THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXXXII

BEING FROM JULY TO SEPTEMBER 1938, INCLUSIVE

State Secrets

IT is imperative even in a democracy that certain facts which might be helpful to a possible enemy should be kept secret. The Government must be accorded adequate powers to ensure that, in such cases, this secrecy is safeguarded. But it is equally essential, both for the safety of the State and for the preservation of liberty, that the House of Commons and the Press should not be hampered in exercising their traditional right—which is also their duty—of criticism. This function can only be effectively performed if Members of Parliament and journalists are well informed; hence it is part of their day-to-day business to secure information from all possible sources.

It is natural that there should be some conflict of interest in this matter between the Executive and their possible critics; for no one is anxious to supply information that may possibly be used against him. The line is, therefore, likely to be drawn too strictly if too much discretion is left with those who are liable to be shot at. On the other hand, Parliament and the Press are rightly jealous of their public functions and sensitive to any action which would tend to restrict them. Constitutional history is packed with incidents illustrating the principles at issue, but we need go no further than our own times for examples. In the spring of 1915, for instance, the Press campaign against the War Office because of the shell shortage at the front could not have been launched without information only obtainable from serving officers in France, which on a strict interpretation could have been regarded as an "official secret." In this case the Press was right, whereas the Prime Minister of the day was wrongly informed. Again, during the last two and a half years, Mr Churchill has been more accurate in his estimate of the pace of German re-armament than the Government; and the strictures which he and other critics have made on the progress and scale of our own air re-armament have proved fully justified.

Both Parliament and the Press are constantly getting information from Service and other sources—much of which they cannot and do not disclose—which helps them to form their judgment on public affairs. But the tendency to enlarge the scope of the Official Secrets Acts is placing new obstacles in the way. The storm in the House of Commons this week over the case of Mr Duncan Sandys has therefore an importance far exceeding the particular details involved.

The curtain rose on this Parliamentary drama after questions on Monday last, when Mr Sandys revealed that he had sent to the War Minister a draft question which he proposed to ask in the House of Commons about our aircraft defences. This showed the writer to be in possession of secret information about our military dispositions.

Mr Hore-Belisha's reply after consultation with the Premier was to put the matter into the hands of the Attorney-General, who asked Mr Sandys to reveal the sources of his information, and pointed out to him that, under the Official Secrets Acts, the penalty for refusing to disclose the name of an informant might be two years' imprisonment. It was not until Mr Sandys made it clear that he would raise the matter in the House that the Attorney-General withdrew, and offered to give him an unqualified promise that the powers of interrogation under the Act would not be enforced against him. On the advice of the Speaker, however, Mr Sandys gave notice of a motion, which the Government accepted, to set up a Select Committee to inquire into the incident and generally into the applicability of the Official Secrets Acts to Members of Parliament. The next day it was announced that the Army Council had set up a military commission of inquiry to discover how the leakage had occurred. On Wednesday, Mr Sandys, who is a second-lieutenant in an anti-aircraft unit of the Territorial Force, startled the House with the news that he had been summoned to appear in uniform to give evidence before this court of inquiry. The Speaker at once ruled that, as the matter was under consideration by the House, there was a *prima facie* case that this action constituted a breach of privilege. Thereupon the Prime Minister proposed that this latest development should be referred to the Standing Committee of Privileges, and in reply to questions intimated that, in so far as Mr Sandys was concerned, the military proceedings would be suspended until the Committee of Privileges had reported.

On Thursday the Committee decided that the action of the Commission was a breach of the privileges of the House—thus vindicating Mr Sandys' claim that the military authorities were not entitled to summon him to give "certain information" at a moment when the House was itself considering the propriety of his being asked to do so.

The House then proceeded to set up the Committee requested by Mr Sandys. The report of the Committee, besides dealing with the incident itself and with the relation of the Official Secrets Acts to Members of Parliament, will presumably bring many other matters of principle under consideration—including, perhaps, the problem of reconciling the responsibilities of a Member of Parliament who is also an officer in the Territorial Army. It may be, also, that an indirect result of the Inquiry will be to stimulate activity in the provision of more adequate anti-aircraft defences. Judgment must, however, be suspended on all the matters under review until the Select Committee's report is presented.

There for the moment the matter rests. But it is pertinent to recall that this incident follows upon considerable discussion on the proper scope of the Official Secrets Acts and the right of interrogation which they contain. These Acts are apparently capable of being stretched to an extent which might easily constitute an arbitrary form of censorship, though this was clearly not the intention of Parliament in passing them. When, for example, the Act of 1920 was put on the Statute Book the Attorney-General of that day, who is now the Lord Chief Justice, gave a definite assurance that the Act only dealt with offences under the principal Act: "in other words . . . we are dealing with spying and attempts at spying." The Act in his view was certainly not intended to refer to journalists. Nevertheless, the Act has recently been used in a police court case, which clearly had no relation to national safety, to convict a journalist who refused to divulge the source of his information. When this use of the Acts was queried two months ago in the House of Commons, Sir Samuel Hoare repeated the assurance that the powers of interrogation under the Act would only be used on the authority of the Attorney-General or the Secretary of State, and that this consent would only be given in cases of serious public importance. In view, however, of the disregard of the assurance given by Sir Gordon Hewart in 1920, there is naturally a doubt whether another verbal undertaking will bind Sir Samuel Hoare's successor. The National Union of Journalists, with the willing support of the whole Press, is therefore urging that the Acts should be definitely amended and the vague powers which they confer confined to the field intended by Parliament that accorded them.

The Sandys case has made it clear both to the House of Commons and to the public that the limitation of the powers of the Executive in these matters is not a mere academic question, but is one which vitally affects the working of our democratic system. If the country considers it wise that certain of our traditional liberties and customs should be curtailed or modified, this should be done consciously and with our eyes open. It must not be brought about through gradual and unauthorised encroachment by the Executive.

American Deadlock

MONDAY next is the 162nd anniversary of the Declaration of Independence of the United States of America. The day will doubtless be celebrated, in the traditional manner, with fireworks and political speeches. But this year, in spite of the mollifying effect of buoyancy on Wall Street, the speeches are likely to be fully as explosive and sulphurous as the fireworks; for America is suffering from a worse fit of political bad temper than has been seen in the land for very many years. It is not merely that the President is at odds with a section of the population containing not far short of half of all its members and nearly all of the more well-to-do; the language that is being used has grown in immoderation until it is out of all relation to the reality of the matters at issue, and until it blocks the way to any consistent attempt to meet the urgent problems with which America is faced. Most of the peculiar bitterness of the great controversy between the rival philosophies labelled "New Deal" and "Business" evaporates in the passage of the Atlantic, and it is difficult for the European to appreciate its intensity. But a small notion of the atmosphere prevailing can be conveyed by the fact that the person of Mr Roosevelt is now guarded more closely than that of any other President of modern times. And nobody who has sampled the conversation to be had in board rooms, at dinner parties, at golf clubs, or in any of the other resorts of the more comfortable, can doubt for a moment that the precautions of the Secret Service are very necessary.

What has the President done to deserve such hatred? That is the question which the foreign observer is impelled continually to ask. The counts in the indictment that is drawn up against the President with such vigour in every prosperous home in the country are very many and varied. But some are outstanding. One is that he has acted with deliberate vindictiveness against the most able section of the nation—against the class, incidentally, from which he himself sprang—and that he is pursuing the vendetta at the expense of the prosperity of the nation, preferring that the wheels should not turn than that they should turn for his foes. Secondly, the President is alleged by his opponents to be so lacking in fundamental convictions, so recklessly opportunistic in policies, that he is unfitted to bear the responsibility of leading a great nation. And thirdly, he is accused of unlimited personal ambition. The controversy over the Supreme Court is represented as an attempt to override the constitution to serve his own ends. There are open accusations that the November elections will be bought with public money. And the attempts now being made by the White House to secure that the rebel Democrats are replaced in the party primary elections by more faithful New Dealers can be made to look like the vaunting of ambition over even the most fundamental loyalty known to the American politician—the loyalty to party.

This is the main substance of the charges that are being made with an embittered iteration and a reckless abuse of language quite without parallel. It is unnecessary, for the foreign observer at least, to attempt to assess the precise degree of truth in them. It is for certain immeasurably less than the impossibly sweeping allegations of the President's opponents would have the public believe. Mr Roosevelt is neither a Communist nor a dictator, nor has he aspirations to be either. He is not attempting to convert the North American Republic into a South American "personalist" domain of his own. He is not debauching the American people with the taxpayer's money or asking them to abandon their traditional liberties. But though these accusations, which can daily be heard on the lips of men of sanity and judgment, are so ludicrously untrue, there is unquestionably some basis for more moderate criticism of the President. Some of his reform proposals have gone beyond the need for guarding against abuses and have become definitely penal in form; he has frequently seemed to be far less interested in exalting the humble and the meek than in putting down the mighty from their seats. There is something also in the charges of reckless experimentation; the course of monetary policy, of housing policy, the alternation between budget balancing and unbalancing, the attitude towards the attempts of industry to fix prices—all these have been unnecessarily and harmfully erratic. There is also no doubt that Mr Roosevelt has "played politics" as shrewdly as any of his predecessors, and no man can dig himself in without throwing up dirt. Moreover, these unlikeable traits of the New Deal have been much more visible in the last eighteen months than in Mr Roosevelt's first term. The quality both of the personnel in Washington and of the policies originating there has unquestionably deteriorated. There has been less and less willingness on the part of the New Dealers to draw their inspiration from the widest circles of opinion and to found their policies on a broad base of approval. Every week sees an increase in the number of former friends of the Administration who have retired to the side-lines or gone into actual opposition, until now it is very difficult to name more than a handful of eminent Americans who, without actually being in the service of the Administration, are known to be its supporters. Mr Roosevelt is certainly not the Prince of Darkness that the newspapers and the conversation of the eminent would make him out to be. But he has no less certainly disappointed his friends.

With all this, however, one fundamental fact remains. Mr Roosevelt is popular with the electors. With few friends and a multitude of enemies among the articulate, he still commands the inarticulate. Judging by all the signs, the turnover of Congressional seats in November will not go badly against him. The Presidential election of 1940 is much further off. But unless the depression becomes much more severe, it is probable that the Democratic candidate will be a person either nominated by, or at least acceptable to, Mr Roosevelt, and that he will be elected. This reveals the peculiar dangers of the present situation in America. For there is an almost complete deadlock of policy. If Mr Roosevelt lives, the opposition has no possibility of gaining control of the administrative machinery of the country for another thirty months, and only a problematical chance then. But so long as the overwhelming majority of the leaders of industry, commerce and finance, the greater part of the professional skill of the country and almost all its vocal opinion is implacably hostile to the President, none of his policies is likely to receive the co-operation necessary for success. In these circumstances the outpouring of public money is the only expedient left to the President—and even that is of doubtful value when it is accompanied by a campaign which impugns its motives and belittles its chances of achievement.

Meanwhile the American ship of State is drifting with slack sails. Skilled seamanship could manœuvre to catch such breezes of economic recovery as are stirring. But in circumstances such as these, the American constitution prohibits the setting of a course; as in 1918-20 or in 1930-32, the helm is disconnected from the rudder. No impression is left more strongly on the mind of a visitor to the United States than of the urgent need for a patriotic effort to bring about a meeting of minds. Sporadic attempts have been made before, from one side or the other, to achieve a reconciliation between the President and Business; they have all failed. But nothing is more necessary than that another attempt should be made and that it should succeed. The outside world may with more reason express this hope because we are all the sufferers from the American deadlock. In every sphere of life the world is looking west for calm, moderate and confident leadership. It is an opportunity which American statesmanship, whether in office or not, cannot afford to miss.

Capital Market Trends

A SAILOR'S life, it is said, consists of long spells of boredom punctuated by moments of intense activity. The same description might be applied to the course of the London capital market in the last six months. The prospectuses of public companies, particularly of new companies, do not always account for the major part of the new money borrowed in normal times, but they certainly lend an air of colourful activity to the market. With a depressed Stock Exchange, however, the more speculative type of industrial issue has in the past six months been conspicuous by its absence. The field has been largely left clear for substantial and well-established borrowers at fixed interest who, within the limits of the official conception of what constitutes "orderly marketing," have taken advantage of their own excellent financial standing and the absence of any further upward trend in interest rates to obtain new capital on advantageous terms. For sheer quality, the past half-year's borrowings can seldom have been surpassed; but in total magnitude they have fallen short of those of the first six months of last year.

Reference to Table I at the foot of the next page shows that the total new capital raised by direct public offer in the first half of this year was £136 millions, against £185 millions in the first six months of 1937. The total was certainly higher than in any half-year (bar 1937) since 1932. But 56 per cent. of it was attributable to a single borrower, the British Government, another 16½ per cent. to home municipalities, county councils, etc., and merely 14 per cent. to other domestic borrowers, i.e. to home industry. Only in one earlier period—1932—was the total for home industry as low as during the past half-year. Empire borrowing was on a moderate—but on no more than a moderate—scale. And the relaxation of the ban on foreign issues did little or nothing to stimulate new borrowing

from overseas, in the absence of credit-worthy borrowers.

If the net be widened so as to bring in all issues made indirectly by Stock Exchange "placing," bonus shares, etc. (see Tables II and III) as well as by direct public offer, the impression of a slump in industrial borrowing is confirmed. The total of new securities made available to the investor in the past six months was less than two-thirds of the aggregate for the first six months of last year. The total for non-official home borrowers, however, was little more than one-third of the average for the three preceding half-years. From 1935 to 1937, when British industry as a whole was active and prosperous, its "output" of new securities ran at a steady rate of about £110 millions in the first half of each year. This measure of new industrial investment, however, fell during the last six months to no more than £40 millions. Clearly, the policy of industrialists in the matter of new capital development is being determined not by the high level of current profits but by a tendency to assess future business prospects conservatively. Another factor in the same direction is the continued practice of effectively capitalising a significant proportion of each year's profits through allocations to reserve.

A close analysis of the identity of the many borrowers during the past six months can be made on the basis of Table II. Taking our all-comprehensive "new basis" figures, we find that Governments and municipalities, home and overseas, raised £111 millions of a 1938 half-year's total of £183 millions. Of the remaining £72 millions, four industries—oil, electric light and power, exploration, financial, etc., and South African mines—with the residual manufacturing and miscellaneous group, were responsible for £52 millions, or 72 per cent. No other group issued as much as £4,000,000 of new capital. Incidentally, bonus shares accounted for £25½ millions, or more than one-third of the total industrial issues.

If the Government had chosen to issue the second *tranche* of its defence borrowing after, instead of before, the turn of the half-year, our figures would have looked meagre indeed. For the time being, perhaps inevitably, we are witnessing the partial eclipse of the equity share. It remains the favourite medium of company finance, and even in the last six months it has accounted for more new company capital than debentures and preference shares together (see Tables IV and V). But its power to loosen the investor's purse-strings is limited on a falling share market. Given a continuance of even moderate

Total	75·9	167·5	101·0	84·3	43·7	13·8

industrial recession, it seems clear that any conceivable programme of public works, designed to cushion its effect on national property, must be financed chiefly by the issue of new fixed interest securities by borrowers of gilt-edged or nearly gilt-edged status. From this standpoint, the Government's decision to offer its £80 millions of National Defence Loan, last month, at an attractive price, calculated to ensure its speedy absorption by permanent investors, seems particularly sound. The period of extensive conversion of existing stocks to lower interest rates has passed, and with it the need for levering up prices to the last half-point. As Table VI shows, the British Government has carried out no conversion operation since 1934; similar operations by other borrowers have fallen to a modest figure, and are still declining. The really essential requirement of the present situation is that the market should have its decks kept clear; and that the necessity for virtually closing the market, in order that high-priced stocks may be taken out of underwriters' hands, should be avoided.

That the disadvantages of intermittent activity have not been wholly obviated, recently, will be clear from a glance at the table on page 50, in which we set out the major individual issues of the past half-year. With few exceptions, these were concentrated either at the beginning of the period, in January and February, or in its concluding weeks. So long, however, as the permanence of any Stock Exchange recovery remains doubtful, the adequate employment of the machinery of the best organised capital market in the world will pre-suppose willingness to meet the market half-way rather than to economise on decimal points. Generosity, after all, need not be unduly costly to borrowers; for there is no sign whatever of any major upturn in basic rates of interest.

Economics of the Tin Opener

THE tin-opener has become an indispensable part of the equipment of every modern home. The reasons for the introduction of canned food into the menus of rich and poor alike are manifold. Home life has greatly changed in recent years. The size of houses and households has, in general, diminished. More and more, from choice or necessity, people spend a considerable part of their spare time away from home. In large towns they travel long journeys to and from work. Everywhere they take advantage of the wide range of facilities offered for entertainment and recreation; while road travel for its own sake is a novelty of recent decades. Labour-saving devices have radically transformed the home. On the one hand, gas and electricity have facilitated the speedy preparation of food; while, on the other, canning has made much cooking unnecessary.

The acceleration of the *tempo* of home life has been accompanied by a notable change in national dietary. In the United States, the United Kingdom, the British Empire and Japan a great canning industry has grown up, which has brought many varieties of fruit, fish, meat and vegetables within the reach of the less well-to-do sections of the community. At the same time, the industry has provided agriculturalists, market gardeners, fishermen and meat producers with a relatively stable market, for part, at least, of their output. It may be opportune to examine the industrial significance of the canning trades; and to assess briefly the merits or demerits of canned food as a growing item in the nation's diet.

Most of the canned meat and fish consumed in this country, and a large part of the canned fruit, condensed milk and meat extracts are obtained from abroad. Argentina and Uruguay supply the bulk of our imported canned meat, while large quantities of canned fruit are obtained from Malaya, Australia, the United States, Canada and Japan. Nevertheless, the British industry has made marked progress in certain directions. In 1935 nearly 55 per cent. of the 2,232,000 cwts. of canned, dried, bottled and preserved vegetables consumed in this country was produced in the United Kingdom, compared with only 23 per cent. of the total for 1930. In the canning and bottling of soft fruits, also, there has been an appreciable increase in domestic output; and the manufacturing policy of the Milk Marketing Board has been responsible for a notable rise in the British production of condensed milk. In 1935 over 67 per cent. of the 4,451,000 cwts. of condensed milk consumed in the United Kingdom was home-produced, compared with only 26 per cent. in 1930. In the table below we show the apparent consumption of the principal categories of tinned foodstuffs in the United Kingdom at the two Census dates 1930 and 1935:—

CANNED FOODSTUFFS IN THE UNITED KINGDOM 1930 AND 1935
(In thousand Cwts.)

	Production		Exports		Retained Imports		Apparent Consumption	
	1930	1935	1930	1935	1930	1935	1930	1935
Meat	266	233	20	6	1,292	1,248	1,538	1,475
Fish	132	181	105	82	1,296	1,410	1,323	1,509
Vegetables	314	1,210	8	25	1,034	1,047	1,340	2,232
Fruit	315	462	29	33	3,288	4,697	3,574	5,126
Condensed milk ...	874	2,993	198	326	2,596	1,784	3,272	4,451
Soups	130	234	*	*	*	*	130	234
Meat extracts	98	91	14	13	85	54	169	132

* Not separately distinguished.

In home production the most striking increase (apart from milk) has been in the quantity of vegetables canned, dried, bottled or preserved. Despite the increasing importance of varieties of vegetables like asparagus, peas still account for half the output of this branch of the industry.

The almost complete absence of organisation in the domestic canning industry on the marketing side is in striking contrast to its high level of technical efficiency. The industry's progress in the future must depend upon its ability to improve the quality and range of canned foodstuffs; and here invaluable research work is being done by the National Food Canning Council, the Canning and Allied Trades Association, and the British Food Manufacturers' Federation, in co-operation with the National Farmers' Union, the Ministry of Agriculture, and the Department of Scientific and Industrial Research. Much is being learned about the successful canning of fruits and vegetables which have previously shown a tendency to deteriorate rapidly in quality when tinned. Progress is being made with the canning of bread; and although canned beer has not yet replaced bottled beer in a large part of the home market, its experimental introduction has been widely successful in the export trade. The fact, however, that canned foodstuffs are still usually subject to serious deterioration renders it largely impracticable to build up considerable reserves of canned foodstuffs against a national emergency. And the dependence of many branches on the production of *surplus* crops, appreciably restricts opportunities of steady-expansion.

Although the social significance of the tin-opener increases year by year, progress has not been uniform in all directions. While the consumption of canned fruits and vegetables, for example, continues rapidly to increase, that of tinned meat remains relatively stable. Between 1930 and 1935, the annual consumption of canned fruit and vegetables rose from 3.27 lbs. to 5.10 lbs. per head

of the population of the United Kingdom; that of canned and bottled fruit from 8.70 lbs. to 12.20 lbs.; and of tinned condensed milk from 8.00 lbs. to 10.65 lbs. In the Severn Valley, in London, Kent and East Anglia, fruit canning now ranks among important local industries. Fish canning has grown most rapidly in London and the ports of the Eastern seaboard, while the canning of dairy produce is well established in the grass country of the South-West, in the West Midlands and in Scotland. The British canning industry as a whole probably consumes about 60,000 to 70,000 tons of tinplate per annum.

Canning is obviously destined to fill a permanent place among British industries. Socially, it may claim to have made a considerable contribution to popular standards of living. Canned goods have brought within the reach of poorer households commodities, such as salmon, pineapples and peaches, which they could never have afforded in a fresh state, and other fruits and vegetables which were formerly obtainable only in times of glut and abnormally low prices. Certain fruits and vegetables, again, are now obtainable all the year round which were formerly available only at limited seasons. Thanks to canning, gluts of perishable produce need not be wholly wasted, and the existence of a large canning capacity in time of war would, for this reason, be valuable. The standardisation and grading of fruit and vegetables, which should be an important element in efficient and satisfactory marketing, is an indispensable preliminary to canning; and a good quality product canned may often be better than a bad quality product fresh.

There are, however, many objections to any indefinite extension of the use of the tin-opener. The commodities which, it is generally agreed, are most deficient in the national diet to-day—fresh fruit, vegetables and milk—are precisely those whose consumption in canned form is most rapidly increasing. This anomaly may be due partly to defects in the distribution of the fresh article, and partly, one must admit, to the natural desire of housewives and other consumers to conserve their own time and labour. So far as canned goods are consumed, *faute de mieux*, because urban dwellers cannot obtain fresh produce in good condition at reasonable prices, their increased consumption might involve serious questions of national nutrition. The best safeguard against such a danger would be, not to impede the progress of the canning industry, but to raise the efficiency of the distribution of fresh produce. Provided the British consumer obtains a sufficiency of cheap fresh fruit, vegetables and milk, the additional amenities furnished by canning may be welcomed unreservedly.

Topics of the Week

A.R.P. Again.—Mr Hore-Belisha's concern with defence of the civil population from air attacks seems anomalous. He is Secretary for War; has responsibility for the Army; and therefore for the Territorial Army, for artillery, and for production of land-war equipment. Since anti-aircraft defence from the land was made primarily the duty of the Territorial Army and its special anti-aircraft units, a certain amount of confusion between the War Office, Air Ministry, Admiralty, Home Office, Ministry of Health, and Ministry of Transport, was bound to occur; for each of these Departments has a direct but distinct responsibility in the general defence of the civil population against air attacks; and even the Committee of Imperial Defence, the co-ordinating authority, and its various *ad hoc* sub-committees, cannot evolve a cut-and-dried scheme which will eliminate all reduplication and conflicts of powers. Probably only a supreme Ministry of Defence could come neares that Last week-end it was announced that Mr Geoffrey Lloyd, Under-Secretary at the Home Office, would concentrate his attention on A.R.P. But meanwhile, Mr Hore-Belisha, like his opposite number at the Air Ministry, has become very energetic. On Tuesday he told the Commons that instead of two anti-aircraft Territorial divisions for the country, embracing all units, a new reorganisation scheme would raise them to five; an increase from 43,000 to about 100,000 men. The increase will be secured locally, area by area, and voluntarily. The Corps Commander in charge will be responsible to the Air Officer Commanding Fighter Command for operations; for the latter has operational control in view of the weight of our general defence system which reposes on the fighter aircraft. As the War Office is responsible for spotting the enemy by searchlights, and for anti-aircraft gunfire, a Lieutenant-General at the War Office will be made Deputy-Chief of the Imperial General Staff (Anti-Aircraft Defence), responsible to the War Minister. Under him, also in the War Office, will be a new Director of Anti-Aircraft Training and Organisation.

* * *

Unfortunately, Achilles' heel is clearly visible in all this; for the new Deputy-Chief of the I.G.S. (A.-A. Defence) in the War Office will have to go to the Director-General of Munitions Production, also in the War Office, if he wants—as he will want—more A.-A. guns. But neither he nor the D.-G.M.P. may get the guns he wants, if, say, the First Sea Lord stakes a prior claim to "pom-poms" for the Navy's programme. Back we come to the crux of our entire re-armament and civil defence programmes alike: a plethora of new subordinate appointments with new powers will not greatly help if the old conflict of powers at the top between the Services themselves, and between each of them and the supply industries, is unresolved. During the last few weeks, months, and even years, our national defence programmes have faithfully followed almost every discouraging precedent established between 1914 and 1916. Meanwhile, though plans for balloon-barrages, gas masks, public bomb-proof shelters, and evacuation of large cities appear to be hanging fire, Ministers in particular departments are doing their best.

* * *

Aircraft Production.—Sir Kingsley Wood, for example, has been quickly off the mark in reorganising and speeding up the arrangements for production of military aircraft in this country. On Monday he told the Commons of changes at the Air Ministry, involving the creation of the post of Director-General of Production, to which Mr E. J. H. Lemon, vice-president of the L.M.S. Railway, had been appointed. Air-Marshal Sir Wilfrid Freeman, the Air Member for Research and Development, would in future be responsible also for production; but he would have two assistants, one, Mr Lemon, as Director-General of Production, and the other, as Director-General of Research and Development, would be Air Vice-Marshal A. W. Tedder. Mr Lemon took over his new post at once, and becomes a member of the Air Council after having been an expert on the L.M.S. since 1911, when he joined the railway as wagon inspector. He introduced methods of continuous production into the L.M.S. works at Derby and elsewhere, particularly for the planning and production of locomotives and rolling-stock. His knowledge of these methods, and of the ancillary trades and specialised auxiliary equipment involved, is said to be second to none. This appointment on the production side, the extension of Sir Wilfrid Freeman's duties to cover production, and the parallel activities of Sir Charles Bruce-Gardner, recently appointed liaison officer between the Air Ministry and the industry, should combine to bridge the gap between production and the Government's programme. As Sir Kingsley said on Monday, it is a good beginning. But the need for more changes may now become more evident. The number of recent changes only shows how much better the problem could have been handled by a Ministry of Supply.

* * *

Dominions and Foreign Policy.—In the absence of a jointly conducted Commonwealth foreign policy, the policy of the United Kingdom must always be conducted with an eye to the views of the Dominions. For in a crisis their opposition or hesitation might prove fatal to swift action, or might even split the Commonwealth. The decisiveness of British policy is thus under a handicap, of which the Attorney-General of Australia spoke courageously in a speech last week. If, as he hoped, the British people were to have one voice, the voice must speak in terms of clarity and with weight and proper authority. They must therefore devote themselves increasingly, said Mr Menzies, to the problem of accelerating and completing the process of consolidation between the United Kingdom and Dominion Governments. The response to this speech in Australia has been remarkably consistent. Indecisiveness and lack of co-ordination in Commonwealth foreign policy, say the Australian newspapers in effect, are the fault of the Dominion Governments themselves for not using the available machinery. If they are unable to impress a clear national policy on the Cabinet at Westminster, that is mainly because in their own countries they stifle public discussion of foreign affairs and deprecate the expression, in parliament or the Press, of decided opinions about British policy.

* * *

This reaction is an echo of the controversy over Mr Eden's resignation, which Mr Lyons declared was an internal British matter and not a subject for debate at Canberra. Whatever the merits of that particular occasion, the Australian Press is surely right in pointing out that the Dominion Governments cannot have it both ways; either they must formulate and conduct a clear and distinct foreign policy of their own, or they must constantly intervene, in the name of their people, in the formulation and conduct of the foreign policy of the United Kingdom. A further illustration of the problem was afforded this week by a passage in the Governor-General's speech at the opening of the New Zealand parliament, in which his Ministers reaffirmed their belief that the people of the Dominion regarded themselves as one with the people of the United Kingdom, with whom, in the future as in the past, they would always stand. As the speech also mentioned a topic on which there has been open difference between the Governments of New Zealand and the United Kingdom—namely, collective security under the League of Nations—there may be some significance in the reference to peoples rather than governments. It would be regrettable, however, if any blurring of the issues, of which there is some suggestion in this instance, were to cause misunderstanding at moments of crisis.

* * *

Bombing Unabated.—If the House of Commons was perturbed by the tragic situation brought to light in the debate on June 21st, recorded in our last issue, there are grounds for real dismay in the swiftly moving course of subsequent events. The Prime Minister is allowing it to be deliberately established, by precedents that will now never be forgotten, that there is one law for the aggressor Powers and another for other countries—e.g. for Great Britain and for Governmental Spain. To all proposals for protecting British merchant shipping and seamen on their lawful occasions in Spanish territorial waters, Mr Chamberlain replies *non possumus*. Either the suggestion which this or that member makes in the House is dismissed as being technically impracticable or else it is ruled out as involving participation in the war. In fact, the Prime Minister declares that we are completely inhibited from making any attempt to protect British lives and property though these are engaged in lawful and peaceful commerce,

Now, Signor Mussolini declares through his mouthpiece, Signor Gayda, that he will retort with every military weapon that he commands if the Spanish Government retaliate for the bombing of Spanish civilian populations by Italian and German airmen—an atrocity of which the Italian Press is now openly boasting. The occasion of this outburst of Italian—and also German—threats was an announcement, made by the Spanish Government on June 25th, that if the bombing of Spanish civilians by foreign airmen continues they may be driven to reply. Apparently the Spanish Government meant to hint that they would launch counter-raids, not upon civilian populations in Italy and Germany, but upon the Italian and German military aerodromes on the Spanish islands of Majorca and Minorca, where the bombers of Barcelona and Valencia have their lairs. It would be hard to find a more gross affront to the instinct of fair play than the suggestion that any retaliation by Barcelona on the headquarters of the Italian "legionaries" in an island which belongs to Spain would bring Italy into active war against the Spanish Government. Either the implications of retaliatory bombing or anxiety not to force Mr Chamberlain too far have lead General Franco to show signs of moderation—in words if not yet in deeds; for it has been intimated through the roundabout but significant channel of the Italian Foreign Office that General Franco will in future endeavour to prevent his allies' bombers from hitting British property and British citizens. And the return of Sir Robert Hodgson from Burgos this week may be the prelude to yet another "understanding" with Franco. Yet it is with Signor Mussolini that the only valid understanding can be made, and there is still no real ground for any hope that Signor Mussolini will refrain from pressing his plans *à l'outrance*.

* * *

What Has Happened in Austria?—Not only the Jews in Austria have felt the raw edge of the Nazis' governance. Good Aryan Austrian Nazis—but wearing Nazidom, as the Austrians always wore Germanism, with a difference—have been offended, even outraged, by the unbridled excesses of German Nazi youths ever since March 12th. Not the sober discipline shown by officers and men of the Reichswehr, but the vulgar hooliganism of "young men in a hurry" impressed Austrians with foreboding. "A servant when he reigneth" is seldom a pleasant colleague; he is always an unpleasant taskmaster. So the Austrian Nazis have found. First, Herr Seyss-Inquart, Nazi supplanter of Dr von Schuschnigg, was himself supplanted by Herr Buerckel, of Saar notoriety. The excesses against the Viennese Jews, an outlet for the animal spirits of the young German brownshirts and blackshirts, grated on the finer susceptibilities of Aryan Austrians themselves; and when some intervened on behalf of the Jews, and felt the full weight of Reichsdeutsch crudity, feelings ran high in Vienna. Herr Hitler was said to be going

there to straighten things out in the Nazi Party of his own Motherland; but he cancelled the visit a fortnight ago; and instead, Dr Seyss-Inquart and one or two other Austrian Nazi notables were bidden to Germany last week. During the last month a great increase in illegal leaflets and printed oppositional propaganda in Austria has occurred; the dual Party lute in Austria has developed a rift; and Herr Buerckel's administrative efficiency is being impaired. All of this is more the work of disgruntled Austrian Nazis than of Socialists or Communists; for the German Nazis were surprisingly kindly disposed to the latter who had, after all, fought on proletarian barricades against the Catholic, Italianate, anti-Nazi Heimwehr in 1934. And these developments, significantly, are having a potent moderating effect on the extremism of the Henlein Party in Czechoslovakia. Herr Henlein now sees Herr Krebs sitting in the German Reichstag as Member and Gauleiter for the Sudetenland—the Buerckel of Czech-Germany! It is a sobering reflection.

* * *

Parliament and the Coal Bill.—Both Houses of Parliament have now accorded three readings to the Government's Coal Bill; but the Lords' approval granted on Tuesday last is a bitter benison. Earlier this year the Commons whittled away at Part Two of the Bill, which was originally contrived to secure the compulsory amalgamation of colliery undertakings in default of voluntary action. Now the Upper House have challenged the valuation of royalties for the purpose of State purchase contained in Part One. The coalowners refused to admit the equity of the Greene Committee's figure of £4,430,000 for the average net annual income derived from royalties between 1928 and 1934, or the validity of the figure of £66,450,000 for the total compensation payable on the vesting date in 1942. Accordingly, after a strenuous conflict conducted in Committee and on Report over the terms of some 220 amendments, the Bill has emerged for the Commons' further consideration with the vesting date deleted and the procedure of valuation for particular properties rendered almost impossibly protracted. It is true that many of the minor amendments carried by the Lords have added point and clarity to a notably complicated measure. It is true, too, that the coal-owning peers refrained from putting into effect their threat to throw out the nationalisation of royalty rights *in toto*. Yet, since the recalcitrant group have announced their intention to fight to the last ditch for the crippling amendments they have made, a major conflict between Lords and Commons is not impossible, and the Government have been placed in an extremely embarrassing position by the intransigence of their own supporters. To the observer it would seem that the future well-being of the coal industry, ostensibly the Bill's chief objective, has been long since forgotten. But it is hardly likely that the Government, whose own project this unfortunate measure is, will follow their surrender of compulsory amalgamations by accepting the almost complete emasculation of the nationalisation clauses that have been sponsored by informed critics of the coal industry from all parties ever since the war.

* * *

Wages and Family Needs.—The Commons' continued discussion of Ministry of Labour questions on June 24th was intended to be an examination of the present plight of Lancashire in view of the deep depression which has once more beset the textile trades. Sufficient was said to reveal conditions of unemployment and underemployment in various coal and cotton districts, whose gravity was in no way diminished by Mr Ernest Brown's congratulatory reference to the relative prosperity of Manchester. For the most part, however, the Commons followed the lead given by Mr Amery and Mr Harold Macmillan in discussing the plight of households in all parts of the country whose total earnings were wholly insufficient to maintain their members in a state of physical efficiency. The well-known findings of Sir John Orr and Mr Seebohm Rowntree were cited, in addition to the disturbing facts revealed by the recent Report of the Unemployment Assistance Board, to show how great was the present burden of poverty and malnutrition, especially upon the large numbers of children in necessitous households. Two years ago, Sir John Orr estimated that, whereas only 10 per cent. of the population were included in the poorest class whose income per head was less than 10s. a week, nearly one quarter of the nation's children were to be found in that group. As recently as March last, Mr Rowntree (revising his earlier estimates in view of the higher cost of certain items in his working-class budget) calculated that a man, wife and three dependent children living in a town needed a total income of 55s. every week in the year to meet their barest needs. In larger towns like London minimum earnings would need to be even larger. Actually, according to Mr Rowntree's estimates in March, some 40 per cent. of adult male urban workers earn less than 55s. a week, and over 33 per cent. earn less than 50s. On Wednesday, the Prime Minister said the time was not ripe for an inquiry, but a *prima facie* case for some investigation of the relation between needs and earnings among the lower paid workers and their families have been clearly established.

* * *

Poverty and Public Health.—In matters of health and nutrition there are signs of a new discernment among politicians and public men. The quality of the food, clothing and shelter available to poor people is now recognised to be as important as their quantity; and the lack of sufficient fresh protective foods in many families' diets is generally acknowledged. The National Association for the Prevention of Tuberculosis is meeting in London to discuss, among other things, yet another disturbing correlation between poverty, malnutrition and disease. If fat-containing foods are not available in adequate quantities, the incidence of tubercle is correspondingly increased. Only the politician can secure redress of the serious social dangers revealed by such investigations. But it is a wholly desirable trend in current affairs that doctors and scientists should more and more be making it their business to point out the social reference of their expert knowledge. In the past there have always been individual doctors in the forefront of social reform. But doctors' organisations have not infrequently been precluded by their purely professional preoccupations from making their due contribution to social policy. Recently, the British Medical Association have evinced a striking readiness to show how the existing social services could be altered and enlarged to secure the highest possible return in the shape of national health and nutrition from the nation's individual and corporate expenditure. Last week, in collaboration with the Trades Union Congress, the B.M.A. published a plan to provide a complete national maternity service for all expectant mothers. The scheme is designed to give every mother the continuous services of a qualified practitioner and the best advice about nutrition, diet and hygiene. Proposals for the financing of the scheme have not yet been issued; but a nation-wide campaign to reduce the tragically high rate of maternal mortality should command the most sympathetic attention from all parties. The proposed maternity service dovetails with the B.M.A.'s boldly advertised suggestions for the extension of National Health Insurance to cover dependants and others, as well as insured workers. It is for public opinion to press the urgency of action.

* * *

Swiss Neutrality.—Addressing herself on May 21st to each of the two non-League—or should we say frankly anti-League?—Powers of the Rome-Berlin Axis, Switzerland has emphatically reaffirmed her adherence to the four-hundred-year-old Swiss policy of neutrality, and in particular to the final formulation of her neutral status in the peace treaties of 1815. She has recalled that she became a member of the League of Nations in 1920 on the express understanding that membership was not incompatible with her existing status, and that she would not be required either to take part in military sanctions herself or to give passage through Swiss territory, for this purpose, to the troops of other State members. Finally, she has drawn attention to the memorandum which she sent to the League Council on April 29th last, announcing that henceforward Switzerland would not take part in any League sanctions even when these did not involve military action. This Swiss move has naturally been responded to, with alacrity, by both Rome and Berlin, and this diplomatic transaction threatens to drive another nail into the coffin of our post-war system of collective security. For the Axis Powers are obviously hoping that Switzerland's example will now be followed by the Scandinavian States and by the Low Countries. For this unfortunate aggravation of our present international ills, Switzerland herself cannot altogether be blamed. Yet, if Switzerland is not to be blamed, she is also perhaps hardly to be congratulated. The "will to neutrality," which the Swiss Government have declared will meet, says Herr von Ribbentrop, with a corresponding "will to recognise and respect this neutrality" on the part of the German Government. The Swiss Government may carry out its obligations with all the scrupulous care of the Scribes and Pharisees without ever being able to feel sure that Herr von Ribbentrop will have the "will," on his side, to give Switzerland a clean bill of neutral-mindedness. Are the Swiss Federal Council quite certain that collective security is dead? On the very date on which they were despatching their notes to Germany and Italy, something very like collective action was preserving the security of Czechoslovakia. On this issue between neutrality and solidarity the last word has not yet been said.

* * *

Mexico Again.—On Monday it was reported that the Mexican Government had abandoned their projected internal loan of 100 million pesos, scheduled for issue on July 1st. While this news emphasises the financial straits of President Cárdenas's administration, the news on Tuesday was more disturbing. A contract, reported to be worth £2,000,000, has apparently been drawn up, now awaiting signature, between the Mexican Government and the W. R. Davis Co., of New York, which conducts a large business in, and with, Germany. The company would take, in six months, 12 million barrels of Mexican oil now produced wholly by the Mexican Government or by Government-controlled Mexican concerns—payment for which will be made by Germany in cash for 40 per cent., and for 60 per cent. in orders for machinery, constructional contracts, etc., from Mexico. Of this oil, 40 per cent. is said to be for the open market; but as the price of oil in the deal is also said to have been fixed at current American rates, it is doubtful if Germany will be prepared both to buy and sell two-fifths of the oil at any price. More probably, transactions will take place on semi-official German instructions—and the free-market oil will be sold when, and wherever, free exchange can be secured. On Thursday it was announced that Mr Davis had retired from the Board of Parent Petroleum Interests, Ltd., an English company in which London and Thames Haven Oil Wharves hold a large interest, and that the company's German and Scandinavian holdings, originally brought in by Mr Davis, had been sold back to him. British shareholders of Parent Petroleum Interests have now bought out all foreign-owned shares. The significance of all these developments is that the Mexican Government, by this aid from Germany, can count on current cash for a few more months. On the other hand, the Shell and Standard oil groups, against which the Mexican Government's expropriation decrees last March were indirectly aimed, have running contracts with Germany; and if Germany and Mr Davis together indirectly assist the opposition, doubtless Germany will not be allowed by the big oil companies to get away with everything, including some of their own Mexican oil into the bargain. Meanwhile, as prophesied in our article on Mexico on April 2nd last, President Cárdenas has driven himself, a self-styled anti-Fascist, into the closest economic collaboration with Germany, by aid of an American intermediary. The exports and contracts envisaged in the new contract will oust much British and American trade and influence from Mexico; Germany will slip into first place; and Italy and Japan are among the next countries on the list for such barter transactions. The implications of this Mexican story are beginning to emerge. They will ramify much farther yet. And they may involve the State Department at Washington.

* * *

The New Ministry in Egypt.—On June 23rd it became known that the Prime Minister of Egypt, Muhammed Pasha Mahmud, after consultation with King Farouk, had reconstructed his ministry in order to bring in the dissident Wafdists—who call themselves Saadists after the name of the founder of the Wafd, Saad Pasha Zaghlul. Out of thirteen seats in the new cabinet, the Saadists hold five, including the important Ministry of the Interior, which has been given to Mahmud Fahmi Pasha Nokrashi, and the Ministry of Finance, which has been given to Dr Ahmed Maher. The orthodox Wafdists have been quick to denounce this change as a fresh example of "Palace government"; and any foreign observer of Egyptian affairs will be on the watch for signs of a reversion to a regime which, in the reign of the late King Fuad, so frequently alternated with spells of semi-democratic parliamentary party politics. In present circumstances, however, the split in the Wafd, and the entry of one of its two wings into coalition with the Liberals, looks like a sign of political health, failing proof positive to the contrary. At any rate, the converse is undoubtedly true: that is to say, the largely successful attempt of the Wafd, between 1919 and 1936, to acquire a single-party monopoly of political power in Egypt, was certainly a sign of political ill-health of which the cause was not far to seek. During those years, Egypt was in an anomalous position *vis-à-vis* Great Britain; and the wish to place Egypto-British relations on a mutually satisfactory, normal and permanent footing was a paramount aim of the Egyptian people, for which the Wafd could fairly claim to be the most effective instrument. Now that the Anglo-Egyptian question has at last been happily settled, the old over-riding issue in Egyptian politics is extinct, and has been replaced by other issues—e.g. national defence and various aspects of domestic social welfare which are enumerated by the King in the royal rescript appointing Mahmud Pasha's reconstructed government. On these issues, it is entirely wholesome that Egyptian opinion should divide; and this on new lines.

Geneva and Alexandretta.—The Franco-Turkish game that is being played to-day in the Sanjak of Antioch and Alexandretta is one more example of the policy of preserving peace at almost any price to other people by the cynical sacrifice of parties who are too weak to resist even the most flagrant and brutal violations of their rights. In this case the three parties are Syria, a State which is still under French mandate; France, who as mandatory is in the position of trustee for Syrian rights; and Turkey, who has a legitimate interest in the Syrian province of Alexandretta in virtue of the fact that there is a Turkish element in the local population. Turkey's right to take an

interest in the welfare of this Turkish minority outside the national frontiers has never been contested either by France or by Syria. But it gave rise to long and arduous negotiations when, in 1936, a Franco-Syrian treaty was concluded, on the Anglo-Iraqi model, for the termination of the French mandate and the assumption, by Syria, of full sovereign independence. Both France and Turkey then consented to invoke the good offices of the League; and it seemed as if, with the League's help, they had arrived at a permanent arrangement that would be more or less satisfactory to all parties. The district was to remain part of Syria, but it was to have a far-reaching local autonomy in which the several elements in the local population were to participate in proportion to their numbers. To ascertain what these numbers actually were it was agreed that the League of Nations should send an electoral commission to the spot—and hence these tears. It has now become evident that the local Turks will not be allotted a majority of the seats in the local Parliament on the basis of the Commission's findings; and the Turkish Government have therefore anticipated the conclusion of the Commission's labours by repudiating the Commission and the League and all its works as far as Alexandretta is concerned. It is said that Turkey and France have arrived at a private arrangement for giving the Turks 22 seats in the Alexandretta Parliament out of 42. If this is really true, the mandatory for Syria is trading away legitimate Syrian interests, in defiance of the impartial fact-finding of the League, in order to keep on the right side of Turkey.

Future Empire Migration.—The report of the Oversea Settlement Board is the latest of a sequence of documents on Empire migration which show a gradual recognition of the complete change effected since last the migratory stream was in spate. The waters are now flowing, so to speak, uphill; for the United Kingdom has been for some years the principal, if not the only, immigrant country of the Empire. The Board have realised that this is no temporary aberration, since the stationary and even declining total of the British population will allow no margin to be spared for migration overseas. Even now, as they remark, "it is only from the point of view of the strengthening of the Empire as a whole that the encouragement of migration from the United Kingdom can be justified." That encouragement, they submit, must not take the form of organised schemes of land settlement, whose failure in the past has given State-aided Empire migration a bad name, but rather that of assistance to individual infiltration into Dominion industry. The Board point out that migration is a matter of attraction, and that it is therefore incumbent on the Dominions to create the conditions which will cause people to migrate. In spite, however, of efforts here and in the Dominions, they contemplate that the supply of British immigrants will be inadequate for the Dominions' social and defensive needs. Hence they favour a carefully regulated flow from other countries whose people are of broadly the same stock as ourselves, and who have a similar outlook. The trouble is that such countries, notably the Scandinavian group, to-day share the trend towards a stationary and ageing population, which characterises Great Britain and some of the Dominions themselves. Clearly, the problem of Empire migration needs thinking out afresh.

* * *

Japanese and Western Prospects in China.—It remains uncertain whether the flood waters of the Yellow River and the Yangtse are going to save Hankow. On the south side of the Yangtse the Japanese are still advancing, and on their northern wing they claim to be pushing on from Shansi into Shensi. Yet the rulers of Japan are now expecting an almost interminably long duration of the war. On June 23rd, for example, the Cabinet at Tokyo approved plans, submitted by the president of their planning board, for the mobilisation of the nation's material resources. The paramount aim appears to be to keep up Japan's export trade by ensuring as large as possible an inflow, into Japan, of raw materials, and as small as possible a consumption of these materials, or of the products manufactured from them, in the home market. As her gold reserve dwindles, Japan is coming to depend more and more upon exports as a means of purchasing the vital supplies without which she can carry on neither her war in China nor indeed her own national life. In the end Japan may find herself being strangled by virtual sanctions which she will not be able to fend off by military threats because they will not be deliberate acts but simply the automatic consequences of a world-wide tendency.

* * *

Meanwhile, the Japanese are moving towards arrogating to themselves a monopoly of the foreign trade in the areas of China that are at present under Japanese military occupation. The first step towards this end is to get rid of the extra-territorial privileges, in China, of all foreign Powers except Japan herself; and last week the Japanese, according to their custom, sent up a *ballon d'essai*. On the occasion of a Japanese-American incident in Shanghai—in which a United States citizen had been gratuitously slapped in the face by a Japanese sentry—the local Japanese official spokesman declared that, in Japanese-occupied territory in China, Westerners were no more entitled to enjoy any special privileges than they were in Japan itself. This declaration has since been whittled down—likewise according to custom—but we have certainly not heard the last of it, any more than the Japanese have heard the last of the China War. The war would last ten years, or perhaps twenty, said General Ugaki on June 25th. Who should know better than the Japanese Minister for War?

* * *

Three Months' Revenue.—The figures for the revenue and expenditure of the Exchequer in the first quarter of the financial year are never more than the most imperfect guide to the state of the national finances. In the return that was issued on Thursday evening, the chief point of general interest lies in the rate of expenditure on the defence services, which is shown below:—

DEFENCE EXPENDITURE (£ Million)

	1935–36	1936–37	1937–38	1938–39
First quarter ...	27·5	37·5	46·3	65·8
Second " ...	30·3	41·2	58·3	...
Third " ...	37·3	48·0	68·3	...
Fourth " ...	41·8	59·4	89·3	...

The reduction as compared with the March quarter is mainly seasonal in character. But the increase as compared with the same quarter of the previous year is less than in either of the two preceding quarterly returns. There seems to have been some retardation in the flow of defence expenditure. Among the revenue items of the statement (which is printed in full in our Current Statistics section) the effect of the recession can be seen in the decline of the yield of customs. But surtax, with its longer time-lag, is still rising rapidly.

* * *

Business Prospects in Sweden.—The Swedish Government's endeavours to diminish trade fluctuations by means of a planned investment and budgetary policy have attracted world-wide notice in recent years. The deepening of general recession in the last few months has enhanced this interest. An article recently published in the Bulletin of the London and Cambridge Economic Service shows that, to the end of May, the economic situation in Sweden had shown remarkable stability. Internally, there were no causes for pessimism. The more serious consequences of speculative activity in 1937 had been liquidated without any fundamental worsening of industrial prospects. The primary threat to stability now lies in the declining exports. The Riksbank's large holdings of gold and foreign exchange will obviate the need for a restrictive monetary policy. Moreover, there is in reserve an emergency Budget of 231 million Kr. to provide for an elastic and speedy increase in public works if and when material signs of depression appear. In addition, the Government proposes, if necessary, to stimulate private investment by exempting joint stock companies from taxes on income set aside as "Konjunktur-investmentfunds."

Congress and Economic Affairs

NEW YORK, June 20. — The session of Congress which has just ended marks another milestone in an era of legislative concentration on economic affairs. This session (if the special meeting last autumn can be counted as a part) was called to enact further business reforms in accordance with the President's October message. Actually, a considerable part of its energies were devoted to measures to cope with depression. The major legislative measures adopted can be grouped under three heads: fiscal operations, agriculture, and business and labour.

The effect of recent fiscal enactments is that total appropriations and reappropriations are calculated at something of the order of $12,000 millions, largely for the fiscal year beginning on July 1st. This is stated by the Press to be the largest for any peace-time year. Some additional amounts will have to be added for the forthcoming fiscal year by the next session of Congress, since the measure for providing for relief makes available funds which are expected to be sufficient for only the first six or eight months of the year.

Apart from the normal operations of the Government, the chief appropriations are for relief, agriculture, public works, flood control, loans to business, and national defence. Many objectives are discernible in these appropriations of a longer term nature than mere alleviation of the present depression. Among these are the conservation of national resources, the furtherance of a permanent programme to ensure social security, and more adequate defence in a troubled world.

Nevertheless, the main objective, in current interpretation, is mitigation of the present depression. Large expenditure is still regarded as necessary for this purpose. In addition to providing relief to individuals, such expenditures serve the wider monetary purpose of augmenting purchasing power. Purchasing power theories still dominate in State policy.

In the early stages of the session efforts to balance the Budget were uppermost. The President's Budget message in January still laid stress upon this aim and emphasised the reduction of expenditure. Monetary policy, revealed by Federal Reserve action, however, had already turned expansionist, as was shown by partial gold desterilisation in September and open market operations in November. But monetary policy in its fiscal aspects was not altered in direction until later. The absence of efforts to raise additional revenue in face of the decline in receipts occasioned by slackening business, attests, together with the appropriations, the purchasing power objective.

The second group of the Congress's measures dealt with agriculture and set up a broad mechanism for agricultural planning and control more sweeping than the original Agricultural Adjustment Administration. The measures include marketing quotas and acreage allotments, with penalties; crop insurance (only for wheat so far); parity income payments; soil conservation; purchase of commodities for relief distribution; crop loans; and export bounties. Some part of the large appropriations already mentioned were made to finance this complicated programme. While the machinery thus established is designed to carry out a long-term agricultural programme to keep production in step with demand, the depression, declining prices, and the prospect of a bumper crop undoubtedly spurred on its enactment.

The third broad group of measures was concerned with specific businesses and business practices, and included labour questions. Among these were the establishment of a civil aviation authority; revision of the Corporate Bankruptcy Act (not covering railways); provision for the regulation of security transactions not made on organised exchanges; additional regulation of food, drugs and cosmetics; liberal provisions for the financing of residential building; the establishment of minimum standards for wages and hours of labour; revision of the Merchant Marine Act; the revision of various taxes; and the initiation or continuation of a number of investigations into business practices which have fallen under suspicion.

The Aims of Legislation

Few generalisations can be made about such divergent measures. They show that the legislature's close attention to economic matters has not been relaxed. The object of stimulating recovery is evident in several, such as the tax reforms, the Housing Act, and the Wages and Hours Act. The purpose of several more is the elaboration and modification of previous business enactments in ways in which experience has suggested that revision would be advisable.

The purpose of later additional economic legislation is suggested by the investigations which have been set on foot. Chief among these is the forthcoming inquiry into monopoly and the concentration of economic power, a question which has been an important public issue in this country for more than four decades. The Committee to make this investigation will consist of six members of Congress and six others drawn from executive departments. Their researches will be concerned with monetary policy as well as business practices, and they have been instructed to consider some adjustment in the purchasing power of the dollar. The topics of other investigations include the Tennessee Valley Administration, alleged subversive activities in the merchant marine, the costs and prices of certain commodities, profit sharing in industry, phosphates, and water resources.

The Wages and Hours Bill, passed in the closing days of the session after many reverses in earlier months, will, if signed by the President as expected, mark the chief step forward in Federal regulation of business secured during the session. It is the second attempt to increase Federal powers over labour conditions, the first (included in the National Recovery Administration) having been declared unconstitutional by the Supreme Court. The measure which finally emerged from Congress was a compromise between the Senate's version, which provided for very wide administrative discretion, and the House's proposal, which was quite rigid in its provisions.

During the first year of the Act's operation employees are to receive not less than 25 cents per hour, not less than 30 cents per hour during the following six years, and thereafter not less than 40 cents per hour. Maximum hours during the first year are fixed at 44 per week, during the second year at 42 per week, and thereafter at 40. Exceptions are made for periods of exceptional seasonal activity, for special arrangements on an annual basis, and a number of exempted businesses. Administration of the Act is vested in the Department of Labour, and committees from each industry are to be set up with considerable discretionary powers to vary the Act's requirements.

In one major field where some enactment was fairly generally expected, none was forthcoming. This was railways. With about one-third of the railway mileage in the United States now in bankruptcy, and with additional systems threatened with inability to meet their obligations because of the low level of traffics and increased costs, numerous proposals for legislative assistance were made. These included financial aid and the encouragement of reorganisation. The absence of legislation in this field has led to some discussion of the possibility of a special session of Congress before next January. Such a step would be most unusual in a campaign year. Its likelihood probably depends upon the course of business.

The Government's Prospects

PARIS, June 28.—In world politics, the renewed collaboration of France and Great Britain seems to have provided a solid counterpoise to the manœuvres of Germany and Italy. In world economy, renewed depression in the United States of America and even in Great Britain has weakened the dollar and the pound. In French domestic politics, Parliament has adjourned for several months, and the Daladier Cabinet seems to be assured of a fairly long lease of life. The dispute between the Socialists and Communists is still unsettled, and the former accuse the latter of making impossible demands.

Taken together, all these circumstances tend to strengthen the Government's hand and to give M. Daladier the long-awaited opportunity to work for some genuine improvement in the country's economic situation. Without some recovery, the improved monetary position cannot be maintained.

What is most necessary is an end to the foolish and fatal clash between capital and labour, who are now urgently required to work together to secure the much needed increase in industrial production. Already, the Government's task has been made easier by the revival of confidence, which has led to the repatriation of 20,000 million francs of flight capital. Now they have turned their attention to the problem of increasing production.

Financial Policy

The Government is at present engaged in renewing the Treasury loan of 2,200 million francs, borrowed last year at 4 per cent., which falls due for repayment in August. They have offered exceptional terms to subscribers to the bonds, which will readily be accepted. The rate of interest on Treasury bonds and on National Defence bonds is to be raised from 2.75 to 3 per cent.

There is also talk of open market operations to restock the money market, and, in addition, of a cheap money policy to pave the way eventually for a large-scale conversion. A stable Government with authority would be in a position to take these steps, provided that production were increased sufficiently to enable them to increase the supply of money without being accused of inflation.

Plans for Production and Trade

A fresh breach has just been made in the law establishing a 40-hour week. A decree has empowered retail shops to apply the law by rotation, which will enable traders to keep open on Sundays. Other decrees just published (the fourth and penultimate batch) affect, in the main, agriculture. It is likely that this year's crops will be abundant; and the Government has decided that the surplus supplies not easily exportable, notably wheat and beet, should be used to make alcohol, in order to maintain the price and reduce the imports of motor spirit—which at present weigh heavily upon the balance of payments.

Further decrees deal mainly with production and trade. A notable programme of political and technical improvement is being steadily and quietly worked out, not by drastic and revolutionary means, but by combining a series of judicious reforms. The programme is far from perfect, but it is in the right direction, and it should not be long before its beneficial effects upon the country's economic life become apparent.

Germany

Conscription of Labour

BERLIN, June 28.—Conscription of labour, in the sense that private citizens must work in undertakings chosen by the State and reside where the State chooses, was decreed last week. This measure has made a considerable stir. In itself forced labour, with State dictation of places of residence, is no more a hardship than compulsory military service. But while established practice and accepted public interest have sanctioned the latter, the former is something of an innovation, and comes as a shock.

The principle of *Freizügigkeit*, freedom to choose place of residence and class of work, played a substantial part in the past in popular agitations on the Continent, and in particular in Germany, where its realisation was retarded by State and sometimes municipal autonomy, and in certain conditions by the powers of the police. National Socialism, however, has never endorsed these Liberal views, including them among the evils attributable to the French Revolution.

Hence, though until now *Freizügigkeit* existed in principle, the thin end of the wedge was inserted years ago by means of vetoes and injunctions. Already in 1935 many persons realised that the new compulsion on employees to take out and carry "work books" was ultimately designed to facilitate forced civil labour. The last of the "work books" of the old pre-war regime, carried by domestic servants, who bitterly resented the discrimination, disappeared soon after the war.

Towards Regimentation

The earlier minor departures from the principle of *Freizügigkeit* were first occasioned by unemployment, and later by labour scarcity. Under a law of May, 1934, the Reich Board for Labour Exchanges and Unemployment Insurance forbade movement to Berlin, Hamburg and Bremen in search of work. In certain industries persons from the country might not be given employment without official permission. Supplementing these negative restrictions was the drastic enactment that agricultural workers who had obtained industrial employment might be sent back to the country. Under an ordinance of the same year employees under 25 years of age may be deported to the land in order to free jobs for older persons.

Despite the scarcity of labour, a veto is still in force on the employment of persons under 25 years of age without permission. Last year, when labour was scarce in some trades, metal workers were forbidden to take employment without permission from their local Labour Office, and the same conditional veto was proclaimed for masons and carpenters. Under the Four-Year Plan workers normally attached to these callings who are temporarily employed in other occupations may be required to take work in their proper trades.

This list omits several means of indirect compulsion, such as the withdrawal of trading licences in order to force the holders into employment for wages, measures directed against independent craftsmen, and so on. The trend of all these measures was clearly towards forced labour.

The new ordinance is not likely to cause any serious hardship other than loss of choice of residence. The forced labourers will receive at least their old wages, will have a claim to be taken back by their private employers after their release, and will retain any rights arising out of their private employment. At the same time, the measure does not constitute classless conscription of labour on a par with the classless military service.

While the new compulsion is theoretically on "men and women of every vocation . . . who are capable of work," it automatically exempts all who have no vocations and who are not capable of work requiring training or experience. It will have to be enforced by the criminal law. Contrary to custom, the ordinance does not expressly lay down penalties for its breach, but the newspapers point out that persons who refuse to become forced labourers will come under the penal clauses of earlier Four-Year Plan enactments.

Austrian Duties and Loans

Austrian import duties on several classes of Reich goods have been abolished. After March 28th Austrian goods were duty-free in the Reich, but the requirement of an "exchange certificate," without which they could not be paid for, was maintained until June 20th. Since then exchange certificates for imports from Austria of such goods as are controlled by the Reich Supervision Boards have not been necessary. The newly announced abolition of Austria's import duties on Reich goods is a further step towards Customs unity. It embraces mainly foodstuffs, textiles with the exception of silk, leather goods, metal goods, electrical machines, instruments and chemicals.

Nothing has transpired about the Austrian foreign loans situation, and the American note of protest against the default had not been answered up to the end of last week. In party and official utterances, the complaints of creditor countries are represented as something unprecedented, and the complainants as reckless firebrands. That is, strangely enough, the attitude of State-Secretary Brinkmann, who represented the Reich at the recent Berlin negotiations.

The number of hours worked in industry in May was 19.9 per cent. greater than in May, 1936; and 340,000 more persons were employed in industry than a year ago. Compared with April, the increased activity was mainly in production goods, and there were slight declines in certain finishing trades and in the paper industry.

Ingot steel output in May was 1,896,300 tons, and the output per working day rose considerably. In the first five months of this year steel production was 9,193,000 tons, against 7,901,700 tons in the same months of 1937. This rapid rise in output was due to the increased use of scrap iron, which involved bigger scrap imports, and resulted in a rise in the proportion of Siemens-Martin steel, which totalled 4,907,500 tons, against 4,128,300 tons last year. Trade journals predict that in the second half-year monthly steel output will exceed 2 million tons. Coal output in the first two months of 1938 was 77,580,000 tons, against 73,860,000 tons in the same months of 1937.

Reich tax revenue in May was Rm. 1,001 millions. In the first two months of the financial year it was Rm. 2,019 millions, against Rm. 1,767 millions in 1937. According to official statements, the promise Dr Schacht made last March, that "intermediate financing" by way of bills would cease, has been kept. The new "Treasury delivery certificates" with which the Reich now pays contractors play a considerable part in the short-term credit market, and are held in some measure by the commercial banks. Dr Einsiedel of the Reichsbank declares that the Reich "work-creation bills" have been almost entirely paid off, but not, however, the "special bills" debt for re-armament, which was mostly contracted at a later date.

Norway

Business Stability

OSLO, June 20.—The trend of events during the first half of the current year (which opened under none too promising international auspices) seems to show once more that the rising tide of world depression only very slowly affects this country's economy. Sudden and disastrous deteriorations in business conditions, so often experienced in the larger countries of the world, only very seldom occur here. Even our shipping industry, which is more sensitive than any other part of our national economy, has shown powers of resistance, that can only be explained by the ability and foresight of shipowners.

Although some downward trend in business is evident, on the whole available data suggest that the country's economic stability is beyond question. The index of industrial production in April was 117, or two points below the figure for the same month last year and only one point below the figure for March this year. While there was a sharp decline in the output of pulp, paper, hides and skins, rubber goods and textiles (some of the mills have been obliged to cut down working hours by 50 to 60 per cent.), other branches of industry, including electro-metallurgical and chemical works, as well as iron and metals, still maintain their output at levels well above those of the same month last year. The unemployment figures on May 16th showed an appreciable fall of about 14 per cent. in the number of unemployed persons compared with the position a month earlier, and were the lowest May figures since 1931.

Declining Exports

The trade returns for April indicate that imports are being maintained at a relatively high level. In the month they were valued at 106·8 million kroner, compared with 130·8 millions in the same month of last year, and 111·5 millions in March this year. Exports, on the other hand, showed a sharp contraction, being valued at 54 million kroner, against 70 millions in April, 1937, and 66 millions in March. The comparatively high level of prices last year partly accounts for the apparent falling off in exports.

The trend of wholesale prices has been slightly downwards since the peak was reached in July, 1937, but the index figure of the *Ökonomisk Revue* for May, at 158·8, shows no change compared with the previous month. The official cost of living index for Oslo on May 15th was up by one point compared with April.

Conditions in the money market continue very easy, and the influx of money into the banks is increasing. Thus, deposits with private joint stock banks during April rose by 13 million kroner, while the increase in savings banks deposits was 9 million kroner. Deposits on call with the Norges Bank rose during the first week of this month by 6·5 million kroner to 190·7 million kroner, compared with 115·6 million kroner a year ago. There was a slight contraction in the item "Notes in Circulation," while "Balances abroad" rose by 0·8 million to 137·3 million kroner, against 58·6 million kroner a year ago.

The national accounts for the first three-quarters of the current financial year show a surplus of about 30 million kroner, and it appears that about 85 per cent. of the estimated revenue for the full financial year has already been collected. With the exception of gilt-edged and municipal bonds (which have been unusually firm with a negligible turnover), the Bourse has experienced a further period of falling prices, especially in shipping and whaling shares. Broadly speaking, only the special "favourites" have been able to attract any interest, but brokers have had difficulty in making buyers and sellers agree on prices.

Lithuania

Business Still Active

REVAL, June 16.—The business situation at the beginning of the summer is comparatively favourable, although in several directions a marked recession is becoming noticeable. The cold and dry spring has adversely affected the growth of agricultural produce, and a considerable falling off in the rye and flax crops is now likely.

The shortage of supplies of fodder has led to a fall in the numbers of livestock, accompanied, however, by a noticeable improvement in quality. Supplies of milk at the dairies and exports of butter have accordingly increased. The purchasing power of the farmers has not yet fallen, and buying of artificial fertilisers and implements is as brisk as usual.

Foreign trade in the first four months of the current year showed an export surplus. Imports were valued at 70·2 million lit and exports at 74.9 million lit. Compared with the same period of last year, imports have risen by about 11.55 million lit. and exports by about 13.25 million lit. The most important exports have been meat, flax, butter, live pigs, cellulose wood pulp, eggs and horses. Among imports, artificial fertilisers, agricultural implements, coal, textile goods and oils have been most prominent.

The note circulation of the Bank of Lithuania on May 1st amounted to 129.4 million lit, against 116.6 million lit on January 1st and 111.6 million lit on May 1st, 1937. It was covered by gold and exchange to the extent of 62.6 per cent., against 69.4 per cent. at the beginning of this year and 71.1 per cent. a year ago.

The Growth of Industry

On January 1, 1938, there were recorded in the whole of Lithuania, 1,231 industrial undertakings with more than five employees each, against 1,056 concerns on January 1, 1937, and 989 on January 1, 1936. The textile industry employed about 7,200 workers, the provision trades 7,800, the lumber trades 5,100, the clothing industry 3,400, the metal industry 3,300, and the paper industry 3,000. The most important industrial centre is Kovno, with 382 concerns, in which on January 1, 1938, 11,500 workers were employed. Memel comes next with 134 concerns, and 8,000 workpeople.

Industrial activity is generally satisfactory, with the exception of the sawmills, which, owing to reduced export business, are operating at a level some 50 per cent. below that of last year. In 1937, some 264,022 cubic metres of timber were exported, against 249,874 cubic metres in the previous year. So far this year, contracts have been closed for the delivery of only trifling quantities of timber.

Brisk Building

Building activity is still remarkably brisk. In 1937 some 23,619 new buildings were erected in the whole country, and a total sum of 63.5 million lit was invested, of which 53.5 million lit were provided privately and 10 million lit by the State. For the financial year 1938 the State Budget provides 26.2 million lit for building purposes, against 23.5 million

The OCEAN
Accident & Guarantee Corporation, Limited
Head Office: **36–44 Moorgate, London, E.C.**
FOR ALL CLASSES OF INSURANCE

lit in the previous year. To assist building and industrialisation the Government have decided to issue an internal loan to the amount of 15 to 20 million lit, of which 5 million lit have been subscribed by the State Savings Bank. The issue of a 15 million lit loan for building purposes on behalf of the municipality of Kovno has been sanctioned by the Council of Ministers.

Chile

Parties and the Presidency

SANTIAGO, June 15.—The political situation is as yet very uncertain. The political parties have up to now presented two candidates: the ex-Minister of Finance, Don Gustavo Ross, supported by the parties of the Right, principally Conservatives and Liberals; and Sr. Aguirre Cerda, an old politician and ex-President of the Radical Party, who was nominated by the Popular Front, composed of sections of the Radical and Democrat parties, the Socialists and Communists. To these two groups has been added a third which represents a union between the National Socialist Party, a party styled Socialist Union and some scattered groups of the adherents of ex-President Ibañez. This group has not yet chosen a candidate, but it is possible that it may nominate General Ibañez.

On the other hand, negotiations are under way for all the parties of the Opposition to join in presenting a single candidate. Should this movement be successful, the Opposition could put up considerable resistance to the candidate of the Right. The elements of the Left are so heterogeneous, however, that such a union would appear to be very doubtful.

World Prices and Foreign Trade

Some stagnation in business is due to two factors: the repercussions of the crisis in the United States, and the uncertainty caused by the internal political situation, in view of the coming Presidential election at the beginning of October. The fall in world prices has especially affected copper and agricultural export products. The sale of exchange by the North American copper companies to date, however, has been about equal in value to the sale in the corresponding months of last year. But with the fresh fall in the price of copper, it must be expected that the sale of exchange in ensuing months will decline. The production of bar copper was maintained in the first four months of the current year fairly stably at about 27,500 tons per month, compared with a monthly average of more than 35,000 tons in the same period of last year.

The smaller amount of agricultural exports is another factor responsible for the tightness in the exchange market and markedly manifest in a pronounced upward tendency in the prices of the dollar and sterling in the free market. These exchanges rose in that market in April to over 28 and 140 pesos respectively, while the Exchange Control Board has maintained the export rates of exchange at a stable level of 25 pesos per dollar and approximately 125 pesos per pound sterling. In May, the prices of exchange in the free market dropped slightly, but it is possible that this may be only temporary in view of the recent new and sharp drop in the level of world prices.

The latest Monthly Bulletin of the Banco Central refers to the dislocation that has occurred in the foreign trade of the country and, correspondingly, in the balance of payments. In the first four months of 1937, the value of exports was 405 million gold pesos, compared with only 255 millions for the same period of this year. On the other hand, imports in the same period of last year amounted to 125 million gold pesos, against 174 millions this year. There was a statistical favourable trade balance last year of 280 million gold pesos, but the export surplus this year amounted to only 81 millions. If, according to the Bulletin of the Banco Central, only 50 per cent. of the value of exports of nitrate and copper is deducted, as representing that part of such exports the proceeds of which are not returned to this country, the balance in the first third of this year becomes actually unfavourable. The difference is covered by payments in gold (of domestic production) and free exchange, which fully explains the upward tendency in the free market.

Elasticity in Monetary Policy

The Banco Central appears to attribute this position partly to the policy of maintaining fixed export rates of exchange with the principal foreign currencies, with the result that this country is directly exposed to influences arising from abroad. Just as last year the bank advocated, during the period of rising world prices, revaluation of the peso (which was actually done in August last in a moderate form), so does it now consider quotations of the controlled exchanges too low, in view of the sharp decline in world prices. "Such a situation," the bank says, "will not only affect adversely export industries and exports themselves, but it also acts as a special stimulus to imports."

The policy which the Banco Central advocates is set out in a memorandum addressed to the Pan American Union on monetary policy. The bank says:—

> It does not appear suitable to us to link monetary policy to a rigid system of stability such as the gold standard requires. On the contrary, monetary laws and especially those by which central banks are governed, must be of such a nature that monetary policy is given sufficient elasticity to be able to adopt at any moment, measures which are deemed necessary to maintain sound internal conditions. . . . This does not preclude a central bank, while internal and external conditions permit, from pursuing a policy of *de facto* stability of the currency in relation to gold or moneys of international circulation; but the bank must be able to modify this relationship at any time that considerations relating to the internal prosperity of the country counsel such a measure, without such a step signifying a breakdown in the monetary system.

In other words, the Banco Central considers devaluation or revaluation, according to the general situation, to be an indispensable measure for the regulation of the internal market; and, in fact, this policy for a country such as Chile does not appear to be lacking in logic.

British Guiana

Capital Works

GEORGETOWN, June 18.—British Guiana's new Governor, Sir Wilfrid Jackson, was able to report to the Legislative Council on May 25th that there was a surplus of $1,062,812, in contrast to a deficit of $527,789 in 1931 when, for the first time, the Colony had to seek grants-in-aid of the budget from H.M. Treasury. During the period 1931-37, however, certain accumulated reserve funds had to be realised and these amounted to a sum ($1,054,632) almost exactly equal to the working surplus.

It is proposed to spend nearly half of the surplus on "works of a capital nature which promise either an increase of production or, by effecting permanent improvement in conditions, substantial economy in charges for annual maintenance." The limitation of the country's sugar exports makes it imperative that there should be an increase in other agricultural production; and the unemployment problem is a matter of constant anxiety to colonial administrators in this part of the world. Sir Wilfrid's proposals have the approval of the entire community.

The most important project will, however, be financed neither from current revenue nor from the accumulated surplus, but from the Colonial Development Fund. This is the reclamation of 5¼ acres of swamp land along a portion of Georgetown's river front; the construction of a river frontage wall; and the conversion of the mud flat into a timber-seasoning ground. For this scheme, as well as the erection of sheds and other equipment for stacking the timber, the Colonial Development Committee have made a free grant of £14,540 ($69,792).

This scheme was described by the Governor as "perhaps the most important single step which the Government of the Colony can take in the direction of developing a market for British Guiana timbers." One incidental advantage is that the health of the city's most popular residential quarter will be greatly improved.

Timber Developments

Exports of timber and sawn wood have increased during the last five years from $123,000 to $275,000; but, as His Excellency points out, this is trifling compared with what might be accomplished

> if we can be successful in organising this trade to meet the needs of the markets offered in the United States of America, Europe, and the Caribbean, to say nothing of the possibilities of almost entirely replacing the use of imported timbers within the Colony itself.

Lack of easy communications has always been the great drawback to the development of the timber industry. This difficulty would be offset by the storage of vast quantities of timber, mostly greenheart, mora and crabwood, in Georgetown itself. It is this purpose that the seasoning scheme is designed to serve. There is a definite relationship between the improvement of the Georgetown harbour (to which the reclamation part of this scheme will contribute in some small degree), the expansion of the timber industry, and the construction of a railway linking the city with Manaos on the River Amazon.

It is unlikely that the Colonial Office will restore the railway scheme to the realm of practical politics, until the timber industry enters the million-dollar class, for then only could freight loadings be assured, since British Guiana's forests are the most considerable and certain asset of its vast hinterland. This development will make it imperative to remove the bar across Port Georgetown. The removal of this hindrance to British Guiana's development will require the alignment, by means of a river wall, of the existing wharves (or "stellings" as they are called locally) and the construction of a mole, or parallel moles, to a point some 12 miles seaward.

The Colony and the Hinterland

The average British Guianese places these two schemes at the very apex of his ambitions for the colony's development: the hinterland railway, and the mole to the Demerara bar. Both schemes were examined during the war and at regular intervals since then the local legislature has debated "a railway motion" introduced by one of the elected members. The last of these motions was debated on June 1st. It was urged that the Government's enthusiasm about timber development contrasted strangely with their delay in embarking on the railway project. The Government have now accepted a motion asking for the appointment of a small committee

> to consider the whole question of the development of the hinterland and to recommend to the Government the best methods for the economic exploitation of its resources.

Past experience has taught British Guiana's administrators to proceed with caution, consolidating the economic gains from each scheme before attempting the next big item involving loan expenditure. In this light the timber seasoning scheme is seen to be an exceedingly useful preliminary step to large-scale development.

Australia

Rising Debt

MELBOURNE, June 8.—Owing largely to defence requirements, public borrowing is tending upwards. The Loan Council have decided to issue a loan of £10,250,000, of which £4,000,000 is for defence and £6,250,000 for public works. During 1938-39 the amount to be raised for public works and farmers' debt relief will be £14,000,000. In addition, some borrowing for defence will be required, a tentative amount of £4,000,000 having been announced, to be followed probably by further amounts later.

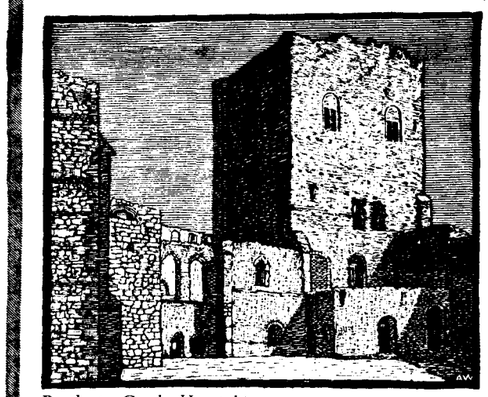
The allocations of loan money for public works have caused dissatisfaction in some States, which object to the curtailment of their own proposals. The amount to be borrowed by semi-Governmental public bodies for water supply and other purposes in 1938-39 is £10,438,658, against £9,009,715 in 1937-38. In addition to fresh borrowings during 1938-39, Commonwealth internal loans for £70 millions will fall due next December.

Social Insurance

The National Health and Pensions Insurance Bill has been read a second time. The scheme is compulsory and contributory, and applies to all employed persons over fourteen years of age, except those employed, otherwise than by manual labour, at a rate of remuneration exceeding £365 per annum. The total number of persons to be brought into compulsory insurance at the outset is estimated at about 1,850,000.

Weekly contributions will be 3s. for men and 2s. for women, of which the employer and employee will each pay half. After five years the contributions will be raised by 6d., and after another five years the contributions for men alone will be raised by another 6d.

The total weekly contributions are the actuarial equivalent of benefits to persons entering the scheme at the age of 16. Many will enter the scheme at higher ages, and there will be an initial debit of a capitalised value of £17,500,000 for health insurance and £264,000,000 for pensions. The Government is therefore to make an annual grant of approximately £900,000 in the case of health insurance and £1,000,000 per annum in the case of pensions insurance, to be raised after five years to £10,000,000 per annum in 1961.



The benefits include medical, sickness and disablement payments, old-age pensions, widows' pensions, orphans' pensions, and allowance for dependent children. Death payments and unemployment benefit are not included. Sickness and disablement benefits, children's allowances and additional benefits are to be administered by approved societies, and other benefits by the Insurance Commission to be appointed. The employee has free choice of society, doctor and chemist. The sickness benefit is 20s. a week for a man and 15s. for a woman, and the disablement benefit 15s. and 12s. 6d., respectively, these benefits being supplemented by an allowance of 3s. 6d. a week for each dependent child under 15 years of age.

The Labour Party oppose the Bill on the grounds that, although it will cost more than the system it is intended to supersede, the new scheme is not liberal enough. They argue that the scheme should be non-contributory.

Uncertain Business Prospects

The Stock Exchange has recently displayed weakness, owing to business uncertainty and the unfavourable position in America. The decrease of £15,000,000 in the proceeds of the wool sales during the past season has been followed by an estimate of 2,970,000 bales for the 1938-39 clip—a decrease of 176,000 bales compared with the estimate made a year ago for the 1937-38 clip.

Although the wheat harvest in 1937-38 reached the large total of 180,515,000 bushels, the farmers who did not sell early have suffered from the recent decline in demand.

Letters to the Editor

Gas and Electricity

TO THE EDITOR OF THE ECONOMIST

SIR,—Sir D. Milne-Watson in your issue of April 2nd states that my comparison of costs between gas and electricity (made in your issue of March 12th) is vitiated by my

> surprising and quite false assumption that the comparative costs of two fuels for a given purpose is proportionate to the percentage of useful energy obtained in either form from a given quantity of coal.

While comparisons of cost between the two industries are difficult to make, nevertheless, there are good grounds for believing that their relative efficiencies in the use of coal may prove to be the most important factor in determining their competitive status.

Recent improvements in machinery have placed electricity on approximately an equal basis with gas in respect to the coal required for a given amount of useful energy. But the electricity companies, according to American figures, have three times as much invested in plant and equipment per therm of energy sold as gas undertakings; and their capital expenses are two or three times as great as their fuel bill. How, therefore, with investment charges much greater, and fuel cost at best no lower than gas, can electricity compete for the domestic heating business?

The electricity industry has been developed as a source of light and power rather than as a source of heat. If there were no domestic heating business, the plants of many electricity companies would be substantially the same as at present. Thus the overhead costs of doing business, billing, engineering, management, etc., may be assumed to be carried by the light and power business, as this would be affected little, if any, by the addition of the heating business.

Furthermore, the requirements of the light and power business are such that the generating plants and distribution systems are partly idle for much of the time, particularly at night; and in these "off-peak" hours a substantial part of the domestic heating requirements can be catered for. The cooking load usually comes a little before and a little after the morning and afternoon maxima of the light and power business. Many companies might cater for a substantial amount of this business without much addition to their facilities.

Under these conditions, the amount of overhead expense to be allocated to the heating business is difficult to determine. The principal out-of-pocket or "incremental" expense for off-peak electrical energy is the cost of coal. The average amount of coal used per kwh. in the United States in 1920 was three pounds; in 1925 it was two pounds; now it is less than one and a half pounds; while the most efficient generating plants require less than one pound. At one pound per kwh. I estimate roughly that coal costs 4½d. per "useful therm," to use Sir D. Milne-Watson's unit of measure.

Electricity companies generally are installing the most efficient generating equipment to carry the base or continuous load, the older and less efficient units being held to carry the peak loads. At present there is probably not a large amount of off-peak energy that can be generated at the lowest fuel cost; and the larger the amount of such energy sold the higher the coal cost, which might, for example, run as high as 1s. or more per "useful therm" for large amounts. Against this out-of-pocket expense for coal we may assume a competitive selling price for gas of 1s. 2d. per "useful therm," the average figure given by Sir D. Milne-Watson.

As the light and power business grows, an electricity company, attracted by the wide margin between the competitive selling price of gas energy and the minimum cost of electrical energy, might install the most efficient types of generating plants, much greater in capacity than is necessary to carry the base load, so that there would be available large amounts of cheap off-peak energy for the domestic heating business. Against this they have the alternative of installing at lower cost, less efficient plants to cater for the peaks of the light and power business, which would give higher costs for off-peak energy.

While there is no general answer to this problem, each electricity company having to calculate how to make the best of its own particular situation, it seems clear that greater efficiency in the use of coal will bring rates for electrical heating much closer to gas in the future than they have been in the past. In course of time it is not inconceivable that this greater efficiency may bring the average of electricity rates—for heating purposes—as low or even lower than gas per "useful therm."

Very truly yours,
H. H. WILLIAMS,

New York.

Austrian Loans

TO THE EDITOR OF THE ECONOMIST

SIR,—Quite apart from the legal problems created by Germany's refusal to accept liability for the Austrian loans, and the technical arrangements to be made to counteract this default, there is one broader aspect, which the British authorities should not leave out of consideration when dealing with Austrian loans. The financial rehabilitation of Austria, one of the most successful financial operations of the post-war period, was carried on under the auspices of the League of Nations and the Bank for International Settlements as a collective effort. The United States of America joined the European creditor countries in this work of European appeasement, and took over a considerable portion of Austrian loans.

Should the German Government now succeed in enforcing with each creditor country separate bilateral settlements, the United States of America would be in a worse position than any of the European creditors, because America, as a raw material exporting country, sells more goods to Germany than she can buy from her. Taking a broader view, the interests of Great Britain and the United States of America, as the two principal creditor countries of the world, must necessarily run parallel. Should the "collective security" of creditors be re-established, the United States of America would benefit in Europe and Great Britain in Central and Latin America.

Yours faithfully,
MERVYN E. STERN.

London, E.C.2.

Right Wages

TO THE EDITOR OF THE ECONOMIST

SIR,—In your timely article on "Wages and Household Means," you note that the Annual Report of the Unemployment Assistance Board reveals "the extent to which the economic system still fails to employ the full capabilities of the population." Then, referring to the present trade decline, you say "clearly the consumption industries will suffer and the depression will be deepened if the expenditure of low-paid workers on the necessities of life is not maintained."

You perform a service in stressing the association between the failure of our economic system and the deficiencies in the spending power of wage-earners; but when you refer to the fact that the State now accepts the responsibility of securing for every individual or family *an income sufficient for its needs*, and content yourself with indicating ways and means of achieving this limited objective, it seems to me you do not come to grips with the root problem of under-consumption.

The mere assurance of wages sufficient for the needs of the worker and his dependants is not enough to correct the failure of the economic system to employ the full capabilities of the population. If increased spending among the low-paid workers will assist the consumption industries and help to prevent a deepening of the depression (as you suggest it will do), then how much more would the consumption industries be assisted, and how much more would we enjoy a safeguard against a deepening of the depression, if other wages (and salaries in the lower scales too) were raised.

Yours faithfully,
RONALD W. FINDLAY.

Edinburgh.

Books and Publications

Blind Alleys for Young People

THIS study* owes its origin to the widespread unemployment among young persons during 1931 and 1932. But the problems which it brings to light are not those of unemployment but of misemployment. To-day, juvenile unemployment is local rather than general, and in many branches of industry an acute shortage has replaced former surpluses. The authors give a critical examination to the official view that a return to heavy unemployment is unlikely, but end by accepting it as probably correct.

Even without allowance for the effects of the raising of the school-leaving age, the number of boys and girls under 18 available for employment is likely to fall by nearly 15 per cent. in the next five years. Under the new Education Act there are powers by which this figure can be reduced a further 15 per cent. Clearly an industrial depression will have proportionately less effect than in 1931.

On the other hand, there is no conclusive evidence that industry is requiring more young people in relation to its total working force. Between 1921 and 1931 the contrary was the case, but while unemployment insurance figures suggest that this movement has not been continued, they do not prove that the expanding industries are those which require a higher proportion of juveniles. There are, however, no signs of a substantial falling off in the demand for juvenile labour, while there will certainly be a decline in the supply of young workers.

The problem is not unemployment but blind-alley employment, and the complete absence of any effective means by which able children can be drafted into progressive jobs. Evidence in support of this statement is given in the first part of this book, which is devoted to analysing the results of an inquiry into the careers of 2,000 children who left elementary schools in five Lancashire towns at Easter, 1934.

It must be said that our gratitude to the authors is as much for the stimulating nature of their discussion as for the actual results presented. Indeed, the representative nature of their sample is suspect—though a detailed analysis of the careers of 2,000 Lancashire school children is not without its own particular interest. Wages in Lancashire in 1934 and 1935 were wholly different from, say, those in London or the Midlands to-day.

Again, while reference to the scandalous nature of the hours worked in uncontrolled employments and to the well-known fact that the Factory Acts are often violated is fully justified, it is probable that the present shortage of juveniles has, if only to a slight extent, led to some improvement in their working conditions. Where the authors have performed an important public service is in laying emphasis on the waste of national resources involved in blind-alley employment and the extraordinary inability of industry to provide progressive work for the abler children leaving school.

The indifference and even opposition of some employers to the placing activities of the Ministry of Labour and the local education authorities are quite indefensible. The scholarship system now secures entrance to the universities to the brilliant child of even the poorest parents. But the able child who goes into industry or commerce often starts in employment which offers no training or future whatsoever.

This is certainly a book for the general reader. The specialist will be glad of it, but he may justifiably ask whether the book's value might not have been vastly increased by a better arrangement of facts and figures. The tables of national statistics based on the census and unemployment insurance are admirable, but the results of the sample inquiry are presented in such a way that it is difficult to sum up the evidence or to judge the validity of the conclusions.

Shorter Notice

"A Raw Commodity Revolution." By Melvin T. Copeland. Harvard University. 97 pages. $1.25.

Dr Copeland disclaims any desire to exaggerate the influence of the Great War in bringing about the revolutionary changes which have taken place in the international raw material situation during the last two decades. Fundamental changes in both supply and demand would inevitably have occurred, war or no war. But this penetrating study provides ample evidence that, directly or indirectly, the war was in fact largely responsible for the magnitude of recent changes. World hostilities interfered with world trade. New processes of production were developed to meet war needs. When the war ended prices fell; much capacity was redundant; Government aid was given to producers; new processes were combined with price-cutting to hold and win markets; cartels were formed; and the continuation of expansionist programmes served to depress prices almost indefinitely. Such was, in general, the contribution of the war and its aftermath to the stories of a wide variety of raw commodities, upon whose producers events thus forced radical improvements in technique. The net effect has, in general, been far from propitious for producers. A state of almost chronic overproduction in relation to contemporary demand has been accentuated rather than eased by tariffs, import restrictions, subsidies, cartels, trade combinations and monetary manœuvres. And the search for new processes to cut costs has, in consequence, gone on. It will continue "until many raw commodities are permanently on a lower scale of prices." In the end the revolution in the world's raw material economy "will yield a higher standard of living for the world at large"; but at the cost of much loss in the process.

THE BUSINESS WORLD

Banking and Trade Recession

THE end of a half-year is an appropriate occasion for the historian of banking. Though detailed analysis must needs await the issue of the June 30th accounts of the big joint-stock banks, the main outlines of the picture of the last few months are already clear. For example, there is no question that any discussion of banking conditions must take industrial recession as its main text and background. Recent events, like the French repatriation of funds and the British Government's borrowing, are important but incidental. Judgment on the broad lines of British banking policy must be determined rather by reference to the extent to which it has been an ameliorating factor or otherwise in economic recession so far, and to its probable bearing on future events.

One way of approaching this question is to compare banking trends in 1929-30 with those of 1937-38. For the joint-stock banks a comparison on those lines is provided by the following table: —

(Million £'s)

	May, 1929	May, 1930	*Intervening Change*	May, 1937	May, 1938	*Intervening Change*
Deposits.....	1,732	1,742	+ *10*	2,218	2,225	+ *7*
Cash	188	186	− *2*	230	228	− *2*
Call loans	141	135	− *6*	163	141	− *22*
Discounts	195	246	+ *51*	243	278	+ *35*
Investments	269	258	− *61*	641	616	− *25*
Advances	976	956	− *20*	937	964	+ *27*

The two periods are not strictly comparable, as the returns for the later period, unlike those of 1929-30, include the figures of the District Bank. That, however, does not seriously affect the lessons of the figures.

In neither period has there been any evidence of a reduction in the total supply of bank credit. Nor at either time was the recession, once it had begun, aggravated by a permanent tightening of money rates. During the earlier year, although Bank rate was raised at one time to 6½ per cent. (largely as a result of events in America which were outside the control of the authorities on this side), during the period as a whole, it was reduced from 5½ per cent. to 3 per cent., with an equivalent reduction in discount rates. During the later year Bank rate has remained at 2 per cent., and discount rates at ½ per cent. It is impossible, to-day, to give trade the stimulus of cheaper money, since money is already as cheap as it can well be.

The evidence suggests that banking policy has certainly not been a causative factor in the present recession. Contrariwise, there is a strong inference that if other consequences unite to cause a recession, no abundance of cheap money can check it. This may be true so far as England alone is concerned, but monetary policy in the United States cannot so readily secure an acquittal. Perhaps it would be more accurate to say that British monetary and banking policy by itself cannot prevent a world recession to-day, or prevent British trade from becoming involved in such a movement.

It may be claimed, nevertheless, that if British banking policy has been unable to prevent the recession, it may at least have mitigated it. Here it may be helpful to analyse some of the items which are shown in our table merely as grand totals. It is common knowledge that, early in 1929, a large mass of somewhat dubious securities, in weak hands, had in fact been financed by borrowed money. In the interim, a great deal of water has passed under London Bridge, and lenders have learned much. The 1937 boom reached its zenith without witnessing any comparable volume of indiscriminate stock and share financing. Consequently, despite the recent heavy fall in security prices, markets have been in a relatively sounder condition than eight years before. To some extent, the fall has reflected a disinclination to buy rather than forced liquidation or general pressure to sell. As a minor but none the less significant symptom, we have so far escaped the 1929-30 crop of financial scandals, which involved many of the banks in appreciable financial losses.

This sounder position is duly reflected in the table already cited. The year 1929-30, it will be seen, witnessed a contraction of £20 millions in bank advances, largely as a result of liquidation. It left behind it also a legacy of frozen loans. During the past year, however, bank loans have increased. The table shows an expansion of £27 millions, but for practical purposes the expansion may be deemed to have been greater; for last year some of the banks were carrying their share of the French railway credit which was repaid in December, 1937. Some of the increase in loans has been available for manufacturers requiring temporary finance for re-armament production. In this respect the banks may claim that their facilities have mitigated trade recession—the more so since the demand for funds arose at a time when the conditions were less propitious for new capital issues.

The table, however, suggests a less consolatory reflection. In both years it is possible to attribute the rise in deposits to an expansion in the banks' bill portfolios. This holds good even after making allowance for each year's contraction in call and short loans—which, incidentally, are made to the Stock Exchange as well as to the discount market. Now, bankers have recently evinced a tendency to measure their liquidity, not only by their rates of cash to deposits, but by the rates of their "liquid assets" to deposits; the term liquid assets, in this connection, comprises cash, balances with other banks, cheques in course of collection, call and short loans and discounts. The traditional minimum cash ratio of 10 per cent. is now being reinforced by a liquid asset ratio of 30 per cent.

But as *all* bank assets, including investments and advances, are normally deemed to be liquid, the adoption of this new criterion may suggest, to some sections of the public, that the two latter classes of assets are in a different category of liquidity from the rest. The banks may disclaim such an interpretation, and argue that the adoption of the second or complementary criterion provides a greater degree of elasticity in practice. They may also point out that the traditional 10 per cent. minimum cash ratio has been supplemented and not abandoned. That, however, is not quite all the story. If joint-stock banks were ever to regard cash, call loans, and discounts as being interchangeable, the scope of open-market policy by the authorities would be narrowed. To-day, if the Bank of England sells bills to the market, the intention and result is an automatic contraction of the credit base, which now consists only of joint-stock bank cash. If, however, the credit base is widened to include both bills and loans against bills, then open-market operations affect only its composition and not its total size. Thus open-market operations become nugatory unless they are conducted through purchases and sales of securities. Another, though perhaps a more remote danger, is that the Treasury bill might become a more direct instrument of inflationary borrowing and so Governments would be under a greater temptation to abuse it.

Recent foreign experience shows that these points are not entirely academic. The adoption of this new "30 per cent. conception" would weaken the banking system's second line of defence, consisting of the joint-stock banks' cash, as distinct from the Bank of England's gold, the first line of defence. Already, in Germany, the disappearance of this second line has caused serious qualms. In several other countries the practice of the commercial banks of rediscounting directly at the central bank offers inflationary possibilities. In any case, a depositor is entitled to be paid in cash, and cannot be required to accept bills of exchange as a substitute. This alone is a complete justification for the maintenance of the minimum cash ratio, and the secondary "liquid asset" ratio should be regarded as purely complementary. Given this interpretation, the new ratio may remain as a valuable guide to bankers. But precedence must needs be given to the cash ratio.

This argument suggests a clear limit to the quest for cheap money and banking elasticity. Our present monetary and banking policy can fairly claim to have mitigated the recession. But the ebb and flow of trade depend upon many factors other than the proper operation of the banking system. Exclusive reliance on cheap money as a solvent of economic difficulties may have serious dangers in the conditions of the world to-day.

India's Cotton Industry

INDIA, the historic home of the cotton plant, has only in the last half-century developed a factory textile industry, though for centuries hand-weaving and spinning have been practised in the villages. The first cotton mill was erected in Bombay in 1856; 24 years later there were 56 mills, using 300,000 bales of cotton per annum on 1½ million spindles. Even in the years immediately before the war, expansion was still slow, but after 1920 there was a more rapid development which, as the table below shows, was checked in 1937: —

INDIAN COTTON INDUSTRY

Year	No. of Mills	Spindles	Looms	No. employed daily	Cotton Consumption '000 bales of 392 lbs. each
		'000	'000	'000	
1880.....	56	1,462	14	44	308
1900.....	193	4,946	40	161	1,453
1910.....	263	6,196	83	234	1,935
1920.....	253	6,764	115	277	2,198
1930.....	348	9,125	179	384	2,574
1936.....	379	9,857	200	418	3,171
1937.....	370	9,731	198	417	3,146

The industry has drawn its raw material, until recent years, from the native crops of short staple cotton. The Indian Central Cotton Committee has done much to improve the quality of the crop by the production of better fibre and the introduction of improved marketing arrangements. To its efforts may be attributed, in part, the credit for the fact that the average yield per acre for the five years 1932-37 for the whole of India was 11 per cent. higher than in 1927-32, and that the area under improved cotton plants, producing a staple length of ⅞ in. or over, rose from 27.5 per cent. of the total in 1932 to 33.3 per cent. in 1937, when the crop was estimated at 6.3 million bales.

The native industry absorbs barely half of this output. In recent years India has exported annually some 3½ million bales of raw cotton, of which more than 2 millions have been bought by Japan. Lancashire's consumption of Indian cotton has increased steadily from 230,000 bales in the year ended July, 1933, to 658,000 bales in the year ended July, 1937. Indian cotton-growers would welcome a still greater expansion in Lancashire's purchases of their product, but that depends on an increase in the sales of British cloth to India. Such an increase would not be welcomed by the Indian weaving industry, which is itself still developing and subject to acute internal rivalries.

Competition from hand looms in India, meanwhile, is slowly declining, in spite of a Government subsidy of Rs. 5 lakhs per annum. The output of hand-woven cloth increased from 1,070 million yards in 1913-14 to 1,490 million yards in 1936-37, but this rate of expansion is far smaller than that of the factory output, which increased in the same period from 1,080 million yards to 3,470 million yards. But Bombay, until recently the centre of the Indian cotton industry, is steadily losing ground to up-country centres like Ahmedabad, the United Provinces, Bengal, Madras, and some Indian States. Further, the industry has now begun to import Egyptian and American long staple cotton and to produce higher counts of yarn and finer cloths, and it is in these types that competition from Lancashire is most feared.

Exports of British piece-goods to India have fallen heavily since the depression; in 1929, India imported from the United Kingdom 1,374 million yards, valued at £26.1 millions, while in 1937 the trade had fallen to 355.8 million yards, valued at £5.7 millions. It was this downward trend that stimulated Lancashire's efforts last May to obtain an agreement under which the Indian tariff on British imports would be lowered, in exchange for increasing British purchases of Indian raw cotton. Although the negotiations are being continued in London by Sir Muhammad Zafrullah Khan, the prospects of an agreement can hardly be rated high, for the Indian textile industry is not anxious to see a reversal of the declining trend in the Indian imports of cotton piece-goods. And in the long run, the Indian Government cannot be oblivious to the implications of this attitude.

She used to be comfortably off . . .

WIDOW, 32, requires situation urgently. Where child of 8 not objected to. Capable, good cook, write F, Box 203, Daily

EVERY year illness or accident leaves thousands of families to face the world alone. In most cases they are not well provided for. Few men are in a position to put aside money enough to maintain their dependants at a satisfactory standard of living in the event of death. It is only fair to your family and to yourself that you place this burden on broader shoulders.

Consider the

'SAFEGUARD' PLAN

which provides a guaranteed income of £3, £6 or £9 per week tax free for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged for the cash sum to be payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

Shipping Shares

THE process of adjustment of industrial ordinary share yields has recently raised the average return on the Actuaries' Index to 6 per cent.—a figure unequalled for six years. Investors who are aware of the deterioration of international trade conditions in recent months will find the greatest difficulty in accounting for the relatively low return on shipping shares, for it is impossible to obtain an average yield in this group exceeding 4 per cent., and on some leading issues the current return is even more modest. Indeed, it is definitely sub-normal, except on the assumption that a significant increase in earning power and dividends will be realised during the current year.

How far is this assumption justified? The Elder Dempster Lines profits, published last week, showed that some accumulated benefit is still due from last year, when international trade was more active and freights were higher than at present. But something more than a mere time lag is implicit in the price of many shipping shares to-day. The nature of that implication is the subject of the present article.

The close correlation between freight rates and shipping share values is obviously an important factor in the problem. Freight rates relate to the tramp shipping market, whereas the investor is more directly interested in the passenger and cargo liner companies. But a sustained movement in tramp rates finds its reflection, sooner or later, in the Conference Rates operating in the principal liner trades. In the accompanying chart, accordingly, we show the course of *The Economist* index of freight rates, and the Actuaries' Index of shipping shares since 1934.

SHIPPING FREIGHTS AND SHARE VALUES

The freight index has been re-worked to conform with the base date of the Actuaries' Index (December, 1928 = 100) and the scale adopted for the share index is five times as large as the freights scale.

The two indices have a close conformity. The trend of freights reflects variations in the volume of world trade, and the League of Nation's estimates suggest that the relative prosperity enjoyed by the shipping industry last year has passed its zenith. The volume of world trade in 1937 was 96½ per cent. of that of 1929, compared with 75½ per cent. in 1933. In the first quarter of this year, however, the percentage fell to 88, against 100 in the last quarter of 1937 and 91.8 in the corresponding quarter a year ago. The concluding three months of each year are normally more active than the opening months, but it is sufficiently clear, however, that a net decline in the volume of world trade is proceeding.

On the revenue side, therefore, the outlook for the shipping industry must be reckoned less favourable than a year ago. Whether the greater stability of freight rates in recent weeks foreshadows a check to the substantial decline of the last seven months can hardly be judged at present. Even on routes where rates are controlled, profits are small and the volume of business is unsatisfactory. And on the more competitive routes the assistance of the minimum agreements scarcely enables shipping companies to cover more than their direct costs and a reasonable allowance for depreciation.

Operating costs, on the other hand, remain higher than they were a year ago. The able seaman's monthly wage, restored to £9 last year, was increased to £9 12s. 6d. from January 1, 1938. Basic rates for first mates and second engineers have been increased from £20 5s. to £21 10s. this year, while the new pension scheme involves an additional contribution of 16s. 1d. per month from the shipowner. The conditions applying to manning scales and annual leave have also been improved.

Fuel costs have shown a somewhat irregular trend. In January last year, best bunker smalls cost 15s. to 15s. 6d. per ton at Cardiff. The price rose to 20s. per ton last June, and is now about 18s. 3d. Fuel oil prices are ascertainable only from declared import values, which rose from 2.48d. per gallon for 1937 to 2.52d. per gallon during the first five months of this year; prices now appear to be lower than last December, but import values may not be fully representative of world oil bunker prices.

Among other factors in shipping costs, the high price of new tonnage is well displayed by *Fairplay's* estimate of the cost per deadweight ton of the simplest type of freighter, which rose from £8 6s. 3d. at the end of 1932 to £10 8s. in 1936 and jumped further to £14 8s. last year. Repair bills have shown a commensurate increase, and port labour costs have also advanced in recent months.

We may proceed to relate the position for individual shipping concerns to this context. In the accompanying table we have set out the total profits, depreciation allocations, and the amount of net floating assets for five important concerns since 1934. The substantial improvement in shipping finances is evident throughout the table, although the industry was slow to recover from the effects of depression. Rising profits have provided a welcome occasion, in most cases, for more generous depreciation provisions (our figures show allocations from revenue, and exclude the frequent supplementary provisions made from internal reserves) which, in turn, have limited the recovery in ordinary dividends. The Elder Dempster Lines report, published last week, illustrates these points. Total profits increased from £633,862 to £1,035,503 last year, but depreciation absorbed £420,000 compared with £275,000 in 1936. Even in the distribution of residual profits, the directors observed marked conservatism, for earnings would have permitted the distribution of 16 per cent., compared with the 9 per cent. dividend actually paid to the Holdings company.

Both this report and that of Royal Mail Lines illustrate the benefits of increased cargoes and higher freights last year. Had it not been for the cocoa "hold-up" from the Gold Coast, Elder Dempster would have fared even better. Voyage results during 1938 to date are described as "satisfactory," but the effects of the cocoa hold-up (now at an end), coupled with the delayed improvement in outward cargo, were frankly outlined by the chairman at this week's meeting of the Holdings company. Their bearing on the results for the current year is of some importance for holders of the outstanding 3 per cent. income debenture stock of the Holdings company. This stock is convertible into ordinary shares at the rate of 90 £1 shares per £100 stock, at any time up to June, 1939. At the present price of 25s. for the ordinary, there is some slight advantage in exercising the option, for the stock is quoted—rather widely, it is true—at 104-109. This quotation could hardly be sustained without the conversion option, and the readjustment of the ordinary shares from last year's high level of 35s. to the present price reflects more cautious dividend expectations for 1938, even allowing for the "play" which the directors have retained by their recent conservatism.

Certain shipping shares tend to be valued in terms of their repute and status rather than their immediate dividend prospects. Of these, Furness Withy ordinary is an outstanding example. The £1 shares rose to 31s. 6d. before the declaration of the 3 per cent. dividend last July, but their subsequent fall to 18s. 9d. suggests that investors are more disposed to take the conservative protestations of the management at their face value in assessing the dividend which is now almost due. The group's building policy has been skilfully timed, and its fleet is conservatively valued. Its subsidiary companies have been given the opportunity to add to their internal resources in recent years—at corresponding sacrifice by the parent company's ordinary shareholders—and the group's position, fortified by the acquisition of a substantial block of Royal Mail Lines shares last year, is undoubtedly strong. Its strength, however, has not yet produced any appreciable relaxation of the board's conservative dividend policy.

Companies whose financial resources enabled them to place orders for new tonnage when construction costs were low have reason to congratulate themselves to-day. The timing of rebuilding orders has played an important part in the determination of dividend policy. Several of the P. & O. subsidiaries, for example, have substantial building programmes still on hand, although the parent company itself has carried out a considerable replacement of tonnage during the past year or two. Stockholders of long standing in this company will appreciate a point which was emphasised by the chairman at last year's meeting. The directors have, in fact, anticipated their actual new tonnage requirements in recent years, and in consequence obtained new vessels much below to-day's cost. The difficulties which arose from the replacement of costly tonnage built after the war will not be repeated. The first interim dividend (of 2½ per cent.) since 1931 on the deferred stock suggests the possibility of a satisfactory final payment, for the company's depreciation provision has now been stabilised. Disturbances in the Far Eastern trades, coupled with the evidence of some setback in economic conditions in India and Australia, however, have probably exerted an unfavourable influence on the results of the voyage year which ended this week. Finally, shipping investors will note that the chairman of Union-Castle Mail Steamship has never concealed the financial implications of the rebuilding and re-engining programme carried out during the past three and a half years. Ten of the fourteen vessels ordered in this period have been delivered, and five vessels are involved in the re-engining programme. Hence the large increase in advances for new construction from £1,263,000 at the end of 1935 to £3,063,000 at the end of last year. Heavy repayments are required during the next few years, and the directors have naturally kept in view the possibility of financing the programme on a more permanent basis. It is unfortunate that the impressive advance in the operating efficiency of the fleet has coincided with a limited improvement in most classes of freight. Fruit cargoes in particular were in some cases carried at an actual loss last year. Meanwhile, the announcement last week of interim payments on the two classes of preference stock was unimprovement in most classes off reight. Fruit cargoes accompanied by any interim announcement concerning the ordinary stock, on which earnings would have been equivalent to nearly 16 per cent. last year if normal preference dividends had been payable. At the meeting last April, the chairman anticipated the payment of a moderate dividend for the current year.

In the light of these considerations, general and particular, it may be asked whether the shipping share group as a whole is really entitled to a significantly higher investment status than the best home industrial stocks. The industry has achieved a notable advance in operating efficiency and financial strength in recent recovery years. Any reasonable setback in trade conditions, therefore, could be accommodated without the acute discomfort which marked the depression. But in terms of dividends it is difficult to perceive any new reason, at this stage, why the leading companies should be inclined to depart from the austere standards which they have set in the recent past. Granted a prompt and substantial improvement in world trade, share values to-day could not be regarded as unduly high. They are, nevertheless, appropriate rather to longer-term possibilities than to the immediate situation of the industry.

(*a*) Elder Dempster Lines Holdings £1 ordinary, on which 5·9 per cent. paid for period to June 15, 1937, and 9 per cent. for year to June 15, 1938.
(*b*) Includes transfer of approx. £100,000 from reserves.
(*c*) Excludes profit of £418,300 on sale of investments, of which £385,085 applied to additional depreciation.
(*d*) Excluding special transfers from various reserve funds against fleet.
(*e*) In addition, £130,000, £170,014 and £146,435 to fleet replacement account 1935 to 1937 respectively.
(*f*) After providing for depreciation at 5 per cent. per annum; amounts not disclosed.
(*g*) Assuming normal preference requirements.
(*h*) Before transfers to fleet replacement account.

NEWS FOR INVESTORS

Ordinary share values are now 30% less than at the end of 1936. Their firmness in recent weeks and their striking resistance to a stern Budget are highly significant facts.

THE SAVINGS UNIT TRUST will enable investors to benefit from coming market trends. Every Company in the portfolio has been carefully chosen with this object in view. Each of the 28 selected Companies is an acknowledged leader in its industry and each has paid regular dividends for many years. On the basis of the dividends paid by the constituent Companies during the past year, the yield to a purchaser of sub-units is rather more than *five per cent. per annum* at the opening price of approx. 2/- per sub-unit.

SPECIAL FEATURES OF THE SAVINGS UNIT TRUST

1. The securities are those which a Stockbroker most frequently and rightly recommends to his clients.
2. 2/- basis for sub-units, enabling investors to re-invest all or part of dividends. The sub-unit holder thus accumulates capital by small but regular savings out of income.
3. Minimum initial investment is 200 sub-units (approx. £20).
4. The initial loading charge is 3% and a further charge of ½ of 1% is made annually throughout the trust period.
5. Custodian Trustees: Lloyds Bank Limited.

Applications for sub-units will be accepted only on the basis of the special booklet S17, obtainable free through your banker or stockbroker (whom you should consult) or direct from the Managers.

Finance and Banking

Great Britain's Gold.—The third half-yearly statement of the position of the Exchange Equalisation Account was issued on June 29th. It reveals the Account's gold holdings on March 31st last. A table embodying the three statements is given below:—

BRITISH GOLD HOLDINGS
(£ millions)

	Mar. 31, 1937	Sept. 30, 1937	Mar. 31, 1938
Bank of England	516·6*	537·6*	537·6*
Exchange Equalisation Account	186·9	279·3	297·8
Total	703·5	816·9	835·4

* Valued at 140s. per fine ounce.

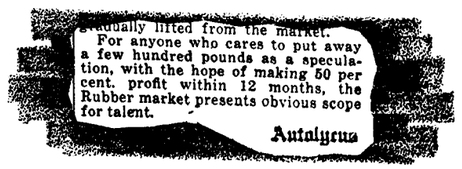
It is not surprising that there was only a moderate increase in the Account's gold holdings during the six months to March 31st last. Some repatriation of French capital occurred in November, 1937. Political and other uncertainties have caused a persistent hoarding demand for gold during most of the period, and in the last resort this was met out of official sales. On the other hand, the Account has from time to time bought gold not only from France, but from other countries, such as Belgium. The Account has in fact become a world cushion, which has to offset not only transfers of funds between London and foreign centres, but also the movement of normal capital into or out of gold. The next return, relating to September 30th of this year, will presumably reflect both the French repatriation of last May and also the June demand for gold occasioned by the latest dollar scare. As, however, it will also cover the events of the following three months, it is impossible to forecast what it will finally show. The important point to remember is that the fluctuations in our official gold holdings are resultant of many independent movements.

* * *

Ease at the Half-Year.—Once more the market has passed the end of the half-year without having to borrow from the Bank of England. Its success is attributable partly to the fact that this week's Treasury bill payments and maturities were so arranged as to leave the market well supplied with cash on June 30th. Maturities were concentrated in the last four days of June, while payments for new bills were deferred until July 1st. Thus, as usual, the Treasury, instead of the market, was short of funds on June 30th, and the revenue returns published on page 52 show outstanding £41.5 millions of Ways and Means borrowing from the Bank. This is the source from which the clearing banks have derived the extra cash thus needed for balance-sheet purposes. At the same time, money is so abundant that the banks probably had to call less than was necessary in the years prior to the present cheap money regime, which was finally inaugurated by the reduction of Bank rate to 2 per cent. exactly six years ago. Some temporary pressure was anticipated on July 1st, as both the whole of the market's payments for this week's new Treasury bills and also the Defence Loan call fall due on that day. On the other hand, the Government is making certain dividend payments, while the banks will be releasing the money called by them on June 30th. Apart from this, tender issues of Treasury bills are for the moment running short of maturities, for the authorities have on hand both the Defence Loan money and also the proceeds of the Exchange Equalisation Account's gold sales made during the recent dollar scare. Thus no strengthening of discount rates seems at all probable, and the market is much more likely to find itself short of bills.

* * *

American Banking Practice.—While the French Government is seeking to establish a money market in Paris, the American Government is, by way of contrast, embarking upon a policy whose soundness is decidedly questionable. According to reports received this week, member banks are henceforward to be authorised to grant their customers loans for a maximum period of ten years, in place of the existing limit of nine months. They may also invest in unlisted bonds of local companies, believed to be of a sound character, provided that the bonds are amortised up to 75 per cent. of the principal. To describe these decisions as questionable may provoke the *riposte* that the British banks have always had complete freedom of action in both respects. There is a fundamental difference, however, between the British system of large branch-banking organisations and the American system of a host of small, independent local banks. The American banks, again, tend not infrequently to frame their policy by the letter of the regulations laid down by the Government, whereas the British banks have had to establish their own canons of prudence and safety. In any event, loans for ten years are not a banking proposition in the usual sense of the term, while for a local bank to invest its customers' money in local securities is a procedure whose dangers are obvious. The change in policy may be related to President Roosevelt's new efforts at pump-priming, and it would be interesting to know how far it originated with the Federal Reserve Board and how far with the Administration.



* * *

Paris Money Market.—During all the recent vicissitudes of French finance, one cause of weakness has continuously been apparent. That is the primitive state of the Paris money market. Eight years ago, the absence of a money market meant that the Treasury was periodically abstracting cash from the banking system and hoarding it. More recently, it has been necessary to create *ad hoc* funds such as the Rentes Stabilisation Fund to assist in the smooth conduct of financial affairs. Nor has the French Exchange Equalisation Fund been able to operate in the same automatic manner as its counterpart in London. Many attempts have been made to remedy this state of affairs, and the latest of them may have a fair chance of success. A decree has now been issued authorising the Banque de France to extend its operations in short-term securities, so as to embrace Treasury bills, National Defence Bonds, "railway" bills and eligible commercial bills. Simultaneously, it is reported that a new Discount Company will be founded on the lines of the London discount houses. These measures are likely to assist in the establishment of an effective money market, but further steps are necessary if an end is to be put to the unnecessary hoarding of funds. The first, it may be suggested, is that all Government institutions should reduce and maintain their cash holdings at a minimum, investing the bulk of their resources in tax securities or Treasury bills, or re-lending them "on ways and means" to the Treasury. The second is the development of the use of cheques, so that cheques may be used as freely in France as in England or the United States. The development of an adequate money market in Paris would be a stabilising influence, and would impart much-needed elasticity to the French financial system.

* * *

Thalers Again.—After a lull, the demand for Maria Theresa thalers has again reached substantial proportions. The manner in which these thalers, whose coinage was formerly the monopoly of the Vienna Mint, have come to be coined in Rome, London, Paris and Brussels, was fully explained in *The Economist* of March 5th last (page 506). Present demand for these coins is coming, not from Abyssinia but from the Aden Protectorate and Arabia, where they are part of the normal circulation. Though political unrest has caused a hoarding demand in those areas, a much more important factor has been the recent discovery of oil in Arabia. The substantial payments which are being made by the oil companies are giving a considerable fillip to commercial activity in the coastal areas, and the increased prosperity is spreading inland. The thalers can now be sold at a rate of about 17d., and at this figure the profit to the coiners and dealers works out at between 3 per cent. and 5 per cent. The Italian Government continues to claim monopoly rights for the coinage of thalers at the Rome Mint, and this claim is understood to have figured (though not prominently) in the recent Anglo-Italian conversations. It has been assumed in certain market quarters that the ratification of the Anglo-Italian Agreement might involve the cessation of the coinage of thalers by the Royal Mint in London. It is difficult to believe this report; for the currency circulates in areas well outside the sphere of Italian economic and political control.

MONEY MARKET NOTES

Foreign Exchanges

THE London market was very dull this week, and its idleness was accentuated on Thursday by the end of the half-year. None of the banks which issue half-yearly statements of accounts ever have open positions in foreign currencies, and so there was no straightening-up to be done. One burden on the market consists of the large sales of forward dollars effected during the recent scare. Forthcoming commercial needs for dollars were well covered during the scare, and so there will be less business than usual during the next few weeks. Also the London houses which took these forward dollars at once covered themselves by selling them spot, and so there is now a mass of undigested dollars in the spot market. So long as the spot rate hangs round its present level of $4.95⅜, there is no incentive to dispose of them. There is, in fact, no demand for dollars apart from that occasioned by political fears, and so great is the supply that even a new political crisis might not have much effect upon the rate. The Paris spot rate is unchanged at Frs. 177⅜. Swiss francs weakened slightly to Frs. 21.62 on the cessation of purchases of francs against sales of dollars. Belgas were steady at bel. 29.20 early in the week, but have since moved to bel. 29.22 as the result of sales of belgas and purchases of gold in London by the Belgian authorities.

★

The Money Market

THE end of the half-year passed off very easily. Loans into July gradually hardened from ¾ to 1¼ per cent. early in the week, while for a short time on Thursday morning 2 per cent. was paid. The banks also called some of their overnight money. Very quickly on Thursday morning, however, it turned out that all borrowers' needs had been satisfied. For the rest of the day a position of stalemate prevailed, for lenders were still trying to obtain 2 per cent., while some borrowers refused to pay more than ½ per cent. There was, therefore, very little business, though one or two banks renewed loans at 1 per cent. during the afternoon. All these Thursday loans were made against bills, as bonds had been pledged against loans arranged earlier in the week. There was no borrowing at the Bank of England.

	July 1, 1937	June 23, 1938	June 30, 1938
	%	%	%
Bank Rate	2	2	2
London Deposit Rate	1/2–5/8	1/2	1/2
Short Loan Rates:			
Clearing Banks	1/2–1	1/2–1*	1
Others	1/2–5/8	7/8	1–2
Discount Rates:			
Treasury bills	1/2–5/8	9/16	17/32–9/16
Three months' bank bills	9/16	9/16–5/8	9/16

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Both Treasury bills and three months' bank bills were quoted at 9/16 per cent., but the banks bought a few September Treasuries at 11/32 per cent. Early in the week there was a fair amount of forward business in bills for delivery and payment on July 1st. The rate quoted for forward business into the new half-year was ½ per cent. These operations should help to provide the market with funds on July 1st, when, as stated in a Financial Note, a big turnover is expected. The market, however, did not anticipate any serious strain on that day.

★

The Bank Return

CURRENCY requirements by the public over the end of the month explain the slight increase in the note circulation. Otherwise this week's Bank return reflects the preparations of the discount market for the end of the half-year.

	June 30, 1937	June 15, 1938	June 22, 1938	June 29, 1938

Proportion	20·3%	25·3%	27·1%	24·4%

As the market was not taking up this week's new Treasury bills until July 1st, Government resources were depleted during the early part of the week by the repayment of maturing Treasury bills. Public deposits, therefore, have run down to £10.5 millions, while the increase since last week of £9.3 millions in Government securities shows that the Treasury has had to borrow on Ways and Means. All this money has gone into bankers' deposits, which have risen since last week by £20 millions.

A year ago the Bank return was dated June 30th, and so revealed the full extent of these movements. This year it is dated June 29th, and so these changes are only partially revealed.

★

The Bullion Market

BUSINESS in gold has been limited, particularly as regards dealings carried through after the fixing. There has been the usual Continental hoarding demand, met by sales from official sources. It would be a mistake, however, to imagine that this official selling involves a continuous depletion of the Exchange Equalisation Account's gold. Except during periods of heavy buying, such as occurred during the recent dollar scare, purchasers' needs can be met out of the newly-mined gold disposed of regularly in London by the authorities. The premium has eased this week, but this is mainly because of the slight improvement in the dollar. There has been only a small drop in the London price.

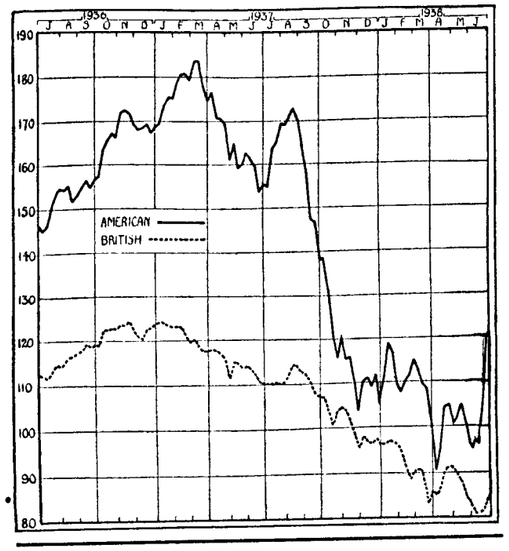
* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce ·999 fine during the week.

The silver market has been very idle, the main feature being an almost complete absence of offerings. Were any weight of silver to come on the market, it would at once affect the price. In the middle of the week some bulls of silver were switching forward their commitments by selling cash and buying forward. This brought the price for two months' silver to a discount of only ¼d., and also to the highest level since the break last March, which followed the suspension of the United States-Mexican Agreement. The forward price, however, eased on Thursday with the termination of these operations; £460,000 of silver has arrived this week from China. This silver had previously been sold forward, and did not come on the market.

Investment

Course of Share Values.—Wall Street, which does nothing by halves, last week fairly took the bit between its teeth. By the end of June, as the chart, opposite, shows, average equity values had regained all their losses of 1938. The movement took the whole market by surprise, and it must be admitted that the arguments so far adduced in favour of its continuance turn rather on points of chart-reading necromancy than on any factors in the immediate economic outlook. The index has broken through the previous "high" for the year, which was the best reading obtained during a series of secondary recoveries which occurred after last year's precipitous decline had been checked in November. The volume of business has increased in striking fashion on every rise within the past ten days, and has diminished at each breath-taking pause, exactly in the manner laid down in text books of modern market theory. London has followed at a respectful distance without, apparently, displaying any widespread confidence in the permanence of America's recovery.

★ ★ ★



The American trade and political background (a description of which is given in a leading article on page 2) does not encourage more than a hope that "pump-priming" may possibly transform the hunch of a moderate autumnal recovery into something more substantial than its predecessors. Signs of some revival in residential building are welcome. But of a thorough-going revival in steel production there are no signs, unless the recent reductions in prices stimulate a disproportionate increase in demand,

and wage troubles do not arise. There have been no overt approaches for a truce between Business and a President whose political prospects at the November Congressional elections look better than ever. To all this the reply may, of course, be made that the rôle of the Stock Exchange is not to register but to anticipate economic changes. But neither the speed nor the extent of last month's upturn in

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(July 1, 1935 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

prices affords in itself conclusive evidence of permanence. The present movement could be paralleled from the experience of 1930, when the market was much wider, because speculative facilities were not curtailed, as they are to-day, by official regulations. The London market, therefore, is likely to maintain its Fabian attitude even if, as is probable, the American movement goes further before encountering its first real check.

★ ★ ★

Anglo-German Debt Discussions.—The absence (up to the moment of going to press) of any official statement regarding the progress of the Anglo-German debt talks, which have continued in London this week, may be taken to indicate that the negotiations, although protracted, hold out the promise of some positive result. Since the question came to a head three weeks ago, a sharp difference of view has been apparent on the questions, first, whether the German Reich must assume responsibility for the Austrian loans or whether the latter, in effect, had become *déraciné* since the *Anschluss*; and, secondly, whether the recognition of the Austrian debt by Germany would entitle the latter to seek concessions on the service of the Dawes and Young loans. There have been indications this week that a comprehensive agreement covering the debt obligations of Greater Germany as a whole has been under discussion. It has been suggested, in particular, that some alleviation of Germany's interest obligations on the Dawes and Young loans might be coupled with a compromise on the Austrian issues and the resumption of some sinking fund operations for the Dawes and Young issues. Sir John Simon declined to make any statement in Parliament on Thursday on the possibility of a cut in the interest on these loans, but he added the significant advice to investors that purchases of Austrian and German bonds from foreign holders would be at their own risk. The British holder of Dawes and Young loans would naturally regard any settlement on the lines suggested above as a compromise based on expediency rather than principle, for there is no essential reason why the recognition of one

INSURANCE SHARES AS A LONG-TERM INVESTMENT

Extracts from

"INSURANCE SHARES 1887-1937"

by the Right Hon. C. A. McCurdy, K.C.

I—GROWTH OF INCOME

"IT SEEMS INCREDIBLE, but it is nevertheless true, that during the troubled years we have passed through since 1913, while Empires have crashed, currencies have collapsed, and great industries have suffered eclipse, the British Insurance Companies have as a group year after year not only maintained but increased their dividend payments. *Surely not during the Great War?* Yes, even during the Great War.

The index figures given below show that the gross income yields on the shares of the *Economist* group of insurance companies rose steadily from £4. 18s. 8d. for 1913 to £6. 0s. 9d. for 1918, and continued upwards with only temporary and minor decreases, reaching £15. 15s. 10d. in 1937.

So much for the income received by a holder of British insurance shares during a period of world crises and general depression. The index figures show us also what happened to the *capital value* of an investment made in 1913 in the shares of the same group of insurance companies as compared with a like sum invested in 2½ per cent. Consols.

YEAR	INSURANCE SHARES: VARIATIONS IN CAPITAL VALUE	INSURANCE SHARES: GROSS INCOME PER CENT. £ s. d.	CONSOLS: VARIATIONS IN CAPITAL VALUE	YEAR	INSURANCE SHARES: VARIATIONS IN CAPITAL VALUE	INSURANCE SHARES: GROSS INCOME PER CENT. £ s. d.	CONSOLS: VARIATIONS IN CAPITAL VALUE
1913	100·0	4 18 8	100·0	1926	243·7	11 1 8	78·1
1914	105·1	4 19 1	101·2	1927	254·0	11 15 4	78·0
1915	85·8	4 19 1	85·3	1928	333·0	12 13 0	79·5
1916	84·0	5 2 3	77·9	1929	340·6	13 3 7	77·25
1917	94·2	5 8 0	72·0	1930	327·5	13 4 5	79·5
1918	123·4	6 0 9	78·5	1931	290·0	14 0 3	78·5
1919	177·2	7 6 11	72·7	1932	291·1	14 1 8	94·6
1920	180·5	8 15 5	68·5	1933	353·5	14 5 3	105·1
1921	141·0	8 11 8	68·0	1934	402·5	14 2 8	119·1
1922	163·6	9 2 5	78·4	1935	449·7	14 12 3	123·9
1923	193·9	9 9 6	81·7	1936	503·1	14 12 0	120·3
1924	220·4	10 6 11	80·7	1937	462·0	15 15 10	105·0
1925	251·1	10 16 2	80·2		(Sept.)		(Nov.)

The first thing to be observed is that for eighteen out of the twenty-four years between 1914 and 1937 Consols could only have been sold at a loss of anything up to £32—say a loss of 25 per cent. on the average—and to-day the £100 put into Consols in 1913 is worth £105.

On the other hand, while the market price of insurance shares dropped in value during the Great War to a low average of £84 in 1916, it had recovered and more than recovered by 1918 to an average value of £123, a figure which without any serious setback had, by 1937, increased to £462."

liability should be held to rest on concessions granted in respect of a second. Meanwhile, the force of *de facto* default has been felt by holders of the Austrian 7 per cent. loan, whose July coupons are payable, out of moneys received by the trustees, at the rate of five-sixths of the amounts due. The full June coupon was paid on the Conversion Loan, 1934-59, but there has been no further announcement regarding the July coupon on the 1933-53 Guaranteed loan.

* * *

Corporation Borrowing Resumed.—Following the outstanding success of the second National Defence Loan a fortnight ago, the authorities have lost no time in re-opening the turnstiles to corporation borrowers. This week's £2 millions issue by Leeds Corporation, indeed, appears to share some part of the reflected glory of the Defence Loan. Its terms—3¼ per cent. stock, dated 1958–62, at £98 per cent.—are similar to those adopted for a series of issues in February and March, which began with Birmingham, and terminated with Middlesbrough. This sequence was interrupted by the £10 millions London County Council loan, whose size, coupled with the anæmic condition of markets early in May, necessitated a 3½ per cent. stock, of roughly ten years' longer life, issued at 101½. Even this basis, it will be recalled, failed to attract public subscriptions for more than 4½ per cent. of the total issue, although the Kent County Council loan, which followed a week later, was over-subscribed.

* * *

What inferences may be drawn from the course of corporation borrowing during the first half of this year? It is evident, first, that lenders are exercising some discrimination between borrowers, and inclined to fight shy of large loans, even when their terms are ostensibly favourable. Secondly, the redemption yield basis of £3 7s. 6d. per cent. adopted for most of the February issues has proved acceptable. Several of the loans offered on this basis stand at a moderate premium to-day. The terms of the Leeds issue, which revert to this basis, have, therefore, a certain appeal, though some quarters might prefer a straight 3½ per cent. stock, with its corollary of a small premium. The terms of the Leeds issue might, under adverse conditions, prove as difficult to maintain as they did last May. While it is proper that the recent improvement in the gilt-edged market should obtain recognition in the price of corporation borrowing, trustee and high-grade fixed-interest issues are likely to provide the mainstay of new capital business for some time to come. It would, therefore, appear desirable, for reasons which we discuss in a leading article on page 3, to avoid any suggestion of squeezing the last halfpenny from the lender, for the events of the last six months indicate that he is more sensitive to new issue terms than at any time since 1932.

* * *

League Loans Service.—Faith, rather than conviction, that time is working on his side, alone sustains the foreign bondholder in these days of default and blocked service. Yet the report of the League Loans Committee, covering the sixth year of its activities, shows once more that working contact between debtor and creditor can protect the rights of the latter and, if occasion warrants, alleviate the burden on the former. The impossibility, under modern conditions, of insistence upon the letter of a bond is not the only reason why the introduction of equity—in its legal sense—in debtor-creditor relations is to be welcomed. During the past year, the Committee have been responsible for permanent settlements involving the modification of original contractual service on the Danzig and Hungarian League Loans, the terms of which were accepted by 98 per cent. and 96 per cent. respectively of the holders. It will be recalled that the trustees protested against the Hungarian settlement, which involved the permanent infraction of the general bond governing the loan, already impaired by partial coupon payments since 1932. Estonia has continued to transfer full service—a matter of importance, since the loan is callable for redemption—while Bulgaria has fulfilled her undertakings. Bulgaria's improved economic position should be marked in the proposals for the future service of the League and other Bulgarian loans, which is to be reviewed next December. Extensive repatriation of Bulgarian bonds has recently been in progress, and service requirements in future will involve a reduced exchange burden. Greece is the only intransigent debtor on the League Loan Committee's books, for her loans have been in complete default for the past eighteen months. In September last year, the Greek authorities announced that they did not intend to modify " in the least " the inadequate terms for permanent settlement published in June, 1937. The fact that further offers of 40 per cent. coupon payments have been accepted by only a very small proportion of non-Greek holders indicates that investors were generally content to follow the lead of the bondholders' representatives, rather than to snatch at inadequate partial payments.

Company Notes

Richard Thomas Finance.—For some time, the London market has been aware of negotiations for raising further finance to complete the new Richard Thomas plant at Ebbw Vale. Speculative reports of the nature of the scheme have been accompanied this week by an appreciable improvement in the 4 per cent. debenture stock from 66 at the end of last week to 77, while the preference shares have appreciated from 9s. 3d. to 10s., after touching higher levels. While some forecasts of the scheme have a circumstantial appearance, at the moment of going to press they lack any official confirmation. On Thursday, however, it was announced that detailed particulars of the new financing scheme would be circulated to share and debenture holders within a few days. It is generally understood that they will relate to the raising of £5—£6 millions of new money, the bulk of which may be found by the subscription of a prior lien debenture issue by banking interests. The recent improvement in the existing debenture issue may be explained by the presumption that some concession will be made in its service as compensation for its relegation. It would be premature, however, to discuss the implications of this possibility, or of any potential changes in the company's directorate, before official information is available.

* * *

London Transport Position.—London Transport has this week completed its fifth year of service, at the end of which its " C " stock stands no higher than 74¼, compared with 112¼ at one time in 1936, and 79 a year ago. The Board's traffic returns for the 52 weeks to June 25th suggest that a substantial recovery has been obtained in gross receipts, for the total shows an increase of £657,100 to £29,388,200. This improvement, however, is more apparent than real, and its translation into terms of potential " C " stock dividends is dangerous. In the first place, the receipts are shown before pooling with those of the suburban receipts of the main line railways. Secondly, the bulk of the "improvement" was concentrated in the last quarter of the year—the first three-quarters closed with a " plus " of £127,600—and thus reflects the deficiency of the corresponding quarter of 1937, which showed a loss of £347,000, compared with 1936, as a result of the bus strike. It would appear that the Board has to some extent increased its normal traffic takings, and has re-attracted an appreciable part of the receipts which were temporarily lost after the strike. But it will be recalled that the operation of the London Transport pool worked in favour of the Board in last year's abnormal circumstances. It may be presumed that wage costs increased on balance last year, and while the rise in fuel costs was checked for a time, the cost of the increased oil duty is estimated to amount to some £180,000 in a full year.

* * *

It is clear, in fact, that the prospects for the " C " stock final dividend, to be announced next October, cannot be assessed with any precision at present. The stock has received an interim payment of 1½ per cent., but the size of the final dividend this year is of crucial importance. Under the 1933 Act, holders of not less than 5 per cent. of the " C " stock are empowered to apply to the High Court for a receiver in the event of the Board failing in respect of each of three consecutive years, of which the first shall not be earlier than the year ending June 30, 1936, to pay interest at the standard rate of 5½ per cent. on the " C " stock. It would, presumably, be open to the Board to challenge the implications of this clause by a technical default on its provisions, if it took the view that renewals provisions must not be subordinated to dividend requirements, and that changes in operating conditions necessitated a revision of standard rates, but the consequences of such a policy would necessarily be far-reaching, both for the Board and the investor. It would be wholly premature to examine them here. Lord Ashfield has pointed out this week that it is too early to say what " C " stock dividend rate will be paid for the year which has just closed. The " C " stockholder will note that increased fares, in the chairman's view, would not necessarily ensure greater revenue.

* * *

General Electric Prospects.—The General Electric Company has now entered its fiftieth year—a jubilee which has already been anticipated by the increase in the cash bonus payment for 1937-38 from 7½ per cent. to 10 per cent., making a 20 per cent. distribution for the year. At the annual meeting this week, Lord Hirst, whose own record of service dates from the foundation of the business in 1888, described 1938 as an exceptional year, and expressed optimism regarding the immediate future. His review of the company's diversified activities showed that practically all departments and all markets made their contribution to last year's satisfactory figures. Export business, for instance, exceeded the previous record established in 1929-30 by nearly £500,000. The heavy machinery, telephone, and lighting branches made satisfactory progress, and throughout the group technical development appears to have been well maintained. The chairman's optimism is based, in part, upon the likelihood of a restocking movement, for he expressed the view that consumers' stocks have now been reduced to sub-normal dimensions. But he added a warning that last year's total dividend might not be repeated, and that the exceptional economic achievements of 1937 might not be quite reached during the current year. Investors should be prepared, it would seem, to contemplate some reduction in the General Electric distribution for the current year, but the chairman's optimism, coupled with the fact that the secular upward trend in the electrical industries is far from exhausted, suggests that any adjustment of the rate should be moderate. Fortunately, the current price of the ordinary stock, even after its impressive recovery in recent weeks, takes some account of this possibility.

* * *

Patons and Baldwins' Reduced Profits.—The full report of this wool-spinning business for the year to April 30th strengthens the inference already drawn from the preliminary figures that the severe fall in wool values since last autumn has overshadowed any change in the amount of business handled. At present values, stock-in-trade represents 44 per cent. of total assets, and the incidence of fluctuating wool prices is plain from the profits record of the company. Stock-in-trade was reduced by 24 per cent. last year from £3,569,208 to £2,721,549, and the primary reason for the fall lies in the board's emphasis of the exceptional reduction in wool values. Though it is not shown separately in the accounts, a stock reserve was set up some time ago for any necessary provisions against book costs which amounted at the end of April, 1936, to £385,000, and was credited with an " adequate addition " for 1936-37. The profit and loss account shows that part, at least, of this reserve was re-credited in the latest year, although the accounts do not directly reveal whether the drop in the balance sheet item for " sundry creditors, reserves for Government taxes, pensions, etc.," from £1,358,988 to £696,912 is accountable to this transfer. Even with the draft upon the stock reserve, however, there is a decline of 30 per cent. in total profits, as we show below: —

	Years ended about April 30		
	1936	1937	1938
	£	£	£
Profit	566,508†	610,959†	426,661*
Depreciation	127,911	126,952	146,433
Interest and fees	20,600	20,225	19,562
Pensions fund	20,000	20,000	Nil
Preference dividend	70,507	69,594	68,156
Ordinary stock (tax free) :—			
Earned	*327,490*	*374,188*	*192,510*
Paid	199,911	239,894	191,915
Earned %	*20·5*	*19·5*	*10·0*
Paid %	12½	12½	10
To reserve	125,000	125,000	Nil
Carry forward	63,909	73,203	73,798

† After depreciation, debenture interest, taxes, employees' bonus and exchange losses. * As above, but after transferring a portion of the stock reserve to compensate for exceptional fall in wool values.

A saving of £20,000 in the pensions fund provision is counterbalanced by an increase in depreciation, apparently necessitated by the substantial additions to fixed plant in 1936-37. But while the tax-free dividend is reduced by no more than 2½ per cent. (through the omission of the cash bonus), the distribution is covered by only a trifling margin, and there is consequently no addition to reserve. The latest year's difficulties have been of exceptional severity, and should not prove permanent. The current gross yield of £6 13s. on the ordinary stock at 44s. 3d., at least, suggests that the market does not view the setback in profits too seriously, although it is not disposed to look for early relief from low wool prices and reduced spinning activity.

* * *

Savings Unit Trust.—The current recovery in equity share prices has coincided with the appearance, under the auspices of the Fifteen Moorgate group, of a Savings Unit Trust, and the formation of a new trust by the Allied Investors' group, to be known as American Industries Trust, of which particulars will shortly be published. The Savings Unit Trust provides an example of compromise between fixity and the more complete manifestations of flexibility. Its initial portfolio consists of no more than 28 securities, and is reminiscent of a typical " fixed " panel rather than a comprehensive flexible trust portfolio, which may include 100 or more securities. The managers' opportunities for " switching " are limited. New investments may not exceed three in any one year (although they may be drawn from a wide range of possible candidates conducting businesses " of similar type " to those covered in the original portfolio) and the maximum number of replacements is limited to twenty. The managers have adopted an approximate value of 2s. for the sub-units. The minimum initial purchase has been fixed at 200 sub-units, but subsequent orders will be accepted for multiples of five sub-units. The price adjustment permitted to the managers amounts to 1½d. per five units. An initial charge of 3 per cent. will be included in their price, and a half-yearly charge of ⅛ per cent.

of the value of the trust fund will be made. Although in some directions the trust represents a reversion to an earlier type, its appeal to a particular clientèle, suggested by its name and its special incremental facilities, is a new departure on the selling side, whose results will be followed with some interest. How far investment in the best "tempered" portfolio of equities can be regarded as an alternative to—still less a substitute for—a deposit with a savings bank or a building society, for savers of very small means, is a highly debatable question.

