

THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXXXIII

BEING FROM OCTOBER TO DECEMBER 1938, INCLUSIVE

LONDON:

PUBLISHED AT THE ECONOMIST OFFICE,
8 BOUVERIE STREET, FLEET STREET, LONDON, E.C.4

QUARTERLY INDEX

Eleventh-Hour Reprieve

AS we go to press, word comes from Munich that the two democratic premiers and the two dictators have reached agreement in principle, and that it only remains to settle questions of detail and technique. All of us have looked over the precipice and seen a vision of the hell of totalitarian war, which would have been waged with all the devilry and ruthlessness of modern science. We are to-day reprieved; and in every country men and women will utter a prayer of thanksgiving.

Those who have lived through these last three weeks will remember them all their lives as a period when events of the most momentous importance came rushing on top of each other with a speed that defied the contemporary chronicler and will confuse the future historian. Three times we have been within hours of war; and three times a last effort has succeeded at least in postponing the disaster. And this week, when the danger seemed most real and most urgent, the *dénouement* has been the most dramatic of the series.

Palmas qui meruit ferat. The man who has worked most assiduously for peace is the man who deserves the lion's share of the credit for the fact that war has been averted. That man is Mr Neville Chamberlain. The Prime Minister's conduct of foreign policy has been severely criticised in the past, not least in these columns. Doubtless it will fall under criticism again in the future. But for the present the world owes to Mr Neville Chamberlain a tribute of unstinted and unqualified gratitude for the magnificent perseverance and tenacity with which he has refused to abandon the search for peace. If, when the

Munich agreement has had time to reveal its full significance, it appears that a really peaceful settlement has been achieved—one which, without necessarily solving all problems at once, nevertheless turns the face of the world towards peace rather than war—Mr Neville Chamberlain will be sure not only of our present gratitude but of his place in history. And if tributes are being distributed, we must not fail to send one of deep gratitude and very sincere sympathy to the Czechs, who have proved in ample measure their astonishing courage, their self-control and the true nobility of their national character. President Benes, who has borne his awful responsibility in solitary dignity, has become one of the great figures of the world, elevated by the abuse that has been showered upon him. It is by his suffering, and that of his people, that we others have been saved.

The seven days that have passed since the last issue of

This issue of *The Economist* was on the point of going to press when the news of the Munich agreement arrived. In the circumstances, some of the contents of later pages have fortunately lost their immediate point. But no apology is needed for presenting to our readers information which is still of far more than merely academic interest.

The Economist was written began at Godesberg on the Rhine. Mr Chamberlain arrived there on Thursday, September 22nd. A week earlier at Berchtesgaden, as we now know, he had been faced with the blunt alternative of self-determination for the Sudeten Germans (meaning their incorporation in the Reich) or immediate war. In a week, and by the exercise of unprecedented pressure on the Czech Government, the Prime Minister had secured the recognition of "self-determination." It was accepted in principle that all those areas of Czechoslovakia with more than 50 per cent. of German-speaking inhabitants were to be ceded to Germany without plebiscite. When Mr Chamberlain arrived at Godesberg he thought—and was justified in thinking—that he had obtained for Herr Hitler what was demanded. He was quickly disillusioned. Throughout his career, Herr Hitler has always made the concession of one demand the pretext for demanding more. He now presented the Premier with the utterly unreasonable demands of the "Memorandum" which has since grown notorious. This document is printed on another page, together with a map which illustrates the difference between the so-called Anglo-French plan and the solution demanded, with all the brutality of a conqueror, by Herr Hitler. The most revealing, and the most sinister, feature of the ultimatum was that it proposed the wholly impossible time limit of October 1st—a date which appeared for the first time, be it noted, at the very end of the Godesberg meetings, late on the evening of September 23rd.

Herr Hitler had manifestly overplayed his hand. All that Mr Chamberlain could do was to remit the memorandum to Prague, but without any suggestion that it should be accepted. Already on Friday, when it was seen how the conversations were going, the British and French Governments had withdrawn their previous advice to Czechoslovakia against mobilisation; and during that night the Czech army was placed upon a full war footing.

PREPARING FOR WAR

The terms of the German ultimatum were not generally known when Mr Chamberlain returned to London on Saturday, and for the moment there was a certain increase in optimism. But when, over the week-end, the nature of the terms leaked out, when it was known that Czechoslovakia had rejected them, when the French Ministers arrived in London and were joined, not by the diplomats who draft agreements, but by the Commander-in-Chief, the public realised that the situation had changed for the worse rather than for the better. Hopes were not, however, quite dead. It was announced that Herr Hitler was to make a speech in Berlin that evening, and from two different quarters, attempts were made to influence him on the side of moderation. One was a letter which the Prime Minister sent by Sir Horace Wilson to Berlin, and which Herr Hitler received before he spoke (its text, together with that of the other vital documents, will be found on a later page). The other was from a source hitherto silent; President Roosevelt addressed an appeal both to Herr Hitler and to M. Benes, pleading for a peaceful settlement. But Herr Hitler's speech when it came was harsh and uncompromising; it must have been the most abusive utterance that the head of a State has ever delivered. The time limit of October 1st was reiterated, and the most open threat made that if the Sudeten territories (on Herr Hitler's own generous interpretation) were not given to him by that day he would take them. Even so, Monday's events were not over, for there were two more statements from London. One was categorical and all-important, though it was issued through unofficial channels. It said that if Czechoslovakia were attacked "the immediate result must be that France will be bound to come to her assist-

ance and Great Britain and Russia will certainly stand by France." The second was a midnight appeal from Mr Chamberlain to Herr Hitler. The reason given by the Fuehrer for his time limit was that he could not trust the Czechs to carry out their promises. Mr Chamberlain accordingly offered to guarantee their fulfilment.

On Tuesday, all these efforts seemed to have been in vain. The reply that Herr Hitler gave Sir Horace Wilson to bring back to London was uncompromising; so was the answer sent to President Roosevelt. And the fact that neither Mr Roosevelt's appeal nor Mr Chamberlain's was published in the German Press seemed to show more clearly than any actions that the Nazi chieftains were determined to lead the German people blindfold into war. There seemed to be nothing to do but to prepare for the inevitable. The British Navy was mobilised; various categories of military reserves were called up; and all over the country, especially in London, feverish preparations for imminent war went forward. The nations of Europe seemed to be ranging themselves in battle array. On the one side stood Germany, apparently committed by Herr Hitler's speech to an attack on Czechoslovakia on Saturday, October 1st. At the other end of the Rome-Berlin axis, Signor Mussolini has been prolific with statements that could only be interpreted as meaning that he would fight by Germany's side. But there is no question that such a war would be unpopular with the Italian people, and there has been a notable lack of any mobilisation orders or war preparations in Italy. There are many shrewd observers who will not believe in Italian armed support for Germany until it is given. Germany's other potential allies had disappeared in the face of Anglo-French determination. Poland, with some agility, had by Wednesday climbed back upon the fence of neutrality. The Hungarian Government was attempting to do the same. On the other side of the crystallising battle-line, it seemed that Czechoslovakia could count on three mighty allies. France was committed by her treaty. M. Litvinoff's declarations, and the massing of the Russian army in the Western Ukraine, indicated that Russia also would honour her obligations. And, finally, the British declaration of Monday evening, together with the obvious preparations for war, removed all doubts that Great Britain, too, would play her part. There had been no official declaration of policy from Roumania—important not only in herself but also as the link between Czechoslovakia and Russia—but all the indications were that she too would assist her neighbours.

THE FINAL EFFORT

Until Wednesday afternoon it looked, therefore, as if Germany, with the possible help of Italy, would within a very few hours find herself at war with Britain and France in the west and with Czechoslovakia, Russia and Roumania in the east. But Mr Chamberlain's efforts were not yet at an end. In a broadcast on Tuesday evening, together with the plain statement that he considered the Godesberg memorandum "unreasonable" and that, though a man of peace, he would resist any nation that "had made up its mind to dominate the world by fear of its force," he coupled an offer to go to Germany yet a third time if any useful purpose could be served. This offer was repeated in a further letter to Herr Hitler, and at the same time Signor Mussolini was asked to join in the appeal for delay. This Signor Mussolini, to his credit, immediately did. In response, Herr Hitler agreed to postpone for twenty-four hours the mobilisation of the German army, which had apparently been planned for Wednesday afternoon. And, dramatically, at the end of Mr Chamberlain's speech to the House of Commons, came the news that a meeting not only of Herr Hitler and Mr Chamberlain, but of Signor

Mussolini and M. Daladier as well, was to be held on Thursday afternoon at Munich.

The enthusiasm with which this announcement was greeted in Parliament and throughout the nation and the world was as genuine as it was overwhelming in volume. The fitting of gas masks, the digging of trenches, the evacuation of families have brought home to every one of us both the nearness and the appalling character of war. The wave of relief was a measure of the strain that had been upon the public; there cannot be a member of the community who, in Mr Chamberlain's words, "did not feel his heart leap that the crisis has been once more postponed."

Mr Chamberlain and M. Daladier, on Thursday, bore upon their shoulders a responsibility that no man would envy. Their task was to secure peace—but to secure it in such conditions that it will last more than a few weeks. Peace of a sort could be had for the asking. The acceptance of Herr Hitler's Godesberg terms, perhaps modified in sufficient minor particulars to have the semblance of a concession, and the abandonment of Czechoslovakia to her fate, would have been an easy solution. The temptation was strong. But we trust that Mr Chamberlain and M. Daladier will be found to have resisted it. For if Herr Hitler now achieves what he wants, substantially when he wants it, and substantially in the way he wants it, our own security will hang only by a single thread—Herr Hitler's declaration that he has no more territorial ambitions in Europe. Mr Chamberlain says he is convinced Herr Hitler means what he says. No doubt he does—now. No doubt he sincerely meant it when he undertook in 1935 to respect the territorial provisions of the Treaty of Versailles and to carry out revisions only by peaceful understandings. No doubt he sincerely meant it in May, 1935, when he declared that Germany "neither intends nor wishes to interfere in the internal affairs of Austria, to annex Austria, or to conclude an Anschluss." If our security depends only on Herr Hitler's word, we are at the mercy of his changing moods.

This is not a pleasant thing to say about the head of any State, least of all the most powerful man in Europe. But it is dangerous self-deception not to recognise it as the truth. And the wisdom of Mr Chamberlain and M. Daladier will, in the end, prove to have been in direct

proportion to their realisation of the need for some security stronger than words.

This is, and remains, the crux of the problem. We gave reasons last week for believing that the cession of the Sudeten areas to Germany is not a sacrifice that can be demanded of Czechoslovakia in the name of justice. It can only be justified by the calculus of expediency; it will be right if it preserves and buttresses the peace. This being so, the methods by which the Sudetenland is transferred to Germany are not an inconvenient side-issue; they are the very centre of the problem itself. If this problem is settled in such a way that Germany will be encouraged to further her other ambitions by using the threat of force, then no treaties, no promises, no guarantees will hold the Nazis back. If, on the other hand, the solution is such that German diplomacy is forced to look for other methods, then we shall not have gone through this ordeal for nothing.

As we write, little more is known of the Munich agreement than that it provides for the German occupation of the Sudetenland by stages and for the delimitation of the new frontier by an international commission. The temptation is almost irresistible to thrust aside the precise details of the agreement arrived at in Munich, whatever they may be, and to treat them as of little account beside the magnitude of the universal relief that we have been saved, at the fifty-ninth minute of the eleventh hour, from destruction. But to-day's rejoicings will sound a little flat if it is soon discovered that the great crisis of our civilisation is merely postponed, soon to fall on us again. And they will appear downright foolish if it eventually transpires that this week's work has lessened our powers of resistance to aggression when we come to meet it again. The skeleton at the feast is not a lovable creature. But even at the risk of casting ourselves for this rôle we feel constrained once more to repeat what has been said so frequently in these columns: any agreement with the ambitious dictator-States, whatever its apparent terms, will turn out to be bad and dangerous in so far as it rewards aggression, good and beneficent in so far as it warns the aggressor for the future. We hope that the Munich Agreement, when it comes to be put to the touchstone of experience, will prove to have been a good day's work.

Big Steamers

LAST Tuesday's launching of the giant new Cunarder had been eagerly awaited for a long time. Almost exactly eight years ago, Sir Percy Bates, chairman of the Cunard Company, announced that for the first time in the history of naval architecture it had become possible to plan a weekly service across the Atlantic Ocean with two steamers only in place of the three then in use. The contract for the "Queen Mary," the first of these vessels, was signed as long ago as December, 1931.

At the start, there was no lack of sceptics who doubted the ability of the Cunard Company to carry through such a grandiose programme. It has required a merger of the Cunard and White Star Lines and the grant of Government assistance. But it has been carried through, to the beginning of the last chapter. The building of the "Queen Mary" was a chequered story, and many voices were raised against what was deemed the megalomania of big ships. But in June, 1936, the company, now Cunard-White Star, took the definite decision to proceed with the second ship—the ship that was launched on Tuesday, the largest ever to enter the water.

In the event, the launch provided a poignant scene. The clear voice of the Queen brought a message of comfort and good cheer from the King in these desperately troubled

days before she gave her own name to the vessel. And it was into an unknown future that the "Queen Elizabeth" moved down the slipway. Yet the two-ship plan has been almost completed, and it is possible to examine the likely wisdom and usefulness of the scheme—under normal peace-time conditions.

The building of two 80,000-ton liners is the latest stage in the history of growing size and increasing speed on the North Atlantic sea routes. A hundred years ago the "Syrius," of 703 tons, completed the first Atlantic crossing wholly under steam, taking eighteen days from Cork to Manhattan. In 1840, precisely a hundred years before the "Queen Elizabeth" is nominally due to enter into service, the first Cunarder, the "Britannia," of 1,200 tons, was built. In 1858, the ill-fated and unsuccessful "Great Eastern" threw the shadow of future developments over the Atlantic scene by its unprecedented tonnage of 18,915 tons, which was actually not exceeded until after the dawn of the twentieth century.

International competition increasingly dominated trans-Atlantic travel, and under its spur size and speed rapidly rose. As early as 1849 the Cunard Company was faced with subsidised rivalry from American lines, and thirty-odd years ago the powerful competition of German undertak-

ings began. In 1907 the "Lusitania" and "Mauretania," for the construction of which Cunard had obtained Government help, exceeded 30,000 tons, and their speed was 26 knots, compared with the 6 knots of "Syrius." White Star's "Titanic" and "Olympic," and Cunard's "Aquitania," launched in 1914, were less speedy, but larger, rising to 46,000 tons; and the German "Imperator" and "Vaterland" topped 50,000 tons. When the last war ended, twenty years ago, 50,000-ton boats provided the express services across the Atlantic, operating on a seven-day schedule, although the smaller and speedier "Mauretania" took only five days. The "Aquitania," the "Berengaria" (once Germany's "Imperator") and the "Mauretania" carried Cunard's flag.

To-day the scene has changed. The "Mauretania" and the "Berengaria" have gone to the shipbreakers' yard. The watchword is 80,000-ton ships and a four-day trip. The traffic, too, has altered. In the old days the United States was still being peopled by European immigrants. Now the flow has practically ceased; and the keen competition between British, American, French, German and Italian lines is for tourists and business men. The express steamers cater for a luxury trade. And the question on all sides for many years has been: can it possibly pay?

What, in fact, seems to be the driving force in the race for size, which brought the "Queen Mary" as a riposte to the "Bremen" and "Europa," the "Normandie" as a reply to the "Queen Mary," and the "Queen Elizabeth" as so far the last word? The Cunard-White Star Company deny that publicity or competition in prestige has influenced their policy. This may be true. But, in any case, it may be taken for granted that the Cunard Company, in initiating the programme, and especially the State, in providing means to carry it through, were not solely motivated by the mere desire to have the world's biggest, fastest and most luxurious ships. There must surely be plausible reasons of an economic kind to account for their construction.

It is no secret that in this case size was dictated by speed. Sir Percy Bates's statement of policy in 1930 postulated a weekly service maintained by only two steamers. If a boat could be built to do the trip regularly in four days, to use two steamers instead of three was a feasible plan. The speed needed was determined by the time-factor, that is, by the necessity of keeping the weekly schedule at all seasons and in all conditions of weather—including the time necessary to remain in port at both sides. There are 168 hours in a week. Of these, something like 44 must be spent in port, 8 on the journey from Southampton to Cherbourg, and 5 on the journey from the Ambrose Channel to the pier at New York, leaving 111 hours to do 3,160 miles on the Atlantic itself. Thus an average speed of 28½ knots is a *sine qua non* of the two-ship weekly schedule.

The size of ship needed is in turn decided by the necessity of maintaining an average of 28½ knots, while at the same time providing sufficient saleable passenger (and/or freight) accommodation, or "pay-space," to cover the cost of achieving this speed. That is, the speed once fixed, it determines the ratio between pay-space and non-pay-space, but the pay-space must be sufficiently large to bring in the revenue required. The answer to this calculation, arrived at by Cunard-White Star and the C.G.T., is a gross tonnage of about 80,000 tons: the "Queen Mary" is 81,000 tons, the "Normandie" 83,000 tons and the "Queen Elizabeth" 85,000 tons.

Thus it is easy to see that the exigencies of the Cunard's weekly schedule provide solid and tangible technical reasons for the big ship as we know it in its latest phase. These factors, however, do not exhaust the controversy. Is the super-big ship of 80,000 tons a paying proposition compared with, say, the 50,000 tonner? This question is the more important because in this country public money

has been spent on the giant Cunarders; the assistance given in construction was only in part a method of financing useful public works; and the mail subsidy as well as the help given in insuring the vessels are direct aids. The company has a public responsibility that the 80,000 tonners should pay their way. In actual fact, these huge ships are, admittedly, not the most paying ships. Few would disagree with the view of the American Maritime Commission that the most paying ships on the Atlantic route are the seven-day 20-30,000 tonners, like the Cunard-White Star's own second string, the "Britannic," "Georgic," "Carinthia," "Franconia," "Scythia," etc. But that is not the point at issue. These boats take seven days to make a single crossing; and there is a public demand for a speedier express service. Cunard and the foreign lines have acted accordingly by building faster and bigger ships. Speed, as we have seen, dictates size.

The choice is not between 80,000 tons and 20,000 tons, but between 80,000 and 50,000, or more precisely in the case of Cunard between two 80,000 tonners and three 50,000 tonners. Exact financial details are a closed secret. But, on the revenue side, we can say that the super-big ships may attract a somewhat higher proportion of total trans-Atlantic traffic, at a slightly higher average fare. Their passenger accommodation is not markedly greater than the 50,000 tonners, but their annual turnover of passengers per ship is greater because they get more trips into the twelve months; two 80,000 tonners probably carry considerably more passengers in a year than three 50,000 tonners. At a modest estimate, the total revenue of two giants is possibly at least 10-20 per cent. higher than that of three merely big ships. Thus the question becomes: do two 80,000-ton ships cost more or less than 10-20 per cent. more to run than three 50,000 tonners when all capital charges and overheads are included? In other words, does the "Queen Mary" (or will the "Queen Elizabeth") cost more or less than 65-75 per cent. more to run than the "Aquitania" or "Berengaria"? The answer is, probably, less, since wages and upkeep costs do not rise in exact proportion to size.

In the last resort, of course, the proof of the pudding is in the eating. But, unfortunately, when the pudding comes to be eaten, it will be impossible to distinguish the ingredients. Cunard-White Star own many liners and the state of the company's profit and loss account will reveal little or nothing about the earnings of the "Queen Mary" and the "Queen Elizabeth." Trans-Atlantic traffic is very dependent, now that the stream of emigration has dried up, on the state of trade in America. Extravagant ships may earn their keep in good years, and the most economical vessels lose money in poor years. And, finally, the real question will always be hypothetical: would three 50,000 tonners have done any better? It is at any rate a fact that when Britain had no up-to-date fast ships, as in the early thirties, British vessels lost traffic appreciably to their more modern German rivals. And it is probable that, under normal conditions of trans-Atlantic trade, the best and most remunerative traffic will be secured by the ships which combine the greatest comfort with the highest speed. People will pay extra for these luxuries.

With the launching of the "Queen Elizabeth" on Tuesday, Cunard-White Star underlined their faith in a policy which, all things considered, was probably a wise one. And the launching may also have marked the end of an era in shipping history, the era of increasing size. A weekly sailing with two ships is a reasonable ambition. But there is no great attraction in a sailing every six days, and the weekly sailing with a single ship is a fantastic dream of the future. There is thus no real need for greater speed—and hence no compelling call for greater size. In any case, marine engineers and naval architects are learning to get more speed out of less space. The 80,000 tonner may well prove to be the last word in a long story.

Capital Market Inactivity

THE September quarter rarely breaks any records in new capital statistics, unless, indeed, they happen to be low ones. This year the period has proved more than usually undistinguished. None of the conditions for activity has been present. In addition to normal holiday distractions, the market has been confronted with growing evidence of trade recession and falling industrial profits. And company promoters, underwriters, and investors alike draw in their horns as soon as political clamour is heard. The new issue figures for the past three months, therefore, make no brave show; few have had the courage to be responsible for contributing to the meagre total in recent weeks.

The Economist's statistics of capital issues have now been presented for some years on a dual basis. There has been a considerable growth in recent years of the practice of raising capital not by a public issue of securities but by the "placing" of a block of securities on the Stock

Exchange and by making issues on bonus terms to existing shareholders. Our "old basis" figures exclude these issues, but are comparable with the figures for a long series of years. The "new basis" figures include placings and bonus share issues but are available only for the past four years. Total borrowing by direct public offer (our "old basis" figures) amounted to no more than £19.3 millions between July and September, and of this total, company issues accounted for £17 millions. The more comprehensive "new basis" figures amount to £34.9 millions for the quarter—well under a third of the total of £118.6 millions recorded in the corresponding quarter of 1937, although the latter was swollen to the extent of £75½ millions by the Tithe Redemption and Anglo-Iranian issues. Such quarterly comparisons demonstrate the paucity of new issue business during the past thirteen weeks. But they do not necessarily furnish the best basis for comparing the

trend in the capital market between one year and another. For that reason the tables which accompany this article provide cumulative figures for the first nine months of the year, during which trade recession and political uncertainty have become increasingly obvious.

The first table on the preceding page shows that total direct borrowing for the past nine months amounted to £155.6 millions, compared with £211.9 millions for the same period of 1937. Taking into account the lack of demand for new industrial capital, this total does not compare unfavourably with the figures for the same periods in 1934 to 1936, when conditions were favourable for raising subscriptions to new industrial issues direct from the public. But practically half of the total for this year to date is attributable to the British Government's operations, which included in particular the second instalment of defence borrowing in June. For the greater part of the period, moreover, the volume of home corporation new borrowing has been fairly well maintained, without entailing any marked indigestion. The main factor in the new capital market during this period is clearly the fall in British borrowing, other than for Government or municipal purposes, from £65.4 millions to £30.4 millions. These figures are the direct measure of the effect of depression on the demand for industrial capital. Empire borrowers have absorbed funds to the extent of two-thirds of those required by British industry, but the proportion in the first nine months of 1937 was no more than one-quarter. And no expansion is to be expected in foreign lending at a time when the balance of payments is markedly adverse to this country and credit-worthy borrowers are scarce.

These conclusions are more strongly confirmed by the more comprehensive figures on the "new basis." New industrial finance under modern conditions is not concentrated in the public new issue market. A succession of industrial prospectuses may create an impression of high activity, as it did a year ago. But comparison of Tables I and III shows that the volume of public money subscribed for new issues is usually of much smaller importance than the amounts raised from shareholders, on bonus or rights terms, or by capitalising reserves. Home industrial issues, which are largely comprehended under the heading "Others" in the third table, show a fall, from £171.5 millions to £64.2 millions, which is substantially heavier than the reduction in direct and indirect official borrowing. The volume of business activity may be largely de-

pendent upon the volume of new capital investment. If so, the comprehensive figures of new capital raised so far this year suggest that, even apart from political factors, no immediate and substantial industrial recovery is to be anticipated.

The impact of the fall in the "new basis" figures on different economic groups may be traced in the second table. The reduction in the capital requirements of heavy industrial companies from over £25 millions to little over £3½ millions is eloquent of changing market and economic conditions. Yet the change occurred while iron and steel profits were still showing a handsome advance over those of the preceding year. As soon as definite evidence of trade recession had accumulated—in other words, by the end of 1937 at the latest—new capital expansion ceased quite abruptly. In the large manufacturing and miscellaneous group, the fall, while less marked, is still of the order of 50 per cent. And the analysis of total company issues in Table VI confirms what has been obvious in recent issue business—the virtual disappearance of the ordinary share issue immediately the security markets begin to hesitate.

