsterdamsche Bank, enabling dividends to be distributed at a higher rate. Examination of the sources of profit reveals that earnings from interest have dwindled considerably, in consequence of the lower level of interest rates. On the other hand, the profits yielded by new issue and stock departments have increased enormously, owing to numerous conversion issues and the large turnover in securities on the Bourse. In the following table, some figures covering the four big banks referred to above are set out:—

PROFITS OF FOUR MAIN BANKS (Guilders)			
	1936	1937	
Interest and bills	27,165,000	19,731,000	
Commission and profits on securities	16,518,000	24,230,000	
Total net profit (after writing-off and allotment to reserve funds)	13,221,000	14,666,000	

Earnings from interest declined by 7,434,000 guilders, but the profits accruing from commission and securities business rose by 7,712,000 guilders.

Conversions Resumed

Following a period of stagnation which lasted about six weeks, conversion operations were recently resumed on the loan market in Amsterdam. This is significant, not only for the Stock Exchange, but also for the general economic situation of the country. The resumption of conversion activities shows that the super-abundant supplies of money continue unabated. It is evident that the recent stagnation in the conversion movement was merely due to reticence on the part of the investing public consequent upon the annexation of Austria.

Confidence has been restored to a considerable extent, and a gradual improvement in the investment market has ensued. These new conversion loans are the first to be issued under the new regulations of the Amsterdam Securities Trade Association, which aim at minimising loss to the investor in the event of the redemption of loans shortly after issue.

Bigger State Debt

The State debt reached a new high level at the end of 1937, as will be seen from the following table:—

(In million guilders)			
Year ended	Consolidated	Floating	Total
Dec. 31,			
1913	1,148	6	1,154
1922	2,728	815	3,543
1929	2,462	265	2,727
1931	2,338	527	2,865
1934	2,700	662	3,362
1936	2,870	675	3,545
1937	3,253	805	4,058

The consolidated debt thus increased by 383 millions in the course of 1937, and the floating debt by 130 millions, so that the State's debts grew by well over 500 million guilders during last year. As the result of conversion operations, the burden of interest on the consolidated loans has not grown proportionately:—

Interest Due			
	1934	1935	1936
(In thousand guilders)			
First half year ...	51,198	48,238	48,463
Second half year	60,093	47,675	49,930
Totals	111,291	95,913	98,393

Although the consolidated debt in 1937 was 500 million guilders higher than in 1934, the interest service was 9 million guilders less than 1934.

Sweden

Recession Checked

STOCKHOLM, May 5.—Though business activity in Sweden has been slackening off for some time, the recession has taken a far less violent form than in 1929-30, and lately there have even been signs of a slight recovery. The general index of business activity, which reached its peak in August, 1937, at 124 (100 = average 1935), gradually fell to 119 at the close of last year and further to 117.5 in January. In February, however, the index rose to 118.5, chiefly owing to lively

building activity, due to favourable weather conditions. News from the United States is followed with particularly keen interest, since recovery in the United States would be of outstanding importance for the Swedish pulp and paper industries.

At a meeting of the Association of Swedish Industries, industrial leaders laid stress upon the fact that Swedish industry had profited from the boom of the last few years by consolidating its financial and technical position. Serious fears were aroused, however, by a proposal, submitted by the Government to the Riksdag, for legislation to provide for a compulsory paid holiday of 12 days for all industrial workers. Swedish employers agree with the principle of granting their workers the right to paid holidays, but it is generally considered that the present proposal needs more thorough examination and should be less rigid.

Another proposed law, which is meeting with strong opposition from shipowners, provides for an eight-hour day in the merchant fleet. On the whole, the Socialist Government tends to show considerable moderation in introducing reforms, and it is probable that the employers' objections to these measures will be taken into consideration.

Poor Industrial Outlook

The outlook for the main staple industries has not improved. New pulp developments consist mainly in contracts regulating prices, and there is practically no interest in pulp deliveries for 1939. It is symptomatic that the European sulphite pulp organisation decided at a meeting in Stockholm in April to reduce production by 20 per cent.

No improvement in the paper market can be expected so long as the large American stocks have not been absorbed. The Scandinavian greaseproof paper organisation recently reduced its production to 50 per cent. of the 1937 output; and the Scandinavian Kraft paper concern has reduced its production to only 35 per cent. of the 1937 output.

The timber market also shows no signs of improvement, and the unsuccessful offers of Russian timber in Great Britain had a discouraging effect. During the first quarter of the year, Swedish timber sales totalled 275,000 standards. In the iron and steel industry the situation is somewhat better, partly because of larger shipments to Great Britain; and domestic stocks have been noticeably reduced.

Exports Well Maintained

Foreign trade is still satisfactory, and the following figures for the first quarters of 1937 and 1938 show that exports have been well maintained:—

(In million kronor)		
	1937	1938
	January-March	January-March
Imports	435.7	479.0
Exports	351.6	412.8
Import surplus	84.1	66.2

In the first two months of this year, Sweden's trade with Great Britain was valued as follows:—

(In million kronor)		
	1937	1938
	Jan.-Feb.	Jan.-Feb.
Exports to U.K.	51.9	73.0
Imports from U.K.	48.2	54.3
Export surplus	3.7	18.7

Of exports to the United Kingdom during January and February valued at Kr. 73.0 millions, only Kr. 69 millions were consumed in the United Kingdom; and of imports valued at Kr. 54.3 millions, only Kr. 36.2 millions represented goods manufactured in the United Kingdom.

Falling Prices

Wholesale prices continue to move downward. The general index of wholesale prices fell in March by 3 points to 131 (1913 = 100). Prices of consumption goods, on the other hand, remained practically unchanged.

The situation on the money market remains notably easy. Because of the disturbing political situation abroad the Bank of Sweden has converted part of its foreign currency reserve into gold; and the Bank's gold reserve increased during March from Kr. 473 millions to Kr. 494 millions. The aggregate reserves of foreign currency held by the Bank of Sweden and the joint-stock banks declined during March from Kr. 883 millions to Kr. 846 millions, partly on account of gold purchases and partly on account of the withdrawal of foreign deposits from Swedish banks.

Latvia

Increased Defence Expenditure

RIGA, May 15.—The Budget for the financial year ending on April 1, 1939, has been balanced at about 191 million lats. Actual revenue and expenditure in the year 1937-38 balanced at about 180 million lats. In the new financial year, because of the activity of domestic trade in 1937, increased revenue is expected from direct taxation.

The Finance Minister explained that domestic business would maintain its present level for at least another two years, but that the following year's Budget might have to include economies. Of particular interest was the Minister's declaration that the prevailing economic expansion in many directions had assumed too rapid a tempo. Some strain, for instance, is evident in the labour market; and Government expenditure on new investment (in agricultural projects, etc.) will be considerably curtailed.

The chief increases in the new estimates will be in expenditure on the War Ministry, and apart from these higher estimates, a special fund for national defence purposes has been established, the receipts of which in the first year have been estimated at about 9,000,000 lats. Apart from certain Government appropriations, the fund will be built up by new imposts, which must be borne by the owners of real estate, by employers with the exception of farmers (2 per cent. of all wages paid and salaries) and by importers. On imports of dutiable raw materials and semi-manufactures, an extra duty of 1 per cent. *ad valorem* will be levied and a similar duty of 2 per cent. *ad valorem* on dutiable finished goods.

An internal loan of 34 million lats for the completion of the construction of the power station at Keggum has been quickly over-subscribed. Various other State mortgages, etc. (also of the 2 per cent. variety) could be tendered in payment. Besides the building of the power station, a beginning has already been made with the erection of overhead transmission lines and transformers.

Surplus of Imports

General domestic business remains, for the time being, almost entirely uninfluenced by the depression in certain foreign markets. Exports in the first quarter of the year moved as follows:—

Million lats.		
	First quarter, 1937	First quarter, 1938
Imports	38.6	51.3
Exports	39.2	41.6
Surplus of Imports (—) or Exports (+)	+ 0.6	— 9.7

The notable growth of imports is chiefly due to the regular covering of heavy requirements for large State building operations. The new State plan for the improvement of agricultural products, moreover, has been affected by the higher prices of imported fertilisers, seed and agricultural implements; and the raw material requirements of industry have, at the same time, been appreciably large.

Exports also rose. Exports of live pigs, compared with the first quarter of 1937, were more than trebled; and 3,754 tons of butter were exported against 2,970 tons last year at an appreciably higher price. On the other hand, exports of timber and flax suffered some contraction.

The surplus of imports is a phenomenon to which increased attention will be devoted. Latvian trade has commonly been distinguished by an active balance of payments. In 1937, on the whole balance of payments, there was a credit total of 313 million lats, of which 261 million lats was derived from the proceeds of exported goods. Total debits were 277 million lats, of which payments for imported goods accounted for 231 million lats. Up to now, however, measures to restrict imports have not been contemplated.

Hongkong

Japan and the Customs

HONGKONG, May 6.—The Anglo-Japanese agreement regarding the Chinese Customs has been favourably interpreted in London, but much still depends upon its practical application by Japan. Something had to be done to end the present deadlock in Shanghai, but, unless Japanese goods entering the Shanghai and Tientsin areas cease to count as military supplies, Customs revenue will be mainly confined to duties on non-Japanese imports and Chinese exports. Some observers here regard the agreement as placing at the

disposal of the Japanese Government revenue, in the form of Chinese currency, with which to purchase foreign exchange.

Fortunately, China still retains control over the Customs collection at ports south of Shanghai, and, judging by the ever-increasing volume of trade with the interior by way of Hongkong and Indo-China, the revenue collections at Canton, Kowloon and Mengtsz (Yunnan) are benefiting considerably by the diversion of trade which would normally pass through Shanghai.

The trade returns for Hongkong show, as was to be expected, an all-round increase of about 25 per cent., if the first quarter of 1938 is compared with the first quarter of 1937. Imports have increased in value from \$131½ millions to \$162 millions, while the value of exports has risen from \$105½ millions to \$135½ millions. Japan's share of total imports fell to 2.7 per cent. compared with 12.4 per cent. in the first quarter of last year, and imports from the United Kingdom showed a slight rise to 7.1 per cent. There was a big advance in the share of the United States—from 5.1 per cent. to 12.5.

Hongkong in Imperial Trade

Hongkong exporters under contract to ship goods to other parts of the Empire have, on various occasions, been placed in a dilemma by the announcement from Whitehall, or from the colony concerned, that certain restrictions would be enforced on a date leaving insufficient time for the contract to be implemented. The Colonial Office now seems to be well informed about Hongkong's export trade, and extends to it considerable practical sympathy. The Secretary of State has even promised to approach Dominion Governments with a view to extending preference to Hongkong manufactures, but all four Dominions have a rooted suspicion of Oriental labour.

Canton remains unperturbed, either by continuous air raids or by rumours of invasion. During the past month there has been one interruption to the railway service, owing to a bomb attack on a bridge; and, in the city of Canton itself, two or three bombs were dropped, causing some hundreds of casualties and the destruction of a factory. Junks trading between Hongkong and Canton are frequently captured and destroyed, but steamers pass to and fro unmolested. There is still considerable congestion on the railway between Canton and Hankow, and some three or four weeks elapse between booking space on a freight train and the actual despatch of goods. Efforts are being made for a quicker return of trucks from Hankow, but there is a lack of siding accommodation at Canton.

Hongkong continues to develop as an air traffic centre. There has been a speeding up of the Imperial Airways schedule, and there are now two arrivals and departures weekly, connecting with the Singapore-Southampton service at Bangkok, and bringing Hongkong to within six days of London. In addition to the weekly service with America by Trans-Pacific Clipper, there are two Chinese companies operating between Hongkong and various centres in the interior, providing almost a daily service between here and either Hankow or Chungking, the new capital.

New Zealand

Scheme for Pensions and Superannuation

CHRISTCHURCH, April 26.—The session of Parliament was completed after a short sitting in March. Twenty-two conventions of the International Labour Office were ratified, none of which required any alteration in existing legislation, and provision was made for the Government to establish an industry to work large iron deposits in the Nelson district.

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital: D. Gulden 5,000,000.—
Reserves: D. Gulden 3,527,571.57

Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.

Vice-Chairman: Józef Kożuchowski

Joint Managers: Stanislaw Pawlowicz and Philip Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig.

INQUIRIES SOLICITED

The National Health and Superannuation scheme was held over for the regular 1938 session, probably beginning about June.

The Government's plans for this scheme were outlined in an address broadcast by the Prime Minister early in April. The proposals included free medical and hospital attention, including free maternity treatment; increases in nearly all classes of pensions; the introduction of new pensions for orphans, and for wives of mental hospital patients; State superannuation at 30s. a week for single persons and £3 a week for married persons at the age of 60, where other income does not exceed 20s. a week; benefits for those incapacitated by sickness or injury from earning a living; and increased family allowances and unemployment benefits. To meet the cost, the wages tax is to be raised from 8d. to 1s. in the £, and the State is to provide a subsidy of an equal amount.

This plan was submitted to a Parliamentary Committee for examination. Detailed information about the total cost and how it was to be met was made available by Mr G. H. Maddex, an actuary on loan from the British Government. His estimates may be summarised as follows:—

	Government Plan	Estimates under the Existing Law
Cost	£NZ '000	£NZ '000
Superannuation benefits	6,200	3,900
Other pensions, etc.	4,800	3,195
	11,000	7,095
Sickness benefits, etc.	3,000	1,500
Health services	3,000	...
Total benefits	17,000	8,595
Administration, etc.	850	400
Total cost	17,850	8,995
Income	£NZ '000	
1s. in the £ tax on wages and other incomes...	7,500	
Registration levy.....	500	
Subsidy required from consolidated fund	9,850	
Total Receipts	17,850	

Letters to the Editor

Nazi Propaganda

TO THE EDITOR OF THE ECONOMIST

SIR,—The letter from St. Gall written by an "English Observer" in your issue of April 30th gives, in my opinion, a very one-sided and incomplete picture of the situation in this country. While it is true that Nazi propaganda is making itself felt to an increased extent here (and also in other countries, such as Brazil, Argentina), you may be sure that it will not be successful.

For some time a movement called "Geistige Landesverteidigung" has spread in Switzerland with ever-increasing vigour and may be considered as a successful means to counteract the Nazi propaganda. Your correspondent seems to overlook the fact that not only is our language fundamentally different from that spoken in Germany, but so are our character, ethics, political views and *Weltanschauung*. Your correspondent also forgets the sacrifices the Swiss have made in the past, and are still making, to preserve their independence.

May I add, finally, that there is no "Jewish Problem" in this country, just as there is none in the great Western democracies, with which our country has far more durable mental bonds than is commonly known. That the sinister conclusions of your correspondent about the future of the oldest democracy in the world, which, unlike Austria, does by no means wish any kind of *Anschluss*, should not become true depends, however, not only on the Swiss people, but to no little extent on the future policy and strength of these Western democracies.

I am, Sir,
Yours very respectfully,
YOUNG SWISS.

Zürich, Switzerland.

TO THE EDITOR OF THE ECONOMIST

SIR,—“English Observer” is very pessimistic about the future of Switzerland in his letter in last week's *Economist*. The fact that a Nazi supporter gave a lecture on National Socialism in Switzerland is no reason at all to think that the Swiss will let themselves be annexed by Germany. Switzerland is the oldest democracy in the world, and all political groups are allowed to express their views.

The Nazi Party, however, is fast losing its influence. At the last election in Zürich, some weeks ago, the Nazis lost all their seats; and Zürich was the only town where they had ever reached any importance. This is evidence that Nazi propaganda has failed in Switzerland.

Furthermore, Switzerland has been an independent country for more than 400 years, and there are certainly not many Swiss who would like to change this state of affairs, in spite of the four different languages. There are no minorities calling for support from strong neighbours. These conditions cannot be compared with Austria.

The declaration of the Swiss Government after the *Anschluss* is backed by the whole population, and enormous expenses for re-armaments have been agreed to by all the

These figures make it appear that about £NZ9,000,000 additional revenue will be required. It is proposed to get £NZ2,500,000 from the increased wage tax, and £NZ6,500,000 will be needed from other sources. Owing, however, to the falling birthrate and the decline in immigration during recent years, the population is ageing quickly, and Mr Maddex estimates that the cost of the plan will increase by £NZ4,000,000, mainly for superannuation, to £NZ22,000,000 in ten years' time, and thereafter continue to increase slowly. It is also difficult to estimate the number of possible recipients of benefit, and this unknown factor may increase the cost substantially.

The Plan Criticised

The plan, which has been promised and repeatedly deferred since the Government took office, has had a mixed reception. There is some protest from those who realise that it is not a universal superannuation plan at all, but a heavy increase in pensions and other social services, to be financed by general taxation, and that the majority of contributors will get little, if any, return for their contributions. Many potential beneficiaries complain that the benefits promised are inadequate, while critics claim that the scheme will be difficult, if not impossible, to finance in good times, and must break down in bad times—or as the population ages and the burden increases.

Judged by their cross-examination of Mr Maddex, the Government members of the Committee appear to rely on the hope that population and national income will increase in the future as they have in the past, a hope that seems vain in view of past and present trends in population, prices, production and trade. The Prime Minister has, however, promised that the legislation will go through in the coming session, when the annual Budget will also be presented. A recent statement estimates the Budget surplus for 1937-38 at £NZ800,000. But the additional taxation required to finance the scheme must be heavy and unpopular, and the issue appears likely to be prominent in the General Election towards the end of the year.

different political parties. There would be no cheers, flowers and flags for any foreign army trying to invade the country, and the "freeing" of the Swiss would prove a difficult task, not to speak of the digestive troubles after the "swallowing."

Yours faithfully,

ANGLO-SWISS.

Zürich, Switzerland.

Germany and the Basque Country

TO THE EDITOR OF THE ECONOMIST

SIR,—With reference to Mr Towers' letter regarding Germany's hold on the Basque country, it is interesting to recall that, despite the pro-German attitude of Spain, the Basques came to our aid during the Great War. They helped to no small degree in breaking the submarine blockade which nearly brought this country to its knees, and lost at least thirty ships in this way.

This friendly feeling towards Britain may provide yet another reason why Germany has been so willing to help Franco in breaking the Basque resistance, and why she has taken control of the country. A glance at the map will show what a useful base the Basque country provides for attacking British sea communications. Yet our Government has sat by and watched this seizure without a murmur.

Yours, etc.,

CLARE L. COCLATT.

Willesden, N.W.10.

Oil and Coal

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr Robert Byron has misquoted me. My words were:—"There is no need to emphasise the beneficent revolution in our national economy that would be caused by using English fuel for our power in all spheres instead of foreign fuel"; meaning not merely in the "sphere" of ships, but also in that of road transport and all engines which could use coal or its derivatives, and so get power better and far cheaper than from imported petrol or diesel-engine oil or boiler-fuel oil. Coal for all these "spheres" put together would add, not Mr Byron's "three million tons" to our annual coal consumption, but those scores of millions of tons by which it now falls short of the 1913 consumption. Moreover, the great national asset of assured outward cargoes of coal would be restored to the balance sheet of our national economy.

Mr Byron tries to falsify me by using the restrictive words "fuel oil" that I did not use. "Fuel oil" is a technical term restricted to boiler-fuel oil for ships' bunkers—that is to say, to the dregs of petrol distillation. His estimate of two million tons—equivalent to the three million tons of coal mentioned above—is boiler-fuel oil bunkered in England only, and leaves out millions of tons of foreign oil bunkered by British ships abroad, instead of British coal.

The cited "authority on naval construction" who recently called the coal campaign a "public nuisance" is not, in fact, a constructor at all, but an engineer. Engineers do not always know everything about burning coal on board ship. The Engineer-in-Chief of the Navy recently said in public that he hoped merchant ships would return to burning coal. The Oil Napoleons are nearing their Waterloo, and, for many reasons, our warships and merchant ships will soon be burning our own coal again in the modern way, without any manhandling or coal dust.

As the last knot or two of a ship's speed costs about as much power as all the others put together, I agree with Mr Byron that "The Admiralty" certainly would be what he elegantly calls "a pack of Bolsheviks," if they did "want our ships to go faster than they ought to."

Yours faithfully,

GEOFFREY BOWLES.

London, S.W.1.

POINTS FROM LETTERS

Canadian Tariff Policy.—In *The Economist* of March 5th I observe the following reference to Canada: "Mr Gordon Ross proposed that the three prairie provinces should be allowed to create a free trade *enclave*, as there could otherwise be no real prosperity for them." Western Canadians are too practical, shrewd, realistic to have any such objective which would be tantamount to withdrawal from the Confederation and the erection of a State within the State. Under

temporary economic pressure suggestions have been made concerning a political retreat, to take the form of a blending of the Prairie Provinces into a single government. The idea will not, nor does it deserve to, grow.—W. P. D.

Brazil.—It is impossible for Brazil to recommence payments of her foreign debts on the "Aranha" basis. Her balance of trade does not permit this. In due course she will make an honourable settlement, but she must increase her exports. To do this, it is imperative to import large quantities of rolling-stock, locomotives and rails, as her railways are in a wretched state and need complete re-equipping. For a time, therefore, her imports will be heavy and cannot be restricted.—G. A. Mulford, Rio de Janeiro.

Re-armament.—The swollen estimates of armament expenditure, involving borrowing £90 millions in the ensuing year, which by dissipating our reserves will diminish our strength rather than increase it, are largely the result of panic. This panic is augmented, if you will allow me to state it, by the unjustifiable assertion in your issue of April 16th that "the need to augment the national defences" is "ineluctable." There are many doubts in many quarters as to what justification exists for the extreme action proposed by the Government. You refer to the speeding up of re-armament in other countries. Neither Italy nor Germany desires to attack us. On the contrary, both of these countries desire an understanding with this country. Where then is the enemy?—D. M. Mason, Queen's Gate Gardens, S.W.7.

The Extra Sixpence.—Does the increase in the standard rate of income tax diminish the progressive character of our taxes? For the man who now pays 5s. 6d. in the £ in income tax against 5s., the increase is 10 per cent. For the man who pays 13s. against 12s. 6d., the increase is 4 per cent. But it would surely be fairer to measure the increased sacrifice by the effect of the increase on net income available for expenditure. The man who pays 5s. 6d. is left with 14s. 6d. out of his £ against 15s. formerly, a reduction in net income of 3½ per cent. The man who pays 13s., however, is left with 7s. instead of 7s. 6d., a reduction of 6½ per cent. The increase is not regressive.—Lawrence Wilkinson, Blackheath.

STATESMAN'S YEAR-BOOK 1938

Edited by
M. EPSTEIN, M.A., Ph.D.

1534 Pages. With Maps. 20s. net.

MACMILLAN & CO. LTD., LONDON, W.C.2

Books and Publications

The Last Years of Peace

In this volume*, the two distinguished editors, with the assistance of Professor Penson, have completed the great work that has taken them fourteen years. "The last years of peace!" For all that we can tell to-day, this title which aptly describes the contents of their book may prove to have been no less apt a description of the years in which the editors were engaged in producing it.

A perusal of this scholarly work at this moment is enough to make the reader believe, perforce, in the nightmare doctrine that history moves in a perpetually recurring cycle, which begins and ends in the same monotonously repeated catastrophe. The parallel between then and now is alarming. We are shown British diplomacy doing its industrious best to sate the appetite of an apparently insatiable Germany by the sacrifice of ewe-lambs that are other people's property. In 1935-38, the victims with which the European aggressors are being placated are Abyssinia and Spain; in 1910-14, they were Turkey and Portugal.

During those last pre-war years, Lord Grey—a high-minded man, like Lord Halifax—was conducting negotiations with Germany about the Baghdad Railway, and the Portuguese colonies. In the first of these two parallel transactions, the object of British policy was to facilitate Germany's acquisition of the maximum amount of Turkish property that she could be allowed to acquire without danger to British interests in the Persian Gulf. In the Portuguese negotiations, we were concerned to put Germany in the way of carving off for herself as large a slice of the

Portuguese colonies as would not cut away the access of Rhodesia and the Transvaal to the sea.

Then, as to-day, His Majesty's Government were sincerely convinced that they were working for peace. Both sets of negotiations, difficult and delicate though they were, were triumphantly brought to the verge of agreement—the Portuguese negotiations in the July of 1914 and the Turkish in the August of the same year. British and German statesmen were congratulating themselves—and even one another—on having successfully navigated Anglo-German relations out of stormy seas into smoother waters!

As if their words had not been given the lie all the time by their actions! While they were seeking peace at third parties' expense, Great Britain and Germany were arming against one another in those years as competitively as they are to-day; and one chapter of this volume ("Mediterranean Agreements") shows that "a naval holiday" then was as vain a dream as "an air holiday" would be in 1938. So pedantically does history repeat itself that there is even a chapter headed "Negotiations for an Anglo-Italian Pact (1912-1914)"—ominous words and dates for the ears of Englishmen living under Mr Neville Chamberlain's administration.

The echoes that travel backwards up the corridor of time are uncanny. "He had lately been in Germany and had been surprised and shocked at the almost universal feeling of irritation against England" (Baron Stumm to Sir F. Bertie, December, 1911). "Where did he propose that we should find gifts for Germany? He said that the Portuguese possessions in Africa were of no advantage to Portugal" (Sir F. Bertie). "I reminded Baron Stumm that the policy of England had always been the maintenance of the Balance of Power, and that it had been prejudiced by the enormous armaments of Germany" (Sir F. Bertie). "The Germans would like the division of the Portuguese colonies to take place as soon as possible. So should I" (Lord Grey [*sic*]: not Lord Halifax).

So the past mocks the present. "It has always struck me that it was an arbitrary and unusual act for two Powers to place prohibitions and restrictions on a third Power which is still a sovereign independent Power" (Sir A. Nicolson on Portugal in 1912—not Sir R. Vansittart on Spain in 1938). "Spain as an enemy to the Entente Powers could make the situation at Gibraltar very unpleasant (in case of war, with the help of foreign artillery), besides immobilising a French army corps by keeping her army massed on her northern frontier. Also the Canaries in hostile hands would be an obvious danger" (written by a British public servant, not in 1938, but in 1912).

The World is weary of the past;
Oh, might it die or rest at last,

is the sentiment that this volume evokes in the mind of the unhappy reader.

Shorter Notice

"War and Democracy." Essays on the Causes and Prevention of War. Edited by E. F. M. Durbin and George Catlin. Kegan Paul. 360 pages. 10s. 6d.

This stimulating collection of young Socialists' views about war covers the psychological and historical evidence of the causes of conflict and warfare, and ends with a strong plea for a policy of collective security to ensure peace. The psychologists conclude that war is endemic but not incurable, and that democratic peoples are less aggressive than authoritarian. The historians' view is that only an international authority endowed with military force could peacefully effect the adjustments necessary for the evolution of nations; and that the resistance of propertied interests to the cause of economic justice is a potent danger to peace, accompanied, as it is, by the spurious appeals of nationalism and propaganda. Mr Fraser's essay on the practical limitations of Pacifism is brilliantly stated, and the closing contributions sum up well the common views of the holders of a common creed, without answering all the questions of their critics.

THE BUSINESS WORLD

Wages in the Building Industry

THE growth of nationwide machinery to determine wages and working conditions in the building trades is comparatively recent. Before the war wages were fixed on a purely local basis. War-time conditions, Government control and the post-war housing problem, however, caused the need for national machinery to be recognised, and the National Wages and Conditions Council of the Building Industry was set up. After a series of disputes a definitive settlement was reached in 1924, and peace has prevailed in the industry ever since. The comparative immunity of the building trades from serious labour troubles for so long a period has been a matter of prime importance for the whole community, particularly in view of the influence of building on general economic activity during the past seven years. We propose, therefore, in the present article to describe the arrangements between employers and employed, which have so satisfactorily stood the test of time.

The national regulation of wages in building is difficult because of the industry's essential characteristics. Building is spread throughout the country; costs and conditions vary considerably from place to place, even in similar jobs; local tradition and trade customs are always strong; and there is often a strong sense of local autonomy on the part of employers or operatives. The machinery for regulating building wages is thus necessarily complex.

First, wages are regulated by a sliding scale based on the cost of living. The standard rate of wages, when the Ministry of Labour's index of the cost of living stands at 165 (July, 1914 = 100) is 1s. 8d. an hour. Every January, wages are reviewed by the National Joint Council for the Building Industry. The average monthly cost of living figure for the preceding calendar year is worked out; and for every completed 6½ points which the index has moved above or below 165, the standard rate of wages (1s. 8d.) is increased or decreased by ½d. The rate thus determined becomes operative on February 1st. Last January, the average cost of living figure for 1937 was found to be 154½, or 10½ points below 165. The index being more than 6½ points but less than 13 points under the datum level, the standard rate of wages became 1s. 8d. less ½d., and prevailing wage rates were accordingly raised from 1s. 7d. to 1s. 7½d. an hour. The "standard" cost of living figure was itself lowered in 1935, by an amendment proposed by the operatives' representatives, from 178 to 165, the effect of this alteration being to increase wages by 1d. an hour.

The principle of regulating wages by reference to movements in the official cost of living index has been criticised. The present arrangement, however, originated in the conditions of the war and post-war periods, when rapid changes in the cost of living were one of the main factors against which the operatives desired protection. Moreover, the system is flexible, and changed conditions can be, and have been, taken into account by revising the datum cost of living figure. The fact that five successive reductions in wages were made under the agreement before 1935 suggests, at least, that the workers have attached considerable importance to the provision of a sliding scale, even where it has operated, ostensibly, to their temporary disadvantage.

A second factor affecting wages is the grading system, whereby local differences are recognised. The various

districts in which the industry is located are graded, and the standard rate of wages applies in all districts graded A. Eight lower grades are recognised, designated A1, A2, A3, B, B1, B2, B3 and C, and in these hourly rates are paid, which are lower than the prevailing rate, respectively, by ½d., 1d., 1½d., 2d., 2½d., 3d., 3½d. and 4d. In addition, two super-grades in London are recognised: the outer zone between twelve and fifteen miles from Charing Cross, where rates are 1d. per hour above Grade A; and the inner zone, within twelve miles radius of Charing Cross, where wages are 1½d. an hour above Grade A. The hourly rates paid in the various local grades during the past few years are set out in the table below:—

Grade	C=Craftsmen.				L=Labourers.			
	July 1, 1935		Jan. 1, 1936		Feb. 1, 1937		Feb. 1, 1938

Permanent machinery exists in the National Joint Council to allocate district grades and to consider applications for regrading. The number of gradings and regradings has recently tended to increase, owing to the growth of building in connection with the re-armament programme in rural districts, which were formerly ungraded. The average level of wages in any given area may be materially altered by regrading, and one of the conditions accompanying the increase in wages implied by the reduction of the standard cost of living figure in 1935 was a general respite from regradings, for three years, except in districts where both employers and operatives were in agreement about the desirability of a revision. This period of respite terminates this month.

In allocating a first grade to a district or considering regrading, regard is had to the size of the area and its population; the character of the area (whether predominantly industrial, agricultural or residential, etc.); the wage rates of building operatives in the nearest large towns; the supply of labour; the wages of workmen of similar skill and training in local industries; the cost of living in the neighbourhood; and any other relevant factors.

Provision is also made for the possibility that one particular job may, by reason of its nature and size, necessitate the payment of a level of wages above that prevailing in the surrounding district, but may not warrant a regrading of the whole district. This may occur, for example, in connection with the construction of an aerodrome, mental colony, or other large project in a rural district. In such a case, application is made for an exceptional margin of a certain amount per hour above the grade rate applying to the district, to be paid for work on this particular

job for its duration only. This enables labour to be brought in, where necessary, from surrounding districts.

So far, reference has been made only to the determination of the wages of the traditional craftsmen (bricklayers, carpenters, masons, slaters and tilers, plasterers and painters). The wages of labourers are governed by the requirement that they shall not be less than 75 per cent. of the craftsmen's rate (to the nearest farthing). Wages are also adjusted between different classes of skilled operatives in some districts, by means of an arrangement whereby a particular class of labour is paid a certain amount less than the craftsmen's rate. Thus, in London, painters receive 1d. per hour less than craftsmen. A system of additional payments has also been evolved to take account of special circumstances. For example, extra payment is

made to men working at more than a certain height, or in sewers, or in dirty surroundings. This method has also been used to regulate the wages of men employed in the many semi-skilled occupations which have arisen owing to recent changes in building technique.

Our brief review of labour conditions in the building trade shows that a complicated structure of wage rates, administered by local, regional and national machinery, has been evolved to meet the special characteristics of the industry. It says much both for the architects of this system and for those in whose hands its administration lies, that, during a period which has not lacked its difficulties and has included both slump and boom, internal peace has been maintained for fourteen years. That is an achievement of which any industry might well be proud.

Unit Trusts Reviewed

WITH this issue of *The Economist* we publish the fourth of an annual series of supplements surveying the unit trust movement. When our first review appeared in 1935 there were no more than 34 trusts in existence, and their total sales amounted to only £25 millions. To-day, their number has increased to 79, in which the investor—especially the small investor—now has funds entrusted to the extent of £75 millions. In the brief space of seven years the unit trust movement has become an established institution, occupying a useful place on the borderland between the Stock Exchange—which is mainly the preserve of the substantial investor—and the typical institutions which cater for the smallest type of saver. Without damaging the progress of established thrift organisations, it has canalised a volume of savings which might well have been less prudently invested.

Unit trust management, like other professions, would doubtless be included in official returns as a "gainful occupation." But the movement, apart from earning its financial reward, is developing a more stable conception of its rôle in investment practice. It has made further progress during the past twelve months, but at a necessarily reduced rate. It has tasted the bitter draught of falling security prices, after enjoying the sweets of a Stock Exchange boom. Yet the movement has taken this medicine with greater fortitude than many observers would have cared to predict a year ago. The unit holder has continued to hold his certificates. He has shown no lack of aplomb even when security values have been falling most severely. The large volume of re-sales of units which was expected to accompany a setback in the investment markets has not occurred. So much is evident from the new figures of turnover which we present in our Survey. In short, the managers have been able, in the face of adverse market conditions, to fulfil their claims to maintain an adequate market in their units.

If the movement, however, were tempted to claim that it had conquered depression and depreciation, merely on the strength of its performance in the early rounds (for the majority of the trusts still have at least three-quarters of their allotted span to run), its claim would ignore certain special factors which have operated in the past year. The movement may cite the evidence provided in our Survey to show that it assisted the market during a period of falling prices. It was able to do so, however, largely because the unit trust holder was not seriously disturbed by Stock Exchange indicators. Hitherto, we have known relatively little about the unit trust holder as an individual. It was uncertain whether he would sell adroitly on any recession in Stock Exchange values or whether he would be seized by panic when his units had fallen by a moderate percentage. Actually, he seems to be a somewhat stolid person, not easily moved by the financial or political headlines. But that does not rule out the possibility that a future depression might bring its "rainy days," in which he might realise his past savings much more readily.

This line of speculation is suggested by a good deal of new data in our Supplement, which throws into greater relief the nature of the average unit trust holding and the relationship between sales and re-purchases of units. Our evidence has been assembled with the courteous and helpful assistance of the trusts themselves. It suggests that the typical unit holder occupies a position between that of the substantial operator, whose resources are sufficient to provide the utmost scope in market operations, and that of the small investor, whose primary requirement is to find a safe place of deposit for his funds, without the attraction of capital profits or the fear of capital losses.

This conclusion is supported by analyses of the distribution of holdings of several important unit trusts, which throw incidental light on the problem of the marketability of units. During the past year, the distinction which we have drawn in our Survey between the immediate liquidity of units (through resale to the managers) and their ultimate realisability (by selling the underlying securities on the market) has become increasingly real and concrete. If shares were ever virtually unsaleable on the Stock Exchange, trust units would also be unrealisable. But if such a condition were prolonged, not only unit trusts but all other investment institutions would have to close their doors. In normal circumstances, the unit holder expects a prompt bid from the managers for his units if he desires to sell. When a trust is "open"—i.e. when the offered prices for its units are calculated on the lines indicated in its booklet—a dealing turn of, say, one shilling between the offered and bid prices provides a marketing facility of tangible value to the investor. Marketability is his first defence; realisability the second. And since realisability involves a certain sacrifice on the investor's part—for in this case he loses the initial loading charge and the dealing turn—he has an interest in the maintenance of adequate jobbing facilities by the managers.

The past year in the unit trust movement, however, has debit as well as credit items in its account. Many observers, for instance, have been recently disturbed by the suggestion that high ostensible rates of income returns might be exploited, in some instances, for selling purposes. In a detailed discussion of the problem of what is a "true" yield, we show that yield-inflating devices might conceivably be employed, even in a flexible trust composed solely of gilt-edged securities. In the absence of outside control the investor is inevitably in the managers' hands. The latter can, if they choose (and if their trust deeds permit) artificially inflate their yield calculations by flagrant but simple violation of elementary investment principles. It is asking too much of the lay investor to discover the inner meaning of a disproportionately high return secured in this way. The Report of the Anderson Committee rightly stressed the importance of the fair presentation of yield figures, but fuller experience of the operation of certain flexible trusts has presented the

problem in a new guise. The point is one upon which trustees, in their own interests, and in those of the investor, might well keep a watchful eye.

During the past year the unit trust movement, which had travelled reasonably well in forward gear, was suddenly put into reverse, in certain instances, by a series of offers to fixed trust sub-unit holders to exchange their holdings for shares in newly-formed managed investment trust companies. The first offer, in fact, coincided with the appearance of our last Survey. We see no reason, in the light of the diminishing response to these offers, to modify our initial—and critical—opinion of the unpromising reversal of policy which they involved. It would be unfortunate if any reaction against the conversion of unit trusts to an investment trust basis—which involves the entire abandonment of the advantages of the unit type of organisation—were to prejudice the possibility of future substitution of flexible for fixed trusts. For the latter might well be a step in the right direction.

Our Survey broadly concludes that the movement has

surmounted the initial difficulties arising from recessionary markets with no little success. That, of course, is no more than an interim verdict. It is not inconceivable that sterner tests lie ahead. In the process of consolidation—for despite such ingenious developments as the geared unit trust, the movement appears to be entering that stage—even closer attention may have to be given to problems of marketability and investment policy. A judicious process of amalgamation between certain groups might assist this objective, and also provide incidental economies of management. The movement has won its spurs, and it will not be subjected to the legislature's attentions for some considerable time to come. Looking back over its rapid development, the observer cannot fail to notice the way in which it has divested itself of many undesirable features which surrounded its early stages. That is not to say that it has attained perfection; rather it suggests that an increased responsibility lies upon it to maintain and strengthen the public confidence it has won for itself.

Gold and its Uses

THE annual report of the Bank for International Settlements has taken its place among the leading economic documents of the world. The latest report devotes the opening chapter to the business recession and its causes—a subject discussed in a leading article of this issue of *The Economist* on page 465. Another section of the report is concerned with the supply of and demand for gold, and though the treatment is mainly objective, it is possible to detect a slight change in the attitude of the B.I.S. towards gold as a monetary medium. The cogent plea of former years for an early and universal restoration of the gold standard has given place to an implicit recognition of the somewhat different part played by gold in the new monetary systems of Great Britain and many other countries.

This section of the Report begins with a summary of the amount and distribution of the monetary gold which became available in 1937. We show the B.I.S. estimates in the table below, in which we have converted figures expressed in the Report in dollars, at the new rate of \$35 per fine ounce, into sterling at 140s. per fine ounce.

MONETARY GOLD AVAILABLE DURING 1937	
(£ millions)	
New production	243.8
Shipments from the Far East.....	13.6
Total available	257.4
Deduct requirements of industry and the arts	12.2
New monetary gold available	245.2

The outflow of gold from the Far East has shrunk to negligible proportions, and is now little greater than the current requirements of gold for industry and the arts. For all practical purposes, the supply of new monetary gold has become equal to current production.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Kingdom. The most serious losses were those of Japan and France. Belgium's heavy loss began only in 1938, and has still left her well supplied with gold. The net results of all the year's movements is a disclosed increase of £270 millions, against an estimate of new supplies totalling only £245 millions.

This discrepancy is due, in the main, to changes in the undisclosed holdings of Exchange Accounts, and movements into or out of private hoards. In a year which included the gold scare—only partially off-set by the autumn dollar scare—a considerable amount of private dishoarding was effected. There was also a net excess of £5 millions of Russian exports over new Russian production, and the Bank of Spain (whose figures are not included in the last table) lost £40 millions of gold.

At this stage the compilers of the B.I.S. Report enter the field of guesswork. Their labours, however, have elicited certain interesting estimates. During the first half of 1937, which included the gold scare, they put total dishoarding at £90 millions, of which £60 millions occurred in London. The total for the nine months from October, 1936, to June, 1937, they place at nearly £200 millions. London re-hoarding during the autumn dollar scare is estimated at £30 millions, so that half the gold which emerged in the spring had by the end of the year been hoarded once more. By and large, the net amount dishoarded during 1937 was from £50 to £60 millions. This leads to the following calculation:—

GOLD ABSORPTIONS BY EXCHANGE FUNDS		£ millions
New monetary gold available		245
Add: From Spain and Russia		45
Add Gold dishoarded		55
Total gold available		345
Less: disclosed absorption by central banks, etc.		270
Amount absorbed by Exchange Funds		75

On this calculation the various Exchange Funds of the world together absorbed £75 millions of gold during 1937.

During the six months to September 30, 1937, the British Exchange Account gained £92 millions. The year's total acquisition, however, is placed "substantially lower," owing to the weakness of sterling in the early part of the year, the French repatriation of November, and the autumn hoarding demand in London. The suggestion in the Report that the French Exchange Fund held more gold at the end than at the beginning of 1937 may seem surprising at first sight; but in fact the resources of this Fund were sadly depleted when the year opened. The Dutch Exchange Fund's gold holdings did not change much during the year (was the Fund already "full" by the end of 1936?), but the Swiss Fund lost gold on balance. It is estimated that at the end of 1937 the undisclosed holdings of Exchange Funds were little changed from the Federal Reserve Board's estimate of £390 millions for the end of September, 1936. Any subsequent gains had been off-set by transfers in December, 1936, and again in May and June, 1937, totalling £128 millions from the British Exchange Account to the Bank of England.

The report goes on to discuss in an informative way the differing constitutions of the various national Exchange Funds. It is pointed out that no Fund at the present time

has the borrowing powers of the British Fund, under which new gold can be taken up in replacement of Treasury bills, which, in turn, are issued to the market. Consequently, the British is the only two-way Fund, which, on balance, can absorb gold as well as part with it. The other Funds can take in gold only up to the extent of any earlier losses they may have sustained. It is clear, nevertheless, that Exchange Funds have automatically acquired many functions unsuspected when the British Fund was first established six years ago. They do not confine themselves to the effort to check exchange speculation or to iron out short-term exchange fluctuations; and, indeed, at times they have been powerless to fulfil these primary tasks. Their actual achievements include the insulation of their countries' internal credit supplies from the effects of the ebb and flow of hot money. They also provide means for dividing a nation's gold reserves into two parts, one of which is implicitly ear-marked against possible future exportations of funds. Finally, as this year's report of the B.I.S. shows, the Funds have more recently acted as shock-absorbers against gold hoarding and dishoarding. They have supplied gold when hoarding demand arose and absorbed it when hoarders disgorged their holdings. Incidentally, as the course of the London market has shown, the Funds have done this only at "their own price," which in practice has provided a deterrent against both processes.

What, it may be asked, in the light of the latest B.I.S. Report, are the modern monetary functions of gold? The metal is still the ultimate medium of international settlement, though it may now tend to pass between Exchange Funds instead of between central banks. The B.I.S. still regards it as "the appropriate asset to meet external claims." At the same time it has been centralised to an increased extent. The Report recognises, for example, that the British authorities hold part of the effective gold reserves of the sterling area. Finally, gold is segregated as a specific reserve for international capital movements—a development which might become more widespread and efficacious if the British example of a two-way Exchange Fund were followed by other countries. The past year's enforced gold acquisitions by the Netherlands Bank emphasise the need of this reform in Holland's case, and latterly France has begun to experience the same difficulty. Even our own Fund needs more elasticity, if it is to cope with really extensive movements of funds, along lines which we ventured to suggest a week ago.

Perhaps the most significant conclusions suggested by the Report is that, in contrast to the position which existed ten years ago, the world is now adequately supplied with gold. The main problem which remains is that of securing a better international distribution of the metal. Once a country has an adequate supply, its division into separate compartments, corresponding respectively to internal and external needs, becomes possible. The world has still to learn the optimum line of division, a lesson which, in the long run, experience alone can teach. More widespread development on these lines would not be inconsistent with the belief that gold is still the most suitable medium for meeting external claims. On the contrary, it would point the way to the eventual re-establishment of the gold standard, in a new form appropriate to the needs of a changed world.

Finance and Banking

The Exchanges and the Crisis.—Foreign exchange business was inevitably affected, to a considerable extent, by the anxiety which developed, last week-end, over the possible course of events in Central Europe. By the time the foreign exchange market opened on Monday, however, the tension had already been relaxed. The general movements of the exchanges followed the lines which might have been expected. Dollars went strong, owing to a wide continental demand, and early on Monday sterling fell to \$4.94½. Mr Chamberlain's statement on Monday afternoon caused a rally to \$4.95½, but, as our Foreign

Exchange Note shows, dollars have remained strong all the week, and some official support to sterling has been necessary. Allied with the demand for dollars there was a keener hoarding demand for gold, which was only partly checked by the rise in the London price caused by the weakening of the pound. Fairly large quantities came on offer early in the week, and the authorities also allowed the premium to drop to the point where arbitrage operations became possible. Most Continental currencies were weak, francs in particular at one time nearly touched their new "top limit"

of Frs. 179. Belgas were strong against sterling; for the belga, being a gold standard currency, moved with the dollar. The cross-rate between Brussels and New York was at the export gold point, Reichsmarks weakened slightly against the dollar, and Czech crowns fell against both the pound and dollar, but in neither case was the movement very large. Later in the week Continental currencies became firmer against the dollar, but sterling failed to regain its strength.

* * *

More French Decrees.—M. Daladier has lost little time in following up his depreciation of the franc with a new batch of decrees, dealing among other things with the thorny but essential question of French labour. Some Frs.11,000 millions are to be voted for public works, the expenditure being spread over three years. An additional Frs.3,000 millions is to be made available for medium-term credits. Legislation relating to cheques is to be tightened up, but the stamp duty on cheques is reduced to 50 centimes. New borrowing and credit facilities are to be provided for exporters and also for colonial producers. Measures for the reform of local finances are proposed. On the labour side, new decrees are issued authorising the working of extra time over and above the 40-hour week in cases where uncompleted orders on hand make this necessary. This provision has obvious reference to the re-armament industries. Employers may also ask their staff to work extra time to compensate for time lost through legal holidays. Further reference to the decrees is made by our Paris correspondent in a letter on page 475. As a whole, they leave the impression that while M. Daladier is moving cautiously, he has in mind a point we ventured to make a fortnight ago—that French industry needs the assurance that it can maintain the delivery dates promised in contracts. So far as the franc is concerned, any good effect which the new decrees might have had, has for the moment been overborne by the reactions of last week-end's political tension. Recent international developments, however, should at least put M. Daladier in a stronger position to carry through his internal programme.

* * *

New Open Market Technique.—The measures taken to offset the temporary contraction of bank cash, due to the repatriation of French funds from London, have brought to light a new and interesting technique of open market policy. Instead of going into the market and bidding for bills the Bank of England allowed it to be known in the discount market, this week, that any firm finding itself short of money, and unable to balance its position by borrowing in the market, would be able to sell bills at ½ per cent. to the firm which normally acts as brokers for the authorities. A considerable business was, in fact, done on those terms. The shifting of the

initiative for open market operations from the authorities to the market itself secured obvious advantages; for the size of those operations was automatically adjusted, with the greatest possible precision, to the amount of help required by the market. The same claim can be made for help granted directly from the Bank of England to the market; but in that case the market is penalised by the necessity of paying either Bank rate or an even higher figure for its accommodation. On the present occasion, there was clearly no justification for allowing a purely temporary tightening of the credit position to force the market into the Bank. To all intents and purposes, the market was in fact forced to go to the Bank. But by applying through the Bank's brokers it was able to obtain its special accommodation at market rates, and not at the penal rate levied by the central bank.

* * *

Forward Gold Market.—Since the "ban" on forward gold dealings was lifted by the Bank of England about three weeks ago, operations in forward gold in the London market have assumed dimensions which have never been approached in the past. This is not merely the result of the lifting of the ban; it is also a reflection of the increased international political tension of the past weeks. The bullion market has found that most of the forward purchases of gold have been made against forward sales of Continental currencies in the following order of importance: French francs, belgas, guilders and Swiss francs. Forward dealings in gold, now that they are permissible, have also been reflected in commodity "hedge" operations. Cases have occurred in which forward purchases of the metal have proved to be the counterpart of forward sales of wheat, cotton and other commodities which have a speculative forward market. Some of the dealings in forward gold are "married" by the market, the supply being provided by comparatively unimportant producers, who are apparently prepared to sell forward in order to benefit by the premium that can be obtained on these terms. By far the greater part of the forward business is, however, covered by corresponding spot operations, in which a forward sale by a broker to a Continental client is covered by a spot purchase, and the gold is financed in London during the currency of the operation. The extent to which dealing on these lines has developed is reflected in the considerable increase which has taken place in the demand for loans against gold in the London money market. The rates quoted for forward business in gold have not been in any way standardised. They depend upon the size of each operation and the standing of the principal for whom it is effected. It may, however, be assumed that the premium at which the gold is quoted for forward delivery corresponds to a figure appreciably higher than the cost of financing the gold in London during the period of the deal.

MONEY MARKET NOTES

Foreign Exchanges

AFTER their relapse early in the week, as described in a Financial Note, Continental currencies have been quieter and mostly stronger. Thursday was a dull day, as all Continental centres were closed for Ascension Day. French francs, after touching Frs. 178½ early in the week, have since come back to Frs. 178½, with three months' francs no worse than Frs. 1½ discount. Guilders depreciated momentarily to Fl. 8.99 on Monday, but have since recovered to Fl. 8.96½. Swiss francs have followed much the same path, having improved since Monday from Frs. 21.71 to Frs. 21.69½. Both centres bought dollars early in the week, but on the whole placed more faith in their own currencies than in sterling. Dollars were consistently bid all the week up to

late Thursday afternoon. The demand came mainly from the Continent, but the rate came down this week from \$4.96½ to a low point of \$4.93½. As the Continent was closed on Thursday, the demand subsided, and so sterling recovered to \$4.94½. One reason for the persistence of the demand for dollars up to Wednesday, by which time the political tension had eased, was that operators wished to cover themselves in advance, in case a fresh strain developed on Ascension Day.

*

The Bank Return

THIS week's Bank return records only minor changes. There is a slight increase in the note circulation, which may be due to the approach of the end of the month, and so the Reserve is a

little lower. In the banking department there is a slight contraction in Government securities. Public deposits have shrunk by two millions, but remain unusually high. Bankers' deposits have also fallen by two millions, but this movement does little more than reflect the week's withdrawals of currency.

On the whole this week's Bank return confirms our previous forecast that the

Exchange Account's cash could only be absorbed when the War Loan dividend was paid. Incidentally, since three weeks ago, the total resources of the banking department have shrunk from £182 to £172 millions. This implies some narrowing of the credit base, but the recent repatriation of French money means that ultimately less credit will have to be demanded of the British banking system for the purpose of financing the Exchange Account's gold holdings. Thus a narrowing of the credit base can be justified as a compensatory movement.

*

The Money Market

MONEY this week has been a little easier, and owing to the scarcity of Treasury bill maturities, the market is not too well supplied with bills. Some of the banks have continued to call, but on a lower scale than last week. They are also readier to buy August bills, but are less keen on taking July maturities. Still, as the Bank return shows, the Exchange Account has not yet disposed of its surplus cash, and with money less plentiful the banks are not such willing buyers of bills as they were in April. Bond-money was quoted up to $\frac{3}{4}$ per cent. early in the week, but by Thursday $\frac{5}{8}$ per cent. had become the ruling rate. One consequence of last week-end's political tension was a lack of activity in the produce markets, and the money market has noticed that this

week fewer bank bills were coming forward for discount.