* * *

Steel Activity and Profits.—The chairmen's speeches at the John Brown and Guest, Keen and Nettlefolds meetings provide a number of interesting pointers for steel shareholders. John Brown, of course, is in a class apart, for the business of its main subsidiary, Thomas Firth and John Brown, is being maintained at a satisfactory level, while the company's Clydebank shipyard is likely to be fully occupied for a considerable time to come. The group, in fact, should enjoy the full benefit of rearmament activity during the current year and, in addition, the commercial business of Firth-Brown still continues at a high level. Profits, it would seem, should be maintained this year, and Thomas Firth and John Brown has a generous margin of undistributed profits to meet the unlikely contingency of any reduction in John Brown's earnings. Mr S. R. Beale, at the Guest, Keen and Nettlefolds meeting, struck a contrasting note, for he frankly admitted that, while the company was earning satisfactory profits, they were not at the high average rate of last year. The chairman scouted any suggestion that slump conditions, similar to those of 1931-32, were likely to reappear in the steel industry, but he emphasised that the working-off of excess stocks would entail "another few months" of much reduced demand. The group, of course, now has the benefit of modernised plants, and the prospects for constructional steel business are still regarded as reasonably good. It is probable, however, that the sheet and tinplate sections of the group are less favourably placed. Some reduction in the current year's dividend would appear to be implied by the chairman's remarks, and the ordinary stock has reacted, on this interpretation, to 26s. 3d.

Bleachers' Association Meeting.—The recent results of the Bleachers' Association (discussed on page 550 of *The Economist* of June 4th) were undoubtedly disappointing, but Sir Alan Sykes' review at last Friday's meeting suggested that they were creditable enough in view of the year's special difficulties. Bleachers, like most industrial concerns, experienced a profound change between the first and the second halves of the financial period. Trading profits to the end of September last were substantially better than a year earlier. Further operating economies were realised, and a moderate improvement in the demand for bleached goods was illustrated by a 5 per cent. increase in exports of bleached cotton piece-goods. But from October the reaction was sharp, and exports fell by no less than 25 per cent. in the second six months of the financial year. Activity was checked by the persistent fall of American cotton prices. Indian trade was hindered by the prospective revision of the trade agreement with the United Kingdom—a matter of serious moment for Lancashire, since exports from this country are still falling, and colonial markets are being penetrated by Indian-produced cotton goods. The fall in cocoa prices, again, had a severe effect on the Association's West African trade. The chief feature of these difficulties is that they lay outside the Association's control, and their remedy may imply some degree of outside assistance. The outlook, however, is not wholly adverse. Technical developments include the production of chemical cotton, for use in the artificial silk, lacquer and plastics trades, and special finishes are being developed. But such developments, while a step in the right direction, can never replace fully the loss of the Association's main trade, particularly in the export markets. It is not surprising that the expected reorganisation scheme has been further delayed, for the Association has yet to achieve some degree of stability even in its sadly reduced profits.

Argentine Navigation Report.—This company's river and coastal steamer services in the Argentine, Brazil and Uruguay provided substantially increased earnings during 1937. Gross profits, after providing for maintenance of the fleet, increased by 16.7 per cent., from 7,438,235 pesos to 8,683,272 pesos, and net profits (after charging expenses under various headings, including fleet depreciation, administration costs and directors' fees) amounted to 2,696,909 pesos, against 1,549,106 pesos for 1936. The payment of a full 10 per cent. preference dividend (together with 4 per cent. in respect of arrears) and of 3 per cent. on the ordinary shares was announced last April. To the British investor, the prospects for the preference issue is of closest interest. Nominally, these shares are of 5.04 gold pesos, but their 10 per cent. cumulative dividend is payable at the fixed rate of 2s. per share, and they are entitled to repayment in a liquidation at £1 sterling per share. For 1935 and 1936 only 9 per cent. was paid, and arrears at the end of 1936 amounted to 4 per cent. Although the improvement in Argentine conditions during the first half of 1937 was damped by the considerable reduction in trade activity during the second part of the year, these arrears and the current dividend were well covered. A further decline in Argentine exports this year has been accompanied by a slight reduction in the company's gross receipts, and operating costs have also advanced. A quotation of 17s. 6d. for the preference shares indicates that the market is not counting on the maintenance of the full dividend this year, despite the directors' conviction that satisfactory results will again be shown.

Pass and Joyce Scheme. — This company experienced a capital reconstruction in 1936, and is now faced with a reorganisation so drastic that the present shareholders will have but a small stake in its future. A new company, Pass and Joyce (Successors), Limited, is to be formed, which will be controlled by Henlys, Limited. The latter will subscribe for ordinary shares to an amount depending upon the exercise of rights by the preference holders, and all prior securities, represented by mortgages, debentures, and preference shares, will be required for the creditors. Existing shareholders will thus receive a vestige of the equity. The present capital, which was written down from £175,000 in 1936, consists of £50,000 in 7½ per cent. cumulative participating 10s. preference shares and £15,000 in 1s. ordinary shares. One 1s. ordinary share will be allotted to a holder of £1 of present preference or £2 of present ordinary capital. This will involve the allotment of 57,500 out of the 200,000 1s. ordinary shares in the new company, and Henlys will subscribe for the balance at par, subject to the issue of shares to preference shareholders, who may exercise the right to subscribe for one 1s. ordinary share for £1 of preference capital held. The new company will also issue 10,000 6 per cent. non-cumulative redeemable £1 preference shares, but these are reserved for creditors. Holders of the existing second mortgage will receive £11,427 cash and £4,500 in preference shares, while unsecured creditors will receive 3s. 2d. in the £ in cash, and one preference share for £2 of debt. The new preference shares will be preceded by £15,000 debentures (carrying a minimum rate of interest of 5 per cent.) to be subscribed at par for cash, while the first charge of all will be a mortgage securing some £33,000 still owing to the bankers, Messrs Coutts & Company, who are forgoing £3,000 of their debt. The new ordinary capital will thus be highly geared, and while the business may be more prosperous in the future, the residual 3¾ per cent. participation reserved to existing ordinary shareholders has a conjectural value. Pressure of the creditors' claims and shortage of cash, however, compels both ordinary and preference shareholders to bow once again to the inevitable.

* * *

African and European Investment.—The sharp reduction in the profits of this mining finance concern last year was explained by Mr Louis Marks at the annual meeting held in Johannesburg last week. It arose primarily from unfavourable stock market conditions, for regular dividend and investment income actually showed a considerable increase. In addition to the company's disclosed reserves, the chairman pointed out, the hidden reserve represented by appreciation of securities over their book value amounted to £1,256,449 at the end of last year. Some 70 per cent. of the investments, which were increased from £2,002,677 to £2,786,345 last year, consists of dividend-paying securities. The company now holds mineral rights over 56,010 acres in the Odendaalsrust district, which are about to be prospected, while a large share interest is held in Western Holdings, whose recent discoveries have been made on adjoining territory. For those shareholders who are more interested in immediate dividend possibilities, Mr Marks held out the prospect of an interim dividend, to be declared this month.

* * *

The Week's Company Profits.—The number of company reports covered in our usual analysis of profit and loss accounts on page 51 is reduced this week to 39, excluding new concerns or those for which comparable figures are not available. The latest net profits of these concerns amount to £1,932,000, and show a decrease of 2 per cent. below the previous year, when they earned £1,971,000. The total profits of 1,458 companies analysed this year amount to £211,773,000, an increase of 13 per cent., compared with profits of £188,303,000 earned in the previous year. This week's results are discussed on page 31, under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 40. Lord Hirst's review of the *General Electric Company's* progress is discussed in a note on page 27. The *Southern Life Association*, whose annual meeting was held in Cape Town in April, earns over 4½ per cent. net on its funds, but values its liabilities on the assumption that only 2½ per cent. or 3 per cent. will be earned. A substantial increase in the company's lager trade was described by Lieut.-Col. R. W. Barclay at the annual meeting of *Barclay, Perkins and Company*. New technical developments were explained to *Bleachers Association* members by Sir Alan Sykes, whose speech is discussed on page 28. At the *Allied Ironfounders* meeting, Mr A. W. Steven described the establishment of a research department, whose whole cost in the year to March last had been charged to revenue though that particular trading year had obtained little benefit from this expenditure. We refer to Mr S. R. Beale's address at the *Guest Keen and Nettlefolds* meeting on page 28. At the *Globe Telegraph and Trust* meeting, the Earl of Midleton explained the use made of the Cable and Wireless (Holding) stock received in discharge of arrears. From the balance remaining after a special bonus, a sum was restored to general reserve equal to the amount taken in 1931 and 1932 to maintain the preference dividend. Mr Louis Marks' speech at the *African and European Investment Company* meeting is reviewed on this page. Addressing *Charterland and General Exploration and Finance* shareholders, Sir Edmund Davis disclosed that at May 31st the valuation of the company's investments was £474,824, representing (after adjustments for other items) a surplus of £123,391 over the issued capital. Mr Charles Emerson reported at the *Malacca Rubber Plantations* meeting that the company had sold over 1,500,000 lbs. of their standard grades at just under 9½d. a lb., which would provide a substantial profit. The year's events in the West African cocoa trade were discussed by the Earl of Selborne at the *Bank of British West Africa* meeting. The chairman expressed the hope that agreement would be reached between buyers and sellers before the truce expired on October 31st.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
JULY 5	JULY 7

THE power of Wall Street over the London market has been well illustrated this week. While the New York indices have leaped through their previous "highs," London has been content to maintain the price of industrials, to preserve a firm appearance for gilt-edged, and to concentrate its buying power on American stocks and commodity shares. Business in home securities continues small, and but for a delayed response to Wall Street's mid-week buying wave, prices towards the end of the account might have shown some net decline, instead of maintaining their general level.

Markets generally became irregular on Monday after a firm start, and *gilt-edged*, in particular, suffered from small selling as a result of which the Defence Loan was lowered to 1 per cent. premium, in anticipation of the large call due at the week-end. Fractional declines continued on Tuesday, but stocks showed little change on balance, thanks to a late recovery, and registered net progress on Wednesday. A further recovery in Australian and New Zealand loans was also reported. Corporation issues remained firm despite the Leeds issue (discussed on page 26).

Hopes of a satisfactory debt settlement encouraged *Austrian bonds*, the 7 per cent. issue in particular staging a sharp advance early in the week. Brazilian bonds rallied after an early reaction, but Chinese issues were still supported on the recent coupon payments.

Home rail stocks were consistently poor. Profit-taking soon checked an initial rise, and the dull market became even more dejected after the issue of a depressing batch of traffics. Little business was reported in the foreign rail market, but the payment of debenture arrears by B.A. and Pacific and Argentine Great Western stimulated interest.

*

Before responding whole-heartedly, on Wednesday and Thursday, to Wall Street, *industrial shares* displayed a more erratic tendency. Prices were fairly well maintained, in spite of occasional profit-taking, but activity slackened somewhat until Wednesday's spurt on Wall Street imparted new vigour. Iron and steel shares were notably strong to start with, but interest fell off as the week progressed. Richard Thomas issues were active on unofficial reports of the arrangements made for new finance, while Guest, Keen receded on the meeting. Coal shares provided no interesting features. Electrical equipment issues were irregular, General Electric, for instance, reacting a little after a favourable response to the annual meeting. Motor shares behaved similarly, a more hesitant tendency following early strength and then giving way to renewed advance. Without being particularly active, aircraft shares were on the whole well supported, Rolls Royce rising briskly on Thursday. Textiles made a mixed showing, Patons and Baldwins gaining at first and reacting in mid-week in common with other issues. Among rayon shares, Courtaulds were easier on reports that the final stages of equipping the new Preston factory would not be proceeded with. Though uninteresting, tobacco shares were firm, and Imperial Tobacco and British American Tobacco responded to the mid-week recovery. Stores, provision and catering shares were irregular. Miscellaneous issues did not move consistently, and some of the leaders lost ground slightly at first, before the end-account spurt.

Oil shares were a little less confident, but enjoyed a satisfactory week, which opened strongly on good American

news, though quieter conditions prevailed later. Anglo-Iranian was among the most active issues. The advance in the commodity price to 7⅜d. this week was again accompanied by considerable activity in rubber shares, particularly on Monday and Thursday.

Mines were not among the brightest features of the stock markets. Prices were marked up at first, under the influence of Wall Street, but the volume of business failed to expand, and prices later were inclined to drift. Kaffirs were subdued until mid-week, when some Paris and Cape demand for the dividend-payers was in evidence. Rhodesian copper shares were among the more interesting sections, but the volume of business was not large.

ACTUARIES' INVESTMENT INDEX

In the week ended Tuesday, June 28th, the Actuaries' index of 151 industrial ordinary share prices rose by just over 2 points to 66·4, comparing with 64·0 a month ago, and 82·6 a year ago. The corresponding average yields are 5·82, 5·94 and 4·39 per cent., respectively. We give below a selection of the component indices, and the usual monthly particulars of fixed interest securities :—

New York

WALL STREET has belied cautious operators, who anticipated a significant bound of profit-taking, by absorbing two days' selling pressure in comparative comfort, and then sweeping on to the biggest buying movement of the year on Wednesday. The Dow Jones industrial average broke through the year's "high" of 134.35, registered last January, to reach 135.87 at the close on Wednesday. Turnover then reached the impressive level of 2,660,000 shares—the largest since October last year—of which 710,000 shares were traded in the last hour. New high records for the year were touched by most of the pivotal industrials, like Johns-Manville, U.S. Steel, Du Pont and Westinghouse Electric, while rails and utility stocks responded generously to good buying. Although the upward movement was well supported by speculative anticipations of a proximate business recovery, it may be significant that large-scale investors, who had hitherto remained out of the market, decided this week to recommence buying operations. Business news, however, is not exciting. *Iron Age* estimates that steel activity continues at 28 per cent. of capacity, and comments on the abandonment of the price differential system between different producing areas, which is expected to have disturbing effects on near-term consumption.

* Two-hour session.

Paris

ALTHOUGH turnover remained limited, and business was restricted mainly to professional operations, June was more satisfactory than recent months. Dealings began listlessly, with firm prices but poor turnover, gold mines providing the only interesting section. From the middle of June a pronounced improvement occurred in domestic issues under the lead of *rentes*, and Kaffirs receded into the background. The strength of Wall Street and an improvement in international politics helped the recovery and activity became broader. The advance, however, was checked periodically by profit-taking, and the last few days of the month showed some hesitation. Prices were stimulated by rumours that the Bank of France would be empowered to conduct open-market operations, but reacted somewhat on the actual announcement, as the authorisation was more limited than had been anticipated.

Berlin

EXCEPT at the beginning and end of the month, shares were reactionary, touching the lowest average of the year. Selling for Jewish and emigrant accounts, the later fears of exporters regarding the possibility of breakdown in the Anglo-German debt negotiations, and the May import surplus accounted for the depression, but most of the declines were not considerable. Farbenindustrie for a time took the lead on the dividend

increase, and potash and certain automotive issues were firm. In the middle of the month both professional and the public operators held aloof, and some leading shares were at times unquoted, but there were temporary rises in specialities such as South German Sugar and Continental Rubber, while utilities were relatively firm. In the third week, utilities attracted further support, chemical shares were firm for a time, and the month ended with a recovery. Reichsbank was little changed and despite a favourable reception of the annual reports, leading shipping shares were lower. Home bonds weakened slightly, the German section of the Young Loan dropping 2 points. Among certificated dollar loans the Dawes and Young issues were quoted lower, but trading in all certificated loans was nominal. The official share index (1924-26 = 100) for May was 112.71, against 114.83 for April; bonds 99.70, against 99.78.

Amsterdam

LIKE other centres, Amsterdam enjoyed a considerable improvement in security prices last month, and the increase in activity eventually attracted public support. A slightly improved tendency was apparent quite early in the month, but the main trading feature at first was a revival of interest in commodity shares, Wall Street's recovery being transmitted to all sections of the market. Rubber shares responded to the quota cut, but relapsed on consideration of its effect on costs, and were hardly changed on balance, until a general improvement in commodity prices began in mid-month. Tin shares were firm on the quota news. Wall Street's recovery brought more cheerful conditions all round, with rising prices and turnover, though, as in London, the last days of the month were irregular.

Canada

DURING the latter half of May, Canadian stock prices declined irregularly, but last month spasmodic upward movements occurred, which produced an appreciable net improvement. Gains, however, were not always held, and the volume of trading generally remained low. Stocks of western grain companies found some support on good crop prospects, and construction and building supply issues were helped by the Government's new housing programme. Industrials generally shared in the recovery in world markets towards the end of June. In the mining market, considerable strength developed in gold mining issues, largely on rumours that gold prices might again be raised, but attention was diverted later to base metals, and gold stocks reacted. The bond market was firm and steady, western provincial bonds rising on the defeat of the Social Credit invasion of Saskatchewan. The Bureau's "Investors" Index for common stocks was 99.9 on May 19th, 95.3 on June 1st, 96.0 on June 10th, and 94.7 on June 16th. The index of long-term Dominion bond prices, for the week of June 10th-16th, averaged 118.0, compared with 118.1 for the previous week and 114.8 for the corresponding week of 1937.

PUBLIC OFFER

Leeds Corporation.—Issue of £2,000,000 3¼ per cent. stock at 98. A trustee stock. Redeemable at par July, 1962, or from 1958 on notice. Ranks *pari passu* with other stocks. Estimated population, 491,880; rateable value, £3,705,640; rates, 15s.; total loan debt March last, £27,195,438; capital assets, £49,000,000,

BY STOCK EXCHANGE INTRODUCTION

Cow and Gate, Ltd.—Particulars of issue of £350,000 4 per cent. first mortgage debenture stock. Trust deed in favour of Prudential Assurance, who take issue at 97. Redeemable by 1966 by drawings from 1942 or on notice at varying rates.

PRIVATE PLACINGS

African Explosives and Industries.—There has been placed privately £1,000,000 4 per cent. first mortgage debenture stock at 100 free of stamp.

Sutton District Water.—This Company has placed privately £45,000 5 per cent. debenture stock.

BY TENDER

Deal and Walmer Gas Company.—Sale by tender of 4 per cent. redeemable preference stock (redeemable at par July, 1965), to produce up to £24,256, minimum price 99.

ISSUES TO SHAREHOLDERS ONLY

Associated London Properties.—Issue of £40,000 5 per cent. "B" mortgage debenture stock at par.

Hants and Dorset Motor Services.—Issue of 100,000 £1 ordinary shares at par (2 shares for every 9 held on June 17th).

King's Motors (Oxford).—Issue of 24,000 6 per cent. cum. participating £1 preferred shares at par (4 new shares for every 10 held on June 20th).

Ohlsson's Cape Breweries.—Issue of balance of £75,000 ordinary £1 shares at 55s. to present ordinary shareholders, in proportion of one new for seven held. The additional shares will not rank for the final dividend, etc., payable on July 8th.

Renong Tin Dredging.—Issue of 40,733 £1 ordinary shares at 27s. 6d. (3 new shares for every 10 held on June 22nd).

SHORTER COMMENTS

Company Results of the Week.—ANGLO-CEYLON AND GENERAL ESTATES are paying 10 per cent. against 8 per cent., net profits having increased by some £25,600 to £80,016. It seems that the higher tea crop, accompanied by a rise in price from 13·08d. to 13·99d. net per lb., combined with increased sugar production more than offset the decline in cocoa and rubber prices. The war in China has reduced the net earnings of PEKIN SYNDICATE from £38,330 to £23,220, and as £17,929 is being transferred to investment depreciation, no dividend is to be paid. In the first half of 1937, however, the coal output from the Honan mines amounted to 737,018, against 578,162 tons, and considerably higher net sales returns were obtained. Recent rubber company reports, mainly covering the year to March 31 last, show somewhat irregular results. Satisfactory increases are still common, but there are a few instances of lower profits. BUKIT RAJAH RUBBER sales produced 6 per cent. more than in 1936–37, but higher estate expenditure reduced net profits slightly to £18,846. Tea company results continue to show marked improvement. JOREHAUT, for example, earned £81,502 against £44,853. No ordinary dividend is being paid by ATLAS ELECTRIC AND GENERAL TRUST, but net profits have increased from £181,719, to £192,664, and available reserves twice covered the depreciation of investments as at March last. The satisfactory increase in the earnings of SANGERS, LTD., is due to a rise of about £7,000 in trading profits, and a special profit of £14,750 arising from a sale is being distributed as a special payment of 1·479d. per share, tax free. SPIERS AND POND have experienced a 9 per cent. drop in trading profits, to £71,617. A profit of £12,789 was, however, realised from the sale of land, and roughly half of the proceeds was applied to various improvements to properties. OHLSSON'S CAPE BREWERIES report earnings of £195.543, against £188,978. The 17½ per cent. dividend is repeated, and a new issue of one new ordinary share for seven held, at 55s. is proposed. It is expected that the Bolsover coal oil refinery of LOW TEMPERATURE CARBONISATION will begin operations shortly, and the new "Coalite" plant in South Wales should be completed for next winter's trade. Although

(*Continued on page* 34.)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Industry and Trade

Retail Trade in May.—*The Economist's* Trade Supplement, which was published last week, came too early in the month for the inclusion of the usual statistics on the value of retail sales in the previous month. According to the *Board of Trade Journal*, the total value of sales per selling day in May was 6.1 per cent. below the corresponding figure for May, 1937; the decline was greatest in Central and West End London (8.6 per cent.) and least in the South of England (4.8 per cent.). Sales were lower this May in all the categories of merchandise, particularly for boots and shoes and for sports and travel goods. These comparisons must not be pressed too far, however, owing to the incidence of the Coronation and the Whitsun holiday in May of last year, but they show that the rise recorded in April was only a temporary check to the downward trend which has been noticeable for some months past.

* * *

Sectional Changes in Steel Output.—A noteworthy feature of the recession in steel output is that the decline in activity is unevenly distributed among the individual sections. Whereas employment in all sections of the industry declined by 9.3 per cent. between December, 1937, and May, 1938, employment in open-hearth melting furnaces fell by 14.1 per cent. and in the rolling mills by 12.1 per cent. On the other hand, the fall in employment of mechanics and labourers was only 2.4 per cent., in the founding department 6.7 per cent., in the forging and pressing department 1.7 per cent., and in puddling forges 5.7 per cent. A more comprehensive survey of the changes in the various sections of the steel industry is given in the following table:—

OUTPUT OF FINISHED STEEL PRODUCTS

	April, 1938		Monthly average, 1937		Monthly average, 1932	
	'000 tons	Per cent. change from 1937	'000 tons	Per cent. change from 1932	'000 tons	Per cent. change from 1929
Forgings	28·5	+ 3·3	27·6	+220·9	8·6	−57·6
Plates & sheets, raw	190·0	−10·6	212·5	+165·6	80·0	−52·9
Tinplates	41·7	−47·7	79·8	+ 28·5	62·1	−15·3
Galvanised sheets	17·9	−37·8	28·8	− 3·7	29·9	−57·4
Railway material	47·2	+ 1·3	46·6	+ 55·3	30·0	−50·4
Sections, rounds, flats, etc.	263·7	− 7·0	283·6	+174·8	103·2	−42·5
Wire rods	31·2	−33·1	51·1	+ 97·3	25·9	+25·1
Hoops and strips	31·4	−43·1	55·2	+180·2	19·7	−30·1
Total finished products	667·2	−17·0	803·6	+117·8	369·0	−41·9
Total raw steel	938·6	−13·3	1082·0	+146·7	438·6	−15·4

It will be seen that output of sections, rounds, etc., and of raw plates and sheets, which are extensively used in the building industry, had decreased substantially less than the average in April, compared with last year, whereas the decline in output of tinplates and galvanised sheets, a large part of which is exported, was considerably greater than the average. The production of forgings, widely used for armaments, and of railway material has actually risen. Compared with the fairly even decline in the production of all types of steel products between 1929 and 1932, the variations in the present recession are marked. As the output of structural steel and plates constitutes about 70 per cent. of the total finished steel production and as demand from the building and construction trades is not likely to fall considerably in the immediate future, there are at present no prospects of a sharp fall in the total output.

* * *

Strong Rubber Prices.—Rubber, which was priced at the opening of the current month at 5§d. per lb., has developed an unusual strength during the past week. The price once touched the 7d. limit for the first time since early last March, and although since then a slight reaction has taken place, the product is still talked to higher levels. The better sentiment is due not only to the revival of speculation, but also to an increase in consumptive demand. According to Messrs Symington and Wilson, stocks of the product outside the regulated areas declined by 17,251 tons in May to 546,825 tons. Although the latter level is still 154,723 tons above the figure of May 31, 1937, the reduction must be regarded as most encouraging, because it represents the first major fall for exactly one year. The new quota of 45 per cent., which came into force on July 1st, will reduce world shipments during the next three months to about 170,700 tons (including outside supplies), while absorption during the same period will almost certainly exceed 200,000 tons. It must be kept in mind, however, that plantations have proved to be unwilling sellers at current prices for weeks past, and as they are now entitled to pile up stocks within the restricting countries, actual new supplies might even be lower than the small quota suggests. The optimism regarding the future of the price of rubber thus appears not unfounded. Naturally, under the influence of the high world stocks, the trend of rubber quotations will be more affected by the outlook of consumption than by the state of supplies, but the market is inclined at present to take a more hopeful view of the future level of consumption than for several months past.

* * *

Oil in Great Britain.—Early this week, the Anglo-American Oil Company stated that during test operations at its experimental well near Dalkeith (Scotland) three and a half barrels of crude oil were produced. This oil, which came from oil sands 1,733 to 1,760 feet below the surface, represents the first oil produced since the start three years ago of the large-scale prospecting campaign under the Petroleum (Production) Act of 1934. As yet, it is not known whether the find is of any commercial value, but it is in so far interesting as the D'Arcy Exploration Company (a subsidiary of the Anglo-Iranian group) has recently encountered natural gas in substantial quantities at its experimental Cousland well, which is also situated near Dalkeith. This find of oil in Scotland will naturally encourage the supporters of the drilling campaign, but at the same time it is not convincing enough to satisfy those critics who found it an unnecessary waste of money to start a second vast search for oil in this country after the discouraging results of the drilling campaign in the years immediately following the last war. So far, the evidence obtained in the past three years seems to support the views of the critics. The five firms engaged in the drilling campaign have abandoned already a substantial number of shallow borings, together with some of the deep test wells in various parts of the country, and the D'Arcy Exploration Company has surrendered seven of its original 52 prospecting licences since the beginning of this year. The centre of the drilling activities, which was originally situated in the South of England, has now been transferred to the North of England and to Scotland, where, according to the views of some experts, the possibilities of finding oil are better. Only the future can tell whether the optimism and energy with which the prospecting campaign is being carried through are justified. This optimism will receive an important stimulus if the new Dalkeith find should prove of commercial value, but even if a close examination of the well should lead to disappointing results, the search for oil in Great Britain will be continued with undiminished vigour.

* * *

Difficulties in the Paper Trade.—Last year's sharp rise in wood pulp prices caused the British paper industry to cover its requirements of this raw material for a very long time ahead in order to be protected against a further rise in prices and against a scarcity of supplies. The actual trend of markets during this year has belied these apprehensions, since supplies are plentiful and prices have dropped sharply. Simultaneously, however, paper manufacturers, in possession of large and expensive pulp stocks and contracts, had to face a recession of demand and a substantial decline in paper prices. The precarious situation is largely attributed to the sales policy of the Scandinavian pulp and paper producers, who, it is alleged, after having induced the British paper manufacturers to purchase large quantities of pulp, have now sharply reduced their paper prices for the British market, thus completely offsetting the protection, and severely endangering the existence of the British paper industry. The Government has been urged to use the lever of the trade pacts to induce a change of policy among Scandinavian manufacturers. Meanwhile, a number of Scandinavian paper producers' conventions have undertaken a sharp restriction of output, as the lower prices failed to lead to an improvement of demand, and the British paper industry, too, had to reduce operations considerably. Partly owing to these measures, the heavy paper stocks in this country, which largely contributed to the lack of new orders, have recently been brought down to a more reasonable level, but holders have been left with considerable losses, since the fall in price for many papers has amounted to 30 per cent. Paper manufacturers, still burdened with substantial stocks of wood pulp and high-priced contracts, hope that arrangements will be made to overcome the present difficulties.

* * *

America and the Steel Pact.—An agreement between the Continental Steel Cartel and the American producers, which might have a great influence on the international steel markets and on the buying policy of consumers, was not obtained at last week's meeting of the Cartel in Brussels. The American producers who are prepared to join the agreement account for only 60 to 70 per cent. of the total American output, but they were required to guarantee a maximum export tonnage for the whole of the American output, including the outsiders; in other words, the export of the outsiders would have to be deducted from the quotas of the participating producers, and should the former increase their sales abroad, the latter would have to diminish their shipments accordingly.

(*Continued from page* 31)

the Bolsover refinery contributed nothing to 1937–38, total profits for the year to March 31 were £116,683, against £97,686 for the year to October 31, 1936, and £55,885 for the following five months. The trading profits of WILLIAMS AND WILLIAMS are 4 per cent. higher than in 1936–37, but owing to the provision of £9,500 against £5,000 for tax and exchange fluctuations, net profits are a little lower.

MISCELLANEOUS

Gas Consolidation, Ltd.—Net profit for year to May 31, 1938, £29,899, an increase of £4,923. Dividends on investments rose from £27,231 to £35,358. Total income £7,431 higher at £41,342. Ordinary dividend raised from 5½ to 6 per cent. Carry forward raised from £3,579 to £6,005.

Reynolds Brothers, Ltd.—Net profit for year to March 31, 1938, £135,013 (an increase of £43,141), after reserving £25,000 against nil for debenture redemption. Proceeds from sugar crop £752,568 against £598,028. To depreciation £28,310 (£15,994). Ordinary dividend 10 per cent. plus a bonus of 2½ per cent. against a dividend of 9 per cent. Carry forward raised from £35,532 to £79,920. Cash and sugar stocks £230,891 against £106,072. Season's total output of manufactured sugar 59,384 tons.

Stanley Motors, Ltd.—Profit for nine months to March 31, 1938, £25,051. Profits for half-year to December 31, 1937, £21,677. Initial report for period September 21, 1936, to June 30, 1937, showed a net loss of £4,584. Preference dividend for half-year to June 30, 1938, will be paid. No ordinary dividend yet.

Williams and Williams, Ltd.—Trading profit for year to April 30, 1938, £71,172 against £69,152. Net profit £44,501 against £46,686. Ordinary dividend and bonus 15 per cent. as before. To general reserve £15,000 against £16,011. Carry forward raised from £10,846 to £11,064.

Anglo-Ceylon and General Estates.—For year to March 31, 1938, profits rose by £25,606 to £80,016. Ordinary dividend 10 against 8 per cent. To buildings, etc., replacement account £6,339. Carry forward raised from £37,356 to £38,911.

Pekin Syndicate, Ltd.—After £17,929 to investment depreciation reserve, net profit for 1937 was £5,291 against £36,503 for 1936. No dividend is to be paid. To staff fund £1,000 (£2,000). Carry forward raised from £7,166 to £11,457. Sales of coal for 1937 reached 1,118,910 tons.

Atlas Electric and General Trust.—Net revenue for year to March 31, 1938, £192,664, an increase of £10,945. Preference dividend absorbed £158,407. Carry forward raised from £37,929 to £72,546. Value of investments at March 31, 1938, showed a depreciation of about 19 per cent. on the balance sheet figure of £5,790,765. Reserve accounts and unappropriated revenue amount to £2,281,558.

Jorehaut Tea Co.—Net profit for 1937 £81,264 compared with £44,853. To renewals and improvements account, £30,000 against £12,500. Ordinary dividend raised from 8 to 12½ per cent. Carry forward raised from £4,236 to £5,738. The crop harvested increased from 5,619,180 lb. to 6,247,105 lb.

Spiers and Pond, Ltd.—Net profit for year to March 31, 1938, £52,041, a fall of £13,057. Ordinary dividend reduced from 7 to 6 per cent. Carry forward raised from £12,513 to £13,501. Properties have been fully maintained, the amount charged against revenue for this purpose being £46,474 compared with £49,086.

Blackburn Aircraft.—Profits for year to March 31, 1938, £137,957, against a trading profit of £121,175 for previous period, which (after £32,500 for tax) left a net amount of £87,980. Ordinary dividend 15 per cent. on £400,000 against 12½ per cent. on £380,000.

Low Temperature Carbonisation.—Trading profit for year to March 31, 1938, £116,683 against £55,885 for preceding five months. Ordinary dividend maintained at 4 per cent. Carry forward raised from £11,149 to £32,450.

Cable and Wireless, Ltd.—Traffic index for May, 1938, is 6·53, against 78·6 in May, 1937, and 67·6 in May, 1936. For April, 1938, the index was 71·5, and for March, 74·7.

Lancegaye Safety Glass.—Net profit for year to March 31, 1938, £14,358, a fall of £27,209. Ordinary dividend reduced from 24 to 10 per cent. Carry forward £2,065. Stocks up from £25,204 to £66,923; cash reduced from £136,345 to £22,736.

Buenos Ayres and Pacific Railway.—A payment of one half-year's interest to July 1, 1934, will be made on July 28th next, on the 4½ per cent. consolidated debenture stock to holders registered July 1st. The Argentine Great Western Railway will distribute one half-year's interest to October 1, 1934, on its 5 per cent. debenture stock on the same date.

Southern Life Association.—In 1937 4,355 policies were issued, assuring £3,440,549. Premium income was £726,149, and interest revenue £329,689, an average of £4 14s. gross or £4 12s. 8d. net per cent. Life assurance fund is £7,355,756, an increase of £353,207. An interim bonus of 40s. per cent. compound is payable on assurances becoming claims this year. During 1937, the Association's activities were extended to general insurance, including fire.

Ohlsson's Cape Breweries, Ltd.—Net profit for year to March 31, 1938, increased by £6,565 to £195,543 before N.D.C. Tax takes £37,165 against £22,979, and depreciation £10,000 (same). Ordinary dividend and bonus maintained at 17½ per cent. To reserves: contingencies, £60,000 (£70,000); tax, £20,000 (nil); staff pensions reserve, £10,000 (nil). Carry forward £2,168 higher at £88,693. Stocks valued at £272,475 against £256,954. Cash £75,443 against £66,356.

Whether the large American producers will ultimately agree to this condition remains to be seen. In the meantime, the whole question may gain a different aspect in consequence of this week's reports from the United States. Several producers have made reductions in prices for domestic requirements, and there is a tendency to abandon the old-established "basing-point" system, which provides for uniform price schedules and thus eliminates competition through regional advantages. Such a recurrence of competition on the domestic market may well induce certain prejudiced producers, e.g. in the Pittsburgh district, to promote their export trade.

INDUSTRIAL REPORTS

THE more cheerful tone noticeable in some markets last week has continued and our correspondents from the principal industrial centres report increased business inquiry and in some cases an improvement in the volume of new business. The textile markets, in particular, have experienced increased turnovers in both cotton and jute. The heavy sections of the steel industry continue to be fully employed and there has been a slight expansion in demand in the lighter trades which have been suffering from a lack of orders recently. The seasonal decline in the demand for coal continues and most collieries now are working short time. The figures for retail sales during May show a decrease of 6.1 per cent. in daily turnover compared with May, 1937, according to the returns published in this week's *Board of Trade Journal*. It must be remembered, however, that both Whitsuntide and the Coronation fell in May last year so that a decrease was to be expected.

Coal

Sheffield.— Inland demand is satisfactory in view of existing industrial conditions. Industrial needs are somewhat less heavy, but are sufficient to keep stocks of steam coal at a moderate level. There is a reduced demand for household sorts. Gas coal is only slowly taken up. Stocks of coke are accumulating with the sharply lessened consumption. Coke makers are somewhat concerned about the decision of the Stanton Ironworks—the biggest consumers of furnace coke in the Midlands—to construct their own coke works. There are no price changes on the week.

Export business continues to be very unsatisfactory. Shippers are confining purchases to actual requirements. Midland collieries have failed to secure any share of the Swedish State railways contract, the bulk going to Northumberland steams on the basis of 16s. 3d. per ton f.o.b.

★

Newcastle-on-Tyne.—Whilst there is more inquiry for delivery ahead in North-East coals with a fair amount of business booked, the current position is a weak one and collieries are considered fortunate to be able to work a full week. In Northumberland, home trade has fallen away considerably, whilst in the export section contracts made last year at higher prices are not being implemented. With less activity in the local industrial trade Durham manufacturing coal is now plentiful and collieries are having some difficulty in finding trade. There is little inquiry from abroad for patent oven coke and the market is weak.

★

Glasgow.— Shipments of coal from Scottish ports during the first half of 1938 are fully 1,000,000 tons below the corresponding total for 1937. This results mainly from the slower conditions of general trade on the Continent, heavy stocks at importing depôts, and the higher prices quoted for Scottish than for competitive fuel. A steady downward revision of prices has been made in the past few months, but the market is now a buyers' one, and there is little extensive business. There has been a seasonal decline in inland and industrial demand and the recent reduction in house coal prices has not yet stimulated a stocking movement. Short-time working is therefore necessary, and even then large fuel is in abundant supply.

★

Cardiff. — Depressed conditions continue on the Cardiff coal market. New business is very restricted, and under the pressure of increasing stocks and a relative scarcity of empty wagons prices have been reduced for prompt shipment. Coke is also suffering from nearly 50 per cent. contraction in demand of the blast furnaces as well as from a reduction in foundry requirements. Shipments at the South Wales docks last week totalled 416,100 tons, compared with 428,200 tons the previous week, and 468,089 tons in the corresponding week last year.

Iron and Steel

London. — A rather brighter tone has made itself felt in the iron and steel markets during the past week, and although conditions generally are quiet inquiry has been more active, says the official report of the London Iron and Steel Exchange.

Buying in the pig-iron market remains at a low level, but the demand normally declines during the summer months. The movement is accentuated this year by heavy stocks and it is not anticipated that consumers will resume large-scale purchasing until early in the autumn. Current business is not sufficient to absorb the entire production, and in some districts producers' stocks are increasing.

The demand for semi-finished steel shows little improvement, and most consumers appear to have sufficient stocks to last some time, whilst others have contracts covering their forward requirements.

In the finished steel section conditions have been more cheerful than for some weeks. The heavy steel department of the industry is well provided with work and lately consumers have shown rather more interest in new business. The lighter branches of the trade, which have been suffering from a lack of orders for some weeks, have also experienced a slight expansion in demand. Export business remains quiet, but with some overseas markets business has been a little more active.

★

Sheffield.— There is no change of note in the iron and steel market. The volume of business in forge and foundry iron has not increased, and consumers are almost entirely off the market, stocks being sufficient for current requirements. Confidence in a good revival at the close of the holiday season is general, although forward buying may be delayed in the expectation of more favourable quotations at the close of the period of fixed prices in December. Basic pig is fairly well taken, but there is little business in hematites; some buying is reported, but the tonnage is limited.

Basic steel billets and acid billets are in steady demand. Good business continues to be done in strip and stainless steel sheets and wire rods.

The official figures of the May output of steel ingots and castings in Sheffield are a gratifying commentary on talk of depression. The total tonnage was 145,300, an increase of 10,300 on May, 1937. For the first five months of the year the output was 749,400 tons, compared with 705,100 tons in the corresponding period of last year.

★

Middlesbrough.—Conditions in the local market remain dull and owing to the limited demand for Cleveland foundry pig iron another blast furnace is to be put out of operation this week. East Coast hematite pig iron production exceeds requirements and further curtailment is expected unless there is an early change in the position. Buyers are discouraged by the fact that prices are maintained on the official base rates until the end of the year.

Semi-finished steel is in good supply, and whilst departments producing heavy steel continue to be fully occupied, orders would now be welcomed for the later part of the year in order to keep the plant running.

Blast-furnace coke is understood to be subject to negotiation, but prices are expected to be based at about 30s. per ton f.o.t at the ovens. There is no business in foreign ore and reduced quantities are demanded under contracts. Steel scrap is extremely plentiful with works retarding deliveries.

★

Glasgow. — Steelmakers continue working to capacity and are being pressed for deliveries. The demand for semis and for lighter sections is still quiet, but there has been an improved volume of inquiry within the past week or two. Inquiry from local consumers shows some falling off owing to approach of holidays in Glasgow and elsewhere, but there is a good deal of new business on the market for export buyers and users in other parts of the country for all classes of material. Manufacturers in Glasgow and district continue fully employed and a gratifying amount of new business has been placed just recently.

★

Cardiff. — There has been little indication this week of an improvement in the trend of business in the tinplate trade, as will be seen from the statistics given below. The position is relatively a great deal better in other finishing sections, particularly those engaged in the manufacture of sections, rods, wire, and nails, but the output of steel ingots is now only just a little more than half what it was in the early summer of 1937. Prices, however, remain nominally unchanged.

Tinplate Industry Statistics

Shipments	209,279	121,931

Textiles

Cotton (Manchester).—There has been a more cheerful tone in the Manchester market, caused by the increased activity on the Stock Exchange. Turnover in American yarns has been larger than for several months back. The increased demand has been stimulated by the advance in raw cotton prices, and the opinion is gaining ground that values were on too low a level a month ago and that the recent advance has been fully justified. Latest news from the American belt is that the crop is making steady progress. The cloth market has also been busier than for some time and manufacturers have been giving out quotations for a wide range of fabrics. Most buyers have been rather slow in putting forward prices which are acceptable, but an increased turnover has taken place. Exporters of cloth are still harassed by the unsettled conditions in many foreign markets. There has, however, been a more persistent demand for India and fairly substantial sales have been arranged in light fabrics.

★

Jute (Dundee). — A rapid change came over the jute market last week-end. In many of the jute-growing districts rain and flooding were reported, causing immature cutting, and the prospects for the new crop are less satisfactory. Speculative sellers rushed to cover "bear" sales, and prices were advanced anything from 10s. to 20s. per ton. The position is now quieter and some of the rise has been lost.

The Indian jute mills appear to be nearer a solution of their troubles in regard to working hours. An improved inquiry has been made for Dundee yarns and cloth, but there has not yet been any noticeable increase in business, so that spinners and manufacturers are unable to insist upon any advance in their prices.

THE COMMODITY MARKETS

THE commodity markets continue to reflect the improved sentiment on the New York Stock Exchange, and the general trend of prices is upward. The movement is, however, still largely due to speculative buying and may prove very sensitive to reactions from Wall Street.

Metal prices continued to rise during the early part of the week, but both copper and tin relapsed towards the close. At one time rubber touched 7d. per lb. and though this level was not maintained, the market is very strong. Cotton prices showed a further rise, but the grain markets have been irregular. Moody's daily index of staple commodities rose from 137.2 (December 31, 1931 = 100) to 140.8 in the week ending last Wednesday, thus continuing the rise which was begun early in June.

Metals

Copper. — After rising to £37 16s. 3d. the price of standard copper fell back to £36 13s. 9d. per ton and closed only 10s. up on the week. Under the influence of the Wall Street boomlet, speculative demand for copper reached a respectable level at times, but consumers did not join the buying rush. Consequently prices reacted sharply on the first deterioration in the Wall Street tendency.

★

Tin. — After the large gains of last week, the cash price closed at £184 per ton, a decline of £3 5s. on the week. The feature of the week was the revival of United States buying, which, however, stopped again after the first reaction of Wall Street. The I.T.C. decided on June 20th to return 37.5 per cent. of the carry-over which was surrendered by Belgian-Congo, Bolivia and French Indo-China at the beginning of this year. This step, which became effective from July 1st, will increase the permissible exports of the three countries by a total of 2,008 tons. Apparently the measure has been taken as some form of compensation for the 7.5 per cent. increase in the Dutch East Indian and Malayan standard tonnages.

★

Lead and Spelter. — While the closing price of spelter, at £13 8s. 9d. per ton, showed no change on the week, lead lost on balance 10s. to close at £14 6s. 3d. per ton. Both markets moved more or less in sympathy with copper, but spelter received some additional encouragement from the revival of rumours that the formation of an international cartel is being planned by the leading producers. So far, however, no new negotiations on the subject have taken place and further discussions are not expected within the next few weeks.

Grains

PRICE movements in the wheat market have been rather erratic, owing to conflicting accounts of the new American crop. Old crop Manitoba is somewhat cheaper on the week, but the market generally has been steady, though quiet. The maize market is unchanged, but the better weather in Argentine has facilitated the conditioning of the crop, and growers' marketings are expected to increase in the immediate future. There is little demand for feeding barley and prices are unchanged.

Other Foods

Provisions.—There was a better demand during the week for mutton and pork and prices rose; elsewhere the meat market was quiet. Butter and cheese prices were little changed on the week; all types of bacon were about 1s. per cwt. dearer than last week, and egg prices continue their seasonal rise.

Colonial Produce. — Sugar and coffee prices were unchanged, and the tea and cocoa markets were generally quiet.

★

Fruit. — Strawberries have been the main interest this week; the crop generally is of poor quality, according to *The Fruitgrower*, and prices have ranged from 6d. to 1s. per lb. for the bulk, with a few good samples fetching up to 2s. per lb. English cherries, currants, gooseberries and raspberries are now coming on to the market.

★

Vegetables.—Tomato prices were little changed, and all forms of salad were in good demand. Good English new potatoes sold from 16s. to 20s. per cwt. and the old crop were still fetching between £9 and £12 per ton.

Miscellaneous Commodities

Oils and Oilseeds.—The markets have been steady, but business has been restricted. Demand for linseed has been small, after the considerable purchases of the last few weeks. The price of Egyptian cottonseed has risen by 20s. per ton since the beginning of June and the new crop is being quoted at £6 5s. per ton for November shipment. The price of linseed oil also showed a further advance of 15s. per ton during the week. The demand for oil cakes is good and prices are unchanged.

★

Rubber. — Prices on the week show a gain of about ½d. per lb. Prospects in this market are discussed in a Note on page 35.

★

Potash. — According to a statement made at the annual meeting of the Mines de Kali Ste. Thérèse (the only privately owned Alsatian potash company), the world potash output reached 2,706,000 metric tons in 1937, an increase of 403,000 tons on the year. Of this tonnage the two cartel countries (Germany and France) produced no less than 2,254,000 tons. World consumption of potash, outside the two cartel countries, last year amounted to 1,225,000 tons, an increase of 195,000 tons over the preceding year. Of this tonnage the cartel countries supplied no less than 713,000 tons. In recent months the position of the international potash market has remained satisfactory, as Spain (the most efficient cartel outsider) is at present prevented from exporting. Simultaneously, the demand for potash has been maintained by the continued war scare which has stimulated the agricultural production in a number of industrial countries.

★

Furs. — Sentiment on the fur market this week has improved slightly under the influence of the better Wall Street advices. Prices, however, remained low and the current demand is but small. The interest of the trade is at present being concentrated on the fifteenth Leningrad sale, which will take place next week and at which a fine selection of the typical Russian furs is being offered. The market expects from the Leningrad sale a lead for the autumn business, particularly as the attendance at the sale will be fairly large and will be composed of representatives from all leading buying countries.

COMPANY MEETINGS

BLEACHERS' ASSOCIATION LIMITED

NEED FOR FAIR OPPORTUNITIES IN WORLD MARKETS

SIR ALAN SYKES' REVIEW

The thirty-ninth ordinary general meeting of Bleachers' Association Limited was held at the Registered Office, Blackfriars House, Manchester, on Friday, June 24, 1938. Sir Alan Sykes, Bt. (the chairman), presided.

Before dealing with the accounts, the Chairman referred to the recent retirement of Mr R. H. Eccles, who had occupied the position of secretary of the company since its formation thirty-eight years ago, and who held what must be almost a unique record in never having missed either a directors' meeting or an annual general meeting during the whole of that time. The Chairman said that he thought the stockholders would wish to join the directors in thanking Mr Eccles for his services to the company, and in wishing him long life and good health in which to enjoy his retirement. Mr H. Johnson, who had acted as assistant secretary for some years, had been appointed to the position of secretary.

In reviewing the changes in the balance sheet in comparison with that for the previous year, the Chairman referred to the reduction in the value of land, buildings, machinery, etc., which he explained to be due to writing down the value of works which had been closed, and which had involved the transfer of £73,609 from the general reserve fund and the transfer of £53,248 to the depreciation and obsolescence fund from the profits earned during the year. The directors were adopting the prudent course of writing down the value of assets which ceased to be productive.

An increase of £116,165 in the value of shares in subsidiary companies and a reduction of more than £128,000 in the value of cash with bankers and investments were explained by changes in and sales of investments to finance the new plant which the association had erected at their Holden Vale Works, in conjunction with the Hercules Powder Company of America, for the production of bleached cotton linters or chemical cotton. This plant was just entering the stage of production and it was hoped that, when it was fully working, it would provide a useful contribution to the profits of the association. The Chairman explained that the production of chemical cotton was almost entirely for the artificial silk, lacquer and plastics trades, and that it was unaffected by the present re-armament programme.

The trading profit for the year at £297,547 showed a decrease of £23,201 in comparison with the previous year, and there had been a small profit of £3,248 on the sale of some of the investments. After providing for directors' fees, depreciation and debenture interest, there was a balance available for the year of £57,197, and the directors had decided to transfer £53,248 of this amount to the depreciation and obsolescence fund, leaving £3,949 to be added to the balance of the profit and loss account which was carried forward.

TRADE OUTLOOK UNCERTAIN

In making this decision the directors had been influenced by the uncertainty of the outlook for the trade in the current year, which rendered any payment of a further instalment of the arrears of preference dividend unwise, and by the necessity of protecting the ultimate interests of all stockholders by writing down the value of assets which had ceased to be productive, for which purpose it was essential to make adequate provision to avoid the undue depletion of the depreciation and obsolescence fund.

The Chairman continued: It would be idle to pretend that the results of the past year's trading are not disappointing, and, for reasons which I will explain, they are even more disappointing to us as directors of the company than they must be to you as stockholders. You will recollect that, at our meeting last year, although there had been no material increase in the volume of our trade, we were able to show an increase of about £50,000 in our trading profit and to make a small beginning in paying off the arrears of preference dividend. In concluding my speech on that occasion I expressed the hope that, when I was privileged to address you this year, I should be able to report a continuation of the slight improvement which the accounts then under review had shown.

That hope was completely justified in the first half of the past year's trading. Up to September 30th, when our accounts for the first six months of the financial year were closed, the trading profit showed a substantial improvement in comparison with the figure for the corresponding period of the previous year. This improvement was due, not only to the continuation of the economies which were mainly responsible for the larger profits in the preceding year, but to a small expansion in the demand for bleached goods. Trade with India, which had been declining continuously for several years, had been fairly well maintained, and although the volume was but a fraction of what we used to finish for India, at least the decline appeared, for the moment, almost to have been checked. In total, our exports of bleached goods to all markets showed a definite increase over the corresponding period of the previous year. If this improvement could have continued throughout the second half of our financial year there is no doubt that my hope would have been realised and that we should have shown a further substantial increase in our trading profit.

Unfortunately, there were several factors entirely beyond our control which combined to change the trend of trade. The price of American cotton, which had remained at nearly 8d. per lb. during the first half of 1937, began to fall in July on the receipt of favourable crop reports, and it continued to fall on still more favourable reports as the season advanced, until, by the end of September, it was below 5d. per lb.; by November it was down to 4½d., and a few weeks ago a further break took the price down to less than 4¼d. A fall of 40 per cent. in the price of raw material is more than sufficient to destroy the confidence of buyers in world markets, with the result that orders are cancelled, deliveries suspended, and no fresh business is entertained until there is a reasonable certainty that prices will fall no further.

LANCASHIRE AND INDIA

There are two other factors of importance to which I should refer. In the case of India, a further hindrance to trade was created by the uncertainty arising from the prospective revision of the Trade Agreement with this country. It will be within your knowledge that about the middle of last year the Government of India and the British Government entered into discussions which it was expected would lead to the conclusion of a new Trade Agreement. Considerable difficulties and delays have occurred in those discussions; one of the difficulties arose from the fact that no trade agreement between this country and India could be regarded as satisfactory unless it contained some measure of relief for the export of British cotton piece goods to India.

Lancashire as a whole considers that this relief is long overdue. India, during the past twelve months, has increased its output of cotton cloth by approximately five hundred million yards. Simultaneously with this great increase in internal production, our exports to India have been reduced from their already low figure by a further sixty-odd million yards, and not only have we lost that volume of trade, but India herself has been penetrating our Colonial markets and has increased her exports within the Empire very considerably.

It is therefore a reasonable claim for Lancashire to make that we should be given an opportunity to share in the increased consumptive power in India which is demonstrated by these figures. We do not expect a full return to the position we once held, but we do expect a square deal, and we do not feel that we are getting it.

It is therefore with disappointment that we have learned that the unofficial negotiations undertaken at the invitation of the Indian Government between Lancashire and Indian interests have, for the time being, broken down. We sincerely hope that wiser counsels will ultimately prevail, and that India will be able to see her way to give Lancashire that measure of help of which she stands so greatly in need.

DECLINE IN WEST AFRICA

In West Africa, which now ranks amongst our larger markets, the fall in exports was even more serious than in India, the decline in the second half of the year amounting to nearly 60 per cent. Here the trouble was due to the very heavy fall in the price of cocoa, which greatly curtailed the purchasing power of the native population and which led to a somewhat short-sighted policy of boycott. The position was relieved by the intervention of the Administration, and although, in the meanwhile, there are considerable stocks to be cleared, it is hoped that the equilibrium of the market will soon be restored; but, unfortunately, the price of cocoa still remains at a much lower level than that upon which our previously improved trade with West Africa was built up.

The net result of these disturbances was that our total exports of bleached cotton piece goods, which increased by approximately 5 per cent. in the first half of the financial year, fell in the second half of the year by nearly 25 per cent.—the comparison in both cases being with the corresponding period of the previous year. There are no means within our power to counteract the effect of such a sudden and severe contraction in the volume of our trade.

Much as we must regret this sudden reversal in the more favourable trend of trade, and much as we regret the effect which it has had upon our profit and loss account, I am confident that the results would have been even worse if it were not for the policy of economy and concentration which we have consistently followed in recent years. It has been hard to face the necessity of closing down old-established works with a reputation extending back, in some cases, for more than a century, and it has been harder still to part with old employees because we can no longer find work for them to do. I should fail in my duty if I omitted, on your behalf, to thank not only our branch managers and our administrative staff, but also our workpeople and employees in all grades, for their cordial co-operation and for the help and assistance which they have given to the directors in a time of great difficulty.

At least, we can take some comfort from the fact that the moderate improvement in trade in the first half of the financial year was sufficient to show us that our organisation is lacking neither in efficiency nor in economy. Improved results must remain dependent upon an improvement in demand, and particularly in the demand from overseas markets.

NEW PROCESSES' GOOD PROGRESS

In the meanwhile, we are employing our resources in new developments and new processes, and, in this connection, you will be interested to know that we are rapidly extending the production of our Bleacraft Sanforized Shrunk Finishes. By this process, cloth is fully shrunk in the piece, and garments made from such fabrics cannot subsequently lose their fit through shrinkage. This characteristic, hitherto unattainable, is of the greatest value, not only to the trade in made-up garments but also in the use of cotton cloth for curtains—especially casements—for furnishing fabrics of all descriptions, and particularly for loose covers for upholstered furniture. If, by our efforts, you can now be sure that garments returned from the laundry will fit your figure as well as they did before and that, after cleaning, loose covers can be replaced upon the furniture to which they belong, we shall feel that we have made an important contribution to your comfort and to the amenities of your homes.

By another process we are producing, under the name of Bleapel, a finish which is permanently water repellent and also resistant to spots and stains. This finish greatly extends the range of usefulness of cotton and rayon cloth for dress fabrics and materials for outdoor use, and for tablecloths and other purposes where wetting or staining would be liable to cause damage.

Satisfactory progress is also being made with the production of Crease Resisting Finishes, which greatly enhance the value of cotton linen and rayon cloth for many purposes. It must be realised, however, that these developments can never fully replace the loss in our main trade, and especially our export trade, in bleached cotton piece-goods.

ENABLING BILL

The intimation received recently from the President of the Board of Trade that the Cabinet have authorised the drafting of a Cotton Trade Enabling Bill is to be welcomed both for the opportunity which it will afford to clarify and to remove the differences of opinion which appear to exist and for the prospect that facilities may be provided to encourage that orderly reorganisation within the trade which is essential to accommodate it to present conditions. The furtherance of these objects will always command our interest and help, especially where they may improve conditions in our own section of the trade. The need for internal reorganisation, however, should not be allowed to obscure the need for greater opportunities in world markets, and it is to be hoped that this, which is essentially a function of the Government, will continue to receive their unremitting attention.

I am reluctant to speak of the future, but I think you are entitled to expect that I will say something of the prospects before us. The current year has opened under depressing conditions. The decline in trade during the second half of our last financial year was progressive, and the falling off in exports—which over the whole of that six months amounted to nearly 25 per cent.—was made up of a decline of about 20 per cent. in the first three months and of nearly 30 per cent. in the last three months. It is at the latter level that the current year starts, and the figures for April and May show no improvement. The prices of the materials we use are generally higher and, although we have been obtaining better prices for our work since July of last year, the increase is not sufficient to cover the rise in the cost of production.

As I have already said, improved results in the future must be dependent upon an improvement in the volume of trade, and this again depends very largely upon the extent to which we can rely upon the good offices of the Government in securing fair opportunities for our trade in world markets. Without such improvement it will be difficult to secure results in the current year equal to those of the year which we have just closed.

The resolution approving the report and accounts was moved by the Chairman, seconded by Sir William Clare Lees, Bt., and carried.

The retiring directors were re-elected, and Messrs Jones, Crewdson and Youatt, and Messrs P. and J. Kevan, were re-appointed joint auditors.

The meeting terminated with a vote of thanks to Sir Alan Sykes for presiding, which was proposed by Mr E. R. Clark, and seconded by Mr A. W. Hewetson.

BANK OF BRITISH WEST AFRICA, LIMITED

DIVIDEND MAINTAINED

The 44th annual general meeting of the Bank of British West Africa, Ltd., was held on the 30th ultimo, in London.

The Rt. Hon. the Earl of Selborne, K.G., G.C.M.G. (the Chairman) said that the general fall in commodity prices had been particularly severe where West Africa was concerned, and the year had been a very difficult one for the Bank. For the first time, he imagined, in its history, there had been no season for selling and buying cocoa on the Gold Coast. Before the usual season commenced the principal buyers of cocoa had made some agreement among themselves in regard to the marketing of cocoa, which was resented by the native cocoa farmers and their Chiefs, and they had made a combination not to sell their cocoa, and had not done so.

The result was that the export of cocoa from the Gold Coast had been brought to a standstill. Since March 31st last the Governor of the Gold Coast had been able to bring about a truce between buyers and sellers, since when some exportation had taken place, but this truce ended on October 31st next. It was greatly to be hoped that before that truce expired an amicable understanding would have been reached between the parties concerned.

The net profit for the year was £60,105, as compared with £90,635 in the previous year, and the directors recommended a final dividend of 3 per cent., making 5 per cent. for the year, less tax, the same as for the previous year. Although that dividend absorbed practically the whole amount of the profit available after the necessary provisions had been made, the directors had decided to pay it because, in their view, the conditions prevailing on the Gold Coast during the last half of the Bank's financial year had been abnormal. The Bank had always reaped a substantial part of its income in normal years from financing the Gold Coast cocoa crop, the value of which at, say, £20 per ton, amounted to not less than £5,000,000. During the last season, owing to the unfortunate dispute between the local farmers, their Chiefs and the merchants, practically none of the cocoa crop was marketed. It was inconceivable that this unhappy dispute would continue during the next season, but, if it did, the directors might be forced to consider a reduction in the dividend next year.

The report was unanimously adopted.

OFFER TO NEW READERS

To the Publisher, The Economist Newspaper Ltd.,
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward it to me by post for the next four weeks. If I then decide to become a subscriber it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GENERAL ELECTRIC COMPANY, LIMITED

CONTINUED PROGRESS

The annual general meeting of this company was held, on the 27th ultimo, in London.

The Rt. Hon. Lord Hirst of Witton (chairman and managing director) said: The company is entering on its fiftieth year, and the figures we are presenting this year are a worthy result of 50 years' continuous endeavour. The profit and loss account shows a total of £1,772,000, an increase of £168,000 over last year.

The improvement which this year's figures show is not due to any particular fluke or piece of luck. Practically all our departments and all the territories in which we operate have contributed to this satisfactory result, and we are particularly pleased to have made considerable advance in our export business in spite of great demands on our resources in the home market. Last year I regretted that our total export was still below our top figure of 1929–30. I am glad to state we have beaten that record by nearly half a million pounds additional export. We are in the habit of comparing our exports with the export of the total electrical industry as published by the Board of Trade, and it is satisfactory to know that we are holding our position very well. Our exports to the extent of 78 per cent. have gone to the Empire.

OVERSEAS PROGRESS

Though all our overseas organisations have done better, we are particularly delighted with the progress we have made in the Crown Colonies during the last year.

We are continuing our efforts to increase export business, and this year we have sent representatives to the British West Indies; they have also paid visits to the Near East, including Turkey, Palestine, Cyprus and Malta, some with definitely good results, and others have led to an improved outlook for the future.

As regards home business, we have continued the policy outlined last year. Whilst coping with a record demand for our products, we have not neglected new developments.

At our Witton Works we have now erected an entirely self-contained shop for the manufacture of mercury arc rectifiers, of types in which I believe I can honestly say we are at the moment leading the world. We have had satisfactory contracts for these rectifiers from the London Passenger Transport Board, and we have also received a number of orders from abroad, from Athens, Canton, Melbourne, Perth, Johannesburg, and Hongkong.

We have also made further progress in the design and building of turbo sets of unusually high generating voltage at 3,000 revolutions per minute. Some of these sets, with a capacity up to 40,000 k.v.a. and 22,000 volts at 3,000 revolutions, are in hand for Stockport, Stepney, Darlington, Woolwich, and overseas.

We have been very successful in a number of big contracts in the paper industry and in the steel industry. I may add that our development of electric furnaces has been particularly useful to the latter industry. One contract that has given us particular satisfaction is for the Karabuk Steel Works in Turkey.

In the field of communications, our telephone works have been engaged to their full capacity throughout the year.

A fact which will interest all is that we have been entrusted with the whole of the new central automatic exchange equipment for Glasgow. Apart from the fact that this is a contract running into between £400,000 and £500,000, some of you may remember that the exchange which is to be replaced was the first public exchange built by this company.

JUBILEE BONUS

Under conditions of great activity, and with the results we have achieved, we feel justified in celebrating our Jubilee Year by an increased bonus, and we have therefore decided, in addition to the normal 10 per cent., to recommend an increase in the bonus from 7½ to 10 per cent.

I am still an optimist as regards the immediate future. Any recession in activity, in my opinion, is more due to psychological effects than due to economic setbacks. We may not quite reach the achievement of 1937, which was an exceptional year, but I am informed by our own industry and by many other industries that if you were to compare with the last normal year—1936—we are ahead over that year, and I believe that can be said of the country as a whole. I see no excuse for pessimism. In the hope that no international complications may arise, and also hoping that that great country, the United States of America, may soon recover its economic equilibrium, I am even hopeful we are steering towards better times than ever.

The report and accounts were unanimously adopted.

ALLIED IRONFOUNDERS, LIMITED

PROFIT SATISFACTORILY MAINTAINED

The ninth annual general meeting of Allied Ironfounders, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad Street, London.

Mr A. W. Steven, the chairman, said, in the course of his address:—Dividends declared by subsidiary companies amount to £231,318, which falls short of last year's dividends by £43,861. This reduction in disposable profits is accounted for to the extent of £28,664 by increased taxation and the remaining £15,000 is more than accounted for by exceptional expenditure on wages paid for the holiday on the occasion of the Coronation in May, 1937, by provision for wages to be paid for holidays this year, and by special development expenditure. On the other hand, we have received £2,000 more in respect of interest, and we carry to profit and loss appropriation account £235,766. The aggregate of additions to reserves and to carry-forward represents a total of £61,351 retained in the business.

In a trading year which was subject to so many fluctuations, to earn a profit equal to that of last year but for the increased taxation and exceptional expenditure will, I believe, be regarded as highly satisfactory.

FEATURES OF YEAR'S BUSINESS

In reviewing the general trading conditions during the year it will be noted how closely our experience ran parallel to that of many other industrial companies. The first quarter ended June, 1937, showed great activity both in demand and in output. During the summer pressure on our works relaxed, and for the remainder of the year the volume of orders fell considerably below that which ruled in the corresponding period of the previous year. Again, like many other manufacturing companies, prices of all our raw materials were sharply advanced. These high prices still persist. It is indeed doubtful if the suppliers of raw materials are acting in their own best interests in maintaining prices at their present high levels, having regard to prevailing world conditions. On the other hand, there is no doubt that our business is adversely affected by high costs of materials.

We are subject in some goods to subsidised competition from abroad, and in other classes to increasing competition at home from producers of goods which serve the same purpose as ours, but which are composed of raw materials of lower cost. During the year wages and working conditions of our employees have been substantially improved. In May, 1937, a general increase in wages of 4s. per week was granted. Improvements in the physical conditions and environment within the works have been effected, and recently, by agreement with the trades unions, payment for holidays has been established as a general rule of the whole industry.

In addition to these increased costs, exceptional expenditure has been incurred in other directions. We have established a well-staffed research department and we have put in hand a number of important developments on which a large preliminary expenditure has been incurred, but which are not yet complete, and some of which cannot reach the production stage for several months to come. Although the trading year ended March last obtained little or no benefit from this expenditure, the whole amount has been charged to revenue.

THE OUTLOOK

In the circumstances at present prevailing, no reliable estimate of the future trend of business is possible. Nevertheless, there seem to be many reasons for believing that we need not anticipate a serious or immediate slump. We believe we are justified in anticipating a somewhat reduced but still healthy demand for our products for some time to come.

Business in export markets is still extremely difficult. On all sides we are met by acute competition, in many cases subsidised by Governments intent on securing foreign credits at any cost. We have, however, endeavoured to stimulate sales by special visits by directors and managers to South Africa, Canada, the Near East and Egypt. At the present moment our sales director is touring India. We have been encouraged by the reception given to several of our newly designed models which appear to be well adapted to foreign conditions. In spite of all obstacles our total overseas trade has increased by 24 per cent. as compared with last year.

While the future remains uncertain and obscure, we will best serve the interests of the company and its shareholders by building on the foundations we have laid and by doing all within our power progressively to improve its efficiency in manufacture, in design and in marketing.

The report and accounts were unanimously adopted.

GUEST, KEEN AND NETTLEFOLDS, LIMITED

FURTHER IMPROVEMENT IN EARNINGS

The annual general meeting of Guest, Keen and Nettlefolds, Limited, was held, on the 28th ultimo, at Birmingham.

Mr S. R. Beale (the chairman), in the course of his speech, said:—It has been a year of further improvement in earnings. Our profits have increased by £176,209, which I hope you will consider as satisfactory as we do. The dividend we recommend on the ordinary shares will increase it from 6 per cent. to 7½ per cent., free of tax.

It has been a year of most marked variations as far as our business is concerned. As I told you last year, that year's working was distinguished by a growing demand for all our products, and we were frequently hampered by shortage of material. I told you, too, that in June of last year the demand was still increasing. I thought at the time, and I still think, that the demand we were then experiencing was at its peak abnormal, and I told you that we always had it in mind that demand might not continue at its then level. I will confess that that prophecy has turned out to be more accurate sooner than I expected. I wish I could say to-day, as I did then, that the output since the period we are reviewing was higher than it was in the corresponding months of last year.

Looking back, one can see that what it is apparently fashionable to refer to as the "recession in business activity" began last autumn and, as far as some of our products are concerned, developed so fast that during the first quarter of this year we occasionally had works standing for want of orders, whereas during the previous quarter they had been standing for want of material.

LOWERING OF THE STEEL TARIFFS

Political and economic affairs in the United States, and on the Continent of Europe, killed that confidence without which trade cannot flourish. Political considerations in this country resulted in considerable lowering of the steel tariffs from last July until the end of last March. However, if similar conditions occur again, we should do well to remember that when we wanted the steel the removal of the tariff made little difference to the supply available, and that which did eventually arrive came at a time when it would have been better for the country that we should have supplied it ourselves.

In some quarters talk is heard of the inevitability of another slump such as that experienced six or seven years ago. I do not anticipate any such unhappy state of affairs, but I do think we must look forward to another few months of much reduced demand.

Every branch of our business has contributed to the improved earnings. The same applies to the subsidiary companies, not one of which shows a loss.

At Cardiff our steel-making interests are contained in the works owned by Guest, Keen, Baldwins. I think the best thing I can do is to give you a quotation from the speech of Sir Charles Wright, the chairman of this company. He said:—"The Cardiff works, which were completed at the beginning of 1936, have continued to work satisfactorily and have come up to our expectations. During 1938 we will complete a programme of extensions which comprises, in addition to our coke oven plant, a fourth blastfurnace stack to ensure continuity and regularity of output, and two additional 250-ton tilting open-hearth steel furnaces.

"The weekly output capacity will then be increased at Cardiff to 7,000 tons of furnace coke, 9,000-10,000 tons of pig iron, and 10,000-11,000 tons of steel ingots. The Port Talbot and Margam works each show an increase of steel and pig iron output. You will be pleased to hear that the company shows an increase in trading profits, which, after transferring £200,000 to depreciation, are sufficient to meet the service on the income notes, to pay the dividends on the preference shares, and 5 per cent. on the ordinary shares."

Referring to the activities in this country which we control directly ourselves, the concentration of the wire-drawing plant and the nail manufacture at Cardiff has been completed. The result of this move is that all the processes of converting iron ore into pig iron and then steel, rolling the steel into billets and then into rods, converting the rods into wire, and making the wire into nails, are carried out on one site, with the natural economies which result from the absence of unnecessary carriage in the various stages of manufacture.

Regarding our shareholdings in the Powell Duffryn Company, and Welsh Associated Collieries, Limited, I am glad to say that it has been a reasonably good year for the coal trade.

Even if the level of business activity does not improve from that which obtains to-day, as we hope it will, we are in a position to benefit from the fact that we are equipped all through the finishing works with the most modern plant. At present we are earning satisfactory profits, if not at the high average rate of last year.

The report and accounts were unanimously adopted.

THE SOUTHERN LIFE ASSOCIATION

BONUS OF 40s. PER CENT. MAINTAINED

The forty-seventh annual general meeting of the Southern Life Association was held at the head office in Cape Town, on Tuesday, April 12, 1938, at which the Chairman, Mr Walter Marshall, presided.

Features from the chairman's speech and annual report are as follows:—

The assets of the Association now exceed £7,500,000.

The financial interests in the United Kingdom are controlled by the Local Board, who pursue a very sound investment policy, as may be seen from the distribution of assets (which more than cover the total liabilities in this country).

	Per cent.
British Government, Dominion Government and Municipal Securities	58
Loans on Association Policies	12
Debenture, Guaranteed, Preference and Ordinary stocks	24
Cash	6
	100

The Association, by reason of the freedom from income tax granted to mutual offices under South African law, earns over 4½ per cent. per annum net on its funds, yet values its liabilities on the assumption that it will earn only 2½ per cent. (with profit contracts) and 3 per cent. (without profit).

The directors have resolved to pay an interim bonus at the compound rate of 40s. per cent. per annum on assurances entitled to participate, which become claims during the current year. This is the twelfth successive year in which the bonus has been maintained at this figure.

MALACCA RUBBER PLANTATIONS, LIMITED

DIVIDEND MAINTAINED AT 7½ PER CENT

The thirty-second annual general meeting of the Malacca Rubber Plantations, Limited, was held, on the 29th ultimo, in London.

Mr Charles Emerson (the chairman) said the balance of the year's working amounted to £88,069 9s. 8d., as compared with £71,050 6s. 6d. for the previous year. The board recommended a dividend of 7½ per cent. on both preference and ordinary stocks and to carry forward £35,665 8s. 8d., subject to Eastern staff commissions. Their exportable crop for the year under the Rubber Regulation scheme after deducting export rights sold was 5,985,628 lbs., and their actual output was 5,497,421 lbs., the balance being taken from stock.

The estates were maintained in good order, and every effort was being made by means of the application of appropriate fertilisers to improve the health of the older trees, prolong their effective life and in certain cases to improve yields. Commencement was made of replanting on a very considerable scale and as part of a definite programme last year, and by the end of the present year they anticipated that they would have dealt with an area of 1,341 acres. They had sanctioned for the year 1939 a further area of 1,019 acres, making 2,360 acres with which they would have dealt by the end of next year. It was inevitable that further areas would have to be treated as time went on. Fortunately, their financial position was a strong one, but at the same time the necessity for strengthening that position was imperative, and the prudence of the transfer to estates reserve of £10,000 which they had made was, he ventured to think, unchallengeable.

They had sold over 1,500,000 lbs. of their standard grades at an average price of just under 9½d. per lb., and from that portion of their crop there would consequently be a substantial profit. That was fortunate, because with prices ruling at the moment the profit on spot rubber was exiguous. If one took the longer view of rubber he was by no means pessimistic. The other factor which had depressed their market as well as many others was the sudden and unexpected recession in the U.S.A. Quite recently signs of a revival had been apparent, and it might well be that recovery would be just as sudden, just as unexpected and just as violent as the present depression.

The report was unanimously adopted.

BARCLAY, PERKINS AND COMPANY, LIMITED

INCREASED HOME AND EXPORT TRADE

The forty-third ordinary general meeting of Barclay, Perkins and Company, Limited, was held, on the 29th ultimo, in London.

Lt.-Col. R. W. Barclay (the chairman), in the course of his speech, said that the profit for the year amounted to £344,645, to which had to be added the carry-forward of £64,987, giving an available total of £409,632. After deducting debenture interest, and the interim dividends on the preference and ordinary shares, they had an available balance of £226,680, from which they proposed a final dividend at the rate of 10 per cent., less tax, on the preference shares and a dividend of 5½ per cent., less tax, on the ordinary shares, making 8 per cent., less tax, the same as the previous year. They proposed transferring £20,000 to reserve, leaving a balance of £70,525 to go forward subject to £5,481 allocation to the workpeople's provident fund.

Last year he had laid particular stress on the amounts they were spending on rebuilding and improving their public houses, and had stated that that expenditure, though absolutely necessary if the houses were to be maintained at the high standard which the directors had adopted, in many cases did not add proportionately to the profit-earning powers of individual houses. The present year would see a continuation of that expenditure at a high level.

During the year under review both home and export trade had increased. The Coronation had come in that period, and it was interesting to note the opinion of Sir John Sykes, chairman of the St. Margaret's licensing division, to the effect that there had been no abuse of the extension of hours, and that the sobriety of the crowds and the conduct of the public houses had been most praiseworthy. Their lager trade had shown a substantial increase, output being the highest since they started brewing that type of beer. Export trade also showed an increase despite the many difficulties, and they had hopes of further progress.

Against that increase of trade they had to set the fact that brewing materials had cost more. Again they had bought their share of English-grown barley. As to the current year, he found it difficult to say something of their prospects. Output would in all probability depend on employment and the country's prosperity generally.

The report and accounts were unanimously adopted.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED

INCREASED DIVIDEND AND SPECIAL BONUS

The sixty-fifth ordinary general meeting of this company was held, on the 28th ultimo, in London.

The Rt. Hon. the Earl of Midleton, P.C., K.P. (the chairman), who presided, said that the income for the year amounted to £264,747, against £219,557—an increase of £45,190. It was proposed to pay a final dividend of 3¾ per cent. net—that was 7s. 6d. per share on the ordinary shares, making a total of 7½ per cent. net for the year, comparing with 5½ per cent. General reserve amounted to £297,026, against £120,000 last year, due to the stock received from Cable and Wireless (Holding), Limited, in respect of arrears of preference dividend, less the amount distributed as a special bonus. As that distribution was in respect of dividends due some years ago, and as many of the existing shareholders had not shared the loss of the non-payment of their dividends, the directors felt that those arrears should be considered as available for distribution as and when required, and they had therefore felt justified in declaring a special bonus of 2½ per cent. net on the ordinary shares, the balance being added to general reserve. From the balance of the stock it was proposed to restore to the general reserve a sum equal to the £38,000 taken from reserve in 1931 and 1932 to maintain the preference dividend, making the figure £158,000 as in the former year.

Present world conditions might considerably affect the traffics of Cable and Wireless, Limited, whose stocks figured largely in the Globe company's balance sheet. At the Cable and Wireless meeting the Governor expressed the opinion that providing a cheap flat rate for telegrams within the Empire would be beneficial to the company as well as to the public, and from the figures given a dividend of 4 per cent. on the ordinary stock of that company would appear reasonably assured.

The valuation of the securities was exceptional among trust companies, and was entirely due to the solid foundation supplied by the trust's holding in Cable and Wireless (Holding), Limited, the permanent security of which had been greatly fortified by the arrangements recently announced.

The report and accounts were adopted.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED

FACTORS AFFECTING PROFITS

The thirty-third ordinary general meeting of African and European Investment Company, Limited, was held, on the 24th ultimo, in Johannesburg, Mr Louis Marks (the chairman) presiding.

The Chairman, in the course of his speech, said that the net profit for the year amounted to £478,838, as compared with £807,887 for the previous year, the reduction being primarily due to the unfavourable stock markets which had obtained during the year. The regular income of the company derived from rents, dividends and from other investments showed a very considerable increase. Two dividends of 5 per cent. each had been paid in respect of the year, and a balance of £106,862 was carried forward.

There was a large hidden reserve in the appreciation over the book figure of the company's quoted securities, which appreciation amounted to £1,256,449 at the close of the year. The market value of the quoted securities at the close of the year was £3,924,083. During the past five years the company's position had shown very great improvement, their reserves having increased by £1,028,026, while the liabilities had been reduced by £324,910 and the assets increased by £1,253,589. The company's land holdings had been reduced during the year by sales of 521,842 acres to 2,340,572 acres. Their own operations, both ranching and agriculture, had shown good results, and satisfactory results had been obtained from the export of high-grade beef to overseas markets.

Considerable activities were now apparent in the Odendaalsrust District of the Orange Free State, where recent discoveries by Western Holdings, Limited, indicated the possible existence of a new mining field for gold. The company controlled an area of 56,010 acres of mineral rights in the Odendaalsrust Area and were about to prospect actively these new options which adjoined the farm St. Helena, belonging to Western Holdings, where the recent discoveries had been made. In addition, the company held a large share interest in Western Holdings.

Concluding his remarks, the chairman stated that an interim dividend would be declared in July.

The report was unanimously adopted.

CHARTERLAND AND GENERAL EXPLORATION AND FINANCE COMPANY, LIMITED

The ordinary general meeting of this company was held, on the 27th ultimo, in London, Sir Edmund Davis, chairman and one of the managing directors, presiding.

The Chairman, in the course of his speech, said:—We recommend the payment of a dividend of 10 per cent. on the ordinary shares, less income tax.

The balance carried to the balance sheet is £33,646, and I hope that you will agree with me that this profit is very satisfactory in view of the times which have been experienced. The depreciation on investments on our usual basis of valuation of each investment at cost or market price, whichever was the lower, amounted to £62,489, as against £7,640 last year, and we have considered it essential to make special provision for this in the present accounts. Accordingly, the sum of £62,489 6s. 4d. has been set against the general reserve of £100,000, which now stands at £37,510 13s. 8d.

As regards the position of the company at 31st ultimo, if we take the quoted investments at the market price at that date and the unquoted at cost or at directors' valuation, we have £474,824, and, after adding cash and debtors and allowing for creditors, we have a total of £483,391, which represents a surplus of £123,391 over the issued capital of £360,000.

From this you will see that the market value of the investments showed a surplus of £35,875 above the amount at which they stand in the balance sheet. We could have shown an increase in the profit for the year had we realised some of our holdings which show an appreciation, but we preferred to hold such investments, as we considered the market prices to be under their true value.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, *8 Bouverie Street, Fleet Street, London, E.C.4.*

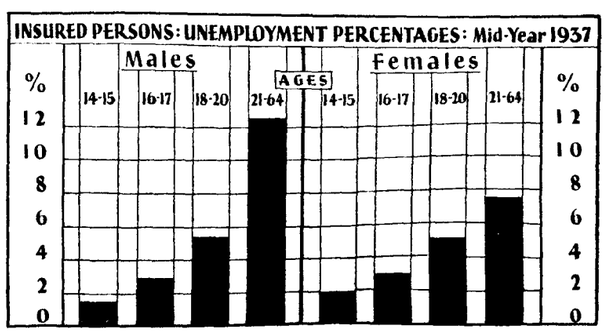
Juvenile Labour



For the following charts we have collected together a number of statistics relating to juvenile employment. In the upper panels we show the occupational distribution of juveniles at the date of the 1931 census. The figures of juveniles under 18 likely to be available for employment are derived from official estimates published in The Ministry of Labour Gazette for October, 1934, and from estimates given in "The Juvenile Labour Market," by John and Sylvia Jewkes, reviewed on page 17. The remaining diagrams have been made possible by various new sets of statistics collected by the Ministry of Labour at intervals since 1934. It should be borne in mind, when examining the chart showing the percentages of insured persons unemployed at different ages, that among juveniles under 18 the numbers of unemployed on the register considerably exceed the numbers of insured unemployed. This does not, however, apply to the age group 18–20.

Finance

GOVERNMENT RETURNS

For the *week* ended June 25, 1938, total ordinary revenue was £6,266,000 against ordinary expenditure of £12,230,000 while self-balancing revenue and expenditure was £3,450,000. For the 12 days ended June 30th, ordinary revenue was £12,797,000, and ordinary expenditure £25,383,000. Thus, excluding sinking fund allocations, the deficit accrued during the quarter ended June 30th last is £103,062,000, against a deficit of £70,215,000 a year ago. The detailed revenue return for the quarter is printed in full on page 52.

After raising Exchequer balances by £158,797 to £2,850,808 the other operations for the period (as shown below, but excluding £240,000 issued to Sinking Funds), raised the gross National Debt by £12,985,000 to about £8,251 millions. An analysis of the approximate position of the National Debt as at June 30, 1938, appears on page 50.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On June 24th, applications at £99 17s. 3d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 57 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 4d. per cent. and above were allotted in full. £45·0 *millions* of Treasury bills are being offered on July 1st.

CENTRAL AND SOUTH AMERICA

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of Paraguay, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate.

*Colombia.** Sight selling rate on New York was 180·30 pesos per 100 U.S. dollars on May 28, 1938. This rate applies to holders of permits buying in the "open" market.

Ecuador. Sight selling rate on New York was 13·80 sucres per U.S. dollar on May 27, 1938.

Guatemala. Sight selling rate on New York is maintained at one quetzal per U.S. dollar, but a commission of 1 per cent. is charged by the Central Bank for the sale of drafts.

*Nicaragua.** In accordance with Decree published on June 9, 1938, sight selling rate on New York was fixed by the National Bank at 5·52½ cordobas per U.S. dollar (including 10 per cent. tax and ½ per cent. commission), subject to change weekly.

Paraguay. Exchange is quoted on Buenos Aires; the sight selling rate was 70·80 Paraguayan pesos per Argentine "free" paper peso on June 10, 1938.

El Salvador. Sight selling rate on New York was 2·51 colones per U.S. dollar on June 1, 1938.

Venezuela. Sight selling rate on New York has been maintained at 3·19 bolivares per U.S. dollar since April 27, 1937.

* Exchange controls are operative in these countries.

The Nation's Food

THE arts of peace are not those of war or preparation for war. It is becoming more and more evident to-day that the needs of national defence run counter to what would be the aims of government in more peaceful days. Our expenditure on social services is menaced by the mounting cost of armaments, though no breach has yet been made. Vital branches of our industry are steadily moving towards a war footing. In all parties earnest adherents of democratic freedom are sadly facing the possible necessity of curtailing individual liberties by the institution of compulsory national service in some form or other.

We are fortunate among the nations in that this conflict between the forces of peace and of war is for the most part still a menace rather than actuality. On the whole, we are still able to have guns and butter. But it is precisely in the matter of food that the conflict has come in the last few days to a direct clash of policies. Nowhere, indeed, is the incompatibility more complete than in the allied fields of agriculture and nutrition, and by an ironic coincidence Monday's newspapers exhibited both the irreconcilable facets of the problem. On the one hand, the Committee Against Malnutrition, a body of high competence in matters of dietetics, published a memorandum which tentatively sketched the outlines of a policy designed to move towards the peace-time goal of adequate food for all. And on the other hand, there was the report of the Prime Minister's speech at Kettering, which has been violently attacked by the agricultural interest because, in effect, it refused to sacrifice peace-time nutrition wholly to war-time needs.

The Committee Against Malnutrition is to be congratulated upon its readiness, unusual among the more academic students of nutritional problems, to go beyond the mere statement of desiderata and examine the practical requirements of any programme to provide an adequate diet for all sections of the community. Briefly, their thesis may be stated as follows: The existence of serious malnutrition among an appreciable minority of our population cannot be denied. The chief deficiency in the diets of the under-nourished is of dairy produce, eggs, fresh fruit and vegetables. These foodstuffs are precisely those which, for various reasons, are relatively most expensive; and any nutrition programme must aim at bringing them within the reach of the poorest, either by raising incomes or by lowering prices. The Committee do not feel that wages could be increased or family allowances provided sufficiently to ensure a full diet for all. They pin their greatest faith upon proposals to reduce the prices of essential foods. They recommend the creation of food boards to buy, store and distribute foodstuffs in bulk; and they propose that the sums being expended by the State on British agriculture, together with the whole apparatus of

protection, should be concentrated on the production of more dairy produce, eggs, fish, vegetables and fruit. Wheat and sugar, they hold, can be much more economically produced abroad.

On grounds of economic advantage under peace-time conditions, the Committee's proposals merit the greatest respect. The administrative details of the system of boards and subsidies which they suggest would require close and critical examination. But if the aim of policy is to obtain the greatest possible quantity of foodstuffs at the lowest possible prices—as for a predominantly urban country it should be—then it would clearly be to our advantage to import even more of the wheat and sugar which we need; and to use the money thus saved to the consumer and the Exchequer for stimulating the production at home of more of the dairy produce and vegetables we lack in our national diet—products which, in any case, because of their perishable nature, must largely be produced as near as possible to our great urban markets. But this is an argument for normal times, and these are not normal times. In war-time, and *pro tanto* in preparation for war, considerations of price and nutritive value largely go by the board. The problem then is to find ways of feeding our people at a time when the volume of imports may be considerably reduced. The governing factor then is the bulk of imports, in terms of ship miles. And, as it happens, grain and sugar, which the Committee would wholly import, are, because of their bulk, precisely the commodities which would burden our shipping most in time of war. Again, the increase of livestock and dairy produce which the Committee propose would engage a large number of ships in the carriage of imported fodder supplies.

Here is clearly a serious conflict of aims. The dangers of following the peace-time ideal to the exclusion of any preparations for siege are obvious. It might have been expected that the foolishness of making food dear in peace-time in order, by growing it at home, to be secure in war-time would have been equally apparent. But for months past the farmers and their friends in Parliament and Press have been abusing the Government because they refuse to be stampeded into such a course. Hitherto the Minister of Agriculture has borne the brunt of the abuse. But last Saturday at Kettering the Prime Minister came to Mr Morrison's side. He considered the proposal to grow all our food at home as expensive to bring about, as commercially ruinous, since it would bankrupt our customers, and as unnecessary since the Navy could be relied upon to keep the trade routes open. He did not, of course, suggest that no precautions should be taken—he mentioned plans for quickly expanding home production after the outbreak of war and the storage of reserves to meet the dislocation that might follow a sudden air attack—but he did reject completely the policy of inducing a permanent change in the scale and character of British agriculture to meet a temporary emergency that may never occur.

There can be no doubt in any disinterested mind that the Prime Minister's policy is the right one. The danger of war unfortunately compels some change in what would otherwise be the rational policy for nutrition and agriculture. But it is the merest common sense that the alteration should be the smallest that would make us safe. To the agricultural interest, however, the rising spectre of war is, not unnaturally, an opportunity to secure the largest degree of subsidised expansion that can be wrung out of a reluctant but apprehensive nation. That the present Government has refused to play this game has, as might have been expected, caused much indignation. The National Farmers' Union has issued one of its peremptory statements, certain organs of the Press are ablaze with protest, and the Conservative agricultural Members of Parliament are up in arms. The pressure which the farming industry can bring to bear upon any Government has been shown in the past to be so formidable that it would be optimistic to be sure that the Prime Minister will stand firm. Already he has had to explain to a deputation of his supporters that he wants to grow *some* more food in England; and much more will doubtless be heard of the matter in next week's debate. But if the Prime Minister decides to stand firm he should have the support of all those whose interest in the matter is to see that the people of England have enough food to eat in peace-time without starving in war-time. Admittedly, we must pay the price of international anarchy by adopting extravagant devices to insure against the risks of war. But it would be intolerable if public nervousness should be exploited to secure, for the benefit of a minority, the adoption of a policy that, in the name of security, would put the feeding of the people on a permanent war-time basis.

The Negotiations in Prague

SEVEN weeks have passed since the critical "Czech week-end" of May 20th; and Czechoslovakia's frontiers, though still watched and warded on both sides, remain inviolate. Yet the situation, which almost exploded into war seven weeks ago, remains acute. It is still a potential danger to the peace of Europe. Despite what has since occurred in and about Spain, despite the intricacies of Anglo-Italo-French relations, despite the aftermath of disillusion among Austrians, despite even the steady perseverance of the Czechoslovak Cabinet along the path of appeasement, it would be idle to pretend that the German-Czech problem has yet been put into cold storage for the summer. Indeed, this problem cannot be shirked, for its solution is as vital to Czechoslovakia's own political and social peace as it is to her relations with a truculent neighbour.

It is precisely this two-fold aspect of the problem which makes an easy solution impossible. The two facets must be distinguished, but they cannot be separated. The official Sudeten German claims, backed by Greater Germany's apparatus of propaganda and pressure, constitute the most critical problem in domestic Czechoslovak politics and administration.

Until about a fortnight ago, negotiations between M. Hodza, the Slovak Agrarian Prime Minister in the Coalition Government, and the Sudeten German Party of Herr Henlein had been tentative, exploratory, and personal. In his Carlsbad speech on April 24th, Herr Henlein, doubtless exalted by the annexation of Austria, laid down eight points as a "minimum basis" for any agreement with Prague. Among these figured demands that the foreign policy of the Republic should be changed, and that the Sudeten Germans should be given autonomy in the sense of a separate regime functioning not in a defined area, but exercising authority over all Germans living in the State, wherever they might be. In other words, Germans in Czechoslovakia were to have something akin to extra territorial rights, and the citizens thus set apart would be governed by, and subject to, the principles of National-Socialism. Clearly very sweeping demands!

M. Hodza, a moderate Agrarian, has had a difficult row to hoe; for his Coalition Government, already denuded of the Activist (non-Henlein) Germans, began to feel restive after the elections. Hence, personal and private negotiations between Prime Minister and principal Opposition Leader—Herr Henlein is not even a Deputy and has always left negotiation to two lieutenants—were fraught with possibilities of a division in the Cabinet.

The chief difficulty was naturally constitutional, for to grant the demands formulated publicly at Carlsbad by Herr Henlein, and subsequently elaborated by Herr Kundt, one of his lieutenants, in a memorandum on June 8th, would destroy the entire fabric and unity of the Republic. The demand for autonomy exercised through a German People's Council, whose President would be a permanent ex-officio member of the Prague Government, and having the right to apply Nazi principles to all Germans in the country, would enable that body to treat Sudeten German Social-Democrats, Communists and Jews as if they were no longer citizens of a democratic State, for whom the Central Government accepts responsibility. The Government could not surrender this responsibility and live. The kind of State within the State demanded by Herr Henlein's negotiators would be in no way comparable with a Swiss Canton, the citizens of which owe allegiance to a common law, and the integrity of which is guaranteed by national measures of defence.

The importance of these points was quickly realised by M. Hodza's colleagues in the Cabinet; with the result that, when the terms of the Kundt memorandum became known, the elaboration of the long-awaited Nationalities Statute and Language Law, which is the responsibility and duty of the Prague Government, has been made a matter for a special Cabinet Committee. Meanwhile, last week the Sudeten German Party announced that the Nationalities Statute—in so far as its provisions, jealously kept secret, were surmised—could not provide a basis for an agreement. This, on the face of it, means that the inevitable incompatibility of the Carlsbad Points with the responsibilities of the Prague Cabinet has come into the open. In this unfortunate, though foreseeable, situation, public opinion in Czech and Slovak regions alike has rallied stoutly to the defence of citizenship before race. In so doing, it has automatically strengthened the position of the Benes Socialist, Social-Democrat and other Left Parties; strengthened the position of Herr Jaksch and his Sudeten German Social-Democrats; and drawn the Slovaks closer to the Czechs. The Coalition still depends on the united Agrarian *bloc* of Czechs and Slovaks; but the Rightward-inclined Czech Agrarians have lost face; and now there is open talk of a General Election in the autumn. In a country where communal elections in three recent week-ends provoked grave disturbances, only avoided by giving Henleiners virtually free rein against their opponents, the advent of a General Election may spell even greater difficulties. Yet, apart from the creation of a Cabinet of Civil Servants or of a dictatorship—both of them desperate expedients—it is hard to see what else can be done. At least, a General Election would enable perhaps one or two parties to unite, and thus to clarify the issues in the contest. A clear answer by the majority of citizens might be dangerous, but it would certainly be healthy.

Fortunately, however, the Henleiners are not irrevocably committed; and there is still hope that an acceptable middle way will be found. Unquestionably it can, if Herr Hitler so wishes. It should be plain to the Germans, of the Reich as of the Sudetenland, that the utter control over the lives of all Sudeten Germans, demanded in the Carlsbad speech and Kundt memorandum, cannot be granted. But it should be equally plain to the Czechoslovaks that more than slight changes in civil administration and the language law are required. The older generation of Czechoslovaks who made the revolution, and the State, have unwisely, since the war, over-centralised the Czech administration; and to-day the younger generation recognises in this a big blunder and a potent source of German discontent. If, now, a wise and efficient decentralisation of all purely civil administration in Bohemia, Moravia, Slovakia and Ruthenia could be quickly announced and executed—providing for equality of languages and of posts in the Civil Service for each district—it should not be difficult to satisfy legitimate claims of all minorities. As in the United States or Switzerland, the central Government would have to safeguard its ultimate rights in well-defined spheres—e.g., law courts, civil rights, defence, etc.—and if Prague insists on that, the insistence should be understood abroad.

Nevertheless, there is a wide gap between Sudeten Germans and Czechoslovaks. The British and French Governments, through their representatives in Prague, have been pressing the Czechoslovak Cabinet to accelerate its proposed legislation. That Cabinet will go ahead with reforms—whether the Sudeten German Party accepts or rejects them. That is a proof of good faith. In return, this democratic small Power can with justification require that when Europe's remaining democratic Great Powers urge her to incur great dangers for the sake of European peace and democracy, they should also lend their support in her stand for the preservation of democratic rights and principles.

Italy's Economic Position—I

The Fascist Economy

ITALY is the weaker pole of the Rome-Berlin axis—weaker in economic as in military strength. So much is obvious to the most superficial observer. But how much weaker? And how close is Italy to economic crisis? These are questions that are unusually difficult to answer. Even in normal times it is no easy matter to diagnose the state of health of a country of peasant cultivators, where industry no less than agriculture is organised in small units beyond the statistician's reach. When many of the necessary statistics are suppressed, and some of the others are suspect of manipulation, the difficulties of interpretation are increased manifold. In this article and its successor, however, an attempt has been made to collect some of the facts available to an outside observer and to piece them together to form a picture of the whole. That there should be many gaps in the picture, that some of its colours should be a shade too bright or too sombre, is only to be expected. The blame for these defects should, however, be placed where it belongs—on the Fascist authorities who so severely ration the supply of information. It is a legitimate deduction from their reticence that the general impression of Italy's economic position would certainly not be more favourable if the unpublished figures could be used.

In the western countries economic difficulties in recent years have become almost synonymous with industrial unemployment. This, however, is one disease from which Italy is not suffering. Industrial activity reached a very high level in 1937, and has been maintained there during the present year. This can be seen from the official indices of industrial production in the first table overleaf.

The textile industries, which were checked during the sanctions period, have resumed their recovery. But they are still a long way below the 1928 level. The present high activity is evidently concentrated in the mechanical and metallurgical industries. Its parents are armaments and autarky.

Feverish armament activity is, of course, common to every nation in the world. Autarky, on the other hand, is

INDUSTRIAL PRODUCTION IN ITALY

	1932	1935	1936	1937
		(1928 = 100)		
Total index	73·0	102·4	95·5	108·6
Textile industries	67·4	76·6	70·1	83·7
Mechanical and metallurgical industries	70·7	102·6	118·7	130·1
		(1929 = 100)		
Hours actually worked	72·4	81·0	81·0	91·7
Workers employed	78·5	94·0	94·9	104·5

a peculiarly authoritarian product. But autarky in Italy is something significantly different from the complete self-sufficiency aimed at in Germany and Russia. True, it is leading to the intensive development of Italy's low-grade deposits of coal and iron ore, which were previously reserved for an extreme emergency. In 1937 the production of iron ore, pig iron, non-ferrous ores and pyrites all greatly exceeded even the wartime year 1918, and the production of coal and lignite was nearly as large as in that year. But even with these efforts, Italy cannot hope to be independent of foreign countries in raw materials. Indeed, one interpretation of the autarky policy is that given in a recent speech by the managing director of the Ansaldo firm—namely, that it aims primarily at independence of the foreigner in finished goods and only secondarily in raw materials. The object is not even to reduce the imports of raw materials, since for Italy a bigger output of finished goods requires a bigger import of fuel and materials. Autarky is, then, simply concerned with the safety of the sources of supply and with the most economical allocation of the foreign exchange available. Thus, in the iron and steel industry, even though the Italian annual consumption of steel is only 59 kilograms per head of population, compared with 383 kgs. in the United States, 248 kgs. in Germany, 180 kgs. in Great Britain and 144 kgs. in France, only some two-thirds of the raw material required can be provided from domestic ore and scrap. Far from reducing home consumption to what can be provided from domestic materials, Italy would have to envisage in wartime a much greater production, and the present plans of expansion call for an increase in production from a little over 2,000,000 tons a year to 2,500,000 or 3,000,000 tons.

Another aspect of the policy of preparing industry for war, of which much has been written, is the geographical redistribution of industry. In practice, little has been done, and nearly all vital production is still to be found in the triangle Milan-Genoa-Turin. The Fiat works in Turin are, however, to be moved, but only into another part of the city, as their present position on the railway line makes them an easy target. A few arms factories have been built in central Italy and paper is being made from straw in the south, but the concentration of industry in the north has not been, and is not likely to be, substantially altered.

The basis for the present high degree of industrial activity in Italy is thus, to a very large degree, the policies of the State. Since the devaluation of the lira industrial profits have been higher, and some of the new capital works have been financed, under Government direction, out of private funds. But the great source of finance for the programme of capital expansion is the credit of the State. Italy, in short, is pursuing an inflationary course, in which an abnormally large amount of money, derived from credit creation, is being spent on various forms of capital works. This is, indeed, no new thing in Italy. Between 1925 and 1928 expansion of the credit basis was founded on foreign loans; between 1928 and 1934 it was accomplished by the method of promising annuities out of the budget for public works; and since 1934 war expenditure and autarky have fulfilled the same purpose. As everywhere, the economic policy of Fascism in Italy has been one of debt inflation.

In any country, a policy of preventing unemployment by continuous inflation has three disadvantages. It involves a constant, and possibly progressive, reduction of the standard of living of the people. It necessitates a steady deficit in the finances of the State, with the inevitable embarrassments to the Treasury of being a continuous borrower. And it endangers the equilibrium of the balance of payments. All three phenomena have been visible in Italy in recent months.

Figures on the standard of living are unusually difficult to give with any pretence to accuracy. The standard of living of the Italian peasantry, especially in the south, is very low at all times, and depends more upon the varying bounty of nature than on the policies of Governments. The industrial worker, however, appears to have been adversely affected by the events of the last two years, especially by the devaluation of the lira in October, 1936. From 1934 to 1936 the wage-index rose from 83.5 to 87.5 (1928-29 = 100), or by 5 per cent., while the cost of living index rose from 76.4 to 83.5 (1928 = 100), or by 9 per cent., and the index of the wholesale prices of consumers' goods from 60.4 to 73.3 (1928 = 100), or by 22 per cent. (The decline in real wage rates is, however, partly offset by the greater regularity and volume of employment.) Supporting evidence is to be found in the yield of taxes levied by the municipalities on some articles of food and drink. In the capitals of the provinces these taxes yielded 1,135 million lire in 1934, but only 959 million lire in 1936. The yield was the same in 1936 and 1937 in spite of the rise both in prices and in industrial activity in 1937. An index of the volume of sales of 58 food shops in Milan has oscillated in the last two years between 55 and 85 (1934 = 100). The figures of savings tell the same story. Deposits in the ordinary savings banks were 19,573 millions at the end of 1934, but had fallen to 18,747 millions at the end of 1937 and 18,638 millions at the end of November, 1937, although the devaluation had intervened. Deposits in the postal savings banks rose, it is true, in the same period from 20,427 million lire to 22,314 million lire; but these deposits are to a large extent the funds of commercial and industrial undertakings, rather than the savings of the people.

As a final indication both of the absolute standard of living and of its fluctuations in recent years, some figures of the *per capita* consumption of certain foodstuffs may be given:—

ANNUAL CONSUMPTION PER HEAD OF FOODSTUFFS
(Milk and wine in *litres*; other foodstuffs in *kilograms*)

	Italy				U.K.,	Germany
	Average 1926–30	Average 1931–36	1935	1936	Average 1934-36	Average 1934-35
Wheat flour	142·5	124·6	119·4	118·6	89·3	...
All Cereals	*176·3*	*140·5*	*152·0*	*149·9*	*95·4*	*113·0*
Potatoes	35·4	34·8	25·8	29·6	98·8	190·0
Vegetables and fruit	107·8	96·8	92·2	91·1	106·0	81·4
Sugar	9·1	7·1	7·0	6·7	41·8	21·5
Coffee	0·9	0·7	0·8	0·6	0·3	2·3
Meat	18·8	16·4	16·5	16·1	63·0	52·8*
Fish	5·1	5·4	5·8	5·6	21·0	10·6
Butter	1·1	1·1	1·2	1·1	11·5	7·5
Cheese	4·6	4·8	5·1	4·3	4·3	5·6
Eggs	6·3	6·7	6·8	6·6	9·5	6·7
Milk	33·1	33·7	34·0	32·8	88·6	122·0†
Wine	110·0	93·9	82·8	100·4	1·4	7·8‡

* Includes poultry and rabbits. † Includes milk equivalent of cream. ‡ 1934 and 1935 were years of record vine crops.

It will be seen that almost every item shows a decline. Perhaps the most eloquent figure is the decline in the consumption of wheat flour. In the ordinary way, since *pasta* is usually taken to be the cheapest way of filling an empty stomach, one might have expected this to mean a shift to more nutritious commodities. But the coincidence of a decline in wheat consumption with falls in a number of other important commodities seems to indicate very clearly that there has been a lowering of the standard of living of the Italian people.

This has been the first and, perhaps, in the long run, the most important, consequence of Fascist economic policy. In the second article an attempt will be made to trace its effects on the finances of the State and on the foreign trade of the country.

The Colossus of Roads

THERE has been no industrial phenomenon of the twentieth century to compare with the automobile industry. From virtually nothing a single generation ago it has built itself up into one of our largest industries. In this country alone it employs, directly or indirectly, over 1,300,000 people, either in the manufacture, the operation or the servicing of motor vehicles. It contributes to the national income in an even more direct way, since taxes and duties on motor vehicles produce nearly one-tenth of the whole revenue of the State—a proportion far heavier than is borne by any other industry of comparable size. But economic facts such as these do not begin to exhaust the importance of the motor industry; its rise has also had far-reaching social and human implications. To millions of people the motor-car has brought an entirely new conception of leisure and the use that can be made of it. The car has changed the whole balance between town and country, making it every year increasingly difficult to say where the one ends and the other begins. It has made us a mobile people, and we are hardly yet beginning to see the consequences of the change. It would, perhaps, be going too far to say that the internal combustion engine has wrought as great a revolution as the steam engine a century and a half earlier. But at least it stands a close second in the list of technical advances that have changed the face of the earth and the mind of man.

From its very nature, the growth of the motor-car has been conducted in the full view of the public. This has been no abstruse product of the obscure laboratory. On the contrary there are few subjects on which the average man is better informed, or in which he has a greater interest than the progress of the car. But there is another sense in which the growth of the industry has been shared with the public. For many years past the Society of Motor Manufacturers and Traders have prided themselves on setting an example to all other industries in the volume of information about themselves that they regularly compile and publish. The publication this week of their annual statistical volume* provides an opportunity for paying tribute both to the quantity and to the quality of the facts and figures provided. There can be few similar publications which contain more matter either of value to the economist or of interest to the ordinary man.

The motorist will, perhaps, find most interest in the figures that are given of the yield of motor taxation, on the one hand, and of highway expenditure on the other. The total revenue of the Exchequer and local authorities from motorists in 1937-38 is estimated at £90,560,000, including £34,608,000 in licence duties, £44,800,000 in fuel tax receipts, £1,688,000 in import duties and £9,464,000 in local rates on garage space. Against this, expenditure on highways and bridges in the preceding year had been only £54,749,000 (omitting Northern Ireland) and, of this, £10,364,000 was either recoverable from property owners and utilities or else raised by loan. The amount spent out of revenue on the roads was almost exactly half the sum raised in taxation on motor vehicles. Now there is no reason why the motorist should not be taxed for the general purposes of the State as well as for the upkeep of the roads. But the motorist may justly retort that there is equally no reason why the non-motorist should not contribute a share of the cost of the roads, and the disproportion between the figures is unduly—and increasingly—onerous.

The most impressive pages of the volume are naturally those which tell the story of the rapid rise of the industry. Production both of private cars and of commercial vehicles was considerably higher in 1937 than in any previous year. More vehicles, in fact, were produced in twelve months than the total in use on the roads as recently as sixteen years earlier. Total production is now over the half-million mark and considerably more than double the figure of 1929, the eve of the world depression. Since 1933 the proportionate increases in the two categories of private and commercial vehicles have been very similar, but commercial vehicles held up rather better in the depression years and consequently show a rather better overall increase. Private cars and taxis, however, still make up nearly 70 per cent. of the total output.

The figures of registrations—that is, of vehicles in use—are fully as sensational as those of production. At the census taken in September, 1937, there were no less than 2,461,833 motor vehicles in use in the United Kingdom, 1,834,248 of them being private cars. Even this enormous figure excludes 491,718 motor cycles—the only category to show a steady decline. The rate of increase is still phenomenally large. The total production of motor vehicles in 1937 was more than 22 per cent. of the total number registered in the previous September, and the increase in registrations, after deducting the cars scrapped, was as high as 8.4 per cent. As the total number of motor vehicles increased it would have been reasonable to expect that the proportionate increase from year to year would decline. But it shows very little sign of doing so; the 1937 figure of 8.4 per cent. is, it is true, lower than for the two preceding years, but it is higher than for any other recent years.

In view of these facts, talk of saturation point seems rather far-fetched. We are still a very long way behind America in car-ownership. The United States in December, 1937, had one car for every 4.6 inhabitants; the British figure was one for every 18.1 inhabitants. National incomes and motor taxation systems make, of course, a great deal of difference. But the average British income is not very far behind the American, and the British taxation system has not prevented the rapid increase hitherto. *Prima facie*, it would be reasonable to expect the British figure gradually to move much closer to the American. The condition of the roads has also a great deal to do with the question, but here again the American statistics do not encourage the belief that saturation point is near in Great Britain. In this country there are 16.4 vehicles for every mile of road; but in the six American States of Connecticut, Massachusetts, New Jersey, New York, Pennsylvania and Rhode Island the comparable figure is 29.3 per mile. And registrations in these States are still increasing. Clearly, road congestion is little if any deterrent to the would-be purchaser of a car. The only limiting factor seems to be the ability to afford a car. That, in turn, is a function of two quantities, the average income and the price of cars. The average income increases steadily from decade to decade, if not from year to year. And, as an illuminating graph in the report clearly shows, there has been an almost uninterrupted fall in the price of cars. An index constructed on an ingenious "chain" principle was in 1937 only 50.5 per cent. of its 1924 level. The conclusion seems, then, to be inescapable that we must expect a continuance for many more years of the rapid increase in the number of cars on the roads.

* "The Motor Industry of Great Britain, 1938." Published by The Statistical Department, The Society of Motor Manufacturers and Traders, Ltd., Hobart House, Wilton Street, London, S.W.1. Price 5s.

From one point of view this is an alarming prospect. The one noticeable omission from the S.M.M.T's annual is the statistics of road accidents. But their appalling incidence is well enough known, and it is not difficult to show that our record is worse than that of many other countries. In the United States, for example, there are only 13.0 deaths per annum per 10,000 motor vehicles; in Canada only 10.5. But the figure for England and Wales is 24.6 per 10,000 vehicles and that for Scotland as high as 34.8. Road congestion is, of course, a large part of the explanation. But if our roads are the most congested in the world (as, with the perhaps negligible exceptions of Gibraltar and the Canary Islands, they are) it is surely incumbent on us to have the best roads. Another table which the S.M.M.T. might give in a future edition is that of highway expenditure per car in the different countries of the world. But in default of such comparisons, the motorist will inevitably come back to the taxation figures and wonder whether the scale of expenditure on the roads, which may or may not have been adequate for a million and a third vehicles a decade ago, is not grossly inadequate for two and a half millions to-day.

Topics of the Week

Bluer Skies in the Markets.—A change, amounting almost to a transformation, has come over the chief security and commodity markets, on both sides of the Atlantic, in the last three weeks. Wall Street, as is its wont, has been the most spectacular performer. The market was firm for the first half of June; but since Monday, June 20th, it has been running away with itself. The Dow Jones index of industrial shares, for example, which stood at 110·61 on June 1st and was only 113·23 on the 18th, has risen by leaps and bounds to close at 137·78 on Wednesday of this week. This is actually a little lower than Saturday's close, but a slight reaction after so steep a rise is only to be expected, and to be welcomed even by the most impatient bull. The American commodity markets have been infected, and Moody's daily index of staple commodity prices now stands 10 per cent. higher than a month ago. London markets have followed the movement in their own less volatile fashion. The *Financial News* index of ordinary shares was 10 per cent. higher on July 6th than on June 7th, and reference to the Note on page 91 shows that *The Economist* index of primary product prices has risen by 1.9 per cent. in a fortnight and 3.2 per cent. in a month.

* * *

All this is naturally gratifying. But what does it mean? Many for whom movements on the Stock Exchange are the beginning and end of economic phenomena have allowed themselves to be convinced that the rise portends the coming end of the 1937–38 recession. In Wall Street, in particular, optimistic prophecies are now as plentiful as forebodings of doom a month ago. There are, it is true, several indications of slightly better business conditions in the United States. One or two of the important indices, notably car loadings and the volume of electric power generation, have begun to rise and, though conditions in the steel industry are unusually chaotic owing to the sudden abandonment of the familiar "basing-point" system which acted as a stabilising influence on prices, it begins to look as if the recent reduction in prices has stimulated an increase in demand. In fact, taking the American situation in the large, some recovery from the very low levels reached in many lines of production seems to be imminent, and it is not impossible that the recovery will continue into the autumn. Whether it will mark a change in the underlying trend, however, is another matter and one which only a clairvoyant could answer on the facts now available. It should not be forgotten that the recession that has occurred since last autumn has been the most rapid ever known. If the 1937 decline was so much steeper than in 1929, the 1938 secondary reaction might be correspondingly more impressive than the embryonic recovery of 1930, and still have no more meaning for the cyclical trend. As for the British outlook, confident optimism seems even more premature than in Wall Street. After all, Great Britain has had what America has not had, an unmistakable period of high prosperity, and the retreat of the British indices, though less spectacular than the American rout, may be much harder to arrest. The June unemployment returns, which are analysed on another page, will not encourage the prudent observer to do more than wait and see.

* * *

Mr Chamberlain at Kettering.—The Prime Minister made another of his somewhat ingenuous speeches on foreign policy at Boughton House, Kettering, on Saturday of last week. Mr Chamberlain took as his text, as any humane statesman must do, the supreme necessity of avoiding war. It was his prime duty, he said, to strain every nerve to avoid a repetition of the Great War in Europe, and he could not believe that anyone who was not blinded by party prejudice could fail to desire that he should continue his efforts. Is it possible that the Prime Minister still has not realised the nature of the opposition to his policies? Nobody, or hardly anybody, in the country doubts the sincerity of his desire to avoid war. Still fewer would disagree with that great object. But there were no words in Mr Chamberlain's speech that implied any room for doubt about the correctness of his methods of maintaining the peace. And it is the methods, not the object, that are passionately opposed. Mr Chamberlain is so bitterly attacked not because he is trying to keep the peace, but because he is pursuing methods which run such a grave risk of failure. Is it conceivable that this very simple point has not occurred to him? Yet how else is it possible to interpret a passage such as this: "What I regret about the attitude of the Opposition is the impression it creates abroad of national disunity. I believe that to be a completely false impression. I do not believe that the country desires us to abandon our efforts to establish and maintain peace." How else are we to understand his plea to the Liberals to join forces with him by reason "above all" of his conduct of foreign affairs?

* * *

The astonishing thing is that Mr Neville Chamberlain showed in the same speech how easily he credits the good intentions of other people, provided only they are not in political opposition to him. He said himself that he had "a little difficulty" in squaring General Franco's account of the bombing raids on British ships with the facts. But the little difficulty was overcome. General Franco must be right, and the whole inconvenient business was really the fault of the shipowners who, in spite of warnings, persisted in sending their ships to Spain and were wicked enough to accept "four and five times the ordinary rates of freight for voyages to these ports." This sublime unconcern for the fate of British subjects seeking legitimate profits in foreign parts may easily be regarded as one more invitation to the potential aggressors to interpret Mr Chamberlain's love of peace as a lack of will to fight. And if that conviction once gains acceptance, Mr Chamberlain's own fear of war will itself have made war inevitable.

The War in Spain.—This week, while Sir Robert Hodgson has been explaining General Franco's views on the bombing of British ships and men to Lord Halifax in London, the General has been pushing forward on land towards Valencia. The halt at Castellon a few weeks ago has now given place to violent activity on the Teruel front, right down to the coast; and, though it is difficult country, the insurgents have effected an eighteen-mile breach in the Government defences near Sagunto. If the advance, now halted, continues, Valencia may be incorporated in General Franco's coastal strip; contact between Barcelona and Madrid will be extremely difficult; and Madrid will be further encircled. Clearly, the rumpus caused by the air bombings of British ships has moderated the attacks for the time being; and while the London Non-intervention Committee's proposals for the despatch of counting commissions have been forwarded to both sides in Spain, the land war has redoubled in intensity. Mr Butler let out in the Commons this week that the bombings of British property and men have been "discussed" in Rome with Count Ciano; but, despite a chorus of French and Italo-German praise of the Non-intervention Committee's progress, progress it certainly is not—yet. If General Franco succeeds a little more on land—and his allies' bombing of Barcelona, Valencia, Alicante, etc., have been intense this week—we may have to face yet another "delaying action" in the expectation of his long-awaited military victory. And then? Then, of course, the real show-down among the contestants for Spain will emerge—from which, probably, the British Government will not be able to hold as Olympically aloof as hitherto.

* * *

Coal, the Lords and the Commons.—The Lords are not to have their way with the Coal Bill. On Wednesday, the President of the Board of Trade informed the Commons that certain of the major amendments made to Part One of the Bill in the Upper House were not acceptable to the Government. Accordingly the Commons, to whom the measure had been returned for discussion of the Lords' changes, rejected four alterations which, if retained, would have wholly crippled the procedure laid down for the valuation and purchase of royalties. The vesting date (July 1, 1942) was restored; and clauses relating to the renewal of leases, the payment of expenses in connection with claims for subsidence and the recovery of expenses on behalf of landowners were deleted. Earlier this Session, the lower House, recognising that the case for nationalising mineral rights in the interests of the coal industry had been fully proved by non-partisan investigations, accepted Part One of the Bill with comparatively little discussion. The same consensus of opinion was evident on Wednesday. The royalty owners in the Lords have been notably less successful in their attempt to wreck the nationalisation clauses than were the mineowners in the Commons last December in their campaign to prevent Part Two of the Bill, which provides for the compulsory amalgamation of colliery undertakings, from being effective.

* * *

The Bill, from the moment of its introduction last year, has been a prey to sectional interests. The Labour Opposition themselves have shown little more appreciation of the general national interest in an efficient coal industry than the self-seeking groups among the Government's supporters. Their resistance to any changes in the coal-selling schemes (dealt with in Part Three of the Bill) when attempts were made last December to modify them in the interests of consumers, was proof that they too hearken more readily to the organised sectionalism of those engaged in the coal industry (masters and men being for once in agreement) than to any wider issues. And Labour complaints this week that the Bill will bring no benefits to mineworkers entirely overlook the fact that none of those associated with the industry can prosper in the future unless determined and wholehearted efforts are made without delay to introduce a much greater measure of economic efficiency than hitherto into the organisation of British coal-mining. As originally drafted, the Coal Bill was a passable attempt to achieve this end. In several important respects, it has now gone the way of its abortive predecessors. True, the Government's resistance to the Lords has saved an appreciable amount from the wreck. The nationalisation of royalties has been won, even if the diehard section of the Peers now stage a last-ditch fight. But the coal industry will still stand in sore need of drastic reform.

* * *

Execution and Murder in Palestine.—At Acre on June 29th a Jewish youth, Solomon, son of Joseph, of Roshpina, was executed after having been convicted on a charge of having fired into an omnibus with intent to murder the Arab occupants. Both inside Palestine and abroad there has been some Jewish agitation in favour of a reprieve. From this, however, all responsible Jewish authorities seem to have held aloof; and it is, indeed, the supreme interest of the Palestinian Jewish community that political as well as other crimes of violence should be sternly and effectively stamped out. If lawlessness were once to establish its reign in Palestine, then the situation of the Palestinian Jews would ultimately become unbearable—surrounded, as they are, by an Arab majority that inhabits vast regions extending to Iraq in one direction and to Morocco in another. The wire fence which now hedges off Palestine from the Arab countries round about will not, in itself, offer any more adequate permanent protection than the Roman or the Chinese Wall. As it is, a new Rural Mounted Police and Palestine Railway Police have had to be organised for the protection of the country inside the Palestinian pale, and during the last few days crimes of

violence have suddenly increased again in frequency. On the night of June 29th-30th the victims were a party of Arab fruit merchants on the Bethlehem-Jerusalem road, who were blown up by a land mine, and a Jewish wedding party at Tiberias, who were made the targets of a bomb. In the Haifa district on the 3rd of this month a Jewish farmer was stabbed to death, and on the same day in the Nazareth district a British policeman and two Jewish travellers were ambushed and wounded. This week there were murderous outbreaks at Jerusalem, Tel-Aviv, Tiberias and other places, and over twenty were killed. Two warships have been sent to Palestine. This fresh wave of violence is hardly surprising in view of the Government's long procrastination in carrying out the recommendations of the Royal Commission's report. The Commissioners themselves have represented, in the most emphatic terms, the plain truth that time is *not* on the side of a happy ending.

* * *

Nobody's Charge.—After the last war, Europe had its first sight of a new kind of *homo Europaicus*: citizen of no country, a Stateless man. The passport provided by the League for such unfortunate emigrants from Russia was, however, dignified with a worthy name: that of Fridtjof Nansen, explorer and humanist. During the last five years, citizens of Europe's remaining not-so-totalitarian States have become inured to the sight of Jews and Aryan, Liberals or Communists—whether they were professors, traders, politicians, students, authors, or priests—streaming out of Germany into countries where, if officials treated them curtly and Home Offices scorned them, they might yet eat the bread of affliction without fear of torture and death. This stream from Germany swelled to a torrent after the annexation of Austria, and after the resurgence of Nazi assaults upon their perpetual scapegoats, the Jews, which followed the "disappointment" over Czechoslovakia on May 20th. New decrees registering and confiscating Jewish—and even non-Jewish but Socialist or Liberal—property have been promulgated; and the wretched victim must choose between reliance upon the dubious charitable sentiments of a foreign people or upon the much more dubious toleration of Herr Julius Streicher and all his kind. The Nazis thus get rid of their victims and get hold of their property. The League Commissioner for refugees from political or racial persecution in Germany, whose functions may terminate at the end of this year, has not been able to do much; but on Wednesday of this week at Evian—the Swiss refused to allow it to be held at Geneva—President Roosevelt and the United States Government convoked their conference of thirty Powers to examine the problem raised by the scale and extent of the German and Austrian persecutions. The crux of the problem will be the Nazi technique of having it both ways. This was made plain in the opening speeches of the American and British delegates. It would not be surprising if, under American leadership, more was accomplished than at the leaderless League. But for that, transfer of the refugees' property from Germany will be necessary.

* * *

Austria Infelix.—*Bella gerant alii, tu, felix Austria, nube* is no longer, alas, an effective prescription for Austria's welfare. Austria has married the Third Reich by an ancient rite which the anthropologists call "marriage by capture" (practised by Circassians and the like). The marriage is bringing such trouble on the poor bride's head that one might almost have thought that she had gone and married a Jew. The Nazi prescription is to evict a sufficient number of Jews, "Blacks" and "Reds," to provide comfortable and lucrative places for expectant party men; and in Austria, as in the other Reich five years ago, the delicate task is to decide which suitors are to be gratified and which are to be sent away hungry. This growing trouble has moved the Reichsdeutsch Nazi Gauleiter and unification-commissioner in Austria, Herr Bürckel, to public speech. On June 30th he told foreign journalists in Vienna that there were then 3,780 political prisoners from Austria in all, of whom about half were Jews, and 150 were in Dachau. But Vienna's own prisons, accommodating 10,000, have been so filled as to necessitate the commandeering of certain schools for a like purpose. He announced at the same time that he had ordered an examination into all seizures of property and all arrests. Thereafter, on July 2nd, in a similar speech, Herr Bürckel revealed that twelve Aryan administrators of Jewish businesses in Austria had been arrested for misconduct and been sent to Dachau, and that further arrests were likely to follow. Many of these administrators seem, in fact, to have interpreted their instructions as permission for helping themselves. Over the week-end Herr Bürckel also published a decree offering rewards of 50 marks for informers against informers—a step which seems likely to lead the said Gauleiter into an infinite regress, if informers against informers are ever informed against in their turn. Herr Bürckel makes the personal impression of an honest and upright administrator grappling with a task which is hopeless from the start. The spirit and principles of the Nazi regime make it so.

* * *

Cabinet Ministers and Parliament.—Freed from their exhausting discussions of the Coal Bill, the Lords found time this week to debate a proposal to make it possible for Cabinet Ministers to address both Houses of Parliament. The Ministers who govern this country are Ministers of the Crown, and by constitutional rule they must sit in Parliament. *Prima facie*, there is no reason, as long as Parliament consists of two Houses, why Ministers should not be drawn solely on grounds of merit from either chamber. Actually, the extension of the franchise to cover all the adult members of the population has enormously enhanced the power and prestige of the Commons. Their prescriptive authority in money matters is of long standing, but their prior rights in matters of ordinary legislation were only defined 27 years ago, when the peers were misguided enough to trench upon the Commons' financial rights on alleged grounds of public policy. The Commons have come to be regarded as Parliament: they alone are responsible to the sovereign electorate. From this has arisen the recent convention that the Prime Minister and most important Secretaries of State should commonly be chosen from the House of Commons, where they are directly in contact with the people's representatives, exposed daily to the searching powers of Parliamentary question and able to state their policy to the lower and more important House. Unfortunately, the mischances of death and inheritance may on occasion remove talented members of the Commons to the Lords. The Government's opposition to Wednesday's proposal was founded on important practical considerations: the responsibilities of Cabinet Ministers are already so great, that to call upon them to participate in the proceedings of both Houses would be inexpedient. It is true that a Minister harried daily in the Commons would have little time to be present in the Lords. A Minister in the Lords, however, might be able to escape more often from the peers' less crowded activities to face the criticisms of the lower House. Again, it is the function of Under-Secretaries to eke out their principals' time by standing in their stead to answer questions or explain their policy. There are convincing reasons for the view that Prime Ministers should be Commons men. In the case of other Ministers, however, a more elastic custom might be made possible by the opportunity to address both Houses, in cases when rigidity would unduly limit the field of choice. Parliament still consists of two Houses.

* * *

Arms and the Engineers.—Months have passed and still no definite move has been made to draft the plans for speeding up re-armament which the Government has required from employers and workers in the engineering industry. Preliminary meetings weeks ago revealed that the employers were anxious that the two unions concerned, the Confederation of Shipbuilding and Engineering Unions and the Amalgamated Engineering Union, should consider the possibility of diluting skilled with unskilled labour and of introducing women. The matter was referred by both unions to their annual conferences and in neither case was any support given to the employers' suggestions. In common with the bulk of the trade union movement, the skilled engineers are distrustful of the Government's foreign policy, and on that ground alone disinclined to co-operate in re-armament without considerable reservations. At present the unions' proposals are being drafted. Some conflict is reported between the two bodies, and it seems likely that the larger and more militant A.E.U. is more intransigently opposed to the employers' plans than the Confederation. The unions' anxiety for their craft rights is understandable; and the mounting number of unemployed engineers does not make their leaders more ready to abate their rules and regulations to facilitate national defence. Nevertheless, the sands are running out. There is widespread impatience that this deadlock in so important a matter should persist. Sir Walter Citrine himself has uttered a veiled warning to the engineers. There were times, he said, in an address last week to the National Federation of Building Trade Operatives, when leaders of the trade union movement should not be deterred from the course they felt to be right by fear of criticism from the rank and file. "Current events involving the practices and standards of trade unions" might give point to what he had said if the proper policy were not pursued. The engineering unions will sacrifice much of the sympathy which is theirs unless they act speedily.

* * *

Railwaymen Confer.—Just over forty years ago the trade unions of British railway workers adopted the first of a long series of resolutions in favour of the nationalisation of railways. The latest was unanimously passed at Southport on Tuesday by the National Union of Railwaymen. In the old days the plea for State ownership was supported by the argument that private enterprise was inefficient and wasteful. This week the view was that the nationalisation of all transport services, rail, road, air and canal alike, would facilitate co-ordination. It was not held that nationalisation would notably enhance the efficient working of the main-line railways, though with some justice it was urged that road transport was in need of some reform to eliminate redundant services and chaotic conditions. Nevertheless, the Road Traffic Acts have already done a great deal to establish order in road transport, and wages and hours are in process of being effectively regulated. Some duplication and overlapping of service still continues in our railway system, while the method of co-ordinating the vast mass of exceptional rates is undoubtedly cumbersome and bureaucratic. But possible economies in these directions that would follow from unification are not as great as are sometimes assumed. The State already has powers to control and co-ordinate transport undertakings, and these powers are being exercised in the regulation of railway rates and wages, in the licensing of goods and passenger vehicles, and the supervision of working conditions on the road. The N.U.R.'s plea for higher wages was, in view of the declining trend of railway traffics, almost equally academic. It is indeed a disturbing fact that 120,000 railwaymen are earning less than 50s. a week, and the union's current demands are rightly confined, in the main, to the proposal for a minimum wage. As things are, however, the companies cannot concede even a 50s. minimum at a time of trade recession without impairing their financial stability and failing in their obligations to stockholders, who have not fared very well in recent years.

* * *

Canada and the Air Force.—It is hard to believe that no considerations of party tactics affected the time and manner of Mr Mackenzie King's announcement of Canada's offer to assist in training pilots for the Royal Air Force. On the last day of the session at Ottawa, Mr Bennett attacked the Government for having refused, according to his information, a British request for the establishment of an Air Force training school in Canada. The Minister of National Defence denied that any communication on this subject had been received from the British Government. Canadian Governments, said Mr Mackenzie King, had long ago settled the constitutional principle that in time of peace no one but the Dominion itself could own and control military establishments on Canadian soil. Mr Meighen—whose name had been canvassed as successor to Mr Bennett in the Conservative leadership—used the episode as text for a fervent oration at the party convention, in the course of which he declared that there was no such thing as the separate, independent defence of the Dominion. The training of men for the defence of Great Britain, he claimed, was equivalent to training them for the defence of Canada. This speech, though enthusiastically received by the majority of Conservatives, provoked the French Canadian delegates to a threat of withdrawal if this was to be regarded as Conservative policy. The next day Mr Mackenzie King announced that the British Government had been offered the facilities of the Royal Canadian Air Force for training R.A.F. pilots in Canada. The offer will doubtless be gratefully accepted, for large numbers of Canadians enlist in the Royal Air Force, and their training in the Dominion will be a great relief to the over-taxed instructional schools here. Mr Mackenzie King, having allowed the Conservative leaders to fly a kite for him, has plainly concluded that a further measure of defence co-operation with Great Britain will rally more votes than it loses. This is a very important movement of the political weathervane in Canada.

* * *

Another American Deficit.—That the financial year of the United States Treasury should end with a deficit has long ago ceased to be news. Nevertheless, the deficit that was announced on June 30th has considerable importance in the series, for 1937–38 was at one time scheduled as the first year of a balanced budget, whereas actually the only distinction it can claim is that it shows a deficit smaller than any since 1932 and likely, by all appearances, to be smaller than any immediately to come. The first intimation of an American Budget is in the President's Budget Message to Congress in January, six months before the year begins. In January, 1937, Mr Roosevelt foresaw for 1937-38 a revenue of $7,294 millions and an expenditure (excluding debt retirement) of $1,000,000 less. By January, 1938, it was clear that these figures were over-optimistic and the figures were revised to $6,320,500,000 in revenue and $7,408,600,000 in expenditure, leaving an expected deficit of $1,088,100,000. Actuality, however, has been even worse. The revenue was no more than $6,242 millions, while expenditure rose to $7,701 millions. The sharp recession in trade has, of course, been largely responsible for this disappointing result. But it has not yet exerted its full influence on either side of the account. The revenue, though less than was expected, was the highest ever recorded, save only for 1920, and rising income taxes contributed the largest share of the increase. On the other side, expenditures on relief and recovery (except for the sub-heading of public works) were considerably lower than in the previous year. This next year, however, taxes can hardly fail to bring in less, unless recovery is as rapid as recession was last year; while the President's "pump-priming" promises a substantial increase in relief expenditures. It looks as if a deficit of $1,459 millions, exclusive of debt redemption, is the nearest approach that the United States can make, in the present state of affairs, to a balanced budget. The President's critics will doubtless

blame the fact on his shade of politics. But it might be more clear-sighted to investigate the thorny subject of adjusting the yield of taxes to the permanent burden that the revenue will have to carry.

* * *

The Franco-Turkish Agreement.—The Franco-Turkish agreement at Syria's expense, which we forecast last week, has now been consummated. In view of the dangers of the present international situation, it would no doubt be quixotic to regret the avoidance of a rift between Turkey and the Western Powers which might have given an opening for further aggression on the "Axis" Powers' part. All the same, we are left with the misgiving that the mandatory for Syria may have bartered away Syrian interests, of which France is, after all, the trustee. Turkish pressure on France was maintained up to the last moment. At Angora, on June 30th, the Turkish National Assembly empowered the Government to denounce the existing Turco-French treaties and to "take all measures to defend the national cause" unless a settlement satisfactory to Turkey were reached in the Alexandretta dispute. In Paris next day, July 1st, it was announced that the Franco-Turkish negotiations had arrived at a happy conclusion after what the Turkish Ambassador described as a "decisive test." There is to be a new pact of friendship between France and Turkey; a military agreement ensuring the internal security of the autonomous district of Alexandretta on a basis of Franco-Turkish parity; an instrument to put this second agreement into effect, and in particular to arrange for equal numbers of French and Turkish troops to be stationed in the district immediately; and a declaration of collaboration in Turco-Syrian frontier questions between Turkey, Syria and France. Last Sunday the technical military agreement was signed at Antioch (the second city of the Sanjak of Alexandretta), while the other agreements were initialled at Angora. These are to be signed in the same place in September, when the French Foreign Minister is to pay a visit of friendship to the Turkish capital. We very much hope that Turkey, in her natural zeal to protect the interests of the Turkish element in the Alexandretta district, will not press for measures that would be unfair to the non-Turkish elements in the local population which, in the aggregate, amount to a majority.

* * *

British Arms for Turkey.—On Monday a Bill to give effect to a recent agreement concluded between the British and Turkish Governments was read a second time without a division. Under the terms of the Bill, Turkey will be lent sums up to £6,000,000 for the purpose of purchasing war materials in Britain. Sir John Simon laid stress upon the political significance of this arrangement. The armaments credit would set the seal upon Turkey's resistance to the attraction of Germany. Mr Dalton also approached the Bill as an act of foreign policy. Turkey was a member of the League of Nations, as well as a country of primary strategic importance in the Near and Middle East. Similar agreements with other League Powers of like importance might bring Mr Chamberlain back to the path of rectitude and collective security. Other Labour speakers were less warm in their commendation. But most members of the Opposition parties looked upon the agreement as a *riposte* to the economic and political expansion by Germany, and called for the extension of the method to Danubia and the Balkans. In reply, Mr Hudson pointed out that the possibilities of concluding such agreements depended upon economic circumstances rather than political and diplomatic aspirations. Many of the countries cited by supporters of the policy of penetration by loan sold twice as much to us as we sold to them; and armaments credits on the Turkish model would not be easy to conclude. In general, the debate revealed a widespread realisation of the dangers of Germany's trade policies, and a readiness to meet stratagem by stratagem. Now that Turkey has been suitably rewarded for her refusal to accept Germany's move to provide for the equipment of her defences, other countries may prove anxious to receive good conduct prizes at our hands.

Social Services in Australasia.—Both Australia and New Zealand have been tackling in recent months the task of expanding and consolidating their social services. Last week the Australian Parliament passed the National Insurance Bill, in great haste before the new Senators, who are predominantly Labour, could take their seats on July 1st. The scheme covers 1,850,000 people, forming with their dependants more than half the population of Australia. The contributions are initially to be 3s. a week for men and 2s. for women, the employer paying half in each case. In return, workers with a satisfactory record of contributions are to have free medical treatment and medicines and cash benefits on the scale of 20s. a week for an adult man for sickness, with a further payment, in some cases, of 15s. a week for disablement after sickness benefit rights have been exhausted. Widows, and women over 60, will receive pensions of 15s. a week and men over 65 pensions of 20s. a week. The Government will indemnify the approved societies against the deficits that are expected to accrue in the initial years, contributing, in addition to an immediate guarantee, an annual contribution of 10s. per insured person to a sinking fund which will eventually replace the guarantee with cash. The Government have had to face the hostility, not only of the doctors, who demanded a higher capitation fee than the 11s. proposed (a dispute on which a Royal Commission is to advise), but also of some of their own followers, who succeeded in ousting the insurance companies from the privilege of being "approved societies" in favour of the friendly societies and trade unions.

* * *

The scale both of benefits and of public subsidy in this scheme may be compared with that in the New Zealand proposals. These are to be debated in the new session of Parliament, which opened last week. The scheme is in essence non-contributory, though a principal item of income will be a levy of 1s. in the £ on wages, to be known as the social security contribution, and replacing the present unemployment tax of 8d. in the £. General and specialist medical services will be available free to all. The invalidity pension will be 30s. a week for a single man or woman, with an additional 10s. for a wife or for each child. This will be granted under a "needs test," non-pension income being fixed at 20s. a week for a single person and 30s. a week for a married person. Men and women over 60 will receive a pension of 30s. a week, and widows a pension of 20s. a week, subject to a maximum of 20s. a week of income from other sources. The New Zealand Government have also had to contend with medical opposition, though the proposed capitation fee is 15s. per head of the population. But the chief criticism has been on the ground of the burden on the public purse. The combined cost of the health and superannuation schemes is put at £17,850,000 in the first year of operation, rising to £20,400,000 in five years. About half of this will be new expenditure in excess of present charges. The social security contribution is estimated to yield £7,500,000, and £500,000 will come from a registration levy of £1 a year on men over 20, but the State will have to bear the remaining sum of £9,850,000 in the first year, and its burden is unlikely to fall. It is this measure more than anything else that has evoked the recent misgivings over the soundness of New Zealand's public finances.

* * *

Conscription of Labour in Germany.—At the end of May Germany's official figure of unemployed had fallen to 338,356; yet only 37,000 of these unemployed were able-bodied workers. The figure seems to indicate that Germany's labour reserves are exhausted, whereas all other industrial countries are vainly trying to reduce their considerable numbers of unemployed. Field Marshal Goering decreed a general conscription of labour on June 23rd. Henceforth all Germans irrespective of age, sex, and social position can be called up for compulsory labour service or for specified technical training. Piecemeal restrictions on labour and employment are to be replaced by general compulsion. Military conscription supplemented by conscription of labour thus completes the effective militarisation of German labour. Where Germany's labour reserves went is clearly shown in the following table. The figures do not include Austria. Unemployment in Austria still amounts to 350,000, and the decree does not mention Austria at all.

	May, 1929	May, 1933	May, 1935	May, 1938
	(in 1,000's)			
Employed	18,490	13,180	16,386	19,900
Sick	480	360	429	500
Unemployed	1,350	5,039	2,019	338
Official total	20,320	18,579	18,834	20,738
Fighting forces	109	200	300	1,100
"Invisible" unemployment	...	2,400	2,200	...
Grand Total	20,429	21,179	21,334	21,940

Except for the estimate of "invisible" unemployment as well as for the strength of the fighting forces all figures are taken from the German health insurance statistics. They exclude highly salaried black-coated workers as well as civil servants. It is a surprising fact that from 1929 to 1933 the official total of workers, i.e. employed, sick and unemployed *decreased* by 1,743,000. During the following five years the official total increased by 2,159,000. Germany's population increased from 1929 to 1938 by roughly three millions. From 1929 to 1933 the increase amounted to 1,288,000. The real development is shown, however, in the grand total which includes soldiers, sailors, and the air force personnel and "invisible" unemployed. The estimate of the invisible unemployment is based upon figures published in *The Economist* of August 10, 1935. Subsequently, the German Institute fuer Konjunkturforschung tried to prove that invisible unemployment amounted only to 700,000. To-day the Institute is now compelled to admit that the recent increase of employed was partly recruited from independent artisans and shopkeepers, who were really unemployed but struck off the benefit lists.

* * *

The development of employed female workers is shown in the following table :—

	(in 1,000's)	Per cent. of total employed
May, 1929	6,179	33·4
„ 1933	4,664	35·4
„ 1935	5,190	31·7
„ 1938	6,180	31·1

The policy of restricting female labour has undoubtedly been successful. Compared with May, 1929, the number of employed male workers increased by 1,409,000, or by 11·4 per cent. There is still a reserve of roughly half a million women. There are on the other hand reserves of several hundred thousands of independent artisans and shopkeepers reluctant to give up their independence, which they value obviously higher than better-paid jobs in rigidly regimented factories. The natural annual increase in the working classes will, on the other hand, soon decline. The increase developed, and will develop, as follows :—

1935	207,500	1938	149,000
1936	178,200	1939	145,000
1937	156,000		

The true inference of Field-Marshal Goering's decree is therefore, that Nazi Germany's military programme has overstepped the resources of man-power and material. Intent on fulfilling this vast programme the Nazi Government has rapidly changed the lower middle-classes, i.e. independent artisans, shopkeepers, and peasants, into industrial workers. This is scarcely consonant with the promises to the "little man" who voted the Party into power. "Little man, what now?"