The fate of the principal issues of the past quarter (among which are numbered that comparative rarity—a corporation issue in August bank-holiday week) is shown in a supplementary table on page 51. During the past two months, the gathering Stock Exchange crisis has taken toll of the majority of new issues which were made in July. Only one equity share—Beecham's Pills deferred—saves this list from being composed entirely of fixed-interest and preference issues.

It may not now be necessary, after all, to speculate on the fate of the capital market in the event of war. Yet it would be unreasonable to suppose that the need for control over borrowing will disappear in the near future. The authorities have a substantial programme of defence borrowing ahead of them, and they will presumably aim at keeping the market as clear as possible to raise whatever amounts may be necessary at minimum cost. The averting of war at the last moment will restore gilt-edged prices to more normal levels. And there is no reason to suppose that the authorities would be unable to bend the gilt-edged market to their will, provided that borrowing was tactfully based on the larger purpose of public finance—neither to give anything unneeded away, nor to extract the last dram from a market which cannot work satisfactorily under conditions of considerable strain.

Topics of the Week

The Nation and the Crisis.—Until hope dawned again on Wednesday, the tragic drama of preparation for war unfolded with gathering speed seemingly to an inevitable end. There have lately been those who have said falsely that democracy could not voluntarily face crisis with resolute action; and others have said, with perhaps more truth, that we were not entirely ready with men and equipment to defend ourselves at home. In the last few days the critics have been more than confounded; men and women in hundreds of thousands have rallied coolly and calmly to an urgent call; and the authorities, central and local, have caught up with astounding speed the leeway in air raid precautions and anti-aircraft defences which had only recently troubled clear-sighted observers. Sir Samuel Hoare's announcement on September 22nd that a great A.R.P. publicity campaign would begin on October 3rd was outdated as soon as it was uttered. That very day centres for the fitting of gas-masks were established in Westminster; and the Ministry of Health announced measures to organise the hospital system in the event of war. On the 23rd, men of the first anti-submarine flotilla at Weymouth and Portland were recalled from leave; and the ensuing week-end, Saturday, 24th, and Sunday, 25th, witnessed scenes of unprecedented

activity. The nation was making ready for the disaster which events abroad seemed to portend. Every man and woman was deeply relieved to learn that the London County Council was ready to evacuate half-a-million children from the menaced metropolis; and other cities had similar plans in hand. In local areas there was now little sign of the dilatoriness which had caused critics to be fearful of the consequences only a few short weeks before. The fitting of gas-masks proceeded swiftly with only minor hitches; and, most important of all, plans were rapidly put into practice on a wide scale to provide protection against high explosives. Trenches were dug in parks and open spaces; and the Home Office published a design for an emergency trench to be made by householders in their own gardens.

On Monday, the 26th, the pattern of official precautions against war and attack became clearer. The distribution of an A.R.P. handbook to every dwelling in the land was announced. Certain anti-aircraft units were called up as a precautionary measure. Volunteers for all forms of national service came forward in great numbers. Private

car owners were asked to place themselves in readiness to help in the removal of civil patients from hospitals if necessary; and the prices of bacon, ham, butter, cheese, lard, cooking fats and margarine were fixed for the next fourteen days. On Tuesday, the 27th, events entered a new and still more serious stage. At Clydebank the Queen conveyed a message of comfort and encouragement from the King. Active recruiting at territorial depots was in full swing. Eight London tube stations were closed for "urgent structural modifications"; and the evacuation of infirm and disabled children from London began. The nation's women were called upon to supply 25,000 volunteers for a new Auxiliary Territorial Service; and, male and female alike, citizens were urgently summoned for A.R.P. work. London's anti-aircraft units, apart from the balloon barrage contingents, were now at full strength.

* * *

The country greeted Wednesday with courage and resignation. Four proclamations called up reserves of officers and men for the Royal Navy and Marines; and England knows no surer sign of impending calamity than the mobilising of the fleet. People knew from the Press and the radio how serious the situation was, and they knew their duty. They had listened to Mr Chamberlain on Tuesday evening and they were under no illusions. Thousands of families were leaving London by rail and road; and crowds of recruits for the defence services were clamouring at the depôts to help. Then came the Prime Minister's dramatic call to Munich; and the wheel of tragedy was for a time arrested. But preparations went on; and the whole world knew, when an agreement was announced on Thursday night, that England, hoping desperately for peace, and glad now that it seemed in sight, had made herself fully ready for war.

* * *

Mussolini's Recent Speeches.—In an interrupted tour of north Italian towns which began at Trieste on September 18th and ended at Verona on September 26th, Signor Mussolini has delivered himself of a number of messages to the Italians and to the world in general. He has ranged himself on the side of Germany, whether it is to be peace or war. He has inflated—or tried to inflate—the national morale in face of a possible war against the democracies. He has shown a strong though sometimes obscured hope that it will be peace, a hope tempered by a great deal of warlike rhetoric and assurances that Italy will stand firm whatever chances may befall. In Trieste he produced an all-round solution for European problems by plebiscite wherever plebiscite was demanded, inspired, we learn, by a sentiment "European rather than Italian." "We still hope even in this last hour for a peaceful issue," he continued, "We hope that if that is not possible the conflict may be localised, but if that cannot be done and

a front is formed either for or against Prague, Italy knows on which side she will be." For the relief of the seaport itself, cut off (though scarcely in its prime) by the *Anschluss*, he professed himself ready to do great things: it transpired that his main proposal for the comforting of Trieste lay in the establishment of a university "for all the studies." There is no spontaneous record of how this was received by the long-suffering Triestines. The Duce's speeches at Padua, Belluno, Vicenza, and Verona were in the nature of running commentaries on the crisis enlivened by the utterance of various moral sentiments. At Padua he commented on German moderation in permitting a time-limit after the added provocation of a new Czech Government which was "too friendly to Moscow"; and on the general situation stated that: "During the last few days certain more or less influential parties and currents of opinion in the Western countries seem to have thought that the time had come to settle accounts with the totalitarian states. If that is to be the case those parties and opinions will not find themselves faced with two separate countries, but with two countries which will form a single *bloc*." At Belluno he affirmed that Italy's enemies beyond the Alps were "at least a quarter of a century behind the times," and could not prevail; and at Vicenza on the next day warned his hearers that although Italy had not yet taken any special military measures "if the other nations continue to call up reservists, and if there are further concentrations of fleets, you will not be surprised if Italy takes similar measures."

* * *

A tendency to deflate feelings of tension about the affairs of Central Europe was noticeable in each of these speeches. The identification of his point of view with that of Herr Hitler received final confirmation at Verona on September 26th. Sole responsibility for relieving the dangers of war was thrown on to President Benes; and whilst the Duce gave recognition to Mr Chamberlain's efforts in the interests of peace, he followed Herr Hitler again in stating that: "The German memorandum (i.e. "the last word") does not deviate from the lines which were approved at the meeting in London." The fate of Versailles, he averred, was being decided this week. The real climax of these speeches rests in Signor Mussolini's readiness to act as mediator, which resulted in the Four Power meeting at Munich on Thursday. It is no criticism of the Italian people to say that some of the Duce's remarks in recent speeches have implied that many Italians are anxious to avoid another war, especially a war in which they would be allied to Germany. His ability to bring together the Munich meeting (in the Italian Press it will seem like magic) must redound enormously to his prestige at home; for not only will it serve to convince many sceptics that his policy is one of peace, but it will also figure as a great personal triumph. And it would be unreasonable to suppose that there will be no rewards for the mediator.

Commonwealth Unity of Mind.—Statesmen of the British Commonwealth have been singularly outspoken on what would be the attitude of their Governments in case Britain were drawn into war. After a full Cabinet meeting, Mr Mackenzie King, the Prime Minister of Canada, said that his Government was "in complete accord with the statement Mr Chamberlain made to the world" after Herr Hitler's Berlin speech on Monday. The Prime Minister further said that his Government "continued to keep in the closest touch with the grave developments in the European situation and were making preparations for any contingency and the immediate summoning of Parliament if efforts now being made to preserve peace in Europe failed." Similar assurances have come from Mr Lyons, the Prime Minister of Australia. "If war is to come," he said on Tuesday, "it will not come by any reason of anything any British nation has done or failed to do. Our hands are clean. . . . Even as the clouds gather about us we still hope that peace may be preserved." The attitude of the Australian Labour Opposition seems to be divided, for although Mr Curtin, leader of the Opposition, has come out for what the *Sydney Morning Herald* describes as a "stay-at-home" policy, the Council of Trade Unions has offered full support to the democratic nations. The place of New Zealand is even more definite. "We fit in at all times to help the Mother Country," said Mr Walter Nash, Minister of Finance and Marketing, on Tuesday, and was echoed by Mr Martin, the Minister of Agriculture, who said: "If the worst comes to the worst, New Zealand will be right behind Britain in a moment. Our Government are prepared to call upon and use all their resources to help." South Africa is necessarily less resolved. General Hertzog, the Prime Minister, has not gone beyond an affirmation that "he would see to it that when it became necessary South Africa's obligations towards the League of Nations would be carried out"; but he has refused to be driven to a declaration of neutrality by the efforts of Dr Malan, leader of the Cape Nationalist Party Congress, just as he has refused to endorse General Smuts' announcements that South Africa would come to Britain's aid. By Thursday, thirty-five Indian Princes had proffered their services to the King-Emperor, including the powerful Nizam of Hyderabad. In British India there is not yet, nor is there likely to be, a consensus of opinion either for or against military support. The Prime Minister of the Punjab, Sir Sikander Hyat Khan, has stated that "Britain could rely on the steadfast support of the martial races of India," by which he presumably meant the Moslems; but opinions in Congress are divided. Sympathies are strongly with Czechoslovakia, but there are those who think with Mr Gandhi that intervention would violate the principle of non-violence, and those who think with Mr Jawaharlal Nehru that "Britain's first task is to eliminate empire from India" (as Mr Nehru wrote in a recent letter to *The Manchester Guardian*), and that Indian support must be conditional on such elimination.

Poland's Future.—The fundamental aim of Polish foreign policy must always be to preserve neutrality in European war without risking territorial dismemberment, to balance the great forces which actuate Poland's neighbours so as to obtain maximum possible leverage for subsidiary acts of policy and the maintenance of Poland's claim to be a Great Power. During the past weeks Warsaw has watched the movement of neighbouring nations with eyes anxious for a sign. Since 1936 a marked movement towards the Berlin-Rome interest, favoured personally by Colonel Beck, emphasised the fall of Anglo-French prestige after the Abyssinian war. The Runciman Mission and the British commitments to Czechoslovakia which the Mission was thought to imply, reminded Warsaw that a pro-German policy was interchangeable at need for *rapprochement* with Paris; and the steadiness with which both France and Britain interested themselves in the affairs of Central Europe provided the necessary persuasion that this was a moment for trimming policy away from Germany. Scarcely had a more amiable face been turned towards the Czechs than Mr Chamberlain had visited Berchtesgaden and, as it turned out, agreed to secession of

the German areas in Czechoslovakia. Fanned by the controlled Press, public opinion in Poland swung quickly and, as in Germany, seemed to apprehend nothing but a localised war. According to precept, the Polish Government took immediate advantage of this situation to demand identical treatment for the Teschen enclave as was accorded to the Sudeten areas, threatening invasion by moving up troops to the frontier. Diplomatic exchanges between Warsaw and Prague revealed that the Poles had sent a virtual ultimatum, to which President Benes had replied with a personal letter to President Moscicki agreeing, it appeared, to negotiate for a secession of territory. Meanwhile Poland was ready to use force: the frontiers were closed and soldiers stood to arms. Over the week-end Poland, or at least the politicians in Warsaw, with disagreeable surprise to themselves, began to realise that Czechoslovakia might not after all be standing alone. The Soviet Government presented a note reminding Warsaw that invasion of Slovakia would mean immediate cancellation of the Soviet-Polish non-aggression treaty; and, more ominously, France and Britain began to prepare for war. By Wednesday the trimming process was again at work on Polish foreign policy, this time working towards the Western Powers, and Prague received a Polish note which was understood to agree to negotiate on secession of territory, possibly on the basis of the Anglo-French plan, without laying down any time limit. But on Thursday, possibly in view of the Munich meeting, this tentative settlement was denied by the Polish Foreign Office. Whatever may be the outcome of these present days, it may fairly be assumed that Poland will continue to apply that process of trimming by response to Franco-British weakness with a movement towards Germany, and *vice versa*. It would be inconceivable that with France, Britain and Russia in the field, and with the known democratic sympathies of the Polish peasant, Poland could ever afford to abandon its stand for neutrality unless in a sense inimical to Germany.

Hungary's Dilemma.—A small country with limited natural resources, small industry, and military strength hindered for twenty years by restrictive measures imposed by the Treaty of Trianon and so obliged to develop what size it can by methods more or less clandestine, is compassed on three sides by an *entente* pledged to resist this small country's aggression on any of its three well-armed members, and on the fourth side by an overweening friend whose claims may well be both irresistible and disastrous. In any large-scale conflict which embroils Central Europe Hungary will hold a key strategic position buffering Germany from Roumania and Russia. How does Hungarian foreign policy deal with the potentialities of such a situation? If the Government of M. Imredy, hoping to regain the Magyar lands lost in 1918, were ever to take up arms with Germany and permit the passage of German troops across the Hungarian plains, those plains would become a battlefield for the Germans, the Czechs, the Roumanians, the Russians and possibly the Yugoslavs. But if Hungary should declare for neutrality in any event, as present reports from Budapest indicate that she will, there must remain the fear that Hungarian territory might be violated by one side or the other striving to gain decisive advantage. This somewhat simple calculation is complicated in the minds of Hungarian statesmen by the knowledge that opponents at home will take immediate advantage of any hesitation shown over irredentist claims to southern Slovakia. When France and Britain appeared to be revealing weakness early last week M. Imredy and M. de Kanya accordingly flew to Berchtesgaden to obtain, if possible, Hungarian participation in any Reich-dictated settlement of Czechoslovakia's minorities. With France and Britain mobilising for war this week and Roumania showing no particular disfavour to Russian proposals of aid for Prague, Hungary began to wobble early in the week and show signs of shifting to the other foot. Hungary's position is very like that of Poland's, and the preservation of neutrality will presumably be the firm intention in case of war. Whether Roumania and Yugoslavia were both ready as the Statute of the Little Entente enjoins, to protect Czechoslovakia against attack from Hungary, was not clear.

M. Stoyadinovich and M. Petrescu-Comnen had a meeting over the week-end at Subotica, following which came reiterated reports of Yugoslav and Roumanian *démarches* in Budapest warning Hungary that the Little Entente would act together; but these reports were never officially confirmed. Demonstrations in support of Czechoslovakia occurred in Belgrade, sponsored chiefly by the Sokol and student organisations; the Government Press confined itself to vague generalisations in a sense usually favourable to Germany. While Yugoslavia's attitude had to remain uncertain until Signor Mussolini had finally committed himself, that of Roumania has been less ill-defined. Sympathies seem definitely in favour of the democratic Powers, and rumour which sprang from M. Litvinoff's meeting at Geneva with M. Petrescu-Comnen had it that, were France and Britain involved in war, Roumania would permit the passage of Russian military aid across its territory. In the event, this rumour might have proved to be based on more than wishful thinking; but the difficulties of communications across northern Roumania were at no time lost sight of. Meanwhile the Cabinet took defence measures in preparation for the worst.

The Straits in Time of War.—In contrast with their history the countries of the Southern Balkans have found themselves standing apart from the menace to peace. During the last few weeks the King of Bulgaria has gone in his own time from Balmoral to Berlin; and thence to visit Prince Paul of Yugoslavia at Bled, where he arrived last Monday, charged, it was rumoured, with a mission from Herr Hitler. In any case, he could wish for nothing but peace, for not only would a general conflict have offered him no returns, but he was surrounded by countries of the Balkan Entente sworn to preserve the *status quo*. Of those countries, Roumania and Yugoslavia might well have had great decisions before them, but from Greece and Turkey came no news except for an isolated statement made by the Turkish Under-Secretary of Foreign Affairs to the British Ambassador, Sir Percy Loraine, concurring with the general belief that his country's policy would not run counter to Great Britain. Trade and political relations between this country and Turkey have become very cordial in the past few years; and we may remain glad of this cordiality, for passage through the Straits, over which Turkey has now complete military control, could in case of war become vital to the Allies.

The terms of the Montreux Convention of July, 1936, regarding the regime of the Straits, repay study. Application to any Power of Article 16 of the League Covenant would bring into effect Article 25 of the Convention, which provides that nothing in the Convention shall prejudice contracting members' rights and obligations under the Covenant. In view of Turkey's League membership this provision vitally affects the regime of the Straits, which in time of war would briefly be as follows: Turkey not being belligerent, merchant vessels under any flag and with any kind of cargo enjoy freedom of transit and navigation in the Straits. If Turkey were at war, merchant vessels not belonging to a country at war with Turkey enjoy the same freedom on condition that they do not in any way assist the enemy. For vessels of war (subject to provisions regarding tonnage, method of transit, notification, etc.), with Turkey remaining neutral, permission is granted for complete freedom of transit and navigation through the Straits; but "vessels of war belonging to belligerent Powers shall not, however, pass through the Straits except in cases arising out of the application of Article 25 and in cases of assistance rendered to a State victim of aggression in virtue of a treaty of mutual assistance binding Turkey, concluded within the framework of the Covenant of the League of Nations . . ." The immense importance of this paragraph becomes apparent on reflection that in case of war no warships of a country not a member of the League might

pass through the Straits, while, on the other hand, the navies of the League States would become eligible, given invocation of Article 16 of the League Covenant, to pass to and fro between the Mediterranean and the Black Sea.

A Forgotten Crisis.—The details of the notorious Sandys case which so excited political passions before the adjournment of Parliament at the end of July were never of first-class importance. Wednesday's report of the Select Committee of the House of Commons, appointed to investigate the circumstances which led Mr Duncan Sandys, M.P., to complain that he had been threatened with proceedings under the Official Secrets Act, because he would not divulge the source of secret information about anti-aircraft equipment collected in the course of pursuing his Parliamentary duties, reveals no more than a chapter of trivial misunderstandings. The findings of the Committee were scarcely noticed under the broken skies of the international scene. Mr Sandys, they report, obtained what was undoubtedly secret information from a fellow Territorial officer who himself convinced the Committee that he divulged it on Mr Sandys' assurance that the details would only be communicated privately to the Secretary of State for War. By sending to Mr Hore Belisha the draft of a Parliamentary question on the matter, Mr Sandys conveyed the impression that he intended to make important secrets public. It is Mr Sandys' contention that this step was no more than a matter of form to elicit a private assurance from the Secretary of State. His conduct was, in the Committee's phrase, "disingenuous."

Nor did his political superiors act with marked tactfulness. Mr Hore Belisha very properly consulted the Prime Minister and the Attorney-General on the military, political and legal aspects of the case; but, unwisely, as the Committee suggest, the Attorney-General, not Mr Hore Belisha, then saw Mr Sandys and left the erroneous impression in his mind that he was being threatened with legal proceedings. On the more specific issue of the actual leakage of information, too, there were misunderstandings. Captain Hogan, Mr Sandys' informant, made no attempt to hide his responsibility, and although Lord Gort, Chief of the Imperial Staff, did not at the time fully grasp what he was being told, he was in fact informed by Captain Hogan's superior officer to that effect. The Committee fully accept Captain Hogan's good faith in the matter; and, unlike the House of Commons, which was made, they consider that the summons of Mr Sandys, as a Territorial officer, to the Military Court of Inquiry, despite the fact that he was a Member of Parliament, was quite in order. An unfortunate incident is now in itself satisfactorily closed. But the Committee have still to consider the wider issue of the position of M.P.s under the

Official Secrets Act. Here graver questions of vital importance to the working of Parliamentary democracy are involved, and Parliament, when quieter days return, will be morally obliged to consider and possibly amend the Official Secrets legislation in the light of the principles by which we are ruled through our elected representatives.

* * *

Savings and Security.—A notable change has been effected in the lives of millions of working people and their families by the granting of holidays with pay. The National Savings Movement has played an important part by assisting employers to administer holiday schemes and by encouraging employees to derive full value from their new opportunities by supplementing holiday payments with personal savings. Sir Robert Kindersley, President of the National Savings Committee, in a speech at Llandudno last week, laid stress upon this and other socially valuable aspects of the Movement. In particular, he addressed himself to the grievous insecurity of employment which persists among large sections of the population who have very little margin from their wages to set aside against bad times. People of small means with three or four children find it practically impossible to save, and the children suffer in nutrition and health. Where saving, however slight, is possible, the Movement can, and does, help. No inconsiderable proportion of the record total of £1,433,600,000 held by Post Office Savings Banks and Trustee Savings Banks or invested in National Savings Certificates on March 31, 1938, is the fruit of thrift among persons of very slender resources.

* * *

But the Movement is helpless before the plight of the worst sufferers from insecurity; and Sir Robert Kindersley last week lent his authority as an economist and statistician to proposals that some sort of scheme to provide family allowances should be instituted. Allowances by individual firms or industries existed and were excellent; but these were not feasible in highly competitive trades. The State could with justice step in, the more logically because already income-tax payers received a remission for each of their children. Five shillings a week for each child after the third would cost only £7 millions a year. Five shillings for every working-class child would cost just over £100 millions. For the moment, social service expenditure has come perilously near its economic limit. But Sir Robert, who believes in economy as well as being an economist, agrees with very many people (including this journal) that money spent on family allowances would be very well spent.

* * *

Mr Roosevelt and the Primaries.—President Roosevelt is not having very much success in his attempt to turn the Democratic Party into a Liberal Party. So long as he confined himself to open support of those of his friends who are facing re-election, he was fortunate. Mr Pepper won a victory in Florida which was interpreted as meaning Southern support for the Wage and Hour Bill and helped that measure to enactment. Senator Barkley was re-nominated in Kentucky by an unexpectedly large margin. These successes encouraged the President to go over to the attack. A few of his most persistent opponents within his own party were listed to be "purged." The list included three Senators—Smith of South Carolina, Tydings of Maryland and George of Ohio—and one Representative, Mr O'Connor of New York. Senators have now all survived, and Mr was thought to be the solitary victim of the "purge." German policy was a par-prochement with Paris. The President had personally both France and Britain during the campaign. Moreover, it of Central Europe provides attempts in which he had the this was a moment for of his Postmaster-General, Mr many. Scarcely had a of the national machinery of the towards the Czechs there is no question that, for the Berchtesgaden and, as it osevelt has done himself harm by

this attempt to influence the primaries. The outburst of envenomed criticism from those who disapprove on principle of all Mr Roosevelt's acts may, perhaps, be disregarded. But the harmony of the President's nominal majority in Congress has hardly been increased, and it has been shown that the President's command over the electorate is not unlimited. But it may well be that Mr Roosevelt has his eye on 1940 rather than on 1938.

* * *

Towards Hankow.—With the Japanese advancing ever nearer to Hankow, another climax of the war in China seems imminent. In the third week of September the offensive developed a fourth point of attack, when in addition to the assaults on Teian, Wusueh and above Kwangtsi, each of which is still meeting vigorous resistance involving very high casualties, Japanese columns moved north-westwards into the province of Honan, occupying Loshan on September 21st and heavily bombing Sinyang on the Peiping-Hankow railway, and thence penetrated southwards into Hupeh to points scarcely more than one hundred miles from their final objective. On Monday last the Japanese claimed to have occupied the Split Hill forts on the Yangtze above Wusueh, and the way seemed clear for a direct assault by river on Hankow. The Chinese are fighting desperately, but appear unable to halt the advance. As with other big successes of the Japanese campaign, there is a fairly ready assumption in this country that the gaining of Hankow will not yield decisive victory to the invaders; the Chinese, it is said, will merely retreat farther into their vast territories, recuperate armed strength from their numberless peoples, and continue the struggle against an enemy whose lines of communication are ever drawing out and straining upon his power of attack, and who is harried by guerillas as soon as his front-line soldiers have passed. A writer in *The Economist* for September 17th thought differently. He pointed out that Hankow is of vital importance to the Chinese as "an essential function of the main lines of communication by which the parts of China still free from Japanese invasion are held together under a central authority," and that by holding the Yangtze from the sea to the gorges of Ichang the invaders would have cut China in two and won a great part of their war objectives. The determined Chinese resistance before Hankow, now lasting for many weeks, suggests that there is truth in this view. Meanwhile General Ugaki, the Japanese Foreign Minister, has resigned on a dispute over the scope and authority of the projected central bureau which is to handle Japanese interests in China; and the League has now applied Article 16 to Japan, leaving each Member to reserve its attitude to sanctions.