	May 27, 1937	May 19, 1938	May 26, 1938
Bank Rate	2	$\frac{1}{2}$	$\frac{1}{2}$
London Deposit Rate	2	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan Rates:			
Clearing Banks	12-1*	12-1*	12-1*
Others	12-5 $\frac{1}{2}$	5 $\frac{1}{2}$ -3 $\frac{1}{4}$	5 $\frac{1}{2}$
Discount Rates:			
Treasury bills	12	12	12
Three months' bank bills	17 $\frac{1}{2}$ -9 $\frac{1}{8}$	17 $\frac{1}{2}$ -9 $\frac{1}{8}$	17 $\frac{1}{2}$ -9 $\frac{1}{8}$

* Viz. 12 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. $\frac{1}{4}$ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The floating debt return shows that for the past three weeks tender issues of Treasury bills have remained unchanged at £570 millions, while tap issues also show little variation. Next week, if the full quantity is allotted, tender issues will be £5 millions in excess of maturities. This will not be nearly enough to cover the War Loan dividend. We have already suggested that the Exchange Equalisation Account's cash might be used for that purpose.

*

The Bullion Market

THIS week's rise in the London price of gold reflects the appreciation of the dollar in terms of sterling. The premium is actually lower than last week, and there has been a certain amount of arbitrage business by those who were prepared to take a view of the New

York exchange. Early in the week there was a keen demand for gold against foreign currencies. This never reached panic dimensions and has since eased off. There has been less speculation in gold against belgas than might have been expected.

* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

The silver market has been quiet. A slight disturbance was caused early in the week by a resolution in the American Senate to the effect that purchases of foreign silver should cease as from June 30th. The Bombay price eased, but the London price moved only fractionally, and has since recovered in sympathy with the firmer trend of the dollar. The present agreement whereby the United States buys silver from China terminates on June 30th, and pending its renewal there may be some uncertainty in the market. A further shipment of silver was made to Bombay this week.

INSURANCE NOTES

Sun Insurance Office.—This company is the oldest insurance office in the country, and the accounts now issued, in respect of its two hundred and twenty-eighth year of existence, reveal a position of great strength. Fire premiums in 1937 increased by £20,000 to £2,234,000, and accident premiums from £1,747,000 to £1,860,000. In each case, the underwriting profits were very satisfactory, and showed an improvement on the results of the preceding year. Marine premiums were £584,000, against £528,000, but while in 1936 £50,000, in addition to departmental interest, was transferred to profit and loss, departmental interest only was transferred last year. The results of the last two years are given below:—

	1936	1937
Amount of age of Profit	Amount of age of Profit	Amount of age of Profit
Fire	231,049	289,427
Personal accident, etc.	114,190	134,824
Marine	50,000	...
Less items debited to profit and loss	395,239	424,251
Net trading surplus	269,939	417,213
	125,300	7,038

Included in the profit and loss debits above is an allowance of £100,000 in each year to investment exchange and contingency reserve fund.

*

Departmental reserves are strong. In the fire and accident departments combined, they aggregate £2,200,000, in addition to the usual reserves for unexpired risk. The Marine Fund amounts to 172 per cent. of the 1937

premium income. There is a general reserve of £1,000,000, an investment reserve of £342,000 and a profit and loss balance, after payment of the year's dividend, of £1,246,000. Total assets shown in the consolidated balance sheet amount to £11,437,000 and aggregate market values of stock exchange securities are in excess of book values. After standing at 53 $\frac{1}{2}$ per cent. for seven years, the dividend was increased last year to 55 per cent., and its cost is more than met by interest income.

*

Commercial Union Assurance.—The short statement accompanying the 1937 report gives the results of the quinquennial valuation of the life department. These are shown in the table below, together with the corresponding figures of the preceding quinquennium. Annuities have been valued on the same basis as in 1932, but the basis of valuation of the assurance contracts has been altered from OM3 per cent. to A1924-29 2 $\frac{1}{2}$ per cent. The cost of this change in basis is not given.

	1928-32	1933-37
Surplus earned during the period	2,235,762	2,255,420
Brought forward from previous valuation	240,931	421,491
	2,476,693	2,676,911
Allocations:—		
Bonuses to policyholders	1,595,221	2,122,746
Shareholders	177,247	235,861
Strengthening of actuarial reserves	145,076	...
Written off investments	137,658	...
Carry-forward	421,491	318,304
	2,476,693	2,676,911

Bonuses are declared on what is known as the contribution method, under which they vary according to the plan,

the age at entry and the time a policy has been in force. In the first instance, the cash amount to be allocated to each policy is calculated and the corresponding reversionary bonus found, on the basis of the mortality and interest used in the valuation. The minimum cash allotted in any case is (as at the last distribution) some 35 per cent. of the ordinary whole term premiums paid in the quinquennium. The reversionary rates of bonus, although slightly smaller than on the last occasion, are particularly good for endowment assurances.

*

In the life department, new sums assured last year amounted to £6,077,000, compared with £5,533,000 in 1936. Annuity consideration moneys, however, fell from £461,000 to £380,000. The rate of interest was 2s. 11d. smaller at £3 16s. 4d. per cent. The new business of the British General, the shares of which are held by the company, increased from £871,000 to £897,000. The fire premium income of the Commercial Union and subsidiaries increased from £5,308,000 to £5,451,000 and the profit was very satisfactory. In the accident department premiums amounted to £8,173,000, against £7,642,000, but underwriting results were not so good as in 1936. In the marine department claims amounted to 67 per cent. of premium income of £704,000, against 58 per cent. of premium income of £610,000 in 1936.

*

The underwriting results are given on the next page.

	1936	1937
Amount of age of Profit	Amount of age of Profit	Amount of age of Profit
Fire	487,680	575,149
Accident	425,023	362,257
Marine	100,000	100,000
Life:—		
Commercial	35,449	35,449
Union Life	5,000	5,000
Hand-in-Hand	45,000	45,000
British General	3,463	3,463
Sinking fund	4,800	4,800
	1,106,415	1,130,318
Less items debited to profit and loss	345,513	435,433
To general reserve	250,000	275,000
	510,902	419,885

Apart from the usual reserve of 40 per cent. for unexpired risk, additional reserves are held in the fire and accident departments, amounting to £4,841,000 and £2,652,000, respectively. Total assets, including those of subsidiaries, exceed £67 millions, of which approximately one-half refer to the fire, accident and marine branches. The general reserve exceeds £4 millions. The book values of the stock exchange securities are in the aggregate below market values on December 31st last. The dividend is 40 per cent. and costs £1,086,000, against available interest earnings of £699,000.

*

Marine Insurance Company.—This marine company has completed the hundred and first year of its existence, and is now a subsidiary of the London and Lancashire. Premium income increased last year from £592,000 to £722,000. First year's claims and expenses accounted for

37.1 per cent. of the 1937 premiums, against 32 per cent. in 1936. Second year's claims amounted to 43 per cent. of the 1936 premium income, against the corresponding figure of 42 per cent. last year. The 1935 account is closed by the transfer of £77,000 to profit and loss—equal to 14.7 per cent. of that year's premium income—compared with 20.1 per cent. and 23.2 per cent. in the previous two years. Total assets amount to £2,658,000, against which there is a reserve fund of £700,000. Interest earnings total £90,000, and the cost of the dividend, which is again at the rate of 40 per cent., is £180,000. The balance of the profit and loss, after payment of the year's dividend, is reduced from £457,000 to £422,000.

*

London and Manchester Assurance.—New sums assured in the ordinary branch amounted last year to £4,041,000 compared with £4,316,000 in 1936; in the industrial branch new sums assured increased from £6,329,000 to £6,553,000 and the premium income was £47,000 greater at £1,850,000. Although the company publishes one balance sheet only, a higher net rate of interest has consistently been shown in the past in the ordinary than in the industrial branch—a result which is contrary to usual experience. From 1933 to 1936 the excess, per cent., in each year, was 2s. 5d., 6s. 3d., 2s. 2d. and 10d. respectively. In 1937, however, the rate of interest in the ordinary branch was £4 6s. 2d. per cent. and in the industrial branch £4 6s. 9d. per cent. While the auditors are, of course, satisfied as to the propriety of the apportionment, some details would be of general interest. The usual annual

valuation of liabilities has been made and the results are given below:—

	Year to March 24 1937	Year to March 24 1938
Ordinary Branch—		
Surplus earned in year	421,287	403,967
Bt. fwd. from preceding year	262,994	329,521
	684,281	733,488
Allocations—		
Bonuses to policyholders	319,760	339,424
Shareholders' account	15,000	15,000
Staff pension fund	20,000	20,000
Carried forward to next year	329,521	359,064
	684,281	733,488
Industrial Branch—		
Surplus earned in year	294,815	276,965
Bt. fwd. from preceding year	131,119	132,264
	425,934	409,229
Allocations—		
Bonuses to policyholders	110,172	108,676
Staff pension fund	30,000	55,000
Shareholders' account	20,000	20,000
Common contingency fund	25,000	...
Carried forward to next year	132,264	137,055
	425,934	409,229

The rate of bonus in the ordinary branch is 40s. per cent. (as in the previous year), calculated on the sum assured, and the cost is amply covered by trading surplus. The basis of allocation to policyholders in the industrial branch is unaltered. Total assets increased from £17,852,000 to £19,127,000. Mortgages on property, which expanded by 30 per cent. in 1936, showed a further increase of £270,000 to £1,811,000, while loans on rates amount to £534,000 against £267,000. British Government securities at £4,747,000 showed moderate expansion, which was more than offset by a fall in Dominion and Foreign Government securities. Debentures increased from £3,107,000 to £3,443,000 and preference and ordinary stocks were also greater. The dividend is again 50 per cent. free of tax.

Investment

Alarms from Central Europe.—The security markets have a technique of their own for dealing with external news which threatens to have serious repercussions in the field of investment. For a century or more before the Great War, political crises tended to evoke an instantaneous response on the Stock Exchange. To-day, thanks, possibly, to improved communications, wider public knowledge of international events and tendencies, and a better market organisation generally, the first instinct of the Stock Exchange, in a crisis, is not so much to sell as to stand fast. That could hardly have been better illustrated than by the behaviour of prices after a week-end during which events in Czechoslovakia—and still more in Berlin—had suggested that Europe might be nearer disaster than at any time in the last twenty years. The fact that Sunday is almost universally a day of holiday was responsible both for the timing of the crisis on the eve of Czechoslovakia's first polling day, and for the absence of any opportunity to deal on the Stock Exchange until Monday, when tension had already been somewhat relaxed. On that day, gilt-edged stocks showed losses up to about $\frac{3}{8}$ of a point, and *The Financial News* industrial index fell from 84.1 to 83.1. These movements, however, were largely due to measures of self-defence by dealers, and little real selling actually developed. On Tuesday, the tone of the market became relatively firm, but an attitude of watchfulness, and a general unwillingness to regard the political crisis as wholly settled, were attested by the easier tendency of the Stock Exchange in the middle of the week. The recovery, however, while it lasted, applied not only to leading domestic stocks, but even to issues like Czechoslovakian 8 per cent. bonds (which rose as many as six points on Tuesday) and to German, Polish and Austrian issues.

Meanwhile, the rise in gold-prospecting counters, like Western Holdings—as a description of whose status, at the present stage, the word "speculative" errs on the side of conservatism—has continued this week with renewed vigour. If this particular movement were to broaden into a revival of interest in the shares of gold producers, as such, there might be much to be said for it, in the present international economic context. But as a mere ebullition of the gambling instinct, it scarcely deserves the headlines devoted to it in some sections of the Press. In general, it would be unwise to assume from the behaviour of the markets this week either that the possibility of further developments of the Czechoslovakian problem has been overlooked, or that present prices necessarily discount all conceivable "war risks." The stolidity of the Stock Exchange in the face of unwelcome intelligence is, in a sense, deceptive. In part, it may be due to the fact that it is the market's business not to wait for bad news, but to

SECURITY FIRST

anticipate it. But it may be equally explainable by the unwillingness of investors to make up their minds on a matter whose extreme implications few desire to contemplate. What is perhaps of more immediate significance is the relative resilience of the markets in the face of accumulating evidence of recession in industry and trade, whose existence was fully recognised by the President of the Board of Trade in the House of Commons on Tuesday. The future alone can bring relief from political fears; but if their incubus were removed a moderate revival in security prices might not unreasonably be expected.

* * *

Western Holdings Excitement.—At first the boomlet in Western Holdings seemed to be an isolated gamble, understandable on psychological and professional grounds but difficult to rationalise on the basis of established fact. Though its technical basis remains as slender as ever, the general market significance and scope of the movement has greatly increased this week as a result of the entry into the field of several important Rand finance houses. Something more, however, would be necessary to justify the price of around 20s. 9d. for Western Holdings 5s. shares, giving the company a market capitalisation of £2,400,000, against £1,500,000 a week ago. The company was formed under the aegis of the South African Townships last year to acquire a mixed bag of rights and options, mainly in the Orange Free State. Following geophysical surveys, promising areas were located to the south of Odendaalsrust between this village and the Zand River, and additional ground was acquired in this area, which is separated from the nearest definitely characteristic Witwatersrand formation at Klerksdorp by nearly 200 miles. The first borehole on the farm St. Helena No. 642 encountered at 1,944 feet a reef assaying 3.77 dwts. over a true width of 103 inches. There are rumours, as yet unconfirmed, that a very rich strike has since been made deeper in this borehole. A second borehole, Kaalpan No. 1, gave interesting geological indications. Union Corporation had also been investigating the region, and near the southern bank of the Vaal River, about 100 miles away, a borehole showed the existence of a reef of 117 inches assaying 5.34 dwts. Other boreholes sunk by the Union Corporation, and also on the Western Holdings property before the company was formed, have given mixed results.

* * *

On the basis of this evidence, some speculators, with professional encouragement, have jumped to the conclusion that the true Witwatersrand beds will be found to underlie large areas in the Orange Free State. Such hopes have been further encouraged by an agreement between Western Holdings and the Union Corporation whereby the latter will be responsible for all exploratory work and maintenance of options on the area south of the Zand River, and will have certain subscription and underwriting rights in any company which may be formed on the area held by Western Holdings to the north of the Zand River. Subsequently the Union Corporation has ceded to the Selection Trust a 50 per cent. interest in its transaction with Western Holdings in exchange for a 50 per cent. interest in options over further areas in the Odendaalsrust district secured by Selection Trust. A further development is the announcement of the reorganisation of Lydenburg Estates, involving a new issue of capital, which will acquire certain options and interests in the Far West, including areas in the regions at present in the market eye. Options on other farms and some exploratory work have been undertaken by other leading Rand mining houses. These institutions have not undertaken any heavier commitment than the actual expenses of prospecting. Conservative mining engineers would not describe the Free State areas as offering, at present, anything more than a prospect, and exploratory operations—the majority of which may be dropped—are in any case the normal work of a mining finance house. A few borehole results, unless checked by full knowledge of the underground structure, may be misleading.

In addition to Western Holdings, a number of shares are affected. South African Townships have advanced to 14s. largely on the strength of the latter's original holding of 1,600,000 shares in Western Holdings, subscribed on its formation. African and European have a direct interest and options on ground lying to the south-east of Odendaalsrust. Selection Trust at 20s. 3d. have responded to the agreement with Union Corporation. Through various lines of contact market interest has been extended until it covers all the leading finance shares in the market. Further, the publicity is bringing back speculators to the more serious development shares such as West Wits, Libanon, Venterspost and "Blyvoors," which are situated on a *terrain* which, by comparison, may be described as intimately investigated. There are also signs of a revival of semi-investment demand for the young Rand concerns such as "Sallies," Van Dyk and Vlaktefontein.

* * *

Cable and Wireless Dividend Prospects.—The chairman of Cable and Wireless (Holding) was able, at Tuesday's meeting, to express much confidence, and even to record some preliminary evidence of success, in the bold flat rate innovation introduced last month by the communications company. He was also able to demonstrate the advantages of the new settlement reached with the home and Empire Governments. But on the main investment question raised by the new "general settlement," he threw little new light. The ordinary stockholders, already subject to the risks of a highly geared capital, and faced with the inevitable fluctuations of an overseas communications business, have now to contemplate the concession of £450,000 per annum in rate reductions. Yet they are, in effect, deprived of any corresponding potential rewards of high gearing and traffic expansion by the cut in the communications company's standard revenue from £1,865,000 to £1,200,000. It may be calculated, by a species of arithmetical gymnastics, that, on the basis of the investment revenues and Marconi manufacturing profits of 1937, plus the net standard revenue, the consolidated earnings for the Holding Company's ordinary stock might exceed 9 per cent. But this calculation would assume that all available revenues are in fact passed on to the holding company and not reserved in a constituent concern. In a bad year, however, earnings might well fall to zero. While it may be unlikely that communications revenue will, in fact, exceed the reduced standard for some time to come—judging, at least, from the recent traffic indices—the chairman did not explain why the risk-taking stockholders have been left, in effect, with such a strictly limited equity if the flat rate scheme is a great success. It may be the board's aim to offset the risk of fluctuation in profits by a conservative and stable dividend policy. That might be suggested by the chairman's reference to "the 4 per cent. dividend on the ordinary stock" being well covered by the new standard revenue. In several passages, both last year and this, the chairman seemed to have a standard 4 per cent. rate in mind. If this assumption is correct, it would surely assist stockholders, and the market, if the policy were explicitly defined. Ten years ago, investors who studied the new merger proposals were puzzled to reconcile the towering capitalisation with the limited earning power of the group; to-day, stockholders find themselves in the dark regarding future dividend prospects under the new standard revenue scheme, at a time when international trading conditions are working against them.

* * *

J. Lyons and Company.—The profit and loss account of J. Lyons and Company is a formal rather than informative document, showing, with small variations from year to year, just enough profit to cover the dividend declared, plus a transfer of £100,000 to reserve, and to provide a new profits record. This year the only (and minor) variation is that the reserve is left at the figure of £2,000,000 attained last year, and the £100,000 surplus is added to the balance carried forward. The actual figures for the last three years are analysed on the opposite page.

	Years to March 31st		
	1936	1937	1938

* After debenture interest, depreciation and contingencies (amounts not shown in the accounts); also after directors' fees of £11,925 in 1935-6; £13,452 in 1936-7; and £13,460 in 1937-8.

‡ Ord. and "A" ord. only. Each proportional profit share receives one-fifth of the div. on an ord. or "A" ord. share.

The chart below emphasises the level course of declared profits.

J. LYONS AND CO. PROFITS 1929-38

The only substantial change in recent years is due to the increased provision for preference dividend, arising from the preference issue of March, 1932, which was used to pay off mortgages and debentures.

* * *

In the last eighteen years only three changes in ordinary dividend payments have occurred. Capital bonuses of 100 per cent. and of 33½ per cent. were declared in 1921 and 1925, respectively, followed in each case by a less than proportionate reduction in dividend rate; and in 1928 the dividend rate (on an altered capital) was raised from 21½ per cent. to 22½ per cent. Even ordinary shareholders who respect the stable dividend policy of the board may speculate regarding the possibility of some future increase. Possibly the balance sheet provides a clue. After the last bonus issue, fixed assets, including freeholds, leaseholds, plant and machinery stood at £9,982,000, and the total moved up by small increments in every subsequent year to 1935, to £10,078,000. Since 1935, however, there has been a steady increase to the latest figure of £11,287,000 for 1938. This increased investment is doubtless earning a reasonable return, and sooner or later the increased profit may be acknowledged in the profit and loss statement. For the time being, however, the directors are probably anxious to ascertain the fair maintainable revenue which may be expected from the new assets before specifically committing themselves to any new dividend basis. They may also be disinclined to make any change when movements in raw food-stuff prices and public purchasing power must create some degree of uncertainty regarding the course of profits from the business as a whole. Apart from major disturbing factors, reasoned hopefulness may suggest the possibility of some eventual increase, though perhaps of a modest nature, in ordinary distributions, and on this basis a yield of £4 4s. per cent. on the present price of 5½ appears justified.

Callender's Cable Profits.—The latest results of Callender's Cable are most satisfactory. Profits have achieved the highest level for a decade with an advance of 11 per cent. over 1936. Export trade as well as home business has expanded, and old customers have increased their requirements. Nor are the profits figures the only indication of the growth of the business. The balance sheet shows that net additions to properties and plant during 1937 amounted to £158,156, against £18,463 in 1936, while stocks, debtors and expenditure on uncompleted contracts have all risen. Considerable changes have also been made at the Erith works, the costs of which are charged to revenue—repairs and maintenance absorb nearly £20,000 more. We show below the division of gross profits in the past three years:—

	Years ended December 31st		
	1935	1936	1937
Gross profit	647,515	833,640	924,990
Repairs and maintenance	38,948	36,296	55,828
Depreciation	64,000	70,000	60,000
Taxes	20,000	30,000	100,000
All other expenses	202,618	235,478	247,673
Debiture interest	13,500	13,500	13,500
Preference dividends	56,000	56,000	56,000
Ordinary shares:—			
Earned	252,449	392,366	391,989
Paid	168,587	224,783	224,783
Earned %	24.8	39.9	40.5
Paid %	15	20	20
Carry forward	390,234	397,817†	565,023

† After placing £160,000 to reserve account, which also received £40,000 from renewals account not required.

Last year's advance in total profits, it will be seen, has not penetrated to the ordinary shareholder. Taxation and other expenses have absorbed all the increase, and earnings on the equity are only about ½ per cent. higher at 40½ per cent. But as in 1936, only half the rate earned is being distributed. The reserve account was raised to the round figure of £1,000,000 by the 1936 allocation and is left unchanged, the available surplus being added to the carry-forward. Undistributed profits in reserve account and carry-forward together exceed the issued ordinary capital of £1,123,916. The retention of so high a proportion of profits in the business, however, may not be due merely to the need for financing extensions nor even to the intention of capitalising the large available reserves at some future time. The board has adopted a stable distribution policy in good and bad years alike. A dividend of 15 per cent. has been paid with unbroken regularity since 1920 (with the additional 5 per cent. cash bonus in 1936 and 1937) on a capital which was increased by share bonuses in 1926 and 1929. On present indications, the company will have no difficulty in maintaining this high standard. But there is some possibility that, in the future, the cable companies may have to rely more on replacement demand and export

business, in view of the rapid extension of electrical transmission lines in recent years. A current dividend yield of £4 14s. 6d. per cent. on the £1 ordinary units reflects their high investment standing.

* * *

The Week's Capital Schemes.—Accompanying the William Beardmore report (which shows an increase in trading profits in 1937 from £115,372 to £167,271) the directors have issued particulars of the awaited capital reconstruction. The company was one of the victims of expanded war-time capacity, and carried through an adjustment of capital and assets in 1929. It has in issue 7 per cent. mortgage debenture stock, interest certificates, and 6 per cent. "A" income debentures to a total of £1,051,652, three classes of preference capital totalling £3,052,459, and an ordinary capital of £102,500. The balance sheet shows a debit balance at profit and loss of £540,787 (after deducting a credit of £145,619 for 1937) and losses on realisations of £857,124. The position, in fact, calls for the drastic treatment which is outlined in the scheme. The capital is to be reduced by £7,926,167, and the prior charge burden lightened. The scheme honours the principle that preference shareholders who sacrifice permanent rights should be duly recompensed by an equity interest. Every capital scheme must be treated as a special case, and this applies with particular force to the William Beardmore scheme. But close comparison of the sacrifices entailed for different shareholders is perhaps less important than the fact that the directors, who put the maximum estimate of average profits in future years at £150,000, have brought all classes of capital within sight of dividends.

* * *

The Brush Electrical Engineering proposals are less drastic. Briefly summarised, they entail the reduction of the ordinary capital to the extent of 75 per cent. (which will provide £366,396 towards writing down the assets). The company will then offer 150,000 £1 ordinary shares to members and stockholders (carrying option certificates to subscribe for further shares) and subsequently will create £150,000 5½ per cent. prior lien debenture stock (the existing prior lien stock being redeemed, and the bank overdraft repaid). Armstrong Whitworth Securities has this week announced the repayment of the whole £2,100,000 issued preference capital, of which £1,350,000 is held by A.W. Second Stock Trust and the balance by A.W. Consolidated Stock Trust. The Securities company's balance sheet shows accumulated cash amounting to £1,481,236, and it is expected that £500,000 will shortly become available from Sir W. G. Armstrong Whitworth and Company (Engineers). The realisation of the latter company is proceeding, and when it is completed the Securities company's main holding will consist of T. and T. Assets, which has substantial indirect interests in Lancashire Steel. The prospects for the ordinary shareholders of the Securities company in this process of realisation should ultimately be favourable.

* * *

Reduced Radio Profits.—The Pye Limited and E. K. Cole reports, both covering the year to March 31st last, provide evidence of the deterioration in conditions in the radio industry which set in last autumn. Pye Limited trading profits have fallen from £139,950 to £119,338, but the dividend of 25 per cent.—equivalent to 125 per cent. on a deferred capital of £33,800 in the previous year—is amply covered and the carry-forward is raised from £33,289 to £58,813. "Ecko" suffered more severely and shareholders, who had already been informed of a reduc-

tion in their dividend from 30 per cent. to 10 per cent. now find that even this lower distribution was not covered by earnings. Tax reserve has come to the rescue with a credit of £20,000, but the balance carried forward is also reduced from £29,615 to £25,044. Such results were not unexpected—the "Philco" report had provided investors with a serious warning. There has been a less dramatic, though no less important, indication of declining sales in the steady falling-off in the growth of wireless licences in force each month. On the sales side, increased taxation and trade recession are cited in explanation of the reduced purchasing power which is now available for semi-luxury goods. On the manufacturing and distribution sides, discipline has gone and open revolt has succeeded it. This crumbling of the morale of the industry must inevitably lead to reckless competition and to increased imports of foreign sets and parts, unless it is promptly checked. On the other hand, the industry is endeavouring to widen the scope of its operations, and to smooth out its fluctuating profit curve, by a general incursion into the domestic appliance and small electrical equipment and light engineering trades. Pye Limited, for instance, has recently entered into a manufacturing agreement with a leading firm of electrical appliance manufacturers in the United States, while E. K. Cole has interests in bakelite, electro-medical and measuring appliances, and electric heating manufacture. But competition from established concerns in these trades suggests that the newcomers may make less profit in their latest ventures than they made as pioneers in the radio trade. The outlook for typical radio manufacturing companies must still be regarded with considerable reserve.

Further Iron and Steel Results.—Company reports from heavy industrial centres continue to demonstrate the prosperity which the iron and steel industry enjoyed in 1937. This week the accounts of Pease and Partners, from the North-East Coast, and of the Park Gate Iron and Steel Company, from Rotherham, have been published. Both show spectacular increases in trading profits, and both have increased their equity earnings and dividends. Pease and Partners, of course, is the more important concern of the two. It is primarily a coal, coke, ironstone and limestone producer, and it is interested in the iron and steel industry largely as a supplier of raw materials, although it also has a direct interest through its subsidiary, Skinninggrove Iron. The company's total profit has advanced from £302,777 to £538,313, and after allowing £100,000 for depreciation, compared with £65,000 last year, and a full year's service on the 4 per cent. redeemable debentures and on the new 5 per cent. preference shares, the company has earned 31.9 per cent. for its ordinary capital, compared with 16.0 per cent., and has paid 10 per cent., against 5 per cent. in 1936-37. The Park Gate company's profit has increased from £103,096 to £189,181. It, too, has provided more for depreciation—£70,000, compared with £40,000—and ordinary earnings have been increased from 4.0 per cent. to 8.0 per cent., and the dividend from 3½ per cent. to 5 per cent. These results are both very satisfactory, although they bear very little relevance to the present prospect. The Park Gate directors point out that there is a falling-off in demand, although the company has at present sufficient orders on the books to keep the works in full operation. Pease and Partners would inevitably be closely affected by any reduction of iron and steel activity on the North-East Coast. At the same time, however, both companies have utilised prosperity well, Park Gate by technical reconstruction and Pease and Partners by rehabilitation of a top-heavy financial structure. The prices of their ordinary shares—Park Gate £1 stock units at 14s. 10½d., and Pease and Partners 10s. shares at 10s. 4½d.—are in reasonable line with those of other securities in this group.

* * *

Newspaper Finance.—The sensitivity of newspaper profits to fluctuations in costs and advertising revenue received further illustration in the Allied Newspapers report for the year to December last. Total profits, before

directors' fees, amount to £1,011,224, compared with £1,102,185 in the previous year. The directors refer to special problems which were operative during the year, and cite in particular the effect of increased wages and reduced financial advertising, together with National Defence Contribution. As a result of these factors, the net earnings available for the ordinary shares have been reduced from £360,398 to £245,668 (equivalent to 13.6 per cent. on the ordinary capital for 1937, compared with 22 per cent. for 1936) and the ordinary dividend has been reduced from 9 per cent. to 8 per cent. Lord Southwood made a pointed reference at the Odhams Press meeting to the operation of increased costs during the current year. Costs of paper and labour are "very much increased," but the directors anticipate that a larger part of the additional expense may be recovered. There is some consolation, moreover, in the fact that no further increase in the cost of paper is anticipated in 1939. Meanwhile, shareholders may have noted that the chairman did not refer in detail to the position of the Daily Herald interest, but Odhams (Watford) is now trading on a satisfactory profit-earning basis, and further capital is to be issued for extensions.

* * *

Property Companies' Results.—During the past fortnight the accounts of several important property companies have been published. The extent of improvement shown varies considerably between different concerns, but the main impression is that satisfactory progress in total revenue has been achieved. More than one report, however, refers to the still greater increase in outgoings, and the combined incidence of higher costs and N.D.C. has withheld from ordinary stockholders the benefit of improved gross revenues. The following table of comparative results shows that equity earnings have either been maintained or actually reduced, and dividends are unchanged. London County Freehold and Leaschold Properties, who

* Of which 3 per cent. interim, tax free. ‡ Before and § after participation rights of preference shares. † Tax free.

are interested chiefly in residential properties near Central London, have felt the effect of increased expenses (since rents cannot be immediately adjusted), but the provision of £14,000 for N.D.C. has been in part offset by lower requirements for repairs and maintenance, and earnings for the ordinary stock are unchanged. Good progress has been made with the modernisation programme, and satisfactory results are expected in due course from the erection of a new building in Oxford Street which will be used in part as a central inquiry bureau. Similar conditions are shown by the City of London Real Property Company. Increased rates and taxes have largely counterbalanced the substantial rise in gross revenue, though the effects of N.D.C. are again softened by a lower provision for replacement reserve.

The interests of House Property and Investment Company are not confined to London, and they consist mainly of business premises. The rise in total income is largely offset by higher expenses and taxes, but the lower rate earned on the ordinary shares is due to an increase of capital and not actually to a lower surplus. Properties owned by City and West End Properties are partly of business and partly of residential character. Allowing for the changed accounting basis from tax-free to less-tax, both earnings and distribution are practically the same as in 1936-37. Hesketh Estates, who now publish a consolidated balance sheet, fall into a different category, for the company was formed to develop building estates near London, on the South Coast and elsewhere. Profits are derived from sales of property as well as from rents and interest, and in this case the fall in profits from sales is more than offset by a rise in current receipts, but increased taxation and other charges have reduced the ordinary earnings.

* * *

Finlay Tea Companies' Results.—The "Finlay" companies' reports, like those of other tea producers, show a consistent improvement. All four companies record substantially higher profits and larger crops, and all have increased their dividend. The following table summarises the results of the group:—

Company (years to November 30)	Tea Crop			Ordinary Shares					
	Amt.	Av. Price†	Pro-ceeds	Earned		Div.	Current Price	Yield	
				Amt.	Rate				
Amal. Tea Est. :—									
1935	5.54	13.79	297,934	41,347	4.4	4	8½	8.0

*1937	...	...	...	194,971	13.2	12½			

† London. * Calendar years.

The parent company's total profits have risen from £231,687 to £251,680, though this result is due to better trading profits rather than to higher dividend and interest receipts, which are only 3 per cent. higher at £232,206. As in previous years, a substantial profit has been realised from the sale of investments, so that £51,410 has been applied in writing down book values. The market value of James Finlay and Company's holdings at the end of 1937 was, in fact, in excess of book cost. The miscellaneous information disclosed by the separate tea companies shows that although larger crops have been gathered, higher average realised prices have been the major factor in the year's improvement. A more detailed analysis of tea sales in certain of the reports suggests that the prices of the cheapest quality teas rose most, both absolutely and relatively, the average increase being over 2d. a lb. For the Amalgamated Tea Estates, of whose crop over a third comes from the Darjeeling district, this fact is of some importance, and partly explains its more modest increase in tea proceeds. Thanks to a substantial increase in investment income, however, earnings for the ordinary stock have more than doubled. For all four companies equity earnings have risen appreciably, but to a smaller extent than tea proceeds, while the year's distributions show greater conservatism than in 1936. The permissible tea quota for 1938-39 is 92½ per cent. of standard against 87½ per cent., but London prices, which were well above the levels of a

year ago until mid-February, have since fallen, compared with 1937, while the estimated absorption of tea in this country in the first quarter showed a fall as compared with a year ago, although total imports were higher. In view of this uncertain trend, the yields now obtainable on the shares of the Finlay group appear justified.

* * *

Oil Dividends.—The oil share market has made little response to this week's important dividend declarations. The distributions are satisfactory, rather than exciting, and from Royal Dutch, in particular, the market had expected more. The final dividend of "Shell" Transport and Trading is 12½ per cent. tax free, making 20 per cent. tax free. The rate is identical with that paid for 1936, but it involves a somewhat higher cash payment, since the company distributed a 20 per cent. share bonus between the interim and final dividends for 1936. The payment, in fact, is equivalent to about 24 per cent. tax free on the old capital. Royal Dutch, whose total dividend had been estimated in optimistic circles at 18 per cent., in fact increased the payment from 16½ per cent. to 17 per cent., and the shares reflected the market's disappointment. It is evident that the group last year produced a record output. The directors of Anglo-Egyptian Oilfields have declared a dividend of 12½ per cent. on the "B" shares. Despite the slight fall in production recorded last year, in fact, the rate of distribution has been maintained at the 1936 level. The dividends on Venezuelan Oil Concessions preference and ordinary shares have also been maintained at 3s. per share, although the company increased its total production by over 25 per cent. last year. Special factors, however, may have been operative in the case of this company, which recently increased its issued capital to provide for the increased scale of operations in the Venezuelan fields.

* * *

Other Company Results.—The number of reports is becoming less heavy than in recent weeks, and our usual analysis of profit and loss accounts, appearing on page 524, includes less than 60 companies, owing partly to the smaller number of rubber companies' reports. We discuss the results on page 496 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 503. Reviewing the operations of the *Royal Insurance Company*, Mr A. E. Pattinson reported that the life department had achieved net new business of over £5 millions for the first time, while premium income in the accident and general section (to which the largest contribution came from the United States) had exceeded that in the fire department. The results of the quinquennial valuation were discussed by Mr Herbert Lewis at the *Commercial Union Assurance* meeting. The basis of valuation had been changed to the new A1924-29 table, with interest at 2½ instead of 3 per cent., and there still existed a substantial margin of market values over book values of Stock Exchange securities. Sir William H. Goschen informed members of the *Sun Insurance Office* that the important business maintained in China

had been affected by hostilities, but that the resulting losses were not substantial. Progress made by the *Slavia Mutual Insurance Bank* between 1919 and 1938 was reviewed by President Joseph Hucl at the annual meeting in Prague. For the first time total premium income exceeded Kc. 250 millions. This income had, in fact, increased by 600 per cent. since 1919, while in that period premium reserves had increased eightfold and the funds fourteenfold. Members of the *Equitable Life Assurance Society* were informed by Mr H. L. M. Tritton that the rate of interest earned (£4 4s. 5d. per cent. net) was slightly higher than in 1936. Addressing the *Central Mining and Investment Corporation* meeting Mr F. R. Phillips surveyed the changes in the gold mining industry since 1932, when South Africa abandoned the gold standard. In 1932, 11,378,000 ozs. were recovered, and in 1937 no more than 11,445,000 ozs., though the tonnage milled had risen from 34,986,000 to 50,725,000 tons, and the value of the output had increased by 67 per cent. Working costs had fallen from 19s. 2½d. to 18s. 11d., while working profits had risen by no less than 116 per cent. At the fortieth meeting of *Union Corporation*, held in Johannesburg, Mr P. M. Anderson discussed progress in development work during the same period. In 1932 there were no mines in development, but at the end of 1937 16 developing mines were active, and one had since entered production. The consequences of the war in China for the *British and Chinese Corporation* were discussed by Mr D. G. M. Bernard at the annual meeting. He much deplored the destruction of the growing confidence in China's railway prospects, and brought out the violent contrast of peaceful progress and war's destruction. Lord Pender's review at the *Cable and Wireless (Holding)* meeting is discussed in a Note on page 488. Mr James Gray reported at the *Madras Electric Supply* meeting that the number of units sold had risen by 18.7 per cent. last year. The purpose of the proposed alterations to the *Articles of Wankie Colliery Company* was explained by Sir Edmund Davis at the extraordinary meeting. Proposals for erecting a new building in Oxford Street were discussed by Mr Thomas J. Cullen at the *London County Freehold and Leasehold* meeting. We comment on Lord Southwood's speech at the *Odham's Press* meeting in a Note on page 490. Addressing the *Mid-European Corporation* meeting, Mr Norman Holden expressed satisfaction that the bank overdraft had been much reduced and that further debenture stock had been issued. At the *Telephone Manufacturing Company* meeting Mr Fred T. Jackson reported that orders in the first four months of 1938 exceeded those for the same period of 1937. Mr E. F. Slade, at the *Batang Consolidated Rubber Estates* meeting, referred to the benefit which would be derived from last year's forward sale of 60 tons at 11½d. per lb., c.i.f. At the *Imperial Continental Gas* meeting, Sir Thomas Royden drew attention to the freedom of the electricity industry in Belgium from government interference. Mr W. Sandford Poole, addressing *Industrial and General Trust* shareholders expressed satisfaction that last year's revenue had exceeded the forecast. Mr Philip E. Hill informed *Beechams Pills* shareholders that the Beecham factory at St. Helens produced more than 11 million pills a week. Mr J. M. Bush, at the *W. J. Bush and Company* meeting, explained the board's policy of writing down goodwill. Members of *General Refractories* were informed by Mr Frank S. Russell that export trade in the latest year had been three times higher than in 1936.

THE STOCK EXCHANGES

London

SETTLING DAYS
TICKET ACCOUNT
JUNE 7 JUNE 9

BEFORE the markets had reassembled last Monday, it was already evident that the tension between Germany and Czechoslovakia had abated somewhat. For this reason, although prices were marked down initially as a precaution-

ary measure against serious selling, the pattern of the Austrian crisis was not repeated, and by the close of business on Monday dealing margins had been reduced to normal dimensions, and only fractional losses recorded. But the large part of the "House" has remained moribund this week, and occasionally frightened—as on Wednesday afternoon—when German diplomatic representations fell fast on Prague. The boom in Western Holdings, however, has pro-

vided much excitement in the Kaffir market, and the circle of interest has widened from the youngest and least mature prospects to the established producers.

The gilt-edged market was disturbed on Monday but, with little liquidation, prices gradually recovered, and on Tuesday evening had regained their initial losses. Business remained extremely quiet, however, and the reaction on Wednesday afternoon was

unaccompanied by any significant increase in selling. In the Dominion market, there was some evidence of support for New Zealand stocks which recovered, at least temporarily, after their prolonged steady fall.

Central European bonds reflected the current anxiety, although the Czechoslovakian 8 per cent. issue rallied sharply on Tuesday. After an unsettled opening, Japanese issues received support, but Chinese bonds remained dull. Movements in Brazilian loans were strictly limited.

*

Dull conditions prevailed in the home rail market, due as much to general conditions as to the uninviting traffics and prospects. In consequence, Tuesday's improvement was not maintained. Argentine issues were barely steady.

No significant volume of liquidation in the industrial share market was apparent on Monday, but support was reduced to the minimum, and was only temporarily increased on Tuesday. Steel shares moved, like other sections, within narrow limits, and while prices were marked firmer on Tuesday, they became irregular later. Tube Investments and Stewarts and Lloyds had satisfactory mid-week advances. Calender's Cable advanced before the report (discussed on page 488) but reacted later. Aircraft shares were steadier, but business was no more than fair. Engineering issues also attracted little attention, despite the occasional small price improvements in mid-week. Provincial investment favourites in the brewery and tobacco lists recovered somewhat after the political impact, but failed to maintain their momentum. In the stores group, Great Universal were marked down on the absence of a capital bonus. Miscellaneous industrial leaders moved from initial dullness to firmer prices, but could not maintain their full recovery.

*

In the oil market, the volume of business remained persistently small. Continental sales and purchases had a greater effect on the whole than domestic orders. A quiet start to the week with sagging prices was followed by a firmer tendency, and then in mid-week by some irregularity, with little broadening of activity. The rubber market continued idle, though the subdued tone induced by the European crisis at the week-end was followed by a rather firmer tendency. Business in tea shares was on a very small scale, but prices were firm.

The European situation was at first a restraining influence in the mining market, but it was not long before considerable activity in gold shares was resumed. As in the two previous weeks, Western Holdings (whose movements are discussed in more detail in a Note on page 488) were the centre of interest. They affected gold shares generally—and not merely Kaffirs—Tuesday, in particular, being characterised by general excitement and sharply rising prices all round. Conditions in mid-week were still active, though quotations moved more irregularly, and the advance continued merrily on Thursday. Selection Trust rose (on its interests in the Orange Free State), but base metals generally were neglected in favour of gold shares.

ACTUARIES' INVESTMENT INDEX

The Actuaries' index of 151 industrial share prices has fallen again, standing on Tuesday last (May 24) at 65.3, against 66.5 a week ago and 69.3 a month ago. The average yield has now risen to the highest level of 1938, and stands at 5.79 per cent., compared with 5.62 and 5.36 per cent. a week and a month ago respectively. A selection of the separate indices follows:

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Prices 1938 High

New York

WALL STREET remains despondent. Depressing news on the home economic front—steel output is estimated by *Iron Age* to have fallen below the 30 per cent. level to 28 per cent. of capacity—coupled with concern over the European situation, brought stocks back sharply. Trading is running at exiguous levels; not since May 10th, indeed, have one million stocks been traded, and the recent rate has sometimes been nearer a quarter than half a million. Steel shares have been particularly affected this week, while rail stocks have approached despair, since opposition is spreading to wage cuts, and the companies' hopes of R.F.C. loans have faded. The market has also taken careful note of the persistent fall in primary commodity prices. The bond market has been affected by the surrounding cheerlessness, both Treasury issues and high-grade railway bonds being weaker.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

BY STOCK EXCHANGE INTRODUCTION

Electrical Distribution of Yorkshire—Particulars of issue of £500,000 3½ per cent. debenture stock, taken by Messrs. Kitcat and Aitken at 93½, less ½ commission. Redeemable at par June 1, 1965, or at 101 from 1955 on notice. No charge to be created in priority to this issue.

PRIVATE PLACINGS

Hawker Siddeley Aircraft Company—A block of 436,224 £1 5 per cent. first cumulative preference shares has been placed privately.

ISSUES TO SHAREHOLDERS ONLY

Gaskell and Chambers—Issue of 20,109 new £1 ordinary shares at 65s. to ordinary shareholders registered as at May 2nd (one new for four held).

Northampton Gaslight—Issue of £48,984 consolidated stock (5 per cent. maximum) at 110. To rank as from July 1, 1938.

Owen (Thomas)—Issue of 1,000,000 1s. ordinary shares at par (one new for four ordinary shares held).

Transport Services—Issue of 400,000 5s. ordinary shares at 6s. to preference and ordinary shareholders as at May 18th (one new ordinary share for every two ordinary shares held).

Colonial Gas Association—Issue of 75,021 8 per cent. £1 preference shares at 23s. English and 28s. 9d. Australian currency.

Tindals Gold Mines—Issue of £25,000 10 per cent. five year convertible notes at par.

SHORTER COMMENTS

Company Results of the Week—The rise in the net profits of PRIMITIVA HOLDINGS, from £78,646 to £80,829, is due to larger receipts from the Primitiva Gas Company of Buenos Aires, who made an exchange loss which—though heavy—was less severe than in the previous year. Another utility holding company, WHITE-HALL ELECTRIC INVESTMENTS,

interested chiefly in Greece and Spain, have earned slightly less than in 1936-37, at £228,680, but after paying the preference dividend, the surplus is added to the carry-forward. The week's rubber company results show very high rates of progress. Thus net profits of UNITED SIA BETONG are £219,613 against £132,436, while TELOGOREDJO UNITED earnings are more than doubled at £78,140. A setback has been experienced by PORRITTS AND SPENCER, the felt and textile manufacturers, whose net profits of £90,337 compare with £113,671. The 10 per cent. dividend is maintained, however, and is covered by earnings. W. J. BUSH AND COMPANY, the manufacturing chemists, have also been unable to maintain their profits, though the decline shown is small. Even after charging depreciation and obsolescence, the 13 per cent. dividend is covered three times by earnings. The first accounts of SCOTTISH MACHINE TOOL CORPORATION since introduction to the public show net profits for the 54 weeks to March 31st last of £69,526, and an 8 per cent. dividend is being paid. The traffic handled at the wharves of BEIRA WORKS rose by no less than 47 per cent. last year, and net profits amount to £176,750 against £132,282, and a dividend of 13.8 per cent. (against 10 per cent.) is being paid. Stable conditions are indicated by the report of ADVANCE LAUNDRIES, whose net profits of £56,965 are practically unchanged. The 7½ per cent. dividend is payable on the increased capital. Total profits of CHLORIDE ELECTRICAL STORAGE COMPANY, at £435,724, are £3,300 higher than in 1936-37, but the additional provision of £15,000 to inaugurate a pension fund for subsidiaries' employees brings net profits below the previous year's level. The dividend is, however, raised from 15 to 20 per cent. through the doubling of the cash bonus.

MISCELLANEOUS

Beira Works, Ltd.—For year to March 31, 1938, revenue increased by £160,057 to £674,304 and expenditure by £82,807 to £293,476, leaving net revenue £77,250 higher at £380,828. Dividend, 2s. per 14s. 6d. share against 1s. 5.4d. To contingencies, £80,000 (same).

Armstrong Whitworth Securities—Net income for 1937 £6,089. A dividend of 2 per cent. is payable on the first preference shares. Carry-forward reduced from £15,116 to £1,206. It is proposed to repay all the £2,100,000 issued preference capital out of cash resources.

Pye, Ltd.—Profits for year to March 31, 1938, fell by £21,570 to £106,030. Deferred dividend 25 per cent. (equal to the 125 per cent. paid in the previous year on the lower capital). Carry-forward £97,819.

Cole (E. K.), Ltd.—Profit for year to March 31, 1938, £40,468 against £113,527 for 10 months to March 31, 1937. To staff fund £5,000 as before. To depreciation £19,515 (£23,510). Ordinary dividend 10 against 30 per cent. Carry-forward reduced from £29,615 to £25,044.

Park Gate Iron and Steel—Trading profit for year ended March 31, 1938, was £251,180. To depreciation £70,000 (£40,000). For tax and N.D.C. £65,000. Ordinary dividend raised from 3½ to 5 per cent. To reserve £30,000 (£15,000). Carry-forward £13,680 higher at £42,484.

Pease and Partners, Ltd.—Total income for year to March 31, 1938, £538,312 against £302,777. To plant depreciation £140,000 (£65,000). Debenture services £34,656 (£20,702). To tax reserve £100,000 (nil). Preference dividend absorbed £62,500 against £29,264. Ordinary dividend raised from 5 to 10 per cent. Carry-forward raised from £185,480 to £240,303.

United Siam Betong Rubber Estates—Profit for 1937 £219,612 against £132,436. Ordinary dividend raised from 13½ to 17½ per cent. To general reserve £20,000 (same). Also £7,500 for N.D.C. To estates reserve £30,000. To depreciation reserve £6,000. Carry-forward raised from £46,647 to £61,281.

DIVIDEND ANNOUNCEMENTS

Rates are actual, unless stated per annum or shown in cash per share. Rate for previous year refers to total dividend, unless marked by asterisk to indicate interim dividend.

Industry and Trade

The Cotton Enabling Bill.—In Lancashire cotton trade circles there has been keen interest in the speech of Mr Oliver Stanley, the President of the Board of Trade, in the House of Commons on Tuesday. He made an urgent appeal to the leaders of the industry to produce proposals for the reorganisation of the trade which would command the general assent and support of the whole of the industry. The difference between the promoters of the scheme and the opposition, however, is on a question of principle and the opponents have condemned the Enabling Bill as a whole. A member of the Opposition Committee on Wednesday said: "I do not think that any approach will be made by our side. The Joint Committee and the opposition group are as far apart as the poles. We have considered the proposals in the Bill and do not agree with them. If the Joint Committee wish to bring forward a fresh scheme then we will consider it. I am convinced that the Bill is designed to drive small firms out of business so that the large combines can remain in business and eventually rule the whole industry. It is important to point out that some of the most up-to-date and best managed concerns in the trade are in opposition." It is understood that the Joint Committee is anxious that the Government should, without delay, say definitely what points in the scheme they approve and what proposals they cannot agree to. If this is done, then there is a possibility that the leaders of the industry can formulate amended proposals on which a ballot of the firms concerned could be taken. The urgency of the matter is being accentuated by the severe depression which now exists in Lancashire.

Wages and Prices.—The accompanying chart shows the trend of wage rates and the cost of living, quarterly, since 1927, on the basis of the official indices:—

During the past year, it will be seen, the index for the cost of living rose faster than the figure for wage rates. The purchasing power of wages has thus tended to decline, a development which has found reflection in a fall in the volume of retail sales. The tendency of the cost of living to rise faster than wage rates, however, was arrested in the first quarter of this year, when the former showed an appreciable decline. In part, this movement was due to seasonal influences, but it was accentuated by the decline in world prices which led to a cheapening of British imports.

Precarious Pig Iron Situation.—Reduced consumption and substantial stocks of pig iron, combined with uneasiness over the future trend of demand, are causing anxiety to British blast-furnace operators. About a score of furnaces, the greater part turning out foundry grades, have been blown out since the beginning of this year. The stoppages are fairly evenly distributed over the various producing districts, the only areas which have not yet been

affected being Scotland, Durham and Northumberland, Wales and South and West Yorkshire. Recently, however, the Cleveland district had to bear the brunt of the recession. The following table shows changes in the number of furnaces in blast, in production and in output per furnace. The output per furnace, it will be seen, has more than doubled since the war.

	Average in blast	Output 000's tons	Output per furnace
1913	337.7	10,260	7,596*
1929	158.3	7,589	11,989*
1932	65.0	3,574	13,750*
1936	110.8	7,721	17,414*
1937	124.5	8,493	17,051*
1937, first quarter	115.3	1,935	16,778
1937, second quarter	123.0	2,076	16,878
1937, third quarter	129.7	2,170	16,735
1937, fourth quarter	133.7	2,316	17,326
1938, first quarter	124.0	2,169	17,492

* Quarterly averages.

The possibility of further stoppages, especially in Cleveland, has given rise to renewed pressure on the Government for the establishment of a pig iron reserve for emergency purposes. The delay in arriving at a decision on this plan suggests that opinion is not unanimous. Meanwhile, the Foundry Pig Iron Producers' Association decided, last week, to extend the present price agreement beyond June 30th. Prices for hematite and basic pig iron used in the manufacture of steel are fixed until the end of this year, the respective producers' associations being affiliated to the British Iron and Steel Federation.

Wages in Engineering.—Britain's skilled engineers are in the news because of their key importance in quickening re-armament. Accordingly, it is perhaps not inopportune to recall their economic record in recent years. Since 1935 engineering has been notably active, and this activity has been reflected in improved rates of wages in shipbuilding and repairing as well as in engineering proper. The following table, prepared by Mr E. C. Ramsbottom, shows the movement of wage rates for all workers, skilled and unskilled, in these industries:—

	1924	1926	1928	1930	1932	1934	1935	1936	1937
Engineering*	100	102	104	104	101	101	104	107	113

* Including railway engineering shops. † Time workers.