Cuts in Steel Prices

NEW YORK, June 28. — The importance of the steel industry to business is fundamental, and recent moves are highly significant. The prices of a great number of varied steel products have been substantially reduced, the cuts ranging from 6 per cent. to 17 per cent. Steel prices have for some time been subject to much criticism both from Washington and from a considerable number of economists. Leaders of the industry had strongly defended their price policy against all attacks, so that the recent move was unexpected.

The implications of the reduction in steel prices are not yet clear. Presumably some decline in the prices of products of which steel is an important constituent will follow. It is not impossible that the steel companies may ask for a downward revision of wage rates. Indeed, such a request to the unions has been widely rumoured. This course would seem consistent with the attitude of the companies about a year and a half ago, when increased labour costs were cited as the reason for raising steel prices.

The changes in steel prices also appear to involve an alteration in the method of pricing which has operated for some fourteen years. By this method the prices of finished steel products were varied between different centres of production. Some of the changes which have just been announced establish uniform prices at different centres. The effect of this policy may be to make freight charges on shipments the dominant factor in placing orders; and a considerable reorientation within the industry may follow.

Heavy Export Surplus Persists

The foreign trade figures for May show no signs of an improvement in business. Both imports and exports declined in value. The value of exports was the lowest recorded since March, 1937; and the value of imports reached the lowest level since December, 1934. The export surplus continued for the eighth consecutive month at the record-breaking rate of more than $100 millions a month; and about two-thirds of

the surplus was covered by imports of gold and silver. The May figures were as follows:—

(Millions of Dollars)

	April 1937	April 1938	May 1937	May 1938	Five Months ended May 1937	Five Months ended May 1938
Merchandise:						
Exports	269	274	290	257	1,271	1,359
Imports	287	160	285	148	1,397	815
Excess of exports	...	*114*	*5*	*109*	...	*544*
Excess of imports	*18*	...	...	...	*126*	...
Gold:						
Exports	N	0·1	N	0·2	N	5·6
Imports	216	71	155	53	767	193
Excess of imports	*216*	*71*	*155*	*53*	*767*	*187*
Silver:						
Exports	1·6	0·2	1·8	0·3	8·9	1·3
Imports	2·8	15·7	3·1	17·9	28·5	92·3
Excess of imports	*1·2*	*15·5*	*1·3*	*17·6*	*19·6*	*91*

Totals are now divided into agricultural and non-agricultural commodities. These bring out a marked change in the importance of agriculture in foreign trade this year compared with last. While total exports were below the 1937 level in May, shipments of agricultural products were 33 per cent. higher, while agricultural imports declined more substantially than other imports.

The large increase in shipments of foodstuffs appears to be the chief reason why exports are being so well maintained. Exports of aircraft and aeroplane engines in May were double those of May last year, and total exports of these goods during the first five months were valued at $29 millions, or 133 per cent. more than in the same period a year earlier.

Rising Prices and Slack Business

When the statistical history of the present period comes to be written, two developments will undoubtedly receive prominent notice. The average prices of "sensitive" commodities rose during June by about 8 per cent. And prices on the Stock Exchange during the week ended June 25th registered one of the sharpest advances on record.

These developments came when sentiment in financial circles was depressed, and a variety of explanations are being offered, none of which is yet capable of proof. Some adduce foreign buying both of stocks and commodities to explain the improvement, others the Government's spending programme, rumours and denials of devaluation, the adjournment of Congress, and so on. There is no certainty about any of these diverse suggestions, and the recent upward movements came as a complete surprise.

The latest comprehensive trade figures, compiled by the Federal Reserve authorities for the month of May, show no change in trend. The decline in business still shows slight signs of being arrested, but only one index (that of freight car loadings, adjusted for seasonal variations) shows even a negligible advance compared with April. The chief figures are as follows:—

Business Indices

(1923–25 = 100: Adjusted for seasonal variations)

	May, 1937	April, 1938	May, 1938*
Industrial production (total)	118	77	76

Freight car loadings	80	57	58
Department store sales	93	83	79
Department store stocks	76	69	69

* Preliminary. † Without seasonal adjustment.

Even when examined in greater detail, few of the individual series showed improvement compared with the previous month. Among the durable goods covered by the index of industrial production only plate-glass output was better in May than in April. Among non-durable goods improvement occurred in cotton consumption, the slaughtering and packing of sheep, sugar meltings, newsprint production, and cigar and cigarette output. Among minerals, only anthracite coal showed a gain. And only in the manufacture of tobacco products and petroleum refining was employment higher in May than in April.

Only fragmentary data are yet available for some weeks of June. Here a modest improvement is perceptible in some directions. Steel operations have risen slightly from the low level recorded early in the month. Automobile production has been maintained in the face of earlier fears that a substantial decline would occur. Building during the early part of the month was maintained at close to the May level. And sensitive commodity prices show a noticeable advance.

Stocks in several industries are reported to have been reduced during recent months to levels more in line with current output. Department store stocks in May were 69 per cent. of the 1923-25 average, compared with 72 per cent. in December, and are reported to have fallen a little further in June in some districts. Total reported stocks on June 1st were 9 per cent. lower than they were three months earlier and 14.5 per cent. lower than in June, 1937.

Germany

Foreign Debts

Berlin, July 5.—Last week the market in shares, which had in general been declining since April, experienced a noticeable recovery. Most of the gains occurred after the news of the Anglo-German agreement came out. The agreement came as a considerable relief to business circles, which had good reason to dread the establishment of a British clearing. The German-owned Dawes and Young dollar loans also advanced (in a nominal market), but for no apparent reason the reichsmark section of the Young loan declined. It now seems clear that the Reich Government's distinction between legal repudiation of the Austrian Federal loans and willingness in practice to negotiate was meaningless, and a cause of unnecessary perturbation. That it was designed mainly for purposes of prestige and internal propaganda must be inferred from the officially directed Press, which represented the main import of the British agreement to be "full maintenance of the German viewpoint," and omitted to mention (or merely mentioned in a way which meant nothing to the uninstructed reader) that Germany had agreed to pay anything at all on account of the Austrian debts.

It is clear from other statements that the same policy will be pursued in dealing with other guaranteeing countries, but although technical repudiation will be the opening gambit, it is equally certain that these countries, like Great Britain, will get what payment they can exact, no more and no less. In business circles one hears the argument that for the small sum involved, it was hardly worth while to risk a quarrel with creditor countries.

The half-yearly report of the Reichs-Kredit-Gesellschaft estimates the total foreign debt (omitting Austria), in February: standstill credits amounted to Rm. 900 millions, and other short-term debt to Rm. 4,100 millions. Long-term debt was Rm. 5,000 millions, making, with the addition of foreign investments and foreign-owned property in the Reich (amounting to between Rm. 4,000 and Rm. 5,000 millions) a total of some Rm. 10,000 millions. Before the recent settlement, transfer obligations for the service of debt amounted to Rm. 250 millions a year.

Secretary Brinkmann, of the Ministry of Economic Affairs, has repeated the recent statement of Dr Funk that exporters will in future be given greater freedom to deal with their exchange receipts, a policy described elsewhere as "bounties on the increase of exports." Already many exporters and firms engaged in transit trade are allowed by the Reichsbank to keep exchange deposits in their own names in foreign banks, the amount and their expenditure being officially controlled. The new system, it is supposed, will tend to counteract the tendency of manu-

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

facturers to sell at home for marks at higher prices, rather than to export for foreign currency for which, in the end, they only get the same badly depreciated marks—and considerably fewer of them.

The partial recovery in world prices has been well received, in the belief that countries producing raw materials and foodstuffs will take more German manufactured goods and thereby more than compensate for the increased cost of imports.

The official price regulations for the farming year 1938-39 have been issued. The basic prices for wheat and rye remain unchanged, and the price of oats for fodder has been raised by Rm. 8 a ton. The policy of fostering the production of oil seeds is being maintained. Prices to farmers are fixed; bounties are given to oil mills to enable them to pay the high prices; and oil-seed producers are enabled to buy oil-cakes at low prices. Trade in hay and straw is minutely regulated. Reports about the early fruit crops are all unfavourable.

In Austria a substantial decline in the wholesale prices of a large number of goods is reported. This is partly due to taxation changes, and partly (as in the case of metals) to measures designed to equalise Austrian and Reich prices. The German railway traffic tax was extended to Austria on July 1st.

Peak of Profits Passed

According to an analysis made by one of the banks, the average dividend paid by all companies whose shares are quoted in Berlin in the first four months of 1938 was 6.01 per cent, against 5.37 per cent. last year, and 3.27 per cent. in 1934. Share values have risen less than dividends, so that the present effective yield (4.32 per cent.) is higher than in earlier years. The view is expressed that industrial profits have now reached their highest point.

Several reasons are given for this opinion. On the one hand, there is the price-fixing regulation of 1936, which since a great number of reductions in price have been decreed operates only in one direction. Taxation has increased not only absolutely but relative to the volume of business and gross profits. A table in the *Frankfurter Zeitung* shows that, while gross profits rose between 1930 and 1937 by 121 per cent., tax payments rose 248 per cent. The point at which increasing intensity of activity ensures more economical production has been passed. Undertakings are now obliged, in some cases, to employ less skilled labour, since many workers have declined in efficiency because of their long spells of unemployment. Finally, exports of coal, iron and other goods are fetching lower prices. Certain classes of enterprises, it is added, actually reached the peak of profitability as early as 1936.

Shipping Activity

Port traffic increased very considerably in the first quarter of this year. Their total turnover of goods was 14,340,000 tons, against 12,053,000 tons in the same months of 1937, and 8,756,000 tons in 1933. Imports were responsible for most of the increase compared with 1937. At the annual shareholders' meeting, the president of the Supervision Board of the Hamburg-America Line, stated that the great shipping companies, which are under-capitalised, propose to raise additional capital in the market, and demanded a reform of shipping taxation. The companies complain of the expropriation of 75 per cent. of the exchange profits made on the repayment of foreign debts, and argue that these profits are wiped out by exchange losses on current business. Shipping already ordered for the Hamburg-America Line totals 21 vessels of 122,700 tons, including a new 36,000-ton vessel for the North Atlantic route.

The Reichsbank's return for June 30th shows a large increase of Rm. 985 millions in credits and investments. The movement of the chief items in the return during the past twelve months was:—

	June 30, 1937	June 30, 1938
	(Millions of marks)	
Gold	69	71
Foreign Exchange	6	6
Discounts	5,322	6,175
Legal-cover securities	104	547
Other assets	716	1,161
Circulation	4,992	6,440
Deposits	880	1,119

The total circulation of all currencies was Rm. 8,466 millions, against Rm. 6,941 millions a year ago. At the end of the quarter preceding the formation of the Nazi Administration, total circulation was Rm. 5,657 millions.

Eire

Economic Problems

DUBLIN, July 2.—Now that Mr de Valera has succeeded in obtaining an independent majority, it is to be hoped that the country will enjoy a few years of political peace that can be devoted to economic reconstruction. The depression in world agriculture and the past few years' economic war with Great Britain imposed a severe strain on Irish resources, and there is little doubt that Eire has been living on its capital for some time. The principal objectives to be sought are the reduction of emigration, the cure of unemployment and the raising of the standard of living of the poorer classes, rural and urban. These problems are, of course, related. Emigration is the result partly of unemployment and partly of poverty. The aim of the Government must be to raise the national income, and this involves the expansion of profitable production and, in particular, of exports.

Every increase in industrial employment and every increase in the purchasing power of the working classes leads to increased imports of capital and consumption goods, and these additional imports can, in the long run, be paid for only by additional exports. The expansion in national income which has taken place as a result of the housing programme cannot be expected to continue.

In the first place, the demand for houses in a falling population is not unlimited, and in the second place housing activity has increased the disequilibrium in the balance of payments. The restoration of equilibrium can no longer be achieved by further protection, because the limit of substituting home-produced articles for imports has been almost reached. Additional exports are an essential condition of Irish economic progress.

Increasing Agricultural Exports

The only articles that Eire can hope to export (apart from such invisible exports as sweepstakes and tourist traffic) are agricultural products. The problem, therefore, resolves itself into increasing the output and reducing to the minimum the cost of production of those articles for which the export market promises an increasing demand. The only export market is Great Britain, where a stationary population with a rising standard of living suggest that demand will be directed towards the dearer varieties of livestock and livestock products. These are the very commodities in the production of which Eire enjoys a high degree of comparative advantage. Assuming intelligent handling of the situation, the prospect before the Irish export trade appears quite bright, because demand seems to be shifting in the direction of these articles.

Actually, the problem is technical rather than economic. Irish farmers must be encouraged, bullied or, if necessary, coerced into keeping abreast of modern developments in the production of livestock products. The winter feeding of cattle is the central technical question. There must be the fullest research into the utilisation of Ireland's great natural product—grass.

What gold is to South Africa, grass is to Ireland, with the important difference that it is replaced annually and the supply does not become exhausted. The proper utilisation of the best pastures is the necessary condition of an increase of tillage on second-class land, and there is no doubt that the development of grass-farming in the light of the latest scientific and technical knowledge is the only possible foundation for an increase in rural employment and in the rural standard of living.

Mr de Valera's Opportunity

The increased purchasing power thus engendered in the countryside would have favourable effects on secondary industries, and the national income would expand in every direction. This expansion would render possible increased social services and increased expenditure, if necessary, on defence. The existing bias in favour of self-sufficiency must be replaced by a bias in favour of exports. Otherwise, Eire is doomed to further emigration, further unemployment, and a gradual increase in the burden of taxation.

Mr de Valera has already had the courage to alter his views on other important matters and, in doing so, has gained increased respect. If he will alter the direction of his economic policy, he will be remembered as a great constructive force in his country. If he fails to do so, there is a danger that the Irish political liberation, which will always be associated with his name, may be disfigured by economic decline and financial instability.

New Zealand

The Effects of World Recession

CHRISTCHURCH, June 6.—The recession in world trade and prices had some effect on New Zealand's foreign trade during the export season now closing; and domestic business is now beginning to feel its influence. A heavy fall in wool prices was partly offset by better prices for dairy produce. As yet the fall in total export values is small. Imports, however, stimulated by high incomes and heavy spending, continued to increase throughout the first quarter of the year, and the surplus of exports has contracted to £NZ7 millions, or about £NZ8 millions less than is required to meet interest and other payments due abroad.

The exchange funds held overseas by the banks, though still larger than was usual before the depression, have been reduced, and trading bank deposits have declined slightly. Advances have risen to record high levels. It appears likely these trends will persist, and that money, which has been very abundant since 1933, will become scarcer before the next export season opens. Changes in domestic business always lag behind those in external trade, but a general slackening (part of which is seasonal) is now reported.

Taxation and Business Conditions

The Minister of Finance, Mr W. Nash, announced the results of the financial year in a recent speech in his constituency. Both revenue and expenditure increased heavily during the year, the net result of which was a surplus of £NZ810,000. Figures for the past two years are as follows:—

CONSOLIDATED FUND

£NZ.	1936–37	1937–38
Revenue—		
Taxation	26,941,000	31,664,000
Interest	2,387,000	2,141,000
Other receipts	1,819,000	2,254,000
	31,147,000	36,059,000
Expenditure—		
Debt services	9,380,000	9,441,000
Exchange	1,581,000	1,828,000
Highways	2,509,000	2,835,000
Social services	9,913,000	11,872,000
Other items	7,292,000	9,273,000
	30,675,000	35,249,000
Surplus	*472,000*	*810,000*

These figures exclude special employment taxation, which was estimated to yield £NZ5.2 millions. The inclusion of this item would make total State taxation in 1937-38 £NZ36.9 millions, compared with £NZ17.8 millions in 1928-29 and £NZ5.5 millions in 1935-36. The greatest increase last year was in the yield of income tax, which realised £NZ9.1 millions, compared with £NZ3.3 millions in 1928-29 and £NZ4.6 millions in 1935-36. This increase, together with an advance of 42 per cent. in the proceeds of the sales tax, indicates the improvement which has taken place in the Dominion's business during the past two years. Most of this has been due to higher export prices, and though the Government takes much credit for the change, the people continue to be most closely interested in the course of prices in British markets.

Labour's Election Prospects

Meanwhile, the Labour Government is confronted with a variety of problems. The last session of the present Parliament opens late in June, and will be followed by a General Election. At the municipal elections in May the Labour Party suffered setbacks in most centres. The Prime Minister has insisted that the social security scheme should become law next season, and the programme has been approved by the party caucus. It must involve heavy additional taxation and is unpopular in many quarters. There is a possibility that it may be withdrawn and made an election issue.

In addition, it is becoming increasingly evident that the level of prosperity reached during the last two years with high export prices is unlikely to be maintained now prices have fallen. Addresses broadcast by Ministers recently have stressed the great increase in prosperity, for which the Government claims credit, and have contrasted present conditions with those of the depression years, for which the last Government is held responsible.

The Labour Party has always been closely associated with the trade unions, and has had its main support in the larger urban centres. In its first year of office, following the adoption of compulsory unionism in many occupations, the number of trade unionists more than doubled. At the 1935 elections Labour was also strongly supported in the dairying districts, where many farmers were won over by promises of guaranteed prices and State control of credit.

Now the dairy farmers are dissatisfied. They are pointing out that the guaranteed prices guarantee only the gross income of the farmer. His net income is contracting as his costs rise, and costs have risen considerably under the influence of higher wages, shorter hours and increased regulation of industry. For the present season, however, the guaranteed prices have been less than the market prices, and a substantial surplus is likely to result. Though a loss was recorded last year, the Prime Minister has stated that the surplus belongs to the dairy farmers and will be distributed among them.

Manufacturers, too, complain of high costs, and, though the tariff has recently been revised in an upward direction, they claim that they cannot meet the competition of imports produced in countries where lower costs rule. In addition, the agitation for lower taxation is strengthening, despite Government proposals which call for heavy additions to the present high taxes.

In the circumstances the result of the election is hard to forecast. Labour claims to be stronger than ever in the constituencies, and there is much truth in the popular saying that nobody wants to kill Santa Claus. There are many who believe that Labour will be defeated, but the more conservative consider that the Government party will be returned to power with a substantially reduced majority.

Argentina

Lower Exports

BUENOS AIRES, June 16.—Exports in May were again very low, although a little higher than in the previous month. The slight improvement is due to the renewal of maize shipments. The volume of exports during the first five months of 1938 has been much lower than in the corresponding period of any of the last ten years, while the value is lower than in any years except 1933, which was the trough of the depression. The quantity and market value of exports during the period from January to May (inclusive) for the last decade have been as follows:—

	Tons	Pesos
1929	7,685,050	1,034,528,556
1930	4,593,982	687,333,456
1931	7,254,012	624,120,524
1932	8,190,949	649,563,351
1933	6,154,666	478,044,997
1934	6,374,669	611,051,745
1935	7,276,560	720,070,020
1936	5,170,119	621,473,194
1937	9,943,968	1,255,373,746
1938	3,472,747	606,705,272

The great fall in exports this year has been in grain and linseed, which declined by 6,384,225 tons in volume and 566,418,184 pesos in value compared with last year. Owing to higher prices in the first few months of this year the reduction in value has been less marked than the decline in volume. Now, however, cereal prices are showing a downward tendency. Nevertheless, during the first five months of this year

average maize prices were 36.6 per cent. higher than last year, linseed prices 3.7 per cent. higher, oats prices 1.2 per cent, chilled beef prices 1.6 per cent., frozen beef prices 28.2 per cent. higher, and canned beef prices 8.3 per cent. higher. On the other hand, average wheat prices were 6.2 per cent. lower than in the first five months of 1937, unwashed wool prices 30.9 per cent. lower, dry ox hides 11.4 per cent. lower, and salted ox hides 34.3 per cent. lower.

Argentine producers failed to take advantage of the higher prices ruling at the beginning of the year, being influenced by local shortage of supplies, the possibility of an extension of hostilities in Europe, and the recollection of last year's high prices. Optimism is a characteristic of the Argentine farmer, and often (as in 1936) it has been justified. This year, however, there is no possibility of any very great increase in the volume of Argentine exports until the next crops are ready, while, owing to the large wheat crop in the United States, lower prices are expected.

Heavy Import Surplus

Despite the fact that imports are now declining in response to the earlier fall in exports, April recorded a heavy import surplus. The market value of foreign trade in the first four months of this year was as follows:—

	(Pesos)		Export (+) or Import (−) Surplus
	Exports	Imports	
January	145,993,968	145,801,423	+ 192,545
February	127,714,064	123,959,819	+ 3,754,245
March	118,578,386	144,403,619	− 25,825,233
April.....	103,208,005	116,733,359	− 13,525,354

In the first four months of 1938 the value of imports was 21.1 per cent. higher than in the same period of 1937. The increase was almost entirely due to imports of machines and vehicles, whose *tariff* value rose by 32,544,589 pesos, against a total increase in the *tariff* value of imports of only 44,632,912 pesos. Smaller increases were registered by textiles, fuels and non-ferrous metals.

In the same period Argentine imports from the United Kingdom increased slightly in value compared with 1937, but the British share of total Argentine imports declined from 20.2 per cent. in the first third of 1937 to 19.3 per cent. in the same months of 1938. The United States, on the other hand, supplied 18.7 per cent. of total imports in 1938, against 16.4 per cent. in 1937.

The British Ambassador recently drew attention to the progressive deterioration of the British position in the Argentine market, particularly in sales of coal and textiles, and, to a lesser extent, of machinery and steel products. He urged British exporters to increase their trade with Argentina by more efficient marketing and more effective propaganda, and by bringing their prices more into line with those of their competitors.

The Government and the Railways

Last month, the Government sent a message to Congress requesting the early consideration of the Bills for the purchase of the Córdoba Central Railway and the purchase and rebuilding of the Argentine Transandine Railway. The State Railways, said the message, had made great improvements in the services of the Córdoba Central Railway since they had temporarily taken it over. On June 9, a Bill was submitted to Congress for the purchase of all the privately owned railways by the State. On the same day the Railwaymen's Union passed a resolution in favour of the nationalisation of Argentine railways. One of the arguments advanced in favour of nationalisation is that it is unfair that the State should exploit lines in remote regions of the country where the population is sparse and profits meagre, while the thickly inhabited zones are left to the foreign-owned railways.

Letter to the Editor

Banking and Trade Recession

TO THE EDITOR OF THE ECONOMIST

SIR,—Your article on Banking and Trade Recession summarises the situation as follows:—

"It may be claimed that if British banking has been unable to prevent recession, it may at least have mitigated it."

And again:—

"Bank rate has remained at 2 per cent., and discount rates at ½ per cent. It is impossible to-day to give trade the stimulus of cheaper money, since money is already as cheap as it well can be."

I suggest that this is too easy a view, that more might have been done and still can be done. While we may agree that short-term rates could not well be lower, this does not exhaust the possible influence which the banking system can exert by operating upon the quantity of credit.

Your readers are already aware of the variety of reasons for supposing that we are well on the downward slope of a recession. The re-armament programme may save us from sinking as low as in 1931; the situation in the United States may possibly improve as surprisingly and as rapidly as it deteriorated last year. But it would surely be foolishly optimistic to imagine that, in the absence of a *deus ex machina*, we shall escape with just as much recession as we have already had and no more, and that the process of the vicious spiral of recession will fail to follow that melancholy course which the universal experience of the past marks out for it. Surely the setback is now sufficiently definite and protracted to justify trying every possible expedient.

In a general way, I am of the opinion that a large-scale programme of public works is alone sufficient to avert a modern slump. But the present situation is a little peculiar, since we already have a moderate-scale programme of public works in the form of re-armament. It is possible that a reflationary banking policy might be more effective as a salvage measure, if operated in conjunction with re-armament that it would be if unsupported by public loan expenditure.

What I have in mind is this. The effect of a year of doldrums on the Stock Exchange has been that the new issue market has been unable to absorb any issues other than the most superfine. I suggest that a reflationary credit policy might be brought to bear upon this market. Indeed, there is much to be said for the view that the normal *modus operandi* of monetary reflation is *via* the long-term capital market.

What is required is that the joint-stock banks should be put into a position in which they feel that they can safely increase their investment portfolio by a considerable sum, say, £100,000,000. For this there are two pre-requisites, namely (i) an increase in their cash basis and (ii) an increase in their other more liquid assets. The first can be brought about by the Bank of England, the second by the Treasury.

The London clearing banks' holding of investments has recently stood at about 27.8 per cent. of their total deposits. We may take the average for 1935 of 30.8 per cent. as the greatest they feel disposed to allow. (It is assumed that the joint-stock banks will co-operate in the reflationary policy.) If the Bank of England provided £15,000,000 of additional cash (by the open-market purchase of securities) and the Treasury increased the average number of Treasury bills available in the market sufficiently to allow the joint-stock banks to hold an extra £35,000,000, they could buy £100,000,000 of additional long-dated securities, without their investments rising above 30.3 per cent. of their total deposits.

The argument is that the injection of £100,000,000 of new money into the Stock Exchange would relieve the doldrums and improve the issue market. It may be that this sum would be sufficient. But all the figures I have given could be multiplied by 3, without the policy producing any strain in our normal mechanism of credit control.

There are two possible obstacles to this reflationary policy having a reviving influence: (i) the stock market may be so bearish that a new set demand for securities of £100,000,000 or £300,000,000 would have no appreciable effect on prices; (ii) it may be that the frozen condition of the new issue market in the last year has *not* been an important obstacle to capital expansion. I do not believe that there is anyone who can speak with authority on either of these points.

But surely the experiment is worth trying. If all proceeds normally, in a year's time our economic and social and political structure will be subject to the painful and dangerous pangs of a great recession. Surely every experiment is worth trying. It is probably too late for the Government to develop a large-scale scheme of public works, even if it were willing to do so. In favour of my proposal I plead that *it can do no possible harm*. And it is not unreasonable to suppose that it might just save the situation.

I am, etc.,
R. F. HARROD.

Oxford.

Books and Publications

Burial Reform

AN encyclopædia of corpses, compiled by Sir Arnold Wilson, M.P., and Professor Hermann Levy.* It starts well with the old custom of burying invalids while they are still alive; and goes on to the pleasant habit of burying dead children under the eaves of houses; to the wrapping of corpses in wool for the encouragement of the mediæval wool market; to the taking of corpses as far as the graveside in coffins and then sending back the coffins (emptied of their burden) for the next corpse.

It talks statistically of open pits 40 feet long and 20 feet deep with a capacity of 1,114 corpses heaped to within six feet of the surface. It quotes brightly from *Bleak House*:—

> over yonder among the piles of bones and close to the kitchen winder they put they werry nigh the top. I could unkiver it for you with my broom if the gate was open.

It speaks of body-snatchers and resurrection men, of burials by day and burials by night, of burials in ditches, at cross-roads, in common graves and in Westminster Abbey—even of burials by stealth in consecrated ground. It shakes its head over the growing acreage given over to cemeteries, and hints at the airman's view of England as a great graveyard. It can be recommended to those who find corpses a pleasing object of contemplation.

The genesis of the book lies probably in the authors' work on industrial insurance. The researches which they made in writing that book impressed them with the absurdity of weekly payments throughout life in the hope of a gaudy funeral after death; and they decided then that funeral benefits should have been included in National Health Insurance.

To Professor Levy the birth of an idea is a prelude to detailed investigation and the gathering of facts and figures which shall tell everything that can be told. The industry with which he applies himself to the task is almost unbelievable. In this book he has searched the world for gruesome precedents, statistics and quotations, and there are not many pages without footnotes citing authorities for the facts—usually unpleasant—given in the text. *The Undertakers' Journal*, the *National Funeral Directory*, "Halsbury's Laws of England," Lord Horder's speeches, learned German doctors, the English law reports and the views of Dean Inge have all been drawn upon, and the bibliography at the end of the book runs to over five pages.

The final thesis is that burial has been commercialised by interests which exploit the desire of common people to do their dead well.

> We have allowed a vast financial interest to grow up round the human desire to do the last honours to the dead,

and

> of a dozen funeral bills which we have examined which provided for coffin, hearse, one motor car for relations, attendance of bearers plus the cost of the grave and the priest's fee, in no case was the sum charged less than £15, and in most cases it was nearer £20.

The authors advocate the establishment by law of a commissioner for the disposal of the dead. This commissioner would work under the general supervision of the Ministry of Health and, in turn, would supervise all the arrangements for burying the dead and control "all persons and bodies, public and private, concerned with interments." He would be in close connection with the National Council for the disposition of the dead, and it would be his first duty to reduce wherever possible the costs of interment to those who can least afford an expensive funeral.

Many people will agree with the authors' dislike of extravagance in funerals, and if your mentality is such that whenever you see extravagance you want to stop it by legislation, you will probably agree, too, with their conclusions. But people enjoy money wasted on funerals as they enjoy money wasted on cinemas; and it is very debatable whether the State should interfere to enforce economy.

A royal funeral is expensive and spectacular and State-arranged. The Imperial War Graves Commission has spent a good deal of money on cemeteries in the battlefields, and the authors commend the work it has done. If the desire to honour the dead by funeral rites is commendable when kings and soldiers die, why should the State seek to forbid the same, but private, tribute to a dead labourer?

If education can change the average man's reaction to death, let education do its work. But it is always possible that we people who dislike the panoply of mourning are wrong and those others who find a sacramental solace in funerals right.

Shorter Notice

"The Bloodless Invasion." By Paul Einzig. Duckworth. 68 pages. 2s. 6d.

Dr Einzig has performed a necessary task with his usual ability and despatch. He examines the motives, procedure and progress of German economic penetration of the Central and South-Eastern European States; disposes of the erroneous and superficial argument that it was inevitable and normal; analyses the questionable commercial and political methods of its accomplishment; and adduces numerous suggestions for counteracting it. The latter section readers of *The Economist* will find particularly helpful, as supplementing the special Survey in the issue of May 14th last, entitled "Europe Beyond Germany." In small and easy compass, Dr Einzig yet finds space to issue warnings about certain proposed British facilities for these small countries—e.g. that a mere increase in British imports, without a kind of control over the use of proceeds, might be turned to aid Germany's imports of raw materials. This is a timely book, eminently worth buying and digesting.

THE BUSINESS WORLD

Germany's Debts

THE Agreements between the British and German Governments signed in London on Friday of last week—one of them entitled a Payments Agreement and the other a Transfer Agreement—come, as the whole world knows, as the climax to long and difficult negotiations. More than once the negotiations have seemed to be on the edge of breakdown, and both countries, at one stage or another, have threatened extreme action. If, in circumstances such as these, any agreement at all has been achieved, the fact reflects much credit on the patience and pertinacity of the negotiators.

The Agreements have had, on the whole, a favourable reception in the City, not least because their conclusion led to a sharp rise in the prices of German and Austrian securities on the Stock Exchange, and Throgmorton Street can forgive most things to a document that puts prices up. But the satisfaction that has been expressed has been both provisional and relative—provisional since there is little confidence in the permanence of the arrangements now agreed; and relative because it is only in comparison with the threats uttered from Berlin of what Germany's action might be that the new agreement shows up favourably. Ever since the *Anschluss* the German position has been that the Reich would accept no liability for Austria's debts; and that is still the formal position, since the new Agreement specifically reserves the question of legal liability. What is more, speeches by members of the German Government could be read as implying the intention of repudiating all debts incurred by Germany herself before the advent of Herr Hitler to power—even though that advent, as he has never ceased to boast, was achieved by regular constitutional means. In view of these proclaimed opinions held by the German Government, bondholders can be excused for their feelings of relief, even of gratitude, when they find themselves little, if any, worse off than they have been in recent months.

By the terms of the Transfer Agreement, Germany consents to pay at least part of the service due upon Austrian loans held by British owners. Interest is to be paid on the 7 per cent. loan of 1930 at the rate of 5 per cent., with a cumulative sinking fund of 2 per cent. As regards the two international guaranteed loans, the 4½ per cent. of 1934-59 and the 3 per cent. conversion loan of 1933-53, Germany undertakes to reimburse the British Government for any payments made under the latter's guarantees and, further, to pay in full all coupons presented by British holders. The effect of this is that British holders of these loans are assured of their full interest, while non-British holders of the 1934-59 loan are assured of at least 24½ per cent. of the amount due, this being the extent of the British guarantee. At the same time adjustments are made in the German debts. Interest on the Dawes and Young loans, formerly 7 per cent. and 5½ per cent., respectively, is to be reduced to 5 per cent. and 4½ per cent., the margin of 2 per cent. and 1 per cent., respectively, being devoted to sinking funds.

The amount of sterling to be provided (all these provisions applying only to British holders) will thus be the same as before, but some of it will be applied to redemption. The City of Saarbrücken 6 per cent. loan of 1928, which derives its special status from the former international character of the Saar, is, by a new concession, placed on an equality with the Young Loan, both as to interest and sinking fund. Finally, holders of all other German and Austrian bonds, who have hitherto been paid their interest only in the form of Konversionskasse bonds are, for two years, to be paid in cash up to half the amounts due, with a maximum of 4 per cent. Since the Konversionskasse bonds have hitherto been disposable only at a discount of more than 50 per cent., this is a small cash gain.

In summary, then, there are small disadvantages, in comparison with the previous position, to the holders of German Government bonds and the Austrian 7 per cent. loan (a sinking fund being an inadequate substitute for interest) and small gains to the holders of other obligations. British holders of the two guaranteed Austrian loans are left where they were and other Austrian creditors, though they escape default, pay the price of a cut in their interest receipts.

The Payments Agreement similarly contains very slight advantages to British traders. The allocation of sterling exchange for the purchase by Germany of British goods, instead of being a flat 55 per cent. of British purchases, is to be regulated by a sliding scale, the effect of which is illustrated in a Note on page 75. In the present dimensions of Anglo-German trade, this will result in somewhat larger British exports to Germany. If, however, our purchases of German goods should fall, the new scale would be less advantageous than the old. At the beginning of a period of hesitancy in international trade, it would be rash to predict what is likely to be the actual result. In any case, a *quid pro quo* is expected, as correspondence attached to the Agreement reveals that Germany has been pressing for tariff concessions in the United Kingdom and in the colonies and that the British Government has undertaken to consider the matter.

These are the main heads of the Agreement. As will be seen, they change little or nothing in the present commercial and financial relations between the two countries, relations which have never been unduly satisfactory from the British point of view. That the absence of change has nevertheless been greeted with relief is a measure solely of the apprehensions that had been aroused of something much worse. But if the substance of the Agreements is thus only relatively satisfactory, the manner of their conclusion has several distinctly unsavoury aspects. A debtor always has the right to approach his creditor for an accommodation, and for one of the points involved in the Transfer Agreement—the reduction of the interest rates on the Dawes and Young loans—a substantial case in equity could be made out. But it is idle to pretend that the negotiations which have resulted in these Agreements resembled in any way the procedure by which a debtor seeks relief. With many of her creditors Germany has made no show of negotiation. The facts of Anglo-German trade made it inadvisable to follow the familiar method of unilateral action where the British bondholder was concerned. But even in the negotiations with the British Government, Germany has achieved her purpose not by request or by reason but by threat—by the threat of repudiating Austria's debts and even by the threat of defaulting on her own. At no time has there been any attempt to examine Germany's capacity to pay—doubtless for the excellent reason that an impartial inquiry would establish beyond question that the creditors could be paid in full if they were given a position of equality with the purchasers of raw materials. In short, it has been possible for Germany to conclude these Agreements only because she can exploit her political, commercial and military power. It can be no great pleasure for Great Britain, the creditor Power which should stand for the rule of law and contract, to conclude Agreements that condone default for political reasons.

Even this, however, does not touch the main issue raised by last week's Agreements. The Dawes and Young Loans to Germany had a distinctive international character. But the Austrian loans represented the most brilliant achievement of post-war international finance, under British leadership. Not only did British statesmanship play the most prominent part in initiating the reconstruction of Austria and carrying it through to a successful conclusion, but for two of the loans covered by these Agreements the British Government joined with others in giving a guarantee. Over and above the general obligation that rests, or should rest, on creditors to act jointly in relation to a debtor who is suspected of the intention of evading his just debts, there was a very special obligation on the British Government to consult its partners of a decade ago when the debts of Austria were in question.

The British Government, however, in the face of all these considerations, decided to accept the German invitation to bilateral negotiations, and entered upon them as the representative of the British creditors, to the exclusion—one might with truth say at the expense—of all the others who had joined with us in the effort of post-war reconstruction. The reason which led the British Government to take this course was doubtless the belief that, owing to our adverse balance of trade with Germany, British negotiators would be in a stronger position than if they were compelled to talk in terms of Germany's trade with all the creditor nations together. But whatever the British reasoning, nothing could have suited the German book better. That can clearly be seen from the exulting comments of the German Press, which takes it as the main achievement of the Agreement that the "creditors' front has been broken, the Committee of Bondholders retreats into the background, and the Geneva Guarantee-Collectivism is dissolved." For this, a few thousand pounds more to British bondholders is a small price. Besides, they will be a very few thousand. For when the threat of a clearing, the chief element of Britain's isolated "strength," is brought to the point of application, it no longer looks very terrible. Clearings, as Dr Schacht has demonstrated, can turn out to be very different from what their authors intend. If precedent were to be followed, the imposition of an Anglo-German clearing would quickly be followed by the disappearance of the margin for servicing the debt. After all, there are many of her raw materials that Germany could buy on the London market rather than elsewhere, and she would undoubtedly do so if it were the means of reducing her debt payments. The only sort of clearing that could not be evaded by the playing-off of one country against another would be a clearing jointly imposed by all the chief commercial countries. Had we acted jointly with the other creditors, our bargaining position would probably have been stronger rather than weaker.

Our moral position would have been incomparably stronger. As it is, for a few thousand pounds we have broken the creditors' front and deserted our friends. It is difficult to see how the new principles that have been established are even in our own narrow interest beyond the confines of the immediate case. It is peculiar business for the world's greatest creditor to exalt the principle of discrimination. Are we really prepared to bear the odium of condoning discrimination, and to be discriminated against in our turn? How, for example, shall we excuse our action to the Americans who, because in this case they are defenceless, will pay for the concessions we receive? And how shall we like it when, say, Mexico seizes with eagerness on the principle of discrimination and our interests have to be represented by these same Americans? The list of possible complications is endless. But over and above the details of specific cases, it can surely never be sound policy for a great creditor nation, which hopes to live in commercial and political peace, to lend any countenance to the doctrine that debtors need pay only those creditors who have the strength to enforce collection. If that doctrine ever attained wide currency a substantial margin of our national wealth would be gone with the wind.

It is only with reluctance that *The Economist* criticises Agreements that have emerged from arduous international negotiations and that represent, within the framework from which the two sides started, a substantial degree of give-and-take. The reluctance is increased when the Agreements provide for cash payments to British investors and British traders. But we cannot conceal our opinion that it was a very poor bargain that was struck last Friday, and one that the nation will come to regret.

Richard Thomas Finance

WHEN Sir William Firth, chairman of Richard Thomas and Company, announced a spectacular expansion programme at the end of 1935, it was clear that its outcome would depend upon the management's ability to solve the vast financial problems which the scheme involved. Technically, the project appeared sound. It included a twofold programme of expansion and reconstruction, designed to increase the group's steel-making capacity from 1,100,000 tons to 1,650,000 tons per annum, its sheet and tinplate capacity from 780,000 tons to 1,180,000 tons, and its coke-oven capacity by a comparable amount. It involved the building of a continuous strip mill plant at Ebbw Vale, which would have introduced into this country methods that have almost entirely superseded older types of plant in the United States, and are estimated to reduce costs by some 30 per cent. The scheme entailed the building of new coke-ovens and the modernisation of the steelworks at Redbourn—a war-time plant which has become out of date, judged by present practice. Technically, no exception could be taken to these developments, and the introduction of a continuous strip mill was calculated to play an important part in the export market.

It was apparent from the beginning, however, that the financial difficulties would be great. It was open to question whether the company had chosen the right moment for its vast programme. In 1936, construction costs had yet to reach the extremes of the following year, but they had already advanced appreciably from depression levels. There was a danger that the re-armament programme might interfere with the supply of machinery. The demand for steel appeared promising, but sceptics doubted whether it would be sustained until the middle of 1938, when the new plant was expected to come into operation. But the potentialities of the plant were considered great enough to outweigh these risks. The position revealed by the chairman's circular and the scheme for new financing, issued this week, shows, however, that an attitude of reserve has been fully justified.

At the beginning of 1937, when the company issued the first block of capital for the scheme, it was estimated that the total cost would amount to £8,500,000, of which £7,500,000 was for Ebbw Vale and £1,000,000 for the Redbourn reconstruction. These estimates were probably based on a higher level of construction costs than those of the Stewarts and Lloyds' Corby plant, which was built in the depths of depression. But in fact they have proved wholly inadequate. In his circular to share and debenture holders, Sir William Firth now estimates that the total cost will reach £11,128,000—an excess of 30 per cent. over the original estimate. Much of this excess appears to have been unavoidable. "Hidden obstructions beneath the surface" affected the estimates for foundation work substantially. Weather conditions were unfavourable. As the project began to take shape, extra unforeseen work became necessary; greater provision was made for sidings and roads; improvements were incorporated in the scheme and the plant was made more flexible. For these contingencies insufficient margin had been allowed in the original estimates. Moreover—and here the question of timing is important—wages increased, contractors fell behind schedule with

deliveries, and the board, encouraged by the expanded demand for steel, incurred further expenditure in the development of ore fields and the accumulation of stocks.

This additional expenditure would in any case have confronted the board with a grave financial problem. In January, 1937, some £9,160,000 was provided by the issue of £7,000,000 4 per cent. first mortgage debenture stock and of 3,750,000 6s. 8d. ordinary shares at 13s. 4d. This finance provided for the redemption of existing debenture stocks, and left some £1,940,000 of the original estimate of £8,500,000 for the new scheme uncovered. The board may be criticised for its under-estimate of contingencies, and for failing to raise the whole amount at one stroke. It was relying, however, upon covering the deficiency from bank overdraft and from undistributed profits, which were running at a high level. The whole basis of this policy, of course, was undermined by the recession, as a result of which exports of sheets and tinplate were suddenly halved. "At the end of April, 1938," Sir William Firth discloses, "the cash resources of the company were exhausted. Recourse to the usual channels of finance proved impracticable in the circumstances." The excess cost of the plant over estimates amounted to £2,628,000. The original estimates already required extra finance totalling £1,940,000, while additional working capital requirements amounted to £1,015,000, and sundry capital acquisitions and repayments of loans "not contemplated at the date of the prospectus" required a further £417,000. The company's requirements have thus reached the enormous total of £6,000,000. In these circumstances, it was obvious that the normal capital market was closed to the company. Temporary financial arrangements were made, and a plan for completing the finance was evolved. Sir William Firth explains that the banks and various banking houses have agreed to collaborate with the Bank of England in providing the necessary finance on account of the national importance of the new plant at Ebbw Vale.

The scheme introduces novel and far-reaching changes in the control of the group, and involves the complete revision of the company's capitalisation. The necessary new money will be provided by the subscription of £5,500,000 4½ per cent. prior lien stock by a banking consortium, and by the issue of 1,500,000 6s. 8d. ordinary shares at par to the Securities Management Trust, which is controlled by the Bank of England. It is intended that the prior lien stock shall be repaid as soon as possible, and it carries, in fact, a half-yearly sinking fund of 2 per cent., which would extinguish the stock in seventeen years. It is, however, convertible into ordinary shares at par until 1941 and at 100 per cent. premium from 1941 to 1945. The ordinary shares include 100,000 "A" ordinary shares, which carry special powers of control.

The introduction of a new prior charge involves the modification of the existing capital structure. Existing first mortgage debenture holders will receive 4½ per cent. instead of 4 per cent. until the prior lien stock is extinguished, in compensation for their loss of priority. Preference shareholders, who now receive the unusual rate of 6½ per cent. free of tax, are invited to surrender their tax-free status, and also their cumulative rights for the next five years, but they will be granted participating rights in the equity up to 3½ per cent. This is not a welcome prospect for preference shareholders, but in the circumstances it cannot be regarded as unreasonable. The ordinary shareholders lose control. Moreover, it is provided that in each year, before any dividends can be paid on the share capital, an allocation of at least £100,000 must be made to general reserve until that reserve totals £1,500,000. The new capitalisation may be summarised thus:—

	£
4½% Prior Lien Deb. stock	5,500,000
4½% 1st Mortgage Deb. stock*	7,000,000
6½% Participating Preference shares†	3,120,346
6s. 8d. Ordinary shares	4,841,667
6s. 8d. "A" Ordinary shares	33,333
	20,495,346

* Interest lowered to 4 per cent. until Prior Lien stock is extinguished. † Cumulative rights restored in 1943.

The investor's problem is to relate this capitalisation to potential profit levels. If the group's profit exceeds £1,300,000 the service of both debentures will be covered without skimping the depreciation provision. Earnings would be shown for the preference shares if profits exceeded £1,500,000, and at £1,750,000 the preference dividend would be fully earned. At a level of £2,000,000 the preference shares would rank for their maximum dividend of 10 per cent, and the ordinary shares for 3½ per cent. If the profits rose to £2,500,000—the level which Sir William Firth originally estimated for 1939-40, the first full year of the strip mill's operation—earnings on the ordinary capital would reach 13 per cent.

For the year to March 31, 1938, the group's gross profits amounted to £2,139,517, which would correspond to maximum payment on the preference capital and to residual earnings of about 5 per cent. on the ordinary capital. This, however, was a year of prosperity, but it may be noted that from 1932 to 1938 the average profit of the group amounted to £1,250,000. Except under conditions of severe depression, the service of both debenture stocks seems assured. But for the next five years, at any rate, payment of preference and ordinary dividend rests largely on directorial policy, apart from profits.

A far-reaching arrangement has, in fact, been made to ensure that the financial policy of the group will in future be strictly conservative. Ultimate control is to be entrusted to a Special Committee of four, consisting of the Governor of the Bank of England as chairman, Sir William Firth, Viscount Greenwood (chairman of Dorman Long and representative of the steel industry) and Mr E. H. Lever, of the Prudential Assurance Company (representative of the trustees for the first mortgage debenture holders). This committee will exercise complete control for at least seven years, and later until the prior lien stock has been extinguished. This unprecedented development in industrial organisation implies that the financial position of the company will be carefully supervised. Moreover, the industrial policy of the group, which has hitherto been of an independent character, is likely in future to conform more closely to that of the industry as a whole. A representative of the steel industry will sit on the Control Committee, while additional directors from the steel industry will take seats on the Richard Thomas board. These changes will assure that the new plant will be operated in co-operation with other units in the sheet and tinplate trade. In particular, they rule out the possibility that the potentialities of reduced costs at Ebbw Vale will involve price-cutting. The new plant will increase the British sheet and tinplate capacity, which already exceeds the level of boom demand, by about one-sixth. Reductions in the industry's capacity, represented by old-style mills, will be necessary. The problem of distributing the burden may therefore arise. But for the change of control, the problem might have been settled by the potential competitive power of the new plant. A co-operative solution will, presumably, now be sought, but its character is not easy to assess. The investor may still have faith in the group's potential earning power, for in the long run the demand for sheets and tinplates should expand. But in the short run, ordinary dividends are improbable and preference dividends uncertain.

Success, however, depends on the plant being allowed to run at its optimum capacity, and in this matter the public as well as the investor has an interest. The establishment of the steel industry on a monopolistic basis, with the aid of a tariff, greatly increases the temptation to preserve vested interests owning obsolescent plant and to shirk the severe course of ruthlessly sacrificing everything else to economical production. So long as the industry exists in separate units, internal competition remains as the only automatic safeguard of efficiency. Its suppression must therefore throw a heavy responsibility on the controllers of the industry, and the country will look with some anxiety to see that its policy is governed principally by consideration of the public interest. In the present instance it is some reassurance that the Committee of Control will sit under the chairmanship of a disinterested party.

Great Britain's Gold

THE return of the Exchange Equalisation Account's gold holdings was issued last week just before *The Economist* went to press, and we were able to do no more than publish the bare figures, which, for reference, are repeated in the following table:—

BRITISH GOLD HOLDINGS
(£ millions)

	Mar. 31, 1937	Sept. 30, 1937	Mar. 31, 1938
Bank of England	516·6*	537·6*	537·6*
Exchange Equalisation Account	186·9	279·3	297·8
Total	703·5	816·9	835·4

* Valued at 140s. per fine ounce.

As the footnote shows, the Bank of England's gold is written up from its statutory price of not quite 85s. per fine ounce (at which it is valued in the weekly return) to 140s. per fine ounce, which is approximately the current market price. The Exchange Account's gold is also valued at the same price.

During the six months ended March 31st last, the Bank's gold was unchanged. There was no need for the Bank to take over more gold from the Exchange Account, since last year's increase of £200 millions in the statutory size of the Account provided it with an ample reserve of sterling assets, while the Bank, on its side, was able to meet the Christmas currency withdrawals by means of a temporary increase of £20 millions in the fiduciary note issue.

The holding of the Exchange Equalisation Account, and consequently the total national gold stock, increased over the six months by a net amount of £18·3 millions. This was the result of many deviant movements, both positive and negative. During the first half of the period—that is from October 1 to December 31, 1937—France probably gained, on balance, a large quantity of gold, which was estimated by us on January 15, 1938, at £100 millions. This was due to the allied causes of the greater confidence felt at the time in the future of the franc and to the "dollar scare" of late October and early November. Not all the gold came from England, and indeed a substantial amount came direct from the United States. But in any case, whatever the size or source of this gold, there is little doubt that France had lost it all again by the middle of February, for at that date the French Exchange Account had to take back from the Bank of France the gold somewhat rashly transferred to the latter institution at the end of November. France also lost more gold in March, at the time of the Austrian *Anschluss* crisis, though how much of this was sold to the British rather than to the American authorities is again an open question. Probably the British Exchange Account lost gold to France in the last quarter of 1937 and received back a rather larger amount in the first quarter of 1938, the whole movement showing a balance in Britain's favour. Great Britain certainly gained gold from Belgium for the belga was under pressure during the early part of the year. The British Account may have lost some gold to Holland, for the Netherlands Bank was a consistent buyer of gold and seller of guilders. Here again, however, the Netherlands Bank was operating in New York rather than in London.

More intricate and interesting were the world's dealings in gold itself. For example, there was the dollar scare of the late autumn. This occasioned a sudden transfer of "hot money" from dollars into gold, and this gold was supplied in London by "the British authorities" at a substantial premium. More generally, the tendency in the London bullion market has been for the demand for gold to come mainly from hoarders, while the British authorities have been the usual source of supply. There is no doubt that, since the termination of last summer's gold scare, gold has regained much of its reputation as the ultimate store of value; but it is difficult to say how far this persistent hoarding demand for gold has affected the Exchange Equalisation Account's resources.

Any calculations are seriously affected by the fact that the current gold output, not only of the Transvaal, but also of certain other producing countries, including part at least of the spasmodic Russian supplies, is marketed in London. Consequently, if there were not a continuous demand for gold either from other monetary authorities or from hoarders, the British gold stocks would steadily increase. But, on the other hand, it is conceivable that, except for gold, the British Empire has a passive balance of payments, and if so, there would be a natural trickle of gold from London to other monetary authorities. It is, however, impossible to detect any definite trace of this.

Much of the hoarding demand for gold comes, of course, from abroad. This is equally true of a flight from a particular currency, such as the franc or the belga, into gold, or of a sudden transfer of "hot money" from a foreign centre into gold, as when the dollar scare caused European funds to be withdrawn from New York and used to buy gold in London. Now, theoretically, none of these movements should affect the size of Great Britain's gold holdings. It is true that the British authorities provide the gold to meet this hoarding demand, and the reasonable presumption is that this gold comes out of the Exchange Equalisation Account's resources. Yet at the same time the Exchange Account should be gaining gold from the foreign centre affected—either from Paris, Brussels, New York, or anywhere else. In theory, the British Exchange Account should "break even."

Does this happen in practice? The fact that the Exchange Account gained gold during the period under review provides some *prima facie* evidence in this

SUCCESS OF THE SAVINGS UNIT TRUST

WITHIN a few days of the formation of this new '15 Moorgate' Unit Trust, a very large number of sub-units have been sold. This success must be largely attributed to the fact that the special features of the Trust found instant favour among experts whose responsibility it is to advise the smaller investor. Have *you* asked anyone yet about the new '15 Moorgate' Trust?

Application for sub-units will be accepted only on the basis of the special booklet S33, obtainable free through your Banker or Stockbroker (whom you should consult) or from the Managers,

SPECIAL FEATURES OF THE SAVINGS UNIT TRUST

1 The securities are those which a Stockbroker most frequently and rightly recommends to his clients.

2 2/- basis for sub-units, enabling investors to re-invest all or part of dividends. The sub-unit holder thus accumulates capital by small but regular savings out of income.

3 Minimum initial investment is 200 sub-units (approx. £20).

4 The initial loading charge is 3% and a further charge of ¼ of 1% is made annually throughout the trust period.

Invest wisely in
THE SAVINGS UNIT TRUST
A '15 MOORGATE' TRUST

An offer of 500,000 Units in a Unit Trust under British management, providing a spread of investment in the best American industrial stocks

AMERICAN INDUSTRIES TRUST

American Industries Trust offers British investors an opportunity of acquiring an interest in the best industrial businesses in the United States of America in the form of Trust Units. Hitherto it has been almost impossible for the small investor to acquire a representative and well-spread investment in American securities by reason of the high prices at which many individual American securities stand.

It is acknowledged that the United States, in many ways the most vigorous and progressive country in the world, offers opportunities for investment which are not found elsewhere. Prices move more rapidly in the United States than in any other industrial area, and experience over the last half century shows that investors who acquire their interest when the general atmosphere of business is relatively quiet, reap the full benefit of their investments by participating in big capital appreciation as soon as business becomes really active.

During the last two years, the American market has fallen and the prices of the best equity shares are at a comparatively low level. It is because of these prevailing conditions that this Trust is introduced at this time, in order that unit holders may have the opportunity of participating to the full in the recovery which is generally believed to have begun, as indicated by the upward trend of market quotations during recent weeks.

The securities included in the selected Portfolio cover the principal industries of the United States and all are the admitted leaders in their respective fields. The income yield in the opinion of the Managers will be substantial and should grow.

The following paragraph is inserted at the request of H.M. Treasury :—

> "This proposal has been considered by the Foreign Transactions Advisory Committee and by the Chancellor of the Exchequer ; no objection is raised to the issue, but it must be clearly understood that no responsibility is taken for the financial soundness of the scheme or for the correctness of any statement made, or opinion expressed in connection with it."

The price of Units is calculated daily and certified by Members of the London and/or New York Stock Exchange and may be bought and sold in multiples of five (minimum 50) through any Stockbroker or Bank. The initial price is 18s. per Unit free of commission.

direction, but it is impossible to be certain. To answer these questions we also need information upon another very important point, namely, the whole balance of payments on current and capital account of Great Britain, or more probably of the British Empire or perhaps of the whole sterling area. It is quite conceivable that while, for example, Continental "hot money" is moving out of dollars, through sterling, into gold, there is no equivalent transfer of gold from the United States authorities to the British Exchange Account. Instead, the sales of dollars for sterling arising out of this movement, may be offset by purchases of dollars required to cover a passive balance of payments between Great Britain or the sterling area and the United States.

Here again we have no certain facts to go upon, except that the current balance of payments of the United Kingdom shows a deficit, and it must be remembered that there is a balance *vis-a-vis* other members of the sterling area as well as the outside world. It is, however, possible that these movements of international "hot money" into gold, and the consequent gold operations of the Exchange Equalisation Account are masking what would otherwise be a steady drain of gold from our reserves occasioned by our passive balance of payments.

This raises the question of the adequacy of our gold reserves, enormous though they appear to be. Our needs, however, have also become substantial. We are committed to an easy money regime, and this requires an enlarged credit base. There is, of course, from the viewpoint of the domestic credit structure, an unrealised reserve of about £200 millions, which could be called into existence by revaluing the Bank of England's gold, but this is already allowed for when our total gold reserves are assessed at £835 millions, as above. The simple fact is that if we revalued the Bank's gold we could probably afford to lose without inconvenience £500 millions of gold, valued at 140s. an ounce, and no more.

Now much of this hypothetical sum of £500 millions is ear-marked either against the London funds of the Empire and sterling area central banks, or against outside "hot money" now lodged either in London or sterling area centres. We saw for ourselves last May how quickly a sum of £50 or £100 millions could be repatriated to its proper home, and Argentina had a similar experience, though on a smaller scale, in the early part of this year. Crop vicissitudes, the trade recession, the fall in the prices of primary products, and re-armament needs, can also react suddenly and widely upon the exchange resources of sterling area countries, and while many of these reactions cancel out over the sterling area as a whole, the residual draft is likely to fall upon our gold resources. A year ago, it was officially stated that our gold reserves were considered to be adequate. In view of the many and profound changes in world economic trends since then, it would be advisable for the authorities to consider how far a similar reassurance can be given to-day.

To urge this is not to suggest that our reserves are, in fact, inadequate. There is no ground for any such suggestion. Indeed, the public is not in a position to form more than the most provisional opinion, owing to the lack of the necessary data. The bare statement of our total gold reserves, welcome though it is, reveals very little. And even that figure loses much of its interest when it appears at such infrequent intervals and after such a long time-lag. The need for secrecy must, of course, be taken into account. But as understanding of the new monetary methods is extended, excessive secrecy tends to do as much harm as good. The wealth of information made public, apparently without harmful results, by the American authorities, encourages the British lay observer to repeat his modest requests. He would like to have the figures of gold reserves at least every quarter and preferably every month, with the shortest possible time-lag. He would also like to know the approximate dimensions of the potential drafts upon our gold reserves, whether from the withdrawal of hot money that has taken refuge in London or from the liquidation of balances held in London by sterling area banking systems. This information must already be in the hands of the authorities, but much of it could safely and legitimately be made known. Without it, it is impossible for the public to assess the full meaning of any change in our gold reserves, to tell whether they are adequate or, most important of all, to decide whether we are really living within our means.

Finance and Banking

Anglo-German Trade.—As part of the Austrian debt settlement, discussed upon another page, the Anglo-German Payments Agreement has been revised. Hitherto Germany has undertaken to earmark for the purchase of goods from Great Britain 55 per cent. of the proceeds of her exports to Great Britain. In practice, her imports from Great Britain have exceeded 55 per cent., but they include British re-exports. The new agreement provides for a basic quarterly import of £4,500,000, plus or minus 90 per cent. of the amount by which German exports for the previous quarter exceed or fall short of £7,500,000. The best way to judge this rather complicated formula is from the following table, though the underlying calculations ignore the time-lag of "the previous quarter":—

Exports to England	Imports from England (£ million) (a) Old Scheme	(b) New Scheme	Ratio of Imports to Exports (New Scheme) %
20·0	11·0	9·0	*45·0*
25·0	13·7	13·5	*54·0*
30·0	16·5	18·0	*60·0*
35·0	19·2	22·5	*64·3*
40·0	22·0	27·0	*67·5*

So long as German exports to England exceed £25.8 millions a year, the new scheme is to the advantage of British exporters. Even in 1933 exports from Germany and Austria to England were £31.1 millions, and in 1937 they were £38.9 millions. The new agreement also contains provisions for making future arrangements that a larger proportion of the ear-marked sterling shall be used for the purchase of finished goods, presumably as distinct from raw material re-exports from Great Britain. Should the proceeds of German exports to Great Britain be insufficient to cover both the amount to be ear-marked for imports from Great Britain and also Germany's financial obligations to the United Kingdom, the German Government may seek for a reduction in the amount to be ear-marked.

* * *

To remove any possible misunderstanding, it may be pointed out that the main agreement only refers to German

Sun Life Assurance Company of Canada

and Austrian long-term indebtedness, and does not affect directly short-term debts subject to the German standstill agreement, which remains in force. There is a feeling in the City that indirectly the new arrangement is of advantage to standstill creditors. Since 1931 standstill commitments have been greatly reduced, while the quantity of those still outstanding has become improved. Some of the reimbursement credits are now being used to finance current trade, which is their normal and proper function. The alternate backing to the standstill debts is obviously the maintenance of Germany's external trade, or rather that part of it which is not conducted through clearing, as distinguished from payments, agreements. That is why any move for the fostering of German trade with England and other free exchange countries is to the indirect advantage of the standstill creditors. This view, however, does not imply any direct approbation of the provision of the long-term debt settlement. In the long run it is to the advantage of every kind of creditor that, even when a debtor is entitled in equity to relief, that relief should emerge from negotiations with the creditors, conducted upon the lines established by commercial usage.

* * *

The Dollar's Recovery.—It is a testimony to the success with which the New York exchange has been stabilised during recent years that the recent appreciation of the rate from \$4.95¾ to \$4.93⅞ should have attracted so much attention. To a large extent it is the natural reaction from the dollar scare of last month. Short positions in dollars, opened at that time, are now having to be covered, while the disappearance of the scare means that money which then left American equities is now being reinvested in them. This last movement is being assisted by the firmer tendency of Wall Street. One interesting point, however, is that most of the money which changed over from dollars to gold last month is remaining in gold; for the public as a whole is still a buyer of gold. To that extent it is different money which is now going into American equities. The commercial position is also interesting. Some large interests took advantage of the June scare to cover their autumn needs in advance, but others may have held back then on the chance that the dollar would become even cheaper. These, of course, are now having to cover. Again, now that the Dominion crops are being marketed and their proceeds are beginning to be spent, there may be a certain Empire demand for dollars, and the impact of this falls upon sterling. The firmer tendency of American commodities is an additional factor increasing the commercial demand for dollars. One way and another, there is plenty of ground for the dollar's new firmness, and there is a feeling in the London exchange market that the dollar may appreciate a little further. There is no need to look beyond these natural influences to any psychological influences due to rumours of impending agreements between the British and American Governments which, in some versions, are said to embrace not merely commercial concessions but a stabilisation of the sterling-dollar rate and even a War Debt settlement.

* * *

Six Months' Money Rates.—The following table gives for purposes of record a comparison of money and discount rates for the past half-year with those of previous years:—

AVERAGE MONEY RATES

Year	Bank Rate	Market Rate 3 Months' Bills	London Deposit Rate, Banks	Average Short Loans Bill Brokers
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1925	4 11 0	4 2 0	2 11 0	3 9 3
1926	5 0 0	4 10 3	3 0 0	4 1 1
1927	4 13 0	4 4 10	2 13 0	3 15 0
1928	4 10 0	4 3 0	2 10 0	3 12 6
1929	5 10 0	5 5 4	3 10 0	4 12 3
1930	3 8 5	2 12 3	1 8 5	2 9 6
1931	3 18 7	3 11 0	2 1 0	3 0 10
1932	3 0 2	1 16 9	1 5 2	1 15 7
1933	2 0 0	0 13 10	0 10 0	0 15 5
1934	2 0 0	0 16 7	0 10 0	0 16 10
1935	2 0 0	0 11 3½	0 10 0	0 14 10½
1936	2 0 0	0 11 10½	0 10 0	0 15 6
1937	2 0 0	0 11 6½	0 10 0	0 15 1½
1938—First half	2 0 0	0 10 10	0 10 0	0 15 0

There can rarely have been a half-year in which there was less movement of rates. Indeed, most rates in the market are now determined by informal agreement between the market and the banks. The averages in the above table are, for recent years, calculated from these agreed scales of short loan and discount rates.

* * *

The Floating Debt.—Reference to the table on page 100, giving the position each week of the Floating Debt, will show that at the end of each quarter it is impossible to divide the Treasury bill total into tender and tap issues, or to calculate the floating assets held by the departments. Normally the floating debt return relates to the end of each week, by which time the whole of that week's issues and maturities of Treasury bills have been paid for or repaid. At the end of each quarter, however, the floating debt return is dated the last day of the month, which as a rule falls on a day of the week when the current week's operations in Treasury bills are still incomplete. In particular, maturities are concentrated at the end of December and June, and payments at the beginning of January and July, the converse applying at the other two quarters, so that on December 31st and June 30th the tender issue of Treasury bills is always subnormal, the deficit being met by Ways and Means borrowing from the Bank. This is illustrated in the following table:—

FLOATING DEBT

	Treasury Bills Tender*	Treasury Bills Total	Ways and Means Advances: Public Depts.	Ways and Means Advances: Bank	Ways and Means Advances: Total
1936—Dec. 31	609·0	766·2	27·8	57·0	851·0
1937—Mar. 31	497·0	674·6	23·5	...	698·1
June 30	553·0	638·2	18·2	49·2	705·6
Sept. 30	573·0	899·1	8·4	...	907·5
Dec. 31	622·0	889·7	39·4	55·7	984·9
1938—Mar. 31	512·0	828·7	13·1	...	841·8
June 30	578·0	851·0	42·4	41·5	934·9

* To *following* Saturday.

The real crux of the table lies in the footnote. As regards recent changes in the floating debt, since March 31st last it has increased by £93.1 millions, last year's parallel increase being only £7.5 millions. This quarter's revenue deficit is £23 millions greater than a year ago, while in 1937-38 £68.2 millions of the proceeds of the first Defence Loan had been received by June 30th, whereas by June 30, 1938, only £14.2 millions of the second Defence Loan subscriptions had been collected. This explains the greater increase in the floating debt during the last quarter, and this will be partly rectified as the remaining calls on the second Defence Loan are collected. So far the French repatriations of last May do not seem to have had much effect upon tender issues of Treasury bills, but it is difficult to disentangle them from the reaction of the Defence Loans.

* * *

The Defence Loan Call.—On July 1st the discount market had to pay for all the new Treasury bills allotted to it at the tender of June 24th, while the payment of the first call on the new Defence Loan occasioned the transfer of a further £38 millions from the banking system to the Treasury. As a turnover of perhaps £70 millions was involved, some anxiety had previously been felt lest the market might find itself pressed for funds. Actually no serious pressure occurred, for the Treasury itself was paying out some £11 millions on that day, while the banks, freed from their balance-sheet preoccupation of June 30th, were lending freely and buying bills with avidity. So far as the concentration of Treasury bill payments on that day was concerned, the market need have felt little anxiety. The proper perspective of these operations is this: instead

HOTEL WESTMINSTER
FULL BOARD From 27/6
Le Touquet

of re-investing in new Treasuries the money received in respect of maturities earlier in the week, the market held back the money, so that the banks could add it to their cash holdings on June 30th. Thus on that day the Government borrowed £41.5 millions from the Bank of England on Ways and Means, and joint-stock bank cash must have been swollen by the same amount. On July 1st the position was rectified. The banks re-lent to the market, the market paid for its new bills, and the Government repaid the Bank. So far as Treasury bill operations were concerned, by July 1st the market was no worse off than it would have been in a normal week. The Defence Loan call presented a different problem, but after deducting the dividend disbursements a sum of only £27 millions was involved. This was easily carried by the market, especially as the banks, in their bill purchases, were making up lee-way which dated not from the beginning of that week but from the early part of June.

* * *

Iran Exchange Problems.—To judge from Sir Henry McMahon's address to the shareholders of the Imperial Bank of Iran, one or two familiar exchange problems have developed in Iran. First, there is the control exercised over foreign exchange dealings by the Iranian authorities themselves, with an official selling rate of 80½ rials to the pound sterling. Supplies of foreign exchange have begun to fall short of the demand, with the result that the Imperial Bank's requirements to cover sterling disbursements and the transfer of profits to London have fallen into arrears. This has necessitated a temporary reservation in the bank's accounts, which has affected the past year's profits to the extent of precluding any allocation to the reserve account. The dividend, however, is maintained, and so it is fair to assume that the directors consider this to be a temporary difficulty. Then there is the growing share of Russia and Germany in Iran's external trade. Russia works through barter arrangements and Germany through a clearing agreement, neither of which provides any scope for ordinary banking operations. Partly as a result of these the Imperial Bank's bills receivable have fallen by £288,000 since last year. On the other hand, the bank's internal bill business is increasing in conformity with the growth in industrial production in Iran, and discounts, loans and advances have increased by £273,000. Thus on balance the bank's business is well maintained, even although it may be changing slightly in character.

MONEY MARKET NOTES

Foreign Exchanges

THE recent strength of the dollar is discussed in a Financial Note, but it is fair to add that sterling has shown signs of weakness against most currencies. This is partly due to technical reasons. For example, early in the week guilders and Swiss francs were being sold for dollars, but by Thursday opportunities for profit-taking caused a reversal of this movement, dollars being sold and the Continental currencies bought. The result was that the guilder suddenly strengthened against sterling from Fl. 8.96¼ to Fl. 8.95⅝ and the Swiss franc from Frs. 21.61¾ to Frs. 21.59½. Belgas have moved in sympathy with the dollar, sterling falling from Bel. 29.21 to Bel. 29.14. The British Control gave some support to sterling at the lower rate. Three months' belgas are also stronger. French francs have been steady, but are a shade firmer at Frs. 177⅛ bid. Forward francs are also steady.

*

The Bank Return

EXTRA currency is always needed by the public at the end of the quarter, and so this week's increase of £3.0 millions in the note circulation is not surprising. More interesting is the fact that the circulation is now £6.2 millions less than a year ago. The French repatriation of last May suggests that less British currency is now being hoarded than was the case a year ago, and this may be the chief explanation of the year's decrease.

	July 7, 1937 £ mill.	June 22, 1938 £ mill.	June 29, 1938 £ mill.	July 6, 1938 £ mill.
Issue Dept.:				
Gold	326·4	326·4	326·4	326·4
Notes in circulation	494·4	483·3	485·2	488·2
Banking Dept.:				
Reserve	32·9	44·0	42·2	39·2
Public Deps.	15·2	21·7	10·5	12·5
Bankers' Deps.	88·5	105·5	125·5	115·7
Other Deps.	37·2	35·3	36·1	36·0
Govt. Secs.	96·6	110·2	119·5	111·9
Discounts & Advances	9·0	5·5	7·3	10·7
Other Secs.	20·4	20·6	21·1	20·4
Proportion	23·3%	27·1%	24·4%	23·8%

In the Banking Department, the week's drop in Government securities restores the position of June 22nd, and so shows that the money borrowed on Ways and Means over the turn of the half-year has now been repaid. For the same reason bankers' deposits are £9.8 millions lower than they were on June 29th, and probably much lower than they were on June 30th. Public deposits, however, remain at a low level, in spite of the receipt on July 1st of the Defence Loan call. Part of this money has been used in payment of dividends, but it will be interesting to see from next week's revenue returns what has happened to the remainder. As matters stand, bankers' deposits are now at the relatively high level of £115.7 millions, in spite of the Defence Loan call and the recent expansion in the note circulation.

*

The Money Market

THE clearing banks are once more ready lenders after the end of the half-year, and so loans against bills are very easy to obtain. Bond money, however, is less easy to borrow, and rates are stiffer than in recent months. The minimum is now probably ⅜ per cent., and it is reported that ¾ per cent. and even ⅞ per cent. has been paid. The explanation is that more money is being borrowed by the Stock Exchange owing to the firmer tendency of the gilt-edged market.

	July 8, 1937 %	June 30, 1938 %	July 7, 1938 %
Bank Rate	2	2	2
London Deposit Rate	½	½	½
Short Loan Rates:			
Clearing Banks	½–1*	1	1
Others	½	1–2	½–1*
Discount Rates:			
Treasury bills	½	17/32–9/16	5/8–7/8
Three months' bank bills	17/32–9/16	9/16	17/32–½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

There is a very good demand from the clearing banks for August and September maturities of all kinds. The banks' buying rate is now back to ½ per cent. The market, however, are reluctant sellers. As stated above, loans against bills are readily obtainable, while at last week's tender the market only received a 40 per cent. allotment and so cannot easily find employment for all its funds. With the opening of July the syndicate's price for new Treasury bills was raised from £99 17s. 3d. to £99 17s. 4d. per cent., and the average tender rate is now back to 10s. 5.33d. per cent. Thus the June increase in the tender rate has now disappeared.

*

The Bullion Market

OWING to this week's appreciation of the dollar, the London price of gold has risen to 141s. 1½d. per fine ounce, or to the highest point since April 21, 1937. There is still a hoarding demand from the Continent, but the authorities have released sufficient gold to bring the premium down during the past week from 5½d. to 3d. per ounce. In this way they have prevented the London price from rising to the full extent corresponding to the appreciation of the dollar. The premium has only to drop another twopence for arbitrage between gold, sterling and the dollar to become possible. This week's imports include £1,000,000 from Russia and fair quantities from Belgium and Canada. Gold has lately been going to Sweden, but it is thought that this is gold already under Swedish ear-mark.

Date	Gold: Price per fine oz.	Gold: Prem. or Discount *	Gold: Amt. dealt in	Silver, price per oz. standard: Cash	Silver, price per oz. standard: Two Mths.
1938	s. d.	d.	£'000	d.	d.
July 1	140 9	5⅛pm	402	18 15/16	18 15/16
„ 2	140 9	5⅛pm	180	19	18 7/8
„ 4	140 9½	6½pm	482	19⅛	19
„ 5	140 8½	5½pm	326	19¼	19⅛
„ 6	140 11	4 pm	557	19 5/16	19
„ 7	141 1½	3 pm	787	19 3/16	19

* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce ·999 fine during the week.

The silver market has been narrow, but further bear covering and the strength of the dollar have combined to raise the London price. In spite of the rise in the dollar, silver is quoted in London at the American parity. The impression remains that it would not take very heavy offerings of silver to bring about a reaction in the price.

Investment

The Market Trend.—The maintenance of firm equity share prices when gilt-edged stocks are rising is commonly reckoned a paradox. Without any challenge to the existing level of industrial ordinary shares, gilt-edged securities staged a significant advance early this week, in apparent defiance of this textbook principle. But the textbooks take no account of the perplexing political factors which, for months past, have harried all sections of the market, and now show apparent signs of relief. Nor, since Wall Street has again surmounted its "pause," is there any positive reason for any disturbance of British share prices, until the economic prospect is clarified for good or ill. The re-awakened demand for gilt-edged stocks, in fact, appears to be a logical development from the success of the second Defence Loan, whose terms made some concession in interest rates, but ensured that the market would be spared the depressing effect of another public department "tap." But whereas, until recently, investors were disposed to seek what protection is available against political risks by concentrating upon dated stocks, this week's buying has been largely concerned with "undated" securities. War Loan, for example, showed an advance of 1⅛ during the first three days, and "Old Consols" of 1⅞ points. The new Defence Bonds, issued at 98 three weeks ago, now stand at a premium of 1 11/16, after the payment of the substantial call at the end of last week. This week's sharp advance, however, is not without its own paradox. It has occurred, in particular, despite the depreciation of sterling against the dollar, and despite the reported uneasiness of certain Continental centres regarding the political outlook. In part, it must be reckoned attributable to technical factors, for the market supply of gilt-edged stocks appears to be sub-normal. Any transfer of attention from the equity markets to gilt-edged was therefore bound to produce its maximum effect. Whether the rumours which have stimulated the market this week will be substantiated is another matter. But it appears to have convinced itself that a comprehensive Anglo-American trade agreement may shortly be effected, covering currency stabilisation and even a settlement of the war debt question. To add to its confidence, the market also revived the suggestion that voluntary conversion offers might be made to holders of Conversion 4½ per cent. and 5 per cent. loans. With no lack of suggested reasons for the rise, one thing is clear. It has provided a favourable context for an impressive volume of fixed-interest capital issues, and in particular for the Bournemouth loan.

* * *

Anglo-German Debt Position.—The main investment implications of the Anglo-German debt agreement are examined in a leading article on page 70. In the following table we show the future ranking of the principal loans in detail, together with their price movements during the past week:—

	Interest Rates		Sinking Fund	Prices 1938				
	Old	New		Lowest	July 1	July 4	July 6	July 7
	%	%	%					
Dawes	7	5	2	43	57½	59½	56	56
Young	5½	4½	1*	33½	50	47	44½	44½
Konversionskasse Funding bonds	4	4	As before	36	38§	49§	48⅛§	46⅜§
Austria 1930	7	5	2	24	55	54	52	51½
Do. Int. guar. 1933–53	3	3	As before	99½	101xd	101xd	101xd	101xd
Do. guar. conv. 1934–59	4½	4½		48	67½	70½	71½	71
Saarbrücken 1928	6	4½	1*	21	22½	44	45	41½
Berlin 1927‡	6	3†	...	21½	22½	30	29	29
Dresden 1927	5½	2¾†	...	21½	22½	30	30	29

* To commence after 2 years. † Cash payments during the next two years. ‡ Similar service on other 6 per cent. State and City Loans, including Hamburg, Saxony, Westphalia, Cologne and Munich. § Series 1 and 2.

Although the best prices have not been held this week, the recovery throughout the list has been appreciable. Comparison with the prices recorded last Friday week is affected by the fact that many of the bonds were then quoted at nominal prices. The recovery from the lowest prices of the year, however, which has been impressive in the Austrian 5 per cent. and 4½ per cent. guaranteed issues, and in the 4 per cent. Funding bonds, whose premium compared with the Young Loan, may be explained by their much nearer redemption date. Although the Austrian 5 per cent. and Dawes Loans are treated identically, in form, the former stands 4½ points below the latter—presumably marking the fact that the agreement has been reached "without prejudice" to the question of German liability for the Austrian debt. It will be noticed that the Saarbrücken loan, hitherto comparable with other municipal and provincial loans, now enjoys a special market status comparable with that of the Young Loan. The Stock Exchange committee has this week revised the conditions governing good delivery of German and Austrian securities, by which it would appear that Austrian 5 per cent. and 4½ per cent. loans and City of Saarbrücken bonds must be accompanied by a declaration that they were in British ownership on July 1, 1938. A similar declaration has been required for the Dawes and Young Loans since June 15, 1934.

* * *

Abridged Prospectuses.—General agreement has been expressed with the decision of the Stock Exchange Committee, announced last week, to require the submission of preliminary announcements or abridged prospectuses, together with the full prospectus or draft, when application is made to the Committee for permission to deal in new securities. The publication of advance advertisements in anticipation of a new issue a few days later, has become a recognised practice, but the brief particulars given in these notices have never been recognised, either officially or by those responsible for the offers of new capital, as forming the basis for the offer. The Stock Exchange Committee, however, considers that the practice may contain potential dangers—a conclusion which would plainly be true if the public had any misconception of the real character of an abridged statement, or if figures vital to the appraisal of the offer were omitted from it. Even a selection of unbiased facts from the prospectus can only be interpreted, for investment purposes, in the light of the full prospectus. And the potential danger to which the Committee refers would be immediately apparent if the facts chosen suggested a conclusion on the merits of the offer which investigation of the full prospectus could not support. Certain investors, perhaps, will always be temperamentally disinclined to peruse the small type of the full prospectus and unduly ready to accept statements in the preliminary or abridged notice as a sufficient—or even official—summary of its main points. The decision of the Stock Exchange Committee, therefore, is obviously to be welcomed by investors and issuing houses alike. It clarifies the real purpose of the preliminary notice, and affords a measure of protection to the unenterprising investor, who might be exploited by any issuing house prepared to imperil its reputation by the issue of colourful preliminary statements.

* * *

Unit Trust Developments.—The recent recovery in the British and American stock markets is finding prompt reflection in the revival of unit trust activity. Three further issues have been made this week. American Industries Trust (sponsored by the Allied Investors' group) is the first example of a British unit trust formed with an exclusive portfolio of American stocks. Until the relaxation of control over foreign security operations last February, indeed, this type of trust would have been inhibited. Indeed, one case at least is on record in which a unit trust was invited to eliminate a security of American domicile. This trust is of the "limited-flexible" character, for its permitted list of companies is limited to fifty (together with British Government securities), and there is no power to extend this number. The new trust will be operated on the "cash fund" method, by which cash received from purchasers of units will be directly payable to the trustee, subject to the deduction of the initial service charge. The managers will not, therefore, be interested, as principals, in security transactions appertaining to the trust fund. A further issue of 350,000 Cornhill deferred units at 13s. 6d. was promptly over-subscribed this week—the price, in fact, was based on the net value of the trust fund on June 23rd, and took no account of subsequent appreciation, which had raised the dealing prices of the units to 13s. 9d.-14s. 9d. The special character of these geared units was examined at length in our unit trust supplement, published on May 28th. Finally, Proved Securities Limited have introduced the Four-Square Trust, whose permitted list covers gilt-edged securities, fixed-interest stocks, industrial equities, and "prospect shares." In this case, the permitted lists may be expanded by the inclusion of not more than five securities in any one year. Powers are also taken for the termination of the trust after 15, and not later than 20 years, and the managers may set aside to reserve any excess of income over 3 per cent. gross on the fund in any half-year. Both this trust and the American Industries Trust have made provision against the artificial inflation of yields, which entails, in effect, the distribution of capital.

* * *

The Yield Problem.—Increased unit trust activity has inevitably drawn attention to the problem of advertised yields. It is unfortunate, in this connection, that the booklet relating to the Savings Unit Trust, created a week ago, included a misprint, as a result of which it appeared that the yield on the sub-units, at an approximate price of 2s., based on dividends paid during the past year, would be "about 5½ per cent. gross per annum." It was stated that this yield had been estimated after providing for managers' and trustees' remuneration, on a basis "strictly in accordance with the recommendations of the Fixed Trust Committee appointed by the Board of Trade." In a subsequent correction, the managers have pointed out that, at the opening price of 1s. 10.2d per sub-unit, the gross dividend yield is £5 3s. 4d. per cent., before deduction of the annual service charge of ⅜ths of 1 per cent. The managers have commendably undertaken to repurchase any units obtained by investors under misapprehension regarding the yield. Any similar inadvertence might be avoided in the future if unit trust yields were to be certified by an accountant, or if the trustee undertook responsibility for the advertised figures. The frequent suggestion that trustees' responsibility extends beyond custodianship has its dangers, but we commend the suggestion that accountants' certificates might in future accompany published yield figures to the movement as a whole.

* * *

Home Rail Traffics.—The plain facts of the home rail position have made unpalatable reading for the junior stockholders for several weeks past. Gross traffics of the four lines as a whole for the first 26 weeks of the year show a fall of £1,841,000 compared with the corresponding period of 1937. The L.M.S. shows the greatest decline, of £780,000, followed by the L. and N.E. (£638,000), the Great Western (£318,000), and the Southern (£105,000). In terms of the total traffics secured in the corresponding period of 1937, these falls amount approximately to 2¼ per cent. for the L.M.S. and Great Western, about 2¾ per cent. for the L. and N.E., and 1 per cent. for the Southern. In such circumstances, the achievement by the L.M.S. of the only gain in the list —a "plus" of £12,000 on its passenger takings—is a matter for congratulation, although it may be connected with the Empire Exhibition. The half-year's figures, of course, are the more disappointing since they include the benefit of the basic 5 per cent. increase in charges introduced last October. The "real" fall in traffics, making adjustment for the estimated retention of increases in fares and freight charges, is in fact of the order of 5½ per cent. compared with an apparent fall of 2¾ per cent. in total receipts. The reduction in the volume of traffic implied by this calculation will find some reflection in direct operating charges. But the burden of last year's wage increase, which was estimated at £2,900,000 in a full year, can only be partly alleviated by reduced operations. On the face of the figures, the outlook for L.M.S. 1923 preference and L. and N.E. first and redeemable preference stocks is particularly uninviting. The Southern may add the benefit of good cross-Channel traffic to its long-term electrification equity (passenger receipts, it will be noted, were £39,000 down, but compared with Coronation and diverted bus traffic last year), but the deferred stock is clearly vulnerable. And for Great Western ordinary, dividend decisions rest upon the board, rather than upon indications, at this stage, of a recovery in traffic during the second half of the year.

* * *

Foreign Bond Movements.—A calmer political atmosphere last month, coupled with an expedient solution of the Anglo-German debt problem, lifted the foreign bond market in general, and European issues in particular, from their despondent position at the end of May. The index of 110 foreign bonds, calculated by the Municipal and General Securities Company, rose from 70.7 at that date to 71.3 at the end of June (January-June, 1934 = 100). European issues, led of course by German and Austrian bonds, recovered from 85.7 to 89.3, while the South American index was assisted by mollifying statements from Brazilian spokesmen regarding the prospect of a resumption of service. Details of the index are given in the following table:—

AVERAGE JANUARY–JUNE, 1934 = 100.

End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	*Undefaulted Bonds*	*Defaulted Bonds*

N.B.—Figures in brackets denote number of bonds included.

The bondholder, perhaps, has cause for tempered satisfaction with the terms of the German debt undertaking, and with the prospect of some slight increase in the service on the Roumanian external loans, but he still sees no sign of resumed payments by such defaulters as Brazil and Greece. War in China has also added to his burdens. The index for the Near and Far Eastern group of 31 bonds in fact touched its lowest point, 68.5, last month, on the prospect of prolonged hostilities, which were reflected in default on the Shanghai-Nanking Railway loan. The latter has increased the defaulted list to 57 bonds.

* * *

Industrial Profits in June.—In the aggregate, industrial profits continue to run higher than a year ago. The earnings of 260 companies whose reports were published in June show an increase of 11.09 per cent. over

the preceding year at £38,076,415. In the following table we relate these figures to the trend of net profits during the past two years:—

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year
1936		£	%	1937		£	%

* After debenture interest.

Oil companies whose net profits last month amounted to £14,735,000 easily constitute the largest group, and provide over half of the disclosed increase. Tea companies record the remarkable rate of improvement of no less than 56 per cent. These two groups together provide roughly 40 per cent. of total net profits, and more than two-thirds of the increase. If they are excluded, to obtain a better indication of home industrial profits, the resultant increase for June companies is only 6 per cent.

Company Notes

Distillers' Report.—Some disappointment was expressed at the end of last week on the maintenance of the Distillers Company ordinary distribution at 22½ per cent. The published results of certain leading subsidiaries in the group had prompted some expectation of a further increase in the dividend. The full report, however, discloses a relatively moderate increase in total profits, after debenture interest, taxation, and other provisions, from £2,469,030 to £2,523,407. After making the same provisions for superannuation and fire insurance—these provisions, together with the £400,000 regularly transferred to reserve fund have now become common form—the 22½ per cent. distribution (including 5 per cent. cash bonus) is covered by earnings equivalent to 28·9 per cent. Profits in recent years are analysed in the following table and chart:—

	Years ended May 15		
	1936	1937	1938
	£	£	£
Profit*	2,332,354	2,469,030	2,523,407

Paid %	20	22½	22½
Reserve fund	400,000	400,000	400,000
Carry forward	348,781	343,249	444,360

* After depreciation (including the writing down of investments in 1937-38) debenture interest, taxation and contingencies.

In the chart, we have combined the computed amount payable for debenture interest in recent years with the preference dividend.

Although the Distillers Company probably avoided the extreme effects of rising costs last year, it is possible that increased operating expenses, coupled with disappointing conditions in the American market, account for the moderate advance in profits. Further expansion is evident in the balance sheet. Investments in subsidiaries have increased from £15,349,881 to £16,915,212, and current and loan accounts with subsidiaries from £5,503,687 to £7,291,692. These movements are partly

DISTILLERS' COMPANY PROFITS 1929-1938

counterbalanced by an increase in amounts due to subsidiaries by the parent company from £7,052,122 to £8,240,345 and by a sharp reduction in cash holdings from £3,147,819 to £1,780,539. The market is prone to expect too much from Distillers—particularly from its interest in the American market—and the profits trend in recent years shows rather that it is a progressive equity of high standing, but lacking the dynamic qualities with which it is sometimes invested. At 99s. 3d. the £1 ordinary stock units provide a yield of £4 10s. 9d. per cent., which seems appropriate to this interpretation.

* * *

Richard Thomas Profits.—Our leading article on page 71 reviews in detail the scheme submitted by the directors of Richard Thomas and Company for raising new finance. For purposes of record, we give below the course of the group's consolidated earnings over the past three years. Although they were exclusively achieved from the operation of the old-style mills, and thus throw no light on the profit-earning capabilities of the new plant, under the revised form of control, they have some bearing upon the future investment status of the company's existing securities. It should be emphasised that the figures refer to the whole group, with the exception of the preference and ordinary dividend payments, which relate to the parent company:—

	Years to March 31		
	1936	1937††	1938
	£	£	£
Total profits	1,186,635	1,717,232	2,139,517

Although the group's total profits increased by 24 per cent. from £1,717,232 to £2,139,517 during the year to March last, the directors have been forced to follow a policy of extreme conservatism. The group's depreciation provisions have been increased from £360,000 to £400,000 and after the payment of a 5 per cent. interim dividend, no further distribution has been made on the ordinary shares. The balance at profit and loss in the parent company's books (£772,306) is to be transferred to general reserve.

* * *

Bank and Discount Dividends.—No changes were anticipated in the interim dividend announcements of the leading banks and discount companies, and this week's declarations have maintained the rates distributed last year in every case. In the following table we set out the dividends declared to date, and the course of bank share prices during the past year:—

BANK AND DISCOUNT CO. DIVIDENDS

Name and Shares	1937 Interim	1937 Year's Total	1938 Interim	Price July 7, 1937	Price July 6, 1938	Yield % July 6, 1938

† One-fourth of price of old £20 shares (£4 paid). * Based on 14% dividend. ‡ Based on 18% dividend.

By all outward appearances, the banks as a whole enjoyed a more profitable half-year than in 1937. The net rise in advances, although checked in May, was still considerable, and implies an increased earnings differential over the yield previously obtained from investments which have been liquidated to provide increased accommodation for borrowers. Even in the best half-year, however, bank dividend policy would remain cautious, and in the circumstances of to-day, when the trade trend is in doubt, the arguments for this policy are clearly reinforced. The latest bank balance sheets to June 30th are summarised on page 102 of our statistical section.

* * *

Provision Companies' Falling Profits.—The latest reports of International Tea Company's Stores and Lovell and Christmas illustrate the paradox that trading in commodities in everyday demand by no means guarantees a corresponding stability of profits. Since 1935-36 International Tea profits have declined each year; profits for the year to March last showed a further fall from £680,310 to £626,043. Throughout the period, however, turnover has steadily increased. The company has suffered from the acute competition in provision retailing, from rising costs, and, on the retail side, from the upward revision of wages. In such circumstances there are limits to possible economies, while the adjustment of retail prices to higher costs has been ruled out by the exceptionally competitive character of the retail provision trade. As a result, the company's ordinary dividend, which was sharply reduced from 30 per cent. in 1935-36 to 16 per cent. a year ago, has been cut further to 10 per cent., and earnings for the ordinary stock amount to £205,048, compared with £287,701 for 1936-37. The directors have maintained the customary excess of earnings over the distribution, and a net addition to reserves of £50,000 has been made.

* * *

The setback experienced by Lovell and Christmas, the provision merchants and importers, during the year to June 11th last is more serious still, for profits have dropped from £143,204 to £90,472, and are now considerably less than half the 1935-36 total. Despite a saving of nearly £13,000 in directors' fees and bonus fund allocations,

INSURANCE SHARES AS A LONG-TERM INVESTMENT

Extracts from
"INSURANCE SHARES 1887-1937"
by the Right Hon. C. A. McCurdy, K.C.

II—THE ELEMENT OF LUCK

"SINCE all investors are not equally fortunate, it seemed to me that it would be of great interest to ascertain how a really unlucky person would have fared who, some time during the last quarter of a century, had chosen the most unfavourable year possible in which to buy insurance shares. The following table provides the answer to that question. It shows what happened to a hypothetical investment of £1,000 in the shares of the 'Economist' group of insurance companies made in any one of the years from 1913 to 1927, and held for a period of ten years.

An investment of £1,000 made in		per cent.		£
1913	1922	4·97		1636
1914	1923	4·97		1854
1915	1924	6·89		2951
1916	1925	7·23		3056
1917	1926	6·97		2638
1918	1927	5·73		2071
1919	1928	4·53		1990
1920	1929	4·92		2120
1921	1930	6·32		2404
1922	1931	5·57		1779
1923	1932	4·95		1567
1924	1933	4·52		1671
1925	1934	4·07		1656
1926	1935	4·27		1907
1927	1936	4·26		2039

…… would have earned an average annual income, free from tax, at the rate of …… and its capital value would have risen to ……

The element of luck does count for something. A holding of £1,000 worth of insurance shares bought in 1916—would have earned an average income of £72 . 6s . 0d. *free of income tax*, and by 1925 would have shown a capital appreciation of £2,056. At the other end of the scale is the comparatively unfortunate man who picked the worst possible year for buying insurance shares. His investment of £1,000, made in 1925, showed at the end of ten years a capital appreciation of £656 after earning, over the whole period, an average annual yield, free of income tax, of something over 4 per cent. There can be very few investors in any other market who, after faring thus, would feel that they had any cause to repine."

earnings for the ordinary capital amount to no more than £11,972, compared with £56,603 for the previous year—a fall which has been followed by the passing of the ordinary dividend. These results are presented in the report without comment, but the irregularity of the profits recorded in recent years, and the chairman's disclosures at last year's meeting, suggest that fluctuations in foodstuff prices have been of decisive importance. Similar conclusions are suggested by the reduction of Scribbans' profits from £150,085 to £107,273. Dividends on the ordinary and deferred capital (which received 5 per cent. and 14.16 per cent. respectively a year ago) have been passed. Lovell and Christmas £1 ordinary shares stand at 10s. 7½d., while the current yield of £5 4s. per cent. on International Tea 5s. units at 9s. 7½d. suggest that investors retain confidence in the company's ability to stage a recovery towards its former prosperity.

* * *

Petroleum Storage Capital Reorganisation.—Since its inception in 1928 this company (which recently came into prominence on the imposition of a power alcohol duty in the last Budget) has been distinguished by an unusual capitalisation. This now consists of £400,000 in £1 8 per cent. cumulative ordinary shares, carrying participation rights to 40 per cent. of residual profits after 8 per cent. has been paid on the deferred capital, and of £75,000 in 1s. deferred shares, which received a dividend of 344 per cent. for 1937. It is proposed to modify the capital structure of the group, maintaining at the same time the relative rights of the two classes of capital. The 1s. deferred shares will first be consolidated into 150,000 10s. shares. The capital of the company will then be increased to £850,000 by the creation and distribution as a capital bonus to existing holders of 150,000 £1 ordinary shares and 450,000 new deferred shares respectively, ranking identically with the existing issues. Profits available for distribution will in future be applied to the payment of a cumulative dividend of 6 per cent. on the ordinary capital, and then to a non-cumulative dividend of 2½ per cent. on the deferred shares. The division of residual profits between the two classes will remain at the rate of 40 per cent. for the ordinary and 60 per cent. for the deferred. The effect of the reduction in basic rates on the new capital will be to increase the gross cost of the fixed ordinary dividend from £32,000 to £33,000, and on the deferred share capital from £6,000 to £7,500. These increases, it will be observed, follow the principle of 40-60 per cent. division of extra profits, and the respective rights of the two classes in a winding-up have also been preserved. In short, the directors, pursuing their intention of bringing the issued capital of the company into closer relation with its earning power, have neatly solved the problem of preserving the rights of two markedly dissimilar classes of capital. In future, the company is to be known as Cleveland Petroleum Company, Limited, to identify it more closely with its products. Shareholders will note that the board intends to make interim payments of 12 per cent. on the increased ordinary capital and 19 per cent. on the old and new deferred shares if the scheme is approved. The reorganisation scheme has also coincided with the raising of the price of Cleveland Discol from 1s. 7d. to 1s. 7½d.

* * *

Union Cold Storage.—The report of Union Cold Storage for 1937 serves chiefly to prolong its remarkable record of stable profits. Over the past decade the difference in disclosed profits for the best and the worst years has barely reached 4 per cent. For the latest year, however, a greater degree of improvement has been revealed, for total profits are about £20,000 higher than in 1936, while in the three preceding years total earnings varied by less than £2,000. This improvement, however, is more than compensated by increased interest charges of £29,209 against £6,588. The table in the next column shows that earnings for the highly geared ordinary stock (which is privately held) are slightly lower than a year ago.

	Years ended December 31

The accounts are among the least informative known to the investor. There has been no sign of the threatened setback in earnings which provided the background of the scheme for voluntary reduction of preference dividends four and a half years ago. Capitalisation of loans is suggested by a £268,400 drop in amounts due from subsidiaries and a £271,500 increase in shareholdings in subsidiaries, which, at £8,320,000, represent nearly half of total assets. The auditors' certificate, however, is given—as in past years—"subject to the value of shareholdings in subsidiary companies." Bank loans are 20 per cent. lower at £849,000, but specific mortgages are up from £72,506 to £925,010, while the general item for sundry creditors, loans, and provision for contingencies (with the addition in 1937 of bills payable) is reduced from £1,948,700 to £991,775. The 10 per cent. preference shares yield £6 11s. per cent.

* * *

Covent Garden Properties.—For the third year in succession, Covent Garden Properties record increased profits, amounting for the year to June 30th to £309,303, against £281,595. Taxation absorbs nearly £6,000 more, but an equivalent sum is released from interest, owing mainly to the repayment of 4½ per cent. first debenture stock last year. The whole increase in total profits is thus available for the ordinary capital, on which earnings amount to £77,994, against £48,287. The 7½ per cent. dividend is maintained from earnings equivalent to 8.2 per cent. on the increased ordinary capital. While the report—published only four days after the end of the financial year—refers to a decline in receipts from Covent Garden market and to a rise in rates and cost of repairs, some rise in net revenue was, in fact, to be expected from the year's acquisitions of new properties. The issue, last October, of 650,000 ordinary shares at 26s. 6d. yielded premiums of £211,250, of which £30,302 remains unappropriated, after writing off the balance of debenture issue and other expenses. Properties purchased during the year amounted to £818,664, or £583,840 net after deducting the cost of property sold. Further acquisitions are being undertaken, for the company has contracted to purchase properties costing £1,236,229, and intends to finance the operation by issuing £1,000,000 4 per cent. first mortgage debenture stock, secured specifically on the new properties and by a floating charge (subject to existing rights of the present stock) on the whole undertaking. At the same time, the directors' borrowing powers, now limited to £3,000,000, are to be raised to £5,000,000. The company's operations have expanded at a somewhat rapid rate in recent years, but the fruits of expansion have been evident in recent profits. The latest acquisitions promise to provide some net residue of earnings, after debenture interest, but the £1 ordinary shares offer as much as £6 16s. 9d. per cent. at the current price of 21s. 10½d.

* * *

Anglo-Dutch Plantations.—The latest results of this important plantation company do not maintain the high rate of recovery shown in 1936, but they are, nevertheless, most satisfactory. Profits from the Dutch subsidiary, before charging £194,746 for depreciation, amount to £661,713, an increase of 23 per cent. over the 1936 figure. The allocation of these receipts in the parent company's accounts is shown in the following table.

	Years ended December 31

† After depreciation, etc., charged by the Dutch operating company, and after crediting interest on investments.

A substantial increase in taxation, coupled with an increase of some £29,000 in the bonus to the Eastern staff for 1936, limits the rise in the amount earned for stockholders to £33,717, and since the dividend is raised from 7 per cent. to 9 per cent., the general reserve allocation is maintained at £50,000 only by a draft upon the carry-forward. Through its Dutch subsidiary, the company is concerned in an important range of primary products. In 1936, sisal contributed more to gross profits than any other crop. Profits from this source again rose slightly in 1937 to Fls. 1,513,000, but were only third in importance, for the yield from rubber increased by 180 per cent. to Fls. 3,001,000 and from tea by 120 per cent. to Fls. 2,039,000. Higher tea prices played a considerable part in the year's progress, for the crop was actually reduced by 10 per cent. to 11,359,000 lb. Rubber prices were satisfactory, and the 35 per cent. increase in the crop was much smaller than the rise in rubber profits. As the company and its subsidiary make up their accounts to December 31st, the full effects of the decline in rubber prices were not experienced in the latest year. A yield of £6 2s. per cent. on the £1 stock units at 29s. 6d. thus appears to discount some further recovery from the low produce prices recorded earlier this year.

* * *

"Johnnies" Reduced Profits.—Dealers had largely discounted the non-payment, after four years, of the 5 per cent. cash bonus by Johannesburg Consolidated Investment. The distribution, thus reduced from 20 per cent. to the basic dividend rate of 15 per cent., appears to be covered by a margin of £127,500, for profits amounted to approximately £720,000 after providing for "all ascertained and estimated depreciation and for contingencies." The corresponding figure for the year to June, 1937, amounted to £1,141,878, which exceeded the 20 per cent. dividend with £351,878 to spare. The sum of £100,000 is transferred to reserve, compared with £350,000 in the preceding year, and the balance carried forward is increased from £168,753 to approximately £197,000. Perhaps the full report will indicate whether special importance is to be attached to this precipitate fall in profits. Some reduction, of course, was to be expected, for conditions in the mining share market have prevented the finance houses from maintaining their dealing profits this year. But "Johnnies" earnings in recent years have been relatively consistent, despite intermediate market fluctuations of similar kind. Shareholders will hope that the greater activity in the Kaffir market recently presages a higher level of profits during the current year.

* * *

The Week's Company Profits.—Our usual analysis of profit and loss accounts appearing on page 104 includes the results of 57 companies, apart from new concerns or those for which comparable figures are not available. The latest net profits of these companies amount to £7,937,000, and show an increase of 3½ per cent. over the previous year, when they amounted to £7,676,000. The total profits of 1,515 companies analysed this year amount to £219,710,000, an increase of 12 per cent., compared with profits of £195,979,000 for the previous year. This week's results are discussed on page 87 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 95. Mr A. d'Anyers Willis emphasised that full provision had been made in the accounts of *P. and O. Banking Corporation* for doubtful accounts in Shanghai and losses on exchange. A cautious advance policy had been followed in view of the fall in commodity prices. Sir Austin Harris, at the *National Bank of New Zealand* meeting, discussed the impact of New Zealand politics on the economic situation of the Dominion, and referred to a considerable fall in the net overseas funds of the reserve banks and trading banks. The chairman of the *Imperial Bank of Iran* referred to the effect of barter and clearing agreements with Russia and Germany on the bank's Iranian business, but showed that these had been offset as far as possible by the expansion in the internal bill business. The chairman of *Lobitos Oilfields* informed shareholders that the refinery at Ellesmere Port was now operating on a profit-earning basis. Addressing shareholders of *British Glues and Chemicals*, Mr T. Walton referred to the part which the company could play in the development of the livestock industry, by supplying special feeding products. The chairman of *Anglo-Spanish Construction Company* reported that less than half of the traffic on the Santander Mediterraneo railway was now of a military character. Sir Edward Rosling discussed the outlook for the tea and sugar—the company's principal products—at the *Anglo-Ceylon and General Estates* meeting. At the *Ohlsson's Cape Breweries* meeting the chairman anticipated the maintenance of the existing distributions on the increased capital.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET JULY 19 — ACCOUNT JULY 21

THIS week's market honours have been carried off by gilt-edged and Kaffir shares. While the opposite ends of the "House" have done well, firm conditions have been maintained in the industrial share market, and the demand for typical commodity shares has been well maintained on Wall Street's ability to resist profit-taking. Technical conditions on the New York Stock Exchange do not govern the chances of nation-wide recovery, but they are playing an important part in the course of commodity dealings and commodity shares in London.

The *gilt-edged advance* (on which we comment on page 78) appeared to be due to a return of speculative interest in the market, to calmer political conditions, but largely to reports of the imminence of an Anglo-American trade agreement, backed by a war debts settlement and currency stabilisation. "Undated" stocks made sharp progress, under the lead of Old Consols and War Loan, both of which showed striking gains during the first four days. The new Defence bonds reached 1⅛ premium. Corporation issues were sympathetically affected, the L.C.C. loan and the Leeds scrip showing particular strength.

The sharp advance in *German and Austrian bonds* from their nominal levels of last week was not maintained. Even on Monday the best prices were not held, and the readiness of holders to take profits became even more apparent on later days, as we show in a table on page 78. Further support for Brazilian issues was reported at first, and Far Eastern issues recovered further in mid-week.

*

After an unconvincing display of optimism, the *home rail market* succumbed to fears regarding the completion of the half-year's rail traffics, and despite a final rally they showed net losses in mid-week, evenly spread between the junior and marginal preference stocks. Business in foreign rails remained small, but Cordoba debentures reacted on reports that some reduction would be sought in the purchase price for the line. Other

(*Continued on page 86*)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(*Continued from page* 83)

Argentine issues lost part of their small initial gains.

Improvement in the *industrial market* continued, but conditions became somewhat quieter as the week progressed. Richard Thomas were the chief feature of the iron and steel section. All securities were firm before the scheme was published. When details were known the debentures improved, but the ordinary shares and the preference lost ground. Other iron and steel shares were strong at first, but quietened later. Coal shares on the whole gained ground. Electrical equipment issues followed the general trend, and after a good start became more irregular in mid-week. Motor shares were satisfactory and continued to receive a certain amount of support when other sections were slackening. Among aircraft issues, Handley Page responded to the good results and the scrip bonus, while de Havilland improved in anticipation of the report. Tobacco shares were a firm though not very interesting market, while brewery issues made progress on provincial support. Activity in textiles shares was limited, but prices hardened. Stores showed a similar trend, firm or advancing quotations being accompanied by a poor turnover. Provision and catering issues made a mixed showing, International Tea falling on the reduced profits (see page 81). The Furness Withy dividend increase had small effect upon shipping shares, though interest in this section picked up at first. The miscellaneous section opened satisfactorily, but failed to hold its ground in mid-week.

★

Oil shares followed an upward trend and turnover was quite satisfactory, except when Wall Street, as on Tuesday, failed to provide a lead. Petroleum Storage issues rose on the announcement of the capital reorganisation scheme. A cheerful start in rubber shares was followed by more subdued conditions, and later by some irregularity. Business remained on a small scale, holders not being inclined to part with their shares. Tea shares were quiet, but showed no weakness.

Mining shares, after an aggressive start, showed more subdued conditions. In mid-week, however, Kaffirs returned to the fore, after a partial eclipse of some weeks. Developing mines received renewed attention, Western Holdings reaching 18s. 3d. while Marievale advanced, but in mid-week interest turned more to dividend payers on Paris support. As an exception to the general tendency, "Johnnies" weakened on the reduced distribution. Some broadening of interest in West African gold mines proved short-lived. Rhodesian copper and base metal shares became less active after a firm start.

ACTUARIES' INVESTMENT INDEX

Though less pronounced than in the previous week, a rise is again recorded by the Actuaries' index of 151 industrial ordinary share prices, which on Tuesday, July 5th, stood at 67·6, compared with 66·4 a week ago and 63·2 a month ago. The corresponding average yield has fallen below 5¼ per cent. again, being 5·72 compared with 5·82 and 6·03 per cent., respectively. A selection of the separate indices follows :—

New York

After anticipating Monday's Independence Day holiday, with a two-point rise in the Dow Jones industrial index and a turnover of 1,470,000 shares on Saturday last week, Wall Street reopened in a rather cautious mind on Tuesday. A technical reaction occurred at first, but the falling volume which accompanied lower prices was regarded as a favourable sign, and dealers were not disposed to see any real significance in a moderate decline in the industrial average, after its 25-point advance in a fortnight. The real test of the market's staying power, however, was avoided, for, after an early reaction, stocks resumed their upward course in mid-week, and selling limits below Tuesday's closing level were not called into operation. Rail stocks provided a feature on the grant of increased passenger fares to the Eastern companies. Despite the uneasiness caused by the abandonment of the steel "basing point" price system, steel shares were well to the fore in the resumed mid-week advance. Output was affected this week by the holiday, but is expected to reach 30 per cent. of capacity next week. Commodity stocks, and particularly base metals, were active on rising commodity prices, but, like the rest of the market, more sensitive than of late.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values, calculated on closing prices (1926 = 100).

Capital Issues

THE fixed-interest investor has enjoyed a wide selection of new issues this week. The terms chosen for the £1,000,000 *Bournemouth* loan are similar to those of the recent Leeds issue, with the significant exception that the price is raised from 98 to 98½. Strong gilt-edged prices, and the attractions of the "name," as expected, ensured a ready success for the issue, the conversion lists for which close next week. Part of the *Midland Counties Electric* 3½ per cent. debenture issue is reserved for conversion of the existing 4 per cent. stock. The company has an excellent earnings record, and its future debenture obligation is well covered by earnings. The first stage of *British Oxygen* new financing is marked by an issue of 5 per cent. second preference shares of £1 at 22s. 6d. The company has made substantial progress in recent years, and its total preference dividend requirements calculated cumulatively rather than by the "prior deductions" method adopted in the prospectus) are covered seven and a half times by average net profits during the past three years. The new shares offer the satisfactory yield of £4 9s. per cent. The profits of *Walker Brothers, Limited*, a sheet metal concern, show a very rapid increase from £11,370 for the year to March, 1936, to £44,301 in the latest year, and its net assets amount to £140,024. Its issues of 5 per cent. debenture stock and 7 per cent. 10s. preference shares at par result in a "three-decker" capital structure unusual for a concern of this size. Both issues, however, will have the advantage of a sinking fund, provided from residual profits, after allocations for depreciation, taxation, "reserves" and a dividend not exceeding 7 per cent. on the ordinary capital (which remains in private hands). This sinking fund will be applied to the repayment of the preference shares at 11s. 3d. by purchase or drawings, after which it will be available to supplement the debenture redemption provisions. Particulars "for information" have been published regarding £1,000,000 4 per cent. debenture stock of *African Explosives and Industries*, and on behalf of *Jersey General Investment Trust* and *Ascot District Gas and Electricity*.

PUBLIC OFFERS

Bournemouth Corporation.—Issue of £1,000,000 3¼ per cent. stock at 98½, redeemable at par 1962 or from 1958 on notice. Holders of £650,000 6 per cent. stock may convert £100 old receives £100 new, and £1 10s. cash). Rateable value, 1938–39, £1,909,832; rates, 7s. 10d.

Midland Counties Electric Supply Company.—Issue of £1,750,000 3½ per cent. debenture stock at 100, £1,000,000 being reserved for conversion by holders of £1,000,000 4 per cent. debenture stock. Redeemable at par December, 1962, or from 1952 at 101 on notice. Owns capital of electric supply, etc., companies, serving 3,000 sq. miles. Operating companies' earnings: 1935, £628,100, 1936, £664,703; 1937, £767,352.

British Oxygen Company.—Issue of 1,000,000 5 per cent. cumulative second £1 preference shares at 22s. 6d. (Rank after £500,000 6½ per cent. cumulative preference and before £2,841,252 ordinary stock.) On winding-up, receive 2s. 6d. premium. Proceeds to repay bank advances and for new activities. Profits after depreciation: 1935, £477,497; 1936, £674,820; 1937, £809,902.

Walker Brothers, Ltd.—Issue at par of £50,000 5 per cent. debenture stock and 140,000 7 per cent. redeemable cumulative 10s. preference shares. Stock redeemable December, 1958, at 102½, or at 105 by drawings from 1939, or on notice from 1941. Preference shares redeemable by drawings from 1939 to 1958 at 11s. 3d. Makers of steel sheets, etc. Net assets, £140,024, purchased for £140,000 in 200,000 2s. ordinary shares and discharge of £120,000 bank loan. Profits before depreciation, directors' fees and commissions and interest, years to March 31: 1936, £11,370; 1937, £17,754; 1938, £44,301.

BY STOCK EXCHANGE INTRODUCTION

African Explosives and Industries, Ltd.—Particulars of £1,000,000 4 per cent. first mortgage debenture stock, placed at par less ¼ per cent. Redeemable by 1963 by drawings at 101, or on notice from July, 1948, at 102. Profits, after depreciation, years to September 30th: 1935, £900,010, 1936, £930,141; 1937, £1,029,848.

Jersey General Investment Trust.—Issued capital 250,000 £1 ordinary shares and 250,000 5½ per cent. cumulative £1 preference shares. Total assets, £655,215. Balance of profit year to April 30, 1938, £44,961.

Ascot District Gas and Electricity Company.—Issue of £30,000 3¾ per cent. stock, redeemable at par July, 1968, or from 1963 on notice. Interest ranks *pari passu* with that on existing debenture stocks. Messrs Seymour Pierce and Company take issue at 99½ net.

SHORTER COMMENTS

Company Results of the Week.—The continuance of favourable economic conditions in South Africa is reflected in the rise in net profits of SOUTH AFRICAN BREWERIES from £487,569 to £504,642. Full reports from the Powell Duffryn group confirm the satisfactory indications of the preliminary announcements. Total profits of POWELL DUFFRYN STEAM COAL are £16,240 higher at £336,084, and provide an increase in earnings for the ordinary stock from 7·1 to 7·7 per cent. to cover the increased dividend, while the surplus of WELSH ASSOCIATED COLLIERIES is 8 per cent. higher at £160,268. POWELL DUFFRYN ASSOCIATED COLLIERIES report that in 1937–38 the volume of trade—principally home trade—expanded substantially, and there was some increase in export trade, despite trade handicaps and currency restrictions. Although these advantages were partly offset by a wage increase and by higher costs of materials, total profits increased by £22,600 to £846,838. Tea companies' profits continue to show impressive improvement. JOKAI (ASSAM), whose crop was only 9 per cent. higher than in 1936, reports net profits of £113,818, against £70,862, the average price (on a London basis) having risen from 13·54 to 13·97d. a lb. A deficit is again recorded by ANGLO-ARGENTINE TRAMWAYS. Gross peso receipts in Buenos Aires were a little higher, but expenses rose in a greater proportion, partly owing to rolling stock maintenance and track renewals. The dividend of TRUSTEES CORPORATION is raised from 10 to 12 per cent., and the balance-sheet cost of securities is fully covered by the valuation. Difficulties of international trading have affected AMALGAMATED DENTAL COMPANY, whose net profits are £134,363 against £141,554. The report of HOVIS, LTD., does not comment on the decline in the net earnings for 1937–38 (which amount to £152,920 against £179,633), though it is probable that profits have been influenced by fluctuations in wheat prices.

MISCELLANEOUS

Eastwoods Flettons, Ltd.—Net profits £51,397 for year to March 31, 1938, after £10,000 to depreciation reserve (same). This compares with £52,364, including £3,635 on sale of investments. Final dividend of 9 per cent. on preferred ordinary shares makes total of 14 per cent. against 15 per cent. Deferred distribution reduced from 2s. to 1s. 8d. per share.

South African Breweries.—Net profits for year to March 31, 1938, £504,642, an increase of £6,220. To South African depreciation £63,404 (£31,386). Tax, £125,000 (£67,000). Ordinary dividend and bonus 22½ per cent., tax free. To contingencies reserve, £30,000. Carry-forward raised from £89,497 to £105,167.

Palestine Electric Corporation.—Gross revenue, 1937, £P.611,051 against £P.582,765. Amount earned for dividends, £P.227,566 (£P.217,208). To general reserve, £P.50,000 (same), and £P.12,000 (same) to preference sinking fund. Ordinary dividend maintained at 7½ per cent., free of U.K. tax. Carry-forward raised from £P24,240 to £P.25,851.

Furness Withy and Company.—Ordinary dividend is increased by 2 per cent. to 5 per cent., less tax, for the year to April 30, 1938. Payment August 19th to holders registered July 26th.

Handley Page, Ltd.—This company is issuing a further bonus to ordinary stockholders of one ordinary stock unit for every two held, by capitalising £124,465. Net profits £210,126 for 1937, against £100,181. Final ordinary dividend of 20 per cent., tax free, (equal to 55.2 per cent. gross on old capital before 100 per cent. share bonus December last). With interim of 10 per cent., less tax, year's distribution is equal to 65·2 per cent. gross on £124,465.

Powell Duffryn Steam Coal Co.—For year to March 31, 1938, income is £336,084, against £319,844. After fees of £4,376 (£4,435), preference dividends less tax absorb £11,546 (£11,840), and preferred ordinary, £21,643 (£22,192). Ordinary dividend, 7½ against 7 per cent., absorbing £288,986 (£277,467). Carry forward, £16,174 against £6,641.

John Lysaght, Ltd.—Profit for 1937, £628,370, against £477,746. To depreciation, £80,000 as before. To general reserve, £200,000 (nil). Ordinary dividend raised from 17½ to 20 per cent., tax free. Carry-forward reduced from £395,536 to £307,906. Negotiations have taken place with American Rolling Mills Company for the joint erection in Australia of a works for making high-class black sheets.

Hovis, Ltd.—Net profit for year to March 31, 1938, £122,843, a fall of £18,436. To depreciation, £20,077 (£18,354). To staff pension fund, £10,000 (£20,000). Ordinary distribution maintained at 20 per cent. To reserve, £20,000 (£30,000). Carry-forward increased from £45,383 to £60,270.

Industry and Trade

Employment Returns for June.—The returns for June 13th show that the decline in the numbers employed continues. Compared with May, 1938, there were 42,000 fewer insured persons, aged 16 to 64, in employment and 326,000 fewer than in June of last year. The numbers unemployed on the register rose from 1,778,805 in May to 1,802,912 in June; the increase is partly accounted for by temporary stoppages, due to local holidays and to extensions of the general Whitsun holiday. Greater unemployment was recorded in the cotton, boot and shoe, iron and steel and engineering trades, and there was a seasonal decrease in the numbers employed in coal mining. On the other hand, the hotel and boarding-house trades, agriculture and the distributive trades showed a seasonal increase in employment. Compared with June, 1937, the number of unemployed has risen by about 500,000, of which increase the cotton industry accounts for more than one-fifth.

* * *

Better Cotton Prices.—The Liverpool price for American middling cotton, which had fallen to 4.20d. per lb. on May 31st, has passed the 5d. limit this week for the first time since the middle of March. The rise was due less to a revival of consumers' buying than to a contraction of offerings and some speculative activity. Apparently operators in cotton are feeling that the price of the product has fallen too much in recent months and that a major rally is justified, particularly as there are continuous reports of increasing insect activity in some of the leading American cotton districts. The next American crop is not expected to exceed 12 million bales, less than one-third of last year's record crop, and may be even below that figure. Nevertheless, the carry-overs of both American and outside cotton will be so high at the end of the season (July 31st) that the size of the new crop will play a much smaller rôle on the market this year than it usually does. In fact it appears that, in spite of the smaller new crop, total supplies of cotton in 1938-39, owing to the record carry-overs, will be not much smaller than the record supply of 1937-38. It is true some 7,000,000 bales of cotton will be held by the United States Government at the end of this season, as their loan scheme will almost certainly be prolonged for another year, but nevertheless total supplies of free cotton will remain well above requirements during the next twelve months. A true and major improvement in cotton prices, therefore, can only come from an increase in consumption. So far, however, the state of international cotton consumption is anything but satisfactory. In the first nine months of this season world consumption of all growths reached only 20,196,000 bales, against 23,173,000 bales a year ago, while consumption for the whole of the 1937-38 season is expected to be 27,100,000 bales, against 30,900,000 bales a year ago. In the United States recent consumption figures showed a decline of over one-third on the year. In Japan consumption has been compulsorily curtailed to the lowest possible level, and for Lancashire the June report of the Joint Committee of Cotton Trade Organisations does not see even a trace of any temporary recovery. There are some hopes that the possible revival of industrial activity in the United States and the prospects of trade revival in Europe will stimulate the demand for cotton in future, but so far these hopes are not yet tangible enough to provide a safe basis for a further improvement in the price of cotton.

* * *

Tin Buffer Stock Scheme.—The details of the buffer stock scheme for tin were published by the Colonial Office this week. It will be recalled that a referendum of producers in Malaya had resulted in a majority of two to one in favour of the buffer stock scheme, and on June 20th the International Tin Committee, representing all the Governments concerned except Siam, approved the proposed draft scheme. At that meeting the Committee decided that the quota under the control agreement for the quarter beginning on July 1st was to be 35 per cent. of standard tonnages (the standards being augmented in the case of Malaya and Dutch East Indies by 7½ per cent.) and that the contribution to the buffer stock for the same quarter should be a quota of 10 per cent. of standard. The initial stock is to consist of about 10,000 tons of tin, which may be increased to a maximum of 15,000 tons by a resolution of the International Tin Committee. The committee will fix a special quota from time to time for the purpose of providing the buffer stock, and each party to the control scheme will contribute to the buffer stock *pro rata* to its standard tonnage. The first contribution is to be handed over not later than October 31, 1938, and the balance not later than January 31, 1939. If any party elects to contribute less than its permissible quota the balance is to be offered *pro rata* to the other parties. The tin contributed to the buffer stock is to be of a quality which complies with the requirements of the London Metal Exchange, and the contributions may take the form of tin or London Metal Exchange warrants, or warrants on any other warehouse or approved documents of title. All contributions to the buffer stock are to be included as soon as possible in the "visible supply."

* * *

The buffer stock will be operated by an executive body headed by a manager and assistant manager, who will be appointed by a sub-committee of the International Tin Committee. No person who is concerned in the production, smelting or marketing of tin is eligible for appointment as manager or assistant manager. With the exception of certain specified information to be furnished to the International Tin Committee, the operations of the executive will be strictly secret. Buying or selling will be carried out through "dealing members" of the London Metal Exchange only and in such a way as to spread transactions as far as possible among all members. Any cash balances standing to the credit of the buffer stock in excess of £2,500,000 are to be distributed to the signatories in proportion to their contributions. The scheme is to end at the same time as the International Tin Agreement; but provision is made for orderly liquidation of any stocks which may be held at that date. One feature of this buffer stock scheme which will be required as a necessity is that the executive should be, like Cæsar's wife, above suspicion. The speculators who profit by wide fluctuations in tin prices on the London Metal Exchange will not at all welcome the provision for secrecy; but secrecy is, of course, as essential for pool operations in tin as it is for operations of the Exchange Equalisation Fund. The present objective of the scheme is to maintain a price between £200 and £230 per ton, and if Wall Street bullishness prevails, and business confidence is restored, the tin control may have difficulty, without buffer pool selling, in preventing the price of tin soaring above £230 per ton, seeing that the existing quota (including 10 per cent. for the buffer pool) is only 45 per cent. of standard tonnages. If the price of tin is really to be stabilised, the mechanism of a buffer pool does become an essential part of the system of control. The practical test of the new scheme, however, as distinct from its theoretical justification, can come only from the manner in which experience reveals its operations.

* * *

New Fall in Shipping Freights.—As we foreshadowed a month ago, the May fractional increase in *The Economist* shipping freight index number was only a temporary check to the decline. The June index number is 96.1, representing a fresh fall of 1.7 points since May.

The Economist INDEX OF FREIGHT RATES
(1898 – 1913 = 100)

	Average, 1913	June, 1937	Mar., 1938	Apr., 1938	May, 1938	June, 1938
European waters	110·0	166·8	109·3	108·2	109·2	107·3
North America	113·1	120·7	110·6	114·0	111·0	108·0
South America	123·4	151·4	129·6	131·7	132·3	127·0
India	106·3	158·4	120·0	106·0	111·7	111·9
Far East and Pacific	117·4	159·3	111·8	109·2	106·2	104·7
Australia	127·9	165·5	111·6	113·0	113·0	112·8
Total	116·3	157·0	115·5	113·7	113·9	111·9
1913 = 100	100·0	134·9	99·2	97·7	97·8	96·1

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	102·2	+ 3·2	South America :—		
Bay—outwards	97·2	+ 5·5	Outwards	99·1	−11·5
Bay—homewards	140·3	+ 1·6	Homewards	155·0	+ 0·9
Mediterranean :—			India—outwards	101·1	− 2·1
Outwards	87·1	− 1·0	India—homewards	122·7	− 2·5
Homewards	114·9	+ 9·4	Far East, etc.	104·7	− 1·5
North America	108·0	+ 3·0	Australia	112·8	− 0·2

Rates for the home trade remained firm, but Bay and Mediterranean rates were lower. There was a sharp fall in the rates outward to South America, while those for North America and Far Eastern waters were on the whole weaker.

* * *

Anglo-French Coal Conference.—The difficulties which have arisen between France and Great Britain over the administration of the French coal import licensing system, and the operation of the coal-pitwood barter agreement of June, 1934, have been the subjects of a conference in Paris during the last fortnight between representatives of the French Government, importers, and consumers, on the one side, and representatives of the British Government, colliery owners, and coal exporters on the other. The datum period chosen originally by the French Government for the determination of import quotas was 1928/30, and in that period the proportion of the total imports of coal, coke, and patent fuel supplied by Great Britain was just over 40 per cent. This proportion has steadily declined. In 1937 it was approximately 33.7 per cent., while since the beginning of the current year it has fallen to 26.4 per cent. Under the Anglo-French Trade Agreement of June, 1934, an arrangement was entered into for the exchange monthly of 40,000 tons of British coals for French pitwood, in the proportion of 2 tons of pitwood for 3 tons of coal. South Wales colliery owners have been purchasing regularly the specified quantities of French pitwood under this barter transaction, but the corresponding quantities of South Wales coals have not been taken by French importers, and the accumulated arrears now exceed 300,000 tons. Another British grievance is that the French railway companies have reduced enormously their purchases of South Wales locomotive coals. These are the three principal questions considered by the conference from the British side. The French aspects of the controversy concern chiefly the trade balance and the welfare of the French coal-mining industry. The French Government has represented that the exchange position has compelled it to restrict coal imports from all sources, particularly in view of the enormous increase in the cost of foreign coals as a result of the devaluation of the franc and the greatly increased f.o.b. prices. They state that the decline in the British share of the quota for foreign coals has been due partly to the altered character of the demand (i.e., for more coke and for less raw coal), partly to the decrease in the imports of bunkering coals, and partly to the fact that, by the terms of the Agreement of 1934, French consumers were given the right to buy freely from any source their bunker coal, metallurgical coal, and supplementary and complementary allocations, totalling in the aggregate about 50 per cent. of the total imports of coal, coke and patent fuel. The Government is also obliged to secure French colliery capital and mining labour as far as practicable from foreign dumping. Negotiations are continuing between the two Governments over the determination of general coal quotas and the disposal of the arrears, but an agreement was reached for the exchange of 120,000 tons of Welsh coal at the reduced exship price of 22s. 3d. per ton for 80,000 tons of pitwood during the next four months.

Changes in the Coffee Market.—The 1937-38 coffee season, which has just come to an end, has brought about a substantial change in world coffee deliveries. For the first time for years Brazil, the pre-eminent supplying country, has been able to improve its position slightly against that of the smaller producers. In the first eleven months of the season Brazil supplied 13,402,000 bags of coffee to the world market, an increase of slightly over 400,000 bags on the year. Simultaneously, the deliveries of non-Brazilian coffee declined by over 180,000 bags to 9,986,000 bags. The rise in the Brazilian figure is chiefly due to the higher deliveries to Europe, a market on which Brazil's losses were particularly heavy in the preceding years. As the change in the trend of Brazilian deliveries started to make itself felt in November, 1937 (in the first four months of the season Brazil had actually lost further ground), there is no reason to doubt that the improvement was solely due to the change in Brazil's coffee policy late last autumn. The past few months, therefore, have proved convincingly that the reduction in the Brazilian coffee export tax, the concessions to Brazilian exporters regarding the quotation of coffee drafts and the discontinuation of purchases in the free market by the Brazilian National Coffee Department were steps in the right direction. Although they have resulted in a substantial fall in international coffee prices, and thus in Brazil's coffee proceeds, they have put an end to the continuous decline in Brazilian deliveries experienced during the past few years. For the 1938-39 season the prospects for a further increase in Brazilian supplies at the expense of the smaller producing countries are even better than they were during the past twelve months, as the new crops of some of the non-Brazilian producers (and particularly that of Colombia,

Oil from Coal.—At the annual meeting of Low Temperature Carbonisation, Ltd., at the end of last week, Colonel W. A. Bristow, the chairman, gave an impressive account of the company's activities. In spite of the warm winter and spring, the company's sales and profits are making records and the potential output is being extended considerably by a number of new constructions. The Bolsover coalite plant is now working at capacity, and the Barugh and Askern works have been improved by the addition of further plant and machinery. The large coal oil distillation plant at Bolsover is progressing and its first part is now being started up. Moreover the coalite plant in South Wales is under construction and should be completed next winter. These developments give the impression that the British output of oil from coal is rising at a rapid rate. In fact, however, in all low temperature carbonisation processes oil is produced only as a by-product, the chief product being a semi-coke (smokeless fuel). According to a reply of the Secretary of Mines in the House of Commons some months ago, only 1 million gallons of light oil (petrol) and 6 million gallons of heavy oil (partly Diesel oil) were produced by low temperature carbonisation in this country in 1937, compared with 0·8 and 3·7 million gallons respectively in 1936. Hydrogenation on the other hand supplied 35 million gallons of light oil last year against 33·3 million gallons in 1936. Consequently the rise in Britain's oil from coal production will be determined by the development of the hydrogenation rather than by that of the low temperature carbonisation method. In hydrogenation, however, no new developments are to be expected for the time being. At the annual meeting of Imperial Chemical Industries (the only company producing oil from coal by hydrogenation in this country) at the end of April last, Lord McGowan pointed out that his company would not extend its commitments in hydrogenation development for at least another two years even if the guarantee of State protection were unlimited. In spite of the successful operations of Low Temperature Carbonisation, Ltd., therefore, no major increase in Britain's oil from coal production is to be expected during 1938 and 1939.

Business Activity in India.—We congratulate *Capital*, the well-known Indian financial review, on the publication of an index of business activity for India. The basis and methods of computation are broadly the same as those of *The Economist's* index—the figures being a geometric mean of thirteen series from which normal seasonal fluctuations have been eliminated, and the base year being 1935. But while changes in industry and commerce can be regarded as a fair measure of fluctuations in British national income, the case of India is somewhat different. An overwhelming proportion of India's population is engaged in agriculture, and a relatively large amount of agricultural output is consumed on the spot. As an indication of conditions, however, in Indian trade and industry—particularly large-scale trade and industry—the new index admirably performs its functions. A glance at the annexed chart shows how closely the Indian index has followed the British in recent years, though the recent business recession seems to have been sharper in India than in this country. The slightly greater fluctuations of *Capital's* index may be due to the absence of as comprehensive and, therefore, as stabilising a factor as our own figures of insured workers in employment. Rail and river-borne trade and cheque clearances, the nearest Indian equivalent, account for 44 per cent. of the Indian index, but cheque clearances are far from having the same representative quality in India as in Great Britain.

Allocation of Milk Supplies.—In the four years of its life, the Milk Marketing Board has erected 11 new creameries and five milk depots in various parts of England, which are concerned in the manufacture of milk products—butter, cheese or condensed milk. This policy of the Board has brought difficult relations with the previously established manufacturers, who are thus both its competitors and customers, since the Board is a party to the sale of all milk from the farms. The manufacturers claim that the Board's competition is unfair, since the Board is not an ordinary business concern and that there is now in many districts insufficient milk for both the old and the new plants. They also claim that the Board has brought unofficial pressure to bear on the farmers who had been supplying the older creameries in order to obtain their output of milk for its own creameries. The Board have defended their policy by stressing its need for information on manufacturing costs, but it can hardly need sixteen creameries and depots to obtain information which could have been got far more cheaply by buying a couple of the already existing plants; it is probable that the Board is, in fact, anxious to get as much as possible of the milk surplus to liquid requirements under its own control. Another source of contention between the Milk Marketing Board and the manufacturers has arisen over the allocation of "calls" for the liquid milk market in the winter months. During the temporary stringency in the supplies of liquid milk last winter, the Board, exercising powers under its agreement with the manufacturers, "called up" various amounts of manufacturing milk, against the payment of compensation. But the proprietors of the plants concerned, while they agree to the necessity of the diversion of milk, naturally object to its execution by one of their own competitors. This seems, indeed, to be a function which should be exercised by an impartial body, such as the proposed Milk Commission. It is unfortunate that the promised Milk Bill, which was to have set up such a Commission, has been postponed until the next session of Parliament.

Foreign Trade of Turkey.—The House of Commons discussed this week the Anglo-Turkish Credit Agreement Bill, by which the British Government granted a loan of £6,000,000 to the Turkish Government to be used for the purchase of defence material in Great Britain. Another credit of £10 millions was previously arranged with the assistance of the Export Credit Guarantee Department, and these may help to check the falling trend of British trade with Turkey. Between 1932 and 1937, British imports into Turkey fell from 12.4 per cent. of the total to 6.2 per cent. and the British share in the total of Turkish exports fell from 9.8 per cent. to 7.1 per cent. During this period both Germany and the United States have increased their trade with Turkey. Last year Germany bought 36.5 per cent. of Turkey's exports against 13.6 per cent. in 1932, and supplied 42.1 per cent. of her imports, compared with 23.2 per cent. in the earlier year. The United States supplied 2.6 per cent. of Turkey's imports in 1932, but 15.1 per cent. in 1937; the proportion of Turkey's exports bought by the United States, however, increased only from 11.9 per cent. to 13.9 per cent. The value of Turkish foreign trade is still increasing; the value of imports rose from £T92.5 millions in 1936 to £T114.4 millions in 1937, and that of exports from £T117.7 millions to £T138 millions. The greater increase in imports led to a considerable fall in the export surplus, from £T25.2 millions to £T23.6 millions. Iron and steel, cotton goods and machinery are the largest items in the import trade and accounted in 1937 for 44.1 per cent. of the total. Turkey's main export is tobacco, which supplied 31.8 per cent. of the total value of exports in 1937; exports of fruit and cereals are also important, and they account together for about a third of the total value of Turkish exports.

Selling Vacuum Cleaners.—On February 5th we published an article on "Machinery in the Home" which discussed, *inter alia*, the causes of the marked decline in the average price of vacuum cleaners sold in this country from £13 19s. in 1930 to £8 in 1934. The view was then expressed that this fall was largely due to a reduction in the proportion of sales of vacuum cleaners effected by door-to-door selling. This interpretation has since been questioned by a representative of one of the most important manufacturers of vacuum cleaners. He contends that, so far from there having been a decline in the number of cleaners sold by door-to-door salesmen since 1930, there has in fact been a considerable increase. In September, 1931, a duty was imposed on imported vacuum cleaners. As a result, domestic production increased almost tenfold, from 37,550 in 1930 to 318,000 in 1934. To a considerable extent, it is claimed, this increased output was of a lower standard of quality than the machines which had previously been imported. These facts, our correspondent argues, sufficiently explain the fall in price to which our contributor drew attention in his article. The door-to-door salesman is by no means disappearing from the business; and no change in selling methods can be adduced to explain the fall in prices.

* * *

Wholesale Prices Firmer.—For the second fortnight in succession British wholesale prices have been rising, and this fortnight the increase is more marked. *The Economist's* complete index is 1·3 per cent. higher, while British prices of primary products have risen by 1·9 per cent. In the United States the movement is not quite so definite. There has been a relatively sharp advance of 3·9 per cent. in the prices of primary products, but the Irving Fisher general index number is slightly lower than a fortnight ago. Wholesale prices on the Continent show a slight upward tendency.

The following table shows the movement of the various groups comprised in *The Economist* index number :—

The Economist INDEX
(1927 = 100)

	Sept. 18, 1931	June 30, 1937	June 22, 1938	July 6, 1938
Cereals and meat...	64·5	91·2	87·0	89·1
Other foods	62·2	67·5	57·8	56·8
Textiles	43·7	70·7	51·5	52·8
Minerals	67·4	106·5	91·7	93·4
Miscellaneous	65·8	86·1	75·0	75·4
Complete index	60·4	84·3	72·0	72·9
1913 = 100	83·1	116·0	99·1	100·3
1924 = 100	52·2	72·8	62·2	63·0

The rise in British prices is mainly in raw materials. In the textile group, raw cotton, wool tops, flax and jute are all higher. There has been a general advance in non-ferrous metals. In the miscellaneous group timber and hides are cheaper, but there was a sharp advance in rubber and a lesser increase in linseed oil. Food prices were less definite in their movements. Meat, bacon and potatoes were higher, and there was also a recovery in maize, but flour, tea, cocoa and butter were all cheaper.

INDUSTRIAL REPORTS

THE figures for unemployment in June published by the Ministry of Labour this week and discussed in a note on page 88 show a further increase, but reports from the main industrial centres are not unduly depressed. The falling-off in the demand for coal is largely seasonal and business in iron and steel in most districts is considered satisfactory for the time of year. Inquiry is improving in nearly all trades, but little new business has been settled as yet. This is particularly true in the case of the cotton textile trade, where the most important event on the market is the advance in raw cotton prices, but where many producers describe sales as disappointing. It is now very widely felt that any important improvement is unlikely before the autumn, but it is also fairly confidently expected that there will be an increase in industrial activity then.

Coal

Sheffield.—The demand for coal is generally quiet, and while industrial demand is steady, consumption is smaller on account of short-time working in some branches of industry. Gas and house coal supplies are accumulating in view of reduced requirements. Stocks of blast-furnace coke are increasing as a result of the smaller number of furnaces now operating. Business in large patent oven and graded coke for central heating is dull. The export market shows no improvement, and the outlook is by no means cheerful. Washed nuts and smalls have been marked down sixpence per ton, but little business is attracted. Other prices, for both inland and export, are unaltered.

★

Newcastle.—Market conditions here are little changed. Northumberland shows little improvement, but there is a feeling that prices will shortly become more stable, as there has been a fair amount of buying ahead by consumers in the Scandinavian countries. Furthermore, this coalfield is regaining home trade which was lost twelve months ago. The Durham section is very quiet; there is a scarcity of trade in all grades and short time is a common occurrence. Export trade in patent oven coke is more brisk, substantial contracts having been completed at minimum prices for delivery over next season.

★

Glasgow.—There are no indications of improvement in demand on either home or export account, and the usual pre-holiday shipping activity seems likely to be absent this year owing to the existence of ample stocks at Continental depots. Despite restricted production in most areas supplies are fully adequate for current requirements. Denmark has been sending one or two useful orders. Lanarkshire and Ayrshire are suffering from reduced household, industrial and overseas demand.

★

Cardiff.—Colliery steams were disorganised last week by delays in the arrival of tonnage owing to the gales, and shipments in the foreign and coastwise trades totalled only 352,000 tons, compared with 416,100 tons in the previous week, and 416,572 tons in the corresponding week last year. The shipping position has improved over the week-end and loadings have been a little more active. The demand for ordinary steam smalls is quiet, but the reduced outputs of large steams are being almost entirely absorbed under contracts, while sized classes are relatively scarce. Prices are nominally unchanged. The course of the Anglo-French negotiations on the French import of British coal are discussed in a Note on page 89.

Iron and Steel

London.—The usual quiet summer conditions prevail in the iron and steel markets, and there is considerable irregularity in the rate of operations now ruling in the different departments, says the official report of the London Iron and Steel Exchange.

New business in the pig iron market is on a very limited scale, and most consumers are using their stocks and deliveries received against old contracts. The tendency to limit production to demand continues and has led to a reduction in the number of furnaces in operation.

Business in the semi-finished steel department has also been affected by the heavy stocks which have not yet been absorbed. Recently there have been indications that some consumers are again interested in the market. This section of the industry, however, is working below capacity, and it is not expected that the demand will revive fully until the early autumn.

The brighter tone which was noticeable recently in the finished steel department has been maintained, but there has been no important improvement in the volume of new business. The heavy steelworks are provided with orders sufficient to keep them occupied for some time, and recently the lighter sections of the industry have experienced an improvement in demand. Export business continues to be restricted by adverse trading conditions, and overseas consumers are pursuing a policy of buying from hand to mouth.

★

Sheffield.—There is no indication of substantial improvement over the next few weeks. Consumers have substantial stocks in hand, and there is no need for them to come into the market. Forge and foundry iron are exceedingly quiet, but basic is rather better. For special qualities of hematite there is a fairly good demand. Not much change can be reported in finished iron; the position of common bars is more satisfactory than that of crown iron, which is neglected.