* * *

No Waiting in London Streets.—The most unfortunate fact about traffic congestion and its cure is that many persons have, quite naturally, a vested interest in the state of traffic as it is. On Friday of last week the Minister of Transport published an order proposing to forbid motor-vehicles to wait by the pavement in any of the streets in West and Central London, as well as in other areas on the North bank of the river. Immediately there were strong and widespread protests from traders, especially in the West End, against this drastic scheme. Traders depend for their livelihood upon customers being able to visit their shops conveniently, and the no-waiting ban would strike at the West End's most remunerative trade. On reflection, however, it would seem true to say that it is already impossible to leave a motor-car outside any shop in the main streets of the West End for the period needed for deliberate shopping; and even the traders' own vans are not permitted to stand after an early hour in the morning. The real grievance of traders and shoppers is surely that insufficient convenient garage and parking space is at present provided in those areas where the presence of waiting cars cannot, for the sake of traffic mobility and public safety, be easily tolerated. London must unhappily abide by the inconvenient consequences of its own monstrosity. But at least the authorities should have an inte-

grated policy for solving its problems; to regulate by bits and pieces is merely irritating. Meanwhile, shoppers in the West End would do well to walk or travel by bus.

* * *

Industrial Migration.—In July, 1937, the Ministry of Labour conducted an investigation by sample into the places where unemployment insurance books were initially issued and the places where they were exchanged in that month. The results, published in this month's *Gazette*, throw a sharp light upon the way in which workers have moved about the country in search of work. Of the books issued in Wales, for instance, over 16 per cent. were exchanged outside that division. And of the books exchanged in the London and South Eastern Area more than 10 per cent. had been issued outside this area. The following table of the number of books issued and exchanged in each of the Ministry's divisions shows clearly the drift to the Midlands and the South from the depressed areas.

GREAT BRITAIN (Males only)			
Division	No. of Books issued and still current in July, 1937	No of Books exchanged in July, 1937	Increase (+) or Decrease (—)
	'000	'000	'000
London and S.E.....	2,187	2,364	+ 177
Midlands	1,217	1,252	+ 35
South West	623	629	+ 6
North East	911	900	— 11
Scotland.....	898	861	— 37
North West	1,265	1,225	— 40
North	631	569	— 62
Wales	537	468	— 69

Notable features are the relatively favourable position of the North East, the wholesale movement from Wales, and the small increase in the South West whence many have moved over the border, into the London and South Eastern Area.

No. 1.

Lord Runciman to the Prime Minister. (1)

Westminster, S.W.1,
September 21, 1938.

My dear Prime Minister,

WHEN I undertook the task of mediation in the controversy between the Czechoslovak Government and the Sudeten German party, I was, of course, left perfectly free to obtain my own information and to draw my own conclusions. I was under no obligation to issue any kind of report. In present circumstances, however, it may be of assistance to you to have the final views, which I have formed as a result of my Mission, and certain suggestions which I believe should be taken into consideration, if anything like a permanent solution is to be found.

The problem of political, social and economic relations between the Teuton and Slav races in the area which is now called Czechoslovakia is one which has existed for many centuries with periods of acute struggle and periods of comparative peace. It is no new problem, and in its present stage there are at the same time new factors and also old factors which would have to be considered in any detailed review.

When I arrived in Prague at the beginning of August, the questions which immediately confronted me were (1) constitutional, (2) political and (3) economic. The constitutional

(1) *Note.*—A similar letter was addressed by Lord Runciman to President Benes on September 21, 1938.

question was that with which I was immediately and directly concerned. At that time it implied the provision of some degree of home rule for the Sudeten Germans within the Czechoslovak Republic; the question of self-determination had not yet arisen in an acute form. My task was to make myself acquainted with the history of the question, with the principal persons concerned, and with the suggestions for a solution proposed by the two sides, viz., by the Sudeten German party in the "Sketch" submitted to the Czechoslovak Government on the 7th June (which was by way of embodying the 8 points of Herr Henlein's speech at Karlsbad), and by the Czechoslovak Government in their draft Nationality Statute, Language Bill, and Administrative Reform Bill.

It became clear that neither of these sets of proposals was sufficiently acceptable to the other side to permit further negotiations on this basis, and the negotiations were suspended on the 17th August. After a series of private discussions between the Sudeten leaders and the Czech authorities, a new basis for negotiations was adopted by the Czechoslovak Government and was communicated to me on the 5th September, and to the Sudeten leaders on the 6th September. This was the so-called 4th Plan. In my opinion—and, I believe, in the opinion of the more responsible Sudeten leaders—this plan embodied almost all the requirements of the Karlsbad 8 points, and with a little clarification and extension could have been made to cover them in their entirety. Negotiations should have at once been resumed on this favourable and hopeful basis; but little doubt remains in my mind that the very fact that they were so favourable operated against their chances, with the more extreme members of the Sudeten German party. It is my belief that the incident arising out of the visit of certain Sudeten German Deputies to investigate into the case of persons arrested for arms smuggling at Mährisch-Ostau was used in order to provide an excuse for the suspension, if not for the breaking off, of negotiations. The Czech Government, however, at once gave way to the demands of the Sudeten German party in this matter, and preliminary discussions of the 4th Plan were resumed on the 10th September. Again, I am convinced that this did not suit the policy of the Sudeten extremists, and that incidents were provoked and instigated on the 11th September and, with greater effect after Herr Hitler's speech, on the 12th September. As a result of the bloodshed and disturbance thus caused, the Sudeten delegation refused to meet the Czech authorities as had been arranged on the 13th September. Herr Henlein and Herr Frank presented a new series of demands—withdrawal of State police, limitation of troops to their military duties, etc., which the Czechoslovak Government were again prepared to accept on the sole condition that a representative of the party came to Prague to discuss how order should be maintained. On the night of the 13th September this condition was refused by Herr Henlein, and all negotiations were completely broken off.

It is quite clear that we cannot now go back to the point

where we stood two weeks ago; and we have to consider the situation as it now faces us.

With the rejection of the Czechoslovak Government's offer on the 13th September and with the breaking off of the negotiations by Herr Henlein, my functions as a mediator were, in fact, at an end. Directly and indirectly, the connection between the chief Sudeten leaders and the Government of the Reich had become the dominant factor in the situation; the dispute was no longer an internal one. It was not part of my function to attempt mediation between Czechoslovakia and Germany.

Responsibility for the final break must, in my opinion, rest upon Herr Henlein and Herr Frank and upon those of their supporters inside and outside the country who were urging them to extreme and unconstitutional action.

I have much sympathy, however, with the Sudeten case. It is a hard thing to be ruled by an alien race; and I have been left with the impression that Czechoslovak rule in the Sudeten areas for the last twenty years, though not actively oppressive and certainly not "terroristic," has been marked by tactlessness, lack of understanding, petty intolerance and discrimination, to a point where the resentment of the German population was inevitably moving in the direction of revolt. The Sudeten Germans felt, too, that in the past they had been given many promises by the Czechoslovak Government, but that little or no action had followed these promises. This experience had induced an attitude of unveiled mistrust of the leading Czech statesmen. I cannot say how far this mistrust is merited or unmerited; but it certainly exists, with the result that, however conciliatory their statements, they inspire no confidence in the minds of the Sudeten population. Moreover, in the last elections of 1935 the Sudeten German party polled more votes than any other single party; and they actually formed the second largest party in the State Parliament. They then commanded some 44 votes in a total Parliament of 300. With subsequent accessions, they are now the largest party. But they can always be outvoted; and consequently some of them feel that constitutional action is useless for them.

Local irritations were added to these major grievances. Czech officials and Czech police, speaking little or no German, were appointed in large numbers to purely German districts; Czech agricultural colonists were encouraged to settle on land transferred under the Land Reform in the middle of German populations; for the children of these Czech invaders Czech schools were built on a large scale; there is a very general belief that Czech firms were favoured as against German firms in the allocation of State contracts, and that the State provided work and relief for Czechs more readily than for Germans. I believe these complaints to be in the main justified. Even as late as the time of my Mission, I could find no readiness on the part of the Czechoslovak Government to remedy them on anything like an adequate scale.

All these, and other, grievances were intensified by the reactions of the economic crisis on the Sudeten industries, which form so important a part of the life of the people. Not unnaturally, the Government were blamed for the resulting impoverishment.

For many reasons, therefore, including the above, the feeling among the Sudeten Germans until about three or four years ago was one of hopelessness. But the rise of Nazi Germany gave them new hope. I regard their turning for help towards their kinsmen and their eventual desire to join the Reich as a natural development in the circumstances.

At the time of my arrival, the more moderate Sudeten leaders still desired a settlement within the frontiers of the Czechoslovak State. They realised what war would mean in the Sudeten area, and which would itself be the main battlefield. Both nationally and internationally such a settlement would have been an easier solution than territorial transfer. I did my best to promote it, and up to a point with some success, but even so not without misgiving as to whether, when agreement was reached, it could ever be carried out without giving rise to a new crop of suspicions, controversies, accusations and counter-accusations. I felt that any such arrangement would have been temporary, not lasting.

This solution, in the form of what is known as the "Fourth Plan," broke down in the circumstances narrated above; the whole situation, internal and external, had changed; and I felt that with this change my mission had come to an end.

When I left Prague on the 16th September, the riots and disturbances in the Sudeten areas, which had never been more than sporadic, had died down. A considerable number of districts had been placed under a régime called Standrecht, amounting to martial law. The Sudeten leaders, at any rate the more extreme among them, had fled to Germany and were issuing proclamations defying the Czechoslovak

Government. I have been credibly informed that, at the time of my leaving, the number of killed on both sides was not more than 70.

Unless, therefore, Herr Henlein's Freikorps are deliberately encouraged to cross the frontier, I have no reason to expect any notable renewal of incidents and disturbances. In these circumstances the necessity for the presence of State Police in these districts should no longer exist. As the State Police are extremely unpopular among the German inhabitants, and have constituted one of their chief grievances for the last three years, I consider that they should be withdrawn as soon as possible. I believe that their withdrawal would reduce the causes of wrangles and riots.

Further, it has become self-evident to me that those frontier districts between Czechoslovakia and Germany where the Sudeten population is in an important majority should be given full right of self-determination at once. If some cession is inevitable, as I believe it to be, it is as well that it should be done promptly and without procrastination. There is real danger, even a danger of civil war, in the continuance of a state of uncertainty. Consequently there are very real reasons for a policy of immediate and drastic action. Any kind of plebiscite or referendum would, I believe, be a sheer formality in respect of these predominantly German areas. A very large majority of their inhabitants desire amalgamation with Germany. The inevitable delay involved in taking a plebiscite vote would only serve to excite popular feelings, with perhaps most dangerous results. I consider, therefore, that these frontier districts should at once be transferred from Czechoslovakia to Germany, and, further, that measures for their peaceful transfer, including the provision of safeguards for the population during the transfer period, should be arranged forthwith by agreement between the two Governments.

The transfer of these frontier districts does not, however, dispose finally of the question how Germans and Czechs are to live together peacefully in future. Even if all the areas where the Germans have a majority were transferred to Germany there would still remain in Czechoslovakia a large number of Germans, and in the areas transferred to Germany there would still be a certain number of Czechs. Economic connections are so close that an absolute separation is not only undesirable but inconceivable; and I repeat my conviction that history has proved that in times of peace the two peoples can live together on friendly terms. I believe that it is in the interests of all Czechs and of all Germans alike that these friendly relations should be encouraged to re-establish themselves; and I am convinced that this is the real desire of the average Czech and German. They are alike in being honest, peaceable, hard-working and frugal folk. When political friction has been removed on both sides, I believe that they can settle down quietly.

For those portions of the territory, therefore, where the German majority is not so important, I recommend that an effort be made to find a basis for local autonomy within the frontiers of the Czechoslovak Republic on the lines of the "Fourth Plan," modified so as to meet the new circumstances created by the transfer of the preponderantly German areas. As I have already said, there is always a danger that agreement reached in principle may lead to further divergencies in practice. But I think that in a more peaceful future this risk can be minimised.

This brings me to the political side of the problem, which is concerned with the question of the integrity and security of the Czechoslovak Republic, especially in relation to her immediate neighbours. I believe that here the problem is one of removing a centre of intense political friction from the middle of Europe. For this purpose it is necessary permanently to provide that the Czechoslovak State should live at peace with all her neighbours and that her policy, internal and external, should be directed to that end. Just as it is essential for the international position of Switzerland that her policy should be entirely neutral, so an analogous policy is necessary for Czechoslovakia—not only for her own future existence but for the peace of Europe.

In order to achieve this, I recommend:—

- (1) That those parties and persons in Czechoslovakia who have been deliberately encouraging a policy antagonistic to Czechoslovakia's neighbours should be forbidden by the Czechoslovak Government to continue their agitations; and that, if necessary, legal measures should be taken to bring such agitations to an end.
- (2) That the Czechoslovak Government should so remodel her foreign relations as to give assurances to her neighbours that she will in no circumstances attack them or enter into any aggressive action against them arising from obligations to other States.

- (3) That the principal Powers, acting in the interests of the peace of Europe, should give to Czechoslovakia guarantees of assistance in case of unprovoked aggression against her.

- (4) That a commercial treaty on preferential terms should be negotiated between Germany and Czechoslovakia if this seems advantageous to the economic interests of the two countries.

This leads me on to the third question which lay within the scope of my enquiry, viz., the economic problem. This problem centres on the distress and unemployment in the Sudeten German areas, a distress which has persisted since 1930, and is due to various causes. It constitutes a suitable background for political discontent. It is a problem which exists; but to say that the Sudeten German question is entirely or even in the main an economic one is misleading. If a transfer of territory takes place, it is a problem which will for the most part fall to the German Government to solve.

If the policy which I have outlined above recommends itself to those immediately concerned in the present situation, I would further suggest: (a) That a representative of the Sudeten German people should have a permanent seat in the Czechoslovak Cabinet. (b) That a Commission under a neutral chairman should be appointed to deal with the question of the delimitation of the area to be transferred to Germany and also with controversial points immediately arising from the carrying out of any agreement which may be reached. (c) That an international force be organised to keep order in the districts which are to be transferred pending actual transfer, so that Czechoslovak State police, as I have said above, and also Czechoslovak troops, may be withdrawn from this area.

I wish to close this letter by recording my appreciation of the personal courtesy, hospitality and assistance which I and my staff received from the Government authorities, especially Dr Benes and Dr Hodza, from the representatives of the Sudeten German party with whom we came in contact, and from a very large number of other people in all ranks of life whom we met during our stay in Czechoslovakia.

Yours very sincerely,

RUNCIMAN OF DOXFORD.

No. 2.

The Anglo-French Proposals presented to the Czechoslovak Government on September 19, 1938.

THE representatives of the French and British Governments have been in consultation to-day on the general situation, and have considered the British Prime Minister's report of his conversation with Herr Hitler. British Ministers also placed before their French colleagues their conclusions derived from the account furnished to them of the work of his Mission by Lord Runciman. We are both convinced that, after recent events, the point has now been reached where the further maintenance within the boundaries of the Czechoslovak State of the districts mainly inhabited by Sudeten Deutsch cannot, in fact, continue any longer without imperilling the interests of Czechoslovakia herself and of European peace. In the light of these considerations, both Governments have been compelled to the conclusion that the maintenance of peace and the safety of Czechoslovakia's vital interests cannot effectively be assured unless these areas are now transferred to the Reich.

2. This could be done either by direct transfer or as the result of a plebiscite. We realise the difficulties involved in a plebiscite, and we are aware of your objections already expressed to this course, particularly the possibility of far-reaching repercussions if the matter were treated on the basis of so wide a principle. For this reason we anticipate, in the absence of indication to the contrary, that you may prefer to deal with the Sudeten Deutsch problem by the method of direct transfer, and as a case by itself.

3. The area for transfer would probably have to include areas with over 50 per cent. of German inhabitants, but we should hope to arrange by negotiations provisions for adjustment of frontiers, where circumstances render it necessary, by some international body, including a Czech representative. We are satisfied that the transfer of smaller areas based on a higher percentage would not meet the case.

4. The international body referred to might also be charged with questions of possible exchange of population on the basis of right to opt within some specified time-limit.

5. We recognise that, if the Czechoslovak Government is prepared to concur in the measures proposed, involving material changes in the conditions of the State, they are entitled to ask for some assurance of their future security.

6. Accordingly, His Majesty's Government in the United Kingdom would be prepared, as a contribution to the pacification of Europe, to join in an international guarantee of the new boundaries of the Czechoslovak State against unprovoked aggression. One of the principal conditions of such a guarantee would be the safeguarding of the independence of Czechoslovakia by the substitution of a general guarantee against unprovoked aggression in place of existing treaties which involve reciprocal obligations of a military character.

7. Both the French and British Governments recognise how great is the sacrifice thus required of the Czechoslovak Government in the cause of peace. But because that cause is common both to Europe in general and in particular to Czechoslovakia herself they have felt it their duty jointly to set forth frankly the conditions essential to secure it.

8. The Prime Minister must resume conversations with Herr Hitler not later than Wednesday, and earlier if possible. We therefore feel we must ask for your reply at the earliest possible moment.

No. 3.

The First Letter of September 23, 1938, from the Prime Minister to the Reichschancellor.

My dear Reichskanzler, Godesberg, September 23, 1938.

I THINK it may clarify the situation and accelerate our conversation if I send you this note before we meet this morning.

I am ready to put to the Czech Government your proposal as to the areas, so that they may examine the suggested provisional boundary. So far as I can see, there is no need to hold a plebiscite for the bulk of the areas, i.e., for those areas which (according to statistics upon which both sides seem to agree) are predominantly Sudeten German areas. I have no doubt, however, that the Czech Government would be willing to accept your proposal for a plebiscite to determine how far, if at all, the proposed new frontier need be adjusted.

The difficulty I see about the proposal you put to me yesterday afternoon arises from the suggestion that the areas should in the immediate future be occupied by German troops. I recognise the difficulty of conducting a lengthy investigation under existing conditions and doubtless the plan you propose would, if it were acceptable, provide an immediate easing of the tension. But I do not think you have realised the impossibility of my agreeing to put forward any plan unless I have reason to suppose that it will be considered by public opinion in my country, in France and, indeed, in the world generally, as carrying out the principles already agreed upon in an orderly fashion and free from the threat of force. I am sure that an attempt to occupy forthwith by German troops areas which will become part of the Reich at once in principle, and very shortly afterwards by formal delimitation, would be condemned as an unnecessary display of force.

Even if I felt it right to put this proposal to the Czech Government, I am convinced that they would not regard it as being in the spirit of the arrangement which we and the French Government urged them to accept and which they have accepted. In the event of German troops moving into the areas as you propose, there is no doubt that the Czech Government would have no option but to order their forces to resist, and this would mean the destruction of the basis upon which you and I a week ago agreed to work together, namely, an orderly settlement of this question rather than a settlement by the use of force.

It being agreed in principle that the Sudeten German areas are to join the Reich, the immediate question before us is how to maintain law and order pending the final settlement of the arrangements for the transfer. There must surely be alternatives to your proposal which would not be open to the objections I have pointed out. For instance, I could ask the Czech Government whether they think there could be an arrangement under which the maintenance of law and order in certain agreed Sudeten German areas would be entrusted to the Sudeten Germans themselves—by the creation of a suitable force, or by the use of forces already in existence, possibly acting under the supervision of neutral observers.

As you know, I did last night, in accordance with my understanding with you, urge the Czech Government to do all in their power to maintain order in the meantime.

The Czech Government cannot, of course, withdraw their forces, nor can they be expected to withdraw the State Police so long as they are faced with the prospect of forcible invasion; but I should be ready at once to ascertain their views on the alternative suggestion I have made and, if the plan proved acceptable, I would urge them to withdraw their

forces and the State Police from the areas where the Sudeten Germans are in a position to maintain order.

The further steps that need be taken to complete the transfer could be worked out quite rapidly.

I am,

Yours faithfully,

NEVILLE CHAMBERLAIN.

No. 4.

The Reichschancellor to the Prime Minister.

(Translation.)

Your Excellency.

Godesberg, September 23, 1938.

A THOROUGH examination of your letter, which reached me to-day, as well as the necessity of clearing up the situation definitely, lead me to make the following communication:—

For nearly two decades the Germans, as well as the various other nationalities in Czechoslovakia, have been maltreated in the most unworthy manner, tortured, economically destroyed, and, above all, prevented from realising for themselves also the right of the nations to self-determination. All attempts of the oppressed to change their lot failed in the face of the brutal will to destruction of the Czechs. The latter were in possession of the power of the State and did not hesitate to employ it ruthlessly and barbarically. England and France have never made an endeavour to alter this situation. In my speech before the Reichstag of the 22nd February, I declared that the German Reich would take the initiative in putting an end to any further oppression of these Germans. I have in a further declaration during the Reich Party Congress given clear and unmistakable expression to this decision. I recognise gratefully that at last, after twenty years, the British Government, represented by your Excellency, has now decided for its part also to undertake steps to put an end to a situation which from day to day, and, indeed, from hour to hour, is becoming more unbearable. For if formerly the behaviour of the Czechoslovak Government was brutal, it can only be described during recent weeks and days as madness. The victims of this madness are innumerable Germans. In a few weeks the number of refugees who have been driven out has risen to over 120,000. This situation, as stated above, is unbearable, and will now be terminated by me.

Your Excellency assures me now that the principle of the transfer of the Sudeten territory to the Reich has, in principle, already been accepted. I regret to have to reply to your Excellency that as regards this point, the theoretical recognition of principles has also been formerly granted to us Germans. In the year 1918 the Armistice was concluded on the basis of the 14 points of President Wilson, which in principle were recognised by all. They were, however, in practice broken in the most shameful way. What interests me, your Excellency, is not the recognition of the principle that this territory is to go to Germany, but solely the realisation of this principle, and the realisation which both puts an end in the shortest time to the sufferings of the unhappy victims of Czech tyranny, and at the same time corresponds to the dignity of a Great Power. I can only emphasise to your Excellency that these Sudeten Germans are not coming back to the German Reich in virtue of the gracious or benevolent sympathy of other nations, but on the ground of their own will based on the right of self-determination of the nations, and of the irrevocable decision of the German Reich to give effect to this will. It is, however, for a nation an unworthy demand to have this recognition made dependent on conditions which are not provided for in treaties nor are practical in view of the shortness of the time.

I have, with the best intentions and in order to give the Czech nation no justifiable cause for complaint, proposed—in the event of a peaceful solution—as the future frontier, that nationalities frontier which I am convinced represents a fair adjustment between the two racial groups, taking also into account the continued existence of large language islands. I am, in addition, ready to allow plebiscites to be taken in the whole territory which will enable subsequent corrections to be made, in order—so far as it is possible—to meet the real will of the peoples concerned. I have undertaken to accept these corrections in advance. I have, moreover, declared myself ready to allow this plebiscite to take place under the control either of international commissions or of a mixed German-Czech commission. I am finally ready, during the days of the plebiscite, to withdraw our troops from the most disputed frontier areas, subject to the condition that the Czechs do the same. I am, however, not prepared to allow a territory which must be considered as belonging to Germany, on the ground of the will of the people and of the recognition granted even by the Czechs, to be left without the protection of the Reich.

There is here no international power or agreement which would have the right to take precedence over German right.

The idea of being able to entrust to the Sudeten Germans alone the maintenance of order is practically impossible in consequence of the obstacles put in the way of their political organisation in the course of the last decade, and particularly in recent times. As much in the interest of the tortured, because defenceless, population as well as with regard to the duties and prestige of the Reich, it is impossible for us to refrain from giving immediate protection to this territory.

Your Excellency assures me that it is now impossible for you to propose such a plan to your own Government. May I assure you for my part that it is impossible for me to justify any other attitude to the German people, since, for England, it is a question at most of political imponderables, whereas, for Germany, it is a question of primitive right of the security of more than 3 million human beings and the national honour of a great people?