Even before last year's marked increases in weekly wages, recognised rates of wages for certain categories of work had moved sharply upwards:—

Level of Rates of Wages at	Engineering (Average of 16 principal centres)			Shipbuilding (Average of 8 principal centres)		
	Fitters and Turners per week	Pattern-Makers per week	Iron-Moulders per week	Shipwrights per week	Ship-joiners per week	Ship-fitters per week
July, 1914	38.11	42.1	41.8	41.7	40.5	40.5
Dec., 1924	56.6	60/11	60/0	55/10½	58/3	58/3
Dec., 1932	59.1	63/4	62/4	60/0	60/0	60/0
Dec., 1935	60.9	65/1	64/2	60/0	60/0	60/0
Dec., 1936	64.1	68/3	67/1	62/0	62/0	62/0

ELECTRICAL ENERGY for
Power, Heating and all Industrial Purposes

Carlisle House, NEWCASTLE-UPON-TYNE
SITES FOR WORKS Apply to above address for particulars

Individual wage increases in 1937 in engineering were 4s. a week, and in shipbuilding there were increases amounting to 4s. a week for men on time work and 8 per cent. for pieceworkers.

* * *

Employment in engineering also markedly improved up to the end of last year, though the numbers of unemployed have moved upward again this year:—

	Dec., 1928		Dec., 1932		Dec., 1937		April, 1938	
	Nos. Insured	Nos. Unemployed	Nos. Insured	Nos. Unemployed	Nos. Insured	Nos. Unemployed	Nos. Insured	Nos. Unemployed
Engineering	744.2	72.3	725.1	215.8	822.4	46.0	822.4	55.9
Shipbuilding	202.4	61.3	181.9	115.4	172.8	39.6	172.8	35.3

The April figures show a distinct setback in engineering, and data for the allied trades of motor vehicles, cycle and aircraft construction and repair, notably important in view of the concentration of immediate defence needs on the air arm, show a similar falling away. The numbers insured in these trades have risen from 234,800 in 1928 to 351,600, but the number of unemployed, which was 17,900 last December, rose to 21,000 on April 4th. It should not be beyond the wit of employers and unions to-day to devise plans whereby the urgent calls of national security might be utilised to preserve the appreciable gains to labour which the current recession in business threatens to whittle away in rising unemployment.

* * *

Copper Under Pressure.—After remaining fairly stable between £38 and £40 per ton during the past four months, the price of copper fell below £33 this week, thus reaching the lowest level since 1935, when a restriction scheme was introduced in order to regulate supplies. Although consumers' demand on this side of the Atlantic has been very poor for some time, the serious setback of prices was due mainly to the depression in the United States. Since January 28th the three large American concerns had strenuously endeavoured to maintain the price at 10 cents per lb. But domestic sales in the United States have fallen below 20,000 short tons per month. As a result the price was reduced to 9 cents per lb. on May 19th, a development which forced the London Metal Exchange to follow suit in order to prevent the copper market outside the United States from being glutted with exports from that country. The reduction of the American price below 10 cents per lb. is a serious development, for this level has long been regarded as the minimum necessary to cover the cost of production and normal depreciation of the American copper industry. During the last slump, too, producers in the United States unsuccessfully endeavoured to defend the 10 cents limit, but as soon as prices fell below this level, the resistance of the market was broken and quotations took a downward plunge. Whether developments will be similar this time is impossible to predict. But producers in the United States feel that they have lost a vital battle, while consumers continue to hold back in anticipation of a further decline in prices. The European market is once again completely at the mercy of the course of events in the United States, in spite of its favourable statistical position; with visible stocks in that country above 356,000 short tons, it cannot afford to let the New York export price rise above the domestic quotation in the United States. This suggests that a reduction

in the output of the restricting countries, which is predicted in London metal circles, is unlikely to bring about a lasting improvement in London copper prices. The course of prices in the London market during the next few weeks will thus depend more on developments in the United States than elsewhere; and the outlook across the Atlantic is at present unpromising.

* * *

U.S. Customs Smelters and Copper Exports.—It is widely believed that the vulnerability of the London copper market to developments in the United States has been exaggerated because exports from that country are limited under an agreement between the companies adhering to the restriction scheme and the American industry. The details of this gentlemen's agreement have never been made public, but it was understood at the time of its conclusion early in 1935 that the limit for American exports of domestic copper was fixed at 8,000 tons per month. It is not known whether the American producers feel themselves still bound by these arrangements, but even if they did, the agreement can by no means be regarded as watertight, for it was accepted only by the large American producers, but not by the American Customs smelters. In the past these smelters, which do not own mines, but only refine ore and scrap, have always proved dangerous sellers in times of a difficult market. The breakdown of the copper price in April, 1929 (which was the beginning of the end of the Copper Exporters Inc., the most comprehensive world cartel in the history of the copper trade) was primarily due to distress sales of customs smelters. Moreover, the large exports from the United States in 1934 which brought about a collapse in the London copper price, came mainly from the customs smelters. Should the European copper market prove more attractive than the American, it is quite possible that the customs smelters may again make heavy shipments to Europe. As the customs smelters earn as a rule only the smelting charges, which are more or less the same whether copper prices are high or low, they have no incentive to store their copper for a long time, especially as they have to take up and finance their new supplies of ore.

* * *

Wholesale Prices again Lower.—The past fortnight has witnessed a rather heavier fall in British wholesale prices. The *Economist's* complete index has fallen by 1.4 per cent., and the primary products index by 3.5 per cent. The decline in primary products prices is paralleled in the United States, where the *Economist's* index has fallen by 3.3 per cent., but the Irving Fisher index for all commodities registered last week a small increase since the end of April. French wholesale prices have risen by 4.2 per cent., this movement reflecting the institution of the Daladier franc.

LIQUEUR BRANDY
MATURED AND BOTTLED AT CHATEAU DE COGNAC

The following table shows the movement of the various groups comprised in *The Economist* index number:—

	The Economist INDEX (1927 = 100)			
	Sept. 18, 1931	June 2, 1937	May 11, 1938	May 25, 1938
Cereals and meat...	64.5	93.6	87.5	88.3
Other foods	62.2	68.6	59.8	58.9
Textiles	43.7	73.2	53.2	52.1
Minerals	67.4	110.0	91.8	89.0
Miscellaneous	65.8	86.7	76.1	75.0
Complete index	60.4	86.2	73.2	72.2
1913 = 100	83.1	118.5	100.8	99.4
1924 = 100	52.2	74.5	63.3	62.4

Grain and bacon prices are lower than a fortnight ago, but there have been advances in meat and potatoes. Tea and coffee are cheaper, and butter has turned downwards after its previous rise. Cocoa is dearer. Textile

prices are almost all lower, and there has been a general fall in non-ferrous metals. In the miscellaneous group, Swedish timber, petrol, linseed oil, tallow, rubber and creosote have all fallen in price.

* * *

India's Economic Adviser.—The decision to create the post of Economic Adviser was announced in the Indian Legislative Assembly some time ago. It was then stated that the purpose of this appointment was, firstly, to obtain for the Government expert advice on current economic and financial problems and, secondly, to provide facilities for investigations of a more general character. It was also hoped that, under such an Adviser, a succession of young Indian economists would be trained in the methods and practice of economic research. The establishing of a new organisation of this type and the development of its functions is an arduous and responsible work, and the Government of India are fortunate in having secured the services of Professor T. E. Gregory.

INDUSTRIAL REPORTS

REPORTS from the principal industrial centres this week do not indicate any change of the trend of business activity. Demand for coal in both export and home markets is declining and some collieries are working short time. In the heavy sections of the iron and steel industry, orders on hand will take some time to complete, but the volume of new business remains small, and the situation in the lighter sections is less favourable. The South Wales tinplate industry remains very quiet, particularly for export, shipments last week totalling only 2,934 tons, compared with 7,630 tons in the corresponding period last year. Business in the cotton trade remains depressed and sales of yarn are below current output. Demand for raw wool is fairly strong, though consumption is below normal. In contrast to the decrease in general activity, retail sales in April show an increase of no less than 11.4 per cent. over the corresponding month last year, according to the figures published in this week's *Board of Trade Journal*. Although this is partly due to the fact that Easter fell in March in 1937, the increase is somewhat greater than was generally expected. Developments in the main branches of activity are discussed in greater detail in the *Trade Supplement* which accompanies this issue of *The Economist*.

Coal

Sheffield.—The market remains quiet, and some of the collieries are not working full time. Prompt delivery of all grades is obtainable, and there is little forward business. Industrial coal is moving less freely, and gas coal is in rather poor demand. With the lessening demand for domestic fuel graded brands are abundant, the lower prices having proved no great attraction. There is a moderate call for blast-furnace coke, but other grades are easy, as supplies are plentiful. Prices generally are maintained.

A slightly better export inquiry is reported, but actual business is slow. Foreign consumers are holding back in hope of better terms. Supplies of steam coal are well in advance of demand.

Newcastle-on-Tyne.—The market retains the easy tone which has been ruling during the last few weeks. Prospects are not good for the summer months and idle time already experienced by some collieries is likely to become more general. A certain amount of business continues to be booked with countries where trading agreements exist, but the slowness in home industrial demand is the primary cause of the uncertain outlook. Patent oven coke, whilst receiving more inquiry from abroad, is still a dull market and makers are compelled to stock.

*

Glasgow.—Conditions remain dull, with demand declining in most of the principal outlets. With the exception of certain home industrial needs inland consumption is slow; the public utilities are reducing the rate of acceptance of contract supplies and the domestic absorption is curtailed by the advance of the season and also by the expectation of price concessions. Despite an easier tendency of quotations foreign orders remain scarce, and weekly shipments are now under the 200,000 ton mark. The decline in the aggregate this year to date is fully 750,000 tons.

*

Cardiff.—There are no signs of an improvement in the state of the South Wales coal trade. Current inquiries continue very scarce, and the owners' chief problems are those of the regulation of output and supply and the co-ordination of prices. The French import restrictions are now in full force and exporters are also complaining of a slackening of purchases for Italy owing to the condition of the new coal account under the revised Trade Agreement with that country. Quotations, however, are unaltered and the majority of owners are reluctant to revise the permitted prices in view of the contraction in world demand for coal and the renewed severity of German subsidised competition. Shipments in the foreign and coastwise trades at the South Wales docks last week totalled only 342,400 tons, compared with 414,500 tons the previous week, and 239,695 tons in the corresponding week last year, which was a short week owing to the Whitsuntide holiday.

Workington.—The coal trade is easier. Irish needs have diminished and local landsale is slack. All the small coal that can be raised goes to the coking plants which are working to capacity for the hematite pig-iron producers. Prices are steady.

Iron and Steel

London.—Lethargic conditions rule in the iron and steel markets, but large tonnages of steel continue to pass into consumption against existing contracts, says the official report of the London Iron and Steel Exchange. In most departments of the market considerable stocks exist, which are being absorbed rather slowly.

In the pig iron section the volume of new business remains on a small scale. It is anticipated, however, that the decision of the foundry pig iron producers to retain their prices unaltered when the period of stabilisation expires at the end of the half-year will release a certain amount of business. Most buying is limited to supplementary parcels, and consumers' requirements are satisfied by deliveries against old contracts. The heavy stocks of steelmaking iron which have been accumulated are causing concern and new production is being gradually curtailed.

Business in semi-finished steel is restricted by the stocks of imported steel at consumers' works. These are being slowly liquidated, but in the meantime new business in British material is severely limited.

Irregular conditions continue to rule in the finished steel department; but most of the heavy steelworks have orders in hand which will take some time to complete. The situation in the lighter branches of the industry is not so good and in some departments operations have been slowed down. Export trade is quiet for most types of iron and steel.

*

Sheffield.—The announcement that forge and foundry prices will remain unchanged as from July 1st has had little effect on the iron market, and the only business is for limited parcels for early delivery. Forward buying is very small, users seeing no advantage in

placing contracts at present prices in view of the heavy supplies available. In spite of the reimposition of the duty on foreign iron this material is still competitive. Makers of hematite report fair inquiries, and special qualities are well sold. Finished iron is unchanged, common and marked bars being the best features.

Although there is some quietness in the steel market, the outlook is regarded with confidence. There is steady buying of basic and acid billets, and the call for stainless steel is maintained. Wire rods are fairly active. Prices are unchanged.

Industrial conditions are easier, especially in the lighter branches. The heavy steel branches are fully employed, and the heavy engineering sections have plenty of work in hand. The basic steel furnaces are working continuously, but the Siemens acid plants are not quite so busy as formerly.

★

Middlesbrough.—The output of heavy finished steel for all purposes continues at a very high rate, but business remains dull. Deliveries are being made against contracts booked some time ago, but replacement orders are not coming to hand. Constructional steel and shipbuilding material is readily specified, but orders for lighter material and for semi-finished steel would be welcomed. The market in heavy steel scrap is quiet, as the supply is plentiful, but users are restricting deliveries.

The decision of the foundry pig iron makers association to maintain the present prices has not resulted in any further buying. The output of Cleveland foundry pig iron is reduced, but consumers have sufficient stocks to last for some time. Some East Coast hematite pig iron is being consumed in producers' own steelworks but deliveries to the Midlands are curtailed and makers' stocks are increasing. Official prices are maintained, but there is no new home or export business.

Blast-furnace coke is in good demand, the price of 32s. 6d. per ton f.o.t. at the ovens being in force until the end of June, but a reduction is expected after that date. Imports of foreign ore into the Tees continue at a high level.

★

Glasgow.—Conditions are very much the same as a week ago. While steelmakers are still very busy, specifications have been slow to come forward this week. There is much new work in prospect and the feeling is general that good tonnages will be placed shortly. In the sheet trade, the home demand is exceedingly good but export business is quiet and no improvement has so far followed the reduction in prices of black sheets for export which took place at the beginning of the week. A considerable amount of employment has been provided for West of Scotland firms in connection with the building of light structures and other work for the Government Defence programme.

★

Cardiff.—Official returns show that the production of pig iron in South Wales in April was only 59,400 tons, compared with last year's peak figure of 85,300 tons in December; of steel ingots 124,400 tons, compared with the 1937 highest monthly production of 235,700 tons; and of tinplate, terneplate, and blackplate in the March quarter only 178,600 tons as against 245,000 tons in the December quarter

of 1937. The tinplate business is very quiet, particularly for export, but prices are unaltered. Figures for production, shipments and stocks are given in the accompanying table.

★

Workington.—There is no improvement in the North-West Coast hematite pig-iron trade, and no immediate change is expected. The steelworks are operated only five days a week and occasionally they are idle for a week. Later they are to work two or three weeks in four. Though stocks are heavy reduction of output is being delayed but may be compelled early in the second half of the year. Prices are unchanged and steelmakers view their prospects with little encouragement. The rolling of rails is virtually completed this month and thereafter the mills will have to depend almost wholly upon the demand for bars. Native ore, at 24s. 6d. f.o.t., is in vigorous local request.

Textiles

Cotton (Manchester).—Conditions have not been favourable for a revival of trade and spinners and manufacturers have reported a restricted turnover, practically all the contracts being for retail lots. European tension has been a discouraging factor, merchants being cautious in placing orders. Raw cotton prices have touched a new low level and bearish sentiment has been pronounced. Demand remains very limited and more cases have been reported of spinners wanting to resell raw cotton. Latest weather reports from the American belt are favourable, and there is every indication of plentiful supplies during the next twelve months.

The yarn market has continued sluggish and only a small turnover, less than the production, has taken place. Some mills that recently worked alternate weeks are now running only one week in three. The Price-Fixing Committee in the Egyptian section has increased selling rates for white hosiery yarns by 1d. to 1½d. per lb. Makers of cloth have experienced another very unsatisfactory week, certain manufacturers accepting ridiculous prices in order to keep looms running. A fair inquiry has come through for India and irregular buying has taken place in dhooties and bleached shirtings for Calcutta, light whites for Madras and Karachi and dyed fabrics for up-country. There are hopes of some concessions being obtained with regard to the new tariff in Egypt. Clearances of stocks in West Africa remain slow. Plain cloths have attracted a fair amount of attention for the home trade and some special Government orders have been placed in fine fabrics for the Air Ministry.

★

Wool (Bradford).—Demand improved during the second half of the

auctions at the third series of Colonial sales. There is a fairly strong market for the raw material, with values generally firm and intact, but consumption is still very much below normal. At Sydney this week selling brokers have cancelled sales till June 2nd, brokers being unable to submit full catalogues owing to growers' unwillingness to offer. Japan seems to be the chief buyer at the present time in Australia, though good support is still forthcoming from the Continent.

At the recent London sales the home trade was credited with purchasing 30,500 bales, the Continent 28,500 bales, and the carry-forward is 57,000 bales. The next series begins on July 12th.

THE COMMODITY MARKETS

THE downward trend in the prices of primary products was sharply accentuated this week. The belief is growing that recovery in the United States is unlikely to get under way before the autumn. And, since the trend of consumption in this and many other countries is also downwards, consumers have no incentive to cover their requirements for long periods ahead. While there is a possibility of a technical rally following the sharp decline in prices, the long-term trend remains unpromising.

The majority of sensitive commodities were marked down sharply. Among non-ferrous metals tin, exceptionally, was slightly firmer, but copper prices slumped heavily following the reduction of the price to domestic consumers in the United States. Rubber, linseed oil, and cotton were all cheaper than a week ago, and wheat, raw sugar and coffee also registered a fall in price.

The decline in prices was not confined to this country. Thus, Moody's index of the prices of staple commodities in the United States (December 31, 1931 = 100) declined from 136.5 to 132.7 during the week ended last Wednesday. A month ago the index stood at 138.7 and a year ago at 207.3.

Metals

Copper.—Copper prices have suffered the worst setback since last autumn. The standard cash price closed at £33 5s. per ton, a loss of £4 6s. 3d. on the week, and reached the lowest level since the autumn of 1935. The main reason for the slump was the reduction in the United States domestic price from 10 cents to 9 cents per lb. This step forced the London market to mark down prices accordingly in order to prevent a rise in United States exports. The copper position and copper outlook are discussed in a special industrial note in this issue.

★

Tin.—Consumers' buying continued at very low levels and the statistics, which have come to hand this week, were discouraging. According to the International Tin Research and Development Council, the world's apparent consumption of tin in the first quarter of this year has declined to 40,700 long tons, compared with 51,000 long tons in the corresponding period of last year. Moreover tin stocks in official warehouses of the L.M.E. reached a new high level of 5,639 long

(Continued on page 517)

COMPANY MEETINGS

THE SLAVIA MUTUAL INSURANCE BANK

BANK'S STRONG FINANCIAL POSITION

SUCCESSFUL RESULTS OF THE YEAR

The seventieth ordinary general meeting of the Slavia Mutual Insurance Bank was held on the 12th instant in Prague. The chair was taken by President Joseph Hucl, and there was a large attendance of members.

The Chairman gave a brief survey of economic developments over the past year, and as regards the activities of the Slavia Bank itself said: The past year's operations brought a considerable increase in the claims which the bank had to meet in respect of the policies it had issued. Claims paid in the life and other departments increased, as compared with 1936, by almost Kc. 5,600,000 to a total of more than Kc. 106,000,000. More than 40 per cent. of this sum represented life insurance, by which the individual is protected and assisted in the accumulation of the amount he aims at, in a manner which is possible under no other form of saving. Since the setting-up of an independent Czechoslovak currency in 1919 the total of matured endowments and claims by death amounted to more than Kc. 1,441 millions; since the foundation of the institution to more than Kc. 1,614 millions.

From the economic point of view the year has brought a further increase in the means and financial strength of the Slavia Bank. Including pension funds, the total of reserves and contingency funds approached a figure of Kc. 1,167 millions; if the funds of re-insurers administered by the bank are included they exceed Kc. 1,326 millions. Thus the bank can without exaggeration be described as one of the pillars which support the economic structure of Czechoslovakia. The responsibility of the bank in managing these large sums is increased by the fact that for the most part it is acting, as it were, in a trustee capacity, so far as the technical reserves (that is, those set aside for a specific purpose) are concerned.

If, on the one hand, the year under review has witnessed a considerable increase in claims by death and by maturity, and in the financial strength of the bank, it has, on the other hand, seen a not less noteworthy and important step forward in the scale of the bank's business. For the first time the total premium income (including re-insurances) exceeded Kc. 250,000,000, reaching a total of Kc. 256,000,000, an increase of Kc. 10,000,000 on the previous record and of Kc. 12,000,000 as compared with 1936. Only when it is remembered that the premium income affords a measure of the protection offered to the community, that it forms the equivalent (part savings and part payment for risk-bearing) of the obligations undertaken by the insurer, and, in addition, covers the incomes of all engaged in the insurance industry, can the magnitude of the success achieved by the Slavia Bank in its expansion during the past year be fully appreciated. You will undoubtedly allow me to thank, in the name of the management committee, not only all those employed both on our office and on our outdoor staff, for their loyalty to the bank, for their steadfast work and the energy, initiative and enterprise devoted to their tasks, but also all our members, of whom there are several hundreds of thousands, and many of whom have been our faithful friends for decades.

Gentlemen, we can regard the economic and commercial results of the past year with all the more pleasure in that they are bound up with two important anniversaries, the twentieth anniversary of the recovered independence of the Czechoslovak nation and the seventieth anniversary of the first step which led to the formation of the Slavia Bank. If it is desired to measure in figures the achievements of the bank in the period from 1919 to 1938, we can say that in the space of nineteen years our premium income has increased by 600 per cent., premium reserves have increased eightfold, and the funds are fourteen times as large as in 1919. From it arises also those amounts with which the bank contributes either directly or indirectly to increasing the income of the State and of public bodies, and which certainly amount to hundreds of millions of kroner; through it is rendered possible the granting of thousands of millions in credits to the State and to private enterprise, and the protection of cultural values, as also of humanitarian and social interests. The success of any institution is the result of human work; inevitably it brings in its train a further increased field of opportunity for work. If the employees on the indoor and outdoor staff of the bank number

more than 6,000, it contributes, by virtue of that very fact, to an increase and extension of the social basis of the citizens of the State who are engaged actively and productively. A survey of that which has been performed in these nineteen years would be incomplete, even in this very general form, if it did not emphasise that the bank has endeavoured since the year 1918 to extend beyond the borders of the Republic, in that it established reinsurance connections based on the mutual giving and receiving of insurance risks. The acquisition of these connections, by which an important role is assured for the companies of the Western States, represents a definite service for our Republic.

If, simultaneously with the anniversary of the recovery of political independence, we think also of the Jubilee of the Slavia Bank's beginnings, there rises before our eyes the proud flag of economic liberty, which, as the symbol of greater and many-sided objectives, showed the way to the founders and their successors. Faithfully and solemnly we have taken over the power entrusted to us. The results attained prove that, where work is guided by a higher purpose, where it is based on the old Bohemian honour and faith, where it did not permit itself to be affected by non-Bohemian foreign influences, a way was paved which led to security of the basis of the State and fulfilment of its tasks. The results achieved make it possible, precisely in the present difficult times, to devote, with your approval, a sum of Kc. 1,000,000 as a contribution to the defence of our country. In view of the fact that the necessary means for this purpose have been created by the conscientious self-sacrificing and hard work of our staff of employees and agents, you will certainly gladly note that we have thought of them and of their families, in that, in commemoration on the 20th anniversary of the renewed independence of the Czechoslovak Republic we have contributed to their pension associations a sum of Kc. 1,000,000 each.

We are living through a period of historical significance for our country and our people. To-day it is not the call to action which is needed, but action itself; not the call for unity, but actual effective unity; not the advantage of the individual or of a group or class, but the commonweal is the interest of all. There is hardly any other people whose history has been so filled with injustice and sufferings. There is no people whose children have for centuries been so systematically and deliberately driven into exile and deprived of their nationality, whose culture it has been sought so to destroy in its very foundations, and whose pride, spirit and character such planned and malicious efforts have been made to demolish, as has been the case with the Czechoslovakian people for centuries. And yet the core of this people has withstood all trials and has remained hard and clean. Whoever thinks that the world order is built up on crude physical force is in error, as are those who would erect castles in the air on lifeless ideological foundations. Within the borders of this State there is room for all its sons, bread for all industrious hands, recognition for all movements which flow out of the eternal springs of truth and justice. In the endless ranks of our intellectual workers, artists and great organisers, both of technical and commercial enterprises, can be observed that great wealth of creative power which is inherent to our people and which, equally with the magnanimity, the idealism and inflexibility of the great men of our history, are a guarantee of our progress and development in the future.

In closing I should like to repeat the words of that great champion of the basic rights of humanity; they are, "it is not in the power of the living to honour the glorious dead; but it is in their power to ennoble themselves through the noble lives of those who are departed." Perhaps there lies more in the power of the living: to maintain their memory through their work, through work not for themselves but for the community and for posterity; just as those worked, suffered and fought for the people—without thought of reward—who kept alive our language and culture and restored our political liberty.

What, in the present difficult times, can give us more strength, courage and determination, than the words and precepts of the statesman Dr Ant Švehla, to which I continually revert in my observations:

"We in the middle of Europe are the outermost bulwarks of Western democracy, we are like a sentry in the field. It may be said of our people: you stand in a dangerous place, this honour has been conferred upon you by history and by the soil. We all stand here in service; the task which fate has imposed upon us is a matter of world importance and a matter for thousands of years. There exists one single solution and certainty, that we must stand fast!"

All the proposals of the board submitted by the general manager, Dr V Peca, in particular the proposal of a bonus of the same amount and on the same basis as in the preceding year to the policy-holders in the life department of the bank, were unanimously adopted.

In the elections immediately following, Messrs Eng, Dr J. Botto, R. Halik, R. Malik and V. Hora were unanimously nominated in place of the retiring directors and Mr J. Pekarek was nominated as auditor.

GENERAL REFRACTORIES LIMITED

FRESH RECORDS ACHIEVED

CONSOLIDATED ACCOUNTS OF THE GROUP

The thirty-seventh annual general meeting of General Refractories, Limited, was held, on the 20th instant, at the Royal Victoria Hotel, Sheffield, Mr Frank S. Russell presiding.

The Chairman said this was the twenty-fourth consecutive year that he had presided. He warmly welcomed the help of the new managing director, Mr Kirkby, in the control of the group and assured him that he could count on every possible assistance from the staff and himself.

Consolidated accounts had been submitted as a preliminary to the period of consolidation and development of their acquisitions on which they were entering at the close of the period of expansion.

The profit was the largest ever shown, but, because of the different structure, was difficult to compare. The creditors were only £10,176 higher despite the heavier stocks and trading. Taxation reserves were already adequate, and there had been no need to transfer any of the profit to this account. Reserve accounts were £189,654 higher. The fixed assets were £29,914 higher and a new feature was a central obsolescence and depreciation reserve, to which £25,000 had been allocated from profits. Investments were increased by £119,125. Trade debtors were £72,050 higher, and advances to subsidiaries had increased by £233,530, largely expended on re-equipment. Stocks and cash were practically the same, and the balance sheet showed total assets of £1,461,623 against outside liabilities of £254,271, leaving £1,207,352 to set against the issued capital of £650,000.

CONSOLIDATED ACCOUNTS

The consolidated accounts showed a surplus of £450,612, but there must also be taken into consideration the depreciation reserves of £417,000, and another £100,000 arising from under-valuations. The advances from banks (many of which existed before the companies concerned joined the group) covered about thirty companies and mainly represented the cost of interests secured, or expenditure on their re-equipment. There was no issue of either debentures or preference shares; this item stood in the place of any such issue and its cost to the group last year was under £15,000, against trading profits of £166,436.

The national value of their organisation under one control was inestimable, and a great source of strength to the country. Export trade was three times higher than in 1936.

THE PROSPECTS

With regard to the prospects, these were difficult to forecast in an atmosphere full of unrest and lack of confidence, and could be no more than intelligent guesswork. There were too many incalculable factors, and if there was to be a reduced demand for steel it was impossible to foretell its effect, or that of the intensified armament programme, their cultivation of business outside the steel industry, and the economies arising from consolidation.

They did know, however, that some members of the group only assisted during part of the previous year and some not at all because they were not ready. The newly-equipped works were producing goods at reduced costs. These were more easily sold because of improved quality, and there was also a substantial reserve of undistributed profits in the subsidiaries. The average dividend paid by the company had been 9.4 per cent., and when he reviewed their facilities he felt he would be surprised if 1938 did not provide them with a satisfactory dividend.

The report and accounts were adopted and the final dividend of 8 per cent. was confirmed, making 16 per cent. for the year.

SUN INSURANCE OFFICE, LIMITED

EXCELLENT FIRE AND ACCIDENT RESULTS

SIR WILLIAM GOSCHEN'S ADDRESS

The annual general meeting of the Sun Insurance Office, Limited, was held, on the 24th instant, at its head office in London.

Sir William H. Goschen, K.B.E., referred to the valuable services rendered by local directors at home and abroad, and mentioned that a member of the board in Sydney, Alderman Nock, had been elected Lord Mayor of that city, which this year celebrated the 150th year of its foundation.

He mentioned that the improved conditions in Great Britain and within the Empire in 1936 continued during a considerable part of 1937. The recession which had occurred at home in the latter part of the year was in his view caused by the growing political unrest in Europe. The efforts now being made by the Government towards appeasement in the political sphere had won the approval of the large majority in this country. In his opinion it was only through such appeasement, accompanied by trade agreements, that we could hope for a restoration of confidence or any improvement in the economic sphere. An increase in the volume of international trade and the removal of existing trading and currency restrictions were first necessities of the world to-day. Progress towards this end depended upon the creation of a spirit of good will among the leading nations of the world.

In the fire section the net premium increased by £19,890 to £2,233,871. The loss experienced both at home and abroad was favourable and the ratio of underwriting profit to earned premiums amounted to 12.97 per cent. In China the office had carried on an important business for many years. The outbreak of hostilities had affected this business, but the losses which had fallen upon the office as a result were not substantial.

ACCIDENT ACCOUNT

The total premium income obtained from all accident classes of business in 1918 amounted to no more than £174,390. In the past year the income from this source was £1,860,043, this being an increase on 1936 of £112,801, spread over practically the whole field of the "Sun's" operations. The growth of casualty business in the United States of America was still being carefully controlled, and the increase in premiums secured last year represented a natural expansion. They had every reason to believe that the Sun Indemnity Company was progressing on sound lines.

As regards motor business increasingly heavy awards were being granted in respect of third-party injuries, and the decision in July, 1937, in the House of Lords in the case of *Rose v. Ford* must have its effect on the business.

The net underwriting profit on the accident account was £134,823, representing 7.44 per cent. of the earned premiums. This was the largest profit ever earned in this section and was derived from the company's operations at home and abroad.

Marine premium income rose from £528,263 to £583,993, and the marine fund now stood at £1,004,504. Conditions in the marine market continued to be unsatisfactory, and as a matter of prudence no transfer had been made to profit and loss other than the net interest earned on the fund.

RECORD FIGURES

The transfers from revenue accounts to profit and loss exceeded £583,089, the aggregate underwriting profits obtained in the fire and accident branches constituting a record. In addition, there was net interest amounting to £112,436 not credited to revenue accounts. £100,000, as compared with £50,000 in previous years, had been carried to the pension fund and a further £50,000 to the head office premises account, making the total of that fund £225,000. As a precautionary measure, £100,000 had been added to the investment exchange and contingency reserve fund.

The total funds of the office had increased from £8,118,427 to £8,420,384. Despite the severe depreciation of Stock Exchange values, the market value of the company's investments still showed a satisfactory margin over and above the book value.

The board were recommending an increase in the final dividend, bringing the total dividend for the year up from 53½ per cent. to 55 per cent. This was well covered by the income from investments.

In conclusion the chairman referred to a statement, in a memorial dated 1736 by the founder of the office, Mr Charles Povey, that:—

"The Sun will have a Being, even to the last Period of Time." He thought it could be said with truth that at no time in the long history of the office had it shown greater strength and vitality than in this its 228th year.

The report was adopted.

ROYAL INSURANCE COMPANY, LIMITED

NINETY-THIRD ANNUAL MEETING

INCREASE IN TOTAL PREMIUMS

SATISFACTORY UNDERWRITING RESULTS

RECORD LIFE NEW BUSINESS

TOTAL FUNDS EXCEED £50,000,000

MR A. E. PATTINSON'S SURVEY

The ninety-third annual general meeting of the shareholders of the Royal Insurance Company, Limited, was held, on the 23rd instant, in Liverpool.

Mr A. E. Pattinson (the chairman) in the course of his address, said:—Our operations in the fire department continue to show satisfactory results. Net premiums at £5,538,000 show a slight advance on 1936, whilst claims amounted to £2,237,000 against £2,334,000 for the preceding year. After making provision for the usual 40 per cent. reserve, a profit of £628,000, representing 11.3 per cent. of the premiums, has been transferred to profit and loss. The fire fund amounts to £5,715,000.

At home, the sustained development of industrial and commercial activity created favourable conditions for the expansion of our business, and our anticipation of a moderate increase in the premium income was realised. We were fortunate, too, in seeing a continuance of the favourable loss experience witnessed during 1936.

In the United States, the year opened with fair prospects, and the improvement in commercial and industrial activity which had become evident during 1936 seemed likely to continue. Unfortunately, this favourable trend was not maintained, for, in the latter months of the year, there was a marked recession of trade. It must be remembered, however, that, in the United States, industrial conditions are apt to change quickly, and, with the great potentialities and resources which that country possesses, it may not be unreasonable to hope for a return to fuller activity before long.

SUCCESSFUL YEAR IN UNITED STATES AND CANADA

Apart from the generally restrictive effect of economic conditions, our own business in the United States has not been materially affected by any adverse factor of major importance. Competition has continued keen, but we have been successful in fully maintaining our important position among the leading companies. Premiums show a further advance, whilst the maintenance of a favourable loss experience makes it clear that, in the competition for business, there has been no relaxation of our strict underwriting practices.

Mr Warner and his colleagues in the United States have been unsparing in their efforts on behalf of the company, and we are grateful to them for the conspicuous success which has attended their work. We look forward to seeing Mr Warner over here later in the year.

Our fire premiums in Canada have shown an increase, the first for several years, while losses have continued moderate, and we are able to report a satisfactory underwriting profit from our operations there.

AUSTRALIA AND NEW ZEALAND

In Australia and New Zealand, where we have important interests, our business continues in a healthy state. Premiums have shown a moderate increase, and there has been a satisfactory profit in our fire department.

I am also glad to report a successful year's work in the general foreign field, although in a number of territories we still have to face some of the adverse and difficult trading conditions to which I have referred in recent years.

LIFE DEPARTMENT

In the life department, fresh records were made in 1937. For the first time in the history of the company we completed a net new business total of over £5,000,000, the new sums assured, after deducting reassurances, amounting to £5,158,000, against £4,924,000 for the previous year.

More than half of our new business consisted of policies under which the benefit becomes payable at death, and it is a good sign

that the advantages of protection for its own sake are so widely recognised despite the powerful attraction offered by the investment element of endowment assurances. Life assurance is not fulfilling its highest purpose if the relatively higher cost of endowment assurances is allowed to restrict the amount of cover attainable. The importance of securing adequate cover can hardly be over-emphasised, particularly in the case of the young family man where the need for maximum immediate protection is vital.

The life premium income at £2,037,000 shows an advance of £72,000 on the previous year. The figure has thus passed the £2,000,000 mark for the first time, and a fresh record is created.

Claims by death at £707,000 were £107,000 less than in 1936. The life assurance fund increased by over £917,000 and now amounts to £26,116,000, whilst the annuity fund at £2,712,000 is virtually unchanged.

ACCIDENT AND GENERAL INSURANCE ACCOUNT

The accident and general insurance account comprises all our transactions other than fire, life and marine and the premium income has reached the total of £5,945,000, an increase of £451,000 over the previous year's figure. The underwriting profit is £490,000, representing 8.2 per cent. of the premiums, a result which in all the circumstances may be regarded as satisfactory. The funds carried forward in the account amount to £5,878,000.

This account has now reached impressive proportions, and the premium income for the first time exceeds that in the fire department. It was so recently as 1906 that we took powers to transact accident business in all its branches, and, in 1907, our first accident account showed a total premium income of only £162,000, against the present-day figure of nearly £6,000,000.

The largest contribution to the account is from the United States. In that great territory results are apt to show considerable variation from year to year, and I am glad, therefore, to be able to report a highly successful outcome of our operations in 1937.

I am glad to report also continued progress in our accident department in other parts of the world, our business in these fields having continued to show steady expansion.

Of the constituent elements of the accident account, motor business is now the most important in size and it probably provides more than its proportion of problems. At home, the business continues to expand, but although we have again succeeded in showing a small margin of profit, the future cannot be regarded with equanimity in view of the constantly increasing cost of claim settlements. Since 1931, the average cost of motor claims has risen by over 50 per cent. and there are indications that it will mount still higher, particularly having regard to the fact that, following a recent legal decision, heavy damages for the loss of expectation of life are now being awarded in cases of fatal injury.

It is to be hoped that the thought and energy devoted to the problems of road safety by the Minister of Transport and the consideration which is also being given to the subject by a Select Committee of the House of Lords, will lead to the willing co-operation of road users in producing a marked diminution of the present toll of the road. It is much to be regretted that, according to the official returns, there was a slight increase in the number of deaths on the roads last year. On the other hand, there was an actual decrease in the total number of persons injured, and although the number of deaths was higher, the increase was smaller in proportion than the increase in the number of motor vehicles in use. It may be, therefore, that there are signs—admittedly faint—heralding some improvement in the future, but it seems to me that, to achieve real progress, what is needed is a conscious effort towards a more rational use of the roads by the whole community. The tragedy of the present situation lies not merely in the number of casualties,

but in the fact that so many of them could, with a little more care, have been avoided. The situation would be capable of control if each individual would exercise slightly more restraint, and it surely should not be beyond the bounds of possibility to achieve that end with the assistance, on the one hand, of regulations wisely conceived and firmly applied, and of voluntary co-operation on the other.

Workmen's compensation business is the next largest contributor to our accident account. Its growth since 1906 has meant much more than the mere accumulation of premium, for during the past thirty years we have been able to do our share in facilitating the smooth administration of an important measure of social legislation. Our larger volume of premiums reflects the greater activity in industry, but our results in this class have been slightly less favourable than for 1936, and we can hardly look for any improvement in this position if the rise in the cost of claims continues.

MARINE DEPARTMENT

In the marine department, the 1936 underwriting account has been closed with a profit of £40,000, which represents 5 per cent. of the premiums for that year. We are fortunate in having closed the account with a balance on the right side, but we cannot look to the future with any feeling of complacency in the present state of the marine market.

The 1937 marine premiums amounted to £926,000 and, after deducting £485,000 for first year settlements and expenses, £440,000 is carried forward. This represents 47.5 per cent. of the premiums and compares with 49.7 per cent. carried forward a year ago. I must add in connection with the 1937 account, however, that claims estimated but not paid at the end of the first year are considerably heavier than was the case in 1936. A year ago I remarked that the immediate prospect for marine insurance was one of increased liability, and this has proved to be true. The outcome of our 1937 operations will reflect the position when the account comes to be closed at the end of this year.

PROFIT AND LOSS ACCOUNT

The total underwriting profit brought into the profit and loss account amounts to £1,210,000, the year thus ranking as one of the best in the company's history.

Looking at the details of the profit and loss account, you will see that the items usually appearing in respect of expenses and directors' fees are no longer shown. These items have now been allocated to the respective underwriting accounts as is the case with other administrative expenses, a change which should simplify and clarify the form in which the accounts are shown. In accordance with our usual practice, £50,000 has been written off freehold house property, and £153,000 has been transferred to the superannuation funds.

Income tax calls for £200,000, and National Defence Contribution for £85,000. Although this is a severe burden, we are always ready to take our fair share in contributing to the country's needs and it is realised that the present level of taxation is related to a very necessary re-armament programme.

You will have observed recently in the Press and elsewhere references to the effect upon insurance companies (other than life) of the provisions of the 1937 Finance Act in regard to National Defence Contribution. As originally designed, the tax applied only to any increase in trading profits, and the Chancellor affirmed that it was definitely not an increase in income tax. Subsequent changes have, however, transformed the tax into one upon all trading profits, and further, it has been held that interest upon investments of general insurance companies is, exceptionally, to be considered as part of their trading or underwriting profits. Commercial, industrial and other companies are taxed upon trading profits and not upon interest derived from investments. This makes the tax upon insurance companies equivalent to an increase in income tax in 1937 and for four years following, whilst, as you are aware, a further 6d. has been added to the standard rate of income tax in 1938.

We had been hoping that the representations to the Chancellor in regard to N.D.C. would have met with some recognition in this year's Finance Bill, but when we read it last week we regretted to find no reference whatever to any adjustment of what we look upon as a legitimate grievance.

The balance carried forward is £2,450,000, showing an increase of £572,000 on that brought into the account.

As already announced, the directors recommended a similar dividend to last year, namely a final payment of 3s. 3d. per share, which, with the interim payment of the same amount in November last, makes a total of 6s. 6d. for the year. You will notice that the provision for the final payment gives effect to the increased rate of income tax.

The total sum required for the payment of the dividend amounts to £1,355,000. This figure does not perhaps convey much impression other than that of size, but it may acquire a new significance when it is borne in mind that our shareholders now number over 24,000, giving an average annual dividend of £56 per shareholder. I think we may justly claim that, with this widespread interest in the ownership of our shares, our business is a truly democratic one.

There are no changes of any importance to report in the balance sheet, but I would draw your attention to the fact that our total funds, including paid-up capital, have now, for the first time, passed the £50 millions mark.

REDEMPTION OF DEBENTURE STOCK

You will notice that the amount of redeemable debenture stock stands in the balance sheet at £597,000. The original amount issued in 1909 as part payment for the acquisition of the British and Foreign Marine Insurance Company, Limited, was £844,000, and the present figure, therefore, indicates that £247,000 of the stock has been redeemed in the meantime by purchase in the open market. In accordance with the terms of the trust deed relating to this issue, all debenture stock outstanding will be redeemed by the company at par on January 1, 1939, and timely notice will be sent to the stockholders asking for their formal discharge and the return of the relative stock certificates.

OUTLOOK

This concludes my review of our operations for the past twelve months. As regards the present year, so far as it has gone there is no particular comment that I would make. Insurance undoubtedly best thrives when the wheels of commerce and industry move freely. From a far wider point of view, however, I hope that the statesman-like efforts that are now being made for an elimination of the causes of international friction will meet with the fullest measure of success and will lead in their turn towards closer world economic co-operation and to a freer international exchange of commodities and services. This, in itself, as a contribution to prosperity, both in this and other countries, would best serve the cause of peace.

The report and accounts were adopted, and a final dividend of 3s. 3d. per share was declared, making 6s. 6d. per share, less income tax, for 1937.

EQUITABLE LIFE ASSURANCE SOCIETY

RECORD NEW BUSINESS

The one hundred and seventy-sixth annual general meeting of Equitable Life Assurance Society was held, on the 25th instant, at 19 Coleman Street, London.

Mr H. L. M. Tritton (the president) said that the new business obtained exceeded last year's record, but the average sum assured by new policies in 1937 was only a little over £600, compared with over £1,000 in previous years. The new business was, taking every class of policy into account, the largest ever obtained by the society.

It was pleasant to draw attention to the fact that the rate of interest earned on the funds—namely, £4 4s. 5d. after deduction of tax—was a little more than it was in 1936.

The amount of the total holdings in the two reversionary societies had decreased by the repayment in January, 1937, of £140,000 of the debenture stock of the Reversionary Interest Society, nearly £62,000 of which was held by the Equitable. The society was in a position to carry out this transaction in consequence of the recovery during 1936 of an unusually large number of reversions. The Equitable now held the whole of the issued share capital and the whole of the debentures and debenture stock. The share capital of the Reversionary Interest Society, which stood in the books of the Equitable at £746,757, was acquired mainly in 1919. At the present level of dividends the yield on the book value was nearly £6 10s. per cent.

The consolidated stock of the Equitable Reversionary Interest Society, which stood in their books at £493,433, was acquired in 1920. The present dividend gave a yield of over £7 per cent. on the book value.

The book value of their investments in the shares and consolidated stock of the two societies amounted to nearly £1,250,000, and the present dividends gave a yield of £6 14s. per cent.

In addition, the Equitable's holding of the debentures and debenture stock had a total book value of £270,833 and they gave a yield of £5 10s. per cent. The total investment in stock, shares and debentures of both reversionary companies stood in the books at over £1,500,000 and yielded about £6 10s. per cent., a very satisfactory figure.

The report and accounts were unanimously adopted.

COMMERCIAL UNION ASSURANCE COMPANY LIMITED

SUCCESSFUL RESULTS

FURTHER RECORD IN NEW LIFE BUSINESS

MR HERBERT LEWIS'S SURVEY

The seventy-sixth annual general meeting of the Commercial Union Assurance Company, Limited, was held, on the 24th instant, in London, Mr Herbert Lewis (chairman of the company) presiding.

The Chairman, in the course of his speech, said: The first account is that of the fire department. The premium income of this department amounted to £5,450,648, which is an increase of £142,236 on the figure of 1936.

Both home and foreign business have contributed to this increase. The loss experience was again favourable both at home and abroad, the payments and provision for outstanding claims representing 39.5 per cent. of the premium income, a figure which is slightly better than that of the previous year. It is satisfactory to note that the loss ratio in the United States continued to be good, although somewhat higher than in 1936.

The net result of the operations of the year, after providing the customary 40 per cent. reserve, is a profit of £575,149. An amount of £575,000 has been transferred to profit and loss account, and the fire fund stands at £7,020,978.

MARINE DEPARTMENT

In the marine department, the net premiums were £703,575, an increase on the previous year of £94,059. The claims paid and outstanding amounted to £469,388. It is pleasant to be able to report to you that there is a marked disposition on the part of the market to work together in harmony. If this happy spirit continues, the Joint Hull Committee will be enabled to inaugurate further measures to put the hull business on a satisfactory footing, as there is little doubt that further increased premiums will yet be required.

It is greatly to be hoped that if and when the marine weatherglass shows set fair the market will not be flooded with a number of newcomers, and competition thereby increased.

A sum of £100,000 has been transferred from this account to profit and loss, leaving the marine fund at £1,208,078. The underwriting account for 1935 has now been closed and, while we may congratulate ourselves on the profit which it shows, I would remark that, owing to the serious losses which have occurred and the present cost of repairs, the profits of succeeding years are not likely to be so good.

ACCIDENT DEPARTMENT

In the accident department the premium income amounted to £8,173,227, an increase of £531,275. I am glad to say that good progress was made in practically every territory in which we are operating.

Claims paid and outstanding amounted to £4,312,368, and, after providing for unexpired risk, there is a profit of £362,257.

From this account the sum of £325,000 has been transferred to profit and loss, leaving the accident fund at £5,921,096.

We experienced another satisfactory year in the United States. I will not venture to predict what the trend of American conditions as they affect our undertaking will be in the immediate future, but a great deal has been done in recent years to improve the general quality of our business and the efficiency of our extensive organisation throughout the United States and, if no adverse contingency arises, the future results accruing from this should be to our advantage.

The substantial increase in the income indicates the ever-growing demand, both at home and abroad, for the many forms of protection and service supplied by this department.

LIFE DEPARTMENT

The favourable conditions of the year for the transaction of new life business are reflected in the increase of the net new sums assured by £543,312 to £6,076,523, a record total for the fourth year in succession. The premium income increased by £71,977 to £1,921,493, the single premiums being less by £14,936 and the annual premiums greater by £86,913. On the other hand, the consideration received for annuities, amounting to £379,768, showed a reduction of £81,639 as compared with 1936.

The claims by death increased by £22,932 to £587,879 and were 92 per cent. of the amount expected according to the A 1924-29 mortality table, which represents the recent experience of assured lives.

The expenses, including commission, amounted to £244,138. This represents 12.7 per cent. of the premiums, as compared with 12.8 per cent. for the previous year, a satisfactory figure in a year when a record amount of new business was transacted.

The fall in the rate of interest obtainable on suitable new investments and increased taxation are two factors which have adversely affected life assurance business, and though the interest income after deduction of income tax has increased by £12,795 to £969,650, the net rate of interest earned after deduction of income-tax has declined from £3 19s. 3d. per cent. to £3 16s. 3d. per cent., the fall being due partly to the two factors already mentioned, and partly to certain special taxation which fell with unusual severity into this year's account.

During the year the amount of the life fund increased by £1,274,010 and stood at £26,532,833 at December 31st last.

QUINQUENNIAL VALUATION

The quinquennial valuation was made as at December 31st last, and the results have already been published. These show that, after strengthening the reserves by changing the basis for the valuation of life assurance contracts from the OM table with interest at the rate of 3 per cent. per annum to the A 1924-29 table with interest at the rate of 2½ per cent. per annum, the surplus amounted to £2,485,420, of which the directors decided to distribute £2,167,116, the share of the policyholders being £1,931,255 (in addition to interim bonuses already received of £191,491), and that of the stockholders £235,861. These figures show an increase of approximately one-third over the corresponding figures of five years ago.

It is an eminently satisfactory result of the work of the life department during the last five years that it has been possible to make the valuation on a basis which is among the strongest adopted by life offices in this country and at the same time to maintain unaltered the minimum rate of cash bonus at a figure which is 25 per cent. in excess of the pre-war rate.

There is still a very substantial margin between the market value of the Stock Exchange securities and the lower figure at which they stand in the books. We do not bring this appreciation into account and we have, therefore, a useful inner reserve available to meet possible future depreciation.

PROFIT AND LOSS ACCOUNT

Passing now to the profit and loss account, you will notice that interest, dividends and rents, after deduction of income tax, amounted to £746,366, or £10,765 less than last year, a reduction more than accounted for by the greater amount of income tax paid as a result of the raising of the standard rate to 5s. in the £.

Transfers from departmental accounts amount to £1,000,000. Contributions from life and leasehold redemption profits remain practically unchanged at £92,912, while trusteeship and other fees are slightly higher at £2,898.

On the other side of the account the final dividend for 1936 and the interim dividend in respect of 1937 account for £1,086,333, and interest on debenture stocks, less income tax, requires £47,388. Income tax on profits is again higher by £15,074 at £238,331, mainly because of the higher standard rate of tax.

Provision for National Defence Contribution for nine months takes £75,000 and in a full year the appropriation will need to be in the neighbourhood of £100,000 on the basis of our present rate of profits. We feel strongly that there is unfair discrimination against insurance companies, but representations to the Treasury have so far failed to secure any redress.

The amount written off freehold premises remains the same at £25,000, and we have maintained the transfer to guarantee and pension fund at the higher figure of £100,000 to which it was raised last year.

The amount transferred to general reserve fund is £275,000, or £25,000 more than last year, and, finally, there is a balance of £585,712 out of which the directors recommend that a final dividend for the year 1937 of 4s. per £1 stock unit, less income tax, be declared. This will require £519,200, leaving £66,512 to be carried forward, against £47,055 last year.

A valuation of our Stock Exchange securities on December 31st last showed only a small depreciation equivalent to about one-half of 1 per cent. To provide for this we have earmarked from the general reserve fund £125,000, which is more than sufficient for this purpose.

In addition to the free general reserve fund of over £4,000,000, the departmental funds total £14,150,151, showing the substantial increase of £311,681, compared with last year.

I think you will agree that on the whole the picture which the accounts present is satisfactory, especially when you bear in mind the conditions under which the business of a company with world-wide ramifications is now carried on.

The report and accounts were unanimously adopted.

CENTRAL MINING AND INVESTMENT CORPORATION LIMITED

STRONG LIQUID POSITION

CONTINUED EXPANSION OF GOLD MINING ACTIVITY IN SOUTH AFRICA

MR F. R. PHILLIPS' ADDRESS

The thirty-third ordinary general meeting of The Central Mining and Investment Corporation, Limited, was held, on the 24th instant, at 1 London Wall Buildings, London, Mr F. R. Phillips, M.C., the chairman of the Corporation, presiding.