There continues to be a good demand for acid and basic steel, although requirements are much below those of six months ago. Stainless steel sheets are a big feature, and business in wire rods is fairly substantial.

The staple industries in this district are fully employed, and there is plenty of work in heavy castings and forgings. Production of crucible and electrically melted steel is at a high level. The lighter steel branches are rather patchily employed, but the call for engineers' tools is well maintained.

★

Middlesbrough.—Shipments of all classes of pig iron, manufactured iron and steel from the Tees during June amounted to 31,350 tons, which is 9,400 tons lower than the previous month, and is the lowest total for some time. The outstanding feature is the fact that shipments of pig iron during the first half of this year amounted to only 9,000 tons, whilst during the first half of last year the quantity shipped was approximately 50,000 tons. During the six months ending June 30, 1938, eleven furnaces have been put out of operation in this area.

There is no change in the iron trade position, and the existing stocks do not encourage the hope of any change before the autumn. Cleveland foundry iron production is practically suspended and basic iron is more than sufficient for requirements.

East Coast hematite also continues in surplus supply, and unless there is an increase in the demand it is expected that more furnaces will be put out of operation.

★

Glasgow.—The position in the West of Scotland is considered quite satisfactory for this time of year, when a slackening of demand is normal. Steel plants are still running to capacity, and there has been no serious curtailment of operations at other plants. Makers of finished material are particularly busy, and heavy tonnages are being supplied to users in all parts of the country. No improvement is reported by the tube makers in this district, who are experiencing a very quiet spell.

★

Cardiff.—There has been a slight improvement in the undertone of the tinplate market. In the week ended June 25th production equalled 44.03 per cent. of capacity compared with 38.47 per cent. the previous week, and operations have been resumed this week at some of the Llanelly furnaces. Shipments of tinplates at Swansea in the week ended June 30th totalled 4,408 tons as against 3,185 tons the previous week and 8,793 tons a year ago. The sheet market continues quiet for both the inland and export trades. Prices are nominally unchanged.

COMPANY MEETINGS

P. & O. BANKING CORPORATION LIMITED

NEED FOR CAUTIOUS POLICY

The eighteenth annual meeting of the P. and O. Banking Corporation, Limited, was held, on the 1st instant, at 122 Leadenhall Street, London.

Mr A. d'Anvers Willis (the chairman) expressed his regret at the retirement of Mr Gubbay from the general managership of the bank, and his pleasure that Mr Gubbay would continue in the capacity of deputy-chairman. Mr C. E. Malkinson, of head office, had been appointed to succeed Mr Gubbay as general manager.

Continuing, he said: I remarked last year that a greater volume of suitable advances would be required to enable us to maintain profits at the level of previous years, and although the earlier months of our financial year were full of promise in this respect, the course of world events prevented the promise developing into reality. Our business in the Far East received a rude shock following the outbreak of the Sino-Japanese hostilities and, of course, expansion in that sphere of our activities became out of the question. All our efforts had to be concentrated instead on safeguarding the bank's position in Shanghai, while at the same time having due care for our customers' interests. In this we received the fullest measure of assistance from Mr Booth, who was our manager in Shanghai during those very trying months from August until February, 1938, and from the bank's Compradore, Mr Zee Mao Dong. I cannot speak too highly of the bearing of our Shanghai staff through the whole period when Shanghai was a war area.

The reduction in our profits this year, which is attributable directly to the Shanghai situation, has been kept within modest bounds by the successful efforts made to protect the bank's interests in that centre. Full provision has been made for all doubtful accounts in Shanghai as elsewhere, and the inevitable loss incurred in Shanghai exchange and the depreciation of our holding in Shanghai Municipal debentures has been provided for in full.

NEED FOR CAUTION

Turning to our other fields of operation, the sharp fall in commodity prices, the causes for which have been so thoroughly ventilated by economists and others that it is unnecessary for me to cover the same ground again, made a cautious policy on our part necessary. Therefore, while our trade advances to customers have been on the whole fully maintained, the increase which you will see of £1,200,000 in our advances was almost wholly accounted for by the use of funds at home in short and temporary loans of a gilt-edged character.

The figures on both sides of the balance sheet are also affected by the rates of conversion adopted this year of 1s. for the Shanghai dollar against a rate of 1s. 3d. in last year's balance sheet. Hongkong dollar balances, rupee balances and Straits dollar balances have again been converted at 1s. 3d., 1s. 6d. and 2s. 4d. respectively,

Our holdings of investments were depressed at the end of our financial year, due to the crisis in Europe during that month following the German march into Austria.

THE OUTLOOK

The predominating feature of the world situation at the present moment as I see it, particularly in those countries in which we are operating, is the uncertain outlook created both by the existence of political tension and the restrictions which hamper the interchange of primary commodities. Were an improvement to take place in American business conditions and sentiment it is possible that a rise in commodity prices might follow. Such a rise in itself might not necessarily bring about an increased volume of business in the areas in which we are working so long as there is the present lack of confidence created by the continuance of political tension and the abnormal conditions which prevail in China.

Although our profits are lower this year, I feel sure that the shareholders will approve of the provision made by the directors out of the profits of the present year of £5,000 to the officers' pension fund.

The balance-sheet as well as the profit and loss account of the Allahabad Bank, Limited, is attached to our report, and this reveals another year of such successful effort by that institution that I feel no hesitation in asking shareholders again to endorse our feeling that the board and the management of that bank deserve our sincerest congratulations.

The report and accounts were unanimously adopted, and the payment of a dividend of 4 per cent. per annum, less income tax at 4s. 4d., was approved.

NATIONAL BANK OF NEW ZEALAND, LIMITED

TRADE POSITION IN THE DOMINION

The sixty-sixth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 7th instant, at 8 Moorgate, London.

Sir Austin E. Harris, K.B.E. (the chairman), said that the profit for the year, after appropriations to contingency accounts, out of which full provision had been made for bad and doubtful debts, exchange, a new item in N.D.C., and other contingencies, was £105,727, which was £2,889 more than last year. The difficulties to which he referred last year—loss of exchange business, low interest rates and the increase in cost of labour, all enforced by legislation—remained with them. He thought they would agree, therefore, that the improvement in profits this year was very satisfactory, especially as it had been achieved after providing considerable increases in staff salaries. Shareholders had already received an interim dividend of 4 per cent. per annum, free of tax, and they now proposed a final dividend for the half-year to March 31st last at the rate of 5 per cent. per annum, less tax.

The value of the overseas trade of the Dominion for the year was considerably in excess of that of the previous year. Exports were valued at £52,215,000 sterling, an increase of £3,834,000, whilst imports increased by £8,388,000, so that the favourable trade balance fell from £10,131,000 to £5,577,000 sterling.

LEGISLATION

During the year the Government had devoted much time to the development of its plan for National Superannuation and Health Insurance. The plan contemplated the formation of a new Social Security Department, and the benefits included a pension of 30s. a week to both men and women at age 60, with an allowable income of 20s. a week from other sources. Those receiving an income of £2 10s. or more would not benefit. Other provisions included the free service of a general practitioner to all members of the community and free hospital and sanatorium treatment.

That scheme, in the form in which it had been made public, must involve a heavy drain on the future finances of the Dominion, as well as a serious burden on the individual taxpayer. It was, however, premature to make definite criticism before the details of the Bill which would be submitted to Parliament had been published.

He had told shareholders last year that the board were hopeful that they would be able to participate in the returning prosperity of the Dominion. This they had, to a limited extent, been able to do. Throughout the year 1937 New Zealand enjoyed a period of prosperity which resulted in improved trade figures and increased demand for bank advances. The high total of their advances showed that they had been able to meet considerable demands for increased accommodation from their customers, but they had reached the stage when they must be careful not to encourage over-trading. There had recently been some evidence of a falling off in business activity, accompanied by a fall in the favourable trade balance. Those two factors could probably be attributed to the fall in the value of wool, trade recession in the rest of the world and political uncertainty in New Zealand itself. The approach of a General Election was always a disturbing factor, and it was not surprising that many people in New Zealand were adopting a cautious attitude and were slow to undertake commitments until the result of the election to be held before the end of the year was known.

SIGNS OF RETURNING CONFIDENCE

They were anxious at all times to assist the industry and production of New Zealand to the best of their ability, but they would be failing in their duty as bankers if they shut their eyes to the danger that might arise from overstocking at a time of uncertainty for trade and a continuance of large imports when exports were bringing in a smaller return. During the past two years there had been a considerable fall in the net overseas funds of the reserve bank and trading banks. In this connection it was pertinent to remember that over £17,000,000 of New Zealand Government bonds fell due for repayment in London at the beginning of 1940, but he had no doubt that this was being borne in mind by the Dominion authorities.

In spite of all this, he was hopeful that the signs of returning confidence and the easing of international tension which during the last few weeks had shown themselves might be the precursors of a general economic recovery and might lead to better times ahead.

In conclusion, he announced that he had decided to retire from the chair and would be succeeded by Lord Balfour of Burleigh.

The report was unanimously adopted.

IMPERIAL BANK OF IRAN

DIVIDEND MAINTAINED

The forty-ninth ordinary general meeting of the Imperial Bank of Iran was held, on the 6th instant, at 51 Gracechurch Street, London, Colonel Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E. (chairman of the company), presiding.

The Chairman, in the course of his speech, said:—I shall deal first with the figures of net profit, which are £11,456 less than last year. Part of this reduction is due to higher taxation, including National Defence Contribution. The rest of the reduction is fully accounted for by a special and, we hope, temporary reservation under the heading of Exchange. As you will remember, transactions in foreign exchange in Iran have been under Government control since March, 1936, at the official selling rate of 80½ rials per £ sterling. The demand for foreign exchange is, however, greater than the supply, and there is accordingly some delay and difficulty in meeting the requirements of the market. As a result of this our exchange requirements in Iran for remittance to London, to meet sterling disbursements and to transfer the profits of our business in Iran, are, to some extent, in arrears. We are assured by the authorities concerned that we shall get this exchange in time, but we have considered it advisable to make a conservative reservation under the heading of Exchange before arriving at the present figures of net profit.

As a consequence of this regrettable necessity we are unable this year to add anything to reserve account, which therefore remains at the figure of £750,000, while the amount carried forward again shows a small increase. Our ability, notwithstanding the lower net profit, to recommend the same distributions as have been made for the past eight years may be taken as the fruit of our past conservatism in this country, not less than as evidence of our trust in the assurances of the authorities in Iran.

THE BALANCE SHEET

The total figures of the balance sheet show a reduction of £100,000. Deposits are £200,000 higher. Bills payable, etc., shows little change. Acceptances are down by £264,000; part of this is due to lessened activity in exports from Iraq and the rest is accounted for by a reduction in guarantees relating to railway and other capital construction in Iran.

On the other side of the balance sheet, the cash item shows little change. Investments are increased by some £210,000. Discounts, loans and advances are increased by £273,000. The greater part of the substantial total under this heading is employed in financing internal business in Iran, where we take our due share in assisting trade and industry.

Bills receivable shows a reduction of some £288,000 on last year, which reflects partly reduced export business from Iraq as compared with an abnormally active season in the previous year, and partly a reduced share in the foreign trade of Iran. Under the barter arrangements concluded in August, 1935, with Russia, and the clearing agreement made in October, 1935, with Germany, an increased proportion of the foreign trade of Iran has gone to those countries, and in most of this business we are unable to assist as bankers. Even in the trade of Iran with Britain our activities are impeded by the diversion of business under conditions detrimental to open competition. As against these reductions in import and export banking, our internal bill business in Iran has increased in conformity with the higher level of industrial production in Iran.

Bank premises, furniture and stationery now stand at the nominal figure of £1,000. I need hardly say that the actual cost of our property in Iran represents a substantial figure of capital which is still invested there.

THE POSITION IN IRAN

The Government of H.I.M. the Shah continues to prosper under his firm and resolute statesmanship. The betrothal of H.I.H. the Crown Prince to H.R.H. Princess Fowzieh of Egypt is an event of good augury for the future. The Transiranian Railway, a project that imagination boggled at ten or fifteen years ago, is expected to be open for through traffic in two months' time, but His Imperial Majesty does not rest on achievements, however great, and projects for further railway and other development are already under consideration.

The increasing industrial development of Iran, with its attendant expansion of credit, has occasioned a marked rise in wages and in the cost of living, and the efforts of the authorities have recently been directed to correcting the upward movement in prices.

The report and accounts were unanimously adopted, and a final dividend of 7s. per share and bonus of 2s. per share, both payable free of income tax, were approved.

ANGLO-SPANISH CONSTRUCTION COMPANY, LIMITED

INCREASED VOLUME OF TRAFFIC

The thirteenth ordinary general meeting of the Anglo-Spanish Construction Company, Limited, was held, on the 6th instant, at 1 London Wall Buildings, London, E.C.

Mr David McA. Eccles (the chairman) said that the cash position of the company had changed very little during the year, and the board did not consider it wise to take any decision regarding the disposal of the cash in hand until the situation in Spain became clearer.

The results of the exploitation of the Santander-Mediterraneo Railway showed a marked improvement, and a surplus of Ps. 640,000 over running expenses had been earned during the year. Well under half the total traffic was of a military character, and the volume of civilian transport was steadily increasing. The great importance of the railway to the economy of Spain had been demonstrated beyond question.

Continuing, the Chairman said:—We are concerned in a business undertaking in a country where a bitter civil war is being waged, throughout the course of which the British Government have wisely adhered to an attitude of strict neutrality. We can only speak with authority of conditions in those areas where we operate and of which we therefore have first-hand knowledge.

The Santander-Mediterraneo Railway traverses for a distance of some 300 miles country which has been in General Franco's hands from the beginning of the war. Here we have the testimony of our own staff and the evidence of our operating conditions and results. Food is plentiful, and the cost of living has shown no tendency to rise except where imported articles are concerned. Labour is rather scarce, but the company's employees have worked exceptionally well and handled a larger volume of traffic without a corresponding increase in their numbers. Business in Castile is flourishing, and a number of new undertakings have sprung up to supply the gap created by the severance from Nationalist Spain of such cities as Madrid and Barcelona. We believe that some of these undertakings will remain and that our traffic may therefore be permanently enlarged. But it is not possible, in existing circumstances, to speak with confidence about conditions in the immediate future. The hope shared by every well-wisher of Spain, and this country is conspicuously among their number, is that there may be a speedy termination of hostilities and that with the end of the civil war we may witness an early execution of a large programme of political and economic reconstruction.

The report and accounts were unanimously adopted.

LOBITOS OILFIELDS, LIMITED

SUBSTANTIAL INCREASE IN PROFITS

The thirtieth annual general meeting of Lobitos Oilfields, Limited, was held, on the 4th instant, in London.

Mr H. C. R. Williamson (the chairman) said that the net profit for the year amounted to £262,367, and the directors recommended a final dividend of 5 per cent. and a bonus of 5 per cent., both subject to income tax at 5s., making 15 per cent. for the year.

The tanker fleet had been fully employed throughout the year at considerably improved average freights, and showed a substantial profit—the first, with the exception of the very small profit for 1936, since 1931. Freights recently had had a serious decline, but as some of the vessels were engaged in carrying crude oil for their own refinery requirements, and others were on time charters fixed some time ago, the present low rates would not affect them to any great extent in the current year.

The refinery at Ellesmere Port was now on a profit-earning basis. The results for 1937 were satisfactory and completely justified the venture. The additions and alterations referred to last year had been partly completed and they were already turning out some of the lubricating oils of improved quality for which the plant was designed while the remainder of the plant, now nearing completion, would permit a full line of superior oils to be produced.

The Peruvian subsidiary had been able to increase its dividend for last year from 10 per cent. to 15 per cent. Production was greater by 25,532 tons than in the previous year and sales were correspondingly larger.

They reverted during the year to their previous practice of declaring an interim dividend, and if nothing unforeseen occurred they hoped to give shareholders a similar new year's present in 1939.

The report was unanimously adopted.

ANGLO-CEYLON AND GENERAL ESTATES COMPANY, LIMITED

SUBSTANTIALLY IMPROVED RESULTS

SIR EDWARD ROSLING'S ADDRESS

The meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 6th instant, in London.

Sir Edward Rosling, chairman and managing director of the company, who presided, first referred to the regretted death of Sir Stanley Bois, who, it would be recalled, had resigned from the board last year after having served as a director for 17 years.

Continuing, he said that the results for the year under review again showed an improvement on those for the previous year, the net profit being £80,015, as compared with the corresponding figure of £58,159 for the year 1936-37. The amount brought forward was £37,356, making a total of £117,371 to be dealt with, and they would have seen from the report the proposed appropriation.

It was suggested in certain quarters in Ceylon that they should have their own rupee instead of using the Indian rupee as their standard, one reason being that should India decide to alter the ratio of its rupee in regard to sterling Ceylon would have it in its power to maintain its own ratio. He could hardly imagine a more disastrous result for the Colony in the event, say, of India fixing its exchange at 1s. 4d. and Ceylon retaining theirs at 1s. 6d.—an equivalent to a 12½ per cent. tax on all those exports which competed with India, such as tea, rubber, etc. He did not wish to imply that there was any probability of India altering its ratio, but, at the same time, it was not an impossibility. He was sure that Ceylon would be better advised not to consider any departure from the present usage of the Indian rupee.

In Ceylon their tea crop amounted to 3,913,138 lb., as compared with 3,635,192 lb.; it realised a net average of just under 1s. 2d. per lb., or an improvement of nearly one penny. The International Committee had increased the exportable allowance to 92½ per cent. for the current season, an increase of 5 per cent., but there might be some alteration in the assessed standard of production, and meanwhile their estimates were based on a crop of 4,000,000 lb.

Rubber, in which their direct interests were very small, showed an improvement in crop, but the price realised was about 1½d. lower; there was, however, a profit of between £2,000 and £3,000. The profit from minor products and rents was £4,500.

SITUATION IN MAURITIUS

In Mauritius the climatic conditions were again favourable, and the amount of sugar produced in their own factories and those of the subsidiary companies totalled 36,214 tons, as against 34,937 tons, but the season had ended with prices at a low level. The International Export Control Committee had unfortunately not been able to maintain sugar prices at last year's level, and they could only hope that some improvement would be effected before long.

As to prospects, in Ceylon their tea and rubber crops continued to be controlled by the International Committee. At present tea prices were slightly under those of last year, but as their year only commenced in April very little of this season's tea had been sold.

Rubber, in which their direct interest was small, was on a low price level, although in view of the control they had every reason to look for an improvement, and, in fact, it would almost appear to have commenced.

LABOUR CONDITIONS

As to sugar, the position depended on prices and labour. They had every reason to expect another good crop, but prices were still low, and there was an agitation for increased pay for the labourers. During last crop there were strikes and rioting, accompanied by loss of life in parts of the island. Fortunately, they themselves had suffered very little. Very exaggerated statements had been made in various quarters as to starvation wages and unsympathetic treatment of the labour, but when it was realised that the average labourer would not work more than four to five days a week—and very often only half-days—and in that time earned sufficient to keep him for the whole seven days, it was difficult to argue that he was underpaid. He did not say that there were not certain conditions which were open to improvement both in connection with hygiene and sanitation, but an increase in pay was not going to effect any improvement in that respect. As to the cost of living, rice—the staple food—was no dearer to-day than it was 50 years ago, and he resented the implication that they were producing their sugar by means of sweated labour.

The report and accounts were unanimously adopted and a final dividend of 6 per cent., making 10 per cent. for the year, was approved.

OHLSSON'S CAPE BREWERIES, LIMITED

FURTHER PROGRESS

The forty-ninth annual general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 7th instant, in London.

Mr Geoffrey Dent (the chairman) said that he was once again able to record a satisfactory year's progress and an increased profit from trading and rentals of £20,905. Trading conditions had continued to be very favourable throughout the Union of South Africa and the company had enjoyed its fair share of prosperity. There had been a steady expansion of the business, with increased sales of their products, and that expansion had been common to all parts of the Union and to Rhodesia. Every branch of the business had shared in the increase.

During the year higher costs had had to be faced in the shape of increased rates on improved properties and increased wage rates paid to their workmen. It was satisfactory to know that the rates of pay of their employees compared very favourably with those of other industries in South Africa. There was also the very heavy burden of increased taxation. Every opportunity had been taken of increasing the outlets for the sale of their products, by the financing of customers and the acquisition of new properties.

What would be the final result of the drastic alterations brought about by the South African Liquor Act it was yet too early to say, but the results of the first six months' trading indicated that there had been no falling off in the company's business. The loss of some licences and the loss of trade and revenue from the sale of spirits in other bars converted to wine and malt licences would appear to have been largely offset by increased revenue and beer trade from the improved properties that remained.

The profit for the year amounted to £285,283, and they proposed to pay a final dividend of 7½ per cent. and a bonus of 5 per cent., less tax, making 17½ per cent. for the year, which, taking into consideration Dominion income tax relief, was equivalent to approximately 19¾ per cent. where the standard rate of income tax had to be borne. While he had no intention of prophesying, he had every hope that the earning capacity of the business should enable the present rate of dividend and bonus to be maintained on the capital as increased by the offer of 75,000 ordinary shares to the present holders.

The report was unanimously adopted.

BRITISH GLUES AND CHEMICALS, LIMITED

STRONG POSITION

The eighteenth ordinary general meeting of British Glues and Chemicals, Limited, was held, on the 6th instant, at the Connaught Rooms, London.

Mr T. Walton, F.C.A. (the chairman), in the course of his speech, said:—We do not expect a sudden return of stability and confidence, and we have thought well, in fixing the dividends recommended to be paid, to give effect to our belief in the importance of again adding to reserves. Not only are our reserves augmented; our liquid position, helped by our adequate allocations for depreciation and obsolescence, is strong.

World conditions in the past year have been far from helpful. Remembering Spain, Central Europe and China, the last a very important market to us, and the financial and economic conditions in the United States and South America, you will not look to me for prophecy. There are grave dangers, yet the future does not lack hopefulness; cessation of the Far Eastern war and reopening of the Chinese market, better understanding among the European nations, further improvement in the American position—these may entirely or in degree be hoped for, and we and all nations would benefit.

Though our profits are lower compared with the previous year, we are nevertheless able to recommend dividends at the rates of the two preceding years, to increase reserves by £10,000, to write off £5,000 from machinery and plant, in addition to usual depreciation, and to write down investments in subsidiary companies by £2,500. The reduction in profit is due to increased cost of raw materials, manufacturing commodities, wages, coal and transport, not the whole of which we have been able to recover in our selling prices.

RESEARCH DEPARTMENT AT DISPOSAL OF AGRICULTURE

During the year the glue trade was good on the whole, but towards the end of the year there was distinct falling off in home and export demand. Again I want to give wide publicity to the great help our research department can give to all consumers of

adhesives and to invite and urge them to make the fullest possible use of our knowledge and experience in helping to solve their many technical problems.

Shareholders will be well aware of the attention which is being devoted by our Government to the development of the livestock industry, both as contributory to defence and as an aid to our farmers. We are anxious to place our fullest assistance, including that of our research department, at the disposal of agriculture on questions relating to the feeding of animal protein to farm stock and of supplementing the ration of that stock by an adequate supply of the minerals required under modern conditions of intensive farming. We produce a wide range of products for the purposes I have indicated, and the importance to the agricultural industry of taking advantage of the most recent scientific research and of adopting the most modern practice cannot be over-emphasised.

The report was unanimously adopted.

(*Continued from page 94*)

Textiles

Cotton (Manchester).—All other matters in the market have been overshadowed by the further advance in raw cotton prices, and rates for the American staple in Liverpool are now nearly 1d. a lb. higher than at the end of May. Inquiry in yarn and piece-goods has broadened, but many producers have described the sales as disappointing. Weather reports from the American belt have been somewhat mixed, but further rains in several parts have increased anxiety as to damage to the crop.

Demand in American yarns has fallen off somewhat, total sales being smaller than in the previous week. Nominal changes have taken place in the price agreements, the futures basis being altered from July to October. Although numerous miscellaneous sales have been arranged in piece-goods, there has not been any real expansion in the turnover.

★

Wool (Bradford).—During the past fortnight there has been a slight "lift" in the Bradford market. The tone is better, more business has been done, and prices for merino tops are mostly about 1d. above the lowest point.

A cable has been received this week from the National Council of Wool Selling Brokers of Australia giving the disposals and stocks of wool for the 1937-38 season as at June 30th last. The most important item is the quantity of wool carried over, which, at 235,701 bales, is the largest amount for the past dozen years. The actual quantity disposed of is 2,718,460 bales, and is creditable considering the difficult conditions prevailing during the whole of the year. The new clip, which begins to be shorn this month in Australia, is estimated to be 200,000 bales less than the previous one, but the quantity carried over will just about make up the deficiency. This means that for the current season Australia's clip will be about 3,000,000 bales. No decline is expected in the clips from New Zealand or South Africa.

THE COMMODITY MARKETS

THE general trend has been upward during the past week in practically all markets, in sympathy with the revival of buying on Wall Street; this, in turn, has been stimulated by the better prices for most commodities, but these advances are still based mainly on speculative buying. The *Economist's* complete index of British wholesale prices rose from 119.3 on June 22nd (September 18, 1931 = 100) to 120.8 on July 6th, a very definite advance after a year of falling prices. The improvement in rubber and metal prices was continued, and raw cotton showed a further rise; the grain market, however, has been somewhat irregular. Moody's daily index of American staple commodities rose from 140.8 (December 31, 1931 = 100) to 144.8 in the week ended last Wednesday.

Metals

Copper.—The standard cash price rose during the week by £3 2s. 6d., to close at £39 16s. 3d. per ton, due chiefly to the better Wall Street advices and to the revival of speculative buying on a large scale in the United States. During the week American producers raised their domestic price from 9 cents to 9.75 cents per lb. Whether this scale of buying can be maintained in view of the prevailing lack of new orders for copper manufactures remains to be seen. The market was also greatly impressed this week by a statement of Mr S. S. Taylor, chairman of the restriction committee, that the high cost copper producing countries could not re-enter the market at a price below £45 per ton. This statement is interpreted in market circles as suggesting that the co-operating copper producers would have no objection to letting the copper price rise to £45 per ton.

★

Tin.—Tin rose by £9 5s. to £193 5s. per ton. The rise was chiefly due to the reserve in offerings and some speculative activity. Consumers have bought at a moderate rate this week, but in the United States the poor state of activity of the tinplate industry (less than 40 per cent. of capacity) is still keeping consumers out of the market. The June statistics, published this week, were disappointing. According to Messrs A. Strauss and Company, Limited, the net increase in world stocks during June amounted to 1,264 tons. New supplies showed the expected decline of 917 tons to 7,048 tons, but world deliveries fell in June by 1,581 tons to 7,366 tons, the lowest level for several years.

★

Lead and Spelter.—Lead and spelter moved more or less in sympathy with the two other metals. Lead rose by exactly £1 to close at £15 6s. 3d. per ton, while the closing quotation of spelter, at £14 7s. 6d., showed an advance of 18s. 9d. on the week. The turnover of both metals on the London Metal Exchange was fairly high this week. Speculative buying has revived, and at one time there was also some evidence that individual producers bought on a moderate scale. Apparently they had sold too much in the preceding weeks. In the absence of an improvement in world trade, prices are bound to react, as current production is in both cases in excess of the current demand.

Grains

HIGHER estimates of the prospective American crop and better reports of the yield of grains in Italy led to a small reaction in prices during the week. The European wheat harvest has begun in Southern countries, and favourable weather in May and June has apparently largely offset the earlier frosts and drought. Broomhall estimates the European harvest at 201 million quarters, a larger crop than any since 1933. The maize market has been quiet, with somewhat larger supplies from the Argentine on offer. There has been a reaction in the price of imported feeding barley and some types are about 1s. per 400 lbs. cheaper on the week.

Other Foods

Provisions.—Markets generally have been quiet, and prices, where changed, have tended to fall. Butter is 1s. to 2s. per cwt. cheaper on the week, and the price of bacon, after an advance early in the week, reverted to its former level. Eggs continue to rise in price, English ordinary, 15-15½ lb., being quoted at 16s. to 16s. 6d. per 120; Danish 15½ lb. were sold at 11s. 6d. to 12s. per 120.

★

Colonial Produce.—Cocoa prices have tended to fall, except for Accra, for which demand has been firm. Sugar and coffee prices are unchanged, and there was a steady demand at the tea auctions, prices being hardly altered.

★

Vegetables.—A return to colder weather affected the demand for salads, and prices eased during the week. Tomatoes sold at 4s. to 5s. per 12 lb., and larger supplies of green peas brought some fall in price. Prices of old potatoes were still firmly held, but those of new potatoes were lower early in the week owing to heavy supplies.

Miscellaneous Commodities

Oils and Oilseeds.—The markets have been firm, but not much business was transacted during the week. Linseed prices have tended to rise, but crushers are well covered and are not inclined to buy on any large scale; prices for cotton seed were also on the upgrade. The market for linseed oil has been well held at £21 10s. per ton ex Hull. The demand for oil cakes has been steady.

★

Rubber.—The market was very strong early in the week, and although there has been some hesitation since, prices showed a gain of ⅛d. to ¼d. per lb.; on Wednesday ribbed smoked sheet sold on spot at 7¼d. The advance in Wall Street was the dominating factor in the market.

Home-produced and Imported Food Supplies

We present below a series of diagrams illustrating the extent of Britain's dependence on imported food supplies, on the one hand for human consumption, and on the other for the feeding of livestock. The figures used are the average of the years 1934, 1935 and 1936 and have been taken from Appendix III to the Report of the Food (Defence Plans) Department for the year ended December 31, 1937. It may be noted that in the case of wheat for human consumption the weight of the grain has been reduced to its flour equivalent. In a number of the diagrams certain of the categories are not fully described; the description "poultry, etc.," for instance, includes game and rabbits, "sugar, etc." includes molasses, and "tea, etc." includes coffee and cocoa.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On July 1st, applications at £99 17s. 4d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 40 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 5d. per cent. and above were allotted in full. £45·0 millions of Treasury bills are being offered on July 8th.

Farmers and Politicians

FOR an overwhelmingly industrial nation, Great Britain takes an astonishing degree of interest in its agriculture. Those who make their living by growing food within this island are substantially less than one-tenth of all our workers, but they have far more than their quota of attention from Parliament and Press alike. Indeed, there is more concern about the growing of food by the seven than about its consumption by the ninety-three, and if Parliamentary time is any measure, there must have been in the past decade a score of debates on agriculture to every one on nutrition. Two more have been added to the tally this week, one in the Lords on Tuesday, one in the Commons on Wednesday.

There is no need to search for subtle psychological reasons to explain the political importance of the farmer. British agriculture, shrunken though it is, is still the largest single industry in the country. It is an industry, moreover, which, more than most, dominates its ancillaries. In the average country town the number of persons who would be shown in the census returns as following the calling of agriculture would be a small fraction of the total; but the whole district may be conscious of its dependence on agriculture. With the sole (and much smaller) exception of coal-mining, there is no other industry which controls a whole range of Parliamentary constituencies. With that hold on the Commons, and, in the Lords, the traditional connection between nobility and landowning, agriculture can afford to forget its numerical weakness.

Hence, even in our industrial country, in an ever more urban age, the farmers' vote is something to be reckoned with. And the reckoning has led at the moment to a political situation of some piquancy; for this is one of those rare occasions when the farmer's vote is up for auction—or, if not actually in the bidding ring, at least open to a fair offer by private treaty. The reason why matters have come to this pass is in itself an interesting question. With the end of Free Trade in 1932, it might have been thought that the Conservative-agricultural alliance would be cemented for ever. But it was an unpropitious moment; for the misguided foreigner and the only slightly less misguided overseas Briton have not ceased to offer the most excellent food at low prices, and the experiments that have been made in limiting the imports of one or two commodities have incurred so much odium among the consuming masses for so little net benefit to British agriculture that the Government have consistently refused to apply the weapon of restriction on the wholesale scale demanded by the farmers.

The paradoxical situation has thus arisen that no Government has ever done more for the farmers, and yet few, if any, Governments have been so bitterly assailed by the farmers' representatives. The farmer is unmoved by the knowledge that the direct and indirect cash benefits

provided specifically and uniquely for him are now at the very least a fifth of the whole net value of his production. He knows only that he still does not make an adequate income. And having tasted to such good purpose the consumers' and the Treasury's blood, he is agitating for more. In the last twelve months, when he has been caught in the scissors of declining prices for many of the things he sells and rising prices for many of the things he buys, his discontent, faithfully mirrored by a large part of the Conservative Party in Parliament, has boiled over.

This quarrel between the allies is, of course, the Labour Party's opportunity. Hitherto the concern of Labour, outside the towns, has been mainly with the farm labourer. But the party is now definitely out for the farmer's vote. Its agricultural policy is, as always, based on the nationalisation of the land. But pains are being taken to make the pill more palatable to at least the tenant farmer, and it has newly been coated with the brightly-coloured sugar of guaranteed prices. Such benefits as would accrue from the nationalisation of the land could only be reaped over a very considerable period. But the farmer, it appears, is to receive his share at once, the bill being discounted, we must presume, by the consumer or the taxpayer or both.

Neither of the two larger parties is thus, in the tactics of the moment, paying its chief attention to the interests of that great majority of the nation whose concern with food is that of consumers. The real humour of the situation, however, lies in the fact that not even the Liberal Party, by tradition and inclination the champion of the consumer, can play its proper rôle at the moment, for it so happens that Mr Lloyd George holds views on the question, which, whether or not they are correct, are certainly not those of traditional Liberalism. On Wednesday the House of Commons was treated to the rare spectacle of a Liberal leader not merely accusing the son of Joseph Chamberlain of having reverted to Free Trade, but seeming almost to upbraid him for so doing.

It is, indeed, a peculiar position in which the Prime Minister finds himself. For seven years he has been a leading member of the Government that has spent so much of the taxpayers' money, and mortgaged so much of the consumers', on maintaining, if not increasing, the scale and profitability of British agriculture. His heresy now is not that he wants to reverse this charitable policy, nor even that he refuses to contemplate its gradual and moderate extension. His Kettering crime was merely that he refused to exploit the war scare to justify a further and much more drastic cut in food imports for the benefit of British agriculture. For this he, the author of Protection, is being accused of excessive Cobdenism. And the supreme irony is that, on this point at least, his policy is unquestionably more consonant with the interests of 93 per cent. of the people than any of the proposals now being hurled at his head. That does not, of course, mean that the Government's agricultural policy is perfect, either for peace or for war. *The Economist* has frequently criticised its peacetime aspects, and will repeat its objections as long as Government action is more concerned with maintaining or raising prices than with efficiency and economy and the provision of an ample supply of fresh products of good quality at low prices. It is, also, probably true that the Government have not yet made anything like adequate preparation for the emergency of war. But the remedy for that lies along the lines of increased storage and more detailed plans for temporary expansion in time of war. In refusing to put the nation permanently in a state of siege, Mr Chamberlain is undoubtedly right.

Lord Addison, in an argument that did more credit to his political astuteness than to his knowledge of the business world, accused Mr Chamberlain of following the policy of the City. But it is foolish to suppose that the value of international trade to Great Britain is bound up with the receipt of dividends. Why is it that, though our population is only two-thirds of Germany's, our national income is something like a quarter larger? The reasons are legion; but the chief of them is that, unlike Germany, we produce our food and our raw materials where they can be produced most cheaply—overseas. Why is it that of all the great industrial countries we suffered least from the world depression? Once again, from a crowd of answers the one that stands out is that, alone of the Great Powers, we maintained our domestic purchasing power by buying our food in the cheapest market. These are the verities with which the present furious campaign for a costly and artificial expansion of British agriculture is trifling. When logical argument is overlaid both with sentiment and with political calculation, with an added dash of the fear of starvation, it is perhaps difficult to adhere closely to the line of common sense. But the fundamental and dominating fact of the whole matter is that the chief interest of the British people in its food is to have it as plentiful, as nutritious and as cheap as possible. An expansion of British agriculture by the increase of its technical efficiency and by the reduction of its distributive costs is not only welcome but necessary; but not at the cost of dearer food. There have been far too many departures from that simple principle in the last few years. If the Government themselves have now decided that these deviations have gone far enough, they deserve, in the face of all three Parties at once, the full support of the people.

The Plan Approved

ON Monday his Majesty's Government issued a Blue Book which is really their blueprint for securing neutrality in the Spanish conflict. In official language it is "the text of a proposed Resolution reaffirming and extending the Non-intervention Agreement, and providing for the withdrawal of foreign volunteers from Spain, for the grant in certain circumstances of belligerent rights to the two parties in Spain, and for the observation of the Spanish frontiers by land and sea." This text was adopted at a plenary session of the Non-intervention Committee on July 5th, and has been sent to both parties in Spain for their approval. It is an imposing edifice of ingenuity and detail, carefully drawn up and elaborately constructed. Its eighty pages are a monument to the lengths to which British skill, good faith, and patience have gone during the two years of conflict in Spain, in the endeavour to prevent that conflict from spreading. But to-day, two years after the outbreak, the laboured meticulousness of this British Plan will strike British readers as a poor second-best compared with the clear simplicity of a joint Anglo-French naval blockade of Spain, as was suggested by this journal within three weeks of the outbreak, and before any so-called volunteers had ever set foot in the Iberian peninsula.

The draft Plan reaffirms the initial Non-intervention Agreement, the list of prohibited war material for despatch or transit to Spain, and the agreement of February 16, 1937, not to allow volunteers from any participating country to go to Spain. The Plan then breaks fresh ground in extending the latter provision to cover visitors to Spain who, on "reasonable grounds," might be thought to be going to engage in "activities susceptible of prolonging or embittering the present conflict . . . . in some form of propaganda . . . . or in some activity repugnant to the intention and spirit of the Non-intervention Agreement." (The text does not say who determines what grounds are "reasonable.") The Plan then extends the shipping prohibitions, already issued by this country, to all participating countries.

Next, it sets up the organisation to secure withdrawal. The "International Board for Non-intervention in Spain," set up to secure control of frontiers as long ago as March 8, 1937, is to be the Committee's agent; and two identical Commissions, consisting of three persons each, are to be appointed by the unanimous vote of the International Committee and despatched to each side in Spain. These commissioners, together with their staffs, are to be given full facilities and diplomatic privileges by each side in Spain; they are to arrange for deliveries of not less than 1,000 volunteers per day from either side; and to concentrate 500 per day in each of four evacuation areas, two on each side, at Palamos, Cartagena, Malaga and Cadiz. If one side is found to have more volunteers than the other, more than 1,000 per day are to be withdrawn from that side; and "substantial progress" will be deemed to have occurred in withdrawal—i.e. the condition for entry into force of Mr Chamberlain's Anglo-Italian Pact will have been satisfied—when at least 10,000 volunteers have been actually evacuated from the side with the least volunteers in Spain; so that, by that time, at least more than 20,000 will have gone. Moreover, when that point has been notified to London as having been reached, the Committee can resolve that the "certain circumstances" have arisen in which belligerent rights can be granted.

The Board has the duty of drawing up the general instructions to the two Commissions, and the Committee the duty of approving them. The nationality of the volunteers in Spain is not to be specified in the Commissioner's reports to London—perhaps a not unwise provision, all things considered. The volunteers are to be embarked—and in some cases sent by land—under the control of the Board's officers until they have arrived at one of several clearing-stations: London, Hamburg, Lisbon, Marseilles and Genoa. To each of these stations volunteers of specific nationality will be despatched before proceeding to their homes.

A rapid time schedule is provided, whereby 45 days only are set aside for the commissioners to count and to prepare for evacuation; a further 55 days for evacuation of combatant (though not sick, wounded or women) volunteers; and another 50 days for all the administrators to report and quit Spanish territory. The Canary Islands, Baleares, and all Spanish possessions or leased territories are to be included; Commissioners will be empowered to count separately all naval, military, air force and civilian volunteers. The word "volunteer" applies to any person who directly or indirectly helps either side in its military efforts, even by clerical assistance or communications; and the contending parties in Spain are requested to agree that if volunteers so designated refuse to withdraw in their contingents, they shall be deported. The arrangements for delivery of volunteers to evacuation areas, for commissariat, transport by sea, and ultimate destination of the volunteers have been worked out in comprehensive fashion; and the Plan even provides that each participating Government shall grant "the widest publicity within its own territories to the decision taken . . . . to do all in their power to secure the withdrawal from Spain of foreign volunteers." The total cost is likely to be about £1,500,000, to be contributed equally, in the main, by Britain, France, Germany and Italy.

It may not be altogether unnatural if critics of the British Government's policy over Spain during these last two years scrutinise the present proposals for evidence of a will to enable General Franco, by the grant of belligerents' rights, to throttle the Spanish Government's forces by blockade. After all, when we simultaneously refuse to grant belligerents' rights in law, and also refuse to protect our legitimate shipping from bombardment, thus according General Franco a practical right to blockade, we might expect to see everything made easy for him in the present proposals. Such, however, is not the case. Though, with those rights, he can legally announce a blockade if he can militarily sustain it, he cannot unilaterally add new items to the list of contraband. That can only be done by the Committee; and by direct negotiation between them and the parties in Spain. The first list of contraband is to be no more than the existing list of war materials prohibited by the Committee; and, though General Franco may with belligerents' rights legitimately visit ships at sea flying the Committee's pennant to verify (the text emphasises that it is *only* to verify) their warranty to fly it, he cannot impugn the Committee's careful measures to secure accurate observation, even by air, of the conditions for sending goods to Spain.

But when all is said, we face this plan in much the same mood as that in which we faced Mr Chamberlain's Agreement for an Agreement with Italy. We are confronted, not with the verbal excellences of a contingent agreement, but with the difficulty of ensuring that all the precedent conditions shall be met. Otherwise, of course, there will be no agreement, and the verbal excellences will be void. In this present text, there are loopholes—if such be required—through which any Power so inclined could drive a coach-and-four. For instance, "volunteers" cannot apply to Spanish citizens; but how easy is it, has it been, to make many "volunteers" into citizens of Franconian Spain or of Republican Spain? There may already be tens of thousands of neo-Spaniards who cannot get their tongues round Castilian; and to them this text cannot apply. Again, large bodies of men have often in history been lost to sight in Central Spain; and the commissioners have not time to go through Spain with a fine-tooth comb. However one regards the prospect before this plan, one is driven back on the good or bad wills of the participating Powers. Thus, in circumventing the process of the League of Nations, we have set up a new and towering façade behind which both totalitarian and democratic European States would, we hoped, collaborate to secure not the old strict neutrality, nor the post-war collective arbitrament, but an entirely new-fangled conception: non-intervention. And what has been the upshot? Right and Left there has been flagrant intervention; the interveners have accused, plotted and sabotaged in the very bosom of the London Committee; the interests only of those Powers who honestly tried to prevent intervention have been gravely jeopardised, our own in particular; and, in sum, we have all found—some to their cost, some to their glee—that even *ad hoc* committees of European Powers cannot achieve more than, if as much as, the League itself.

The question now is: Will Signor Mussolini, bereft as yet of the Anglo-Italian Pact and facing continuous Spanish war throughout the winter, honestly try to get this plan working as soon as possible? If not—if, for instance, for domestic reasons he cannot repatriate Italian volunteers without a military victory by General Franco in Spain—this plan is already stillborn. For, in its terms, it does not favour General Franco; and if its execution is to be delayed until General Franco is in a position to win, it can be nothing but a gigantic piece of hypocrisy: a salve for whatever conscience remains in the European democracies, and a screen for others' actions. Unhappily, though it can be made to work rapidly, we shall not know whether it will be worked at all, until the two parties in Spain reply favourably, the London Committee finally approves it—as it stands—and its massive machinery begins to move. It is a notable piece of ingenuity. It is a thousand pities that such ingenuity was ever allowed to become necessary.

Profits at the Peak

THE earning of profits is—or is intended to be—a continuous process. But the publication of company reports is, by custom and law, a yearly business. In some degree, all published profits figures are subject to a time lag. The reports analysed week by week in *The Economist* may appear three months or more after the companies' financial years have closed. And between the average date at which profits are earned, and their analysis in these quarterly reviews, the time lag may amount to 10½ months or more.

Profits reported during the second quarter of the year, however, have particular importance. Both the number of reports, and the profits they disclose, are the highest of all four quarters. In addition, they complete the series which—after adjusting for the time lag—gives the closest possible approximation to an estimate of industrial profitability during the previous calendar year. The profits reported in the four quarters ended June 30, 1938, are, by and large, the profits earned by British industry in 1937.

In the first table below, we give the profits recorded in each year, to June 30, since 1929:—

TABLE I—PROFITS IN YEARS ENDED JUNE 30th

Reports received during years ended June 30th	Number of Companies	Profits (after debenture interest)	Profits, same Companies, preceding year	*Chain Index Number (1928 = 100)*
		£	£	
1928	...	...	...	*100*
1929	1,742	197,291,452	193,835,724	*102*
1930	1,771	198,471,070	191,301,133	*106*
1931	2,053	187,588,541	219,811,990	*90*
1932	2,017	139,436,950	189,655,091	*66*
1933	1,949	137,083,181	146,861,278	*62*
1934	1,960	159,597,442	142,379,992	*69*
1935	2,072	192,965,202	161,498,274	*83*
1936	2,138	224,045,804	198,980,667	*93*
1937	2,271	266,533,101	230,496,227	*108*
1938	2,337	298,839,206	263,175,920	*122*

It will be noticed that though the number of included companies changes from year to year, the profits of each year's sample are compared with the profits of the identical companies in the previous year. By the device of a chain index, it is therefore possible to get a continuous series of figures which may be taken to represent the changes in the profitability of British corporate industry in general. These figures, which are given in the last column of the table above, may be compared with the first of our charts, on which the ratio of profits to share capital for companies reporting in the second quarter is plotted since 1929. Both table and chart show that 1937-38 was the most profitable year for industry since recovery began.

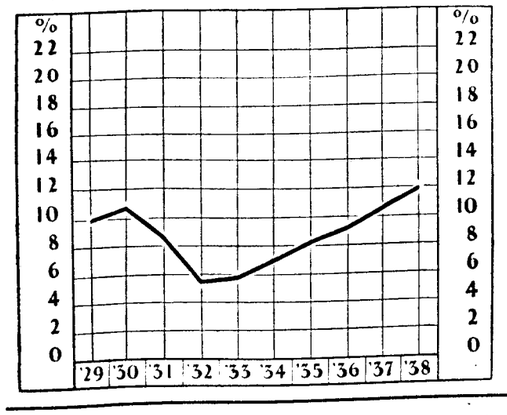
Satisfactory profits in the past, however, are a poor solace for the prospect of lower earnings in future. Is there any evidence that the decline in profits, which the Stock Exchange has evidently been expecting for more than a year past, is on the way? Certainly the latest quarter's figures, which show an increase of 12.8 per cent. in profits (after debenture interest), provide no such evidence, although this rate of increase is lower than that shown by the past twelve months as a whole, and conspicuously lower than the percentage gain during the second half of 1937. It is true that, of the twenty-five industrial groups which appear in the distribution tables on page 154, seven showed a fall last quarter from the previous year's profit levels, while only two minor setbacks occurred in the March quarter. But the high percentage increases recorded by heavy industry, shipping, and plantation profits show that the investor is still obtaining increased dividends, even though his holdings may be worth substantially less than a year ago.

The overall earnings ratio of 11.9 per cent. on the combined preference and ordinary share capitals of 805 companies whose reports appeared last quarter is, in fact, the highest during the past decade. "Second quarter companies" in 1937 equalled their earnings performance in 1930; they have now more than doubled the earnings ratio of 5.4 per cent. recorded in the depth of depression six years ago. Simultaneously with this spectacular growth in profits, two other trends are perceptible in their distribution. Our third table suggests that the proportionate burden of prior charges on industrial profits is lower to-day than in pre-depression times. But the exercise of increased conservatism in the distribution of profits has reached the point at which nearly one-third of total profits is set aside to reserves, and less than two-thirds of available earnings are distributed on the ordinary capital. Ordinary shareholders have no cause for complaint, for they have received, on the average, 9.4 per cent. on their nominal capital last quarter, compared with 4.6 per cent. in 1932. But since profits began to show real recovery in 1934, there has been remarkable constancy in the proportion of total earnings paid out to ordinary shareholders. Their share has risen from 51.6 per cent. to 53.8 per cent. in the last four years, but it is well below their participation in 1929 and 1930, when profits were still high. In recent years, directors have increasingly followed the precept: "For every pound to ordinary shareholders, a pound for the company." This is a tendency which merits the most careful observation. British industry appears to be following the example of American industry in the 1920's and making itself progressively more liquid and self-financing—with effects which can at present only be guessed, but are likely to be far-reaching, on the functions both of the banking system and of the open capital market.

Each company, however, frames its own conception of dividend policy, according to the cyclical risks for which it must prepare, and to its estimate of the scope for self-finance in its business. These points are illustrated in the second of the two charts shown above. It is no accident that while steel and shipping companies provided more for reserves last quarter than they paid in ordinary dividends, commodity companies—rubber, oil, and tea—distributed their profits more generously. In actual fact, however, none of these five groups set aside for reserves a smaller proportion on its total share capital than the 805 companies as a whole. The lessons of adequate reserve and depreciation policy appear to have been well learned.

The charts suggest that commodity and shipping companies made an important contribution to the past quarter's profits. If they were excluded, to provide a better measure of the progress of home industrial profits, last quarter's improvement would be reduced from 12.8 per cent. to about 7 per cent., and of this, increased iron and steel profits would be responsible for 4½ per cent. While there is no evidence, last quarter, of any dramatic change in total profits, individual industries are beginning to show a more irregular trend. A few recent reports—usually in the heavy industries and textiles—reveal a significant setback in profits. Indeed, the last week of the quarter brought an aggregate fall of 2 per cent. in the profits of 39 companies whose reports were then published. These are straws in the wind, and the weekly budget of industrial news makes it only too clear from which direction the wind is blowing. It is probable that this quarterly survey shows profits at their cyclical peak.

TABLE II—PROFITS OF "SECOND QUARTER" COMPANIES, 1929-38



Reports Issued during Second Quarter	No. of Companies	Total Profit (after deb. interest)	*Change since preceding year (same companies)*	Total Preference and Ordinary Capital	*Ratio of Profits to Capital*
		£	%	£	%
1929	639	78,079,238	− 0·7	783,972,918	9·9
1930	578	79,717,393	+ 8·6	751,909,913	10·6
1931	619	64,051,136	−19·4	745,477,186	8·6
1932	675	56,832,591	−21·8	1,042,514,627	5·4
1933	612	52,871,165	+ 3·3	929,556,651	5·7
1934	642	67,334,795	+18·2	973,291,929	6·9
1935	694	80,076,325	+17·8	980,620,210	8·2
1936	739	92,280,660	+10·6	1,015,646,042	9·1
1937	765	100,690,626	+19·9	951,790,564	10·6
1938	805	112,472,971	+12·8	942,078,693	11·9

TABLE III—DIVISION OF PROFITS (SECOND QUARTER COMPANIES)

Reports issued during Second Quarter	Proportion of Profits after Debenture Interest			*Rate of Payment on Each Class of Capital*			
	Paid in Pref. Div.	Paid in Ord. Div.	Put to Reserve or "Carried Forward"	*Debenture*	*Preference*	*Earned for Ordinary*	*Paid on Ordinary*
	%	%	%	%	%	%	%
1929	23·1	60·4	16·5	5·1	5·9	12·5	9·8
1930	24·9	56·5	18·6	4·9	6·3	13·7	10·3
1931	27·3	57·9	14·8	5·0	5·8	10·4	8·3
1932	32·6	56·3	11·1	5·0	4·9	5·5	4·6
1933	31·5	55·9	12·6	5·0	4·9	6·1	5·0
1934	27·8	51·6	20·6	4·7	5·2	7·9	5·7
1935	25·4	51·7	22·9	4·7	5·7	9·6	6·7
1936	22·2	51·2	26·6	4·6	5·6	11·1	7·3

DISTRIBUTION OF PROFITS, 1938

(Companies reporting in second quarter; percentages of total share capital)

The Commons' Privileges

THERE is no subject which can more surely be relied upon to excite the interest of the House of Commons than an attack, or a fancied attack, on the privileges of members. The time and attention that are being given to what has come to be known as the Sandys affair are not, however, merely the result of wounded self-importance. It may be that the summons to a Member of Parliament to appear before a military court and give evidence on a matter into which the House of Commons was itself preparing to inquire was not, in itself, a grave infraction of the constitutional liberties of Parliament. But the issues involved, which have been clarified by centuries of conflict, go right down to the base of the Parliamentary system. In view of recent developments abroad it was not a waste of time to bring into play the impressive machinery of the Committee on Privileges and to spend the better part of a Parliamentary day in discussing this particular aspect of the Sandys affair, for it brought from the Prime Minister a reaffirmation of vital principle. The purpose of privilege, he said, was to ensure that Members should not be hampered in their duties by pressure from outside the House.

Hundreds of years of history give force to this view of Parliament's traditional rights. In the course of six centuries the Commons have won many victories. Their earliest office was merely to furnish mediæval monarchs with information and money; to retail grievances and seek their redress. To-day they themselves make law, and to them the Ministers of the Crown are directly responsible for their policy. At all times in this long tale of progress it has been important that Members should be permitted to go about their business without let or hindrance from any quarter. The Commons have consistently laid claim to privileges and immunities designed to safeguard them against coercion or pressure.

Freedom from arrest and freedom of speech in debate were essential to the development of the Commons' authority; and they claimed the right to forbid the publication of debates and to expel strangers lest unwelcome words should be carried to the ears of unfriendly kings. Hardly less important was the Commons' claim to control their own proceedings; and, so long as the Speaker remained in part a royal official, his powers were rigorously restricted. It was vital, too, that no outside interest should be able to control elections to Parliament, and the Crown's frequent interference in Parliamentary elections was met by the claim that the Commons had the sole right to provide for the due composition of the House. Finally, the Commons claimed the right to punish offenders for breach of their privileges, for disrespect to Members or to the House.

The original purpose of these privileges, established only after centuries of struggle, was clearly to protect the Commons against the King. They were first asserted five hundred years ago when the Crown was weakened by faction. They were strenuously fought for and finally won in the sixteenth and seventeenth centuries. "Without free speech," said Peter Wentworth in a Parliament of Elizabeth, "it is a scorn and a mockery to call it a Parliament House." And when James I ascended the throne, Parliament greeted him with the assertion that "the High Court of Parliament gives laws to other courts but from other courts receives neither laws nor orders."

When King James I tried to silence an earlier Sandys,

Sir Edwin, and threw him into prison on a secret charge, the Commons in 1621 recorded in their journal a memorable protestation which declared that theirs was the right to discuss freely "the arduous and urgent affairs concerning the King, the state and defence of the realm." The King tore out the pages from the journal and imprisoned three Members of the House. His son's attempt over twenty years later to take similar steps was answered by the civil war that cost him his head. The Commons had their way in the end, in spite of the Restoration of 1660; for the revolution of 1688 paved the way for Parliamentary supremacy in matters of government. When executive power passed from the Crown to Ministers, themselves Members of Parliament, protection was no longer needed against the King.

It is true that, at the commencement of every Parliament, the Speaker lays claim by humble petition to certain of the Commons' ancient privileges, which the Lord Chancellor readily confirms on His Majesty's behalf. But this ceremony is now no more than a picturesque survival. The privileges of Parliament rest upon the law and custom of Parliament itself. In some cases they have been defined by Act of Parliament. In every case they are beyond the control of any other person or body.

Parliamentary privilege, however, has its limits. The freedom of Members from arrest during sittings of Parliament, and for forty days before and after, has never applied to criminal offences; and since imprisonment for debt was abolished in 1869, this immunity has ceased to be very significant. In 1763 the House decided that there was no privileges in cases of seditious libel, and seven years later the extension of the privilege to include Members' servants was ended. In theory, attendance at the House still has precedence over attendance in any court on *subpœna* to give evidence, but this is commonly waived, though leave of the House is required for the attendance of one of its Members or servants to give evidence concerning any proceedings in the House itself.

The privileges designed to ensure freedom of speech have similarly changed in character. Debates are published with the assistance of the House itself, and strangers are admitted to the Commons' proceedings. The extension of the franchise has made open discussion and wide publicity imperative; and Parliament's powers of prohibition and control are held in reserve. Words spoken in Parliament, however, are immune from court proceedings; they are privileged and, by the Parliamentary Papers Act, this immunity extends to all papers printed by order of the House and all faithful copies. The House still possesses the right to fill vacancies in its ranks and to determine disputed elections, though the misuse of the latter power for party purposes led to the transference last century of the actual examination of contested election returns to the High Court. And the Commons' power to punish for breach of their privileges, or contempt, remains as part of their inherent authority "to do all that is necessary to maintain their own dignity and efficiency."

Thus the privileges which have sprung into notice in the last few weeks are relics of the past. But, although the contest between King and Parliament which gave rise to most of these privileges has long since ended, there are still good reasons why the freedom and independence of Members should be safeguarded. It is essential in a parliamentary democracy that the representatives of the people should be free to carry out their duties unhindered.

Among their duties, none is more important than the obligation to criticise the executive and inform the people of grievances, disclosing what they know of the "state and defence of the realm." This function is the more important because, through the rigid ties of party allegiance, Cabinet Ministers who lead the majority in the Commons control Parliament from day to day rather than *vice versa;* "Parliament does not rule," said Bagehot, "it only elects the rulers." Ministers have great powers; virtual power to make law is frequently delegated to them; and they tend to be impatient of outside criticism and "mischievous curiosity." The function of Parliament is to keep watch and ward over the administration. In military matters there is clearly a responsibility upon Members not to make public information likely to be of advantage to foreign powers. Even more, however, Members are responsible to the electorate for the proper fulfilment of their duty to be vigilant. The privileges which served to protect the middle-class Parliamentarians of the Stuart period against royal autocracy may appropriately preserve the vital liberties of modern Members.

Topics of the Week

British Shipping.—There are many reasons for the widespread anxiety, voiced in Parliament and the Press, about the state and prospects of British shipping and shipbuilding. Together, these industries provide employment for some 250,000 workers. Shipping services commonly contribute between £75 and £125 millions to the credit side of Britain's balance of payments. We depend upon seaborne supplies for nearly 75 per cent. of our food and for the raw materials of our textile trades. At a time when preparations for the possibility of war figure largely in public policy, the vital importance of adequate, prosperous and well-found shipping in the structure of national defence cannot be exaggerated. The Commons' debate on shipping just over a week ago and the recently published returns of Lloyd's Register for the June quarter of this year have emphasised the disturbing current in which this vital industry is drifting. Shipbuilding has been caught between the upper millstone of low and scarcely remunerative freights and the nether millstone of high construction costs. Some 1,037,000 tons were under construction at the end of June, but new orders since January have only come in at the rate of 400,000 tons for the full year. Naval orders have done something to sustain activity, but not enough to outweigh the slackening in civil activity due to trade recession. Proposals for laying up British tonnage are in sharp contrast to the activity of foreign yards; and for the first time more shipping is being built abroad for British firms than is under construction in this country on foreign account. Foreign tenders, supported by State subsidies, are too low for British builders to compete. Subsidies to foreign rivals have also played no inconsiderable part in bringing about the losses in trade which British shippers have suffered in the Mediterranean, in Indian waters and in the Far East. It was estimated in the Commons' Debate on July 8th that annual subsidies of some £20 millions (or half the estimated annual assistance at present given to British agriculture) might enable our shipping to hold its own. This would be a high price to pay for what is fundamentally an uneconomic policy. Competitive subsidies can have no lasting success.

* * *

Trade Policy and War-time Needs.—Clearly the present state of British shipping is in part due to the unprecedentedly sharp recession in world trade. Equally obviously, it is due to a general change which has taken place in national economic policies, not excluding our own. Channels of international commerce have been silted up and reduced in number by tariffs, quotas, currency devices, bilateral arrangements and, be it said, such measures as the Ottawa Agreements. More ships of more nations are competing, on State aid, for reduced and canalised trade; and the greatest shipping nation in the world must needs suffer most. The volume of world trade is now again falling, but what is more serious is that the share of the world's carrying trade conveyed in British bottoms has markedly declined. Other nations are no longer content that their goods should be borne in British ships. At present, we have 28 per cent. of the world's tonnage (excluding tankers), compared with 44 per cent. in 1914; and our effective tonnage (excluding tankers and Empire tonnage) for the transportation of food, raw materials and men in war-time is 14 millions, against 17½ millions in 1914. The number of ships has fallen by some 2,000. The Government is convinced, as last week's debate showed, that we shall retain the command of the seas, and that our tonnage will be adequate for all our possible needs in emergency. If the policy of food storage is pressed forward on the broadest possible front, this prognostication may indeed be proved correct. Nevertheless, the present state of British shipping, its secular decline in world importance and its vital responsibilities in the event of war, are powerful reasons for whole-hearted efforts to secure a measure of freer trade.

* * *

Anglo-Italian Relations.—The fate of the British plan for the withdrawal of foreign combatants from Spain, with which we deal in a leading article this week, is bound up with the wider question of the relations between the two pairs of European Powers. There is an ominous significance in the fact that Italy's differences with Great Britain, France, and the ideals for which the two West European Great Powers stand are being emphasised loudly and authoritatively at the very moment when Mr Chamberlain, with manifest *bona fides*, is making a supreme effort to get the British plan carried out. The latest salvos of Italian hate have been fired by Signor Mussolini in person. Still more illuminating is Signor Mussolini's preface, dated July 1st, to the just published report of the Fascist Grand Council for the last five-years' period. In this manifesto, the head of the Italian State first celebrates the triumph of the Italian nation over "the Coalition of Geneva," and then passes from Abyssinia to Spain. "Victory," he writes, "is in the grasp of General Franco's forces. It is the first time—but will it be the last?—that the Blackshirts have faced the forces of Bolshevism on an international ground. . . . We do not know whether this meeting may not develop to-morrow on a European or on a world-wide scale." Returning to the Italian invasion and conquest of Abyssinia, Signor Mussolini declares that this has determined the main lines of Italian policy and has based it on collaboration with Germany and Japan. His parting shot is to repeat that Italian life "must and will become more military."

* * *

This is an unpromising Mussolinian contribution to Mr Chamberlain's wider plan of getting the Italian lion to couch side by side with the British lamb in an idyllic *tableau vivant*. Through Signor Gayda's pen Signor Mussolini has in effect accused the Prime Minister of allowing the Opposition in this country to force him into going back on the original Chamberlain-Mussolini bargain. The understanding was, says Signor Mussolini, in effect, that the British Government should acquiesce —and should induce the French Government to acquiesce —in General Franco's being carried to a complete victory in Spain by means of Italian and German violations of the Non-intervention Agreement; it was understood that the British plan for making non-intervention a reality should only be brought into action after a one-sided intervention had decided the results of the Spanish war by breaking the Republicans' resistance. This is Signor Mussolini's allegation. It seems to be making Mr Chamberlain's reply very difficult.

* * *

The Italian Harvest.—The Italian dictator has replied with customary vigour to those who prophesied that last winter's drought would tell heavily on Italy's wheat harvest. It had been expected that about 60 million quintals would be reaped (20 millions less than last year, which was exceptional) and thus necessitate the import of about 10 million quintals, even allowing for reserves now in hand. At a meeting of the Cereals Corporation on July 2nd, however, Signor Rossoni, the Minister of Agriculture, stated that the yield would not be less, owing to the favourable weather of the last two months, than 70 million quintals. He pointed out that in all districts except Lombardy, Piedmont, Liguria, and the Veneto the yield would be higher than last year and of an excellent quality. After this report the Cereals Corporation decided to reduce the percentage of adulteration in bread-flour from 20 to 10 per cent., with the proviso that only maize flour might henceforth be used as a substitute for wheat. Millers will receive orders to produce two standard types of flour; and to regulate supplies of maize the marketing system already applied to wheat will be adopted. By this are established *amassi*, or storage pools under State control, into which the producer delivers his grain and receives a fixed price. The peasant's complaint against this system is that it disables him from taking advantage of a fluctuating market; at whatever moment he decides to sell, the price he gets will bear little reference to actual market conditions. To his advantage is the fact that he need never be afraid of having his grain left on his hands.

* * *

The decision to reduce adulteration bears out the frequent reports that the poor quality of bread was causing discontent in Italy. Adulteration has been going on now for some time, officially since last November, and although the mixture of inferior flours has been officially admitted only for maize, agricultural publications speak openly of the leguminous materials also used. The peasant bakes his own bread and does not suffer, but the commercially-baked loaf has contained recently various kinds of flour, including that made from rice and from haricot beans. The result is not very appetising and tends to cause indigestion. The smaller adulteration now decreed will presumably lead to a greater consumption of wheat and even if the figure of 70 million quintals does not turn out to err on the side of official optimism, it is clear that wheat imports will have to be resumed on the scale of 1936, when about five million quintals were purchased. The maize, hemp and bean harvests are reported as satisfactory; and the threatening shortage in animal foodstuffs has become less likely with the second hay crop, which is also reported as satisfactory.

* * *

Onward the R.A.F.—On Wednesday was issued at Supplementary Estimate for the latest acceleration and expansion of our Air Force construction programmes. The extra sum required amounts altogether to £22,901,000 of which only £1,000 is covered by the Supplementary Estimate, since £22,900,000 is to be defrayed as Appropriation-in-aid by issues from the Consolidated Fund under the Defence Loans Act of last year. The original budgetary Air Force Estimate amounted to £103,500,000 in all—six times as much as four years ago—of which £30 millions were to come from the £90 millions to be borrowed this year *via* the Consolidated Fund for defence purposes. The supplementary £22,901,000 now pushes the R.A.F. vote for the first time above that for the Army and the Ordnance Factories together (£116 millions, of which another £30 millions is from loans). The R.A.F. thus for the first time challenges even the Senior Service, on which £123.7 millions, £30 millions borrowed, was originally estimated to be spent this year, *plus* an eventful supplementary for the 1938-39 proportion of the new 1938 construction programme. Moreover, the R.A.F. now gets £52.9 millions out of its total of £126·4 millions by way of loan—more than either the Navy or Army. The new R.A.F. programme aims at a total first-line *home* strength of 2,370 machines by the end of March, 1940, nearly two

years distant. The present Supplementary covers an increase in men from 83,000 to 96,000; acceleration of deliveries under existing contracts; and the establishment of a civil reserve of wireless operators. But since out of the total sum £11.5 millions is for "technical and warlike stores," and £8.2 millions for "works, buildings and lands," it is clear that increased aircraft production and extended aerodrome accommodation are the chief objectives of the new programme; but both the R.A.F. Reserve and the Auxiliary A.F. are to be greatly expanded.

* * *

Aerial Exploits.—A week which brings us the news that our Air Force Estimates have for the first time completely outstripped those for the Army, also brings tales of great feats in the upper air. An American, Mr Howard Hughes, is emulating with four companions that "young lady named Bright who could travel much faster than light" by putting not Puck's girdle round about the earth, but an aerial lassoo about the North Pole from West to East. They left New York just before midnight on Sunday and flew to Paris, on to Moscow, on to Omsk and Yakutsk, and came back to United States territory—not exactly "on the previous night"—but less than three days later, in Alaska. For the first time, a squadron of eleven Hawker Hurricane fighters shot beyond British frontiers to the Villacoublay display at Paris. This took 66 minutes against a headwind; but they shot back to Northolt in 51 minutes, at an average speed of 263 miles per hour. Both record flights, being in uninterrupted close formation, are a tribute to men, material and machinery. They were led by Squadron-Leader Gillan, who flew, also in a Hurricane, from Edinburgh to London last February, by night but with a tailwind, at the prodigious pace of 408 m.p.h. Last Saturday two young Englishmen put up a gliding record, remaining in the air for more than 22 hours. At the end of last week four Vickers Wellesleys made a non-stop record formation flight of 4,300 miles from Lincolnshire to the Persian Gulf and back to Egypt before landing. The world which looked to Jules Verne's Phineas Fogg (who compassed it in 80 days) like an orange, begins to look more like a pea—a *petit pois* at that. When, however, we hear, as we now do, an almost continuous drone above our heads, we would prefer not to think the noise is "as if men fought upon the earth and fiends in upper air."

* * *

Refugees and Governments.—The inter-governmental conference on refugees from Germany and Austria, convoked by President Roosevelt at Evian last week, on which we then commented, has made some progress this week. So far, the refugees concerned are only those who have left or want to leave Germany. The United States has agreed to fill its hitherto unfilled quota of immigrants; the European countries have in the main agreed temporarily to house refugees in transit; and the overseas countries have agreed to consider, within the bounds of economic possibility and with the right of selection, increased settlement in their territories under a generally applicable set of conditions. A draft resolution which was to be submitted on Friday of this week emphasises that the countries from which the emigrants come should collaborate to enable the latter to bring with them their property. The conference is to continue its work in London next month with a permanent committee and organisation, the chairman of which would be British, and the director of which will probably be a notable American citizen; but as the work is not to cause governmental expenditure, the costs will have to fall on voluntary contributions by private bodies, individuals or Governments. It has been suggested that Sir Neill Malcolm's office as League High Commissioner for Refugees from Germany and that of M. Hansson as Head of the Nansen Office, should be merged by the League Assembly, on the report of the Council, in September in order that the new High Commissioner can be co-opted by the Permanent Committee of the Conference on Refugees. It is obvious that much must be accomplished and quickly, before direct approaches to the German Government can be made with sufficient force and authority. But if this is not done, the refugees will not be able to get at their property, and the countries receiving them will not be prepared to foot the bill just to make things easier for Germany. In this humanitarian endeavour, conscience should not be allowed to make cowards of us all.

* * *

The Czechoslovak Problem.—The political situation in Prague has taken a sharp turn for the worse since the week-end; and the passing of the Nationality Statute is likely to be further delayed. The Nationalities Bill—a tripartite instrument consisting of a new language law, minority law and administrative reforms—has been negotiated and worked out solely by the Slovak Agrarian Prime Minister, Dr Hodza, and the Ministry of the Interior, also led by Agrarians. The Agrarians are the largest party in the Coalition Government; but Dr Hodza has restricted negotiations to personal exchanges of view with Herr Henlein and other minority leaders, instead of permitting Cabinet discussions as a whole. Thus, the non-Agrarian elements in the Coalition have suffered shocks during the last two weeks, as some of the contents of the Bill slowly became divulged. Since last week-end, Dr Hodza's demand for acceptance of the Bill in its entirety by Cabinet and Parliament has encountered stiff opposition both in the Cabinet and the non-Agrarian parties. The newspapers of the Clericals, Benes-Socialists, Social-Democrats and other parties of the Centre and Left have already voiced deep misgivings; and it is highly significant that Dr Hodza has been driven to hint at an alternative government by decree, perhaps without Coalition or even Parliament. Cabinet Ministers are naturally shy of accepting Cabinet responsibility for reforms whose exact nature and ultimate effects they guess and fear. Moreover, the entire Parliamentary strength of the Coalition is 163 out of 300 seats in the Chamber: i.e. 45 Agrarians, 38 Czech Social-Democrats, 28 Benes-Socialists, 22 Clericals, 17 Industrial Party members and 13 Czech Nationalists; and they need 17 more votes to obtain the requisite 180, or two-thirds, to pass the Language Reform, which alters the Constitution. Even the 11 Sudeten German Social-Democrat votes (non-Henlein) of Herr Wenzel Jaksch's party would not suffice without Communist votes. The latter, indeed, have promised support for a "reasonable" language law; but their votes will not help if there are desertions right and left from the Coalition itself. Hence the hint that Dr Hodza may ask for power to govern without Parliament at all. The split in the Cabinet—and between the parties behind it—seems at present to turn on the problem of deciding for what quota of German population in a district to accord equality of language rights. First, 20 per cent. was mentioned; then 10 per cent.; then the Right Wing of the Coalition Cabinet agreed on 15 per cent. or 18 per cent.; and all the Sudeten Germans irrespective of party want full equality for the German language in Bohemia and Moravia, however many Germans live in any district. This language dispute may be the present point at issue; but the real division is over the Right Wing Agrarians' move to do without Parliament in order to effect a realignment in the Coalition.

* * *

Diplomatic Caucus-race.—True to prototype, everyone in the current European diplomatic caucus-race seems to be winning, and all will get prizes—of some kind. First, the return of the large Jugoslav Sokol delegation from the Sokol festival in Prague to Belgrade has combined with the growing anti-German pressure by Slovenes on the Slovene Minister of the Interior, Father Koroshetz, to reorientate official Jugoslav policy a little nearer to the Little Entente than it has been of late. Secondly, from Roumania this week comes news of even more drastic action against Iron Guard members, and hints of a new Constitution containing parties and a Parliament again. In this context, recent British economic activity in Roumania, especially in oil, has called down on the British Minister's head the vials of many German newspapers' wrath—on the ground that our Minister knows a lot about petroleum and was once stationed at Teheran! Thirdly, Colonel Beck is again in a whirl of diplomatic visits to Latvia, Lithuania and Estonia, in his effort to build up a *cordon sanitaire* of contiguous neutral States from Scandinavia and Finland through the Baltic States and Poland down to Roumania, in order to isolate Germany, Czechoslovakia and other States "appertaining to" Germany, from Russia. This week, however, Colonel Beck's latest overture to Roumania in this sense has been again declined; perhaps because too much is being openly said about a Polish-Hungarian junction at the expense of Slovakia, and therefore indirectly of the Little Entente. It is now announced that the Prime Minister of Hungary, Dr Bela Imrédy, is to make his first official visit outside Hungary next week, not to Germany as many expected, but to Rome. To wind up a jolly European party, the Chief of the Italian General Staff was in Germany while the latest British fighting aircraft were giving a dashing exhibition of prowess before an enthusiastic Parisian audience. International collaboration—with a difference—has seldom been as extensive, or as hectic.

Twelve Months of War in China.—Like the second anniversary of General Franco's insurrection in Spain, the first anniversary of Japan's general onslaught on China finds the war, thus wantonly and criminally launched, still as far as ever from any prospect of a decisive conclusion. In the Far East, however, as in the Peninsula, both combatants are declaring as emphatically and apparently as sincerely as ever their determination to fight on until they have won a complete victory. If the Spanish insurgents' prospects are not bright, Japan's are distinctly gloomy. Japan's superiority over her victim in munitions and apparatus is perhaps greater than is General Franco's over the equipment of the Spanish Government; and she has the added advantage of being able to manufacture her weapons for herself. On the other hand, when the last yard of railway and macadamised road in China is under the Japanese heel, the Chinese hinterland, beyond railhead and roadhead, will stretch away to a virtual infinity that is only bounded by the still vaster spaces of the Soviet Union. Japan, unfortunately for her, does not happen to lie between the Soviet Union and China; and, however far north-westward she may succeed in pushing her advance guards, it is hard to imagine that she could ever completely close China's back door to Russia via Sinkiang.

* * *

The closing of these Sino-Russian lines of communication is doubtless the ultimate objective of the new large-scale Japanese offensive in Shansi. The significant point about this operation is that, after a twelve months' interval, it is now being started all over again for the second time. Almost at the beginning of the war the occupation of Shansi was announced by the Japanese to be an accomplished fact. This labour of Hercules has now to be repeated. The case of Shansi brings to light the true criterion of Japan's ultimate prospects. These depend, not on the advance of the Japanese military front, but upon the subsequent state of the ever-widening tracts of Chinese territory in the rear of it. A year's experience shows that while the Japanese can go on occupying lines of communication, and seizing strategic points, so long as there are any such pieces left to take on the chessboard, they cannot pacify the countryside beyond a rifle shot's distance from the Japanese lines, and *a fortiori* cannot make any profit out of it. Herein lies China's ground for hope. It is substantial.

* * *

The Week in Palestine.—The new wave of bloodshed in Palestine, which we unhappily had to signal last week, is still mounting. There is now a toll of casualties from crimes of political violence which must make the much-abused Turkish pashas, under whom Palestine was happy in having no history for 400 years, turn and grin in their graves. Within the last few days the statistics have risen to figures that are unprecedented even in the 20 years of British rule up to date. On July 6th, for example, at Haifa, a bomb outrage, followed by a riot, resulted in 26 deaths and 103 non-fatal casualties. On the 7th, at Jerusalem, a bomb killed 4 people and wounded 7 seriously and 20 slightly. On the 10th three people were injured by another bomb at Jerusalem; and there were 27 non-fatal casualties at Haifa. These are a few startling items from a chronicle which is far too voluminous to be reproduced in full. Additional British troops are being rushed to Palestine, not only from Egypt, but also from Aldershot; and British warships have been diverted to Palestinian ports. The Mandatory Power can do no less; but there is no solution in this concentration of armed force; for neither bayonets nor bullets nor armoured cars nor aeroplanes can prevent a war to the knife from being waged, under the army of occupation's nose, by two factions of the civilian population of the occupied country, when once they have fallen into this evil course. Even in 1936, when the crimes of violence in Palestine were being committeed by the Arabs only, force proved powerless to restore order until statesmanship came to the rescue with a constructive plan for removing, or at any rate diminishing, some of the stumbling-blocks over which the Arabs and the Jews have so grievously fallen out. To-day the problem is vastly aggravated by the fact that the Jews have now followed the Arabs' example in resorting to violence. The Jews appear, in fact, actually to have been the aggressors this time—notwithstanding the energetic remonstrances of their own responsible leaders. The only hope of better things lies in executing, without further procrastination, the plan that was offered to the Government a year ago by the Royal Commission.

* * *

Paid Holidays.—On Thursday, the Government's Bill to empower trade boards and agricultural wages committees to include paid holidays in the arrangements they negotiate was debated on second reading. Broadly, the measure embodies the first stage of the plans proposed in the recent Amulree Report to provide holidays with pay within the next three or four years for all manual workers and non-manual workers not in receipt of more than £250 a year. The Report's recommendation that paid holidays should be made compulsory over the whole range of industry by legislation in the session 1940-41 has not yet been finally approved by the Government. Labour critics on Thursday argued that trade boards and agricultural committees affected only a small proportion

WILLS & TRUSTS

In acting as an executor or trustee, the Westminster Bank aims at putting itself in the position of a private trustee. It is therefore its practice to employ the family solicitor, if there is one, or any other solicitor the client may name; by such means the Bank succeeds in combining domestic tradition with business efficiency. A book showing the advantages of corporate executorship and the terms of appointment may be had at any branch

WESTMINSTER BANK LIMITED

Also in Piccadilly, Bristol, Liverpool, and Manchester

of the workers still without paid holidays, and complained that these bodies were not compelled by the Bill to give holidays with pay in all cases. Moreover, they regarded the Bill as nugatory without a firm pledge that comprehensive statutory action would shortly be taken. Actually, however, the Amulree Committee itself, on which organised labour was represented, plainly regarded statutory compulsion as only a last resort, and expressed the hope that paid holidays for all could be achieved, with due regard to the varying financial needs of different industries, by the traditional means of collective agreement and negotiation. There is more force in the doubt widely expressed whether sufficiently energetic steps have been taken to ensure that adequate facilities for cheap holidays will be provided. Uncertainty whether in fact the outstanding millions will be brought into the scheme by statute in three years' time admittedly complicates the problem of providing for their holiday needs. Nevertheless, yet another stage has been reached in the progress of a notable social reform; and the news that plans are now almost completed for the transference of public examinations for school children from the dog-days of July to the cooler and damper days of December suggests that measures are being actively devised to make it possible for families to take their holidays together, without all being crowded into a few congested August weeks.

* * *

Britain's Water Supplies.—The recent shortage of rain in the spring, unprecedented for the time of year, served once more to demonstrate the inadequacy of existing provisions for the storage and supply of water. It has long been clear that a system in which responsibility rests initially upon over a thousand statutory undertakings and a similar number of companies and private persons is not capable of catering with consistent and uniform success for Britain's steadily increasing consumption of water per head of the population. Last year the Central Advisory Water Committee was set up to advise the Minister of Health on questions of water policy. Their first report, published on Monday last, lays stress upon the urgent need for the co-ordination of all bodies and interests concerned with the use and supply of water. During the past fourteen years Regional Advisory Committees have been set up one by one to increase co-operation between water authorities. To-day there are nine, embracing areas with a total population of 15 millions; and the report recommends that their powers should be augmented by statute, and their number increased, to facilitate joint action and the amalgamation of undertakings. Outstanding problems in recent years have been the relative inadequacy of water supplies in rural areas; the uncontrolled and indiscriminate sinking of wells; and the waste and pollution of water. If the administrative concentration the Committee suggest is made effective, these disadvantages will diminish, though the financial problem which arises when smaller authorities find themselves unable to meet the capital cost of waterworks will not wholly disappear, since no method of assistance or financial guarantee is proposed. The Committee's recommendations for legislation to prevent pollution, waste and the taking of underground water will meet urgent needs, as scattered epidemics in recent years have only too tragically shown; but co-ordination must proceed very much farther than is at present envisaged before Britain's priceless blessing of an ample and (over a long period) constant rainfall can be utilised to the fullest social advantage.

* * *

Democratic Education.—The report of the Board of Education for 1937, published last week, must evoke mixed feelings among those who believe the quality of our democracy depends upon the character of our educational system. More than one-eighth of the population of England and Wales is in attendance at institutions directly or indirectly controlled by local education authorities. Most of them will spend nine years at school; and some of them will stay longer. During last year an imposing programme to provide school children with physical training was put into force. The number of playing fields and gymnasia available for their use was increased; and the practice of setting up school camps was widely extended. In the sphere of more formal training steady progress was made with the provision of new school buildings, which (the Report claims) facilitated the execution of plans to reorganise the type of training provided for boys and girls over eleven years of age. It is precisely in this direction, however, that the policy of the Board and of local authorities is most open to criticism. More than a decade has elapsed since the Hadow scheme to reorganise post-primary education was first adumbrated and approved. To-day, something like one-third of the children over eleven are still in schools which have not been reorganised; and, more serious, the curriculum of many schools which have been reorganised bears only a distant relation to the Hadow plans for differentiated post-primary schools to suit the capabilities of various types of children. They are no more than elementary schools in a new setting, or, which is no better, inferior secondary schools, inferior in staffing and organisation. The social cleavage between those who proceed to secondary schools and those who do not persists in our educational policy, and is sharply reflected in marked discrepancies between the present expenditure per child in different types of school. A great chance to achieve a fully articulated system of education, neither ridden by formal academic pre-occupations nor cleft by distinctions of social prestige, is being so feebly grasped as to be almost thrown away; and the administrator's answer that "reorganisation is not so simple as it sounds" cannot satisfy rate- and tax-payers who contribute £100 millions annually to the cost of public education.

* * *

Conservative Leadership and Policy in Canada.—The election of Dr R. J. Manion as leader of the Conservative Party in Canada, following on the mixed reception given to Senator Meighen's imperialist speech and the adoption of the name "National Conservative" for the party, seems to reflect an attempt at a far-reaching realignment of political forces in the Dominion. Dr Manion is a Roman Catholic and a former supporter of Sir Wilfrid Laurier. Although he left the Liberal camp on the conscription issue, it is doubtless hoped that his religion will attract French Canadian votes and that his political history will acquit him of any suspicion of Toryism, which the party has been eagerly seeking to repudiate. The key to the situation is in the province of Quebec, where two years ago the old-established Liberal Administration was ousted by the Union Nationale, a new party led by M. Duplessis. Quebec is thus anti-Liberal in provincial politics, but anti-imperialist (which has meant anti-Conservative) in federal politics. Over the country as a whole, the Liberals' successful exploitation of dislike for Mr Bennett's "New Deal," with its implied encroachment on provincial rights, gave them something of the character of a conservative party, a large group of titular Conservatives standing definitely on their left in matters of economic policy. Although the actual policy programme adopted by the Conservative convention is on the imperialist and cautious side, there is plenty of evidence that in this amorphous situation the party is striving to broaden the basis of its appeal, both in Quebec and elsewhere.

* * *

A Settlement with Mexico?—Last week-end it was reported from Washington that the four big American oil concerns, out of the sixteen foreign-owned Mexican companies expropriated by President Cárdenas's decree last March, were preparing to settle with the Mexican Government on a basis whereby they would work the fields and market the oil for the Government, and take compensation out of the sales proceeds. Such, however, is not yet the case. "This," said the President of the Standard Oil of New Jersey this week, "would make the companies obligatory contributors to their own spoliation." He went on to tell the State Department that the American companies—and this is *a fortiori* true of the Anglo-Dutch companies, whose Governments have sharply protested the Mexican expropriatory decree—would only negotiate if the Mexican Government returned them their property, and allowed discussions over the workers' demands to be resumed on amicable grounds. This statement was disowned by another American oil company's chairman, but it is certainly the view and attitude firmly adopted by the Anglo-Dutch and Standard groups. Meanwhile, the companies' latest appeal to the Supreme Court of Mexico is still pending; and the Mexican Government is shipping oil in barrels from Minatitlán for unspecified European destinations. It also announces that more freighters will arrive this month to take oil for Germany, Italy, etc. This week Mr W. R. Davis, who secured the £2,000,000 contract with the Mexican Government to supply oil to Germany, Scandinavia and other European countries (see *The Economist* of July 2, p. 9), has been in Stockholm trying to raise £800,000 from Swedish banks to finance a cash purchase of 20,000,000 barrels of Mexican oil. Mr Stanley told Mr Strauss in the Commons on Tuesday that the British Government knew nothing more than appeared in the Press about the Mexican Government's agreement with Mr Davis. That seems a pity.

* * *

Costly Milk.—If the nation's nutrition is to be appreciably improved, a greatly increased consumption of fresh milk per head of the population is imperative. The present retail price of liquid milk is too high to make this possible. A study of delivery costs in four selected towns,* published this week, reinforces the view that existing methods of retailing milk, including as they do acute competition between a multiplicity of distributors, enhance milk prices unnecessarily. Excessively numerous retailers compete for custom by the lavish provision of expensive services. The overlapping of delivery rounds means that much of the distributive agencies' work is redundant; and the Milk Marketing Board's policy of fixing minimum retail prices "intensifies competition in services by excluding competition in prices." The profits of relatively less efficient distributors in high cost areas are protected by the Board's policy; and in all districts housewives have no choice but to pay, not only the costs of this excessive competition, but also for additional services of treatment, bottling, double deliveries, advertisement and credit sales, many of which the majority would willingly forgo. The protection of milk against disease is essential; and consumers' choice between distributors cannot reasonably be eliminated unless appreciable gains in the shape of cheaper milk can be guaranteed. The conclusion of Mr Cripps' investigation, that if milk distribution could be wholly unified in each area milk prices might be reduced by a penny a quart, suggests that drastic reform of retailing methods would afford only a partial solution for this urgent problem. Official marketing policy might well be re-examined in the light of nutritional needs. Nevertheless, Mr Cripps has revealed sufficient of the conditions under which not inconsiderable profits are made in the urban distribution of milk to justify an earnest hope that the Government may proceed with their plan (rumoured three months ago) to experiment with unified distributive services in a number of areas. At least such an experiment would show the margin which actually exists for reducing costs; and any expansion which could be achieved in consumption would considerably outweigh in public importance the inevitable protests of outraged interests.

* "The Distribution of Milk." By John Cripps. Agricultural Economics Research Institute. Oxford. 91 pages. 2s. 6d.

* * *

Jewish Capital in Germany.—The methods that have been followed in the census of Jewish-owned property in Germany suggest that the main purpose of the census was to provide fodder for anti-Semitic propaganda rather than information of genuine economic value. The returns as made under the law are likely to add up to an extraordinary sum, but it is doubtful if they will present a true picture of Jewish property in Germany. The basic provision of the law is that all Jews owning more than 5,000 marks must declare these fortunes on a prescribed detailed form. Unfortunately for the Jews, however, the word *Vermögen*, the normal meaning of which is fortune or capital, is being defined for the purposes of the census in an unusual way, to include not only artificial values on real assets, but also capital which has no existence at all. For example, all receivers of pensions are instructed to multiply their annual income by a factor which varies with the age group (e.g. for persons up to 25 years of age the factor is 17, at 80 it is 3). Jews whose sole means of existence consist of microscopic pensions will thus appear in the returns as possessing substantial amounts of capital which they do not now, and will never, possess. In the case of businesses the instruction is that no deduction from the value must be made for the fact that the business is in Jewish hands. Thus the Jewish store-keeper, whose business outlook becomes bleaker from month to month, must assess his enterprise at the normal market value. This does not, of course, mean that he could expect to receive this value for it if he were to sell it to an Aryan buyer. It is well that these details of the methods by which the returns were compiled should be known before the Nazi propaganda machine begins to broadcast the doubtless surprising figures that will be forthcoming of the hold that Jewish finance has secured over German business.

Financing Deficits

New York, July 5.—On June 30 the Federal Government closed the eighth consecutive fiscal year in which receipts have been less than expenditure. On the next day they began another fiscal year which will show a deficit. The deficit in the fiscal year just closed was the smallest for any year since 1931. But the prospect is that the new fiscal year will show a deficit rather more than double that of its predecessor.

The deficit in the fiscal year 1938 was $1,459 millions, compared with $2,707 millions in the fiscal year 1937. The decline was due preponderantly to increased receipts, though expenditure did fall slightly. The figures are exclusive of sinking fund. The gross debt of the Federal Government on June 30th was $37,165 millions, an increase of $740 millions compared with the previous year. In addition, there existed $4,925 millions of debt guaranteed by the Federal Government, which had increased by $182 millions during the year.

Receipts totalled $6,242 millions, or almost $1,000 millions more than in the preceding year. About half of this increase was accounted for by income taxes, and most of the balance by social security taxes. Expenditure (excluding sinking fund) amounted to $7,701 millions, which was $300 millions less than in 1937. There was a decline of $791 millions in expenditure on public works, including work relief, and one of $557 millions in expenditure on the soldiers' bonus (part of which had been paid in the fiscal year 1937).

The table below summarises the results of the last seven fiscal years. Figures for the earlier years have been recast by the Treasury Department to make them comparable with the current returns:—

(Millions of Dollars)

Fiscal Year	Total Receipts	Total Expenditure*	Deficit*	Gross Debt (June 30)
1932	2,006	4,741	2,735	19,487
1933	2,080	4,717	2,637	22,539
1934	3,116	6,746	3,630	27,053
1935	3,800	6,803	3,002	28,701
1936	4,116	8,477	4,361	33,779
1937	5,294	8,001	2,707	36,424
1938	6,242	7,701	1,459	37,165

* Excluding sinking fund.

Government operations during the fiscal year just ended were somewhat different in their financial and economic effects than those of the previous years in which deficits were shown. In April last about $1,400 millions of gold was "desterilised," and the proceeds placed in the Treasury's cash balance. This balance provided funds to cover the deficit without borrowing, or, more accurately, cash was provided which had previously been borrowed, and the remainder of these funds will cover the deficit for some weeks hence. This, and the existence of an excess of receipts in trust accounts, explains the difference between the deficit and the amount by which the public debt rose.

Furthermore, the entire increase of more than $740 millions in the Government debt was financed from internal Treasury sources. In consequence, the volume of Government securities held outside the Treasury fell by $378 millions between June 30, 1937, and June 30, 1938. In addition, $438 millions of United States Savings bonds, which are non-transferable, were sold during the year. During the year, therefore, there was a total decline of $816 millions in the volume of public debt quoted in the public markets. The financing of deficits by these means does not have the same expansionary effect upon credit and banking as those which occasion a rise in outstanding securities.

Prospects for Public Finance

For the fiscal year just beginning, a deficit of about $3,500 millions is currently anticipated, although official estimates have not yet been made public. Estimated expenditure of something like $9,000 millions and receipts of perhaps $5,500 millions are the basis of this rough calculation.

Only tentative forecasts can, however, be made. First, the Reconstruction Finance Corporation and the Commodity Credit Corporation have until recently been financed through the Treasury; hereafter, it has been announced, they will finance themselves independently through the public sale of their obligations, guaranteed by the Government. This will mean that figures for this year will not be comparable with those given in the table above. Secondly, the President stated at a recent Press conference that methods of liquidating the considerable increase in the debt which has taken place in recent years were being examined. Thirdly, the President's attitude towards the Tax Revision Bill is unfriendly, and he has stated his intention of seeking reconsideration of this measure by Congress as soon as possible. Fourthly, the large appropriations made as part of the "spend and lend" programme may or may not be spent rapidly.

All these figures cover only the Federal Government. To obtain a complete picture of Governmental financial operations in the United States, the state and local administrative units must be taken into consideration, and figures for these are available only after a considerable time lag. The total debt of all types of Government, including Federal, is estimated to have been $55,600 millions on June 30, 1937. Total tax collections in 1936 are put at $10,498 millions and $12,300 millions in 1937. Total expenditure in 1936 was $16,900 millions and $17,047 millions in 1937. The magnitude of these figures, relative to a national income estimated at only $63,000 millions in 1937, is very great.

Outflow of Short Term Funds

The Treasury's report of capital movements during the first quarter of this year, which has just been made public, confirms the implications of recent trade figures. The net outward capital movement from the United States in the first three months of the year amounted to $203 millions, and during that period the net import of gold and silver was $122 millions. The sum of these two figures almost exactly equals the export surplus for the period, which was $321 millions.

The outward movement of funds from the United States in the first quarter was entirely accounted for by a decline of $233 millions in short-term banking funds and the movement proceeded almost without interruption. There was a small increase in brokerage balances. Foreign transactions in American securities here showed a slight excess of $11.6 millions of sales, which was more than offset by American transactions in securities abroad. The heaviest outflow of short-term funds was to Switzerland, and the largest outflow on security account went to the Netherlands. The total outflow for the first quarter was less than half that recorded in the final three months of 1937, when it was $517 millions. The Secretary of the Treasury has stated that no sharp deviation from the trend of the first quarter occurred during the second quarter.

The Federal banking authorities, after some weeks of discussion, have agreed upon a co-ordinated programme to examine and supervise the country's commercial and savings banks. These authorities include the Federal Reserve Board, the Federal Deposit Insurance Corporation, the Comptroller of the Currency, and the Treasury Department, and the State banking authorities are reported to be in agreement with their proposals. The move seems to have the object of meeting the criticism frequently made of overlapping activities and contradictory policies. An effort will be made to render credit more easily available to small business organisations, and to lessen the effect upon banks of fluctuations in the market prices of securities, sometimes serious, because securities now constitute so large a portion of banking assets.

BANK OF MONTREAL

France

New Defence Bonds

Paris, July 13.—Next Monday the National Defence Fund will issue 3½ per cent. bonds to the value of 1,000 million francs, the interest for 18 months being paid in advance. These bonds, issued in coupons from a hundred to a million, will be free of security and income taxes. They will be discountable at the Bank of France up to 90 per cent. of their nominal value during the first twelve months and thereafter up to 95 per cent. There is no limit to subscriptions. The funds will be applied to the development of re-armament.

By making such an issue on the short term market, the Government hopes to avoid any further difficulties in the long term market, and the news was, in fact, greeted by a rise in the public funds. Moreover, the recent weakness of the franc on the exchange market was ended by information that a 3½ per cent. credit of 75 million guilders had just been granted to France in three months Treasury Bills (five times renewable and without gold clause).

Uncertain Political Prospects

Parliament has risen for four and a half months. The Treasury's needs are covered for the moment. The course of foreign trade is not unfavourable and the import surplus is probably covered by considerable receipts from tourists, attracted by the low level of the franc.

A number of factors recently led to renewed selling of francs. They included vague rumours about the international situation and Professor Rist's examination of the deficit in the public accounts. Thus, after three months of the Daladier regime, there are still influences making for nervousness and instability. Fears of war, world economic depression and uncertainty about the future policy of the Left wing parties still impede any appreciable business revival.

What will the Radical Socialists decide at their Congress in Marseilles on October 26th? What will be their answer to the Socialists' invitation to press for an increase in the wages of civil servants and for the fundamental adjustments which M. Blum claims have been rendered inevitable by the rise in the cost of living? They are likely to support a policy of retrenchment, but the elections of 1940 are only eighteen months distant, and relations between the Radical Socialists and the Socialists are a vital factor in political prospects.

Six Months' Trade

There was a surplus of imports in June of 1,520 million francs, compared with an average surplus of 1,552 millions during the first six months of the year. Since January the total import surplus has amounted to 9,300 millions, or exactly the same as in the first half of 1937. The following are the figures for six months:—

Francs (000's omitted)

	First six months of 1937	First six months of 1938	Increase in 1938
Imports:—			
Foodstuffs	5,110,413	6,121,503	+1,011,090
Raw materials	12,055,070	13,619,380	+1,564,310
Manufactured goods ...	3,139,289	3,532,988	+ 393,699
Totals	*20,304,772*	*23,273,871*	*+2,969,099*
Exports:—			
Foodstuffs	1,564,235	1,902,830	+ 338,595
Raw materials	3,890,178	4,538,257	+ 648,079
Manufactured goods ...	5,574,508	7,539,740	+1,965,232
Totals	*11,028,921*	*13,960,827*	*+2,951,906*
Import surplus.....	**9,275,851**	**9,293,044**	**+ 17,193**

Slightly Improved Trade

The figures show a slight improvement in the French terms of trade. The surplus, especially in trade with foreign countries, has been stabilised, imports are now falling, exports are increasing in value and volume (notably of manufactured goods), and imports of foodstuffs from French colonies have increased. Nevertheless, in so far as the diminution in imports of raw materials is due to economic recession and the decrease in French exports to her colonies to the rise of French prices, the position is still far from favourable.

Unemployment on July 2nd was 357,915, against 362,877 in the previous week, an increase of 38,754 compared with the figures for a year ago. Partial unemployment (as recorded in factories employing at least 100 persons) is increasing much more rapidly than the numbers of wholly unemployed.

Coal output in May was 3,818,073 tons for 20·8 working days, against 4,125,527 tons in April for 22·5 working days and 3,473,358 tons in May, 1937, for 20·3 working days. Average daily output was thus 183,077 tons, against 182,862 tons in April. The number of men employed at collieries was 248,467 at the end of May, against 248,136 at the end of April, and was about 13,000 more than the number of men engaged in May, 1937.

Declining Output and Higher Prices

The Statistique Générale has just published its monthly figures of industrial production:—

(1928 = 100)

	May, 1937	March, 1938	April, 1938	May, 1938
General index	*89*	*84*	...	...
Mines	86	96	95	91
Chemical industries	106	96	98	...
Paper	190	157	142	...
Textiles	84	81	78	...
Leather	72	69	...	...
Iron and steel	85	73	68	65
Engineering	92	83	78	...
Automobile	76	88	67	88
Building	66	59	59	59
Gas and electricity	128	133	...	...
Miscellaneous	107	109	...	...
Old general index (1913 = 100)	*104*	*95*	...	...

In the motor industry, 18,595 vehicles were put on the road in May, compared with 12,922 in April and 17,262 in March.

Prices have perceptibly risen. The advance is most marked in the case of imported goods and industrial products:—

	May, 1937	March, 1938	April, 1938	May, 1938	July 9, 1938
Wholesale prices (1914 = 100):—					
General index.....	*529*	*617*	*619*	*644*	*657*
Domestic products ...	552	654	662	686	689
Imported products ...	486	552	543	570	600
Foodstuffs	515	613	623	652	657
Industrial products ...	541	622	617	638	657
					June, 1938
Retail prices (1914 = 100)	*586*	*690*	*691*	*698*	*698*
Lighting and heating (1930 = 100)	93·4	116·4	117·4	117·8	117·8
Clothing.....	93·7	100·0	100·0	100·0	100·4

There were 472 bankruptcies in June, against 455 in May and 444 in April; judicial liquidations and bankruptcies numbered 613 against 567 in May and 567 in April.

Germany

Entail Abolished

BERLIN, July 13.—Entail of landed property has been abolished, and will in general cease to exist after January 1, 1939. Thus a long dispute, in part economic and in part ideological, has come to an end. In parts of West Germany where the Code Napoleon was introduced entail was abolished more than a century ago. It was the subject of agitation in the year of revolution 1848, but survived and was recognised by the Civil Code of 1900.

Article 155 of the Weimar Constitution abolished entail in principle, but the execution of the principle was left to the states, these having their own land laws. The principle was not carried into effect, or only to the extent of provision being made for a gradual lapse of entail. A Nazi law of 1935 standardised the system of entail throughout the Reich, but did not weaken it; and to-day there are 910 entailed estates, embracing about 1½ million hectares of land.

According to the Party's original programme, all large estates (not necessarily identical with entailed estates) were to be divided up among smallholders. This programme was never carried out, or even attempted. Although the dimensions of estates are statistically recorded, there are no data of the amount of land in the hands of individual proprietors or families.

In general, entail accorded with the Nazi doctrine of "Blood and Soil," that is, the permanent association of the family or *Sippe*, with its particular spot of earth, and with the tenet that land is not a proper object of trade and speculation. Even now, after the law abolishing entail has actually appeared, the institution of entail is being praised for having served as a desirable corrective of Liberalism. Entail is abolished, not because it is bad, but because it is now superfluous. Already the alienation of land is for the most part no longer free, being subject to official sanction.

Considerably better reports are being issued of the condition of cereal and root crops, and meadows and pastures are above average. Wheat imports in the first half of the year totalled 543,300 tons, costing Rm. 73 millions. Foot-and-mouth disease continued to spread late last month, affecting (without Austria) some 104,000 farms but high hopes are entertained of a newly discovered preventive. The food position in Berlin has in general improved: the supply of meat, eggs, and fats is adequate, and even imported commodities, like oranges and cream, long unobtainable, are being sold; but the price of vegetables and fruit is exorbitant.

Trade with the Americas

Satisfaction with the trade and payments agreement with Great Britain has been eclipsed by impaired prospects for exports to the United States and South America. The outlook in these markets is, however, confused. On the one hand, it is pointed out that, in the event of an Anglo-American commercial treaty, Germany, having no treaty with the United States, will lose her already restricted American market for those classes of goods in which she competes with Great Britain. It is reported, however, that Washington is ready to restore treaty relations with the Reich on the basis of most-favoured-nation treatment. If the years 1931-34 were taken as the basis for a quota for German trade with the United States, as Germany apparently proposes, German purchases of American goods would increase very considerably. In trade with America the main German aim since the initiation of Dr Schacht's New Plan has been to reduce the import surplus. In 1937 the passive balance was Rm. 73 millions, against Rm. 311 millions in 1932.

Since trade difficulties arose with Brazil, there has been a tendency to play off Washington and Rio against each other, although it is simultaneously asserted that Brazil's anti-German policy, and in particular the Bank of Brazil's stoppage of the purchase of payment-marks directly resulted from American pressure. The trade Press now emphasises Brazil's dependence on German buying, in particular of cotton. It is announced to-day that in consequence of Brazil's action it will be impossible for the Reich to buy Brazilian coffee, tobacco, rubber, wood and fruits. Cotton, for some reason, is not mentioned.

These specified goods will be purchased from other countries, and large deliveries from other countries have already been contracted for. Despite the Mexican oil agreement, the outlook for trade with Latin America is not considered satisfactory; and the sharp fall in the Bourse quotation of Deutsche Ueberseeische Bank, which is now quoted at about 108, against 143 in 1937, probably reflects this view.

Record Employment Figures

The number of unemployed fell during June by 46,000 to 292,000, of whom only 28,000 were fully employable. The number of employed workpeople and clerical and technical employees in June reached 20 millions for the first time, and the total was 1,100,000 higher than a year before. Relatively, the number of women employees increased most. In Austria the number of employed increased by 76,000, and unemployment fell to 275,000. Vetoes on Jews engaged in specified gainful occupations have been extended to several more occupations, including trade in real property, mortgage business and house management.

The Ruhr coal industry announces measures for increasing productive capacity, including the deepening of pits and sinking of new pits. It is expected that after the coal setback of the spring, demand will increase substantially, both for the industrialisation of Austria and for the Hermann Goering concern.

The Reich system of rationing iron and steel to consumers has been extended to Austria. The home steel market is active, and while there was no improvement in the foreign market in June, reports from Belgium this week speak of favourable factors. The Steel Trust's figures of output in the second quarter of the year show a decrease in coal, but moderate increases in pig iron and steel. The Aluminium G.m.b.H. of Rheinfelden has erected new works, which will bring its annual output of raw aluminium to 23,000 tons. Machinery exports in May rose to 40,100 tons, the highest since the depression.

The Reich Debt on April 30th is returned at Rm. 20,739 millions, against Rm. 16,156 millions in April, 1937. Other recorded Reich liabilities, including certificates issued against loan stock (impounded dividend) claims, total Rm. 408 millions. The increase in debt during the twelve months was wholly in "long- and middle-term internal debt," and resulted from the flotation of consolidation loans. Owing to the fact that Reich bill debt figures are not made public, no repayment of old short-term debt out of the proceeds of consolidation loans appears in these schedules. According to the statement of a Reichsbank director, nearly all of the work-creation bills have been paid off, leaving only re-armament bills outstanding.

Czechoslovakia

Calm on the Surface

PRAGUE, July 7.—The country remained calm and steady during the communal elections and did not respond to violent foreign propaganda. Proof of the complete calm is to be found in the successful carrying out of the great Sokol Festivals, at which home and foreign visitors were extraordinarily numerous.

Meanwhile the Government are preparing their solution for the minority problems and have entered into negotiations with all the minorities affected. It is expected that final discussions will take place in Parliament before the end of July. Business circles are very anxious that a peaceful solution should be found; and this view has been emphasised in the General Assembly of the Central Association of Czechoslovak Industries from both Czech and German sides.

Political tension has, of course, had its economic repercussions. The great health resorts of Western Bohemia have been suffering heavily. Politics and its noisy manifestations are incompatible with the prosperity of watering places. Carlsbad, for instance, has been selected by Herr Henlein as one of his principal centres of activity. The Western Bohemian spas are calling for Government assistance.

ROYAL INSURANCE COMPANY LIMITED

FOR ALL INSURANCE NEEDS

Head Offices:
LIVERPOOL North John St. LONDON Lombard St.

In the German and mixed districts, boycott has been instituted of Czech firms and goods, a movement which has led to similar action in Czech districts against German firms. The President of the Prague Chamber of Commerce has emphatically rejected the boycott on either side as a weapon economically inadmissible and two-edged.

Checks to Trade

The political unrest in Central Europe causes some reluctance on the part of foreign buyers to place orders, and this reserve is accentuated in the case of the United States by trade depression. Owing to the political unrest there has also been uneasiness on the money market. At one time deposits were withdrawn, especially from institutions in the German and mixed districts, and the Finance Minister made a statement to allay alarm. Money was paid out freely, however, calm has been restored, and the withdrawals have been redeposited. The money market stood the test well and remained absolutely liquid. Share prices rose and those of Government securities remained steady.

Despite some delay in growth, the state of crops is excellent and a good harvest is expected. The Agrarians are asking for higher corn prices, because costs of production have risen and cattle prices have declined. In addition, the cattle trade has suffered considerable losses through epidemics. Consumers, on the other hand, want corn prices reduced, and the merchants are seeking a better ratio between the prices fixed for wheat and rye, since their present relation leads to the disproportionately extensive growing of wheat—and it has even been necessary to import rye.

The number of unemployed persons at the end of May was 285,795, against 360,849 a year ago. Employment in industry was, on the whole, good, although in some export industries work is slackening. This is especially so in the textile trades: business is poor in the porcelain and glass industry, and the German population of the northern frontier districts will suffer. Building is active.

The output of coal remains unchanged, but the production of iron and steel has declined compared with last year. Output in the period from January to May was as follows:—

	('000 tons) 1937 five months	1938 five months
Coal	6,767	6,426
Lignite	7,243	7,268
Coke	1,212	1,206
Pig iron	588	670
Steel	820	903

Imports during January to May amounted to 3,865 million Cz.Kr., against 4,330 millions a year ago, and exports to 4,817 millions, against 4,500 millions last year. Exports kept up well in spite of political unrest. But lower prices for raw materials partly caused the fall in the value of imports.

Negotiations with Germany about payments have been concluded, and those about trade have been resumed. Trade negotiations with Italy and Greece have also been concluded, and discussions with Hungary are being prepared.

Economic assistance by the Western Powers to Central Europe has been mooted. Czechoslovakia's prime need is a more liberal system of trading with foreign countries, especially with France. The economic problems of Central Europe are now, since the Anschluss, different from what they were. The adjustment of the relations with the former Austria is far from easy. Exports are meeting with considerable difficulties.

Japan

Cabinet Changes

TOKYO, June 9.—A drastic Cabinet reshuffle was announced on May 26th. The changes affected four Ministries: General K. Ugaki replaced Mr K. Hirota as Foreign Minister; Mr S. Ikeda succeeded Mr O. Kaya and Mr S. Yoshino as Minister of Finance and Minister of Commerce and Industry; and General S. Araki relieved Marquis Kido of the portfolio of Education, which the latter held in addition to that of the Ministry of Public Welfare. The reconstruction was completed a week later by the appointment of Lieutenant-General S. Itagaki—just recalled from the front—as General H. Sugiyama's successor at the War Office.

The Ministerial changes received strong popular approval, and Mr Ikeda's inclusion in particular was regarded with general favour. By far the most important feature of the reconstruction is Mr Ikeda's appointment to two vital posts at the same time, which puts him in a position somewhat analogous to the German Minister of Economic Affairs. There will be no fundamental change (the new Minister has declared) in the fiscal and economic policies hitherto pursued; but the two departments have gained in prestige by the replacement of two junior Ministers by the veteran financier. Under single management they will function without friction; and wartime control will be exercised more thoroughly and more flexibly.

The values of imports and exports fell still further in May, and their decline during the month was in each case the most severe since the downward movement began last November. Imports, valued at 253.2 million yen, fell by 166.7 million yen, or 39.7 per cent., compared with the corresponding month of last year; while exports, valued at 210.9 million yen, declined by 71.3 million yen, or 25.3 per cent. Well over two-thirds of the decline in imports was accounted for by textile materials, and textile goods were responsible for nearly as much of the decrease in exports. Only fertiliser imports and timber and machinery exports showed appreciable increases.

Rising Prices and Labour Disputes

Commodity prices are rising again. The index number of wholesale prices prepared by the Bank of Japan registered an advance of 0.9 per cent. during May, and at the end of the month was 3.1 per cent. higher than in May, 1937. In the middle of May the average level of retail prices of commodities covered by the statistics compiled by the same bank (including food, rent, clothing, fuel and light and miscellaneous items) remained unchanged compared with a month ago, but was a fraction less than 15 per cent. higher than a year ago.

Strikes, which subsided on the outbreak of the Sino-Japanese conflict last July, have become more numerous again in recent months. The number of trade disputes involving stoppages of work fell to 44 last December, rose to 82 in January and 89 in February and was 81 in March. These monthly figures are still less than one-third of those recorded a year ago. The greater part of the recent disputes arose out of demands for higher wages, a reflection of rapidly rising prices.

The spring cocoon crops are arriving on the market. On the average they are quoted at about 4.20-30 yen per kamme, against an average of 5.75 yen last spring and 5.02 yen two years ago. The season's crops are expected to be smaller owing to reduced rearing of silkworms, primarily as a result of a shortage of farm labour.

The wheat crop is also reported to be not very satisfactory. The official forecast estimates the year's crop for the country (excluding the north-eastern provinces and Hokkaido) at 8,985,000 koku, an increase of 1.9 per cent. compared with last year and 9.1 per cent. higher than the average of the last five years. Present wheat prices are higher than a year ago, being quoted at about 21.75 yen per koku, against 20.00 yen.

Canada

Budget Deficit

OTTAWA, June 26.—The long-delayed Federal Budget was submitted to the House of Commons on June 16, after the Government had given up hope of including the tariff changes necessitated by the new trade treaty with the United States. The Minister of Finance was able to report that the actual deficit for the fiscal year 1937-38 was only $13,775,000. Revenue was $516,592,000 and total expenditure

THE BRITISH LINEN BANK
Incorporated by Royal Charter, 1746
Head Office: 38 St. Andrew Square, Edinburgh
OVER 210 BRANCHES IN SCOTLAND
LONDON OFFICES:
City Office: 38 Threadneedle Street, E.C.2
West End Branch: 198 Piccadilly, W.1

$530,467,000. He claimed that the Budget would have been balanced if the drought in the West had not involved special expenditure of $20 millions and if the business recession had not increased the deficit on the Canadian National Railways by $7 millions.

The deficit was a great improvement upon the previous year's deficit of nearly $78 millions. For the current fiscal year, however, Mr Dunning forecast an aggregate expenditure of $524,600,000, against a revenue of no more than $501,700,000, leaving a prospective deficit of about $23 millions. There were no changes in taxation, except some alterations in the levies upon gifts and the exemption from the sales tax of lumber and other materials used in building in order to encourage low-cost housing.

Nor were there any changes in the tariff. Mr Dunning explained that, since Canada's two best customers, the United Kingdom and the United States, were not prepared to reduce their tariffs except by trade agreements, it was futile for Canada to pursue an isolated policy of tariff reduction. In his review of the financial and economic situation, Mr Dunning took a line of restrained optimism. He expressed the view that recovery depended largely upon two factors: the elimination of the fear of a world war and substantial betterment in the economic situation in the United States.

C.N.R. Oppose Unification

The Special Railway Committee of the Senate is now hearing the statement of the C.N.R. The Canadian Pacific's plan for the unification of the two systems has been subjected to a lengthy criticism by the C.N.R. and pronounced both impracticable and contrary to the public interest. It is argued that the C.P.R.'s estimate of an annual saving of $75 millions through unification is extravagantly large, and that the proposed abandonment of 5,000 miles of lines is impossible. Railway economies would be obtained at too high a price if they retarded the development of Canada and increased the seriousness of the unemployment problem.

The C.N.R. contend that most of the results promised for the C.P.R. scheme could be secured by intelligent co-operation, and propose the creation of a board of three members, one from each system with a neutral chairman. This body should examine all projected schemes for co-operation and seek the support of both railways in such schemes.

Good Crops Forecast

Crop reports from the prairie provinces continue to be very encouraging. The prospects of a good western crop are still high. Hay and pastures are also much better on the prairies than in any recent year. The crops in Quebec and the maritime provinces are late, but in the main all the crops in Eastern Canada are faring well and pastures are very abundant. Despite the heavy American crop, grain prices are keeping up well, and visible stocks of Canadian wheat on June 3rd had been reduced to 29¼ million bushels, compared with 55¾ million bushels on the corresponding date in 1937.

Little change in business conditions is expected until a good grain crop in the West is definitely assured. A review by the Bureau of Statistics of business conditions during the first four months of 1938 places the index of the physical volume of business for this period at 110.4 (1926 = 100), compared with 117.3 for the same months of 1937, and the index of industrial production at 111.9 compared with 120.7. Comparative data about important branches of economic activity in the first third of this year and last are as follows:—

	Four Months 1937	Four Months 1938	Increase (+) or Decrease (−)
Carloadings	800,674	751,313	− 6·2%
Production of electric power, k.w.h.	9,199,627	8,658,742	− 5·9%
Construction	$55,835,700	$41,137,100	− 6·3%
Flour production, bushels	3,106,868	2,769,900	− 10·8%
Newsprint production, tons	1,162,680	850,499	−26·9%
Steel production, tons	473,590	441,854	− 6·7%
Copper production ...	$116,752,000	$165,373,200	+41·6%

The mining industry has shown a remarkable advance in the value of output during a period when the production of other industries has been shrinking. It is now one of the chief buttresses of Canada's economy.

Letters to the Editor

Banking and Trade

TO THE EDITOR OF THE ECONOMIST

SIR,—May I endorse Mr Harrod's plea in your correspondence columns for concerted measures to reduce the long-term rate of interest. Most people would agree, presumably, that a reduction would be advantageous in present circumstances both to the Treasury and to business. If, however, there are some who doubt the efficacy of Mr Harrod's proposals, is there any objection to settling so important a matter by making the experiment?

I am, etc.,
J. M. KEYNES.

Tilton, Firle, Lewes.

Palestine

TO THE EDITOR OF THE ECONOMIST

SIR,—In *The Economist* of July 9th, on page 59, it is declared that

> If lawlessness were once to establish its reign in Palestine, then the situation of the Palestinian Jews would ultimately become unbearable—surrounded, as they are, by an Arab majority that inhabits vast regions extending to Iraq in one direction and to Morocco in another.

The implication is that the Jews in Palestine could never stand alone against the Arab world, and ought therefore to submit indefinitely to the Arab terrorism, against which a notoriously pro-Arab British administration has for so long failed to protect them; and to consider themselves lucky that they have not been altogether wiped out. The fact is, on the contrary, that it is now only the British power which prevents the Jews from taking possession of the whole of Palestine and holding it by right of conquest.

The Jews of Palestine, with the support of Zionists all over the world, could in less than a year put into the field an army which would make short work of the mythical might of the "Arab world." Zionism has money, organisational and technical ability, territorial concentration—all the requisites for military effectiveness which the Arabs lack.

The idea that the Jews are incapable of military power is a most extraordinary delusion. In antiquity they broke the power of the Seleucids and confronted the Roman Empire with the most formidable national revolt it ever had to encounter. In this century they have served with distinction in the principal armies of the world, and have produced in Monash and Kakir two of the ablest soldiers of our time.

The Balfour Declaration may have been wrong, or at least unwise. But the Mandate was solemnly accepted by Britain, and it is Arab violence which has rendered it unworkable. The most effective method of dealing with that violence would be for Britain to give warning that, unless Arab terrorism is immediately brought to an end, British troops will be withdrawn and the Jews given a free hand.

I am, etc.,
G. F. HUDSON.

All Souls' College, Oxford.

Financing Public Works

TO THE EDITOR OF THE ECONOMIST

SIR,—It is some months since I expressed in your columns my optimistic view of the international political outlook, and my pessimistic view of the economic situation. Mr Harrod's letter, in your issue of July 9th, on page 68, shows that he is in full agreement with my opinion on the business outlook and, like so many other eminent economists, he favours energetic action and in particular a large-scale programme of public works.

Mr Harrod's suggestions interest me less than his statement that what he proposes *can do no possible harm*. Although other members of the public works school have implied this, I have never before seen it so definitely stated, and I am therefore anxious to seize this opportunity to ask Mr Harrod why he is so confident that his plans are, at least, harmless.

Economic developments in any one country can have world-wide reactions. I believe it is quite impossible for one man or a committee of men to know what all the reactions would be. There is no economist to-day in a position to explain what will be all the ultimate economic effects of our re-armament programme, nor the effects of President Roosevelt's pump-priming. During several of the most recent years President Roosevelt has incurred enormous deficits on various schemes, and yet even now he is faced with the gravest difficulties. Moreover, in spite of his schemes the business revival was much less pronounced in the United States than in several other countries, including England, and we cannot hope to spend on the same scale as America. Our financial position will not allow it.

How can we be sure that the financing of large-scale public works will not damage our credit? How can we be sure that those who have their capital in fixed interest bearing securities (in fact, all those with fixed incomes) will not be made to suffer in order that others may benefit? How can we be sure that some prices will not be raised to the detriment of certain industries and individuals? How can we be sure that public works do not merely postpone the evil day and eventually make it much worse?

Mr Harrod is confident that public works, or at least the proposals he makes, *can do no possible harm*, and I am anxious to understand the reasons for such confidence. Otherwise, I should prefer to await the economic results of our own re-armament programme and President Roosevelt's pump-priming before encouraging further schemes in England, even though we must face a depression in the meantime.

Yours faithfully,
G. E. ROSS.

The Long Term Budget Problem

TO THE EDITOR OF THE ECONOMIST

SIR,—There are three possible ways, the authors of your survey of the Long Term Budget Problem say, of meeting steadily rising Government expenditure out of a static taxable capacity: (i) by reduced Government expenditure; (ii) by increased taxation; and (iii) by increased productivity per head.

The authors appear to be agreed that (i) and (ii) offer little hope as a means of obviating future Budget deficits, because they would tend to reduce business activity and, consequently, to aggravate the problem. In effect, it is not by reducing the amount of buying that we can increase the amount of selling, and thus increase taxable income.

As for (iii), this use of the word "productivity" does not advance matters in the least. Increased production to meet increased final-buying of goods is undoubtedly the way to prosperity; but increased production *not* accompanied by final-buying of goods only leads to losses and depression.

The fundamental economic facts of our time are, on the one hand, that the increased use of labour-saving machinery and organisation tends to increase the velocity at which industry is able and willing to produce; and, on the other hand, that the arresting of the growth of population tends to arrest any increase in the velocity of final-buying of both consumable goods and capital equipment. In other words, modern developments tend to cause productive capacity and purchasing power to outstrip final-buying. Hence there is a tendency for the formation of excessive quantities of *unclaimed wealth*, the existence of which, in the form of stocks of goods, retards the velocity of production.

In these circumstances, productivity, national income and taxable capacity vary as productive capacity and purchasing power are adequately utilised, being greatest when the velocity of final-buying of goods and services is equal to the velocity at which industry is able to produce.

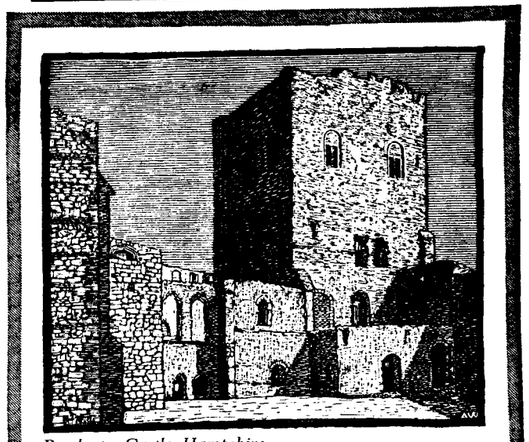
There is no doubt that purchasing power can be, and frequently is, withheld for a variety of reasons. Purchasing power can even be "hoarded" in the form of bank deposits. Thus, when for any reason the public fail to utilise purchasing power adequately, the *unclaimed wealth* so made available should be utilised by the Government in any manner that seems appropriate.

Yours faithfully,
A. H. ABBATT.

Eastbourne.

Books and Publications

The Continuity of Economics



PROFESSOR RIST has written a book that should interest almost equally the general reader who wants to know about economists, the monetary theorists themselves, historians, and students of the history of economic thought.* He has performed this unusual and admirable achievement by inextricably blending in a single volume a number of separate books.

Somewhere in these well-printed pages there is a lucid and not too elementary treatise on the theory of money. Elsewhere there is a summary history of banking and finance in the last two centuries. There is also a compendium—and this is perhaps the completest of the hidden books—of the monetary theories of a host of writers, some known and some neglected, amply illustrated with long quotations from their works, for which the author is particularly to be thanked. Finally there is an essay on the many sound and some rather deplorable ways in which the science of economics has developed.

Professor Rist has mixed these ingredients well. If the result is, frankly, rather a stew, it has the advantage of that dish: that different constituents which could not ordinarily go together may be swallowed at once with pleasure and profit.

The first five of the nine chapters are devoted in the main to authors, from Cantillon, for whom the author has a very special affection, to Ricardo, whom (in common with so many contemporaries) Professor Rist in one breath reveres and detests, and Tooke. The last four chapters deal with separate or, more accurately, separated questions, such as the connections between the rate of interest and prices. Here the authors, now those of the last century and of to-day, take second place. By this method, history, theory and the history of theory are developed gradually throughout the book.

T.T.190D

All this sufficiently shows that this is a good book, and permits us to sound a note of criticism. The theory of money is a controversial subject and one professor's meat is sure to be another's poison. One can, therefore, only deplore the way in which Professor Rist ignores the essential parts of the doctrines of Malthus, almost the profoundest (though certainly the most confusing) of the classical economists, and completely neglects Professor Pigou among contemporaries. These gaps indicate how the author has almost entirely ignored the whole question of unemployment and its relations with money, which is the subject closest to the heart of English thinking, both at the time when Malthus wrote weekly to Ricardo and to-day.

Thus, the most interesting book of all—to an English student—is missing from Professor Rist's collection. Its absence is this book's fundamental fault. It means that the author fails to see the drift of much that he is judging. In its train, too, it brings another fault because several authors in consequence appear to Professor Rist to be writing nonsense, and are paid in their own coin. How else could Professor Rist refute Mr Keynes's doctrine about open market policy by quoting a page of Cantillon to show that it is (*a*) unoriginal and (*b*) untrue? That is pamphleteering and there is no place for it, even in the best of treatises.

These are not inconsiderable faults, but the faultless history of economic theory would be a deadening work. An irritated reader is a stimulated reader, and if irritation is mixed with unstinted admiration, as it must be for any student of this massive and readable book, the cause of the science must inevitably be furthered. Professor Rist leaves no place for complacency, and should be congratulated on a strikingly valuable piece of work.

Shorter Notices

"The Science of Society. An Introduction to Sociology." By J. Rumney. Duckworth. 125 pages. 3s. 6d.

Within its limits, this is an excellent introduction to sociology, both for the student and the general reader. The author adopts a neo-Marxist approach to his subject, but in general his method is eclectic, linking up the generalisations of sociologists as different in their views as, for example, Spencer, Hobhouse and Briffault. In view of the book's brevity, it is perhaps foolish to complain of omissions, but it is surprising (more especially as Mr. Rumney mentions most sociologists of importance) to find no reference to the pioneer work of Le Play. As the author justly remarks, English universities, with the honourable exception of London and Liverpool, have, to their own loss, neglected the study of sociology. This is the more extraordinary because, in the general study of society, this country has a splendid record from Buckle down to Professor Ginsberg. The centre of gravity of sociological studies is undoubtedly in the United States. The output in recent years of books discussing general sociology, of which Mr. Rumney's is an excellent example, encourages us to hope, however, that this country may be entering upon a new period of fruitful work in this field.

"Tin Statistical Year Book, 1938." International Tin Research and Development Council, 378 Strand, W.C.2, and 21 Prinsessegracht, The Hague. 200 pages. 6s.

The 1938 edition of the Statistical Year Book of the International Tin Research and Development Council contains various new tables and 75 graphs which render the book, even more than its predecessor, indispensable to those who wish to keep fully informed on the tin situation. The object of the book has been to collect all the available statistical information about the quantities of tin produced at mine or smelter and consumed in various countries; and to show how much tin is used in different industries. The sources from which each country obtains its tin or tin products are set out; and in the case of countries which export tin or tin manufactures the quantities consigned to each destination are given. Those who are interested in the tin industry or tin mining will find all the available statistics collected in this book as well as full information about the tinplate, canning and many other industries.

"Broomhall's Corn Trade Year Book, 1938." (London) G. P. Broomhall, 14 St. Mary Axe, E.C.3. 162 pages. 10s. 6d.

The assortment of facts and figures given throughout the year in the *Corn Trade News* is collected together in this annual, with comparative statistics for recent years. Two articles deal with wheat-growing in Canada and the prospects of the wheat and flour trade. This is, as usual, a most valuable reference book for all concerned with the corn trade.

"Office Organisation and Management." By the late L. R. Dicksee and Sir H. E. Blain. Twelfth edition by S. W. Rowland. Pitman. 326 pages. 7s. 6d.

At a time when books on what might almost be called the metaphysics and theology of office management are frequent, the reappearance of this very practical handbook on topics important and familiar in the day-to-day practice of ordinary business men is especially welcome. It covers office routine, business procedure, simple accounting and various legal matters of general application; and has been brought up to date in all its chapters.

THE BUSINESS WORLD

Home Rail Prospects

OF all investors, the home rail stockholder has particular reason for awarding a black mark to the past six months. If he holds the ordinary and deferred stocks of the four group companies, his capital loss amounts to 33⅓ per cent. since the end of 1937, compared with 8 per cent. upon a general list of industrial shares. The market valuation of the "marginal stocks"—L.M.S. ordinary, L. & N.E. second preference, Great Western ordinary, and Southern deferred—fell by 35 per cent. (from £78½ millions to £51 millions) during the first half of this year. And the home rail market has the grim feeling that last year's modest measure of recovery may not return for some time to come. Next week's dividend announcements from the Southern and L. & N.E., to be followed a week later by L.M.S. and Great Western, are awaited in no optimistic mood.

Yet the year began with a fair show of confidence. Railway chairmen were relatively cheerful at the annual meetings. They emphasised the fact that costs were rising, but they did not anticipate any serious check to traffics. Armed, indeed, with a basic 5 per cent. increase in charges, there was a real expectation that the railways would be able to cover increased expenses, and to provide a little extra for the stockholder. Even at the beginning of the year it was a little difficult to justify these hopes from the published traffics, but few investors could have anticipated the unpleasant realities of recent returns.

Gross receipts for the four main lines show a fall of 2.3 per cent. (from £78,599,000 to £76,758,000) for the first 26 weeks of the year, compared with the same period of 1937, and no class of traffic has escaped. Passenger receipts are down by 0.6 per cent., merchandise by 4.4 per cent., and coal and coke by 2.3 per cent. *The Economist's* Index of Business Activity for the first five months of the year declined by 2½ per cent., compared with a 1½ per cent. fall in gross railway takings. But the latter have been subject to incidental disturbances arising from the different incidence of Easter and Whitsun, and from the extra receipts derived from the Coronation and London bus strike last year.

In the table at the foot of this page, we have regrouped the cumulative figures for each line and class of traffic into comparable periods. Easter traffics, for example, are covered in both years in the sixteen-week period, and Whitsun traffics during the twenty-three-week period. The percentage comparisons with 1937 provide clear evidence of the deterioration in railway business as the half-year progressed, and the heavy lines have been affected with greatest severity. L.M.S. (whose gain of £12,000 in passenger receipts stands in splendid isolation) was one of the first lines to show a setback in merchandise receipts. It is no coincidence that the short-fall in gross receipts for this company, and the L. & N.E. has been increasing since the end of April. There have been slight differences in timing, but the general picture is similar for all companies. Passenger receipts have fallen least, but merchandise receipts, quickly followed by coal traffics, have experienced a cumulative fall.

The railway stockholder, indeed, may be tempted to ask: What has become of the 5 per cent. increase in charges? It is a dangerous question, for its answer reveals the present difficulties of the railways in even stronger light. The effective retention of the basic 5 per cent. increase in charges awarded from last October has been authoritatively estimated at 3½ per cent. for passengers, 3 per cent. for merchandise and 4 per cent. for coal. If we assume that such benefits were actually obtained during the past half-year, the "true" fall in traffics would greatly exceed the apparent fall registered in the published receipts. It would, in fact, be of the order of 5.6 per cent. for total receipts, 3.9 per cent. for passengers, 7.2 per cent. for general merchandise, and 6.1 per cent. for coal. These percentages have relevance to the trend of operating costs, for they indicate, necessarily in rough fashion, the fall in the volume of railway operations during the period. They imply, other things being equal, that some

reduction is to be expected in direct operating costs, without indicating its possible extent. Later in this article, we assume that 40 per cent. of the "true" fall in traffics will be offset by lower running charges—an assumption which may err on the side of generosity so far as the stockholder is concerned.

In present circumstances, indeed, the latter has at least one cause for envying the American rail stockholder, who can obtain some guidance from monthly net operating receipts. The most intelligent guesswork is a poor substitute for net revenue figures, particularly when traffics are falling and costs rising. Even if gross receipts had been maintained this year, a fall in net receipts would still have been inevitable. The investor's main difficulty at the moment is to obtain even an approximate measure of the extent to which increased costs will swell the deficit already visible in the gross traffics. The available information is difficult to handle, and is more or less "dated."

It must, however, be employed in the absence of better material for any attempt to measure the potential movement of net revenues during 1938. In evidence before the Railway Rates Tribunal, in June last year, Sir William Wood estimated that the increase in costs of labour and materials, applying prices known at that time to the quantities used in 1936, would amount to £7 millions for all four companies in a "notional" year. Part of that increase will apply to 1938—for example, increased costs of steel rails—and part even to 1939. On the other hand, some materials and coal would presumably cost less to-day than a year ago, and the effective charge upon any particular calendar year depends, to some extent, upon the rate at which stocks are worked off. If we take 60 per cent. of the estimated increase in costs of materials as applying to the current year, both these points will have been recognised, although the resulting figures must be employed with great reserve. A similar *caveat* applies to the guess that 40 per cent. of the "real" decline in traffics will have been offset by operating costs during the year. A further addition to costs arises from the restoration of the remaining 1¼ per cent. cut in wage rates from August last year, estimated for the four companies at £2,900,000 in a full year. It is, however, difficult to reconcile this figure with the estimates given by the companies earlier this year, which amounted to £1,215,000 for L.M.S., "over £1 million" for L. & N.E., £695,000 for Great Western (£475,000 in the current year), and £700,000 for Southern. These increases will be effective for the first 7½ months of the current year, since they commenced in August last year. To complete the rough-and-ready balance for the current year, we have computed the potential fall in traffics for the second half of the year, on the assumption that the percentage falls in the first half-year are repeated. This basis leaves reasonable room for any likely recovery in traffics during the second half of the current year. No account has been taken of possible changes in ancillary revenues.

In the following table we set out the resulting potential fall in net revenue for each company on these necessarily arbitrary assumptions: —

(Amounts in £000's)

	Fall in Traffics, 1938		Increased costs		Reduction in direct costs from lower traffic volume*	Estimated reduction in net revenues
	First half year	Second half year (estimated)	Materials*	Wages*		
L.M.S.	780	860	1,250	760	1,500	2,150
L. & N.E.	638	680	720	625	950	1,713
G.W.	318	350	465	475	650	958
S.R.	105	115	325	435	400	580

* Of these three estimates the increased cost of materials and reduction in current operating costs must be regarded as very rough. The wages increase is more closely estimated and covers the operation of last year's wages award during the first seven and a-half months of this year.

What do the results mean in terms of prospective dividends for the full year? The estimate for L.M.S. suggests that the ordinary stock would be uncovered, and that the 1923 preference stock might earn about 2¼ per cent. For L. & N.E. the estimate would correspond to 3¼ per cent. earnings on the 4 per cent. first preference and 4 1/16 per cent. on the 5 per cent. redeemable preference stocks, but these rates are necessarily subject to renewals policy. For Great Western ordinary, the maintenance of 3 per cent. status might involve the resumption of drafts upon reserve funds, for the potential earnings basis, on our assumptions, is of the order of 2¼ per cent. The estimate for Southern is necessarily subject to the results of steamboat traffics during the summer season (which at the moment bid fair to repeat last year's excellent performance), but it suggests that earnings for the preferred ordinary stock may reach 4¼ per cent.

Apart from the inherent limitations of our estimates, the investor must remember that the railway position is changing with somewhat disconcerting rapidity. If the recent trend of traffic continues, our estimates may well prove too optimistic. In the absence of business recovery during the second half of the year, there is little ground for cheerfulness in the home railway market. And if railway directors exercise caution in their interim dividend decisions during the next fortnight—as, on the face of the situation, they well may—a recovery in railway stocks from their present low levels will be even less likely.

Timber

TIMBER ranks among the most important of the raw materials for modern industry. The building and furniture trades, shipbuilding, the automobile and aircraft industries, the manufacture of toys and boxes, the coal mines, all depend upon timber. It is the main raw material for newsprint and other varieties of paper, and many of the more wonderful products of modern chemistry are derived, though sometimes at many removes, from it. The largest consumers of timber are the various trades connected with building and construction; a considerable proportion of the cost of the ordinary villa house can be attributed to timber in one form or another. The furniture and cabinet trades work almost entirely on wood, and the volume of their demand follows closely, though with a certain time lag, changes in the amount of new building. The fortunes of the timber trade are therefore closely bound up with those of the constructional industries, which use mainly soft woods.

Great Britain is the largest importer of soft wood timber in the world, and enjoys a semi-monopolistic position in this respect, since only two of the main producers—Czechoslovakia and the United States—can afford to ignore the English market. The bulk of the Czechoslovakian exports are bought by Germany, and the American industry exports most of its surplus production to the nearer markets of Central and South America. The table below shows the extent to which the other soft wood exporters depend upon the British market, which took nearly half of the 5.2 million standards sold in the world markets in 1937.

APPROXIMATE EXPORT IN 1937 OF SAWN AND PLANED SOFTWOOD

Country	Total Export	Exported to United Kingdom
		Standards*
Norway	40,000	28,500
Sweden	875,000	465,000
Finland	1,019,000	584,000
U.S.S.R.	922,500	496,000
Estonia	57,000	35,000
Latvia	151,000	85,000
Poland	323,000	228,000
Czechoslovakia	105,000	5,500
Canada	918,000	491,000
U.S.A.	520,000	56,500
Total, above countries	4,930,500	2,474,500

* One standard = 165 cu. feet.

The importance of Britain as a purchaser of timber has been emphasised since the introduction in recent years of exchange restrictions by some other importing

countries. Germany, for example, who bought 656,000 standards in 1912, imported on the average of 1931-37 less than 350,000 standards per annum. In 1937 the import of timber into the United Kingdom was valued at £61.8 millions, more than 6 per cent. of the total value of all British imports; the relative importance of the various sources of the imports of sawn soft woods (i.e. omitting planed soft woods, which were included in the first table) is shown below: —

IMPORTS OF SAWN SOFT WOODS INTO THE UNITED KINGDOM IN 1937

Country	Standards	£
Canada	366,822	5,633,931
Other British countries	79	956
Soviet Union	444,495	7,314,836
Finland	495,611	6,982,815
Estonia	31,018	437,363
Latvia	75,564	998,502
Sweden	286,203	4,096,139
Norway	6,539	100,292
Poland	208,318	2,826,096
United States	52,596	1,223,447
Other foreign countries	96,493	1,307,069
Total	2,063,738	30,921,446

The largest individual supplier is Finland, although the trade with the U.S.S.R. is generally of higher total value, since the Finns specialise in the lower qualities of building timbers, as opposed to the high-class joinery woods which make up a large proportion of the Soviet Union's export. Canada is the only important exporter amongst Empire countries, and her competitive position has been considerably enhanced since 1932, when a duty of 10 per cent. was placed on imports of many varieties of timber into Great Britain from foreign countries; the Ottawa Agreements guaranteed the continuance of this preferential margin for five years. Since 1932 Canadian exports of sawn and planed soft wood to Britain have increased from 77,000 standards to 491,000 standards in 1937.

The Soviet Union could, if it wished, undercut all producers, and the attempts made to insert a so-called "fall" clause in the annual bulk purchase contracts for Russian timber were intended as a means of nullifying to some extent the preference extended to Canadian timber. This clause was held by some to infringe the Ottawa Agreements, which included provisions directed actually, though not specifically, against Russian price-cutting. It provided that reductions in the contract prices would be made to meet any fall in the market which had occurred between the conclusion of the contract and the date of shipment, a period averaging about eight months. In the past the sale of the Russian output destined for England was handled by one firm, Timber Distributors, Ltd., composed of the leading importers, who purchased the entire quantity at the beginning of the shipping season and allocated it to their constituent members for marketing. This fixed the Russian prices for each year (except where there were "fall" clause provisions) and was a stabilising factor of some importance. But for the last two years the stock has been sold in the ordinary way to individual purchasers, and the somewhat erratic nature of Soviet selling policy has had a disturbing effect upon the market. Finland, to whom the British market is of prime importance, has been forced to fall in line on the appearance of each new Russian price schedule.

The world consumption of timber has remained very constant over a long period of years. In 1912 the total export of soft wood timber was estimated at 5,395,000 standards, and in 1937 at 5,200,000 standards. Substitutes for timber for one or another purpose have been constantly adopted, but new uses have also developed, and on balance little change has taken place in the volume of timber used, though there has been a considerable shift in the importance of the various types of wood. But although the long-period trend in demand has been almost stationary, there have been considerable short fluctuations, caused mainly by the variations in the activity of the building industry; in 1931-2, for instance, consumption of timber was nearly a third less than previously.