I fail to understand the observation of your Excellency that it would not be possible for the Czech Government to withdraw their forces so long as they were obliged to reckon with possible invasion, since precisely by means of this solution the grounds for any forcible actions are to be removed. Moreover, I cannot conceal from your Excellency that the great mistrust with which I am inspired leads me to believe that the acceptance of the principle of the transfer of Sudeten Germans to the Reich by the Czech Government is only given in the hope thereby to win time so as, by one means or another, to bring about a change in contradiction to this principle. For if the proposal that these territories are to belong to Germany is sincerely accepted, there is no ground to postpone the practical resolution of this principle. My knowledge of Czech practice in such matters over a period of long years compels me to assume the insincerity of Czech assurances so long as they are not implemented by practical proof. The German Reich is, however, determined by one means or another to terminate these attempts, which have lasted for decades, to deny by dilatory methods the legal claims of oppressed peoples.

Moreover, the same attitude applies to the other nationalities in this State. They also are the victims of long oppression and violence. In their case, also, every assurance given hitherto has been broken. In their case, also, attempts have been made by dilatory dealing with their complaints or wishes to win time in order to be able to oppress them still more subsequently. These nations, also, if they are to achieve their rights, will, sooner or later, have no alternative but to secure them for themselves. In any event, Germany, if—as it now appears to be the case—should find it impossible to have the clear rights of Germans in Czechoslovakia accepted by way of negotiation, is determined to exhaust the other possibilities which then alone remain open to her.

(Signed) ADOLF HITLER.

No. 5.

The Second Letter, September 23, 1938, from the Prime Minister to the Reichschancellor

My dear Reichskanzler. Godesberg, September 23, 1938.

I HAVE received your Excellency's communication in reply to my letter of this morning and have taken note of its contents.

In my capacity as intermediary, it is evidently now my duty—since your Excellency maintains entirely the position you took last night—to put your proposals before the Czechoslovak Government.

Accordingly, I request your Excellency to be good enough to let me have a memorandum which sets out these proposals, together with a map showing the area proposed to be transferred, subject to the result of the proposed plebiscite.

On receiving this memorandum, I will at once forward it to Prague and request the reply of the Czechoslovak Government at the earliest possible moment.

In the meantime, until I can receive their reply, I should be glad to have your Excellency's assurance that you will continue to abide by the understanding, which we reached at our meeting on the 14th September and again last night, that no action should be taken, particularly in the Sudeten territory, by the forces of the Reich to prejudice any further mediation which may be found possible.

Since the acceptance or refusal of your Excellency's proposal is now a matter for the Czechoslovak Government to decide I do not see that I can perform any further service here, whilst, on the other hand, it has become necessary that I should at once report the present situation to my colleagues

and to the French Government. I propose, therefore, to return to England.

Yours faithfully,

NEVILLE CHAMBERLAIN.

No. 6.

Memorandum handed by the Reichschancellor to the Prime Minister on September 23, 1938 (with a Map).

(Translation.)

REPORTS which are increasing in number from hour to hour regarding incidents in the Sudetenland show that the situation has become completely intolerable for the Sudeten German people and, in consequence, a danger to the peace of Europe. It is therefore essential that the separation of the Sudetenland agreed to by Czechoslovakia should be effected without any further delay. On the attached map⁽²⁾ the Sudeten German area which is to be ceded is shaded red. The areas in which, over and above the areas which are to be occupied, a plebiscite is also to be held are drawn in and shaded green.

The final delimitation of the frontier must correspond to the wishes of those concerned. In order to determine these wishes, a certain period is necessary for the preparation of the voting, during which disturbances must in all circumstances be prevented. A situation of parity must be created. The area designated on the attached map as a German area will be occupied by German troops without taking account as to whether in the plebiscite there may prove to be in this or that part of the area a Czech majority. On the other hand, the Czech territory is occupied by Czech troops without regard to the question whether, within this area, there lie large German language islands, the majority of which will without doubt avow their German nationality in the plebiscite.

With a view to bringing about an immediate and final solution of the Sudeten German problem the following proposals are now made by the German Government:—

1. Withdrawal of the whole Czech armed forces, the police, the gendarmerie, the customs officials and the frontier guards from the area to be evacuated as designated on

⁽²⁾ [The White Paper contains a sketch-map based on the original. The information given in it is incorporated in the map below—Ed., Econ.]

the attached map, this area to be handed over to Germany on the 1st October.

The evacuated territory is to be handed over in its present condition (see further details in appendix). The German Government agree that a plenipotentiary representative of the Czech Government or of the Czech Army should be attached to the headquarters of the German military forces to settle the details of the modalities of the evacuation.

3. The Czech Government discharges at once to their homes all Sudeten Germans serving in the military forces or the police anywhere in Czech State territory.

4. The Czech Government liberates all political prisoners of German race.

5. The German Government agrees to permit a plebiscite to take place in those areas, which will be more definitely defined, before at latest the 25th November. Alterations to the new frontier arising out of the plebiscite will be settled by a German-Czech or an international commission. The plebiscite itself will be carried out under the control of an international commission. All persons who were residing in the areas in question on the 28th October, 1918, or were born there prior to this date will be eligible to vote. A simple majority of all eligible male and female voters will determine the desire of the population to belong to either the German Reich or to the Czech State. During the plebiscite both parties will withdraw their military forces out of areas which will be defined more precisely. The date and duration will be settled by the German and Czech Governments together.

6. The German Government proposes that an authoritative German-Czech commission should be set up to settle all further details.

Godesberg, September 23, 1938.

APPENDIX.

The evacuated Sudeten German area is to be handed over without destroying or rendering unusable in any way military, commercial or traffic establishments (plants). These include the ground organisation of the air service and all wireless stations.

All commercial and traffic materials, especially the rolling-stock of the railway system, in the designated areas, are to be

DISPUTED AREAS IN CZECHOSLOVAKIA

(THIS MAP SHOWS THE CESSIONS PROPOSED BOTH BY THE ANGLO-FRENCH PLAN AND BY HERR HITLER'S MEMORANDUM)

Reproduced by kind permission of The Times

handed over undamaged. The same applies to all utility services (gas-works, power stations, etc.).

Finally, no foodstuffs, goods, cattle, raw materials, etc., are to be removed.

No. 7

Letter handed by the Czechoslovak Minister to the Secretary of State for Foreign Affairs on September 25, 1938.

Sir,

September 25, 1938.

My Government has instructed me just now, in view of the fact that the French statesmen are not arriving in London to-day, to bring to His Majesty's Government's notice the following message without any delay:—

The Czechoslovak people have shown a unique discipline and self-restraint in the last few weeks regardless of the unbelievably coarse and vulgar campaign of the controlled German press and radio against Czechoslovakia and its leaders, especially M. Benes.

His Majesty's and the French Governments are very well aware that we agreed under the most severe pressure to the so-called Anglo-French plan for ceding parts of Czechoslovakia. We accepted this plan under extreme duress. We had not even time to make any representations about its many unworkable features. Nevertheless, we accepted it because we understood that it was the end of the demands to be made upon us, and because it followed from the Anglo-French pressure that these two Powers would accept responsibility for our reduced frontiers and would guarantee us their support in the event of our being feloniously attacked.

The vulgar German campaign continued.

While Mr Chamberlain was at Godesberg, the following message was received by my Government from His Majesty's and the French representatives at Prague:—

"We have agreed with the French Government that the Czechoslovak Government be informed that the French and British Governments cannot continue to take the responsibility of advising them not to mobilise."

My new Government, headed by General Syrový, declared that they accept full responsibility for their predecessor's decision to accept the stern terms of the so-called Anglo-French plan.

Yesterday, after the return of Mr Chamberlain from Godesberg, a new proposition was handed by His Majesty's Minister in Prague to my Government with the additional information that His Majesty's Government is acting solely as an intermediary and is neither advising nor pressing my Government in any way. M. Krofta, in receiving the plan from the hands of His Majesty's Minister in Prague, assured him that the Czechoslovak Government will study it in the same spirit in which they have co-operated with Great Britain and France hitherto.

My Government has now studied the document and the map. It is a *de facto* ultimatum of the sort usually presented to a vanquished nation and not a proposition to a sovereign State which has shown the greatest possible readiness to make sacrifices for the appeasement of Europe. Not the smallest trace of such readiness for sacrifices has as yet been manifested by Herr Hitler's Government. My Government is amazed at the contents of the memorandum. The proposals go far beyond what we agreed to in the so-called Anglo-French plan. They deprive us of every safeguard for our national existence. We are to yield up large proportions of our carefully prepared defences, and admit the German armies deep into our country before we have been able to organise it on the new basis or make any preparations for its defence. Our national and economic independence would automatically disappear with the acceptance of Herr Hitler's plan. The whole process of moving the population is to be reduced to panic flight on the part of those who will not accept the German Nazi régime. They have to leave their homes without even the right to take their personal belongings or, even in the case of peasants, their cow.

My Government wish me to declare in all solemnity that Herr Hitler's demands in their present form are absolutely and unconditionally unacceptable to my Government. Against these new and cruel demands my Government feel bound to make their utmost resistance, and we shall do so, God helping. The nation of St. Wenceslas, John Hus and Thomas Masaryk will not be a nation of slaves.

We rely upon the two great Western democracies, whose wishes we have followed much against our own judgment, to stand by us in our hour of trial.

I have, etc.,

JAN MASARYK.

No. 8.

Letter from the Czechoslovak Minister in London to the Secretary of State for Foreign Affairs.

Sir,

London, September 26, 1938.

I HAVE communicated to my Government the Prime Minister's question which he put to me yesterday afternoon and for which he wished an answer. This question of the Prime Minister's, as I understood it, I transmitted to Prague as follows:—

"Although Herr Hitler did say that the memorandum handed to the Czechoslovak Government by His Majesty's Government was his last word, and although Mr Chamberlain doubts very much that he could induce Herr Hitler to change his mind at this late hour, the Prime Minister may, under circumstances, make a last effort to persuade Herr Hitler to consider another method of settling peacefully the Sudeten German question, namely, by means of an international conference attended by Germany, Czechoslovakia and other Powers which would consider the Anglo-French plan and the best method of bringing it into operation. He asked whether the Czechoslovak Government would be prepared to take part in this new effort of saving the peace."

To this question I have now received the following answer from my Government:—

"The Czechoslovak Government would be ready to take part in an international conference where Germany and Czechoslovakia, among other nations, would be represented, to find a different method of settling the Sudeten German question from that expounded in Herr Hitler's proposals, keeping in mind the possible reverting to the so-called Anglo-French plan. In the note which Mr Masaryk delivered to Mr Chamberlain yesterday afternoon,^(*) mention was made of the fact that the Czechoslovak Government, having accepted the Anglo-French note under the most severe pressure and extreme duress, had no time to make any representations about its many unworkable features. The Czechoslovak Government presumes that, if a conference were to take place, this fact would not be overlooked by those taking part in it."

My Government, after the experiences of the last few weeks, would consider it more than fully justifiable to ask for definite and binding guarantees to the effect that no unexpected action of an aggressive nature would take place during the negotiations, and that the Czechoslovak defence system would remain intact during that period.

I have, etc.,

JAN MASARYK.

No. 9.

Letter from the Prime Minister to the Reichschancellor.

My dear Reichskanzler, London, September 26, 1938.

In my capacity as intermediary I have transmitted to the Czechoslovakian Government the memorandum which your Excellency gave me on the occasion of our last conversation.

The Czechoslovakian Government now inform me that, while they adhere to their acceptance of the proposals for the transfer of the Sudeten-German areas on the lines discussed by my Government and the French Government and explained by me to you on Thursday last, they regard as wholly unacceptable the proposal in your memorandum for the immediate evacuation of the areas and their immediate occupation by German troops, these processes to take place before the terms of cession have been negotiated or even discussed.

Your Excellency will remember that in my letter to you of Friday last I said that an attempt to occupy forthwith by German troops areas which will become part of the Reich at once in principle and very shortly afterwards by formal delimitation, would be condemned as an unnecessary display of force, and that, in my opinion, if German troops moved into the areas that you had proposed, I felt sure that the Czechoslovakian Government would resist and that this would mean the destruction of the basis upon which you and I a week ago agreed to work together, namely, an orderly settlement of this question rather than a settlement by the use of force. I referred also to the effect likely to be produced upon public opinion in my country, in France and, indeed, in the world generally.

The development of opinion since my return confirms me in the views I expressed to you in my letter and in our subsequent conversation.

(*) No. 7.

In communicating with me about your proposals, the Government of Czechoslovakia point out that they go far beyond what was agreed to in the so-called Anglo-French plan. Czechoslovakia would be deprived of every safeguard for her national existence. She would have to yield up large proportions of her carefully prepared defences and admit the German armies deep into her country before it had been organised on the new basis or any preparations had been made for its defence. Her national and economic independence would automatically disappear with the acceptance of the German plan. The whole process of moving the population is to be reduced to panic flight.

I learn that the German Ambassador in Paris has issued a communiqué which begins by stating that as a result of our conversations at Godesberg your Excellency and I are in complete agreement as to the imperative necessity to maintain the peace of Europe. In this spirit I address my present communication to you.

In the first place, I would remind your Excellency that as the Czechoslovakian Government adhere to their acceptance of the proposals for the transfer of the Sudeten-German areas there can be no question of Germany "finding it impossible to have the clear rights of Germans in Czechoslovakia accepted by way of negotiation." I am quoting the words at the end of your Excellency's letter to me of Friday last.^(*)

On the contrary, a settlement by negotiation remains possible and, with a clear recollection of the conversations which you and I have had and with an equally clear appreciation of the consequences which must follow the abandonment of negotiation and the substitution of force, I ask your Excellency to agree that representatives of Germany shall meet representatives of the Czechoslovakian Government to discuss immediately the situation by which we are confronted with a view to settling by agreement the way in which the territory is to be handed over. I am convinced that these discussions can be completed in a very short time, and if you and the Czechoslovakian Government desire it, I am willing to arrange for the representation of the British Government at the discussions.

In our conversation, as in the official communiqué issued in Germany, you said that the only differences between us lay in the method of carrying out an agreed principle. If this is so, then surely the tragic consequences of a conflict ought not to be incurred over a difference in method.

A conference such as I suggest would give confidence that the cession of territory would be carried into effect, but that it would be done in an orderly manner with suitable safeguards.

Convinced that your passionate wish to see the Sudeten-German question promptly and satisfactorily settled can be fulfilled without incurring the human misery and suffering that would inevitably follow on a conflict I most earnestly urge you to accept my proposal.

I am,

Yours faithfully,

NEVILLE CHAMBERLAIN.

No. 10.

Letter from the Reichschancellor to the Prime Minister.

(Translation.)

Dear Mr Chamberlain,

Berlin, September 27, 1938.

I HAVE in the course of the conversations once more informed Sir Horace Wilson, who brought me your letter of the 26th September, of my final attitude. I should like, however, to make the following written reply to certain details in your letter:—

The Government in Prague feels justified in maintaining that the proposals in my memorandum of the 23rd September went far beyond the concession which it made to the British and French Governments and that the acceptance of the memorandum would rob Czechoslovakia of every guarantee for its national existence. This statement is based on the argument that Czechoslovakia is to give up a great part of her prepared defensive system before she can take steps elsewhere for her military protection. Thereby the political and economic independence of the country is automatically abolished. Moreover, the exchange of population proposed by me would turn out in practice to be a panic-stricken flight.

I must openly declare that I cannot bring myself to understand these arguments or even admit that they can be

(*) No. 4.

regarded as seriously put forward. The Government in Prague simply passes over the fact that the actual arrangement for the final settlement of the Sudeten German problem, in accordance with my proposals, will be made dependent not on a unilateral German petition^(*) or on German measures of force, but rather, on the one hand, on a free vote under no outside influence, and, on the other hand, to a very wide degree on German-Czech agreement on matters of detail to be reached subsequently. Not only the exact definition of the territories in which the plebiscite is to take place, but the execution of the plebiscite and the delimitation of the frontier to be made on the basis of its result, are in accordance with my proposals to be met independently of any unilateral decision by Germany. Moreover, all other details are to be reserved for agreement on the part of a German-Czech commission.

In the light of this interpretation of my proposals and in the light of the cession of the Sudeten population areas, in fact agreed to by Czechoslovakia, the immediate occupation by German contingents demanded by me represents no more than a security measure which is intended to guarantee a quick and smooth achievement of the final settlement. This security measure is indispensable. If the German Government renounced it and left the whole further treatment of the problem simply to normal negotiations with Czechoslovakia, the present unbearable circumstances in the Sudeten German territories which I described in my speech yesterday would continue to exist for a period, the length of which cannot be foreseen. The Czechoslovak Government would be completely in a position to drag out the negotiations on any point they liked, and thus to delay the final settlement. You will understand after everything that has passed that I cannot place such confidence in the assurances received from the Prague Government. The British Government also would surely not be in a position to dispose of this danger by any use of diplomatic pressure.

That Czechoslovakia should lose a part of her fortifications is naturally an unavoidable consequence of the cession of the Sudeten German territory agreed to by the Prague Government itself. If one were to wait for the entry into force of the final settlement in which Czechoslovakia had completed new fortifications in the territory which remained to her, it would doubtless last months and years. But this is the only object of all the Czech objections. After all, it is completely incorrect to maintain that Czechoslovakia in this manner would be crippled in her national existence or in her political and economic independence. It is clear from my memorandum that the German occupation would only extend to the given line, and that the final delimitation of the frontier would take place in accordance with the procedure which I have already described. The Prague Government has no right to doubt that the German military measures would stop within these limits. If, nevertheless, it desires such a doubt to be taken into account, the British and, if necessary, also the French Government can guarantee the quick fulfilment of my proposal. I can, moreover, only refer to my speech yesterday in which I clearly declared that I regret the idea of any attack on Czechoslovak territory, and that under the condition which I laid down I am even ready to give a formal guarantee for the remainder of Czechoslovakia. There can, therefore, be not the slightest question whatsoever of a check to the independence of Czechoslovakia. It is equally erroneous to talk of an economic rift. It is, on the contrary, a well-known fact that Czechoslovakia after the cession of the Sudeten German territory would constitute a healthier and more unified economic organism than before.

If the Government in Prague finally evinces anxiety also in regard to the state of the Czech population in the territories to be occupied, I can only regard this with surprise. It can be sure that, on the German side, nothing whatever will occur which will preserve for those Czechs a similar fate to that which has befallen the Sudeten Germans consequent on the Czech measures.

In these circumstances, I must assume that the Government in Prague is only using a proposal for the occupation by German troops in order, by distorting the meaning and object of my proposal, to mobilise those forces in other countries, in particular in England and France, from which they hope to receive unreserved support for their aim and thus to achieve the possibility of a general warlike conflagration. I must leave it to your judgment whether, in view of these facts, you consider that you should continue your effort, for which I should like to take this opportunity of once more sincerely thanking you, to spoil such manoeuvres and bring the Government in Prague to reason at the very last hour.

(Signed) ADOLF HITLER.

(*) ? decision.

Overseas Correspondence

From Our Special Correspondents

United States

Wall Street and Europe

NEW YORK, September 20.—Last week, for the first time, American markets appeared to be directly under the influence of news from Europe. The sterling exchange was heavy, and its break through \$4.80 (although brief) was the occasion of a certain amount of apprehensive foreboding. Wheat prices fluctuated widely; cotton was heavy; and non-ferrous metals were strong. The bond market was weak, and Government securities erratic.

The main reflection of the crisis, however, was in share prices, which fell. It is questionable, nevertheless, whether the break can be explained entirely in these terms. The weakest groups, as has now come to be usual, were utilities and rails; these have lost a great part of the June advance, in which, in any case, they had participated only half-heartedly. Reasons for renewed weakness in the utilities are not wholly clear; electric power output has shown a fair recovery; and the utilities are nearer their 1937 earnings than any other important industrial group. The railways are faced with a serious labour problem. They have filed notice of cancellation of the increase in wages granted a year ago; and this has been formally rejected by the unions.

Railway Difficulties

It will be recalled that the increase in wages was granted just before the slump began. By the end of September, 1937, the railways were already in a critical position. Two small increases in freight rates were allowed by the Interstate Commerce Commission, and provided some slight alleviation. This summer there has been a small increase in traffic. Carloadings are now approaching their annual peak, and the railways must look forward to the lean and expensive operations of the winter months.

The basic problem of the railways is what suggests an inherent change in our economy. In 1937, when the index of production was nearly at the 1928 level, the total volume of goods transported, by rail, water and road, was much less than in 1928. In other words, while the railways have lost traffic to road and water competition, this loss in competition is only a fraction of the total loss. Although the index of production in 1937 and 1928 was practically the same, the character of the American economy has changed so much in the last decade that the total volume of goods transported was much lower.

Meanwhile, the railroad problem remains in suspense. For many companies the question of showing earnings on capital investment has long since gone. It has become the bald problem of meeting operating expenses and taxes. Under these circumstances weakness in railway securities is by no means inexplicable.

Revival Continues

While certain business indices have shown signs of becoming stationary, in general the data give the impression that vigorous revival is still proceeding. Steel output now exceeds 47 per cent. of capacity—a new high level for this year's recovery period, and automobile production is in full swing, except where operations are cut down by strikes. The

figures for residential building continue to show expansion. There is some element of speculation in these signs. The introduction of new automobile models needs several weeks of full production merely to supply samples to dealers; and much of this year's residential building is also of a speculative character.

Reports from retail trade are, on the whole, rather non-committal. Considering that the pump-priming programme has been operative for almost six months, its effects on consumer demand are extraordinarily difficult to ascertain. This is not entirely unexpected. The pouring out of deficit payments may, in its early stages, have encountered a neutralising current of falling incomes elsewhere. And it is not at all unlikely that the income of large sections of the population went on falling, even after the revival in business was evident. Nevertheless, the absence of any vigorous upturn in consumer demand is surprising.

Pensions and Politics

With the elections only six weeks away, the Congressional campaign has shown only one distinct feature of economic interest—the question of pensions. The Townsend Plan to provide pensions of \$200 a month for persons over 60, figured in the campaign of 1936, but was damped down by the Social Security Act. It has reappeared in the current campaign, and, as in 1936, a substantial proportion of the candidates for Congress are standing as sponsors of the plan.

A variant has appeared in California, where an amendment to the state constitution will be submitted to the voters, authorising a scheme midway between a pension plan and a Social Credit system. If this amendment is adopted, the state of California will undertake to pay "\$30 every Thursday" to persons over 50 years of age who are unemployed and not employers. As \$30 a week is well above average wages, it may be supposed that most persons over 50 would be or become eligible. Payment would be made in state scrip, to which a 2 per cent. stamp would be affixed every week, thus retiring the scrip (plus 4 per cent.) in one year. The project is, therefore, analogous to that undertaken in Alberta some years ago.

Enthusiasm for similar pension plans is most marked in those states where the proportion of elderly persons is highest; and it is fairly high in a good many places. The heavy immigration of 1900–14 was largely adult, and these immigrants are now becoming advanced in years; while internal migration has occasioned wide variations in the age distribution of the population of the several states.

Although Congress will not meet until January, dispatches from Washington regularly contain references to tax revision. The question of tax-exempt securities is frequently mentioned. The totals of such securities are as follows:—

TAX EXEMPT SECURITIES (\$000,000)

Borrower:—	Total	Wholly Exempt	Partly Exempt
U.S. Government.....	29,836*	11,600	18,236
Federal Agencies	5,712	1,393	4,319
State and Local Governments†	14,854	14,854	...
Territorial and Insular Govts.	120	120	...
Total	50,522	27,967	22,555

* Excludes U.S. securities held by Government agencies, etc.
† Estimated.

Of this total, \$17,300 millions of United States securities are held by banks, with \$3,600 millions of local government securities. Life insurance companies are estimated to hold \$4,400 millions of Federal securities and \$1,400 million of local government securities. In other words, well over half of the Federal debt is held by these two types of financial institution. Of individual holders, the largest are, of course, those in the higher income grades, to whom tax-exemption presumably compensates for the low return.

France

A Loyal Response

PARIS, September 29.—The French people have responded firmly and loyally to calls made upon them by the crisis. The majority are not ready to fight for any ideology, but all understand that further concessions would lead to war and not to peace. The dignified calm of the reservists who have been called to the Eastern frontier has made a great impression and may have important social consequences in the future.

Last week the strikers in the building trades resumed work, and the leaders of the mining unions exhorted their followers to cease their resistance to the agreement of September 1st which sanctioned supplementary hours of work; the situation was too grave for sectional controversy; and social and national discipline was imperative. If peace is safeguarded at the eleventh hour, then the crisis may prove to have had some favourable consequences; at least the country has come to realise the danger of internal conflicts.