The Secretary (Mr R. A. Macqueen) having read the notice convening the meeting and also the auditors' report,

The Chairman, in the course of his speech, said:—The profit and loss account shows a credit from the year's operations of, in round figures, £794,000, which compares with £886,000 a year ago. This reduction will, I feel, be regarded as moderate in view of the almost unrelieved fall in market prices which occurred after the first quarter of the year, resulting in a contraction in our profits on share dealing.

On the other hand, I am pleased to say that our revenue from dividends and interest again showed an increase. The amount required to write down to market prices at December 31st last such stocks and shares as stood in our books at prices in excess of those ruling at that date has been provided out of the year's revenue, and no credit has been taken for any portion of the very substantial margin which exists between the aggregate market value and book value of the shares comprised in our portfolio. Before arriving at the gross figure of £794,000 in the profit and loss account we have appropriated £10,000 for contingencies account.

On the other side of the account you will see that our general expenses are down by £14,000, which is accounted for in the main by an increase in the administration and other fees received by us which, in accordance with customary practice, are utilised as an offset in arriving at the net total of our general expenses. This year we have to make provision for National Defence Contribution, which was levied as from April 1, 1937, and requires £35,000. We are left with a balance of £708,863 to be carried to the appropriation account, which, with the credit brought forward from the previous year, gives a total of £884,900 for disposal. The dividend on the preference shares takes £50,000, and the interim dividend on the ordinary shares of 8s. per share, already paid, £170,000.

DIVIDEND AND ALLOCATIONS

The board recommend the distribution of a final dividend on the ordinary shares of 12s. per share, amounting to £255,000. We also recommend the transfer to depreciation reserve account of the sum of £100,000. We make this recommendation not with a view to providing for any specific loss but because, after the end of the financial year, there was a further fall in market values, and we felt it would be desirable, therefore, to have such a fund which could be drawn upon if the necessity arose.

The provision for income tax is £25,000 higher at £100,000. After deducting the amount due to the directors under the articles of association—namely, £30,289, the balance carried to the balance sheet is increased by £3,573 to £179,692.

The balance sheet shows that the Corporation is in a strong and liquid position.

The book value of our investments is £7,062,000, which is £525,000 higher than last year. Of this amount £454,000 represents the net increase in our investment in South African gold mining shares. As stated in the directors' report, we have subscribed during the year to various issues of capital of gold mining companies. Of the mines in the development stage, the only new investment that I think I need mention is our substantial interest in the Blyvooruitzicht Gold Mining Company, Limited, which was floated in June, 1937. In the dividend-paying group, we have added to our holding of Durban Roodepoort Deep, Limited, which increased its capital during the year, and also of General Mining and Finance Corporation, Limited.

FIVE YEARS' PROGRESS

In reviewing the results of the South African gold mining industry in 1937, it occurred to me that it would be of interest to compare them with those obtained in 1932, the last year in which the currency of South Africa was on the gold standard. So remarkable a change has taken place in these five years that the enormous progress of the industry can best be seen in its true perspective if dealt with in this

manner. Dealing in round figures, the first point which strikes one is that, whereas in 1932 11,378,000 oz. of gold were recovered, in 1937 the number of ounces had only risen to 11,445,000, in spite of the fact that the tonnage milled increased from 34,906,000 to 50,725,000, a record in the history of the industry. The explanation, of course, lies in the fact that, as the price of gold rose from 84s. 10d. to about £7 an ounce, the mines were able to treat ore of much lower grade than before, the average mill grade in 1937 being 4.462 dwt., against 6.472 dwt. in 1932, a reduction of 31 per cent. In the matter of value, the gold output of 1937 was valued at £80,520,000, compared with £48,181,000, or an increase of 67 per cent.

EFFECT ON WORKING COSTS

Let us now look at working costs. In 1932 working costs totalled 19s. 2½d. per ton, and in 1937 they amounted to 18s. 11d. When South Africa departed from the gold standard the view was held, and has since been frequently expressed, that working costs must inevitably rise. In point of fact the figures which I have just put to you show that the contrary has actually been the case, although the decrease is very largely due to the great increase in the tonnage milled.

Working profits at £31,704,000 have risen by no less than 116 per cent., though they, of course, are subject to the heavy taxation which is levied by the Government. Nevertheless, what to holders of gold mining shares is perhaps more interesting is the amount which the industry was able to distribute in the form of dividends, and I find that while the amount in 1937 was slightly lower than in 1936, the total reached £17,015,000, or almost twice the amount paid by the industry in 1932. The change which has taken place in the number of employees is also instructive. At the end of 1937 white workers numbered 39,160 and native employees 288,962. In 1932 white workers numbered only 23,771 and natives 221,008.

To continue my comparison of the expansion in the gold mining industry during the past five years, I should like to give you one further figure which is of interest. The cost of stores consumed in all the gold mines of the Union, which in 1932 was just over £16,000,000, had increased last year to over £29,000,000, or 81 per cent. It may be noted that approximately two-thirds of this cost was expended on stores from the Union and Rhodesia. That this increase is not attributable to any important extent to the greater cost of the individual items but rather to the large increase in the scale of operations is shown by the fact that, taking the mines of our group alone, the cost of stores per ton milled only rose by 3.4 per cent.

NEW RECORDS

During the past year the Witwatersrand mines of our own group again established new records in the tonnage milled, namely 18,590,000 tons, an increase of 458,500 tons and in fathomage broken 1,320,282, an increase of 45,353. Development footage, however, at 693,555 ft., showed a decrease of 52,281 ft. This decrease is largely accounted for by the acute shortage of native labour during the latter months of the year. There was a further slight decrease in the yield per ton from 4.19 dwt. to 4.12 dwt., but owing to the increased tonnage milled, the working revenue at £26,921,008 showed an increase on the year of £262,280. Working costs showed a small increase of 1.2d. per ton milled.

Our report in dealing with the operations of our group, gives the total taxation for the year 1937, and compares it with the total for 1936. I should perhaps make it clear that the two figures are not strictly comparable, as that for 1936 was arrived at after making an adjustment in respect of taxation over provided for the year 1935. There was little difference between the two comparable figures. There were no important changes in the methods of mining or metallurgical treatment except that there is an increasing tendency to make more use of mechanical means for the handling of broken rock in place of hand labour.

THE FAR WEST RAND

On the subject of our new ventures, on the Far West Rand the Blyvooruitzicht Company has begun shaft sinking. Boreholes a

development results during 1937 in the extensive gold-bearing areas on this side of the Rand have increased our confidence in a successful future for this company. It is probably not generally realised that it is not only the increase in the currency value of gold that has enabled the development of this and other Far Western areas, under a thick covering of dolomite, to be undertaken, but, also, the fact that the problem of handling the large flows of water encountered in these rocks, which prevented the completion of a shaft on the Western Rand Estates in earlier days, has been solved by the use of the cementation process for sealing off water flows with cement. This process is now in general and successful use on the Far East Rand as well as the Far West.

EAST RAND DEVELOPMENT

On the East Rand active development work is taking place on the properties of Rietfontein (No. 11) Gold Mines, Limited, Holfontein (T.C.L.) Gold Mining Company, Limited, and Welgedacht Exploration Company, Limited, but so far values have been disappointing. The work accomplished to date on these three properties is, of course, very small when account is taken of their extent, and much further work will be necessary before sufficient information is available to judge of their prospects.

Witbank Colliery, Limited, acquired last year the adjoining property of Wolvekranz, upon which a large tonnage of excellent coal has been proved. As a result, the prospective life of the company has been very greatly extended.

IMPORTANCE OF NATIVE LABOUR SUPPLY

Towards the end of 1937 the industry began to experience a marked shortage of native labour. Since then the position has greatly improved, and in April a record number of natives was employed, but with the scale of operations increasing progressively as new mines are developed and brought into operation, requirements will be correspondingly higher. The vital importance both to the industry and to the country of an adequate labour supply for the mines is generally recognised, and steps are being taken to obtain permission to recruit in areas north of the Transvaal which have hitherto supplied only relatively small numbers of natives on an experimental basis.

NATIONAL REVENUE OF THE INDUSTRY

The industry still continues to make a very heavy contribution to the revenue of South Africa and for some years now the Union Government has been enjoying considerable surpluses in its annual Budget. Hitherto from the national point of view this satisfactory state of affairs has been achieved without serious detriment to the industry which has made the surpluses possible. But industrial progress and expansion are neither indefinite nor automatic. One of the major problems which confront the industry is the provision of fresh capital for new enterprises or for properties in the stage of semi-development. The fact is that the bulk of the new money required must come from the overseas investor. It is therefore, a matter for South Africa to consider whether the existing high scale of taxation is not now, or will not shortly become, a deterring and limiting factor.

WELFARE OF THE NATIVES

A visitor to South Africa cannot fail to be struck with the general air of well-being and contentment of the country, and should he be returning after a lapse of a few years he will be impressed with the signs of progress in practically all directions. In its government and administration the Union of South Africa need fear comparison with few, if any, countries, and an unbiased observer will note with satisfaction the real attempts to plan constructively for the future. In South Africa, as elsewhere where there is freedom of the Press and liberty of the individual, there exist vociferous sections expressing extreme views. In native affairs particularly is this manifest. The welfare of the natives is a matter of direct concern to every member of the community. It is especially a matter of vital interest to the goldmining industry upon which the economic structure and prosperity of the whole country is based and depends. Contrary to the belief in some quarters that the South African Government is either apathetic or illiberal in its attitude towards this complex problem, the measures that have been and are being adopted towards its solution are far-reaching in their importance and likely to be progressive in their effects.

AUSTRALIAN INTERESTS

I will now deal briefly with some of our other interests. In Australia the production of gold from properties controlled by the Gold Exploration and Finance Company of Australia, Limited, or in which that company holds a substantial interest, has continued. Of the eight properties from which outputs are reported five are making

distributions, the initial dividend of Gold Mines of Kalgoorlie, Limited, having been made in 1937. Although exploration in the Bendigo goldfield has been very disappointing, the operations in Western Australia of the Gold Exploration Company are meeting with success in many directions, and it is believed that a considerable total increase in production will be obtained during the current year.

The year 1937 has again established high records for both production and consumption of oil. Prices for crude oil, fuel oil, and refined products were maintained at a satisfactory level. Sales during the year were favourably influenced by improved trading conditions and the accumulation of oil reserves by various countries. During recent months, however, the demand for oil products has not reached the rate anticipated, due to general trade recession.

CRUDE OIL PRODUCTION AND PRICES IN THE UNITED STATES

The control of crude oil production in the United States has been well maintained through the action of State regulatory bodies, and there has been a steady increase in the use of petroleum products.

A feature in demand in America has been the increase in the use of oil for domestic heating, which has resulted in some excess of production of petrol and heavy fuel oil. While, therefore, production of crude has, in general, been kept in line with the demands of the refineries, there has been a tendency in the past few months for a weakening of the price structure of petrol and heavy fuel oil.

During the financial year ended June 30, 1937, the volume of oil handled and the profits earned by Trinidad Leaseholds, Limited, were the highest in the history of that company. The total dividends distributed for that year amounted to 30 per cent., as compared with 25 per cent. for the previous year. An interim dividend of 10 per cent. for the current year was recently declared.

The strike, which occurred in Trinidad last June and July, of labour on the sugar estates and in certain Government departments as well as on the oilfields, has resulted in a certain amount of unrest, and labour conditions have not yet returned to normality. There is little doubt that events of a political nature in various countries contributed to bringing about this strike, and that economic conditions alone were not responsible. Employers in the oil industry have expressed their willingness to redress grievances where they exist, and, provided labour does not endeavour to insist upon impracticable demands, it should not be difficult to arrive at a better understanding between them.

FURTHER GEOLOGICAL SURVEYS IN VENEZUELA

In Venezuela, exploratory drilling by the North Venezuelan Petroleum Company, Limited, in the Araucaria-Ricito area of its concession was abandoned when the third well failed to disclose the presence of oil-bearing sands. Further geological surveys are now being made in other areas. Production from the Cumarebo area, operated by the Standard Oil Company of Venezuela, was satisfactory and a substantial revenue accrued to the North Venezuelan Petroleum Company from its share of this oil.

The Ultramar Exploration Company, Limited, has obtained further exploration concessions over considerable areas in Venezuela, and is engaged in extensive geological and geophysical surveys. Drilling in various areas, owned by other interests, adjacent to certain of the company's concessions has demonstrated the existence of commercial oil deposits. These successful developments are considered to have a favourable bearing on the holdings and royalty interests of the company.

The Guarico Oilfields (Venezuela), Limited, was formed by the corporation and certain associates in May, 1937, to acquire from the Caracas Petroleum Corporation 50 per cent. of its interest in a concession from the Venezuelan Government in the State of Guarico. This new company has also acquired 100,000 shares in the Ultramar Exploration Company, Limited. After extensive geological and geophysical surveys a site was selected for the first well, and drilling was commenced in the middle of March.

THE SPANISH SITUATION

Turning to our interest in Spain, there is little of purely economic importance to tell you. The revenue of the railway has continued to grow both on civil and military account. The line, which is entirely in country controlled by General Franco, is in good order, and by the service it has rendered in recent times has most convincingly proved its essential value to the system of Spanish communications.

The Anglo-Spanish Construction Company has been unable to repay any further portion of its debenture liability. Part of its assets consist of a holding of Spanish Government Treasury Gold Bonds which has been immobilised in Madrid since the beginning of the civil war.

I hope that before I address you again the civil war, with all the suffering and destruction which it has involved, will be over, and that order and good government will prevail. When that time arrives

we shall then renew our endeavours to secure just treatment under the terms of the contract which governs our undertaking in Spain.

In the meantime, we must express our gratitude and admiration to all the staff and employees of the Santander-Mediterráneo Compañía who have served it so loyally and efficiently through the most trying times.

YUGOSLAVIAN RESULTS

The decrease in base metal prices during the latter part of the year has naturally affected the profits obtained by the lead-zinc producing companies in Yugoslavia with which we are associated. Production from Kopaonik Mines, Limited, commenced in June last, and by the end of the year over 12,000 metric tons of ore were being treated each month. This tonnage has since been increased. At Zletovo Mines, Limited, production is expected to start in the near future, and, given a reasonable price for lead, profitable operations may be expected at this property.

THE OUTLOOK

I come now to the outlook for the current year. In a business such as ours revenue depends upon two main sources, dividends from our shareholdings and profits from operations in market dealings. As far as it is possible to foretell, income from the former source seems likely to be satisfactory for the current year and to be comparable to the results incorporated in the accounts for the year under review. The policy of the board, as you are aware, has been, during the past few years, gradually, and as opportunity offers, to increase our revenue from dividends earned, and I am glad to say that this policy, to which we still adhere, has resulted in a steady increase of income under this heading. Operations in market dealings form, and necessarily form, an important adjunct to our business transactions.

During the year under review active and rising markets prevailed during the first quarter of the year, but thereafter, partly on account of what was known as the gold scare, with the resultant dislocation of business activity both here and in the United States as well as on the Continent, and partly on account of the growing international tension in Europe, confidence was sorely impaired and market activity with steadily falling prices, apart from a slight revival towards the end of the year, gradually declined and dwindled into almost slump-like proportions. During the current year these conditions not only continued but became greatly intensified. I make these observations to indicate that opportunities for profitable market operations so far this year have been greatly reduced.

Notwithstanding the somewhat unfavourable atmosphere in which we meet to-day, there are some directions in which we can regard the future with reasonable confidence. In the first place, our main product, gold, in spite of, or because of, the dislocations that have occurred, seems to be the one stable element in an unstable world. In our view, gold must retain its value, whether world conditions still further deteriorate, or whether, as we hope and believe, they will in the fullness of time gradually improve and ultimately become stabilised. It is fashionable in some quarters to take a defeatist view of world trade and political tendencies, thereby intensifying the very evils which it is in everybody's interest to avert and overcome, and to ignore or minimise the favourable factors that make for general appeasement and settlement.

FAVOURABLE FACTORS

A few of the favourable factors may be enumerated as follows: an increasingly strong United Kingdom, rendered the more so by the recent Irish agreement; a community of outlook of all the members comprising the British Commonwealth of Nations the strengthening of the ties, moral and material, between the Commonwealth and the United States of America; the dawning perception in the United States of the interdependence of nations and the breakdown of the conception of absolute isolationism; the practical invincibility of the "free" nations in a possible, though not necessarily probable, appeal to force; the signing of the Anglo-Italian Agreement, and the consequent relaxation of tension in the Mediterranean; the close friendship which exists and the identity of interests which prevails between ourselves and our friends across the Channel; the example in the Far East of the exhaustion brought about to both sides by protracted warfare; and finally the inevitable breakdown of uneconomic methods of national finance entailing the ultimate abandonment of ideas of self-sufficiency.

The moral from the above is that the appeal to force or threatened force will, or should in time, give way to the appeal to reason; and with the appeal to reason confidence must revive, so that with the immense weight of money awaiting investment both here and overseas many of the economic ills of the nations will be found capable of solution. In the meantime the policy of the corporation is necessarily one of caution and the avoidance under the prevailing circumstances of commitments which might be likely to strain our resources.

The report and accounts were unanimously adopted.

UNION CORPORATION, LIMITED

THE GOLD-MINING INDUSTRY

ANOTHER YEAR OF OUTSTANDING PROGRESS

DEVELOPING MINES AND THE FUTURE

MR P. M. ANDERSON'S REVIEW OF CORPORATION'S HOLDINGS

The ordinary general meeting of shareholders of the Union Corporation, Limited, was held, on the 10th instant in Johannesburg, Mr P. M. Anderson presided.

The Chairman, in the course of his remarks, said:—This is the fortieth occasion on which shareholders have been called together. Much has happened during those 40 years. At first we had many "ups and downs" but, on the whole and especially in the last 20 years, we have made steady and substantial progress. Thus, for five years to 1922 our net profits averaged about £200,000 per annum, and for the next five years to 1927 £355,000 per annum. Then the annual average for the following five years fell slightly to £315,000, but recovered handsomely in the last five years to 1937, when the average rose to almost £600,000 per annum.

THE NET PROFIT

The net profit for last year was £682,854, which was within two or three thousand pounds of the record set up in 1936. After placing £90,000 to the credit of exploration reserve account and providing for a final dividend of 6s. per share, making, with the interim dividend, 8s. 6d. for the year, a balance of £128,805 remains to be carried forward. The dividend distributions are the same as for 1936.

There are two features relating to the net profit declared to which I desire to draw your attention. That profit has been arrived at after charging £35,116 for "new issue expenses" incurred in connection with the increase of our capital, to which I will refer later. That expense is non-recurring.

EXPLORATION EXPENDITURE

The other noteworthy feature is that we have ceased to charge exploration expenditure directly to profit and loss account. The reasons for that change are explained in your directors' report. In effect, it amounts to this: In the search for profitable new business, considerable outlays are incurred on the prospecting of properties over which control is secured by option or otherwise. There is no regularity in the incidence of this expenditure.

In some years there may be great activity and in other years practically none, but whatever may be the expenditure it is generally unremunerative for a considerable number of years and at the time there can, from the nature of things, be no certainty as to the prospective value of the work. Time is required to make a fair appraisal. Hence the decision to charge such outgoings to exploration reserve account.

That account at the beginning of the year stood at £50,000. It was increased by £212,500, being part of the share premium received in November last, and £90,000 was appropriated out of profits of the year. Thus, at the end of the year there was a total of £352,500, from which had to be deducted £97,416, being the actual expenses incurred in exploration during the year. We thus enter the new year with the very respectable exploration reserve of £255,084, which should suffice to cover outlays on exploration for some time to come.

INCREASED HOLDINGS

Share and debenture holdings, after making the provisions referred to in your directors' report, show an increase of £417,373, and it may be expected that there will be further expansion of this item in the current year. Last year we increased materially our interest in the Grootvlei, Marievale Consolidated and Van Dyk Companies, and again this year, as a consequence of the offers which have been made to shareholders of the Grootvlei and Van Dyk Companies, we have been able to further augment our holdings in those companies.

In order to be in a position to make such purchases and similar investments without unduly depleting our cash resources, your directors decided to increase the issued capital of the corporation. Hence, in November last, shareholders were offered 140,000 new shares at £7 per share. The issue realised a gross sum of £980,000. The issued capital therefore now stands at £962,500 in 1,540,000 shares of 12s. 6d. each. The new and old shares will all rank alike after the payment of the final dividend of last year. This issue gave

rise to a share premium of £892,500, of which, as I have already mentioned, £212,500 was transferred to exploration reserve account; the balance of £680,000 was added to reserve account, which now stands at a round £2,000,000.

I mentioned last year that the whole of our profits is subject to United Kingdom taxation and, therefore, to the new National Defence Contribution. That contribution in its final form was modified so that it constitutes as from April, 1937, a charge of 5 per cent. of the profits computed in accordance with United Kingdom income-tax principles, and deductible as an expense in arriving at the profits subject to income tax.

THE RAND GOLD-MINING INDUSTRY

Coming now to the Witwatersrand gold-mining industry in general, it is pleasing to record another year of outstanding progress.

The tonnage milled has increased steadily and last year reached 50,000,000 tons, an increase of some 16,000,000 tons on the 1932 figures. The number of ounces produced, however, has not increased proportionately with the tonnage and last year's output of 11,445,087 ounces, although creating a new record, is only slightly in excess of the 1932 figure. This is due to the enhanced price of gold having permitted the profitable treatment of a much lower grade of ore than was possible prior to the abandonment of the gold standard, and accordingly the grade milled has dropped by approximately 2 dwt. per ton. The advantages of this policy are clear when it is realised that the life of the industry has been extended for many years and that the payable ore reserves have been more than doubled in the space of five years.

Working revenue, at approximately £80,000,000, represents an increase of nearly 4s. per ton on the 1932 figure, and this, coupled with a reduction of 3d. per ton in working costs, has enabled the industry to achieve a working profit of nearly £32,000,000, which is more than double the 1932 figure. Of this working profit some £17,000,000, or almost 100 per cent. more than in 1932, has been distributed in dividends, and nearly £14,000,000, representing a 200 per cent. increase, has gone to the government by way of taxation and share of profits from leased mines.

DEVELOPMENT WORK

As regards the amount of development work done, it is interesting to notice that in 1932 there were no "non-producing" developing mines, whereas at the end of last year there were no fewer than 16 such mines, of which one has just come into production and two are scheduled to start later in the year. The development work accomplished by these "non-producers" and the 37 "producers" last year amounted to 2,300,000 ft.—an increase of over 60 per cent. on the 1932 figure—while the 48,850 ft. of shaft sinking done during the year is nearly double the 1932 figure.

The developing mines are situated mainly in the Far East Rand, while the lesser number in the Far West is supplemented by the very large area on which deep boreholes are being sunk. If present conditions, particularly as regards working costs and price of gold, continue—and there seems no reason to think otherwise—these activities should serve to maintain mining activity on a substantial scale for a very much longer period than could possibly have been visualised only a few years ago.

In order to complete the programmes of the developing mines and to finance the new developments contemplated, very large capital funds will be required, which, for the most part, can only be provided by the investing public, both in South Africa and overseas. It is therefore essential that the confidence of the public should be retained, and there is no single step that could contribute to this end so fruitfully as a reduction in the present unnecessarily high rate of taxation of gold-mining profits.

LABOUR SITUATION

At the end of 1932 the industry had a native labour force of 221,000 and the number steadily increased until the latter part of February last year, when the record figure of 310,000 was reached.

The number of Europeans employed directly by the mines at the end of the year was 38,404, which is over 14,000 more than the number employed at the end of 1932. The satisfactory relationship existing between the industry and its European employees has been maintained and working and living conditions were further improved.

Towards the close of the year the industry received requests from the mining unions for certain additional benefits and, in particular, for a cost-of-living allowance equivalent to the amount by which the cost of living had increased since September, 1936. These requests, which were carefully considered, could not be agreed to and, instead, the industry is arranging to establish a savings fund into which the employers would pay, on behalf of the employees,

amounts equivalent to 5s. per week per man, which amounts would earn a reasonable rate of interest.

OPERATIONS OF THE COMPANIES

I now propose to review in some detail the operations last year of the companies under our administration, in which our major interests are centred. On the Witwatersrand our producing companies, Geduld and East Geduld, continue to do well, and the non-producers have made very substantial and satisfactory progress. In the cases of Grootvlei and Van Dyk, development results have been beyond expectations, and it has been possible to arrange for the erection of mills having crushing capacities considerably larger than originally projected. Marievale also is developing nicely. We shall soon be benefiting from the dividends which will accrue to us by virtue of our substantial holdings in the companies which are nearing the producing stage.

The chairman then dealt with the affairs of the above-mentioned companies and those of the Witbok Proprietary Company, Limited, and later those of South African Pulp and Paper Industries, Limited, all of which were fully reviewed in the addresses from the chair at the respective annual meetings held recently. He then proceeded: We also retain our substantial interests in various important companies that are at present developing large gold-mining areas situated in the far eastern section of the Witwatersrand district.

We have two drills still operating in the northern area of the Orange Free State. It appears likely that one more hold will complete the drilling programme.

A substantial portion of the northern area adjoining the property of Western Reefs Exploration and Developing Company, where the more encouraging results were obtained, is being retained, but a substantial portion of the remainder of the northern area has not been proved to be of economic value and has accordingly been abandoned.

Drilling is still proceeding on the farm Uitgevonden No. 99, Western Transvaal. Unfortunately a badly fractured zone has been encountered and great difficulty is being experienced in penetrating this zone.

While technically we have reason to be satisfied with our interest in San Francisco Mines of Mexico, as development results in depth and laterally are fully up to expectations, it is unfortunate that the Mexican Government places so many obstacles in the way of foreign enterprise. Thus, taxation is extraordinarily high and labour is encouraged to force upon the mining and smelting companies demands for utterly uneconomic wage scales and working conditions.

COPPER INTERESTS

Our copper interests are centred in Roan Antelope Copper Mines and Rhodesian Selection Trust. Such enterprises cannot expect to earn the steady profits to which we are accustomed in gold mining. We should, therefore, not be concerned if, in some years, revenue is disappointing, nor should be unduly elated if, in other years, expectations are exceeded. The basic factor is that we believe our copper interests to be well selected because we regard them as capable of producing the metal as cheaply as most of the world's great copper mines. In the long run we expect to do well out of them.

Similar comment is applicable to all our holdings in enterprises other than gold. Thus, we have faith in the future of Consolidated African Selection Trust, which has made excellent progress in its alluvial diamond operations in the Gold Coast and Sierra Leone fields. We recognise also that Selection Trust, in which we have an important holding and with which company we frequently collaborate, has valuable and well managed base metal, diamond, and other assets and is itself very efficiently administered.

Bay Hall Trust has suffered, in common with investment business generally, from the fall in the market prices of securities, but the earning power of its investments continues to be satisfactory, which, in the case of an investment trust, is the main consideration.

We have various other interests among our assets, but I think there is no need to deal in detail with these in this survey of our affairs.

The chairman then moved the adoption of the report and accounts, which was seconded by Mr P. Strakosch and carried unanimously.

BRITISH AND CHINESE CORPORATION, LIMITED

EFFECT OF WAR ON RAILWAYS

MR D. G. M. BERNARD'S REVIEW

The fortieth ordinary general meeting of the British and Chinese Corporation, Limited, was held, on the 25th instant, at the registered office of the company, 3 Lombard Street, London.

Mr D. G. M. Bernard (the chairman) said: Gentlemen,—The tragic conditions in China make a distressing contrast with the promising outlook at the time of my address to you in May of last year on the occasion of our thirty-ninth ordinary general meeting.

In the department of railways, the improvement recorded in the latter half of 1936 was continued and substantially increased during the first seven months of 1937. Most of the lines in which our corporation is particularly interested showed considerably augmented, and indeed record, earnings with satisfactory reductions in the operating ratio. The supervision exercised by the Loan Service Committees, to which I referred at the last annual meeting, was also giving satisfactory results.

Advantage was taken by us of the visit to London of Dr H. H. Kung, the Minister of Finance, and Mr T. K. Tseng, the Vice-Minister of Railways, during the months of July and August to enter upon discussions relative to the construction of new railways. These resulted in the signature at the end of July of a loan agreement for the construction of the Canton-Meih sien Railway, in partnership with a syndicate formed by leading Chinese banks known as the China Development Finance Corporation. This transaction for the amount of £3,000,000 at 5 per cent. was welcomed by us as a return at last to the issue in London of sterling loans for railway enterprises in China, and we felt confident that this would prove to be the precursor of other loans for railway development on an increasing scale.

In addition to the Canton-Meih sien loan, our corporation entered upon an agreement with the Ministry of Railways in June for the supply of materials for the improvement and development of the Shanghai-Nanking Railway.

Within, however, a few days of the signature of the Canton-Meih sien and Pu-siang agreements the actual outbreak of hostilities destroyed the prospect of any early public issue of a loan. The situation became increasingly grave until it developed into the general undeclared war between China and Japan, which is now raging with the most serious effects on China's economy and on our interests in her railways.

A CHANGED OUTLOOK

The past year, gentlemen, has thus been one of violently contrasting aspects. It began and continued up to the end of July with the happiest prospects, but closed in disaster.

It is most deplorable that the growing confidence in business and financial circles in China's railway prospects should have been destroyed for the time being by the Sino-Japanese hostilities. It is not possible at this time to form any estimate of the total damage suffered by those railways with which we are concerned, but demolitions on the Shanghai-Nanking and Shanghai-Hangchow-Ningpo railways have been very extensive and there is reason to fear that a great deal of the rolling stock has been destroyed or carried away to other lines.

SHANGHAI-NANKING RAILWAY

We received news in August that Chinese troops had occupied the North Station and that the administrative staff were excluded from the offices. The permanent-way employees, however, continued work on repairs to tracks and bridges damaged by Japanese air raids until the retreat of the Chinese forces.

Subsequently, the newly completed and spacious administration building was reduced to a shell by bombardment. The North Station was in ruins when it was visited by a British party at the end of November.

Since the advance of the Japanese army to Nanking in December, this railway has been occupied by the Japanese military authorities. The British engineer-in-chief and the chief accountant, as well as the Chinese staff, have been refused access to the line. The strongest protests have been lodged in diplomatic quarters against the continued occupation of the railway, with the request that it shall be returned to its proper administration.

Apart from the extensive physical damages, the loss of revenue up to the end of December was computed to be over \$5,000,000, and the administration, without revenue from the line, has no resources and is in a difficult and precarious position.

Two coupons of the 1903 loan due December 1, 1935, and June 1, 1936, were paid in 1937, leaving three half-yearly coupons and eight instalments of amortisation in arrear.

SHANGHAI-HANGCHOW-NINGPO RAILWAY

Under the Loan Agreement of May, 1936, for the completion of this railway, good progress was made during the first seven months of 1937 in the work on the unfinished section of the line and on the construction of the important Chien Tang River bridge. Subsequent to the outbreak of fighting along the line, demolitions were carried out on an extensive scale by Chinese troops. Against this wholesale destruction we lodged a strong protest. The loss of revenue to the end of December was computed to be over \$1,500,000.

The open line section of this railway from Shanghai to Hangchow is also in the hands of the Japanese military authorities, and representations for its return to the proper administration were made simultaneously with those respecting the Shanghai-Nanking Railway. Claims have been put forward for compensation from the Japanese authorities for their continued use of these two lines. The two interest coupons due on June 15th and December 15th of last year were paid.

CANTON-KOWLOON RAILWAY

The loop line to connect the Chinese section of this railway with the Canton-Hankow railway was constructed off the line from the Canton-Hankow railway to Whampoa soon after the outbreak of hostilities at Shanghai. With this junction, the Canton-Kowloon railway is of the utmost importance to the Chinese Government for the transport of through goods from Kowloon to Hankow. The Chinese section has been subjected for some months past to almost daily air-raids, but the damages caused have been speedily repaired and, up to the present time, through traffic has been maintained.

There was a suspension for some months of the monthly payments due by the railway to the loan service reserve account, owing to funds being utilised to repair damage done by air-raids, but the managing director has ordered measures to be taken to make good the deficit. The cost of making good these damages from October, 1937, up to February 9, 1938, was just under \$300,000.

Payment of 2½ per cent. interest was duly made on June 1, 1937, in accordance with the terms of the debt settlement.

PEKING-MUKDEN RAILWAY

The portion of this line from Peking to Shan-hai-kuan remaining under the control of the Tientsin administration, has not suffered from war damages to permanent-way and bridges, although the old administration building at Tientsin was destroyed by the Japanese bombardments. The line was, however, for a considerable time, used entirely for Japanese military transportation, and, as no payment was made for this traffic, the railway got into financial difficulties and cash advances were made by the South Manchuria Railway for working expenses.

The revenue is now reported to be returning to normal, but there has been much interference with the administration by the Japanese, and officials from the South Manchuria Railway have been installed in all departments. All operations on the line are subject to the control of the Japanese officials. Payments on account of the arrears of the Shanghai-Fengching railway mortgage redemption loan, which is secured upon the revenues of the Peking-Mukden railway, have been suspended since August last.

Strong representations have been made to the Japanese Government in regard to this and to the interference with the duties of the British general manager and engineer-in-chief.

The monthly payments for the service of the 1899 loan have been made as usual.

CUSTOMS AND SALT REVENUES

Anxiety has naturally been felt as to the maintenance of the existing Customs Administration in the areas under Japanese control, and it is satisfactory to note that an agreement was reached in Tokyo on May 2nd between the British Ambassador and the Japanese Vice-Minister for Foreign Affairs, by which the foreign obligations secured upon the Customs revenue are provided for during the period of hostilities.

The salt revenue for the year 1937 was reported to be \$213,000,000, as against \$218,000,000 for the previous year. It is to be hoped that an agreement, similar to that for the Maritime Customs, will be arrived at to safeguard the Administration and ensure the remittance of the quotas for the foreign loans secured upon the salt revenue.

The report and accounts were unanimously adopted and the payment of a dividend of 10 per cent. on the paid-up capital (subject to tax) was approved.

The proceedings terminated with a vote of thanks to the Chairman and directors.

WANKIE COLLIERY COMPANY, LIMITED

ISSUE OF BONUS SHARES

SATISFACTORY POSITION AT THE COLLIERY

An extraordinary general meeting of the Wankie Colliery Company, Limited, was held, on the 23rd instant, at the Abercorn Rooms, Liverpool Street Hotel, London, for the purpose of considering and, if thought fit, passing resolutions authorising an increase in the capital, the capitalisation of certain reserves and the distribution of 1,330,000 bonus shares to the shareholders, the subsequent conversion of the whole of the issued shares of the company into stock, and authorising certain consequential alterations in the articles of association.

Sir Edmund Davis, J.P. (chairman of the company), presided.

The Chairman, in the course of his speech, said:—Except for the clause dealing with the directors' additional remuneration, these resolutions need no further explanation.

Under the present Articles the directors' additional remuneration is calculated upon 5 per cent. of the surplus profits remaining in any year after the payment of a 5 per cent. dividend for that year, such remuneration being restricted to a maximum total of £3,000. Should there be no alteration in the Articles, the members of your board would not be entitled to any additional remuneration till £83,125 had been distributed by way of dividend. This sum is 66 per cent. more than hitherto, thus leaving a much smaller surplus upon which the additional remuneration would be calculated. The alteration in Article 88, which you are now asked to approve, is intended to regularise the position so that the directors are not prejudiced by this increase in the capital of the company, and the suggested increase of the maximum figure is only due to the larger number of directors now participating than has hitherto been the case.

First and foremost, you will be interested to know that during our visit we settled contracts at reduced prices with the Electricity Supply Commission as well as the Bulawayo Municipality for the whole of their fuel requirements for a term of years. Since these contracts were arranged we have received many applications for similar long-term contracts, which we expect to complete at an early date.

SATISFACTORY CONDITION OF COLLIERY

With regard to the colliery itself, we were very pleased with everything we saw, but in order to meet future needs it has become necessary to incur large capital expenditure in connection with crushing capacity, washery, and screens at the No. 2 Colliery.

It was soon realised that on the estimated future increased trade a much larger supply of water would be necessary, and for this purpose 2½ miles of 10-in. pipeline are being laid, which, unless there is a sudden and unexpected increase in sales over our present estimates, should be ample for many years to come.

REDUCTION IN COAL PRICES

Coming now to the reduction in the price of coal, we are, in the first instance, negotiating long-term contracts with consumers of a minimum of 10,000 tons per annum. As soon as we have completed these negotiations we intend to give consideration to a reduction in the price to the general public, which is a matter we cannot do until we have fixed all the other contracts, so that we may then realise the effect of these on the future profits of the company.

I wish, though in no way committing my colleagues, to state that I estimate that sufficient profits will be made in our present financial year to warrant the distribution of a further dividend of 6 per cent. on your total holding—that is, on your present holding—as well as on the bonus of 1,330,000 shares. Such 6 per cent. would mean a distribution of £99,750, less tax, which, added to the interim dividends already paid, would make a total distribution of £219,450, compared with £199,500 for the previous 12 months, which ended at August 31, 1937.

The resolutions in each case were carried unanimously.

Replying to a cordial vote of thanks the chairman alluded to certain unpleasantness in Southern Rhodesia following a reference he made at the last annual meeting to a small coal proposition South of Wankie. In the Legislative Assembly a member, Sir Hugh Williams, who was interested in the coal proposition as a vendor, said "I saw a little paragraph saying the residence of Sir Edmund Davis had been burgled and pictures worth £50,000 had been neatly cut out of their frames. Well, my only regret about that was that the burglar did not cut his throat." (Cries of "Shame"). He did consider it to be a shame that a man should be allowed to say such a thing, and he proposed to send a full copy of the proceedings at the meeting to the speaker of the House of Assembly in Bulawayo and to the Prime Minister.

CABLE AND WIRELESS (HOLDINGS), LIMITED

NEW ERA IN RELATIONSHIPS WITH GOVERNMENTS

The ninth ordinary general meeting of Cable and Wireless (Holding), Limited, was held, on the 24th instant, at Southern House, London.

The Rt. Hon. Lord Pender (the Governor), in the course of his speech, said: The profit for the year is £265,000 higher at £1,208,246, to which must be added the balance of £188,000 brought forward from 1936. Your directors have paid the dividend on the 5½ per cent. cumulative preference stock, which absorbs £922,162, and they now recommend the payment of a dividend of four per cent. on the ordinary stock, which requires £275,324, and leaves £199,097 to be carried to 1938. Your directors are glad to be able to place before you to-day accounts showing such a marked improvement, and to be in a position to recommend a dividend of four per cent. on the ordinary stock.

On numerous occasions I have referred to the representations which have continually been made to the Governments concerned for some readjustment of the terms of the charter under which the communications services are operated by Cable and Wireless, Limited. I informed you last year that the various Governments of the Empire had recognised that the time had arrived for a re-examination of the position, and that the proposals submitted by the company were being investigated. The resultant negotiations have been prolonged and intricate, but I am glad to say that they have now been successfully concluded, with the results which were made known last month, which have been generally received with much satisfaction both in this country and overseas.

ALL-EMPIRE RATES SCHEME

A comprehensive all-Empire rates scheme is introduced which places Imperial overseas telegraphic communication on a new and simple basis. You are fully acquainted with the details, so that it is unnecessary for me to do more than remind you that from April 25, 1938, the new rates for telegrams between any two points in the British Empire were reduced as follows:—

Ordinary full rate	1s. 3d. a word.
Code rate	10d. a word.
Deferred rate	7½d. a word.
Letter telegram rate ...	5d. a word with a minimum of 25 words.

In order to facilitate this scheme, the Governments concerned have agreed to reductions in their terminal and transit rates where such rates exceed three-halfpence a word. The reductions, which are estimated to benefit the telegraphic public to an amount of nearly 500 thousand pounds per annum, would not have been possible without the special arrangement made by the United Kingdom Government. Moreover, the new tariffs will involve concessions of varying amounts on the part of overseas Governments and companies.

The directors hope and believe that the new arrangements will not only bring prosperity to Cable and Wireless, Limited, and place the company on a new and enduring basis, but will also prove advantageous to all parties concerned, the stockholders, the public and the Empire Governments, at the same time not overlooking the interests of the staff.

On this very important point, our figures for May have improved and we are justified in thinking that this is due to the new All-Empire Rates scheme and we have definite information that we are receiving a volume of fresh traffic which we have never had before. In our opinion the future is distinctly promising and if the international situation improves you may then indeed look forward with satisfaction to our interest in our great company.

You are aware that the originator of the Empire Flat Rate Scheme and the one on whose shoulders, from the company's standpoint, the burden of the prolonged negotiations has rested, is Mr. Edward Wilshaw, the Government-approved chairman of Cable and Wireless, Limited, the operating company, who presided last summer over a conference of the responsible heads of most of the Empire Telegraph Administrations and who, both before and after that time, played a leading part in these negotiations and was largely instrumental in bringing the proposed scheme to a successful issue.

The conditions which are to-day generally impeding the normal activities of trade and industry are clearly reflected on the Stock and Commodity Exchanges of the world. The future outlook must be largely dependent upon the leaders of the various nations—Democracies and Dictatorships alike—returning to a sound policy of mutual co-operation and goodwill, which alone will lead to universal peace and a restoration of general confidence and prosperity. The report was unanimously adopted.

IMPERIAL CONTINENTAL GAS ASSOCIATION

SATISFACTORY RESULTS

SIR THOMAS ROYDEN'S REVIEW

At the general meeting of the Association, held on May 27, 1938, the chairman, Sir Thomas Royden, Bt., C.H., said that political and industrial conditions in France had been very unsettled throughout the period under review, and there had been a complete lack of confidence in the future. The troubles of the franc, which had fallen within the last two years from 75 to 177 to the £, were the outcome, not of bear speculation, but of the inherent unsoundness of the economic position. France was suffering from under-production and the 40-hour week had so affected the potential output that consumption had far exceeded production, with the inevitable result of a continuous rise in prices and in the cost of living. If the bold step taken by the present Government in fixing a minimum value to the franc were followed by a resolute policy in connection with the working hours, the whole picture would change and we should see once more a prosperous and industrious France. The French Government seemed to have realised this, as they were now taking steps to provide cheap credit facilities and to modify the regulations governing the 40-hour week with a view to increasing production.

COMPAGNIE CONTINENTALE

The Compagnie Continentale reported an increase of just under 1 per cent. in its sales of gas and of 9.5 per cent. in the sales of electricity, but this had been accompanied by rising costs, the price of coal having increased by 67 per cent., and heavier taxation. Furthermore, public utility undertakings had been singled out to bear a special surtax on profits and 50 per cent. higher rates in respect of certain other taxes. Nevertheless, the average price the company was permitted to charge for electric current was less now than in July, 1935.

The Compagnie Continentale, whilst maintaining its ordinary dividend at the same rate as last year, had decided to make a special distribution from reserves amounting to Frs. 50 gross per share, which, in addition to the normal dividend, will be brought into the accounts of the Association next year. It seemed idle to retain within the company substantial cash resources awaiting permanent investment when neither economic nor political conditions in France seemed to warrant the permanent further locking up of funds there.

This was a somewhat depressing picture of the French situation, but comfort might be found in the relatively small percentage of the Association's French revenue: the investment in the Compagnie Continentale, which used to be our principal asset, had now fallen to fifth place in our interests, judged by the importance of the dividend received.

DEFENCE OF THE BELGA

Unfortunately, exchange speculators had recently directed their attention to the Belga. It was true that at the present moment Belgium was suffering from a recession of trade, but this was common to most countries. There was no reason to assume that because France and Belgium had a franc currency they were necessarily linked together, and the contention that the two nations were economically interdependent was largely unfounded. France bought only 8 per cent. of Belgium's output of manufactured goods. The sterling bloc bought 41 per cent. Belgium's future lay more within the orbit of the latter, whereas France, with her heavy tariffs and quotas, followed a more independent path towards partial self-sufficiency. On this account any modification, either up or down, in the price of Belgian goods would not greatly affect their sale in France. A further devaluation of the Belgian currency would solve no problems; neither those of balance of trade nor of budgetary equilibrium. Belgium was still in a strong position; the last devaluation occasioned a rise in gold values equivalent to 38 per cent.; the rise in the retail index numbers had only been in the neighbourhood of 22 per cent.

Prior to the recession of trade which began during the last quarter of 1937, Belgium enjoyed two years of great prosperity. This period had been taken advantage of by both the banker and the industrialist to strengthen their respective positions. Recent events showed that the banks were able to face considerable withdrawal of funds without serious inconvenience. The Belgian authorities had ample means with which to defend the currency, and they were prepared to go to extreme lengths for this purpose.

The industrialist had used a fair proportion of his extra profits for the modernisation of plant, and now, despite the scarcity of new

business, was engaged in reconstituting normal stocks, which had become exhausted owing to intensive demand. In France, on the other hand, little had been done in the way of industrial re-equipment.

Sales of gas in the Belgian companies showed increases varying from 3.5 per cent. to 10.2 per cent., while for electricity they varied from 5.9 per cent. to 16.5 per cent.

BELGIAN ELECTRICITY INDUSTRY

The electricity industry had been particularly free from any special measures of interference on the part of the Belgian Government, although a proposal had recently been brought forward to apply a special rate of tax to public utility companies. The moral of what had already been achieved in the field of electrical development as a result of the Belgian Government's policy of non-interference was worthy of emphasis. In Belgium, unlike Great Britain, there was no National Grid, no limitation of profits and no body, such as the Electricity Commissioners, to dictate to suppliers of electricity what they should do or what they should not do. The results were striking. In Belgium 89 per cent. of the population had a supply of electricity, as compared with 59 per cent. in Great Britain. The average price for current was 0.89 pence per unit, compared with 1.107 pence in Great Britain. This record of achievement in Belgium would not have been possible unless supply was for the most part in the hands of a few large well-managed undertakings. It was very much to be hoped that the Belgian Government would view this record with satisfaction and would be content to leave well alone.

The Association had a very considerable interest in the electrical industry in this country through its investment in Edmundsons Electricity Corporation. The example of Belgium might well be studied by the British Government with advantage, when the obvious conclusion would be drawn that the industry should be left to work out its own salvation.

THE ACCOUNTS

Turning to the accounts, it would be seen that there were only comparatively minor changes over the last twelve months. The fact that for the fourth year in succession there had been a diminution in the market value of investments, which was mainly attributable to the investment in the Compagnie Continentale, and that nevertheless the board was satisfied that their actual value was still higher than their book value (£9,545,192) showed the latent strength of the Association's balance sheet. The reduction in this figure of £139,000 was explained by the transfer of further holdings in the Belgian operating subsidiaries to Contibel, the Belgian holding company, but, on the other hand, the Association took up during the year its quota of new ordinary shares of Edmundsons Electricity Corporation, Limited.

Loans from bankers showed a considerable reduction at £61,000, despite the further investment in Edmundsons Electricity Corporation, and since the date of the balance sheet the bank loans had been cleared and there was a substantial sum in hand in anticipation of the dividend.

During the last five years cash to the extent of £1,700,000 had been repatriated from the Continent and, together with £900,000 taken from current assets available in 1933, had now found its way into permanent investments in England, so that 25 per cent. of the assets were now situated at home, compared with 8 per cent. in 1933.

Income from dividends had risen by nearly £35,000 in 1937-38, an additional £54,000 having been received from Belgian and £40,000 more from home sources, but French revenue showed a decline of £59,000.

The increase of £34,000 in expenditure was entirely due to taxation, and in particular to the National Defence Contribution. It was difficult to understand why public utility companies operating abroad, other than in the Dominions, should have been denied the exemption given to such undertakings in this country, but such was the case.

The net profit for the year at £427,686 differed by only a few hundred pounds from that of the previous year.

A final dividend of 6 per cent., less tax, making 10 per cent. for the year, was proposed, leaving the sum of £16,086 to be added to the carry-forward.

BEECHAMS PILLS, LIMITED

RECORD PROFIT

MR PHILIP E. HILL'S ADDRESS

The tenth ordinary general meeting of Beechams Pills, Limited, was held, on the 26th instant, at the May Fair Hotel, London.

Mr Philip E. Hill (the chairman) said that the profit of £600,908, although a record in the company's history and an increase over that of last year of £59,498, was disappointing in so far as the home sales were concerned. That was attributable entirely to the exceptionally mild winter experienced and the adverse effect it had had on the sale of the company's seasonal products. Under normal conditions the profits should have been greater. The result of the export business, however, was most encouraging and showed an increase over last year's figures of more than £20,000.

Some ninety years ago the business of Beechams Pills was founded by the late Thomas Beecham, and to-day the Beecham factory at St. Helens produced over 11 million pills per week, and that was entirely apart from the production of the Beecham factories in different parts of the world.

The directors had continued their policy of extensive advertising and general propaganda, and he thought they could safely congratulate themselves on the results. Their development fund was still fattening new products and their overseas trade. The directors recommended again bringing that reserve up to £100,000.

COMPANY'S PRODUCTS

The company owned and marketed the following proprietary articles:—Beechams Pills, Beechams Powders, Beechams Lung Syrup, Cassell's Tablets, Veno's Lightning Cough Cure, Cicfa, Dinnefords Magnesia and Tablets, Germolene Ointment and Soap, Holloway's Pills and Ointment, Iron Jellies, Lactopeptine, Nicocin, Phensic, Phosferine, Ashton and Parsons Baby Powders, Phyllosan, Sherley's Dog and Cat Foods and Medicines, Yeast-Vite Tablets, Amami Shampoos, and other products.

The proposed bonus issue of preference shares redeemed at average periods over the next ten years would require, with the premium on redemption, an additional £45,000 annually. That should be provided without imposing difficulties on the company in continuing the payment of a dividend of 85 per cent., provided, of course, that unforeseen events outside the control of the board did not arise.

The directors were of opinion that it would be of enormous value to their business if more of their customers could have a financial interest in the company and so benefit by its prosperity. Their existing 5s. deferred shares fluctuated in price during a year between, say, 50s. and 65s., a figure beyond the means of the small investor, who constituted the backbone of their business. The directors were exploring every channel to see whether it was not possible to devise a scheme whereby an interest in their company could not be offered in a unit with a market purchase price around 5s. He would not be misunderstood. No fresh issue of capital for cash was contemplated, and if a scheme was devised, it would be submitted to every shareholder for approval.

A BONUS ISSUE

The directors had felt for a long time past that the present share capital of the company did not represent the intrinsic value of the assets. Accordingly they had revalued the investments in their subsidiary companies, with the result that Messrs Price, Waterhouse and Company had advised the company that the value of such investments was not less than £2,500,000, and the value of such investments had accordingly been placed at that figure and the increase in value placed to a capital reserve account. From that account £300,000 had been transferred to general reserve, and it was proposed to capitalise that sum immediately into 5 per cent. redeemable cumulative preference shares of £1 each, which it was proposed to issue as a bonus credited as fully paid to the holders of deferred shares in the proportion of one such £1 share for each four deferred shares of 5s. each at present held. Those shares would be redeemed by the company out of profits on or before March 31, 1949, or by yearly drawings of 22s. per share.

They possessed a business which to-day was stronger than it had ever been, and under ordinary conditions should continue to make increasing profits.

The report was unanimously adopted, and a hearty vote of thanks was accorded to the chairman, directors and staff.

At subsequent meetings the capital proposals were approved.

W. J. BUSH AND COMPANY, LIMITED

FACTORS AFFECTING TRADE

The forty-first annual general meeting of the shareholders of W. J. Bush and Company, Limited, was held, on the 26th instant, at the Great Eastern Hotel, Bishopsgate, London, Mr J. M. Bush (chairman and managing director) presiding.

The Chairman said:—Gentlemen, subject to your approval, I propose to take the directors' report and statement of accounts for the year ended December 31, 1937, as read. The net profit is slightly below that of the previous year, which was the largest in the history of the company. The outlook for the current year indicates the probability that there will be a decline in our profits. The war in the Far East is seriously affecting our export trade, and our shipments to Japan and China during the first four months show a very considerable decline from the corresponding period in the previous year. The manifold restrictions controlling international trade in many countries still continue. In another direction a lot of our raw materials have increased in price without it being possible to increase the selling prices of our finished products.