Restriction and control schemes have been rare in the history of the timber trade. Conventions, mainly to discuss production problems, were held in 1923, 1924 and 1929, but it was not until 1932 that an attempt was made to exercise some control over new felling. In that year the European Timber Exporters' Convention was established to fix export quotas for all the main European producing countries. With the co-operation of the Governments concerned it was possible to maintain the quotas despite the rapid increase in prices during 1936 and 1937. The table below gives the quotas agreed upon for the years 1936/8:

EXPORT QUOTAS (SAWN SOFT WOODS ONLY).

Exporting Country	1936	1937	1938
	Standards		
Sweden	820,000	820,000	738,000
Finland	1,005,000	1,005,000	904,500
U.S.S.R.	950,000	950,000	855,000
Poland	313,000	313,000	281,700
Latvia	...	127,000	114,300
Czechoslovakia	96,000	96,000	86,400
Austria*	275,000	275,000	247,500
Jugoslavia	168,000	168,000	151,200
Rumania	223,000	246,000	221,400
Total	3,850,000	4,000,000	3,600,000

* Exports of timber from Austria have been prohibited since that country was absorbed by Germany in March.

The 10 per cent. reduction for 1938 was deemed sufficient to prevent any serious setback in values; but prices have continued to fall, and a greater reduction may be required to arrest the decline, in view of the heavy stocks now held and the decreased consumption of the last few months. The policy of the Convention has been limited to the prevention of the accumulation of unsold stocks, and nothing has been done to force prices up by restricting supply below the normal quantities consumed by the various importing countries.

In recent years much discussion has taken place on the question of Britain's timber supplies in time of war. There are some who cherish the belief that in timber, as in other materials, the United Kingdom can become self-supporting; but any such view is based upon a complete misunderstanding of the situation. Compared with the volume of

imports, the home supply of timber is very small, and consists mostly of woods for decorative and other special uses. There are also a few categories of timber which could be produced in this country at some expense, but on the whole there is no possibility of supplying from the small area available for forestry the immense quantities required by this industrial island. Nor can the Empire be called upon to supply what foreign countries now send, since in 1937 only 19 per cent. of the value of imported timber came from Empire countries. Canada is the only British producer capable of supplying Great Britain with soft wood building timber in any quantity; but her total exportable production is at present in the neighbourhood of 900,000 standards, whereas even in the depression year of 1931 British imports amounted to 1,600,000 standards, and in 1937 they exceeded 2,000,000 standards. Further, it is unwise to assume that in war conditions it would be cheaper or easier to bring increased quantities of timber thousands of miles across the Atlantic than from the much nearer Scandinavian countries, whose policy and intention is to remain neutral in any European conflict. While the requirements of national defence naturally reinforce the arguments for afforestation, no practicable increase in home production or in supplies from the Empire can provide an immediate or adequate substitute for the British imports of timber from foreign countries.

Insurance Investment Policy

BRITISH insurance offices are numbered among the world's most successful investors. They provide substantial grist for the Stock Exchange mill. Through them, the smallest policyholder is able to follow unswerving canons of prudent investment by proxy. Institutional traditions are strong, and modifications of investment policy rightly have to undergo the most stringent tests. Yet a process of adaptation to changing investment conditions has been proceeding year by year, and particularly since the War Loan conversion of 1932. The examination of these trends forms a fitting appendage to the Insurance Supplement, published with this issue of *The Economist*.

The tables at the foot of this page set out the percentage distribution of the aggregate assets of 38 British insurance companies, whose returns have been analysed in our Insurance Supplements at the end of each of the last thirteen years. From the mere fact that the assets of these companies, at the end of last year, were valued at £1,170 millions, it will be apparent that their decisions on investment policy have important effects—the more so as their resources have been progressively increasing during the period under review.

Before commenting on the figures, we may point out that balance sheet values of insurance companies' investments are not identical with, or even necessarily approximate to, corresponding market values. Book values, it is true, would tend to be written down—unless specific investment reserves were utilised for the purpose—in a period of falling prices. This would have the effect of bringing out higher percentages for mortgages and reversions (Groups 1 and 4 in the first table) which are virtually immune from depreciation. The amount of writing down is influenced by the fact that, as a rule, insurance companies are reluctant to increase book values when security prices rise. The figures in the table are, however, subject to such disturbing factors. If it were possible to translate book values into market values on December 31st for each year, the percentage distributions given below would no doubt be considerably different for all four groups.

Mortgages have always been a favourite medium for the employment of insurance funds. The bogey of market value appreciation and depreciation is avoided. Moreover, mortgages are frequently backed by substantial life assurance and sinking fund policies as collateral security. Where the office transacts other classes of insurance business advantages also accrue to these departments. In addition, the holding of mortgages enables an office to extend its purely insurance connections through its investment organisation.

It will be seen that while interest rates were high the mortgages percentages in Group I (which includes policy loans and loans on local rates) tended to increase, but a sharp fall took place after the War Loan Conversion in 1932. The full financial effect of the general change in interest rates is not shown, for that has been expressed in income and not in capital in those cases in which the mortgage remained at a lower rate of interest. There have been many cases, however, where mortgages have been repaid and accommodation found elsewhere. Latterly, there has been some increase in the percentages, and this may be due partly to lending on new types of property.

From the investors' point of view, great interest attaches to the relative changes between gilt-edged and other securities during the period. In 1913, British Government securities represented no more than 1½ per cent. of the total assets of British life assurance companies, but by 1921 the proportion had risen to over 35 per cent. Subsequently, efforts were made to reduce the percentage, and this process continued until 1930. During the succeeding financial crisis there was a temporary but definite movement back to Government securities, principally of the short-dated type, in order to avoid depreciation. In more recent years, however, the percentage has again fallen. Given a continuation of peace conditions it is likely to continue to do so. The percentage invested in all Stock Exchange securities, however, remained fairly constant until the last few years. During a great part of the period there has thus been a basic movement away from British Government stocks towards other types of Stock Exchange securities.

The second table showing percentages for Stock Exchange securities (other than those of the British Government) under a number of different headings, deserves detailed examination. The steady fall in the percentages of Indian, Colonial and Foreign Government and Municipal securities may be due in part to restrictions on foreign lending. In the main, however, it is a reflection of the heavy depreciation suffered on many foreign stocks and bonds, and the resulting (and increasing) distrust of securities of this type. Part of the increase in the percentage invested in Debenture Stocks, on the other hand, may be more apparent than real. Certain investments now appear as Debentures which in earlier days would have been classed as mortgages. Conversely, the percentages shown in the first table under mortgages may be artificially low to-day by comparison with those of earlier years. Large sums have been invested in recent years in Public Board securities and these are included among Debenture Stocks in the table. The significant increase in Preference and Ordinary stocks may partly be accounted for by a broadening of investment policy with a view to maintaining the rate of interest earned on the funds. The increase in the percentage of Ordinary stocks marks a definite departure from former practice, which regarded these investments as unsuitable for insurance funds.

These are the substantial changes in recent years (for the fourth group of reversionary interests of all kinds includes agents' balances and cash, and is thus too heterogeneous to suggest any precise conclusions). The increasing equity basis of insurance companies' investment policy is apparent, although ordinary shares still represent no more than 9.2 per cent. of the whole. But the powerful advocacy of the merits of equity shares by leading insurance practitioners in recent years, coupled with the quest for adequate yields, suggests that this new trend will continue.

PERCENTAGE DISTRIBUTION OF ASSETS OF THIRTY-EIGHT PRINCIPAL BRITISH INSURANCE COMPANIES

Finance and Banking

The Functions of Control.—When the Exchange Equalisation Account was instituted six years ago, it was stated that its principal function was that of smoothing out unnecessary and unjustifiable fluctuations in the exchanges. Such an occasion arose early this week, and it was handled in a new way. The demand for dollars, which last week was due to a combination of natural causes, rapidly developed, and it also became clear that the over-riding motive was the general belief that the impending Anglo-American Trade Agreement would be accompanied by an agreement to stabilise the pound at $4.866. This induced every exchange operator to buy dollars, and by Tuesday it was clear that such a big demand was developing that either the exchange rate would have to be allowed to slide, or else the British Control would have to make very large purchases of sterling. In spite of Mr Cordell Hull's refusal to discuss this question, which he explained lay outside his province, there was, in fact, no basis for the rumour. The authorities therefore decided to make an announcement to this effect, with the result that sterling, which between Saturday and Tuesday had dropped from $4.94 1/16 to $4.92 3/4—the lowest rate for over a year—at once rallied to $4.93. In this way the Control performed its function without having to make heavy purchases of sterling, and incidentally, operators were checked from making unjustifiable and expensive purchases of dollars, which in all probability would in the end have involved them in loss. The market must not, of course, expect official statements to be made in every period of uncertainty, but in a case like this, where a movement was based entirely upon a belief which the authorities knew to be erroneous, it will be generally accepted that the remedy adopted was both the simplest and the best. The fact that on purely economic grounds $4.886 may be a more natural level for the pound than one of over $4.90 is in the particular circumstances irrelevant. The demand for dollars arose from the rumour that stabilisation at $4.866 was actually contemplated, and the baselessness of this rumour provided sufficient ground for the action of the authorities. This may constitute a valuable precedent, if similar circumstances arise on a future occasion.

* * *

New Franc Doubts.—There has recently developed a fresh and ominous weakness in the franc. During most of the week the spot rate for sterling has been between Frs. 178 and Frs. 179, while the three months' rate has risen to Frs. 181½ and Frs. 181¾. The French control has been intervening almost continuously, and while there has been no real panic, the French Exchange Fund must, in the aggregate, have lost a fair amount of gold. It is now clear that the May repatriation was an isolated movement, due to the initial impact of M. Daladier's depreciation, and that the more recent trend has been that of a quiet but renewed efflux of funds from France. It is also ominous that the three months' rate has been allowed to rise above M. Daladier's "upper limit" of Frs. 179; and the six months' discount of Frs. 5 to Frs. 6 represents an even wider margin. The exchange position remains sound, for the French authorities must still have in hand most of the large amount of gold recovered last May. One simple explanation of the present weakness of the franc lies in the return of funds to Wall Street and the recent appreciation of the dollar; for these affect the franc as well as the pound. This is not, however, the whole story. The French Treasury position is beginning to arouse new doubts. No recent statement has been made, but the negotiations for an Amsterdam credit of Fl. 75 millions, of which Fl. 35 millions are to be placed in Holland and the balance in France, point to the current difficulties of the Treasury and not to any needs of the Exchange Fund. Also M. Daladier seems to have reached a pause after his initial efforts at reform, and there has been no extensive use of his decree powers or

£1,300 *instead of* **£1,000**

UNDER *The Distinctive System* of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum clearly elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to *an immediate and certain bonus of £30 per cent.*, as large as can be looked for in other Offices only after many years.

real adjustment of the 40-hour week problems. Finally, no real assurance is felt in France over the international and political outlook. These are probably some of the reasons which explain the present weakness of the franc and the renewed outflow of French capital.

* * *

Insurance Companies and N.D.C.—On the third reading of the Finance Bill on Monday, the Chancellor of the Exchequer made his promised concession to the insurance companies' complaints about their assessment to National Defence Contribution. The theory of the tax is that it is levied on the profits of business and not on income from investments. For some classes of financial institutions, however, such as banks, investment companies and life assurance companies, the holding of investments and the receipt of income from them is of the essence of their business. Accordingly, these institutions will have to pay N.D.C. on their investment income. Originally, all varieties of insurance companies were included in this category, but it was represented to the Chancellor with great justice that fire and accident insurance business does not necessitate more than a very moderate holding of investments. The companies themselves suggested that a holding of investments equal to a year's net premium income might be regarded as being needed for the purposes of the business and the income from it accordingly assessed to N.D.C., while any additional investments should be exempt. The Chancellor has now accepted the principle of this suggestion, while amending the figure from 100 to 150 per cent. of net premium income. In defence of his figure, Sir John Simon argued that reserves equal to 40 per cent. of premiums need to be kept against the unexpired risks on current premiums and 35 per cent. for liabilities on claims notified but not yet settled. The total of 75 per cent. was doubled to make provision for "exceptional cases and some catastrophic risks." This was admittedly not a precise calculation, and there will be many in the insurance world who will question even its approximate validity. But the substantial point is that a concession worth £150,000 (less income tax) has been made to the insurance companies; and this, though less than they had hoped, will be welcome.

* * *

New York Bank Statements.—The following table gives the salient items in the June 30th accounts of the Chase National Bank and the National City Bank:—

	Chase National		National City	
	1937	1938	1937	1938
	($ million)			
Cash, etc.	686	801	550	610
Government securities	619	627	419	529
Other securities	220	259	233	185
Loans, discounts, etc.	810	654	710	525
Deposits	2,136	2,152	1,808	1,761

In accordance with the general American banking trend, both banks show an increase in cash and a decrease in loans and discounts. The National City Bank has added substantially to its Government securities, though it has reduced its other security holdings. The National City Bank's deposits are lower than a year ago, but those of the Chase National Bank are slightly higher. The liquidity of both banks is definitely greater than a year ago, and at the moment can be considered more than adequate. There is plenty of bank credit available if only the nation can be induced to make use of it.

* * *

New Zealand Banking.—Sir Austin Harris's speech at the recent general meeting of the National Bank of New Zealand was a mixture of encouragement and warning. New Zealand, he said, had had a prosperous year during 1937, and this had naturally increased the demand for bank credit. In consequence, the National Bank's own advances had risen from £10,977,000 to £12,703,000, while profits were £2,889 higher than in the previous year. On the other hand, deposits had only risen from £13,752,000 to £13,909,000, so that investments had been reduced by £1,107,000 to just over £2,225,000. This last was considered a normal holding in times of active trade. Sir Austin, however, alluded to the decline in the time deposits of the New Zealand banks, and also the competition of the Post Office Savings Bank. The trading banks, of course, could increase their deposit rates. But this would necessitate higher rates for advances, which was contrary to the policy of the Government. Sir Austin discussed the impact upon New Zealand of the more recent trade recession. This was expressed in the fall in wool prices and in a shrinkage in the active trade balance. There had been a considerable fall in the net overseas funds of the Reserve Bank and trading banks since two years ago. It was on these grounds, probably, that he felt obliged to utter his note of warning lest the banks should lend in such a way as to encourage over-trading. He also pointed out that last year's active trade balance was only £stg5,577,000, whereas £stg8,000,000 was required to cover the service of Government and municipal loans raised in London. These are the common problems of a primary producing country during a world trade recession, but it is just as well that New Zealand should be warned that she cannot claim immunity from them.

* * *

Standard Bank of South Africa.—Dominion Bank reports appearing at the present moment reflect the prosperity of 1937 rather than the recession of 1938, and it is no criticism on the Standard Bank to judge its latest accounts from that point of view. For South Africa, 1937 was a year of activity, and this is apparent in the bank's latest balance sheet, which shows increases in discounts and advances, customers' bills for collection, the note circulation, and last but not least the net profits earned by the bank. The only doubt arises from the absence of any further increase in deposits. One consequence of this is the reduction in cash, due to the larger demands being made upon the bank's resources, but the ratio of cash to deposits remains fully adequate:—

	March 31st	
	1937	1938
	£'000	£'000
Note circulation	736	875
Deposits	65,972	65,149
Bills, etc., for collection	9,662	11,118
Cash	13,241	10,675
Investments	14,892	15,800
Bills purchased	5,835	4,640
Discounts and advances	33,415	38,252
Net profits	557	622
Dividend	10%	12%
Cash bonus	4%	3%

In view of the increase in profits, the directors have felt justified in increasing the dividend, though the bonus has simultaneously (and prudently) been reduced. The total distribution of 15 per cent. is now back to its 1931 level, after having dropped to 10 per cent. in 1933 and 1934.

* * *

The End of a Venture.—Nearly two years ago the Central Bank of India, a well-known indigenous commercial bank, founded a London subsidiary, called the Central Exchange Bank of India. In this way the parent institution obtained direct access to the London money market for the employment of its surplus funds; and it also obtained a share in the financing of India's external trade. Unfortunately, the cheap money regime, accompanied during recent months by the world trade recession, made this venture much less profitable than its promoters had probably expected. The London office is therefore being closed down, and the parent institution will, as in the past, rely upon its London correspondents, Barclays Bank and the Midland Bank, for the conduct of its London business. The subsidiary company will presumably be wound up, after having neither earned any appreciable profit nor involved its owners in any serious loss. It is arguable that two years was too short a period to give the experiment any real chance to justify itself, but if the promoters had become convinced that there were no big profits to be made in London under present conditions, they were probably wise to bring their venture to an honourable conclusion.

* * *

The B.I.S. and Austria's Debts.—Although the Bank for International Settlements is the Trustee for the Austrian Loan of 1930, the new Anglo-German Transfer Agreement apparently attracted little attention at the July meeting of the Board. This may have been because the B.I.S. had already defined its attitude to such special agreements. Referring to the Dawes and Young Loan settlements of 1934, the latest report of the B.I.S., published prior to the new Anglo-German Agreement, says: "The Trustees are not parties to any of these special agreements, have had nothing to do with their execution, and have considered them as incompatible with the General Bonds and the international agreements relating thereto." As a formal expression of opinion there is really nothing more to be said. Informally it may have been felt at Basle that the recent British Agreement embodies the best terms that could have been secured in the circumstances, and that as such it gives a lead to the other interested nations who are now engaged in negotiations with Germany—or at least to those of them who, like Britain, have passive balances of trade with Germany. If it turns out that the other Governments secure similar terms for their bondholders, then the bilateral British settlement may turn out to be less open to criticism. But this is obviously a matter beyond the province of the Bank for International Settlements.

MONEY MARKET NOTES

Foreign Exchanges

The broad tendencies of the week's movements in the dollar and the franc are discussed in Financial Notes. During the latter part of the week sterling remained steady against both currencies, with the New York rate at $4.93\frac{1}{8}$. Forward dollars were rather more bid. One technical cause of the franc's recent weakness was that until the end of last week the French authorities had held the spot rate at Frs. 177.90. This made people think that sterling would not rise any higher, and so a certain number of orders for selling forward francs were kept back. A week ago, however, the French authorities allowed sterling to rise above this rate, and so many of these orders were thrust on the market without any further delay. On Thursday of this week forward francs were a little stronger, except for the six months' rate, which was quoted at Frs. 7⅛ discount. Belgas have been strong in sympathy with the dollar, with the British Control buying sterling whenever the rate dropped below Bel. 29.13. The lowest rate touched was Bel. 29.09. Swiss francs also strengthened, from Frs. 21.59 to Frs. 21.56¼, in sympathy with the dollar.

*

The Bank Return

THERE is very little change from last week's return. The note circulation remains normal, and the small decrease since a year ago is readily explained by dishoarding.

	July 14. 1937 £ mill.	June 29. 1938 £ mill.	July 6, 1938 £ mill.	July 13* 1938 £ mill.
Issue Dept.:

Other Secs.	20·7	21·1	20·4	20·6
Proportion	22·7%	24·4%	23·8%	24·2%

In the banking department slight discrepancies between the dates of Treasury bill payments and maturities explain the drop of £2.3 millions in Government securities. The decline of £2.7 millions in bankers' deposits is mainly the counterpart of this last movement. Reference to the revenue returns shows that of the £34.8 millions of Defence Loan money collected during the first nine days of July, £14 millions was required to meet the excess of expenditure over revenue for this period, £10 millions being disbursed in dividends. A further sum of between £5 and £10 millions was used to repay Treasury bills issued by tender. Thus most of the Defence Loan cash has returned to the banking system, which accounts for the maintenance of bankers' deposits at a relatively high level. Their size on June 29th was of course abnormal, as this date was at the end of the half-year.

*

The Money Market

The discount market has now fully returned to its accustomed ease. Bank money was still not too plentiful early in the week, and rates of ¾ per cent. were paid. By Thursday, however, it was readily obtainable at ½ per cent. The clearing banks are ready buyers of September and early October maturities at ½ per cent., but bill brokers are reluctant sellers. The reason is that the discount market holds substantial quantities of July maturities, and as so far the tendency has been for tender issues of Treasury bills to fall short of maturities, the market is experiencing rather greater difficulty in finding employment for its funds.

	July 15. 1937	July 7. 1938	July 14. 1938
	%	%	%
Bank Rate	2	2	2

Discount Rates:			
Treasury bills	½	½	½
Three months' bank bills	$\frac{17}{32}$–$\frac{9}{16}$	$\frac{17}{32}$–$\frac{9}{16}$	$\frac{17}{32}$–$\frac{9}{16}$

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

It was announced this week that Messrs William P. Bonbright and Company, a firm established in 1895, are shortly to discontinue their business as banking and discount agents. This news will be received with regret in the City, but it only provides additional evidence of the change in conditions in the discount market, especially in the contraction in the supply of commercial bills.

*

The Bullion Market

There has been a demand for gold this week from all over the Continent. Early in the week it came from France, but later it has become more general. Not all of it is a purely hoarding demand. Since the end of April the sterling price of gold has risen by about 1s. 6d. per ounce, and there is already a certain feeling that it is safe to buy gold "for the rise." This week's heavy turnover and relatively low premium suggest that the authorities are at the moment inclined to release sufficient gold to prevent too abrupt a rise in the price. It was noticeable that Tuesday's hint to the foreign exchange market, referred to in a Financial Note, in no way checked the demand for gold, but on Thursday a little reselling by private holders was noticeable.

Date	Gold: Price per fine oz.	Gold: Prem. or Discount *	Gold: Amt. dealt in	Silver, price per oz. standard: Cash	Silver, price per oz. standard: Two Mths.

* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce ·999 fine during the week.

In the silver market sellers are still holding back, and this, rather than the strength of the dollar, explains the slight increase in the price. There has been some more bear-covering and a little sporadic buying. The London price is still above the dollar parity, and the view is once more expressed that it is too high to be entirely stable.

Investment

London and Wall Street.—Both in London and Wall Street, security prices have this week experienced their first substantial check since recovery began in the middle of June. In London, the volume of business has once again shrunk to exiguous proportions, and industrial share prices have pursued an indifferent course, without deriving temporary support from Wall Street's occasional rallies. Fears that a change in the political wind might shortly displace the comparative calm of recent weeks were encouraged by nervousness in Continental centres. And on the home economic front, the news was little to the investor's liking. On such dismaying evidence of a continued downturn in trade activity as revealed by the steel production figures and the Courtaulds interim dividend, the industrial markets—which had been inclining to the view that some partial recovery in economic conditions might be at hand—came sharply to heel. The gilt-edged market maintained a firm front until Thursday, and gold shares were stimulated by the latest gold rush, in which gold has reached the highest level since the scares began in the spring of last year. Wall Street's behaviour has been quite irregular. Operators at first snatched at every bullish factor, but their calculations have been upset by the accumulation of selling on any setback in prices. On Wednesday, for instance, the whole market was carried to new "highs" for the year, on the "inflationary" Budget figures and expectations of an early reduction in steel wages. But heavy trading in the last hour lowered the Dow Jones industrial average by three points from its temporary "high" of 139.90. Whether the market's intermediate recovery during recent weeks will survive this check will appear in the sequel. Hitherto, Wall Street has resisted profit-taking with every sign of firmness, and the determined resumption of buying has suggested that it reflected a degree of economic recovery known to "insiders" which had yet to be measured in the business indicators. In its absence, the prevailing level of common stocks is certainly higher than earnings prospects would justify. Wall Street's behaviour in the next few days will, therefore, be crucial, and London, where conditions have been much more sedate during the past fortnight, cannot escape its influences.

* * *

Further Unit Trusts.—The present phase of activity in the unit trust formations rivals the movement's growth in the summer of 1935. Its coincidence with rising security prices is not accidental, for progress in the past has always been most rapid when market conditions were favourable. This week the formation of two new trusts has been announced. Unit Investments, a new management group (although part of the management personnel was formerly associated with the Selective group) have introduced the British and Dominion Insurance-Bank Trust—making the third trust of this type. At least one-third of the trust fund must consist of insurance shares, and a similar minimum is laid down for bank shares. The trust is of flexible type, and the managers are free to vary the investments of the fund, subject to limitations that not more than 7½ per cent. of the fund may be invested in one company (apart from trustee securities) and not more than 5 per cent. of the total issue of any class of shares of any company may be held. Changes of investment require certification by the management, although their powers cover the widest contingencies. Reserve or uncalled liabilities may be covered by insurance or from the capital of the fund, which must always exceed 2½ times the amount of the liability. The trust will have a life of twenty years, but it may be terminated earlier with the consent of the certificate holders. The service charges will be 5 per cent. of the market cost of the underlying securities and cash of the fund, *plus* accumulations and expenses, and a semi-annual charge of one-twentieth of one per cent. on the value of the fund on the first day in each distribution period. The attractions of American stocks are emphasised in an announcement of the formation of British and American Securities Trust by the British General group. The custodian trustee (as in two other trusts formed recently) will be Martins Bank.

* * *

The Movement's Development.—Certain reflections are prompted by the increased unit trust activity in recent weeks. The movement appears once again to have entered a phase of aggressive competition which, three years ago, was reflected in the quest for selling pointers rather than the strictest insistence upon investment merit. In the meantime, of course, it has made appreciable progress towards the best standards of practice. The insistence in recent formations that the managers will act solely as fiduciary agents, and not as principals, in transactions in the underlying securities recognises a criticism which the Board of Trade Committee exposed with much force. There is no fundamental reason why the movement should not multiply. Its advantages for the small investor are fully recognised, and its services should be none the worse for healthy competition. The danger, of course, is that competition may exceed the limits of prudence. That would be a calamity for the movement. Imitative competition, for example, might involve a departure from the best investment practice, if it persuaded managers to frame their investment policy to produce ostensibly attractive yields. The Parliamentary Secretary to the Board of Trade, in a statement in Parliament last December, recognised the progress which the movement had made towards the adoption of the Anderson Committee's recommendations. And his announcement, by implication, removed the threat of legislation, at least for a considerable period. But the Anderson Committee examined the movement's position when comparatively few flexible trusts had been formed, and the statement that many of its recommendations have already been carried out by the majority of the trusts (as we pointed out in our recent Unit Trust Survey) applies with rather diminished force to the question of yield calculations. In this and other matters, the movement has, in a real sense, been put on good behaviour, and the safeguarding of the investor's interest should rank at least as high as its legitimate desire to earn satisfactory profits.

* * *

Roumanian Debt Offer.—The proposals which the Roumanian Government has submitted for the service of the external debt for the year from April 1st last are not exciting, but they are at least in the right direction. Three loans are affected. Coupons of the 4½ per cent. gold loan of 1913 and the 4 per cent. consolidated loan of 1922 which fall due between April 1st and September 30th will be paid at the rate of 45 per cent. For the succeeding six months, coupons will be paid at 47 per cent., and will be supplemented by a 2 per cent. payment in compensation for the reduction in the first half of the year. Over the whole period, bondholders will receive, on the average, 47 per cent. of their contractual payments. For the 4 per cent. external loan of 1922, which has priority over other Roumanian debts, an offer to pay coupons on the basis

BEECHAM MACLEAN HOLDINGS
LIMITED

(Incorporated under the Companies Acts, 1929.)

SHARE CAPITAL:

Authorised :		*Issued or to be Issued :*
£1,500,000	in 1,500,000 5 per cent. Redeemable Cumulative Preference Shares of £1 each	£1,500,000
750,000	in 3,000,000 Ordinary Shares of 5s. each	750,000
£2,250,000		£2,250,000

The List of applications will open and close on Tuesday next, July 19th, 1938, for an

OFFER FOR SALE OF

1,496,500 5 PER CENT. REDEEMABLE CUMULATIVE PREFERENCE SHARES OF £1 EACH AT 20s. PER SHARE

These Shares are redeemable by purchase in the market or by drawings on or before 1st July, 1960, at 22s. per Share if purchased or drawn before 1st July, 1945, or on and after that date at 21s. 6d. per Share.

PAYMENT OF THE DIVIDEND IN RESPECT OF THESE SHARES IS UNCONDITIONALLY GUARANTEED BY BEECHAMS PILLS LIMITED AS STATED IN THE OFFER FOR SALE.

DIRECTORS:

PHILIP ERNEST HILL (Chairman, Beechams Pills Limited), Chairman.
JOSEPH STANLEY HOLMES, M.P. (Managing Director, Beechams Pills Limited).
ASHLEY SEIGBERT MACLEAN (Joint Managing Director, Macleans, Limited).
MAJOR HARRY EDWARD MEADE, O.B.E. (Joint Managing Director, Macleans Limited).
LOUIS NICHOLAS (Vice-Chairman, Beechams Pills Limited).
SIR PERCY COLEMAN SIMMONS, K.C.V.O., D.L. (Solicitor).
SIR RHYS WILLIAMS, BART., K.C., D.S.O. (Director, Atlas Assurance Company Limited).

Brief particulars relating to the Offer

(1) Beecham Maclean Holdings Limited was incorporated in July of this year to acquire over 90% of the Ordinary Share Capital (3,400,000 fully-paid Ordinary Shares of 5s. each) of Macleans Limited, Manufacturing Chemists.

(2) Macleans owns a number of nationally advertised branded proprietaries and pharmaceutical products including Macleans Peroxide Tooth Paste, Maclean Brand Stomach Powder, Mac Brand Antiseptic Throat Sweets, Clotabs (Halibut Liver Oil Tablets), Lemskin Lemon Hand Jelly, and (through its wholly owned subsidiary, Fynnon Limited) Fynnon Salts.

(3) Beechams Pills was incorporated in 1928. It owns the business of Beechams Pills, founded in 1842 and 98·89% of the Deferred Ordinary Shares in Veno Drug Company Limited. Since incorporation, "Beechams Powders" have been successfully marketed and the Company has acquired the whole of the Share Capitals of the Cicfa Company Limited, Dinneford & Company Limited, Holloway's Pills Limited, Iron Jelloid Company Limited, Lintox Limited, Natural Chemicals Limited ("Phyllosan") Limited, and Phosferine (Ashton & Parsons) Limited, and the whole of the Ordinary Share Capital of Prichard & Constance (Manufacturing) Limited ("Amami") and A. F. Sherley & Company Limited, and a controlling interest in Phensic Limited.

(4) Beechams Pills Limited has unconditionally guaranteed the dividend on the 5 per cent. Redeemable Cumulative Preference Shares of Beecham Maclean Holdings Limited, as stated in the Offer for Sale, and if the profits of Beechams Pills Limited for the year ended 31st March, 1938 (ascertained as stated in the Auditors' Certificate published in the Offer for Sale), are added to the proportion of the profits of Macleans Limited for the year ended 30th June, 1938 (ascertained as stated in a Joint Certificate given to Macleans Limited by Messrs. Fitzpatrick, Graham & Co., the Auditors of Macleans Limited, and Messrs. Price, Waterhouse & Co.) attributable to the ordinary Shares of Macleans Limited agreed to be acquired, the total will COVER THE ANNUAL DIVIDEND ON THE REDEEMABLE PREFERENCE SHARES OF BEECHAM MACLEAN HOLDINGS LIMITED OVER 10 TIMES.

(5) The Directors are aware of firm applications upon the terms of the Offer for Sale for 500,000 shares and these applications will be accepted in full.

Full Particulars of the Offer for Sale (upon the terms of which alone applications will be considered), and Forms of Application, can be obtained from the

of 63 per cent. for this period has been accepted by the Bondholders' Associations, and the Roumanian Government has undertaken to make a supplementary payment of £19,455. These amounts are calculated to represent interest at 3.92 per cent. per annum. The June coupon will be paid on the basis of 60 per cent., with £9,727 10s. from the supplementary amount, while the December coupon will receive 63 per cent. of face value, together with the extra 3 per cent. held over from June, and the remainder of the supplementary cash payment. The immediate increase in the exchange liabilities of Roumania is therefore small, and the full benefit of the agreement will not be obtained until the second coupons due in the year are presented. It appears, in fact, to be a strictly provisional arrangement, pending the negotiation of a long-term settlement. Bondholders will hope that the Roumanian authorities will make the best use of this interim period.

Company Notes

Courtaulds Dividend Shock. — On Wednesday, Courtaulds £1 stock units closed in official hours at 35s. When the "Street" market dispersed, they stood no higher than 29s. 9d., and had touched 29s. Most dealers had expected the maintenance of the interim dividend at 3½ per cent., and the sharp cut in the payment to 1½ per cent. came as a serious shock, whose influence spread to other markets on Thursday. The news that even this payment was not fully covered by earnings for the period—for the interim dividend has been met only by supplementing the balance of net profit with a draft on the balance brought forward from 1937—is indeed disturbing. Investors, it is true, had made their preparations for smaller profits from Courtaulds for the current year, and the stock has for several weeks been at the mercy of "bear" operators. The company's American interests (which last year distributed a greater sum in dividends than they had earned) were known to be seriously affected by the recession. The directors, in fact, describe American operations as "quite unremunerative" during the first half of the year. In this country a serious falling off in sales has occurred, and high production figures in recent months have only implied a greater accumulation of stocks. The setback in the home market has been responsible for the decision of the board to postpone the commencement of operations at the new Preston factory. And the directors' dividend announcement concludes with the grim reminder that the evidence of business improvement is vague, and that even if trade recovered, only the last few months of the current year could benefit.

* * *

It is evident, therefore, that the current year will be one of the worst in the company's history. Last year it earned £1,973,892 for the ordinary capital, after taxation, and the 10½ per cent. dividend was covered with a small margin. Since the directors have been compelled to draw on the credit balance at profit and loss to pay the 1½ per cent. interim, it may be calculated that equity earnings for the latest half-year, on a similar basis, cannot have exceeded £261,000. In addition to its trading profit, however, the company derives income from nearly £15¼ millions of British Government and other securities. Assuming that the average yield on these holdings is 3½ per cent., they would appear to have contributed some £192,000 after income tax towards the maximum earnings figure given above. It is quite possible, in fact, that short of a spectacular recovery (of which the directors see no sign) the full dividend for the current year may be well under half the total for 1937. And even when due allowance is made for the company's prospects of expansion in the long period, it is equally possible that the ordinary stock has yet to find its lowest level.

* * *

Gaumont-British Report.—In 1936, shareholders declined to approve the Gaumont-British Picture Corporation's accounts until a consolidated balance sheet had been placed before them. At last year's meeting, the chairman explained the absence of a consolidated statement by the fact that as many as possible of the 100 subsidiary and associated companies in the group were being consolidated. When this programme has been achieved, the board would give their immediate attention to the preparation of a consolidated statement. The latest report, to March 31, 1938, shows that 76 per cent. of the Corporation's book assets, totalling slightly over £13 millions, consists of shares and debentures in, or amounts due from, subsidiary companies, and it is unaccompanied by any consolidated statement. Considerably higher profits for 1937-38 were forecast by the chairman at last year's meeting. The accounts show, in fact, that reported profits, including investment income (and in the latest year profit on redemption of debenture stock) have increased from £561,702 to £684,032—an increase of 21.8 per cent. But this figure is subject to certain qualifications. It is charged with a provision of £50,332 for losses arising from certain subsidiary and associated companies. Secondly, the increased dividend of 22½ per cent. paid by Provincial Cinematograph Theatres (compared with 15 per cent. for the year to January, 1937) was not quite fully covered by earnings, which fell from 25 per cent. to 22.2 per cent. during the year. Profits from directly-owned theatres and dividends from theatre-owning subsidiaries were in fact lower than in the previous year, and marked a decline in their combined earning power. Gaumont-British Distributors, which operates in conjunction with General Film Distributors, has experienced "a satisfactory year," but its contribution to the Corporation's revenue is not disclosed. The substantial dividend received from Bush Radio is also unspecified in the report.

* * *

After provision for increased taxation, debenture service, and depreciation (which receives £42,498 against £13,951 in the previous year) the preference dividend is covered with a margin of £41,845. The balance sheet reveals that the Corporation's bank overdraft had been reduced from £819,778 to £373,991 at the end of the latest financial year, and the reduction in amounts due from Gaumont-British Distributors appears to account largely for the reduction in the amount due from subsidiaries from £1,118,051 to £629,668. Free cash balances, however, are still no higher than £1,395. From the report alone, it is difficult to frame any confident conclusions regarding the revenue prospects for the Corporation, for the chairman of Provincial Cinematograph has pointed out that last year's increased distributions may not be repeated. Indeed, the fall in theatre earnings, on which the Corporation is now largely dependent, is not of hopeful augury for ordinary shareholders. And, on the longer view, the latter cannot rule out the possibility of a capital reorganisation, if the Corporation's earning power proves to be permanently reduced.

* * *

Further Bank Dividends.—With one exception, this week's further bank interim dividends complete the story of "No change" whose beginning was told on page 81 of last week's issue of *The Economist*. Lloyds Bank "A" shares again receive 6 per cent. actual and Williams Deacon's "A" shares and "B" shares (the majority of which are held by the Royal Bank of Scotland) receive 6¼ per cent. The exception is more apparent than real. District Bank have increased the interim distribution on the "A" and "C" shares from 8⅓ per cent. to 9⅜ per cent. Last year's final dividend, however, had already been raised to this higher rate. In the following table we set out the latest dividend position, and share prices of these banks.

Williams Deacon's "A" £5 (£1 pd.)	6¼	12½	6¼	45 0x	48 9	4 3 3
Union Discount £1	3¾	10	3¾			

† Based on an 18⅓ per cent. dividend.

Union Discount completes the discount company payments with the usual interim distribution of 3¾ per cent. Bank shareholders have reason for satisfaction with the course of prices during the year to date. According to the Actuaries' Index, bank and discount shares stand at the same level as at the beginning of the year, the index figure being 114.6 (December, 1928=100). Their average yield has declined from 4·12 per cent. to 4·06 per cent. during the same period, compared with a similar decline in the yield on 2½ per cent. Consols from 3·36 per cent. to 3·29 per cent.

* * *

United Dominions Trust.—A year ago, the Bank of England relinquished almost entirely its financial interest in the United Dominions Trust, by offering 150,000 4½ per cent. £1 preference shares at 20s. 6d. to the existing ordinary shareholders. At the same time, the Trust decided to broaden its capitalisation, and issued 75,000 £1 ordinary shares to existing holders, at £4 10s. each. In February last, it issued a scrip bonus of one new ordinary share for every £5 stock held. The consequences of these changes are plain in the latest report. Under the friendly interest of the Bank of England, the Trust and its subsidiaries have made further impressive strides. For the group as a whole, bills receivable and notes on hand have jumped from £6,255,122 to £7,420,107. Loans and acceptances increased from £1,700,000 to £2,210,749, while current, deposit and other accounts advanced by slightly over £300,000 to £3,902,789. Loans and acceptances now represent 24.4 per cent. of the consolidated balance sheet total, compared with 21.9 per cent. a year ago, while the respective percentages for current and deposit accounts are 43.0 per cent. this year and 46.3 per cent. a year ago. This progress is impressive. The investor has every reason for satisfaction with the group's achievement. Profits, after rebate and contingencies, rose from £201,802 to £213,248, and although this increase was not sufficient to cover the higher tax charge, the 17½ per cent. dividend (of which the 11½ per cent. final was paid on £600,000 ordinary capital) is covered by earnings of 28.2 per cent. United Dominions Trust (Electric) paid an increased dividend of 15 per cent. (against 10 per cent.), while Continental Guarantee paid 5 per cent., Credit for Industry 1½ per cent., and British Medical Finance 2½ per cent. United Dominions Corporation (South Africa), which was formed in the previous year, has made satisfactory progress, and its paid-up capital has been increased to £S.A.250,000. It is evident that the group's star is still in the ascendant. The £1 ordinary stock units, now quoted at 81s. 3d., yield £4 8s. 9d. per cent.

* * *

Aircraft Company Profits.—Aircraft shares have not been helped by this week's profits, largely because the market was guilty of expecting too much, and not through any defect in the results themselves. The Bristol Aeroplane dividend, increased from 22½ per cent. to 25 per cent., disappointed the optimists, but the report, which shows a 38 per cent. increase in total earnings to £537,393, was regarded more favourably. After the provision of £185,000 (against £80,000) for taxation, ordinary share earnings amount to £322,079, against £272,213. Substantial increases in debtors (from £529,241 to £1,360,773) and in stocks (from £1,406,767 to £1,740,913) are accompanied

Preliminary Statement

REGIS PROPERTY
COMPANY LIMITED
(Incorporated under the Companies Act 1929)

Authorised.	SHARE CAPITAL - £1,000,000	*Issued and fully paid*
£500,000	in 500,000 5½ per cent. Cumulative Preference Shares of £1 each	£362,500
£500,000	in 500,000 Ordinary Shares of £1 each	£362,500
£1,000,000		£725,000

	LOAN CAPITAL:	*To be Issued*
£675,000	4½ per cent. First Mortgage Debenture Stock	£675,000

The List of Applications will be opened and closed on Wednesday, the 20th July, 1938, for an

OFFER FOR SALE AT PAR OF

250,000 5½ p.c. Cumulative Preference Shares of £1 each

and

100,000 Ordinary Shares of £1 each.

PARTICULARS CONTAINED IN THE OFFER WILL SHOW *INTER ALIA* THAT:—

1. The Company has been formed to acquire twenty leasehold and freehold properties in the London area, comprising Offices, Shops, Flats and Garages. The properties which have been developed as permanent investments have been erected within the last few years and provide the necessary amenities required in modern accommodation. The flats, of which there are 1,547, have an average rental value of less than £135 per annum.

2. The schedule of rents and charges shows that the gross revenue under existing leases and agreements is £234,191 per annum, and that when lettings have been effected to produce 95 per cent. of the whole, the gross revenue will be £262,862 per annum.

The net revenue from the properties as estimated by the valuers on the basis of lettings having been effected to produce 95 per cent. of the total gross revenue is £128,678 per annum. After payment of all charges and administration expenses, there should remain a net profit, subject only to N.D.C. (estimated at £3,350) and Income Tax, of £58,035 per annum. This sum is sufficient to cover the dividend on the issued Preference Shares over 2¾ times, leaving a balance after deducting the amount of such Preference dividend but before providing for N.D.C. and Income Tax equivalent to over 10½ per cent. on the issued Ordinary Share Capital and after providing for N.D.C., as estimated, equivalent to over 9½ per cent. on such Ordinary Capital.

Mortgages amounting to £524,705 are redeemable by monthly instalments. Such repayments in the first year will amount to approximately £10,228.

3. Real Property & Finance Corporation Ltd. has guaranteed to the Company that for each of the three years ending July 10th, 1939, 1940 and 1941, the annual net income derived from the properties will be at the rate of not less than £128,678 per annum, the total liability under such guarantee being limited to £50,000.

4. The value of the assets of the Company is £1,986,000, which after deduction of Debenture Stock (£675,000) and Mortgages, (£558,170), leaves an excess of £752,830.

On this basis the issued preference share capital is covered more than twice and, after deducting the amount of such preference share capital, the balance is equivalent to over 21s. 6d. per issued Ordinary Share of £1.

DIRECTORS:

THE RT. HON. LORD KENNET OF THE DENE, P.C., G.B.E., D.S.O., Chairman.
AYNSLEY VERNON BRIDGLAND (Director of United City Property Trust Limited).
VINCENT ALPE GRANTHAM (Director of Forbes, Campbell & Co. Limited).
RALPH EDWIN HABBEN, F.C.A. (Director of The Beaumont Property Trust Limited).
PATRICK VVO HUGH SMITH (Director of Mid-Lincolnshire Electric Supply Company Ltd.).

Copies of the Offer for Sale are available and may be obtained together with forms of application from:—

BANKERS:

LLOYDS BANK LIMITED, 72 Lombard Street, London, E.C.3, and Branches.

REAL PROPERTY AND FINANCE CORPORATION LIMITED

Rex House, 38 King William Street, London, E.C.4

by the appearance of a bank loan of £491,915. The general growth in activity which these figures reflect may thus be marked by a further issue of capital in the future. A new holding of shares in an associated company, amounting to £70,000, presumably arises from the formation of Rotol Airscrews. The desire to bring the company's capitalisation into line with the assets employed was emphasised last week by Handley Page, whose 50 per cent. scrip bonus follows a 100 per cent. scrip bonus last December. In recent years profits have expanded rapidly, and the preliminary announcement shows that net profits last year, at £210,126, were more than twice those for 1936. A final dividend of 20 per cent., tax free, on £248,930 of ordinary capital, together with an interim of 10 per cent., less tax, on £124,465, represents about 65.2 (against 50) per cent. on the ordinary capital before last December's bonus.

★ ★ ★

Blackburn Aircraft was largely concerned last year in building up equipment to the required capacity and degree of efficiency, and the chairman refers to the year as one of the most difficult in the company's history. In view of the amount of preparatory work, the rise from £124,769 to £139,657 in total profits is satisfactory. Fixed assets have almost doubled and the gross value of stock has risen from £548,200 to £1,234,268, with a resulting increase in the depreciation provision. A bank loan of £321,881 is shown in the balance sheet. Aircraft components makers have also shared in the first real fruits of the expansion programme. Aircraft Components, who specialise in landing equipment, have earned £35,407, against £20,630 (for 13 months), and although the taxation provision is doubled, net earnings amount to 15.9 against 9.8 per cent. on the share capital. Surplus earnings are largely employed to write down patents by £12,000. Future expectations appear to be measured in the decision of the directors of Airscrew to distribute a 25 per cent. share bonus, for profits were sharply reduced from £40,200 to £22,415 for the year to March, and the ordinary dividend from 30 per cent. to 20 per cent.

★ ★ ★

International Tea Problems.—Shareholders in International Tea Company's Stores at last Tuesday's meeting heard a full explanation of last year's further fall in profits (discussed on page 81 of *The Economist* of July 9th). Mr Guy Collier disclosed the interesting fact that many articles were being sold at a satisfactory rate of gross profit, and that price-cutting was confined to no more than half-a-dozen commodities. But the latter, which include butter and sugar, were precisely those which were handled in large quantities. In common with most members of the Multiple Shops Association, the company had entered into an agreement with the Shop Assistants' Union for an increase of wages in November last. Mr Collier estimated that the extra wages involved in 1937-38 would have represented another 3 per cent. for ordinary shareholders, while N.D.C., which appeared in the accounts for the first time, represented a further 2 per cent. in terms of the ordinary capital. Although the company's turnover is still increasing, it is unlikely that its old prosperity will be restored until profits margins are more satisfactory. The present state of competition in provision retailing lends little support for such hopes in the near future.

★ ★ ★

Powell Duffryn Prospects.—Mr. E. L. Hann discussed the position of the Powell Duffryn group and the prospects for the coal industry at large with commendable frankness at this week's meeting. Last year, Powell Duffryn Associated Collieries obtained an increase of £32,602 in profits, and paid increased participation dividends to Powell Duffryn Steam Coal and Welsh Associated Collieries. Mr Hann described this increase as "satisfactory," for costs of production had risen; the company's wages bill increased by £1,400,000 last year (of which part, of course, was due to increased output); and increased rail charges since 1933 had increased the cost of Welsh export coal by approximately 5½d. per ton. The Powell Duffryn group is closely interested in the prosperity of export coal business. And the contraction in demand this year is expected to widen the price differential between export and domestic markets. Those investors interested in companies serving the inland market may also note that Mr Hann forecast severe tests for the Selling Schemes during the next few months, since the Control Boards must accommodate themselves to falling demand. He refused to admit, however, the likelihood of a severe trade reaction. The group has effected considerable measures of internal reorganisation in recent years, but these cannot be expected to outweigh the adverse consequences of diminished home and export trade. A current yield of nearly 8¼ per cent. on Powell Duffryn Steam Coal ordinary shares obviously recognises this point.

★ ★ ★

Anglo-Ecuadorian Oilfields.—The announcement that the points at issue between Anglo-Ecuadorian Oilfields and the Ecuadorian Government have been settled was followed by a slight setback in the £1 ordinary stock units to 19s. 9d. The key to this reaction is to be found in a sentence of the directors' announcement, which points out that the effect of increased taxation under the new agreement will be serious, although the board thinks that, "provided crude oil prices are maintained, there is every prospect that the company will be able to continue the payment of dividends." The Ecuadorian Government have made it plain that allegations of misfeasance against the company were unofficial and unproven, and the company continues to enjoy the confidence of the Government. Thus, the directors' forecast, made last March, that confiscatory proceedings such as those in Mexico need not be feared, has proved correct. But the company's future burdens will, nevertheless, be substantially increased under the new contract. As from January last, the rate of royalty on crude oil production has been increased from 7 per cent. to 10 per cent. The company's import franchise has been cancelled, although some of the items which it imports into Ecuador will be placed on the free list. Finally, the exemption from income tax which the company has enjoyed hitherto is revoked, and it has been called upon to pay tax, at the rate of 8 per cent., for 1935, 1936 and 1937. It is difficult accurately to estimate the potential effect of these changes upon the company's earnings position. A rough estimate suggests that, on production proceeds for the year to June, 1937, the increased royalty would involve about £12,000, while the Ecuadorian tax liability might amount, at most, to about £32,000, assuming that it was assessed on the basis of net operating income. The payment of four years' tax liability will represent an unusual drain on the current year's available profits, but, subject to the course of the oil market, the increased charges would normally leave fair prospects for the stockholders. So far as they can be estimated, in terms of the 1936-37 profits, they would appear to represent less than 3 per cent. on the company's capital. But the settlement has political implications which oil shareholders generally can scarcely afford to ignore.

★ ★ ★

The Week's Company Profits.—Our usual analysis of profit and loss accounts on page 156 includes the results of 39 companies, apart from new concerns, or those for which comparable figures last year are not available. The latest net profits of these companies amount to £3,668,000 and show an increase of 5½ per cent. over the previous year, when they amounted to £3,475,000. The total profits of 1,554 companies analysed this year amount to £223,378,000 and show an increase of 12 per cent. over the previous year's total of £199,454,000. This week's results are discussed on page 139 under the heading "Shorter Comments."

★ ★ ★

Company Meetings of the Week.—Reports of company meetings will be found in this issue commencing on page 146. Mr E. L. Hann's survey at the *Powell Duffryn Associated Collieries* meeting is discussed in a Note on page 134. The difficulties experienced in making wheat purchases last year were discussed by Mr A. H. Dence at the *Hovis* meeting. Mr. E. Russell Polden reminded shareholders of *Amalgamated Dental* of the highly competitive nature of the trade, which the company endeavoured to meet by the sale of high quality goods and by organised research. Mr Horace Boot informed shareholders of *Eastwoods Flettons* that contracts for Government work and for investment and industrial building were engaging more of the company's attention than hitherto. At the *Covent Garden Properties* meeting, Mr Philip E. Hill discussed the recent purchase of properties costing £1,236,229, and reported that advantageous offers for certain of the company's properties had been accepted. Members of the *Trustees Corporation* were informed by Mr W. Sandford Poole at the annual meeting that most of the increased investment revenue had been derived from home securities. Sir Frederic Hamilton declared that developments in connection with Luipaards Vlei, the most important mining interest of *H.E. Proprietary*, were extremely encouraging. As the largest shareholders, they had no hesitation in approving the scheme for an extensive development programme which would cost £1,750,000. At the *Kuala Muda Rubber Estate* meeting Sir Francis M. Voules referred to the remarkable improvement in the rubber position since the middle of May. Sir Godfrey B. H. Feel disclosed that the *Thistle-Etna Gold Mines* would shortly increase their crushing capacity to 48,000 tons a year. Sir Reginald Wingate described the outlook for *Tanganyika Concessions* as brighter to-day than ever before.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
JULY 19	JULY 21

THE market this week has been much less assured. Gilt-edged and Kaffir shares have made some progress, but the course of industrial shares, home rail stocks and foreign bonds has been much less impressive. In part, Wall Street's irregular course may take the blame, but specific factors bearing on the London market included political restiveness, reflected from certain Continental centres, and a number of bearish industrial pointers, including a sharp fall in steel output in June, and the shock of the Courtaulds interim dividend announcement.

Undated *gilt-edged stocks* fell at the outset on profit-taking, but regained a firmer tone in mid-week, when the success of the Bournemouth issue assisted the market. War Loan led the recovery, and smaller gains were shown by Old Consols and Local Loans. These gains, however, were all lost in Thursday's reaction. New Zealand stocks continued an uneasy market, and fears that restrictions on remittances might be imposed led to a widening of quotations. Australian stocks were better, and the new 3¾ per cent. scrip reached par for the first time.

In the *foreign bond market*, further falls were registered in German and Austrian bonds, for the market was unwilling to take stock. By mid-week, substantial falls had been registered in Young 4½ per cents. to 39¼, and in Dawes 5 per cents. to 52½. Buenos Ayres loans received better support, but Brazilian bonds continued heavy. Far Eastern bonds staged a partial mid-week recovery.

★

Among *home rail* stocks, the approach of the interim dividend season caused a subdued opening, and small selling resulted in fairly sharp falls. The week's traffics produced a further fall, although prices closed above the worst. Despite the small volume of business, Argentine rail stocks made a slight improvement in mid-week.

The *industrial market* lost much of its impetus towards recovery, and though prices on the whole were not seriously lower, the tendency became more irregular than in recent weeks. Iron and steel shares weakened, particularly after the publication of the June output figures, but losses were not substantial. Coal shares were also dull, at lower prices. Interest in the electrical equipment section was centred in Crompton Parkinson and Callenders on rumours of a deal between the two companies. Both shares went ahead, but became more irregular in mid-week on profit-taking. Other electrical equipment shares fluctuated, but the tone was generally satisfactory. Electric supply issues were better than in recent weeks. Motor shares became firmer after a poor start, and aircraft issues similarly went ahead on Wednesday after the Bristol report, which made amends for the disappointing dividend. Courtaulds fell back slightly in anticipation of the interim dividend (discussed on page 132), dropped sharply on the actual announcement from 30s. to 29s. 9d. in Wednesday's "Street" market and fell further to 28s. 6d. on Thursday. Other textile issues improved slightly after early neglect. The shipping group brightened slightly after early dulness. Miscellaneous shares followed the general trend with dull conditions and narrow price movements. Beechams deferred responded to the news of amalgamation with Macleans, but reacted later.

★

Business in *oil shares* showed some signs of expansion in mid-week, but quiet conditions prevailed at first. News from Wall Street was the main influence, and Continental dealings were too scattered to affect prices. Turnover in rubber shares remained restricted. Quotations on Monday were mostly unchanged, and although a later tendency to weakness was soon reversed, firmer prices were not accompanied by any marked increase in business. Tea shares were quiet and irregular.

Though prices held up well, conditions in the *mining market* were dull, with little business passing except for a small revival in activity in mid-week. Kaffirs started the week more quietly than for some time past, but quotations were marked up moderately later, and there was some return of interest in developing mines. Rhodesian copper issues were irregular, and other base metal shares undecided.

ACTUARIES' INVESTMENT INDEX

A further slight rise on last week is shown by the Actuaries' Index of 151 ordinary share prices, which on Tuesday, July 12th, stood at 67·9, compared with 67·6 a week ago and 63·4 a month ago. The corresponding average yield on Tuesday last was the same as a week ago at 5·72 per cent. A month ago it was 5·99 per cent. A selection of the separate indices follows :—

New York

WALL STREET'S recovery is no longer so effective, and this week's movements have been more erratic than at any time since recovery began in June. Monday saw a moderate reaction, mainly on profit-taking, but there was also some slackening of investment interest. Then a pronounced rally, under the lead of steels, brought prices above those prevailing at the end of last week, and trading volume expanded satisfactorily. This upswing continued on Wednesday, partly on the inflationary interpretation of the revised Budget figures. The Dow Jones industrial index touched a new 1938 high of 139.90, but prices broke sharply in the last hour, bringing the index down 3 points. The worst feature of this setback was the rise in trading volume as prices fell. Steel shares were the most active group. *Iron Age* estimates output at 32 per cent. of capacity, but the market is paying more attention to the price structure and to the chances of reducing wages than to output. Steel shares

(*Continued on page* 138)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Capital Issues

The success of the *Bournemouth* issue, for which conversion lists closed on Tuesday this week, has provided a favourable setting for further municipal conversion operations. Bournemouth has a unique "name" as a borrower, but the satisfactory opening premium on its new loan was expected to ensure fair success for the *Bootle* and *Ipswich* issues. The former is wholly, and the latter partly, for conversion of existing 6 per cent. stocks, and apart from slight variations in redemption dates, both issues are made on the new terms adopted for Bournemouth. This week's issues have catered exclusively for the fixed interest investor, for the remaining offer consists of 4 per cent. first mortgage debenture stock of *Covent Garden Properties* at £99 per cent. This stock is specifically secured on properties valued at £1,537,000, and by a floating charge on the remainder of the undertaking, subject to specific and floating charges securing the existing 4 per cent. stock. Estimated total profits, including revenue from properties agreed to be purchased, cover the interest on both stocks over two and a half times, while total net assets cover the principal of both stocks twice. Since the existing debentures rank first for floating charge, the slight discount on the issue price of the 1938 debenture stock, compared with the net price of the existing stock, seems reasonable. The same sponsors will make an offer for sale on Tuesday next of 1,496,000 5 per cent. redeemable £1 preference shares in *Beecham Maclean Holdings* at par. Particulars of this issue, and of the preference and ordinary share offer of *Regis Property Company*, on Wednesday next week, will be found below.

PUBLIC OFFERS

Covent Garden Properties.—Issue of £1,000,000 4 per cent. (1938) first mortgage debenture stock at 99. Specific charge on properties (largely shop) valued at £1,537,000, and floating charge ranking after that securing existing £2,500,000 4 per cent. first mortgage debenture stock. Total net assets before proceeds of present issue, before deducting new and existing debenture stocks, and including new properties being charged, £5,901,893. Net profits before debenture service, years to June 30: 1936, £255,054; 1937, £277,083; 1938, £304,987.

Ipswich Corporation.—Issue of £1,000,000 3¼ per cent. stock at 98½, redeemable at par December 1964. Holders of £300,000 6 per cent. stock 1938–50 may convert. A trustee stock. Estimated population, 93,870; rateable value, £623,430; rates, 14s. 6d. Net debt March last, £3,906,411 (of which housing £1,853,528). Remaining proceeds to repay short-term loans.

CONVERSIONS AND REPAYMENTS

Bootle Corporation. — Offer of conversion into 3¼ per cent. stock from £500,000 6 per cent. stock 1938–50, at 98½. A trustee stock. New stock redeemable at par June, 1962, or from 1958 on notice. Estimated population, 74,690; rateable value, £519,071; rates, 13s. 9d. Net debt March last, £1,911,335 (of which £1,429,991 productive).

PRIVATE PLACING

Van Emden (Dutch Guiana) Gold Mines.—This company has placed privately 75,035 5s. shares.

ISSUES TO SHAREHOLDERS ONLY

City of London Real Property.—Issue of £300,000 3¼ per cent. debenture stock at 99. Will rank *pari passu* with 3, 3¼ and 3½ per cent. debenture stocks.

Stewarts and Lloyds.—Issue of 300,000 5 per cent. cumulative third preference stock at par, in proportion of £1 for every £1 of stock.

FORTHCOMING ISSUES

Beecham Maclean Holdings.—Lists will open and close on Tuesday next (July 19th) for an offer for sale of 1,496,500 5 per cent. redeemable cumulative £1 preference shares at par. The offer will show that the dividend is unconditionally guaranteed by Beechams Pills, Limited, and that the shares are redeemable at 22s. to July, 1945, or 21s. 6d. thereafter to 1960. The company has been formed to acquire 90 per cent. of ordinary capital (3,400,000 5s. ordinary shares) of Macleans, Limited. Combined profits of Beechams Pills and the proportion of Macleans profits attributable to the shares for the latest year are stated to cover Beecham Maclean Holdings preference dividend over ten times.

Regis Property Co., Ltd. Lists will open and close on Wednesday next (July 20th) for an offer for sale at par of 250,000 5½ per cent. cumulative £1 preference shares and 100,000 £1 ordinary shares. The offer will show that the company has been formed to acquire 20 properties in the London area. Gross revenue under existing leases, £234,191. When lettings have been effected to produce 95 per cent. of the whole, gross revenue will be £262,862, or £128,678 net. Estimated net profit, £58,035. Value of assets, £1,986,000, leaving £752,830 after deduction of £675,000 debenture stock and £558,170 mortgages. Real Property and Finance Corporation guarantee for three years to July 10, 1941, annual net income of £128,678, subject to total liability of £50,000.

Industry and Trade

Coal Prosperity.—The latest statistical summary shows that during the first quarter of 1938 the coal industry enjoyed a high degree of prosperity, in which both workers and employers shared. Compared with the corresponding quarter of 1937, the sum distributed in wages rose from £25·2 million to £28·7 million; and although there were 27,250 more workers to share the money, the average earnings per man-shift rose from approximately 10s. 4d. to 11s. 1½d. Since the March quarter of 1935 average earnings per man-shift have risen by 1s. 10¾d., and the Mining Association, in commenting on the return, notes that this satisfies almost precisely the demand made in that year for an extra 2s. a shift for men, 1s. for boys—only the men wanted it then, not now. The increase in profits is even more spectacular. Every district shows a credit balance, varying from 1s. 1¾d. a ton in S. Wales to 3s. 2¾d. in S. Derbyshire. Over the whole country the credit balance averages nearly 1s. 11½d. a ton. This is the highest figure for any quarter since 1924. The Mining Association points out that such charges as debentures take 3d. a ton, but even so the balance is substantially higher than the average pre-war profit of 11½d. a ton.

* * *

In the coal industry, sharp bursts of prosperity have always alternated with long periods of dullness or depression, and the cycle is running true to form. Owners and workers have done so well because they have ceased fighting each other and have been able to secure high prices for their product. The average proceeds of commercial disposals amounted to 17s. 4¾d. a ton, which is nearly 1s. 10d. more than a year ago and 3s. 10d. more than in the first quarter of 1935. In part, this increase is due to the interplay of supply and demand, in part to the better bargaining powers given by the central selling schemes. Producers and consumers continue to dispute the relative importance of these factors.

* * *

Overseas Trade.—The preliminary figures published in *The Board of Trade Journal* show a marked decline in the value of British overseas trade, as compared with the high figures of June of last year. The value of imports was 13.2 per cent. lower than in June, 1937, and that of exports 18.9 per cent. lower; owing to the greater absolute fall in imports, the excess of imports over exports showed a decline of 5.4 per cent. The aggregate figures for the first six months of the current year show that hitherto the falling off in exports has been much greater than the decline in imports, whose value was well maintained in the early months of 1938.

The Poultry Scheme.—Those concerned with the poultry industry will give a cordial welcome at least

SHORTER COMMENTS

Company Results of the Week.—TAMPLIN AND SON'S BREWERY, BRIGHTON, report trading profits of £315,802 against £302,121, but increased expenses reduce the improvement in net profits to a very small sum. A satisfactory increase in sales during 1937 has resulted in a £26,300 increase in net profits of VICTORIA FALLS AND TRANSVAAL POWER to £612,629. Continued increase in sales is reported for the first half of 1938. Owing to rising demand, the new Klip power station is being extended to double its original capacity. MERLIMAU PEGOH reports that the average c.i.f. price of rubber fell to 7·63d. per lb. in 1937–38, against 9·18d. in 1936–37, and net profits have declined from £105,106 to £90,438. Since oil production fell from 1,003,903 tons to 713,405 tons, last year, and a gradual decline in prices occurred from last August, PHŒNIX OIL AND TRANSPORT COMPANY shows a reduction in net profits from £174,232 to £108,824. This has necessitated the passing of the dividend. UNITED BRITISH OILFIELDS OF TRINIDAD report an increase in 1937 production from 193,844 to 242,510 tons, sales of refined products rising from 442,633 to 544,597 tons. Oil proceeds were 30 per cent. higher at £1,120,877, and though net profits amount to £185,815 against £177,245, the 7d. per share dividend is unchanged. Further progress is shown by ALLIED BAKERIES, whose earnings last year amounted to £154,186 against £60,445. The dividend is raised from 8 per cent. to 10 per cent. Various businesses were acquired during 1937–38 and the net trading profits of the group amounted to £293,918. A satisfactory increase in profits is shown by THOMAS BOLTON AND SONS, whose works have again been employed to capacity. Net profits amount to £184,847 against £154,094, and the 10 per cent. dividend is repeated.

MISCELLANEOUS

Oceanic Steam Navigation (Scheme of Arrangement).—A scheme of arrangement is proposed between this company and its creditors, under which a realisation company is to be formed—to be known as O.S.N. Realisation Company—with a capital of £1,150,000, in "A" and "B" £1 shares. Powers will be given to create further "B" shares to any amount required for issue under the scheme. Principal asset is the 3,800,000 Cunard White Star shares. Unsecured creditors for over £4,000,000 will be allotted the "B" capital. Neither the "A" nor "B" shares will carry any right to dividend.

Philips' Lamps.—Report for year to April 30, 1938, shows a sharp fall in the balance of operating profits from fl.19,673,975 to fl.8,015,307. There is a reduction in the year's dividend from 18½ to 11 per cent. Board and management remuneration takes fl.589,916, against fl.1,990,973; allocation to staff reduced to fl.540,756 from fl.2,143,823.

Phoenix Oil and Transport Company, Ltd.—Net profit for 1937, £108,824 compared with £174,232. Cash and Government securities show a decrease of £66,429 at £137,144. No dividend is to be paid, against 3¾ per cent. for 1936. Reduced profits are stated to be due mainly to decreased production (713,405 tons as compared with 1,003,903) and to a gradual decline in prices since August last. After £50,000 to investment reserve and £50,000 to taxation reserve, the carry forward is increased from £365,324 to £374,149.

City of San Paulo Improvements.—Net profit for year to February 28, 1938, was £97,360, against £38,923 for previous year. This is added to the amount brought in, and makes £374,862 to go forward. Sales of land for year, £281,766 against £197,127. Land sales first four months 1938, £76,475 against £102,250.

Victoria Falls and Transvaal Power.—After tax and renewals fund, net profits amount to a record of £612,628, an increase of £26,263. Ordinary dividend raised from 12 to 13¼ per cent. To reserve £100,000 as before. Carry forward raised from £135,832 to £197,535. Sales for the first six months of 1938 show a further increase over those for the same period of 1937.

Hecht, Levis and Kahn.—Final dividend of 15 per cent. on the ordinary shares, for the year ended March 31, 1938, making 20 per cent., less tax for year. Also a scrip bonus to the ordinary shareholders is recommended, of preference shares equivalent to 10 per cent. on the ordinary capital. Total payment for 1936–37 was 35 per cent. including a 15 per cent. cash bonus, and a similar scrip bonus.

United British Oilfields of Trinidad.—Profits for 1937, £69,192 against £67,680 for 1936. Ordinary dividend maintained at 8¾ per cent. Carry forward reduced from £14,896 to £13,131. The 3,000,000 ordinary shares issued in May rank for dividend from January 1, 1938.

Allied Bakeries, Ltd.—Net profit for year to June 30, 1938, £137,250 against £53,274. Ordinary dividend raised from 8 to 10 per cent., absorbing £68,996 against £29,969. Carry forward raised from £7,152 to £40,187. Stocks £108,595 against £55,046. Cash is up from £168,444 to £212,784.

to parts of the announcement made on Monday last by the Minister of Agriculture. The Government has decided to implement the recommendations of the Poultry Technical Committee and to set up a Poultry Commission, with power to control the distribution of breeding stock, hatching eggs, and day-old chicks; the Commission will also conduct a stock improvement scheme on voluntary lines, assisted by premiums from the Exchequer on a diminishing scale. By these measures it is hoped to check the rapid increase in the mortality rate among poultry, which is one of the most serious problems the industry has had to face in recent years. In addition, the Government will facilitate the establishment, already under consideration by the Agricultural Research Council, of a research station for the further investigation of poultry diseases; it will give sympathetic consideration to a scheme, which the Commission would be asked to prepare, for the establishment of a progeny-testing station, and it will co-operate with the Commission in extending the educational and advisory work among poultry producers. Such measures will do much to improve the stamina and quality of the industry's breeding stock, whose health is the foundation of successful egg production.

* * *

— And Better Marketing for Eggs.—The haphazard and rather inefficient methods by which the home output of eggs has been marketed has been another handicap, but statutory control over the whole production, on the lines of the Milk or Pig Marketing Boards, has been rejected by the industry, in which there is a very large number of small producers. The Government have therefore decided that improved marketing could be best secured by giving the Poultry Commission powers to regulate the marketing of eggs and of dead poultry by the standardisation of grades, etc.; Exchequer loans will also be provided for the setting up of co-operative egg packing stations. Mr Morrison also rejected the idea of a subsidy, and further declared that the Government " were not prepared to restrict imports for the purpose of raising the normal level of prices, since only an increasingly drastic restriction of imports of eggs could effect and maintain (and then only for a limited period) any appreciable rise in prices." This sound analysis of the economic situation will probably not be appreciated by the industry, whose claims for greater protection against foreign imports were stimulated by the rise in feeding-stuff prices since 1936. But what is reasonable in its claims has been met by Mr Morrison's further statement that the Government were prepared to regulate imports to safeguard the market from sudden dislocation due to temporary abnormal arrivals, and to support any organised scheme for storing the spring flush of eggs, so as to diminish the existing seasonal variation in market supplies and prices. The Government's proposals seem on the whole to be a statesmanlike attempt to increase the efficiency of an industry whose satisfactory development could play an important part in improving the nation's diet.

* * *

Further Decline in Shipbuilding Orders.—The latest figures published by Lloyd's Register show that the decline in the tonnage of mercantile shipping on which work was begun has been continued into the second quarter of the year. In Great Britain and Ireland, construction was begun on 156,970 tons between April and June, compared with 173,000 tons in the first quarter of the year, and 368,000 tons in the second quarter of 1937. Owing to the delay between the placing of an order and its delivery, the total tonnage under construction in this country, while slowly declining, is still high, and the tonnage launched in the last quarter, at 286,733 tons, was 179,992 tons higher than in the previous quarter. It may be noted, however, that in countries other than Great Britain, the amount of new tonnage begun in the latest quarter showed an increase of 123,669 tons, compared with the previous three months, so that the proportion of world construction held by this country will continue its progressive decline.

* * *

Nitrate Producers' Agreement.—The international nitrate agreements, which comprise both the European Convention and the Convention between Europe and Chile, came to an end on June 30th. Discussions for their renewal started early this year; they were continued in Paris on June 29th, revived in London during the first week of July, and since last Monday the discussions have been again transferred to Paris. The delay in these negotiations, however, is not unexpected. The world's potential output of nitrogen is about twice as large as the actual output, and the current rate of output is greatly affected by strategic and political considerations in most of the producing countries. Consequently the arrangement of a quota scheme which meets the approval of all groups concerned is exceedingly difficult. Three years ago, when the last agreements were discussed, the signature could not take place until nearly three months after the termination of the preceding conventions, so that the announcement last Thursday that agreement had been reached on major issues is highly satisfactory. Details have not yet been published, but it is understood that the previous conventions have been prolonged without much change for a further three years. The experience of the last scheme has been very favourable. Both world production and world consumption of nitrogen reached new records of 2,594,000 and 2,675,000 metric tons respectively in 1936-37, representing increases of 17.7 per cent. and 37.1 per cent. respectively over the previous record year 1929-30. Figures for 1937-38 will not be published until November next, but it is already known that they will show new and substantial advances. In addition to the orderly and steady rise in production and consumption, prices of nitrogen fertilisers have shown satisfactory levels throughout the period of the past agreement.

* * *

The Price of Bread.—The report issued last week by the Food Council on the subject of bread prices in London shows with admirable clarity the difficulties that confront the would-be "stabiliser" of conditions in a distributive industry. Since 1925 the margin between the price of bread and the price of flour for London bakers has been fixed by the combined action of the Food Council and the Bakers' Joint Price Committee. In August, 1937, a temporary increase in this margin was arranged to meet the complaints by the bakers of higher costs, while the Food Council undertook an examination of the account books of representative firms. The Food Council has verified the higher costs of baking, and has reluctantly sanctioned both the previous increase and a further increase in the margin; the price of 8½d. per 4-lb. loaf will now be related to a price of 31s. to 35s. (instead of 36s.) per sack of flour. The Council points out that the rise is entirely due to the higher costs of distribution, and that, in fact, a fixed margin gives rise to a vicious circle. Competition between bakers, which cannot be expressed by price reductions, leads to the provision of more costly services; when these have become general the margin must be increased to allow the bakers once again a reasonable profit. The more wealthy consumer, no doubt, insists on these services, but since he has to pay for them in any case and can get no reduction in price by fetching his bread from the shop, he continues to demand them, and the burden falls on the poorer families. The Food Council recommends that bread sold over the counter should be cheaper by at least ½d. per 4-lb. loaf than bread delivered at the door, and it is to be hoped that the baking trade will give effect to this recommendation. As a long-term policy, however, it might be better in both the baking and milk distributive trades to fix *minimum* margins for the simplest form of service—where the consumer buys his bread or milk over the counter—and to allow the price of ancillary services to be determined by competition and the variations in the consumers' wealth.

* * *

Cotton Enabling Bill.—Important modifications and amendments to the Cotton Industry Enabling Bill will be laid before a special meeting of the Joint Committee of Cotton Trade Organisations within the next fortnight. These will be recommended by the executive following discussions with various interests concerned, including the representatives of the objectors to the bill, and also the special committee of the Manchester Chamber of Commerce. The form of amendment which will be recommended has not yet been finally settled, but it is probable that as a result of discussions which have already taken place the bill will be considerably simplified, and its safeguards against exploitation or hardship to individual units greatly strengthened. Probably the most important amendments will be those affecting conditions under which price schemes should operate. It is generally agreed that selling prices should be strictly related to actual costs in efficient mills working on a reasonable capital basis, and provision will be made in the bill for an impartial investigation of costs before any schemes are approved. To meet objections, it is considered likely that clauses relating to sectional schemes will be revised, and the objects of schemes will be limited to two or three generally agreed purposes. Any levies would be defined at a maximum rate, and would not exceed a small fraction of the industry's turnover. It is emphasised that the Cotton Industry Board will have no executive authority, but will simply be the channel through which sectional schemes are to be considered. Meanwhile, the Opposition Committee have taken advantage of the half-yearly meeting of the Manchester Chamber of Commerce, on Monday next, to table a resolution committing the Chamber to a rejection of the proposed Bill. An amendment will be moved by the ex-president, however, approving the Chamber's recent decision to defer any official pronouncement until the Government's proposals have been published in detail.

* * *

Prolongation of the International Tinplate Cartel.—After lengthy and difficult negotiations at last week's conference at Baden-Baden, which was attended by representatives of Great Britain, Germany, France, Italy and Norway, the International Tinplate Association has been prolonged for another three years. A number of amendments have been made in order to improve the efficiency of the agreement, which has recently been impaired by demands of the American partners for a higher quota, undercutting of official prices by Italian and Norwegian works, and by the prospective increase of tinplate output in a number of countries. The demands of the American producers have been met by increasing their quota by 2½ per cent., and they have agreed to pay a fine for having exceeded their quota last year. Moreover, outsiders have been invited to join the association, and it is understood that a provisional agreement has already been concluded with some outsiders, among them, presumably, Czechoslovakia. The prolongation of the association is to be welcomed in the interest of the South Wales tinplate industry, though the depressed situation on world markets renders a conclusive settlement difficult; further, the Cartel will soon have to face the formidable task of bringing the output of the new Ebbw Vale strip mill into its scheme.

INDUSTRIAL REPORTS

CONDITIONS in all the industrial centres are quiet. There is normally a slackening of activity with the commencement of the holiday season, and the existence of large stocks makes any pre-holiday rush unnecessary. Both in the coal and the iron and steel industries it is felt that with the resumption of business afterwards conditions are likely to improve. The returns of overseas trade show a general decline in June, but both imports and British exports on a working day average basis were higher than in the preceding month.

The textile industries have not fully maintained their recent improvement, for raw cotton prices have declined slightly this week, and turnover has been disappointing in both yarn and piece-goods.

Coal

Sheffield.—On inland account there is a steady demand for industrial fuel, but household coal requirements are lower and stocks are increasing in spite of short working in soft coal seams. The majority of orders are for secondary descriptions suitable for the bagging trade. A bigger call for South Yorkshire locomotive hards is helping to offset the easier demand for industrial steams. Gas coal demand is quiet.

The decline in pig iron production has been followed by a drop of 5s. per ton from July 1st in the price of blast-furnace coke. There is also an easier tendency in large selected patent-oven coke.

Export trade continues very dull, and the outlook is depressing. The bunkering trade is disappointing, and coke, in spite of lower prices, is neglected.

★

Newcastle-on-Tyne.—The immediate position remains unchanged, idle time being a common occurrence, but there is a better inquiry which has resulted in some new business. The Northumberland steam market is weak, but price levels reached have induced home consumers to cover certain requirements. The Durham section is quiet, Italian shipments are disappointing and home trade shows no improvement. Patent oven coke is a steadier market under a better foreign demand.

★

Glasgow.—There has not been the usual pre-holiday rush for supplies this year, and the collieries close down this week-end with all orders comfortably completed to date. The only activity has been the mild pressure experienced in Fifeshire for some of the better qualities. These conditions are the result of reduced demand at home and abroad, especially for bunkering fuel, orders for which remain very scarce. It is expected that general demand will be on a better scale after the holidays, with house coal an early development of importance.

★

Cardiff.—Business continues quiet on the Cardiff coal market. There is little expansion in current inquiries, and demand is reduced for some of the European trades. Collieries are finding it difficult to dispose of their output. The final result of the discussions between the Ministries of Mines of the United Kingdom and France is not yet known, but a decision is expected shortly. Shipments in the foreign and coastwise trades at the South Wales ports last week totalled 375,600 tons compared with 352,000 tons the previous week, and 433,480 tons in the corresponding week last year, and for the twenty-seven weeks ended July 9th the total trade was about 320,000 tons, or about 3 per cent. less than in the same period last year. Dry peas and beans are comparatively scarce, but there is a plentiful supply of other classes, and stocks are exceptionally heavy.

Iron and Steel

London.—According to the official report of the London Iron and Steel Exchange, trading conditions in the iron and steel markets remain quiet, and the holiday season has begun to influence the situation. Arrears of orders have been worked off, and in practically all departments it is possible for the makers to give early delivery. With the demand at its present level little impression is being made upon stocks, and it is evident that a month or so must elapse before business is likely to revive.

In the pig iron section stocks are particularly heavy, and are sufficient to enable consumers, with the assistance of their running contracts, to meet their full requirements, although some reduction has been made in the accumulations of steel-making iron. Consequently the volume of new business is insignificant, and in some districts the reserves at the producing works are being increased. Little relief is experienced from the export markets, as British prices are not competitive with those of foreign makers.

There is a good deal of idle plant in the semi-finished steel department. Consumers' stocks are large and are slow in being used. As a result, the transactions now taking place relate principally to small parcels.

The demand for finished steel is irregular, and has declined during the last few months, partly owing to holiday stoppages; but a considerable tonnage is still being taken by the consuming works. Export business, however, remains poor, and foreign buyers are not showing much interest in the market.

★

Sheffield.—Interest in the market is extremely limited, and until the close of the holiday season there appears little hope of improvement. The decision of the Stanton Ironworks Company to resign from the Central and Foundry Pig-Iron Producers' Associations on the ground that the existing officially fixed prices for forge and foundry iron are too high will doubtless induce consumers to hold off the market as long as possible in the expectation that the action of the company, which is the biggest producer of foundry iron, will bring about lower quotations at the end of the year, until which time prices are stabilised. The notification of resignation by the Stanton Company has six months to run.

A good deal of the curtailed pig iron output is still going into stock, users finding their supplies and deliveries under existing contracts ample for their requirements.

Hematite business is small, but there is a moderate market for special qualities. Finished iron shows no change, crown bars being in especially poor request.

There is less activity in the steel market, but confidence in the good autumn prospects is unabated. Production of basic billets and acid qualities is rather smaller, but the demand is steady. Stainless steel sheets and steel strip continue to be strong features.

★

Middlesbrough.—Market conditions are still quiet. Production and market transactions in Cleveland pig iron have been suspended as stocks are sufficient to meet current requirements. Business in East Coast hematite pig iron is very small. Producers are able to absorb some of the output in their own foundries, and limited deliveries are being made to the Sheffield area. Export business is at a standstill.

Semi-finished steel is plentiful, with little demand. Heavy steel producers keep well employed, and according to the latest shipbuilding returns, the tonnage of vessels in construction on the Tyne, Wear and Tees at the end of June, 1938, is practically equal to the tonnage building at June 30, 1937. New merchant ship orders are, however, not being received.

Users of foreign ore have good stocks and are specifying for reduced deliveries. Business in steel scrap is practically negligible.

★

Glasgow.—Holidays are now commencing in Glasgow and many districts in the West of Scotland, and there is a general slackening off in demand, although several orders have been booked by local manufacturing firms. In this district the impression seems to be fairly general that specifications will be more plentiful soon after the holidays, and that a buying movement will develop in the early autumn. In the meantime there is still a good tonnage of unexecuted orders on books at the steel plants and other works, and with few exceptions the prospects of regular employment after the resumption of work are good.

★

Cardiff.—In the tinplate trade shipments have been more active recently, but a considerable proportion of them have been drawn from stocks, and production in the week ended July 2nd was only 40.11 per cent. of capacity compared with 71.78 per cent. in the corresponding week of 1937. Sheets are also a restricted market, and no improvement is reported in the heavier branches of the industry. Prices are nominally unchanged. The present position of the industry is indicated by the table given below.

Tinplate Industry Statistics

	Week ended July 3, 1937	Week ended June 25, 1938	Week ended July 2, 1938
Production—per cent. of capacity	71·78	44 03	40 11

	Tons	Tons
Shipments	224,821	131,736

Textiles

Cotton (Manchester).—An unsettled feeling has prevailed in the market during the past week. Although inquiry in yarn and piece-goods has kept up fairly well sales of any importance have been few and the turnover disappointing. The American estimate of 26,904,000 acres under cotton has caused much interest. Although the forecast was slightly above expectations, prices were unaffected by the report. Since then better weather advices have caused a decline.

Business has been irregular in the yarn market. In the American section the bulk of the turnover has been in counts and qualities that are not governed by any price agreement. Spinners continue to press for delivery instructions. It is understood that good progress is being made in securing a renewal of the price agreement in the Egyptian branch, which expires at the end of next month. Fair orders have been booked for piece-goods, but very few manufacturers have made any progress towards better times. The recent improvement in the demand from the Dominions has been maintained, and quite a useful business has been done in home trade fabrics.

★

Jute (Dundee).—Prices of raw jute have maintained their recent advance, which was mainly due to unsatisfactory reports of the new crop. Considerable flood damage has necessitated some immature cutting, thus affecting the yield. The acreage under jute this year, however, at 3,155,400 acres, is approximately 10 per cent. greater than last year.

Trade in jute yarns and cloth has continued quiet, and spinners and manufacturers have the greatest difficulty in obtaining even a slight increase on their recent terms, though prices of raw jute have increased £2 per ton.

THE COMMODITY MARKETS

SENTIMENT continues to be dominated by the development in Wall Street, and prices generally reacted sharply to the hesitation shown there at the end of last week, though there has been some recovery since. Metal prices, however, are generally lower than a week ago, and raw cotton prices declined on better weather reports from America. Rubber continued to improve in price, but grain prices have weakened, though irregularly, and that for maize showed a slight advance.

Moody's daily index of American commodity prices continued its advance after a temporary check at the end of last week; the index stood at 147.5 (December 31, 1931 = 100) last Wednesday, compared with 144.8 in the previous week and 208.1 a year ago.

Metals

Copper.—Although the market staged a fair recovery on Wednesday, the price at £38 17s. 6d. showed per ton a net loss of 18s. 9d. on the week. During the whole week the market moved in sympathy with Wall Street, and so far there are no reports of an increase in new orders for copper goods. The latest monthly statistics show for the first time since April, 1937, a fall of 9,929 tons in United States stocks, which amounted in June to 359,871 tons; stocks outside the United States, however, increased by 7,974 tons to 192,524 tons, influenced probably by increased American exports.

★

Tin.—After being down to £189 the cash price for tin recovered to £192 10s. per ton, a net loss of 15s. on the week. In this market, movements constituted only a reflection of Wall Street changes. Consumers' buying has been small, and as the tin consuming industries have now entered their quiet season, a major increase in buying is unlikely.

★

Lead and Spelter.—Lead closed at £14 18s. 9d. per ton, a net loss of 7s. 6d. on the week, while spelter lost 2s. 6d., to close at £14 5s. per ton. Both markets moved more or less in sympathy with copper and tin, but in addition spelter was favourably affected by a statement of Viscount Horne at the New Broken Hill meeting, in which he said that there is a probability of collective action by the zinc producers to regulate production.

Grains

The July official estimate of the United States crop shows a total of 967 million bushels for the combined harvest of winter and spring wheat, which corresponds closely to the average of private forecasts. The estimates of the condition of the Canadian crop show there are reasonable prospects of a good harvest, and Broomhalls calculate that North America will have about 55 million quarters available for export in 1938-9, some 24 million quarters more than in the current season. During the week, the grain markets have been quiet and business has been restricted, particularly for wheat. There was a steady demand for maize,

COMPANY MEETINGS

COVENT GARDEN PROPERTIES COMPANY, LIMITED

INCREASED PROFIT

The fourteenth ordinary general meeting of the Covent Garden Properties Company, Limited, was held, on the 13th instant, at the May Fair Hotel, London, Mr Philip E. Hill (chairman of the company) presiding.

The Chairman, in the course of his speech, said: The profit for the year, before providing directors' fees, debenture interest, income tax, and National Defence Contribution, amounts to £309,302—an increase over the last year of £27,707. This revenue is represented by the income from rents, tolls, and interest on investments—£283,687—being an increase on last year's figure of £31,480, and the profit on sale of properties and sundry fees amounting to £25,435, a decrease of £3,773. As mentioned in the report, the receipts from Covent Garden show a slight decline this year, due to drought and general conditions. The company has put into operation a pension scheme for the market staff, a step which I am sure shareholders will approve, and a full year's charge in respect of the annual premium has been made in the accounts. The revenue from the company's other properties shows a substantial increase, as I foreshadowed in my address to you last year.

DIVIDEND AGAIN 7½ PER CENT.

The directors are again recommending a dividend of 7½ per cent. on the ordinary share capital of the company. It will be remembered that the amount of this was doubled by the further issue made in July last, and the 7½ per cent. is paid on the full capital although the company has not had the use of the additional capital for the whole of the year.

The company's investments, in sympathy with most securities at the present time, show a depreciation. These continue, however, to yield a satisfactory return.

Turning to the balance sheet you will see that the balance of the company's 4½ per cent. debenture stock, amounting to £164,910, has been redeemed during the year. From the premium received on the issue of the new ordinary shares your directors have written off the balance of the expenses of the issue and conversion costs in respect of the 4½ per cent. and 4 per cent. debenture stock and the costs of the issue of the new ordinary shares amounting to £180,948, leaving a balance on the share premium account of £30,301.

The company's subsidiary, English Property Corporation, Limited, which owns Africa House, Kingsway, has now turned the corner and with the improvement in lettings has this year made a profit which I anticipate should not only continue but increase.

The company has purchased properties costing £1,236,229—mostly freehold. These consist principally of shop properties in good positions in growing suburban districts let to multiple shop companies and established private traders. The building of certain of the properties has only recently been finished and completion of the purchase of certain of the shops comprised in these properties will not take place until the shops are let to approved tenants. The company has also purchased freehold ground-rents costing £157,859. During the year the directors received advantageous offers for certain of the company's properties, which have been accepted.

AN ISSUE OF DEBENTURES

In order to provide the necessary finance for the purchase of the properties referred to, and to enable the company to repay the amount due to its bankers, the board proposes to create and issue an additional £1,000,000 4 per cent. debenture stock secured by a specific charge upon the new properties, and by a floating charge on the whole undertaking and assets of the company—which floating charge will rank after the specific security and floating charge in respect of the existing £2,500,000 debenture stock. Subject to the formal consent of the shareholders being obtained at the class meetings to be held at the conclusion of this meeting, it is proposed to make the issue forthwith. A copy of the prospectus will be sent to each stockholder and shareholder of the company, together with an application form entitling the holder to preferential consideration in allotment. I personally regard the stock as a very well-secured and first-class investment.

The estimated further revenue indicates that the income to be derived from rents, tolls and interest on investments, in the absence of unforeseen conditions, should be sufficient to pay the usual 7½ per cent. on the company's ordinary share capital, apart from any revenue that may accrue from the sale of properties, etc.

The report and accounts were unanimously adopted and at a subsequent extraordinary general meeting the issue of debenture stock was approved.

POWELL DUFFRYN ASSOCIATED COLLIERIES, LIMITED

POWELL DUFFRYN STEAM COAL COMPANY

WELSH ASSOCIATED COLLIERIES, LIMITED

SATISFACTORY INCREASE IN PROFITS

At the annual general meeting of Powell Duffryn Associated Collieries, Limited, held, on the 13st instant, in London, the Chairman, Mr Edmund L. Hann, began by paying a warm tribute to Sir Stephenson Kent, who retired in May last.

Mr E. L. Hann then dealt in detail with the company's accounts, and referred to the increase in profit of £32,633 on last year. This might be regarded as satisfactory.

Costs of production had increased considerably. The wages paid by the company in the year under review rose by over £1,400,000. In addition, the cumulative effect of increased railway charges had resulted altogether in an additional cost of approximately 5½d. per ton to the export trade of South Wales as compared with 1933. Provision had been made in the present accounts to meet the cost of holidays with pay, and it was hoped that this would mark another progressive stage in the happy relations now prevailing between employers and men.

SELLING SCHEMES

The selling schemes were likely to be very severely tested during the next few months. The industry was faced with a falling off in demand, and the control boards in every district had a difficult task before them. Any attempt to force on consumers coals that they did not want in order to preserve an arithmetical balance of trade was predestined to failure.

The world demand for coal in 1937 had postponed, but the contraction of demand this year would intensify, the marked difference in prices realised by collieries engaged in the export trade compared with those whose market was at home. Help from the Government was needed, and it should be possible to devise a scheme either directly to encourage export or to equate the difference between export and inland prices.

Some form of assistance must be given to the exporting districts, for the inroads which foreign (particularly German) subsidised competition continued to make into the British coal export trade were alarming. Between the years 1932 and 1937 German coal exports increased by 66 per cent., while British coal exports in the same period rose only 4 per cent. With the ever-increasing adverse balance of trade, any permanent diminution of British coal exports should be viewed with the greatest concern.

There were serious grounds of complaint that the French Government was permitting transfers of British licences to other countries in contravention of the terms of the agreement. Discussions were at present being carried on between the British and French interests, and it was to be hoped that the latter would appreciate the importance of fully supporting the British coal industry.

As for the Coal Bill, the mere introduction of the Bill had proved costly to the company, for royalty owners had withdrawn all temporary concessions. This was already costing the company between £11,000 and £12,000 a year, and the total increased charge would be very nearly £20,000 a year.

PHURNOD AND BY-PRODUCTS

The demand for PhurnoD had greatly increased. PhurnoD, a specially sized and graded fuel of remarkably high heat value, was ideal for domestic hot water boilers, central heating and similar appliances. The market had also been tested for Phurnacite, a new fuel, and this fuel had been extremely well received.

A new tar distillation plant was being erected by the company in South Wales, which, when completed, would be one of the most up-to-date of its kind in the country. In addition to dealing with the company's own crude tar output, it would also be able to deal with the whole of the crude tar from the existing coke ovens of Richard Thomas and Company, Limited, and from their new works at Ebbw Vale under an arrangement made with them.

After referring to the continuation of the policy of merging the assets of the remaining subsidiary colliery companies into the company, and after mentioning the acquisition of the remainder of the shares of British Briquettes, Limited, the chairman said that, although there had been a certain falling off in demand, he saw nothing to justify the pessimistic feelings of a severe trade reaction which existed in certain quarters.

The directors' report and the accounts were adopted, and the dividends recommended were duly declared.

The annual general meetings of the Powell Duffryn Steam Coal Company, Limited, and Welsh Associated Collieries, Limited, were subsequently held; the reports and accounts were adopted and dividends recommended duly declared.

NEW BROKEN HILL CONSOLIDATED, LIMITED

CONFIDENCE IN COMPANY'S FUTURE

The second ordinary general meeting of New Broken Hill Consolidated, Limited, was held, on the 12th instant, at 20 Aldermanbury, London.

The Rt. Hon. Viscount Horne of Slamannan, P.C., G.B.E., the Chairman, said in the course of his speech: At this early stage of our history you will not expect anything dramatic. The figures reveal only the regular routine of a company proceeding towards its natural development.

During the year the final call of 2s. on 1,250,000 shares issued for cash became due, and the total amount of £125,000 was promptly paid. The issued capital at the end of the year was 2,026,911 shares, fully paid, of an authorised total of 2,400,000 shares of 5s. each. Since the close of the year we have issued 4,626 additional shares against further transfers of shares of the Barrier South Company. We now hold shares equivalent to approximately 99 per cent. of the Barrier South Co., which has been placed in liquidation, while its leases have been transferred to our company.

CO-OPERATION WITH ZINC CORPORATION

A scheme for closer co-operation with the Zinc Corporation in the equipment and working of the two mines has been formulated. Material advantages will accrue to both in the shape of reductions in capital expenditure and working costs, by mining under one management and ore-treatment in one mill—a great saving in the time necessary to reach production.

This joint working arrangement covers the development and working of that portion of our lease immediately south of the boundary of the Zinc Corporation which presents prospects of a sufficient tonnage of ore to occupy our energies for many years. The main lead ore body in our property is not estimated to be productive above 2,250 ft. To reach this depth with a separate shaft and equipment, and to open up for production, would have probably taken more than five years. Under our agreement with the Zinc Corporation we should be in the ore body and from development work have some production (not large) in the first half of 1940. I estimate the capital savings to us resulting from the joint agreement at not less than £250,000.

DEVELOPMENT PROSPECTS

It is anticipated that the New Main (Freeman) Shaft of the Zinc Corporation will very shortly be in commission to the No. 11 level, the vertical depth of which is 1,573 ft., and that by January it will have been completed to the No. 15 level (2,120 ft.). Meanwhile, the erection of powerful winding plant has been completed.

The No. 12 level has been advanced 274 ft. into our property, and from it, close to the boundary, a winze is being sunk in the vicinity of the diamond drill boreholes which intersected the continuation of the Zinc Corporation lead lode. Thereby we hope to accelerate exploration of that section of the property and provide a winze which later will serve as a main sand pass for stope filling. For the subsequent mining of the ore the deep main haulage levels of the Zinc Corporation will serve for transport to the mill.

As regards the areas further south, we have carried out some preliminary diamond drilling with the object of mapping the general geological features as a basis for further exploratory work in the vicinity of the Rising Sun Shaft, some two miles south of your northern boundary. Additional areas have been secured which we believe will amply protect the results of our exploratory work. These additional areas total 1,409 acres, making a joint total of 2,016 acres which longitudinally cover a distance on the possible line of lode of a little over 3½ miles.

If the managerial estimates be realised we shall be in the ore body in 1940, and should thereafter begin to "develop a mine." I have no fears of what our exploration and development work will disclose as regards the size and metal contents of the ore body. The two uncertainties are cost of working and metal prices. I am hopeful that the former will be kept at a satisfactory level and that metal prices will enable us to obtain a fair reward for our enterprise.

While we are not yet in the producing stage we are very materially interested in the course of metal prices. During the last fortnight the markets for lead and zinc have been healthier than for some time past, and it appears reasonable to hope that the recent recovery may be more than maintained.

Taking a wide and a long view of our prospects nothing has happened since we last met which in any way alters my confidence in the future of this company.

The report was adopted.

H.E. PROPRIETARY, LIMITED

SUCCESSFUL YEAR'S OPERATIONS

SIR FREDERIC HAMILTON'S REVIEW

The annual general meeting of H.E. Proprietary, Limited, was held, on the 12th instant, in London.

Sir Frederic Hamilton (the chairman) said that the accounts again reflected a satisfactory result for the past year. On the liabilities side of the balance sheet the item of creditors, £24,870, represented the amount due to the State in respect of income tax and National Defence Contribution. On the assets side the most important item was shares, debentures and sundry interests in other companies, £544,028, an amount which, as stated in the directors' report, taking the market price of quoted securities and directors' valuation of unquoted securities, was substantially in excess of that figure. The profit and loss account showed a net profit of £107,304, which, with the balance brought in, gave an available total of £191,550. From this they had transferred £40,000 to the reserve for equalisation of dividends and contingencies, raising that account to £190,000, or nearly two-thirds of the issued capital of the company.

DIVIDEND POLICY

An interim dividend of 10 per cent., less tax, had been already paid, and the directors now recommend a final dividend of 15 per cent., less tax, bringing the total dividend for the year up to 25 per cent. and leaving a balance of £76,550 to be carried forward, subject to directors' additional remuneration, amounting to £2,500. They had declared an interim dividend for the present year of 5 per cent., less tax. Seeing that their reserves and carry-forward were together nearly 90 per cent. of the company's issued capital, he thought it desirable to review their action with regard to the interim dividend in the light of facts and conditions as they found them to-day.

At their last meeting he pointed out that their profits during the last few years had averaged less than one-third from dividends and more than two-thirds from realisations. They obviously could not expect those proportions to be maintained. A comparison of market prices of almost any class of securities this year and last told its own tale, and they might count themselves fortunate that they were still able to show a substantial excess of actual over book values. The position to-day was that those proportions were already reversed. The interim dividend which they were paying for the first six months of the present year had been handsomely earned, and more than four-fifths of it was derived from dividends received and less than one-fifth from realisations.

THE INVESTMENTS

Dealing with the company's investments, he said that their most important mining interest was their holding in Luipaards Vlei Estate and Gold Mining Company, Limited. Development results throughout the mine had been, and continued to be, extremely encouraging, especially in the Tudor shaft area, where the exposures had shown highly payable values over exceptionally good widths. The company's technical advisers stated that the position in the mine warranted a large expansion both of development and milling capacity. The whole scheme envisaged doubling the present output, and a commensurate development programme, at an ultimate cost of one and three-quarter million pounds. They, as the largest shareholders of the Luipaards Vlei company, had been consulted and, notwithstanding the expense entailed, they had no hesitation in approving the scheme. They continued to regard the future of the mine with great and increasing confidence.

AUSTRALIAN AND OTHER INVESTMENTS

In Australia they had a large interest in the Gold Fields Australian Development Company. Judging from the statements of the chairman at the recent general meeting, it was believed the first dividend would be forthcoming in the current year. They also had a substantial interest in Wiluna, where the outlook was now decidedly more encouraging. They had retained a holding of over 25 per cent. of the issued capital of the Associated Mining and Finance Company, which was in a very strong position, with sound and promising assets. The progress of the Anglo-Huronian Company, in which they were interested, had been adversely affected by the general fall in American securities. The liquid position of the company remained strong, and more than one of the mining interests presented a considerable element of progress.

The chief interest outside of mining was in Moussec. This had been a source of outgoing for some years, but now promised to be a substantial revenue producer. In October last they had received their first dividend of 10 per cent., and since then sales had shown a further increase.

The report and acounts were unanimously adopted, and the proceedings closed with a vote of thanks to the chairman and directors.

THISTLE-ETNA GOLD MINES, LIMITED

ENCOURAGING RESULTS

The fourth ordinary general meeting of the Thistle-Etna Gold Mines, Limited, was held, on the 12th instant, in London.

Sir Godfrey B. H. Fell, K.C.I.E., C.S.I. (the chairman), who presided, said that the net profit for the year, subject only to income tax and N.D.C., amounted to £15,131, and it was proposed to pay a dividend at the rate of 5 per cent. per annum, less income tax.

With regard to development, of the total footage of 8,809 ft., which consisted of shaft sinking, crosscuts, drives, rises and winzes, 6,011 ft. were sampled, 46.3 per cent. of which was found to be payable, averaging 10.1 dwt. over 20 in. Those results were, to some extent, disappointing, but the chief explanation was that the reef in the Etna mine was dislocated by various faults in the area below the main dyke.

Development during the current year should prove very interesting. The sub-incline shaft which was being sunk to the point where No. 5 borehole cut the reef about 960 ft. on the incline below the 10th level, would, they hoped, pass through an area relatively free from the faults which had given so much trouble in the past. Shareholders would no doubt recollect that that borehole indicated an assay value of 54.8 dwt. over an average width of 42 in., which gave them ground for hoping that they would develop below the 10th level ore of good value and good width.

During the year the mine supplied the mill with 23,500 tons of ore, and the ore reserves at the end of the year were estimated at 66,100 tons of an average assay value of 5.12 dwt. over a stoping width of 30 in., compared with 31,860 tons at the end of the previous year. So soon as the ore reserve position warranted it, they proposed to add another five stamps to the mill, bringing the number up to 20. The mill would then have a crushing capacity of 48,000 tons a year.

He hoped shareholders would look on the results as satisfactory, having regard to the exceptional difficulties which they had encountered in connection with their development programme, difficulties which he trusted would not recur. He thought they had every reason to regard the results of the first year's operation of the mill, working at half its proposed full capacity, as decidedly encouraging.

The report and accounts were unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED

CONSIDERABLY IMPROVED RESULTS

The ordinary general meeting of Tanganyika Concessions, Limited, was held, on the 14th instant, at 20 Aldermanbury, London.

The Right Hon. Viscount Stonehaven, the chairman, presided, and called upon General Sir Reginald Wingate to speak.

General Sir E. Reginald Wingate, Bart. (vice-chairman), said that he wished to pay a heartfelt tribute to the memory of the late managing director, Sir Robert Williams. Referring to his own resignation as chairman, he said that he felt the need for the position to be occupied by a younger director, and had proposed that Viscount Stonehaven should become chairman, which had been unanimously agreed to.

The Chairman, after associating himself with Sir Reginald Wingate's remarks with regard to the late Sir Robert Williams, said that the results of Sir Robert's life work were represented very largely by the assets of the company, and he thought it could fairly be said that the outlook for the company was brighter to-day than it had ever been. The results of operations for the year under review showed a big improvement. There was a balance of profit of some £161,000, which reduced the balance standing to the debit of the profit and loss account at December 31st last.

With regard to the company's interests, the very strong financial position of the Union Minière as well as the improved results of the Benguela Railway for 1937 were highly satisfactory features. Since then there had been a setback, largely due to the trade recession in the United States of America, but in that respect there had been distinct signs of improvement lately. With regard to their gold interests in East Africa, in the opinion of the mining engineer it should be possible to build up a big gold industry in Tanganyika Territory.

The Right Hon. Earl Grey referred to his visit to East Africa, and said that whether or not the Geita District at the south end of Lake Victoria was going to become a profitable goldfield nobody could say for certain to-day. They would know a great deal more when crushing began early next year, and very soon after that they would be in a position to decide on the next step. The organisation out there was working very well.

The report and accounts were unanimously adopted.

TRUSTEES CORPORATION, LIMITED

REVENUE AGAIN INCREASED

The fiftieth annual general meeting of the Trustees Corporation, Limited, was held, on the 13th instant, in London.

Mr W. Sandford Poole, the chairman, in the course of his speech, said:—Revenue from interest and dividends, after provision for income tax at the increased rate and National Defence Contribution, amounted to £162,923 for the year to May 31, 1938. This compares with £148,662 for the previous year, in which, however, no specific charge was made in respect of any liability to N.D.C. The major portion of our increased investment revenue was derived from our home investments. So far as current revenue from our investments is concerned, we still suffer from continuing default on a large proportion of our holdings of foreign Government bonds. I fear returns will be disappointing from many of our interests in South America (including the Argentine Republic) which have suffered from short crops and cramped world trade.

With regard to the home outlook, added impetus is being given to certain sections of industry as a result of the speeding up of re-armament which is likely to maintain a reasonable level of consumption demand at home.

After reasonable provision for repairs, renewals and contingencies, we show revenue from Winchester House at £15,207, compared with £13,689 for the previous year. Revenue from public halls and auction rooms, safe deposits and strong rooms was about the same as in the previous year.

The corporation's total revenue for the past year, after providing for income tax and N.D.C., was £186,065, compared with £172,081 for the year to May 31, 1937, an increase of £13,984. After charging debenture interest and all expenses of administration the net revenue for the year amounted to £128,244, compared with £114,901, an increase of £13,343.

We propose a final dividend of 7 per cent., less income tax, payable on July 19th, again making the dividend on the ordinary stock 10 per cent. for the year. Furthermore, as a tangible recognition of the corporation's jubilee we recommend the payment on the ordinary stock of a jubilee bonus of 2 per cent., less income tax, in addition to the final dividend I have just mentioned. We have allocated the sum of £2,000 to a staff jubilee bonus fund.

The report and accounts were unanimously adopted.

HOVIS, LIMITED

INCREASED SALES DURING CURRENT YEAR

The fortieth ordinary general meeting of Hovis, Limited, was held, on the 8th instant, in London.

Mr A. H. Dence, J.P. (the chairman of the company), said that the board considered the result as entirely satisfactory taking into consideration conditions in the milling industry. He supposed it was not too much to say that the 12 months under review had been more difficult for the wheat buyer than any time since the War. Fortunately, the position was gradually improving, prices were easier and crop reports from various parts of the world were more hopeful, but that the credit at profit and loss account at £164,335 was lower than for some little time was only to have been expected when the fluctuations of the wheat market were taken into consideration.

Owing to the partial crop failure in Canada last autumn, supplies of good quality strong wheat had not only been difficult to obtain, but were held for large premiums over other descriptions of wheat. In order to maintain the high standard of quality of Hovis it was necessary to ensure regular supplies of the best qualities of wheat, and purchases had to be made a long time ahead, whatever the market outlook might be, as they dared not depend on being able to buy on spot to supply their needs. The board took great pains to maintain the high standard of the company's quality, and were confident thereby that they added to the value of the goodwill of Hovis.

With regard to the future, he did not wish to take too gloomy a view, but he did want to emphasise once more the dangers of the unfair competition to which British millers were subjected by the importation of foreign and Dominion flour, often sold here not only at a very low price, but also lower than the price ruling in the country of origin.

A reasonable measure of protection against imported flour would go a long way towards solving the Government's problem of holding a sufficiency of food stocks in the country against the dangers of war. Moreover, if more wheat were ground in this country there would be larger stocks of weatings and bran available for farmers here, and they, in turn, would be able to keep larger herds of cattle and pigs, and more poultry.

The report and accounts were unanimously adopted.

EASTWOODS FLETTONS, LIMITED

RECORD PRODUCTION AND SALES

The eleventh ordinary general meeting of Eastwoods Flettons, Limited, was held, on the 13th instant, in London.

Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E. (the chairman), in the course of his speech, said that the company had continued to make good progress and, except for the severe weather conditions, which had retarded production during the winter and adversely affected manufacturing costs, the output had been well maintained.

Last year's figures included a profit of £3,634 on realisation of investments, which was not repeated this year. It was, however, satisfactory to note that the net profit was £51,397, very nearly approximating to the previous year's figure of £52,363. The great bulk of their profit was derived from the Kempston Works, where they had again broken all previous records for production and sales. Actually the works profit was a little higher.

Contracts for Government work and for investment and industrial building were engaging more attention than hitherto, and those, together with the rehousing and slum-clearance schemes of local authorities, were making up any deficiency which might have arisen from the mass construction and sale of small houses. The Fletton brick had very largely displaced the foreign brick imports which had proceeded on so large a scale since the war.

Actually more houses had been built in the six months ended March 31st than in any previous half-yearly period. Manufacturing profit was to a large extent outside the control of the industrialist. Taxation, transport, coal, material and wages all added to the expenses of production, for which the consumer ultimately paid. His (the chairman's) objection was to the extravagance of the limitless borrowing by the bureaucratic chiefs of spending departments. Industry was being mulcted in the cost of complying with an ever-increasing quantity of legislation.

Dealing with the financial position of the company, he said that on a capitalisation of £200,000 they had internal reserves and undistributed profits amounting to £131,512, and the excess of liquid assets over liabilities was £57,005. In all the circumstances, they were to be congratulated upon the satisfactory position in which they found themselves.

The report and accounts were adopted.

AMALGAMATED DENTAL COMPANY, LIMITED

CONTINUED PROGRESS OF THE INDUSTRY

The thirty-third annual general meeting of the Amalgamated Dental Company, Limited (formerly Claudius Ash, Sons and Company, Limited, and De Trey and Company, Limited), was held, on the 8th instant, in London.

Mr E. Russell Polden (chairman of the company) who presided, said that the profit of £205,960 showed a small increase of £693. The directors recommended payment on October 1st next of the balance dividend of 4 per cent. on the preferred ordinary stock (making 8 per cent. for the year), less tax, and a dividend of 5 per cent. on the deferred ordinary stock, less tax.

The territory covered by their trading was, under existing circumstances, more confined, and further, it was not always possible, even where profit had been earned and was due, to have the money transferred to London. He was happy to say that in an important section of their trading, including particularly the British territories business continued to be well maintained.

The fact that the company's products were recognised as the standard throughout the world and the continued esteem in which they were held, justified the claim for them to be regarded as the "world's best dental goods."

Shareholders would not be surprised when he said that the industry was highly competitive. The company's constant endeavour was to meet that factor firstly by the supply essentially of the highest quality goods, and by organised research, production and distribution, which enabled its products to be supplied wherever it traded on a basis of efficiency and value which could reasonably claim to be unsurpassed.

The report was unanimously adopted.

KUALA MUDA RUBBER ESTATES, LIMITED

THE REPLANTING PROGRAMME

The thirteenth annual general meeting of this company was held, on the 11th instant, in London.

Sir Francis M. Voules, C.B.E. (the chairman), in the course of his speech, said:—Our profit for the year amounted to £42,882 10s. 10d. We recommend the payment of a final dividend of 2½ per cent. (less tax), making 5 per cent. for the year.

The crop during the year amounted to 2,741,808 lb., which was produced at an average cost of 3.62d. f.o.b. The gross average price realised for rubber sold was equivalent to 8.13d. per lb. London landed terms.

The replanting of 254 acres with budded rubber was completed during the year and excellent reports have been received. With regard to the replanting programme we have decided to write off an amount representing £35 per acre in respect of the rubber cut out and to charge the cost of replanting the areas to capital account.

The new Rubber Regulation Agreement, which is not yet operative, will allow a certain amount of new planting. We have therefore prepared plans for planting up 360 acres of our reserve land with budded rubber next year. No deduction from distributable profits will be required in order to finance this extension.

During our financial year we received dividends amounting to 14 per cent. on our holding of stock in Kepong (Malay) Rubber Estates, Limited, and since the close of the year we have received a further dividend of 7½ per cent. When considering our capitalisation it should be remembered that the £58,800 stock we hold in the Kepong Company represents 2,124 acres of rubber, which materially reduces our capitalisation per acre, in addition to providing our debenture-holders with a liquid asset.

When addressing the Kepong stockholders on May 19th last I had to deplore the progressive deterioration in the rubber market and the substantial increase in the world stocks. Since that date a remarkable improvement has set in and actually in May the stocks were reduced by nearly 20,000 tons. Whilst previously it was only possible to express confidence in the long view, the welcoming improvement justifies a more hopeful outlook for the immediate prospects of our great industry.

The report and accounts were unanimously adopted.

(*Continued from page 143*)

however, and values showed a slight advance; as a consequence, more interest was shown in feeding barley, but buyers are generally waiting until the results of the various harvests are known.

Other Foods

Provisions.—Bacon prices rose by about 3s. per cwt. at the end of last week, both Danish and English selling at 102s. per cwt. The meat market has been quiet and butter prices are little changed. English eggs (15-15½ lb.) were priced at 16s. 9d. per 120 at the close of the week.

★

Colonial Produce.— Sugar prices were advanced by 3d. per cwt. early in the week, T. & L. cubes selling at 23s. 6d. per cwt. The cocoa and coffee markets are unchanged. The tea auctions showed a firmer tone later in the week, and prices were generally about ¼d. per lb. higher.

★

Milk — The table given here is compiled from statistics issued by the Milk Marketing Board. Liquid sales show a decline of 1.4 million gallons from May, but are 4.5 million gallons greater than in June last year.

	June, 1937	Apr., 1938	May, 1938	June, 1938
Prices (per gall.)	d.	d.	d.	d.
Liquid	12	16	13	13
Av. manufacturing	5·404	6·563	6·615	6·699
Av. pool	9·32	12·46	10·07	10·32
Contract sales (mill. galls.)				
Liquid	48·9	50·9	53·8	52·4
Manufacturing	37·9	30·9	36·3	37·4
Total contract	86·8	81·8	90·1	89·8
Used by farmhouse cheesemakers	3·1	1·6	3·4	3·5

Miscellaneous Commodities

Oils and Oilseeds.—There was little business in these markets during the week, and prices generally are somewhat lower. The trade in linseed is affected by the seasonal decline in demand. The prices of both linseed oil and cottonseed fell slightly during the week; refined cottonseed oil is quoted at £22 per ton ex mill.

★

Rubber.—The market showed considerable hesitation at the end of last week in sympathy with Wall Street, but recovered later; prices showed an advance of ⅛d. to 3/16d. per lb. on the week, to close at 7¾d. per lb.

Britain's Best Customers

In the following charts we show the course of the trade of the United Kingdom with our five best customers. For each country we show total imports of merchandise into the U.K. (whether retained for home consumption or not) and total exports of merchandise from the U.K. (whether consisting of British or imported produce). The inclusion of bullion would of course substantially increase imports from South Africa. The order of countries shown below has no significance. In the twelve months ended March 31st of this year our best customer was South Africa, closely followed by Australia and British India (including Burma), and then by the U.S.A. and Canada. In 1928 the greatest value of total exports went to British India followed by the U.S.A., Australia, Canada and South Africa in that order. Owing, however, to the greater importance of re-exports in 1928, the five biggest purchasers of British produce in that year were slightly different, namely, British India, Australia, U.S.A., Eire and Canada, followed sixth by South Africa.

Finance

GOVERNMENT RETURNS

For the 9 days ended July 9, 1938, total ordinary revenue was £18,477,000, against ordinary expenditure of £32,726,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £117,311,000, against a deficit of £80,823,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On July 8th, applications at £99 17s. 4d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 40 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 5d. per cent. and above were allotted in full. £45·0 millions of Treasury bills are being offered on July 15th.

Pageantry of Peace

FOR the first time since May of 1914—and only for the fourth time in a century—the King and Queen of England are on a State visit to Paris. Queen Victoria and the Prince Consort marked Anglo-French collaboration in the Crimean War by making a State visit to Paris in the year 1855. King Edward VII made the second in 1903 and founded the Entente Cordiale. And finally, King George V and Queen Mary in 1914 strengthened the superstructure of that Entente in time for it to meet the catastrophic stress and strain of the Great War. The importance of the present occasion can be gauged by the presence of the Foreign Secretary at their side, by the discussions he will have with M. Bonnet, and by the intense interest which the State visit has aroused in other capitals. Is it a portent? Does it presage peace? Or does it mean that four years of war and twenty years of suspicion and ferment have led us back to the position we all occupied in Europe in that gay summer of 1914?

On the face of things, there is a disturbing resemblance in the setting of the two latest State visits to France. Now, as then, Europe is engaged in so hectic an arms race that, as Colonel House reported back to President Wilson, if nothing halts its mad career "the guns will go off of themselves." Now, as then, feverish attempts are made, as crisis after crisis racks the Continent, to improvise a rudimentary Concert of the Powers in Europe to keep the peace. Now, as then, material progress and urgent social reforms are alike being postponed under the increasing burden of arms expenditure, which weighs on the nations' backs like an Old Man of the Sea. Now, as then, while Ministers frown and General Staffs look grave, a London Season is almost preternaturally brilliant—with its charming *débutantes* and their escorts, who, like their ancestors at the ball in Brussels on the eve of Waterloo, look out on the world with the carefree myopia of youth. Must we assume that history will repeat itself?

The King himself, however, replying to President Lebrun's toast at the State banquet in the Elysée on Tuesday evening, struck the true note. Though both speeches referred to the healing of past animosities and the sharing of past sacrifices—and for that matter to the present identity of ideals and outlook between the two countries—the King, emphasising that Anglo-French friendship was aimed at no other Power, defined the simple basis on which that friendship necessarily reposes. "In spite of the strip of sea which separates us, our two countries have seen their destinies inevitably drawn together with the passage of the centuries; and it would now be impossible to recall a period in which our relations were more intimate."

It is, indeed, this inevitable coupling of French and British destinies—and for "destinies" we can read "interests"—that alone explains why two such utterly dissimilar peoples should ever have consorted in amity and mutual endeavour.

There is also another explanation, which every generous Englishman, mindful of his share in that legacy of European culture and civilisation which is first Roman and then French, readily admits. It is an explanation which reveals the common foundations of British, American and French democracy: the refusal to esteem such elements of

civilisation as government, law, rights, progress, welfare and freedom, except as these things touch the individual citizen, who is the irreducible constituent of the State. It is not for nothing that between the French, American and British peoples to-day subsist links which have stood many tests since the French political scientists from Rousseau onwards released the forces of the American and French Revolutions. The citizens of two Republics and a Monarchy in the world of to-day draw their faith in democracy from a common source; and we do well to remember that, if the French Revolution let loose a Napoleon on Europe, the principles on which that revolution occurred came to prevail not only in the American Republic, but also in that very England whose rulers first took up arms against the new French Republic.

Thus, when we look out on the world of to-day, we can discern more durable foundations beneath the three superficially dissimilar Anglo-Saxon and French Commonwealths than beneath the four superficially similar remaining Great Powers: the authoritarian States of Russia, Germany, Italy and Japan. Such historic consonances as exist between the British, American and French Constitutions cannot fail to bring their citizens' minds to a common focus, as generation succeeds generation and they live at peace with one another.

The common outlook shared by the great democracies of the world implies, however, something more than the purely negative philosophy of "live and let live." If we have attained to a large measure of unity and individual freedom, we must never forget that this happy condition is the fortunate inheritance of our long history. Britain and France achieved their national unity, out of an amalgam of tribes and races, long before any other European nation. It was not a national unity founded on racialism. Indeed, how could it have been, when both countries contained Celts, Belgic or Frankish tribes, Romans Norsemen and Teutons? It was a political fusion that took centuries to achieve. Other great powers are imposing heavy strains and stresses upon themselves in order to achieve by an iron discipline not merely solidarity, but a position of high prestige and power. In this twentieth century world, the democracies have not merely privileges to enjoy but duties to perform.

In Europe, for example, the responsibility rests upon them to preserve standards of mutual respect and toleration between the nations analogous to those on which the social structure is built up in a democratic community. This means that their policy must not be concerned merely with mutual defence or with fostering an exclusive friendship, but must seek by active diplomacy to stimulate trade and revive political confidence throughout the Continent. The main responsibility is upon them to pursue a constructive peace.

And, looking farther ahead, they have to consider how the genuine needs of other races can be met. In this connection it is significant that, while the King was being entertained in Paris on Wednesday, the House of Lords were debating at Westminster the problem of how to people the Empire. We and France are among those who have great possessions. We have no right to adopt a dog-in-the-manger policy in regard to the great territories. Both we and France are at the point where our population is ceasing to grow—which fact, as the Duke of Devonshire pointed out, makes it the more urgent that we should seek in co-operation with the Dominion Governments to increase the population of the Empire while there is still time. The Overseas Settlement Board itself has hinted that the Dominions might consider the encouragement of a regulated supply of suitable foreign migrants.

It is only by forward-looking policies on this and many other problems of a very far-reaching kind that the democracies can hope to honour the obligations thrust upon them by their history, and prove to all the nations that there is a more excellent way of achieving national ambitions than the way of mutual destruction.

Policy for Recession

WITHIN the last few months suspicion of a trade recession has deepened into certainty. A year ago, those who warned of the possibility of a decline from the very high levels of activity then prevailing were cast—and outcast—as alarmists. Even in the late autumn, when the signs were unmistakable, those who read them were officially stigmatised as "dismal jimmies." But such self-deception, whether by Minister or by layman, is no longer possible. Indeed, the danger now is the contrary one: lest the public over-emphasise the decline that has occurred or is in prospect. In the last few weeks, it is true, there has been a diminished risk of excessive pessimism; for, with Wall Street bounding upwards and the other markets of the world firm, spirits have been buoyant. But the news from industry does not entirely reflect this changed mood; though there have been few drastic setbacks in June and July, there have been even fewer signs of a return to last year's levels. The Chancellor of the Exchequer was undoubtedly right in his belief, expressed in the House of Commons last week, that there is no reason to anticipate another slump such as that of 1931-32. But the recession of 1938 must nevertheless be taken seriously. Neither wishing nor waiting can be expected to change the present downward course of British trade.

In these circumstances it is the plain duty of public policy to take the field against the recession. The record of policy in this struggle is, it is true, not a brilliant one, and it may be that the forces of the trade cycle are more powerful than any counter-measures that have yet been applied. But even if that is so, skilfully contrived policy may nevertheless serve to diminish the amplitude and shorten the duration of the swings of the pendulum. The fact that pneumonia inexorably follows its course is no argument against skilled doctoring. We must have a policy for the recession.

It is not, however, the necessity for the policy so much as its nature that causes difficulty. The present recession—like all recessions—is an unusual one. It is accompanied by a shortage of labour in some industries and high activity in many others that are usually the first to be left dry by the ebbing tide. Many of the other conditions of the day—the huge re-armament programme, the unbalanced Budget, the extreme cheapness of money—are highly unusual accompaniments to the beginning of a depression. Hardly one of the chief forms of remedy for economic anæmia that have from time to time been advocated can now be applied without modification or proviso.

The most controversial of these suggested remedies is the policy—or, more accurately, the group of policies—that can, for brevity's sake, be described as the Public Works policy. Even the ardent partisan of public works must admit that the existence, and the urgent priority, of the re-armament programme impede the whole-hearted advocacy of large-scale public works at the present time. It would be difficult, as a matter of practical administration, to devise any large scheme of capital construction that would not encroach at many points on resources of men or materials needed for the defence programme. But if these practical difficulties are admitted, it must also be recognised that the re-armament programme is proving to

be a most powerful reinforcement to the general argument for public works as a remedy, or at the least as a palliative, for depression. There would be very few to be found, in the face of present facts, denying that State expenditure can sustain the volume of employment; and even fewer would argue that concentration upon the means of slaughter and destruction has economic virtues denied to more peaceful and productive expenditure. Furthermore, the fact that unemployment is increasing alongside the re-armament programme is not, upon examination, nearly as impressive a counter-argument as might appear on the surface. It is of the essence of the public works policy, as usually propounded, that the sums spent in a depression upon works of capital development shall not be currently raised in taxation, but shall be borrowed from the funds of idle capital that always accumulate in such times. But in this sense the re-armament programme is by no means as large as its total volume of expenditure would indicate; for out of a total prospective expenditure this year of £366 millions, only some £113 millions is to be borrowed—a considerably smaller sum than those customarily mentioned in connection with the public works policy.

Public works as a policy for recession must, therefore, be regarded as being, not in disgrace, but in temporary abeyance. The unemployment returns must be carefully watched month by month to determine whether there is a sufficient field of usefulness for a programme of capital works in addition to, and not in distraction from, the progress of re-armament. And it is the merest wisdom to have the plans fully prepared for the time when they will be needed, which will certainly come, if not earlier, when re-armament itself begins to decline.

Public works, however, are hardly an adequate answer to our search for an immediate policy for recession. There may be more immediate prospects of success in encouraging private works. The chief means lying to the hand of the financial authorities for promoting private works is a reduction in the long-term rate of interest payable by borrowers in the open market. The analysis of the half-year's banking figures contained in an article on page 175 of this issue suggests that the Bank of England has in fact been trying in the past twelve months to support the gilt-edged market—the keystone of the arch of the interest-rate structure—by supplying the joint-stock banks with additional cash. But the analysis also suggests that, if this was the intention of the Bank, it has been frustrated, since the banks have absorbed the additional cash by an increase in their reserve ratios. In these circumstances, the ordinary man would suggest that the Bank of England should try again, and go on trying until it succeeds.

In our correspondence columns in the last three weeks Mr R. F. Harrod and Mr J. M. Keynes have been advocating precisely that—namely, a concerted effort to reduce interest rates. It is difficult to resist the force of their argument that such an experiment could, in present circumstances, at the worst do no harm, and at the best might do much good. It is considerably harder, however, to feel confident that still cheaper money would be a complete cure. How can lower interest rates—or public works, for that matter—provide more orders for the textile works of Lancashire and Yorkshire, or for the coal mines and tin-plate mills of South Wales—save perhaps in the long run when, as Mr Keynes himself tells us, we are all dead?

The analysis of Britain's economic needs thus comes back in the end, as it always must, to our dependence upon foreign trade. It is the export trades that have contributed most to the current recession, and it is through the export trades that policy can most usefully attack the problem of growing unemployment. During the past week a memorandum has been issued by the Federation of British Industries which arrives at the same conclusion from an entirely different approach. The F.B.I. is most concerned with the growth in the adverse balance of visible trade. It is possible to take a much less alarmist view than the Federation does of the position in this individual year of 1938 and still agree with the contention of the memorandum that "no nation can continue indefinitely to face adverse payment balances of magnitude without permanently weakening its financial structure." The memorandum sets out the three ways by which the situation could be met, namely, by living on capital, by restricting imports and by expanding exports. The first course has only to be mentioned to be condemned. It is pleasant to find the representatives of British industry also rejecting the second. The expansion of exports remains; and the method by which the F.B.I. proposes to achieve it is "that we should use the great lever given us by the large purchasing power of our market to secure more favourable treatment for our export trade, which is vital to the industrial prosperity of the country." More specifically, the Federation proposes that the British tariff should be of the "three-decker" variety, the lowest rates applying to the Empire, the middle classification to those countries who treat British goods favourably, and the highest rates to those countries whose treatment of our imports we regard as unfair.

This proposal bears a strong family resemblance to one which has consistently been urged in *The Economist*. Subject to the very large practical difficulty of defining, by agreement, what is and what is not favourable treatment, we believe that such an amendment of our tariff structure would be the means of expanding both British export trade in particular and international commerce in general. But as with many other proposals that are advocated in general terms, everything would depend upon the method of application. The F.B.I., for example, would initiate its policy by "retaliating" (its own word) against those countries whose balance of trade with Britain is most "unfavourable" to us, and a list of eleven specified countries includes such important trading nations as the United States, Germany, Holland, Sweden and Belgium. It can be said at once that an attempt by Great Britain to "retaliate," or to negotiate with a threat of retaliation, against a list of countries including these five would lead at once to a world-wide economic war, in which the hope of reviving international trade would disappear, perhaps for ever. It is true that the F.B.I. memorandum claims that "there is no desire to see greater restrictions on international trade," but a proposal must be judged by its probable effects rather than by its intentions; and the almost certain effect of "retaliation" would be a net increase in the hindrances to trade.

The truth is that the F.B.I., with its talk of retaliation, has grasped the wrong end of its excellent proposal. A three-decker British tariff will do good to us and the world, only if the third schedule of duties is drawn between the two existing ones and provides concessions which we can offer to countries that agree to facilitate our export trade. It is only by rewarding the virtuous, and not by punishing the wicked, that we can hope in a world of sovereign States to advance the cause of freer intercourse and trade.

Subject to this far-reaching amendment, however, the proposal to use the enormous buying power of the British market as a lever to increase international commerce, and thereby reduce British unemployment in precisely those industries where it is now growing most rapidly, offers the best opportunity of applying "purposive direction" to the course of British trade and industry in the immediate future. That there must be some "purposive direction" needs no further argument. The British public cannot be expected to accept the position that no effort need be made to exert any influence on the trade cycle save as the accidental by-product of a programme of piling up works of destruction, whose nature and necessity the common man equally detests.

Italy's Economic Position—II

Italy's Exchange Weakness

THE continuing high level of industrial activity in Italy has had its direct origin in the expenditures of the State. It has been kept going for some years past by consistent deficit financing. In the year ended June 30, 1935, the ordinary Budget closed with a deficit of 2,030 million lire. The year 1935-36, which saw the beginning of the Abyssinian war, produced a deficit of 12,686 million lire. In 1936-37 the ordinary Budget had a surplus of 1,289 million lire, but the expenses of the so-called extraordinary Budget were 17,519 millions, so that the combined deficit of the year was 16,230 millions. Over these three years as a whole, therefore, the excess of expenditure over revenue was 30,946 million lire. At the current official rate of exchange the sum is equivalent to about £327 millions, which would be a very large deficit even for Great Britain. But, in comparison with the fact that the total expenditure of the ordinary Budget in 1936-37 amounted to only 23,413 million lire, the Italian deficit of the last three years assumes enormous proportions. Most of the sum required has, nevertheless, been raised by loans, including such expedients as advances from the Cassa di Depositi e Prestiti, the exchange of bonds for foreign exchange holdings appropriated from the public and sold by the State, and the issue of 1,350 million lire of additional notes placed in circulation. The sums raised by these means in 1936-37 apparently amounted to 28,597 millions, leaving 2,349 millions to be met by short-term borrowing. The Bank of Italy is authorised to lend up to 3,000 million lire to the State, and had done so by the end of 1936. It is worthy of notice that the expenditure in these three years on the Abyssinian and Spanish wars amounted to 29,621 million lire, or almost the full amount of the deficit.

The Budget for the year 1937-38 was estimated to close with a deficit of 3,173 millions on the ordinary Budget. Additional expenditures have been decided upon in the meantime (e.g. 500 millions for salary increases consequent upon the devaluation and 3,000 millions as the first instalment of a six-year plan to develop East Africa). The Minister of Finance stated recently, however, that these additional expenditures could be met out of the increased yields of taxation. The amount of the extraordinary expenses had not been made known by the end of the Budget year; but from a speech by the Minister of Finance on May 18 it appears that about 6,400 million lire had been spent in nine months, and the Minister estimated that the total for the year would not exceed 9 milliard lire. There are some indications that expenditure in East Africa has been reduced. The surplus of Italian exports in trade with East Africa has shown a steady fall ever since 1936, after making allowance for the devaluation. The net emigration of workmen to East Africa in the first five months of 1938 was less than one-third of the figure for the same period of 1937. And, finally, the amount of space devoted in the newspapers to activities in Abyssinia—a reliable index in a censored land—has been much reduced. On the other hand, it is unlikely that there has been any perceptible drop in the expense of non-intervention in Spain. It hardly seems probable that the total deficit for the year, taking the ordinary and extraordinary Budgets together, will be less than 10,000 million lire. To cover this deficit, the Treasury will have at its disposal a further amount of about 2,600 million lire of bonds guaranteed by the real estate tax. It is believed that 800 millions more might be raised by selling expropriated foreign securities and replacing them by Government bonds. There is a deficit of 390 millions on the clearing accounts with other countries, of which the Treasury might make use. The State social insurance is at present yielding about 200 million lire a year more in premiums than it pays out, and the deposits of the Postal Savings banks are increasing by about 2,400 million lire a year. Thus the task of financing the deficit is not entirely impossible if it can be kept below 10,000 million lire.

The period of adjustment to the devaluation of the lira has not yet finished, and the yield of taxes is still rising. For some years before the devaluation the normal Budget balanced at about 20,000 million lire; the equivalent figure in new lire would be 34,000 million lire. But while total expenditure is already not far short of this figure (it was considerably in excess of it in 1936-37), it is unlikely that the national income, and hence the yield of taxation, will quickly and automatically adjust themselves in the precise arithmetical proportion by which the lira was devalued. For some years to come a revenue of 30 milliard lire should represent about the maximum limit of Italy's financial capacity. Until this can be reached, the Treasury will be under the continuous necessity of financing a large deficit without resorting to outright currency inflation.

Italy has certain advantages in facing deficits as compared with democratic France. In both countries the saving habit is a rooted instinct. But the Italian peasant is allowed neither to entertain any distrust of his Government's solvency nor, if he did, to buy gold. His only choice is between hoarding notes and buying Government bonds; and the only difference is that the latter carry interest. So long as confidence in the regime is maintained, State borrowing can continue. The burden of the debt is, however, already heavy. After allowance is made for the capital value of deferred payments (annuities), the total of the State debt by the middle of this year cannot be less than 200,000 million lire, or, say, seven times the maximum level at which the Budget can be expected to balance. In these circumstances, large-scale borrowing cannot be long continued without either a heavy increase in the general level of taxation or else a further devaluation of the lira. In view of the past history of the Italian currency and of the further falls in the value of the French franc that have taken place since October, 1936, a new devaluation at some time in the next few years is not inherently improbable.

The last few years have produced deficits in the balance of trade as well as in the Budget. The figures are given in the following table, together with the changes in the reserve of the Bank of Italy. These figures do not include, for the last three years, the special secret reserves derived from the expropriation of gold and foreign securities, out of which the deficit in the balance of payments has actually been financed:—

	Excess of Imports (Million lire)	Change in Reserve of Bank of Italy (Million lire)
1928	7,314	− 1,035
1929	6,429	− 730
1930	5,210	− 717
1931	1,434	− 1,827
1932	1,639	− 653
1933	1,575	+ 253
1934	2,617	− 1,514
1935	3,174	− 2,488*
1936	2,053	− 1,030*†
1937	5,640§	+ 7*§

* Excluding change in secret reserves. † In old lire, taking no account of change in value due to devaluation. § In new lire.

Last year's deficit on trade account was almost up to the pre-depression level. But of the items which, before 1931, helped to close the gap in the balance of payments—tourist traffic, shipping earnings, foreign loans and emigrants' remittances—all are now seriously reduced, and the latter two have nearly disappeared. The improvement in 1938—the import surplus in the first five months was 700 million lire less than in the same period of 1937—can be almost entirely attributed to the unusually low imports of wheat, owing to last year's big harvest. Imports of wheat will again be necessary in the next twelve months, and the odds are on a considerably larger deficit in the balance of trade in 1938 and in 1939 than in 1937.

The most interesting feature of Italy's foreign trade is the change in its distribution brought about by sanctions. The share of Germany (the former Reich) in Italy's exports rose from 19.0 per cent. in 1935 to 22.9 per cent. in the first quarter of 1938. This change, together with the *Anschluss*, has made Italy very largely dependent on Greater Germany both for imports and for exports. In the first five months of 1938, for instance, Greater Germany provided 27 per cent. of Italy's imports and took 25 per cent. of her exports. Italian dependence on Germany, however, is not quite so great as would appear from the figures. For one thing, the balance of trade is heavily in Germany's favour (omitting invisibles), which gives Italy some bargaining leverage. And in the second place, it is to a surprisingly large extent a barter of coal for lemons. Half Italy's exports to Germany (the old Reich) are of food and a little under one-third of fruit. On the other side, out of a total export from Germany of 2,572 million lire in 1937, 1,032 millions was for coal and coke. It follows that Germany could dislocate Italy's foreign trade only at the cost of losing a valuable market for coal and starving herself of fresh fruit and vegetables.

It can be seen from the table on page 160 that the Bank of Italy has been a consistent loser of gold for many years—the average loss for the seven years 1928-34 was 691 million lire. But the drain is probably more severe now, and it will be greater still later in the year unless there is a radical change in the situation. The published reserve of the Bank of Italy at the end of 1937 was 4,028 million lire. But these were devalued lire, equivalent to only about 2,370 million old lire. It is not known how much in gold and foreign exchange was brought in by the Government's campaign during the sanctions period, nor how much of it has already been spent. As for gold, the Budgets of 1935-36 and 1936-37 provided 512 million lire for compensation. This may not be the full amount of gold procured, but it is unlikely to have been more than 1,000 millions of old lire, which would be 1,700 million new lire. Estimation of the value of foreign securities obtained is further complicated by the unknown factor of the prices at which they could be sold in outside markets. To judge by Budget entries and other indications, however, the unutilised balance at the end of April, 1937, may have been as high as 4,000 million lire, making a total of all reserves, published and secret, of from 8,000 to 10,000 million "new" lire as a maximum. It is probable, however, that at least 2,000 million lire has had to be used in the past twelve months. Italy's total reserves at the present moment can, therefore, hardly be more than 8,000 million lire, and are more likely to be in the neighbourhood of 6,000 million lire—a very small sum with which to face a trade deficit of over 5,000 million lire a year.

This, then, is beyond question the weakest joint in Italy's armour. It is a joint, moreover, which will be weakened precisely in the degree that other portions of the armour are strengthened; for an intensification of re-armament necessarily implies an increase of imports and enhanced difficulties for the export industries. In a democratic country both the gradual lowering of the standard of consumption to provide resources for capital works and also the unbalanced Budget by which alone the process could be financed would lead to criticism and to lack of confidence. Not so in a Fascist economy. Neither the standard of living nor the state of the National Debt is likely to be Signor Mussolini's Waterloo. But the problem of buying from abroad is of the utmost intractability. Dr Schacht can manage with a minuscule reserve, because his credits and debits have been made to balance and because Germany can provide at least some of the essential raw materials for herself. But Italy must have foreign exchange to buy raw materials if she is to keep her place in the arms race. And the fact that Germany can give her neither is obviously an important factor in the diplomatic poker game.

Anglo-American Aircraft

THE rapidity with which the colossal total of £126,401,000 for our Air Votes has been reached, together with the recent transatlantic records and the size of the orders placed with Lord Nuffield and with the American manufacturers (upon which we comment in a Note on p. 164) has focussed public attention upon the rôle of the United States in the drama of Europe's aerial re-armament.

We have learned during the last three months of Boeing "flying fortresses" which went to Buenos Aires and back in formation, and from California to Virginia on a new transcontinental record of 10¾ hours for the 2,285 miles. They are aerial monsters with four engines of 1,050 h.p. each, cannon, a bomb load of 2½ tons, and a speed of 230 m.p.h.; and already a "super fortress" has been built with four motors of 1,500 h.p. each, and an even greater capacity and performance. The 200 Lockheed reconnaissance machines ordered by the R.A.F. are in production and will begin to be delivered early in October. They are identical (save for military equipment) with that used by Mr Howard Hughes and his four companions for the round-world trip last week; but the U.S. Government has now given permission for the fitment of the latest Wright motors, which have been hitherto restricted to use by the War and Navy Departments. Finally, at the beginning of this month the Canadian Prime Minister announced that the Canadian Royal Air Force's facilities for training pilots would be placed at the disposal of the United Kingdom R.A.F., and another Air Mission is now going to Canada to organise this system and to arrange for the manufacture of heavy bombers by Canadian and Canadian-American concerns.

How far, then, can we in this country call in the New World to redress the balance of aerial re-armament in the Old?

In the first place, the manufacture of aircraft in Britain differs fundamentally from that in the United States. Here, owing to long dependence on private manufacturers for complete aircraft and to the paucity of demand for commercial aircraft, the R.A.F. contracts have been awarded for prototype machines almost wholly produced in any given factory. The only exceptions have been for engines—mainly Rolls-Royce and Bristol, since the Napier, Bentley and Siddeley motors lapsed from production after

the war—and for instruments, pumps, carburetters, magnetos, etc. Accordingly, rapid expansion in our construction programme has encountered "bottle-necks" in both the aircraft factories and the factories making equipment. In America, on the other hand, owing to a large and steady demand for commercial civil and military aircraft, manufacture has tended to proceed by way of specialisation on *all* parts of an aeroplane. The manufacturers of aircraft have, in effect, been assemblers of parts, from the engines to the propellers; and the entire range of the engineering industry and precision trades of the United States has consistently been at the disposal of aircraft manufacturers. The importance of America's extensive machine-tool industry in this context can scarcely be overestimated.