Financial Resistance

Appreciable withdrawals from private and public banks were easily met by these institutions with the aid of the Bank of France and the use of technical measures, such as the multiplication of instruments of payment, the creation of 5,000 franc bank-notes, and the increase of the note issue. The increased note issue appears in the latest weekly return of the Bank of France, which was as follows:—

	(Thousands of francs)	September 1	September 8	September 19
Note circulation	101,759,702	102,900,034	108,185,555	
Securities, etc.	9,086,136	10,541,962	13,086,896	
Advances to the State...	40,246,954	40,246,954	43,246,954	

Prolonged pressure on public cash has caused the bank to increase its rediscount rate from 2½ to 3 per cent. and the rate for advances from 3½ to 4 per cent. New Treasury bonds (three months at 3 per cent.) have just been issued and the rate of interest on other bonds was increased to the same extent as interest on National Defence Bonds, that is, from 3½ to 4½ per cent.

Other measures have been taken to alleviate the money market and to prevent the rapid increase of hoarding just at the time when the Treasury most needs money.

A fresh ban has been placed on the export of certain products needed for war purposes. These include all foods, rubber, copper, tin, aluminium, nickel, chemicals, cloth, etc.

The Stock Exchange Waits

The tragic turn taken by the European crisis, before new hopes were raised on Wednesday, and the stiffening attitude of London and Paris led on Monday to a general fall in Stock Exchange prices. Yet the decline in the public funds was not more than 2 or 3 points, though the loan which carries an exchange guarantee was particularly hard hit because of the fear of a further decline in the pound and the franc.

On the following day, however, the market showed better resistance. Quotations were already very low indeed, and in actual fact they considerably underestimate the improvement which has taken place in the economic and social situation. Prices will rise rapidly if and when the international tension eases:—

	Highest 1938	Lowest 1938	Sept. 1	Sept. 26	Sept. 27
3% perpetual	77.25	65.30	75.64	74.00	74.50
3% redeemable ...	79.80	70.30	75.65	76.00	76.00
4% 1917	78.00	62.25	72.50	68.00	68.00
4% 1918	76.85	62.40	71.85	66.20	65.80
5% 1920	107.25	88.60	98.10	92.65	92.80
4% 1925	142.00	104.00	133.75	124.75	125.50
4½% 1932 A.	82.25	68.20	79.45	75.20	75.50
4½% 1932 B.	80.50	68.60	79.25	74.80	75.05
4½% 1937	139.40	103.75	133.20	125.50	125.50

Paid holidays in August caused the output of coal to drop to 2,866,839 tons for 15.9 working days, compared with 3,801,145 tons in July for 20.9 working days. In August, 1937, it was only 2,672,580 tons for 15.3 working days. Average daily production was thus 178,903 tons, against 182,887 tons in July and 170,040 tons in August,

1937. The number of men employed was 248,773 at the end of August, compared with 249,084 at the end of July and 238,307 in August, 1937. And the production of coke in the coke plants of the collieries was 319,037 tons, against 336,156 tons in July, 1938, and 320,963 tons in August, 1937.

Prices

Wholesale prices have risen slightly and the following table shows price movements during the last six weeks:—

	Aug. 20	Aug. 27	Sept. 3	Sept. 10	Sept. 17	Sept. 24
General index	644	646	641	644	645	648
Domestic products	669	670	664	668	666	669
Imported products	600	603	600	602	607	612
Foodstuffs	627	629	627	632	630	635
Raw materials ...	660	661	654	655	659	660

In the week ended September 17th, the number of persons unemployed was 337,932, compared with 338,255 on September 10th and 305,958 a year ago.

Bulgaria

Credits from France

SOFIA, September 17.—After the conclusion of the Salonika agreement of July 31st, by virtue of which Bulgaria obtained the right to re-arm, public opinion is optimistic about the country's security. A credit of 350 million French francs was recently granted to Bulgaria by a French banking group. This credit is to be used for the construction of roads, the purchase of railway materials, and for armament purposes.

A new commercial agreement is pending between France and Bulgaria, designed to increase Bulgaria's sales to France, so that the credit will in effect be reimbursed in kind. Negotiations are under way with Greece and some expansion of trade with that country is also expected.

The drought during the summer severely affected a number of crops, including maize, oats, forage and industrial plants, such as sunflower. As a protective measure to guarantee fodder for cattle during the winter, the Government has imposed an embargo on the export of maize, rye, sunflower-seed and forage plants. The wheat crop, on the other hand, is plentiful and is 5 per cent. greater than last year's; there will undoubtedly be a surplus for export. Vegetables and fruit, especially grapes, have likewise been abundant.

Signs of Recession

The unfavourable outlook for several crops, however, exercised a depressing influence on industrial activity, as well as on domestic and foreign trade. There has also been some curtailment of credit facilities. Commodity prices, on the other hand, have risen owing partly to events abroad, but more especially to diminished output in certain branches. The general index of wholesale prices (1926 = 100) rose from 70.5 in June to 73.3 in July, against 71.3 in July, 1937. The price of exported products has risen most—6 per cent. Compared with July and August last year business activity in the last two months fell off some 3 per cent.

Exports, which increased during the first quarter of the year and remained stable during the second quarter, fell in

BRITANNIC

Currency Reserve - £500,000

The Bank has branches throughout New Zealand
and conducts every description of Banking business
with that Dominion.

July. For the first seven months of this year the course of foreign trade was as follows:—

	1937		1938	
	Thousands of tons	Million Leva	Thousands of tons	Million Leva
Imports	184	2.663	200	2.639
Exports	377	2.701	314	2.790
Surplus of exports	193	38	114	151

During the last three months the value of both imports and exports has fallen, and their estimated values for 1938 include the exchange premium. This actual fall in values is estimated at about 5 per cent.

Great Britain ranks second among Bulgaria's suppliers, sending 8 per cent. of her imports, against 5 per cent. in 1937. The share of Germany in Bulgaria's imports has declined from 58 per cent. in 1937 to 49 per cent. this year, but she still takes 45 per cent. of Bulgaria's exports.

Argentina

Europe Over Argentina

BUENOS AIRES, September 24.—Argentine markets have lately been dominated by the European political crisis. The Stock Exchange several times showed extreme weakness when it appeared that war was imminent, and recovered sharply on the arrival of more favourable news. The grain market reacted in the opposite direction, prices rising with the increase of tension and falling back when a settlement appeared probable.

Nearly half the population of Buenos Aires is foreign-born, while the remainder are largely of foreign parentage. Hence the psychological effect of events in the Old World is much greater than in a country whose neutrality is undisturbed by blood-ties. Foreign affairs are in consequence overshadowing Argentina's own problems.

Meanwhile there is no change for the better in the economic outlook. Exports are still very low; the import surplus is increasing; and the prospects of short or medium term loans from abroad seem to have receded. No forecast of the coming crops can safely be made for another six weeks, since late frosts and drought are liable to upset early calculations. And the trend of commodity prices is still disappointing.

In August, imports were surprisingly high, while there was scarcely any recovery in exports. Thus the import surplus for the year increased considerably. The following table shows the course of Argentine foreign trade this year:—

(In Pesos)			
1938—	Exports	Imports	Export (+) or Import (–) Surplus
January	145,993,968	145,801,423	+ 192,545
February	127,714,064	123,959,819	+ 3,754,245
March	118,578,386	144,403,619	–25,825,233
April	103,690,644	116,733,359	–13,042,715
May	110,173,828	110,831,148	– 657,320
June	106,371,841	105,561,480	+ 810,361
July	107,760,397	114,381,836	– 6,621,439
August	108,940,329	120,096,850	–11,156,521
Total ...	929,223,457	981,769,534	–52,546,077

In the first eight months of 1937, Argentina had an export surplus of 750,214,668 pesos. In Argentina, which needs an export surplus of around 500,000,000 pesos annually to pay for invisible items, an import surplus, even in a single month, is an unusual occurrence, and such a long succession of deficits on trade account is very rare.

The commercial disequilibrium is due to two causes. Exports have fallen owing to small crops in Argentina, bumper wheat crops abroad, and falling prices. Imports, whose market value for the first eight months of 1938 was higher than in a similar period of any year since 1930, rose in response to the expansion of exports in the first half of 1937.

The increase in imports during the eight months is very marked in machinery and vehicles, which were higher by 54.2 per cent. in tariff value compared with the same period of 1937. This helps to explain why the United States have ousted Great Britain from first place as a supplier of goods to Argentina. In the first eight months of 1938 the United States supplied 19.1 per cent. of the total imports; Great Britain supplied 18.5 per cent., Germany (including Austria) coming next with 10.8 per cent.

Restrictions on Foreign Trade

Early in the month the Government presented to Congress a Bill to protect Argentine industry against alleged foreign dumping. The Bill has caused much controversy between rival interests and may be considerably modified before it becomes law. The main principle is the creation of a committee authorised to impose compensatory duties on goods which can be produced in Argentina and are imported and sold below the market price in the country of origin. A year or so ago it was hoped among importers that, as a result of the prosperity then existing, the restrictions on trade imposed by the crisis would soon begin to disappear; the increase of obstacles to the normal flow of trade creating fresh vested interests to be protected in the future is being viewed with a jaundiced eye.

On September 16th, the Ministry of Agriculture issued its first estimate of cereal and linseed sowings for 1938–39. Wheat sowings are calculated at 8,100,000 hectares compared with 7,778,000 hectares last year and with an average for the last ten years of 7,730,690 hectares. Linseed sowings are given as 2,780,000 hectares compared with 2,842,000 hectares last year and with an average for the decade of 2,977,516 hectares. The figures for maize are not yet available because this crop is sown much later in the season.

The latest official estimate of the production of Argentine cotton in the 1937–38 season is 45,000 tons. This is 8,800 tons less than the previous estimate, but 13,830 tons higher than in the preceding year when drought caused a partial failure. About three-quarters of Argentina's cotton is grown in the Chaco Territory in the far north of the Republic. Cotton, although holding great possibilities, is still a crop of secondary importance in the economic life of the country.

India

Favourable Outlook

CALCUTTA, September 8.—The report of the Reserve Bank of India for the year 1937–38, which has just been published, notes a fairly substantial increase in imports and a slight decline in exports. The favourable balance of trade in merchandise (for India and Burma combined) decreased from Rs. 79.51 lakhs in 1936–37 to Rs. 43.54 lakhs in 1937–38. There was also a fall in net exports of gold from Rs. 27.85 lakhs to Rs. 16.33 lakhs, but this was more than made up by a decrease in net imports of silver from Rs. 13.59 lakhs to Rs. 1.50 lakhs.

Reporting on exchange and remittance transactions for 1937–38 the Bank notes with satisfaction that though the total amount of sterling purchased by it on behalf of the Central and Provincial Governments fell short of total requirements by roughly £12 millions (for the reasons mentioned above) it had no difficulty in meeting the deficit from the large sterling resources which had been built up in previous years. Total sterling purchases for 1937–38 amounted to Rs. 32.29 lakhs (£25,140,000), against Rs. 70.87 lakhs (£53,532,000) in 1936–37. In view of the tendency to rupee weakness, it will be interesting to see how the current 1938–39 sterling purchases compare with the two previous administrative years. For the past three weeks sterling purchases have been suspended, and the absence of any revival in export business does not point to the restoration of more propitious conditions for Government.

An interesting sidelight on the official debt redemption policy is shown in the report. Although there were no new loans during the year, the Government of India were able to effect a reduction in the amount of sterling debt outstanding by approximately £3,000,000 by the purchase of sterling securities up to a limited amount and their transfer to the Government for cancellation.

Disparity between rupee and sterling security prices began to be noticeable as long ago as March, 1936, though at first the advantage of rupee paper seldom exceeded one point. During 1937–38 and 1938–39 the difference has continued to grow, the average difference being about five points, and at some periods as much as seven points. This must be attributed mainly to the confidence of the Indian investor in the sound financial position of the Government of India and the Provincial Governments, the absence of internal disturbances, and the comparative immunity of the Indian markets from the effects of political developments in Europe.

The last available trade figures, those for July, show an improved balance of trade in favour of India, a welcome change after the narrow margin disclosed by the June figures.

Letters to the Editor

West Cumberland

TO THE EDITOR OF THE ECONOMIST

SIR,—I was interested to see the comments on "The Special Areas and Aliens" in last week's issue of *The Economist*. It might perhaps be of interest to your readers to know something about West Cumberland, perhaps the least well known of all the Special Areas.

Our problem here is somewhat different to the other Special Areas in so far as our population is more scattered. On this account it was felt that a trading estate would not be suitable for the Area, owing to the distances over which workers would have to travel.

To meet our peculiar needs the Commissioner for the Special Areas formed the West Cumberland Industrial Development Company, Ltd., and granted the company powers to build factories on selected sites in various parts of the Area. This has enabled us to put down factories close to the people for whom we are endeavouring to find employment, and has also enabled us to offer prospective industrialists choice of sites, each with its own special advantages.

We have received a large number of enquiries from aliens, and particularly from Czechoslovakia. Enquiries, from whatever source they may come, are equally welcomed.

Yours faithfully,

JOHN PATTINSON.

Whitehaven.

The Shape of the Trade Cycle

TO THE EDITOR OF THE ECONOMIST

SIR,—The following appears in the article under the above heading in your issue of August 27th:—

... the changing relationships between agricultural and industrial prices are clearly of crucial significance in the working of a world economy based upon the exchange of primary products for manufactures. Low agricultural prices relative to industrial prices mean small purchases of manufactured goods and slackened industrial activity; and, while high agricultural prices mean high exports of manufactures from the industrial nations and quickened industrial activity, they also bring with them rising costs of industrial production and an enhanced cost of living which eats into the purchasing power of the industrial masses.

While high prices for primary products mean high exports of manufactures from the industrial nations and quickened industrial activity, is it inevitable that they should bring with them rising costs of production?

If manufacturers would wait until the high exports had materialised before raising the prices of their finished products to the consumer, and would look for their increased profits from the fuller utilisation of their plant rather than from the higher prices of the finished products, would they not encourage sales of their goods and avoid the reaction which the enhanced selling price of consumer goods appears always to bring about?

Much of the benefit of the higher purchasing power of the producer of primary products which high prices brings is lost as soon as the manufacturer increases the selling price of his goods. The heavy capitalisation of the modern manufacturing plant means that the interest on capital investment is a very important factor in a manufacturer's costs, in relation to which the cost of the raw material and even of wages are frequently of relative unimportance.

Although high wages to labour in manufacturing countries and high primary products prices (which means high wages in countries producing them) bring increased consumption of manufactured goods, manufacturers are inclined to regard them as unmixed evils. But, owing to the high capitalisation of manufacturing plants, the advantages of keeping machinery employed at 80–100 per cent. of its capacity are so great, as compared with utilisation of plant at only 50 per cent. of capacity or less, that the amount paid out for wages or raw materials is of smaller significance in the ultimate cost than is generally realised.

Yours truly,

FREDK. C. HARDING.

Port of Spain.

Books and Publications

Modern Banking

This book* is a general survey of modern banking. Beginning with a brief account of the functions of banks, Mr Sayers describes the typical developed banking system of to-day. Mainly he discusses English practice, but the most significant differences between our practice and that of other countries are succinctly examined. One of the most welcome features of the book is its freedom from that tendency to idealise one particular phase of banking development so common—at least up to 1931—in English textbooks. We are constantly kept aware, in reading Mr Sayers, of the extent to which any banking system is simply an adaptation to the changing needs and shifting local problems of the economic world.

This general exposition of central and commercial bank functions is followed by an analysis of the relations between banks and the wider economic system, between banking operations and international monetary conditions, and between banks and governments. Here the book becomes somewhat more difficult, but the treatment of these topics remains admirably clear and straightforward.

In Chapter VI the theory of changes in bank rate is considered. Mr Sayers regards bank rate as useful for dealing with gold movements under certain conditions. As a method of securing a general revision of money incomes, however, "it is a halting, clumsy, indeed a brutal, instrument."

The collapse of the gold standard is discussed as a double issue. Why did the bankers break "the rules of the gold standard game" between 1925 and 1931? And, were the so-called Cunliffe "rules" really the operative principles of

the pre-war banking system? To the first question Mr Sayers replies that bankers did *not* break the rules, which they (correctly) believed to allow them a wide discretion which, however, they may have exercised mistakenly.

On the more important second point, Mr Sayers claims that the Cunliffe Report did not give a true picture of the pre-war system—only of what it promised to become. It is possible to feel that this comment disposes of the issue far too summarily. If we could approach, without any preconceptions, the monetary arrangements prevailing over a large part of the world towards the end of last century, we should be impressed most of all by their dependence on a particular centre, London, which happened to have attained a high degree of technical development about the time when other countries found it desirable to use the financial facilities it offered.

It is arguable, that is to say, that without London there would have been no international monetary system as we knew it before 1931, and that it was because sterling was a gold unit that the system actually established was a gold standard one. It involved comparatively frequent movements in the English bank rate because foreign centres, despite large gold reserves, stood in something of the relationship to London in which individual banks stand to the central bank in an integrated system. In effect, the holding of the international system's final reserve—which had to be mobile—was thrown on London. We gather, however, that Mr Sayers's own position approximates to that of Mr J. M. Keynes; he is not enamoured of international monetary arrangements unless local conditions can be effectively insulated, when desired, from external changes.

So far as commercial banking is concerned, the most valuable part of this book is perhaps the discussion (in Chapter IX) of the distribution of bank assets. The ambiguity of the term "liquidity" in this connection is clearly shown. As Mr Sayers shows, what bankers have in mind is partly "shiftability," i.e. the acceptability by the central bank of certain assets, and partly the "self-realisability" at short term of other assets. The last chapter contains a short discussion of the issue involved in the nationalisation of banking.

Taken as a whole, Mr Sayers has written a book of high quality, which is as stimulating as it is informative. Attractively written, it will enable the student to trace the main outlines of modern currency and banking, in both theory and practice, unblurred by details of bank routine or commercial history.

Shorter Notices

"Europe and the Czechs." By Sheila Grant Duff. Penguin Series. 6d.

This timely book aims at giving the facts, historical, political, diplomatic and economic, about the Czech problem, in a succinct and popular way. It was brought up-to-date right up to the moment of publication; and it achieves its topical purpose remarkably well. Even now the public needs enlightenment on issues which have shaken the structure of world peace to its foundations. Miss Grant Duff has responded to their need.

"The Bank and Insurance Shares Year Book, 1938-39." Compiled and published by Trust of Insurance Shares Limited. 739 pages. 10s. 6d.

This reference book is now in its third year of publication. It has quickly established itself as an authoritative source of

information on all aspects of bank and insurance business, management and finance. The accounts of 59 banks and discount companies and 37 insurance companies are analysed in detail. Other features include records of share prices and dividends, and useful tables summarising the progress of banking, discount and insurance institutions in recent years. The value of the year book is enhanced by its pleasing format.

"International Year Book of Agricultural Statistics." International Institute of Agriculture, Rome. 1013 pages. L.100.

The latest edition of this annual volume has again been enlarged by the inclusion of statistics of various new crops, among which rubber is the most important. Six more countries have been included, of which Brazil is the largest. The statistics relate mainly to 1936 and 1937, though data for the latter year are naturally not complete.

THE BUSINESS WORLD

The City—Then and Now

TO the City's relief, the nightmare of immediate war has been averted. Many observers looking back over the events of a critical week will nevertheless feel that, although the history of 1914 so nearly repeated itself, its consequences for the City would have been substantially different. The position of the financial markets to-day is in many respects totally changed compared with the situation prevailing during the last few days that preceded the outbreak of the war in 1914. It would be essential to lay stress on the differences, if only in order to allay fears of a recurrence of the chaotic conditions which placed London at such a heavy disadvantage during the early days of the last war.

The difference between August, 1914, and September, 1938, may be summed up under three headings. First, there is a difference in the technical position of the discount market; secondly, there is a difference in the psychological preparedness of the City in an emergency; and, thirdly, there is a difference in the readiness and ability of the authorities to take action in order to cope with emergency. Regarding the technical position, it is sufficient to recall that the volume of bills outstanding at present is a mere fraction of its volume of 24 years ago. Informed estimates of the volume of bills in August, 1914, vary between £350 millions and £500 millions. Even if the lower figure is accepted, the volume of bills in 1914 must have been at least four times the present amount of bills carried by the market.

Nor is this all. About half of the bills outstanding at present have already been frozen for the last seven years. As far as standstill bills are concerned, the arrangement by which for seven years they have been treated as if they were liquid would become even more of a fiction than it is to-day if we were at war with the debtors' country, and the standstill might have to come to an end. But, in any case, since 1931 most banks have had ample opportunity to make provision for a large part of their frozen standstill credits, and they would be able to take up their own bills without any difficulty. In relatively few instances assistance might be required, but the amount involved could not be very large.

As for the bills which do not come under the standstill, the bulk of them were drawn to finance trade with countries which are not likely to be affected by European war. While temporary disorganisation might cause inconvenience in many instances, the bulk of these bills would remain self-liquidating. The more countries were opposed to us in a conflict, the higher, of course, would be the total of frozen bills. Nevertheless, the total which might conceivably have to be looked after would be a negligible fraction of £120 millions, which was the amount of the bills which had to be taken into "cold storage" in August, 1914. Thus the crisis in the discount market experienced at the outbreak of the last war would not be repeated to anything like the extent experienced in 1914.

Another important difference is in the extent to which the financial community is prepared to face the blow of an outbreak of war. In August, 1914, the City was caught utterly unprepared. The war and the financial crisis that accompanied it came entirely as a bolt from the blue. At

the end of July, 1914, everybody took it for granted that the methods that had created prosperity and stability for nearly 100 years would continue for ever. It was no wonder that the City was stunned by the shock when, from an atmosphere of confidence, it stepped into chaos overnight. Until the very last moment, most people were convinced that Great Britain would keep out of the European war. When it was decided to declare war on Germany the financial community and the public were psychologically entirely unprepared for the decision. At present, however, the state of affairs is totally different. For one thing, even before the development of acute political tension, conditions had been distinctly depressed for many months past. The political crisis itself developed slowly and gradually. After a series of isolated war scares the tension became continuous from July onward, and in the last few weeks there can have been few people in the City who did not envisage the strong possibility of an armed conflict in which Great Britain would be heavily involved. This being so, the outbreak of war would not have taken the financial markets by surprise.

By far the most important difference between the immediate financial consequences that would have followed an outbreak of war at the present time and the events of August, 1914, lies in the attitude which the authorities might have adopted in the face of emergency. There can be little doubt that the shock of the outbreak of war in 1914 became accentuated to no slight degree as a result of the Bank of England's decision to raise Bank rate to 10 per cent. It is unlikely that the authorities would resort to similar drastic methods to-day. In 1914 the main object of this move was to call in credits from abroad in order to support sterling. This object was so well attained that for a short while sterling went to an entirely abnormal premium against the dollar. Whether or not the result provided adequate compensation for the considerable inconvenience caused by the high Bank rate is a matter of opinion. What is important is that the motive for the action of 1914 does not now exist. The amount of the credits which could be called in with the aid of a Bank rate is at present so small that it would certainly not be worth while to disorganise trade and inflict inconvenience upon the financial markets for the sake of such a meagre result. In any case, the same result could be achieved much more easily through a request to the London banks to call in their foreign credits. Such a direct method of intervention would have been entirely unprecedented in 1914, but similar requests have become accepted practice during recent years.

This does not necessarily mean that the Bank rate would not be raised to a relatively high figure on the outbreak of war, or even before. But it would be done for more normal and technical reasons. If money rates should tend to rise, notwithstanding the cheap money policy which the Treasury would be as anxious in war as in peace to continue, then Bank rate would follow the trend. What is unlikely is that the deliberate increase of Bank rate, almost for its own sake, would be repeated. It may be taken for granted that the authorities would not rely upon Bank rate for the regulation of the market to anything like the extent they did in 1914. Apart from direct intervention, such as the request to call in short-term credits, the

A NEW BOOK by William J. Baxter

"AMERICA FACES A COMPLETE BREAKDOWN of Government and Business"

In 60,000 words the author discusses the coming breakdown, the "Ray of Hope" for revival and the outlook for the "Four Horsemen," Capital-Labour-Management-Government.

authorities have at their disposal their highly developed technique of open market operations, which was in a much more rudimentary form 24 years ago.