During the past year we have appointed Mr William J. Thomas a director of the company. Mr Thomas is the manager of our Australian branch. He has been in the service of the company for fifty-six years and manager of our Australian branch for forty-three years, during which time the turnover and the number of employees in Australia have largely increased.

Your directors consider it desirable to continue the policy of writing down goodwill. We therefore recommend the appropriation of £50,000 for this purpose, thus reducing the valuation of this asset to nil. When the company was formed the goodwill item in our balance sheet stood at £132,115.

A conspicuous item in the balance sheet is the amount of expenditure on plant and machinery. Chemical processes are constantly being changed or modified, and we propose appropriating £5,000 against possible plant obsolescence. We also propose adding a similar sum to the reserve against buildings.

I take this opportunity of expressing the appreciation of the board of the loyal and able services of the managers and employees in England, in our branches abroad, as well as those employed by our subsidiary companies.

The report and accounts were unanimously adopted.

ODHAMS PRESS, LIMITED

SUCCESS OF THE WATFORD UNDERTAKING

The eighteenth annual general meeting of Odhams Press, Limited, was held, on the 26th instant, at the Connaught Rooms, London.

The Right Hon. Lord Southwood of Fernhurst (the chairman and managing director), who presided, said that the profit for the year amounted to £340,192 as compared to £351,553 for the previous year, a reduction of £11,361. That was chiefly due to the disturbance of trade consequent upon the Coronation celebrations. With regard to the trading account, the reduction of £42,700 in the trading profit must be taken in conjunction with the increase of £25,100 in dividends and interest receivable, which, in effect, represented trading profits derived from subsidiary companies.

Included under the heading of profit and loss appropriation was the sum of £29,000 in respect of the guaranteed preference dividend of Odhams (Watford), Limited, in which their company owned all the ordinary shares. That company was now trading on a satisfactory profit-earning basis and the guaranteed preference dividend was repayable to their company out of the future profits.

Copyrights showed an increase of £69,000. The greater part of that was represented by the expenditure on the launching last June of the new journal *Woman*. That publication had already proved to be very successful and had attained a weekly net sale of more than 500,000 copies, with a commensurate advertisement revenue. It was already the leading journal in the field of women's weeklies.

The facilities for rapid, efficient colour printing available at their Watford company's works had made it possible for this and other of the company's publications to set up a higher standard than that which had hitherto prevailed.

With regard to Odhams (Watford), Limited, the programme of extension foreshadowed last year had had to be extended to enable that company to handle the large volume of work available. The Speedy process of colour printing, of which that company had the sole British rights, was proving very successful. An issue of capital would be made shortly in order to finance those extensions to the factory and plant of that company. It was intended that preferential opportunities to subscribe would be offered to the shareholders of all the Odhams group.

The report was adopted and a final dividend of 7½ per cent., making 12½ per cent. for the year, was approved.

INDUSTRIAL AND GENERAL TRUST,
LIMITED

DIVIDEND INCREASED TO TWELVE PER CENT.

The fifteenth ordinary general meeting of the Industrial and General Trust, Limited, was held, on the 26th instant, in London.

Mr. W. Sandford Poole (the chairman) said that the revenue account showed results more satisfactory than he had felt justified in forecasting last year, when there were many circumstances prompting caution in estimating future prospects. It was gratifying, therefore, that the revenue figures, which reflected the improved commodity prices and the revival of home industry in the previous year, showed substantial expansion in spite of economic disturbance and world unrest and also larger levies for taxation.

The international situation had provided continual cause for anxiety during the year. The complete default by Brazil in the service of its external debt was an unexpected and nasty shock. Her conduct in this matter appeared inexcusable for there was no doubt that she could pay some part of the interest, if not the whole. If no move was made by the Government of Brazil before June 1st, he suggested that a meeting of the holders of Brazilian bonds should be held in July and that the Brazilian Ambassador be invited to attend. The re-armament of Great Britain, with the consequent restoration of its influence in international affairs, was a reassuring factor. The conclusion of the agreement with Italy was another. The spirit of realism which Mr Chamberlain had imported into our foreign policy held hopes for a better understanding abroad.

In the economic sphere the outstanding source of disturbance had been the business depression in the United States. At home the results of the past year had shown continued progress in both industrial production and profits. Our external trade, however, continued to show the need for an expansion of overseas markets. Trade returns in the early months of the current year had definitely indicated a downward trend, but the position of industry in this country was sounder than it had been five years ago.

The directors recommended a final dividend of eight per cent. less tax, making twelve per cent. for the year against eleven per cent. for the previous year.

The report was adopted.

MID-EUROPEAN CORPORATION,
LIMITED

INCREASED REVENUE

The fourteenth annual ordinary general meeting of this company was held, on the 23rd instant, in London.

Mr Norman Holden, the chairman, in the course of his speech, said:—During the last few years I have been able to tell you of the steady appreciation in the value of our securities so that while, in June, 1932, the total depreciation of the combined companies, including losses written off in Lothbury Continental Company, was about £1,050,000, by March last year it had been reduced to £290,924, on the whole a satisfactory result. But in one single year the depreciation has gone back to £827,159. A valuation made one month later showed that £68,118 of this amount had been recovered. Our net revenue, after debenture interest, income tax and N.D.C., has improved from £50,639 to £54,485.

The idea seems widespread that we are going back into a long-drawn-out depression. That there is a depression is obvious, but that it will result in continued decrease in trade and profits does not seem to be either proved or obvious. In some directions there are signs of a small recovery and the correct view may well turn out to be that there is really only a lag of a comparatively short period.

Probably many industrialists were frightened at the beginning of last year that there would be a shortage of materials and bought too heavily ahead to protect themselves against rapidly rising costs. But so soon as they reduce these stocks they will begin to buy again and business will expand once more.

International politics and the American situation are the two bug-bears. As to international relations I have nothing to say. As to America it is very largely a matter of internal politics and the position might easily improve in a comparatively short period.

Finally, your corporation has during the year reduced its bank overdraft from £102,944 to £28,928, and issued a further £37,024 of 4 per cent. debenture stock, making a total of £82,938 now in issue. This is a satisfactory accomplishment, and places the corporation in a reasonable position to take advantage of any recovery.

The report and accounts were unanimously adopted and a final dividend of 2½ per cent. on the ordinary stock, less income tax, making 3½ per cent. for the year, was approved.

LONDON COUNTY FREEHOLD AND
LEASEHOLD PROPERTIES, LIMITED

ANOTHER SATISFACTORY YEAR

The annual ordinary general meeting of the London County Freehold and Leasehold Properties, Limited, was held, on 25th instant, at 114/116, Park Street, London.

Mr Thos. J. Cullen (vice-chairman and managing director) presided in the absence through indisposition of the chairman, Sir William Burton, and moved the adoption of the directors' report, which stated that the net revenue for the year was £396,101, compared with £392,470 for the previous year. The directors recommended a final dividend of 4 per cent. and a bonus of 1 per cent., making the total distribution to the ordinary stockholders 11 per cent. for the year. It was the eighth successive year the total ordinary stock dividend and bonus had been maintained at that rate. The surplus revenue had steadily increased to the present figure of £94,756. The surplus of assets over all liabilities, including preference and ordinary stock, was £1,555,391.

The income from flats let at inclusive rentals for varying terms of years must of necessity suffer the incidence of increased outgoings until the rents could be adjusted, and, in view of the substantially increased burdens which property let at inclusive rents now had to bear, the result of the year's work was, in the opinion of the directors, satisfactory. Unrest of whatever kind had its effect in diminishing the number of prospective tenants willing to enter into relatively long-term commitments, yet their void percentage at March 31st last was still lower than the average percentage at that date for the past six years.

The company had acquired the site of Nos. 421/429 Oxford Street, and it was proposed to erect a really outstanding and efficiently planned building. Certain portions of the new building would be occupied by the company as its head office, and the remainder would be let to commercial interests on attractive terms. Although the building would not be completed until the Autumn, they had already received inquiries from prospective tenants. In their opinion, the new Keysign House in Oxford Street would soon become a well-known landmark and prove of mutual benefit to applicants, to tenants and the company.

The report was unanimously adopted.

TELEPHONE MANUFACTURING
COMPANY, LIMITED

INCREASED DEMAND FOR COMPANY'S PRODUCTS

The eighth annual general meeting of Telephone Manufacturing Company, Limited, was held, on the 23rd instant, in London.

Mr Fred T. Jackson (chairman and managing director) said that the net profit for the year amounted to £40,016, and it was proposed to pay a final dividend of 6½ per cent., making 9 per cent. for the year. The orders received in 1937 showed an increase of 8 per cent. as compared with 1936, and there had been an increase of 13 per cent. in the works output. During the first four months of the current year the orders received showed a substantial increase compared with the corresponding period of 1937. Although this increase might not be maintained during the remaining eight months, they were of the opinion that they would continue to have a satisfactory order book. The policy of the directors was firmly to establish the company's reputation on quality production at reasonable prices.

The bakelite plant had been working at full capacity for the whole of the year and was likely to be well employed during 1938. The condenser plant had also been well employed, and there was an increase in orders amounting to 66 per cent. The department devoted to the manufacture of A.C. synchronous clocks had made further progress, the increase in orders being 68 per cent. During the year they had put into production a new synchronous motor, which was proving very satisfactory. "Temco" electric clocks were most reliable and everyone should have at least one in their homes if only to set their spring-wound clocks to the correct time. In the marine department the order book again showed an increase, and there was every prospect that in the current year a record output would be achieved.

They were able to record that every year since they commenced manufacturing marine telephone apparatus that department had increased its turnover, and they were now in the position to claim that they were the leading manufacturers of such apparatus, including among their customers all the bigger steamship lines as well as the Admiralty. Orders for new telephone apparatus had increased by 59 per cent. and had expanded still further in the current year.

The report was unanimously adopted.

MADRAS ELECTRIC SUPPLY
CORPORATION, LIMITED

NORMAL BUSINESS EXPANSION MAINTAINED

The ordinary general meeting of this company was held, on the 25th instant, in London, Mr James Gray (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The normal expansion of the business was maintained last year, the total number of consumers connected having been increased by 9.1 per cent. and the number of units sold during the year by 18.7 per cent. The increase in units sold applied to every section of our business, indicating that the advantages of electricity are being more commonly recognised in Madras. Notwithstanding these increases, the table appearing in the report indicates a reduction in the balance on revenue account of £2,227. The reduced tariffs (which were granted to every class of consumer), came into operation in their entirety as from January 1, 1937.

There is a total available for distribution of £114,271. The directors recommend payment of a final dividend of 5½ per cent. (actual) on the ordinary shares, making 8 per cent. for the year, free of income tax, leaving £41,566 to be carried forward, as against £38,665 brought in.

The sum of £90,627 added to "capital expenditure" during the year is explained by the completion and setting to work on May 26th last of the 15,000 k.w. set; the installation of new high-tension switch-gear of higher rupturing capacity; additions to the equipments of various sub-stations to meet the increased demands for supplies of current; together with the augmentation of mains and expenditure on land and buildings.

The improvement reported at our last general meeting in the tramway traffic receipts was maintained during the year. The result of the Tramway Company's working for 1937 showed a gross profit of £36,920. After debiting interest and London office expenses, providing £8,450 for debenture service and transferring £12,500 to depreciation and renewal account, there remained a balance of £12,799. To this had to be added £8,500 brought forward, making a total of £21,299. The preference dividend absorbed £7,500, and a dividend on the ordinary shares of 5 per cent. for the year was declared, absorbing £3,875, leaving £9,924 carried forward.

The report and accounts were unanimously agreed to.

(Continued from page 502)

tons last weekend, representing an increase of 361 tons on the week. The market, however, was affected but little by these unfavourable figures, and after a relapse early in the week, the closing price at £162 15s. per ton showed a net gain of £1 per ton over last week's close. There are now more tangible prospects that the buffer pool question will be settled within the next few days. The I.T.C. is to meet on Thursday of next week and by then the Malayan attitude towards the pool is likely to be known.

★

Lead and Spelter.—Lead lost 7s. 6d. to close at £13 15s. per ton, while spelter declined by 2s. 6d. to £12 10s. per ton. The basic position of the two markets has not changed this week. In the United States stocks of lead have risen from 143,500 short tons at the end of March to the new high level of 156,700 short tons at the end of April. United States lead deliveries fell from 31,100 short tons in the preceding month to 26,000 short tons, while production increased simultaneously from 36,400 to 39,300 short tons.

Grains

The wheat market has been dull and prices, where changed, are somewhat lower; buyers are only covering their immediate requirements and are disinclined to buy forward. It is expected that Italy will have to buy considerable quantities to make good the failure of her wheat crop; on the other hand, the French Government is already seriously concerned by the prospects of a large

BATANG CONSOLIDATED RUBBER
ESTATES, LIMITED

DIVIDEND OF FOUR PER CENT.

The eighteenth ordinary general meeting of this company was held, on the 20th instant, at 19 Fenchurch Street, London.

Mr E. F. Slade (the chairman), who presided, said:—The profit for the year is £12,071, or approximately £200 more than for 1936. The selling price of our product was approximately ¾d. per pound more than last year, but costs work out at almost 1d. per pound more, the whole of which increase is accounted for by the increased cost of native labour and a higher Government duty. Our standard assessment for the present year has been reduced to 840,000 pounds, but what we shall be allowed to export it is impossible to say until the edict of the International Committee is known.

Our manuring programme has been continued with satisfactory results. The present programme covers the manuring of over 1,000 acres a year at the proper intervals up to 1942. One hundred and eighty-one acres of the oldest and poorest rubber on your property is at present in course of replanting. Felling and stacking has been completed over the whole area and already an area of 90 acres has been clean cleared. The greatest care is being taken to ensure first-class agricultural conditions. The greater portion of this estate was planted many years ago, and while it is still capable of producing rubber at a reasonable cost, yet what is really requisite is the acquisition of one, two or even three thousand acres of young well-planted rubber. Such an acquisition should make the company's profit-earning capacity secure in the future. Your directors have been, and are, constantly on the look out for a property or properties which would fill these requirements.

In all probability the necessity of writing down the capital of this company will arise and, when the time is ripe, your directors will have the acumen and the courage to put the matter before you fully and clearly. The forward sale made last year, covering 60 tons at 11½d. c.i.f. for this year, deliverable at the rate of five tons per month, is a great advantage to the company at this time, when the market for the raw material is in such a depressed state.

The directors propose to pay a dividend of 4 per cent. and there will be £10,638 to carry forward, subject to bonus to estate staff.

The report was unanimously adopted.

surplus of native wheat. The break in the drought brought a slackening in the demand for maize, but prices are little changed; the market for feeding barley has also been quiet.

Other Foods

Provisions.—The bacon market has been quiet, and prices have fallen by about 2s. per cwt.; Danish and English were quoted at the end of the week at 98s. per cwt. Prices have also fallen in the butter market; New Zealand and Danish were about 4s. per cwt. cheaper at 126s. and 128s. per cwt. respectively. The somewhat smaller supplies of beef and veal met a good demand and prices are a little higher; those of mutton and pork also tended to rise. The market for cheese was steady, while egg prices show a small decline.

★

Colonial Produce.—Sugar prices were reduced by 1½d. per cwt. early this week, since when the market has been steady. Coffee from Costa Rica has been cheaper than last week, but other varieties show no change. The cocoa market has been quiet, and quotations for medium and strong teas at the tea auctions have tended to fall.

★

Fruit.—The markets have been steady, with a good demand for all varieties, according to *The Fruitgrower*. Larger quantities of English strawberries are selling well; supplies of oranges are still light and demand is firm. There is a good inquiry for apples and prices are unchanged.

Vegetables.—New potatoes are coming in larger quantities, and the price of Jersey supplies has dropped to 20s. to 22s. per cwt. The demand for old potatoes is slackening, particularly for "seconds." Prices of spring cabbage and greens were somewhat lower over the weekend as the supply had increased, but supplies of cauliflower are still short.

Miscellaneous
Commodities

Oilseeds and Oils.—Extremely quiet conditions have prevailed in practically all sections, and prices have eased. Calcutta linseed for August shipment to Hull has been sold for £12 5s. or less; crushers have covered their immediate requirements and are showing no interest in futures. Egyptian cottonseed is selling quietly for immediate delivery. The price of linseed oil has again fallen, and is now £5 10s. less than at the beginning of March; refined cotton seed is quoted at £19 15s. per ton ex mill. The demand for oilcakes is poor and prices are lower.

★

Rubber.—Markets have been dull and the European crisis caused a drop in price over the weekend. Some of this was made good on Monday, but prices show a decline of ¾d. to 1½d. per lb. on the week. Consumption in America shows no sign of recovery and in fact appears to be slowly falling.

Depression in the Cotton Industry

In the following charts, which compare figures for the 12 months ended last April with the corresponding figures for the 12 months ended April 1937, we draw attention to the present situation of the cotton trade. The *Economist* index of raw cotton consumption shown on the left-hand side represents the volume of deliveries to mills; it is placed on a daily basis and corrected for seasonal fluctuations. On the right-hand side the unemployment percentages refer to insured persons aged 16-64 in Great Britain. For 1936-37 all the percentages are based on the numbers insured in July 1936 and for 1937-38 on the numbers insured in July 1937. In the latter case the figures have been adjusted upwards from October 1937 to allow for the change in the method of counting. This adjustment, which we make for purposes of comparison, in no case amounts to more than 0.7 per cent. and for last April we show a figure of 25.5 per cent., compared with 25 per cent. on the new basis. The figures of wages refer to firms reporting to the Ministry of Labour and are for one week in each month. To avoid confusion, owing to the fluctuations from month to month in the number of firms included, the wage bills of firms reporting in any one month are expressed as a percentage of the wage bills of the same firms for the corresponding month of the preceding year. For share prices we have used the Actuaries' Index.

Finance

GOVERNMENT RETURNS

For the week ended May 21, 1938, total ordinary revenue was £12,970,000, against ordinary expenditure of £12,902,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £39,403,000, against a deficit of £18,750,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On May 20th, applications at £99 17s. 5d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 35 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 6d. per cent. and above were allotted in full. £45.0 millions of Treasury bills are being offered on May 27th.

Transvaal Output, Employment and Working Profit.—Gold output, April, 1938: Witwatersrand, 957,543 fine ounces; outside districts, 25,421 fine ounces; total, 982,964 fine ounces. Value for purposes of declaration, £6 19s. 6d. Total output, March, 1938: 1,012,516 fine ounces. The number of natives employed at end of April was: Gold mines, 316,359; coal

mines, 17,138; total, 333,497. Total estimated working profit for April, 1938: Witwatersrand, £2,475,432; outside districts, £8,983; total, £2,484,415. Comparable figures for March, 1938: Witwatersrand, £2,606,758; outside districts, £9,364; total, £2,616,122.

* On basis of £6 19s. 6d. per fine ounce.

THE ECONOMIST WHOLESALE PRICE INDICES

III.—THIRD (CURRENT) INDEX, BEGINNING JANUARY, 1924

In *The Economist* of March 26th, page 725, we gave a record of the original *Economist* index, from 1851 to 1910. A record of the second index, from December, 1910, to November, 1928, was given in three instalments in *The Economist* of April 2nd (page 66), April 9th (page 126), and April 30th (page 282). Details of the third and current index were given in *The Economist* of December 15, 1937. The figures from January, 1924, to December, 1932, were given in last week's issue on page 461. The remainder is given below.

* For half year. † Free of Income Tax. (a) No comparable figure. (b) Equal to 9½ per cent., less tax, as interim dividend of 3 per cent. was paid free of Income Tax. (c) Also 10-8d. on proportional and "B" proportional profit shares. (d) Absorbed £23,000. (e) Ten months. (w) Absorbed £31,687.

Rio de Janeiro City Improvements.—Net revenue for 1937 £105,854 against £49,377. Tax-free ordinary dividend raised from 2½ to 4 per cent. Carry-forward raised from £43,490 to £73,006. The report states that owing to exchange restrictions it has not been possible to remit the amount available out of the second half-year's revenue under the drainage agreement with the Brazilian Government.

Great Universal Stores.—Profits for year ended March 31, 1938, £408,712, an increase of £45,353. Depreciation and fees absorb £22,227 (£20,075). Tax and N.D.C. require £111,524 (£85,788). Dividend maintained at 50 per cent. on capital increased by previous year's 10 per cent. scrip bonus. To general reserve £50,018 making it £780,000. Carry-forward raised from £11,452 to £12,181.

Triplex Foundry.—Report for year to March 31, 1938, shows profits of £23,964, after £9,682 tax and N.D.C., against £15,845 for seven months before £4,000 tax and including £3,955 earned before incorporation. Final ordinary dividend 5½ making 8 per cent. for year (against 7½ per cent. per annum for five months to March 31, 1937). To reserves: Tax, £5,000 (nil), general £5,000 (nil). Carry-forward £4,657.

Perhaps the chief reason for this is that the Government, which has been unable to give adequate reassurances about the progress of the air programme, still refuses to change its attitude with regard to the setting up of a Ministry of Supply. We are told that plans are in existence for bringing such an organisation into being when war breaks out, but that the Government is not convinced—or perhaps we should say that it is unable to persuade the Service Departments—that it is right to do this now. One of the reasons given is that we have not yet reached such a state of emergency that the dictatorial authority exercised in the Great War by the Ministry of Munitions over every phase of the nation's industrial life would now be justified. Another obstacle undoubtedly is that the Services are unwilling to surrender authority to a civilian department which they feel might prejudice their complete control over the design and inspection of armaments.

These objections are unconvincing. The case for a Ministry of Supply is just as strong whether the purchasing authority acts by compulsion or by persuasion. The prevention of over-lapping, the standardisation of contracts and methods of profit control, the best allotment of such industrial resources as are available, the priority of deliveries not only from contractors but from sub-contractors, the timing of supply from the raw material upwards so as to give the best possible synchronisation of the flow of finished products—all these things can only be achieved through a properly organised civilian department, manned by persons with industrial knowledge and covering the whole field of armament supplies. There is a strong case for a single supply department as a permanent organ of Government. Indeed, as a result of war experience, a Bill was drafted for the establishment after the war of a department which would handle all the buying for all Government departments, civil as well as military. The project was abandoned only on grounds of economy, and because of the desire felt among all classes and in all countries to be rid of anything that savoured, however indirectly, of war-time conditions, and to return to pre-war conditions of freedom. This particular project was, therefore, killed; though it is arguable that on the long view it was wise and may yet be adopted as a measure of economical administration.

But if the device is one which might well be adopted permanently, it is surely desirable at a time when our armament expenditure is rapidly rising to an abnormally

high peace-time level. It is true that we are not yet producing munitions or aeroplanes on a war scale, and our experience twenty years ago shows that a stupendous output can be achieved by mass production methods when once the Government takes full industrial control. For example, the fact has more than once been stated that over 30,000 aeroplanes were produced in this country in the first ten months of 1918, whereas four years previously, when the Expeditionary Force had gone to France, there were barely a score of serviceable aeroplanes left in England, and in the whole year 1914 less than 200 were produced. The increased production in four years in the face of rapidly-changing design and a multiplicity of new types was a very great industrial achievement. But in the next war we shall not have four years in which to work up to full output; accordingly, full production should spring into existence in a very short space of time. The shadow factory scheme is designed to achieve this. But greater preparation is necessary than merely to tell manufacturers in advance what they must produce. A great organisation, such as a Ministry of Supply will be in the next war, cannot leap from the ground at a moment's notice; but it can enlarge very rapidly if it is already operating on a small scale with at least a skeleton cadre of experienced personnel, who are familiar with the procedure, problems and staff of other departments, and whose functions are so clearly defined that it would be unnecessary to waste precious weeks in inter-departmental argumentation. The wrangles of 1915, and the hasty improvisations that were then inevitable, are powerful arguments for starting now on a scale appropriate to peace time.

Finally, Mr Churchill has more than once made clear how to hold the balance between the claims of those concerned with the perpetual improvement of design and those who are responsible for the rapid increase of production. Industrial considerations tend always to be overlooked by the Services in times of peace, and there is more than a suspicion that they are still not being given their due weight. If this is so, it can only be corrected by Cabinet authority, and the only way in which this can be done is by a decision at this stage to set up forthwith a Ministry of Supply. In industrial circles, in the House of Commons, in the country generally there is widespread opinion that this change is already overdue. There is certainly no more effective step the Government could take to satisfy the country that it is getting the best possible result for the sacrifices which it is being called upon to make.

Our Colonial Responsibilities

AT the beginning of this week it seemed that the trouble in Jamaica, which began with a strike of waterside workers, was at an end. Mob violence had been firmly put down; and after the release of their chief spokesman on bail the strikers accepted a compromise offer by the employers, singing "God Save the King" to demonstrate their loyalty. Since then, however, the news has grown worse; for riots have broken out in other parts of the island. It is not yet clear from the cabled despatches whether these outbreaks are the handiwork merely of hooligans or whether they are connected with the more responsible and widespread agitation in the colony for higher wages and better working conditions. But it is significant that the Public Works Department has chosen this occasion to raise labourers' wages, that other subordinate Government workers are demanding higher pay, that the strikes have affected a very wide variety of industries, and that regular trade unions are reported to be in process of formation in many parts of the island. The disturbances of the past two weeks certainly appear to represent the culmination of a far-reaching sense of economic

discontent among the poorer people of Jamaica—an island which has not only had in recent times to grapple, in common with the rest of the world, with trade depression, but has experienced a long-drawn-out change in the economic status of one of its chief products.

A similar conclusion about the state of affairs in Trinidad was reached by the Royal Commission which inquired into the disorders in that colony a year ago. Apart from their criticism of the manner in which the local Government handled the situation, the Commissioners found that the riots were chiefly due to general dissatisfaction which had no adequate means of expression, to delay in adjusting the earnings of the workpeople to the rising cost of living, and to the belief that a strike was the only means of redress, coupled with irresponsible agitation by an unruly element of the population. There is a good deal to suggest that, if a Commission were now to visit Jamaica on a similar inquiry, its verdict would be very much the same.

One aspect of the situation at least is clear. The people of Great Britain, through Parliament and the Ministers of

the Crown, are finally responsible for the conduct of Government throughout the dependent Empire. Yet as a whole they remain completely ignorant of social, economic or even political conditions in the Crown Colonies, until some such violent episode as has just occurred in Jamaica arouses and informs them. Through occasional incidents like the Trinidad riots they are suddenly confronted with knowledge of conditions which would profoundly disturb their conscience if it were pricked more continuously. It is idle to expect the British electorate, or even Parliament, to be informed about the details of affairs in all the dependent colonies; at best, it can exercise only a general vigilance. But the fact remains that official and unofficial channels through which information about the Colonial Empire is conveyed to the public are alike inadequate to the responsibilities that we have assumed as trustees for peoples "not yet able to stand by themselves in the strenuous conditions of the modern world."

Moreover, the Trinidad episode awakened a suspicion in many minds, of every shade of politics, that even the Colonial Office itself was, possibly, insufficiently informed about the economic condition of the Colonial peoples; or that if its information was ample, its resulting action was inadequate. The Trinidad Commission sharply attacked the existing health administration in the colony, and recommended that a separate Public Health Division should be created, staffed by full-time qualified medical officers. It also recommended the establishment of a Labour Department and an Industrial Court. The grounds for these and other proposals were, fundamentally, the wretched condition of many of the workers. Disease, malnutrition, overcrowding and bad housing were prevalent; one British company was censured for "failing to realise the claims of the workpeople to the common decencies of home life," and the employers generally were described as indifferent or hostile towards collective organisation of their workpeople. Had the Secretary of State been aware of these conditions he would surely have been stimulated into taking, in advance, some of the measures which were eventually recommended by the Royal Commission. Perhaps the most important Government action on the Commission's report has been the appointment of a Labour adviser to the Colonial Office, with a roving commission. It is to be hoped that his reports will be made available for Parliament and the general public.

It is not only in the West Indies that economic discontent has recently disturbed administrative calm. In West Africa, the past year has seen a remarkable movement of co-operation among native cocoa growers to withhold their crops from the market, as a means of combating what they

considered to be the monopolistic control of prices by a few large trading companies. This "producers' strike" has hastened the adoption of new marketing methods.

In other parts of Africa the most urgent economic problems are of a different order. Almost everywhere, from the Cape to the Nile, in consequence usually of ignorance in the face of new conditions, land is being impoverished by bad cultivation, overstocking, the settlement of formerly nomadic peoples, and the destruction of forests, with consequent alteration of moisture conditions and soil erosion. Impoverishment of the soil means impoverishment of the native cultivator, who, at the same time, inevitably feels the gradual penetration of more advanced ideas of comfort and living standards. The contrast between falling means and rising demands tends to be enhanced where the greater part of the best land has been alienated to white owners. Closely connected with this problem of agricultural impoverishment is the problem of native workers in the mines or other Western industries. Both the Rand and the Rhodesian copper-belt have recently felt the need of increased supplies of native labour. Sir Alan Pim's recent report on the economic affairs of Northern Rhodesia suggested that the conditions of life, including the social services and education, of the native workers in the copper-fields left a good deal to be desired. It is not long since that area itself underwent experiences of industrial disorder akin to those of Trinidad and Jamaica.

To generalise about so wide and diverse a collection of territories as the British dependent Empire must always be dangerous. But looking at these various instances from Africa and the Atlantic (and they could be paralleled, for example, in Fiji), one cannot help concluding that the colonial empire is passing through a phase of economic and social transition. The relations between white immigrants, or white capital, and native labour have always generated difficult problems; but these problems become more and more acute when difficulties accumulate, when general economic conditions bring about rising costs of living or falling standards of income, and when native workers acquire both European needs and knowledge of European methods of winning battles for the working classes.

We are witnessing in the Colonial Empire to-day, in short, a combination of a Chartist movement and a trade union movement. The outcome of this very proper effort to hasten the improvement in the standard of living, we may confidently expect, will be as favourable as that of the similar movements in Great Britain in the nineteenth century. But wise administration, both locally and from Whitehall, will be indispensable if this critical phase is to be passed without violence and misery.

Holidays for All

THIS week-end, vast crowds of holiday-makers will spend a few brief hours at the sea or in the country. Trains will be uncomfortably full, roads will be dangerously congested and lodging-houses and cafés will be taxed to capacity. The overcrowding always associated with the Whitsun and other Bank holidays has this year a new significance. A notable movement is under way to extend paid holidays of a week or longer to the main body of working people. Will the railways, the roads and the holiday resorts be able to cope with the swollen crowds?

Until recently the great majority of workers were compelled to confine their holidays to hasty family trips at Bank holiday week-ends. Even the more fortunate few are still very often constrained by the dates of school examinations and business custom to take their longer holidays within six weeks during August and September. The established holiday season is a comedy in three acts with inordinately long intervals. Six weeks separate Easter and Whitsun; and two or three months elapse between Whitsun

and the August rush. In consequence, the chief characteristic of British holidays is extreme congestion. The strain on transport facilities is already tremendous during the three holiday periods; and the cost of food and lodging is correspondingly enhanced.

This year some seven and a quarter million administrative and manual wage-earners will take paid holidays of a week or more. After 1941, if the recommendations of the Amulree Committee are fully passed into law, a further ten and three-quarter millions will be similarly provided. Already the Government has signified its intention to legislate on the basis of the Committee's proposals. On Thursday, the Minister of Labour announced that, as a first step, a Bill would be introduced to empower trade boards and agricultural wages committees to provide for holidays with pay. If the new exodus is to be crowded into the present brief holiday periods, the results may well be disastrous. Even this summer, when the first large-scale effects of holidays with pay are likely to be felt, grave diffi-

culties will be experienced. If the bulk of the new holiday-makers take their week with pay at the beginning of August, the railways may be unable to carry the Bank holiday traffic, in addition to maintaining their ordinary services. Seaside lodgings may be even more inadequate than railway rolling-stock. A widespread breakdown is not impossible; and, unless some drastic reorganisation of holiday seasons and facilities is carried through, the situation will be much worse in future years.

Even before the recent extension of paid holidays, proposals were rife to spread holidays more consecutively over the summer season between May and September. Now, it is clearly imperative to adjust the rhythm of industry and education in order to make it possible for transport and the holiday industry to cope with the growing crowds. Lancashire has shown the way in which this can be done. The planning of the "Wakes Weeks" of the larger towns of North-West England so that they follow one another in orderly succession throughout the holiday period has made possible the provision of adequate holiday facilities for the ten million inhabitants of Lancashire, Cheshire and the West Riding. The town of Blackpool, with a resident population of between 120,000 and 130,000, has grown up almost entirely to cater for the entertainment of these people; and it receives some seven million visitors annually. It should not be impossible in other industrial districts to arrange for the holidays of the various towns or industries to be taken in rotation over the period between May and September. The railways would be provided with a relatively even and continuous stream of traffic; and the wasteful and inefficient overcrowding of lodging accommodation for a few weeks each year, separated by long intervals in which hotels and boarding houses are much less than full, would be overcome.

To "stagger" summer holidays, however, will not, by itself, be sufficient to solve the problem of holiday congestion. To make it possible for the holiday industry to absorb the extra millions will involve an expansion of the industry's resources and the development of new facilities. It is true that this industry has notably grown in recent years. Since 1923, the number of insured persons engaged in the provision of entertainment and sports has risen from 60,050 to 139,620; and the number of insured persons in hotel, public-house, restaurant and boarding house services has simultaneously increased from 258,960 to 444,110. In 1937 these two groups of occupations together accounted for 4½ per cent. of the insured population, compared with only 2½ per cent. fourteen years before. Leisure and the economic capacity of the people to make use of leisure have

been rapidly growing. Nevertheless, the latest movement to provide holidays for all cannot be successful, unless all the existing holiday services are appreciably expanded and reorganised. Even in France, where there already existed a very large holiday industry, built up on the basis of the foreign tourist traffic, the institution of paid holidays for industrial workers in 1936 caused a considerable overloading of existing facilities.

Even if seasonal overcrowding and scarcity prices are eliminated by spreading working-class holidays in rotation over five months, the holiday industry in this country, as at present organised, is unfitted to cater for cheap holidays of a week or more for the bulk of Britain's families. The cost of holidays is too high for many working people. Apart from increasing the present provision of food, drink and shelter, as well as of piers and pierrots, in established holiday centres, it will be necessary to develop new and cheap ways of holiday-making. One enterprise already provides holiday camps at which every amenity of a popular holiday for all ages can be obtained for a low inclusive charge. Camps for schoolchildren have become the annual responsibility of many local education authorities. And, to facilitate the evacuation of three million people from London in the event of attack from the air, large-scale camps are to be established for children, to which they may become accustomed under happier conditions during their holidays.

Furthermore, the desirability of developing National Parks and other means of preserving natural amenities and making them accessible to the people have lately been widely discussed. Here, too, new ways of catering for the nation's new leisure may be discovered. In the thorough planning of the use of Britain's land which urban congestion and the need for fresh food will almost certainly make necessary very soon, opportunities for popular recreation cannot be ignored.

Until recently, our social and economic system has not made much provision for the leisure of the masses. In the near future, holidays for all will be an accomplished fact. Many other countries, faced with the same demand, have solved the problems of overcrowding and expense by regimenting their holiday-makers. In Britain, where democratic traditions still prevail, the method should rather be to organise holiday facilities. Public health, national fitness and considerations of social justice are the sponsors of the holiday movement. Only mechanical difficulties, which can readily be overcome by goodwill and ingenuity on the part of central and local authorities and private enterprise, stand in the way of its complete success.

Bread and Draftsmanship

THE London County Council, which provided entertainment a few months ago, by prosecuting an ice-cream man for standing still while he sold his ices, has done it again. This time it was concerned with bread, and its information was preferred against a Mrs Davis, who sold bread in London after 8 p.m.—contrary, it was alleged, to the Shop Acts of 1928. And again the L.C.C. lost its case.

What happened may be briefly stated. In 1928, Parliament ordained the closing of shops at 8 p.m., but declared (in clause (b) of section one of the first schedule) that the Act should not interfere with "the sale of newly-cooked provisions and cooked or partly cooked tripe to be consumed off the premises." Having made, no doubt, a careful study of the schedule, Mrs Davis decided to keep open for the sale of bread, excusing the action to herself by the subtle plea that her bread was new, that it was cooked, and that it was provisions. That was too much for the L.C.C., which, first in the police court and then before three judges in the High Court, did its utmost to demolish the lady's case.

Before approaching the judgments of their Lordships in this now leading case, let us turn for counsel to the dictionary. What has it to say of the meaning of newly-cooked provisions? Following the lead of Mr Pott's assistant on the *Eatanswill Gazette* (who looked up Chinese under China and metaphysics under metaphysics and combined the information), we shall look up newly under new, cooked under cook, and provisions under provision. Combining the information, we shall decide humbly whether we see eye to eye with the great lawyers of the bench or with the greatest municipal body in the history of the world's government. First, then, for "new":—

New nū adj. lately made; having happened recently recent modern; not before seen or known; strange different; changed for the better; not of an ancient family; a at first; unaccustomed; fresh from anything; uncultivated or only recently cultivated.

First round to Mrs Davis. Unless her bread was so incredibly stale that no human jaw might penetrate the crust

she comes home on one or other of these definitions. Even if it had not happened recently, the bread must have been modern, and whether or not changed for the better, it must have been fresh from the oven. Unquestionably, Mrs Davis wins on "new." Next, "cooked":—

Cook kook v.t. to prepare food; to manipulate for any purpose or falsify as accounts etc.; to concoct. v.i. to make the sound of the cuckoo.

Leaving on one side the sound of the cuckoo and the falsification of accounts, etc., both of which appear to be irrelevant to Section one of the first schedule to the Act of 1928, we may concentrate on the words "to prepare food." And as the L.C.C. argued that bread is not cooked, but baked, and that baking connotes a different process from cooking, we turn back to B and consult the dictionary on "bake":—

Bake bak v.t. to dry harden or cook by the heat of the sun or of fire; to prepare bread or other food in an oven; to harden as by frost.

Another round for Mrs Davis. Indeed, if Mr Nuttall had foreseen her action and arranged his definitions to assist her in the downthrow of the L.C.C. he could not surely have worded his sentences better. To cook is to prepare food, and to bake is to cook or prepare bread or other food in an oven. The bread was therefore newly-cooked; and if bread is provisions, then Mrs. Davis wins her case. Everything now turns on "provisions":—

Provision pro-vizhun n. act of providing; that which is provided or prepared; measures taken beforehand; a clause in a law or a deed; a rule for guidance; an appointment by the Pope to a benefice not yet vacant; previous agreement; a store of food; provender.

Store of food! Provender! The L.C.C. takes the count and Mrs Davis wins on a knock-out.

It is always a satisfactory thing when several trained minds, moving through different avenues of thought, arrive independently at the same conclusion. Mr Justice Branson, Mr Justice Humphreys and Mr Justice Du Parc will doubtless be glad to learn that *The Economist*, working at the problem from the literary or lexicographic angle, comes to the same decision that they reached along the dustier path of law. The dictionary and the rules of construction have spoken with one voice. But, strangely enough, although

the words "newly-cooked provisions" must include fresh bread, and although on their exact meaning the L.C.C. was bound to lose its case, it is as certain as may be that, on the intention of the draftsman of the clause, the L.C.C. ought to have won. It was never intended by those who were responsible for the Act that all bakers' shops should be allowed to stay open after 8 p.m.; and it never occurred, either to the draftsman or to the House of Commons, that the words "newly-cooked provisions and partly-cooked tripe" would cover bread in a baker's shop. What the House of Commons and its draftsmen had in mind was tripe and fish and chips; but, thanks to the difficulty of saying in the English language just what one means and nothing more, the door that was held open for fish and tripe was pushed far enough to let an unintended loaf gate-crash.

The truth is that English, admirable medium as it is for the epics of Milton, the lyrics of Shelley, the rhetoric of Burke and the leading articles of *The Economist*, is not an ideal vehicle for exact draftsmanship. What can a draftsman do with a language which permits hours of argument on the meaning of the verb "to cook" and the significance of the noun "provisions"? And as Parliament takes an ever-closer interest in the daily life of John and Mrs Bull, as laws become more intricate, more complicated and more concerned with trivial details, the work of covering everything in a set form of words, most of which have a dozen different meanings, tends to become practically impossible. The draftsman simply cannot find language that will be water-tight in every set of future circumstances. If any reader doubts this, let him read the judgment of Mr Justice Hilbery in *Chisholm v. London Passenger Transport Board*, and consider the extraordinary difficulty of deciding who must give way to whom under the Ministry's regulations at a pedestrian crossing. It looks almost as though a new technique of draftsmanship may have, in this complex state, to be adopted—a technique which will express the intention of Parliament and permit the bench to interpret the Act according to the intention, instead of following with pedantic care the exact and literal meaning of a set of words which, on an itemised analysis, will often legalise the very thing that Parliament and the draftsman meant to make illegal.

Topics of the Week

The Engineers' Decision.—Over two months ago the Government invited the employers and workpeople in the engineering industry to collaborate in the preparation of plans to facilitate the speeding-up of re-armament. On Tuesday, the annual conference of the Amalgamated Engineering Union, representing nearly 70 per cent. of the skilled engineers affected by the Government's invitation, decided that they would not tolerate any interference with their rights and privileges. The Union's decision was ostensibly taken on purely industrial grounds. The Executive had placed before the conference certain clear charges; that unemployment and short-time were on the increase among skilled engineers, especially in railway workshops and textile factories; and that military aircraft were still being exported in considerable quantities. In these circumstances, it was held that the need did not arise to dilute skilled labour in order to accelerate the output of war-like instruments. Moreover, the Prime Minister's statement last week in the Commons that the Government would not seek the power to dilute labour was adduced to show that the time had not yet come to contemplate the relaxation of union regulations. On the other hand, Sir Thomas Inskip had asked the Union to consider dilution; and the employers had gone still further in asking that union regulations should be relaxed in civil as well as military establishments.

The issue is, on the face of it, one of fact: can it be proved that alterations in important workshop practices are now necessary, if the defence programme is to be brought up to the level of speed and efficiency that is now generally desired? The A.E.U. have said No; and the growing recession in civil industry lends an appearance of force to their contention. Nevertheless, re-armament is, unhappily, more than a useful public work to wait upon the discarded resources of declining manufacture. If there is no immediate shortage of skilled men to make munitions, tools and equipment, there is likely to be such a shortage as soon as the accelerated defence programme is in full blast, whatever the state of civil industry. In the final resort, war preparation will be a full-time job for the engineering industry; and the A.E.U.'s latest decision, which has aroused considerable criticism in many quarters, can be regarded as no more than an interim statement, based upon facts which Government spokesmen are presumably prepared to dispute. The present attitude of the A.E.U. can perhaps be justified from current evidence. As a long-term policy it may prove to be wholly inexpedient. Indeed, it cannot be disguised that, though the Union's decision was taken for industrial reasons, it was motivated very largely by political preoccupations. For engineers to wish to know the probable destination of the shells and bombers they make is understandable; and it is no final answer to their fears to describe re-armament as designed for defence and therefore directed against no one.

Air Raid Measures.—The Government has been properly impressed by the criticism levelled against its defence plans. Greater activity in re-armament and food storage is now noticeable; and Wednesday's debate on air raid precautions revealed a determination to get on with the job in this department also. The Home Secretary seems to have been fully converted to the widely held view that high explosive bombs are the chief danger. An extensive survey of potential shelter accommodation is being conducted by local authorities. The provision of properly sited trenches and dug-outs for between 1,250,000 and 1,500,000 people on London's 8,261 acres of open spaces is being prepared; and other authorities are taking similar steps. Broadly, however, "our policy is one of dispersing the population"; hospital accommodation will be provided for London's casualties on the outskirts of the metropolis and as far afield as Oxford; and timetables have been drafted, with the aid of the railways, to move 3,500,000 people fifty miles or more from London within 72 hours. Doubts about anti-aircraft measures and complaints about local slackness and inefficiency persist in many quarters. Only half of the million volunteers for A.R.P. work have been recruited. But, if the nation must face the horrifying prospect of air attacks upon civilian centres, it will do so with the greater equanimity and courage the more it is convinced that new energy is being infused into the Government's plans.

Conscription and National Service.—On Monday night the Minister for the Co-ordination of Defence informed the Commons that plans for general conscription in the event of war had been prepared by the Government. His statement was taken to mean that a wholesale regimentation of man-power was intended. On Tuesday, however, the Prime Minister denied that conscription in this sense was contemplated, and on Wednesday he explained that, whereas plans for compulsory military service had been prepared, no scheme had been devised for industrial or non-military service. The broader interpretation which had been put on Sir Thomas Inskip's statement was due to the fact that the Defence Minister was trying to make it clear that persons of military age who joined civilian emergency services in peace-time would not thereby escape the liability to military conscription. The moulding of a democratic system to a war-like shape is far from easy; and the Government's obvious desire to minimise the interference with personal and corporate freedom which will be necessary is evident and wholly praiseworthy. Nevertheless, the need to make the fullest and most efficient use of man-power is more than ever imperative in modern warfare. On the outbreak of war some plan for the speedy allocation of duties to every citizen would be vitally necessary.

President, Congress and Taxes.—Apart from the Supreme Court controversy, nothing stuck in the gills of American business men quite so much as the original capital gains and undistributed profits taxes. On Friday of last week, therefore, when the President announced that he would allow the Tax Revision Bill to become law without his signature, the important alterations in the new Bill in favour of investors and companies promised to release, if slightly, the log-jam in investment. The concessions on the side of undistributed profits are broadly in favour of corporations who make large earnings which they may wish to "plough back" without ranking them for dividend. To this extent the new law practically abandons the principle of the old undistributed profits tax. On the side of capital gains, the new flat rate of tax replaces the former progressive system, and favours the larger investor. Despite the President's declaration that he would not sign the Bill because of the regressive nature of the new tax schedules, his first unsigned law means that he has pocketed something very like a rebuff, at the hands both of Big Business and Congress, with wisdom and good grace. On the other hand, it is highly

probable that the immediate effects of the new law will be felt only in the field of psychology. Whether this move to restore business confidence will actually be translated reasonably quickly into a move to expand net new investment in capital goods is highly doubtful. Even if large corporations and rich investors are now more free to invest what they do not wish to distribute, investment in capital goods depends entirely on the prospects of recovery after one of the most rapid collapses in business activity which has ever afflicted a country. The situation of the railroads, big utilities, automobile industry and other important branches of American industry which normally constitute the demand for capital equipment, does not promise a rosy future; and investment, even of available funds, was in the doldrums before the new law was passed. Incomes have gone down on all sides during the last year, and this will in any case reduce even the now enlarged proportion of earnings available for new investment. The significance of the new law and of the President's action, or rather inaction, is therefore to be gauged better from the standpoint of the politicians. They are anxiously canvassing the possibility that a new *détente* between business and the White House may now be ripe for initiation.

Central Europe Breathes Again.—During the last week many evidences of a tranquillising influence on German-Czech relations have come to light. Thus, German troops have been withdrawn from the frontier to a line about fifteen kilometres behind it; the Czech Government's measures to call up reservists have not been proceeding so rapidly; and the private discussions between M. Hodza and Herr Henlein's deputies, Herren Frank and Kundt, have been continuing in a calmer atmosphere. This may be due to the results of the municipal elections last weekend, in which the Henlein Party secured 1,897 places out of the 2,607 available places in all the German areas. The Social-Democrats secured 185, the Communists 160, the German Democrats secured only two, but the Czech parties secured altogether 259. The Henlein Party declared that they had won 88 per cent. of the poll; but as this figure was calculated on only the German electorate, apart from Czechs and others, the true figure is 67½ per cent. Meanwhile, the situation is still grave; for the still unpublished Bill for the Status of National Minorities has to obtain, even when it is ready, a two-thirds majority in both Houses. Moreover, on May 28th the Germans suddenly suspended the negotiations with the Czechs in Berlin for a new commercial treaty, for no apparent reason. On the credit side of the sheet, however, is to be noted a significant and substantial improvement in Czech-Polish relations, consequent on the very strong representations in Warsaw by Marshal Jonsescu, Chief of the Roumanian General Staff, who is understood to have begun to improve Czech-Polish relations as a Roumanian "honest broker." As Roumania is linked to Czechoslovakia by her Little Entente treaty and to Poland by the bilateral treaty of alliance, there is much to be hoped for in this direction. Moreover, now that Germany has suspended the commercial negotiations with Czechoslovakia, it is in the interests both of Poland and Czechoslovakia to organise the transit trade coming from South-Eastern Europe through the narrow neck of Slovakia and up to the port of Gdynia by the railway from Polish Silesia.

The Non-Intervention Committee.—On the 26th of last month the Non-Intervention Committee met and—with the important exception of the Russian delegate—arrived at a verbal agreement on a course of action. This has happened on the Committee so many times before that, unless and until substantial withdrawals of foreign troops from Spain are positively proved to have taken place, it will be wise to reserve judgment on the effectiveness of the Committee's proceedings. The agenda this time consisted of the third revise of the British Plan, together with a volume of amendments. It has now been agreed, by all

parties except Russia, that two small counting commissions are to be sent to the two sides of the Spanish front; that the international control officers shall resume their work on the French-Spanish and the Portuguese-Spanish frontiers on the day on which the counting begins; and that simultaneously the observers at sea shall be given power to inspect ports as well as ships. On the other hand, it is not proposed to re-establish the naval patrol round the Spanish coasts. The counting is to be completed within a month; and after that period France is to be free to put an end again to the control along the French frontier if by that time the withdrawal of troops has not actually begun. When withdrawal begins, "substantial withdrawal" is to be defined as meaning the withdrawal of at least 10,000 men from the side with the smaller number of foreign troops, and of a proportionate number from the other side. If and when that point is reached, belligerent rights are to be granted to both sides.

The Russians object that this plan means effectively preventing further troops and supplies from reaching the Spanish Government, while leaving the insurgents free to evade the control by sea in the absence of a naval patrol. Some colour is given to this charge by the attitude of His Majesty's Government, whose profession of neutrality now rather thinly disguises a wish to see the war in Spain ended speedily in the only fashion in which a speedy end is now conceivable: that is to say, by a rapid "liquidation" of the Governmental regime in the regions where its flag still flies. Signor Mussolini might then be induced to withdraw his troops *bona fide*, and the Anglo-Italian agreement could be brought into force. The Duce has just published a total casualty list of 9,541 Italian losses in Spain up to date; and this may perhaps be interpreted as a signal that he would like now to get rid of the Spanish war quickly—of course, by a victory for his own side.

Irish General Election.—Mr de Valera's Government was defeated in the Dail last week by one vote, on the important issue of compulsory arbitration for civil servants. Mr de Valera himself was absent, and it was more than possible that he could later have secured a reversal of the decision on a vote of confidence. It was not *force majeure*, therefore, but his own choice that persuaded him to seek a fresh mandate at a general election. He has never had a stable majority over all other parties, and since the last general election his Government has virtually depended on Labour sufferance. From his viewpoint, the present moment is propitious. The ending of the economic war with Great Britain, together with the other provisions of the new Anglo-Irish pact, will probably gain him votes from the farmers and from other quarters which have hitherto opposed him. The absence of any increase of taxation in the current Budget is another favourable point, and Mr de Valera's prestige has been enhanced by the rapid success of the £10 millions loan required to liquidate the annuities. Mr Cosgrave's party, Fine Gael, have indeed had their thunder stolen. Many conservative people who would normally vote for Mr Cosgrave realise that a Fianna Fail Government with an independent majority would be far more satisfactory to them than one dependent on Labour support. The Labour Party is at least able to raise real social issues, but now that the dispute with Great Britain has been settled (except for partition, which affords common ground to all parties) there is little of substance to distinguish Fine Gael from Fianna Fail. Hence the general expectation in Ireland is that Mr de Valera will succeed in gaining his majority.