Big aircraft-engine manufacturers—e.g. Wright, or Pratt and Whitney (United Aircraft)—designed their engines, then had the parts and incidental equipment (carburetters, superchargers, magnetos) made by specialised firms all over the States. Testing and assembling was done at the factory; and then the aeroplane manufacturer bought the complete motor. Thus, the five biggest air transport lines in the United States agreed to pool their knowledge and requirements to produce the famous Douglas transports; and the best of everything went to their assembly by the Douglas Corporation in California. In this way, expansion can take place gradually in every ancillary firm, as well as in the concern finally assembling the machine.

Secondly, however, the American industry itself has not as large an existing surplus capacity as many people imagine. If we include the 400 machines now on order for our R.A.F., it is doubtful if it could turn out more than another 300-500 machines, and then they would need to be mainly of one, or at the most of two, types— because otherwise there would arise disorganisation of details in all the American ancillary factories. It must be remembered that the American commercial air fleet numbers about 400 big transports, constantly being overhauled or replaced; and the American military demand on manufacturers is rapidly being increased. The American industry employs only 40,000 men at the outside—**but the value of its output has been rising steadily throughout the recovery period. The following figures are approximate, and take account of military aircraft for the U.S. Government.**

In $ millions

1929	...	68	1936	...	76
1933	...	27	1937	...	110
1935	...	42			

Industrial capacity has been expanding; and the value of monthly deliveries of aircraft and parts, both civil and military, in the first four months of this year stood at $46.1 millions, compared with $30.5 millions in the first third of 1937 and $18.9 millions in the first four months of 1936. Of deliveries in the first four months of this year, over 30 per cent. were for export, the bulk either to China or Japan. Thus, normal American and non-British demand is already taking perhaps as much of current capacity as can be immediately allocated. Therefore, new British orders would have to be supplied by additional capacity. By itself, the American industry will scarcely expand to a greater extent than is necessary to meet domestic, commercial and military demand.

It is at this point that Canada becomes important. **First,** Canadian firms, even if owned by American shareholders, are not subject to the American neutrality legislation or embargoes, as long as Canada herself is not at war. **Secondly,** assembly plants rather than complete factories can quickly be set up in Canada; for they are scarcely farther from the factories making components than are, say, United Aircraft at East Hartford, Connecticut. They need encounter no tariff obstacles, for collaboration cannot take place between American and Canadian firms until supplies are made available for Canada at a mutually satisfactory level of costs. Then the Canadian amalgamations and new factories will be organised on the basis of Canadian and American participation. Already, the British Bristol engine concern and the American Wright engine concern have founded Canadian companies with some common directors; and Pacific coast aircraft manufacturers are reported to be in negotiation for sites in British Columbia. Clearly, the difficulty is not going to be financial; it will be to expand production of engines and ancillary equipment in the States or Canada; and the latter country for this purpose will need engine factories, or at least assembly plants. Thus, Canada will be driven back on the American industry for components. The American industry delivered 289 military aeroplanes and 679 military motors, valued at $12.2 millions and $4.8 millions respectively, in the first quarter of this year, compared with 106 aeroplanes and 488 engines of the same description, valued at $5.7 millions and $3.4 millions, respectively, in the corresponding quarter of 1937. This is a remarkable advance; but the quantities concerned are not large, even by comparison with our own re-armament programme.

In the light of all the foregoing, it seems that the best way to accelerate our own aerial re-armament would be to set up assembly concerns, both for air frames and motors, in Canada, in which British, Canadian and American concerns could participate. This system would admit of the closest collaboration *in situ*—on the secure soil of Canada—between suppliers and training bases. These assembly firms must count on the same governmental financial guarantees as are already being given to similar firms in Britain and Australia; but can they count on a parallel rapid expansion in the American firms supplying their equipment and components? The problem is crucial. We do not want repetitions across the Atlantic of what has already dogged the footsteps of Lord Swinton and Sir Thomas Inskip here. With that experience behind us, however, we may hope that those now engaged on these highly important negotiations will take steps to prevent the emergence of "bottle-necks." It will, of course, be necessary, indirectly, to ensure to the Canadian and American firms concerned contracts long enough to warrant expansion of their capacity and its current amortisation; but that is being done here and in Australia, and is a necessary concomitant of re-armament by private firms at a pace many times as great as that of a few years ago when their factories were first equipped.

That these considerations are being taken into account, at least to some extent, is obvious from the announcement on Thursday that the Canadian Air Transport and Manufacturers' Association has agreed on the desirability of creating a company to co-ordinate the British Government's requirements from Canada with the potentialities of present and future Canadian aircraft factories. At present, among others, the British Bristol, De Havilland and Vickers concerns are operating in Canada; but their capacity has hitherto been extremely limited. In this connection, the American aircraft and equipment factories could be an immediate and increasing source of supply; and time is the essence of the matter.

If all these problems are solved, as they can be, we may yet see deliveries of large military aeroplanes across the Atlantic under their own power. More important even than this, however, is the sudden emergence of the North American Continent, immune from aerial attack, as the safest and greatest potential aeroplane factory and air base in the world.

Topics of the Week

A Truce to Madness.—If the gods first drive mad those whom they wish to destroy, the Western nations are heading for destruction. Such was the tenor of Sir John Simon's peroration in his final speech on the Finance Bill on Friday of last week. He was not alone in condemning the insensate folly which is taxing and overtaxing each nation's current resources in order to convert the proceeds into armaments yielding neither revenue nor quota of consumable amenities. The day before Sir John spoke, President Roosevelt—from Treasure Island in the Bay of San Francisco, whence he sailed to review the combined naval strength of the United States—talked of an "inevitable disaster" to which this arms race was tending, and offered American co-operation and encouragement to halt it. At almost the same time Signor Virginio Gayda, of the *Giornale d'Italia*, was expressing his, and therefore his chief's, misgivings at the pace which the arms race had attained, and his hope that it could be reduced or halted. This latter expression of opinion must be read in conjunction with Signor Mussolini's recent declarations that Italy must be a nation of militarists; but the contrast is striking. Nothing, however, can be achieved at this late hour to halt the Gadarene progress of re-arming nations unless parallel guarantees for security from aggression are devised alongside arrangements to arrest the arms race itself. In this respect, none of us has progressed beyond the stage reached in 1932 at the Disarmament Conference. Germany and Italy have greatly re-armed; but they have driven the rest to re-arm out of fear; and the rest, combined, can still make Germany and Italy feel insecure. So the madness goes on, destroying the vital forces, the prosperity—and, in the end, the peoples—of the nations upon which it battens. So, too, were the voices of another Roosevelt, a Haldane, a Colonel House, a Walter H. Page, a Prince Lichnowsky, raised on the eve of the last Great War. But the plague was not stayed.

* * *

The Finance Bill and the Future.—Involving as it does the expenditure of close upon £1,000 millions in a single year, the Finance Bill, which was read a third time in the Commons on July 15th, represents an arduous effort on the part of this country to pay for both guns and butter at the same time. Taxes in the current year 1938-39 will amount to something approaching a fifth of the national income. True, this proportion is small compared with, say, the very tentatively estimated 40 per cent. of France's national income now required of the French taxpayer, but it is none the less a grave and menacing burden. Expenditure is unlikely to fall appreciably below its present level in future years. The national income, on the other hand, can only be deleteriously affected by the present recession in trade; nor, taking a longer view, can we take it for granted that national productivity will leap ahead in the future as it has done in the past. In the final debate on the third reading on Friday last week, Members were more anxious to examine the possibly unpleasant outlook for future years than to quibble over the details of present policy. The Chancellor of the Exchequer himself expressed surprise and gratification at the generally good reception given to his austere proposals. For the most part Members were disposed to agree that things might have been very much worse. They welcomed the concessions made to small taxpayers, insurance companies and students in technical training, and were content to express the view that 5s. 6d. in the £ was very nearly, if not quite, the limit to which income tax could fairly and expediently be raised. Many, however, were unhappy about the future. In the short run, expenditure on the present scale must be met out of a diminished national income. And the long term Budget problem was regarded as even more serious. As the authors of a Memorandum published in *The Economist* on June 11th pointed out, any appreciable reduction in expenditure must be politically difficult, and any increase in the share of the national income taken in taxes economically dangerous. The only solution is to increase the national income more rapidly than seems likely from an examination of present trends. There is no sovereign remedy; but an economic policy consciously contrived to cut down to a minimum prevailing restrictions on trade and enterprise at home and abroad must be wholly beneficial.

* * *

Parliamentary Privileges.—The so-called Sandys case has had a double significance from the outset. It raised the major question of the application of the Official Secrets Act to Members of Parliament and the minor question of the treatment accorded to Mr Duncan Sandys, M.P., by the Secretary of State for War and the military court set up to inquire into the matter. Unfortunately, the minor aspect has received by far the larger share of attention hitherto. Not only has Parliamentary time been wasted, but the major issue has been obscured by the mood of bored indifference with which the public now contemplates the question who has behaved most correctly. When the House once more debated Mr Sandys' summons on Tuesday last, most Members seemed fully conscious that a mountain had been made out of a molehill, though Mr Churchill and certain Opposition speakers seemed anxious to prolong the controversy. Meanwhile, the gravity of the questions which are being considered by the Select Committee has not lessened. How far is a Member of Parliament entitled to inquire into military secrets *in the discharge of his Parliamentary duties? To what* extent is he protected by his status against action under the Official Secrets Acts? These are questions of moment, because the net of official secrets jurisdiction has been cast very widely in recent months. Journalists, for instance, have been hampered in the execution of their ordinary work by the extended application of the Acts, and it is of first-class importance that we should know where Members of Parliament stand in this matter.

* * *

The B.B.C.'s New Head.—The Director-Generalship of the British Broadcasting Corporation is one of the half-dozen most important posts in the country. Others perhaps are more in the public eye, but none so completely monopolise the public ear. Ever since Sir John Reith's translation to the chairmanship of Imperial Airways, speculation has been busy with the gap he left behind him. This week's announcement that his successor is to be Mr F. W. Ogilvie, President and Vice-Chancellor of the Queen's University, Belfast, has been received with surprise—not because Mr Ogilvie is considered unfitted for the post but because he is not widely known. To readers of this journal, the most interesting and gratifying feature of the appointment is that Mr Ogilvie is an economist, who has lectured for seven years at Oxford, and for eight years occupied the chair of Political Economy at Edinburgh. It is a very good thing in these days of rampant fallacy that the head of the most pervasive and persuasive educational organisation in the country should be a student of "Man in the Ordinary Business of Life" and should appreciate the intricate complexity of the system by which we all live and pay our licence fees to the B.B.C. Mr Ogilvie's administration will rightly be subject to the most searching and widespread scrutiny. The public will hope that he will always be able to convince his critics that the British system of broadcasting is inferior to none in the world.

Germans, Sudetes and Czechs.—On Tuesday the Sudeten German Party published the fourteen-point memorandum which they sent to the Czechoslovak Government on June 7th last as a basis for negotiations with the Prime Minister, M. Hodza. It turns out to be even more exigent than Herr Henlein's eight-point speech at Carlsbad on April 24th. It demands for every national group in the State "an equal share in the conduct of State business"—a vague phrase. Local government boundaries are to be redrawn; all nationalities should have the right "to foster common national interests"—which could mean "common" with foreigners outside Czechoslovakia; legislative powers should be divided between the central Government and the nationalities' Diets; and pre-military training is to be the province of each nationality. The other points follow the Carlsbad speech of Herr Henlein, but nothing is said in the published version about alteration of Czechoslovak foreign policy. The Nationalities Statute is still being discussed between M. Hodza and the various leaders of the Coalition Parties and Ministers. The Government have not adopted any official attitude to the Sudeten German Party's memorandum, and it is not expected that the Nationalities Statute will reach Parliament this month.

* * *

The flying visit to London last Sunday of Captain Wiedemann, Herr Hitler's confidential agent, his talk with Lord Halifax, and the latter's talks in Paris with M. Bonnet and M. Daladier on Wednesday are all said to be connected with the negotiations in Prague. The Germans have been anxious, ever since "the Czech week-end" of May 20th, lest the semblance of Anglo-French support for Prague should arouse Czechoslovak nationalism to the pitch of obstinacy; and they are most anxious now. This reorientation of Germany towards London has increased the embarrassment of the Henlein Party, whose extreme Nazi wing is disappointed by the continued absence of *mots d'ordre* from Germany, and whose moderates are gravely perturbed by the fate of Austria and their Austrian cousins at the German Nazis' hands. It is becoming increasingly difficulty for M. Hodza to satisfy both Germany and the Sudetes—to say nothing of Czechs, Slovaks, Hungarians and Poles.

* * *

Diplomatic Post.—Europe's statesmen and diplomats during the last fortnight have been playing general post. As if to inaugurate the second lap of the diplomatic caucus-race—whose first lap we noted last week—Herr Hitler's confidential *aide*, Captain Wiedemann, flew to London on Sunday, bringing to Lord Halifax, so it is said, a warning about German requirements from Czechoslovakia, and an offer. The latter is reported to have been a refurbished version of the German offer of March 7, 1936, after the military occupation of the Rhineland. Briefly, this was to give a clear run to Germany in Eastern, Central and South-Eastern Europe in return for a German promise not to attack the two democratic Western Great Powers or their possessions for twenty-five years; or, as the inimitable "Low" put it: "How much will you give me not to kick your pants for 25 years?" Lord Halifax is known to have discussed this offer, the Czechoslovak problem, and Spain when in Paris this week; but it is reported that, while the French have agreed to support Mr Chamberlain's policy of "appeasement," the British have recognised the validity for France of the Czecho-French alliance. Meanwhile, however, M. Bela Imrédy and M. de Kánya, respectively Prime Minister and Foreign Minister of Hungary, have been buttressing the Rome Protocols in the city of their origin after the collapse of the Austrian pillar, under the urgent gaze of Signor Mussolini. Viewing Italy's and Jugoslavia's increasing economic dependence on German trade, considering Trieste's obscure future as a transit centre, and observing the German drive—with the benevolent concurrence of M. Stoyadinovitch at Belgrade—to the Adriatic, the Duce seems to have written-off Britain and France completely, to have become indifferent to Mr Chamberlain's dearly purchased Anglo-Italian pact, and to have thrown in his hand with Germany, Hungary and Jugoslavia. Both the Duce and M. Imrédy sanctioned a joint *communiqué* on Wednesday which restricts their own policies to "harmony with the Rome-Berlin axis." Meanwhile, the Finnish Foreign Minister has been in London; and the Egyptian Prime Minister has arrived to discuss Egypt's defences and Britain's share of their cost. All this intense diplomatic activity bodes no good, unless it be related to a common European policy for peace and security from aggression.

* * *

Gold and Games.—The Japanese Government have withdrawn their invitation to the Olympic Games at Tokyo in 1940, and postponed the international exhibition which was to have taken place there at the same time to celebrate the 2,600th anniversary of the foundation of Japan's empire. So much was announced on Friday of last week. It is a reasonable assumption that these decisions were taken on grounds of economy; for the China war is plunging Japan's economy deeper into the mire. The Government have just had to announce that most of the gold in the Bank of Japan is to be transferred to a special fund for financing necessary imports over and above the level of current exports. As the total gold holdings of the Bank amount to less than £60 millions, such an announcement can only be taken to indicate acute stringency in the financing of Japan's imports. Her import trade has been increased by the need of more raw materials for conversion into war materials, and also by the need to increase exports in payment therefor. On the other hand, Japanese exports have been rendered less and less profitable by reason of the fall in world prices, the rise in domestic costs following expansionist monetary manœuvres, the increasing war strain, and the great extent to which administrative organs of the State have superseded private enterprise, both large and small. When Japanese Ministers and Generals tell us the China war will last perhaps for ten years, we are not so surprised that these same authorities consider Tokyo an inappropriate venue for international athletic exercises in 1940. The sword is mightier than the Finance Minister's pen, and gold than games.

* * *

Aerial Re-armament.—A deep depression has long been centred over Britain's aerial re-armament programme. From November of 1934, when Earl (then plain Mr) Baldwin first announced an expanded programme of construction, until April of this year—three and a-half years—the depression deepened. In the third week of April it burst into a storm; and the detonation was due to Lord Winterton's announcement that the Government had decided to send an Air Mission to the United States to investigate the possibility of recruiting British air strength from the aeronautical industry of America. It proved to be the swan-song not only of Lord Winterton but also of his chief, Lord Swinton. On May 16th Sir Kingsley Wood and Captain Harold Balfour took over at the Air Ministry. On May 25th the Opposition and Mr Winston Churchill harried the Government in the Commons over delays—indeed, more and more irretrievable delays in comparison with other countries' programmes—in our aerial re-armament. Finally, at the beginning of last month it was announced that, as a result of the returned Air Mission's tour of inquiry in the United States, orders had been placed there for 200 Lockheed reconnaissance machines and 200 North American Aviation trainers, at a total cost of over £7,000,000. Since then, progress at home has been recorded by Sir Kingsley Wood; for at the beginning of last May our aerial re-armament programme was doubled and accelerated, in order to achieve a first-line strength of 3,500 machines by 1940. On Friday of last week Sir Kingsley himself cut the first sod on the new 135-acre site of the Castle Bromwich factory which, after many vicissitudes, Lord Nuffield has agreed to erect and manage; and the Air Minister announced that the Air Ministry had placed with Lord Nuffield an immediate initial order for 1,000 Supermarine Spitfire single-seater fighters. These are our fastest military aircraft, designed from experience gained in the Schneider Trophy races. They are all-metal and are fitted with the latest Rolls-Royce single high-power engine—the Merlin, of 1,050 h.p. This, the largest single order for aircraft in this country's peacetime history, caps the tale of expansion in a programme which, last week, called for another £22,901,000, making this year's total expenditure under the Air Votes £126,401,000. It remains to be seen whether the expanded programme will, in default of a Ministry of Supply, proceed rapidly and without the delays and hitches which have by now become painfully familiar.

* * *

Trade Union Policy.—This is the season of conferences, usually at the seaside. In the last week the Mineworkers' Federation have been in session at Whitley Bay, and the Amalgamated Union of Building Trade Workers have foregathered at Morecambe. Both bodies occupy powerful positions in the trade union movement, and in the course of their latest deliberations two statements of principle have been made which are of the utmost importance at a time when the representatives of organised labour are being faced on the one hand with trade recession, striking at such export trades as that in coal, and on the other with the rising claims of re-armament upon men and materials. Opening the Miners' Conference, Mr Joseph Jones pronounced the strike weapon out of date. The present outlook for coal was gloomy; distribution costs were too high; and declining trade would mean a struggle to defend wages. But success in preserving miners' standards could best be achieved, short of the nationalisation of the industry, not by a series of district strikes, but by reorganising the structure of the miners' unions to give their leaders more strength in negotiation than their traditionally sectional organisation at present afforded. Mr Jones might have remembered the opposition conducted by Labour Members of the House of Commons against any revision of the coal-selling schemes sustaining the relatively high prices of coal which he regarded as liable to be detrimental to the industry and its workers. He might also have given more credit than he did to the Government's successful nationalisation of coal royalties. But his plea for peaceful methods, addressed to organisations which still bear the scars of militant action in the not very distant past, was significant.

* * *

So, too, was Sir Walter Citrine's forthright condemnation of industrial action to secure political ends, in a speech to the builders at Morecambe. The trade union movement is whole-heartedly on the side of the Republicans in Spain; both the engineers and the miners are raising large sums to mitigate the distress occasioned by the long drawn-out struggle against the forces of General Franco. The unions distrust the foreign policy of Mr Chamberlain and his colleagues. But Sir Walter believes that the right course is to appeal to the electorate and not to seek to intimidate the Government by threatening strikes or refusing to co-operate with employers in re-armament. Any decision about the role of labour in accelerating the defence programme is complicated by the deepening of depression. A few days ago leaders of 39 engineering unions (excluding only the Amalgamated Engineering Union, whose views are now well known, and the Foundry Workers) refused to consider relaxing their rules to speed up the output of arms. A chief cause of their refusal was the fact that unemployment among their members was appreciably growing. There are restless elements among union members, but their leaders are facing recession and re-armament with a determination to curb any extreme tendencies. Sir Walter Citrine and the other union chiefs are as resolved as Mr Chamberlain to have their way with their followers.

* * *

Abortion and the Law.—The case of Rex *v.* Bourne, which was tried at the Old Bailey this week, has served to clarify the present state of the law on abortion. The governing statute is that of 1861 which forbids the unlawful use of an instrument for the purpose of procuring abortion. The exact circumstances of this particular case are, fortunately, rare, for the operation to which the prosecution related was performed on a girl of fifteen who had become pregnant as the result of rape for which her assailants have already been sentenced. But the importance of the case is that it established legal principles that will have a much wider application. The crucial word is "unlawful" as applied to the use of instruments. An Act of 1929 has already laid down that an operation performed to save the immediate life of the mother, even if it sacrifices that of the unborn child, is lawful. In the present case, the Judge advised the jury, who accepted his advice, that it was impossible to draw a distinction between immediate danger to the life of an expectant mother and danger to her general health. This decision, coupled with the general rule of English law that the onus of proof is on the prosecution, appears to mean that convictions will not be obtained in future unless the Crown can prove that the operation was not necessary to preserve the general health, and thereby the life, of the mother. This brings the law more into line with the view held by the great majority of people. But that it is a step forward is shown by the mere fact that the Attorney-General sought to obtain a different verdict, which would have implied a more restricted version of the law. It is the duty of the medical profession to see that the high responsibility placed upon them by the law as now declared is not abused.

Doctors and the Public.—The doctors have also been before the public this week in a somewhat less altruistic guise than that of Dr Bourne. The discussions of the British Medical Association at Plymouth have touched upon two topics of particular public interest. One is the question of admitting qualified Austrian refugees to practise in this country. It has been stated that the Home Secretary asked the B.M.A. to agree to the admission of 500 doctors. Whether this is so or not, the B.M.A. has consented only to 50. It is, of course, easy to understand the preoccupation of a professional organisation with the security of its members. But that only increases the misfortune of entrusting Britain's reputation for generosity to such interested bodies. The Government would have done far better to have made the decision on their own responsibility. An unfortunate impression is also likely to be left by the discussion at the Conference on the relations between the medical profession and the rapidly developing system of contributory schemes, by which the less well-to-do can secure hospital benefits for themselves by regular contributions in times of good health. These schemes were attacked as likely to diminish the private practices, and the incomes, of doctors. But they can be defended as powerful aids in the general development of health services. There is at all times a latent antagonism between the professional duty and desire of the doctor to serve the public without regard to anything but the demands of health, and his need to make an income from the practice of his profession. It is very greatly to the credit of the doctors that this antagonism so rarely emerges. But whenever the general public is confronted with a conflict between the system of private practice and the health of the nation, it is likely to conclude that the health of the nation must take precedence. The doctors will enjoy the respect of the public to precisely the same degree that they do not behave like a commercial vested interest.

* * *

An Anglo-Australian Agreement to Differ.—The Australian Ministerial delegation has not secured the new trade agreement that it came over here to negotiate. Instead, H.M. Governments in the United Kingdom and Australia have issued a joint statement which affirms a number of generalities about the inter-dependence of the two countries in political ideals, in defence, in commerce and finance, qualified by a reference to the more specific practical difficulties that hinder them in translating that inter-dependence into freer trading relations. The gist of the remainder of the statement is that, until each side has been able to think out its own position more clearly (to some extent in the light of new factors that are not yet realised), it is best to leave the present Ottawa Agreement in force. Beneath its outward ingenuousness the statement is unusually frank about the main reason for the failure to reach concrete agreement. Certain immediate difficulties arise, it says, when an attempt is made to reconcile the admitted desirability for Australia to expand her secondary industries with that of the United Kingdom to maintain her exports. An effort was made to meet these difficulties through the general clauses of the Ottawa Agreement, under which Australia undertook not to afford tariff protection in excess of a level that would give United Kingdom producers "full opportunity of reasonable competition on the basis of the relative cost of economical and efficient production."

* * *

The Ottawa clauses, it is acknowledged, have been attacked from opposite points of view in Australia and the United Kingdom. The negotiations in London have turned, in fact, mainly on the future of these general undertakings, which the Australian Government wanted to abolish altogether. The United Kingdom Government was ready to agree to this, provided that a schedule of maximum rates of preferential duty was substituted, as in the Anglo-Canadian trade agreement replacing Ottawa. It is this project which Mr Lyons and his colleagues require time to examine, recognising that they must first decide what broad lines of development they intend Australian secondary industry to follow during the next few years. Meanwhile, the United Kingdom Government agrees to turn a blind eye to the somewhat loose interpretation placed by the Tariff Board on the general undertaking, while the Australian Government promises that it will make every effort to ensure that Tariff Board recommendations are in fact carried out The joint statement also alludes, rather cryptically, to another cause of difficulty, namely, the unfinished condition of the Anglo-American trade negotiations The signatories agree that they need to contribute to an expansion of world trade, and that they will assist each other in arriving at trade agreements with foreign countries. Finally, the statement gives a blessing to the project of commodity councils, organised by the producers themselves for regulating the volume of international trade in their products.

* * *

Mr Nash's Third Budget.—The formal orthodoxy of New Zealand's budget for 1938–39 contrasts sharply with the fears of inflation, default and extreme socialism that have recently agitated investors in New Zealand bonds. These fears, and the reasons or lack of reasons for them, are discussed in an article in the "Business World" section of this issue of *The Economist*. Mr Walter Nash, the Finance Minister, continues his policy of financing increased expenditure out of the buoyancy of revenue without additional taxation. This year, indeed, while estimated expenditure is up by £438,000, total revenue is expected to fall by £214,000, a further improvement in income tax being offset by a decline in receipts from customs. Last year's accounts, however, realised a surplus of £810,000, so Mr Nash is still able to balance his budget. Cautious observers will seek reassurance on three main points. First, they will ask whether the estimates of revenue may not prove over-sanguine in view of the lower incomes of exporters and the curtailment of dutiable imports. Secondly, they will be anxious about the possibility of a deficit on the account through which the guaranteed price for dairy produce is financed. Finally, they will wonder how, with anything like the present budgetary structure, Mr Nash proposes to meet the enormously increased cost of social services, if and when the Government's health and pensions measure passes into law.

The Pope on "Racists."—On Thursday of last week the *Giornale d'Italia* published, for the first time in Italy, a semi-official avowal of those racial hypotheses on which the rickety edifice of Nazi bio-politics is dubiously founded. This work of Italian university professors says that race is a "material and necessarily biological concept"; that the bulk of the Italian people has been Aryan and unmixed by immigration since the Lombard invasions of the eighth century A.D.; that Italians should keep a Nordic-Aryan racial ideal before their eyes; that Italians should now recognise themselves as racists; and that the idea of race has nothing to do with considerations of history, language or religion. Perhaps this last point stung the Vatican to reply; for on Saturday, addressing a group of French missionary nuns, the Pope roundly condemned "the exaggerated and misunderstood nationalism which was causing such agitation in the world," and which he termed "a direct negation of the Apostolic injunction." The contrast between the "Catholic," i.e., universal, church and that form of nationalism was evident. The Holy Father informed his hearers that he had convened all the procurators-general of the religious Orders and missionary Congregations then in Rome and bidden them admonish those in their care to beware of "this curse of exaggerated nationalism which hinders the saving of souls, which raises barriers between people and people, which is contrary not only to the Law of God, but to the Faith itself, and to the Creed which is said and sung in all churches throughout the world." After the Concordat between the Vatican and the Fascist Party-State, what are we to think of Fascist Party leaders who ordered, the day before the Pope spoke, all provincial Party secretaries to note the article in the *Giornale d'Italia?* It would seem as if, on the Rome-Berlin axis, the driving force was applied at the Berlin end and the Roman wheel simply follows. For the Roman people and cult, especially after the annexation of Austria and the behaviour of the Austrian (but Sudetic) Cardinal-Archbishop Innitzer, this development in Italy looks inauspicious.

* * *

The Palestinian Chronicle.—The melancholy tale of bloodshed in Palestine has to be continued over yet another week. July 11th brought twelve deaths. At Haifa that day, marines had to assist the police to keep order. Simultaneously, fifty Jewish Revisionists were arrested, and three Jewish newspapers suspended, on account of the previous disturbances. On the 12th, the First Battalion of the Essex Regiment arrived in Haifa from Egypt to find the city in an uproar, as a result of three bomb outrages. In Jerusalem on the same day one of the Imams of the mosque of the Dome of the Rock was mortally wounded. During the next two days there was a lull, on the strength of which the curfew regulations in Jerusalem were relaxed. On the 15th, however, at Jerusalem, in the Arab vegetable market in the Old City, ten Arabs, including three women, were killed, one mortally wounded, and twenty-eight others more or less seriously injured, by a bomb which was said to have been thrown by a Jewess in Arab disguise. At Sefed on the same day, one Arab was wounded by the explosion of a bomb in the Arab quarter, and thereafter the troops had to fire in order to repel a consequent Arab assault upon Jews. Against the background of these tragic events in Palestine, that country was referred to on the 15th at the closing session of the Conference on Refugees at Evian by the British representative, Lord Winterton. He emphatically took issue with the suggestion that the whole Jewish question in Europe might be solved by a removal of all restrictions on the immigration of European Jews into Palestine. In his reference to the present restrictions, Lord Winterton was extremely guarded. The positive point in his speech was an announcement that a scheme was already on foot for the settlement of Jews on a small scale in Kenya, and on this occasion he referred for the second time to the possibility of Jewish settlement in East Africa at large.

* * *

British and World Shipping.—The new edition of *Lloyd's Register Book* has made a timely appearance this week, and from its pages it is possible to measure the difference between Britain's shipping strength to-day and in 1914. The number of all the world's ships has only risen from 30,758 in 1914 to 30,990 in 1938; but their total tonnage (steam, motor and sail) has increased from 49,073,545 gross tons to 67,846,511, and was as high as 70,131,040 in 1931. The gross tonnage (steam and motor) possessed by Great Britain and Ireland to-day is 17,675,404, a decline of 1,216,685 tons, or 6.4 per cent., since 1914. It is true that the mercantile marine of the British Dominions has risen by 1,412,069 gross tons, or 86·5 per cent. in the same period; and that modern ships are on the average much speedier than those of a generation ago, and can therefore carry out more voyages in a given time. But they are also larger than their predecessors, which increases the merchant fleet's liability to loss in the event of hostile attack. And, while the total tonnage (steam and motor) of the British Empire has risen 1 per cent. since 1914, world tonnage has risen over 47 per cent.

* * *

British tonnage is still by far the largest afloat, but the United States with 8,936,465 sea-going tons (steam and motor) shows an increase of nearly 341 per cent. since 1914, though the U.S. mercantile fleet is now much smaller than it was in 1922, when a tonnage of over 14 millions was recorded. Japan's shipping has increased 193 per cent. in steam and motor tonnage since 1914, Norway's 136 per cent. and Italy's 130 per cent. Britain's share of the world's steam and motor tonnage is now only 26.4 per cent.; in 1914 it was 41.6 per cent., and in 1901 just over 50 per cent. Only Germany's share, which has been reduced from 11·3 per cent. in 1914 to 6.3 per cent. to-day, has also fallen. These figures may cause some perturbation among those who believe rightly that the source of Britain's wealth and strength is upon the sea. But, for the most part, they are no more than a further sign that other countries have grown up to a stature of mercantile independence. And by subsidies and fiscal devices they are determined to hold the ground they have gained.

State Aid to Industry.—A fundamental feature of economic policy in recent years has been the growing measure of State assistance accorded to British industries. Last week the Chancellor of the Exchequer gave the House of Commons particulars of subsidies from public funds payable to industry since October 1, 1931, up to and including estimated expenditure during the current year. The total was £55,062,060, and the details were as follows:—

	£
Beet sugar	21,164,399
Cattle: payments to producers	18,218,859
Milk	5,764,297
Land fertility improvement	1,889,205
Oats and barley	203,000
Tramp shipping	4,002,183
Herring industry	130,157
Light horse breeding	49,000
Mechanical transport	13,360
Civil aviation	3,627,600

Direct subsidies form only a fraction of a total which to be complete should also include, not only direct aid in such forms as revenue rebates and rating reliefs, but also the value of tariffs, preferences, quotas, special assessments for income tax and the grant of statutory monopoly powers to the beneficiary industries. Sir John Simon's total of £55 millions for some seven years represents only a small portion of the total benefits derived. A writer in the June number of *The Round Table* estimated the total of special assistance being given at the present time to agriculture alone, including rating relief, reduced transport rates, smallholding grants and revenue rebates on sugar, to be in the neighbourhood of £37 millions a year. And the less direct assistance accruing from tariffs and quotas would make a considerable addition to this sum. Large parts of our industry are, directly or indirectly, on the dole. Many of the present subsidies are being used to bolster up forms of production which are clearly uneconomic. The State's responsibility under modern conditions to render assistance in deserving cases is indisputable. But the bill is footed by the taxpayer, the ratepayer and the consumer, and it is becoming urgently necessary to determine the limits of this policy, to lay down the guiding principles it should follow and to ensure adequate returns.

Wall Street and the Economic Outlook

New York, July 12.—The recent sharp advances in stock prices during the rally which began on June 20th have brought persistent inquiries about what had happened or was happening in business to warrant such a rise. Because business figures are reported only after the passage of some time, the question could not at the outset be answered statistically. By now, however, a variety of business figures are available, covering more or less the period of market recovery, even though the complete reports of the Federal Reserve Board have not yet been made public.

In the week ended June 4th, steel, which is a cornerstone of modern business, was being introduced at a rate which employed 26.2 per cent. of the industry's capacity. This gradually advanced to 28.7 per cent. in the week ended June 25th, and in the following week (partly owing to closing on Independence Day) fell to 22.4. The total output of steel and the production of pig iron in the month of June were the lowest for any month of 1938. And June witnessed a decline in the number of blast furnaces in production.

The movement of traffic on the railways showed no significant change during June, although there was a markedly better showing in the week ended July 2nd *after* the market has advanced somewhat. Carloadings (in less than car-load lots) totalled 148,525 in the week ended May 28th, and 145,461 in the week ended June 25th; all other carloadings totalled 413,536 during the last week in May, and were the same as in the last week of June.

The output of motor cars showed no significant movement. Production was 45,000 in the week ended May 28th; it fell to 27,000 in the following week; and then remained steady at about 41,000 per week until July 2nd, after which output fell back to 25,000 in the week ended July 9th. Production did not fall to the negligible figures which the pessimists had prophesied, but it did not rise.

The output of electric power showed some uptrend during the period, rising from 1,879 million k.w.h., in the week ended June 4th, to 2,019 million k.w.h. in the week ended June 25th. During the following week, however, it declined slightly. Retail trade, measured by department store sales, declined further in June, but the decline was not as great as that which normally occurs between May and June, and the index published by the Federal Reserve Board rose from 78 to 81.

Building, which is generally regarded as likely to make headway, declined a little in May, according to indices adjusted for seasonal variations; residential contracts showed no change, after such adjustment, compared with April, and the non-residential index fell. During the first nineteen days of June, the daily rate of residential contracts was slightly below that of the same period in May, whereas in 1937 there was an advance in June compared with May. Non-residential contracts for the period, however, rose appreciably, so that the total of building contracts for the nineteen days just preceding the stock market advance was higher than in the preceding month.

Business Unchanged

Two weekly business indices, which combine a number of factors and move quite similarly to the Federal Reserve Board's comprehensive monthly figures, advanced by tiny fractions in the three weeks ended June 11th, 18th and 25th. During the following week ended July 2nd, however, both declined, and virtually all the gains of the preceding weeks were lost.

Nor did commodity prices show any marked change prior to the Stock Exchange rally, Moody's index of the prices of sensitive commodities had risen slightly from its low point early in the month, but the increase was only about 4 per cent. Other commodity indices were even less convincing in their movements. Prices of the more sensitive and speculative commodities have, of course, advanced with, or following, the upward movement in stock prices, but not prior to it.

The high grade bond market had been displaying an upward trend for some time, and both the long- and short-term rates of interest were at, or below, the levels of any previous period. Bonds of poorer quality were, of course, still depressed in price, and rallied only *with* stock prices. The high grade bond market has been an excellent forecaster of business in this country in periods of major change; but this time the advance was fairly short-lived and occurred under the abnormal influence of the April reduction in reserve requirements and gold desterilisation.

Credit Factors

Bank credit showed divergent trends. During early June there was an abrupt rise in both deposits and assets, but this was clearly associated with the forthcoming governmental financing operations of June 15th. The trend is more clearly visible for a longer period. During the ten weeks from April 27th to July 6th, the net total of loans and investments of the weekly reporting member banks fell by $368 millions, and most comments on banking during the period referred to this as "deflation." However, gold was in process of being sterilised, and the reserves of these banks rose during the period by $517 millions, more than offsetting the decline in other assets, and causing a rise of $203 millions in deposits.

Finally, the volume of new securities issued during June showed a marked improvement on preceding months. Total issues, excluding refunding and Federal Government issues, amounted to $345 millions for June, which was the largest total for any month this year. The rise was explained by the $100 millions issue of United States Steel and the $72 millions issue of Commonwealth Edison.

To summarise the showing of these miscellaneous data, the actual volume of business done has not yet advanced appreciably. For several weeks it has fluctuated with little net change. Commodity prices have risen to some extent with stock prices, but very little advance was shown prior to the Stock Exchange recovery.

The sensational rise in stock prices seems, therefore, definitely to have been anticipating a business recovery, rather than reflecting one. It still remains to be seen whether this anticipation is correct.

This episode will be yet another case to add to the evidence in the inquiry whether the stock market reflects or anticipates business. The events of 1937 suggested that its rôle was one of anticipation; the long period of market decline and business stability is still fresh in our minds. Many commentators tentatively concluded then that stock market regulation had become so extensive and stringent as to have caused stock prices to have lost all touch with business.

France

Hopes and Fears

Paris, July 20.—Intensive re-armament is the order of the day. But the aim of French policy is to support respect for international law and to revive the spirit and practice of international co-operation. This is the purpose of Anglo-French collaboration, upon which this week's visit of the British sovereigns to Paris has set the seal. The visit has aroused enthusiasm in France, and the French people, realising the significance of their Majesties' coming, are deeply grateful. The occasion may be a memorable event in history as a milestone to peace and security.

Despite these hopes, however, fears of foreign conflict still weigh heavily upon the French public. Recent events in Czechoslovakia have not been calculated to allay their alarm, especially when the crisis earlier this summer is remembered. This fear of events abroad explains why the country has so readily accepted the halt which the Daladier Government has imposed upon social and economic reform. If M. Jouhaux, leader of the trade-

reform in the autumn, he will find little support so long as the nation's anxiety remains as acute as it is now.

Improved Financial Position

The visit of the British sovereigns and the realisation that the new issue of National Defence Bonds will render a further long-term loan unnecessary has led to renewed firmness in the market for public funds. The Minister of Finance, in a recent broadcast speech, laid stress upon the improvement in the national finances during the past four months. The Government must still borrow, but new subscriptions are covering the Treasury's needs.

There is no inflation. The increase in the note issue is much smaller than the increase in the gold stock of the Equalisation Fund. The credit account of the Sinking Fund is at the highest level for 27 months. The public funds are rising.

The 1939 Budget will set out to cover ordinary expenditure from normal receipts, and only the cost of re-armament and special aid to industry will be defrayed by borrowing. Meanwhile, revenue in May was 57 million francs more than the estimated figure, or, if the proceeds of the 8 per cent. emergency tax are taken into account, 164 millions more.

Recession Arrested

The recent falling-away in industrial activity seems to have partially stopped, especially in the iron and steel trades. The following table shows comparative details for iron and steel output in May:—

(Metric tons)

	May, 1937	April, 1938	May, 1938
Steel	651,000	500,000	502,000
Semi-manufactured products	109,000	81,000	76,000
Pig iron	666,000	479,000	483,000
Iron ore extracted	2,861,000	2,576,000	2,628,000

In May, 83 blast furnaces were in operation, and 126 were idle.

There is further cause for optimism in the course of wholesale prices. The index stood at 657 last week, against 658 and 656 in the two previous weeks, which suggests that prices are now reasonably stable. A rise from 603 to 610 in the index of import prices was counterbalanced by a fall from 689 to 683 in the prices of home-produced commodities. Food prices have fallen from 662, on July 2nd, to 654, largely as a result of a sharp drop in vegetable prices. The index of the prices of industrial products, on the other hand, has risen from 657 to 660, owing to the effects of the recent increases in wages and taxes. Unemployment on July 9th was 353,676, against 357,915 on July 2nd and 316,482 a year ago.

A new commercial agreement will shortly be signed between France and Germany. The first effect will be a further decline in the trade between the two countries. Discussion of the problem of Austrian debts has been postponed, and a delegation will be sent to Berlin for this purpose.

Germany

Bourse Collapse

Berlin, July 20.—The share market, which declined very sharply in the week ended July 9th, last week suffered the greatest fall for any one week since the National Socialist Government took office. Prices fell by 4 or 5 points in a single day, and in a few cases by much more. The present week opened with a still more violent decline, followed yesterday by a moderate recovery.

Some stocks are now 30 or 40 points below their recent peaks, which were mostly recorded in April. This event has created a considerable stir. The share market has for years been relatively quiet, with a gradually rising tendency and no important setbacks. It seemed to be reverting to pre-war conditions, when quotations very seldom varied more than 25 per cent. in a single year. After the currency stabilisation of 1924, prices sometimes doubled or dropped to half in a few months. Later, the fluctuations became less sharp, the decline being relatively moderate, even during the collapse of 1927.

Since the National Socialist Government took office Bourse stability has been an ideal. It was considered to be a natural consequence of business stability, for Germany was now supposed to be emancipated from cyclical trade movements of all kinds, and there was a theory that "speculative" influences had been eliminated. Share prices have been rising since April, 1932, when the Bourse was reopened after being closed for six months. Between then and the end of 1937 the index for all shares quoted in Berlin rose from 45.6 to 137.3—a movement which, however, was partly due to the scaling down of companies' capital. At the recent high prices dividend-yields were low; but this year they have risen somewhat because dividends have increased, while quotations have shown little change.

The Drive Against the Jews

There were several reasons for this month's collapse. Minor causes were tightness of money and the belief that profits had nearly reached their peak. The principal one, however, was the drive against the Jews. On the one hand, Jews sold their securities, and on the other, the expulsion of Jewish brokers and traders seriously impaired the efficiency of the Bourse; this measure has thus proved a failure as a defence against "speculation." Some of the heaviest falls last week were in shares of companies in which Jews had substantial holdings; one such company's shares fell 11 points on a single day.

The semi-panic of Monday, July 18, was caused by a rumour, since officially denied, that the holding of securities by Jews would be entirely forbidden. But the Bourse could not absorb even small offers. Members complain that the banks withhold a great deal of business, which they prefer to conduct directly with one another. The inefficiency of the Bourse, however, is no new problem. The reintroduction of trading for future settlement (either monthly or fortnightly), which was suspended in 1931, has been officially discussed as a possible remedy. But insecurity of property, which is a proper description of the anti-Jewish measures, is incompatible with soundness in the security market.

In normal times a collapse of prices such as has been witnessed this month would have been taken to foreshadow a trade decline. But nobody now expects that. Some of the heaviest falls were experienced by shares of companies which have more orders than they can execute, and are considered likely to increase their dividends.

Shortage of Farm Labour

It has been necessary for farmers to borrow labour from industry, and in many cases industrial employers objected on the ground of urgent contracts; soldiers have also been employed. There is a shortage of domestic servants, and Austrian women have been brought to North Germany. It has been declared that, under the new regulations for the conscription of labour, private concerns will not be allowed to increase their profits by reason of the fact that conscripts are allotted to them owing to the political importance of their work. Undertakings of this kind will be expected to find labour in their own districts as far as possible, and also to economise labour by internal reorganisation. In general, the conscripts will not be kept longer than six months, after which period they will be replaced by new recruits.

Industrial Activity and the Transport System

Statements at the meeting of the Ruhr Coal Syndicate imply that the decline in the export of coal has come to an end, and that a fresh increase in home consumption is likely. Pig-iron production in June was 1,508,800 tons, the total for the first six months being 8,803,900 tons, against 7,710,300 in 1937. The average output per day worked rose from 42,598 to 48,640 tons.

The international iron and steel outlook is thought to have improved, but German exports have declined very considerably. In 1937 the average monthly export of rolling-mill products was 213,800 tons, with maximum in July, 1937, of 289,900; by contrast, the figure for April, 1938, was only 136,400 tons, and for May 152,300 tons. In December, 1937, there was an export surplus of 133,400 tons of iron, steel, and iron and steel goods (other than machinery), but this surplus fell in March to 39,500 tons, since when it has recovered to 65,700 in May.

The Netherlands, Scandinavia and Switzerland have

BRITANNIC
ASSURANCE COMPANY LIMITED

All classes of Life, Fire, Accident, Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

reduced their purchases, and the market in Eastern Asia has almost lapsed. The chief markets which have not been affected are Great Britain and Italy.

The high level of industrial activity has imposed a considerable strain on the transport system. The Reich Railways have about 100,000 fewer goods wagons than at the time of the 1929 boom, but they are supplying 40,000 wagons a day more than during the depression. The demand is met by making the rolling stock do much more work, with the result that repair costs have risen considerably. The internal waterways are also transporting much more freight than during the last boom, with rather less tonnage. Their proportion of the total goods carried by rail and water has increased, reaching 21.6 per cent. in 1937.

Continued Surplus of Imports

The foreign trade balance of "Greater Germany" (i.e. including Austria) shows, for June, an import surplus of Rm. 49 millions, against Rm. 51 millions in May. The import surplus of the Old Reich alone was Rm. 26 millions, against Rm. 30 millions, imports having declined by 6 per cent., to Rm. 429 millions, and exports by 5½ per cent., to Rm. 403 millions. The figures for both imports and exports are the lowest recorded during the past twelve months. The following statistics for the first half-year show an import surplus for the Old Reich of Rm. 114 millions, against an export surplus of Rm. 176 millions in 1937:—

	May	June	Jan.–June
Imports	Millions of marks		
I. Foodstuffs	**166·9**	**160·3**	**1,011·0**
(*a*) Livestock	10·5	9·8	56·4
(*b*) Animal foodstuffs	32·9	36·6	226·3
(*c*) Vegetable foodstuffs	91·5	84·2	549·2
II. Industrial goods	**285·7**	**265·7**	**1,662·3**
(*a*) Raw materials	166·2	153·9	969·1
(*b*) Semi-manufactured	85·4	79·3	496·4
(*c*) Manufactured	34·1	31·8	196·8
Total	**456·8**	**429·4**	**2,696·9**
Exports			
I. Foodstuffs	**4·0**	**5·5**	**30·9**
(*a*) Livestock	0·1	0·1	0·8
(*b*) Animal foodstuffs	0·4	1·7	3·9
(*c*) Vegetable foodstuffs	1·5	2·1	13·7
II. Industrial goods	**422·9**	**397·1**	**2,551·2**
(*a*) Raw materials	44·0	45·3	265·1
(*b*) Semi-manufactured	31·1	28·9	166·2
(*c*) Manufactured	347·8	322·9	2,089·9
Total	**427·1**	**402·8**	**2,583·1**

In spite of the passive balance of trade, the import of gold continues. It is probably paid for with expropriated securities, and is not reflected in the Reichsbank's returns. The net total for June was Rm. 16 millions; for the first half-year imports were Rm. 97 millions and exports Rm. 6 millions.

Sweden

Resisting Recession

STOCKHOLM, July 13.—The economic situation shows little change. Although the outlook for the staple trades is still somewhat uncertain, Swedish industry shows signs of great resistance, and the majority of companies can report satisfactory business. Owing to reduced output, employment has fallen in the timber, pulp and paper industries. On the other hand, however, the building industry is extremely active and demand for labour is on the increase.

The number of registered unemployed fell in May from 16,000 to 12,000, compared with 16,000 in May, 1937. The general index of business activity showed a slight rise of 0.3 in April to 117. This compares with 116 at the beginning of 1937, 121 in April, 1937, and 117.5 at the beginning of the current year. Among the various components of the general index, employment in the building industry rose by 3 points to 118, imports of capital goods by 4 to 130, while the volume of staple exports declined by 6 points to 111. (In all cases the average of 1935 = 100.)

The timber market is still dull, and recent offers of Soviet timber in Great Britain at further reduced prices have not been calculated to improve the situation. On June 15th Swedish timber shipments reached only 360,000 standards, compared with 675,000 a year ago. On the pulp market, the situation is practically the same as it was a month ago, owing to the existence of large stocks in America. Paper exports, too, are dull; but there is a marked improvement in the iron and steel industry, chiefly owing to a brisker demand for home consumption.

As a result of the world position, pulp and paper exports are declining. In May exports were valued at Kr. 158.5 millions, compared with Kr. 171 millions in May, 1937; and of this total pulp exports accounted for only Kr. 41 millions, or Kr. 17 millions less than in May, 1937. Out of total pulp and paper exports in 1937, valued at Kr. 586 millions, the United States took about Kr. 173 millions, and the American situation is of paramount importance for Sweden. Foreign trade figures for the period from January to May were as follows:—

(In million kronor)

	January–May 1937	January–May 1938
Imports	819·4	813·6
Exports	671·6	728·1
Import surplus	*147·8*	*85·5*

Trade with Great Britain during the first four months of the year was valued as follows:—

(In million kronor)

	January–April 1937	January–April 1938
Exports to U.K.	108·7	141·1
Imports from U.K.	112·2	117·0
Export surplus	—	*24·1*
Import surplus	*3·5*	—

Falling Prices

Wholesale prices declined in June and the general index number fell 1 point to 129, chiefly as a result of lower coal and coke prices. At the same time the index of prices of consumption goods fell to 105.6.

The money market remains easy, though deposits in the joint-stock banks in May fell slightly owing to the payment of income tax. Advances, on the other hand, increased, particularly against mortgages, a form of lending lately adopted by the joint-stock banks because of the increased difficulty of finding more remunerative business.

The Bank of Sweden continued to buy gold in May, and gold held abroad increased during the month from Kr. 54.4 millions to Kr. 76 millions. Owing to a reduction in the foreign assets of the joint-stock banks, and in the foreign bill holdings of the Bank of Sweden, the aggregate foreign assets of the Bank of Sweden and of the joint-stock banks fell in May by Kr. 28 millions to Kr. 799 millions.

The Stock Exchange in May was entirely under the influence of Wall Street, and the general index of share prices declined during the month from 165 to 158. In June, when the outlook in the United States seemed brighter, stocks recovered, and the general index rose to 164. There is still a noticeable shortage of bonds, and a 3 per cent. loan issued by a Norwegian private bank (with a State guarantee), offered at 99, was immediately covered. On June 30th, which is the close of the financial year 1937-38, the National Debt stood at Kr. 2,430 millions, compared with Kr. 2,237 millions a year ago.

Estonia

Better Seasonal Conditions

REVAL, July 4.—In the first half of the current year business activity has continued to increase, albeit at a slower *tempo* than last year. At the same time, several slight indications of recession have become apparent; these are associated with similar indications in world markets.

In agriculture, crop prospects have somewhat improved. The yield of summer grain promises to be somewhat higher than the average, and the condition of the potato crop is thoroughly satisfactory. The clover fields suffered owing to the drought, but the position in this respect improved at the end of June owing to heavy falls of rain. Although there has been some recovery, the outlook for winter wheat and winter rye is still unsatisfactory. The condition of pastures is good, and the production of butter has risen.

In the first half of 1938 116,475 fifty-kilo casks of butter were exported, compared with 106,878 casks in the same period of 1937, an increase of 9 per cent. The average price realised was 1.64 Kr. per kilo, compared with 1.38 Kr., and the receipts therefore rose from 9.5 to 12.5 million Kr. The export of eggs in this period increased from 15.5 to 18.8 millions.

Increased Foreign Trade

The rise in exports has kept pace with that in imports. In the first five months imports amounted in value to 46.4 million Kr., compared with 43.2 million Kr. in the same period last year, while the value of exports rose correspondingly from 32.5 to 36.9 million Kr. After the increase in agricultural exports, the most notable features were the higher figures for shale-oil and benzine. Exports were 19,300 tons of oil and 2,400 of benzine in five months of this year, compared with 11,200 and 1,100 last year; total value was 2 million Kr., against 1 million Kr. The export of flax shows a heavy reduction, the price having fallen by about 40 per cent., compared with that of June, 1937.

The increase in imports was found principally in various materials required for production and in vehicles, as may be seen from the following items (in millions of Kroner)—the figures in brackets being those for the first five months of 1937: artificial fertilisers, 2.5 (1.7); agricultural implements, 2.5 (1.7); industrial machinery, 3.3 (2.1); metal goods, 3.6 (2.3); vehicles, 4.0 (2.9); chemicals, 3.8 (3.2). A slight decline was registered in imports of certain raw materials (such as cotton and iron). The prospects of preserving equilibrium in the balance of trade are considered favourable, because exports of oil will be larger and import requirements in the immediate future will probably show a reduction.

Industrial Developments

The level of industrial activity continues to be very satisfactory, except in the textile industry, where a slight depression has developed as a result of the saturation of the market. In manufacturing industries 49,957 workers were employed on May 1st, compared with 47,376 on April 1st and 45,923 on May 1st, 1937.

A noteworthy increase in activity is recorded in the shale industry, where a large new distillation plant came into operation in June. The yearly production of existing works amounts to about 170,000 tons of crude oil. Through the construction of new plant, capacity is to be raised to 500,000 tons of oil by 1946. The market has deteriorated in the timber and cellulose industries, where prices have fallen and difficulties are being encountered in foreign business. The building of the State cellulose factory, with a production of 35,000 tons, has been completed, and operations should start in August.

The reconstruction of the Government has led to the appointment of a new Minister of Public Economy, Mr Leo Sepp, who carried through the financial and monetary reforms in 1927, and is regarded as a thorough expert. It has been officially intimated by the Government that henceforth economic policy will be directed more particularly to the development of agriculture, whilst, in industry, greater importance will be attached to the rationalisation of existing undertakings than to the building of fresh factories. The new Minister of Public Economy will pay particular attention to the problem of placing loanable capital at the disposal of business through a reorganisation of the securities market. The Government has passed a decree whereby credit institutions and mortgage banks may henceforward only make new issues with the consent of the Minister of Public Economy and on the conditions sanctioned by him.

Hongkong

Traders Depressed

HONGKONG, June 29.—After a period of buoyant trade lasting for seven or eight months, Hongkong is now suffering from an acute attack of pessimism. The intensive bombardment of Canton and the serious depreciation of the Chinese national currency were the main factors in bringing home to Chinese dealers that they had been living in a state of false prosperity. During the early part of the year a big demand sprang up for Hankow and other markets in the Yangtze valley. Dealers from that area, unable to obtain goods from Shanghai, came down to Hongkong by rail and made extensive purchases, being confident that with the low state of stocks in the interior they could resell at high profits. Hongkong dealers anticipated the continuance of this demand and placed extensive orders for British and American goods.

With the collapse of the exchange and the uncertainty of rail communication with Hankow, they are now endeavouring to reduce their commitments by cancelling orders booked with local importers. The Chinese Piece Goods Guild has taken the lead in demanding cancellation on behalf of its members, and other guilds have followed suit. In the case of woollen piece goods, it is believed that the major portion of the orders for autumn shipment has been placed through German importers.

The guild's action may be partly due to their members' desire to sever German connections, now that the Hitler regime has given the cold shoulder to China. Be that as it may, the feeling among British importers is that undue anxiety is being displayed by their Chinese customers; as the market for piece goods is now cleared of accumulated stocks they expect future supplies to be absorbed without much difficulty.

Exchange Difficulties

The efforts of some of the foreign banks to support the Shanghai dollar seem to have been in vain. The exchange regulations imposed by the Chinese Government last March did nothing to restore confidence in an already depressed market, and bear speculation led to a virtual flight from the dollar. The market rate declined rapidly from 1s. 2d. to a bare fraction above 8d. One or two brief rallies have since raised the rate to 9¼d., but it has again weakened, and at the moment of writing is 8⅞d. There is now a wide gap between the Shanghai and the Hongkong dollar, which remains at 1s. 2⅛d., the cross rate being in the neighbourhood of 170.

With nearly all the ports of China under Japanese control, to increase exports, which would be the natural corrective to currency depreciation, is impracticable. An appreciable volume of Chinese produce, particularly wood-oil and tea, has found its way from the interior to Hongkong for shipment abroad, but the difficulties of transportation are diminishing this trade. Exports of South China produce from Canton, which should have followed their normal course in the absence of Japanese obstruction, have been hampered by the Central Government's requirement that shipments should be financed through the Chinese Government banks at restricted rates of exchange.

Refugees, Housing and Trade

The influx of refugees into Hongkong has gone on steadily for the past ten months and, despite a good many departures in the meantime, the population has probably risen from a million to a million and a quarter. This has brought some benefits to the colony, but it has also created various problems which are baffling the authorities. There has been a marked increase in retail purchases, and the revenues of public utility companies have been favourably affected. Whereas a year ago there were many empty tenements and houses let at uneconomic rents, there is now a serious shortage of housing accommodation. The change in this respect has caused much hardship to permanent residents, and legislation has had to be hurriedly passed to protect tenants from eviction in favour of wealthy refugees who were offering fantastic sums for accommodation. What may prove to be a permanent benefit to the colony is the transfer of several industrial undertakings from Shanghai to Hongkong. The revenue of the Government in the first four months of the year was over $1 million more than during the corresponding period of last year, and the surplus fund in the Treasury has risen from $14 millions at the end of 1937 to $15,525,000 at the end of April.

Parliament and Tariff Policy

Ottawa, July 4.—The third session of the 18th Federal Parliament ended on July 5th with very few legislative or other achievements to its credit. For their omission to deal with a number of major problems, the King Ministry pleaded that they must first wait for the report of the Royal Commission on Dominion-provincial relations; and the Conservatives, in view of the fact that they were about to change their leader and evolve a new programme, were not disposed to raise many controversial issues.

Nevertheless, the Government obtained authority for its long-range programme of national development; this included a low-cost housing scheme, a variety of public works and subsidies for self-liquidating municipal projects. The nationalisation of the Bank of Canada was completed, and the present Board of Railway Commissioners replaced by a Transport Board to control air and water transport, as well as railways.

At the close of the session Mr Dunning submitted a Budget which, for the first time since 1912, contained not a single change in the tariff; this led the Western supporters of the Government to protest violently against what they regarded as a grave backsliding from Liberal pledges. A group of them threatened to vote against the Budget, but most were eventually placated by personal assurances from the Premier that substantial tariff reductions would be forthcoming in the next Budget.

In the closing speech from the Throne hopes were held out that a comprehensive enlargement of the existing trade agreement with the United States might yet be accomplished. But the latest news from Washington about the negotiations is not very encouraging. The suspicion now prevails in Ottawa that the Roosevelt Administration is fearful of antagonising farming, fishing and other interests by granting the tariff concessions which Canada is seeking, and therefore intends to prolong the negotiations until the Congressional elections are safely over in November. If this is correct, then no new treaty can be expected much before the end of the present year.

This year the Government found little opposition to their defence estimates. In the last days of the session, however, they had to face severe criticism from Mr Bennett for their unwillingness to co-operate with the British Government in Imperial defence by permitting the establishment of a British aviation school in Canada.

Favourable Crop Reports

Crop reports from the prairie provinces continue to be, on the whole, very encouraging. Hot weather in the last week of June brought the wheat along too rapidly and caused considerable deterioration in areas which were short of moisture reserves. In the opening days of July, however, an ample and widespread rainfall arrived to bring relief from the drought.

In North Central and North-Western Saskatchewan and in the Northern and extreme Eastern parts of Alberta the crop prospects are only 50 per cent. of normal; but elsewhere in the prairie country there is the prospect of the best wheat crop of the present decade, provided rains come at intervals in the next month. There has been some damage from hailstorms, and also from grasshoppers in certain areas, but control measures are proving effective. Most crops in Eastern Canada are above the average, and pastures are excellent.

Better Business Outlook

Canadian business continues to mark time. But a sudden boom in stocks seems to indicate that recovery is confidently expected during the second half of the year. The general economic index of the Bureau of Statistics, which stood at 107.1 for the week ended June 11th, fell to 106 for the week ended June 25th, or 2.3 points below the figure for the corresponding week of 1937. The three major components of the index show the following movements:—

Week Ended	Carloadings	Wholesale Prices	Bank Clearings	General Index
June 26, 1937	*77·45*	*84·8*	*92·4*	*108·3*
June 11, 1938	68·41	80·3	91·4	107·1
June 18, 1938.	66·33	80·2	95·8	107·0
June 25, 1938.	68·18	80·4	95·8	106·0

One encouraging sign is some evidence of rising prices; there has been a sharp advance in the prices of base metals, and recently livestock prices reached their highest level for some time past. The low-cost housing programme of the Government promises to give an impetus to new building. All building materials have been exempted from the 8 per cent. sales tax, and their manufacturers are planning to increase output in anticipation of a brisk demand. The outlook for the pulp and paper industry, which has been very depressed, has also improved with the gradual reduction of stocks in publishers' hands.

Letters to the Editor

Banking and Trade Recession

TO THE EDITOR OF THE ECONOMIST

Sir,—Although I am in favour of public works, Mr Ross is wrong in saying that I asserted that they "could do no possible harm." I used those words of my own scheme, which may be summarised concisely thus: (a) The Bank of England should provide such an increase in the cash basis of the joint stock banks, and the Treasury should maintain such a supply of Treasury bills on the market, as would enable the joint stock banks to purchase long-dated securities of the value of £100,000,000 or more, without seriously disturbing the proportions of their assets; and (b) the joint stock banks should purchase long-dated securities of the value of £100,000,000 or more. This has nothing to do with public works.

Mr Ross writes:—

> I should prefer to await the economic results of our own re-armament programme and President Roosevelt's pump-priming before encouraging further schemes in England.

The main point of my letter, which, although he has paid me the compliment of a comment, he appears to have read with scant attention, was that the favourable factors, which he mentions, make the case for public works less urgent and increase the chances of success of milder measures.

But I disagree with him in his view that we should do nothing. The position in the United States is uncertain. The depression has been gathering momentum despite re-armament, and it is not likely that a reversal of the movement may be expected to come from that source.

The output of guns and aeroplanes may be increased. But the demand for producers' equipment, required as a preliminary to the higher production of arms, is probably a more potent stimulus, and may well be already past its peak. The case against continued inaction appears overwhelming.

I am, etc.,

Christ Church, Oxford. R. F. Harrod.

TO THE EDITOR OF THE ECONOMIST

Sir,—May I respectfully suggest that a further reduction of the long-term rate of interest, as postulated by Mr Keynes, might be a source of very considerable danger?

It may be argued that a redistribution of the national income, through the curtailment of the yield of fixed-interest-bearing securities, may benefit labour in the first place, and enterprise in the second. On the other hand, the forcing of interest rates down to a level at which—considering taxation and the high cost of living—the capitalist simply cannot exist, must compel him to invest overmuch in higher yielding equities, without duly considering the risk arising from participation in all the vagaries of industrial prosperity.

If it is intended to turn the investor—*i.e.* all classes of investors—into an "entrepreneur," let us say so. Meanwhile, the Government should offer a minimum "subsistence level" of interest rates to those investors who cannot afford to take risks, and leave it to the tax collector to differentiate between "deserving" and "undeserving" cases.

Yours faithfully,
Banker.

Feeding the Multitude

It is a welcome sign of the times that the Government of India, the various autonomous Provincial Governments, the State-aided research institutions and the Indian universities should address themselves more closely than hitherto to problems of agriculture, nutrition and population. Professor Radhakemal Mukerjee has for decades been a noted student of demography, and sponsored the first Indian Population Conference held at Lucknow in 1936. Here he has prepared a lucid survey* (based on the admittedly incomplete statistical data available) of the relation of India's food supplies to the size and likely increase of India's population. He makes an interesting attempt to lay down minimum levels of food requirements for the various geographical regions of the subcontinent; and draws particular attention (in the concluding chapter) to the dysgenic trend of population. The facts disclosed by the book are disquieting in the extreme.

India, including Burma, covers one-half of the area of the United States of America but has three times its population. Food more than shelter and clothing is the primary need of tropical and sub-tropical peoples. One acre of land is held indispensable for the proper nourishment of one person in regions subject to monsoon conditions. With an average of 4.2 persons per family the minimum size of a subsistence family holding is reckoned at 5 acres. According to Dr Mukerjee, some 2,800 calories would represent the daily gross per capita food requirement in India; and in 1931 food supplies from all sources contributed the equivalent of a daily ration of only 2,337 calories per "average man."

In 1935 the estimated food requirements of all India were 321,500,000 calories, whereas the actual food supply was equivalent to only 280,400,000 calories. Thus, in a normal agricultural year, there was a marked shortage of food. A deficiency of calories, and, still more disturbing, a shortage of fats, proteins and, generally, of protective foods is revealed. India's milk production is estimated at 113,000 million lbs. To give Indians a balanced diet the output of milk would need to be increased to at least twice this figure. Provided no epidemic, famine or war intervenes, India's total population is expected to reach 400 millions in 1941. The problem is how to feed this great multitude.

The author suggests for each rural area an improved crop rotation to ensure the most economic use of land, animals and human labour. The development of dairy-farming outside but adjoining the areas of human concentration is recommended. Approval is given to the destruction of one-third of the cattle population as being superfluous. Controlled breeding of general utility and dual purpose types of cattle is the only way to improve the quality of working animals and increase the yield of milk. The author agrees with Sir John Russell's proposal to raise food crops on a smaller acreage by employing improved farming methods, utilising the area so released for the cultivation of fodder for cattle.

The general standard of life in India has been depressed by the over-crowding of agriculture, the slow progress made by urban industries and the absence of opportunities for emigration. To the reviewer this book's significant silence about problems of tenancy and land tenure is ominous. At the moment when Denmark has celebrated the 150th anniversary of the emancipation of her peasants from serfdom, the Indian Zamindars and Taluqdars still see a red light in the mild legislative measures proposed by the various provincial legislatures to ameliorate the present pathetic lot of the Indian peasant and agricultural labourer. Professor Mukerjee's book cannot fail to give India's legislators further food for thought.

THE BUSINESS WORLD

New Zealand's Credit

FOR several months past New Zealand securities have been in the trustee bargain basement. But bargain hunters have been few. British investors, interested to the extent of £130 millions sterling in the Dominion's debt, have become distinctly restive. And this uneasiness cannot fairly be ascribed in its entirety to a whispering campaign fostered by the opponents of the Savage Government. The doubts of the moment are based not on political melodrama, but on economic tests which every bondholder may—and should—properly apply.

New Zealand has an unblemished record, and the exercise of tact was sufficient to rectify the misunderstanding which arose two years ago regarding the Dominion Government's attitude towards its debt burden. There has been no suggestion, throughout the recent market weakness, that this record may be impaired. But there has been a sufficient disturbance of confidence to hasten the withdrawal of capital from the Dominion, and that, in turn, has further reduced her London balances. The investment consequences are evident from a comparison of redemption yields. Since the end of January last the yield on the 3 per cent. loan 1952-55 has jumped from 3.89 per cent. to 4.20 per cent., and on the 5 per cent. loan, due 1946, from 4.06 per cent. to 4.43 per cent. New Zealand formerly enjoyed a slightly higher credit status than Australia. In January, 1937, the New Zealand 3 per cent. loan of 1952-55 and Australian 3¼ per cent. stock, 1964-74, both gave a redemption yield of 3.30 per cent. To-day, the yield differential amounts to about one-third of 1 per cent. in Australia's favour.

Such movements reflect a fairly severe disturbance of the conventional calm of the trustee loan market. Investors have begun to inquire how far the symptoms of economic deterioration in the Dominion may be affected by the play of domestic politics, particularly in an election year. This, in turn, has raised, in some quarters, the question of the Dominion's willingness to pay, which is best answered from her record. It is more profitable—and more scientific—to examine recent economic trends in order to discover whether, and how far, they have affected New Zealand's ability to pay.

Ability to pay is governed by two main factors: the size of the Dominion's export surplus, and the extent of her sterling resources. In round figures, the service of the Government debt, including interest on the obligations of local bodies payable abroad, amounts to approximately £NZ10 millions per annum. During the years to March 31, 1936 and 1937, the active trade balance was sufficient to cover these obligations with a satisfactory margin. In the latest year, however, a short-fall of approximately £NZ3 millions is evident from the following figures: —

NEW ZEALAND TRADE AND STERLING ASSETS
(In £NZ 000's)

	Years to March 31,		
	1936	1937	1938
Exports	49,676	60,235	65,008
Imports	37,440	47,621	58,065
Active trade balance	12,236	12,614	6,943
London balances*	38,973	30,147	24,000†

* End of year. † Approximate.

Although a surplus was available in 1936-37, the Dominion's London funds, after allowing for interest payments and debt redemption, fell by £NZ8,826,000. And during the latest year it is estimated that a further fall of about £NZ6 millions has occurred, reducing the total London balances to some £NZ24 millions. Part, at least, of this reduction of £NZ14 millions during the past two years must be attributed to a flight of capital. Certainly the fall is much larger than can be explained by the current items of the balance of payments, or by the contention of the New Zealand Prime Minister that the reduction in sterling balances is due to the overtaking of arrears of capital equipment.

The potential significance of these movements in the trade balance and London funds has not been lost on investors, for they have occurred during a year in which trade conditions were extremely good. Exports for the year to March last exceeded those of the previous year by nearly £NZ5 millions, and were £NZ15 millions higher than in 1935-36. But the increase in imports has been much more rapid. Indeed, the total has increased by over £NZ20 millions during the past two years. On trading account alone, the trend must be reckoned adverse. It would be foolish to argue that it puts the debt service in jeopardy, but, on the other hand, 1937-38 (unlike good years in the past) has brought a reduction, and not an increase, in the reserve resources that are available to meet any setback in New Zealand's trade.

The flight of capital, evident during the past fifteen months, has recently become more acute. It has been reported, for example, that certain New Zealand banks are attempting to discourage exceptional movements of funds, without, of course, interfering in ordinary commercial transactions. The strain to which the confidence of the New Zealand stockholder has been subjected can undoubtedly be traced to political as well as to purely economic sources, but it has not been lessened by the Government's defence that the London funds were unnecessarily large. Nor has the Prime Minister's recognition that sufficient funds must be accumulated in London to meet the Dominion's commitments afforded much consolation. Indeed, if the present rate of decumulation continues during the next year or two, the safety margin may become inadequate. Can New Zealand assure herself that her dairy produce and wool business will ride any further setback in international trade conditions with reasonable comfort? And if not, what are the potential Budgetary consequences for the Dominion?

Since the present Government took office in November, 1935, it has taken four important steps in the realm of economic policy. It has nationalised the Reserve Bank, which now controls credit, currency, and foreign exchange. In August, 1936, it introduced the dairy produce marketing and guaranteed price scheme, on behalf of which advances have been made by the Reserve Bank. It has actively promoted labour and social legislation. And, finally, it has given encouragement to the establishment of secondary industries. These changes have been facilitated by active export trade. But they have also produced uncomfortable consequences. The whole cost structure in the Dominion, affected by the 40-hour week in certain industries and by regulation of wages and conditions for farm labour, has risen—so high, in fact, that the dairy producers have successfully pleaded reduced profit margins to obtain £NZ815,000 from the marketing scheme's surplus for 1937-38 to supplement their guaranteed prices. Thus, the scheme, which operated at a loss of [illegible] in its

first year, has an effective surplus of only £NZ114,000 (and not £NZ929,000) for 1937-38 to offset against its deficit. Since losses are, in fact, made good from public funds, the change in the character of the marketing scheme from a guaranteed price arrangement to a profit-sharing pool has incurred no little criticism.

The rise in costs owing to social legislation is already considerable. Its full force, however, may not have been felt. The proposed pensions and health insurance scheme, which caused considerable market disquiet earlier this year, has lately been considered by a Parliamentary Committee, and will play an important part in the October election. The cost of providing a weekly pension of 30s. to persons at the age of 60, whose other income does not exceed £1, has been estimated at £NZ17,850,000 in 1939-40, of which £NZ9,850,000 would fall on the Consolidated Fund. It has lately been reported, indeed, that maximum pension rights are to be accorded to contributors whose total private and pension income does not exceed £300 per annum. It is only necessary to relate these estimates of cost with the fiscal and farming incomes of recent years (given in the following table) to show that, however desirable their object, the burden on a Dominion, dependent upon export trade in primary foodstuffs, would be considerable, even in prosperous years: —

(£NZ 000's)

	Years ended March 31,				
	1932	1936	1937	1938	1939‡
Government revenue ...	22,720	26,172	31,147	36,059	35,845
Exp. on social services...	7,233*	7,756	9,913	11,872	12,774
Gross farming income †	38,900	58,200	71,900	...	...
of which—					
Dairying, bees, etc.	17,500	24,000	27,700	...	...
Pastoral produce ...	14,900	26,800	37,000	...	...
Farm produce, volume index (1928-29 = 100)	*110*	*128*	*130*	...	...

* Excluding £1,119,000 subsidy to unemployment fund.
† Production year ended in above years. ‡ Estimates.

The Budget for 1938-39, which has recently been introduced by Mr Nash and is discussed in a comment on page 166, is balanced with a revenue total of £35,845,000 and expenditure of £35,787,000. The magnitude of these figures can be seen by a rough comparison between New Zealand and the United Kingdom. The ratio of population is, in round figures, 1 : 30. The New Zealand revenue is thus equivalent to about £1,075 millions for Great Britain, while the expenditure on social services is equivalent to £356 millions a year. It is fair to add that expenditure on defence is little more than £1 per head per annum, but on the other hand the debt burden is higher than in Great Britain. And, finally, the estimated cost to the Consolidated Fund of the new pensions and health insurance scheme is equivalent to £295 millions in terms of the British budget. Figures such as these are quite sufficient, without any political bias against Mr Savage's or any other Labour Administration, to raise doubts in any investor's mind.

The precise consequences of social legislation—as reflected in increased taxation and costs—are difficult to assess, for these increases are felt immediately, whereas any subsequent improvement in productive efficiency is bound to be slower. But it is certain that the Government's social policy must result in some measure of Budgetary expansion, without any offsetting reduction in the cost of the external debt. Over half of the Dominion's debt is domiciled in the United Kingdom, and the next opportunity for conversion does not arise until 1940, when the 3½ per cent. loan, of which £17,172,191 is now outstanding, falls due for repayment. The 4 per cent. loan, of which about £10½ millions is now outstanding, is optionally redeemable from 1943, but it is now quoted three points below par. Not until the middle and late 'forties will New Zealand have an opportunity to effect any considerable saving, from the conversion of 4½ and 5 per cent. stocks. Already, however, an annual saving of some £NZ1½ millions has resulted from conversions effected since 1932. In March of that year, only 29 per cent. of the total debt carried interest at 4 per cent. or less, but by 1937 the proportion had risen to 66 per cent. Nor is there any likelihood of relief from the exchange burden. The New Zealand pound was depreciated by 25 per cent. against sterling in 1933 to assist the farmer. Mr Savage, on taking office, announced his intention of increasing its exchange value, but in view of the uncertain trend of primary produce prices—quite apart from the deterioration in the balance of trade and the possibility of increased budgetary burdens—any appreciation of the currency against sterling seems highly unlikely.

On present indications, therefore, the maintenance of New Zealand's debt service may involve a greater strain in the near future than hitherto. Even if butter and wool values are maintained—and they have been fairly steady over the past two months—the Government will still be faced with the difficult task of financing a larger Budget and strengthening its trade balance. The recent deterioration of confidence is due, not to the threat of immediate crisis, but to uncertainty regarding the Government's intention to correct trends which are already disturbing, and may become ominous. In an election year, voters are more vociferous than bondholders. But although the Government is now compelled to walk delicately at home, it must also foot a big bill abroad. That it will continue to do so, we have no doubt. And if, in future, it can convince the British investor that it is not cutting over-generously into its limited supply of cloth, the tarnish on New Zealand credit will quickly be removed. The investor, in short, will watch for proof, particularly after the election, that the Government, in pursuing its policy of economic development, is keeping a firm grip on financial reality. In the long run, the interests of the New Zealand elector and of the holder of New Zealand securities are identical, and the path of a reforming Government will itself be smoother if it spares no pains to keep its credit standing high.

Credit Policy and the Banks

THE balance sheets of the clearing banks for June 30, 1938, deserve a somewhat closer analysis than usual. The recession in trade, whose existence is now beyond doubt, had not begun twelve months ago, and the weakness in the security and commodity markets was only a few weeks old. If banking policy has been in any way responsible for the recession, the fact should be reflected in this year's figures when compared with last year's. Alternatively, any attempts that have been made to cure the recession by monetary means should have left their trace on the accounts. The salient figures are set out in the accompanying tables.

It will be noticed that during the twelve months to June 30th, the aggregate cash held by the eight banks included in the table increased by £16·6 millions, or by 6·7 per cent. of the June 30, 1937, total. This is a by no

means inconsiderable expansion. In order to see how it was brought about, it is only necessary to look at the contemporaneous returns of the Bank of England. Taking the return for June 22nd last and comparing it with the previous year, it appears that there was an expansion of £10.5 millions in bankers' deposits. During the year, there was no change in the Bank of England's gold, while the note circulation was also practically unaltered. The sole counterpart to this growth in bankers' deposits was an increase of £12·2 millions in Government securities held in the banking department. This suggests that the growth in bank cash was due to a definite, and presumably deliberate, enlargement of the credit base. It is clearly impossible to impute any blame for the recession to credit restriction.

Deposits at the clearing banks, however, have only risen by £23·8 millions, whereas on the 10 per cent. cash ratio basis a growth of £16·6 millions in cash could have supported an expansion of £166 millions in deposits. Nor is the growth in deposits shared by all the banks, for Lloyds and Westminster Banks record decreases. Before probing further into the reasons for the limited increase in deposits, it is simplest to examine the year's changes in the banks' principal assets. The expansion of £16·6 millions in cash is accompanied by an increase of £20·6 millions in discounts, but balances with other banks and cheques in course of collection are fractionally lower, while call and short loans have fallen by £7·3 millions. The combined ratio of these liquid assets—cash, discounts, balances, etc., and short loans—to deposits has risen from 32·6 to 33·4 per cent., while their total amount has increased by £28 millions. It has thus outstripped the year's increase of £24 millions in deposits. To interpret these movements, it may first be recalled that during the twelve months under consideration there was a net increase of £45 millions in the volume of Treasury bills issued by tender. This amply explains the growth in discounts. On the other hand, the decrease in Stock Exchange activity may account for the contraction in call and short loans, which are made to the Stock Exchange as well as to the bill market.

This expansion in the more liquid assets has naturally limited the possibility of increasing the combined total of investments and advances. In actual fact, however, this total has not increased at all, but has shown a small decline. Investments have fallen by £13·6 millions, while advances have risen by £13·1 millions. This last figure, however, requires some qualification. A year ago the French railways' sterling credit of £40 millions was outstanding, a large part of which had been taken up by certain of the clearing banks. This was repaid early last winter. If allowance be made for this, the year's increase in advances to British customers was probably a good deal greater than £13 millions. Thus the recession has not so far been accompanied by a contraction in short-term borrowing from the banks.

There is no inconsistency in this. A considerable amount of new finance must have been needed for re-armament, while the stagnation in the new capital issue market, in itself a consequence of the recession, means that so far much of this new money has had to be found by the banks. There is no need to look for any further explanation of the growth in advances, or to fear that the banks are getting loaded up with frozen loans. The increased liquidity of the banks, in contrast with the conditions of 1929–33, is one of the redeeming features of the present recession. There can be very little doubt that a further expansion in advances would be eagerly welcomed by the banks. On the other hand, however, they have refrained from buying the full volume of securities that their cash holdings would justify. If the object of the purchase of securities by the Bank of England was to provide a stimulus to the gilt-edged market, it has failed in its purpose, and the enlargement of the credit base of the banking system has been absorbed, partly in an expansion of discounts, partly in a rise of the cash ratio from 11·1 per cent. to 11·7 per cent. The changes in the cash ratios of each of the five largest banks are shown below :—

CASH RATIOS OF THE BIG FIVE

	June 30, 1937	June 30, 1938
	%	%
Barclays	11·8	12·2
Lloyds	11·9	13·0
Midland	10·4	11·9
National Provincial	10·1	10·3
Westminster	11·1	10·8
Five banks	11·0	11·7

There is some danger in arguing from cash ratios alone. As was mentioned above, the banks also try to maintain a "second-line reserve" of more liquid assets to the amount (including cash) of not less than 30 per cent. of their deposits. But in the past twelve months this ratio has also risen, from 32·6 per cent. to 33·4 per cent. If the banks had been content to leave the ratio at the former figure, they could have bought £44·1 millions of securities, instead of selling £13·6 millions. If they had allowed the ratio to fall to 30 per cent., they could have bought £242·5 millions. The ratio of cash alone in the two cases would have been 11·4 per cent. and 10·5 per cent. respectively. There was consequently nothing in the reserve position, as commonly understood, to impede a considerable increase in the banks' holdings of securities over the twelve months. The fact that the holdings nevertheless fell may possibly mean that the banks, like other investors, are taking a view on the future prospects of gilt-edged securities, or it may indicate a change in the accepted reserve ratios, which may be connected with the presence in London of large amounts of volatile foreign money on deposit. But whatever the reason, it is enough for the moment to point to the fact and to remark that it has inevitably had some bearing on the course of the gilt-edged market since June, 1937, and hence on the long-term rate of interest.

The history of the past twelve months thus has several useful lessons to teach for the immediate future. There is very little evidence that the recession is due to any restriction of credit. The banks are lending more than a year ago, and their latest statements suggest that they still have in hand a margin out of which to satisfy the needs of credit-worthy borrowers. But enlargement of the credit base has not led to purchases of investments. If it were thought desirable, now or in the future, to stimulate the banking system into buying securities as part of a programme to bring down the long-term rate of interest, it would be necessary to pay particular attention to the question of ratios. In particular, it would not have to be forgotten that additional cash is of little value without more of the other liquid assets; and since the total of balances with other banks and cheques in course of collection is not susceptible of much alteration, the provision of additional liquid assets involves the issue of additional Treasury bills by tender. In short, the upshot of the matter is that if the authorities desire to use the banking system as a lever for promoting recovery through bringing down the long-term interest rate, they must not be too zealous in funding the floating debt. And, whatever is the intention of the policy pursued, the events of the past twelve months suggest that it is likely to be effective in precisely the degree to which it enlists the conscious co-operation of the

Finance and Banking

June Clearing Bank Averages.—The June returns of the ten English clearing banks give evidence of the effects of the War Loan dividend payment. Cash, which had been reduced in May by the reactions of the French repatriations and the Exchange Account's gold purchases, has been restored to the April level. Deposits, which had also fallen in May, are increased by as much as £37 millions.

(In £ millions)

	June, 1937	Feb., 1938	March, 1938	April, 1938	May, 1938	June, 1938

Investments in affiliated banks	23·5	23·9	23·9	23·9	23·9	23·9
Cover for acceptances, premises, etc.	168·2	152·4	155·3	155·3	159·6	159·5
Total assets	2,511·7	2,488·3	2,464·4	2,477·5	2,476·8	2,514·0

The early June increase in tender issues of Treasury bills explains the expansion in discounts and call and short loans. Investments and advances are little changed from May. These returns are antecedent to the big Defence Loan call, paid on July 1st. Largely because of this, tender issues of Treasury bills have fallen by £15 millions since June 25th. This makes it natural to expect the July averages to show a decrease in discounts, and quite possibly in deposits. The June 30th statements of accounts are discussed in an article on page 175.

* * *

The French Outlook.—At the moment, the French franc has ceased to attract interest in the foreign exchange market. That is reassuring from the French point of view. The recent French gold losses appear to have been very limited, and there is no new definite flight of funds from France. Sales of francs have mostly been inspired by a desire to make jobbing profits out of the growing strength of the dollar. The rise in French internal prices since M. Daladier's May depreciation of the franc has not been excessive, and in consequence there has been a slight improvement in both home production and exports. This summer's tourist traffic is proving extremely good. France has now become a cheap holiday centre, while political doubts are deterring holiday-makers from visiting the totalitarian countries. All this is helping the exchange position. On the other hand, the improvement in home trade is not yet sufficient to make the tax revenue buoyant enough to solve all France's fiscal problems, even though a more favourable view of the immediate Treasury position is being taken since M. Marchandeau's reassuring broadcast at the week-end. Again, M. Daladier's failure to grapple with the 40-hour week and ancillary problems has created some misgivings, for it is thought that he has missed the opportunity provided by the general support which attended his accession to power. Early in the summer Rentes were allowed to rise too far and too fast, so that profit-taking has since caused an inevitable reaction. At the same time it is felt that borrowing still has to be conducted upon too costly a basis, instances being a recent railway 6 per cent. bond issue at 84, and City of Paris 6 per cent. loan at 90. Criticism also attaches to the recent Dutch credit, part of which was placed in France, for it implies that French investors are not ready to lend direct to their own Government. The whole system of issuing a continual series of small loans is also regarded as unsettling, and M. Marchandeau has himself implied that he is afraid of overloading the capital market. All this suggests that while the immediate outlook is in many respects reassuring, neither French industry nor French savings have yet recovered to the point where they can carry the full burden of national defence and other Government needs.

"Germany and the World's Insurance": A correction.—The Insurance Supplement contained in last week's issue of *The Economist* included an article by a Correspondent on "Germany and the World's Insurance." In the course of this article the statement was made that "the Assicurazioni Generali of Trieste, the Swiss Reinsurance Company of Zürich and the Svea Company of Göteborg are all subject to German control through a large majority of the ownership of their shares." We now learn that, owing to an unfortunate mistake in translation, this statement was incorrect in the case of all three companies. The Assicurazioni Generali of Trieste is entirely in Italian control, the Swiss Reinsurance Company of Zürich is entirely in Swiss control, and the Svea Company of Göteborg is wholly Swedish. We desire unreservedly to withdraw the statement that these companies are subject to German control and to express to them our profound regret for any annoyance or inconvenience to which they may have been subjected as a result of its publication.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW, which is sent post free on application, gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Japanese Gold Drain. — Nearly a year ago the Japanese authorities wrote up the Bank of Japan's gold reserves in the proportion of 133 to 350, thereby raising them from 446 to 1,170 million yen. Of this new amount 801 million yen were left with the Bank of Japan and the balance was used to constitute an Exchange Equalisation Account. Hitherto the Bank of Japan's gold has remained intact. This week, however, a new proposal is announced. A sum of 300 million yen is to be appropriated from the Bank of Japan's reserves and used to constitute a Foreign Exchange Fund Account. This gold will be used to finance imports of raw materials needed by the export industries, and within a limited period it is to be replaced by gold derived from the sale of the resulting exports. Meanwhile the Bank of Japan will retain 500 million yen, which, so the official statement runs, will be sufficient for the new proposal to have no effect upon confidence in Japan's currency. A former, if mythical, Japanese Minister, who in his time held several portfolios, once called attention to the advantages of corroborative detail to add an air of artistic verisimilitude to an otherwise bald and unconvincing narrative. Apparently this precedent has not been forgotten. At least the cynic is prevented from inquiring whether there is no longer any gold in the Exchange Fund which could be used for this purpose.

National Bank of Australasia.—The latest accounts of this bank, dated March 31, 1938, are in conformity with the general trend of those of the Australian trading banks. On the liabilities side deposits have risen slightly from £42.2 millions to £43.1 millions. Among the banks' assets, cash (including money at short call in London) is virtually unchanged at £5,979,000. Holdings of Commonwealth Treasury bills are reduced from £3,600,000 to £2,485,000, but investments have risen from £2,788,000 to £4,303,000. There has thus been a partial change-over from Treasury bills to longer-dated securities. Advances and other assets have risen from £33.1 millions to £34.8 millions, while their ratio to deposits has risen from 78.4 per cent. to 80.8 per cent. This last percentage compares with one of 88.5 per cent. for all the nine trading banks. The National Bank of Australasia therefore occupies a relatively liquid position, which may prove advantageous now that Australia's exports are being affected by the recession. Gross profits have risen from £1,240,000 to £1,357,000, but much of this increase has been absorbed by heavier expenses and taxation. Last year a final dividend of 6 per cent. was paid, compared with an interim dividend of 5½ per cent. This year a level 6 per cent. is paid, this being the highest dividend since 1932. During 1933-35 only 5 per cent. was paid.

MONEY MARKET NOTES

Foreign Exchanges

DOLLARS continued to appreciate this week, and by Wednesday sterling had fallen to $4.91⅛. The next day it was a little stronger at $4.91⅛. The demand for spot dollars has been mainly commercial in character. Forward dollars have also been more bid, and six months' dollars are quoted at 1¼ cents premium. French francs have been easily held at Frs. 178⅛, though the French Control has had to buy a few francs. Three months francs are quoted at Frs. 2½-⅝ discount, with no support from the Control, but six months' francs are at the ominously wide margin of Frs. 8¼ discount. Guilders have been steady, but Swiss francs have appreciated to Frs. 21.47½ in sympathy with the dollar. Belgas have similarly improved to Bel. 29.09. Six months' Belgas, however, stand at the relatively wide discount of 80 cents. Argentine free pesos have been rather more bid, and have improved from pes. 19.02 to pes. 18.94. The Canadian dollar is quoted this week at a narrower discount in New York. In view of the fact that all first-class mails will be carried by air, the Australian banks are ceasing to quote buying rates on Australia for sea-mail transfers.

*

The Money Market

THE clearing banks remain ready lenders at their usual rates, but bond money is still not very plentiful.

	July 22, 1937	July 14, 1938	July 21, 1938
	%	%	%
Bank Rate	2	2	2
London Deposit Rate	½	½	½
Short Loan Rates:			
Clearing Banks	½–1*	½–1*	½–1*
Others	½–⅝	⅝	⅝–¾
Discount Rates:			
Treasury bills	½	½	½
Three months' bank bills	17/32–9/16	17/32–9/16	17/32

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

September and October maturities are still in steady demand from the clearing banks, but the market is not eager to sell. The reason is that most of the bills now maturing are still held by the market, as the banks did not buy many bills maturing during July. Conversely the market has only had indifferent success at the July tenders, while during the past four weeks new tender issues of Treasury bills have fallen £15 millions short of maturities. Thus the market is now extremely well supplied with money, and so prefers to hold bills rather than to sell them.

*

The Bank Return

THERE has been a further slight drop in the note circulation, which is now at its lowest point prior to the summer holidays. In the banking department, the chief movement has been a transfer of funds from bankers' to public deposits. This is due to July income tax payments, to the usual excise duty payments made in the middle of each month, and to discrepancies between the dates of Treasury bill payments and maturities. The increase of £2½ millions in other securities is a temporary movement arising out of the transfer to the Exchequer of excise duty payments, and it will disappear next week.

The Bullion Market

THE demand for gold from many Continental centres has remained strong, buying having been noticeable from French, Swiss and Dutch sources. The authorities have met this demand fairly readily, for the premium has never risen to more than 2d. per fine ounce. The market price, however, rose on Wednesday to 141s. 6d. per fine ounce, this movement being due to the further appreciation of the dollar. Throughout the week the premium remained just high enough to prevent arbitrage. On Wednesday, when gold reached its highest price, a little re-selling became noticeable. Part of this was against spot purchases of belgas made to cover the maturity of forward sales made when the belga was weak three months ago. Some interests with surplus funds have been buying gold against sales of forward dollars. In this way they secure the premium at which forward dollars are now quoted, while as the gold can be sold in the United States to cover the exchange contract on its maturity, they run no risk of loss. There have also been purchases of forward gold against sales of forward dollars, but these operations are more speculative, for the premium on forward gold is greater than that on forward dollars.

* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce ·999 fine during the week.

In the silver market, the appreciation of the dollar stimulated further bear covering, which went so far as to drive the London price above the New York parity price. It is pointed out that even if sterling fell to $4.87, the equivalent New York "dead parity" would only be 19⅛d., and the London price is now nearly up to this level.

Investment

Market Trends.—British weather conditions, it is said, are determined by the ceaseless combat of cyclone and anti-cyclone as they proceed over the Atlantic. The same system of causation has linked stock markets in London and New York ever since the recovery movement started in mid-June. At the end of last week, more cautious observers, conscious of the fact that Wall Street's impressive recovery had so far received flimsy support from the trade indicators, were inclined to discount the prospect of a resumed advance, at least of any dramatic order. Increased selling on the intermediate declines suggested that the technical dash which had hitherto been characteristic of the market had received a check. But such forecasts under-estimated the resilience of the market. Wall Street has proceeded to show that its appetite is unimpaired. On Monday, the market penetrated the Dow Jones "resistance point" of 140, and provided the foretaste of a further wave of buying on Tuesday, in which nearly 3 million shares were traded, and the industrials average jumped 3¼ points to reach the highest point since October 9th last year. To the chart-reading fraternity, the "confirmation" of this achievement by the continued advance of rail stocks was especially gratifying. But profit-taking, which has succeeded every impressive rally since the market began to recover, checked the advance in mid-week, although turnover was lower. Wall Street, indeed, still appears to have the bit between its teeth. It is assuring itself that wage adjustments will be practical politics in the steel and railroad industries, and is ready to accept estimates that steel output will reach 60 per cent. of capacity in the course of a month of two. There is, of course, still the shadow of the Administration, which this week has fallen over the film industry, against which anti-trust proceedings have been instituted. Wall Street's further gain of ground has naturally been appreciated in London, where security values at first improved in all sections. But the Stock Exchange, ever keen to detect changes in the political wind, also interpreted the visit of Herr Hitler's personal envoy to London as a possible harbinger of pacification in the Central European problem, which has recently shown signs of increased acerbity. Each week, however, confirms London's ultimate dependence upon Wall Street. The cautious investor may have missed the best buying opportunities, but he can at least claim there is still no immediate sign of economic improvement on the scale which will eventually be necessary if present stock prices are to be sustained.

* * *

Share-pushing Bill.—Although the Government's intention to introduce a measure to combat share-pushing was announced in the King's Speech last October, pressure on Parliamentary time has prevented its appearance. This week's announcement that the Bill will be introduced before the recess comes opportunely, for the investing public has been reminded of the extent of the evil activities of the share-hawker by recent criminal proceedings at the Central Criminal Court, as a result of which six of the defendants in the "Wetnall, Jenkins" conspiracy case were sentenced to terms of penal servitude and imprisonment. The Bill will presumably be based largely on the findings of the Departmental Committee of the Board of Trade on Share-pushing, which issued its report in August last year. Its main findings concerned the re-drafting of the share-hawking provisions of the Companies Act, the establishment of a register of all dealers in stocks and shares (members of recognised Stock Exchanges being exempt), and the tightening-up of the provisions of the Larceny Act which define false pretences and inflict penalties. In a debate on the Companies Acts last December, the Parliamentary Secretary to the Board of Trade indicated that the measure would also cover what he described as "cognate activities," such as invitations to participate in share, commodity or metal pools. Remedies of abuses under the Industrial and Provident Societies Acts, although difficult to draft without interference with the large number of *bona fide* societies registered under the Acts, were also being considered. The introduction of the Bill at the end of the present Session will serve two objects. It will obtain advance publicity and discussion. And, secondly, it will presumably be well towards the top of the legislative timetable when the House re-assembles. All sections of the community, with the possible exception of the dwindling number of unscrupulous share dealers who remain at liberty, will welcome and assist its early enactment.

* * *

Unit Trust Formations.—Full details are now available of the British and American Securities Trust, formed by the British General group to provide a mixed interest in British and American industrial securities for the unit trust investor. The trust is a further example of the "limited flexibility" type, for its portfolio of permissible investments consists of fifty-two securities, equally divided between British and American stocks. Not less than 50 per cent. of the trust fund will be represented by British securities or cash, and the number of companies in the permitted list may be increased, "under appropriate safeguards," by not more than three companies in any half-year up to a total of twenty-six in all. It is also of some significance that the trust, like certain recent formations, is of the "Cash Fund" type, under which the whole of the amount subscribed by certificate holders is payable to the trustee for the benefit of the fund, subject only to the deduction of the service charge. This consists of 4½ per cent. of the inclusive price of the units, together with any adjustment of the price up to the nearest multiple of 3d. A half-yearly payment to managers and trustees will also be payable at the rate of one quarter of one per cent. on the average value of the trust property. The approach of the holiday season may be expected to reduce the number of new trust formations in the near future. But if active market conditions are maintained, and if the legislative programme for the autumn, as expected, contains no reference to unit trusts, further opportunities for unit trust activity may arise in the autumn.

* * *

Mr Richard Maguire.—The death of Mr Richard K. C. Maguire, at the early age of 47, robs the Stock Exchange community of a personality which it can ill afford to lose. Mr "Dick" Maguire was senior partner in the stockbroking firm of S. C. Maguire and Son, and had been a member of the "House" since 1919. His election to the Stock Exchange Committee in March, 1936, brought his great knowledge of Stock Exchange affairs, both in London and the Provinces, into the service of Stock Exchange government. His canons of business were impeccable to a degree. His independent mind and able judgment were fostered by the close contact which he maintained with industrial conditions and by his absorbing interest in political affairs. Sincere sympathy will be extended to his brother, Mr Thomas R. Maguire, who remains as the head of an esteemed firm which was established 200 years ago.

Company Notes

Callender's Cable and Crompton Parkinson.—For some days before the official announcement of merger negotiations this week, market rumour had been freely associating the names of Callender's Cable and Crompton Parkinson, to the accompaniment of spirited bidding for the shares. The initial suggestion, plausible though it seemed, that Callender's Cable might obtain an interest in the Derby Cables section of Crompton Parkinson's undertaking is short of the truth. This week's announcement shows that a complete pooling of interests is contemplated through the medium of a holding company, by means of which the identities of the two companies will be preserved. Each has its special characteristics. Callender's Cable is a mature industrial undertaking, with an expanding profits record in recent years. Until 1936, when the dividend was supplemented by a 5 per cent. cash bonus, it had maintained a stable 15 per cent. ordinary share distribution for a decade. It is largely interested in cable manufacture and, like Crompton Parkinson, is a member of the Cable Makers' Association. Its decision to seek a liaison may be due, at least in part, to increased competition in the cable trade, and to the advantages of greater diversification in future. It might be unwise to infer from the mere completion of the "Grid" transmission lines that any reduction in demand for cables is likely to be serious, although increased electrification in recent years does imply greater reliance upon replacement demand at home in future, and increased dependence upon export business. Crompton Parkinson, on the other hand, has been an essentially dynamic concern in recent years. It has set a hot competitive pace in the electrical equipment and lamp business. Its equity earnings have increased in spectacular fashion during the last five years from £58,530 to £355,206. Simultaneously, its equity capital has been progressively increased by regular capital bonuses and by occasional cash issues. That a concern so noted for its independent policy should be ready for alliance with one of the "Big Three" cable companies may suggest that, in the management's view, the first stage of dynamic progress has been completed, and that consolidation marks the next step. The link with Callender's Cable should extend its already wide trade connections.

* * *

Terms of Exchange.—The terms of the exchange of shares in the two undertakings for those of the holding company are now under consideration. Since the position, and the immediate prospects, of the two companies show certain dissimilarities, the calculation of a "fair" basis of exchange is somewhat difficult. In the following table we set out the earnings, dividend and capital positions of the two companies for 1933, 1936 and 1937:—

	Total Profits	Earned for Ord.	Earned	Paid	Ord. Cap. issued end-Year
	£	£	%	%	£
Callender's Cable—					
1933	522,311	169,885	15·1	15	1,123,916
1936	833,640	392,366	39·9	20	1,123,916
1937	924,990	391,989	40·5	20	1,123,916
Crompton Parkinson‡—					
1933	119,004	58,530	34·9	12½*	199,770†
1936	384,608	305,700	76·4	12½*	499,479†
1937	432,114	355,206	76·9	12½*	584,058†

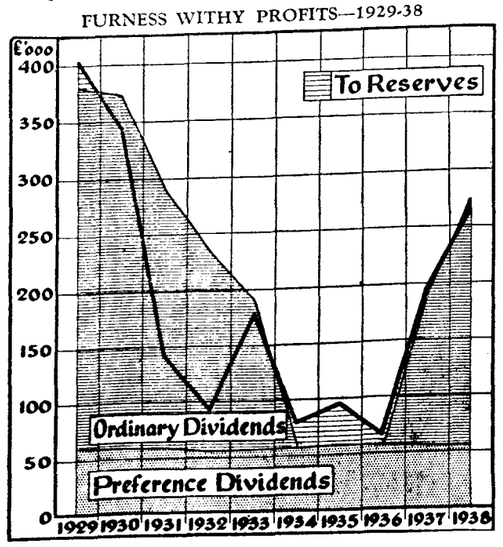
* And capital bonuses. † Of which £150,000 ordinary and balance "A" ordinary. Present capital, £819,628. ‡ Years ended Sept. 30th.

Each company, in addition to its equity capital, has two issues of preference capital. So far as the ordinary shares are concerned, dividend distributions would scarcely provide a satisfactory basis for the exchange, for Crompton Parkinson has distributed a much smaller proportion of its earnings in cash, and has financed much of its extension in recent years from retained profits. On the company's present equity capitalisation, last year's earnings would be equivalent to 54.8 per cent., or 13.7 per cent. on a £1 share. This level of earnings is approximately one-third of the rate on Callender's Cable ordinary which stand at 99s., compared with 30s. 1½d. for Crompton Parkinson. On the latest earning basis, therefore, the two shares would appear to be somewhat out of line. It may further be noted that the merger arrangements will presumably take into account any fructification of Crompton Parkinson's recent expansion which has yet to accrue.

* * *

Southern Railway Dividend.—The first of the main line railway dividend statements make unpromising reading. A reduction in the interim distribution on the preferred ordinary stock from 2 per cent. to 1 per cent. had been generally anticipated. But the course of net revenue, as displayed in the announcement, was far from encouraging for the market, which marked down the preferred stock from 69½ to 65 nominal. For the half-year to June 30th, passenger receipts fell by £22,000 and goods receipts by £61,000—a total fall of £83,000, which is £22,000 less than the decline in traffics for the first 26 weeks. Railway working expenditure, however, increased by the unexpectedly large sum of £456,000, of which approximately £220,000 was attributable to the increase in wages granted last August, and the balance mainly due to higher costs of materials and maintenance expenses. Including a reduction of £35,000 in the net income from steamboats and other ancillaries, net revenue thus fell during the half-year by £574,000. In short, the deferred ordinary stock is completely uncovered, and even if the company were to "break even" during the second half of the year, earnings for the preferred stock would only amount to 4⅜ per cent. The estimate of the increased cost of wages during the current year in our article on home rail prospects last week was based on the company's own estimate, but it may prove too high. But our estimate that earnings may be of the order of 4¼ per cent. for the year may still be reasonably close if materials and maintenance costs continue to run at their present levels.

* * *



Furness Withy Report.—There are few shipping companies which rival the conservative financial policy of Furness Withy. There are also few shipping shares which have awaited the fruits of recovery with greater patience. During the year to April last the company's total profits, including dividends received, reached the highest total since 1929. But since recovery first began depreciation has had the larger claim on profits. In 1929 and 1930 the appropriation was £250,000. Since 1931, however, it has been raised from £150,000 to reach £350,000 in each of the past three years. The past year's recovery in net earnings has proved barely sufficient to meet the 5 per cent. ordinary dividend, after maintaining this depreciation provision. And it is evident from the directors' report that the latter part of the year failed to maintain the promise of the early months. This fact somewhat dims the satisfactory nature of the figures for the latest year, analysed below:—

	Years to April 30th 1936	1937	1938
Profits, including dividends received	415,310	544,744	620,681
Depreciation	350,000	350,000	350,000
Preference dividend	57,656	56,719	55,312
Ordinary stock:—			
Earned	*7,654*	*138,025*	*215,369*
Paid	Nil	135,000	217,500
Earned %	*0·2*	*3·1*	*5·0*
Paid	Nil	3	5
Carried forward	210,787	213,812	211,682

OVER ONE HUNDRED AND TEN YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS EXCEED £17,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1.

In the following chart we show the company's distributable profits during the past decade:—

FURNESS WITHY PROFITS—1929-38

Total profits are struck, as usual, after depreciation. It may be pointed out, however, that profits for 1931 and 1932 were supplemented by a transfer of £100,000 from tax reserve which is not included in the total. For the three subsequent years there was included in disclosed profits a transfer of approximately £100,000 from reserves in each year.

* * *

As interests in subsidiary companies comprise nearly half the assets totalling £11,984,752, the Furness Withy stockholder may well feel the lack of a consolidated assets and earnings statement. But the balance sheet as it stands is impressive, particularly for its liquid strength. In March, 1936, the company showed net current assets of no more than £54,000. Since that date, the liquid position has been greatly strengthened, and surplus liquid assets now amount to £1,040,000. General investments, including gilt-edged (at cost, less depreciation), total £2,439,873, compared with £1,621,936 two years ago. In the same period shipping property has been reduced from £2,992,818 to £2,288,171 (a figure which probably falls well short of net replacement cost), while interests in subsidiaries have declined from £5,969,109 to £5,687,261. Active depreciation policy, in short, has written the properties to conservative levels, and also provided the resources for replacement building when the time is opportune. The immediate prospects for the ordinary stockholder, however, are somewhat obscure. The further decline in shipping freight rates must sooner or later have some adverse effect upon conference rates (which determine the revenues of liner companies such as Furness Withy) unless there is a fairly vigorous revival of international trade. The £1 units yield £5 10s. 3d. per cent. at 18s. 1½d.

* * *

Distillers Prospects.—In the light of Lord Forteviot's survey of the past year's trading, the increase in profits obtained by the Distillers Company in 1937-38 appears quite satisfactory. Earnings for the equity were increased by £56,528 to £2,265,119, but the total distribution was maintained at 22½ per cent., including a cash bonus of 2½ per cent. (and not 5 per cent., as stated on page 80 of *The Economist* of July 9th). A number of extensions had not yet been in operation sufficiently long to bring appreciable benefit to profits for the year to May 15th last. The Booths Distilleries acquisition is a case in point—though progress is being made—and other developments include the new Cambus distillery and the Gyproc Plaster Board factory. It is the company's practice, moreover, to suspend profit on sales to subsidiaries until the goods are actually marketed, and Lord Forteviot disclosed that the sum reserved for spirit manufactured this year was larger than the sum withdrawn from reserve, although he remarked that costs had risen. The volume of business, however, had improved in almost every country, and home trade showed to particular advantage. Profit margins on industrial alcohol are still very narrow, and the chairman emphasised that the company had no share interest in any concern selling petrol mixed with alcohol. The Distillers undertaking is consolidating its position, and should continue to show a steady growth of profits in future years as the business extends. But Lord Forteviot's review suggests no ground for revising our previous opinion—that the market invests the ordinary stock with dynamic qualities to a degree which is not confirmed by history.

* * *

British Plaster Board.—Although the fall in British Plaster Board profits during the year to April 30th last is disappointing, the latest results appear more satisfactory when examined in close perspective. Lord Belper explained at this week's meeting that the setback was due, not to any decrease in the volume of trade, but to higher costs and reduced selling prices for plaster board. Consolidated net profits after depreciation amount to £576,888, against £600,216. The parent company's profits show a somewhat larger fall from £564,397 to £534,121 before charging £166,326 (against £150,597) for taxation and fees. A repetition of the excellent 1936-37 results, however, was scarcely to be expected. The growth of the company, since it became known to the investor in 1932, has been remarkable; the latest profits, indeed, are little short of ten times those earned in 1932-33. The undertaking makes over 100 different products, and is by no means dependent solely on the building trade. But it has naturally been affected by the decline in building activity,

SCRAMBLE FOR STOCKS

Recent Uprush in Stocks Gives Added Significance to Digest No. 15 of March 22, 1938, Entitled "The Coming Scramble For Stocks"

The function of an Investment Consultant (under a Managed Money economy) is not only to forecast the NATURAL swings of the business cycle, but also to forecast those ARTIFICIAL MONETARY measures which the government might take to counteract the "natural" deflationary (or inflationary) forces. One may be right on one count yet wrong on the other.

In early September 1937, Major Angas advised the Washington authorities that IF they did not take immediate steps to counteract the 6% bank credit deflation of net demand deposits, which had already occurred, they would have a *stock exchange panic followed by an unexpectedly violent cyclical slump. His forecasts proved all too true.*

In November 1937, in his pamphlet "*Remaking the Boom.*" Major Angas published the telegrams which he had sent to Washington; and enumerated the specific measures which would have to be taken to reverse the downward cyclical trend.

After a delay of eight months his advocated policy has been adopted, lock, stock and barrel. The result has been the recent "SCRAMBLE FOR STOCKS," as forecast in his April pamphlet, "*The Coming Rescue Inflation.*"

Major Angas

Money, and its "flow," governs trade. It was the 20% inflation of bank money which caused the 1926-29 boom. It was a 28% deflation of bank deposit money which caused the 1929 slump to reach the 1932 levels. It was a 40% reflation of bank deposits which caused the Roosevelt boom of 1936. And it was a 6% deflation of bank deposits which caused the 1937 slump. Finally, it is the recent 3% reflation of bank deposits, coupled with a prospective further 15% reflation, that has caused the recent revival. Furthermore, the future *speed* of the coming boom will depend on Monetary Policy.

Digests

Stock market and business forecasting depends primarily on a study of monetary factors, i.e. Managed Money. Investors and business executives, as well as speculators, should therefore study Major Angas's "DIGESTS" on "*Coming Medium-term Fluctuations in Trade and Securities under Managed Money.*"

They are read by leading statesmen, bankers and executives throughout the English-speaking world.

A twelve months subscription to these digests costs $25. Six months $15. An early Digest will be entitled "HOW TO RIDE THE COMING NEW BOOM."

L. L. B. Angas, Investment Consultant, 301 Park Avenue, New York

and possibly by the accelerated pace of competition. The results, in short, fulfil the chairman's warning last year against the expectation of an indefinite continuance of the company's high rate of progress. Shareholders, however, have the consolation that the 50 per cent. dividend is maintained, although net earnings are £45,808 lower at £360,047, and represent 65.1 per cent. on the ordinary capital, against 71.6 per cent. in the previous year. Reserve receives £66,740, and the balance carried forward is increased by £16,828. In recent years the company's progressive policy has served it well, and, in the chairman's words, the company's business "refutes rather than confirms" the trend shown by the building-plan figures. Both in turnover and profits no setback is discernible so far in the current year.

* * *

W. and T. Avery.—The holder of the ordinary shares of W. and T. Avery seeks security rather than excitement. He has been well served by the latest results of the company for the year to March 31st last. Trading profits again increased, though less vigorously than in recent years, from £209,195 to £212,745. The effects of N.D.C., coupled with those of rising costs (on which the chairman issued a warning last year) may well account for the moderate dimensions of last year's progress. The fact, however, remains that the 15 per cent. dividend, which has been maintained for more than a decade, and accompanied on two occasions by a capital bonus, is again covered by earnings exceeding 22 per cent. The reserve fund is raised to £275,000 by the transfer of £45,000 from revenue, and now approaches one-third of the issued ordinary capital. A further expansion of stocks, from £246,465 to £306,580, coupled with a relatively small increase in fixed assets, provides the main interest in an essentially sound balance sheet. Despite the movement in trade indicators, this increase is unlikely to reflect any substantial accumulation of stocks due to reduced demand. The stable character of the £1 ordinary stock units is well reflected in their yield of £4 0s. 9d. per cent. at a current price of 74s. 4½d.

* * *

United Dominions Trust.—Mr J. Gibson Jarvie's speech at the United Dominions Trust meeting this week was in characteristically vigorous style. The Trust was established to fill the "No Man's Land" between bank finance, and the facilities offered by the capital market. In particular, it has done much to foster the retail turnover of capital and semi-capital goods for industrial, agricultural, and domestic use. It has penetrated new fields, such as assisting the financial requirements of medical practitioners; it has developed a service for builders and contractors, by which property owners can spread the cost of improvements over a period. Mr Gibson Jarvie emphasised the benefits which this latter service might provide for the hotel and boarding house "industry"—a point which suggests that this type of finance will not duplicate the services offered by the building societies. And he stoutly denied that the Trust's agricultural department was guilty of imposing unduly high rates of interest or onerous terms. On the Hire-Purchase Bill, the chairman expressed the view that this measure was long overdue. There should, in fact, be little change in sound hire-purchase business as a result of its enactment. His conclusion that, short of a "major catastrophe," the Trust's business would continue to progress is well supported by its record during the past sixteen years.

* * *

Richardsons, Westgarth Results.—The reconstruction and amalgamation scheme put through earlier this year prevents any exact comparison of the latest profits of this marine and general engineering business with those of earlier years. It is, however, clear that the undertaking has achieved a more satisfactory earning basis, in contrast with the series of losses previously experienced. Total profits amount to £25,469 for the fifteen months to March 31st last. It was estimated the original Richardsons business would contribute not more than £10,000 to profits for the year ended on that date, and the year's profits for the combined companies were put at £82,000. Presumably only a small proportion of the earnings of the acquired businesses are brought into the latest accounts, for the scheme was not passed till February. Directors' fees and bank interest absorb £10,822; and debenture interest requires £1,375, which is only a fraction of the amount required for the £500,000 5½ per cent. debenture stock issue in future. The proceeds, however, have been partly applied to repaying the bank overdraft. The surplus of £13,272 represents 2.2 per cent. for the ordinary shares, from which is deducted the debit balance of £7,861 which remained after giving effect to the scheme. While the report refers to the decline in orders throughout the country in the last few months, especially in the marine engineering business, the immediate outlook is not discouraging. In the past year the value of the work turned out by the combined companies was £1,500,000; orders at present on the books are valued at £1,533,136, most of which are due for delivery in the current financial year. The amalgamation, moreover, should eventually provide economies. But while these orders may protect the 1938-39 profits to some extent, there is no clear indication of a substantial dividend distribution, and the 5s. shares stand no higher than 2s.

* * *

The Week's Company Profits.—Our usual analysis of profit and loss accounts on page 211 includes the results of 60 companies, apart from new concerns or those for which comparable figures for last year are not available. Net profits of these companies amount to £4,259,000 for the latest year and show an increase of 2 per cent. over the previous year's level of £4,170,000. The total profits of 1,614 companies analysed this year amount to £227,636,000, and show an increase of 12 per cent. over the previous year's total of £203,624,000. This week's results are discussed on page 187 under the heading "Shorter Comments."

* * *

Company Meetings of the Week. In this issue, reports of company meetings begin on page 194. At the *Standard Bank of South Africa* meeting, Mr Bertram Lowndes stressed the importance of the gold-mining industry as a stabilising factor in the Union. During 1937, new production records had been reached, and in the Transvaal nearly £27,500,000 had been disbursed in wages and salaries, while the value of stores consumed was about £28,500,000. Viscount Samuel explained to *Palestine Electric Corporation* shareholders that the increase of 4.9 per cent. in revenue was less than the 8.8 per cent. increase in units sold owing to the further reduction in rates that had been effected. In the last six years, the average charges per unit had been almost halved. Mr J. Gibson Jarvie's speech at the *United Dominions Trust* meeting is discussed on this page, and Lord Forteviot's survey at the *Distillers Company* meeting on page 181. At the *North Eastern Trading Estates* meeting, Colonel K. C. Appleyard expressed the hope that by the end of this year the civil engineering work on the Team Valley Estate would be finished, and that expenditure would subsequently be on factory buildings, which would, of course, produce revenue. At the *Allied Bakeries* meeting, Mr W. Garfield Weston said that net trading profits for the current year, if all the companies now brought into the group maintained their earnings, would be around £293,000. Mr P. E. Marmion reported to *Gold Mines of Kalgoorlie* shareholders that mining and treatment costs had been reduced by about 14s. a ton. The Rt. Hon. L. S. Amery pointed out to members of *Gold Exploration and Finance Company of Australia* that the balance sheet reflected the policy of

HOTEL WESTMINSTER
FULL BOARD From 27/6
Le Touquet

eliminating doubtful propositions and concentrating on properties that had been proved capable of profitable operation. At the *Anglo-Dutch Plantations of Java* meeting, Mr W. H. Daukes reported that the selling price of the tea crop had advanced during the year from 9.37d. to 10.79d. per lb net. Mr Gerald Kingsley pointed out to shareholders of *Merlimau Pegoh* that the company was well placed for selecting the best areas for tapping. At the *Sungei Gettah Rubber Estates* meeting, Mr P. J. Burgess said that the permitted new planting would cover 78 acres. At the *Bristol Aeroplane* meeting, Mr G. W. Verdon Smith referred to additional equipment and buildings which would require an expenditure of £1,500,000. Members of *Consolidated Tin Smelters* were informed by Mr Ernest V. Pearce at the annual meeting that the quota releases for the first half of the current accounting year would average about 50 per cent. of standard tonnages. At the *City of San Paulo Improvements and Freehold Land* meeting, Mr Herbert Guedalla said that shareholders must await with patience the conclusions of an economic committee set up by the President of Brazil to investigate the Exchange situation.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
AUGUST 9	AUGUST 11

THE London market opened with no great show of promise on its three-week holiday journey. Prices, however, were soon responding to Wall Street's further advance into new high ground, and made the most of the pacific implications of this week's discussion between Lord Halifax and Herr Hitler's personal envoy. The general appearance of the market, from gilt-edged to commodity shares, has been one of renewed confidence after an indifferent start. But Wall Street's behaviour still sets the tone from day to day.

Led by undated issues, the *gilt-edged market* staged an all-round advance. Business remained small, but the trend of prices was undoubtedly "right." War Loan, Old Consols, and Local Loans made the best progress in mid-week, but became irregular later. The recovery helped the further improvement in home corporation scrips.

European bonds were unsettled at first by week-end reports from Berlin of troop movements in Czechoslovakia, and dealers marked prices down to stem any resulting liquidation. On the reappearance of greater calm in mid-week, the recovery in Czech, German and Austrian bonds was prompt, although a certain amount of profit-taking prevented the maintenance of the best prices. Far Eastern issues were heavy, and South American bonds received no support.

*

Nervous conditions prevailed at first in the *home rail market*, but a decided improvement set in on Tuesday, and was partly maintained in the face of another depressing batch of traffics. Southern stocks attracted support on the latest receipts and in anticipation of Thursday's dividend announcement (discussed on page 180). The actual figures, however, proved disappointing and the preferred stock fell to 65 nominal. Slightly firmer conditions were also reported in the Argentine rail market, although business remained extremely small.

In the *industrial share market*, the week was unexciting, but on the whole satisfactory. Firmer prices succeeded a hesitant start, but business remained throughout on a small scale. Iron and steel shares improved during the first part of the week, and finally there was some general broadening of interest. Coal shares behaved similarly, Powell Duffryn being a particularly firm share in mid-week on news of orders for Welsh coal. Interest in motor issues revived after a quiet beginning, price changes, however, being quite small. As in previous weeks, aircraft shares displayed a somewhat better tendency than the rest of the market, and with a few exceptions made persistent small gains. The attention of the electrical equipment section was absorbed by Crompton Parkinson and Callenders, on statements concerning the merger (discussed on page 180). Electric supply shares continued firm. Textile shares were first inclined to weaken, and though quotations became steadier, little business passed. Celanese of America hardened on American news, and Courtaulds, after losing ground on the decision to close two mills during August, rallied well, mainly on bear covering. No definite trend emerged in brewery shares, price movements continuing within narrow limits. Distillers were unaffected by the meeting. Among provision and catering issues, Scribbans rose, but reacted in mid-week. Leaders in the miscellaneous group were firm on the whole, but without marked movements.

*

Under the influence of Wall Street, *oil shares* opened cheerfully. The undertone continued firm, and the general trend of prices was upwards, but this satisfactory tendency was not accompanied by any expansion of business. While a few share prices responded to the firmness of the commodity early in the week, conditions in the *rubber market* were idle, quotations being hardly tested.

The *mining market* spent a quiet week on the whole, though there was some activity in individual issues, and business tended to broaden as the week went on. Dividend-paying Kaffirs were uninteresting, holiday conditions in Paris not helping matters, though the tone in mid-week was more cheerful. Developing mines were firmer, attention again turning to Western Holdings. Interest in West African gold shares revived a little, and prices for Rhodesian copper companies were firm, but there was not much business. Except for considerable activity in Polberro, tin shares were quiet.

ACTUARIES' INVESTMENT INDEX

For the first time for some weeks, a decline is recorded by the Actuaries' Index of 151 ordinary share prices, which stood on Tuesday last, July 19th, at 66·7, against 67·9 a week ago and 64·3 a month ago. The corresponding average yields are 5·86, 5·72 and 6·02 per cent. A selection of the component indices follows :—

New York

FOR the second week running, Wall Street prophets had been none too sure of themselves, but the market immediately proceeded to establish new "highs" for 1938, and the easier tendency in mid-week could be attributed to profit-taking and anti-trust proceedings against film-producing companies. After a cautious start a substantial advance was recorded, with rising turnover, and industrial prices (according to the Dow Jones index) reached the highest levels since last October. Then in mid-week the tone became less certain, though turnover continued at a high rate, and interest was diverted from industrials to rails and utilities. Rails, in fact, were better than for some time, the governing factor being wage negotiations with the Brotherhoods. The possibility of wage-cuts also benefited steel shares, which led the general advance but shared in the mid-week recession. In this section, however, better industrial news was of some importance. *Iron Age* estimates steel output at 36 per cent. of capacity—the highest rate this year—most of the improvement being attributed to miscellaneous demand, for automobile and railroad consumption has not apparently risen. A feature of the bond market was the weakness of amusement company bonds.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

* Two-Hour Session.

Capital Issues

FIXED-INTEREST securities again provide the bulk of this week's new capital offers. Cash lists opened and closed for the *Wolverhampton* loan on Thursday, but conversion lists remain open until Tuesday next week. The favourable response to the Ipswich loan, and the strength of recent corporation scrips, provided a good background for the issue, though "names" have had an important bearing on the degree of success of recent municipal offers. Nearly four-fifths of the *City of Pretoria* issue is required for the conversion of the existing 4 per cent. stock. The new stock is not eligible under the trustee rules, and may therefore appeal to the investor who requires a stock of sound status with a somewhat higher yield than the trustee list can provide. The offer for sale of 5 per cent. redeemable preference £1 shares of *Beecham Maclean Holdings* at par was subscribed within one minute of the opening of the lists on Tuesday, and allotments were not known as we went to press. The cover provided by the due proportion of Macleans, Limited, profits for the latest year, and by Beechams Pills profits under the dividend guarantee, attracted substantial "stag" applications. For the long-term investor it may be pointed out that the Beechams Pills guarantee applies only to dividends and does not cover principal of the new preference shares. The preference and ordinary shares of *Regis Property Company* rank after £675,000 4½ per cent. first debenture stock and mortgages securing £558,170 also at 4½ per cent. Ultimate prospects depend upon the realisation of the directors' estimates regarding rental revenues, which are based on a normal letting position. A guarantee of estimated profits operates during the next three years, but is limited to a total liability of £50,000. *Bowater-Lloyd Newfoundland* have issued £1,250,000 4½ per cent. first debenture stock at 98, guaranteed by Bowater's Paper Mills, Bowater's Mersey Paper Mills, and Edward Lloyd, Limited, as to principal, interest and sinking fund. The company has been formed to acquire the 800,000 £1 common shares of International Power and Paper of Newfoundland, as part of a programme for the protection of supplies of raw materials. For their security, of course, debenture holders will have to look mainly to the guarantor companies, whose latest earnings and assets positions appear adequate to meet any liability which may arise. *Montague Burton* 5 per cent. secured loan stock ranks as a second floating charge after £3 millions of 4¼ per cent. first mortgage debenture stock. The stock is well covered by recent assets and earnings, and will have the support of a generous sinking fund, commencing in 1940. Its junior status, however, suggests that it may have difficulty in establishing itself as a market favourite.

Ltd., 5s. ordinary shares. Macleans profits after depreciation and N.D.C., years to June 30: 1936, £182,485; 1937, £302,893; 1938, £316,488. Purchase price to Beechams Pills for 3,357,356 Macleans shares is £2,221,779, i.e. £3,500 cash, this issue, and 2,887,116 5s. ordinary shares. Price is 12s. 6d. per share, Beechams receiving 20 per cent. final dividend and paying £105,000 expenses. Lists closed at 9.1 a.m. July 19th. Applications amounted to £10,500,000.

Regis Property Company.—Offer for sale at par of 250,000 5½ per cent. cumulative £1 preference shares and 100,000 £1 ordinary shares. Excess of assets, £752,830 (after debenture stock and mortgages of £1,233,170), purchased for £752,830 in 362,500 5½ per cent. preference and 362,500 £1 ordinary shares, vendors forgoing £27,830. Property valuation, £1,973,000. Total gross rents, etc., £276,697 (including £42,506 from unlet space); void allowance, £13,835; expenses, £134,127; mortgage interest, debenture service, etc., £70,643. Estimated balance, £58,035. Gross rents, etc., received years to March 31: 1937, £161,708; 1938, £232,607. Real Property and Finance Corporation guarantee annual net income of £128,678 for 3 years (maximum liability, £50,000). Lists closed 9.5 a.m. July 20th.

SHORTER COMMENTS

Company Results of the Week.—Net profits of THRELFALL'S BREWERY are slightly lower at £348,512, the 18 per cent. dividend being maintained. Borrowing powers are to be increased by £500,000. CITY OF LONDON BREWERY AND INVESTMENT TRUST, net profits amount to £183,780 against £185,245. McDOUGALLS TRUST are maintaining the 10 per cent. dividend, although the operating company's total profits have fallen from £429,425 to £412,038. HEAD WRIGHTSON'S profits are most satisfactory, for they show an 87 per cent. advance at £112,983. Accumulated wear and tear allowances make taxation provision for 1937–38 unnecessary, and the former 5 per cent. distribution is doubled. The good impression made by the HANDLEY PAGE preliminary statement is confirmed by the full report, total profits amounting to £551,597. ANGLO-JAVA RUBBER net profits are 18 per cent. higher at £128,613, but the dividend rate, payable on a larger capital, is reduced from 7½ to 3 per cent. Taxation and other reserves absorb £82,500. EAST ASIATIC RUBBER stocks at March 31st last amounted to £37,322 against £16,572, and account for the improvement in 1937–38 profits. For 1938–39, 180 tons have been sold forward at 10¾d. per lb. TANKERS, LTD., trading profits fell sharply from £101,506 to £38,275, although variations in freight rates did not affect the company. Increased costs of repairs, etc., have reduced net profits to £33,796, against £109,759. During the year three vessels of 106,479 deadweight tons were sold for £190,560. BRITISH STEAMSHIP INVESTMENT TRUST, over three-fourths of whose holdings are in the British Empire, have earned £15,700 more at £123,909. The first accounts of CORNERCROFT, LTD., since its introduction to the public show trading profits after depreciation of £30,447. Good improvement is recorded by CROSSLEY BROTHERS, LTD., who have earned £62,839 against £45,453 and are resuming dividends with a 2½ per cent. distribution. GLOUCESTER RAILWAY CARRIAGE AND WAGON COMPANY report continued improvement on the manufacturing side, and a slightly better return from the hiring business; net profits are £17,862 against £9,201. HECHT LEVIS AND KAHN have experienced a considerable setback, earnings amounting to £132,540 against £190,418. A reserve formerly made for investment depreciation but not now required has been brought in and some £25,000, of a capital nature, is distributed as a bonus.

MISCELLANEOUS

Rio de Janeiro City Improvements Company.—The directors announce that the Brazilian Government have paid the half-yearly revenue to June 30, 1938.

General Theatre Corporation.—Net profit for year ended March 31, 1938, £328,922, a decrease of £8,119. Final dividend 6 per cent. on the participating preferred ordinary shares makes 15 per cent. for year (same). To general reserve £35,000, leaving £56,592 to carry forward against £54,494.

City of London Brewery and Investment Trust.—Net profit for year to June 30, 1938 (after tax and N.D.C.) was £183,780 against £185,245. Dividend on deferred stock 8 per cent. against a capital bonus of 20 per cent. a year ago. Carry forward reduced from £89,086 to £86,358.

South African Distilleries and Wines—Aggregate net profits (after tax) expanded from £S.A.227,206 to £S.A.259,490, in year to June 30, 1938. Ordinary dividend 18¼ per cent. against 15 per cent. plus a 5 per cent. bonus paid from sums previously set aside in connection with possible litigation. Carry forward raised from £1,491 to £2,289.

Cable and Wireless Traffic Index.—The course of the index-number since January, 1930, is shown in the following table:—

(Working day average of comparable receipts year 1929 = 100)

Fodens, Ltd.—Accounts for eleven months ended May 31, 1938, show trading profit of £57,554, and after tax and reserve for investments, and crediting interest, etc., net profit is £58,757, compared with £46,383 for previous year. Deducting debit of £13,880 brought in, there remains £44,876. Dividend of 5 per cent. less tax (nil); to creation of reserve £15,000; £18,733 forward.

McDougalls Trust, Ltd.—Revenue for year to June 30, 1938, amounted to £205,200 against £205,210. Ordinary dividend maintained at 10 per cent. Carry forward raised from £37,817 to £39,497.

Southern Kinta Consolidated.—Profits before tax, to March 31, 1938, £265,886, a decline of £48,653. Operating expenses increased by £55,787 to £209,543. To depreciation reserve £58,500 (£64,500), Reserve for tax £82,000 (£96,000). Ordinary dividend 25 against 30 per cent. Carry forward raised from £72,018 to £88,509.

Tavoy Tin Dredging.—Profit for 1937 £29,353 against £6,101 for 1936. Proceeds of tin concentrates, £189,454, compared with £126,807. Operating expenses rose from £81,524 to £97,170, and £12,750 more at £35,000 is reserved for depreciation. After writing off £14,245 special reconditioning expenditure, £32,397 goes forward, compared with £17,289.

Tankers Limited.—Profit for year to March 31, 1938, £33,796 (compared with £109,759) after charging £14,231 against £16,696 net, balance of reconditioning expenses. To survey and repairs reserve, £12,500. Dividend 4 per cent. on preference, as before, taking £22,678. To survey and repairs reserve, £12,500 against £25,000. In 1936-37 £200,000 had been placed to depreciation. Carry forward £4,633 against £6,016.

Handley Page Limited. Net profit for 1937 £211,389, an increase of £108,710. Ordinary dividend 30 against 50 per cent., absorbing £62,233 in each instance. To general reserve £125,000 against £25,000. Carry forward raised from £16,888 to £19,868. Cash stands at £150,491 against £301.

Industry and Trade

Cotton Trade Enabling Bill.—An important development regarding the proposed Cotton Industry Enabling Bill has been the announcement in Manchester this week of further joint discussion between representatives of the 750 firms which have registered their opposition to the proposals and the Executive of the Joint Committee of Cotton Trade Organisations. A mass meeting of representatives of objecting firms has been held, and although from the tone it was obvious that a large number of people still opposed the whole form of the Bill, it was rather significant that, on the proposal of Sir T. D. Barlow, seconded by Sir Kenneth Lee, a resolution was passed in favour of continuing discussions with the sponsors of the Bill. The willingness of the opposition to consider the proposals indicates that there is a possibility of agreement being reached on certain points. The full Joint Committee of Cotton Trade Organisations will meet in Manchester on Tuesday of next week to consider the position and approve the amendments and modifications to the Bill which have

OTARD'S EST. 1795
V.S.O.P.
LIQUEUR BRANDY
MATURED AND BOTTLED AT CHATEAU DE COGNAC

already been recommended by the Executive. The half-yearly meeting of the Manchester Chamber of Commerce approved the directors' policy of refraining from any official statement condemning or approving the proposed Bill until its details had been made known; it was stated that the Bill would probably be drafted in September and would be placed in the hands of the members of the Chamber of Commerce and of the trades concerned before it was introduced into the House of Commons.

* * *

Overseas Trade by Commodities.—The preliminary figures for the value of British overseas trade in June were discussed in a Note on page 139 of last week's issue of *The Economist*; they confirmed the general expectation of a further decline in international trade, which, however, was less than that which usually occurs in this month. As a result, *The Economist's* index of the volume of raw material imports (computed on the basis of the first quarter's prices) rose from 97 in May to 104 in June (daily average of 1935 = 100), compared with 125 in June, 1937; the corresponding index of exports of British manufactures rose from 91½ in May to 99 in June, compared with 122½ in June, 1937. The tables given below

RETAINED IMPORTS—MONTH OF JUNE

Item and Measure	1936	1937	1938
Wheat ..... '000 cwts.	10,332	8,093	9,966
Beef and veal ..... '000 cwts.	1,029	1,184	1,303
Mutton and lamb ..... '000 cwts.	668	773	817
Sugar (unrefined) ..... '000 cwts.	3,930	3,605	4,674
Iron ore and scrap ..... '000 tons	581	734	448
Raw cotton ..... '000 centals	1,326	1,120	638
Sheep's and lambs' wool ..... '000 centals	680	817	615
Flax, hemp and jute ..... tons	16,406	25,346	12,503
Crude petroleum ..... '000 galls.	71,547	44,649	63,391
Hides, wet and dry ..... '000 cwts.	166	153	88
Wood pulp ..... '000 tons	241	156	121
Rubber ..... '000 centals	80	234	315
Unwrought copper ..... tons	25,648	40,600	31,853
Pig lead ..... tons	23,809	31,964	31,520
Tin: Ore and concentrates ..... tons	2,487	4,468	4,556
Blocks, ingots, slabs and bars ... tons	671	2,221	301
Iron and steel manufactures ... '000 tons	111	175	61
Machinery ..... tons	7,573	12,529	10,126

show clearly the unequal effects of the recession in business activity. The June imports of foods (wheat, meat and sugar) and of petroleum were all larger than in June, 1937, or than in May, 1938; the fall in imports of industrial raw materials, particularly textiles, continues. Compared with

BRITISH EXPORTS—MONTH OF JUNE

Locomotives and parts ..... tons	2,205	1,811	2,172
Motor vehicles and chassis ..... No.	6,434	8,835	6,945

June of last year, exports of all except two of the items given below—machinery and locomotives—are lower; compared with May, there has been some recovery in these two items, and also, for the first time for many months, in the exports of wool tops, worsted yarns and tissues.

* * *

Iron and Steel Production.—The output of the iron and steel industry showed a further decline in June. Production of pig iron fell from 633,900 tons in May to 541,500 tons in June, and that of steel ingots and castings from 167,500 tons to 150,800 tons. Exports also showed a further decline to 150,900 tons, compared with 167,500 tons in May. Imports of iron and steel showed an insignificant increase on the month to 60,800 tons, but the level of imports has varied very little since the re-introduction of the import duty in March:—

PRODUCTION AND TRADE IN IRON AND STEEL
(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855·0	638·6	185·9	414·1
1929 " "	632·4	803·0	235·2	364·9
1932 " "	297·8	438·5	132·7	157·4

" May	633·9	957·0	55·7	167·5
" June	541·5	776·1	60·9	150·9

As a result of the continued decline in domestic production, *The Economist's* index of apparent iron and steel consumption (1935 = 100) fell from 104½ in May to 93 in June; this index does not include changes in stocks, but is adjusted for seasonal variations.

* * *

Sugar Quota Reduced.—The International Sugar Council, at its meetings in London from July 5th to 9th, and again from July 13th to 16th, had the very difficult task of fitting the elaborate quota system decided upon last year to the realities of the 1938–39 sugar season, which begins on September 1st. It will be recalled that the International Sugar Agreement, which resulted from last year's Conference, fixed basic quotas of exports by thirteen exporting countries to the "free market"—which is all the market that is left after each consuming country has taken the whole of its own production and the British Dominions have had first call on the United Kingdom market. Unfortunately, these quotas add up to 3,682,500 metric tons and the Council is only empowered to reduce them by 5 per cent., while the estimate of free market requirements in 1938–39 is only 3,150,000 metric tons even this figure includes an allowance for contingencies and for possible Government purchases. The gap has, however, been closed—on paper. The 5 per cent. cut in quotas accounts for 184,125 metric tons; it is assumed that exporting countries will, in fact, fall short of the amounts allotted them by 100,000 tons; and voluntary surrenders by exporting countries amount to 228,375 tons. This brings the prospective supply down to 3,170,000 tons. The final gap of 20,000 tons has been closed by the surrender of that quantity of their exports by the British sugar-producing countries.

* * *

This is an achievement. But whether it is of more than arithmetical significance remains to be seen. What will happen if the actual exports do not fall short of the quota by the expected 100,000 tons, if the free market requirements turn out to be lower than the Council's estimate, or if the producing countries outside the Agreement increase their exports? All the participating countries, British and foreign, have declared themselves at the limit of the sacrifices they can make. The continuance of the Agreement thus depends on events in the next twelve months justifying an admittedly optimistic calculation.

* * *

South African Gold Records.—Figures published by the Transvaal Chamber of Mines this week indicate that the Transvaal gold industry is on the way to produce

a record output of more than 12,000,000 ounces of gold this year, thus breaking last year's record of 11,741,000 ounces. Production in the first six months of this year totalled 5,951,379 ounces, compared with 5,816,397 ounces in the corresponding period of 1937. In March, as well as in May and June, 1938, production exceeded 1,000,000 ounces, a monthly level which had never been reached before. The new rise in production is particularly satisfactory, as the grade of ore mined this year showed a further reduction. In the first five months of this year the average gold content per ton of ore milled did not exceed 4.417 dwts., against 4.488 dwts. in the corresponding period of last year. In May, 1938, the figure was as low as 4.348 dwts., representing the lowest content yet milled, and it is probable that under the influence of the recent rise in gold prices the grade of the ore mined in the Transvaal will be reduced still further. Fortunately, South African gold mines have been able in recent months to secure the additional number of native workers required to maintain the present rate of production in spite of the lowering of the ore grade. On June 30th the native labour force of the Transvaal gold mines comprised 320,749 men, the largest number in the history of the industry. Since the end of last year the number has risen by no less than 38,069, a fact which suggests that the new reserves of native labour are being increasingly used. The rising activity in the gold industry, however, is not confined to the producing mines. Figures published by the South African Department of Commerce and Industries last week give the number of men employed in the Dominion's developing gold mines on April 30th as 3,643 Europeans and 24,479 natives. These are the highest figures of this kind since the early stages of Rand mining development. Since December 31, 1937, the number of Europeans has risen by 451 and that of native workers by 4,488; compared with April 30, 1937, there has been a rise of 934 Europeans and 7,072 natives. The progress in the opening up of new mines is, of course, the best insurance for the maintenance of the present record rate of the South African gold production over a long period, even if the grade of ore remains at its present low level.

* * *

Oil *versus* Steam.—The latest issue of Lloyd's Register reveals the rapid rise of the diesel motor in the shipping world. On June 30, 1914, only 0.45 per cent. of the world's merchant shipping tonnage was driven by internal combustion engines. On June 30, 1937, this percentage had risen to 20.74 per cent., compared with 18.89 per cent. a year before. In future the share of the diesel engine is likely to rise much more rapidly than in the past, because steam is most used in the older and smaller ships, which will be gradually taken out of service and for the greater part replaced by motor ships. This tendency is clearly discernible in the 1938 figures of current launchings, the commencement of new constructions and the building returns for ship engines. In the quarter ended June 30, 1938, no less than 60.0 per cent. of the ships launched in the world consisted of motor ships, compared with 54.0 per cent. in the corresponding quarter of 1937. Steam tonnage launched declined from 44.3 per cent. to 38.3 per cent. of the total. And of all the new constructions begun in the June quarter of 1938, motor tonnage supplied 64.6 per cent., against 59.5 per cent. last year, while the corresponding figures for steamships fell from 40.0 per cent. to 32.0 per cent. The horsepower of marine motor engines under construction last quarter reached 65.1 per cent. of the total, compared with 60.8 per cent. last year, while the corresponding figures for steam engines amounted to 34.9 per cent., compared with 39.2 per cent. These figures also indicate that the oil consumption of the world shipping trade is rising rapidly. In fact, however, this increase is even more pronounced than indicated by the progress of the motor ship, since an increasing share of the steam tonnage is heated by oil fuel. On June 30, 1937, steamships using oil as boiler fuel supplied 29.84 per cent. of the world's merchant tonnage, compared with only 2.65 per cent. in 1914, and consequently the influence of the shipping activity on the international oil market is growing year by year.