The Government is altogether better equipped to meet an emergency than it was in 1914. In the sphere of foreign exchange it is now in possession of an organisation by which the market can be held under control. Had the Exchange Equalisation Account existed in 1914 the sterling-dollar rate would never have been allowed to rise even temporarily to the drastic level of \$7 to the pound. An outbreak of war might, in fact, make comparatively little difference to the activities of the Exchange Equalisation Account, which would continue to control sterling as before. Its task might well be facilitated by the restrictions that would doubtless be placed on some categories of transactions by British subjects.

Stock Exchange Policy

IT would be difficult to discover any period in Stock Exchange history in which hopes have sunk so low, to be so spectacularly revived, as in the past five days. The security markets have been increasingly apprehensive since the Czech problem came to a head. But this week they have tasted the bitter threat of war itself, and enjoyed the relief of catastrophe averted at the fifty-ninth minute. When the Prime Minister, at the outset of his dramatic speech on Wednesday, declared that the situation to-day had no parallel since 1914, his words were appreciated to the full in another "House." Until the unexpected *dénouement* at the end of the speech sent prices ablaze in the "Street" market, indeed, the gilt-edged market had been dealing for two days on the basis of minimum prices—a situation unknown since the Great War. For any security market, the maintenance of peace is an essential condition for free dealings and representative quotations. As soon as emergency threatens, the most which investors and professional dealers can do is to avoid precipitate action, and, in the process, the normal channels of business inevitably dry up.

In the strained circumstances of the past three weeks, the London Stock Exchange may take credit for calmness and discretion. It is true that the immediate danger of war—which threatened on September 14th, and again this week—produced serious falls in quotations, and an inevitable increase in sales, particularly of gilt-edged securities. On Monday this week, War Loan again provided a target for renewed selling, falling 4½ points to the wholly abnormal basis of 93.96. Indeed, dealings in the stock were marked as low as 90 and as high as 98—surely the widest extremes ever recorded in one day's business in the premier gilt-edged security.

Against falls such as these, some action was imperative if a semblance of rational dealing conditions was to be preserved. There were, as always, the usual complaints regarding the "uncommercial" attitude of jobbers, coupled with the usual unreadiness of the critics to perceive that it is not the jobber's function to take unlimited amounts of stock in a "one way" market. Accordingly, to meet a situation which was indeed without parallel since 1914, jobbers in gilt-edged, municipal and dominion stocks quoted agreed minimum prices at the opening of business on Tuesday, below which they were not prepared to deal. In most cases, these minimum prices (which are set out in greater detail on page 30) were the same as, or fractionally higher than, the bid quotations in the Official List on Monday. War Loan, for instance, which was quoted 93.97 on that day, was called 93.95, and could not be sold below 93. These precautionary measures by the jobbers, although not taken at the behest of the Stock Exchange Committee, no doubt had the latter's approval.

Brokers were not stopped from dealing below these minimum prices. They appear in the main to have observed them loyally, but some "outside" bargains at

During the tension of the last few days, part of the transition from a state of peace to a state of imminent war had been gradually accomplished. Voluntary measures for fixing minimum prices for Government loans have been successfully tested. Others have been discussed and decided upon, so that there would be no need for hasty panic decisions. There is therefore every reason to believe that if the final shock had come, it would have had a relatively moderate effect upon the City. The idea that the outbreak of a major war must necessarily be accompanied by a major financial panic is not merely fallacious but dangerous, for the mere fact that an unduly large number of people believe that the experience of 1914 must necessarily be repeated would have tended to accentuate the disorganisation, which war must necessarily bring to the mechanism of the City.

lower levels are reported to have been transacted. Nor did the scheme carry any Treasury mandate. It was, in fact, a purely private arrangement between the jobbers in one section of the market to produce order where disorder threatened, and there can be no doubt that it was generally successful, and generally appreciated. There is naturally a risk that fixed minimum prices, under the conditions which prevailed during the first part of the week, provide an outlet for sellers without encouraging buyers; but selling orders have generally been cleared, even though jobbers on occasion have been willing to offer stock at the minimum—in other words, to forgo any "turn" in the interest of maintaining a market.

In unofficial dealings on Wednesday, and when the "House" re-assembled on Thursday, these minimum prices had already lost reality on the sudden change in the political situation. But they open up the larger question of Stock Exchange policy in times of extreme political emergency. They appear to provide a partial solution to a problem which has been debated for twenty-four years: under what conditions, if any, should the market be closed? When the closure was applied on July 31, 1914, there were many in the Stock Exchange, as well as outside, who criticised the action of the authorities. On that occasion closure preceded the fixing of minimum prices, which took effect on September 14th—nearly four months before the market was again officially opened. To-day, the entire market is in an appreciably stronger position in one respect than in 1914. Its total commitments have been reduced to a point which approaches more closely to technical equilibrium than on any occasion in recent years. Yet serious price reactions, as Monday's dealings clearly threatened, might have produced untoward effects on other parts of the credit structure. The uncovering of loans backed by collateral security was regarded in 1914 as an imperative reason for closing the Stock Exchange. Judging from the behaviour of the market when it was reopened in 1915, however, it was not easy to justify a step which affected the prestige of the freest market in the world, when Lombard Street itself was still able to function with assistance.

It is probable that the majority opinion to-day would be in favour of maintaining an open market, provided that precautions against the consequences of extreme selling could be observed. Even the partial introduction of minimum prices this week has demonstrated their superiority both to closure and to panic. Under conditions of prolonged crisis, minimum prices would need to be extended to all markets under official control to prevent "black" dealings, at least for a time. Here, again, the war-time precedent is of interest. Treasury sanction was given to a new list of minimum prices in March, 1915. In November of that year dealings in gilt-edged stocks were released from control, and in July, 1916, the market was restored to full freedom. As an alternative even to short closure, the advantages of this method of control must be obvious.

As we write, investors have real ground for hoping that

the need for such measures will be averted. But even now the investor can hardly venture far upon a positive policy. A political settlement, even of a partial character, would undoubtedly bring a substantial further recovery in all sections of the market. Yet it is evident that the long-term market outlook, on these assumptions, may still present the unattractive alternatives of a re-armed peace or eventual war. On the former assumption, fiscal strain will become increasingly evident; the armament industries and their ancillaries will enjoy a further period of intense activity; and the course of trade generally will be determined largely by political factors, secondarily by arms activity, and only partially by the play of free economic forces and the trend of American industry.

These, after all, are the general conditions under which the investor has been called increasingly to operate during the past year or two, and he has had ample notice to effect his dispositions to accord with them. The effect of the last critical weeks upon business activity has yet to be recorded statistically, but even if the crisis is averted it has obviously affected the speed of general economic recovery. Yet, considered solely in terms of investment values, such conditions are infinitely preferable to war, which spares no department of the Stock Exchange. The following index numbers illustrate this point:—

	British and Indian Stocks*	British Industrials*	S. African Mines*	U.S. Common Stocks†
July, 1914	100	100	100	100
January, 1915	91	85	75	97
December, 1915 ...	84	73	75	126
December, 1916 ...	76	83	80	130
December, 1917 ...	75	88	80	91

December, 1920 ...	63	66	76	91

* Based on *Bankers' Magazine* indices. † Based on Cowles Commission index.

By the end of 1916, it will be seen, gilt-edged, industrial and mining securities had suffered a depreciation of between 20 and 25 per cent., compared with July, 1914. It was not, indeed, until war had been ended a year that

inflationary factors held sway and fixed-interest and equity stocks parted company. But these inflationary consequences were essentially post-war phenomena, and they proved short-lived. The only major protection available to the investor during the early stages of the Great War lay in a holding of American common stocks, although even these were 9 per cent. lower at the end of 1917, compared with July, 1914.

Such figures illustrate the limitations to which any attempt to hedge the war risk is necessarily subject. In minor degree, the same limitations hold under conditions of re-arming peace. The main distinction between the two situations is one of economic control. In both, the problem of Budget deficits and high taxation must be faced. In both, the authorities would keep a close watch on the profits of the armaments industry. In both, fears of inflationary developments upon the prices of essential materials and primary foodstuffs would be tempered, for a time at least, by the existence of considerable unabsorbed supplies, actual and potential. All these factors tend to limit the advantages of equity shares generally, as a war risk hedge. They might leave some scope for industries serving the armament trades and for suppliers of essential war materials. But they might not provide the same advantages as carefully chosen gold-mining shares or American industrial securities, under wartime conditions.

Such conclusions illustrate the negative policy which alone would have been open to the investor, if a grave emergency had developed into war. For the immediate future, much depends on the nature of the Munich agreement, and the political temper which emerges from it. It may renew the forces of economic recovery in the United States which have lately been checked. If it demonstrates that war has been wholly averted, rather than deferred, it could pave the way to general economic improvement. But these are large assumptions at present, and the investor would be well advised to exercise all his powers of vigilance for the time being. Meanwhile, the crisis of recent weeks will have served to emphasise one useful investment lesson—that a well-chosen portfolio, in the last resort, affords the best protection against adversity, short of actual disaster.

Munition Metals

IN this machine age metals play a decisive part in peace as in war. But while the qualities and uses of the non-ferrous metals—aluminium, copper, lead, spelter and tin—have received much publicity, the steel alloying metals—including chromium, cobalt, manganese, molybdenum, nickel, titanium, tungsten and vanadium—have perhaps not received the attention they deserve as a result of their growing importance, partly, perhaps, because the majority of them are sold by private treaty. Antimony and mercury, though not, strictly speaking, ferro-alloying elements, are also important munition metals. Although some substitution is possible, ferrous metals are indispensable in the manufacture of modern armaments. A description of their properties, uses and sources of supply may, therefore, be of interest.

To the layman, steel is a uniform product made from iron ore; but the engineer recognises an infinite variety of steels—just as a connoisseur of wine can distinguish between a multitude of growths, each with its distinctive flavour. Since the Great War technical progress in metallurgy has, perhaps, been more rapid than in any other period of the steel age, and the main feature of recent progress in this field has been the development of alloy steels—the metal markets now recognise some 8,200 alloys—designed to meet the strains and stresses to which the modern aeroplane, the motor car and the engines of war are subjected. Indeed, metallurgical research is probably more highly concentrated on alloy steels than on any other type of ferrous metal.

The remarkable increase in the efficiency of modern engines of all kinds is largely due to the rapid technical progress in the manufacture of alloy steels. It is now possible, for example, to produce steels of a tensile strength of over 130 tons per square inch. As a result, the ratio of power to weight, which is all-important in the aeroplane engine, has been appreciably increased. Again, in the manufacture of armaments, makers of armour-piercing shells have been running a neck-and-neck race with producers of armour plate, which has led to a remarkable improvement in the efficiency of both. A few facts concerning the chief uses of the different alloying metals may be briefly set out.

Ask for

on sale everywhere

Manganese.—An addition of 7-18 per cent. of manganese to steel results in an alloy of great strength and elasticity combined with hardness. It is used in the manufacture of jaws for stone and ore crushers, of dredger baskets, tramway and railway switches and crossings, mining car wheels and burglar-proof vaults. Its non-magnetic property is of great value in the construction of submarine mines whose presence cannot be detected by magnetic means. It enters into the composition of shrapnel-proof helmets. Manganese is also used for decarbonising, desulphurising and purifying steel.

Chromium.—Added in small quantities, chromium slightly raises the tensile strength of steel but slightly diminishes its ductility. A large proportion of chromium renders steel brittle. Steel containing chromium is used in the production of armour-piercing shells and diaphragms in connection with submarine work. It enters into the composition of stamp shoes, dies for crushing hard ores, drawing dies, finishing rolls, chisels, impact tools, axes, hammer heads, balls and rollers for bearings, automobile axles and springs and locomotive frames and springs.

Nickel.—The ability to impart great tensile strength and ductility as well as corrosion-resistance to alloys is nickel's outstanding merit. Other applications arise from the magnetic qualities found in alloys containing certain percentages of nickel. While important as an armament metal, by far the greater part of the output of nickel is used for commercial purposes. Nickel steel is employed in machinery handling foods and beverages, in the mining and petroleum industries and in the moving parts of heavy-duty transport equipment, from high-speed aviation to slow-moving Diesel engines.

Cobalt.—The principal uses of this metal are about evenly divided between the metallurgical and ceramic industries. In metallurgy it is used in high-speed cutting steels, in the production of stellite alloys (cobalt and chromium with small amounts of other metals) used for cutting metals at high speed, and in the manufacture of permanent magnets.

Tungsten.—Tungsten renders steel hard and improves its wearing properties. Consequently, it is indispensable in the production of cutting, crushing and grinding tools. It is used for filaments in electric lamps and wireless valves and as a catalyst in chemical operations.

Molybdenum is an excellent substitute for tungsten; it is to a large extent interchangeable with vanadium and can be used in place of nickel, for example, in the manufacture of structural steel.

Vanadium.—Vanadium has probably the most powerful influence of all alloying metals on the properties of steel. An addition of 0.2 per cent. of this metal increases the elastic limit and tensile strength of mild steel by about 50 per cent. It is used in the manufacture of the highest classes of tool steel. Ordinary steel becomes brittle or "fatigued" under continual vibration or under variable strains. The addition of a small percentage of vanadium helps, for example, the piston and connecting rods of an engine, alternately under tension and compression, to resist deterioration.

Titanium.—By adding to a bath of steel or cast iron a ferro-carbon titanium containing about 15 per cent. of titanium, the bath can be almost entirely cleansed from dissolved or occluded gases, such as oxygen and nitrogen, and from oxides of iron usually present in steels. Titanium, therefore, is used in the production of pure steels. The addition of 1 per cent. of titanium to steel renders it practically rust-proof and very hard.

Antimony and Mercury.—Antimony is used in the production of "hard" lead, type metal, anti-friction metals and Britannia metal. It is an essential constituent of the ordinary shrapnel bullet, its effect being to harden the lead and prevent the bullets from losing shape on the bursting of the shell which contains them. The fulminate of mercury is employed as a detonator for high explosives and in percussion caps and primers for the ignition of explosives employed in the mining industry.

The principal sources of supply of these metals are given in the accompanying table, which shows production in the principal countries in 1936, as estimated by the Imperial Institute. As will be seen, all the principal consuming countries are dependent on imports for most of these metals, and only a few industrial countries—including the United States, the U.S.S.R., Italy and Japan—possess significant domestic supplies of any one of them.

The British Empire produces substantial quantities of chromium, cobalt, manganese, titanium, tungsten and vanadium and practically the whole of the world's output of nickel, but is deficient in antimony, molybdenum and mercury. Molybdenum can be obtained from the United States. Difficulties, in time of war, might arise in the case of mercury, for supplies might not be obtainable from Italy, and, in lesser degree, of antimony if Chinese supplies were not available. France, like the United Kingdom, has insignificant domestic resources, but obtains some of the metals from her Empire—cobalt and molybdenum from Morocco, and nickel and chromium from New Caledonia.

(a) Ore. (b) Metal content of ore. (c) Concentrates. (d) 1935. (e) Exports.

Germany is bare of domestic supplies; and her immediate neighbours can supply only small quantities of chromium (Yugoslavia) and mercury (Czechoslovakia). Italy is also devoid of all these metals except mercury, of which Italy and Spain are the world's two chief sources. Some of Japan's needs of chromium and manganese can be supplied from domestic ores, but she has to rely on imports for the other metals. The United States produces tungsten and vanadium, is practically independent of foreign mercury and is the most important producer of molybdenum. Canada is the largest source of nickel and has a large production of cobalt, and Mexico produces antimony. North America as a whole thus lacks only chromium, manganese and titanium.

From the strategic point of view, Great Britain would be favourably placed for obtaining supplies of almost all these metals in wartime, provided the sea routes to America, Africa and the East could be kept open. France would presumably be in the same position. Russia would have no difficulty about chromium and manganese and would have some nickel, but, if the trade routes with the

outside world were closed, would be devoid of the other metals, except, perhaps, tungsten and antimony from China. Germany and Italy would be in a very unfavourable position. Japan, if she had access to Chinese supplies, would be tolerably well supplied with at least some of the more important of these metals.

The relative importance of these metals cannot be judged by the volume of their output, for the percentage of the alloying element added to steel in order to produce the desired properties varies considerably. But, taken as a group, their growing importance for commercial and armament purposes is revealed by the remarkable increase in demand during the past few years. For example, the world's output of chrome ore rose from 590,000 tons in 1929 to 1,040,000 tons in 1936. During the same period, world production of manganese ore advanced from 3,600,000 tons to 5,200,000 tons, while output of nickel rose from 55,000 tons to 87,200 tons. Moreover, metallurgical experts foresee further technical progress which will assure a continuance of the rapid increase in the demand for the majority of these rarer metals.

Finance and Banking

Rise in Discount Rates.—The situation in the discount market has this week evolved with a rapidity equal to the speed of events in the international crisis. Towards the end of last week it was already apparent that in the tug of war on rates between the popularity of the end-of-year bill and the implications of international developments the former technical factor failed to make the slightest impression. The end-of-year Treasury bills therefore went at 1d. under 1 per cent. During the first half of the present week the open market rate of discount was raised day by day and by Wednesday up to 2 per cent. was in certain cases quoted for three months fine bank bills. The Bank rate had in other words become theoretically effective, though in practice no bills were taken for discount at the bank. In the prevailing circumstances there has of course been no finely adjusted open market for bills. The rate for remitted bills to be discounted "at best" has differed fairly widely from that for bills obtained in competition. On Wednesday, for example, the competitive rate may have been 1½ and not 2 per cent., but none the less a fair amount of business was done at the higher figure. The rise in discount rates has not been caused by a corresponding hardening in short-term money rates. The clearing banks have continued to lend against bills at ½ per cent., though the volume of such money is strictly limited. There has been some evidence of calling from the clearing banks during the week. For bond money the rate paid to outside lenders has remained between ¾ and ⅞ per cent., but it is fairly evident that the total supply of outside money is now much smaller than it was. Many houses in the discount market, realising the precariousness of a good deal of what remains of outside money, have preferred to cease depending on it, and have gone to their clearing bankers for bond money for which the fixed charge of 1 per cent. has been made. The borrowers have decided to pay a little more for their bond money, regarding that as an adequate price to pay for the advantage of converting such loans from "bad" to "good" money.

The discounting of bills of longer currency has been largely a matter of negotiation—and of difficult negotiation at that. Up to 3 per cent. has been quoted for six months bills but the rate has been wholly nominal. One illustration of the difficulties experienced in discounting longer dated paper was provided by the tenders for the Liverpool yearling bills opened on Tuesday of this week. The amount on offer was £1,000,000 and applications totalled only £100,000. Even these were apparently based on so unfavourable a rate to the borrower that they were rejected and the tenders postponed to some more propitious moment. The dramatic turn of events on Wednesday after-

noon has found little reflection in the discount market. Though no change in Bank rate was made on Thursday the level of quoted open market rates remained substantially unchanged with three months bills at 1½ to 1⅞ per cent. One of the reasons for this insensitiveness of discount rates to the change in political sentiment was the fact that the money position on Thursday was feeling the backwash of the enormous movements of funds that occurred in the more strained hours on Wednesday. The exodus of capital, which was largely responsible for the drop in sterling to \$4.60, found its counterpart on Thursday in heavy calling of funds by foreign and other outside institutions. Moreover, large withdrawals of bank notes on Wednesday by firms large and small which were preparing for the possible eventuality of a bank holiday and temporary moratorium were having an effect on the clearing banks' cash positions and helped to maintain comparatively stringent conditions in the short loan market. Even though the climax in the international crisis may possibly have passed, it is unlikely that discount rates will return in the near future to their recent basic minimum levels.

Record Note Expansion.—This week the note circulation has risen from £479.2 to £500.9 millions. This increase of £21.7 millions is a record for any single week since the amalgamation of the note issues ten years ago. No comparison, of course, is possible with August, 1914, as notes were then not the main medium of circulation. There are many obvious explanations for this movement. First there are the normal quarter-day requirements, while there may also have been a certain amount of foreign hoarding. Then the banks have probably been strengthening their currency reserves all over the country, not because they are afraid of anything like a run, but because the outbreak of war would have created new currency requirements. Territorial, when mobilised, would at once qualify for pay; there might be billeting charges, and also wage payments for the host of miscellaneous civilian public servants. The evacuation of children and others

The OCEAN

Accident & Guarantee Corporation, Limited

FOR ALL CLASSES OF INSURANCE

from London also requires a large amount of currency, both for railway fares and also because it is unwise to send members of the family away without a few pounds in their pockets. Some people, too, will have had memories of the August, 1914, bank holidays, and so have thought it wise to have a little extra cash in the house. All these new requirements can easily mount up to a formidable total, and so this week's increase in the note circulation cannot be regarded as ground for either surprise or anxiety.

* * *

Wild Exchange Movements.—Ever since the breakdown of the Godesberg conversations extraordinary movements have been witnessed in the foreign exchange market. On Wednesday, in particular, when the fears that war could no longer be averted were suddenly relieved by the news of the Munich conference, the market was so chaotic that it is almost impossible to trace the course of events. Rates were quoted almost for the moment and with wide margins, and even so they disappeared almost before a dealer could lay down his telephone. How business could be done at all is a mystery, and yet the turnover in dollars alone on that day is estimated at little short of \$100 millions, with the British Control selling heavily in the morning and buying dollars back again in the late afternoon. In these circumstances it is impossible to give very connected records. Suffice it to say that up to Mr Chamberlain's electric announcement on Wednesday afternoon there was a continued demand for dollars in exchange for gold, sterling, French francs and practically all European currencies. The various Controls did the best they could, but from \$4.19½ on the evening of September 23rd sterling slid and slid, until on Wednesday it broke from \$4.72 to \$4.61. Three months' dollars went to 3 cents premium, with a strong commercial demand and the British banks scrupulously refraining from seeking the certain profit which they could have made out of swap purchases of spot and sales of forward dollars. On this same day the French franc broke through the Daladier limit of Frs. 179, the rate rising to Frs. 180, with three months' francs nominally at Frs. 7 discount. The Dutch authorities had earlier in the week abandoned their peg with sterling at Fl. 8.92, and on Wednesday the rate fell to Fl. 8.50. Swiss francs touched a low point of Frs. 20.50, and belgas one of bel. 26.95. Then came Mr Chamberlain's announcement of the Munich conference. In the twinkling of an eye sterling swung back to \$4.72½, reacted to \$4.68 and closed at \$4.71. Early on Thursday morning dollars were offered at \$4.74 in a relatively quiet market. Contractual rates rebounded in sympathy, and on Thursday morning French francs were quoted at Frs. 178½-¾, guilders at Fl. 8.80, Swiss francs at Frs. 21.00-05, and belgas at bel. 27.95-28.00. And so for the moment the foreign exchange market has settled down after one of the most memorable weeks in its history.

* * *

The Flight from Gold.—The London bullion market could not have expected to have escaped from the week's turmoils, and its hopes or fears were certainly

realised. The wide fluctuations in the exchange market and the further increase in the war risks rate from 2s. 6d. to 5s. per cent., restricted arbitrage to post-fixing dealings. There was also a fear among certain foreign holders that it was no longer safe to hold gold, as it would certainly be commandeered as soon as war broke out. Hence there was a general rush to sell gold, and after the week-end the British Exchange Equalisation Account became the sole buyer. On the first three days of this week £5,700,000 of gold was thrown on the market at the fixing alone. Between September 23rd and 28th the London price rose from 144s. 6d. to 147s., but even this latter price fell nearly 2s. short of the American shipping price parity, so far as the latter could be determined at all. Thus the British authorities only bought gold at a price very low from their point of view. The gold taken by the Exchange Equalisation Account was in one sense of no benefit, for the vendors of the gold at once bought dollars, and so the Exchange Account at once lost the gold again through its efforts to support sterling. It was, in fact, no more than a pipe-line, and all that can be said is that the Exchange Account's net gold losses were not the full amounts of its sales to the American authorities in support of sterling, but only the latter less its purchases in the London market. Still, this week's shipments to the United States are returned at £16,708,079, so that the Account has lost heavily on balance. It is, however, possible to say that this week's purchases of dollars for pounds did not wholly constitute a flight out of sterling. It represented a general rush for dollars out of gold, sterling, Continental currencies—in short, out of everything. On Thursday morning the market was easier. The recovery in sterling brought the price back to 145s. 10d., and only £1,300,000 was dealt in at the fixing.