Coal in the Lords.—The Government's Coal Bill has now run the gauntlet of the Lords in Committee. The Commons paid most attention to the Bill's proposals (in Part Two) to secure compulsory amalgamation of collieries

in default of voluntary steps being taken, and rendered these clauses almost wholly nugatory. The Lords, on the other hand, have directed their chief attacks against Part One, which touches their interests most closely, since it provides for the national purchase of mining royalties. Fully three-quarters of the peers' speeches on the Second Reading of the Bill and in Committee have been hostile to these clauses. The peers criticised the arbitral award of fifteen years' purchase as the capital valuation of royalties, on no ground more convincing than the fact that the sum so computed was lower than the compensation they would have liked. They further assailed the method of valuation adopted because a global sum for compensation was arrived at, leaving the regional valuation of particular properties to be made within the framework of the total amount available. Lord Hastings was reluctantly persuaded to withdraw his notice to delete the nationalisation clauses altogether. Lord Burghley succeeded, against the Government's wishes, in deleting the vesting date, July 1, 1942, on which the actual ownership of the coal was to have passed to the Commission set up by the Bill. And the Government was again defeated when an amendment was carried providing that, after receiving the certified valuations from the required valuation boards, the Board of Trade should lay before Parliament a statement of the total amount of certified valuation in each region. The tenour of these amendments was identical. Noble lords feared that individual apportionments of the total payment might be insufficient; and they therefore sought to make the process of regional valuation as lengthy as possible. So far, the Lords have not mutilated Part One quite as completely as the Commons maimed the amalgamation clauses. But the object of the Bill—to establish the conditions for an efficient coal-mining industry—has been almost entirely ignored in the confused clamour of interested voices. Another Coal Bill has been rendered largely ineffective. The industry may rue these barren triumphs if present trends in the coal trade continue; and the Government deserves sympathy for the lack of economic good sense evinced by a section of its noble supporters.

Food Storage Powers.—Announcing completed Government purchases of wheat, sugar and whale oil in his Budget speech on April 26th, Sir John Simon explained that a Bill to give statutory sanction to these operations would be introduced as soon as possible. On May 26th, the Essential Commodities (Reserves) Bill was introduced in the Commons, and last Thursday it was debated on second reading. The Bill goes much further than might have been inferred from the Chancellor's announcement six weeks ago. In addition to regularising the purchases of foodstuffs disclosed by Sir John, and the further purchases of raw materials recently mentioned by the Marquis of Zetland in the Lords, the Bill gives the Board of Trade power to buy and store foodstuffs (including feed for animals),

fertilisers and oil. These stores will simply expand normal commercial stocks. Authority is also given to the Board of Trade to obtain particulars from traders of the stocks they hold and of their storage accommodation; and to provide traders with financial aid, where necessary, to increase their reserves of essential commodities or to improve their storage facilities. To meet the cost of purchasing stocks, assisting traders and erecting Government storehouses, the Essential Commodities Reserve Fund will be created, under Board of Trade control. Periodic sums will be voted by the House of Commons to maintain this fund, and no certain estimate of the scheme's probable cost can yet be hazarded. After the Budget speech it seemed clear that the purchases which had then been made fell appreciably short of three months' supply, and shorter still of the equivalent in shipping space of one year's supply of wheat, which Sir Arthur Salter has postulated as the basis of any adequate storage policy. The new Bill seems to foreshadow action on a much wider and more satisfactory scale.

* * *

Behind the Scenes.—On August 1st, Sir Maurice Hankey, who is now Secretary to the Cabinet, Secretary to the Committee of Imperial Defence and Clerk to the Privy Council, will become a director of the Suez Canal Company. His retirement from his administrative offices, announced on Monday on the ground that he had passed the retiring age, will end a remarkable career, during which Sir Maurice had been the repository of all the inner secrets of British politics for nearly a quarter of a century. In 1908, Sir Maurice became Assistant Secretary, and in 1912 Secretary, to the Committee of Imperial Defence. His appointment as Secretary to the Cabinet in 1916, to record that body's proceedings, destroyed the constitutional fiction that the Cabinet did not exist and violated extreme views about Cabinet secrecy. The remainder of Sir Maurice's offices followed from his making himself indispensable in these two posts. In 1923, he became Clerk to the Privy Council; and between 1919 and 1930 he was Secretary of either the Conferences or of the British delegations in Paris, Washington and Genoa, at The Hague, in London, Lausanne and elsewhere. Discreet, hard-working, loyal, dependable and shrewd, Sir Maurice was a perfect secretary, and, without presuming beyond the limits of his office, a real force in the nation's councils. A realist, he combined the traditions of the fighting and civil services in his outlook. To compare Sir Maurice in any real sense with Colonel House or Lord Esher would be inexact. Yet, like them, he left his mark upon a nation's history by virtue of doing his job well behind the scenes. The end of Sir Maurice's triune administration will witness an important innovation in administrative co-ordination. A unified office will be set up, with Mr E. E. Bridges as Permanent Secretary and Secretary to the Cabinet, to include the Clerk to the Privy Council and the Secretary of the Committee of Imperial Defence, in future to be separate and distinct personages. The new secretariat will bring together the major activities of the Government and co-ordinate in one department the chief functions for which the Cabinet as a whole is responsible.

Frightfulness in the Air.—What remains of a once civilised world has been profoundly shocked during the

ESTABLISHED 1810

last week by news of indiscriminate bombings of the civil population in two countries where war, in all but name, is now raging. Last week-end came the news of repeated aerial onslaughts upon the crowded population of Canton by squadrons of Japanese bombers. Three such attacks resulted in loss of life estimated at about 2,000. While such attacks may be calculated to break the morale of this vast population, Canton itself cannot be called a military objective. In the other theatre of war, the example is, if such a thing were possible, even worse; for here Spaniards and foreign allies have been bombing their own kinsmen. Last week-end, and again this week, a wave of frightfulness seems to have swept General Franco's air forces almost beyond the bounds of the British Government's patience—if, again, such a thing were possible. At the end of last week the non-military city Alicante was subjected to a murderous assault from the air in which hundreds of civilians lost their lives. Since then, many non-military towns and villages in Catalonia have been similarly attacked from the air. The sinking of the British ship "Thorpehall" last week, on which a protest from the British Government was sent to Burgos, has been followed, not by the usual soft words of General Franco, but by the sinking of the British ship "Penthamess" on Tuesday. It is obvious that if, as is reported, General Franco refused to take the offensive against Madrid and Barcelona without fresh Italian troops, he has at least been trying by aerial frightfulness to break the morale of the Spanish Government's supporters. It is noteworthy, however, that in this attempt he has till now utterly failed and his machines have often been repulsed. Moreover, he has steadily driven our long-suffering Government, at last, into considering joint action with the French in support of their protests; and this, despite their manifest desires to see the Anglo-Italian and the hypothetical Italo-French agreements enter into force as soon as possible. The reaction of the British and American peoples to this unchecked aerial savagery has been epitomised—and perhaps when history comes to be written it will be duly noted, like Captain Jenkins's ear—by the telegraphed protests and appeals for aid which masters of British ships engaged in lawful trade, but sunk without warning, have been repeatedly sending to the Government in London.

* * *

Japan Plunges Deeper.—Last week we recorded the reconstruction of the Japanese Government. One of the new appointments is that of General Baron Araki to the Ministry of Education; and this means that the new masters of Japan are looking far ahead. The immediate purpose of the enthronement of a nakedly military regime in Tokyo has been officially described as being "to attain the original objectives of Japan's holy war [sic] in China." Megalomania has been the note of Japanese action from the autumn of 1931 onwards; and the men who incarnate this spirit have risen steadily until to-day they are in undisputed possession of supreme power. Nor, this week, have they been slow to make the meaning of their advent clear. The Japanese war-machine is now being directed to no smaller an objective than a total conquest of China by the use of every means of frightfulness which has been placed in the hands of war-makers by scientists. The savage air attacks on the civilian population of Canton may be followed by an attempt to make a landing on the south coast and open up another front. Simultaneously the Japanese are pressing westward up the Lunghai Railway. All this is strangely reminiscent of General Ludendorff's strategy in 1918, when he sent German troops far and wide into the Ukraine and the Caucasus, while at the same time he staked his country's fortunes on a supreme effort to break through in the West. An unlimited extension of the war zone may inflict untold sufferings upon the Chinese people, but, in a war of exhaustion, this must surely tell in favour of the Chinese Army, with its vast reserves of man power and its immense field of manoeuvre.

No Change in Business

NEW YORK, May 24.—The past week has revealed no marked changes in business activity. In some industries, such as steel and automobiles, what appear to be seasonal declines are appearing, in spite of the absence of any defined peak in the spring. On the other hand, in the out-door industries, such as building, there is some evidence of increased activity.

On the whole, one can derive a fairly clear impression of what may be called the consequences of the economic fatigue caused by the lengthy duration of depression. Five or six months at the prevailing low level of activity have made serious inroads, in many instances, into the resources of both individuals and corporations. But, so far, the depression has been more urban than rural; more severe in the heavy than in the light industries; and more severe in its effects on corporate earnings than on the volume of activity.

Unemployment has undoubtedly increased materially during the past year; but it is questionable if it has increased since the end of March, since the availability of out-door occupation has offset a probable increase in factory unemployment. In *The Economist* on May 28, page 475, reference was made to the new monthly index of national income. The March figure, at about 80 per cent. of the 1929 level, is not far from the average of 1931, and this corresponds reasonably well with the index of production. Indeed, the index of production at the end of 1937 was almost the same as in December, 1930, but the spring of 1931 brought a vigorous rebound which has been absent this year.

Why Confidence is Lacking

In most discussions of the American economy, the element of confidence is stressed, as if it were a purely emotional factor. Actually, what is loosely termed lack of confidence is, upon analysis, not emotional at all, but the consequence of a careful appraisal of a concrete situation, usually involving no more than simple arithmetic. At no time since 1930 has there been a receptive market for corporate new capital issues, and during the past year the issue of corporate securities has been almost completely suspended. It is begging the question to explain this simply in terms of "lack of confidence." In this period, for instance, the earning power of the railways as a group has almost vanished. The following table shows the consolidated returns of the 141 Class I railways for the March quarter of this year and last:—

CONSOLIDATED RETURNS, CLASS I RAILROADS
(\$000,000)

	1st Quarter, 1937	1st Quarter, 1938
Freight revenue	847	644
Passenger revenue	105	100
Total operating revenue (inc. other)	1,031	813
Maintenance of way	105	92
Maintenance of equipment	206	171
Transportation expense	377	345
Total operating expenses (inc. other)	764	677
Accrued taxes	88	85
Operating income	180	51
Net operating income	148	19

The railways are in dire need of capital, but their inability to command capital is the consequence of very clear and tangible causes.

The utilities are also in need of capital, but the deterrents to investment in utilities are somewhat different from the deterrents in the case of the railways. The utilities have still, in many cases, substantial earning power, although this is less than it was a year ago. Apart from their volume of business, however, the utilities have been affected by a declining tendency in their rates, and the actual or potential competition of Government-financed agencies. While this

competition has, so far, been mostly centred in the Tennessee Valley, there has been the ever-present likelihood that it would be extended to all parts of the country. In these circumstances, the utilities in recent months have not offered an attractive field for private investment, but, again, for concrete rather than psychological reasons.

In the winter of 1936-37, industrial corporate earnings were quite good; but these included, in many cases, inventory profits. Broadly speaking, American manufacturing industry has had a record of poor earnings ever since 1929, relieved for only a brief period in 1936-37. The reasons for this are primarily, of course, the low volume of business; but this has been aggravated by rising taxes and, in many cases, increased labour costs, which the consumer has apparently not been able to absorb.

Lack of Capital

That is, while the problems of rails, utilities, and industries differ radically in detail, the crucial point for each is earning power, past, present and prospective. This reacts on the capital market at two points. First, in an industrial economy, capital is largely formed through corporate earnings, whether these earnings are reinvested directly (undistributed profits) or indirectly, by individuals' reinvestment of dividends and interest received. Secondly, the earning power of a corporation determines its attractiveness to the prospective investor. Corporate earnings in recent years have been so small that the formation of capital has been much less than formerly; and such capital as has been formed has not been attracted into corporate enterprise, but has sought investment in Government securities, Federal or local.

To a great extent, investment capital is formed in the shape of capitalists' income, i.e. in the income of those who are already investors and receive an income sufficient to provide a surplus above their living expenses. The following table only refers to the income of those filing Federal returns above \$25,000, but it shows clearly the shrinkage of income in this investing group:—

	Income Tax Returns above: \$25,000	Net Income	Federal Reserve Board Index of Production
		(millions)	
1926	87,589	5,727	108
1928	111,052	8,636	111
1932	26,218	1,406	64
1936	58,978	3,264	105

Compared with a decade ago, the net income of this group of investors in 1936 had dropped by almost one-half. The decline from the peak year (1928) is even greater, but in 1928 and 1929 reported income was exaggerated by exceptionally large capital gains.

There is, of course, a substantial formation of capital in the income grades below \$25,000; but it is quite clear that the capacity of capitalists to furnish capital to American enterprise is much smaller than it was a decade ago, and that this is largely the consequence of reduced business earnings. At the same time, the Treasury has come to take a preponderant place in the capital market and such capital as is formed, both among large and small holders, is in one way or another canalised into the Treasury, either by the attraction of tax exemption, or by its offer of greater safety.

France

Political Calm

PARIS, June 2.—The Parliamentary recess has ended, but the session will be short. It will be interrupted for the Socialist Conference at Royan and probably closed before the visit of the British sovereigns. Moreover, this session is likely to be very quiet. The extremists are impressed by the dangers of the foreign situation; and public opinion would not tolerate any political crisis until M. Daladier has fully used the plenary powers which the Chamber gave him to bring about financial and economic recovery. The first results of his policy have been favourable both in foreign policy and in the stabilisation of the franc.

New measures have just been decided to encourage agriculture, and steps to reform local finance have been proposed. The third batch of decree-laws will include an important revision of the present expensive system of social insurance.

The Socialists were visibly taken aback by two recent elections in which Radicals were elected with the backing of the Moderates against their former allies in the Popular Front. If this new alignment is further confirmed in other elections, it would seem that the country is less cautious than M. Daladier himself in its abandonment of the political coalition of 1936.

M. Blum is urging his followers to be patient. He points out that to go back into opposition immediately would be inadvisable, and that the proper procedure for the Socialist party must be to refrain from contact with the Left wing of the Radicals until circumstances similar to those in 1935-36 (economic crisis and general discontent) cause the Popular Front to be reconstituted.

The Government and Business

One danger is that too rigid respect by the Prime Minister of certain social laws (such as the 40-hour week) will have the effect of hampering a fundamental revival of business—which is already impeded by the impact on French markets of the recession in world trade. This recession—some economists point out—is favourable to the franc's stability because it has caused pressure on the dollar, the pound and other currencies.

All the same, it is unfavourable to a development of business, and notably to any recovery in French visible and invisible exports. The latest figures show that domestic activity is declining. Pig-iron production, for example, declined from 552,000 tons in March to 479,000 tons in April—a fall of 33 per cent. compared with the best monthly figure of 1937. Steel production was 503,000 tons against 564,000 tons in March—a decline of 62 per cent. from the highest monthly level of 1937.

Will re-armament and the great public works which are projected obtain results commensurate with the efforts which the money market is being asked to make? Many observers are sure that, even if the summer months are calm, the rise in prices and the contraction of purchasing power will be fatal to the Cabinet. On the other hand, the President of the Employers' Federation has described the decree laws as "an appreciable measure of progress," while the Presidents of the Chambers of Commerce have stated that "the work accomplished by the Prime Minister will favour the recovery of many distressed branches of activity, such as building."

Prices Steady

Wholesale prices, after renewed tension on the day after the last monetary depreciation, have remained steady, in spite of the recent rise in foodstuff prices, which was principally due to unfavourable weather conditions:—

	Apr. 23	Apr. 30	May 7	May 14	May 21	May 28
Wholesale prices (1914 = 100):						
General index	620	619	639	643	645	644
National products ...	665	662	673	678	686	686
Imported products...	541	543	577	579	573	570
Foodstuffs	626	623	637	641	652	652
Industrial products...	616	617	641	645	641	638

During the week ended May 21st, the number of persons unemployed was 384,939 against 389,271 in the preceding week and 351,846 a year ago.

Germany

Calm over Czechoslovakia

BERLIN, June 1.—Since May 21st, which witnessed a semi-panic on the Bourse, the international situation seems definitely to have changed for the better. Indeed, it has been transformed. This is all the more remarkable because the Sudeten-German dispute itself is in much the same stage of development as it was then. But the prospect of a war has dwindled, if not disappeared.

Cool observers here never believed that the Reich intended to risk a war by resorting to force against Czechoslovakia. In general, Reich policy, fairly summarised, is to get the fruits of war without taking the risk of war. The obvious comment on this is that the Reich cannot infallibly measure the risk of war; indeed, of late, the risk has varied daily according to new information or surmise about the attitudes of other Powers. But, though few people believed on May 21st that the Reich intended to go to war, nearly everyone here believed that the risk of war was great.

This view was not the result of untrue foreign reports about German military movements; it was due exclusively to the fact that other signs in Germany were precisely similar to those observed in the two days before the *Einmarsch* into Austria. The affair was being beaten into what looked like the final stage of white heat by the officially directed Press. After the British move in Berlin on May 21st, the agitation and incitements abated; and other matters, including even unimportant domestic events, sometimes appeared as the day's chief news.

At present the Sudeten-German question in Berlin is quieter than at any time since the beginning of May. Probably this is in Germany's own interest. If the Sudeten-German problem is, as it seems to be, an Irredentist question of familiar type, time must work for Germany; and the impatience and extravagance displayed in the first three weeks of May was unnecessary and impolitic.

Austria's Foreign Debts

The negotiations of the Leith-Ross delegation about the revision of the Payments Agreement of 1934 and their upshot are discussed elsewhere [on page 544]. It seems that the Reich has shown itself anything but accommodating in the matter of Austrian debts. In German law, a complete transfer moratorium has existed since April 29th for all Austrian long-term debts, Federal, local, and private; and such transfers as thereafter occurred were exceptions (which the law permits) to the moratorium.

The position, therefore, was precisely the same as in the case of the German long-term debts after the moratorium of June, 1933. The concessions in regard to transfer of the service on Dawes, Young and other loans were obtained after, and in the face of, the 1933 moratorium. The difference is that in 1933 there was no doubt about the status of the German debts themselves. But the status of the Austrian, or at least the Austrian Federal, debts does not seem to have been determined.

It has been understood that the Reich refuses to accept the Federal debts as its own, that is as Reich liabilities. If this meant that it declared them to be Austrian-State (*Land*) debts with the same rank as Prussian or Bavarian debts, it seems that nothing would be lost. Only the question of transfer would be important. But it is not known whether the Reich even admits that these Austrian debts are a liability of the Austrian *Land*. If they were regarded as neither Reich nor *Land* liabilities, they would seem to be repudiated altogether.

The announcement of a transfer-moratorium for Austrian loans does not accord with the statement from the Ministry of Economics in March that negotiations about Austrian loans with the creditor countries would be necessary. This statement implied that no unilateral action would be taken; but the transfer-moratorium of April 29th constituted a summary default. If the negotiations (which are to be continued after Whitsuntide, possibly in London) finally break down, the earliest possible denunciation of the present Payments Agreement would be to August 1st.

Meanwhile, Germany has concluded several international agreements concerning Austrian trade, of which the most important, in view of the fact that it presumably involves the status of an Italian-guaranteed Austrian foreign loan, is with Italy. The conditions of the agreement, however, are being kept secret. The remaining Austro-German foreign exchange restrictions have been relaxed. Previously, Austrian goods were freely importable into the old Reich, but for payment exchange certificates were necessary. Now, for many classes of goods, certificates are not necessary.

Difficulties in Agriculture and Industry

Crop reports are not satisfactory. In April there was a marked deterioration of cereals. The spring frosts are unofficially reported to have damaged fruit trees very seriously. On May 1st, however, the stock of rye and wheat was 3,500,000 tons, compared with 2,300,000 tons on the same date in 1937; imports of wheat in four months had amounted to 813,000 tons; and the fodder situation seemed to have improved.

The Nazi organ, *Deutsche Volkswirtschaft*, says that the maintenance of the present boom will present difficult problems. Credit measures and continued State intervention will be required. Full employment of industry, it is declared, involves the danger of a certain petrification of productive forces. Another official party organ says that banks' conditions in the matter of security for credit must be relaxed, and argues that the ability of a borrowing undertaking to earn profits is in itself good security. It ranks such security together with "land, buildings, plant, and stocks of goods," a doctrine which would cause some trouble to the compiler of a bank balance sheet.

The Ministry of Economics is considering whether the exchange restrictions may not be relaxed; apparently to the extent of allowing exporters greater freedom to deal with their foreign currency takings. The industrial event of last week was Herr Hitler's announcement that the new people's motor-car is to cost only Rm. 990 (about £80), payable by instalments. For a German workman this is a high sum, and maintenance here is extremely costly.

Motor Car Exports to Britain

The question of imports of cheap German cars into Great Britain has been ignored. In Germany it has always officially declared that export subsidies are paid in order to overcome foreign currency devaluations. The Adam Opel A.G., the largest German motor-car concern, which seems to have delivered the cheap cars to Britain, has increased its dividend from 6 to 8 per cent. In 1937 it produced 130,267 cars, of which 34.2 per cent., against 15.0 per cent. in 1936, were exported. One trade journal states that nearly 50 per cent. of the company's output was exported in the first quarter of this year.

Ingot-steel production in April was 1,765,700 tons; and in the first four months of the year it amounted to 7,296,700 tons, against 6,290,600 tons in 1937. The Trade Research Institute comments pessimistically on coal trade prospects. In order to maintain exports, it is stated, Germany will be obliged to make further reductions in prices.

Tax revenue in April, the first month of the new financial year, totalled Rm. 1,018 millions, against Rm. 911 millions in April, 1937. Reich funded debt on March 31st was returned at Rm. 15,450 millions, against Rm. 13,854 millions at the end of 1937, and the floating debt at Rm. 2,345 millions, against Rm. 2,388 millions. The only other disclosed liabilities are Rm. 440 millions of tax-credit certificates.

Denmark

Defence Preparations

COPENHAGEN, May 14.—At a meeting of the four Scandinavian Ministers of Foreign Affairs in April, a brief address by each was broadcast, stating the common political line of the Northern peoples, whose aim is co-operation in the maintenance of peace. Meanwhile, with general European re-armament, the Rigsdag has passed a Bill empowering the Government to raise a long-term loan of 50 million kroner, and to employ the proceeds to prepare the country against the consequences of a possible European conflict.

The amount was raised privately in a few days. It is intended to acquire reserve stocks of metals, coal, grain, fertilisers, etc. The production of new war stocks for the defence forces, which was originally to be spread over a period of five or six years, will now be accelerated, so that the greater part of the stocks will be ready in the course of the present financial year. Ground defence against air attacks will be organised. A plan for the evacuation of the central parts of Copenhagen is under preparation; and an increase of the police forces of the capital by 600 men (in addition to 1,400 auxiliary police) is foreshadowed.

A continuation of the Hague agreement of the Oslo States has been found impracticable while the present trend of

world trade persists. It has been officially stated, however, that, although the agreement has been discontinued for the present, co-operation between the Oslo States will continue. The summer of 1938 will witness the Agricultural Exhibition at Copenhagen between June 17th and 26th, celebrating the 150th anniversary of the abolition of villeinage, a reform which became the foundation stone of the present highly scientific and intensive methods of Danish farming.

Improved Capital Balance

An official estimate of the balance on capital account with foreign countries, shown in the following table, reveals a continued improvement during the last three years.

	(In million kroner)		
	1935	1936	1937
Long-term debts to foreign holders:—			
Government stock.....	846	756	734
Mortgage bonds with State guarantee..	180	145	170
Municipal bonds	453	395	390
Other mortgage bonds	120	130	125
Other Danish securities abroad	220	225	210
Sundry long-term debt	15	15	15
Total long-term indebtedness.....	1,834	1,666	1,644
Ordinary trade debts	411	399	394
Total indebtedness	2,245	2,065	2,038
Credits and investments abroad:—			
Danish holders of foreign securities ...	305	300	305
Sundry investments	25	25	25
Ordinary trade outstandings	353	366	467
Total Credits	683	691	797
Net indebtedness	1,562	1,374	1,241

The improvement is ascribed partly to the ordinary redemption of fixed debts, partly to profit on favourable exchange fluctuations and partly to the growth of ordinary trade credit balances.

At the general meeting of the Federation of Danish Industries, the Chairman emphasised that, although the results of the past year were on the whole satisfactory, and although Danish exports of manufactured goods in 1937 reached the record figure of 395 million kroner, the unstable factors inherent in the present economic and political situation must be considered when planning ahead. On the whole, Danish industry may be said to be prepared for any contingency, but it is difficult to foresee all the difficulties this country may have to face in the next few years.

Switzerland

Improvement in Trade

GENEVA, May 17.—The economic position of Switzerland continued to improve during the first quarter of the year. Imports were valued at 399,920,657 francs, against 454,911,769 francs in the same three months of 1937. Exports were valued at 306,259,582 francs, compared with 264,099,456 francs in the first quarter of last year. Improvement in the watchmaking and machinery trades was maintained, but conditions were somewhat unsatisfactory in the textile industry. Exports of the products of the four chief industries were as follows:—

	(in millions of francs)	
	First Quarter	
	1937	1938
Watches, etc.	40.3	53.8
Cotton goods	22.3	21.7
Silk goods	28.7	28.6
Machinery	23.9	46.0
	115.2	150.1

Increased Exports to Britain

Imports from Great Britain were below the 1937 figures, but exports to Great Britain showed a further rise. Imports were 22,518,315 francs, compared with 28,687,771 francs, while exports totalled 34,214,101 francs, against 30,575,756 francs. The increase in exports was mainly due to purchases made in Switzerland for British armaments. Trade with five main countries was as follows:—

	(in millions of francs)			
	Imports from 1937	1938	Exports to 1937	1938
Germany	90.2	87.8	42.0	47.8
France	61.3	50.3	34.0	31.1
Italy	27.8	25.5	16.8	22.1
Great Britain ...	28.5	27.3	30.5	34.1
U.S.A.	28.0	36.3	25.2	20.6

Compared with last year, business in retail trade showed an increase of nearly 1.5 per cent. in the first quarter of this year. Prospects are much better in the building trade, but agriculture was hard hit by the spring frost and drought. The yield of vineyards is estimated to have been reduced by about 70 per cent., while that of fruit trees will probably fall by nearly 60 per cent.

The number of unemployed, which was 95,722 in January and 110,754 in January, 1937, fell to 66,631 in March, compared with 89,346 in March, 1937; and a small increase has been recorded in the receipts of transport undertakings and of the postal and telegraph services. The influx of foreign capital has slowed down, but the money market continues to show remarkable liquidity.

First Steps in Financial Reform

After long and arduous discussions, the Commission of the National Council, or Second Chamber of Parliament, adopted, by a small majority, the financial programme drafted by the Council of States, or First Chamber. The Commission rejected a proposal to impose new taxes. Its first object was to provide a constitutional basis for certain financial measures already taken by the Government under the Plenary Powers Act.

The Constitution will now embody the principle of the tax on beer, a tax on capital, or on income, or on capital and income, and a tax on war profits. These taxes are intended to enable the Government to cover the expenses necessitated by re-armament and the strengthening of national defence. The tax on capital, or on income, or on capital and income, will replace the Crisis Tax, which the Government was authorised to levy again in 1938.

The financial programme lays down that no new expenditure can be decided unless it is counterbalanced by savings or new receipts. On the other hand, Parliament will not be entitled to increase the credits sought by the Government by means of emergency decrees which are not submitted to popular vote. The programme is only the first step towards a general financial reform, the details of which will only be settled when the programme has been approved by Parliament.

Swiss Neutrality and the League

At the League Council an important decision was taken regarding Swiss neutrality. The policy of neutrality is traditional in Switzerland, and it dates back as far as the sixteenth century. In 1920, Switzerland made it clear that her position in the League was exceptional, and was not to involve the obligation of taking part in military sanctions. The Treaty of Versailles acknowledged that exemption, while Switzerland pledged herself to take part in economic sanctions and to defend her territory.

The failure of collective security, the difficulty of making a distinction between economic and military sanctions, and the fear of being treated as if she had taken military action if she applied economic sanctions, caused Switzerland to revert to her traditional policy of complete neutrality. The League Council recognised the exceptional position and complete neutrality of Switzerland, who is thus exempt from taking part in either military or economic sanctions, though remaining a League member. At the same time, Switzerland undertakes to defend herself, and to guarantee the free working of League institutions on her territory.

Roumania

Changes in Government and Administration

BUCHAREST, May 29.—The political situation has remained calm in spite of the conviction of Corneliu Zelea Codreanu, leader of the Iron Guard, for treason. Obviously, M. Codreanu hoped that time is working for him and his party. He did not feel strong enough to resist the Government backed by the Army. On the other hand, however, the Government's action cannot control invisible propaganda, designed to win over young people.

The new administrative law has been published. It divides the country into seven provinces, the boundaries of which coincide with those of the military districts. Economic, religious and ethnical entities have been little respected. The Carpathian range, a natural boundary between Transylvania and the Old Kingdom, is crossed in three places by the boundaries of the new provinces. Minority districts have been, as far as possible, divided into small pieces.

The effect of the new system of administration cannot be guessed until it actually begins to operate; but public opinion was favourably impressed by the frequent careful inspections of local authorities made by high officials and ministers. Many inefficient public employees have been dismissed, and both the severity and rapidity of the measures taken contrast strikingly with the hesitant attitude of former Governments. This purification will have to be continued ruthlessly for many years, if Roumania is to be relieved from the curse of corruption and incompetence in her civil administration.

Depression in Business

Frequent political changes and the menacing complications of international politics have created an atmosphere of general reserve, and business is rather dull. Current sales of iron and steel are about 60 per cent. of last year's figure, which was, however, a new high record. The textile trade is also suffering from depression, and sales during April were about 30 per cent. below the level of 1937. On the other hand, sales of goods for mass consumption did not fall, and sugar consumption in April exceeded the corresponding figure for April, 1937, by 4 per cent. In quantity, sales of cigarettes during the first three months of this year were as much as 20 per cent. higher than those during the first three months of 1937. The proceeds of sales of alcoholic drinks were 12½ per cent. more than a year ago. The outstanding features of the market are steady turnover figures for commodities bought by the lower classes, and dwindling sales of better qualities.

The new regulation of banking business and the reduction of maximum interest on outstanding debts from 9½ to 7½ per cent., together with the reduction of bank rate from 4½ to 3½ per cent., have released accumulated capital for the Stock Exchange. Both bonds and shares have gained substantially during the last two weeks. Stabilisation bonds advanced from 51 per cent. to 58½ per cent., and Astra Romana oil shares from 950 to 1,150. Later on, however, the poor international situation led to heavy sales, and all quotations receded with the sole exception of "Mica" gold mines. The turnover, however, has been markedly higher than for several months.

Bulgaria

Economic Recession

SOFIA, May 19.—The economic recovery of Bulgaria, manifested throughout 1937, has since the beginning of February, given place to recession. Wholesale prices have steadily fallen since December, and during the first quarter of this year the decline was about 5 per cent. The fall is even greater in the prices of export products—over 8 per cent.

Foreign trade still shows a surplus of exports because of the outstanding balance of last year's food crops. But activity on the domestic market has seriously slackened and home sales of industrial products have diminished. It is, however, believed that the recession will be only temporary. Crop prospects are good and another abundant harvest may be expected.

The future of trade relations with the new Greater Germany is being discussed in official circles. Last year, Germany and Austria together took 47 per cent. of Bulgarian imports and supplied 65 per cent. of Bulgarian imports. In the first

quarter of this year these percentages were 57 and 56, respectively, and the negotiations at present taking place in Berlin seem to indicate Germany's willingness to increase the volume of her imports from Bulgaria. This is disquieting, since it would inevitably place the country in greater dependence on Germany and reduce the National Bank's prospects of increasing its stock of foreign exchange.

Another disadvantage of the present position is the over-estimated value of the Reichsmark. Its rate in trade with Bulgaria is fixed by the clearing agreement with Germany, which makes the monetary policy of Bulgaria dependent on the Reich. Since the *Anschluss* some reorganisation of commercial methods has been noticeable, with Germany endeavouring to place the organisation of trade with Bulgaria in the hands of German agents.

The Bulgarian Government would like to free itself of such dependence and direct foreign trade to other markets—Great Britain and the United States. Results so far, however, are far from satisfactory, owing mainly to monetary factors. Thus, while the rate of the Reichsmark has remained steady ever since 1932, on other foreign exchanges Bulgarian importers have to pay premiums which run up to 35 per cent. above the official rates of the National Bank. Imports of other countries into Bulgaria are unable to compete with German products because of the high premiums importers have to pay.

Foreign Trade Results

In the first quarter of 1938 foreign trade was as follows:—

	(000's omitted)			
	1937		1938	
	Tons	Leva	Tons	Leva
Imports	64	913,000	63	1,081,000
Exports	144	1,299,000	155	1,579,000
Surplus of exports		386,000		498,000

This year's increased values are due, in the first place, to the method of valuation which includes the paid premiums, and these increases are not, in consequence, actual. Nevertheless, the favourable trade balance has helped to increase the foreign exchange stock of the National Bank from 659 million leva in December to 895 millions at the end of March, against 581 millions in March, 1937.

State revenue in the first quarter was satisfactory. Receipts totalled 2,225 million leva, against 1,929 millions in the corresponding period of 1937. The 1938 figure, however, is still 101 millions below the Budget estimate, and there is a marked tendency for the proceeds of direct taxes to diminish.

Greece

Improved Economic Outlook

ATHENS, May 16.—The economic outlook has improved. Abundant rains have considerably improved prospects for crops, and industrial activity is still satisfactory. Domestic trade is enjoying a seasonal upturn, and wholesale and retail prices have fallen slightly.

Foreign trade returns for the first three months of 1938 compare favourably with those of the corresponding quarter of 1937, but reveal a further increase of the adverse balance of trade. Nevertheless, the foreign exchange position remains satisfactory, while the note circulation, bank advances and deposits continue to expand. Movement on the Stock Exchange is brisk, and in general prices are rising.

Budget estimates for the financial year 1938-39, which began on April 1st, provide for a reduction in expenditure compared with the previous year, of Drs. 1,777 millions. The following table shows estimated revenue and expenditure in 1937-38 and 1938-39:—

(In millions of drachmas)		
Revenue:—	1937-38*	1938-39*
Ordinary	12,271	12,031
Extraordinary	4,215	2,488
Total Revenue	16,486	14,519
Expenditure:—		
Ordinary	11,535	12,137
Extraordinary	5,348	2,969
Total Expenditure	16,883	15,106
Deficit	397	587

* Estimated.

The Budget for 1937-38 is now expected to close with a deficit of not more than Drs. 125 millions, and some reduction is hoped for in the anticipated deficit on the current year (1938-39). Estimated total expenditure is reduced from Drs. 16,883 millions in 1937-38 to Drs. 15,506 millions in 1938-39. Of this, Drs. 3,421 millions was covered by loans in 1937-38, whereas only Drs. 1,950 millions will be so covered in 1938-39. Re-armament expenditure is reduced from Drs. 2,750 millions in 1937-38 to Drs. 894 millions in 1938-39. Moreover, a sum of Drs. 285 millions is set aside in the 1938-39 Budget as a reserve against unforeseen expenditure.

Foreign Debt Service

Provision is made in the Budget for an expenditure of Drs. 976 millions for the service of the foreign debt, against Drs. 923 millions in the previous year. An agreement with the foreign bondholders has not yet been concluded, and the Government again decided to pay 40 per cent. of the normal service. This was refused by the Council of Foreign Bondholders in London, who claim that the offer of the Greek Government is inadequate.

Here it is argued that the transfer capacity of Greece seems to be over-estimated in certain quarters abroad. According to the figures contained in the annual report for 1937 of the Governor of the Bank of Greece, this country's balance of international payments was adverse, as regards income items, by 39,609,000 gold francs. Including capital items, and receipts whose nature cannot be exactly defined, the accounts closed with a net adverse balance of 10,674,000 gold francs. The prospects for the current year seem less promising. 1937 was an exceptionally good year, and some items of income from abroad will be much smaller this year owing to the altered international economic and political situation.

On May 14th the Bank of Greece completed ten years of existence. When the Bank was established in 1928, the gold exchange standard was adopted, and the drachma was stabilised at Drs. 375 to the gold £, or ⅓ of its pre-war gold value. The drachma, which was linked to sterling in September, 1936, is now worth about 42 per cent. of its 1928 gold value, and is now quoted at 550 drachmas to the £.

China

Shanghai's Plight

SHANGHAI, April 26.—Shanghai is still virtually a refugee city, and many people are in need of relief. Although a wide area of the lower Yangtse region is nominally held by the Japanese forces, in a number of districts, away from the roads and railways, Chinese guerilla bands still operate, and sporadic fighting continues. The outlook for any rapid recovery of industry and trade in this area is dismal until some settlement is reached to enable communications to be restored and the work of reconstruction to be started. The Ta Tao, or Great Way, Shanghai Municipality, established by Japanese consent or initiative, has so far done no more than undertake elementary police duties and introduce various new local taxes.

It is understood that arrangements are being made for a limited number of approved passengers to travel on the Shanghai-Nanking and Shanghai-Hangchow-Ningpo Railways. Since the Japanese obtained control of these lines the representatives of the British bondholders, for whose benefit the revenue receipts are pledged, have been refused access to the railway property. It will be interesting to note what arrangements are now made by the Japanese as regards both administrative control and the disposal of the earnings of these railways.

Exchange Difficulties

The exchange restrictions, introduced a month ago largely to protect China's foreign currency reserves from Japanese raids through the instrumentality of the Federal Reserve Bank in North China, have at times caused considerable nervousness in the exchange market, and resulted in the quotation of appreciably lower rates for the Chinese dollar. Early attempts on the part of the Chinese Government banks and some of the foreign banks to maintain the rate resulted in the establishment of a "black bourse"; and, so long as the rationing of exchange remains necessary, and discrimination is shown in the weekly allotments of foreign currency between different banks, a "black market" is likely to continue, though its importance may not actually be very great.

Confidence has now been somewhat restored, and the selling rate has recovered to about 1s. 1½d. for the dollar. There has been some criticism of the foreign exchange banks by local merchants, who have felt that the banks were acting selfishly either in retaining (to cover an oversold position) part of the foreign currency allotted to them or in giving less favourable rates to import merchants than those at which the allotments were made by the Central Bank.

China's foreign trade, as recorded by the Customs, for the first three months of the current year, compared with the same period of last year, was as follows:—

	(In millions of Chinese dollars)	
	January-March 1937	1938
Net imports.....	271.2	230.7
Net exports	239.9	134.2

The following figures for Shanghai show how badly this city has been hit by the hostilities:—

	(In millions of Chinese dollars)	
	January-March 1937	1938
Shanghai's gross imports	165.1	52.8
Shanghai's gross exports	125.2	33.7

War-time Trade Decline

An appreciable part of Shanghai's recent imports has consisted of cargo off-loaded at other ports, such as Hongkong, Manila and Singapore, during the period of local hostilities last year. Shanghai's ability to dispose of these shipments is adversely affected by the present disorganisation of local industry and the breakdown of communications with the interior.

Unless, indeed, there should be some sudden and unexpected development, foreshadowing an early termination of hostilities, China's imports are likely to be reduced considerably in coming months. Moreover, if the stability of the Chinese dollar is to be maintained, it will clearly be necessary for the Government to take steps to bring about a more even balance between imports and exports, and so reduce the demand for foreign currency. As an indication of the way in which the hostilities are affecting internal trade and the marketing of agricultural produce, it may be noted that, during the first three months of the current year, it has been necessary to import rice and paddy from abroad to the value of \$15.3 millions, compared with \$3.2 millions in the same period of last year, and wheat flour to the value of \$10.2 millions, compared with \$1.3 millions in 1937.

Letter to the Editor

French and Italians in Tunis

TO THE EDITOR OF THE ECONOMIST

SIR,—In a recent number of *The Economist* I read the statement that in Tunisia the French colonists are outnumbered by the Italians. This is not, or rather is no longer, the truth.

Here are a few figures concerning the respective French and Italian populations of the Regency. They are taken from the "Statistique Générale de la Tunisie, Année 1936."

	1931	1936
French	91,427	108,068
Italian	91,178	94,239

The movements of Italians, immigration and departure, are given by the following figures:—

	1932	1933	1934	1935	1936
Arrived	10,876	3,150	2,135	1,382	1,393
Left	11,268	1,680	1,655	1,858	1,927

The increase of Italians between 1931 and 1936 mostly comes from immigration, but the movement appears to be reversed in the last two years.

All this suggests that Italian influence is important in Tunisia, but in no way sufficient to support the claim that Tunisia is, in fact, and should be in right, an Italian colony.

Yours truly,

JAQUES GANS.

Nancy,
France.

Books and Publications

The Trade Cycle in Sweden

THE Institute for Trade Cycle Research was set up by the Swedish Government in April, 1937, and given a very large field of inquiry. This Report,* the Institute's first publication, will be welcomed by all those interested in trade cycle investigations. The author of the Report and head of the Institute, Dr Erik Lundberg, is already well known for his book "Studies in the Theory of Economic Expansion."

This Report is intended to serve the dual purpose of analysing and describing the current economic position and providing a basis for future investigations. The result is an extremely useful 150 pages of information on developments in Sweden since 1929. Dr Lundberg examines in turn the main factors influencing the course of economic activity, and endeavours to assess the relative importance of each.

The section showing the effect of the financial and investment policy is interesting and, significantly, these measures led to no lack of confidence among the investing public. For example, the construction of private dwelling-houses, which accounts for some 75 per cent. of total building activity, was still in 1932 some 14 per cent. above the 1929 level. It is of interest to speculate whether the state of confidence in business circles could have been maintained without the assurance that all deficits were to be covered in more prosperous years.

Dr Lundberg points out that, in the long run, developments abroad, and particularly in Britain and the United States, must be of decisive importance to Sweden. For the United States, he draws a parallel with 1923, when the end of a period of rising prices was reached. On that occasion, the depression was a temporary one, largely owing to the great number of opportunities for expansion in investment activity that were available. The same factor may prove dominant in 1938.

While a general falling off in world trade must be expected to lead to a diminution in Swedish exports, no internal counter stimulant can now be expected, as was the case in 1935 and 1930, when falling exports were offset by a strong internal expansion, particularly in building activity, which increased by no less than 30 per cent. between 1929 and 1930. Nevertheless, Dr Lundberg does not consider that 1938 is likely to witness any serious stagnation in activity.

The Swedish economy is on the whole stable, and can offer considerable resistance to a depression abroad that is neither prolonged nor very serious. The consumption goods industries are favourably situated, owing to the stability of the country's purchasing power, which has been further secured by the wage increases during 1937. Other favourable factors are the liquid position of industry in general and the strong currency position.

This Report not only contains much useful information, but is also a model of presentation. It provides a clear and concise picture of the Swedish economy, forming a welcome contrast to the usual unwieldy and often disjointed collection of data provided by similar investigations. We have come to expect a high standard from Swedish economists and this Report does not disappoint us.

* "Konjunkturläget Hösten, 1937." First Report of the Swedish Institute for Trade Cycle Research. Stockholm, 1938.

Shorter Notice

"Why the League has Failed." By "Vigilantes." 96 pages. (London) Gollancz. 1s. 6d. net.

The triune personality who writes under the familiar *nom de guerre* noted above has produced this third volume in four years, bringing his (or perhaps one should say their) analysis of the deteriorating international situation up to date. As usual, the book is vigorously and provocatively written; its criticism of the British Government's foreign policy, familiar from the two earlier volumes, does not protrude until two-thirds of the book is passed. This analytical first

section is notable for its clarity and compactness (fifty-seven pages). It is not, however, quite true to say that the Conservative Government of 1925 killed the Geneva Protocol of the first Labour Government in 1924; for at least three British Dominions had a hand in that deplorable loss of a great opportunity.

"Vigilantes" see the only hope for democracies in a "World Peace Union," which should use its overwhelming powers to mobilise the sabotaged League of Nations against any and all acts of aggression by Fascist States. On the other hand, the Union would offer the latter countries guarantees that they would not be attacked, that their grievances would be collectively discussed, and the economic difficulties collectively solved. The authors want to see the Governments of the remaining democracies prove to the world, and to the Fascist States in particular, that democracy can ensure both peace and prosperity for its citizens. They thus believe that democracy can and should convince by example, rather than be forced, in a race to war, to copy the Fascists' organisation. Those who read this last and in many ways most trenchant of "Vigilantes'" writings can scarcely fail to be impressed by its argument, exposition and conclusion.

EYRE & SPOTTISWOODE

THE BUSINESS WORLD

Trade With Turkey

AT the end of last week three new agreements were signed between representatives of the British and Turkish Governments. The first provides for new credit facilities to Turkey. These take the form of the issue of Turkish Government Sterling Treasury bills, guaranteed by the British Export Credits Guarantee Department. The second agreement makes certain modifications in the 1936 Clearing Agreement. The third provides for a British Government Loan of £6,000,000 to Turkey, to finance Turkish purchases in the United Kingdom of material necessary for Turkey's defence.

The agreements are necessarily complicated, especially as they refer to the detailed clauses of the 1936 Clearing Agreement. The Credits Agreement, which excludes munitions of war and is confined to goods wholly or mainly manufactured in Great Britain, provides for the endorsement by the Export Credits Guarantee Department of 5½ per cent. Turkish Treasury bills up to a total of £10 millions. The bills are payable in accordance with a schedule agreed between the Department and the Turkish Government, the terms of which have not yet been divulged. The bills will be discounted in the London market, and any resulting profits will accrue to the Export Credits Guarantee Department. The proceeds of their sale, up to the face value of the bills, will be paid into a special account at the Ottoman Bank. The agreement relates only to contracts to be made not later than December 31, 1940. An extension during 1941 is to be allowed, however, up to a limit of £1.5 millions, provided that brief particulars are forwarded before the end of 1940. A programme of orders is to be transmitted by the Turkish authorities at an early date.

A separate section of this agreement relates to the sale of certain Turkish commodities in the British Empire and also in all foreign "free exchange" countries. A new company, called "Anglo-Turkish Commodities, Limited," is to be formed in London for this purpose. The proceeds of the sales of the commodities specified in the agreement are first to be used for defraying the expenses of the company and for meeting liabilities arising out of the British contract of December, 1936, for the erection of steelworks in Turkey. The balance, including that accruing from sales to "free exchange" countries, is to be ear-marked against the payment of the bills guaranteed by the Export Credits Guarantee Department.

The next agreement modifies the Clearing Agreement of September, 1936, which broadly ear-marked 70 per cent. of the sterling produce of Turkish exports for the liquidation of outstanding commercial debts; leaving the remaining 30 per cent. at the disposal of the Turkish control banks. The first operative clause recapitulates the terms of the Credit Agreement providing for the disposal of the receipts of Anglo-Turkish Commodities, Limited. It adds that these proceeds are also to be used for the payment of the annuities due to the Aidin Railway Company and the Istanbul Telephone Company, and for payments due under the new Armaments Credit Agreement. Of any remaining balance, some 60 per cent. will be applied for the discharge of commercial debts due to British creditors, 30 per cent. will be for the free disposal of the Turkish central bank, and 10 per cent. will be available for the purchase of

United Kingdom newspapers, periodicals and books, which are not suitable for purchase through the clearing or by private compensation. A separate clause ear-marks the proceeds of Turkish wheat shipments to England for the financing of Turkish purchases of British ships. Certain detailed adjustments are also made in the allocations provided in the 1936 agreement. In particular, British creditors may now (with certain reservations) use sums which are blocked in Turkey for the purchase and exportation of Turkish goods. The creditor may use the sterling proceeds of the re-sale of these goods for the purpose of liquidating his debt, any balance going to the liquidation of British commercial debts generally.

The Armaments Credit Agreement, which requires legislation in England, provides for a British loan of £6,000,000. The rate of interest up to the end of 1942 is "one above Bank rate, minimum three," and thereafter such a rate as the British Treasury certifies as for a loan of similar term guaranteed by the British Government, again with a minimum rate of 3 per cent. The interest is to accrue (compounded) up to 1952, and the total debt will then be repayable in twenty equal half-yearly instalments. The Turkish Government, however, has the right of anticipating repayment, in whole or in part.

The three agreements form a single whole. Obviously, it was necessary to adapt the machinery of the Anglo-Turkish clearing to permit of the liquidation of Turkey's new liabilities under the Credits and Armaments Agreements. The new arrangements will be welcomed on various grounds. On the economic and commercial side, without overlooking the needs of existing British creditors, they provide fresh opportunities for trade in both directions between England and Turkey. The nature of these opportunities is shown by a schedule to the Credits Agreements, in which there are envisaged Turkish purchases of British textiles, chemicals and engineering products. The granting of a loan to Turkey for the purchase of munitions has come as a greater surprise, in view of the pressure of Britain's own programme on her re-armament industries. Given the importance to those conditions, however, of a steady flow of orders, the Turkish loan would permit of the filling up of gaps which might arise as the British programme passed from its earlier to its later stages. But precedents suggest, also, that in the unfortunate contingency of our finding ourselves involved in war, we might find it convenient to be in a position to purchase from Turkey ships and other war material which might happen to be in process of completion in this country.

On the political side, the strengthening of our link with Turkey is welcome. Turkey, the outwork of South-Eastern Europe, occupies a strategic key position, and recent endeavours by Germany to extend and improve her position there afford a significant recognition of this fact. There is, indeed, ample scope for trade between Turkey and Germany, ourselves and the world at large. The inclusion in the agreements of facilities for commerce between Turkey and "free exchange" countries shows that Great Britain has no exclusive object in view. On this showing, the agreements deserve a favourable reception, and their results should contribute to the furtherance of industrial trade and the world's peace.

Steel under Central Control

ON March 1, 1932, the iron and steel industry was granted protection on condition that it would take steps to improve its efficiency by reorganisation. In July, 1935, the industry further entrenched itself in the home market by a five-year agreement with the Continental Steel Cartel, under which imports of a specified range of products from the member countries were severely limited. Imports from countries not adhering to the Cartel were made subject to a heavy duty designed to keep out supplies of any magnitude. Thus, at the beginning of the greatest steel boom ever witnessed in this country, which culminated in the autumn of 1937, the industry obtained a virtual monopoly in the home market for a promise to set its house in order. The boom, however, is now past its peak, and the industry is faced with the task of adjusting its policy to a downward trend of demand.

What are the broad results of the first phase of the experiment in central control which coincided with this period of unprecedented expansion in the home market? And how far can the lessons taught by recent experience be applied to the conduct of the industry during the second phase coinciding with a period of recession?

The industry's experience during the period of recovery may be briefly summarised. The first of the two charts overleaf shows the trend of general business activity and of apparent domestic iron and steel consumption, annually, from 1929 to 1937, and monthly from July, 1935, on the basis of *The Economist's* indices. The index of domestic iron and steel consumption is based on the average daily output of steel ingots and castings, and of forge and foundry pig iron, plus the crude steel equivalent of imports, less the crude steel equivalent of exports. We have, however, described it as "apparent" since lack of data makes it impossible to ascertain the rise or fall of stocks. While this omission does not invalidate the annual figures as a measure of the trend of consumption, the monthly index shows the quantity of new materials available for consumption rather than the quantity actually absorbed. Both monthly indices are adjusted for normal seasonal variations.