* * *

Co-operative Turnover.—For the 13 weeks ending on April 9, 1938, the turnover of the Co-operative Wholesale Society amounted to £29.6 millions, or 6 per cent. more than in the same period of 1937. This rate of increase compares unfavourably with the 10 per cent. recorded between 1936 and 1937. Foodstuffs continue to supply the main business of the Society, and their sale accounted for no less than £22.2 millions of the total turnover, of which some £2.6 millions were provided by the sale of flour from the Society's nine flour mills. Sales of drapery amounted to £1,296,000, and of men's wear to £905,000, and the rate of increase in these departments was less than 2 per cent. compared with 1937. The building, engineering and service departments have been largely extended during the year and obtained a turnover of £695,000, almost double that recorded for the first quarter of 1937.

* * *

Wholesale Price Fluctuations.—International price movements during the past fortnight have been somewhat contradictory. In England prices of primary products are steady, the average increase during the past fortnight being 1.3 per cent. The complete *Economist* index has fallen by 1.1 per cent., but the movement is largely explained by a seasonal reduction in the price of potatoes. In the United States, primary products have fallen on the average by 0.9 per cent., partly because of a reduction in the price of pig iron. Some of the divergence between the prices of British and American primary products may be due to the appreciation of the dollar against the pound. French wholesale prices are slightly lower than a fortnight ago. The net increase since the end of April is 6.1 per cent., whereas sterling has risen against the franc by just over 10 per cent. The significance of this divergence is discussed in a Financial Note on page 177.

The following table shows the movement of the various groups comprised in *The Economist* index number:—

The Economist INDEX
(1927 = 100)

	Sept. 18, 1931	July 14, 1937	July 6, 1938	July 20, 1938
Cereals and meat...	64·5	92·6	89·1	83·6
Other foods	62·2	67·6	56·8	58·1
Textiles	43·7	71·9	52·8	53·4
Minerals	67·4	108·1	93·4	93·1
Miscellaneous	65·8	85·8	75·4	75·3
Complete index	60·4	85·0	72·9	72·2
1913 = 100	83·1	116·9	100·3	99·3
1924 = 100	52·2	73·4	63·0	62·4

The sharp decline in the cereals and meat group is due to the reduction in potatoes. Wheat was steady, maize dearer, and meat prices mostly down. There was an advance in bacon. In the other food group there was a decline in tea and advances in cocoa, refined sugar, butter and coco-oil. Among textiles, cotton has reacted, but flax, hemp and jute are dearer. Non-ferrous metals moved irregularly. In the miscellaneous group there were small increases in hides, tallow and rubber, offset by a reduction in creosote.

American Cotton Crop.—The Department of Agriculture of the United States Government has estimated the area under cultivation for cotton for the 1938-39 season at 26,904,000 acres, a decline of 22 per cent. compared with a year ago, when the total was 34,471,000 acres. The estimate was rather higher than anticipated, but when trading was resumed in New York and Liverpool after the report there was practically no change in prices. Since the beginning of last week, however, better weather advices have been received from the cotton belt, and Liverpool prices declined by about ¼d. per lb. from the top figure recorded in the previous week. Past experience shows that acreage is a very poor guide to the probable crop, but it may be pointed out that on the ten-year average of yields the production in 1938-39 should be about 10,500,000 bales, whilst on the five-year average the output should be about 11,500,000 bales. The United States Government will publish a forecast of the probable crop on August 8th. The crop for the season which is now closing was of record dimensions at 18,946,000 bales; world consumption of American cotton at the present time is about 11,000,000 bales per annum, so that the world carry-over of all kinds of cotton at the end of this month will be about 23,500,000 bales, or 10,000,000 bales more than a year ago.

INDUSTRIAL REPORTS

UNCHANGED conditions are reported from most industrial centres this week, with the normal seasonal slackening of activity aggravated by the fact that stocks are still sufficient to supply current requirements. News that the French State Railways have ordered 270,000 tons of coal and the Portuguese State Railways invited tenders for 250,000 tons is the outstanding event in South Wales. In other districts demand for both household and industrial fuel is poor. A slight advance in the price of raw wool at the London auctions has been reported, but conditions in the cotton textile trade are still disappointing.

Coal

Sheffield.—Inquiry for coal is poor on both inland and export account. The quietest season of the year is being experienced in household fuel, stocks of which are accumulating in spite of the fact that prices are now apparently at their lowest. Inquiry is diminishing for industrial fuel and coke and gas coal are in only moderate request. Export business is unsatisfactory, although there is a small inquiry for washed doubles and singles. Prices generally are unchanged.

★

Newcastle-on-Tyne.— There is very little inquiry in this area and, whilst a few collieries are comfortably placed, the majority are having idle shifts. Northumberland steam coals are weak due to the usual seasonal decline and Durham manufacturing coal suffers from lack of home trade. The greater activity in the export section of patent oven coke continues; there is a good inquiry for prompt shipment and substantial quantities have been sold ahead to Scandinavian consumers.

★

Glasgow. — Collieries in the Lothians resumed production on Monday, but most of the others are closed this week, and many salesmen are on holiday. The market, consequently, has been quiet. Prices are maintained and increased business is expected to develop in the next few weeks as there are already increased inquiries for forward delivery. The prompt position for steam coal (particularly Third Fife) and washed treble nuts remains easy. The smaller sizes of nuts, on the other hand, are readily taken up, and pearls in Fifeshire are now fully booked until about the end of August.

★

Cardiff.—It is learned that the French State Railways will shortly make allocations for 270,000 tons of South Wales coals for delivery up to the end of the year, and that the Portuguese State Railways have also invited tenders for 250,000 tons. These have been the only noteworthy developments on the Cardiff market this week, and the current trend of trade shows no material change. Stocks are heavy and several of the districts are reporting short time. Prices are unaltered. Shipments in the foreign and coastwise trades last week totalled 396,300 tons, compared with 375,600 tons the previous week, and 430,341 tons in the corresponding week last year. For the current year to date the shipments at the South Wales ports totalled 10,638,039 tons, as against 10,991,138 tons in the same period last year.

Iron and Steel

London.—Business in the iron and steel markets has been rather quiet, and is likely to remain so until the close of the holiday season, according to the official report of the London Iron and Steel Exchange. The scarcity of new business recently has been more noticeable owing to the dull trading conditions of the past few months. There seems to have been some reduction, however, in the stocks of iron and steel which have been weighing upon the market since the first quarter of the year, and this increases the probability of a revival of demand in the early autumn.

In the pig-iron department new business is scarce, as consumers appear to be concentrating upon reducing their reserves, and many of the important users covered their forward requirements some time ago. Nevertheless, good tonnages of all descriptions of pig iron are being sold.

Business in semi-finished steel is irregular and is hindered by the existence of heavy stocks. More specifications, however, are reaching the works than for a long time past.

New business in finished steel is quiet, but production is well maintained considering the time of year, and the rather inactive markets which have ruled during the preceding few months. Some improvement is also noticeable in the position of the lighter branches of the trade. Export business, however, is poor and overseas buyers appear to be unwilling to undertake important commitments.

★

Sheffield.—Normally there is a slackening of the iron and steel market at this season, but not since the period of depression has business been so quiet as at present. There are few inquiries and actual transactions relate to small parcels for early delivery. There is a good deal of speculation concerning the outcome of the step taken by the Stanton Company and an announcement by the Central Pig-Iron Producers' Association concerning prices—which are at present stabilised until the end of the year—would cause little surprise in view of the trend of business.

Basic and acid steel billet demand continues to be on a fairly satisfactory scale. Stainless steel requirements keep output at a high level. Steel strip is in heavy request, but demand for wire rods is rather easier.

The iron and steel scrap market shows no improvement. Control prices are firmly maintained, but outside the control merchants are prepared to shade prices for substantial business.

★

Middlesbrough.— Conditions in the local iron and steel trade are unaltered. Now that foundries and steelworks in the Sheffield area are closing for holidays, deliveries of hematite from this district are being further restricted and business is confined to very small parcels for prompt use. Heavy steel departments continue to be well occupied, although there has been no material increase in orders. Smaller steel sections are in better demand. Semi-finished steel is plentiful with producers having good stocks and steel scrap is almost unsaleable. Blast-furnace coke is now freely offered but sales are proceeding slowly owing to reduced consumption.

★

Glasgow.—Owing to the holidays in Glasgow and other parts of Scotland, little business is being done. Some new orders have been placed during the week with sheet metal workers and with builders of light steel structures. An order for three tug-boats, to be built by Messrs Ferguson Brothers, of Port Glasgow, for the Anglo-Iranian Oil Company, is also reported. Repair work on an extensive scale is being carried out during the holiday period at several plants which in many cases will prevent a resumption of operations before the first week in August. At other plants it is hoped that a good start will be made early next week.

★

Cardiff.—There has been no appreciable change this week in the condition of the tinplate trade. Inquiries have been a little more active, but the actual volume of new business placed has been disappointing. There is a fair inquiry for steel sheets for the home market, but for export the market is extremely quiet. Prices are nominally unchanged. The statistical position of the tinplate and sheet industry is shown in the following table:—

Tinplate Industry Statistics

	Week ended July 10, 1937	Week ended July 2, 1938	Week ended July 9, 1938
Production—per cent. of capacity	74·99	40·11	43·60
	Week ended July 15, 1937 Tons	Week ended July 7, 1938 Tons	Week ended July 14, 1938 Tons

Stocks (warehouse and in vans).....	2,439	5,445	5,240
	Twenty-eight Weeks ended July 15, 1937 Tons		Twenty-eight Weeks ended July 14, 1938 Tons
Shipments	233,717		136,039

Textiles

Cotton (Manchester).—There are no indications of better conditions in Lancashire and it has again been a very unsatisfactory week for producers. Spinners and manufacturers have reported a limited inquiry both for export and the home trade, and only small sales have been arranged. Owing to uneasiness about the international political situation, and about the future level of raw material prices, buyers have not had sufficient confidence to place large orders, and turnover has been disappointing. Miscellaneous sales have taken place for India, and there has been a limited demand for Java and Singapore. Business for Egypt, the Near East and South America has been small. There has been a reduction in sales to the Dominions, and business for the home trade is still dull. The yarn section has been lifeless, and it has been very difficult to dispose of current output.

The general trade outlook is causing more uneasiness.

Wool (Bradford).—At the fourth series of Colonial sales, held in London during the past fortnight, the demand for the raw material has been equal to most expectations. Although a definite advance has not been registered in merinos, crossbreds have sold well, realising prices which have exceeded most expectations by 5 per cent. The home trade has been the largest buyer and supported the market very commendably. The carry-over will not be over-large, the auctions revealing a fairly sound position.

THE COMMODITY MARKETS

AFTER a strong upward tendency at the end of last week, in sympathy with the buying on Wall Street, a more hesitant feeling developed in many of the commodity markets. Grain prices have tended to decline, owing to expectations of a large world crop, and cotton barely maintained the levels reached after last week's decline. On the other hand, both rubber and copper prices continued their advance, while prices generally declined in the vegetable oil market. Moody's daily index of American commodity prices, after a further rise at the end of last week, relapsed to 146.8 (December 31, 1931 = 100) on Wednesday, compared with 147.5 in the previous week and 207.8 a year ago.

Metals

Copper.—As a result of the improvement on Wall Street, the copper market had a firm appearance this week and standard cash closed at £40 3s. 9d. per ton, a rise of £1 6s. 3d. on the week and the highest official price since the end of March. The improvement was more due to the reserve in offerings than to an increase in demand. In fact, consumers continued to buy only on a moderate scale, although there are signs of growing confidence among consumers. According to Messrs Brandeis, Goldschmidt and Company, Limited, exports of domestic copper from the United States reached the high level of 9,300 long tons in June, compared with 4,500 tons a month before and 3,600 tons a year before. The monthly average of American domestic exports in the first half of this year totalled 7,200 tons, against 4,400 tons a year ago.

★

Tin.—The better Wall Street advices led to a rise of £1 15s. to £194 5s. per ton in the price of tin. The level is the highest so far quoted this year, but here also consumers' demand was small. In the United States, tinplate activity has now fallen to below 30 per cent. of capacity (90 per cent. a year ago) and advices are also discouraging from the other tin consuming centres.

★

Lead and Spelter.—Lead declined this week by 5s. to close at £14 13s. 9d. per ton, while spelter lost 1s. 3d., thus closing at £14 3s. 9d. per ton. The demand for the two metals this week was rather poor. On the decline in prices, however, offerings fell to very low levels, so that the turnover on the L.M.E. was abnormally small. Production of the two metals continues to be large, particularly outside the United States, but, on the other hand, consumption figures are still low. As, however, consumers' stocks are much below normal, prices are bound to rise when a return of confidence induces consumers to replenish their stocks.

Grains

THE wheat market is now dominated by harvest reports from North America and Europe; as these continue favourable, wheat prices have tended to sag during the week. The quality of the American crop is reported to be exceptionally variable and the protein content to be generally less than a year ago. The French harvest is expected to yield about 41 million quarters, against 31½ million quarters in 1937; and the Danube countries are also expecting record crops. Buyers of maize continue to cover their immediate requirements only, but there has been a steady demand from the Continent, which has helped to maintain prices. Russian feeding barley has been freely offered at 20s. to 20s. 3d. per quarter and considerable trade was done at these prices.

Other Foods

Provisions.— The bacon market was very firm during the week and prices of all varieties rose by 4s. per cwt., English and Danish selling at 106s. per cwt. Butter and cheese prices were also advanced early in the week; the meat market was generally quiet.

★

Colonial Produce.—Sugar prices were again advanced by 1½ per cwt. at the end of last week, since when the market has been steady. Business in cocoa, coffee and tea was quiet and prices were little changed.

★

Fruit and Vegetables.—Increasing supplies of new potatoes brought a reduction in prices; Sharpe's Express were quoted on Tuesday at 5s. to 6s. 6d. per cwt. Salads sold well, but larger quantities of raspberries could be sold only against lower prices; the demand for oranges has also been slack.

Miscellaneous Commodities

Oilseeds and Oils.—Trade in linseed has been quiet, and prices are somewhat lower on the week; the decline has been reflected in most markets for vegetable oils. Oilcakes, however, are in good demand and prices are unchanged.

★

Rubber.—The trend continues upward in this market, and the price of spot standard sheet advanced by ⅛d. per lb. during the week to close at 7½d. per lb. The statistics from America show that consumption in June increased by 1,682 tons to 30,629 tons, the highest monthly total since November, while stocks declined by 5,154 tons to 294,566 tons, compared with 172,056 tons in June, 1937.

COMPANY MEETINGS

THE STANDARD BANK OF SOUTH AFRICA LIMITED

SATISFACTORY RESULTS—INCREASED PROFIT

15 PER CENT. DIVIDEND DISTRIBUTION

COMPREHENSIVE SURVEY OF AFRICAN INDUSTRIES

MR BERTRAM LOWNDES' ADDRESS

The one hundred and twenty-fifth ordinary meeting of shareholders of the Standard Bank of South Africa Limited was held, on the 20th July, at Southern House, London, E.C.

Mr Bertram Lowndes presided.

The Secretary (Mr H. Dales) having read the notice convening the meeting and the report of the auditors; and the report and accounts having been taken as read,

The Chairman said:—My Lords, Ladies and Gentlemen,—

Before I proceed to deal with the accounts and the business of the day I am sure you will allow me to refer to the great loss we have sustained by the death of Mr Reierson Arbuthnot some few weeks ago. Mr Arbuthnot was our senior director; he joined the board in December, 1905—nearly 33 years ago—and during that long period he gave his colleagues the full benefit of his wide experience.

Mr Arbuthnot was highly esteemed in the City as a merchant banker, and his knowledge of finance and produce markets was invaluable to our bank. We deplore the loss of a wise counsellor and a very staunch friend.

Balance Sheet Items

Turning now to the accounts, you will see that the balance sheet totals £85,000,000, which I may say creates a record. As compared with the figures of the previous balance sheet, there is no change in the capital and reserve fund. Notes in circulation increased, and there was a rise of £1,500,000 in the item customers' bills, etc., for collection. Following a very large increase in the amounts during the preceding years, deposit, current and other accounts show a fall of approximately £800,000.

Cash in hand and at call and short notice reflects a reduction of just over £2,500,000, and investments are up by approximately £900,000. Bills of exchange purchased declined by about £1,000,000 as against the increase of £1,500,000 in bills for collection. The item bills discounted and advances to customers shows an increase of nearly £2,000,000. The decrease in deposits and the increase in advances—both quite moderate—may be taken as some indication of the change in business conditions in the Union of South Africa, to which I will refer later.

Profit and Loss Account

Turning to the profit and loss account, you will note that the balance of profit for the year, after making an appropriation to contingencies account, is £621,633, an increase of £65,046 over the figures at March 31, 1937. Including the amount of £149,292 brought forward from the previous year, there remained for disposal the sum of £770,925. The interim dividend paid in January last absorbed £125,000, and after appropriating £75,000 to writing down bank premises, there is a balance of £570,925.

Dividend and Bonus

It is recommended that £150,000 be allocated to the officers' pension fund, that a final dividend of 7s. per share be paid, together with a bonus of 3s. per share, making a total of 15 per cent. for the year, and that £170,925 be carried forward. You will remember that the shareholders received a total distribution of 14 per cent. for the previous year in the shape of a dividend at the rate of 10 per cent. and a bonus of 4s. per share.

You will be pleased that the directors are now able to recommend an increase in the dividend.

Officers' Pension Fund

I now wish to say a few words with regard to the proposed allocation of £150,000 to the officers' pension fund. When Mr Stanley Christopherson presided at our general meeting in July, 1935, he spoke at some length on the position of this fund, for which adequate provision had not been made in the preceding years. For that year ended March 31, 1935, and each succeeding year, we set aside £125,000 for the benefit of the pension fund, but a much larger contribution is required, and the directors have now to ask the shareholders to agree to the appropriation of £150,000 for this purpose.

It will be appreciated that as our business grows—and you see from the accounts now being presented to you that it is growing and producing good results—there must be an increase in the numbers of the staff and an increasing liability accruing against the officers' pension fund.

Conditions in South Africa

Regarding the general conditions which prevailed where we carry on our operations, I may say that during the period under review business in the Union continued to go well. Apart from the disturbance which occurred in the Stock Exchange market in April last year, affairs proceeded smoothly, although commercial and industrial expansion was not so marked as in the previous year.

An indication of business conditions may be found in the Union Government figures which were quoted by the Minister of Finance when he introduced the Part Appropriation Bill in the early part of this year. Instead of a surplus of £1,180,000 contemplated in his Budget of 1937, he estimated that the surplus at the end of the financial year would be £3,250,000. We may expect more definite information regarding these figures when the Union Parliament assembles in two days' time.

The satisfactory position was also reflected by the railway earnings for the year ended March 31st last, which rose from £32,100,000 to about £33,400,000, representing approximately £1,600,000 above the official estimate.

The external trade of the Union totalled nearly 229 million pounds, an increase of 14 per cent. over the figures for 1936.

All these figures are remarkable as an indication of prosperity but it is doubtful whether they can be maintained during the current year.

Gold Mining Industry

In our report last year we attributed the progress then made to the sound position of the gold mining industry, which contributed so largely to the stability of the Union. Under the most capable management and control the great gold mining industry continues to make good progress, and new records have been established in respect of the quantity of ore milled and the number and value of fine ounces of gold produced. In the Transvaal during the year 1937 more than 51 million tons of ore were milled, producing nearly 11¼ million fine ounces of gold, the approximate gross value of which was £82,350,000. The industry disbursed nearly 27½ million pounds in salaries and wages in the Transvaal, and the value of the stores consumed was approximately 28½ million pounds. Quite apart from the large amount which the Union Treasury claims from the profits of the gold mining industry, it is difficult to over-estimate the benefits which flow through the country from this source.

I remember some remarks made by the late Lord Welby, who was a very distinguished member of our board, when he presided at a dinner given by the bank in honour of a group of South African farmers who visited this country in the early days of 1914. He bade them be of good cheer and to be thankful for what he called that "fertilising stream" which flowed from the gold mines of the Transvaal. In comparison with those days that "fertilising stream" is now in flood.

During the period under review there have been occasions when, owing to rumours of currency devaluation and political unrest, there has arisen a strong demand for gold, buyers being willing to pay substantial premiums above the exchange parity in order to acquire it. From this it would appear that apart from the use of gold as the basis and support of currencies, the holding of the metal is being regarded more and more as a measure of safety and as a protection and cover against possible economic disturbances.

We can see no signs of any weakness developing in the demand for gold.

Other Minerals

While gold mining continues to contribute so largely to the welfare of the Union, we must not overlook the value of other important industries which are developing on sound lines. The production of other minerals in the Union, more particularly asbestos, coal, iron ore and manganese, is increasing year by year. Unfortunately the diamond industry was adversely affected by the unsettled conditions in the United States of America and on the Continent, but the amount realised from sales, including sales from stock, was over £9,000,000, which was more than £1,000,000 in excess of the amount realised in the previous year.

Agriculture

The climatic conditions in the Union during the year under review were less favourable than in 1936 and agricultural markets were adversely affected by the unsettled conditions prevailing overseas, but following on the good crops and the good prices realised during the previous year and with the help of a sympathetic Government, the farmers in South Africa are probably in a much happier position than farmers in any other part of the world. I may say that the production of sugar in the Union constituted a record for the industry.

Following the weakness on the Stock Exchange, which became most acute in April last year, the upward trend in commercial business in the Union was checked and caution was necessary. A feeling of depression prevailed and in consequence merchants found they were overstocked—particularly in luxury goods; there are indications that the position is now rather better in this respect.

There can be no doubt that the situation would have been much more serious if we and the other banks operating in South Africa had not exercised a restraining influence against speculation during the period of boom in the Kaffir Market.

Southern Rhodesia

We have nineteen branches and agencies in Southern Rhodesia, where business continues to expand. The overseas trade of the Colony is increasing. Imports during 1937 were £1,500,000 more than in the previous year, while exports increased by nearly £2,000,000. As indicated by the Budget figures, which show a surplus of nearly £200,000 as at March 31st this year, Government revenue and expenditure is on a healthy basis. The traffic revenue and expenditure accounts of the Rhodesia Railways resulted in a surplus of more than £2,000,000.

As in the Union, gold mining is the most important industry in Southern Rhodesia and the value of the precious metal exported during 1937 was nearly £5,750,000.

There has been an increased output of other minerals, particularly asbestos, coal and chrome ore.

The farming industry is improving, the maize crop was a record one for the Colony, and the production of tobacco was very satisfactory, the value of the export of leaf being over £900,000, nearly £300,000 more than for the previous year.

Northern Rhodesia

As you are aware, the production of copper is the important factor in the development of Northern Rhodesia. For the year 1937 the total exports from the Colony were valued at rather more than £12,000,000, of which no less than £10,700,000 was provided by the shipment of copper. A most remarkable achievement!

Nyasaland

The Nyasaland Protectorate is dependent upon the products from its soil, chiefly tobacco, tea and cotton, and there has been little change to record in the production of these crops during the period under review.

We shall be interested to hear the result of the deliberations of the Royal Commission which is now considering whether closer co-operation between the Rhodesias and Nyasaland is desirable and feasible.

South West Africa

General business conditions in South-West Africa remained steady during the year.

Although there has since been some set-back in the diamond and base metal industries, the territory as a whole is being gradually developed and prospects of further expansion are not unfavourable.

East Africa

There were no outstanding features in the business conditions prevailing in the East African territories.

Gold mining in Kenya and Tanganyika is still in its infancy and some time must elapse before any reliable view of its potentialities can be obtained.

Climatically, agricultural conditions were satisfactory, but prices overseas reacted unfavourably against some of the principal crops. Imports declined but there were no serious effects on the stability of the trading community.

More details regarding trade conditions in South and East Africa will be given in the report of this meeting which will be sent to every shareholder.

Director's visit to South Africa

Brigadier-General Sir Samuel Wilson visited South Africa in the early part of this year and by making use of air transport he was able to go to some of our branches in Southern and Northern Rhodesia as well as to the more important branches in the Union. Sir Samuel's visit was very much appreciated by the general managers, the staff and many others in South Africa, and his colleagues on the board were greatly indebted to him for undertaking such a long and arduous tour in the bank's interests.

The Recent Elections

Before I close perhaps I may be permitted to make some reference to the recent Parliamentary Elections in South Africa, which have resulted in the return to Government of those gentlemen who proved to be so successful in the administration of the affairs in the Union during the past five years. As bankers we are not politicians, but we are concerned with the political situation in the territories in which we do our business, and it is satisfactory to feel that the Union may look forward to a further period of constructive legislation.

This bank was formed more than three-quarters of a century ago to do business with South Africa, and our good times and bad have coincided with the good and bad times of that interesting country.

Confidence in the Future

During the past few years, while the greater part of the world has been in a state of chaos, South Africa has enjoyed remarkable prosperity, and we have some good reasons for quiet confidence in the future. At the same time optimism must be restrained because we know that the further satisfactory development of South Africa's most important industry and the markets for its mineral and agricultural products must be influenced by affairs in other parts of the world.

I will conclude by moving the first resolution, viz.:—

"That the report and balance sheet to March 31, 1938, now presented, be adopted,"

and I will ask my colleague, Mr R. E. Dickinson, to second it.

Mr R. E. Dickinson: I beg to second that.

The Chairman: Before I put the resolution to the meeting, may I ask whether any shareholder wishes to make any remarks on the report and accounts? (A pause.) Then I now put the resolution to the meeting.

The resolution was carried unanimously.

The Chairman: I have now to make the formal declaration of dividend:—

"As empowered by the Articles of Association, on behalf of the board, I now declare a dividend for the six months ending March 31, 1938, of 7s. per share on 500,000 shares, as a final dividend for the twelve months ended on that date, with a bonus of 3s. per share (making, with the interim dividend, a total distribution of 15 per cent. for the year), both payable in British currency and subject to income tax, to be paid to those shareholders whose names appeared on the register on June 29th, and to become payable on the 23rd instant."

I have now to propose the second resolution, which is:—

"That The Right Honourable The Earl of Athlone, K.G., Mr John Francis Grey Gilliat and the Right Honourable Lord Balfour of Burleigh be re-elected directors of the company."

I shall be glad if Mr Horace Peel will kindly second that resolution.

Mr Horace Peel: I have much pleasure in seconding the resolution.

The resolution was unanimously approved.

The Chairman: The next item on the agenda is the appointment of auditors for the ensuing year, and I will ask Mr Joseph Nissim if he will kindly propose this third resolution.

Mr Joseph Nissim: Mr Chairman, my lords, ladies and gentlemen, I have great pleasure in proposing:

"That Mr A. T. Turquand-Young, F.C.A., Mr Roderick M. Peat, F.C.A., and Sir Nicholas E. Waterhouse, K.B.E., F.C.A., be re-appointed Auditors of the Company for the ensuing year at a remuneration of 400 guineas each."

I am sure, Mr Chairman, that the shareholders will be pleased to renew their trust in the senior members of three leading firms of Chartered Accountants. I imagine that it must be a great pleasure to the auditors themselves to audit a balance sheet which is so well balanced in all its proportions and which, we are glad to note, has shown increased profits.

The Chairman: May I ask Mr Daniels if he will kindly second that resolution?

Mr. C. N. Daniels: I have very much pleasure in seconding the resolution.

The resolution was unanimously adopted.

Thanks to Officers and Staff

The Chairman: I have now a very pleasant duty to perform in moving a vote of thanks to our staff for their services during the past year.

On looking over the accounts to-day we have seen the results of good work well done, and we owe our thanks to every member of the staff who has contributed towards those results.

Earlier in these proceedings I referred to Sir Samuel Wilson's visit to the Union of South Africa and the Rhodesias. During his tour Sir Samuel was glad to have the opportunity of meeting a large number of the staff and seeing them at work, and he was much impressed by their sense of loyalty and devotion to the Bank.

From my close association with them I can tell you that the same spirit of loyalty and good service prevails amongst the staff in London, East Africa, New York and Hamburg, and, as an old official who served both in Africa and London, I can say that the members of the staff are grateful for all the privileges they enjoy, and are proud to be in the Bank's service.

Our special thanks are due to Mr Milton Clough, our General Manager in South Africa, and to Mr Ralph Gibson, the Manager at our Head Office in London, whose administration covers a very wide field.

It is only two years since Mr Clough received his present appointment, but he has succeeded in winning the full confidence and goodwill of his staff and he is highly esteemed by the general community in South Africa.

I have much pleasure in moving:

"That the thanks of the Meeting be given to the General Managers, the London Manager, and other officers for their valuable services."

I will ask Sir Ernest Clarke to second this resolution. (Applause.)

Sir Ernest Clarke: Mr Chairman, my lords, ladies and gentlemen, I have very great pleasure in seconding that resolution. I am quite sure that all the shareholders are as conscious as I am of the debt of gratitude we owe to all the members of the staff for their wholehearted loyalty and devotion to duty, and who, by their helpfulness and efforts, have succeeded in producing the excellent results which you, Sir, have been able to present to us to-day. I am particularly happy in being permitted to associate myself with this resolution because I have always received the greatest courtesy and consideration from every member of the staff during the 43 years I have been a customer of the bank. I think you will all agree with me that we are very fortunate indeed in having so able and loyal a staff, and I also think you will agree that we should join the directors in this resolution, recording our sincere thanks and gratitude to the staff for all they have done for us. (Applause.)

The Chairman: Sir Ernest Clarke, I am quite sure that the staff would wish me to thank you for your very kind remarks regarding them. May I now put the resolution to the meeting? (Applause.)

The vote of thanks was unanimously accorded.

The Chairman: My lords, ladies and gentlemen, that concludes the business of the meeting.

Vote of thanks to the Chairman and Directors

Sir John Chancellor: Before we separate, it is my privilege to propose:

"That the cordial thanks of the Meeting be accorded to the Directors for their attention to the affairs of the Bank, and to the Chairman for his conduct in the Chair."

It is always a great pleasure to me to come to the meetings of the shareholders of the Standard Bank of South Africa, partly because it brings back to me very happy memories of the years I spent in Rhodesia, and also because one always has from the chairman such a very cheering account of the state of affairs in South Africa; it is indeed very pleasant in this unhappy world, to hear the account of a country which has no difficulty in balancing its Budget. (Hear, hear.) It is also a special pleasure to me to come here and hear good reports of Southern Rhodesia, where I spent some very happy years and it is very pleasing to me to hear how rapidly it is progressing. I have no doubt that its future is now on a very firm and a more extended basis than it was when I lived there. What with the large exports of tobacco and maize, not to mention the mineral resources which it has developed—gold, asbestos and chrome in particular—one can feel confident of a very bright and happy future for Southern Rhodesia. (Applause.) I have very much pleasure in proposing this resolution. (Applause.)

Sir Frederick Eley, Bt.: I have great pleasure in seconding that resolution.

The resolution was put to the meeting by Sir John Chancellor and carried with acclamation.

The Chairman: Sir John Chancellor, Sir Frederick Eley, I can assure you that every one of the directors very much appreciates the very kind remarks that have been made, and I thank you, my lords, ladies and gentlemen, for your attendance and for your vote of confidence in the administration of the bank. (Applause.)

The proceedings then terminated.

PARTICULARS IN REGARD TO THE CHIEF INDUSTRIES OF SOUTH AND EAST AFRICA FOR THE PERIOD UNDER REVIEW

MINERALS

The value of the mineral output of the Union for 1937, taking gold at the standard value, was £61,580,202, as compared with £55,744,319 in 1936. Including the currency premium on gold, the value was £94,291,502.

GOLD

The Transvaal gold output amounted to 11,740,891 fine ounces, a figure 187,327 fine ounces in excess of the previous record established in 1932. The present record was achieved by milling 51,129,650 tons of ore, yielding an average of 4.460 dwts. per ton, as against an average yield of 6.471 dwts. per ton from 35,209,650 tons milled during 1932.

The output of gold in Southern Rhodesia amounted to 804,219 fine ounces, valued at £5,656,693, as against 797,061 fine ounces, with a valuation of £5,632,444, in the previous year.

DIAMONDS

Exports of diamonds from the Union were valued at £3,318,168, as compared with £3,313,475 in 1936.

The outlook is dependent chiefly on the course of events in Europe and America but, apart from the luxury demand, it is encouraging to record that the efforts to widen the scope of the industrial use of diamonds are being continued and it is considered that prospects of success are not unfavourable.

The sales of diamonds during the year amounted to over £9,000,000.

COAL

The value of the coal produced in the Union exceeded £4,000,000.

An upward trend in the sales output figures was maintained during the year, but the industry was faced with difficulty in obtaining an adequate supply of labour and in securing full transport facilities, which militated against the more rapid expansion that at one time seemed probable.

COPPER

The amount realised for copper produced in the Union showed an appreciable increase, chiefly owing to the higher prices ruling during the year. Quotations have been substantially lower during recent months and prospects are less favourable, although it is anticipated, in view of the stimulus afforded by various re-armament programmes and the wider industrial use of copper, that production in the Union should be maintained.

The Northern Rhodesia copper mining industry has also been affected by the lower demand and quotations. As production was increasing disproportionately to demand, restriction of the output was reintroduced on December 1, 1937. As the result of the exceptionally low production costs of the Rhodesian deposits, a satisfactory measure of progress has been achieved and prospects of further improvement are favourable.

ASBESTOS

The demand for asbestos continued to expand, and it is expected that the steady upward trend evident during the past few years will be maintained during the current year.

Exports from the Union increased from £326,464 to £427,557, while in Southern Rhodesia the value of the output rose from £836,469 to £840,026.

FARMING INDUSTRIES

MAIZE

The 1935-36 maize crop in the Union was practically sufficient only for domestic needs, but for the 1936-37 season the production allowed of an exportable surplus, which realised over £4,000,000 as against the nominal export value of £242,000 in the previous year.

The latest estimate of the 1937-38 maize crop is 17,609,000 bags, which compares with the record yield of 28,128,000 bags in the 1936-37 season.

WOOL

The value of the 1936-37 wool clip in the Union was placed at about £13,000,000, as compared with £8,500,000 for 1935-36, and the increase was attributable to the general strength of export markets and to heavy purchases in South Africa by Japan. The season closed with a carry-over of about 12,000 bales, as against 21,000 bales at the end of the previous season.

The 1937-38 clip is estimated at 900,000 bales, representing an increase of 67,000 bales on the figures for 1936-37, and, notwithstanding the development of international political uncertainties and a generally uncertain trend in overseas affairs during the period prior to the opening of the 1937-38 selling season, it was believed that there would be no material change in values. The absence of Japanese competition at the commencement of the Australian sales, however, tended to affect quotations, and an easier tone was evident at the opening of the South African markets in September, 1937, which persisted for some months until values in general were about 30 per cent. below the peak levels of the previous season.

As an indication of the effect of these conditions on the South African wool industry, it may be mentioned that during the period July, 1937, to February, 1938, exports in terms of grease wool amounted to 141,655,000 lb., valued at £5,926,168, as compared with 167,947,000 lb., with a valuation of £8,594,340, during the corresponding period of 1936-37.

MOHAIR

The keen demand for mohair in the 1936-37 season resulted in a marked upward trend in prices, and at the close of the season in June, 1937, the quantity of unsold stocks was small. Although only 5,770,000 lb. were exported from the Union, as compared with 8,883,000 lb. in the previous period, the value increased by £96,262 to £506,283. During the present season prices have weakened in sympathy with the fall in wool values.

HIDES AND SKINS

At the close of 1937 the value of the Union exports of hides and skins, at £2,395,000, showed an increase of about £500,000 over the figures for 1936, this being due to the higher average prices received. During the latter part of the year the volume of purchases was adversely affected by the unsettled conditions overseas and by some decrease in local orders and prices evinced an easier trend.

SUGAR

The 1937-38 sugar crop in the Union, which totalled 507,219 tons, as compared with 446,409 tons in 1936-37, constituted the third successive record for the industry, and it may be noted that the increased output was attributed to the introduction of new cane varieties and to favourable weather conditions during the growing period.

The Sugar Act of 1936 and the International Sugar Agreement functioned smoothly during the year under review, and have had a beneficial effect on the industry as a whole. The overseas demand has been steady and South African consumption continues to expand.

FRUIT

The value of the Union exports of fruit increased from £3,171,870 to £3,627,462.

The quantity of citrus fruit shipped represented a record for the industry, but prices obtained were less favourable.

WATTLE BARK AND EXTRACT

The exports of wattle bark and extract from the Union rose from £776,985 to £1,000,901.

Government grading, which has proved very satisfactory, was commenced early in 1937, and the increasing adoption of progressive sylvicultural methods should result in a gradual improvement in the quality of the bark produced.

TOBACCO

Exports of tobacco leaf from Southern Rhodesia during 1937 amounted to 18,418,498 lb., valued at £934,830, as against 18,510,498 lb., with a valuation of £653,392, in 1936. The 1937-38 crop is estimated at 25,000,000 lb.

The value of the tobacco exports from Nyasaland increased from £390,587 to £423,994.

DAIRYING

Owing to adverse weather conditions, the position of the dairying industry was less satisfactory than in the previous year, but there are prospects of improvement.

The value of the exports of butter declined from £507,228 to £383,519, and of eggs from £174,512 to £118,961.

SISAL

During the year under review the price of sisal showed considerable fluctuation; at April 1, 1937, the price was £29 5s. per ton, and at March 31, 1938, it had fallen to £17 per ton.

Exports of sisal from Kenya fell in value from £719,618 to £692,283, while those from Tanganyika rose from £1,873,312 to £2,079,204.

COFFEE

Coffee exports from Kenya and Uganda declined from 36,868 to 25,592 tons, but the figures for Tanganyika showed an increase from 12,146 to 13,612 tons.

COTTON

A comparison of the export values of cotton from Uganda and Tanganyika for the past two years shows:—

	1936	1937
Uganda	£3,326,879 ...	£4,269,283
Tanganyika ...	£640,625 ...	£603,594

MANUFACTURING INDUSTRIES

Industrial activity generally in the Union was facilitated by the uninterrupted progress of the gold mining industry, and an appreciable forward movement was achieved.

The building trade showed further expansion, and the total value of plans passed at the chief centres increased by about £1,169,000 to £22,278,000. The principal interest centred in Johannesburg, where the figures rose from £9,750,000 to over £11,000,000. While there has since been some fall in the value of plans coming forward, it is not anticipated that there will be any abatement of activity in the industry itself during the current year.

The iron and steel industry showed good results, and it is expected that the favourable position will be maintained.

ALLIED BAKERIES, LIMITED

NEW ACQUISITIONS

The third annual general meeting of Allied Bakeries, Limited, was held, on the 20th instant, at Winchester House, London.

Mr W. Garfield Weston (the Chairman) said that they were still labouring under the inconvenience of certain profit adjustments, where companies had been brought into the group during the period covered by the accounts. For the current year, if all the companies maintained their earnings, the net trading profits should be around £293,000. The present issued capital had not been operating for the full year, but they had been able to pay a final dividend of 6 per cent. on the total ordinary capital, making 10 per cent. for the year. The company was in a far stronger position than last year. Cash and investments, over 90 per cent. of which were in Government short-term loans, amounted to over £317,000; the goodwill item stood at only 2¾ years' purchase of the net trading profit, against which they had a share premium account of £230,000.

During the year they had further strengthened the position by bringing into the group nine well-established and well-known businesses. They had heard it suggested that the company was expanding too rapidly. With that suggestion the directors entirely disagreed and believed that the accounts supported their view.

Their policy had been to make progress through supplying bread of the highest possible quality. They were confident that that was the right policy and, when favourable opportunities occurred for expansion in districts where their organisation was not adequately represented, the directors had decided to obtain a footing in such areas. Not only had there been a definite plan behind each acquisition in relation to the broad aspect of rationalisation, but in every case the management of the company to be acquired had been willing to remain with them and to accept shares in the company as the major part of the purchase price.

They had spent much effort and money on modernising the equipment in some of their subsidiaries, and they would not rest content until the most up-to-date machinery and equipment was standard throughout the group.

Trading results so far in the current year were ahead of last year, and they hoped to present even better results at the next meeting.

The report was unanimously adopted.

THE DISTILLERS COMPANY, LIMITED

The sixty-first annual general meeting of the Distillers Company, Limited, was held in the North British Station Hotel, Edinburgh, on the 15th instant, when the Rt. Hon. Lord Forteviot, O.B.E., M.C., chairman of the company, presided.

The Chairman said: Before reviewing the results of the activities of the company during the past year may I be permitted to refer to the genuine and profound regret felt by the board, and, I am sure, the general body of stockholders, at the passing of our chairman, the late Mr Thomas Herd? Mr Herd, from his earliest days, was connected either with companies which now form part of our organisation or with the parent company itself. Our prosperity was his only consideration, the furtherance of our interests his one great hobby. He has left behind him a signal record of distinguished service and unselfish devotion to duty, and I feel honoured that my colleagues have chosen me to carry on that great tradition. I shall do my best to maintain it.

The report and accounts, copies of which have been in your hands for some time, I presume I may take as read. First of all, I refer to the assets side of the balance sheet.

Land and buildings, plant and utensils, at £777,647, show an increase of £120,332 over the figure of last year. As during the year over £200,000 was spent on our new distillery at Cambus, over £50,000 on alterations at Hammersmith and considerable sums on buildings and plant elsewhere you will realise that depreciation has been written off these assets on a liberal scale, thus continuing the policy outlined in some detail by Mr W. H. Ross nearly ten years ago.

Sundry investments are shown in the balance sheet as worth the very substantial figure of £6,148,669. Approximately £5,000,000 of this is invested in British Government stocks with fixed rates for repayment, and the market value of these is in excess of the book value. The remaining investments under this head consist partly of undated Government stocks, but mainly of investments which your board consider it in the interests of the company to hold. Over 93 per cent. in value of these investments have a market quotation, and the market value of these holdings is considerably in excess of the value at which they are taken in the balance sheet. The remainder are entered at what the directors consider to be a conservative value, and in no case in excess of cost. You will therefore understand that as any doubtful investments have been amply provided for the sundry investments in our opinion are fully worth the value at which they appear in the balance sheet.

The next item on the assets side is that referring to the investment in the loans to subsidiary companies. The investment in subsidiary companies at £16,915,212 shows an increase of £1,565,331 over the figures of last year, and the loans to subsidiary companies at £7,291,692, an increase of £1,788,005. The increase in the sum invested is largely accounted for by the holding in Booths Distilleries, Limited, which was acquired in the early part of the year under review.

There were various reasons which led to the making of this investment, and we saw certain direct and indirect advantages in this purchase. We have not yet had time to reap the benefit of the complete scheme, but progress has been made towards this end, and the running of this well-known business is gradually being brought into line with that of the other members of the group.

As you know, it has been the policy of your board to develop those activities which are ancillary to distilling potable spirit, but our main investment is still in the distilling, blending and gin subsidiaries which are so well known to you all, and much the greater portion of the sum invested under this head is represented by the shares of these companies. In accordance with our usual practice, our investments in subsidiary companies have all been carefully examined, and any provision considered necessary has been made against the values at which they stand in our books.

The increase in loans to subsidiary companies arises partly from the increase in trade and partly from a re-arrangement of the financing of the Booth Company.

The greater activity of our distillers, coupled with a rise in raw material prices, explains the increase in stocks of £145,471, as compared with last year. As is stated in the report, these stocks are valued at conservative figures.

The only other asset to which I need refer is the cash balance, which shows a reduction of £1,367,281, as compared with last year, which is more than offset by the increase in the other assets appearing in the balance sheet.

Turning to the liabilities, there is no change in the capital or the debenture stocks of the company. The reserve fund, the fire insurance fund, and the superannuation and provident fund have been increased by the same amounts as last year. As you know, the company acts as banker for the members of the group and this explains the increase of £1,342,091 in the loans from subsidiary and associated companies. Sundry creditors and other balances are increased by a net figure of £34,585, which is accounted for by an increase in the reserves for unrealised profits and taxation, less a reduction in creditors.

As regards the reserve for unrealised profits, it is our practice, as you are aware, to suspend the profit on all sales from this company to subsidiary and associated companies until the goods are finally marketed. There has been added to the reserve this year the profit made on the spirit manufactured and sold to subsidiary and associated companies during the year. Although the costs of distilling have risen and the profit on the manufacture of spirit has consequently fallen, the sum reserved for spirit manufactured this year is greater than the sum freed through spirit marketed and withdrawn from the reserve.

As has been explained before, a sum is reserved each year to meet the income tax required on the profits earned, so that income tax reserve account represents the total sum payable for income tax on the profits earned by the company, although part of this tax is not due for two years. The provision made for last year was, however, at the rate of 5s. in the £, whereas tax must be paid at 5s. 6d. in the £, and an increased allowance has been made this year to meet this addition in tax. Full provision for the National Defence Contribution has also been made for the year under review.

Dealing now with the profit and loss account, the available profit for the year after writing down buildings, plant and investments, providing for debenture interest, management remuneration, head office expenses, taxation and contingencies and including interest and dividends from investments, is £2,522,204, and after adding the sum received for transfer fees and deducting directors' fees, the sum remaining for distribution is £2,512,470, an increase of £54,054 compared with a year ago.

Trade at home has shown to appreciable advantage during the past year, and the various brands of Scotch whisky marketed by our group companies have more than held their own. Quality with requisite age, so consistently maintained by the management of each of our companies, cannot fail to be a strong selling factor in the position they hold.

In our export markets the position is encouraging, and we are able to report that in almost every country in the world we have experienced an increase in trade. Our volume of business in the United States of America discloses that consumers of alcoholic beverages in that country still display a distinct partiality for "Scotch." In tropical countries the medical profession continue to emphasise the advisability of including our product as an essential part of the daily dietary. Ample proof of the preference our brands are enjoying in these countries is reflected in the expansion shown in our trade, and it is obvious that the medicinal value of Scotch whisky is becoming more apparent every day.

A pleasing feature in connection with this section of our business is that, notwithstanding the immense difficulties put in the way of Scotch whisky in many markets by increased domestic taxation, and the incidence of abnormal rates of exchange, our brands are still able to surmount all these difficulties, and continue to command the confidence of a discriminating public.

Our various brands of gin enjoy universal popularity, which is shown by the increase of sales both at home and abroad.

It is difficult to prophesy regarding the coming year, but it is quite evident that there is in this country a slight recession of trade. Our strong position, however, enables us to face the future with confidence.

The output at our grain distilleries has been maintained at a high level throughout the year. We have orders on hand to ensure a full programme of work at all our operating distilleries till the end of the present calendar year.

During the past distilling season nearly all our malt distilleries have been in commission and have worked the full season. Advantage has been taken of the silent period to recondition and bring the plants to a thorough state of repair, so that we will be in a position to overtake any demand for malt whisky which may arise next distilling season.

Our business in industrial alcohol has progressed favourably during the year, but in this case we are working on very narrow margins of profit, and the costs of manufacture have also been affected by the coal and labour charges. The extra cost of coal used by our various units was considerable when compared with the previous year, and, as you can well understand, we are compelled to exercise economies in this direction, in order that we may be able to maintain the minimum cost of production.

You are fully acquainted with the new tax imposed on alcohol used for motor spirit. We are well accustomed to act as tax gatherer on behalf of the Government: we realise the national need of extra finance in the present grave international situation; we shoulder our burden willingly, but having embarked a large amount of capital in order to supply alcohol for this motor spirit we cannot understand this sudden change of policy. It is not generally understood that the Distillers Company have little if any advantage from this turnover other than the very narrow margin of profit taken on the alcohol itself. It has been stated that the Distillers Company have a definite interest in the profits of the company or companies selling petrol admixed with alcohol, but this is not the case. We have no share interest of any kind in these companies.

It will be appreciated also that any reduction of turnover must mean an increased cost of the remainder production. You will realise—though the general public may not—that an enormous number of trades depend on alcohol as one of their principal raw materials, and those of you who visit our pavilion at the Glasgow Exhibition will get some idea of the varied character of our productions and also how far the industries of this country depend on alcohol as a basis for chemical manufacture.

The chemical side of our business has progressed during the year, but has suffered somewhat from exceptional competition from abroad, where consideration of profit or even costs of production do not at the moment seem to enter into the quoted price.

The yeast and malt extract business has been satisfactory, but profits have decreased owing to increased costs of raw materials, wages, coal and labour.

Reference was made last year to the Gyproc plaster board factory which was then in the course of erection at Shieldhall, Glasgow. This has now been completed and is fully occupied in the manufacture of plaster boards and other products for the building industry. These products have met with a very favourable demand, and arrangements have been made for an increase in the manufacturing capacity of this factory and of the works at Rochester.

You are probably aware that the company has hitherto been tenants of various offices throughout the City of London. This was found to be inconvenient, and we have recently completed offices of our own at Distillers' House in St. James's Square. The new arrangement has brought our numerous departments into closer touch with one another, resulting in better co-ordination and control.

You will observe from our annual report that Mr Reginald W. Preston does not seek re-election as a director, and your board desire to put on record their great appreciation of the long and honourable services rendered by him to the company and the allied businesses with which he was connected.

I desire here to record the appreciation by the board of the loyal service and efficiency of the staff throughout the whole of our organisation. It is to their co-operation that is due much of the success of the company during the past year. For some time every employee of the Distillers Company, Limited, has enjoyed the privilege of holidays with pay, together with facilities including pay for Territorials attending their annual training.

I have now much pleasure in moving the adoption of the report which recommends a final dividend on the preference stock of 3 per cent. less tax, making with the interim dividend of 3 per cent. already paid a dividend of 6 per cent. less tax for the year; also a final dividend on the ordinary stock of 12½ per cent. less tax, making with the interim dividend of 7½ per cent. already paid a dividend for the year of 20 per cent. less tax, also the payment of a bonus of 2½ per cent. less tax on the ordinary stock and carrying forward to next year a sum of £444,359 19s.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

UNITED DOMINIONS TRUST, LIMITED

NEW RECORDS ACHIEVED

The sixteenth annual general meeting of the United Dominions Trust, Limited, was held, on the 20th instant, at Regis House, London.

Mr. J. Gibson Jarvie (chairman and managing director) said that the financial year just ended had been fraught with many difficulties and anxieties, but once again their accounts disclosed a new high level of business transacted, of profits earned, and a general development of their companies' scope and interests, which should be reflected in still greater strength and growth in years to come.

The improvement was due to some extent to the fact that they had been able to secure new accounts and to extend their service into new fields. It was satisfying to realise that even in a very difficult year they had continued to strengthen their foundation and broaden their basis, and to find the company more securely established in the economic and banking structure. Their policy was to continue to expand their activities without sacrificing in any way the conservative principles on which the business had been established. They did not look for—in fact, they would avoid—spectacular advances, but at the same time more and more businesses looked to them to satisfy those commercial requirements which they had equipped themselves to meet.

STRONG FINANCIAL POSITION

The capital now stood at £1,100,000, and the profit for the year had increased to £213,248. Income tax and provision for N.D.C. had risen from £41,030 to £63,995. The consolidated statement showed the strength of the company. Capital and reserve accounts amounted to approximately one-third of the aggregate figures, and the balances at bankers and cash in hand amounted to £1,017,399. Taxation had become oppressive; where the safety of the country was concerned there would be no limit set, but the burden of taxation on industry might conceivably stifle the effort by which it was satisfied.

The Trust occupied a unique position as a commercial bank supplementing the service of the ordinary banker, providing finance for the distribution of goods rather than for their manufacture. By granting facilities to trading and manufacturing clients, they made it possible for the latter to give credit in turn to their customers. The company had been responsible to a very great extent for a large increase in retail turnover in capital and semi-capital goods; the range was very wide and embraced machinery and plant of every description, motor vehicles, farm equipment and implements, refrigerators, and other domestic appliances. The list was almost endless.

United Dominions Trust (Electric), Limited, was a company constituted to provide financial facilities for the electrical industry. Electricity was now an essential in the homes of the people, and the financial requirements were of such a special nature that they had come to the conclusion that electrical finance was entitled to a company of its own.

CREDIT FOR INDUSTRY

Credit for Industry, Limited, was another of their companies constituted for a particular purpose. Larger advances were again shown, after substantial repayments, during the year. The service being rendered to British industry by that company was very much greater than the figures indicated. They had been the first in that particular field, and could reflect with satisfaction on the usefulness of the company to the country in connection with the great problem of the special areas. They had set an example which had been followed in other quarters, and the amount of money for which they had been directly or indirectly responsible for placing in the special areas was many times the actual loans by the company up to date. He believed that the company could continue to be of service to the industrial community long after the special areas had ceased to be so regarded.

The times were not propitious for a large increase in the activities of the company, but, as and when money conditions tightened, it was reasonable to suppose it would have a field of finance which it might look on as, in a measure, its own.

Dealing with other activities, he said that British Medical Finance, Limited, provided a service recognised by the medical profession as the approved service when the purchase of practices was being considered. The South African Company had made a satisfactory beginning. Summing-up in conclusion, he said that the Board anticipated a progressively forward growth in strength, service to their customers, and profits. In the absence of a major catastrophe, they could scarcely fail to continue their progress.

The report was unanimously adopted.

BRISTOL AEROPLANE COMPANY, LIMITED

WORKING TO FULL CAPACITY

MR VERDON SMITH'S SPEECH

The twenty-eighth ordinary general meeting of the Bristol Aeroplane Company, Limited, was held, on the 21st instant, at Filton, Bristol.

Mr W. G. Verdon Smith, C.B.E. (the chairman), said: It is common knowledge that during the past year the aircraft industry has been fully occupied with the fufilment of Government orders for aeroplanes and aero engines besides all the numerous accessories connected with aircraft manufacture. Shareholders will, therefore, expect to find in the case of this company that the accounts for the year under review show improved earnings resulting from considerably increased output.

The net trading profit, with transfer fees £392, amounted to £537,393. Of this sum a large proportion will have to be paid to the Government in the form of income tax and National Defence Contribution, the provision for this purpose being no less than £185,000. Deducting this amount, together with directors' fees and interest, a balance is left of £344,579. Adding the balance brought forward from the previous year, the available profits are therefore £353,005. £100,000 of this amount has been placed to reserve, the net dividend on the preference shares absorbed £22,500, an interim dividend of 7½ per cent. was paid during the year on the ordinary shares, and the board now recommend the payment of a final dividend of 17½ per cent., less income tax. The balance remaining after this distribution is £10,755, which it is proposed to carry forward to the next account.

EXTENSIONS TO FACTORIES AND PLANT

Referring to the balance sheet, further expenditure has been laid out in extension of the factories and plant, the net addition, after providing for depreciation, being represented by an amount of £142,114. Inasmuch as the outlays were largely made in the second half of the year, the full benefit will not accrue until the present year. A new item, namely, £70,000, in respect of shares in an associated company, refers to our investment in Rotol Airscrews, Limited. At the last general meeting I explained the reasons for joining with Rolls-Royce, Limited, in the formation of this separate company for the manufacture of airscrews. The factory has now been erected and its equipment completely installed. Considerable orders for controllable pitch airscrews have been received and satisfactory production, though not yet to maximum capacity, is being obtained.

The total of the current assets on the one side of the balance sheet and of current liabilities on the other, show a similar and substantial increase of approximately £1,000,000. The value of stocks and work in progress is larger by £334,146, an increase following in the ordinary way from the much larger amount of work passing through the shops.

On the debit side of the balance sheet it will be seen that by the addition of £100,000 out of the current year's profits, the general reserve amounts to £1,200,000, a sum equal to the whole of the subscribed ordinary share capital. The total current liabilities and provisions show an increase of rather more than a million pounds, and include a bank overdraft of £491,914, rendered necessary as a temporary measure to finance the large volume of orders in course of execution.

Before leaving the financial results of the year's work, it may be desirable to refer to suggestions in some quarters that new capital either in the form of debentures or a bonus issue of share capital might be anticipated. On such questions the board would have regard to what they conceive to be the best interests of the company and the necessity of maintaining a conservative financial policy, particularly in view of the possibility of changed conditions in the industry arising from political or other causes beyond their control. They are anxious that the permanent capital of the company should not be unduly enlarged but some additional capital resources will certainly be required before long.

For reasons which will be readily understood, it is impossible on this occasion to supply you with detailed information with regard to the company's operations. Large demands have been made upon us in connection with schemes adopted by the Government for the expansion of the Air Force, and it is gratifying that the company has been in the position both as regards design and production to cope with the heavy responsibilities placed upon it for the supply of aircraft and aero engines.

WORKING TO FULL CAPACITY

The company's organisation has been greatly enlarged during the past two or three years, as can be readily seen by passers-by in the vicinity of Filton on the main road out of Bristol. The whole of the factories are working to full capacity, and, indeed, as announced in the Press, arrangements have recently been entered into with the Air Ministry to provide additional manufacturing resources necessary to meet their latest requirements. These new buildings and their equipment will involve an expenditure of approaching £1,500,000, an outlay too great to be undertaken by the company under an expansion scheme over a limited period. Financial arrangements suitable to the special conditions have been concluded, therefore, with the Ministry. I might add that, contrary to an impression which seems to exist, this new scheme of extensions is not a "shadow" scheme.

It must be apparent to all interested in such matters that this company has played a part of first-class importance in the Government expansion schemes for aircraft construction. In the first place, a large volume of orders for aircraft and aero engines have been fulfilled directly by this company without delay in delivery. In addition, "Bristol" aircraft and "Bristol" aero engines have been and are being built in large numbers in Government shadow factories.

In this connection it is pleasing to be able to record that the companies managing the various shadow factories have acknowledged from time to time in generous terms the great value of the assistance which this company has gladly rendered in connection with the numerous difficult technical questions necessarily arising in the course of the inaugurating and carrying out of their undertakings. As you are aware, the company is to receive remuneration in respect of their products manufactured under the "shadow" schemes, but it is not yet possible to indicate the extent of the financial benefit to which the company will be entitled.

The company has enjoyed for many years past a high reputation abroad, and has established a very considerable goodwill for its products in many parts of the world. It is therefore of great importance—and one might add in the national interest also—that all the work of the past years in building up a valuable goodwill and sales organisation should not be wasted by a complete cessation of exports. Therefore, although the company has been so largely concerned with the fulfilment of Government orders, endeavours have been made to respond as far as possible to insistent demands from friendly foreign countries.

TECHNICAL PROGRESS

Anyone with merely superficial knowledge of the aircraft industry will realise that technical progress and development must be the constant aim of the company if the business is to continue to achieve successful results. It is therefore wholly satisfactory that aircraft and engines already developed are in successful production, and that new types are in course of development with every prospect of successful results. The Perseus sleeve valve engine is in production, and the Hercules sleeve valve engine now in an advanced state of development will be in production at an early date. Other types of engines are also in process of design and development, and there is good reason to anticipate that they will reach a higher level as regards power and performance than has hitherto been attained in aero engine construction.

Considerable numbers of aero engines of "Bristol" design and construction are in use for civil purposes, including a large proportion of the engines used in the services operated by Imperial Airways, which have been supplied by this company. Your directors have always been anxious to produce aircraft and aero engines for civil purposes, but in the meantime, so far as aircraft are concerned, national requirements for military purposes have made it essential that all our efforts should be concentrated on the fulfilment of Government orders. The question of civil aviation, however, is always before your board, and whenever the opportunity occurs you may rest assured that this company will be in a favourable position to manufacture aircraft of the larger types suitable for public passenger transport.

The chairman concluded by moving the adoption of the report and accounts. Sir G. Stanley White, Bt., seconded the motion, which was carried unanimously. The resolution proposing the re-election of the chairman, Mr W. G. Verdon Smith, C.B.E., was proposed by Sir G. Stanley White, Bt., and seconded by Colonel Sidney E. Smith, and was carried. The re-election of the auditors was proposed by Mr J. Bird and seconded by Mr Thomas Perkins, C.M.G., and was also carried. The meeting terminated with a hearty vote of thanks to the chairman and directors, which was proposed by Mr J. S. Young and seconded by Mr J. S. Collins, and was carried with acclamation.

NORTH EASTERN TRADING ESTATES LIMITED

SATISFACTORY PROGRESS

The third annual general meeting of the North Eastern Trading Estates, Limited, was held at Metrovick House, Newcastle-upon-Tyne, on Tuesday, July 19, 1938.

Colonel K. C. Appleyard, O.B.E., D.L., J.P., the chairman, in the course of his speech, said: You will see that the advances from the Commissioner for the Special Areas (England and Wales) have increased by the large figure of approximately £800,000, while capital expenditure on land, development and buildings on the Team Valley Estate now stands at over £1,048,000, the additions during the financial year having amounted to £937,604 13s. 1d.

As an indication of the effort which the above expenditure represents, it will interest you to know that up to date we have completed 12¼ miles of roads on the Estate, 6¼ miles of railway, 20 miles of sewers, and have brought practically 1¾ million tons of fill into the area from local pit heaps. In addition to this, we now have 17 acres of factories either completed or under construction.

It is expected that by the end of this year the civil engineering work in developing the Team Valley Estate will be finished and that the company's subsequent expenditure will be almost entirely on factory buildings which are, of course, revenue producing. This will really represent the end of the first stage of development.

On the revenue side of the account it will be seen that the amount received in rents is small, this being due to the fact that our first factory was only completed in July, 1937, and that none of our tenants has been in occupation for a full year, while some had only had possession for a few weeks.

Current expenditure is within the estimates approved by the Commissioner, and a considerable proportion of this is due to publicity and propaganda, which we are convinced has contributed materially to the success of our activities.

I am happy to be able to tell you to-day that we have secured the hundredth tenant for the properties we are administering, and that this tenant is the well-known local firm of Thomas Hedley and Company, Limited, who, we are proud to say, have investigated the advantages offered on the Team Valley Estate and have instructed us to build premises for them.

OTHER FACTORY SITES DEVELOPED

I refer above in the plural to the properties which we administer, because our activities are no longer confined to the Team Valley Estate. The Commissioner for the Special Areas invited the company during the year to act as his agents in developing industrial sites at Pallion near Sunderland, at West Auckland, and in an area of East Gateshead, to be cleared and prepared for industrial and other uses. The board agreed to undertake these tasks and will in due course take over the properties on long lease and be responsible for factory construction thereon. The company is also acting as the Commissioner's agents in constructing further individual factories on other sites and has already commenced to receive contributions to its revenue on scales agreed with the authorities for these additional tasks.

SCALE OF ENTERPRISE JUSTIFIED

From time to time there has been some faint criticism of the scale on which this enterprise is being developed, and it may be as well for me to say here that the board set out, with the full approval of the Commissioner and the Government, to attract light industries in numbers commensurate with the importance of the North East Coast and the size of the unemployment problem which exists in bad times. We felt that if this novel State experiment were to be successful, it must be of such a nature as to seize the imagination of the industrial people whom we approached and to give evidence in itself of permanence and the widest choice of sites which different businesses could desire.

I believe the fact that we have maintained a rate of one new tenant a week since August, 1936, is ample justification for the board's original conclusions. Whether such a rate can be kept up is another matter, but at the present time the number of inquiries and our letting rate are still being maintained, and it is hoped that when the staff move into the Central Administration Buildings early in August, and are able to do their work at the heart of the enterprise, an even greater concentration of effort in publicity, research, and letting activities will be possible.

I am convinced that the new way in industry is not to build factories but to hire them with every necessary service, and I am sure that there is no more attractive, modern and efficient industrial area in which to hire them than in the Team Valley Estate.

The report and accounts were adopted.

PALESTINE ELECTRIC CORPORATION LIMITED

INCREASED SALES AND PROFITS

The fifteenth ordinary general meeting of the Palestine Electric Corporation, Limited, was held, on the 19th instant, at 2 Grosvenor Gardens, London. The Right Hon. Viscount Samuel, P.C., G.C.B., G.B.E. (chairman of the corporation), presiding.

The chairman, in the course of his speech, said: The year under review has been one of steady development, notwithstanding the continued unrest in Palestine and the accompanying economic depression.

During the year, the number of consumers increased in comparison with the previous year by 14 per cent. and the number of units sold by 8.8 per cent. The increase in gross revenue was 4.9 per cent., from £582,765 in 1936 to £611,051. That the increase in revenue is less than the increase in sales is due mainly to the further reductions in our rates which came into effect in the course of the year. It is of interest to note that in the last six years the average charges per unit for all classes of electric supply to the public have been reduced by nearly one-half.

I mentioned last year at the annual general meeting that it would be necessary to provide for an increase in the authorised capital of the corporation with a view to increasing the issued capital to such extent and at such times as might be found desirable. At the extraordinary general meeting which followed, a resolution was passed increasing the authorised capital from £2,500,000 to £4,000,000, and your directors thereupon made an issue of Four and a-Half per cent. £1 second redeemable cumulative preference shares, ranking junior to the previous issue of preference shares to an amount of £500,000.

NEW POWER HOUSE

Turning to the accounts, we expended during the year an amount of £668,618 on capital account. The principal items were £341,677 in respect of the new power house near Tel-Aviv, £158,142 on the extension of the Haifa power house and cooling water basin, and £121,097 on transmission and distribution lines and on meters.

Notwithstanding the serious delays encountered in delivery of plant and machinery owing to pressure of Government orders in Great Britain, rapid progress was made with the construction of the new power house near Tel-Aviv, and also with the extension of the Haifa power house plant. The new power house has now been completed, and it is expected that it will be put into commission shortly.

The financial plan of the Jordan Concession requires that from 1937 an annual sum should be set aside under the head of capital amortisation fund. Accordingly, that new item now appears in our balance sheet; the amount being £9,754, which is the computed sum needed by the provisions of Clause I of the financial plan.

An amount of £95,150 has been allotted to reserve for depreciation in respect of the year 1937, and this reserve now stands at £455,391.

PROFIT AND DIVIDEND

Turning now to profit and loss account, the operating expenditure, together with provision for depreciation, in 1937, was £343,982 as compared with £326,063 in 1936. This is an increase of £17,919, or 5½ per cent., in comparison with the previous year; but this includes an increase of £9,290 in the allocation to depreciation reserve.

The net profit for the year was £235,566. To this we have to add the carry-forward from last year of £24,240, making a total of £259,806 available for distribution. We now recommend the transfer to general reserve of £50,000, bringing it up to £250,000, and of £20,000 to the reserve for income tax and contingencies. We further recommend the payment of a final dividend of 5 per cent., free of U.K. income tax, on the ordinary and "A" ordinary shares issued, making a total of 7½ per cent., free of U.K income tax, for the year, the same as last year.

You will be glad to be informed that the first six months of the present year again show an increase on the previous year in sales and in gross revenue, although the rate of increase is less.

The directors desire again to pay tribute to the managing director and to the staff in Palestine for their efficient and successful work during a trying year, carried on under conditions always of anxiety and often of danger. You will not expect me on the present occasion to enter into political matters. I would only express the earnest hope that wise statesmanship among the governors and self-restraint among the population may find the way to happier times.

The report and accounts were unanimously adopted.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED

BEST RESULTS SINCE 1927

MR W. H. DAUKES'S ADDRESS

The twenty-eighth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 15th instant, in London.

Mr W. H. Daukes (chairman and managing director), in the course of his speech, said: It is with considerable satisfaction that the directors are able to publish the best results since the year 1927, when an approximately similar profit was earned, although at that time on a smaller capital.

The profit from the local company was £661,713, compared with £569,705 in 1936 and £221,164 in 1935, but in making these comparisons the difference in exchange rates must be borne in mind. After the deduction of London expenses and interest on debenture stock the profit for last year is £424,290, compared with £297,384 for 1936. The directors have added £50,000 to the general reserve, bringing this up to a total of £350,000, and they propose to pay a final dividend of 5 per cent., which, with the interim dividend of 4 per cent. paid last February, brings the total dividend for the year to 9 per cent.

TEA CROP

From our 21 tea estates we exported 11,359,456 lb. of manufactured tea, 10,955,172 lb. being produced by our own estates and 404,284 lb. being bought leaf manufactured in our factories. Throughout the year, however, extensive areas were rested in connection with the restriction of crops, the greatest amount of tea at any one time out of pluck being 5,700 acres. The company's standard production for 1937-38, including the allowed purchase of native leaf, was 18,222,834 lb., of which the local exportable quantity was 59 per cent., or 10,751,472 lb. In addition 637,558 lb. of export licences were purchased.

The tea generally on all estates maintained its good condition although the necessary steps to combat helopeltis and root disease had to be taken as usual. As regards both these, Mr Masefield, our tea superintendent, and the managers are always on the alert to counter any fresh outbreaks; otherwise our tea continues very free from pests and disease.

Turning to the tea results for the year, the gross profit amounted to F2,114,619, compared with somewhat under one million guilders the previous year. The cost of production, owing to an advance in wages and somewhat more liberal treatment and cultivation of the gardens, increased from 6.07d. to 6.43d. per pound. The difference would have been greater but for the improved rate of sterling exchange. This cost included everything except debenture interest and the charges in the local balance sheet for depreciation, the last-named amounting to 1⅓d. per lb. The selling price advanced from 9.37d. to 10.79d. per lb. net.

With the further 5 per cent. increase in the international export quota for the regulation year 1938-39, our exportable crop for 1938 is estimated to be 11,500,000 lb., in addition to which we have purchased some 600,000 lb. of export rights from the Sumatra Anglo-Dutch Company spread over the next restriction year, which includes the first three months of 1939.

RUBBER

Last year we had sixteen estates totalling 36,285 acres under rubber, of which 8,759 were immature. The total production of the year amounted to 16,505,762 lb., a yield on the mature rubber of just under 600 lb. per acre, which is some indication of what our rubber would be capable if on full production.

The company's standard production for 1937 was 17,700,665 lb., and of this approximately 78 per cent. was exportable against the international regulation figure for the year of 83⅓ per cent. Export licences were purchased for 1,438,404 lb. At December 31st last we were therefore left with a stock of unlicensed rubber of just over 1,000 tons, an amount well within our permissible stock figure. This stock has been taken into the accounts at a price which just covers prime cost. Mr Jackson continues to report most satisfactorily as regards the general condition of our rubber.

During the course of the year we continued our rejuvenation programme. A further 1,667 acres were replanted at a cost of under £3 10s. per acre. This brings the total area planted with first-class modern clones and seedlings during the last ten years to just under 12,000 acres, while approximately a further 2,600 acres are being replanted during the current year. So far as can be judged at present, all the rejuvenated areas are extremely promising.

The gross profit for the year from rubber amounted to just over three million guilders, compared with F1,079,000 in 1936. This big improvement is accounted for by the larger amount exported, by a decrease in the cash cost from 2.77d. to 2.57d. a lb., and by an increase in the selling price from 7.56d. to 7.89d. a lb. Actually the cost price, mainly owing to higher wages, showed an increase on the previous year of .18d. a lb., but this was more than offset by the improvement during the year in the exchange value of sterling. The various depreciations add practically 1d. a lb. to the cost price, so that the all-in cost works out at 3.53d. a lb. In calculating the selling price practically ½d. a lb. has had to be deducted in respect of export taxes.

COFFEE AND OTHER PRODUCTS

At the time of our meeting last year the prospects for coffee appeared somewhat brighter, but the price took another downward dive in the latter half of last year, and the position is now as bad as it has been at any time during the last few years. Our crop in 1937 amounted to 19,914 cwt., produced at a cash cost of 36s. 1d. per cwt., while the net selling price was 23s. 9d., against that of the previous year of 29s. 8d. per cwt. The result for the year was a loss of F198,345, compared with F85,642 for 1936.

The profit from our kina estates was F250,620, compared with F183,483 the previous year. This increase was chiefly brought about by the advance from 40 per cent. to 52 per cent. in our export quota.

During the year our three rice mills at Pamanoekan, Pegaden, and Paboeran dealt with a record quantity of paddy. The results from rice were more satisfactory than for some years past. It is satisfactory to be able to report a record profit from Soekamandi Estate for 1937. The combined gross profit from sisal and tapioca came to F2,047,155, against F2,032,509, the previous highest figure, that for 1936. It is difficult to speak hopefully of the prospects as regards Soekamandi for the current year. Prices for both sisal and tapioca have declined heavily, and even at the reduced level sisal sales have been difficult to make, whilst the demand for tapioca flour both is and has been now for many months entirely absent. Fortunately the estate is in excellent condition, and is able to face a period of low prices.

PROSPECTS FOR CURRENT YEAR

A few words with regard to the prospects for the current year. I fear it is impossible to paint these with bright hues. Consumers of the world's products have shown considerable reluctance to buy, the result being low prices for practically all classes of commodities. Tea has been one of the few exceptions. By the careful adjustment of supply to demand the International Tea Committee has been able, whilst providing the world with sufficient tea, to prevent any heavy accumulation of stocks. At the end of May this year stocks in the United Kingdom amounted to somewhat over 162,000,000 lb., rather more than last but less than has always been considered a normal stock figure. It can therefore be said that the statistical position is sound, and although the exportable percentage, 92½ per cent. of the standard quantities of the countries included in the export regulation agreement, is the highest since the agreement started, the industry can well afford to see larger stocks than those at present held without feeling that they are in any way excessive. Although, therefore, it is unlikely that we shall see a further advance in tea prices, there is at the same time no reason to anticipate any substantial drop. With reasonable prices, therefore, and a larger export than has been permitted for some time, our tea results should not be unsatisfactory.

Unfortunately, the same cannot be said with regard to rubber. Here we have an entirely reversed position. The lowest percentage of export yet allowed and at the same time an unremunerative price. If the present export quota of 45 per cent. remains in force until the end of the year our exportable allowance will be approximately 9,250,000 lb. Fortunately, about 45 per cent. of this amount has been sold forward at the equivalent of practically 11d. per lb., London landed terms, so that we are assured of some profit, although naturally the drastic cut necessitated in production is bound to affect the cost price adversely.

With the exception of kina, the results from which are not likely to show much variation from recent years, the remaining products in which we are mainly interested—namely, sisal, tapioca, and coffee—can only be said to vary in differing degrees of badness, and unless the prices for these improve little assistance is likely to be forthcoming from either of the first two, and the last named cannot possibly avoid showing us another loss. It appears, therefore, that for the current year we must look mainly to tea, with some assistance from rubber and kina.

The report and accounts were unanimously adopted, and the retiring directors and the auditors were re-elected.

Sir Robert Williams was then presented with his portrait in oils, and after he had briefly thanked the shareholders the proceedings terminated.

SUNGEI GETTAH RUBBER ESTATES, LIMITED

PROFIT MAINTAINED

The thirteenth ordinary general meeting of Sungei Gettah Rubber Estates, Limited, was held, on the 20th instant, in London.

Mr P. J. Burgess (the chairman) said that the accounts for the past year must be considered entirely satisfactory in the maintenance of the profit at the same approximate figure as for the preceding year at £7,204, in spite of the reduction of 1.656d. per lb. in the average price at which their rubber was sold. Their estate had fortunately been able to take full advantage of the high releases under the Rubber Regulation Scheme in 1937 and to produce a crop which was higher than in the previous 12 months by 117,703 lbs., which compensated for the lower selling price and the general increase of labour costs.

Their liquid assets in cash and Government securities amounted to £13,140, which was equivalent to nearly £8 10s. per planted acre, which, after payment of the final dividend, would be reduced to just under £7 per planted acre. That was on the low side and should be strengthened in view of the new planting which would be permitted in 1939 and the eventual need for replanting rubber as it became obsolescent. They recommended a final dividend of 2½ per cent., making 5 per cent. for the year.

A new five-year period of control of rubber production commenced in 1939 and under it they would be permitted to effect new planting up to 5 per cent. of their present planted acreage. That would amount to 78 acres and would absorb rather more than the balance of their plantable reserves.

The prospects for the current year depended upon the two factors of price of rubber and extent of the releases during the next nine months. At present their release was set as 45 per cent. of the assessment and with a rubber price of 7½d. per lb. there was very little margin even for their property with its low costs. He was quite confident, however, that the position was one which must improve and that the reduction of stocks of rubber, brought about by the current low release, would lead to a price increase and also, as the exportable amount was now quite insufficient for the world requirements even with trade as it was at present, larger releases were inevitable when the price had reacted to the stock reductions.

The report was unanimously adopted.

MERLIMAU PEGOH, LIMITED

DIVIDEND OF 12½ PER CENT.

The twenty-eighth annual general meeting of Merlimau Pegoh, Limited, was held, on the 20th instant, in London.

Mr Gerald Kingsley (the chairman), in the course of his speech, said: The year covered by the accounts was in many ways a disappointing one for rubber producing companies. The price of rubber on April 1st last year was 1s. 1½d. per pound, and when the company's financial year ended on March 31st last it had fallen to 5 ⅛d. per pound. In the circumstances it is possible to derive some satisfaction from the fact that your company has been able to repeat the allocation of £8,000 to special cultivation reserve, and to pay dividends totalling 12½ per cent., against 15 per cent. distributed last year.

The benefits derived from conservative tapping systems and from careful attention to cultivation are apparent and the estates, both young and old, are improving steadily. The extensive manuring programme upon which we embarked last year was carried through successfully, and is expected to give good results.

The low selling price for rubber emphasises the importance of producing the restricted crops as cheaply as possible, and our colleagues in the East are making arrangements with this end in view. A large group like ours is in a favourable position for adjusting its organisation to meet the needs of the present situation, and we are well placed for selecting the most suitable areas for tapping, and for resting those properties where for various reasons the cost of production is higher.

In recent weeks we have been able to derive some encouragement from the improvement which has taken place, not only in the price of rubber but in business sentiment both on the London markets and in America.

I think it would be unduly pessimistic to regard the existing state of affairs as permanent. We have all seen how completely conditions changed for the worse in a period of less than 12 months, and the improvement for which we are all hoping may be just as sudden and far-reaching. In the meantime, we can rest secure in the knowledge that all our properties are in first-class order, and that the group as a whole is well equipped to face whatever the future may hold in store.

The report was unanimously adopted.

GOLD MINES OF KALGOORLIE LIMITED

INCREASED REVENUE

ORE RESERVE POSITION STRENGTHENED

The fourth ordinary general meeting of Gold Mines of Kalgoorlie, Limited, was held, on the 15th instant, at 20 Aldermanbury, London.

Mr P. E. Marmion (the chairman), in the course of his speech, said: It is very gratifying, although the new mill was only operating during the last five months of the period under review, to be able to draw attention to the substantial increase in revenue from gold proceeds, £139,513, compared with £92,255 for the previous year, an improvement of more than 50 per cent. Results on the expenditure side of operations have been equally satisfactory. The costs of mining and treatment show a material reduction amounting to approximately 14s. per ton, and, after providing for development redemption and advance stope preparation at the same rate as last year, the working profit, £55,772, shows an improvement of £12,636.

The great increase in the value of plant, machinery and equipment explains the advance, from £6,869 to £17,500, in the amount transferred to depreciation reserve. In addition, we have decided to charge to this year's profits one-half of the expenditure incurred on the Mount Charlotte investigation. The amount brought forward to appropriation account, after payment of dividend No. 1, is £5,027, and the total remaining for disposal at March 31, 1938, is £36,259. It is proposed that a dividend of 6d. per share shall be paid, leaving £5,759 to be carried forward.

You will, I am sure, be pleased to note the strength of the cash position, funds in hand at March 31, 1938, amounting to over £116,000 after all the major items of capital expenditure had been met.

ORE RESERVE INCREASED

At March 31, 1937, the estimated proved and probable ore in your company's leases was 242,800 tons, which with a further 23,200 tons in the leases of our subsidiary, Lake View South (G.M.K.), Limited, made up the total of 266,000 tons of which I advised you last year.

After providing 46,009 tons for our treatment plants during the year, the estimate of the ore reserves in our own leases at March 31, 1938, showed the substantial increase of 95,300 tons to a total of 338,100 tons, which is equivalent to more than three and a-half years' supply for our new mill at its present capacity. The ore reserves of the Lake View South were also increased by 10,400 tons to 33,600 tons after milling 1,919 tons.

The grade of the ore suitable for treatment in the small associated mill was considerably in excess of the average of the ore reserves. While that plant was operating, the average grade of the reserves naturally declined. In addition, some relatively large tonnages of lower-grade ore developed during the year were incorporated in the reserves, with the result that their average grade at the end of the year was reduced to 6.6 dwts. per ton.

As a consequence of preparatory work, the mill has been kept fully supplied with ore from the time it started operating, and I am pleased to inform you that the preparatory stages of our development work are now practically completed.

LOWER WORKING COSTS

The Chairman then gave an exhaustive survey of the exploration work carried out during the year, and, continuing, he said:—Concurrently with the exploration work a great deal has been done to improve the facilities for handling the ore underground and generally to modernise working conditions. It has been possible to effect a substantial reduction in working costs, and it is hoped that further improvement will be made during the current year. The cost of treatment in the new mill has come up to our best expectations, averaging approximately 11s. 6d. per ton to the end of March, while for April and May the corresponding figure was 10s. 4d. per ton.

In conclusion, the Chairman said: Your property has been fully equipped and modernised well within the cost originally anticipated, which has left our cash position in a highly satisfactory state. The power and treatment plants have shown their ability to function efficiently and economically at the full capacity for which they were designed, and the ore reserve position has been greatly strengthened at some sacrifice in grade, against which we shall enjoy lower working costs resulting from the operating improvements that have been effected and the large increase in milling capacity. It is our intention to continue the vigorous policy of development which has rewarded our efforts in the past and encourages us for the future.

The report and accounts were adopted.

GOLD EXPLORATION AND FINANCE COMPANY OF AUSTRALIA, LIMITED

INCREASING REVENUE

The fourth ordinary general meeting of this company was held, on the 19th instant, in London.

The Right Hon. L. S. Amery, P.C., M.P. (chairman of the company), in the course of his speech, said:—Our income for the year from interest and dividends, at £24,272, shows an increase of £4,291 over that of last year, while administration charges, less transfer fees, amounted to £8,497, a further reduction of over £1,000. Thus the net revenue for the year was £15,775, which has been applied to reducing the debit balance brought forward on profit and loss account to £5,791.

The balance sheet reflects the policy of eliminating doubtful propositions and concentrating on the exploitation of properties which preliminary investigation and exploration have, in the opinion of our technical advisers, proved capable of profitable operation. The provision we consider it advisable to make for losses is a large one, and emphasises the inevitably speculative nature of operations in the earlier stages of a company like ours, formed for mining exploration. We feel, however, that the process of elimination is practically complete and that we are left with interests in a group of promising properties from which, with only moderate good fortune, we should receive a reasonable reward for our patience.

"Interests in properties" account has been written down by £37,197. This represents the elimination of two items, namely, the difference between book-value and sale price of the Costerfield gold/antimony proposition, and the total expenditure in connection with the Victorian Deep Leads.

In regard to the latter, the position, as I stated last year, was that, although drilling had given encouraging results, a large amount of capital was required to prove these values by actual production. Our resources had been curtailed by the failure of the Bendigo venture to meet expectations, and circumstances being far from favourable for raising the necessary capital elsewhere, we and our partners (Gold Mines of Australia) decided to relinquish the leases rather than incur, for an indefinite period, the non-productive expenditure which would be involved in retaining them.

SUCCESS AT KALGOORLIE

It is a pleasure to turn from the reverse at Bendigo to the success we have achieved at Kalgoorlie. There we hold about 370,000 shares, representing, say, 30 per cent. of the issued capital of Gold Mines of Kalgoorlie. This company made a working profit of £55,772 for the year to March 31st last, or £12,636 over that of the previous period, and increased its dividend to 6d. per share, while the prospects of a further expansion of its profits appear to be satisfactory. The company completed its new mill with a capacity of 8,000 tons monthly during the year, and it is highly creditable to the management to be able to record that the mining and milling costs and recoveries already compare very favourably with the best being accomplished at other mines in this field.

Apart from the Bendigo disappointment, I think I am entitled to claim that the company has made good progress. With the Victoria Gold Dredging Company commencing operations all our present major interests will this year be in production and the drain of financing non-revenue-producing exploration should soon end. Our cash balance at the end of the financial year was practically £100,000, and by the end of June I am glad to say it had increased to £140,000, which, of course, does not include the Gold Mines of Kalgoorlie dividend. With the exception of Central Norseman Gold Corporation, which will probably need some further finance in order to develop its property on the scale which we are advised its potentialities justify, we appear to have reached the end of the major capital expenditure to be provided by us on the properties in which we are now interested.

CURRENT YEAR'S PROSPECTS

Subject to no unforeseen adverse influence I expect our revenue for the current year to show a substantial increase, while costs continue to be subjected to the closest scrutiny. Meanwhile, with our direct and indirect interests in Gold Mines of Kalgoorlie, Cox's Find, Central Norseman, Triton, Victoria Gold Dredging and Morning Star, we have reached a position which fully justifies our confidence in the future.

When we have a clearer view of the results of development in the deeper ore-bearing zone of Central Norseman and of the actual yields from the Victoria Gold Dredging areas, we shall be in a better position to formulate a scheme for the adjustment of our capital to meet ascertained losses, and we shall then lose no time in submitting definite proposals to you.

The report and accounts were unanimously adopted.

CONSOLIDATED TIN SMELTERS, LIMITED

DIVIDEND OF 5 PER CENT.

The ninth ordinary general meeting of Consolidated Tin Smelters, Limited, was held, on the 20th instant, at the Institute of Chartered Accountants, London.

Mr Ernest V. Pearce, Assoc.Inst.M.M. (chairman and managing director) said that the average quota release sanctioned under the International Tin Control Scheme during the period covered by the accounts of their subsidiary companies was the highest since the inception of the Tin Restriction Scheme. Supplies of ore were consequently in excess of the preceding year. Such being the case they should rightly look for material increases in the dividends received from their subsidiary companies, but unfortunately factors such as increased taxation, rising costs of materials and further reductions in smelting charges had operated against such increases.

The net income from subsidiary companies and investment totalled £223,180—a decrease of only £264 on the preceding year. Interest and sundry receipts, income tax recovered and transfer fees together showed an increase of £2,108, the net result being that their total revenue increased by £1,844. The directors recommended the payment of a dividend of 5 per cent., leaving £92,215 to be carried forward.

The quota releases during the period covered by the accounts of their subsidiary companies averaged 102½ per cent. of standard tonnages. The quota releases fixed for the first six months of their current accounting periods would average approximately 50 per cent. of standard tonnages, so that it was obvious that during the current year the supplies of ore available for smelting must show a very considerable decrease. With such variable conditions obtaining the wisdom of conserving their resources could not, he thought, be questioned.

The Buffer Pool, which was in reality a Producers' Pool, had been formed with the definite object of effecting stabilisation of the price within reasonable limits. It would be operated in conjunction with the Tin Control Scheme, and if its object could be attained it should prove of immense value both to producer and consumer.

The report was adopted.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED

EXCHANGE DIFFICULTIES

The twenty-sixth ordinary general meeting of the City of San Paulo Improvements and Freehold Land Company, Limited, was held on Thursday, 21st instant, in London, Mr Herbert Guedalla, F.C.A., presiding.

The chairman, after dealing with the balance sheet, said that the profit for the year of £97,360 did not include any dividend from the subsidiary, The San Paulo Mortgage and Finance Company, Limited, whose profit of £5,620 had been carried forward. The charge for difference in exchange was only £14,914 compared with £38,848 in the previous year, but if remittances had been obtained with which to pay outstanding debenture interest, the exchange difference would have been considerably larger, particularly as there was now a tax of 6 per cent. on remittances.

With regard to the land, the current selling prices showed in milreis an increase over book value of 33 per cent. of the sales; 52 acres were sold during the year, and the new register of property showed that the company owned 394 acres fully developed, with 964 acres partly developed. The construction of the Stadium at Pacaembu had been the subject of further negotiations and the Municipality of San Paulo now intended to complete a more ambitious scheme which would involve twice the cost of the original contract; 15 houses were sold during the year, 4 only remaining at the date of the balance sheet. It was not proposed to build any more. The debtors amounting to £848,018 represented amounts repayable over a term of years.

The San Paulo Mortgage and Finance Company, Limited, had been granted a moratorium on June 2, 1938, by their debenture holders having regard to the impossibility of obtaining remittances. It was impossible to gauge the exact position of Brazil with regard to exchange, and one had to await with patience the conclusions of an economic committee set up by the President of Brazil. In the meantime it was impossible to consider reorganising the balance sheet on a different exchange basis, one difficulty being that the main asset of freehold land would take many years to dispose of. The question of remittances was also important.

The report and accounts were adopted.

Where Are the Workless?—I.

In the following charts we draw attention to the recent course of unemployment in the ten administrative divisions into which the United Kingdom is divided by the Ministry of Labour. The percentages for 1936–37 (indicated by a dotted line) are in each case based on the total numbers aged 16–64 insured against unemployment under the general scheme (excluding agriculture) in July 1936; and the percentages for 1937–38 (shown by a continuous line) on the numbers insured in July 1937. In addition, the percentages for 1937–38 are too low compared with those for 1936–37 as a result of the change in the method of counting the unemployed, which came into operation in September 1937. These provisos should be taken into account in any conclusions that may be drawn. Next week a similar series of diagrams will indicate the varying levels of unemployment since 1936 in a number of selected industries.

Finance

GOVERNMENT RETURNS

For the week ended July 16, 1938, total ordinary revenue was £14,226,000, against ordinary expenditure of £12,936,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £116,021,000, against a deficit of £74,594,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are *no* Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On July 15th, applications at £99 17s. 4d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 37 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 17s. 5d. per cent. and above were allotted in full. £45·0 millions of Treasury bills are being offered on July 22nd.

Parliamentary Balance-Sheet

ON Friday of this week Parliament adjourned for some three months, and the Session which began last October has now virtually ended. It has been a Session largely taken up by questions of defence and diplomacy, and the introduction of a Budget of nearly £1,000 millions, though received with comparative calm by Members of Parliament and taxpayers, was evidence enough of the strain which the country is being compelled to undergo. Almost to a man, we have come to recognise that the possibility of war cannot be ignored, and a very large part of Parliament's time has been occupied in debating foreign policy, re-armament and precautions against air raids. The Opposition have never adopted the pacifist platform; but even had they done so in the calm of the nineteen-twenties, the resumption of the armaments race abroad and the return to power-politics would quickly have caused them to modify their attitude. In the Session now closing their main objectives have been to urge upon the Government the need for more speed and efficiency in the supply of arms and defensive equipment, but at the same time to demand a policy in foreign affairs based upon principles of collective action and international law.

It would be a mistake, however, to dismiss the Session which has been adjourned as one wholly devoted to preparing for war. There have, for example, been triumphs and tribulations in the Imperial field. The Anglo-Irish Agreement, which largely owed its consummation to the mutual patience and good sense of Mr Malcolm MacDonald and Mr de Valera, was a notable step towards a final settlement of the oldest outstanding problem in British politics. It was the Government's greatest success of the Session. On the other hand, murder and execution in Palestine and riot in the West Indies have served to illustrate once more the troubles which beset an Imperial Parliament. During the recess two Commissions will investigate these grave and crucial problems. To devise remedies for the radically unsound economies of the West Indian Islands, and to resolve the competing claims of Jew and Arab in the Palestinian Mandate will tax statesmanship to the full. The trade discussions with Australia have ended in "No change," while the Anglo-American negotiations are making haste slowly.

At home, too, the Session has been by no means entirely sterile. The Session's legislation has not been exciting; but it has included definite contributions to social reform. The main improvement in the condition of the people in recent months, apart from the considerable gains in wages derived from the period of high prosperity which only slackened last autumn, has been the spreading custom of granting paid holidays to workpeople; and the recent Act empowering Trade Boards and other wage-fixing bodies to provide for this concession in labour settlements represents the first small instalment of an official policy to encourage the eventual provision of paid holidays for all. Health insurance has been extended in scope during the Session to

bridge the gap which had previously existed between the school medical services and the national scheme. The qualifying age for blind persons' pensions has been lowered, and an Act to provide for the effective regulation of wages in goods road transport has met an urgent need. Finally, at almost the last moment, Sir Samuel Hoare has given an outline of his long-awaited programme of prison reform, while there has been laid on the table for consideration next Session the text of a Bill for dealing with the evils of sharepushing and financial fraud. The familiar process of piecemeal betterment by statute has continued.

It must not, however, be thought that the recording angel will have no criticisms of the Government's policies to enter in his book, even in purely domestic and unmilitary matters. For one thing, there is an excessively long list of important measures which, owing to the over-riding claims of discussions of foreign policy and defence, have had to be postponed. And in the economic sphere, the Government is still apparently unable to impose its will upon vested interests in matters of industrial reorganisation. An inordinate amount of time has been spent since the autumn, in both Houses, upon the Coal Bill, because of strenuous and prolonged opposition from sectional interests; and, in the event, the ruthlessly deployed forces of the mineowners were successful in emasculating the crucial section of the measure relating to amalgamations. Nor has any further progress been made with the proposals to rationalise the distribution of electricity which aroused such a storm of interested protest last year. Indeed, the closing Session has given little comfort to those who believe that one crucial test of governmental effectiveness to-day is the ability of Ministers and Parliament to legislate for individual trades and industries with the benefit of the whole community, rather than the wishes of the interests directly concerned, chiefly in mind.

These are, however, minor episodes of a period in which Parliament was almost wholly absorbed in foreign affairs and national defence. Throughout the year the Government's policy on these matters has been subjected to strong criticism from all points of the political compass. The Anglo-Italian Agreement (which has not yet come into force) is widely suspect. There has been deep dissatisfaction that the policy of non-intervention in Spain has been so rigidly interpreted as to permit the bombing of British ships without retaliation or effective protest. The events which led to the reconstruction of the Cabinet on the resignation of Lord Swinton and the importance attributed to the Sandys Case were due to the critical attitude of men of all parties towards the slow progress of rearmament in the air and on land.

Nevertheless, the widespread distrust of the Government's policy on these vital questions has not been translated into any serious threat to the Government's majority. There has been no overt split in the Cabinet or revolt in the Tory party. Mr Churchill remains a lone wolf. Mr Eden has not sought to form and lead a pack of dissentients. The leaders of the Labour party still lack national stature, and their policy has not yet fired the popular imagination. The Opposition groups which have come together on the issues of diplomacy and defence do indeed represent a widely held view that the Government's opportunist policy lacks both principle and, save in the shortest run, expediency. But they are too divided in their creeds, philosophies and programmes, too jealous of their sectional importance, to constitute a real menace to the Government—unless the Prime Minister and his defence Ministers fail to deliver the goods they have promised.

In the past Session Mr Chamberlain's administration has perhaps rocked, but it has never looked like falling. Seats have been lost at by-elections; but there is no sign of a great swing to the Opposition. The Prime Minister has staked his all on his policy of appeasement abroad coupled with re-armament. On this issue the attitude of the country is one of suspended judgment, poised between alarm at the totalitarian challenge to democracy and to the interests of the British Empire and relief that the dogs of war are still leashed. In defence and foreign policy Mr Chamberlain still has a chance to make good. If he has not so far succeeded, he has not so far manifestly failed. The fate of his Government at the next election—when it comes—will be determined by the outcome in the field in which he has chosen to put his fortune to the test.

A Lighter Atmosphere

"The atmosphere is lighter, and throughout the Continent there is a relaxation of that sense of tension which six months ago was oppressive."

THUS Mr Chamberlain, in a speech to the House on Tuesday, which will send both his critics and his supporters off to their vacations in a slightly better humour with themselves and with the world. It is true that international affairs are still in a parlous state; and that, in the Prime Minister's phrase, Tuesday's debate was mainly concerned with "two ferocious wars" which are actually raging and with an area in which there is a dispute that constitutes "a potential threat to the peace of Europe." Indeed, the present relaxation of tension has been compared to one of those lulls that occur at the centre of a hurricane in which for a time a ship may drift before plunging from this peaceful vortex into the other side of the storm. But analogies may prove misleading, and it is more useful to inquire if there is any ground for tempered optimism.

Supporters of the Government, who, Micawber-like, believe that something will turn up to rescue Britain and the free countries of the world from their difficulties if only war is kept at bay, are gratified that after several months of crisis the danger of general war is still being averted. This reflection will not satisfy those who believe that the only way of maintaining peace is stoutly to defend certain principles of international dealing and to resist aggression wherever it may arise. But these, too, may find some comfort in recent events and in the Prime Minister's survey of them.

The King's visit to Paris, we are now told, and the conversations that accompanied it, produced no new undertakings nor any change of Anglo-French policy. But it certainly strengthened the feeling of solidarity between the French and British peoples, and in so doing has undoubtedly reinforced the confidence of our neighbours across the Channel. The mission of Lord Runciman to Prague, at the invitation of the Czech Government, and with the approval of the French and British Cabinets, is also a hopeful development. Some of the Peers in Wednesday's Debate in the Lords felt that it would be difficult for the former Cabinet Minister to avoid acting as an authorised representative of Great Britain, and Lord Cecil rightly pointed out how much stronger his position would have been if he had gone as a nominee of the League of Nations. But the Prime Minister has insisted that he is merely to be an observer and an "honest broker" between the opposing parties, and on this footing his mission has been accepted not only by the two parties in Czechoslovakia but by Berlin. The gap between the two disputants is wide, but Lord Runciman may be relied upon to make a great effort to bridge it. Meanwhile, not the least of the advantages of his visit is the virtual certainty that the Sudeten question will not produce an acute war crisis so long as it is *sub judice* in this rather unusual way.

Apart from these two visits there were three very welcome comments in the Prime Minister's speech. The first is that in which he disposed of the suggestion that the British Government has been hustling the Czechs. Far from this being the case, His Majesty's Government has neither pressed the Czech Cabinet to hasten their nationalities legislation unduly, nor to make concessions to the Sudeten German party which would imperil the integrity of the State. Indeed, Mr Chamberlain and his colleagues have actually urged that the presentation to the Parliament in Prague of the new reforms should be delayed until they have been submitted to Herr Henlein and his Party. Unless this had been urged from without, M. Benes and his colleagues could not have run the risk of holding their hand; for if at any moment a crisis like that of May 21st had arisen without any specific offer having been laid upon the table, the world would have accused the Czech Government of refusing to make any concessions where concessions were due, and it could have been represented that it was they who were the intransigent party.

Secondly, the Prime Minister had an interesting comment to make on the vexed question of the coming into force of the Anglo-Italian Agreement. In reply to an intervention by Mr Attlee he explained to the House that the Agreement could not be effective if it stood alone, and that throughout it had been regarded as the basis for a wider appeasement. If there was no settlement in Spain which removed events in that country from the category of a danger to peace, the Agreement would not be brought into effect. This did not necessarily mean that the Agreement would be operative as soon as a certain number of volunteers had been withdrawn, but if and when that desirable end is achieved, the Government will consider what is then the position. "I should like," he said "to see what happens when the volunteers are withdrawn."

There will naturally be much speculation what the Prime Minister implied by this comment. It may be presumed that he means that there must not be left behind in Spain a situation which might be a military menace to France. It certainly suggests that there will be no premature rushing into the Anglo-Italian Agreement, and though the Prime Minister had some kind words to say about Italy's behaviour in regard to other matters, such as propaganda and the withdrawal of troops from Libya, his speech was a warning to Mussolini that the Government is not as complacent as at one time it seemed towards the effect of the dictators' intervention in Spain.

Thirdly, the Prime Minister hinted—and the suggestion was repeated by Lord Halifax on Wednesday—that although the Government did not see its way to make an outright loan to China, "another way" of helping her had been proposed which was not open to the same objections as a direct loan, and this was being examined by the relevant Government departments. This "other way" may perhaps be not unconnected with export credits. It was revealed later in the debate that certain subjects are to be discussed between the British Ambassador in Tokio and the Japanese Foreign Minister, and Great Britain would indeed be glad to take any opportunity of offering its services to bring about a suspension of hostilities. But the Prime Minister insisted that many British interests were involved in China and they would not allow them to be sacrificed. Help for China, no matter in how modest a form, would have a great moral effect in stiffening China's resistance. The critics both in the Lords and in the Commons would be glad to see this help given more promptly and in the most effective form, but it is something gained that Mr Chamberlain accepted the implication that China is entitled to receive from members of the League of Nations such help as they are able to give.

These various signs of greater firmness on the part of the Government are obviously associated with Mr Chamberlain's evident conviction that our military strength is steadily growing. The specific points we have mentioned will by no means allay all the apprehensions about our foreign policy which have been expressed time and again during the Session. It cannot be said, for example, that Mr Chamberlain fully met the arguments of Sir Archibald Sinclair who, in opening the debate, called for assurances that our national arms and resources would not be used merely for narrow British interests, but, before it was too late, for safeguarding the system of justice, law and freedom hitherto upheld by free countries in association. The Opposition were also very critical of the pressure put on France to close the Pyrenees frontier and to acquiesce in the crushing of the Spanish Peoples' Government in Spain. Other criticisms also were strongly pressed in both Houses of Parliament. Nevertheless, Tuesday's debate unquestionably revealed a slight move by Mr Chamberlain towards the viewpoint of those who have consistently criticised the policy of acquiescence; and if this really is the trend of the Prime Minister's mind, we may yet find that to-day's lull does not mean that we are in the calm centre of the hurricane, but that we are actually sailing into smoother seas.

American Trade with the Colonies

From the start of the negotiations for a Trade Agreement between the United States and the United Kingdom, it has been the contention of the American Government that strictly Anglo-American trade cannot be considered in isolation from the trade of the United States both with the self-governing Dominions and with the Colonial Empire. The Dominions can speak, and have spoken, for themselves. The following article deals with the hardly less important trade between the United States and the British Colonies.

THE United States must needs be interested in the British Colonial Empire, so long as her motor-car and other industries depend on its supplies of rubber and tin. Her interest was particularly marked at the time of the Stevenson rubber restriction plan of 1922-28, and the policy of the various regulatory schemes now in existence is still a matter of intimate concern to the United States. The question of American trade with British Colonies, as a whole, has special importance to-day, since the heavy surplus of imports which the United States takes from the Colonies normally largely counterbalances her enormous export surplus with the United Kingdom. In 1937 the United States had an export surplus of $328 millions in trade with the United Kingdom, but an import surplus of $246 millions with the British Colonial Empire.

This balance has, however, been seriously upset in the present year. Compared with 1937, American exports to the United Kingdom have risen very rapidly, whereas imports from the United Kingdom have been halved. Imports from the Crown Colonies have also shrunk in value, helped by the fall in prices; imports from the Gold Coast and Nigeria were only a quarter their size in 1937, partly, no doubt, as a result of the slump in exports of cocoa.

No less than three-quarters of the total American imports

from British Colonies come from British Malaya, and consist almost exclusively of rubber and tin. Indeed, Malaya was second only to Canada as a source of American imports in 1937. Her importance is strikingly illustrated by the fact that American imports from Malaya in 1937 amounted to $235 millions, whereas imports from the next two British Colonies in order of importance—the Gold Coast (cocoa and manganese) and Ceylon (rubber and tea)—were only $21 millions each. The chief other Colonies from which the United States drew supplies were Nigeria (cocoa and palm oil), Hongkong (tin and tungsten), Southern Rhodesia (chrome ore), Trinidad (cocoa), and Kenya and Uganda (coffee).

Rubber alone accounted for more than half the total American imports from the British Colonies in 1936. No less than one-third of the world's rubber is used in the manufacture of American motor tyres. In the case of rubber, however, as of tin and cocoa, there is little room for complaint on the part of Colonial exporters, since all three commodities are admitted free of duty into the United States. Indeed, the boot is if anything on the other leg, thanks to the international rubber and tin restriction schemes, although these have not aroused anything like the same antagonism in the United States as the Stevenson rubber scheme of the 1920's. On the other hand, American imports of vegetable oils, which are important for many British Colonies, have been subjected to protective duties in the interests of domestic producers of cotton-seed oil.

The United States buys over twenty-five times as much from British Malaya as she sells to her. The disproportion in this case is exceptional. But the United States has import surpluses with practically all British Colonies except the West Indies—and there invisible American imports in the shape of tourist expenditure are important. American exports to the British Colonies are therefore comparatively small, amounting to approximately $76 millions, or little over 2 per cent. of total American exports, in 1937. The United States is, in fact, probably less concerned with the absolute size of her exports to those territories than with the general principle of securing equality of treatment for American products in foreign markets. That is to say, in British Colonial markets, as in the United Kingdom market, the United States objects not so much to the absolute height of the tariff as to the preferences accorded to British goods.

In 1896 Joseph Chamberlain, then Colonial Secretary, could justly claim that

> We in our colonial policy, as fast as we acquire new territory and develop it, develop it as trustees of civilisation for the commerce of the world. We offer in all these markets over which our flag floats the same opportunities, the same open field to foreigners that we offer to our own subjects, and upon the same terms.

This was perfectly true in 1896 of the position since the 1860's, when the last preferences in British colonial tariffs had been abolished. But by 1903 an exception had already been made to the principle of the Open Door. In that year a preferential duty was imposed on tin ore exported from the Federated Malay States and Johore—a measure designed to protect the smelting industry in the Straits Settlements at the expense of the United States. In 1912, preferences were granted to Canadian goods by the majority of the West Indian Islands—once again a move of particular interest to the United States. By 1922 some 26 out of 55 Crown Colonies were granting preferences; yet it was calculated by the United States Tariff Commission in that year that only 5 per cent. of the trade of the British Colonial Empire was affected by Imperial Preference. Ottawa, in fact, although it did not introduce the principle of discrimination into British colonial tariffs, extended its application very widely. An even more striking development was the imposition of anti-Japanese textile import quotas in the summer of 1934.

There are, however, important exceptions to this general tendency towards discrimination. In most of the African Colonies British goods are given little or no preference. The Open Door is maintained in Kenya, Uganda, Nyasaland, Zanzibar and part of Northern Rhodesia by the Congo Basin Convention, and also in Nigeria and the Gold Coast in spite of the lapse of the Anglo-French Convention guaranteeing this in 1936. It is also maintained in the A and B Mandates—Palestine, Tanganyika, the Cameroons and Togoland.

Moreover, the British Government has offered,

> without prejudice to the principle of colonial preference . . . to enter into discussion with any Powers which may approach the United Kingdom Government for an abatement of particular preference in non-self-governing colonial territories where these can be shown to place undue restriction on international trade. This offer must, of course, be made subject to such reservations as may be necessary to secure reciprocal advantages to colonial products and to meet the competition of excessively low-cost producers.

This offer was announced by Mr Eden at Geneva on September 21, 1937, when referring to the report of the League Committee on Raw Materials. But so far it has not resulted in any application being put forward.

Imports into British Colonies from the United States embrace a wide variety of products, and it is quite impossible to state definitely how far diversion has occurred, and to what extent it has been due to Imperial Preference. The chief items concerned would appear to be motor vehicles, mineral oils and machinery. Textiles are of comparatively minor importance to the Americans in most of these markets, the field being left to Lancashire and Japan. Motor vehicles should provide a good test case as to the effects of Imperial Preference, since in the Anglo-Canadian Agreement signed at Ottawa most of the Colonies (except, of course, those pledged to maintain the Open Door) undertook to grant a 20 per cent. preference to British motor-cars. It is certainly significant that in British Malaya, Ceylon and Jamaica, the United States has lost ground, whereas in three Open Door Colonies—Nigeria, the Gold Coast, and Kenya and Uganda—she has actually improved her position.

It would, however, be a mistake to infer too much from this one instance, since mineral oils provide a contrary example. In this case, there has in many Colonies been an equally striking fall in the American share, irrespective of whether they grant Imperial preference on mineral oils; and the fall in the American share has usually been counterbalanced by a rise in the share of the Netherlands East Indies, the Netherlands West Indies, or Iran.

A more general indication is provided by changes in the American share of the total imports of various Colonies since Ottawa. Between 1931 and 1936 this fell from 29 per cent. to 16 per cent. in the case of Jamaica, from 18 per cent. to 16 per cent. in Trinidad, from 4 per cent. to 2 per cent. in Ceylon, and from 2½ per cent. to 2 per cent. in British Malaya. These are all Colonies granting preferences to British goods. Yet in two Open Door Colonies the American share has fallen rather more—in Nigeria from 9 per cent. to 5 per cent. and in the Gold Coast from 17 per cent. to 10 per cent.

Enough has been said to show the extreme difficulty of deciding precisely how much effect the colonial preferences have had on American trade. Some effect they must have had; and some modifications of existing preferences may be expected in the Agreement. But any serious reduction of the American import surplus with the British Colonies is unlikely so long as the American export surplus with the United Kingdom is maintained. The United States is probably mainly concerned with preventing the present international rubber and tin controls from repeating the faults of the Stevenson scheme.

Plato on Juries

In a recent case, which lasted over three weeks, the jury complained of the long interruption to their own affairs. Another juryman recently complained in court that he had been kept hanging about the courts for a week without even being called. The Lord Chief Justice silenced his complaint by promptly ordering his removal from court. The following, which seems to be a passage from Plato's Republic, is of some topical interest.

AND now we have decided what justice is, there remains for us, I think, another task before our deliberations are complete

What is that?

Must we not decide how justice shall be administered, and with what manner of person the duty of judging our lawsuits shall rest?

I think we should.

Well, in the first place, shall we agree to train some of our most able youths in the study of the law, bidding them devote five years to the pursuit of legal knowledge and to the understanding of its peculiar methods of argumentation and its obscurest terms? They will thus become what may be called our professional lawyers, skilful in the art of telling truth from falsehood, expert in choosing rightly between conflicting stories, capable of applying sound principles to confused facts. From these men we will choose our advocates to argue this way and that in our courts of law, and from the best of them we will select judges who shall adjudicate between our litigants. In this way shall we not build up a great judicial system, and may we not hope that the professional lawyers, who should know, will themselves be convinced that it is incomparably better than any other system past or present?

With their training they should be good.

Yes, but let us consider further. While we choose our judges from these professional lawyers, would we not do well to leave to others the actual work of judging—to men and women not trained in the law, but chosen at random from the lists of citizens—putting by force a dozen such into a box together and trusting their intelligence or, as the case may be, their stupidity, to discern the truth? Do you agree?

Perhaps I do.

And to encourage these men we will invent (shall we?) a myth to tell them, declaring that this involuntary work of theirs can only be done by persons like themselves of untrained minds. We will flatter them and say that their common sense is the envy of the civilised world; that this duty of theirs transcends in importance the earning of their daily bread and the support of their families; that they should deem it a privilege to "kick their heels," as the saying is, at our public courts for a week till their turn comes and to spend a month thereafter listening at an obol a day while the professional lawyers wrangle between themselves at many talents a day. As this conscription of their labour for a month or more may involve the ruin of their respective businesses—a thing they may perhaps dislike—a myth of this sort that we could tell the jurymen will be helpful and even necessary. Do you agree?

I should say undoubtedly.

But remembering that the judges are trained professional lawyers with large incomes, we must leave, I think, the last word to them: and if after a month the untrained men and women decide that 50 talents is a right award to the successful litigant whose cause has been tried, while the judges think the award should be 25 talents, then the view of the expensive judges will naturally override the month's deliberations of the cheap, untrained citizens? Should they not?

I think they should.

And from whom shall we choose those untrained minds? Shall all be liable for service or shall some be exempt? The professional lawyers, for instance? Should not they be exempt? In virtue of their profession they will naturally be exempt from any special taxes levied in a national emergency, and would it not also be natural that they should be exempt from this conscription of their time and labour for the jury box? What do you think?

I think it would.

We will therefore free from this service the professional lawyers, and place the burden on the remaining citizens. It may perhaps happen that one of these remaining citizens will complain that the thing is unfair; he may argue that he ought not to be taken from his business and his income for a month while the lawyers make large fees from the suit which is ruining him; he may hint that lawyers are exempt because they make the laws themselves and are loth to lose a month of their income, as he must lose a month of his. To such an one we will say, will we not, that he does not understand the beauty of our judicial system or the high-mindedness of our professional lawyers? We will tell him that he is a bad citizen, and if he persists in his complaints, the professional lawyer who is in charge of the court will order his forcible removal. If necessary, we will have him kept in custody until he is ready to step into the jury box, calm and in a fit state to listen patiently to the arguments in court and administer justice fairly, serenely and impartially. All that we must do, must we not?

In certain cases it will, I should say, be very necessary.

We will, in a word, stand no nonsense from the ordinary citizen who is not a professional lawyer?

We will not.

And by doing all this shall we not be achieving a treble purpose? First, we shall be relieving from a burdensome and expensive duty a most highly-deserving class of professional men. Secondly, we shall be teaching citizens of smaller importance the great lesson of serving the State to their own detriment. Thirdly, we shall establish a system in which facts of the greatest complication and difficulty will be judged by men and women of untrained minds, who, as the days and weeks pass and the professional lawyers practise on them the arts and tricks of advocacy, will grow more and more confused as to what it is all about; whose irritation over the whole affair will be in proportion to the length of time they are kept in the court; whose sense of justice, weak perhaps at the opening of the case, will be strengthened day by day as they ponder and brood over the injustice which is, they will think, being inflicted on themselves. All this we shall have done, shall we not?

I think we shall.

And if, after we have done all this, some grumbling critic—a writer, perhaps, in a weekly financial newspaper—should declare, in his coarse way, that our talk about the magnificence and splendour of the judicial system we have built up is ballyhoo; that the administration of our courts, so far from being perfect, is tardy, obscure, expensive, partial, pedantic; that our jury system, if it be really necessary, is in itself the gravest possible criticism of the competence of our professional judges; that it imposes an intolerable and unfair burden on those citizens who have to serve; and that any one who knows the ropes can evade a jury summons after it has been served on him—if he should say all that, what, Glaucon, do you think should be our answer?

To tell you the truth, Socrates, I do not know.

And to tell you the truth, I answered, no more do I.

Topics of the Week

The Anglo-American Trade Agreement.—Rumour has been very busy with the negotiations for a Trade Agreement between the United Kingdom and the United States. The discussions have taken longer than was expected, and it is an open secret that considerable difficulties have had to be overcome. It is believed, in fact, that a stage has been reached at which the British delegation had to seek further authority from the Cabinet. The American negotiators, it appears, have not been ungenerous in offering concessions to British goods entering the United States. But they have asked in return for concessions in the British tariff which the Ottawa Agreements make it difficult to concede. There is no reason to suppose, as one rumour has alleged, that a breakdown, or even a substantial modification of the scope of the Agreement, is in prospect, and both the British Prime Minister and the American Secretary of State have in the last few days expressed themselves as being satisfied with the progress being made. Indeed, there are many people in this country who will welcome the American insistence. The aspect of the Ottawa Agreements which has always excited most criticism is the tendency they showed to seek advantages for inter-Imperial trade, not by lowering the tariff barriers put in its way, but by raising them against foreign goods. Such a penalisation of foreign trade would be against the interests of the United Kingdom even if a self-contained economic unit could possibly be formed out of the Empire. But both geography and politics prohibit any such possibility—geography because we cannot take all the Empire's exports nor the Empire all ours; and politics because, as the recent negotiations with Australia have shown, the Dominions are not prepared to give British manufacturers as free a market as their own foodstuffs and raw materials enjoy in the United Kingdom. If, then, the American insistence, backed by all the commercial and political hopes that have been attached to the conclusion of an Agreement, can succeed in reversing, even in only minor degree, the restrictive policies of Ottawa, the United Kingdom will be the gainer fully as much as the United States.

* * *

The Coal Industry's Difficulties.—On twenty-four days of the expiring parliamentary Session foreign policy has been debated—and Monday last was the twenty-third of the days devoted to the coal industry. In place of the interminable and often detailed discussions of legislation which have previously characterised the Session's coal debates, an opportunity was afforded for a general survey from the Secretary for Mines of the industry's present position. It was made quite clear by Captain Crookshank and successive speakers that the short-lived revival in export trade, upon which large sections of the industry depend, had spent its force last year. In the first half of this year, the volume of coal exports fell by a million tons compared with the same period last year; and in the whole of 1938 output is hardly likely to exceed 230 million tons by any appreciable margin, compared with 241 million tons last year and 287½ million tons in 1913. Other countries, including Germany, have lost ground in export markets since the new year, and it is evident that a major cause of the recent decline is trade recession. On the other hand, both German and Polish exports have made great inroads into neutral markets since 1933, and the Government has at present under consideration a plan put forward by representatives of the British coal industry to meet the subsidised competition of these countries by imposing a levy on inland sales to be employed, with the addition of an Exchequer contribution, for the assistance of the British export trade. The plight of the coal industry merits sympathy: the worst features of our changing industrial structure, in the shape of long unemployment and poverty, are visible in the coal areas. Yet, in the domestic market the industry has already been organised by statute to take advantage of its monopolistic position, and its power to fix selling prices has this year imposed heavy burdens upon domestic consumers, notably the railways. If subsidising exports will involve raising prices to home purchasers, there are obvious objections to such a course on grounds of equity.

* * *

It is indeed true that German and Polish prices are from 4s. to 5s. a ton lower than British in common markets; but it is equally the case that average British export prices are now 5s. 6d. more per ton than in 1934. Foreign subsidies do not tell the whole story of falling exports: trade recession and the relative inefficiency of the British industry, which has recently so stoutly resisted reorganisation, must be taken equally into account. There may be strong arguments in the present position for special measures of retaliation, but competitive subsidies are the worst possible mode of economic warfare; and, in any case, countries like Germany are much better placed than we are to conduct such a campaign, because of their machinery of currency manipulation. The only sovereign remedies for the coal industry's problems are extensive reorganisation at home and, perhaps, an endeavour to bring Germany into the international consortium for the division of the world's markets. Germany's hunger for more and more foreign exchange is a potent obstacle to such an arrangement; and the proposed subsidy might serve, *faute de mieux*, as a bargaining weapon. But an important general issue is involved: industrial interests are lining up to receive subsidies to-day just as since 1931 they have clamoured for tariffs. The logs are rolling merrily, and we have at least the right to expect that the strictest conditions should be imposed for State assistance, before subsidies become an addiction rather than a rare and desperate expedient.

* * *

Flying for All.—A week which has witnessed record outward and homeward Atlantic flights by "Mercury"—the upper component of the Short-Mayo flying-boat carrier—brings us the promise that we shall all soon be mounting up with wings like eagles. The Air Minister and Under-Secretary for Air announced last Sunday the Government's new scheme for securing the maximum number of air pilots in this country. Apart from workers under the Air Raids Precaution scheme, and members of the Auxiliary and Voluntary Reserve of the Royal Air Force, men and women between the ages of 18 and 50 will now be enrolled in a Civil Air Guard and will begin tuition in October, learning to fly at recognised air clubs all over the country and at greatly reduced terms. There are 77 light aeroplane clubs in the country, of which 53 receive the subsidy; and these 53 have 7,157 members, of whom 3,148 hold their "A" Licence. Until now, any civilian who wanted to learn to fly—outside the Service Reserve—had to join a club or school, and pay upwards of £2 an hour for dual instruction and £1 10s. for solo work. An average tuition period for an "A" Licence of 12 hours' dual and the requisite three hours of solo would cost at least £35, by the time subscriptions had been paid. The Government paid £25 to every recognised Club when a member obtained his "A" Licence; and the sum so obtainable by a Club in one year was limited to £2,000. Under the Civil Air Guard system, no such limit is set for Clubs; the grant is increased to £50 per new "A" Licence obtained on the heavier "standard" machines, and to £30 for licences gained on lighter machines. This means that, on the average, flying can be learned for 5s. per hour on heavier types and 2s. 6d. per hour on lighter types, in the middle of the week. At week-ends, to avoid congestion, these fees will be doubled. After taking the "A" Licence, the Government grant per hour of flying will be £2 per hour instead of 10s. as hitherto, for a maximum of 10 hours per year. The Guard is to be administered by five honorary Commissioners; Lord Londonderry is to head them, and one is to be a woman. The response to this announcement has overwhelmed the clubs, who now find themselves short of machines and instructors. For that reason it is hoped to spread tuition over the mid-week days by the sanction of employers. This is a sensible and cheap scheme, which is already promising the Government a surprisingly large supply of pilots whose activities at home, in the air and on the ground, would be very useful in wartime.

* * *

Prague and the Nationalities Statute.—The announcement by Mr Chamberlain on Tuesday that Lord Runciman is to be "observer and adviser" of both parties in the delicate negotiations between the Czechoslovak Coalition Government and Sudeten German Party has been received in Prague with warm satisfaction. This is mainly because Czechoslovak opinion is virtually unanimous that the followers of Herr Henlein do not want, and do not intend to help to create, a working agreement with the Prague Government within the bounds set by the integrity, administration and defence of the country as a sovereign State. It is freely stated that the next few weeks are vitally important, as the German National-Socialists are expected to wait until the German harvest is garnered before resuming active intervention through the Sudeten German Party. Accordingly, Lord Runciman's presence is widely and warmly welcomed in Prague as helping to secure at least peaceful discussions and negotiations for a few more weeks or even months. The hectic military activities reported from the former Austrian frontier regions on the German side indicate the necessity for a breathing-space.

* * *

Meanwhile, the draft text of the still unsettled Nationalities Statute was published on Tuesday. The Coalition Parties have not yet agreed to all its provisions; but the Henlein Party leaders have characterised it as "wholly unacceptable." It grants the Germans proportionate representation for education, contracts, civil service, etc.; but does not define the percentage of population required to make German an official language. The Administrative Reform Bill, of which the text has not yet been published, is said to provide provincial self-government in all matters save police, defence, foreign policy and certain legal jurisdictions (e.g. criminal law, civil rights) for Bohemia, Moravia and Slovakia, thus abolishing the predominance of Czechs in the governance of the State. It proposes to substitute administratively devolved provincial diets and local councils for the central administration; to give every nationality equal rights and proportionate shares in State activities and contracts. The third Bill, the language law, will equalise the language rights. On the other hand, the Prague Government reasonably insists that no Czechoslovak citizen, of whatever nationality he be, shall be deprived of his rights, guaranteed by the State, as a result of the exercise of provincial or local powers. This of course challenges the Henlein Party's doctrine, root and branch, which has continuously and intransigently demanded totalitarian rule "in the spirit of National Socialism" over all areas where Germans are living. This is the crux of the problem, and always has been; for it is a question of the State's integrity and existence. It is impossible to give the Henlein Party totalitarian control of non-Germans and of frontier regions even yet undefined—and as to drawing ethnographic lines, indefinable. It seems equally impossible for Herr Henlein and his German superior officers—among whom is Herr Hitler—to lose prestige by seeing democratic rights and administration guaranteed to Czechoslovak citizen-kinsmen whom, as recently as last week-end in Austria, Herr Hess claimed for Germany. Thus, two utterly sundered mentalities, outlooks, even civilisations, have to be accommodated in a cribbed and confined space. Compromise in the British sense, as advocated by Lord Halifax on Wednesday, is scarcely possible; for it spells not accommodation but ruin to either cause. Dr Hodza's Minorities Statute may give Herr Henlein the 50 per cent. of his demands which have to do with national and minority rights; but it is the 50 per cent. of "ideological" demands which formed the stumbling-block long before mention of Lord Runciman's name.

"Killing no Murder."—If Austria made her fortune by happy marriages, she lost it by murder most foul. As a sequel to the murder of the Archduke Franz Ferdinand and his wife, Austria lost her empire. As a sequel to the murder of Chancellor Dollfuss, she lost her independence even in the pitiful "home farm" that was left to her in a Peace settlement which bereft her of the rest of her once great estate. The very name of Austria has recently been expunged from the map of Europe by the Austrian-born German conqueror of Austria's home provinces; and the whole former domain of the Monarchy is now partitioned between successor-states organised on the principle of a Staatsvolk which is the dominant, if not the exclusive, national element in each parochial commonwealth. Meanwhile the Nazis have been celebrating with jubilation the very process to which they take such strong objection where the Czechs, instead of the Nazis, happen to be the beneficiaries. They have chosen to commemorate their triumph over the Schuschnigg regime, and over the supernational outlook for which that regime stood, by glorifying the murderers of Dr Dollfuss. Last Sunday, at Klagenfurt, a public ceremony was staged in honour of these two murderers (Planetta and Holzweber), as well as for the eleven other Austrian Nazis who were fairly tried, condemned to death, and hanged for their share in the abortive Putsch of which Dr Dollfuss was the victim. These political criminals were eulogised as heroes and martyrs in an oration by Herr Hess. It is true enough that the Third Reich has benefited territorially from these thirteen men's work to an extent that is not incomparable with Serbia's territorial gains from the ultimate consequences of the crime committed twenty years earlier by Prinsep. In Jugoslavia, however, they have at least been more discreet, and the murderers of the Archduke have only been commemorated by an inconspicuous plaque. In Austria, at the Prince-Bishop's cathedral in Salzburg, the very Church whose last ministries were denied to his son, Dollfuss, by his murderers, celebrates a Requiem Mass for the murderers themselves. Is this that eschewment of politics which the Bishop of Gloucester commends to the dissident German Protestants? If so, is it a foretaste of the kind of Christian unity to which the Lord Bishop bids us look forward?

Mr Roosevelt on Tour.—Mr Roosevelt's tour of the United States reached the end of its first stage with his departure for a cruise in the Pacific Ocean, and the American political world is waiting for the results to come to hand. Other Presidents in the past have made tours of the country for political purposes; but very few have avowed their intentions as clearly as Mr Roosevelt. For one thing, this autumn's elections do not concern the Presidency, and it has always been thought a little bit contrary to the spirit of the separation of powers for the head of the Executive to try to influence the composition of the Legislature. And for another thing, Mr Roosevelt's intention was not mainly to get Democrats rather than Republicans elected to Congress, but to get the right sort of Democrats. His concern was not so much with the eventual elections as with the party primaries, which are always supposed to be matters in which not even the national headquarters of the party has a right to meddle. But Mr Roosevelt has never been a conventional President and in his last broadcast he specifically claimed that he had the right, as head of the Democratic Party, to exert such influence as he could upon the character of the Democrats sent to Congress. At one time, those Democrats who have voted against New Deal legislation feared that the President was going to disown and attack them in their own constituencies. But he evidently deemed it more prudent to punish them only by the omission of praise, and the object of his tour was to help his most devoted followers, such as Senator Bulkley in Ohio, Senator Barkley in Kentucky, Senator Thomas in Oklahoma, Congressman Maverick in Texas and Senator McAdoo in California. The only one of these States which has yet gone to the primary polls is Texas, where several of the President's friends were narrowly defeated. But it is doubtful how far Texas can be taken as representative. Local rather than national issues have always been dominant there, and the State is much under the influence of the Vice-President, Mr Garner, who is now in barely-disguised opposition to Mr Roosevelt. In the country at large, there has been a perceptible rise in the President's stock in recent weeks, partly but by no means entirely due to the revival of business optimism. It seems probable that the loss of Congressional seats by the Democrats in November will be so small as to make the election a victory for Mr Roosevelt. It would be fortunate if there were any signs that such a demonstration of his continued grip on political power would lead to any relaxation, on his part or his opponents, of the embittered misunderstanding which now impedes the restoration of American business to a sound footing.

* * *

Japan, China and Britain.—Lord Halifax, in the Lords' debate on foreign policy on Wednesday, confirmed what the Prime Minister told his hearers in another place on Tuesday about the Government's attitude to the war in China and the two antagonists. Lord Halifax warned Japan that a continuance of Japanese impediments and discrimination against British trade in the parts of China occupied by Japan would void the assurances given by the Japanese Government to the British Government; and a system such as obtained in Manchukuo would also be accounted a voidance of Japan's engagements to this country. His Majesty's Government were considering "the possible action open to them if they do not secure adequate consideration of their interests which they have a right to protect." Among alternatives are not only economic and financial assistance to China, but economic impediments to Japanese trade in British countries, such as were advocated this week both in the Lords and Commons by Conservatives, as well as members of other parties. Meanwhile, in China, the Japanese divisions on the Yangtse have taken Kiukiang, less than 150 miles from Hankow, and are pressing the retreating Chinese. Hankow may be the next objective, though there is reason to suppose that the Japanese may operate from Kiukiang to cut the vital Canton-Hankow railway near Changsha, or to Nanchang, the key-town on their Kiangsi flank. In any case, the Japanese armies are now 400 miles inside China; the trouble on the Russian-Manchukuo border is clearly very serious; and the economic resources of Japan are becoming more and more mortgaged. Yet the end of the war they lightly undertook over a year ago seems more remote than ever.

* * *

Mr Eden and the Future.—Mr Eden's latest speech at Kenilworth has set a pretty problem for political soothsayers. It would be fanciful to read too much into a single speech. Mr Eden's sudden switch from diplomatic issues to the problems of unemployment and the Special Areas may be no more than an indication that Members of Parliament, even for relatively prosperous Midland constituencies, must show themselves to be as conscious of domestic as of international questions. Nevertheless, the ex-Foreign Secretary must realise that, since his momentous departure from the Cabinet, a fierce light of publicity has beaten down upon his utterances. It may be that his appeal for a national effort to abolish poverty was no more than a further indication of his disinclination to embarrass Mr Chamberlain on questions of foreign affairs until the policy represented by the Anglo-Italian Agreement has had a chance to succeed—or fail. But Mr Eden is a man of high principle; and his words at Kenilworth were stirring words. It was Disraeli's insistence upon the paramount importance of social reform which enabled the Conservative party last century to meet and defeat the Liberals on their own ground under the new conditions of democratic politics created by the extension of the franchise. Mr Eden is by no means the only one in the Conservative party to-day who fervently believes that the first aim of government should be to plan industry, agriculture, education and the health services in such a way as vastly to improve the nutrition, security and conditions of life of the people. Mr Chamberlain's party does not lack sympathy and honest endeavour in these respects; but it is not overburdened with the boldness and courage and insight for which Mr Macmillan and Mr Amery, like Mr Eden, have lately called. If Mr. Eden is indeed to succeed in the fullness of time to Lord Baldwin's legacy of leadership, the philosophy outlined in his Kenilworth speech may serve as a fitting foundation for a new and more inspiring Conservatism.

* * *

The Distressed Areas.—"The problem of the Special Areas is not disappearing; it is spreading." Mr Eden's words at Kenilworth were timely. Unemployment statistics, the researches of the Pilgrim Trust and the stark revelations in the recent Report of the Unemployment Assistance Board have revealed only too clearly that last year's relative prosperity did little more in the distressed regions of the North and Wales than throw into relief their distress and poverty. True, there was some amelioration as exports revived and re-armament activity was accelerated; and the continued liquidation of redundant labour by migration and transference mitigated despair among the young people of the Special Areas. But the tide of recession has been running fast since the New Year, and a fresh awareness of these sore burdens upon our economy is urgently needed. There are some small signs of hope in the work in progress under the ægis of the Commissioners for the Special Areas. In April, 1937, the Commissioner for England and Wales was empowered to make contributions to the rent, rates and income tax of new enterprises; up to June 30th last this assistance had been offered to 59 factories. Since 1934, the Commissioners' total commitments for all purposes have amounted to £16,223,000. On the Team Valley Trading Estate just short of 60 factories have now been completed and tenants are available for 44 more. At Treforest, 19 factories are already occupied and 21 are under construction. The search for new industries to redress the balance of the old order of declining staple trades is proceeding with some success. But the scale of operations is sadly small in comparison with the problem involved. The Team Valley factories, for instance, employ only 1,100 workpeople, and more than half of these are

women and juveniles, new entrants into a labour market glutted with elderly and middle-aged miners and workers in the heavy trades. In Lancashire, too, where there is no Special Area, the seventh annual Report of the Industrial Development Council, published this week, reveals that the recent reversal in the trend of the county's trade has seriously impaired the value of the Council's efforts to readjust the economic structure of the region by stimulating the growth of new industrial enterprises. The Council call for more definite control of industrial location than hitherto to serve as the basis of a serious attempt to restore without delay the industrial and economic balance of the county. Local effort is not enough. It must be that some industries and areas decline while others rise, but the State's responsibility to ensure that the scars of economic change shall be as little deep and lasting as possible is inescapable.

* * *

Europe's Northern Neutrals.—At the instigation of Dr Munch, Danish Minister of Foreign Affairs, in Copenhagen last week-end, the heads of the foreign departments of Belgium (M Spaak), Luxembourg (M. Beck), Finland (M. Holsti), Netherlands (M. Ratijn), Norway (M. Koht) and Sweden (M. Sandler) met him for discussion. The interchange of views which took place broadened the basis of the recurrent counsel taken by the heads of the Scandinavian foreign departments among themselves, when at home or at Geneva. The Copenhagen discussions expressed the feelings of 35 million people, traditionally used to democratic government. Their combined foreign trade exceeds that of France and Germany, equals that of the United States, and is only slightly less than that of Great Britain. Nature prevents these seven States from forming a self-sufficient unit. They all need markets outside their own borders, and if asked to assist in abolishing the present numerous restraints on international trade they would willingly respond. The seven States are not tied to one another by any form of military alliance. Their aim is to keep out of any warlike conflicts between European powers. They have to admit with regret that the League of Nations has been too weak and has lacked the character of a universal institution. But on the other hand, much work performed by the League is of great practical value to the peoples of the world, and to this they willingly lend their hand, simultaneously hoping for a reconciliation between the Great Powers before it is too late for an international organisation embracing all the peoples of the world to be created. In view of the dangers inherent in the present armaments race they have agreed to consider any possibility to re-open negotiations for an international agreement on this subject. In particular, they want to support any endeavour to restrict aerial bombardment. The developments of the last few years which led to the present situation have compelled them to exempt themselves from certain obligations under the Covenant. They consider themselves released from any obligation under Article 16 (the Sanctions Clause), admitting at the same time that all other members of the League should enjoy the same privilege. They have put on record, in their *communiqué*, their belief that it is in the interest of the League that this right to free judgment in the matter of sanctions should be expressly stated, and they have intimated that they mean to take an active part in expounding this point of view at Geneva.

* * *

Reverberations from Copenhagen.—The decisions at Copenhagen have been received with undisguised jubilation in Berlin and undisguised dismay in Moscow. In this country, the Government and their supporters must, in their hearts, be as downcast as the Opposition. The worst of it is that even the most convinced and stout-hearted upholder of the League in this country cannot have the face, in the light of his own Government's record, to blame our seven small neighbours for taking this line now. The reversion of these seven States, in Switzerland's wake, to their pre-war policy of neutrality is a fearful indictment of Anglo-French statesmanship; but it is another question whether for these states, any more than for us, a pre-war policy of isolation is practical politics under post-war conditions. Dr Munch himself, perhaps unintentionally, made this point when, the moment before declaring that "all seven States were definitely determined never to take part in any conflict between the Great Powers," he referred to the magnitude of their combined foreign trade. Is it likely that a group of States with aggregate exportable resources of such importance would be left in peace to enjoy their neutrality in a future European war by a Germany for whom it would once more be a matter of life and death to obtain foreign supplies from quarters where a British blockade would be only partially effective? Would Sweden really be able to neutralise her iron ore, or Denmark her foodstuffs? And what about the strategic key-positions that the Oslo States, unluckily for them, happen to occupy on the war-map of Europe—Scandinavia offering a bridge between Great Britain and Russia, while the low countries lie in the fairway between Great Britain and Germany. Is not Belgium's fate in 1914 a warning that, in an age of totalitarian warfare, neutrality is a thing of the past?

* * *

Mexico and the Powers.—On Thursday of last week the State Department at Washington sent a strongly worded Note to Mexico, requesting a settlement of the outstanding agrarian debt caused by continuous expropriations of lands belonging to American *hacendados*. The Note invoked arbitration under the 1929 treaty if no settlement were forthcoming. Since August 30, 1927, no agrarian claims could be lodged with the Mixed Commission; and since 1928 the Mexican bonds have been in default. Even the compensation decreed in January of last year fell into arrears forthwith, and no payments have been made. Consequently the American Administration, in electing to broach matters with Mexico on outstanding debts for compensation of American citizens, has inserted the thin end of a wedge which—if matters lead on to the present oil dispute—may prise Mexico apart from her northern "good neighbour" and best customer. Meanwhile, it is confirmed that the recent £2,000,000 deal in Mexican oil, undertaken by Mr W. R. Davis of New York, was on account of Germany; for the current number of the German *Four Years' Plan*, the organ of Field-Marshal Goering's economic organisation, jumps to the defence of President Cárdenas's regime in justifying the German purchase. That regime, says the paper, is erroneously termed Communist; on the contrary, it resembles National Socialism because its *raison d'être* is to free the country from the yoke of foreign capital and revive the old institution of small property holdings. (On this definition, the arch-exponents of National Socialism are the Russian Communists of 1917!) The Davis transaction is giving rise to continuous shipments, in British and Norwegian tankers, of oil from stock in Minatitlán to Holland, Scandinavia and Germany; and Japanese tankers are expected there shortly. The legal ownership of this oil has yet to be determined: it may be that if it gets into British or Dutch vessels the title to it may be found deficient. But in any

case President Cárdenas, despite a gradual worsening of Mexico's domestic and foreign trading situation, is getting 40 per cent. of the £2,000,000—as and when it arises from sales—in cash; the balance in German equipment. For that, he is jeopardising the far more valuable commercial link with the United States. This play—half drama, half farce—is not yet within sight of a *dénouement*.

The Wheat Harvest.— The wheat year closes on July 31st, a month after the publication of the official July estimates of the next year's crop in North America. From this dividing point it is thus possible to look both backwards over the last season and forward over the next. The 1937–38 season was marked by very low exports, due to poor harvests, from Canada and Argentina. Australia and the United States, on the other hand, increased their exports—this being the first reappearance of the United States as an exporter after two seasons with an import surplus. Total world production (excluding Russia, China and Brazil) was estimated at about 3,805 million bushels, compared with 3,510 million bushels in 1936–37. This increased production was shared by the European importing countries, whose purchases from abroad will amount by the end of the month to about 420 million bushels, or 56 million bushels less than in 1936-37. The carry-over will thus be increased and will start the new season at a figure considerably higher than the 234 million bushels of a year ago.

* * *

The season 1938–39 is going to see a bumper crop in the United States, the official estimate being 967 million bushels, compared with the average of 641 million bushels in the five preceding years. The Canadian crop is also expected to be larger than the average and may reach 370 million bushels. Unless, therefore, there is a crop failure in the Southern hemisphere, the supply in the free market will be large. Demand may also show some increase. The European crop, it is true, seems to have recovered from the late frosts and prolonged drought of the early spring and, except in the Mediterranean area, will probably be well up to the average; but the failure of the Argentine maize harvest may react on the demand for wheat, and there is always the possibility of Government purchases for storage. There will clearly be no wheat famine next year. Those concerned would be happier if they could feel equally confident that there will be no glut.