* * *

French Precautions.—On Tuesday the Banque de France raised its discount rate from 2½ to 3 per cent. Other short-term rates are adjusted accordingly. Then the rate on National Defence Bonds with 18 months to two years to run is raised from 3½ to 6½ per cent., while the changes in Treasury bill rates are as follows:—

Maturity	Old rate	New rate
75 to 105 days.....	2½	3
Six months.....	2½	3½
Twelve months.....	3	4

The main object of this limited rise in short-term rates is thought to be to discourage currency hoarding: for the Banque de France's return dated September 22nd shows an expansion in the note circulation from Frs. 102.9 to Frs. 109.6 thousand millions during the preceding fortnight. With the same object in view it has been decided to make it simpler to use credit instruments instead of currency as a means for making payments. Circular letters of credit are to be issued by the Banque de France, free of commission, and it is pointed out that as no restrictions on the withdrawal of bank deposits are contemplated these letters of credit will be for all practical purposes equivalent to bank notes. Fresh steps are also being taken to simplify and popularise savings accounts at the Post Offices. Meanwhile, a new issue of three months' 3 per cent. Treasury bills is being made, in denominations ranging from Frs. 100 to Frs. 5,000. Interest is payable in advance, and they are eligible either for rediscount at the Banque de France or as collateral for 30-day advances from the Banque. According to one report they are to be used by the French authorities in making payment for requisitions, and to that extent they might become a supplementary form of currency. Certainly they are being issued in denominations small enough for that purpose, but it is doubtful if the introduction of an interest-bearing form of currency is either necessary or desirable.

* * *

The Banks' War Preparations.—The banks have shown little perturbation at the immediate reactions of the crisis. They are naturally not entering into any fresh commitments, and they are equally anxious to maintain their liquidity. This explains the current week's difficulties of the money market, which are described in a Financial Note. The decision to maintain minimum prices for gilt-edged

securities will alleviate the banks' anxieties regarding both their own investments and securities held as collateral for loan. They recognise, however, that nothing is to be gained by curtailing facilities to normally credit-worthy customers, and indeed that any tendency in that direction would be a national disservice. Preparations of a more practical character are those constituting the banks' part in air-raid precautions. In addition to the protection of staffs, the banks are having to arrange for the safeguarding, and as far as possible for the duplication, of ledgers, records, customers' signatures, authorisations, and the whole host of documents upon which depend the smooth working of our credit

system. In this task the branch-banking system no doubt is of great use, for branches scattered throughout the country could easily be made the repositories of essential documents usually kept at head office. There is also no reason why certain departments now housed in London could not be removed. An obvious and most important example is country clearing, which deals with cheques drawn on offices everywhere outside the Metropolitan area. There is as yet no public intimation of the banks' intentions, but it seems reasonable to assume that schemes dealing with these and other points have been prepared and are ready, if need be, to be put into immediate operation.

MONEY MARKET NOTES

Foreign Exchanges

THURSDAY proved a quieter day. This came as a great relief to the foreign exchange market, after its hectic experiences of previous days, which are described in a Financial Note. The New York rate, which had dropped on Wednesday to \$4.61, hovered on Thursday around \$4.74, then \$4.75, next back to \$4.73½, and finally to \$4.74½. The spot Paris rate, which on Wednesday had risen to Frs. 180, was brought back to Frs. 178½-¾, or nearly to its old pegged rate of Frs. 178½. Guilders, after several fluctuations, settled down at Fl. 8.82-4, while belgas went to Bel. 28.10, compared with Wednesday's low point of Bel. 26.95. Swiss francs came up to Frs. 21.09—again considerably above Wednesday's low point of Frs. 20.50. Registered marks were quoted at 61½ per cent. discount on a basic rate of Rm. 11.90, this making their rate about Rm. 31 to the pound. Taking the market as a whole, a fair amount of business was passing on Thursday, but it fell far short of the enormous turnover of the previous day. Clearly operators were on the whole hoping for a successful outcome to the Munich meeting.

*

The Bank Return

THIS week's abnormal increase of £21.7 millions in the note circulation, which is discussed in a Financial Note, has by itself called for special measures, for otherwise there would have been a big and undesirable contraction in the joint-stock banks' balances at the Bank. As matters stand, both the Reserve and the Proportion are heavily down from last week, but the authorities wisely decided to ignore those reactions and to concentrate upon maintaining the supply of bank cash.

The remedy adopted was the special buying of bills and other securities. The Bank of England itself bought £15.2 millions, for Government securities have risen by that amount. The Exchange Equalisation Account has also continued to re-invest the proceeds of its gold sales in Treasury bills, either obtained through the tap or purchased in the open market. During the week

to September 24th, the tap issue rose by £11 millions, tender issues of Treasuries being reduced by £12 millions; while this week's Bank return shows a sharp reduction of £7 millions in public deposits. The latter, indeed, are now so low as to suggest that the Exchange Account has successfully re-invested all its surplus cash. Thanks to the Bank's purchases of bills and the Exchange Account's disbursement of its cash, bankers' deposits have been saved from the serious contraction which would otherwise have been caused by this week's heavy currency withdrawals. They have in fact only fallen by £1.0 millions, which shows how successfully this new problem has been handled.

*

The Money Market

EARLIER events in the money market are described in a Financial Note. On Thursday there was still a keen demand for money, in spite of the easier political outlook. The banks were not eager to do more than continue old loans, and while there was some desire to obtain bond money from the banks it was not always possible to do so. In spite of this difficulty, and also of the shortage of money among outside lenders, rates were slightly easier than on Wednesday, the rate for Thursday afternoon being described as "½ per cent. offered," compared with ¾ per cent. in the morning. To that very limited extent the market responded to the more hopeful outlook.

	Sept. 20, 1937	Sept. 22, 1938	Sept. 29, 1938
Bank Rate.....	½	½	½
London Deposit Rate.....	½	½	½
Short Loan Rates:

Others.....	1½-5*	1½-7*	1½-4
Discount Rates:			
Treasury bills.....	1½	1½-7*	1½
Three months' bank bills.....	9½	1½-15½	15½

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The fine rate for three months' bank bills was 1½ per cent. There was no business in hot Treasuries, as applications for this week's bills were concentrated on October 1st, so as to obtain the December 31st maturity. For these and for other reasons the discount market is by no means out of the wood, irrespective of impending political developments. Money is still very short, and there are heavy payments for Treasury bills to be made on October 1st. Next week, too, the market will remain short, owing to the heavy special purchases of early October maturities made during recent weeks. The absence of any increase in Bank rate caused no

surprise, especially as on Thursday the special buyer dropped his rate from 1½ to 1¼ per cent.

*

The Bullion Market

AFTER the disturbances of the previous days, described on page 28, more normal conditions were established on Thursday. Continental selling continued, but on a smaller scale, and there was a little Continental re-buying. The British Control was actually able to remain out of the market and content itself with holding a watching brief. If anything, it was inclined to give gold. There was a fair arbitrage demand after the fixing, as indeed has been the case all the week. Arbitrageurs now find that they cannot arrange their day's insurance in time for the fixing, which occurs in the middle of the morning, and so have to confine themselves to post-fixing purchases. The war risk rate was raised on Monday evening from 2s. 6d. to 5s. per cent. This increase has been allowed for in computing the discounts shown in the table. Gold was dealt in at a discount at every day's fixing, and on Wednesday, when the dollar was fluctuating rapidly, the discount was very substantial.

* Above or below American shipping price. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 2s. 6d. per cent. up to September 26th and as 5s. 0d. per cent. from September 27th onwards. † At fixing. The New York price of silver remained at 43 cents per ounce - 999 fine during the week.

The silver market completely failed to follow the New York exchange, for silver fell heavily up to Wednesday and recovered all the ground lost the following day. American trade demand was choked off so long as war appeared imminent, while there was heavy general selling on Tuesday, followed by speculative re-selling on Wednesday. It is thought that this last day witnessed the final cleaning-out of the "tired bull" position. Thursday's better news at once caused the American trade demand to revive, and as only a small amount was on offer prices at once rebounded. American buying of both cash and forward silver was noticed. Silver, of course, is now cheap in London, in comparison with the present level of sterling.

Course of Share Values.—All normal considerations for the valuation of securities in every market of the world have been swept aside during September—a month which included two threatening speeches by the German Chancellor, three flying visits to Germany by the Prime Minister, the threat of war, and—right at the end of the month, when all seemed lost—renewed hope of a peaceful solution. Both in London and New York, as the accompanying chart reveals, the rate of fall in equity values has been approximately the same—a matter of some significance in the latter case. American common share values have lost approximately one-third of their sharp recovery

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

in June and July, but in London the continued trend line is clear and unmistakable. The Munich agreement obviously holds the prospect of a further improvement in share values. A solution of the crisis is of immediate importance, but its terms must bear full scrutiny. And on the best assumptions the investor must still consider the economic and political implications of increasing arms. To deny the market's reaction at the news of the Four Power conference would be churlish. But the investor, no less than the ordinary citizen, may still be advised to exercise self-discipline until tension has been fully removed.

The reaction of the London market to the strain and relief of this week is illustrated in the following table, which gives the closing dealing levels, so far as they can be accurately determined, of selected fixed-interest and equity securities.

It must be understood that throughout the first half of the week conditions in all markets were completely nominal. It was impossible to deal satisfactorily, for instance, in all leading industrials until the news of the Munich conversations reached the City after official hours on Wednesday. And jobbers who had been compelled to take stock earlier in the week were not prepared to let it go easily, once the implications of Mr Chamberlain's third visit became clearer.

Minimum Prices.—The part which can be played by minimum prices (which were operative on Tuesday and Wednesday this week in the gilt-edged, corporation and Dominion stocks market) as an alternative to closing the "House" in emergency is discussed in a leading article on page 24. In order to assess their importance in this week's critical dealings, we set out in the following table the official quotations of the leading gilt-edged securities for the first four days of this week:—

	Monday, Sept. 26	Tuesday, Sept. 27	Wednesday, Sept. 28	Thursday, Sept. 29
2½% Consols	65-71	66-68	66-68	71-74
4% Consols	100-106	101-103	101-103	105-108

2½% Nat. Def. Bds.	92-96	93-95	93-95	95-98
3½% War Loan ...	93-97	93-95	93-95	98-100

It should be explained that, on Monday, quotations for the majority of issues were largely nominal, for although jobbers received a significant volume of sales, they were reluctant to deal on a normal basis, even when margins had been reduced, later in the day, to a half-point turn. On Tuesday, and again on Wednesday, dealings were regulated by agreed minimum bid prices—the lower of the official quotations recorded on each day. These, it will be seen, were usually somewhat higher than the corresponding quotations of the previous day, and by the close of business on Tuesday it was clear that the volume of selling had at least been regulated, and some buying orders, for example in War Loan, were being satisfied at rather more than the usual turn over the minimum price. Wednesday's experience in official hours suggested that most selling orders had been accommodated, although on occasion jobbers were prepared to meet buying orders on the basis of minimum prices, thus sacrificing any return for themselves in the interest of preserving a market. Unofficial dealings on Wednesday evening were more responsive to the gleam of light in the inter-

national crisis since dealers were reluctant to deal without adequate consideration of the last-minute efforts to avert war. But War Loan, which had closed officially unchanged on the basis 93-95, rose immediately to 93½-95, and within an hour to 96-98. Thursday's official quotations confirmed this initial response, with rises ranging up to four points. Quotations advanced without any reaction, unless the failure of War Loan to maintain its highest level of 99½ by half a point can be so described. The steadying effect of minimum price dealings carried out by agreement between jobbers has been generally appreciated by private and institutional investors.

* * *

Ranks' Report.—Obscure accounting practices permitted to holding companies under the provisions of the Companies Act may be criticised, even if they are legally permissible. There are companies like Dunlop and Wiggins, Teape which provide shareholders each year with detailed and informative profit and loss accounts and balance sheets, in which the affairs of the entire family group are clearly set out. On the other hand, there are companies like Ranks, Limited, whose accounts for the year ended July 2nd last are published this week, which display an extreme reticence regarding the financial position of their subsidiaries and associates. It is difficult for the lay investor to understand why the board of this company should decline each year to adopt the more informative accounting methods which are already practised by holding companies whose ramifications are far more complex. The make-up of the Ranks group is comparatively simple. The holding company owns the entire share capital of the operating company (Joseph Rank, Limited), which in turn controls Associated London Flour Millers and, directly or indirectly, various provincial flour milling concerns. In addition, the holding company has recently acquired over 90 per cent. of the equity of John Greenwood (Millers). It would hardly appear, therefore, that the preparation and submission of consolidated accounts for the whole group would present especial difficulties. It is fortunate, indeed, that while Ranks shareholders lack this information, they have some compensation in the company's proved capacity for earning profits. Since the holding company was registered in 1933, ordinary shareholders have received a first distribution of 9 per cent. actual, followed by 15 per cent. in both 1934-35 and 1935-36, 18 per cent. in 1936-37 and 17 per cent. in the year to July 2nd last. These distributions have been made from dividends paid by the operating company which is believed to have made regular and adequate reserve provisions in its own accounts. Undoubtedly the dividend experience of Ranks, Limited, shareholders has been, and should remain, favourable. The group's position has been further consolidated through the John Greenwood deal, by the acquisition of a well placed north-western district interest and also by the reported decision to renew the Millers' Mutual agreement on prices, output and sales for a period of ten years. But shareholders deserve to be given more adequate information regarding the affairs of the group of which they are, in the strictest sense, part owners.

* * *

Joseph Lucas Profits.—Throughout the past decade this company has given a demonstration of steady and expanding earning power. For the year to August 7th a dividend of 15 per cent. has already been announced. The report, published this week, shows that the previous year's record profit figures have not been maintained. Total profits, after taxation and depreciation, amount to £321,587, a figure which in fact is closely similar to that for 1935-36, before the advent of N.D.C. The absence of any information regarding the allocations made from profits before striking the published figures tends to limit their value, and it can only be assumed that the directors have followed their customary depreciation practice, in the absence of any indication to the contrary. The

following analysis of profits shows that the 15 per cent. dividend is comfortably covered by earnings of 21 per cent.:

	1936	1937	1938
Profit, after depreciation and taxation.....	320,642	351,298	321,587
Staff funds and fees	17,500	17,500	11,961

Reserve	75,000	100,000	75,000
Carried forward	66,628	69,385	80,581

* * *

The Week's Dividend Announcements.—The direct consequences of the crisis have been evident in at least one dividend decision this week, for the directors of Barry and Staines have deferred the declaration of any interim dividend specifically on this account, although profits for the half-year to July 31st are adequate to cover the usual interim payment. Last year, an interim distribution of 5 per cent. was made. Some significance was read into the decision of the board of Philip Hill and Partners to maintain the interim dividend at 12½ per cent. The company, in fact, intends to make three distributions during the fifteen months' financial period to June 30th next year. In the past financial year, two payments, each of 12½ per cent. were made. It is tempting, perhaps, to make inferences regarding the prospects for the current year on the hope that such equal distributions may be maintained, but any estimate of revenues at this stage is conjectural. The announcement of a dividend of 13½ per cent. by Mufulira Copper Mines has a bearing on the dividend prospects for Rhodesian Selection Trust, and to a smaller degree for Rhokana Corporation. An approximate calculation suggests that the dividend should be equivalent to some 16 per cent. for

THE BANK AS EXECUTOR

Rhodesian Selection Trust shares, and to an addition to Rhokana Corporation's income equivalent to $8\frac{1}{2}$ per cent. on the ordinary capital. The preliminary announcement of Electric and Musical Industries is disappointing, for profits have fallen from £363,964 to £146,000, and the dividend is halved at 5 per cent.

* * *

Spinning Margins and Cotton Profits.—Last week's news that the minimum price agreements in the cotton spinning trade had again been shipwrecked on the rock of competition from uncontrolled minorities, was followed by falls of as much as 2d. per lb. in the American ring yarns concerned. The situation is obviously of considerable concern for the investor. While this collapse (in a section of the trade of which well over 90 per cent. of spindles supported the price agreement) has been taken as evidence that an Enabling Bill is essential, it may equally be observed that the cut in yarn prices, which was found necessary to compete with the "outside" concerns, is a measure of the savings which those concerns had been able to achieve by full-time working. In the American section a fall of 2d. per lb. in the spinning margin would be a very serious matter—though it should be observed that 2d. must be a maximum rather than an average figure for the cut suffered, for the true spinning margin itself could not support a 2d. cut. Over the range of yarns spun there is no actual figure which can be named as the spinning margin, but by comparing raw cotton prices with a representative yarn, and allowing about 12 per cent. for normal net wastage by evaporation and loss, a rough measure of the margin can be obtained. In 1913 that margin worked out at about 3d. per lb. for America and $6\frac{1}{2}$ d. per lb. on Egyptian yarns. For many years after the war the margin was much wider, but by the eve of Lancashire's brief revival at the end of 1936, the American margin had fallen back to about 4d. and the Egyptian to about, or rather under, the pre-war level of $6\frac{1}{2}$ d. Trade recovery gave mills enough work on which price agreements could be based with some hope of their being observed in most sections of the trade. Margins widened and, despite fluctuations and a narrowing tendency, continued wider until last week's collapse. For representative American yarns the margin at the beginning of September had been about $4\frac{1}{2}$ d. to $4\frac{3}{4}$ d., and for Egyptian yarns as much as $9\frac{3}{4}$ d. The cut, therefore, even if it averages well under $\frac{1}{2}$ d. on the spinning margin itself, is a serious matter for the American section, while the Egyptian section, in which the price agreement had very substantially raised the margin since 1936, is in a vulnerable position for that very reason.

* * *

The effect of the cut on individual concerns is impossible to assess. First, it is not practicable to measure the exact amount by which the average margin has been reduced; and secondly, the under-employment of spindles is a factor varying from mill to mill and capable of considerable effect on costs. But it may be observed that, on the full capacity output of the Lancashire Cotton Corporation, a variation of $\frac{1}{4}$ d. per lb. in the true margin means a rise or fall of as much as £250,000 a year in net profits. This calculation does not necessarily mean that the corporation's earnings will be wiped out, since it is almost always possible to introduce special economies to meet special emergencies. But, unless agreement is restored in the spinning trade, it is clear that profits will be meagre.

* * *

Thos. W. Ward Prospects.—In view of the increase in the interim dividend from $2\frac{1}{2}$ to $3\frac{1}{2}$ per cent. announced in February, it was generally expected that Thos. W. Ward would not be very seriously affected by the industrial recession. The report bears out this expectation. Trading profit is down by no more than 16 per cent., but though the final dividend is cut to the extent that interim payment was increased, the total distribution is in fact $2\frac{1}{2}$ per cent. higher at $12\frac{1}{2}$ per cent. owing to the addition of a special diamond jubilee bonus. It is probable that when the interim dividend was increased the company's profits were still expanding, but it was inevitable that sooner or

later a company with such a wide appeal of interests would suffer some decline in earnings, though it may be due to that wide spread that the fall is not more severe. Net earnings at £188,494 represent 17.7 per cent. on the ordinary capital, so that the increased distribution is still well covered. The table below shows the relative earnings position over the past three years:—

	Years to June 30		
	1936	1937	1938
Profit.....	175,220	292,600	245,095
Depreciation	7,100*	52,005*	56,601
Sundry interest	1,793	241	...
Preference dividends.....	44,297	43,984	43,594
Employees' dividend.....	3,010	3,952	5,003
Ordinary shares—			
Paid	63,250	82,844	100,719
Earned (%).....	14.2	23.5	17.7
Paid (%).....	7 $\frac{1}{2}$	10	12 $\frac{1}{2}$
Employees' fund.....	...	5,000	...
Reserve	40,000	80,000	15,000
Carry forward	50,301	74,874	99,053

* Also £56,085 written off out of capital reserve in 1936 and £10,879 out of capital profits in 1937.

The table shows quite clearly that the directors' policy during these three very successful years has always remained conservative, and the wisdom of this conservatism needs no stress. The company passed through a difficult time during the last depression, though it emerged with its capital intact. And as a result of a cautious financial policy during recovery the company is now much better able to face a recession in business. But its strength lies perhaps not so much in its financial position as in the ramifications of its business. If the company were still reliant almost solely on the scrap and shipbreaking side of the business, it might have been less ready to raise its distribution. The scrap side remains important, but at the present moment shareholders will probably look to the company's other activities, which have been so assiduously developed during recent years, for the maintenance of satisfactory earnings.

* * *

United States Rail Position.—The position of many American railways has shown improvement since their plight was reviewed in these columns two months ago. But it remains true that the depression has left the system decidedly weak, and that the special difficulties of the industry may even exercise a powerful pull against the forces now operating for wide industrial recovery. This possibility is most clearly reflected in the desperate efforts which many large roads are making to extricate themselves from financial collapse. The delay and confusion

caused by the complicated procedure of the Bankruptcy Act is impelling the weakest units to submit voluntary plans, since they can no longer maintain full contractual obligations on their bond issues. These systems include Lehigh Valley, which has proposed the extension of interest and principal maturities, the New York, Chicago and St. Louis Railroad Company, which has defaulted on September interest payments, and is also seeking an extension of note maturities, and the Baltimore and Ohio line. The degree of support which has been received for these plans in authoritative quarters sufficiently reflects the gravity of the position.

* * *

In these instances there is ample evidence that the systems should be able to tide over immediate difficulties. Granted the more generous Federal Loan support now being given to roads in rather less difficult circumstances, the United States rail system should avoid the chaos which widespread financial collapse would undoubtedly bring. But the remaining problems will not easily be solved. The struggle for higher wage-rates, which played so prominent a part in the crisis of last year, is still far from a satisfactory solution. The bleak position facing the railroads is shown by the fact that in 1937 operating revenues amounted to \$4,166 millions, and that only \$98 millions of this sum was finally available to meet fixed charges, which were covered with a bare margin. With the wage advances then secured, the whole system was facing bankruptcy on the level of 1937 traffic—and traffic earlier this year fell below 1932 trough levels, and were, until recently, more than 30 per cent. below the level of last year. Even after the freight increases granted in the first quarter of this year, the Class 1 system piled up a net deficit of \$181 millions in the first six months of 1938. And on June 30th, the I.C.C. report on Class 1 roads showed cash at \$315 millions, against total current assets of \$1,014 millions, and current liabilities of \$2,035 millions. On this basis, the managements' demand for a 15 per cent. wage reduction (estimated to reduce operating charges by some \$300 millions in a normal year—or some 40 per cent. of all fixed charges) can be understood. To that demand the unions are offering uncompromising resistance, and although the lengthy arbitration procedure is almost certain to avert complete breakdown, the political situation will demand a compromise on terms much more favourable to the men. The one solid improvement is that car-loading volume is steadily moving to higher levels—the latest returns being some 17 per cent. below 1937 levels. By dint of desperate economies, the roads should be able to keep their heads above water this year, and revival next year should bring them much needed relief. But the history of 1938 will bring scant comfort to holders of American rail stocks.

Cordoba Central Affairs.—The legislative mill grinds slowly, but in the Argentine its delays seem peculi-

arly emphatic. In December, 1936, the Government communicated its offer to purchase the Cordoba Central Railway undertaking. Last year Congress departed without giving any attention to the Bill authorising the purchase. And in December the Minister of Public Works announced that agreement for the transfer of the railway would be concluded before December 12, 1938. In February, however, the State lines took over the operating management of the Cordoba concern by an agreement running for a maximum period of four years, and at the beginning of September the Argentine Chamber of Deputies approved the purchase of the line in principle. The Bill now awaits detailed consideration by the Senate. Consequently, the directors are still unable to submit a scheme of arrangement. But they have decided, with the approval of the trustees and the debenture holders' committee, to pay $1\frac{1}{4}$ per cent. on the first debenture stock on October 19th—the first payment since 1931. This decision leaves for later consideration the amounts accruing between October, 1934, up to this month. Meanwhile, it is the fate of the first debenture stock to provide the only speculative displays—and those rare ones—in the foreign railway market, as hopes of an early decision of the Senate rise and fall.

The Week's Company Profits.—Reports have been received this week from 39 companies, whose total profits amount to £2,329,000 compared with £2,719,000 in the preceding year—a reduction of over 14 per cent. The aggregate profits of 1,831 companies whose reports have been received this year to date total £245,343,000, showing an increase of slightly over 10 per cent. on the previous year's total of £222,361,000. This week's results are discussed in preceding notes and under the heading "Shorter Comments" on page 50. Our usual table appears on page 52.