The course of the annual indices reveals (a) the fundamental problem of the industry, which consists of the wide cyclical fluctuations in the demand for capital goods; and (b) a strong long-period upward trend in the use of iron and steel. Between 1932 and 1937, when the annual index of general business activity rose by 33½ per cent., the figure for apparent iron and steel consumption advanced by 140 per cent. Moreover, while the level of general business activity last year was 13½ per cent. above that of 1929, apparent iron and steel consumption was no less than 46 per cent. higher. The following table, showing the crude steel equivalent of domestic production, imports and exports in 1929, 1936 and 1937, reveals how the enormous expansion in demand was satisfied:—

DOMESTIC OUTPUT, IMPORTS AND EXPORTS, OF IRON AND STEEL
(In thousands of tons)

	Domestic Output	Imports	Exports	Excess of Exports over Imports	Quantity available for Domestic Consumption
1929	11,391	3,458	5,359	1,901	9,490
1936	13,157	1,774	2,696	922	12,235
1937	14,684	2,266	3,141	875	13,809

Between 1929 and 1937 the quantity of iron and steel available for home consumption was increased by 46 per cent. During the same period the domestic output of crude

steel and forge and foundry pig iron (which is normally not used in the manufacture of steel) increased by only 29 per cent. In order to meet the expansion in demand it was necessary, therefore, to retain a much larger proportion of domestic output than previously; the crude steel equivalent of the excess of exports over imports thus fell from 1,901,000 tons in 1929 to 875,000 tons in 1937.

The fact that the industry has not only been unable to meet domestic requirements in full, but has also been unable to take full advantage of the rising export demand in 1936-37, has led to severe criticism of the policy of those in control. There can be little doubt that those entrusted with the guidance of the industry have, in fact, underestimated the extent of the expansion in demand in 1936-37, both at home and abroad. But three or four years ago, it must be conceded, few foresaw the steep rise in demand at home, due largely to the intensification of re-armament, and the sudden, but short-lived, revival of international trade. Moreover, in view of past experience under competitive conditions, a central authority was naturally anxious to avoid over-expansion of capacity. Nor can the industry be held entirely responsible for the hectic scramble for materials which took place last year; for, as the diagram shows, domestic supplies increased by leaps and bounds between April and December last year.

Further, as the accumulation of stocks has since shown, actual consumption did not expand as fast as supplies or as consumers' demand suggested at the time. The fear of

"I parted with £1,600, including all my securities."

Widows with a little capital and no experience in financial matters are sometimes easy prey. The tale is always the same. The tempting bait of high interest yields is swallowed... glowing promises are followed by bitter disillusionment and loss of capital. Tragedy indeed. For the protection of your wife, should you leave her a widow, choose the 'Safeguard' plan. None better. It provides a guaranteed income of £3, £6 or £9 per week according to her needs. It will free her from investment worries and shield her from traps laid for the unwary.

The 'SAFEGUARD' PLAN

provides a non-fluctuating income of £3, £6 or £9 per week for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged that the cash sums are payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

General Manager: VERNON E. BOYS

a shortage prompted many consumers not only to cover their requirements further ahead than usual, but to order more materials than they wanted in the expectation of receiving only a proportion of the quantity demanded. This scramble for materials in the spring of 1937 was not confined to iron and steel, but was a world-wide phenomenon affecting the majority of raw material markets. On the other hand, the authorities are now shown to have been mistaken in delaying the relaxation of the import duties until July of last year; for, if they had not done so and if it had been known that ample supplies would have been available, current demand would not have outrun actual

The industry's price policy is illustrated in the second diagram, which compares the course of the Board of Trade's index of iron and steel prices with its index of all industrial products. As the Board of Trade's new index only goes back to 1930, the figures for 1929 have been calculated from the previous series. As in the case of business activity and apparent steel consumption, the price indices are given (on the same basis) annually from 1929 to 1937, and monthly from July, 1935. After declining sharply between 1929 and 1932, the annual index of all industrial products recovered to the pre-depression level in 1937. The fall in the figure for iron and steel during

INDICES OF BUSINESS ACTIVITY AND IRON AND STEEL CONSUMPTION

INDICES OF PRICES FOR IRON AND STEEL AND OTHER INDUSTRIAL PRODUCTS

consumption to such an extent as it did and the consequent accumulation of stocks could have been avoided. Moreover, owing to the natural anxiety to prevent an over-expansion of plant, extension plans were delayed too long, with the result that the crude steel-producing capacity of the industry is being extended from 13½ million tons to over 14 million tons this year, when consumption is likely to decline. Had this capacity been available in the spring of 1937, the course of events would have been different. But unfortunately perfect foresight is impossible in a dynamic world.

The price policy of the industry affords a more cogent ground of criticism. Last November, when demand already showed signs of flagging, steel prices were fixed at the current level until the end of 1938, on the ground that the assurance of a stable price level for a long period enabled industrialists to plan ahead. But in the event this action has tended to accentuate the depression by postponing demand until 1939.

the depression was much less marked, but its rise since 1932 exceeded that of the general index. In contrast to the general index, the 1937 figure for iron and steel shows an increase of about 30 per cent. over that for 1929. This increase has been justified on the grounds that prices in 1929 did not provide the industry with a sufficient return on its capital, that conversion and material costs have risen substantially since 1932, and that a comparatively high return in prosperous years must compensate for the low returns in depression. These arguments undoubtedly have weight, though they must be critically considered in the light of the industry's promise to improve its efficiency in return for protection in the home market.

There can be little doubt that those entrusted with the control of price policy have prevented prices in 1936-37 from being raised as much as they would have been advanced under free competitive conditions. But the policy of moderation during the scramble of 1936-37 cannot justify the maintenance of prices during a period of declining trade at a level which checks consumption at a time when it ought to be fostered in every possible way. A reduction now would naturally reduce the profits, since contracts for raw materials have been made at high prices; but the industry has been doing well, and it is more important to bring about recovery than that profit margins should be maintained at their maximum for a few months longer.

But if the policy of the iron and steel industry during the recovery phase of the trade cycle is not above criticism, there have been some compensating advantages. Final judgment of the merits of the experiment in central control must be delayed at least until the new organisation has been tested in a period of depression and until it is possible to see how the British steel industry fares in the long run in the face of world competition.

South African Gold Mines

IT would be highly regrettable if the publicity lately given to fluctuations in the shares of a company like Western Holdings—which holds options over an area situated at a considerable distance from the Rand, where the existence of gold in payable quantity has yet to be proved—were to divert public attention from the merits of the case for investment in the shares of proved South African gold producers. Whenever the political or the economic future has seemed uncertain, men have always turned instinctively to gold. And when, as at present, the world is following a policy which, sooner or later, may have an inflationary aftermath, the appeal of the yellow metal as a "hedge" is augmented. Thus, paradoxically, investment in gold mining, which last century was regarded as one of the most hazardous of speculative adventures, is held up to-day as a way of escape from the financial dangers of an unquiet epoch.

For the British investor, the argument for including a reasonable—not an excessive—proportion of sound gold-mining shares in a mixed portfolio gains much from the fact that the great majority of the shares quoted on the London Stock Exchange which interest the more solid type of capitalist, large or small, are those of enterprises situated in the Witwatersrand area of the Union of South Africa. For, in the first place, the accounts of these companies are kept in pounds. It is conceivable that the price of South African pounds might depreciate in terms of sterling (or appreciate, as it did in 1931-32). But it is much more likely that the investor will be spared both exchange difficulties and political *contretemps*, which are ever-present dangers in many foreign countries. And, in the second place, technical conditions invest South African gold-mining shares with an element of reliability unparalleled by those of mines in other areas. There is no gold-bearing formation elsewhere in the world comparable in the matter of size, regularity and predictability with the Rand. In that area, geological conditions, especially in certain sections, are such that when development has reached a given stage, the life and yield of many mines, for any given price of gold, are ascertainable with a greater degree of precision than are the future financial results of the majority of commercial undertakings.

Such, in brief, are the arguments for Kaffir investments. Against them there are at least two adverse possibilities of which account should be taken, even by investors to whom high politics and world economic tendencies are inscrutable mysteries. Past experience suggests that the first of these is the possibility of increased South African taxation. Mr P. M. Anderson recently pointed out that while the industry's working profit for 1937, at £32 millions, had increased to more than double the 1932 figure, some £14 millions, representing treble the amount in 1932, went to the Government by way of taxation and share of profits from leased mines. There may be an appreciable risk of still higher scales of taxation, in the event of further currency depreciation. A second possibility is a future rise in operating costs, both for labour and materials, which in recent years have not shown a rise at all proportionate to the extent of the currency depreciation which has taken place. In the long run, this discrepancy is likely to be reduced, but there is a partial offset by way of steadily increasing mining efficiency, resulting from the application of modern methods and equipment. There are other, and more remote contingencies, which, perhaps, deserve mention. After the results of the last election, the "political risk" of the advent to power in South Africa of a Government hostile to the mining interests and/or to the British connection has receded into the background. But in the event of another world war, abnormal risks, of a different character, might arise. For example, producers might be compelled to sell their gold to the authorities at a price below its true currency value; or, under a system of exchange

control, the overseas currency proceeds might have to be converted at an arbitrary rate.

To discount such possibilities as these, in advance, is well-nigh impossible; but it is advisable that the investor should realise clearly the risks he is running and the assumptions he is making before buying a gold share as a safe refuge for his money. On the whole, however, he may be reasonably safe in assuming that the proprietors of the industry will always be allowed to retain a sufficient proportion of the gold won to maintain the volume of production and the incentive to work. Putting the more intangible risks on one side, there are at least four types of South African gold-mining shares which merit consideration from the investor, rather than the speculator or the out-and-out gambler.

The speculative element is at its lowest in the case of fully developed mines situated in the best part of the Reef. The penalties of full development and the virtual elimination of technical risk, however, are a short "life" and a declining annual yield. The principal examples of this type of Kaffir are given in Table I, below:—

TABLE I

Share	Price	Estimated Life (Years)	Present Annual Rate of Dividend
Geduld £1*	87½	12	15½
Government Areas 5/-	114	12	4/6
New Modderfontein 10/-	118	7	5/9
Van Ryn Deep £1	17½	12	5/-
Witwatersrand Gold (Knights) £1	115½	10	5/-
Nourse Mines	25½	15	4/-

* Geduld is exceptionally placed by virtue of its interest in East Geduld (see the third table in this article), the yield from which will reduce the prospective decline in dividends from the company's own mine.

The current price of these shares largely represents an approximation based on the estimated remaining economically recoverable gold in the mine, *plus* realisable assets on winding up, *less* working costs, taxation, and interest during the remaining expectation of life. Investment in shares like these is somewhat specialised, but it frequently proves highly remunerative by the time final liquidation takes place, owing partly to the general tendency to take a conservative view in estimating the gold yield and partly to absence of speculative interest in this type of share. In recent years, however, the search for high current income, especially by certain Unit Trusts, has occasionally, but not generally, resulted in rather high prices for mines which have passed their prime.

To calculate income yields on this type of share on the basis of current dividend distributions is apt to give a misleading impression. The investor should retain out of the dividend distributions a sufficient sum to represent a moderate return, e.g. 5 per cent., on the initial cost of his holding. The balance should be set aside to accumulate at compound interest or should be reinvested in the shares themselves. Ultimately, the investor who follows this policy should find that the total accumulated in his "sinking fund," together with the final liquidation proceeds, will exceed the cost price of his shares by a comfortable margin.

There is a strong case for putting these shares in a class by themselves, according to the investment purpose in view. The investor who buys them is taking a stake in a known store of unwon gold on a much more favourable basis than if he were buying an actual ingot of the metal, which would yield him no income and involve him in storage charges. Moreover, if circumstances ever brought about a further depreciation of the South African pound, considerable quantities of existing low-grade ore would be brought within the range of economic working. Both the amount and the paper value per unit of the recoverable gold would, consequently, be increased. If the prospective life of a mine were only a few years at the time of purchase, the

POLITICAL FINANCE

A tract for serious investors

By L. E. HOPKINS

133 pages — 7½ x 5 — 5/-

The *Annalist* (May 13th) says: "Here is an attack on the managed money advocates done in a way it should not be done. The Author takes almost a personal view point. His arguments are not presented in a scientific and objective manner."

Why does the Editor of New York's premier financial weekly trouble to print this !!! Only two London papers have noticed the book. Read it and judge for yourself. We agree the point of view is personal and individualist and not academic. The sooner we all take a personal interest and use some plain speaking about managed money, the quicker the Black Areas will return to prosperity. The Author of this book fails to discover any scientific basis for managed money; that is the meaning of the title "POLITICAL FINANCE."

CORTIS & CO., 11d Regent Street, London, S.W.1

proportionate improvement in the effective return to the holder, under such conditions, would be all the greater.

At least one disadvantage, however, attaches to the shares of a declining mine. The investor cannot reclaim tax (except by way of Dominion relief) on any part of his annual dividends, although a substantial part of them represents the return of capital. For investors under the surtax limit, this disadvantage is reduced by the operation of Dominion income tax relief, which reduces the incidence of British income tax by a proportion which approaches (but may not by statute exceed) one-half of the standard rate. The surtax-paying investor in the higher income ranges, however, is in a much less favourable position, and may even find that, at the end of a mine's working life, his investment has involved him in a net loss. For this class of investor a more attractive type of holding is provided by the shares of young but proved mines, which have still to reach their maximum rate of operation. This type of Kaffir investment is calculated to appeal, also, to the private individual who finds difficulty in performing the routine of reinvesting part of his dividend income, which is essential to the technique of investing in declining mines. In Table II, therefore, we have given a specimen list of three shares which are likely to continue gradually to increase their dividends in coming years:—

TABLE II

Share	Price	Last half-yearly Dividend multiplied by two	Yield (%)	Est. Life (Years)	Remarks
Luipaards Vlei 2/-	16/6	1/-	6	35	An expansion programme in progress which should eventually make this mine one of the largest producers on the West Rand.
Simmer & Jack 2/6	15/10½	9d.	4.7	30	A very large area in depth is being opened up by the new South Vertical Shaft and the mine should gradually expand.
Durban Deep 10/-	21½/6	2/6	4.3	40	The property now has a great area in depth, which is being opened up by deep shafts.

For investors anxious to secure the maximum current yield which is compatible with the maintenance of capital the shares in Table III may be deemed more suitable. All the mines mentioned in the table are in the early middle stages of their effective working life, and their dominant characteristics are well established. Finally, for investors to whom current income is of secondary consequence in relation to eventual prospects, the proved non-producers, given in our final table, may have a special appeal.

Finance and Banking

Austrian Debt Deadlock.—Before the *Anschluss*, Austria was able to meet the service of her external debts, as well as to give almost complete freedom to dealings in foreign exchange. Since the *Anschluss*, however, the gold and *devisen* reserves of the Austrian National Bank have been taken over by the Reichsbank, while Austria herself has been relegated to the position of a German *land* or province, with her debts no longer ranking as State debts. The service of her external debts is also blocked, payments now being made into the *Konversionskasse*. The German Government, however, has power to permit the transfer of money due on Germany's external debts, and uses that power to fulfil the agreement with Great Britain over the service of the Dawes and Young loans. Presumably with the object of placing the Austrian Government's debts on the same footing, representatives of the British Treasury have recently been in Berlin to discuss the matter with the German authorities. The allied question of the revision of the Anglo-German Payments Agreement has also been under discussion, and here both sides seem to have felt

Share	Price	Last half-yearly Dividend multiplied by two	Yield (%)	Est. Life (Years)	Remarks
Crown Mines 10/- Robinson Deep "B" 7/6.	15½/6 31½/2	19/- 5/-	6.0 7.4	40 25	The extinction of the "A" shares (which absorbed £62,500 in 1937) in 1941 will benefit the "B" shareholders.
East Geduld £1...	11	10/-	4.6	40	One of the outstanding properties of the East Rand, with a long life and a substantial interest in the adjoining Grootvlei.
Sub Nigel 10/- ...	10½/6	15/-	7.0	40	The richest mine in South Africa. Continues to show remarkable values in the lowest levels, which indicates the values to be expected in the underlying Vlaakfontein, in which Sub Nigel is substantially interested.
Brakpan 5/-	3	3/-	5.0	40	A large property with a substantial interest in South African Lands mentioned in the next table.
Daggafontein 5/-	13½/2	2/4½	6.0	40	Holds a substantial interest in the adjoining East Daggafontein, which is in the development stage.
East Rand Proprietary 10/- West Rand Consolidated 10/-	3 12½/2	3/6 3/-	5.8 7.8	40 30	...

* Not allowing for amortisation.

TABLE IV

Share	Price	Remarks
Van Dyk Consolidated 10/-	12½/6	Strong ore reserve position established. Crushing has just started on basis of 60,000 tons per month, to be increased in the near future.
South African Lands and Exploration 3/6.	32½/2	Strong ore reserve position. Crushing should start during the present year.
Grootvlei £1.....	4½/6	Strong ore reserve position. Crushing should start during the present year.
Venterspost 10/-	11½/6	Excellent development indicates a large mine. Erection of reduction plant may shortly be announced.

Our lists are representative rather than exhaustive, and other sound and promising shares may well deserve the attention of an investor who desires a well-balanced holding in South Africa's gold mining industry. Our review, however, must necessarily end with a warning, which cannot be too often reiterated. Every investor should make the most searching technical enquiries before parting with his resources on a casual recommendation. The reliability of the proved mines all too often provides a platform whence the purchase of dubious, speculative or over-priced shares may be enthusiastically urged in times of Stock Exchange activity.

that Germany should increase her purchases of purely British goods. Arguments in favour of such an increase are in fact strengthened by the *Anschluss*, for previously Austria's imports from Great Britain equalled her exports. The Austrian debts question, however, is at present proving a difficult obstacle. Thus for the time being the negotiations have ended in deadlock; for while Germany regards Austria as a *land*, the British view is that Austria's debts should be on the same footing as the Dawes and Young loans. It may be a hopeful sign that transfers have continued up to and including the payments due on May 31st, while it is also announced that the negotiations are to be resumed after Whitsun. Any further move must naturally be conditioned by general developments affecting the relations between Great Britain and Germany. While every effort will doubtless be made to reopen the negotiations on a friendly basis, there is a strong feeling in London against sacrificing the rights either of the creditors or of those Governments which, in the case of one loan, have given guarantees.

The War Loan Dividend.—In *The Economist* of May 21st the suggestion was made that the payment of the June 1st War Loan dividend of about £35 millions would provide a useful opportunity for the absorption of the Exchange Equalisation Account's surplus cash; for the payment of the dividend could be financed by issuing "tap" Treasury bills to the Account in exchange for its cash. This week's Bank return, however, comes as somewhat of a surprise. Admittedly, it is dated June 1st, by which time only a proportion of the War Loan dividend warrants would have been presented, but only the major movements it shows are increases of £14 millions in Government securities and £11.6 millions in bankers' deposits. Public deposits are reduced only from £26.5 millions to £24.9 millions. *Prima facie*, it looks as if the Government had borrowed from the Bank in order to pay the War Loan dividend at a time when a Government fund, namely, the Exchange Account, was over-supplied with cash. This explanation seems so unlikely that due regard must be paid to another possibility, namely, that the Bank itself has been acquiring securities in a week which happened to coincide with the War Loan dividend payment. On the other hand, this week the total tender issue of Treasury bills has only risen by £5,000,000, or by an amount quite inadequate to cover the War Loan dividend. Conceivably further light will be shed by the floating debt return for June 4th, by which time the dividend payment should be complete; but at the moment it is a little difficult to see where the War Loan dividend has come from, or what the authorities are doing.

Recovery in the Belgae.—With the relaxation of the international tension, Continental currencies have become firmer. This improvement is particularly noticeable in the case of the belga. Early this week the spot rate between Brussels and New York was comfortably inside the export gold point, while the discount on forward belgas had also shrunk to reasonable proportions. In consequence, the request to the Belgian banks to refrain from non-commercial purchases of forward belgas, and the restriction on credits to foreign borrowers have been withdrawn. The Belgian Bank rate, which early in May was raised from 2 to 4 per cent., has now been reduced to 3 per cent. The new Government's victory in the Chamber has also created a better atmosphere, though according to recent reports from Brussels the revival of confidence has not improved to the point where it would be practicable to issue a long-term internal Government loan. Meanwhile, the fact that French prices have risen, since the creation of the Daladier franc, mitigates the effect of the Daladier depreciation upon Belgium's competitive powers. It now seems that no early change in Belgian monetary policy is imminent.

The Falling Rupee.—The rupee, continuing its downward tendency this week, has touched 17½d., which is within ½d. of the lower sterling point or "reverse council" rate of 17¼d. At this point the rate will need to be rigidly defended if the Government of India complies with its statutory obligations. The further decline of the rupee may be regarded to some extent as a corollary of the slump in commodity prices. By the end of last April the Indian export surplus stood at 60 crores, against 90 crores for the corresponding period of 1937. This reduction of the surplus to a point at which it becomes insufficient to provide cover for the country's invisible imports has been the joint result of reduced exports and of the maintenance of imports at the level dictated by the previous high rate of Indian export trade. The lag in the reaction of imports to exports should now be coming to an end. Unfortunately, however, the vicious circle of falling prices is revolving faster now than for some months past. This will tend to extend the period of the lag, and thus to cause further encroachments on the sterling reserves of the Reserve Bank. Another factor causing additional pressure on the Indian balance of payments is the progressive falling off in exports of gold. These have been steadily falling for the past year and the reduction is likely to continue. Reports from India indicate that available supplies of gold are dwindling and increasing

efforts are needed to coax the metal from up-country hoards. In addition, a certain speculative activity in rupees appears to be gathering headway. Altogether, it seems probable that the Reserve Bank of India will before long be called upon to enter the market in support of the rupee, through the sale of reverse council bills.

Chinese Customs Revision.—It is not only on open towns that Japanese bombs have been falling in China this week. One bombshell has exploded with painful detonation in the Chinese Maritime Customs administration. At the instigation of the Japanese authorities, the puppet governments installed in Nanking and Peking have decreed a new tariff schedule, which has become immediately operative in the areas under their control. The new tariff rates are from one-third to one-half of the old rates on exports, and they represent a reduction of from 35 per cent. upwards on import rates. Certain export goods, such as cotton, linseed and mineral ores have been placed on the free list. The reasons for these revisions are not difficult to infer. The greatest reductions in export rates have been made in those classes of goods which Japan needs most in pursuing her war with China. Import rates have been most greatly reduced in the case of such items as cotton piece-goods, steel plates and raw fish—all *par excellence* Japanese produce for the Chinese market. This violent revision of the Customs tariff is calculated to upset the equilibrium between the Customs revenue, on the one hand, and costs of administration plus charges on the net revenue on the other. The Customs authorities in Shanghai have decided for the time being to ignore the revised tariff, but it has already been intimated from Japanese sources that any officials failing to apply the new tariff will immediately be replaced by more amenable personnel. The inevitable clash between the Japanese authorities and the Maritime Customs Administration has been brought within the range of immediate probabilities by these developments. One of the effects of the revision in the Customs tariff will be to reduce further the supplies of foreign exchange available in Shanghai and other Chinese markets. This fact has been partly responsible for the continued weakness of the Chinese dollar which has this week fallen to 9¼d.-10¼d.—both rates being nominal.

Bank of Spain.—We published in our last issue the first return of the Bank of Spain issued since the outbreak of the civil war. This new return is dated April 30, 1938. As might be expected, it shows that the Government has been unable to wage war without resort to inflationary financial methods. Since August 1, 1936, Government borrowing from the Bank of Spain has increased from 120 to 9,160 million pesetas. The counterpart to this heavy borrowing is found in an expansion in the note circulation from 5,573 to 9,212 million pesetas, and in private deposits at the central

bank from 1,170 to 6,171 million pesetas. The bank's gold losses have been relatively moderate, its gold holdings having fallen from 2,202 to 1,606 million pesetas, and its silver reserves from 650 to 549 million pesetas. There has been comparatively little change in the bank's

MONEY MARKET NOTES

Foreign Exchanges

EXCEPT for a short period of nervousness on Wednesday, due to a further incident in Czechoslovakia, dollars have been offered this week against most Continental currencies. The general feeling on the Continent is that sooner or later the dollar will once more be devalued. Early in the week there were strong runfours to this effect, some of them going so far as to forecast a new gold price of 160s. per ounce in London and \$41 per ounce in New York. Needless to say, this was baseless rumour, but it serves to explain the weaker tendency of the dollar. The spot rate on Thursday was still \$4.94½, but three months' dollars weakened to just under ½ cent premium, which is the narrowest margin for quite a long time. Belgas were bid during most of the week, and the spot rate on New York is now comfortably inside the gold export point. Forward belgas were strongly bid against sterling down to 30 and 50 centimes discount for one and three months, respectively. Guilders and Swiss francs have been very steady. French francs depreciated fractionally to Frs. 178½ on Wednesday's incident, but have since come back to Frs. 178½. Three months' francs are at Frs. 1½ discount. Canadian dollars have recently weakened against American dollars. Sentiment in the exchange markets has come to regard Canada as being, from the exchange point of view, part of the British Empire, rather than as linked with the United States.

The Money Market

At the tender of May 24th, the market was able to reduce its tender price for Treasury bills from £99 17s. 4d. to £99 17s. 3d. per cent., and even so secured a 57 per cent. allotment. The effect of this was to raise the average tender rate from 10s. 1.11d. to 10s. 9.37d. per cent. This hardening of rates is purely seasonal, for during most of June the banks refrain from buying bills, as they are preparing for their

half-year statements of accounts. For the same reason discount rates were rather stiffer this week. The clearing banks are still buying bills, as they have the War Loan dividend money to dispose of, but they may stop buying at the end of next week. For this reason, the market was hoping on Thursday that the Treasury bill tender rate would again harden.

Others	12	12	12-5*
Discount Rates:			
Treasury bills	9½	12	12
Three months' bank bills	5½	17½-9½	9½

* Viz. 12 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. 54 per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

This week the Treasury bill tender issue has risen to £575 millions, compared with £512 millions at the end of the financial year. Last week the tender issue was £570 millions, while the tap issue was £281 millions, compared with £289 millions on March 19th, just before the end of the financial year.

The Bank Return

CURRENCY requirements by the public over the end of the month explain the increase of £4.7 millions in the note circulation. The Reserve is reduced by the same amount. As pointed out in a Financial Note, on page 545, the week's increases in bankers' deposits and Government securities are rather mysterious. The War Loan divi-

INSURANCE NOTE

Equitable Life Assurance.—New business obtained in 1937 constituted a record for the society, which is the oldest existing life assurance office in the world. Life assurance contracts increased from 1,285 policies assuring £1,708,000, to 3,378 policies for £1,935,000. The decrease in the average new sum assured from the usual level of over £1,000 to only a little more than £600 was due entirely to the society having reinsured the provident fund of one of the banks, where there were nearly 2,000 policies for an average sum assured of only £100. Deferred annuities chiefly in connection with staff

pension schemes, were issued for £146,000 per annum, against £204,000 in 1936 and £87,000 in 1935. The net rate of interest earned on the funds of the society (including reversions and investments in the reversionary and equitable reversionary interest societies and any interest received therefrom) was £4 4s. 5d. per cent. against £4 4s. 4d. per cent. in the previous year. The maintenance of the interest rate is partly due to the practice of not writing up securities and partly to the increased dividends from the society's holding in reversionary interest societies. Out of total assets amounting to £11,535,000,

discounts or advances. The Paris delegate of the Bank of Spain has stated that everything is being done to ensure prompt payment of foreign debts. To ensure foreign interests against war losses a special commission has been appointed to examine claims.

dend payment explains the former increase, but with public deposits at a high level, it is difficult to believe that the Government has borrowed from the Bank. The net result of the increase in Government securities is that the total resources of the banking department have risen to £180.9 millions, or to within a million of their level prior to the French repatriations in early May. Thus the narrowing of the credit base, noticeable during the intervening weeks, has for the moment disappeared. It will be of interest to see from next week's Bank return whether this week's enlargement of the credit base persists.

The Bullion Market

DEMAND for gold this week has come mostly from the Continent. The premium has been too high to permit of direct arbitrage buying against the dollar, but some operators may have bought gold in the hope that a subsequent movement of the exchange would make re-sales in the United States profitable. The supply has come chiefly from official sources, but a little gold from other quarters was offered on Tuesday.

* Above or below American shipping price. The New York price of silver remained at 43 cents per ounce .999 fine during the week.

The silver market has been very quiet. The small increase in the London price is due to the firmer tendency of the dollar and to some American trade buying. The sterling price is now exactly at a parity with the dollar price, and so is regarded by the London market as being top-heavy.

the total investments in stocks, shares and debentures of the Equitable's two subsidiary reversionary interest societies account for over £1½ millions and yield about 6½ per cent. As the society has never employed agents nor paid commission for the introduction of business the ratio of expenses to premium income is extremely low at 6.8 per cent. Mortgages increased from £2,932,000 to £3,298,000, and debentures from £2,404,000 to £2,622,000. Stock exchange securities stand in the balance sheet at or under middle market prices quoted on December 31, 1937.

Investment

Course of Share Values.—The past month has brought but cold comfort to investors, apart from the negative reflection that things might well have been worse. The threatened Czechoslovakian crisis of May 21st undoubtedly shook the market's nerve badly. Subsequently, the Central European temperature has fallen; but most of the news which has made up the investor's daily fare has been concerned, either with domestic preparation against the contingency of war, or with the growing evidence of recession in industry. After unsettlement during the Sudeten scare, gilt-edged stocks have held their ground fairly well. And, at the other end of the "House," the gold-mining share market has even staged a "flutter" of the type normally associated with the crest of a speculative boom. But industrial shares have been frankly depressed. As the accompanying chart shows, the seepage of values had carried *The Financial News* index, at the end of the month, nearly back to the low point of last March. In New York, conditions have been similarly cheerless. In the first part of the month, indeed, prices showed an incipient tendency to rally, but they failed to break through the April high point, which itself represented the recovery of less than half the ground lost since the beginning of 1938 alone. And their subsequent course, like that of London prices, was downward, in a "thin" market which seemed to have lost all speculative interest.

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS (July 1, 1935=100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

The war spectre is more remote, by the breadth of the Atlantic, from the land of the American than of the British investor, but its effect is far from negligible. And in America, industrial depression is not only complicated by the fact that Government and business are still pulling in different ways, but has itself reached a definitely more advanced stage than in Great Britain. As we show in a subsequent Note, American company dividends have fallen more rapidly than share values since the beginning of this year. In Great Britain, however, while a minority of companies, in depressed industries like textiles, have disclosed reduced earnings in their latest reports, the trend of industrial profits as a whole is tending to become stationary at a high level rather than to decline. It may be that the American "hunch" of recovery in the autumn will be more correct than earlier premonitions, but the share market as yet shows no evidence of a lively faith in such

a development. The British investor has evinced even less inclination for crystal-gazing—perhaps wisely; for, putting politics on one side, it now seems inevitable that industry will go worse before going better. It would perhaps be reading too much into the comparison of share values, commodity prices, unemployment, etc., in 1928-30 and 1936-38 (which appears on page 573 of this issue) to suggest that the history of the last depression is destined to repeat itself on a similarly drastic scale in coming months. So far, however, the correspondence between the two periods has been close, and if equity share values fall only half as much in the second part of 1938 as they did in the corresponding months of 1930, there will be little incentive for investors to re-enter the industrial market in force for some time yet.

Foreign Bond Movements.—The modest recovery of foreign bond prices in April was largely erased last month. The market suffered not only from the adverse political factors common to all sections of the Stock Exchange, but from troubles all its own. That Germany's intentions towards Austrian bond holders were unsatisfactory was evident even before the adjournment of the British negotiations in Berlin (which form the subject of a Note on page 544). The further suggestion that Germany might default on the Dawes and Young Bonds was viewed largely as a bargaining "kite." The general trend of German political and financial policy, however, was sufficiently clear to affect not only the prices of the bonds immediately concerned, but of those of other Eastern European countries, like Hungary. From the Far East, news was uniformly unfavourable, but bond prices showed more resiliency than might have been expected. Although the Chinese 5 per cent. Shanghai-Nanking Railway Loan of 1903 fell sharply on the announcement that interest due on May 18th would not be paid, other Chinese bonds remained relatively firm. Further unwelcome news was conveyed by the announcement that the puppet Chinese Governments in the Japanese-occupied area had ordered a reduction of the customs tariff. Movements in various sections of the foreign bond market are summarised in the following table, compiled by Municipal and General Securities Company:—

AVERAGE JANUARY-JUNE, 1934 = 100.									
End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	Under-forecasted Bonds	De-forecasted Bonds
				States	Provinces	Total

May	85.7	74.9	98.4	63.0	47.2	58.8	70.7	75.3	66.6

N.B.—Figures in brackets denote number of bonds included.

There is little progress to record, even in areas where default can be explained neither by war nor *weltpolitik*. The "readjustment" of Brazil's economy, promised by President Vargas, has not yet, apparently, reached a point at which a resumption of debt payments is deemed feasible. Details of new agreements between Great Britain and Turkey, whose implications for bondholders should be broadly favourable, are given in a leading article on page 540 of this issue.

The Work of the Stock Exchange.—Every year, and in every way, the Report of the Committee for General Purposes of the London Stock Exchange grows better and better. The Report for the year ended March 24, 1938, begins with a well deserved tribute to the work of the Chairman and Deputy Chairman, and goes on to give an extract from a speech by the Chairman, Mr R. B. Pearson, made at a function which technically fell outside the period covered by the Report. This was well worth putting on record for its informative picture of the way business is done on the Stock Exchange, and for its moral that it is buyers and sellers, and not jobbers, who determine the course of prices. Two other innovations, in the present document, deserve respectful commendation. The first is the presentation of a vivid pen picture of the work and duties of the members of the Committee, who, individually and collectively, render annually, on an entirely honorary basis, services which, if they were valued on a professional footing, would be worth many thousands of pounds. A second innovation is the decision to supplement the familiar calculation of the nominal value of all the securities in the Official List with a calculation of their aggregate market value.

SECURITIES QUOTED IN OFFICIAL LIST

The following table shows the total nominal value of securities included in the "Daily List of Officially Quoted Securities" as at March 24, 1938, and in addition, their market values calculated at the quoted selling price. These figures have been adjusted to exclude securities removed from the list owing to absence of recorded bargains.

Shares of no par value	70,670,637		70,100,169	

It will be seen that during the past year, while the total nominal amount of securities outstanding increased by £232½ millions, the market value decreased by £2,170 millions. If, however, the figures for "British Funds, etc." (whose market value has remained relatively steady) be excluded, the net result would seem to be that every

£100 of capital quoted on the London Stock Exchange had, on the average, a market value of £116 on March 24, 1937, and of £94 on March 24, 1938. In other words, the depreciation in market value between the two dates was 19 per cent. In other ways, the Report contains a good deal of evidence of a setback in the activity and prosperity of the Stock Exchange during the past year. For example, the number of bargains recorded in the Official List (years to March 24th in every case) fell by 22 per cent., from 1,634,714 in 1937 to 1,274,807 in 1938, and in the Supplementary List by 34½ per cent., from 1,008,216 in 1937 to 662,647 in 1938. The number of items cleared by the Settlement Department declined by 29½ per cent. from 3,977,420 to 2,817,703.

Declining Yields in America.—No investor who has followed the trend of yields on industrial shares in this country and the United States can fail to be struck by the contrast between their respective trends in recent weeks. In Great Britain dividends and earnings have on the whole been well maintained. Consequently, falling prices have been accompanied by rising yields. Thus the average of the industrial shares in the Actuaries Index has recently risen above 5½ per cent. On Wall Street, however, company dividends have been falling, while prices, for all their week-to-week fluctuations, have suffered no net loss of ground recently. Since the beginning of this year, therefore, average yields have been falling. We reproduce below the end-of-month yields over the past two years, as calculated weekly by the Standard Statistics Company:—

AVERAGE YIELD ON 50 AMERICAN INDUSTRIAL COMMON STOCKS.

As at	Rate	As at	Rate	As at	Rate	As at	Rate
1936:—		1936:—		1937:—		1938:—	
May 27	3'44	Dec. 30	4'46	June 30	4'38	Jan. 26	8'33

Oct. 28	3'36	Apr. 28	3'82	Nov. 24	8'60	June 1	5'61
Nov. 25	4'05	May 26	4'07	Dec. 29	8'71		

The reasons for these abrupt movements are significant. In the first place, American dividends were deliberately swollen to avoid the operation of the Undistributed Profits Tax. In the second place, last autumn's decline in security prices preceded the actual fall in dividend distributions. In other words, Wall Street attained last November the paradoxical phase in which a gloomy outlook and weakening prices were accompanied by a very high rate of return based on past dividends. The Stock Market anticipated a decline in dividends by a few months, but subsequent events have shown that it did not over-discount the reduction. In the latter part of February, the conjunction of a recovery in prices and a number of dividend cuts brought the

Company	Interim div. p.s.		Payable 1938

Westinghouse Electric	\$1	50 c.	May 27

average yield on 50 industrial common stocks down by 2½ per cent. in a single week. Nor does more recent news encourage hopes of any recovery in yields save by a further decline in prices. Every day brings news of falling earnings and reduced dividends. Our second table shows some of the cuts that have been announced in recent weeks by the more important companies, though a policy of caution may be playing a part in recent announcements. But the reductions are sufficiently widespread to show that depression has affected earning power more speedily in America than in Great Britain.

Capital Issues in May.—The total of capital issues increased sharply in May, the broadening of activity being due mainly to the appearance of a relatively small number of large and important offers. The following table gives our usual analysis of new money subscribed in recent months:—

Monthly Average 1937	United Kingdom		Excluding British Possessions		Conversions Foreign Countries		Total
	£	£	£	£	£	£	
Old basis	18,603	1,842	525	20,970

Apr., 1938	Dr. 1,300	3,110	478	Nil	2,288		
May, 1937	Dr. 400	22,551	3,314	Nil	25,465		
May, 1938	Dr. 350	17,508	12,193	Nil	29,351		

All the important public issues were of fixed-interest securities, industrial ordinary share offers being mainly conspicuous by their absence. A month, however, which has seen two such large issues as those of Australia and the L.C.C. (not to mention the issue, in Ireland, of a £10 millions Eire loan) deserves honourable mention in the investment history of 1938—although few underwriters will remember it with gratitude. Only two industrial concerns, Holt Brewery and Beira Works, made public issues, and these were partly for conversion purposes. There were, however, several large offers to shareholders only.

Company Notes

Anglo-Iranian Oil.—The preliminary figures of the Anglo-Iranian Oil Company make cheerful reading for the investor and the British Government. Of the company's ordinary stock of £20,137,500, some £11,250,000 is owned by the British Government (which, alone among shareholders, receives both dividend and income tax) and £5,342,985 by Burmah Oil, whose latest figures are discussed in a separate Note. For these two holders (which together own 82 per cent. of the total ordinary capital) the company's decision to maintain last year's 25 per cent. dividend, on a capital increased by last year's scrip bonus, means a gross income of £2,812,500 and £1,068,597 respectively. Actually, the Anglo-Iranian's net profit, which was £3,500,000 in 1935 and a little over £6,000,000 in 1936, rose to nearly £7,500,000 last year, and the dividend was covered by earnings of 34½ per cent. on the increased capital.

† And 50 per cent. scrip bonus. ‡ On capital increased by preceding year's scrip bonus. * After writing off £33,122 new issue expenses.

The spectacular nature of the recovery in earnings, a year ago, was explainable, in part, by conservative computation

of profits in 1935, when the company was affected by the Sanctions crisis arising out of the Italian invasion of Abyssinia. The further rise of 22 per cent. in net profit last year, however, was attributable predominantly to increased trading activity. The company's production last year (excluding that of the Iraq Petroleum Company) rose by 24 per cent., from 8,200,000 tons to nearly 10,200,000 tons. The company's accounting appears again to have been distinctly conservative. At 83s. 1½d. the £1 ordinary stock yields 6½ per cent.—a figure which implies a tendency to discount the adverse effect of declining world trade in the oil industry in coming months. The profits of the Anglo-Iranian have always been susceptible to fairly wide variation between good times and bad, but the increasing revenue possibilities from the company's 23½ per cent. interest in Iraq Petroleum should partly offset any potential fall in earnings.

* * *

Burmah Oil Report.—The accounts of the Burmah Oil Company for 1937 are presented in a slightly amended form, the primary purpose of the changes being to bring out the full amount of taxation by the United Kingdom, India, and Burma Governments, chargeable in the year. The necessary adjustments have been extended to the 1936 figures in the accompanying table, making them wholly comparable with those for 1937. The full report confirms the excellent impression created by the dividend announcement and the declaration of the 50 per cent. capital bonus. Total income has risen by more than £1,000,000 to £5,075,420. Some three-fourths of the increase was contributed by the company's investment income. Since 1935, the investment income has risen from 35 per cent. to nearly 44 per cent. of the total revenue. Trading profit, however, continues its steady upward trend, and rose last year from £2,598,225 to £2,856,436. The considerable expansion in investment income last year was due almost wholly to increased receipts from the Anglo-Iranian Oil Company.

* 1936 figures adjusted to revised form of accounts adopted for 1937. † Gross dividend. ‡ Earned rate not "grossed up," owing to Dominion income tax relief. § Plus capital bonus of 50 per cent.

Accompanying the report is a notice of the extraordinary general meeting to sanction an increase of the capital to £18,500,000 by the creation of 5,000,000 additional ordinary shares. This addition is required to give effect to the decision to distribute a capital bonus of 50 per cent. which, as to nearly two-thirds, is the counterpart of a writing-up of the company's direct holding of £4,292,985 in Anglo-Iranian oil from the book cost of 7s. 9.6d. to par per £1 unit, and of the indirect holding of £1,050,000 of the same stock held through the B.O.C. Anglo-Iranian Share Trust from a book value of 13s. 4d. to par per £1 of stock. These revaluations will realise an increment of £2,968,325, and the balance of the bonus of £4,578,838 will be provided out of general reserve. The balance sheet shows the customary strength; surplus liquid assets amounting to £14,859,000 are covered up to £4,463,000 by cash and gilt-edged securities. Even after

the proposed revaluation, investments will have a book value of some £16 millions under existing market value. At 5½ ex dividend and cash bonus the stock yields just 8 per cent. In view of the further increase in the Anglo-Iranian distribution, announced this week (and discussed in a separate Note), the company's investment income should show a further increase in the current year.

Associated Newspapers.—The report of Associated Newspapers for the year to March 31st last shows that, after income tax, N.D.C. and fees, profits have fallen from £931,822 to £785,036. The total dividend on the deferred shares has been reduced from 26½ per cent. to 25 per cent. Even after this reduction, however (and after the placing of £50,000 to reserve for publicity, against £100,000 transferred to investments reserve in the preceding year), the amount carried forward has been reduced from £548,430 to £525,131. The company does not publish a consolidated balance sheet, but the accounts suggest that interests in certain subsidiaries have been disposed of during the year. "Shares in subsidiary companies" now appear at £2,617,205 against £3,549,629, while "Other investments" have risen from £237,234 to £1,084,229. A yield of about 13 per cent. on the 5s. deferred shares suggests that investors, whose attitude towards newspaper shares has long been conservative, are estimating near-future possibilities with redoubled caution. It is true that experience shows that the volume of advertising carried by British newspapers is less vulnerable in the early than in the later stages of trade recession. But the market, at the moment, is more concerned with the level of working costs. Higher newsprint costs, whose effect on profits this year will be considerable, are largely a matter of *force majeure*, but the same condition scarcely applies to the large sums expended in the process of attracting new readers. A forceful plea for the abolition of canvassing was made by Lord Kemsley this week at the meeting of Allied Newspapers, whose decision to cease all canvassing has been endorsed by another group of papers. Shareholders will hope that no individual hopes or fears will stand in the way of a wider adoption of this policy, whose financial benefits would be particularly opportune at the present time.

Bleachers' Association Setback.—While results from different sections of the textile trades are by no means uniform, successive reports are bringing, on the whole, increasing discouragement to the investor. The Bleachers' Association report provides no exception. The setback experienced by the Association is small—total profits have declined by only 4 per cent.—but with preference dividends in arrear since the end of 1933 the chances of overhauling the ground lost in the past are becoming increasingly remote. Since repairs and maintenance require a little more than in 1936-37, and as an additional transfer is being made of £53,249 to depreciation and obsolescence fund, the surplus available for shareholders is £76,450 less than in the preceding year, and has thus fallen to a negligible amount. It is not surprising, therefore, that the directors recommend no preference dividend. We show in the following comparative table how total profits have been allocated in the past three years:—

	Years ended March 31		
	1936	1937	1938
Profit	£421,115	£478,560	£459,547
Repairs and maintenance...	150,961	157,811	162,000
Depreciation, etc.	179,897	140,000	193,249
Interest and fees	103,599	103,599	103,599
Earned for dividend	Dr. 13,342	77,150	699
Special credits	Cr. 9,897	...	Cr. 3,249
Carry-forward	174,668	183,412†	187,360

† After paying six months' preference dividend (£68,406) to December 31, 1933.

The board do not comment upon the year's results, but the usual full and informative survey will doubtless be given at the annual meeting. The chairman's review of the general outlook will necessarily be influenced by the consideration that British exports of cotton piece-goods, which were lower in 1936 than in 1935, recovered only to a trifling extent in 1937 and remained lower even than in 1932. Trading difficulties, however, have not deterred the Bleachers' Association from following a sound depreciation policy. Apart from maintenance charges and "normal" depreciation of £140,000 annually, plus this year's special transfer from profits to depreciation and obsolescence fund, the general reserve has been reduced to the round figure of £850,000 by transferring £73,610 to write down fixed assets, property and plant. The omens for an early resumption of dividends on the preference units, now quoted at 5s. 9d., are not bright, given the present conditions of the cotton textile industry. Sooner or later, a capital reorganisation scheme may be inevitable.

Great Universal Stores.—Although the market registered a certain amount of disappointment with the failure of this mail order and chain store business to repeat the preceding year's 10 per cent. scrip bonus, the full report shows satisfactory results. Total profits of £408,714 for the year to March 31, 1938, compare with £359,529 for 1936-37, including eighteen months' profits from one of the subsidiaries. Income tax and N.D.C. require between them £111,524 against £85,788, and a full year's dividend is payable on the 5 per cent. preference shares. The earnings for the equity are thus only £13,084 higher at £233,321. The cash dividend of 50 per cent. is payable out of earnings of 63.9 per cent., against 79.3 per cent. actual a year ago. For each of the previous three years a 10 per cent. capital bonus was declared, but thanks also to an issue for cash in June, 1937, the issued ordinary and "A" ordinary capital is now, at £496,802, as much as 35 per cent. higher than at the end of March last year. The balance sheet shows various changes, resulting in the main from the new issues made in 1937. The value of shop premises is halved, as a result of sales during the year to the extent of £220,474. Shares in subsidiaries, however, stand at £970,979, against £483,002, and advances to subsidiaries and sub-subsidiaries are as high as £474,421. In view of the increasing importance of subsidiaries (interests in which now amount to half the balance sheet total) and of the expected announcement of further developments, the inclusion of a consolidated balance sheet is especially welcome. This shows that out of total assets of £3,132,866, goodwill accounts for £407,682, fixed assets for £824,097, stocks for £408,968, and debtors, etc., for £567,222. A certain reserve in the market's attitude towards a further rise in the trend of profits is suggested by a current yield of £10 8s. per cent. on the 5s. shares at 26s. 6d.

Harland and Wolff Accounts.—The accounts of Harland and Wolff, Ltd., the largest shipbuilders in the country, are disappointing. The drastic capital reconstruction of last July has certainly cleared up the financial position. The balance sheet is now strong; for liquid assets of £2,563,816 comfortably exceed current liabilities of £1,608,894. But the company's earning capacity has not yet been restored. The profit, before allowance for depreciation, has actually fallen from £64,047 to £24,557, and has sufficed only to cover the pension fund and slightly to increase the carry-forward. The report explains that this surprising fall in profits was due to the booking of substantial orders at low prices. The subsequent increase in the cost both of labour and of raw materials reduced profit margins to negligible dimensions. Results of the current year, however, are expected to show a "substantial improvement." The company has important naval contracts in hand, and is working on orders for 200,000 tons of commercial shipping, including both cargo and passenger liner tonnage. These orders, together with the company's interest in aircraft production (in association with Short Bros.), should justify the directors'

anticipations, but further orders for new merchant tonnage are scarce, and even the present high rate of production leaves a considerable amount of capacity unfilled. The present reduction in the volume of world trade and the high level of shipbuilding costs are a combination which discourages a recovery in shipbuilding orders. Thus the Harland and Wolff report, by implication, endorses strongly the plea of Mr J. Frater Taylor at the Pease and Partners' meeting this week for cheaper and more efficient production of coal. It is in reports like this that the obverse side of high price-fixing in coal, iron and steel can best be seen.

Western Holdings Anti-Climax.—Following days of extravagant rumour which carried the Western Holdings gamble to new heights at the end of last week, the company issued a cable giving the actual results of assays in the St. Helena borehole of the reef struck at 2,417 ft. The results came as an anti-climax. A solid core of reef of approximately 2 inches in diameter was raised, and was then split longitudinally. One-half gave the astonishing assay of 11.8 dwts., which over the estimated true thickness of the reef of about 10 feet was equivalent to the phenomenal figure of approximately 1,416 inch-dwt. This was the result of which much was heard in the market before the issue of the cable. In order to obtain confirmation, the other longitudinal section of the core was split, in turn, and the two resulting portions were assayed. One gave only 2.68 dwts. and the other only 0.2 dwts., the two results representing, on the same estimated reef thickness, only 321 inch-dwt. and 24 inch-dwt. The actual process of assaying is so simple that the possibility of error can almost be ruled out. Nor can any normal explanation readily account for so great a discrepancy between the three longitudinal splits. After the information had been published, some 25 per cent. of the market capitalisation of the shares was lost. A further writing down, to 13s., occurred as soon as first reports of Thursday's meeting came to hand. At that meeting the chairman of the company, Mr Harold Jeppe, stressed the point that work done on a single exploratory bore-hole at this early stage neither confirmed nor denied the possibilities of the area. This is a very proper attitude; and it emphasises the over-optimism implicit in prices which gave the company a market capitalisation running into millions.

Rubber Quota and Company Results.—The lethargy of the rubber share market in recent weeks has been ascribed largely to uncertainty regarding the International Rubber Regulation Committee's decision upon the July-September quota. This week's announcement of a drastic cut to 45 per cent. (which is discussed in a Note on page 557) has failed to start the market into fresh activity. Postponement of a decision until the end of May had caused disappointment, as the unhappy necessity for drastic curtailment had become increasingly apparent. While the market remains agreed upon the advisability of making restriction effective, complaints have frequently been voiced on the one hand of the technical difficulties to which producers are subjected by frequent changes in permissible production, and on the other of the insensitive and tardy character of quarterly revisions of the quota. A suggested solution was put forward by Mr Fairbairn when, in addressing Bangawan shareholders, he revived the idea of a buffer pool. The reception of the suggestion was, on the whole, tepid. Analogy with tin was rejected on the grounds that the time taken to convert the original raw material into the saleable commodity is longer for tin than for rubber—being a matter of months rather than of days. An alternative suggestion was put forward by Mr H. J. Welch, and supported by Mr A. Parker Smith, to the effect that producers should be enabled to carry heavier stocks. This, it was suggested, would help to steady production and to provide a quick response to changes in requirements. Mr J. G. Hay, however, put his finger on the really weak point in the industry's present position

when, at this week's meeting of United Sua Betong, he declared that no device could insulate producers from the effects of falling demand. Recovery, in fact, postulated a revival in American consumption, and the omens, in that direction, were not particularly bright.

Meanwhile, rubber company reports are calculated to provoke feelings of relative satisfaction with the immediate past and apprehension for the immediate future. The substantially increased dividends have in many cases understated last year's real progress. We give in the accompanying table details of profits, proceeds of sales, and share prices for some of the more important companies whose reports have recently appeared:—

Company	Crop	Av. price per lb. *	Sales	Earned for div.		Div.	Current

* London landed terms. † Average net price. ‡ Dividends and earnings on £622,052 (since increased). † Estate profit and other receipts. ‡ Par value of shares shown in brackets.

While the improvement recorded in 1937 has been comparable with that of 1936, the causes have been somewhat different. The average percentage of the quota was actually lower in 1936 than in 1935, while average prices were roughly 2d. higher. In 1937, prices moved still higher, but by a smaller amount. The greater part of the increase in sales proceeds in fact arose from the larger crop, the average quota percentage for 1937 being 83½ per cent. against 62½ per cent. With an average quota this year of 58½ per cent. (up to the end of September), an unsatisfactory trend of American consumption, and the prospect of higher costs owing to the lower output, the outlook for 1938 must be accounted unfavourable.