* * *

Palestine and Syria.—The dreadful tale in Palestine continues to unfold. In the Mount Carmel district, on July 20th, the Jewish settlement at Kiryat Maroshet was rushed by an armed mob of Arabs who managed, before they were beaten off, to stab to death two families in their homes. On the 21st a party of Jews who were boring for water in the nighbourhood of the Dead Sea were attacked by Arabs who killed three Jews and wounded two; while on the same day, at Tiberias, three Jews on a housetop were wounded by a bomb. The toll of the 27th—spread over a number of small fights—was eight Jews and Arabs killed, and about 20 persons wounded (including one British soldier). July 25th witnessed, at Haifa, the worst bombing outrage that has been perpetrated. Here, as at Jerusalem a few days back, the bomb was thrown into a crowded Arab market. This infernal machine killed 39 Arabs and three Jews and wounded 45 Arabs, and that day's total casualties at Haifa—the riots included—amounted to 47 killed and 52 injured.

* * *

The week's history in Palestine is bad enough, but simultaneous events in Syria and Egypt which, in themselves, are happily not of the same tragic seriousness, still serve to remind us that Palestine's situation in the heart of the Arab world is perhaps the most menacing of all the factors in the present Palestinian crisis. In Egypt the Wafdists of Nahas Pasha's following have launched a political and financial campaign on behalf of the Palestinian Arabs who are "struggling to safeguard the integrity of their country." No doubt this move is primarily to be explained in terms of Egyptian domestic politics. A party which finds itself in the wilderness is snatching at an opportunity of embarrassing a party in office which is anxious to remain on good terms with Egypt's British ally, but which at the same time will be sensitive to a charge of ignoring the tribulations of an Arab people under British rule just on the other side of Egypt's western frontier. At Damascus, on the 22nd, the absolute and immediate independence of Syria, in anticipation of the expiry of the French mandate, was proclaimed by the Syrian Prime Minister, Mardom Bey, at the close of a congress of the Syrian Nationalist Bloc. This gesture has, of course, nothing directly to do with Palestine, but is an expression of Syrian discontent over French concessions to Turkish residents in regard to the future of the Alexandretta district. But any exacerbation of national feeling in Syria is likely to produce rapid effects on the Palestinian side of the border.

Penal Reform.—On his translation to the Home Office, Sir Samuel Hoare speedily made a deep impression by his earnest and energetic efforts to reform the prison system which in many of its details, inherited from an earlier age, gravely conflicts with modern views of the social purpose of punishment. The congestion of Parliamentary time has not permitted the Home Secretary to proceed with his promised legislation for more enlightened treatment of juveniles and recidivists. But he has taken full advantage of his administrative authority to introduce experimental reforms into prison routine, and the survey of this work which he gave to the Commons on Wednesday was a record of unmistakable progress. Prison life has been stripped of some of its more glaring marks of needless inhumanity; prison clothes have been improved; more opportunities have been provided for prisoners to receive visits from friends; more facilities for reading have been afforded; and the experimental introduction of small earnings for convicts' work has been successful in adding purpose to their labours and small comforts in their lives. Old, gloomy and out-of-date prisons are to be discarded and, altogether, there are many signs that Sir Samuel has embarked upon a wholesale overhaul of a key position in our communal life. The Home Secretary is no sentimentalist. He appreciates the paramount need to protect society against evil-doers. But he believes that crime is in large part a reflection on society itself, and he is far from satisfied that our present methods of dealing with criminals are conducive either to social security or to the desired regeneration of the offenders themselves. It is to be hoped that Sir Samuel will be given the chance to put his views into practice on the widest scale. If so, it is not unlikely that he will rank among the outstanding reformers of our time.

* * *

Labour's Gesture.—Last year, the Labour Opposition marked their conversion to the need for re-armament by abstaining from voting against the Defence Estimates. This year they have gone further, and have not voted against the Civil Estimates. Once a year, two hours on each of two days are conventionally spent by Members of the Commons in ceaselessly tramping through the lobbies to record votes upon the expenditure of millions of pounds. So long as the Government's majority is reasonably secure, and the present Cabinet's majority is quite unassailable, the results of the voting are foregone conclusions, and the negative voice of the Opposition is simply symbolical of their constitutional duty and political inclination to oppose and criticise the Government of the day. In any other sense, the four hours so spent are wholly wasted, and to the ordinary man unobsessed by formalistic notions the Labour Party's decision to abstain from challenging divisions seems the merest common sense. The views of the Opposition on defence and social policy are well known; their obligation to oppose is well enough fulfilled in debate and at question time during the Session; and their votes are cast against the Government in the day-to-day divisions of Parliament to reinforce their speeches by evidence of their application to duty. The Estimates divisions, on the other hand, have become a farce, and serve, *inter alia*, as a means for negligent and absentee Members to amass credit marks by swelling the number of their apparent attendances. Indeed, the practice of the Opposition doggedly dividing against all the Votes was instituted as recently as 1906 by a Conservative minority vexed by the Liberals' great success at the Election of that year, and it has never been a very praiseworthy addition to Parliamentary precedent.

* * *

The L.C.C. and the Rating System.—Mr Herbert Morrison, having inflicted one Waterloo on the Government, has now found another battlefield—that of local taxation. At its last meeting before the summer recess, held on Tuesday, the London County Council decided to promote, in the next session of Parliament, a Bill to give it the power to levy a tax on site values. Theoretically, there is everything to be said for this scheme; it discourages the land speculator from holding land off the market and ensures the most economic use being made of land. In fact, almost the only justification of the present system of rates on the "annual value" of property is that it has been familiar to the English people for more than three hundred years. In an urban area, the case for taxing site values is at its strongest. Ever since the foundation of the L.C.C., the Council has been struggling to reform the rating system. But its Bill of 1901 came to naught, and the report of the Royal Commission on Local Taxation of the same year was inconclusive. The present agitation began after the election of the Labour Council in 1934; called upon to report, the Finance Committee condemned the present rating system as unfair in its incidence, and a letter was accordingly written to the Minister of Health urging its early reform. Six months later, Sir Kingsley Wood replied that the Government were unwilling to move on this matter. Seeing that this inactivity has continued, the Council has now taken things into its own hands, and is proposing to remedy the present unsatisfactory position, at least as far as London is concerned, by a special Bill, which bears a very strong resemblance to the Bill of 1901. It will empower a separate valuation to be made of the annual site value of each property; on this, a site rate of two shillings in the £ will be levied on ground landlords. This is estimated to yield £3,000,000, only a fraction of the total required, but it is intended to introduce the new system gradually. Whether it is ever introduced will, of course, depend on the Government, which will probably hold that so important a change in a national system should not be made in a local Bill. But whatever happens, this Bill is probably due for at least as lively a death as Waterloo Bridge, and it is very good that Parliament should be reminded of the inequitable and illogical basis on which the finances of our local authorities rest.

* * *

Railway Accidents in 1937.—The Chief Inspecting Officer of Railways' report to the Minister of Transport shows that so far as the casualty list is concerned, more passengers were killed in train accidents during 1937 than in any year since 1915. Last year's high death roll of 49 passengers was mainly due to the two accidents at Batter-sea Park and Castlecary. The number of train accidents during the year was 16, which does not compare too unfavourably with the experience of previous years. This distinction is important, for once an accident occurs the size of the casualty list is largely a matter of chance. This not only shows that 1937 was an unlucky year, but also proves the need of investigating every accident regardless of the number of casualties arising from it. The most interesting paragraph in the report is that discussing methods of preventing accidents. The Inspecting Officer emphasises the need of "proving" distant signals by interlinking them with the block instruments, the wider use of automatic train control, the value of track circuiting, and the use of more powerful tail lamps. These recommendations, incidentally, cover the Battersea Park and Castlecary disasters, and the report mentions certain steps taken or in contemplation by the Southern Railway as the result of the former disaster. The real lesson is that the necessary safeguards are already in operation at many places on the British railways, but there is still need of their universal adoption. Accidents of all kinds to railway servants and also level-crossing accidents show a welcome tendency to decrease, and the Inspecting Officer points out that the latter risk is negligible compared with the other risks of the road. The conclusion is that the existing high standard of safety is being maintained, but there is still need for further propaganda among passengers and staff. The comment might have been added that the provision of universal safety measures is now an economic rather than a technical question.

* * *

The War in Spain.—News from the Spanish fronts this week has been varied and surprising. First, the insurgents under the "radio General," Queibo de Llano, have awakened to activity on the long dormant Estremadura front in the south-west and have apparently pocketed an unsuspecting Government force. Secondly, and more important, the insurgents' "big push" to the south on the Teruel-to-the-sea front has been halted, with, so it is reported, very heavy losses among the Italian troops, all of whom are said to have been employed on this drive. In some cases counter-attacks have been successful; and Valencia is accorded another respite. Most important, however, is the Government's successful surprise attack upon the insurgents' rearguard in Catalonia on the Ebro. By crossing the river in many places, Government forces have smartly pushed ahead, taking many prisoners—all Spanish. Thus, the gains by General Franco on the Teruel-Sagunto coast sector have been matched by losses in the north; and the venture has cost him and his Italian allies very dear. Meanwhile, bombing of British and other merchant ships goes on, a Danish and a British ship being sunk this week while on their legitimate and peaceful avocations. General Franco has agreed to investigation of such bombings, and the Spanish Government have agreed to facilitate inquiries into bombing of open towns. The Spanish conflict bids fair to last a long time yet. With its persistence vanish hopes, either of inaugurating the Plan to withdraw alien volunteers or of the inception of the Anglo-Italian Pact conditional on substantial withdrawal of them.

A Famous Economist.—The name of Weber is well known to all who pursue social studies in every country. The reputation of Max Weber was world-wide; and the contribution to knowledge and practical wisdom made by his brother, Professor Alfred Weber, one of the greatest of Heidelberg's scholars, who celebrated his seventieth birthday on Friday of this week, has been similarly notable. Educated in the Berlin circle of Friedrich Naumann, the Liberal social reformer, and trained by such eminent economists as Schmoller and Böhm-Bawerk, he became Professor of Political Economy first at the University of Prague in 1904, and then at Heidelberg in 1907. Since the war Professor Weber has turned from economics to sociology; his latest writings have been concerned with the relation between culture and social, political and economic conditions, with the crisis of capitalism and the future of democracy, and they have all been significant. But it is Professor Weber's great pre-war work on the theory of industrial location which has left the deepest mark on modern thought and policy. No Government today can ignore the pressing problems which arise from the rise and decline of industries, the movements of population and the growth of towns. Even now, a Royal Commission is examining these questions as they affect Britain, and, like all students of industrial location, it will have found the theories of Alfred Weber woven firmly into the accepted pattern of argument about this fundamentally important topic.

Relief and Politics

WASHINGTON, July 15.—Future historians of the New Deal are likely to devote much study to the dominant part played in politics by Federal relief. Roosevelt won in 1936, so his opponents complained, because he had "bought" the election with the taxpayers' money, and he is about to "buy" another election in the same way.

Since 1936 the country has suffered the steepest business decline in its history, which in normal political circumstances would be enough to win the next election for the Opposition. But the new depression has led to new Government spending, and so this political maxim has been stood upon its head. "Nobody will vote against Santa Claus," was the proverb that explained the Roosevelt victory two years ago. "You can't beat five billion dollars" is already the Republican apology for the showing expected in November.

Though the Republican line in the November campaign has not been finally clarified, it may consist of little more than a protest against the influence of relief on politics. The charge is outright corruption, not to the point of paying the voter to go to the polls on election day, but by spending large sums on relief projects in districts where the vote will be close. This creates large staffs of Government-paid employees, who are expected to express their gratitude on election day. In some regions Works Progress Administration workers are said to understand quite well that their jobs are "political," and that they have to render political services for them. The late Huey Long used to say about Louisiana that one State employee is "good for" ten votes, and the ratio holds good for the entire country.

To what extent more immediate political pressure is brought into play, and how far a needy person's party affiliations decide whether he is to receive relief, are subjects on which the evidence is scarce and not at all conclusive. In some districts the actual administration of relief has slipped into the hands of State and county professional politicians. Unquestionably, relief is politically used in such districts, but that is not to say that its administration has been debauched. If relief were really failing to reach the needy because they were not going to vote right, then plenty of evidence would be forthcoming to prove it.

The complaint that relief is being used politically applies to the planning of projects, rather than to the actual spending. When the Federal Government is pouring out funds a "good" Congressman, from the local viewpoint, is one who brings a goodly share of that money to his district. It pays a Congressman to stand in with the planners of appropriations, and it makes a questionable campaign issue for him if he has sacrificed his community to his disbelief in the New Deal and its works.

The Republican charge is not so much that relief has been dishonestly administered; they complain rather that it is a new form of political influence, and one which is so powerful that the party in office, so long as it keeps on spending, can never be ousted. In past times the party in power kept the wayward in line by withholding or extending patronage; but this was a bagatelle in comparison with million dollar relief projects, and billion dollar spending programmes.

Dissensions in Both Parties

President Roosevelt's purge of disloyal Democrats has aroused great interest, and is being both exaggerated and distorted. The President holds a dual position, one which the British understand better than Americans. He is the chief executive and therefore the servant of all the people, but he is also the leader of his party. If his party shows defections, it is sound politics to try to prevent the re-nomination of the rebels. But the Republicans would deny this privilege to Mr Roosevelt, and their comments on the purge have apparently led the President to modify his plans. The public seems to dislike the idea of anyone being punished because he departed from the party line on the issue of the Supreme Court or the reorganisation of government.

The public is not party-minded in national affairs. This is natural, since in the past the two parties have not been clearly divided on fundamental national questions. Mr Roosevelt would like to create a genuine New Deal party. He has expressed his desire to have the "liberals" on one side and the "conservatives" on the other. But the political executions and bitter battles which such a reformation would entail are too expensive to be risked in a campaign year. One or two conservatives may be defeated, as a warning to others. But the chief conservative Democrats will espouse the New Deal with lukewarm words for vote-catching, as they did two years ago, and will re-appear in Congress titular Democrats but potential conspirators against the President.

It is clear that the Republicans have not recovered from their debacle of 1936. The tussle between Mr Landon and Mr Hoover goes on, Mr Landon still hoping to gain party control for the liberal wing, Mr Hoover leading the traditionalist Republicans along their familiar conservative path. But it is not a struggle which interests the public, and though Mr Landon feels deeply enough that the Republicans cannot hope to win an election until they can vie with the Democrats in their concern for the under-privileged, he lacks the magnetism and oratory to convert Mr Hoover's followers, or win over those of Mr Roosevelt.

The party leadership in 1940 may go by default to Senator Vandenberg, though he lacks the stature of either Mr Hoover or Mr Landon. Bruce Barton, who combines advertising with popular religious writing, was invited to address the Indiana Republican convention, and struck the popular note which Mr Landon has failed to sustain. At once Mr Barton began to be studied as a possible candidate in 1940. He is serving his first term in Congress from a silk-stocking New York district, and was elected on his promise to try to "repeal a law each day." The combination of advertising with piety in Mr Barton's person makes him appear an unusually characteristic American of the business type, and by no means shuts him out as a Presidential candidate.

It is worth noting that much of the effect of Mr Roosevelt's tour across the continent was lost because of the round-the-world flight of Mr Hughes. The President was not relegated to the inside pages, but the flyers got the larger headlines and more readers. Mr Roosevelt, however, has aroused enthusiasm in the West, and all the polls show a slight rise of the percentage of the public who favour his leadership. The President's popularity is the chief asset of the Democratic party in the campaign, and it is difficult to see how the Republicans are going to concoct one that can begin to offset it before November.

Wall Street as a Barometer

NEW YORK, July 20.—One month has now elapsed since the memorable Monday morning when the stock market began its meteoric advance. Rarely, if ever, has so great a revaluation of the industrial equipment of a country occurred in so short a time; in two weeks, the industrial share indices rose about 30 per cent. From the low point of the year, approximately at the end of March, it is the exceptional share which has not risen at least 50 per cent.; and advances of 100 per cent. are by no means uncommon, especially among the low-priced, non-dividend-paying equities.

Not only was this remarkable change in appraisal not preceded by any visible upturn in general business; even now, a month after the stock market movement started so explosively, visible evidence of recovery is still relatively scanty. This, of course, is far from saying that no reason exists for anticipating a substantial revival. It is rather a reminder of the extreme instability of American markets and of the American economy in general.

In July, 1937, average stock market prices rose some 30 points (say 20 per cent.), apparently on the discovery that mid-summer business was holding up better than had been expected. There was hesitation for a fortnight or so, and then prices plunged downwards some 60 or 70 points between

mid-August and mid-September, although there was no strong statistical evidence of business recession until after the market decline was far advanced. In the same way, in March, 1938, average share prices fell nearly 30 per cent., although there was, as it transpired, no marked change in the level of production between the first and second quarters of the year. In retrospect, it is apparent that the violent rise in July, 1937, was a "false" move, generated by technical conditions within the market; and that the decline which began in August, 1937, was a "true" move, because it was eventually validated by a collapse in production and earnings.

The simple fact is that the stock market has a dubious record as a barometer. It is a nervous reflector of opinion that has been sometimes right and sometimes wrong. But it is more than that; to some extent these violent stock market moves create opinion, and so influence the decisions of business men. Hence it is of some significance that, although there is still little enough statistical evidence of an upturn in business activity or production, yet business men, who in early June were inclined to expect that business would get worse before it got better, now incline to the belief that business will get better without getting worse. It would appear, however, that they are still cautious about converting that opinion into action.

Changing Opinions about Inventories

Business decisions are largely governed by the inventory position. While statistical information is scarce, the general attitude of the business community towards inventories is usually well known. In the sellers' market during the winter of 1936-37, business men favoured the accumulation of stocks, either physically or in the form of forward orders. In the second quarter of 1937, the policy of ordering forward was generally discontinued; and by the autumn of 1937 the policy of reducing stocks was generally in vogue.

The controversy about whether excessive inventories induced the depression or the depression made any given inventory excessive is still unresolved. The simple fact is that by the spring of 1938 any inventory had come to be regarded as burdensome; and, curiously enough, the "inventory problem" was considered much more acute in the second quarter of 1938 than it had been in the third quarter of 1937, in spite of the fact that for the intervening nine months (or longer) business policy had persistently been directed towards reducing stocks. This, in turn, serves as a reminder of the extent to which panic played a part in the collapse of last autumn, and of the fact that in an uncartellised and highly competitive economy, inventory gains and losses play an extremely important role in determining profits.

In general, nothing is so conducive to the idea of enlarging an inventory as the spectacle of rising commodity prices, and nothing is so conducive to the idea of letting an inventory run off as the spectacle of falling prices. But the really important factor is the expectation about future movements. Thus steel prices were maintained from the second quarter of 1937 through the second quarter of 1938; but for at least the last six months, the opinion that steel prices would come down had become an *idée fixe* of the steel-consuming community. It is therefore no paradox that the actual reduction in steel prices was promptly followed by an increase in steel orders, while a *rise* in non-ferrous metal prices provoked an identical response. Both movements convinced a certain number of consumers that little was to be gained by postponing the replenishment of inventories.

Eleven months ago, production was at a high level, far above that of incoming orders. The level of security prices in the middle of August, 1937, was an appraisal of the hope that orders would appear in the early autumn which would maintain the current level of production. This hope was disappointed, and the markets reflected that disappointment several weeks in advance of any marked decline in production.

The situation this July appears to be almost the exact opposite. For more than six months production has been extremely low—presumably below the level of actual sales, since during that time there has been a persistent effort to reduce inventories. In June, it seems that the attitude toward inventories began to change, and orders were placed; these were reflected in rises, first in the price of industrial raw materials (non-ferrous metals, hides, rubber, scrap iron) and then in the volume of steel production.

If one must rationalise the behaviour of the share market, the decline in August, 1937, was an appraisal, not of the existing level of production, but of a future lower level indicated by the absence of incoming orders. Conversely, the advance in June, 1938, appears as an appraisal, not of the current level of production, but of a future higher level, more or less indicated by incoming orders.

More Hopeful Outlook

In this description, the question of inventories has been made to play a leading role. Such an account is an oversimplification. Actually, the change in outlook is perhaps the most important, and certainly the most conspicuous, development of the past month. In early June the business community faced the summer with apprehension and the autumn without enthusiasm. In the middle of July, the business community finds its summer apprehensions mistaken, and confronts the autumn with optimism. This is an almost incredible change for so short a period; but it is entirely characteristic of our economy, which in recent years has witnessed rapidly alternating booms and collapses rather than the slow ebb and flow of the conventional business cycle.

France

Better Fiscal Receipts

PARIS, July 28.—Fiscal receipts were 3,472 million francs in May, of which 3,338 millions were ordinary receipts, an increase of 1,038 millions over May, 1937. This exceeds the revised estimates by 57 millions, whilst the preceding months of the year showed an increasing deficit. The yields of the turnover tax and the tax on dividends were particularly favourable; direct taxes also showed better results.

For the first five months of the year the total receipts from indirect taxes thus reached 15,165 millions, an increase of 3,000 millions in comparison with the same period of 1937. An encouraging feature of the return is the fact that the latest increase in taxes has been followed by a greater increase in receipts than was estimated; this suggests that there has been a certain revival of business.

Apathy in the Capital Market

The yield of the taxes on Stock Exchange transactions is nevertheless disappointing. The turnover remains very low, and it seems as if nothing can wake up the market. The festivities for the British Sovereigns had no effect, despite the frequent references to the Entente Cordiale as a guarantee of peace; neither did the British "mediation" in Central Europe, nor yet the revival of business in the United States. Even the favourable results reported by many companies for the first six months of the year produced little response from the Stock Exchange.

The strike of capital is a source of perplexity for observers, who can find no explanation for this phenomenon except the warnings by the extremists of renewed proletarian action in the autumn. But these fears seem very speculative, now that Communists, Socialists, Radicals and trade union leaders are quite unable to agree on a common policy. On the other hand, the fear of international conflicts certainly does not encourage renewed activity. Markets were also depressed by the pessimistic reviews of the economic recession abroad, which were published a few weeks ago when many people were about to depart for their summer holidays.

Further Decline of Prices

The index of wholesale prices for July 23rd shows a further decline of 3 points to 654, against 657 and 658 in the two preceding weeks. This is principally due to a seasonal

Germany

Recovery on the Bourse

BERLIN, July 26.—The decline in share prices, which reached almost panic dimensions on July 18th, has at least temporarily come to an end. In four days of very substantial recovery the losses of the 18th were fully made good, but quotations are still considerably lower than at the beginning of July. Apparently the banks intervened, probably in response to an official hint, for the collapse was having an unfavourable effect on confidence, and was difficult to reconcile with the official thesis that violent fluctuations were a thing of the past.

There is a certain gingerliness in discussing the cause of the break. It is euphemistically attributed to "already known displacements of property" instead of, as it should be, to the virtual expropriation of Jewish property. According to the official analysis of the whole movement, based on an impressive mass of data, quotations of industrial shares, which certainly were very high, have now been brought back to levels ensuring a fair dividend yield. Hence the break, which, in fact, caused serious losses, is finally shown to be a blessing.

According to the banks, some of the worst sufferers were "Aryans," who, losing their heads, sold at the bottom when liquidation by Jews had been nearly completed at tolerable prices. The official attitude seems to have its origin in the fear that the affair might be exploited outside the Reich as a proof of insecurity within.

Privately compiled figures show that the rise in industrial profits last year was erratic and uneven. Net profits of coal, artificial silk and engineering companies increased most, those for coal having actually doubled. But in most other industries the rise did not exceed 10-20 per cent., and in motor-vehicles, shipbuilding, cement, and rubber-linoleum there were declines. Yet, with two exceptions, all groups paid out more in dividends.

These results confirm earlier opinions, some of which were official, that the great rise in profits experienced during five years of recovery has now terminated. For this many reasons are given. Owing to the use of long-derelict machines and inferior workmen, full employment has not led to the fall in costs which might have been expected to accompany a rise in output. In some of the few industries where exact comparison is possible (notably coal-mining), per capita output has recently declined, and this process is expected to continue. Statistical forecasts for the coal industry, while optimistic about increasing production and expanding markets, agree that the additional coal will be mined at a higher cost. Coal output in the first six months of the year was 92,499,000 tons, compared with 89,265,000 in the first half of 1937.

Berlin, London and Prague

The international situation is considered to have improved—which means, in a totalitarian State, that official spokesmen and the Press are relatively calm. The Anglo-French fraternisation in Paris induced no unfriendly comment worth mentioning. On the Spanish question, the Reich apparently feels no need to be demonstrative, since it is believed that the Civil War will soon terminate, naturally, in the desired way. Russia is very much in the background, and as the foreign policies of the Scandinavian and other small Continental States are represented to be entirely anti-League, they are commented on with satisfaction.

The most striking change of the past two months has been in the Sudeten-German question. It is true that this question has not been settled, and may be many Sudeten and Reich Germans do not expect settlement, otherwise than by secession and *Anschluss,* though for tactical reasons a provisional agreement, secretly regarded as temporary, might possibly be concluded. The change is in the official and Press attitude since May 21st.

Immediately before that date, the salient factors were a crescendo of ever greater agitation and incitement (the real cause of the war scare), and a pretence that this question, as the Austrian before it and any other Central European question that may later arise, concerned Germany alone. Berlin did not, of course, object to London's action as long as London could be represented as counselling an intransigent Prague to make concessions. But it was not admitted that London could be an intermediary with a *locus standi* derived from peace treaties or from general interests; and when London appeared to be opposing the Reich's intemperance or menaces, it was made clear that London had nothing to do with the matter. During the past two months, despite occasional whippings up, the agitation and incitements abated; and the Press not only recognised the British Government as an intermediary with a status, but has even implied that the procedure was to "wait and see" what England could achieve. In this atmosphere the despatch of Lord Runciman to Prague has been relatively well taken.

Commercial Agreements

The business situation has changed little. Four trade agreements, covering Austria, but not the Austrian debts, have been virtually concluded with France, and the debts question is now being considered. The financial Press continues to emphasise the fact that those Austrian creditor countries with which debt-service agreements have not been concluded can draw no inferences from the Anglo-German agreement. But it is implied that France and other countries will have to make concessions resembling those made by Britain in regard to old Reich loans. Probably, though it is not announced, the coming into force of the new trade agreements with France is conditional on a settlement about the Austrian loans.

The Bank of Brazil has resumed the purchase of barter-marks, but not for the settlement of cotton and coffee export accounts. There is a marked tendency to play off the United States against Brazil, despite the belief that Brazil, and those other Latin-American countries which have lately shown anti-German tendencies, acted at the behest of Washington. In Berlin a number of commercial agreements have been signed with Turkey, which deal with payments and not with clearing. These include Austrian trade.

The relation between Austrian and German prices continues to be erratic. The valorisation of the schilling before its exchange into marks drove many Austrian prices much above the German level; and in Vienna certain prices are still 20 and 30 per cent., or even more, higher than in Berlin. But butter, most meats, and some other necessaries are cheaper in Vienna, while "controlled" houses and apartments are let at only a fraction of Berlin rents.

The money market shows a normal month-end demand. There have been considerable repayments of Reich short-term liabilities, and this has fed the market. The main feature of the banks' balance sheets for June 30th is the replacement on the assets side of discounts by Treasury certificates. The former declined by Rm. 424 millions, while the latter increased by Rm. 432 millions. In view of the fixed rationing of ordinary Reich Treasury certificate issues, the increase must be made up entirely of the new "delivery certificates," with which (in place of the abolished "special bills") armament and other Reich undertakings are now financed. Industry, that means, has been raising credit on the security of "delivery certificates." In general, a good deal is talked of the increasing demand of industry for credit.

Poland

Friendship with the Baltic States

WARSAW, July 20.—The fact that Polish relations with Latvia have recently shown a marked improvement (this is confirmed from Riga), and that progress is being made towards the "normalisation of relations" with Lithuania, rather indicates that some change has taken place in official policy.

Latvia has always been very suspicious of Polish-German friendship, and Lithuania, until quite recently, was much afraid of Poland. The Poles still disclaim any desire for hegemony over the Baltic States, or for the formation of any sort of neutral bloc with the Baltic and Scandinavian countries. But their evident desire for close friendship with those countries may be regarded by England and France as a healthy symptom—always provided, of course, that the primary object of Colonel Beck's present activities in that region is not simply to consolidate opposition to Article 16 of the League Covenant.

The public appraisal o Polish-German "friendship" has sunk to new low levels since the *Anschluss;* but the Polish Government clearly desires tc maintain its "good neighbour" policy towards Germany, despite growing friction over minorities, the virtual loss of Danzig and the revealing anti-Polish outbreaks which appear periodically in German publications.

Polish-German Clearing Agreement

A new trade and clearing agreement with Greater Germany was signed in Berlin on July 1st. This replaces, as from September 1, 1938, the existing agreements with the Reich and Austria, and is to-run for two and a-half years. Much secrecy is being maintained about its contents—partly, no doubt, because it has disadvantages for Czechoslovakia—but it is known to provide for the establishment of quotas which will permit an annual export on both sides of 260 million zlotys. It will probably not affect the existing arrangement whereby Germany pays to Poland—mostly in goods but partly in foreign exchange—about 60 million zlotys a year for railway transit across the Corridor.

In the calendar year 1937 Polish imports from Germany were officially given as 182 million zlotys, and, from Austria, as 58 millions—a total of 240 million zlotys for commodity exchanges and transit payments combined. Polish exports to those countries in 1937 amounted to 167 and 59 millions respectively—or a total of 226 million zlotys. In the first five months of 1938 Polish imports from Germany and Austria combined were valued at 121 million zlotys, and exports to those countries at 92 million zlotys; while imports from the United Kingdom (which for many years occupied first place in Poland's foreign trade) were valued at 63 millions, and exports to the United Kingdom at 92 million zlotys.

The new agreement gives the Reich important advantages (hitherto only available to Austria) for the export to Poland of manufactured goods. The prospect of being compelled to handle increasing imports of German manufactures—to the detriment, no doubt, of imports from Great Britain and the United States—gives no pleasure to the Jewish merchants, whose influence on Polish trade is still very strong. Polish exports of timber, coal and agricultural products will be increased.

Large Import Surplus

The following are the foreign trade returns for the first half of the year:—

January–June—	Imports	Exports	Balance
	(In Millions of Zlotys)		
1936	458·7	482·0	+ 23·3
1937	594·5	582·2	− 12·3
1938	662·0	555·6	−106·4

These figures show why so much concern is now being felt about the trade position; it will not be easy to maintain imports of raw materials and supplies to provide for the growing needs of the national defence programme without curtailing the requirements of other industries. They also cast considerable doubt on the wisdom of Polish policy in encouraging trade on a barter basis with Germany, from which country it is impossible to obtain industrial raw materials (except scrap iron) or military supplies.

Good Harvest Prospects

It is estimated that this year's harvest of the four principal grains (wheat, rye, barley and oats) will be at least 10 per cent. above last year's—which was affected by drought—and that there will be an export surplus of nearly 1,000,000 metric tons, mostly rye. The system of export premiums on grain and flour, which was abolished early in 1937, will soon be re-established in order to prevent a collapse in internal prices and to make grain exports possible. A processing tax on flour will also be introduced for the first time.

The disastrous peasants' strike in Galicia last August, when over forty peasants were killed and several hundred sent to gaol, was partly a reflection of the poor harvest. There have lately been rumours of another strike being in preparation—this time on a national scale—and the Government will no doubt do its utmost to prevent a serious fall in grain prices, which would add fuel to the political discontent of the peasants.

Spain

Enforcing Exchange Control

BARCELONA, July 24.—The police continue to make frequent discoveries of gold, jewellery and other valuables which have been illegally hoarded in the most unlikely places. Recently a party of foreigners was arrested at the Barcelona aerodrome when on the point of departure for France with over a hundred ounces of gold.

The Government have therefore issued a decree imposing drastic penalties on anybody guilty of offences against the exchange laws. It is expected that this will prove an adequate deterrent, as the profits to be derived from dealings on the "black bourse" do not justify the risk of a long term of hard labour, or even (in extreme cases) of capital punishment.

A period of grace is allowed in which foreign currency or valuables held without permission may be voluntarily surrendered. If this is done the maximum penalty will be confiscation of the articles.

Centralised Control of Shipping

As early as *July 29, 1936,* the Government began to seize ships which belonged to private owners or companies hostile to the Republic. Special organisations were created in each case to manage the ships and obtain cargoes for them. Some vessels belonging to loyal owners were also expropriated, as being necessary for defence purposes.

Two years have now elapsed, during which the process of seizure has continued. The Government have consequently acquired quite an important fleet of merchant ships of various descriptions, and the system of management by numerous *ad hoc* organisations has proved inefficient.

To secure unity in working a decree was passed on July 9th to centralise control over all merchant ships sailing under the Government flag. This control will be exercised by an existing organisation which was set up in October, 1936, to enforce the laws relating to expropriated ships; its new title will be "Official Management of the Spanish Commercial Fleet." The decree expressly states that when peace is restored the Government will consider the question whether it should continue its present abnormal activities in the sphere of shipping.

The function of this body is to manage the whole Spanish carrying trade by sea. It will be run on strictly commercial lines, and its business transactions will be governed by the Spanish commercial code and in accordance with the usages of international shipping. The decree provides for advances from the Treasury if the official management's income should fail to cover expenses.

Among other duties it must maintain exsiting lines and establish new ones where required; set up agencies at home and abroad; put ships at the disposal of other Departments of State; and negotiate charters with Spanish or foreign subjects. It will also have full control over all port facilities.

The organisation will be run by a board of twelve members. Five, including the chairman, will be nominated by the Ministry of Posts and Transport, which also appoints the general manager. There will be four representatives of the staff of the ships, and one each from the Navy Department, the Ministry of Finance and the commercial marine.

The Budget Prolonged

A decree has been passed extending the validity of the 1937 Budget to cover the third quarter of 1938. This procedure is in strict accordance with paragraph 107 of the Spanish Constitution.

Similar extensions were made by the Government of the Right which held office before the Popular Front.

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital: D. Gulden 5,000,000.--
Reserves: D. Gulden 3,527,571.57

Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.
Vice-Chairman: Józef Kożuchowski
Joint Managers: Stanisław Pawłowicz and Philip Frederick Rann.
Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig.

INQUIRIES SOLICITED

British Guiana

Encouragement of British Films

Georgetown, June 14.—Preference for British cultural aims and ideals is shown in a resolution to be discussed at the sixth congress of the Associated West Indian Chambers of Commerce, to be held in Port of Spain, Trinidad, from August 26th to August 29th. The resolution states that:—

> In view of the development of the film industry of the Empire, and recognising the immense influence which the cinema exercises upon commercial and social questions, as well as the great potentialities of Empire-produced films in fostering and consolidating British aims and ideals, this Congress urges that every reasonable encouragement should be given to the exhibition of good British films throughout the British West Indies and British Guiana, and that when possible locally produced films of merit should be protected by quotas or other means.

There is no local film industry in any of the West Indian colonies except Trinidad (where production is on a very small scale), so that the resolution is intended primarily to benefit films produced in the United Kingdom.

The Economic Bonds of Empire

There are several other important resolutions to come before the congress. The congress will, for example, express appreciation of the benefits which have resulted to the British West Indies and British Guiana from the Ottawa Agreements, and pledge its support to all efforts to extend the adoption of Imperial preference. It will also acknowledge the assistance given to West Indian sugar by the Governments of the United Kingdom and Canada, and urge that it be continued on at least the existing scale.

Other resolutions dealing with Imperial preference recommend that the preference to Empire-grown citrus should be continued, and when possible extended, and that the British Government should reconsider the question of according a preference to petroleum produced within the Empire. The preamble points out that

> the Home Government has already accepted the principle of preference for petrol produced from coal in the United Kingdom.

Need for Tourists

Economic stress in the West Indies and increasing anxiety about the outcome of the International Sugar Agreement is reflected in three resolutions which urge the Governments of the various West Indian colonies:—

(1) to do everything in their power to encourage the development of new agricultural industries and to augment the existing ones which are in a state of decline due to uneconomic conditions.

(2) to exercise every possible economy in public expenditure in order that the present burden of taxation may be relieved and the depressed state of industry alleviated.

(3) to prevent the entry into the colonies of aliens who by their methods of acquiring a livelihood and by their standards of living do not become desirable citizens but, to facilitate the transfer of labour from one colony to another.

The immigration laws in these colonies allow the influx of undesirables, but tend to exclude hard-working agricultural labourers who would be an acquisition to colonies where there is a shortage of labour.

It is widely felt, however, that what these colonies need is a new industry, now that sugar production is limited. There is only one such industry, and that is the tourist industry.

Co-operation with British West Indies

For the sake of convenience, the expression "British West Indian countries" is used to include not only the islands of the West Indian archipelago, but also the Bermudas and the mainland colonies of British Honduras and British Guiana. The people of the Bermudas, however, on account of their proximity to the United States, have little of the West Indian outlook of temperament; and at the Southern extreme the majority of the people of British Guiana have always felt that the destiny of their country is to be a great independent British State in South America. Nevertheless, a West Indian Department of the Colonial Office supervises them all; they are all signatory to the Canada-West Indian Trade Treaty, and the Department of Overseas Trade publishes in one volume the economic reports of the two Commissioners who represent the United Kingdom.

Letters to the Editor

Banking and Trade Recession

TO THE EDITOR OF THE ECONOMIST

Sir,—Anything Mr Harrod writes must receive the closest attention. I read his letter not "with scant attention," but several times, and was careful to say "Mr Harrod is confident that public works, *or at least the proposals he makes*, can do no possible harm." As he raised both the issue of public works and interest rates in his letter, I hoped he would enlighten me on both subjects, but he has merely ignored my questions, and as you now confirm his opinion in your leading article on "Policy for Recession" that a reduction in interest rates can, at least, do no harm, I must put the other point of view without further delay.

The War Loan Conversion was the first big attack on interest rates, and it had the effect of reducing many investors from comparative comfort to a state bordering on poverty. Others were merely somewhat embarrassed. Since 1932 the attack on interest rates has continued, and there has been no compensation in the form of a decline in taxes or in the cost of living.

After six years of refunding operations one might imagine that the investor was entitled to a rest, and even to some compensation in a fall in the cost of living. Mr Harrod and his associates think otherwise. They assert that a reduction in the rate of interest is entirely harmless, and they are anxious to effect a further transfer of purchasing power to those who have enjoyed six years of rising prosperity at the expense of those who have already suffered for six years.

Is such a policy equitable, and can it possibly be regarded as harmless? As interest rates were not allowed to rise during the boom, but are to be forced down further in the recession, what is to happen when this policy has been pushed to its extreme?

The policy of large-scale public works also seems to call for much more criticism than it is receiving. From 1932 to 1937 the annual output of steel rose by about 146 per cent. to the record figure of approximately 13,000,000 tons. Iron and steel enjoyed a very great boom, and the steel manufacturers did not fail to take advantage of it. They secured protection in the form of import duties and quotas, and they put up their prices by 38 per cent. between 1933 and 1937.

The rise in iron and steel brought large profits to the iron and steel companies, but it had an adverse effect on other industries, particularly shipbuilding. The shipping industry made a late start in the recovery, but in 1936-37 freights improved rapidly and shipowners were encouraged to build new ships. Some owners were lucky enough to place their orders early. Those who did not were faced with such a rise in the cost of ships (partly if not largely due to the rise in iron and steel) that they had to abandon their plans or place orders abroad.

Freights have fallen again, but not steel, and the possibility of a revival in mercantile shipbuilding is now dreadfully remote. So strongly entrenched are the steel makers that they have maintained their prices at the peak, and the rearmament programme is encouraging them to hold this position. Meanwhile the plight of the shipbuilding industry is partly hidden by the naval programme, but our mercantile business is going abroad. In short, re-armament (a near relation to public works), far from helping our industries, is giving them a feeling of false security, while weakening them. I have mentioned the case of steel merely as an example; similar arguments apply to other industries.

The right policy now is to follow the example of the American steel industry and reduce prices to a more normal level in order to combat recession. Mr Harrod, Mr Keynes and, I am afraid, *The Economist*, prefer a policy of public works which, at the present stage, will inevitably encourage

industrialists to maintain their prices at boom levels, and further reduce our prospects of saving our export business from extinction.

Finally, Mr Harrod is wrong when he attributes to me the view that we should do nothing. Although I do not want large-scale public works at this stage, I am strongly in favour of a policy which aims at removing obstacles from the path of business and which helps our export industries.

Yours faithfully,

London, E.C.2. G. E. Ross.

[We cannot undertake to answer for Mr Harrod. But, speaking for ourselves, it seems a little hard to be criticised for wanting "a policy of public works which, at the present stage, will inevitably encourage industrialists to maintain their prices at boom levels and further reduce our prospects of saving our export business from extinction" after an article which specifically declared a public works programme to be impracticable at the moment. Is it possible that Mr Ross has still not appreciated the difference between a public works policy and a policy of cheap money, which we described as a private works policy? As for the alleged inequity of a further reduction in interest rates, would Mr Ross hold that investors as a whole have suffered rather than gained from the cheap-money period of the last six years, or that even the fixed-interest investor is substantially worse off, in real terms, than a decade ago?—Ed., *Econ.*]

TO THE EDITOR OF THE ECONOMIST

Sir,—"Banker" in his argument against a further reduction of the long-term interest rate suggests that such a reduction might be a source of very considerable danger. It would appear that the danger is not to the economic system but to the investor who will, of course, get a smaller return for his money.

In a finite economy where the pool of available money had a physical limit, the owner of money had a right to a fee for the use of it, and the fee would vary according to demand. In an expanding economy, the ultimate rate of return on money lent without risk is logically *nil*, and there is no reason why an owner of capital, who has neither the ability nor the courage to turn his wealth to account, should salve his conscience by calling himself an investor and expect a "minimum subsistence level of interest rates" to be arranged for his benefit.

The danger in Mr Keynes's proposals is to the usurer, not to the trader and the financial structure necessary for the carrying on of his business.

I am, Sir,

Your obedient servant,

Rollo Villiers.

London, E.C.2.

TO THE EDITOR OF THE ECONOMIST

Sir,—May I add a word to the very interesting correspondence which has appeared in your recent issues on the subject of reduction of the long-term rate of interest as a remedy for trade recession at this juncture?

Suppose that the authorities succeeded in inducing the commercial banks to make large purchases in the gilt-edged market. Suppose that the long-term rate of interest was thereby reduced. Suppose that private enterprise was thereby induced to increase its expenditure on premises and equipment. Suppose that the activity of businesses making premises and equipment was thereby stimulated. Whether all this could happen is debatable, but suppose it happened—what then?

Would not one result be the very difficulty to which you referred in your last week's leading article on "Policy for Recession" as likely to result from the adoption of a public works policy at this juncture, namely, encroachment at many points on resources of men and materials needed for the defence programme? Much as one deplores the recession from the point of view of unemployment, one must recognise that it is not without advantage from the point of view of re-armament, when one remembers the dangerous "bottlenecks" that appeared in industry last year.

Nobody believes that the re-armament nightmare will last for ever. It may, of course, be succeeded by the even more horrible nightmare of war, but everyone hopes, and there is good reason for hoping, that it will be succeeded by a *détente*. What is then going to take the place of armament orders in this and other countries in the same boat? Will not that be the psychological moment for putting into operation both a public works policy and a policy designed to reduce the long-term rate of interest? These are cards which cannot be played repeatedly.

I am, Sir, etc.,

G. D. Rokeling.

London, S.W.5.

Books and Publications

Children in Trouble

It's an awkward thing to play with souls,
And it's matter enough to save one's own;
But think of the child and the burning coals
It plays with for bits of stone.

That misquotation sums up one's feelings after reading this book*, at once so depressing, so hopeful, and so valuable. It is depressing for its picture of young children living in circumstances which pre-dispose them to crime, and of other children born with a twist of the nerves or some natural gift which unfits them for the surroundings into which it has pleased Providence to call them. It is hopeful for the care and industry with which people like the late Clarke Hall and the author of this book have studied the problem. It is valuable because there is in every chapter something that a magistrate who takes up the most difficult of all the tasks that fall to a J.P. will find helpful in his juvenile court.

Juvenile courts were established in this country by the Children's Act of 1908, which laid it down that courts of summary jurisdiction, *i.e.* police courts, should, when hearing charges against children, sit in a different building or different room from that in which they usually sit *or* on different days *or* at different times. The object, it will be seen, was to get the children away from the atmosphere of the police court, and that in itself was a great step forward. But the police court was retained, and those who best understand the needs of children and the working of the courts are most conscious of the difficulties inherent in this arrangement.

Some children's courts are as informal as any court of law can possibly be, and here the proceedings are probably understood as they should be by the young delinquents who come to them. But in others the procedure of an ordinary court is closely followed, and evidence is asked and given in the familiar terminology which children of sub-normal intelligence must find bewildering and confusing. "In what condition did you find the premises when you returned at 8.30 p.m.?" That is good enough for a court in which an adult is on trial, but it is not good enough for a court in which an under-developed twelve-year-old is having his first taste of the law's majesty.

A very good example of the difficulties involved in the present system is given by Miss Elkin when she discusses the use of the psychologist for young delinquents. A boy was up for theft, and the evidence against him was not strong enough for him to be found guilty. But he had been sent to a child guidance clinic, and there the psychologist had obtained from him a confession of guilt, which was included in the report made to the magistrates' clerk before whom the boy pleaded not guilty. That case is enough to show how extraordinarily difficult it is to graft a system appropriate to child delinquents on to the old police-court procedure.

The essential duty of a children's court is to prevent the child from drifting into a life of crime, and it can do that only by finding out everything that there is to be known about the child. Individual treatment is everything. And proper individual treatment postulates (a) magistrates who

understand their job as the children's justices; (b) probation officers with skill enough to do their work properly and time enough to give to it; and (c) the right places for children to go to if they cannot be sent back, or ought not to be sent back, to their homes. It is a technique of its own, and only by the development of the right technique can the children's courts be made to do their special work with success.

One suggestion perhaps the writer of this book will consider. Admirable as it is, the book is meat for specialists rather than for the general public, who may find the discussion too detailed for their own casual reading. Will she consider another book designed for the general reader who knows little or nothing of police courts—a short book written on the broadest lines and aimed at the decency and sympathy of the ordinary man? Apart from her experience, she has one excellent qualification for writing such a book. She cannot be mistaken for a crank.

Shorter Notices

"Commercial Goodwill: Its History, Value, and Treatment in Accounts." By P. D. Leake. Pitman. 201 pages. 15s. net.

The difficulty of placing a proper value upon anything so indeterminate as commercial goodwill is evident. Mr Leake has done much to solve this problem in a study which is both comprehensive and clear, combining technical and practical exposition with sound theoretical analysis. The exchangeable value of goodwill (including patents and similar rights) is regarded as the capitalisation of future "super-profit," which, in the form of a constant or diminishing annuity (assuming a rate of discount appropriate to the industrial risk involved) is eventually realised over a limited period. It is an essential part of Mr Leake's thesis that this "super-profit" cannot be depended upon to last for ever, owing to the risk of future competition and changing conditions. Goodwill should therefore be written off systematically, and never permanently represented by irredeemable shares. Whether or not it is possible to carry out these recommendations in all their rigour, they are very helpful to clear thinking; and Mr Leake's high reputation will be enhanced by this new edition of his book. It includes a discussion of past estimates of national capital, and should interest all economists in addition to the members of the accounting and legal professions, who will find it invaluable.

"Foreign Intervention in Spain," Volume I. Documents collected and edited by "Hispanicus." United Editorial, Ltd. 751 pages. Price, 7s. 6d.

It is nothing new for critics to say that the Non-Intervention Committee was, from the start of its proceedings, a cynical pretence. "Yes, gentlemen. We have ascertained that not only has there been no intervention, but there is no civil war, and there is indeed doubt as to whether such a country as Spain exists." These words, put into the mouth of the Chairman of the Non-Intervention Committee by the *Heraldo de Madrid* early in 1937, appear hardly more exaggerated in the light of these documents than some of the speeches which were actually delivered. If the Kellogg Pact abolished not war but its declaration, the Non-Intervention Agreement prevented not intervention but the admission of intervention—that is, until Signor Mussolini, angered at the rout of Guadalajara in March, 1937, gave up the pretence of Italy's good faith. This volume is concerned with German and Italian intervention between July, 1936, and January, 1937. It is to be followed by a second on the attitudes of France, England and Russia during the same period, and by other volumes dealing with subsequent events in chronological order.

THE BUSINESS WORLD

The Share-Pushing Bill

THE Share-Pushing Bill—or, in official parlance, the Prevention of Fraud (Investments) Bill—which has been introduced to Parliament this week, is the result of deliberations extending over twenty months. It represents a further and long-needed legislative effort to correct the financial abuses which arise when fraud and deceit are in a position to exploit greed and cupidity. Few investors who confine their operations to properly conducted investment markets have escaped the devices of publicity employed by undesirable share dealers, commodity pools and other enterprises of a debatable character. The freedom enjoyed by rogues to set up as share dealers has too long been a public scandal.

The problem of coping with abuse is to impose rules and prescribe penalties which hamper the wrongdoer without impeding the course of legitimate business. In broad terms, the Bill succeeds in this object. Its clauses are based substantially on the findings of the Bodkin Committee, which was appointed early in December, 1936, "to consider the operations commonly known as share-pushing and share-hawking and similar activities." The Committee's report was presented to Parliament in July last year, and its findings were discussed in *The Economist* of August 14, 1937. Its recommendations were endorsed in the course of a debate on December 15th last year by the Parliamentary Secretary to the Board of Trade, who forecast that the Bill would also cover the activities of property societies, on which the Anderson Committee on Fixed Trusts made some critical observations.

The Bodkin Committee found that official supervision of share dealing—hitherto unknown—and increased penalties for fraudulent operations were necessary. Clause 1 of the new Bill provides that, from the appointed day, no person may deal in securities without a licence from the Board of Trade. Both principals and representatives —that is, directors and executive officers—must be licensed, and licences will be valid only for one year, and will come up for annual renewal. The licensing regulations will not apply to dealers in shares who are already under adequate authority—in other words, members of recognised Stock Exchanges. The latter will include the London Stock Exchange, and any association approved by the Board of Trade. Thus, if the considerable number of dealers in securities who carry on business in the provinces, but are not at present members of any Stock Exchange, combine to form an association, with proper disciplinary rules, they would presumably come within the limits of exemption. Application for the registration of an Association of Stock and Share Dealers, it will be recalled, has recently been made to the Board of Trade. Exemptions will also be granted to banks and finance houses. Finally, approved trustees of unit trusts and managers of authorised unit trust schemes are also exempt. An authorised unit trust scheme requires an approved trustee, which is defined as a corporation formed in the United Kingdom with powers to undertake such duties, and having an issued capital of not less than £500,000, of which half must have been paid up in cash.

These licensing clauses, therefore, bring all share dealings formally within their scope and then proceed to release those which are clearly genuine. They will plainly be more effective in closing loopholes than if particular types of share-dealing were to be defined for licensing purposes. The number of brokers to which the licensing provisions [illegible] may be put at between 600 and 800, but the number which fall under the exemptions is of the order of 5,500. If the applicant for, or holder of, a Board of Trade licence fails to furnish information concerning himself and his business which the Board may require, or if he is proved guilty of fraud or dishonesty, of a breach of the Board's rules, or of discreditable business methods, the Board may refuse an application, or revoke an existing licence, subject to appeal to a special tribunal.

The recommendations of the Bodkin Committee on contracts and books of account are covered by Clause 5 of the Bill, under which rules may also be formulated for "determining the class of persons in relation to whom, and the manner and circumstances in which, any holder of a licence may deal in securities." Under these powers, the Board of Trade will be able to regulate communications with clients, either by telephone or in person. The Bodkin Committee, it will be recalled, found that section 356 of the Companies Act, which made the hawking of shares "from house to house" illegal, had become almost a dead letter. Loopholes permitted by this clumsy form of words, and by the exploitation of the telephone, will now be closed to the unscrupulous share-pusher.

Substantial penalties are defined for breaches of the main provisions of the Bill. In particular, special steps have been taken to widen the powers of prosecution at present permitted under the Larceny Act. The character of an indictable false pretence under sections 32 and 33 of the Act, has raised special difficulty in the past. As the Bodkin Committee pointed out, the maxim *simplex commendatio non obligat* involves "the sound principle that indefinite praise upon a matter of indefinite opinion cannot be made the ground of an indictment for false pretences." It has, therefore, been necessary hitherto to prove that statements are actually false regarding an existing fact, and promises or forecasts regarding the prospective position of a company have not been indictable. Under Clause 9 of the Bill, this weakness is remedied by a remarkable and far-reaching definition. Any person who invites another to enter into dealings for profit in securities, property or commodities on the basis of any statement which he knows, or could reasonably be expected to know, to be false, misleading or deceptive, or who dishonestly conceals material facts in his invitation, or makes any promise or forecast which he has no reasonable ground for supposing to be fulfilled, will be liable, on conviction on indictment, to penal servitude up to seven years, with a similar penalty for conspiracy in such acts.

The scope of this clause is of considerable importance. Would it apply to misguided recommendation of shares by a broker or in the columns of a newspaper? Would it cover an optimistic director's forecast of future profits in a prospectus? Would it expose any broker who issued *bona-fide* opinions regarding shares to criminal proceedings at the instance of a disappointed client? It is to be presumed that an honest mistake of judgment will not be visited by the penalties of the law on the charge that the person responsible had "no reasonable ground for supposing that it was likely to be fulfilled or verified." These points may be clarified in the interval between the Bill's first introduction and its progress through the legislative mill next session.

Clause 9 covers all security, property and commodity dealings, including the "similar activities," such as mushroom farms, on which the Bodkin Committee was invited to report. But the latter are further prohibited,

under Clause 10, from seeking any publicity whatever, even if the statements made would be permissible under Clause 9. This clause provides that no person may circularise (or have in his possession for the purpose of distribution) any invitation to participate in dealings in securities, property or commodities, or put out any information "calculated to lead directly or indirectly" to such participation by the recipient. It has been drawn in the widest terms and its scope will be reduced by authorised exemptions, such as prospectus issues, offers made by members of recognised stock exchanges and associations, licensed dealers in securities, exempted dealers and managers of authorised unit trust schemes, and offers by Governments, corporations, industrial and provident societies and building societies. Information and invitations given in the regular course of business by dealers in commodities to other persons will also be exempted. But the powers, as at present defined, would appear to inhibit a newspaper from discussion of investment matters, which clearly might lead "directly or indirectly" to dealings in securities or property. It would be surprising if the legislature intended, for instance, to make the publication of the Stock Exchange pages of *The Economist* illegal. Delivery of a newspaper is exempted, and it would appear that *bona fide* publication should be explicitly covered also.

It will, however, be impossible for the non-registered dealer to reach the public. Those who are concerned with dealings in property or commodities—the "similar activities"—will either have to convert themselves into authorised unit trust schemes (a matter of some difficulty in the case, say, of a mushroom farm) or to register under the Companies Act. In the one case, the public will be protected by a trustee of substance and repute, and in the other the full prospectus provisions of the Companies Act would need to be observed.

Finally, the Bill makes sharp proposals for dealing with abuses which have arisen under the Industrial and Provident Societies Acts. Investment trusts and property societies which appeal to the public for funds will have to be registered under the Companies Act, and subject themselves to its prospectus provisions. The Registrar of Friendly Societies will be given powers to refuse or cancel the registration of any society which is not a *bona fide* co-operative society or is not conducted mainly for improving the well-being of the working classes. Societies at present registered which do not fulfil these requirements are allowed a year's grace from the passing of the Bill to convert themselves into companies without payment of capital or registration duties.

So much for the main provisions of the Bill. It appears to be a thorough and workmanlike attempt to rid the City and the Provinces of a growing mischief. It has proceeded in the best way, by absolute prohibitions subject to exemption, and leaves little opportunity for avenues of escape which might have arisen if detailed prohibitions had been defined in advance. Clearly, it leaves the Board of Trade with considerable responsibility for defining the scope of its rules and securing their observance. To those who object that this is legislation by order the answer is complete. For in combatting the ingenuity of the share-pusher, blanket prohibitions and exemptions by order will provide the essential flexibility of attack which has hitherto been lacking. The detailed provisions of the Bill will, of course, require very careful and expert examination, and even after its passage into law, much will depend upon the interpretation placed upon such words as "reasonable" by judges and juries. **But in its broad outline the Bill is an admirable measure which deserves the full support of investors, of the Stock Exchange and of the public at large.**

Consumers' Co-operation in Great Britain—I

The Co-operative Societies

THE Consumers' Co-operative Movement in Great Britain has grown in less than a century from insignificant beginnings to one of the most complex trading organisations in the country. The movement has a membership of more than seven million persons; its accumulated funds and its annual trading turnover both exceed £300 millions. For reasons that it would be difficult to discover, however, the co-operative movement has never attracted the degree of attention from outside students that its size and its intrinsic interest would merit, and until recently there has been no fully adequate description of the movement in all its ramifications. This deficiency has recently been made good by the collaboration of a number of authors who have brought both economic scholarship and profound knowledge of the movement to the task.* The resulting volume gives authoritative consideration to every aspect of the movement. The present article and its successor can do little more than scratch the surface of the rich vein of interesting material to be found in the book.

Idealism and realism have always been mingled in the British co-operative movement. On the one side, the ancestry goes back to Robert Owen who, in revolt against the ugly materialism of the early industrial age, sought to build a new social order based upon co-operation rather than competition. But the exact formula in which this brave conception was successfully fused with hard-headed business instincts was the sole discovery of the Rochdale Pioneers in 1844. The organisation they established was regarded not as a medium for social revolution, but as a convenient means of reconciling private interest with the public good. The main lines of development began to take shape with the passage of the Friendly Societies Act in 1846 and were virtually completed with the important consolidating measures of 1876 and 1893. The growth of the movement is well illustrated by the following figures:

Year	Number of Societies	Membership
1881	965	546,560
1900	1,419	1,703,084
1910	1,396	2,529,271
1920	1,326	4,459,960
1930	1,181	6,346,745
1933	1,124	6,856,159
1934	1,110	7,141,558
1935	1,096	7,422,718
1936	1,242	7,851,804

The whole movement is based on the retail societies, which are registered not under the Companies Act, but under the Industrial and Provident Societies Acts. They are associations of shareholding members (no member being allowed to hold more than £200 in shares in any one society), with limited liability. In size and organisation the co-operative societies are by no means homogeneous. They range from the small village society with a single store to the vast societies with numerous shops, found in the large cities. Almost 6,000,000 families out of a total of about 11,000,000 in this country are now claimed to be associated with co-operative stores.

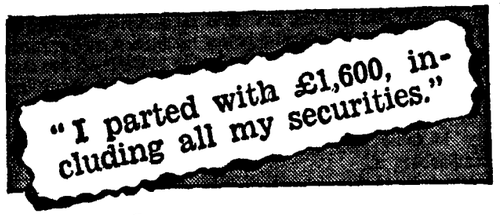
Hardly any of the societies is yet in a position to supply all the requirements of its members. Foodstuffs still account for over 70 per cent. of the aggregate trade of the co-operative stores; and the main gaps consist of specialised goods catering for a limited market and lines which require special equipment on the part of the shopkeeper. Prices are usually fixed by the permanent officials and are, as a rule, roughly in line with those of the better quality chain stores. The chief characteristic of the movement is, of course, the dividend on purchases. This is almost universally referred to as the "divi," and the contraction is useful as a means of emphasising the difference between a co-operative dividend and the more usual meaning of the word. The co-operative "divi" is paid to the member as customer and not as shareholder, and it is calculated as a given rate in the £ of his purchases. There has been a gradual decline in the average rate of "divi" paid by all societies from 2s. 10d. in the £ in 1902 to 1s. 10½d. in 1936, while in 1935 54 per cent. of the societies (representing 70 per cent. of the membership and 65 per cent. of the retail turnover) paid a "divi" of 2s. in the £ or less.

The retail societies are managed by committees (frequently of twelve members). The members of the committees are, in general, typical representatives of the main body of consumers; skilled artisans predominate among them. The committeemen, elected by the members and ultimately responsible to them, are generally laymen serving in their spare time. A notable exception is the Royal Arsenal Society, whose board consists of full-time members; while in the Barnsley British Society three out of the nine members of the board are full-time servants. In the larger societies much of the detailed work of supervision is performed by sub-committees, in order to economise the work of the committee and to enlarge the effective area of detailed control. The chief executive officer and the departmental managers are usually appointed by the management committee and are immediately responsible thereto. The larger societies commonly have one executive head, called the managing secretary, or general secretary, to whom all departmental heads are responsible. Virtually all the employees are recruited direct from the elementary schools, preference being given to the children of members. They enjoy a security of tenure almost comparable with that of the Civil Service. The recruitment of staff from the elementary schools clearly has serious drawbacks in an age when the advantages of higher education are becoming every day more apparent; and the societies might be amply repaid if they were to modify their method of recruitment to secure a certain proportion of better educated employees.

The relationship of the retail societies to the wholesale societies—the Co-operative Wholesale Society and the Scottish Co-operative Wholesale Society—is similar to that of the individual members to the retail societies. Though individuals may become shareholders of the Scottish C.W.S., membership of the English C.W.S. is restricted to incorporated co-operative organisations. Of the 1,052 members of the C.W.S. in 1935, 882 were retail societies, 97 agricultural societies, 4 producer societies, 22 overseas societies and 47 miscellaneous bodies. The wholesale, like the retail, societies are owned and controlled by their members. In the case of the C.W.S., 28 directors are nominated and elected by the management committees of the retail societies. Their term of office is usually four years, but they are eligible for re-election at the end of this term and in practice this is virtually automatic. Their salary commences at £750 a year and rises to £1,000 after four years. The difficulties of managing so complex an organisation through a body of this size are such that a certain rigidity seems almost inevitable; but the success of the Society may stand as sufficient justification. Detailed control is secured through the medium of sub-committees. A rather serious disadvantage is stated to be the absence of machinery to promote and guide the comprehensive development of trading activities.

The wholesale societies perform the services of manufacture, wholesale merchanting, transport and many others. In 1936 the C.W.S. produced goods to the value of £41 millions. The scale of its outside purchases can be judged from the figures of imports in 1935 in the next column.

The C.W.S. Bank—itself a business of no mean size—is administered as a department of the C.W.S. and employs the retail societies as its local agents. Its most important customer is the C.W.S. itself. But when this huge account (representing 68 per cent. of the total) is deducted, the rest of its deposits, amounting to more than £26 millions annually, are still comparable in magnitude with those of such a well-known banking institution as Coutts and Company.



C.W.S. Imports, 1935

Countries From—	£'000	Commodities	£'000
Argentina	2,993	Butter	7,949
Australia	2,996	Cheese.....	810
Canada	3,897	Coffee	73
Denmark	6,082	Eggs	442
Holland	794	Fruit	2,123
India and Ceylon ...	3,843	Grain	762
New Zealand	3,338	Meat	2,620
Other countries	8,697	Tea	4,293
		Vegetables	349
		Wheat	4,081
		Other commodities ...	9,138
Total	32,640	Total	32,640

The C.W.S. and the Scottish C.W.S. are the sole members of two other bodies—the English and Scottish Joint C.W.S. and the Co-operative Insurance Society. The Joint C.W.S. exists to perform the special service of tea and coffee blending and cocoa and chocolate manufacture. Its control is vested in a board of eight directors, six from the C.W.S. and the remaining two from the Scottish C.W.S. The Co-operative Insurance Society began life as a separate Co-operative Insurance Company in 1867. Little headway was made until it was taken over by the wholesale societies in 1913, but progress since then has been rapid, and insurance is now reckoned as one of the most successful branches of co-operative enterprise. Between 1920 and 1937 the annual premium income increased sixfold from £1,385,000 to £8,415,598, while the assets increased sixteen-fold from £1,685,000 to £27,634,212.

Exigencies of space preclude even the briefest consideration of the productive societies, the agricultural societies or the Co-operative Union. But enough has perhaps been said to indicate the present-day importance of the co-operative movement in the nation's economic life. The general questions of co-operative finance and democratic control, together with an assessment of the movement's prospects, must be left for the concluding article.

* "Consumers' Co-operation in Great Britain." By A. M. Carr-Saunders, P. Sargant Florence and Robert Peers, in consultation with a Committee drawn from the movement. Allen and Unwin. 556 pages. 15s. net.

Widows with a little capital and no experience in financial matters are sometimes easy prey.
The tale is always the same. The tempting bait of high interest yields is swallowed . . . glowing promises are followed by bitter disillusionment and loss of capital. Tragedy indeed. For the protection of your wife, should you leave her a widow, choose the 'Safeguard' plan. None better. It provides a guaranteed income of £3, £6 or £9 per week according to her needs. It will free her from investment worries and shield her from traps laid for the unwary.

The **'SAFEGUARD' PLAN**
provides a non-fluctuating income of £3, £6 or £9 per week for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged that the cash sums are payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

Finance and Banking

A Discount Market Change.—It was announced at the week-end that the National Discount Company was taking over, as from July 25th, the banking and bill-broking business of Reeves Whitburn and Company. The Hon. L. W. Coke, a director of Reeves Whitburn, is joining the board of the National Discount Company, and several members of the staff are being transferred. This new movement towards consolidation is the inevitable consequence of the post-war contraction in the supply of commercial bills, but the disappearance of an old and famous house naturally arouses a feeling of regret. This change does not represent a merger in the ordinary sense of the term, for there is no intimation of any exchange of shares or increase in the capital of the National Discount Company. The essential *modus operandi* of the discount market is for each member to finance the bulk of its new business by means of call and short loans from the banks, and so it is perfectly simple for one firm to purchase another firm's entire assets and to finance the purchase in just the same way as when it buys bills in the market. This, no doubt, is what has happened in this case, and having sold its assets the firm of Reeves Whitburn will presumably be wound up. So far as the National Discount Company is concerned, the main difference between this transaction and their ordinary business lies in the magnitude of this special operation. There is, however, one important difference: for the National Discount Company not only gains the experience of the new staff which it takes over, but also acquires Reeves Whitburn's valuable Continental and other connections. One question which has been raised is how the quota of Treasury bills formerly assigned unofficially to Messrs Reeves Whitburn at each week's tender will be allocated. Here again the simplest answer is the correct one. The quota, being unofficial, is not transferable, and so will simply disappear. The result is that the remaining members of the discount market, and also all other applicants for Treasury bills, will receive better allotments at the future tenders. Finally, this reduction in the number of members of the discount market does not necessarily mean any lessening of competition. It is not irrelevant to refer to the fact that the banking amalgamations of twenty years ago in some respects intensified competition instead of diminishing it.

* * *

The Treasury Bill Outlook.—On July 22nd only £42 millions of Treasury bills were allotted out of the £45 millions originally offered, while this week the quantity offered is cut down to £40 millions. During most of August maturities only range from £30 to £40 millions, and as the final Defence Loan call falls due on August 12th it is reasonable to expect relatively small offerings and allotments during the next few weeks. Taking a more general view of the near future, during the next few months the Government will have in hand all the new Defence Loan money and is not likely to spend it until later in the year. For this reason alone the normal autumn growth in the Treasury bill issue does not seem likely. It is true that a similar position existed last year, when the proceeds of the first Defence Loan were kept in hand for quite a long period, but there is one important distinction between this year and last. The first Defence Loan was practically all of it taken up by the Departments, who had in consequence to reduce their holdings of tap Treasury bills, and so its proceeds were not available for the redemption of tender Treasuries. This year's loan, however, has mostly been taken up by the investor, and so, pending its ultimate use, is available for the redemption of the tender Treasuries. Another important point of contrast is that during the six months to September 30, 1937, the Exchange Equalisation Account bought a net £92 millions of gold, all of which had to be financed by tender issues of Treasury bills. For the current half-year the Account may well show a net sale, as the result of the French repatriations last May, and the proceeds of such a sale are automatically applied to the redemption of tender Treasuries. A year ago the tender issue of Treasury bills rose from £500 to £543 millions between April 9th and July 23rd, and then to £573 millions by September 30th. This financial year it has so far risen from £512 millions on April 2nd to £568 millions on July 23rd, but it touched £585 millions on June 18th, so that it has latterly contracted by £17 millions. Bearing in mind the factors outlined above, a further contraction rather than a new expansion appears the more probable during the next two months, unless expenditure upon rearmament is greatly accelerated or unless the Exchange Account has suddenly to buy more gold. Neither of these last eventualities appears very likely.

* * *

Foreign Money in New York.—The United States Treasury continues to earn the gratitude of all those who are interested, from the theoretical or the practical standpoint, in the problem of transferring large sums of liquid capital from one to another of the financial centres of the world, by its remarkably comprehensive statistics of the movement of foreign funds into and out of New York. The figures appear quarterly, and give details of each week separately, so that a very detailed picture of the flow of funds can be obtained. The figures for the first quarter of this year, together with those for the last three calendar years, are given in the following table:—

CAPITAL MOVEMENTS BETWEEN UNITED STATES AND FOREIGN COUNTRIES

(In $ millions; + denotes inflow; − outflow)

	United Kingdom	France	Netherlands	Switzerland	Total Europe	Canada	All Countries
Short-term banking funds:							
1935	+ 337·4	+ 177·6	+ 55·4	+ 74·0	+ 763·7	+ 41·4	+ 964·6
1936	+ 4·2	+ 28·6	+ 7·2	+ 38·6	+ 168·9	+ 82·3	+ 397·3
1937	+ 55·2	− 29·2	+ 9·3	+ 178·4	+ 268·4	− 69·1	+ 255·6
Jan.–Mar. 1938	− 49·2	− 15·5	− 41·1	− 64·7	− 196·2	+ 25·5	− 233·4
Brokerage bals.:							
1935	...	+ 2·4	+ 1·3	+ 2·5	+ 7·6	− 4·5	+ 6·0
1936	+ 4·0	+ 8·0	− 2·2	+ 6·7	+ 15·0	− 3·1	+ 6·8
1937	+ 7·5	+ 1·1	+ 5·9	+ 1·7	+ 21·5	+ 11·1	+ 34·7
Jan.–Mar., 1938	+ 1·4	+ 1·9	+ 1·7	− 2·1	+ 3·2	+ 2·0	+ 6·6
Security transactions:—							
1935	+ 217·5	+ 30·2	+ 57·9	+ 53·9	+ 429·4	+ 36·9	+ 441·8
1936	+ 266·2	+ 52·7	+ 110·2	+ 160·0	+ 666·8	+ 71·3	+ 791·8
1937	+ 101·7	+ 10·2	+ 67·1	+ 91·8	+ 311·9	+ 13·8	+ 511·6
Jan.–Mar., 1938	− 7·7	− 1·7	− 11·2	+ 3·5	+ 7·5	− 8·2	+ 23·7
Net capital movement:—							
1935	+ 554·9	+ 210·2	+ 114·5	+ 130·4	+ 1200·6	...	+ 1412·5
1936	+ 274·4	+ 89·3	+ 115·2	+ 205·2	+ 850·7	+ 150·5	+ 1195·9
1937	+ 164·4	− 17·8	+ 82·2	+ 271·9	+ 601·7	− 44·2	+ 801·9
Jan.–Mar., 1938	− 55·5	− 15·3	− 50·6	− 63·3	− 185·5	+ 19·3	− 203·0

The flow of funds was eastwards rather than towards New York between January and March. Even so, it will be noticed that there was a net inflow into brokerage balances and Stock Exchange securities; it was only the banking funds that were withdrawn. The most remarkable feature, however, was the sharp decline in the volume of transactions. Thus the total turnover of securities bought and sold by foreigners in 1937 was $6,067,504,000, but in the first quarter of 1938 only $687,346,000. What happened was evidently not so much that the "hot money" went home as that it cooled off. The report also reveals that, in addition to security holdings, foreign countries had $1,520,961,000 of short-term banking assets in the United States on March 30, 1938. Of the total, $248 millions belonged to the United Kingdom, $126 millions to France, $237 millions to Switzerland, $186 millions to Canada, $258 millions to Latin America and $220 millions to the territorial division entitled "Far East." American deposits in foreign banks have, of course, to be offset against these figures. On a net basis, much the largest share is credited to Switzerland.

* * *

Standard Bank of South Africa.—Mr Bertram Lowndes' address to the shareholders of the Standard Bank was a mixture of encouragement and warning. He alluded to last year's increases in profits and dividend, but said that the expansion in the size of the staff automatically necessitated a larger allocation to the bank's pension fund. South Africa had maintained her internal level of business fairly well, in spite of the world recession, and for this she had largely to thank the continued prosperity of the gold-mining industry. There had, however, been some check to general business activity immediately after the setback on the local Stock Exchange in April, 1937. Mr Lowndes gave it as his opinion that the situation would have been much more serious if the Standard Bank and other South African banks had not exercised a restraining influence against speculation during the period of boom in the Kaffir market. More recently, commercial and industrial expansion has not been quite so marked as in the previous year. He had a feeling of quiet confidence in the future, but said that optimism must be restrained, as South Africa would not be immune from the influence of affairs in other parts of the world. The year's decrease in deposits and increase in advances—both quite moderate—must be ascribed to these changes in South African business conditions.

MONEY MARKET NOTES

Foreign Exchanges

THE London foreign exchange market this week has been extremely quiet and idle, and even Mr Morgenthau's visit to Paris did not arouse any excitement. Early in the week the New York rate rose fractionally from $4.91⅞ to $4.92⅛, but on Wednesday and Thursday it was bid quietly down to $4.92⅛. There has been a small but persistent commercial demand for dollars, and it is thought that tobacco shipments are now beginning to be covered. The spot Paris rate has been steady at Frs. 178 to Frs. 178⅛, but there has been so little business that no intervention by the Control was necessary. Belgas continue to move with the dollar, the latest spot rate being bel. 29.09. Forward belgas are a little more offered, and in one or two places there has been a tentative revival of the old rumour that the belga must be devalued. Guilders have weakened slightly to Fl. 8.95⅛, possibly because of sales arising out of the recent Dutch loan to the French Treasury. Swiss francs have remained very steady.

*

The Bank Return

THE holiday currency withdrawals have now begun, and this week the note circulation has increased by £6½ millions. This is slightly larger than the parallel increase which took place a year ago.

	July 28, 1937 £ mill.	July 13, 1938 £ mill.	July 20, 1938 £ mill.	July 27, 1938 £ mill.

In the banking department the money which last week had gone into public deposits has now returned to bankers' deposits, showing that last week's movement was purely temporary. It is probable that if a daily Bank return were issued, movement of this character would be shown to be continually occurring. The increase in the note circulation by itself causes an equivalent contraction of the credit base, and to neutralise this £6.0 millions have been added to Government securities. This keeps the credit base at approximately its previous size, and has enabled bankers' deposits to retain the whole of the money which has returned from public deposits. At the same time the Reserve is lower, and so there has been an appreciable drop in the Proportion. These movements, of course, can all be regarded as temporary and seasonal.

*

The Money Market

MONEY remains very easy. There is more bond money available than was the case in previous weeks. Loans against bonds are being freely offered at ⅜ per cent., and borrowers who held out for a lower rate might only have to pay ½ per cent. in certain quarters. The clearing banks are still ready buyers of bills of all maturities, but the market is so well supplied with funds that it remains reluctant to sell.

	July 29, 1937 %	July 21, 1938 %	July 28, 1938 %
Bank Rate	2	2	2
London Deposit Rate	½	½	½
Short Loan Rates:			
Clearing Banks	½–1*	½–1*	½–1*
Others	½–⅝	⅝–¾	⅝
Discount Rates:			
Treasury bills	½	½	½
Three months' bank bills	17/32–9/16	17/32	17/32

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Last week £3.0 millions was cut off the top of the tender, and this week the quantity of Treasury bills offered is being reduced from £45.0 to £40.0 millions. The outlook for Treasury bills is discussed in a Financial Note, but for the three weeks ended August 27th maturities only averaged £35 millions a week. With the prospect, therefore, of a decrease in the quantity of tender Treasury bills outstanding, it looks as if offerings are likely to be lower than usual during the next few weeks.

*

The Bullion Market

IN the middle of the week there were indications of a diminution in the Continental demand for gold, and about one-third of the gold dealt in at the fixing on Tuesday and Wednesday consisted of re-sales by private holders. Gold was also offered on Wednesday morning after the fixing. Then on Wednesday afternoon the situation changed completely. A sudden new demand for gold sprang up, and as the authorities were not selling the price rose to 1½d. over the fixing. This new Continental demand continued the following day, but as the authorities were selling more freely the price at Thursday's fixing was ½d. below that of the previous afternoon. It is not easy to account for this quick change in sentiment, and several people were taken by surprise.

* Above or below American shipping price.
The New York price of silver remained at 43 cents per ounce ·999 fine during the week.

After rising to a peak of 19 13/16d. on July 25th, the expected break in the silver market has come. It was indeed inevitable, for at last Monday's price it was almost profitable to intercept silver being delivered at the American Treasury and reship it to London for sale there. In consequence producers at last began to sell in London, and there was also some Indian profit-taking. Since Monday the cash price has fallen by ½d. an ounce, but each day the fall was partially checked by new Indian forward buying. It is not easy to understand this, for this is now the monsoon season when the Indian demand is at its lowest, while the Indian bull position in London is probably already sufficient to cover India's autumn needs. There has been some Continental selling this week. It may be relevant to point out that a fresh shipment of 100 tons from Spain to France is announced, and early this week London was a more attractive market than New York or Washington. The London price is still too high to attract any trade demand from the United States, and while the market is now steady, it may be that in certain respects the price is still on the high side.

Investment

Pause or Turning Point?—The ties which bound Throgmorton Street and Wall Street in the recent recovery had already become weakened on such evidence of receding domestic business activity as the Courtaulds interim dividend statement, and the disagreeable truths outlined in the railways' interim dividend announcements. For the moment London has no trend. Security prices have lost some of their polish, but they are dull rather than depressed. The chief characteristic of this week's dealings at home, indeed, is the lack of business sufficient to indicate any potential investment trend in the near future—a phenomenon which is not uncommon as the holiday season approaches, but which has been fortified this week by a general disposition to take a more tentative view regarding the prospects of any immediate business recovery, either in this country or in the United States. But, of the two markets, Wall Street has suffered more from this change of psychology. The market has not been impressed with this week's second quarter earnings statements. Even the full payment of the U.S. Steel preferred dividend failed to counteract an earnings statement which showed a net loss of $5,010,426 for the June quarter, compared with $1,292,151 for January to March—a larger fall than might have been suggested by a reduction in shipments from 35·3 per cent. of capacity in the first quarter to 32 per cent. in the second. And an unfortunate technical mishap, by which the "ticker" wrongly recorded a four-dollar fall in the common stock on Wednesday, led to temporary consternation throughout the market. Nor does this week's rate of steel output—at 37 per cent. of capacity, against 36 per cent. last week—provide a really hopeful indicator of the much greater level of activity which the market has recently canvassed. It is not surprising, therefore, that the market showed heavy losses of profit-taking on Wednesday, for a technical correction was probably overdue. It arrived when other second quarter earnings statements—including General Motors (which earned 52c. per share during the second quarter compared with $1.48 for June quarter of 1937) and Chrysler ($1.31 per share for the first six months, compared with $6.31 for the same period of 1937)—had added their depressing quota to poor car-loadings, and a further decline in electricity output. Recovery in the United States may be round the corner; it is certainly not clear to the view.

* * *

"New Zealand's Credit."—A passage in our article under this title in last week's issue of *The Economist* has evoked a comment from an informed observer. In the course of the article we described the trend of social legislation in New Zealand, and cited the gross cost of "pensions at 60" as £NZ17,850,000 in 1939-40. Actually, this sum is the estimated cost of the entire social security scheme, existing or proposed, including administration expenses, in the first full year. The estimated gross cost of the "pensions at 60" plan alone is £NZ6,200,000, and this is supplemented by widows' pensions, family allowances, etc., requiring £NZ5,000,000, sickness and sustenance benefits requiring £NZ3 millions, and a similar sum for proposed health services. Our correspondent points out that the net cost of £NZ9,850,000 to be met from the Consolidated Fund for the whole scheme is not entirely new money, for services already in operation are estimated to require £NZ7,250,000, for 1939-40. The additional burden on the Fund arising from the new proposals thus amounts to £NZ2,500,000. We gladly make these facts clear, but they do not invalidate our general comments on the trend of New Zealand's public finance.

* * *

New Issues in the Limelight.—Activity in the capital market immediately before the holiday season is no new phenomenon, and on the basis of new money subscribed, the volume of business during the past fortnight cannot be described as abnormal. But recent public offers have been almost entirely concentrated on fixed-interest securities. Only one public issue since mid-June has included an offer—and that small—of ordinary shares. It is characteristic of a period of declining industrial activity that fixed-interest issues should predominate over equity issues. In the first half of 1930, for instance, the limited number of industrial issues consisted largely of debenture and preference share placings. In the summer of 1938 this tendency has been strengthened by the firmness of gilt-edged stocks, following the success of the 3 per cent. Defence Loan issue and the somewhat calmer political outlook. Corporation stocks have been by no means predominant in recent new-issue activity. They account for one-third in number of public issues made this month, and for a still smaller proportion of new money, for they have been largely made for conversion purposes. The avoidance of public issues of ordinary shares is well illustrated by the decision of South Metropolitan Electric Light and Power to make an issue of third preference shares this week. But investors are exercising marked discrimination, even among fixed-interest securities of sound calibre. In contrast to the success of the Beecham Maclean Holdings offer last week, underwriters were compelled to take up one-third or more of the Bowater-Lloyd Newfoundland, Wolverhampton, and the South Metropolitan Electric Light and Power issues. This fact suggests that the market can have too much of the best, particularly when investment interest generally is tending to flag.

* * *

Unit Trust Yields.—The suggestion recently made by *The Economist* that unit trust managers might accompany advertised yields with an accountant's certificate has been promptly taken up by the National Group of Fixed Trusts. In future, the published yields of trusts in the group will be certified by Messrs Peat, Marwick, Mitchell and Company, chartered accountants. The group, of course, has hitherto arranged for the certification of income distributions, on which, apparently, it has based all yield calculations. The National group may be congratulated on this decision, which will be welcomed by investors, and will doubtless be adopted by other managements in due course. It is generally accepted that a fixed trust offers little scope for any augmentation of the distributable income of the trust, once the initial portfolio has been determined. Provided, therefore, that income received from the underlying securities of a fixed trust is properly distinguished as between the distribution of current earnings and quasi-capital receipts, such as proceeds of scrip bonuses, it is unlikely that any serious divergence between the advertised yields on the sub-units and the average return on the underlying securities would arise. The National group, which consists of ten fixed trusts and one flexible trust has, of course, observed this distinction. But in the certification of the yield on a flexible trust, interesting questions of principle arise. In our recent Unit Trust Survey, we showed that it was possible, particularly in the case of a growing fund, to augment the cash distributions on flexible trust units beyond the average, or "notional," return on the underlying securities held by the fund. If such an undesirable practice were adopted in any particular instance, a certified yield based on distributed income alone might suggest independent approval of an average return which might not be maintained in future. It is possible, indeed, that such practices, if they arose, might well be held to fall within the definitions and penalties of Clause 9 of the Share-Pushing Bill, which is discussed in a leading article on page 231. It might, therefore, be worth considering if the holder of flexible units could be furnished with one of two yield figures. He might be informed either of the average earnings of the flexible fund during the previous twelve months—after adjustment for purchases and sales of securities whose prices included some proportion of accumulated dividends—or, alternatively, of the average return, during the preceding twelve months, on the securities held by the flexible fund as at any given date.

* * *

Company Registrations.—The capital market has recently been pre-occupied with issues of fixed-interest securities rather than equities. The same falling-off in "enterprise" is suggested by the small number of new industrial public companies formed during the first half of the year. From Messrs Jordan and Sons' usual analysis, it appears that only 48 public companies were registered in the first six months of 1938 (excluding companies registered under guarantee and associations not for profit) of which only one had an original capital of £500,000. A year ago the comparable number was 180. The number of private company registrations, however, was practically unchanged at 6,558, although the total registered capital fell to £30,239,906 against £42,072,839. Some 108 public companies of all kinds were registered with capitals of £2,102,316 (compared with 227 companies involving £27,968,500 for the first half of 1937), and public and private companies amounted in all to 6,666, against 6,780 companies. Messrs Jordan and Sons repeat the necessary warning that the original capitals registered are becoming increasingly unreliable as a guide to new investment activity, owing to the growing practice of registering private companies with a small capitalisation, which are subsequently converted into public companies with large capitals. Detailed analysis does not reveal any unusual features of recent registrations. The "land and buildings" and the "investment, finance and banks" groups (which include companies—mostly unlimited—formed for taxation purposes) provide between them 868 companies with an initial capital of £8,662,319. Home railway stockholders should not infer that the registration of the Surrey Border and Camberley Railway, Ltd., foreshadows a twentieth-century railway boom. It has been formed, in fact, to operate a miniature railway.

Company Notes

L.M.S. Dividend.—Recession may be the polite term to apply to the current industrial trend, but depression is the only fitting appellative for the home railway market. The rather dramatic improvement in home rail stocks in the middle of this week, after several days of hammering, correctly heralded a rather better half-yearly statement from the London, Midland and Scottish Railway than stockholders had anticipated at first. No interim dividend, as expected, is to be paid on the 1923 preference stock, but 2 per cent. is to be paid on the 4 per cent. first preference stock. The statement shows that total receipts fell by £959,000 during the half-year (compared with a fall of £780,000 for railway receipts only during the first twenty-six weeks). The gross increase in expenditure arising from increased costs of wages and materials amounted to £1,040,000 for the half-year. But this sum is a "notional" figure, for it was, in fact, reduced to the extent of £503,000 by costs saved owing to the reduction in the volume of traffic. The net increase in expenditure, therefore, amounts to £537,000, and the total reduction in net revenue to £1,496,000—a sum which rather more than wipes out the 1½ per cent. earned and paid on the ordinary stock last year. It must be conceded that the L.M.S. figures are considerably more satisfactory than those of the L. and N.E.R., although it is doubtful if the 1923 preference stockholder will regard them as hopeful, unless he is prepared to subscribe to the optimistic assumption that the company will be able to "break even" during the current half-year. The stockholder, perhaps, would have welcomed a dissection of the increased costs between wages and materials, but the impression left by the statement, and welcomed by the market, is that the company has been relatively successful in reducing costs as traffics have declined.

* * *

L.N.E.R. Statement.—The home rail market, depressed by the Southern Railway dividend statement, fell into rout at the end of last week, when the dramatic London and North Eastern half-yearly results were announced. Interim dividends of 2 per cent. have been declared on the first and second guaranteed stocks, but only with the assistance of a transfer from general reserve, and dividends on all the preference stocks have been deferred until the full year's results are available. Compared with 1937, the half-year's gross railway receipts, together with net receipts from ancillaries, have fallen by £729,000. (The traffic loss of £638,000 for the 26 weeks' traffics, of course, did not include ancillaries.) But the increase in expenditure amounted to no less than £1,051,000, and net receipts for the half-year were thus reduced by £1,780,000. Examination of the company's half-yearly statements since 1932 shows that net receipts for the past half-year were £791,000 lower than those of 1932, when the first and redeemable preference stocks received 1 and 1¼ per cent. respectively. Of the disturbingly large increase in costs, some £473,000 is attributed to last year's final restoration of wage cuts, some £403,000 to increased costs of fuel and materials, and £175,000 to an increased volume of maintenance work. But for the increase in railway charges last October, it is evident that the results would have been even more disheartening than they are. Passenger-train traffic receipts were reduced by 0.74 per cent. and merchandise and coal receipts by 3.28 per cent. But for the 26 weeks to July 2nd the number of originating passengers was 9.3 per cent. lower and the tonnage of merchandise and coal 7.3 per cent. lower than for the corresponding period of 1937. The toll of increased costs has hit the railways at a time when they have been highly vulnerable to the consequences of trade recession. In the light of the half-yearly statements so far published, it seems very probable that the estimates of potential railway earnings given in *The Economist* of July 16th, may prove optimistic. The Great Western statement, which was awaited as we went to press, will enable us to re-examine the position of all four companies.

* * *

Richard Thomas Prospects.—Sir William Firth's experience in facing class meetings of the preference and ordinary shareholders (which approved the scheme for providing new finance) and also the annual general meeting of shareholders on Thursday cannot have been enviable. But he reaffirmed the case for the Ebbw Vale

project and his confidence in the future of the company with considerable effect, an effect by no means lessened by the frank admission that, in failing to provide adequate finance for the whole scheme from the start, mistakes had been committed. The time factor also had worked against the project, which had been burdened with increased costs, delays in the supply of equipment, and unforeseen site difficulties. For the future, shareholders will welcome Sir William's assurance that the new control committee will not fetter the general management of the business, and that the appointment of new directors from other steel companies cannot prove to the company's disadvantage. It would appear, moreover, that full resort to the new borrowing powers—up to £6,000,000—may not be required if trading conditions do not call for the estimated amount of new working capital. For the current year, evidently, the company's prospects are far from favourable. It is carrying heavy standing charges on the uncompleted works; demand in recent months has been unsatisfactory; operations have been curtailed; and profits for the year to date are disappointing. Shareholders, like their chairman, must have faith in the ultimate rather than the immediate prospects of the company and its new plant.

* * *

Gaumont-British Finance.—It can scarcely be said that Mr Isidore Ostrer's speech at the Gaumont-British Picture Corporation meeeting, at the end of last week, greatly clarified the obscurities of the recent accounts. Their main features—the reduction of the bank overdraft and in the amounts owing by subsidiaries—were clearly connected with the realisation of film stocks. But the ordinary shareholder, concerned with the fundamental position of the group and with the prospect of resumed dividends, learned little that was new. Once again the chairman declined to produce a consolidated balance sheet and profits statement, on the ground, not of "policy," but of the technical intricacies involved. We confess that this declaration is somewhat difficult to understand, for a consolidated statement of assets and liabilities was published two years ago. The board has in hand a process of internal consolidation which involves the liquidation of certain subsidiaries, and the acquisition of 100 per cent. in others. But this is scarcely an adequate answer to the plain question whether the Corporation's accounts, as presented, enable the shareholder to assess his prospects and security. Moreover, the board sets no time limit to its task. Mr Ostrer felt "reasonably safe" in forecasting that the current year's results would be "no less satisfactory" than those of the latest years. But he made no reference to the fall in total cinema earnings last year, mentioned in the report, declined to give any particulars regarding the amount received from the "new and promising source of income"—Bush Radio—and was unable, when stressing the prospective importance of the television industry, to give any indication of its potential profits. Nor does the extension of film production on a sharing basis hold out massive prospects for the ordinary shareholder. Prospects for dividends depend, it would seem, upon the discovery of a new and dependable source of income to supplement the earnings of the exhibition side. Neither film production nor television seems likely to provide this source in the near future. His capital position depends upon the present-day value of such major items at £5,106,064 for shareholdings in subsidiaries, and £2,010,410 for freehold and leasehold properties and fixtures. Perhaps it will be clearer, when the process of consolidation is eventually completed, whether any dead wood remains. But it would be premature to reject, in advance, the idea that a capital reorganisation will not one day be necessary.

* * *

Furness, Withy Prospects.—Lord Essendon's reviews of the shipping industry's position rightly attract general attention from shipping shareholders. This week's speech at the forty-seventh annual meeting of Furness, Withy is no exception. Last year's results were below the best expectations, for the setback in the freight market last autumn damped the earlier recovery. The group's branch offices, indeed, provided the major source of increased profits, for the fleet itself showed smaller profits than in the preceding year. Liner fleets, of course, never obtain immediate benefit from increased freight rates, for the adjustment of conference rates, either up or down, takes some time. Thus they failed to share to the full extent in last year's recovery, and the fleets operated from Furness House (which exclude Shaw, Savill and Albion, Royal Mail, Cairn Line and Manchester Liners) are now faced with an increase in direct operating costs of the order of £275,000 per annum, compared with a year ago. Lord Essendon, however, is not to be found among the pessimists. He concedes that a temporary trade setback has been experienced, but the gap between unprofitable trading and profitable trading, in his opinion, could quickly be bridged by a revival in international trade.

* * *

Increased competition from subsidised lines drew frank criticism. Referring to the possibility of an international pooling scheme for laying up of tramp tonnage—for the minimum freights scheme no longer affords adequate protection to the industry—Lord Essendon stressed the possible danger that any particular nation might prefer to continue to operate its tonnage merely at the expense of making the necessary contribution to the compensation pool. He suggested, therefore, that, if the proposed scheme attracted sufficient international support, each participating country should, as far as possible, lay up a similar proportion of its tonnage. And he made it clear that the shipowner's first duty is to operate his fleet as a commercial venture; if questions of national interest dictated larger fleets beyond the limits of profitable working, some form of Government assistance would seem inevitable.

* * *

Prices Tailors Results.—At last year's annual meeting, the chairman of Prices Tailors expressed the hope that expanding sales would permit the company to maintain the rate of advance in its profits, despite the rising costs of cloth. In the meantime the industrial outlook has greatly changed, but the expectation of increased profits has been fulfilled. The preliminary announcement for the year to June 30th last reveals that total earnings amounted to about £572,000, compared with £521,788—an advance which is not so large, either absolutely or relatively, as in the previous year, but which nevertheless appears satisfactory. Since the operating company became public about ten years ago, profits have increased rapidly and almost without interruption, the latest total being over six times that shown in the first accounts. The record of the past three years is given below:—

	Years to June 30		
	1936	1937	1938
	£	£	£
Profit	446,470	521,788	572,000†
Taxation	95,000	115,000	170,000
Depreciation and fees	82,758	94,215	91,500
Pref. and pref. ord. divs.	42,282	41,594	40,563
Ordinary shares (tax free):			
Earned	*226,430*	*270,979*	*269,937*
Paid	162,000	192,000	200,000
Earned %	*129·4*	*154·8*	*154·2*
Paid %	92·6	109·7	114·3
Reserves	Nil	10,000	15,000
Carried forward	157,436	226,415	281,353†

† Approximate.

Expenses for 1937-38 include £100,000 placed to taxation reserve, in addition to £70,000 charged for income-tax and N.D.C. The substantial increase involved, compared with 1936-37, reduces the earnings for the ordinary shares slightly below the level of the previous year. The total dividend is, however, raised by £8,000 to £200,000, and as in the past, a considerable proportion of the available earnings is retained in the business. The holding company,

Prices Trust Co., whose income depends almost entirely upon dividends received from Prices Tailors, is in consequence paying 50 per cent., against 45 per cent., for the year to September 30th next. At a current price of 40s. 6d., the 5s. shares of Prices Trust yield £6 9s. 6d. per cent.

* * *

Rhokana Profits.—Estimated net profits of Rhokana Corporation for the year to June 30th show little apparent change compared with the previous year. After providing for debenture interest, depreciation and development reserves, and mine provident fund, the total net profit, subject to taxation, amounts to £1,950,000. In the previous year profits amounted to £2,010,000 excluding the provident fund provision. Profits in each year include no allowance for dividends on the Corporation's 32·3 per cent. holding of Mufulira Copper Mines shares. Allowing for a reported figure of £55,000 for the mine provident fund, it is evident that profits have shown little movement. In the following table, we have dissected the Corporation's profits and production and average copper prices for the half-years to December, 1937, and June, 1938:—

	6 mos. to Dec., 1937	6 mos. to June, 1938	*Fall %*
Net profits, subject to tax (£)	1,136,000	869,000	*23·5*
Production (long tons)	39,684	36,591	*7·7*
Average Copperprice, per ton, London "Standard" (£)	48·56	38·71	*20·3*

Since July 1st, copper producers in the restriction scheme have been operating at 95 per cent. of basic quotas, but Rhokana Corporation obtained an increase of 952 short tons per month in basic quota at the same time, raising its standard tonnage to 7,290 short tons per month. The Corporation, therefore, is now producing at a higher rate than at 105 per cent. of its previous basic tonnage. The £1 ordinary shares are quoted at £12.

* * *

Building Material Shares.—The latest figures of building plans approved suggest that the building industry is fighting back bravely at recession. During February, March and April, a marked decline in future activity was foreshadowed by decreases in the value of plans approved ranging between 12½ and 25½ per cent. compared with the same months of 1937. Conclusions drawn from figures for individual months can only be tentative, but the value of plans for May and June suggest that the fall has to some extent been checked. In May, total plans approved by 146 authorities were fractionally higher than in 1937, and though the June figures for 140 authorities showed a 7 per cent. fall to £8,530,000, housing plans again showed an improvement of the order of 4 per cent. So far, the fall in house-building is slow, and it is being largely compensated, it would seem, by municipal housing activity. Such pointers are of importance for building material concerns, whose recent reports show considerable lack of uniformity in profits, and no increased dividends. Yorkshire Brick, for instance, shows total profits of £49,428, against £43,630, and earnings for the ordinary shares are 1½ per cent. higher at 12.3 per cent., despite the increase in taxation. But the 6 per cent. dividend paid in the previous year has been halved. This paradox is explained by the need for conserving cash resources. Higher turnover has required more finance, and the acquisition of a competing business (holdings in wholly-owned subsidiaries have risen from £137,000 to £211,000) has reduced surplus liquid assets from £134,000 to £77,000. Last March, shareholders in Flettons, Limited, were informed that some reduction in profits should be expected, but the maintenance of the 7½ per cent. interim dividend announced last week gives no indication of the measure of any decline. A rise in the total profits of Hollychrome Brick from £26,487 to £29,683 combined with the repetition of the 15 per cent. dividend and a 20 per cent. scrip bonus is also a good omen. Eastwoods Cement, however, have reduced the distribution from 16 per cent. to 12½ per cent., for total profits have fallen by £10,326 to £42,271 and earnings for the ordinary capital are reduced from 19 per cent. to 13.8 per cent. Mr Horace Boot pointed out at this week's meeting that the directors had anticipated this result, for the costs of fuel rose continuously, and the adjustment of selling prices was delayed until December last year. The preferred ordinary dividend of Eastwoods Flettons has also been reduced from 15 to 14 per cent., and the deferred dividend from 200 to 166⅔ per cent., although the decline in total profits is quite small.

* * *

"Westralian" Gold Companies.—No other section of the Stock Exchange has fallen further from grace than the "Westralian" gold share market. The newcomers of 1933-4 have, on the whole, provided a bitter vintage for investors. Heavy falls have been sustained in other markets on general trends and technical factors, but among "Westralian" shares every sort of disappointment and rebuff has been experienced. Excesses on the part of professional operators, together with thoroughly bad mining results, have so depressed share values that the investors' confidence will not quickly be restored. These somewhat gloomy reflections are prompted by the recent reports of four companies which occupied prominent positions in the boom. The present prices of the shares compared with their peak levels epitomise, too well, the results of the work of the past four years. For each swan's egg that has reflected credit on its parents, a dozen have hatched out geese:—

Company	Peak Price	Present Price	Dividend
Gold Exploration & Finance (10/–)	15/–	2/6	None
Gold Mines of Kalgoorlie (10/–)	14/–	7/6	5%
Commonwealth Mining (5/–)	17/10	2/6	None
Anglo-Australian (5/–)	14/4½	1/6	None

Commonwealth has the largest nominal capital of this group, namely, £11,212,500, and has provided, perhaps, the biggest disappointment. The peak price was reached when the Yellowdine Mine, over which the company had an option, showed such excellent promise, but, for strategic reasons, the company parted with 50 per cent. of the interest in this mine. The latest accounts show that a revenue account debit has been transformed into a credit of £54,150 primarily as a result of dividends from the Yellowdine interest, which amounted to £76,051, and represented seven-eighths of the year's revenue. Further dividends, it may be recalled, were announced last week. Most of the other properties and options have been disappointing, though there are one or two speculative ventures which might turn out well. The credit balance, however, is of little significance, for the balance sheet shows a weak position. Investments standing at £403,142 had a market value at May 31st of £87,235, while investments in and advances to subsidiaries totalling £690,352 are stated in a note to the balance sheet to be of unascertainable value. The chairman explained at last Tuesday's meeting that the anticipated capital increase in the value of the company's interest in Yellowdine, now only represented at cost, should put a new face on the balance sheet. Anglo-Australian, in the same group, is in a worse plight. In this case a 20 per cent. interest in the Yellowdine property is the main redeeming feature. Other interests, including Wheel of Fortune, Mars, Daydawn, have been handed back to the Crown, while the King of Creation Mine is now stated to offer little hope of becoming a payable proposition. The reduction of the share capital is a matter which is to receive "careful and prompt consideration."

Le Touquet

Prospects for Gold Exploration and Finance may be somewhat more hopeful, though a cut in the capital—which must be substantial—is officially foreshadowed. The failure of the Bendigo venture is now accepted and discounted. Its other interest includes a 30 per cent. holding of the capital of Gold Mines of Kalgoorlie, and a 96 per cent. holding of the issued capital of Western Mining Corporation. The company has completed its major programme of capital expenditure, and, if no unforeseen factors arise, revenue during the current year is expected to show a substantial increase. Given a satisfactory capital reorganisation, there appears to be a fair prospect of the commencement of dividends. Gold Mines of Kalgoorlie followed an initial dividend of 3¾ per cent. for 1936–7, with one of 5 per cent. for 1937–8. These shares may now be considered, at the present level, as a reasonable "Westralian" mining proposition, for the property is now fully equipped and the cash position is satisfactory. The power and treatment plants, as Mr Marmion has pointed out, have been proved in practice and the ore position has been greatly strengthened, though at the cost of some reduction in the average value from 7·3 dwt. to 6·6 dwt. Lower working costs are expected to result from operating improvements and increased milling capacity, and a modest increase in the dividend may be possible.

* * *

Leopoldina Railway.—Total profits of Leopoldina Railway have recovered a step further from the low point touched in 1935, but they do not begin to approach the pre-depression level. The company's future depends largely on its relations with the Brazilian Government. It is unfortunate that the progress of negotiations last year was interrupted by a change of Government, and although, as Mr C. H. Pearson informed shareholders at the annual meeting, the granting of exchange contracts was renewed later, it was only with a condition of delayed delivery. The authorities have given the company to understand, however, that the exchange position is likely to show improvement, and it is believed that the Government has reached some decision upon the railway's affairs, though details are not yet known. Meanwhile, debenture and shareholders must draw what comfort they can from the slight improvement recorded in the latest report. Operating revenue rose from £1,049,224 to £1,200,194, and goods traffic (which accounts for well over half the company's gross receipts) contributed £90,400 to the increase. Operating expenses increased at a slightly greater rate from £920,728 to £1,060,063, and net income was accordingly some 10 per cent. higher at £147,884. In addition, there was a saving, as compared with 1936, of over £13,000 in income tax, and expenses (other than loan charges) consequently amounted to no more than £6,586 against £17,548. This measure of improvement is small. Debenture interest on both the Railway and the Terminal stocks, which requires about £291,000 annually, has been charged but not paid under the 1936 agreement, while redemption calls for £47,000 a year. The payment of interest was postponed until January, 1939, but may be postponed further up to 1942. The resulting deficit of £205,757 for 1937, compared with £187,970 for the previous year, increases the debit balance carried forward to £507,100. There is small hope, at present, of a resumption of normal interest payments.

The Week's Company Profits.—Our usual analysis of profit and loss accounts on page 264 reflects the seasonal decline in the number of reports, and contains no more than 23 companies, apart from new concerns and those for which comparable figures for last year are not available. Net profits of these companies amount to £668,000 for the latest year, and show a decrease of 1 per cent. below the previous year's level of £677,000. The total net profits of 1,637 companies analysed this year amount to £228,304,000, and still show an increase of 12 per cent. over the previous year's total of £204,301,000. This week's results are discussed on page 244 under the heading "Shorter Comments."

* * *

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 252. Sir William Firth's survey of the position of *Richard Thomas and Company* is discussed in a Note on page 237, and we refer to Lord Essendon's comments at the *Furness Withy and Company* meeting on page 238. Members of the *Victoria Falls and Transvaal Power Company* were informed by Mr Arthur E. Hadley at the meeting that a forecast had indicated that the annual rate of increase in the load might be expected to continue at about 50,000 kw. a year for the next four years, and that provision had had to be made to meet these requirements. Discussing current trading prospects at the *Eastwoods Cement* meeting, Mr Horace Boot said that so far this year there had been no diminution in the record deliveries reached in the industry in 1937, when loading for home trade had touched 6¾ million tons. Major C. M. Threlfall reported to *Threlfall's Brewery* shareholders at the annual meeting that the company had been successful in obtaining permission to erect three hotels in new localities, and to rebuild and extend several of their older properties. The distribution policy of *Central Commercial Properties* was explained by Mr W. Stanley Edgson at the annual meeting. The aim, he declared, was to reduce the basic dividend to a constant 10 per cent., plus a cash bonus commensurate with the year's results. It was intended to discontinue annual scrip bonuses and further to build up the capital and contingency reserves over a period. At an extraordinary general meeting of the *Chosen Corporation*, Mr G. W. B. Portman discussed some of the details of the sale of the company's holding in Nurupi to the American Overseas Mining Investment Corporation for £345,000. At the *Southern Kinta Consolidated* meeting, Captain Oliver Lyttleton declared that the company's conservative policy, and particularly the depreciation provisions, had permitted the financing of an ambitious plan of plant reconstruction out of the company's own resources. Surveying prospects of *McDougalls Trust* for the current year, Mr Kenneth A. E. Moore reported that in the first quarter of its year the operating company had experienced a gratifying increase in trade, at a slightly reduced, but satisfactory, profit margin. Mr D. Christopherson informed members of *Gold Fields Rhodesian Development Company* that at May 31st last the value of the company's quoted investments much exceeded the balance-sheet figure.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
AUGUST 9	AUGUST 11

THE London market has relapsed into seasonal inactivity, but with little of the typical holiday *joie de vivre*. Indeed, the effects of the Courtaulds interim statement and of the home rail half-yearly dividends have still been reflected in nervousness regarding the [illegible] situation. Already divorced from Wall Street, the London market did not suffer markedly from the mid-week break in that centre. But the general lack of life and paucity of business produced lower prices in almost every department of the "House," and even the Prime Minister's references to the political situation failed to stimulate interest.

Small business was characteristic of the *gilt-edged market*, which after showing little initial change, reacted fractionally and declined further on the poor response to the Wolverhampton loan. This in turn affected new corporation scrips. A mid-week recovery in New Zealand stocks was reported.

Interest in *European bonds* was at a minimum. Investors failed to follow an initial rise in Austrian and German issues, which reacted later, and Czechoslovakian bonds continue uneasy, despite Lord Runciman's mission. Heavy falls were recorded in Japanese bonds following the incidents on the Soviet frontier.

Home rail stocks were abysmally depressed on Monday and Tuesday, on further consideration of the Southern and L.N.E.R. statements. Preference and guaranteed stocks in particular were a weak market, L.N.E.R. first preference falling to 30½ at one time on Tuesday, while the second guaranteed stock also fell by a further 4 points to 66. There was a dramatic mid-week improvement, however, throughout the lists, resulting from a combination of professional covering and averaging purchases. Lower prices were quoted for Argentine rail stocks.

*

Though prices were not unsatisfactory, business in *industrial shares* was at a low ebb. Prices were well maintained at first, but became a little more irregular later through sheer lack of support. Iron and steel share quotations moved within narrow limits, with no particular trend in either direction. Hadfields rose in anticipation of the interim dividend. Engineering issues were firm on the whole, though B.S.A. were dull. Coal shares continued neglected, and proved entirely unresponsive to the proposals for assisting exports. Electrical equipment issues were quiet and irregular, though price changes remained small. The firmness of electric supply shares, apparent in recent weeks, persisted. Motor shares also were uncertain. Austin Motors weakened on the announcement of price reductions. Aircraft shares ran true to form and were steady on the whole, though little business was transacted. Handley Page were firm on the meeting, and General Aircraft gained on news of the British Aircraft acquisition. Textile shares were still neglected, apart from some improvement in Patons and Baldwins, while rayon shares, though not much affected by the June output figures, were inclined to sag. Though movements were small, brewery shares were firm early in the week before succumbing to the general listlessness of the markets. Tobacco share prices were well maintained. Movements in the stores group were indefinite, Great Universal weakening after early support. Harrods B.A. gained on the interim announcement. On the whole, prices of provision and catering issues hardened or were unchanged. Shipping shares made a mixed showing, Furness Withy declining slightly after the meeting. Miscellaneous issues were somewhat irregular. Qualcast were active on the proposed deal, and Beechams deferred lost ground towards mid-week.

*

Except for a slight weakness on Tuesday, *oil shares* were firm. Activity, however, was very small, and interest was largely confined to the leaders, Anglo-Iranian particularly being in demand. Business in *rubber shares* continued on a small scale, but prices were steady. The market failed to respond noticeably either to the better commodity price early in the week, or to the postponement of the I.R.R.C. quota decision. At first, *tea shares* were firmer than in recent weeks, but the tendency towards firmer prices was not kept up in mid-week.

The *mining markets* were just as listless as other sections, turnover shrinking to small dimensions. The undertone, however, was generally quite firm. Business in Kaffirs was subdued, with small dealings mostly on local account. Developing mines were slightly less lethargic, especially Western Holdings and Klip Nigel. The Rhokana results and strength on Wall Street at first helped Rhodesian coppers, which became irregular later. Tin shares were neglected. Trepca and Kopaonik weakened a little on the amalgamation details, while Zletovo were firm.

ACTUARIES' INVESTMENT INDEX

As compared with a week earlier, the Actuaries' index of 151 industrial ordinary share prices on Tuesday last, July 26th, was unchanged at 66·7, against 66·4 a month ago and 83·0 a year ago. The corresponding average yields were 5·88, 5·82 and 4·37 per cent. respectively, the yield a week ago being 5·86 per cent. We give below a selection of the separate indices, and the usual monthly particulars of fixed interest security prices and yields :—

New York

WALL STREET has experienced a fairly marked reaction from the strength displayed at the end of the previous week and, in all but the last hour, in Monday's session. Prices went ahead moderately to start with, and though the best levels were not held, Monday's close saw some small advance on the day. Tuesday's session was subdued rather than unsatisfactory, with small price recessions and a lower turnover, but in mid-week losses became heavier. The Dow Jones industrial average lost 3.09 points on the day, and though all groups suffered, steel, chemical and motor shares were the most sensitive. Profit-taking was the main influence at work, for some technical correction was probably overdue, since evidence of business recovery is less marked. Other factors were the steel earnings statements and the opinion expressed by *Iron Age* (which estimated steel activity at 37 per cent. of capacity, against 36 per cent. a week ago) that a more moderate rise in operations is to be expected until the motor industry enters the market to a greater extent. Rails were depressed by the poor car-loading estimates and the passing of the Atchison Topeka preferred dividend, while general market sentiment was not improved by rumours of an experimental period in which specialists would be prohibited from trading in certain issues on their own account.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

* Two-Hour Session.

Capital Issues

UNTIL the eve of the holiday, activity in the new issue market was maintained at a relatively high rate. A further corporation issue, of £1,500,000 *Stoke-on-Trent* 3¼ per cent. stock has been made on the now familiar terms. Of the issue, some £900,000 is required for conversion of the existing 6 per cent. stock, for which the lists remain open until next week. The market was not anticipating an enthusiastic response, in view of the poor response to last week's Wolverhampton loan. This fate was shared by the *South Metropolitan Electric Light and Power* 3½ per cent. debenture stock and 4 per cent. third preference share issues, despite their excellent security. The 4 per cent. debenture stock of *Amalgamated Press* is well covered by earnings, but its terms of issue appeared to be rather less generous than the market was inclined to expect for an industrial debenture of this type. On the other hand, the smaller debenture issue of *Easterns, Limited*, which enjoys less impressive cover, but yields slightly over one per cent. more, enjoyed a good reception. *African Explosives and Industries* 5½ per cent. £1 preference shares, issued at 21s., were well received. Imperial Chemical Industries and De Beers Consolidated Mines hold the share capital of the company equally, and it has an impressive record. The prospectus, which commendably adopts the "cumulative requirements" method of calculating cover, shows that the debenture service and preference dividend was covered over five times in the latest year. The issue provides a useful addition to the number of sound but high-yielding preference issues. The issue of preference shares by *John Jeffrey and Company* is predominantly of interest to Scottish investors, for permission to deal will be sought only from the Edinburgh Stock Exchange.

PUBLIC OFFERS

South Metropolitan Electric Light and Power Company.—Issue of £500,000 3½ per cent. debenture stock at 100, and 500,000 4 per cent. cumulative third £1 preference shares at 20s. 6d. Stock redeemable at 102 January, 1972, or in or from 1955 on notice. Ranks *pari passu* with other debenture stocks. Net assets (excluding debenture stocks) £3,250,181. Profits, after depreciation, before debenture interest: 1935, £114,325; 1936, £119,762; 1937, £149,933. Lists closed 9.30 a.m. July 26th. It is understood that 63 per cent. of the debentures and 28 per cent. of the preference shares have been left with underwriters.

Amalgamated Press.— Issue of £1,000,000 4 per cent. second mortgage debenture stock at 99 (part of £1,500,000 authorised). Specific and floating charge, subject to rights of £1,500,000 3½ per cent. first mortgage debenture stock. Redeemable by 1970 from 1941 at various rates. Profits, after depreciation and first debenture interest, years to end February: 1936, £577,068; 1937, £584,918; 1938, £529,224. Total assets, £9,536,153 (copyrights, etc., £5,326,602). Lists closed at 10 a.m. July 26th. It is understood that a certain proportion will be taken by the underwriters.

Easterns Ltd.—Issue of £150,000 5 per cent. first mortgage debenture stock at par (part of £200,000 authorised). Redeemable by 1977 at 102½, from 1941 at various rates. Furniture, etc., dealers; largely hire-purchase. Net assets, £532,903 (properties, £160,329). Profits, after depreciation, before interest, years to August 31: 1935, £34,791; 1936, £41,783; 1937, £45,925. Lists closed at 9.5 a.m. July 26th. Oversubscribed.

Jeffrey (John) and Co.—Issue of 57,500 5 per cent. cumulative £1 preference shares at par. Brewers since 1837. Net profits after depreciation: 1935, £20,478; 1936, £24,495; 1937, £29,296. Surplus assets (after mortgages, etc.), £21,754.

CONVERSIONS AND REPAYMENTS

Stoke - on - Trent Corporation.—Issue of £1,500,000 3¼ per cent. stock at 98½, offered in conversion to holders of £900,000 6 per cent. stock 1938–50. A trustee stock. Redeemable at par December, 1963, or from 1958 on notice. Census population, 276,619; rateable value, £1,216,451; rates, 18s.; net loan debt March last, £7,868,042. Cash lists closed at 9.30 a.m. July 27th. Conversion lists will close on August 22nd.

BY OFFER FOR SALE

African Explosives and Industries, Ltd. — Offer for sale of 1,500,000 5½ per cent. cumulative £1 preference shares at 21s. Profits, after depreciation, years to September 30: 1935, £S.A.900,010; 1936, £S.A.930,141; 1937, £S.A.1,029,848. Total assets, £7,230,615. Vendors are Imperial Chemical Industries (one-third) and De Beers Consolidated Mines (two-thirds); they pay £6,500 expenses also 1½d. per share brokerage. Lists closed 9.5 a.m. July 27th. About 27,000,000 shares equivalent on a full payment to £28,350,000 were applied for.

BONUS SHARES

Lilley and Skinner.—Bonus issue of one £1 7 per cent. second preference share for every two ordinary shares. The ordinary shares are privately held.

ISSUES TO SHAREHOLDERS ONLY

Rand Selection Corporation. — Issue at par of £1,000,000 5 per cent. five year notes in proportion of £2 notes for eight 5s. shares held. Convertible on basis of one ordinary share for every £2 of notes from October 1, 1938, to September 30, 1943, when any notes outstanding will be repaid at par or by an equal issue of 5½ per cent. cumulative preference shares.

Kuala Lumpur Rubber Co.— Issue of 50,000 £1 shares at 22s. 6d. (one for every eight held). The new shares will not rank for any dividend for year ended June 30, 1938.

SHORTER COMMENTS

Company Results of the Week.— The maintenance of trade improvement has resulted in a rise from £100,145 to £111,023 in the net profits of ASSOCIATED BREWERIES. During the year the ordinary share capital of Berwick Breweries was acquired. The subsidiaries of STEEL BARREL SCAMMELS paid some £6,000 more in net dividends last year, and the parent company earned £32,594 against £28,113, and has raised the dividend from 12½ per cent. to 14 per cent. Total profits of FALK STADELMANN AND COMPANY are a little higher than in 1936–37, and the 10 per cent. dividend is repeated, but additional taxation has depressed net profits below the previous level. In the first year of trading as a public company THOMAS SKINNER AND COMPANY (PUBLISHERS) report net profits of £17,642, but this sum includes only 10 months' profits from the A.B.C. Railway Guide. Substantial progress is recorded by GEORGE WEST (WEATHERPROOFS), LTD., who have earned £37,400 against £23,322, and who pay in all one-and-a-half years' 7½ per cent. preference dividend. Another company new to the public, ALEXANDER SHIPPING COMPANY, earned £141,415 net in 1937–38, during the first part of which freight markets were active and strong. Trading profits of BRITANNIA ELECTRIC LAMP WORKS amount to £47,667 for the first full year's working as a public company. A severe setback has been experienced by FRAS. HINDE AND HARDY, owing to declining trade and increased costs; the trading loss for 1937-38 amounts to £15,426. Net profits of CONTINENTAL AND INDUSTRIAL TRUST show, at £94,299, a small decline as compared with 1936-37. Over half of the Trust's securities are held within the Empire.

(*Continued at foot of page* 245)

Industry and Trade

Rubber Decision Postponed.—Contrary to the expectations of the market, the International Rubber Regulation Committee decided on Tuesday not to fix the export quota for the last quarter of the year immediately, and the decision has been postponed until September 12th. This delay means that the producing companies will not know their allotted level of output for the last quarter until a few days before it begins, but in spite of this inconvenience, the Committee's decision must be regarded as a wise one. The United States absorbs in normal conditions nearly half of the world production of rubber, and the output for the last quarter must be largely determined by the course of rubber consumption in that country, which in turn depends on the general level of business activity. The Committee have decided not to forecast what that level will be during the last three months of 1938 until another six weeks have passed, when the existence or absence of the trade recovery, which Wall Street has so eagerly anticipated in the last few weeks, will be more easily determined. The postponement of the Committee's decision led to a slight fall in rubber prices, since the market had anticipated a continuation of the existing 45 per cent. quota and regarded the announcement as a bear point, but this view proved mistaken, and the upward trend of the rubber market re-asserted itself later in the week.

* * *

The Volume of Overseas Trade. — The current number of the *Board of Trade Journal* contains a comparison of the volume of British exports and imports in the first six months of 1938 with similar figures for earlier years. The volume figures have been obtained by calculating what would have been the recorded value of British exports and imports if the average prices of 1935 had continued to rule. Comparing on this basis the first half of the current year with the corresponding period of 1937, imports decreased in volume by 1 per cent., domestic exports by 12 per cent., and re-exports by 7 per cent.

INDEX NUMBERS OF THE AVERAGE VALUE AND VOLUME OF OVERSEAS TRADE

(1935 = 100)

Year	Imports		British Exports		Re-exports	
	Average Values	Volume	Average Values	Volume	Average Values	Volume
1930	128·4	107·6	116·6	115·0	127·7	123·0
1936	105·3	106·5	101·9	101·5	110·2	99·7
1937	120·3	113·1	110·2	111·2	131·7	103·2
1937—Jan.–Mar. ...	114·9	105·7	105·2	108·2	132·6	102·3
April–June...	120·9	111·1	109·2	112·0	133·7	117·9
1938—Jan.–Mar. ...	117·7	110·3	113·9	99·7	120·0	95·2
April–June...	113·3	104·8	111·9	94·3	112·5	109·6

These decreases in volume were accompanied by falls in average values of 2 per cent. in the case of imports and 13 per cent. in the case of re-exports, but an increase of 5 per cent. was shown for exports of British goods; average values were in each case lower in the second quarter of 1938 than in the first. In part, the divergence between the price levels of our imports and exports is due to the time lag between the import of raw materials at the high prices ruling in 1937 and their export in the form of manufactured products. Nevertheless, the maintenance of these relatively high prices is undoubtedly partly responsible for the recent decline in the volume of our exports.

Cotton Trade Enabling Bill.—Further details are now known of the modifications which the Joint Committee of Cotton Trade Organisations have made in their draft of the Enabling Bill, in order to meet the objections of the Opposition Committee. The proposals have been simplified and now provide for only three types of scheme, dealing respectively with redundant machinery, the establishment of minimum selling prices and the legalisation of wage or other agreements. The clause which allows compensation to operatives who are thrown out of work as a

MISCELLANEOUS

Association of Stock and Share Dealers.—Application has been made to the Board of Trade for a licence directing registration of this Association (about to be formed) with limited liability, without the addition of the word limited to its name.

The association will have the following objects: To do all such things as may be considered necessary to maintain a high standard of conduct in the transaction of business in stocks, shares, bonds, debentures, units of unit trusts and all other kinds of marketable securities, by persons who are not members of recognised stock exchanges in the United Kingdom, and particularly to ensure that such standard shall be observed by its members.

Macleans, Ltd.—Profits for year to June 30, 1938, £294,949, a rise of £28,690. Ordinary dividend raised from 20 to 30 per cent. Tax provision increased from £15,208 to £71,518. For N.D.C. £10,000, against nil. To capital redemption reserve £8,801, against £8,317. Carry forward reduced from £19,170 to £11,034.

Tata Iron and Steel.—Total income expanded from Rs.3,08,71,000 to Rs.4,60,15,000 in year to March 31, 1938. Net profit Rs.3,43,06,000, compared with Rs.2,66,27,000. Ordinary dividend raised from 13·33 per cent. to 20·67 per cent. tax free. Deferred dividend 252·34, against 120·73 per cent. tax free. Carry forward Rs.4,99,000, against Rs.1,94,000.

Head Wrightson and Company.— Net profit for year to April 30, 1938, £85,233, against £32,698. Ordinary dividend 7½ per cent. plus a 2½ per cent. bonus on £315,000 of capital. For preceding year 5 per cent. was paid on £210,000 of capital. To reserves: Pensions £10,000. General purposes, £40,000. Carry forward raised from £7,420 to £12,225.

North American Company.—Consolidated income statement of 1938 for year ended June 30, shows operating revenues $118,096,645 (£25,610,000), a decrease of 1 per cent. compared with the corresponding 1937 period. Balance for common stock was $14,393,472, representing 16·59 per cent., or $1·68 per North American common share, against $2·01 a year ago.

Shell Union Oil Corporation.—Net income for the quarter to June 30, 1938, $2,922,990, compared with $2,907,447 for previous quarter and $4,806,448 for second quarter of 1937. After preferred dividend, balance equals 19c. per common share, the same as for the first quarter, but comparing with 33c. a year ago. For the first half of 1938 net earnings total $5,830,437 (38c. per common share), against $8,480,027 (57c. per common share) for January–June, 1937.

United States Steel Corporation.— The full regular quarterly dividend is to be paid on the 7 per cent. cumulative preferred stock on August 20th. For quarter to June 30, 1938, net loss is $5,010,426, compared with a first quarter loss of $1,292,151, and a profit of $36,173,682 for second quarter of 1937. First half of 1938 loss was $6,302,577, compared with a profit of $36,173,682 for first half of 1937.

Lombard Unit Investments, Ltd.— This company has been registered with a capital of £40,500; it is understood that it has the backing of important City interests, and will manage a new group of unit trusts.

Trepca Mines Merger.—Trepca Mines is to acquire the undertakings of its three associates (which are to go into liquidation) by an exchange of shares as follows:— Kopaonik Mines: One share in Trepca Mines for every four shares held; Novo Brdo Mines: One Trepca share for every 25 shares held; Zletovo Mines: Two Trepca shares for every five shares held. The shares to be issued under the scheme will not rank for any dividend for the financial year ending on September 30, 1938.

General Aircraft Acquisition.— General Aircraft have concluded negotiations for the purchase from the receiver of the buildings, plant and stock of the British Aircraft Manufacturing Company. It is stated that the purchase price is considerably less than the original basis covered by the conditional agreement of December, 1937. General Aircraft directors announce at the same time that the accounts to December 31, 1937, will be held over till September.

Chrysler Corporation.—Dividend 25 cents, compared with 50 cents in June, and no payment in March. Net profit, second quarter, 1937, $16,542,000 or $3.80 per share. First quarter, 1938, $2,109,000 or 48 cents per share. Second quarter, 1938, $3,599,000 or 83 cents per share. First half year, 1938, net profit $5,709,000, equal to $1.31 per share, compared with $27,456,000 or $6.31 per share in first half of 1937.

General Motors Corporation.—Net income, second quarter of 1938, $24,786,000 (52 cents per share) against $65,731,000 ($1.48 per share) for second quarter of 1937 and $8,234,000 (14 cents per share) for first quarter of 1938. Net sales second quarter, 1938, $272,265,000 against $250,512,000 for first quarter of 1938 and $500,412,000 for second quarter of 1937.

result of any redundancy scheme is retained. Provision will also be made for "scrap and build" schemes, wherever the section concerned prefers this method of dealing with out-of-date plant, but the "pool and quota" proposals have been dropped. The price-fixing schemes will be made more elastic by giving the Cotton Board authority to permit firms to sell in overseas markets at prices lower than the legal minimum rates when the Board is satisfied that such price cuts are necessary in order to recapture lost trade. As before, all producing firms will be compelled to register at an annual fee not exceeding 5s. per 1,000 spindles, 30s. per 100 looms, and 0.03d. per cent. of turnover in the finishing processes. A manufacturing firm, therefore, with 1,000 looms would have to pay £15 a year, and a 100,000 spindle mill would pay £25. It will, however, no longer be compulsory for merchants to register, but if they wish to do so, the fee will not exceed £3 3s. a year. The new draft will again include powers to raise funds for technical and scientific research, market investigation and publicity or other ways of increasing demand for cotton goods, and it is hoped that the Government will supplement such funds. It is expected that the draft Bill containing the revised proposals will be published before the end of September, when it will be considered by each section of the industry.

* * *

New Factories in 1937.—The annual report of the Board of Trade on the number of factories opened, extended and closed in 1937* reveals no material change from the developments recorded in the previous year. The number of new factories, excluding concerns owned by the State, was practically unchanged at 541, of which 94 were transferred from other areas, and 131 were new branches of existing firms. Compared with 1936, there has, however, been an increase in the number of factories extended, from 185 to 237, and the number of factories closed fell from 394 to 361, so that the balance of new and extended factories over those closed was substantially increased. Greater London continued to attract almost half of the new factories, with North-West England as the next most favoured area. Among industrial groups, clothing heads the list, with 135 new and extended factories, but the net increase was small, as 90 factories were closed. The net increase in engineering was much higher, since only 33 factories were closed, while 92 new factories were opened and 53 extended, a reflection of the re-armament programme.

* * *

The combined figures for the past five years, given in the table below, show that only in the textile trades was there a net reduction in the number of factories. As might be expected, the engineering industry heads the list,

	New Factories and Extensions	Factories Closed	Net Increase + or −
Iron and steel	255	121	+ 134
Engineering	443	200	+ 243
Vehicles	195	72	+ 123
Textiles	423	602	− 179
Clothing	723	480	+ 243
Food, Drink and Tobacco	229	98	+ 131
Timber	285	168	+ 117
Paper, Printing, etc.	216	118	+ 98
Other	643	298	+ 345
Total	3,412	2,157	+1,255

together with the clothing industry, in which, however, the annual "turnover" in factories is much higher, although the net increase is the same as in the engineering industry. For about two-thirds of the new factories established in these years, the Board of Trade have collected data on the reason for their location; this information has been obtained orally, and is necessarily rather vague, but has nevertheless considerable interest. From the summary given below, it will be seen (as might, indeed, be expected) that the main reason given for the choice of location was the convenience of premises, which includes both the suitability of already existing buildings and such factors as good transport and cheap power. Access to raw materials declined in importance during these five years, while the question of suitable labour was considerably more important in 1936 and 1937 than in the earlier years.

	No. of Cases	Per cent. of Total
Access to raw materials	159	9·1
Proximity to markets	147	8·4
Suitable labour	201	11·5
Cheap land, low rent, rates	107	6·1
Proximity of other factories in same line of business	205	11·7
Convenience of premises	887	50·7
Proximity to employer's residence	43	2·5
Total	1,749	100·0

* * *

Lower Aluminium Prices.—For the past six years the price of aluminium has been unchanged at £100 per ton, in spite of considerable fluctuations in the price of other base metals and in the level of consumption. But last week the firms concerned announced a reduction to £94 per English ton for aluminium sold in this country, and to £90 per metric ton for exported aluminium. The market received this announcement with considerable surprise, and is rather sceptical of the validity of the official reason for this act—the need to bring aluminium prices into line with those of other metals. It is true that prices of other metals have fallen considerably from their peak, but the present tendency is again upward, and in any case the price of aluminium was not raised with those of other metals last year. Moreover, consumption has recently increased far more than that of copper, tin, lead or spelter. The latest figures published by the Aluminium Information Bureau show that British consumption of aluminium amounted to 44,000 tons in 1937, a 28 per cent. increase over last year's figure, and more than 2½ times larger than the consumption in 1928; a further increase is expected in 1938, as aluminium is largely used in the armament industries. World consumption in 1937, for which accurate figures are not yet available, was probably in excess of 500,000 tons, nearly double the 1929 figure of 276,000 tons. It may be that the reduction in price is meant to forestall the possibility of increased competition from outside producers or, possibly, to stimulate the industrial demand, which has been affected by falling production in the automobile industries.

* * *

A Worsted Spinning Scheme.—The efforts to draw up a reconstruction scheme for the worsted spinning industry, which were described in an article in *The Economist* of February 26th, have now resulted in definite proposals, which were last week laid before a meeting in Bradford to which all the spinning firms in the industry were invited to send representatives. The problems of the industry are fundamentally the same as those which afflict the cotton spinning industry on the other side of the Pennines. The decline of export trade in wool yarns and wool fabrics has led to excess plant both in spindles and in looms. The present proposals do not contemplate the scrapping of plant; they aim at the maintenance of remunerative prices. One of the major difficulties in the way of a price-fixing scheme for the worsted spinning industry is that there is no authoritative quotation for the raw material, tops. The scheme proposes to surmount this difficulty by inviting topmakers to deposit a written quotation of their prices, identified only by a secret code number, in a box on the Bradford Exchange before 4 p.m. on each market day (Monday and Thursday). On the basis of these quotations, the spinners will be informed of the prices they may accept for different counts of yarn out of different qualities of tops. The topmakers are not to be bound to charge the prices they quote, but if any spinner can secure a concession on his raw material, the benefit must go into his own pocket. It is proposed that the spinners' committee of control shall have power to examine the books of participating firms to verify their observance of the agreement.

* * *

Any attempt to improve the condition of the industry will naturally be welcomed by its members. But a certain amount of scepticism is expressed in Bradford about the scheme's prospects of success. The woolcombers, faced with a very similar problem, adopted some years ago a considerably more drastic scheme which, by buying redundant plant and scrapping it, succeeded in putting the combing tariff on a more remunerative basis. But the woolcombers' scheme has been making heavy weather in recent months, and it is estimated that about 25 per cent. of the woolcombers in the whole industry (not merely in the Association) are either taking less than tariff rates or have done so in recent weeks. If a more complete scheme, concerning a group of only 60 to 80 firms, has had such imperfect success, it is being asked, is there any more hope of success for a less far-reaching scheme involving between 300 and 400 worsted spinners? The excess plant will remain in existence, and its presence will be a standing temptation to spinners either to stay out of the scheme, or to evade its provisions, or to pay the fine for non-compliance in order to reap the profits of under-cutting. There is also, as with all similar schemes, the suspicion of the smaller firms that it is intended mainly for the benefit of their larger competitors. The success of the proposals thus seems to be somewhat problematical and in any case the inherent weakness of the spinners' position should absolve the weavers of any anxiety that the price of yarn is going to be unreasonably raised against them.

The International Beef Conference.—Since the early months of 1937, imports into this country of beef and veal have been regulated by the International Beef Conference. This body is composed of nominees of the Governments of the principal exporting countries, with a chairman appointed by the British Government. The Conference has allocated, for each country, its quarterly exports of beef and veal to the United Kingdom, and its determinations are enforced in each country by control over exports. This new development in the regulation of international trade is of particular interest, as, at the recent Sydney conference of Empire primary producers, the delegates agreed on the desirability of setting up other councils, on the same lines, to regulate the British imports of such foods as mutton and lamb, dairy produce, and some kinds of fruit. The Minister of Agriculture recently announced that the Government would deal with imports of lamb and certain types of dairy produce according to the precedent established in the case of beef. The regulations of the International Beef Conference have been accompanied, in the last eighteen months, by an increasing sale of imported beef and veal in the United Kingdom at stable prices:—

	Chilled Beef '000 cwt.	Frozen Beef '000 cwt.	Veal '000 cwt.
Imports:—			
1935	8,486	2,315	180
1936	8,780	2,156	191
1937	8,971	2,618	19
Allocations:—			
1938—1st quarter	2,247	475	47
2nd "	2,478	580	38
3rd "	2,317	1,269	30
4th "	2,008	863	118
Year	9,050	3,187	235

The allocations for 1938, as shown in the table, allow for a considerable increase in imports of frozen beef and of veal, and for a slight increase in those of chilled beef.

United States Metal Consumption.—Under the influence of the better advices from the other side of the Atlantic, metal prices have continued their advance this week. The poor state of the international metal market in the first half of this year was solely due to the unsatisfactory state of the position in the United States, so that the ready response of the London Metal Exchange to the current reports from that country is quite natural. Statistics so far available, however, do not yet show any major improvement in metal consumption in America. That country's copper consumption in June, at 32,863 short tons, was still less than half of the 1937 monthly average. June deliveries of zinc amounted only to 29,248 short tons, 21,000 short tons less than the corresponding figure of last year, which itself was not excessively high. The consumption of tin in the United States in June reached 4,205 long tons, only slightly higher than the record low level of April, 1938. On the other hand, consumption of lead in June was 35,300 short tons, the highest level since October last, and only 7,400 short tons less than in June, 1937. Probably, however, the July delivery figures of all metals will be more favourable than those of June, and as the production of base metals in the United States is at present remarkably low, stocks are likely to show a reduction in July. So far, however, the purchases of American consumers have been used chiefly to replenish their own stocks, while the country's genuine consumption has not yet improved. Metal prices are still low, but not so low that a further improvement could be justified without a considerable increase in the American consumption.

Ensilage.—The rapid development of the new process of grass drying (some aspects of which were discussed in a note on page 624 of *The Economist* of June 11th) has rather overshadowed in recent years the no less important developments which have occurred in the alternative method of storing fodder—ensilage. Essentially, ensilage is a means of preserving crops through the use of the natural fermentation which is set up by the decay of the plants after they have been cut and stacked. The process was first introduced into England in the 1880's, but it is only in recent years that extensive research has been carried out on both the theory and practice. The new knowledge gained by these experiments is admirably set out in the fourth edition of their bulletin on ensilage just published by the Ministry of Agriculture.* Recent experiments have shown that the keeping quality of the ensilage can be controlled by regulating the access of air, which is affected by the water content of the crop, and by the addition of such substances as molasses, dried whey or various acids, to encourage the rapid formation of the lactic acid which provides the preservative of the crop. Much progress has also been made in the construction of small, cheap silos, which may be partially sunk in the ground or made on a portable frame, thus greatly reducing the capital cost of construction and the labour of filling. It has also been shown that, under good management, the nutritional value of the dry matter of silage does not appreciably vary from that of the crop in its green state, though, of course, the moisture content is considerably lower. Rotation grasses, the spring flush of young grass, long grass which is too damp to be stacked as hay, can all be used as ensilage, and, with due precautions, will keep sweet over the winter. The variety of material and the low cost, both in capital and in working expenses, of the modern silo are the great factors in favour of this method of preserving for winter use crops grown on the farm.

INDUSTRIAL REPORTS

REPORTS from industrial centres this week all speak of quiet conditions prevailing at present, but most districts confidently expect a revival in the autumn. More detailed reports concerning the main branches of industrial activity are given in our monthly *Trade Supplement* which accompanies this issue of *The Economist*.

Coal

Sheffield.—The inland market for coal is slow, and holiday closings have reduced industrial demand. The railways and electricity works are taking substantial tonnages but house and gas coal are very little called for. Small coal and coke are quietly steady, but stocks of graded coke for works use and central heating are accumulating. The export market continues dull, and price concessions do not induce wider inquiry. The adoption by coalowners of a scheme to provide subsidies in British coalfields to foster British export coal trade is viewed with favour by the market.

★

Newcastle-on-Tyne.— There is little foreign inquiry for North-East coal, for stocks abroad are still high and buyers prefer to wait until there is definite news about the proposed subsidy. Trade in this section is in general below the usual summer volume. In Durham there is no improvement in demand for manufacturing coal and idle time is frequent. Prices are maintained in both coalfields. Demand for patent oven coke in the export section continues to improve, but inland trade is slow.

★

Workington.—Trade is brisker despite the fact that home demand for coking coal has diminished. One of the batteries of ovens is on short time, and is, moreover, putting part of its output into stock. Irish users are stocking in anticipation of an adverse movement of prices in October, and as there are Continental needs to satisfy, shipments from the local ports are now averaging about 10,000 tons weekly. Local landsale has benefited from the cool weather. Prices are inclined to ease.

★

Glasgow.—The collieries made a slow start this week after the holidays and production was relatively low. There has been no pressure of demand for household or industrial coal, and with overseas business on a small scale supplies are plentiful. Orders for large fuel would be welcome in all areas. Curtailed output has reduced supplies of washed nuts, which are therefore fairly comfortably placed.

★

Cardiff.—Quiet conditions continue in South Wales. Last week there was a slight improvement in foreign and coastwise exports which totalled 400,600 tons compared with 396,300 tons the previous week, but they were 74,000 tons less than in the corresponding period last year. It is now officially stated that the French National Railways have allocated orders for 274,000 tons of large coal for delivery between August and December. The current volume of trade is substantially below the output and supply allocations, and part-time working is reported from several districts. Reduced production makes the supply of sized coals comparatively scarce, but other grades are plentiful. The patent fuel and coke markets are featureless. Prices are nominally unchanged.

Iron and Steel

London.—According to the official report of the London Iron and Steel Exchange, the demand for most iron and steel products is on a restricted scale, owing to the holiday period, but the tone of the market is well maintained. A more optimistic feeling is in evidence and the inquiry in some departments has become more active. These tendencies point to a revival in business in the early autumn, and the outlook now is regarded as being more encouraging than at any time since the first part of the year.

Business in the pig iron market is still restricted by heavy stocks and production is being curtailed to bring supplies more into line with the demand. Imports, however, have practically ceased and accumulations are being gradually reduced.

The demand for semi-finished steel is quiet, and in this department also considerable reserves are weighing upon the market. Some productive capacity remains idle, but there has been a marked reduction in the imports of foreign semis, and consumers' stocks are being steadily absorbed.

The improvement in the tone of the market is chiefly noticeable in the finished steel section and recently business upon home account has shown signs of developing. Export business is not easy to arrange, and overseas consumers do not seem inclined to undertake fresh commitments.

★

Sheffield.—The production of steel ingots and castings in the Sheffield district in June, at 101,900 tons, is 46,100 tons less than in June, 1937, and is the lowest for any month since December, 1934. During the first six months of this year, however, output was only 1,800 tons below the corresponding period last year.

The beginning of the "holiday with pay" weeks has brought about still quieter conditions in the iron and steel market. The present dullness is likely to continue over the next month at least, when revival is confidently expected, at any rate, in the steel section.

Pig-iron prospects are regarded as problematical. Consumers are so fully committed under contract, and have such considerable stocks in hand, that a renewal of buying may be delayed for some time. There are various rumours concerning revision of the present stabilised prices before the end of the year, but none appear to have any authority behind them. Finished iron conditions are unchanged.