Labour on the Rand.—The chairmen's speeches at the Union Corporation and the Central Mining meetings, which invariably command a wide audience, may be read as a footnote to the leading article on South African gold mining shares on page 543 of this issue of *The Economist*. This year both Mr P. M. Anderson and Mr F. R. Phillips devoted a considerable part of their addresses to the labour problem, whose importance for all the mining companies can hardly be exaggerated, in view of the great increase in the number of employees since South Africa left the gold standard. At the end of 1937 the number of natives was 288,962, an increase of 68,000 in five years. In 1932 there were no non-producing develop-

ment mines; at the end of last year there were no less than sixteen, mainly situated on the Far East Rand. In the Far West, the results of work on the large area on which deep boreholes have been or are being sunk, points to a further considerable increase in the number. The prospective increase in the demand for labour is indicated by the fact that development work accomplished last year amounted to 2,300,000 feet, an increase of over 60 per cent. on the figure for 1932, while the 48,850 feet of shaft sunk represented an increase of nearly 100 per cent. In February last year the industry's labour force reached a total of 310,000. Subsequently, good crop conditions (which drew large numbers of natives back to their homes), and a decline in recruiting, reduced the total at the end of the year to 182,000—a figure far below the requirements of the mines. But the movement was then reversed, and last April the record total of 316,000 was attained. For future expansion it is hoped that the maximum number of 90,000 natives from Mozambique, fixed by agreement with the Portuguese Government, may be increased. Additional further labour requirements, however, are likely to be obtained mainly from tropical areas north of 22 degrees south, provided the British Government can be satisfied that working conditions on the Rand are suitable for the natives of those areas. Both chairmen also referred to the second main requirement for the exploitation of the mining areas—namely, ample supplies of capital. Since the greater part of any new money must come from the overseas investor, there was pertinence in the chairmen's question whether the high scale of South African taxation of the gold-mining industry might not have a deterring effect, present or future, on the investor. We discuss this question in greater detail in our leading article.

Other Company Results.—Company reports for 1937-38 are now becoming less numerous, and this week our usual analysis of profit and loss accounts appearing on page 580, contains no more than 44 companies in all. The results are scattered over a wide field, no single group being predominant. On page 556 we discuss the reports under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—In this issue reports of company meetings begin on page 563. The value of co-operation with suppliers was stressed by Mr Simon Marks at the *Marks and Spencer* meeting. Apart from the need of following changing tastes in the consumer, he pointed out, the retail distributor must take into account, at the production end, new technical processes and materials. Close collaboration with suppliers had been

extended further, and contact had been made with the producers of the materials supplied to the manufacturers. The result of linking up the three parties in this way was the opening up of entirely new markets. Members of *J. Lyons and Company* were told by Sir Isidore Salmon at the annual meeting that the volume of business done in the past year had been greater, and—what did not always follow—that the turnover had increased in consequence. Profits had been maintained, although the company had withheld for as long as possible those increases in selling prices which were justified by rising costs. The necessity for various sections of this country's paper trade to form cartels with the Scandinavian countries was discussed by Lord Portal at the *Wiggins, Teape and Company* meeting. Addressing *Ever Ready* shareholders, Mr Magnus Goodfellow expressed satisfaction that the complete reorganisation of their production facilities (begun six years ago) enabled them to face competition with composure. His belief in real rationalisation was reaffirmed by Mr J. Frater Taylor at the *Pease and Partners* meeting. At the *Marievale Consolidated* meeting in Johannesburg, Mr P. M. Anderson drew attention to the progressive improvement in reef disclosures by development work. Addressing *East Geduld Mines* members, Mr Anderson reminded his hearers that the coming into commission of the extensions to the reduction plant completed the main capital expenditure programme. At the *Geduld Proprietary* meeting, he referred to the success of their policy of splitting large blocks of ground and opening up low grade areas. To *Grootvlei Proprietary* shareholders, he said it was at present expected that the initial reduction plant would start up about the end of next quarter, and that a capacity of 120,000 tons or so a month should be reached towards the end of 1940. At the *Van Dyk Consolidated Mines* meeting, Mr Anderson remarked that the incline haulage which they expected to complete early next year should greatly facilitate the opening up of the shallower portion of the mine. Satisfaction with the ore reserve position was expressed by Mr John A. Agnew at the *Gold Fields Australian Development Company* meeting. The reserve showed an increase of 71,000 tons, although over 100,000 tons had been milled during the year. At the *United Sna Betong* meeting, Mr J. G. Hay suggested that the question of cost of production was a fitting one for close study, and expressed the hope that the Governments concerned and the industry would enter into friendly collaboration for a proper ascertainment of the facts. Members of the *Dalkeith (Ceylon) Rubber Estates* meeting were told by Sir Delves Broughton that the standard assessment for 1938 had been slightly increased. At the *Rio de Janeiro City Improvements* meeting, Mr Francis M. G. Glyn referred to the company's constant applications to the Exchange Authorities, who had assured the board that exchange to remit the milreis balances would be allotted in due course.

London

SETTLING DAYS
TICKET ACCOUNT
JUNE 7 JUNE 9

DERBY week is invariably a quiet week in the markets, and this year it has been quieter than ever. The European situation is still sufficiently dangerous to dissuade investors from entering into new commitments, and the constant Parliamentary discussion of war preparations, culminating this week in Sir Thomas Inskip's conscription "indiscussion," is a constant reminder to investors of the uncertainty of any positive investment policy at the present time. Moreover, the accumulating evidence of industrial recession, and the absence of any hopeful economic indicators, either here or in the United States, have induced definite weakness in the industrial and home rail markets, although bear closing on Thursday, the last day of the account, some

what improved the complexion of the week's prices.

Throughout the week, however, the *gilt-edged market* has been steady and firm. There has been little business, but the tone was satisfactory, and on Thursday morning, the reinvestment of the big June 1st interest payments strengthened the market appreciably. In corporation stocks there was very little movement.

The *foreign bond market* was inevitably depressed. The main pressure was felt by German and Austrian bonds, which after having been weak on Monday and Tuesday, fell sharply on Wednesday when it was known that the Anglo-German trade and debt negotiations were making no headway, and when it was widely rumoured that Germany would repudiate her whole foreign debt. There was some recovery on Thursday, after the Government's statement that the discussions had not actually broken down, but the week shows a substantial net loss in the

Dawes and Young Loans and in the Austrian 7 per cent. issue.

*

In the *home rail market*, new low levels for the year were reached. The weekly traffics showed a loss of £315,000 compared with the corresponding week of last year—the first undistorted comparison for three weeks, and one which suggested that the trend was actually going worse. The market has at last appreciated the implications of this trend, and the marginal stocks lost a point or so, while the vulnerability of the lower ranking preference stocks was recognised in a further sharp marking down of quotations. Argentine issues were again depressed.

The industrial implications of the rail traffics were also appreciated by the *industrial share market*. On Monday, prices were marked down, but there was little selling pressure and very little business at all. On the following day,

however, there was a general decline, the *Financial News* index falling by 1.3 points. All sections of the market shared in the decline, even aircraft shares—by far the steadiest part of the industrial market in recent months—losing sixpences and shillings. The same tendency continued on Wednesday, scattered selling taking place in all sections, with very little support. On Thursday there was some improvement, caused by a certain amount of bear closing and by the recovery of Wall Street on Wednesday afternoon, but the market was still in a very unsettled frame of mind. Motor shares, coal shares, iron and steel shares, electric equipment, and textile shares have all lost a significant amount of ground.

*

In the *oil share market*, there was little business but prices were maintained. The excellent Anglo-Iranian results had no effect upon the market as a whole: after the announcement on Tuesday there was a sharp rally, but profits were rapidly taken and there was no net advance in the shares. *Rubber shares* were hardly affected by the drastic reduction in the export quota for the third quarter: the leaders were marked up in sympathy with the improvement in the commodity, but there was no public support, and prices fell back again. In *tea shares*, there was no change. Prices were generally easier, and business was virtually at a standstill.

Interest in the *mining market* was again centred in Western Holdings. On Friday, the shares had closed at 21s. 3d., but the week-end cable, which put the "discovery" in a new and truer light, was a grave disappointment, and in the flurry to sell the shares, the price fell at one time as low as 18s. A rally brought the price back to 18s., but from that point support dwindled away, and on Wednesday the shares closed at 15s. 3d. Support from the Cape, however, was forthcoming, and on Thursday an advance was registered. The rest of the Kaffir market was naturally overshadowed by these hectic dealings, and dealings were somewhat subdued. The undertone, however, remained good, and there was no evidence of weakness. In West African and Australian gold shares, there was very little business, and Rhodesian Coppers, after a firm beginning on Monday, tailed off in mid-week. Tin shares were again neglected, unaffected by the British Government's endorsement of the buffer pool principle.

ACTUARIES' INVESTMENT INDEX

By a series of fairly small declines, the Actuaries' price index of 151 industrial ordinary shares has fallen below the previous low level of 65.0 on April

5th. In the past week, the index fell by 1.3, standing on Tuesday last (May 31st) at 64.0, against 69.3 a month ago and 85.2 a year ago. The corresponding average yield has risen as high as 5.94 per cent., against 5.36 and 4.22 per cent., respectively. We give below a selection of the separate indices, and the usual monthly particulars of fixed interest securities:—

New York

ALTHOUGH prices advanced slightly in the last session before the Memorial Day holiday, response to the passing of the Tax Bill was less than might have been expected. It removed one cause of anxiety, but the plain disclosure of the President's attitude, fears of further official supervision of business, the continued weakness of commodities, and the persistence of unfavourable company news, between them effectively subdued any optimistic tendency. Nor were conditions after the holiday any better. Prices sagged from sheer lack of support, and the volume of business shrank still further. In its present mood the market becomes active chiefly on news of Government inaction. Accordingly, in mid-week business broadened moderately and prices recovered on hopes of an early adjournment of Congress and news of the abandonment of the Government Reorganisation Bill. Another helpful factor was reports of good progress in discussions between representatives of Utilities and the S.E.C. Motor shares were unmoved by news of charges made under the Sherman Act.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values, calculated on closing prices (1926 = 100).

Paris

WHILE the Bourse was in hesitant mood on the first few days of the month, after M. Daladier's pronouncement on the franc there was considerable improvement. As a result of popular confidence that a firm franc and the new decrees would encourage a return of capital, business broadened, and all classes of domestic issues rose strongly, sometimes at the expense of international. In the following days these satisfactory advances were consolidated.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are denominated in pounds at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

Later, however, the market was depressed by alarmist rumours on the foreign situation and by absence of public support, these factors more than counteracting the success of the Defence Loan. The Czechoslovakian crisis did not greatly affect prices; for tension had eased considerably when the Bourse re-opened after the critical week-end. Business slackened, however, and prices sagged towards the end of the month.

Berlin

DURING all May the share market was reactionary. Against good business reports and dividend news was the threatening international situation, and late in the month there was considerable selling for emigrant and non-Aryan accounts. No temporary recovery of any dimensions occurred, and the close of the third week witnessed a semi-panic. Certain specialities were active: at first (on dividend expectations) Westdeutscher, Kaufhof, later certain chemical, automobile, shipping and textile shares, and, finally, Farbenindustrie. In contrast, standard steel and coal issues were neglected, an exception being Harpener Mining, which rose sharply. The chief electrical shares were heavily sold and on the whole month lost considerably. Despite speculative interest on the basis of some dividend resumptions, the two chief shipping companies dropped several points. Reichsbank declined by about six points, and all the leading commercial banks were slightly lower. Home bonds fluctuated within narrow limits in a dull market, and towards the close of the month were slightly lower. The official share-index (1924-26 = 100) was 114.83 for April, against 113.85 for March; bonds 100.05, unchanged.

Amsterdam

BUSINESS in May was characterised by quiet trading and irregular price movements. Over the whole month, however, some deterioration took place, although in mid-month quotations had in the main risen above the levels of the end of April. As a result of the pronounced absence of public support, the market was easily affected by foreign news of all kinds. Day-to-day movements in the early part of the month were irregular, close attention being paid to the fortunes of the belga. A quiet period then followed, in which prices were firm but turnover negligible. After the Czechoslovakian crisis, quotations were depressed, and the second fortnight witnessed a decline.

Canada

THE Canadian stock markets during the past month have been decidedly dull and sluggish but prices are slightly better than at the beginning of April. Though it seemed at first that the recession had been checked, prices sagged anew in the latter part of May. However, the volume of trading remains small and both speculators and genuine investors seem chary about entering the market as long as the depression in the United States continues and international tension is not relieved. Prices have fluctuated within a narrow range, the only stocks showing much liveliness having been those of western grain companies. Newspaper stocks are still out of favour, and construction stocks have been affected by the decline in the volume of new construction, while there is no demand for luxury stocks like those of the liquor companies. The Bureau's index for common stocks stood at 98.5 on April 30th and by May 12th had risen to 100.5.

PUBLIC OFFERS

Beira Works.—Issue at 101 of £750,000 5½ per cent. registered debentures (making £2,822,300 outstanding). Redeemable at par by 1972 by drawings, or from 1946 on notice. Proceeds to redeem £231,500 7 per cent. registered debentures and for improvements. Profits before interest, after depreciation, years to March 31: 1936, £212,327; 1937, £258,589; 1938, £333,292. Surplus of assets, £2,931,032. Lists closed May 30th; underwriters

to take up 96½ per cent. of their commitments.

BY STOCK EXCHANGE INTRODUCTION

Matthew Hall and Company, Ltd.—Issued capital, 200,000 5s. ordinary shares and £5,000 6 per cent. debentures to be redeemed August 1, 1938. Heating and sanitary engineers, established 1848.

TENDERS

Barnet District Gas and Water Company.—Sale by tender of £50,000 4½ per cent. preference stock, at minimum of 110 (which yields £4 1s. 10d. per cent.).

BONUS ISSUES

Stanton Ironworks.—This company proposes a free capital bonus of one ordinary share for every five held, involving a capitalisation of over £310,500.

Ribble Motor Services.—It is proposed to distribute a scrip bonus of 50 per cent.

Hector Powe.—This company is to distribute a 10 per cent. share bonus.

ISSUE TO SHAREHOLDERS ONLY

Venesta Ltd.—Issue of £500,000 4½ per cent. debentures at par. Of the total, £300,000 will be offered to shareholders and noteholders, and the remaining £200,000 to convert £200,000 4½ per cent. notes.

SHORTER COMMENTS

Company Results of the Week.—Among the larger rubber company results, those of ALLIED SUMATRA are satisfactory. Net profits are over £10,000 higher at £88,693, the average net sale price per lb. having risen from 7.9d. to 8.3d. A further batch of investment trust results is available. INVESTMENT TRUST CORPORATION earned £259,691 against £263,206. Revenue is a little higher, but the incidence of N.D.C. affects net profits. Difficult trading conditions in the biscuit industry towards the end of 1937 and in the early months of the present year have led ASSOCIATED BISCUIT MANUFACTURERS to pass their ordinary dividend. Receipts from subsidiaries were £20,000 lower at £50,000. ASSOCIATED NEWSPAPERS have experienced a considerable decline in profits, by 15 per cent. to £785,036, but the deferred dividend is only 1½ per cent. lower at 25 per cent. The deterioration in market conditions in the latter part of 1937 reduced DENNY, MOTT AND DICKSON net profits from £155,985 to £75,523, in spite of active trading. FISHER AND LUDLOW, who report that the volume of orders now on hand continues satisfactory, made slightly higher trading profits in 1937-38 than in 1936-37, but other allocations have reduced the latest net earnings below the previous level. MILLARS TIMBER AND TRADING COMPANY, who are paying 10 against 7½ per cent. after earning £31,000 more at £138,350, report that in Australia the selling side of the business was well maintained, though the quantity of timber was reduced following an Arbitration Court award. SALTS (SALTAIRE) have experienced a severe setback, net profits being £61,906 against £229,527; the fall in wool values has contributed to this result. The gross proceeds of sales by VENEZUELAN OIL CONCESSIONS were almost £2 millions higher at £5,328,950 (production having risen 30 per cent. to over 50 million barrels), but production expenses rose by 74 per cent. While the 2½ per cent. dividend is unchanged, the rate of earnings on the ordinary shares is 37.1 against 29.3 per cent., after tax reserve and depreciation.

MISCELLANEOUS

Capital Securities Trust.—Improving Securities Trust announce that, subject to certain limitations, H.M. Treasury raise no objection now to the inclusion of American securities in the portfolio of Capital Securities Trust. (When the Trust was first launched American shares were, on the request of H.M. Treasury, withheld from the portfolio.)

Hawker Siddeley Aircraft.—This company has found it necessary to give financial assistance (owing to increasing production) to the subsidiary operating companies of Armstrong Siddeley Development Company (which is owned by Hawker Siddeley). To put this finance on a more permanent basis, Hawker Siddeley will increase their holding in Armstrong Siddeley ordinary shares by £2,412,581.

Investment Trust Units.—A progress report has been issued covering the second

half-yearly period ending April 23, 1938, for which the distribution payable May 31st amounts, after tax, to 3.5346d. per unit net. The first distribution for seven months was 3.7706d. per unit. Distributions to date are equivalent to a gross yield, since formation, of £4 5s. 8d. per cent. per annum on original issue price, compared with £4 per cent. as originally estimated by the managers (Trust of Insurance Shares, Ltd.).

Brazilian Traction Light and Power.—Net revenue for 1937, \$10,886,281, an increase of \$4,642,393. Ordinary dividend increased from 70c. to \$1 per share. During 1937, Brazilian exchange showed an improvement. Cash expenditure during year on properties of operating companies was \$15,400,000.

Venezuelan Oil Concessions.—Increase of £1,965,729 to £5,328,950 in gross income was secured for 1937. For tax and N.D.C., £233,720 against nil. Depreciation

allowance raised from £286,314 to £456,803; transfer to exploration and general reserve doubled at £500,000. Net result is increase in profit balance by £14,947 to £1,089,015. Dividend on preference and ordinary shares unchanged at 22½ per cent.; carry-forward raised from £148,085 to £157,494.

Fisher and Ludlow, Ltd.—Net profit for year to March 31, 1938, £111,294 compared with £126,900. Dividend and bonus maintained at 20 per cent. on a larger capital, absorbing £87,000. To staff development fund £2,000 as before. Carry forward raised from £75,716 to £91,010.

Associated Biscuit Manufacturers.—Profits declined from £70,055 in 1936-37 to £50,048 in the year to March 31, 1938. Of this, preference dividend takes £29,250. No ordinary dividend (against 3 per cent. tax free). Carry-forward increased from £1,082 to £21,880.

Industry and Trade

Lancashire and the Government.—The proposals for a Cotton Enabling Bill, made by the Joint Committee of Cotton Trade Organisations, have aroused considerable opposition both in the industry itself and in those trades which are associated with, but not part of, the cotton industry. The Joint Committee and the Opposition Committee have recently been in communication with the President of the Board of Trade in an endeavour to ascertain the views of the Government. Mr Stanley, in a letter to the Chairman of the Joint Committee, has now announced that the Government have decided to prepare a Bill themselves on the general lines of that already proposed, but with such modifications as may appear necessary on grounds of public policy or to obtain a greater measure of support for it. The Government consider that the publication of their Bill should make it possible for the different industries and the individual firms affected to appreciate more clearly their position under the scheme, and would thus provide a better indication than is at present available of the extent to which it would command the approval of those concerned. Mr Stanley, at the same time, has urged the Joint Committee to renew their efforts to secure the greatest possible measure of agreement within the cotton trade on the proposals for reorganisation, since the rehabilitation of an industry can only be successful if it is backed by the great majority of the interests concerned. In view of the serious depression in the cotton industry, it is to be hoped that the publication of the Government's Bill will not be delayed.

Coal-Mining Industry Profits.—The provisional trading results in the various coalfields of the United Kingdom for the first quarter give a credit balance of over £5 millions for the industry as a whole, compared with £4,849,980 in the corresponding period last year. With the exception of Scotland, all the coalfields produced more in the first quarter of 1938 than in 1937; but the trend of prices was not uniform, some of the inland coalfields recording appreciable falls and Durham and South Wales substantial increases. During 1937, however, the financial improvement in the exporting districts lagged behind that of the other principal areas, and their average pithead proceeds are now being sustained by the higher-priced long-period contracts concluded last year. The inland coalfields continue to show better results than those mainly or largely dependent on the export trade. The monthly credit balances of the constituent administrative areas of the Midland Amalgamated district ranged during the March quarter from 1s. 8½d. to 3s. 1½d. per ton, while for the exporting coalfields they averaged 1s. 11½d. in Scotland, 1s. 6½d. in

Northumberland, 1s. 2½d. in Durham and 11½d. in South Wales. The leading credit balances were as follows:—Yorkshire, £1,104,702; Notts. and Derby, £993,213; Scotland, £743,734; Durham, £524,347; Lancashire and Cheshire, £462,339; and South Wales and Monmouthshire, £454,423. As a result of the rise in the industry's income, wages have continued to advance, and during the March quarter 415,900 workpeople were affected by an estimated net increase of £52,750 per week. The improved marketing organisation of the industry, and particularly the regime of central selling, have contributed to this improved financial position, but the main factor undoubtedly was the boom in demand last year. How far the new marketing system will be able to resist the disintegrating and price-depressing influences of the recession which has been in progress during the last few months remains to be seen. Conferences are at present taking place between the Central Council of Coal Owners and the District Executive Boards with a view to increasing the effectiveness of the regulative powers of supply control and of the co-ordinated district price schedules.

Rubber and Tin.—The marked decline in the consumption of primary products is severely testing the restriction schemes. Despite valiant efforts to adjust output to the decline in consumption, stocks in producers' hands have tended to increase and prices have fallen almost as rapidly as in 1929-30. Between the end of March, 1937, and last Wednesday, for example, the prices of rubber and tin fell from 12½d. per lb. to 5½d. per lb. and from £285 per ton to £163 per ton, respectively. During the corresponding period of 1929-30, the prices of rubber and tin declined from 10½d. per lb. to 6½d. per lb. and from £220 per ton to £135 per ton, respectively. A reduction in output sufficient to stem the downward movement of prices naturally encounters a host of difficulties, especially in countries which are largely dependent on a small number of commodities. Consequently, it is only to be expected that those in control of restriction schemes tend to take an optimistic view of the trend of demand. The International Rubber Committee, however, has taken a heroic decision at its meeting last Tuesday by reducing the export quota from 60 per cent. of the basic output in the current quarter to 45 per cent. in July-September. This reduction follows a cut from 90 per cent. during the second half of 1937 to 70 per cent. in January-March. Despite this drastic reduction, however, prices failed to improve. The uneasiness of the rubber industry was voiced by Mr J. G. Hay in his address to the shareholders of United Siam Betong Rubber Estates. "Such a severe limitation of production," said Mr Hay, "is bound to lead to a further increase in costs, and unless, therefore, the latest cut leads to a substantial

increase in price we shall be little better off." Meanwhile, the results of the referendum in Malaya on the tin buffer pool—a scheme whose latest version provides for the segregation of a proportion of the output in order to avoid the necessity of a further sharp cut in quotas—have been published. Some 57 per cent of the European and 76 per cent of the Chinese votes were in favour of the formation of a pool. In view of these results, the market was not surprised when the Colonial Office announced on Wednesday that it had approved the proposal, subject to the negotiation of a satisfactory detailed scheme. But it remains to be seen whether the segregation of a proportion of the output, at the current level of production, will have the desired effect of raising prices. The International Tin Committee held a meeting on Thursday, but its results were not known as we went to press.

An International Steel Conference.—It had been anticipated that the renewal of certain Comptoir agreements within the Entente Internationale d'Acier would be confirmed at last week's meeting of its Joint Co-ordinating Committee in Rome. The prolongation of the Entente Internationale d'Acier and of its agreement with the British industry would have followed automatically the renewal of the sectional arrangements. Contrary to expectations, however, the prolongation of the international agreements beyond June 30th was held up by dissensions within the Belgian industry, due to the demand for a higher quota by the Boel concern. A further conference is, therefore, to be held in Paris on June 16th. It is confidently expected that the difficulties within the Belgian industry will be overcome in the interval and that it will then be possible to prolong the international agreements.

Aircraft Production in the United States.—Representatives of the Air Ministry have just returned from a visit to the United States and Canada, undertaken with the purpose of investigating the possibility of supplementing domestic production from America. The following table, showing the output of military and commercial aircraft in the United States, provides an indication of the capacity of the aircraft industry in that country. The figures from 1929 to 1937 are those of the Aeronautical Chamber of Commerce. The estimates of production in 1938 have been made by the *Analyst* :—

NUMBER OF AIRFRAMES AND ENGINES PRODUCED IN THE U.S.A.

	Aeroplanes (without Engines)		Engines		Total Value (including parts)
	Military	Commercial	Military	Commercial	
1929	677	5,357	1,861	5,517	(Thous. \$) 70,896
1930	747	1,937	1,841	1,925	51,717
1931	812	1,582	1,800	1,976	47,270
1932	593	549	1,085	813	32,010
1933	466	591	860	1,120	33,519
1934	437	772	688	2,048	42,740
1935	459	1,109	991	1,974	45,195
1936	1,141	1,559	1,804	2,433	77,101
1937	949	2,281	1,989	4,095	113,993
1938	1,250	3,000	...	...	150,000

For a number of years the aircraft industry in the United States has exported a substantial proportion of its output. Thus exports of aircraft rose from 140 units in 1931 to 550 units in 1936 and 629 units in the past year. But while the output of military aircraft is now appreciably higher than in 1929, the production of commercial aeroplanes remains considerably below that level. The figures do not indicate, however, that the United States is in a position to undertake the delivery of large numbers of military aircraft to this country at short notice.

Milk Vessels Recovery, Limited.—It is probable that few people outside the milk distributive trade have heard of this organisation, and yet its work, admirably

summarised by its name, is of considerable importance. Of the millions of milk bottles deposited annually on British doorsteps by thousands of roundsmen, it is inevitable that some should go astray and, either by accident or by intent, should fail to be returned to their owners. Such wastage represents a considerable pecuniary loss to the trade, which is reduced by the activities of Milk Vessels Recovery, Limited, in providing a clearing house for lost bottles and churns. In 1937, 14½ million bottles were collected and delivered to their owners, together with 17,424 churns and 12,693 bottle crates. In addition, more than a hundred traders were prosecuted and convicted of using bottles and churns which were marked as the property of other retailers. Figures of this size lead the uninitiated to wonder if the trade could not adopt a form of non-returnable carton, such as is largely used in some Continental countries. Not only the wastage due to loss and breakages, but the heavy capital cost and running expenses of bottle-washing plants could thus be avoided. No doubt the Milk Commission, which has been foreshadowed as the *pièce de résistance* of the new milk Bill, will eventually deal with this minor problem of milk distribution.

Fall in Shipping Freight Rates Arrested.—Following the steep decline since last September, tramp shipping freight rates had a steadier tendency last month. As our index shows, rates showed a slight rise between April and May.

The Economist INDEX OF FREIGHT RATES
(1898 — 1913 = 100)

	Average, 1913	May, 1937	Feb., 1938	Mar., 1938	Apr., 1938	May, 1938
European waters	110.0	174.8	117.6	109.3	108.2	109.2
North America	113.1	123.1	109.3	110.6	114.0	111.0
South America	123.4	149.9	122.4	129.6	131.7	132.3
India	106.3	152.7	130.3	120.0	106.0	111.7
Far East and Pacific	117.4	159.1	120.4	111.8	109.2	106.2
Australia	127.9	169.7	113.4	111.6	113.0	113.0
Total	116.3	154.9	118.9	115.5	113.7	113.9
1913 = 100	100.0	133.1	102.1	99.2	97.7	97.8

As the next table indicates, declines on some routes have been offset by improvements on others.

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	99.0	+3.0	South America :—	110.6	+1.4
Bay—outwards	102.7	+3.6	Outwards	154.1	+0.2
Bay—homewards	141.9	—3.3	Homewards	103.2	+6.4
Mediterranean :—			India—outwards	120.2	+5.0
Outwards	88.1	+4.9	India—homewards	120.2	+5.0
Homewards	124.3	—5.7	Far East, etc.	106.2	—3.0
North America	111.0	—3.0	Australia	113.0	...

Last month's improvement, however, does not necessarily portend a change of trend. In view of the persistent fall in the prices of primary products and the shrinkage of international trade, the outlook remains uncertain.

Difficulties in the Cocoa Trade.—Since the lifting of the Gold Coast cocoa boycott in the middle of April, the London quotation for Accra cocoa (July futures) has declined from 24s. 8d. to 18s. 5d. per cwt, compared with 35s. at this time last year and nearly 60s. at the height of the boom in January, 1937. The recent decline suggests that the international cocoa market is in disequilibrium. On the basis of the recent rate of demand, the world's cocoa absorption in the 1937-38 season (October-September) may be well below 600,000 metric tons, compared with nearly 700,000 tons in the preceding season. According to *Gordian*, invisible stocks in consuming countries amounted to 110,000 metric tons on March 31, 1938, only 10,000 tons less than a year before. Brazil, the second largest producing country, is now at the peak of her season

and is selling more freely than in recent years. Under these conditions, the resumption of Gold Coast exports would in any case create a difficult problem both for West African shippers and for the international markets, but these difficulties have been increased by the announcement of the Gold Coast Department of Agriculture that 55,000 tons would be released for shipment during June. It seems impossible for the market to absorb this amount, which represents a rate of export of 20 per cent. greater than the highest monthly exports in the 1936-37 record season. Shipments at such a rate must lead to a serious increase in stocks in consuming countries, and will thus intensify the pressure on the cocoa market. It is quite possible, therefore, that the price of cocoa has not yet reached the bottom.

Slump in Raw Cotton Prices.—During the past week prices for American cotton in Liverpool fell about a halfpenny per lb., bringing the official quotations to the lowest level for six years. The downward movement has been brought about by the liquidation of straddle operations in East Indian and American futures. Early this

INDUSTRIAL REPORTS

APART from the heavy sections of the steel industry, which are still fully employed upon existing contracts, reports from the principal industrial centres this week are not encouraging. There is a good deal of inquiry from both home and overseas markets, but little business is being done; heavy stocks are still preventing the placing of new orders. In the coal industry the normal seasonal decline in demand is being experienced, in addition to a falling off in industrial demand, and many collieries are working on short time. Some districts have reduced prices for certain grades of coal by 6d. or 1s. a ton. The position of semi-finished steel remains unchanged, and the fixing of forge and foundry pig-iron prices to the end of this year has not brought out the business which was expected. The position in the cotton trade continues to deteriorate, and American raw cotton prices reached the lowest level for six years. There seems to be no indication of a change of trend in the near future, though some of the reports are hopeful of an improvement later in the year.

Coal

Sheffield.—With an easier demand, the inland market for coal is dull. Industrial requirements are smaller, and it has been found necessary to reduce output at some pits. Business in household fuel and gas coal is slow, as is customary at this period, but that for small coal is steady, with a good demand from coke and brickworks. Coke stocks are increasing, but prices are nominally unchanged.

Export prices have been reduced, Yorkshire steam coal being sixpence cheaper, and Derbyshire and Notts steams sixpence and a shilling per ton down. By this it is hoped to secure a share of the substantial inquiries received, but competition from other British areas and the Continent is keen.

Newcastle - on - Tyne.—Certain groups of collieries are working full time and have little coal available for the next few months, but the position

generally is dull and coals of all descriptions are freely offered. The Northumberland steam market for prompt shipment is quiet, idle time being experienced, but a fair amount of home business is being booked at the lower prices. The Durham section shows little improvement. As local industrial demand has declined and there is no inquiry from abroad, manufacturing coals are now plentiful. Current demand for patent oven coke is quiet, but over the coming winter season consumers abroad are booking moderate quantities.

Glasgow.—Dullness persists in the Scottish coal market. Home demand is declining with an exaggerated effect on the market position owing to the large stocks at depots and a tendency to delay buying in the hope of price reductions, particularly in the house coal branch. Acceptance of deliveries by public utilities is also on a lower scale, and the needs of industry are less. Overseas inquiry is improving, but the main requirements are open to tender, including seasonal needs of the Swedish State Railways, and it is not yet certain that Scottish producers will secure much of the business. Navigation fuels have been reduced by 6d. to 1s. per ton, but the dull shipping position retards business.

Cardiff.—Favoured by a relatively good tonnage position, shipments at the South Wales docks last week totalled 394,700 tons, compared with 342,400 tons the previous week, but the volume of trade was still about 25,000 tons less than in the corresponding period last year. There has been little, if any, improvement in the volume of current inquiry. Long-period contracts are the mainstay of the collieries, but they are not absorbing the allocated supplies and stocks are accumulating despite irregular working in some of the districts. Dry peas and beans are comparatively scarce, but for other grades supply is plentiful. The coke market is also weak but patent fuel is unchanged. Control Board permit quotations are nominally unaltered. The joint audit for the three months ended

April shows a credit balance of £454,423, compared with £388,129 in the previous quarter and with £135,886 in the corresponding period of 1937. The economic wage certified was 21.36 per cent. above the 1937 standard base rates, but the effective minimum wage rate for the three months ending August next will be maintained at 30 per cent. above the standard rates.

Iron and Steel

London.—The weekly statement of the London Iron and Steel Exchange indicates that irregular conditions have ruled in the iron and steel markets, and, with the approach of the summer, there are indications of the usual seasonal decline in the volume of business. In most departments new business is on a restricted scale, and consumers are working chiefly upon stocks and deliveries against contracts. Heavy reserves of pig iron have accumulated and with some decline in operations at the steelworks these are weighing upon the market. New business in foundry iron also has been on a much diminished scale, but fair quantities are still passing into consumption. The stabilisation of the current prices of foundry pig iron until the end of the year has not brought out much new buying but has relieved the market from uncertainty regarding prices.

The situation in the semi-finished steel department does not improve and most consumers have larger stocks on hand than they require. As a result, the production of semi-finished steel has been affected. It is estimated that the existing stocks will not be absorbed until towards the end of the third quarter. In the finished steel section business continues on a restricted scale compared with the conditions ruling earlier in the year. Operations at the steelworks have declined to some extent, but production is still maintained at a high rate.

Sheffield.—Quiet conditions continue in the iron market, with little

(Continued from page 559)

prospect of early improvement in demand. The announcement that the prices of forge and foundry pig will remain fixed for the rest of the year has not induced forward buying, consumers appearing content to cover their current needs. There are considerable stocks both at furnaces and works, and output is being further curtailed, another Derbyshire blast furnace having been put out of operation this week. A few small parcels have changed hands, but there is an absence of important business. Demand for hematites, with the exception of special qualities, is virtually at a standstill. Buying of finished iron has declined sharply, and it is suggested that prices may be revised at the end of the half-year.

The steel market is less active, although a steady run of business is being maintained in basic billets. Acid qualities are steady. There is a substantial call for wire rods, strip and stainless steel sheets. Prices are firm.

Production of steel ingots and castings in April amounted to 144,500 tons, which is 15,000 tons lower than in March. But for the first four months of the year the output was 34,000 tons above that for January-May, 1937.

*

Middlesbrough.—The market position is unchanged, but it is hoped that the fixing of pig iron prices until the end of the year will bring in buyers who have been hoping for a reduction. Most foundries, however, have good stocks of iron and actual business passing is very small, though there are some inquiries. The production of East Coast mixed numbers hematite still exceeds market requirements, and deliveries under existing contracts continue to be curtailed. One of the local works has booked an order from South Africa for a substantial quantity of railway chairs. On the other hand, owing to the lack of demand, four more blast furnaces are to be blown out.

Semi-finished steel is now in good supply with demand easier, whilst the heavy steel departments continue active under orders already on their books. Prices remain unchanged, with the exception of black sheets for export. Heavy steel melting scrap is in less demand owing to the reduced requirements at the steelworks.

It is confidently expected that the price of blast furnace coke will be reduced by 2s. 6d. per ton for deliveries after the end of June. Deliveries of foreign ore during May amounted to 217,000 tons, which is about 42,000 tons above the total for April.

*

Glasgow.—On the whole the situation in the West of Scotland is satisfactory. Plate makers are still working to capacity and anticipate being able to continue operations on this basis until the middle of July at least, when works will be closing down for the annual holidays. An important addition to the work on hand at bar mills is the large order placed with Messrs. Colville for ferro-concrete bars. Local sheetmakers have a considerable tonnage of unexecuted orders on books and are keeping a large proportion of their mills and galvanising plant well employed. Clyde shipbuilders have secured several new contracts within

the past couple of weeks and most of the yards are at the moment very busy.

*

Cardiff.—The market position in the tinplate industry shows no improvement, but prices are nominally stable at the recently revised minimum f.o.b. prices. The position in the heavier branches of the industry continues unsatisfactory, but with a heavy reduction in imports, stocks are gradually being reduced, and there are hopes of an improvement later in the year. Figures for production, shipments and stocks compared with last week and last year are given in the accompanying table.

Textiles

Cotton (Manchester).—Business has been disorganised by the further sharp decline in raw cotton prices, and most buyers have adopted a waiting policy. The latest developments have caused much concern and the depreciation in the value of yarn and cloth stocks may have serious consequences. Persistent liquidation of contracts in the raw cotton markets has brought prices of the American staple to the lowest point for six years. The easier movement has uncovered stop losses and some speculators have lost much money. World consumption remains disappointing and supplies exceed demand.

The yarn market has been easier, prices having fallen equally with the decline in raw material rates. Most of the demand in American qualities has run on counts that are not under any price agreement. Some spinners, however, have sold more freely than for several weeks.

In the cloth section all the contracts arranged have been for retail lots, the absence of demand being decidedly marked. The stoppage of looms tends to increase, and many firms are making arrangements to close down for a longer period than usual at Whitsuntide.

*

Jute (Dundee).—Trade in all departments is very moderate. The Indian jute mills are still working long hours and there are no signs of the conclusion of an agreement for the limitation of production, in spite of the fact that they are producing much in excess of the world's requirements. Stocks of both hessians and sackings are mounting in Calcutta and their disposal will last many months after any decision to curtail output has been reached. The owners of only 2 per cent. of the looms refuse to agree, but these are apparently adamant. It is reported that a few Indian mills have closed down owing to the unsatisfactory and unremunerative working conditions. Prices for Calcutta goods have displayed some weakness and they are ruling at a very low level.

Dundee spinners and manufacturers are delivering sand bags to the Government at the rate of two million bags per week, otherwise they would require to curtail their production even more. It is believed that the mills and factories are working only at about 50 per cent. of capacity. Nevertheless, prices for yarns and cloth are being maintained.

THE COMMODITY MARKETS

THE downward movement in the prices of primary products has lost none of its force during the past week. Consumers are still purchasing sparingly, and, as many of them have not yet worked off the stocks accumulated last year, sales of some commodities remain below the current level of consumption. Moreover, there has been nothing in the latest international developments to provide an incentive for consumers to increase their purchases. Consequently, the outlook for prices, despite the sharp fall in recent months, remains unpromising.

Hardly any of the sensitive commodities were unaffected by the general downward trend last week. Wheat, raw cotton, copper, lead, and spelter were all marked down in price. Raw sugar, rubber, and tin, exceptionally, were slightly firmer than a week ago. The decline in rubber and tin was arrested, at least temporarily, by the drastic cut in the export quota of the former, and by the Colonial Office's acceptance, in principle, of a buffer pool for tin.

In the United States, Moody's index of the prices of staple commodities (December 31, 1931 = 100) fell from 132.7 to 130.1 during the week ended last Wednesday. A month ago the index stood at 136.7 and a year ago at 204.4.

Metals

Copper.—Early this week, the publication of the Copper Institute figures for April had a favourable effect on prices and the cash price rose to £35 15s. per ton. Consumption outside the United States reached a record level of 129,577 short tons (against 125,270 short tons in March) and stocks fell from 197,470 to 185,916 short tons. Later, however, the continued weakness of the American copper market brought the cash price down to £32 18s. 9d., a loss of 6s. 3d. on the week.

*

Tin.—The price of tin fluctuated during the week and closed 5s. per ton higher at £163 per ton; the meeting of the Tin Committee on Thursday overshadowed the market. New supplies are already below deliveries, so that the retention of part of the current quota for the buffer pool should soon lead to a shortage of current supplies.

*

Lead and Spelter.—Lead declined by 8s. 9d. to £13 6s. 3d. per ton, while spelter declined by 12s. 6d. to the new low level since 1935 of £11 17s. 6d. per ton. Although current stocks are below normal, demand continues to be very poor, so that the outlook of the two markets remains unfavourable.

COMPANY MEETINGS

J. LYONS AND COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

PROFITS MAINTAINED

ADOPTION OF DECIMAL NOTATION

BOARD'S SOUND CONTINGENCIES RESERVE POLICY

BUSINESS ALWAYS KEPT UP TO DATE

IMPORTANCE OF SCIENCE IN MODERN BUSINESS

SIR ISIDORE SALMON'S ADDRESS

The forty-fourth ordinary general meeting of J. Lyons and Company, Limited, was held, on the 2nd instant, at the Trocadero Restaurant, Piccadilly Circus, London.

Sir Isidore Salmon, C.B.E., D.L., J.P., M.P. (one of the managing directors), presided.

Messrs Turquand, Youngs, McAuliffe and Company, the auditors, retire and are eligible for re-election.

(Signed)

ISIDORE SALMON

HARRY SALMON

Managing Directors.

Cadby Hall, London, W.14.

May 19, 1938.

DIRECTORS' REPORT

The report of the directors for the year ended March 31, 1938, states that:—

The directors have the pleasure to submit their forty-fourth annual report, with a balance sheet and profit and loss account, made up to March 31st last, showing the financial position of the company at that date.

The balance of trading account after providing reserve for contingencies (including N.D.C.) is	£ 1,011,000.00
To which is to be added the amount brought forward from last year	42,203.43
Showing available for distribution a total of	1,053,203.43
From this total the following dividends have been paid or provided:—	
On preference and preferred ordinary shares to March 31, 1938	490,353.27
On ordinary, "A" ordinary, proportional and "B" proportional profit shares—interim paid December 1, 1937	154,689.42
And the directors propose to deal with the balance as under:—	
To pay a final dividend of 2/10 per share on the ordinary shares and "A" ordinary shares for the year ended March 31, 1938	236,055.34
To pay a final dividend of 6.8d. per share on the proportional and "B" proportional profit shares for the year ended March 31, 1938	26,916.66
Leaving to carry forward to next account	145,188.74

The dividends received from subsidiary companies have been included in the company's trading account. In the aggregate the profits of the subsidiary companies exceeded the declared dividends. Losses of subsidiary companies so far as they concern this company have been dealt with in this company's accounts.

Messrs I. M. Gluckstein and S. I. Salmon retire from the office of director and, being eligible, offer themselves for re-election.

Messrs G. A. Pollard and L. H. Lampitt, employé directors, retire and are eligible for re-election.

Messrs Julian Salmon and A. H. Salmon, who have been appointed ordinary directors by the board since the last general meeting, retire and are eligible for re-election.

CHAIRMAN'S SPEECH

Mr H. H. G. Bennett (one of the secretaries), having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—I am pleased to welcome you to the forty-fourth annual general meeting of the company and to be able to report to you on the successful outcome of the company's activities for another year.

We regret to record the death, in February last, of our old colleague and friend Mr George Dec, who retired at the beginning of 1936 on account of ill-health. He was held in high esteem by us all and will be remembered for his loyal service to the company during a period of over forty years.

Before dealing with the figures, I should like to mention that since the close of the financial year we have appointed Mr Julian Salmon and Mr A. H. Salmon to the board. Since, later in these proceedings, they will be proposed for re-election in accordance with the articles of association, I need not at this stage say more than that, in common with every member of the board, they have received a long and thorough training in the business which has fitted them for the positions which they have now attained. I am sure they will continue to show that devotion to the company's interests which has been characteristic of their work hitherto.

ADVANTAGES OF DECIMAL NOTATION

The balance sheet figures call for little comment. You will have noticed that we have shown last year's figures side by side with those of this year to facilitate comparison. This being so, it seems unnecessary for me to make particular reference to the differences by pointing out that this figure is greater or that figure smaller—you have, I am sure, done that for yourselves. The variations are normal to the company's trading activities and need no comment. Another point of difference in the form of the balance sheet is that we have, for this year's figures, used the decimal notation. As I told you last year, the board is interested in the adoption of a decimal coinage, being convinced that it would be of real value to business and to the country generally. (Hear, hear.) We feel that anything we can do, however small, to give others the same conviction is a step towards the ultimate achievement of this object. The gain in simplicity is apparent to anyone who will take the trouble to add the decimal figures and convert the total into pounds by the operation of dividing by ten instead of adding two columns which must be divided by twelve and twenty respectively.

It will be best to deal with the figures by way of the report of the directors where the results of the year's trading, as affecting the available balance for distribution, are shown. But, perhaps, I might first say a word as to the year's business.

ADJUSTMENT OF SELLING PRICES

The volume of business done has been greater with, what is not always the case, a consequent increase in turnover. Increased turnover is expected to yield increased profit but again that is not always the case. I am pleased to say, however, that profits have been maintained notwithstanding the fact that we withheld for as long a time as possible those increases in selling prices which were justified by the rise in the cost of raw materials and other expenses. However, one cannot say what loss the delay in adjusting selling prices may have caused, for no one can tell how much the volume and turnover might have diminished if we had raised prices to our customers earlier. That is always an unknown quantity and our statisticians, however capable they may be, cannot give a measure which the management could use.

The amount brought in from the trading account is the round figure of £1,011,000. It is a round figure because it is a remainder after setting aside a sum for contingencies reserve, odd pounds, shillings and pence, being transferred to contingencies reserve rather than shown in the trading balance, the latter method being perhaps misleading in the sense of implying an exact sum of annual profit which the balance from trading account does not purport to be. The amount placed to contingencies reserve is not stated for the factors which are taken into account by the directors in arriving at the figure are unknown to you and were they known I suggest, with the greatest respect, would be of no value to you without the long experience of your directors in what I can assure you is a very complex business. Indeed, we do not claim that we, even with our experience, always arrive at a correct assessment of those factors—there are always some present which the economic expert describes, I believe, as "imponderable" and things which cannot be weighed are difficult to assess.

To the balance from trading account—£1,011,000—we add the amount brought forward from the previous year, giving us a figure of £1,053,203 as the amount which we consider available for distribution and, after deducting dividends paid and to be paid amounting to £908,014, we are left with an amount of £145,188 to carry forward in the profit and loss account.

NATIONAL DEFENCE CONTRIBUTION

In view of the nature of our figures, there are debatable points with regard to the actual amount assessable to N.D.C., which could not be decided at the time of making up the annual accounts and we therefore thought the most satisfactory method of dealing with this charge against the company's profits would be to make an estimate of the amount required and include it in this year's provision for contingencies reserve, which account, when the amount is agreed and paid, will bear the debit.

You will have seen that this year we have made no further addition to the reserve shown on the balance sheet out of the sum available for distribution, but that we have carried forward in the profit and loss account the whole balance after providing for payment of dividends. The reason for this is not that we think the present amount of reserve, which is £2,000,000, is such that no further additions need at any time be made to it, but that we do not think the present a suitable time for such additions. We do not know how long the present heavy taxation may continue nor whether it has reached its maximum in view of the demand for increased armaments.

I do not wish this to be understood as a criticism of the N.D.C. nor of the expenditure on re-armament. This expenditure is of the nature of an insurance premium for at least some degree of security. While the world is divided into different States, some of which seem to think violence is the only way of overcoming difficulties, it is a duty which we all readily accept to see that the country is fully armed to resist violence until such time as all States are prepared to accept justice as the measure of their obligations and privileges and to refer all disputes regarding them to arbitration by a properly constituted authority.

CONTINGENCIES RESERVE

But to return to our figures; we want to make provision, as far as possible, that these contributions to National Defence shall not have the effect of diminishing your dividends nor do we wish them to diminish the amount which we feel it essential from year to year to set aside for contingencies reserve. Contingencies reserve cannot be diminished while we have the present state of international affairs,

which gives rise to many trade difficulties. It does not need a European war to create these difficulties—they are inherent in the unsettled international conditions.

I have said that we are carrying forward a much larger undistributed balance in the profit and loss account and this will be available, if necessary, to make contribution to next year's N.D.C. payment. You may say quite properly that it would have had exactly the same effect if we had transferred it to the reserve—that the matter is merely one of book-keeping—since the reserve could be drawn upon in a like manner. But "reserve" has been in existence on our balance sheet for 40 years and it has never been so drawn upon. In our minds, apart from the definition in the articles of association of its possible uses, it is a capital reserve. It has almost become a tradition with us that there should be no reduction of the figure unless it takes the form of a transfer of capital. If this and any future addition by way of carry forward in the profit and loss account is never called upon, a stroke of the pen will take it from the profit and loss account and transfer it to reserve.

You will appreciate from this rather lengthy exposition that our method of conducting this business is to try to provide for the incalculable; a method which you will agree tends to stability, a fundamental principle in our policy.

DEVELOPMENT OF THE BUSINESS

On our general activities during the year, of which the figures show the tangible results, there is little for me to say. We think we can claim that we are taking advantage of every opportunity of developing the business. To use a hackneyed phrase which hardly does justice to the facts, we keep "up to date"—perhaps I might say even in advance of that—in all our ventures. That in itself is a process of development and calls for great effort and alertness on the part of everyone engaged in the business. It is a commonplace to say that science—represented by the chemist and the engineer—is playing a steadily increasing and important part in business to-day. That is no less true of our particular business, where the chemist and the engineer have their function as instruments in our technical control. Production on the large scale we have reached would be impossible without the mechanisation the engineers have provided for us in our factories.

The effect of large-scale production of this kind makes itself felt to the benefit of the consumer in the price he has to pay for the goods, the first of the two important factors which make up value. The second factor in value is quality, and it is in the control of quality that the chemist plays his part. We have a large staff of chemists qualified in every branch of the chemistry of food and working in laboratories equipped and organised for the purpose of rigidly controlling the quality and the suitability of our materials of all kinds and the purity and standard of the resulting products. They are also constantly engaged in the investigation of problems which touch the many processes and products with which the business is concerned. They have contributed materially to the general fund of scientific knowledge in relation to food, in addition to their direct contribution to our own business. The value of this work is shown by the fact that members of this scientific staff have on a number of occasions collaborated in investigations carried out by various Government Departments.

I cannot conclude without saying that, once again, we should like to pay tribute to the part played by our staff in the successful carrying on of the business. The results we have been able to put before you are only achieved by the keenest devotion of everyone concerned to the interests of the company. The staff continues, year by year, to display a loyalty and enthusiasm for which both you, as shareholders, and we, as directors, of this great enterprise have every reason to be grateful.

I now propose the resolutions which the secretary will read and shall ask Mr Harry Salmon to second them. (Applause.)

The secretary then read the resolutions as follows:—

"That the report of the directors and the balance sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of 1s. 8d. per share on the issued ordinary and 'A' ordinary share capital of the company and 4d. per share on the proportional profit and 'B' proportional profit share capital of the company be and are hereby confirmed; and that a final dividend be paid for the year ended March 31, 1938, of 2s. 10d. per share to the holders of ordinary and 'A' ordinary shares of the company and 6.8d. per share to the holders of proportional profit and 'B' proportional profit shares of the company who were on the registers on the 6th day of May, 1938."

MR HARRY SALMON'S REMARKS

Mr Harry Salmon, J.P. (one of the managing directors): Mr Chairman, Ladies and Gentlemen,—I have much pleasure in seconding the resolutions proposed by the chairman. I do not think that

I can usefully add anything to his remarks on the figures of the past year. They are evidence that the company still maintains its position in the forefront of the catering industry. In this connection I cannot refrain from expressing the satisfaction your directors feel in the compliment paid to the company by the appointment of its chairman as Hon. Adviser on Catering to the British Army. (Applause.)