* * *

Company Meetings of the Week.—Reports of company meetings will be found on page 45 of this issue. Sir Louis Vaughan reported to the shareholders of *Parnall Aircraft* that orders for turrets from the Air Ministry would keep the company occupied for at least two or three years. In the airframe construction and components section considerable contracts were also in hand. It is anticipated that the company will be able to finance its increased programme during the current year by bank facilities and Air Ministry progress payments, without any increase in capital. At the annual meeting of *E. W. Tarry and Company* Sir J. Fortescue Flannery had the pleasure of recommending the resumption of ordinary dividend payments. The chairman laid special emphasis on the trading prospects in South Africa. Mr W. H. Rhodes informed shareholders of *Allied Industrial Services* that business during the current financial year had so far proved satisfactory.

SETTLING DAYS

TICKET	ACCOUNT
OCTOBER 11	OCTOBER 13

NORMAL dealing conditions this week have been impossible in all sections of the market. As we show on earlier pages, the market re-assembled at the beginning of the week under a heavy cloud, and gilt-edged prices deteriorated seriously under selling pressure. On Tuesday and Wednesday the gilt-edged market was steadied by the introduction of minimum prices, but the remainder of the market, from the highest grade industrial equities and bank shares to the most speculative mining counters, was

despairing and nominal. After official hours on Wednesday the wave of enthusiastic buying caused spectacular advances in the "Street" market. And on Thursday a steady volume of business continued, without any interruption to mounting prices, amid renewed confidence. Closing prices in most sections were at the day's best levels, although War Loan closed at 99, after touching 99 $\frac{1}{2}$.

In all sections of the market, price movements followed this set pattern. Abnormal dealing margins were quoted in the gilt-edged market on Monday, but these failed completely to stem the selling in anticipation of Herr Hitler's Berlin speech. Jobbers anticipated the black conditions which threatened on

Tuesday by quoting agreed minimum prices, and these greatly steadied market conditions. Indeed, at the close there was some slight recovery in demand. Gloom prevailed for the greater part of Wednesday, until dramatic 3 point rises occurred in War Loan and Conversion 3 $\frac{1}{2}$ per cent. after hours. Buying was still confident on Thursday, and continued good throughout the day.

In the foreign bond market, all Central European issues were on a completely nominal basis. Headlong falls occurred in Czech 8 per cents. and German bonds touched new low levels. Dawes Loan was marked as low as 19 $\frac{1}{2}$ on Wednesday, jumped to 32 $\frac{1}{2}$ in late dealings, and further gains on Thursday made the rise between the two

extremes fully 100 per cent. Far Eastern issues were naturally affected in the early part of the week, and staged their recovery in less spectacular style.

★

Home rail debentures were again a weak feature in early dealings in sympathy with the demoralisation of the gilt-edged market, and, of course, lacking the benefit of minimum prices. Although the senior issues improved on Thursday, the rest of the home rail market failed to respond on the same scale as other sections. Business in Argentine rail stocks was negligible, and only possible by negotiation.

Nowhere have the violent repercussions of this critical week been more evident than in the industrial share market. In every section, at the opening, dealing was almost entirely a matter for negotiation. Wider and lower quotations were made in steel shares; substantial falls were recorded in electrical equipment issues; aircraft and armament shares fell as heavily as the remainder of the market; and bank and insurance shares, naturally affected by the gilt-edged market, registered heavy losses. There was some recovery above the worst levels recorded on Tuesday, but net losses were again substantial. Wednesday's dealings were spared a similar fate by the dramatic news of the Four-Power Conference, and prices in unofficial dealings rose to the accompaniment of enthusiastic buying. Imperial and British American Tobacco jumped 10s. from the lowest levels, and made even greater progress on Thursday. Other leading issues like Courtaulds also recovered sharply. The rebound was enjoyed by every section of the market on Thursday.

In the oil and rubber share markets, initial suspense was accompanied by lower and wider prices, and atrophied dealings. Oil issues enjoyed active "Street" trading on Wednesday, but rubber issues had perforce to wait until Thursday, before the last-minute peace moves had their natural effect.

General marking down occurred throughout the mining markets at first. Substantial losses were recorded by Kaffir shares, whether dividend payers or speculative issues, and business progressively deteriorated until the close on Wednesday. In hectic "Street" dealings, attention was centred on Western Holdings, which jumped from 10s. nominal to 14s. 4½d., and on West Wits., which closed at 6½ after 5. Rhokana and Treppa also staged a sharp advance in closing dealings. Although some of the speculative gold shares failed to make appreciable progress on Thursday, the general level of activity was more normal, and prices recovered briskly.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Investment Index of 151 industrial ordinary share prices had fallen on Tuesday last (September 27th) to 58.0, compared with 63.5 a month ago and 80.6 a year ago. The corresponding average yields are 6.50, 5.97 and 4.52 per cent. A selection of the component indices—almost all of which recorded lows for the year last Tuesday—and also the usual monthly particulars of fixed interest security prices and yields, which have been similarly affected by the international crisis, are given below.

New York

WALL STREET is still more sensitive to European events than to home conditions. Whilst United States business pointers have been generally good, the market has fluctuated in accordance with news of the crisis. On Saturday last week many operators threw their stock on the market for fear of grave week-end developments. After an early selling wave on Monday, further uncertainty developed, which was not removed by Herr Hitler's speech. There was some recovery on Tuesday, but the Prime Minister's speech caused a reaction. On Wednesday a gloomy opening was quickly succeeded by a rush to buy when the news of the Four-Power Conference was received, and stocks rose strongly in active trading. It was realised that the uncertainties of the European situation still remained, but opinion was optimistic in the belief that if the existing tension were removed the domestic business improvement would be greatly accelerated. Steel shares recovered on news of the rise in Pittsburgh schedules. The decline in steel activity was responsible for unsettlement on Monday, but on Wednesday steels joined in the general advance. Iron Age estimates production for the current week at 47 per cent. of capacity compared with 47.5 per cent. in the previous week. Motor stocks fluctuated with the crisis news and shared to the full in Wednesday's recovery. Chrysler, in particular, jumping several points. Treasury issues were affected early in the week by nervous selling, but prices were well maintained at the close.

* Two-Hour Session.

Paris

INTERNATIONAL politics entirely dominated the Bourse in September. Early in the month there were signs of weakness. Selling was not on a particularly large scale, but it found the market without support and prices in practically all sections were affected. There was a slight rally prior to Herr Hitler's Nuremberg speech largely on bear covering, but this was not sustained, and the first fortnight ended with a further weakening of price levels. Mr Chamberlain's first visit to Herr Hitler resulted in the third week opening with a definite improvement in tone which was further encouraged by the favourable reply from the Czech Government to the peace plans. The Godesberg talks and the further demands that resulted in Mr Chamberlain's return caused prices to weaken again towards the end of the week, and by the beginning of the last week of the month, when the nature of the new demands was understood, prices began to fall sharply. But an improvement in sentiment was noticeable after Herr Hitler's Berlin speech, and the decision to limit falls in French share prices to 5 per cent. had a steadying influence on prices, though dealings were necessarily suspended in certain shares. The month closed with a sharp rally on the news of the Munich conference.

Berlin

THE earlier part of September found the Bourse more cheerful than during the preceding two months, but by the second week an erratic tendency was becoming noticeable, though when losses occurred they were not extensive. The deterioration of the Czech situation naturally made itself felt, but the announcement of the British Premier's visit to Herr Hitler resulted, as everywhere, in a sharp recovery. A strong upward tendency occurred in the first few days of the second week, following the acceptance by the Czech Government of the Anglo-French Plan. Prices, however, relapsed on the realisation that fresh demands were to be made at the Godesberg talks which opened on September 22nd. Heavy falls occurred after the breakdown of the second conversations, but some improvement followed Mr Chamberlain's appeal for peace and Herr Hitler's Berlin speech. The market was very subdued during the few days at the end of the month that culminated in the announcement of the Four-Power Conference but the close was naturally firmer. On balance, the month has shown only a comparatively small decline in prices, and in view of the slumps that occurred in July and August when the situation was by no means so grave, it is impossible to escape the conclusion that the stability of prices during the past month is due to brokers having read the Government's appeal for the avoidance of a panic on the Bourse as a command.

Amsterdam

POLITICAL events in Europe have entirely overshadowed the Bourse throughout September, and heavy falls in prices have occurred. The first week of the month, which was interrupted by the holiday in connection with the fortieth anniversary of the Queen's accession, was mainly quiet and dull. The deterioration in the international situation, however, caused prices to commence falling in the second week. The movement gathered pace, and was only checked by the news of Mr Chamberlain's visit to Herr Hitler. The rally, however, was short-lived, and prices wavered during the first few days of the third week, and even the Czech Government's acceptance of the Anglo-French Plan did not result in any marked improvement. The general tone had become listless, and with no support prices continued to sag away. By the beginning of the last week of the month slump conditions prevailed, the breakdown of the Godesberg conversations resulting in the heaviest falls since the start of the crisis. Herr Hitler's Berlin speech resulted in some improvement, but it did not last, and only the news of the Four-Power Conference prevented markets from finishing the month at the lowest levels.

Canada

THE Canadian stock markets continued stagnant until the end of August, when a sharp break resulted from the crisis in Czechoslovakia and heavy selling depressed all classes of stocks. Early this month the markets steadied themselves and there was even a slight recovery. But before the middle of the month alarming news from Europe caused renewed selling, unsupported by any buying resistance. There was also a good deal of forced selling when speculative accounts were closed out. The breathing space given by Mr

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. The return on ordinary stocks and shares is calculated on the yield on "cum div." shares. Allowance is made for accrued dividends.

Industry and Trade

Business and the Crisis.—Despite the grave risk of war, averted only at the last moment, the business world has remained calm. But the possibility of a conflict caused much dislocation in industry and commerce. The anxiety caused by Herr Hitler's unyielding attitude prompted many business men to postpone their plans, and the flow of new commercial orders to industry was reduced to a trickle. Export business, moreover, was seriously hindered by the sharp rise in the cost of war risk insurance. On the other hand, the speeding up of preparations for defence, especially of A.R.P., gave rise to some confusion here and there, but on the whole work proceeded smoothly. In contrast to the position in 1914, the Government has prepared detailed plans for the control of industry and of food supplies in case of a national emergency. So far these plans have not been put into operation, though steps have already been taken to ensure supplies of essential commodities and to prevent a sudden increase in prices of certain foods and raw materials. Export licences for war materials for foreign countries were suspended on September 28th. Moreover, in view of attempts to lay in abnormal stocks of foodstuffs by a number of consumers, the Board of Trade announced on September 28th that supplies of essential foods were adequate not only for immediate needs but for some time to come, and that in the case of war the supply and distribution of these commodities would be controlled in order to prevent an undue rise of prices and to ensure fair distribution. While the news that agreement had been reached at the Four-Power Conference in Munich has brought relief, industry is unlikely to recover quickly from the shocks of the past fortnight.

Control of Essential Commodities.—The Essential Commodities Reserves Act passed in June empowered the Board of Trade to obtain from traders information concerning their stocks of, and facilities for storing, commodities essential in time of war. The Board of Trade was also empowered to create reserves of these commodities either by direct purchases or by inducing traders to increase their own stocks. Last Monday the Board of Trade issued an Order listing the commodities to which the Act can be applied. All cereals and allied products, meat, live animals for food, dairy produce, all forms of edible fats, oils and oilseeds, sugar, fish, the staple fruits and vegetables (including potatoes), beverages, condiments and spices are included, thus covering the bulk of human and animal foods. The Act is also to apply to fertilisers and the raw materials from which they are made, to petroleum and its products, and to coke. The size of the stocks of these commodities held by the Government is unknown, but the information which the Board of Trade can obtain under this order is essential in the event of an outbreak of war.

Stocks of Raw Materials.—In view of the possibility of transport difficulties in the early stages of a war, the possession of adequate stocks of essential foods and raw materials is of the utmost importance. The Government has frequently been urged, not least by *The Economist*, to accumulate adequate reserves of primary products against an emergency. The accompanying table shows the stocks of certain important commodities, exclusive of those held by consumers. As complete information is not available in most cases, total stocks are probably higher than the published figures suggest. Although the Government has been somewhat tardy in

Commodities	British consumption 1937	Stocks in U.K. Total	Date	Stocks as per cent. of 1937 consumption
Foodstuffs—				
Sugar 000 tons refined	1,935	267½	31 July	14†

* Ratio to total consumption.
† 1938 home crop, England and Wales, estimated at : wheat, 1,719,000 tons; barley, 727,000 tons; oats, 1,020,000 tons; sugar, less than 370,000 tons white equivalent; wool, 116 million lb.; potatoes, 2,788,000 tons.

1 In terms of wheat.
2 Including Government-owned stocks; port stocks only.
3 Stocks in bonded warehouses.
4 Stocks in cold storage.
5 Port and mill stocks.
6 Stocks at ports and railway depots.
7 Port stocks.
8 Stocks in recognised warehouses.

accumulating reserves, stocks of many essential commodities are quite substantial.

Stabilisation of Prices.—In order to prevent a sudden increase in the price of consumption goods, it was announced on Tuesday morning that the London Provision Exchange, at the request of the Food Defence Plans Department, had agreed to maintain unaltered for fourteen days the wholesale prices for bacon, hams, butter, cheese, lard, cooking fats, and margarine current on Monday, September 26th. The prices of certain grades of these commodities are given below, with the prices ruling last Saturday and a month ago for comparison.

	Aug. 27	Sept. 24	Sept. 26
Bacon—			
No. 1 sizeable, English per cwt.	99s.	99s.	99s.
Danish per cwt.	99s.	99s.	99s.
Hams—			
Short cut, Canadian per cwt.	102s. 104s.	98s.	100s.
Lard—			
Irish finest bladders per cut	56s. 62s.	50s. 56s.	50s. 56s.
Cheese—			
Finest farm Cheddar, English per cwt.	78s. 80s.	86s. 90s.	86s. 90s.
Finest new, Canadian per cwt.	86s.† 85s.†	71s. 72s.	71s. 72s.
Butter—			
Finest salted, N.Z. per cwt.	121s. 136s. 137s.	117s. 135s. 136s.	116s. 135s. 136s.
Danish per cwt.			

† Old season.

Later, it was also announced that the leading tea distributing firms had agreed not to increase retail prices of tea during the next fortnight. Moreover, the Chamber of Coal Traders have voluntarily agreed, on behalf of their constituent associations, that, apart from normal seasonal increases operating from October 1st in certain districts, the present level of retail prices for household coal will remain unchanged for the next fourteen days. As our latest series of wholesale price

indices show, there has so far been little change in the prices of the majority of commodities, the sharp advance in wheat early in the week being a notable exception.

Minimum Coal Prices.—Under the original marketing schemes, efforts were made to increase the earning-capacity of the coal-mining industry by means of minimum price schedules. These have not been very successful, due partly to evasions of the terms of such schedules and partly to the absence of any effective method for the co-ordination of selling prices between districts. Under the amended schemes which were brought into operation on August 1, 1936, a different and more rigid form of price regulation was introduced by means of district central selling or centralised control of sales. For a period of about eighteen months this centralised regime met with the good fortune of a rising market. During the spring of 1937 there was an acute shortage of coal not only in the United Kingdom but throughout Europe, and in these circumstances the normal operation of the market led to substantial increases, particularly in the prices of steam and bituminous coals. This improvement in the financial position of the industry enabled it to achieve the two main objects of the 1936 amended coal schemes, namely, higher wages for the miners and higher profits for the coal owners. The average earnings per shift increased from about 9s. 3d. in 1935 to 11s. 1½d. in the first quarter of the current year, when the credit balance of the industry was greater than that for the whole of 1935. But times have changed. In the first eight months of 1938 the output of coal was over 7 million tons smaller than in the same period in 1937, and the Board of Trade price index fell by over 10 per cent. between January and August this year. The Central Council has therefore decided to exercise the compulsory powers of co-ordination delegated to it under the amended legislation of 1936. During the past week it has issued to the districts a direction requiring each forthwith to prepare a schedule of minimum prices for the inland trade for every class of coal produced locally. Pending the approval of these schedules no sales are to take place for delivery in areas other than those in which the coal is produced, except with the authority of the Central Council, or unless such sales take place under the co-ordinating arrangements which have already been established voluntarily in the districts and have been in operation for many months with the approval of the Council. Meanwhile, the districts are further amending their schemes in order to implement the assurances for the protection of consumers given by the colliery owners to the Government last February in negotiations over the Coal Mines Act. The preparation of the minimum schedules is not, it is understood, to involve any interruption of the normal operations of the local price-controlling bodies, except in so far as the over-riding supervision of the Central Council may be necessary to prevent price-cutting as between districts.

Retail Trade.—Reports from the big London stores indicate that the fear of war has led a number of consumers to order large quantities of essential foods. Most of these stores, however, are refusing to supply foods to any one purchaser in abnormal quantities. Retail trade in commodities other than food, on the other hand, is reported to have fallen substantially during the past fortnight. The latest returns of retail trade relate only to the month of August; they show that the daily value of sales in the shops concerned was 2.8 per cent. higher than in August of last year. The increase was general in all districts with the exception, as before, of Central and West London, where a decline of 4.7 per cent. was registered. Clothing departments obtained most of the increase in sales; sales of piece-goods, furnishings and hardware all showed a considerable decrease from the figures of last year. The value of stocks (at cost) at the end of August was 4.4 per cent. lower than a year ago.

British Ports.—The dominating position which London holds in British foreign trade is illustrated in the table below, which gives the value of imports into and exports from all ports whose total trade in 1936 exceeded £5 millions. London dealt with no less than 42 per cent. of British imports (by value) and with 31 per cent. of our exports. The second largest port, Liverpool, shipped 28 per cent. of our exports, but received only 19 per cent. of

DISTRIBUTION OF BRITISH TRADE BY PORTS, 1936

Total : United Kingdom	847,752 100.0	501,374 100.0

our imports. The seven largest ports on the East coast, including London, handled 55 per cent. of our imports and 43 per cent. of our exports; the seven largest ports on the West coast, including Liverpool and Manchester, handled 29 per cent. of our imports, but 36 per cent. of our exports.

The Cocoa Season Ends.—What was perhaps the most eventful season in the history of the international cocoa trade came to an end yesterday. The year opened on October 1, 1937, with Accra cocoa priced at 30s. 1½d. per cwt., to which level it had fallen from a peak of 59s. per cwt. in January. Prices continued to decline until in May Accra cocoa was quoted for a time at less than 18s. per cwt. There is no doubt that this fall in price must be ascribed to the decline in consumption, which is estimated in the past twelve months to have been some 10 per cent. below the record quantity of 695,000 tons absorbed in 1936–37. But the beginning of this fall in price coincided with the formation of a buyers' pool by the big West African shippers, which led the native farmers of the Gold Coast (which supplies 40 per cent. of the world's cocoa) to believe that the buyers' pool was the cause of their declining receipts. They organised a selling boycott which lasted from November, 1937, until April of this year, when it broke down. For the remainder of the season, cocoa exports from the Gold Coast have been regulated by the Department of Agriculture, which

OTARD'S EST. 1793
V.S.O.P.
LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

has succeeded in disposing of the bulk of the crop at prices above the low levels reached in May. It is known that stocks have risen considerably in the season just ended, but they are held by the financially strong shippers, and there is no danger of forced sales. In fact, there is, at present, a considerable demand for good quality cocoa, as the quality of the last Gold Coast crop was affected by inadequate storage during the boycott, so that part at least of the new harvest, which will appear on the market in about two months' time, will find ready buyers. The new season thus opened to-day with a more hopeful note. The Gold Coast is anxiously awaiting the recommendations of the British Commission of Inquiry, which was set up at the end of the boycott, and whose report is believed to be completed. It is hoped that their recommendations will improve the marketing of the cocoa crop, and will remove some of the ill-feeling which still exists between the native farmers and the shippers.

* * *

The New Bacon Contract.—The Pigs and Bacon Marketing Boards, with the assistance of the Bacon Development Board, have now agreed on the terms of the 1938-39 contract. According to the Bacon Industry Act passed in July, the contract must provide for an average price of 12s. 6d. per score (against a basic price for feeding stuffs of 8s. 6d. per cwt.) to the farmers over the whole contract year. It has been agreed that in February and March, 1939, the farmers' price shall be raised by 6d. to 13s. per score and that it shall be lowered to 12s. per score in October and November, 1939. There has also been an alteration in the grades; Class II (pigs between 8 sc. 8 lb. and 9 sc. 8 lb. deadweight) has been abolished and pigs in this weight range will be graded into Class I (minimum deadweight 7 sc.) or Class III (maximum deadweight 10 sc. 10 lb.). The scale of prices agreed to by the Boards refers to a basic price for the standard ration of feeding stuffs of 8s. 6d. per cwt. During the latter half of 1936 and the early months of 1937 the price of this standard ration rose sharply, reaching a maximum of 10s. 4d. per cwt. between September, 1937, and March, 1938. Since then it has again fallen, to 8s. 11d. in September. Should the prices of wheat and barley (whose products compose 90 per cent. of the ration) fall further, it is likely that the price of this ration will fall below 8s. 6d. per cwt.; the basic price paid to the farmers will then be proportionately reduced.

* * *

Slight Rise in Wholesale Prices.—Events have been moving so rapidly and in such kaleidoscopic fashion, that it may be advisable to give the reminder that the latest *Economist* index numbers relate to Wednesday, September 28th. Compared with the previous fortnight they show surprisingly little movement for so anxious a period. The complete British index has risen by only 0.9 per cent., and the primary products index by 1.1 per cent. Part of this latter movement may reflect the depreciation of sterling, for the American primary

products index is practically unchanged. The complete Irving Fisher index number, which relates to a week earlier, shows an insignificant increase, and so does the French index number. The German index is unchanged. Generally speaking, wholesale prices have shown remarkable stability, but the intermediate fluctuations in the leading commodities during the intervening fortnight must not be overlooked, even though they are not reflected in these indices which relate to particular dates.

Miscellaneous	65.8	84.5	74.0	75.3
Complete index	60.4	82.2	69.5	70.2
1913 = 100	83.1	113.1	95.6	96.6
1924 = 100	52.2	71.0	60.1	60.7

During the fortnight covered by *The Economist* index, wheat, maize and meat prices were unaltered, but there was an increase in flour, and a decrease in barley, oats and potatoes. Sugar was firmer, and there was a sharp rise in coffee. Textiles were all slightly higher in price, and there were moderate increases in non-ferrous metals. In the miscellaneous group, hides and linseed oil were dearer, but there was a setback in rubber.

INDUSTRIAL REPORTS

BUSINESS transactions were seriously dislocated last week by the risk of a German invasion of Czechoslovakia. The view of the uncertainty, overseas holders held their hands, and the State in war risk insurance premiums possible the difficulty of doing business. war, throw of new commercial orders and raw material consumers was also Government. On the other hand, the *The Economist* preparations for defence increase in activity in the primary products. A tendency to ing table shows commitments has been ties, exclusive of the iron and steel information is not a instance of heavy are probably higher i-stocking move- Although the Govern- wise have been

expected to take place. On the other hand, the domestic demand for coal has been fairly well maintained. Transactions in cotton textiles were small in volume, but the market in wool textiles has shown some improvement in the expectation of heavy Government orders.

Coal

Sheffield.—Demand is improving steadily. Industrial steam coals move fairly well, with best qualities firm. Small coal is in good supply, electricity works taking good deliveries. The market in coking smalls is quiet, and

the demand of brickworks is easily met. Business in household fuels is moderately active, and gas coal is being well taken up. The market in coke remains quiet, with prices unaltered.

The export market is still depressed for prompt, but for forward shipment there is a slightly better inquiry.

*

Newcastle-on-Tyne.—Despite all the uncertainty, the North-East coal market has remained calm. Northumberland steam collieries continue to be slightly better placed, but there is no scarcity of coals. Durham collieries, on the other hand, are experiencing much idle time, the coking and

gas coal sections being particularly weak. Patent oven coke in the export section is affected by the scarcity of tonnage.

*

Glasgow.—Trade is proceeding normally and business has, if anything, been a little brisker. Nuts in particular have been moving a good deal more freely, and these are now in a fairly strong position in all districts, but chiefly on the East Coast. Demand for large coal has been less brisk and tonnages of most classes continue to be freely offered.

It was learned during the week that a new committee has been set up to control supplies for the London and South Coast markets. For some time past there has been increasing inter-district competition for this business, which conflicts with the industry's selling policy, and accordingly the new committee will operate a scheme to co-ordinate the delivered prices of all contracts of over 15,000 tons. The committee will fix prices and decide other matters affecting the interests concerned.

*

Cardiff.—The immediate outlook on the South Wales market has been profoundly disturbed by the grave events of the last few days. France is the chief outlet for German exports of coal and coke. In 1937 the exports of coal and coke to that country, principally from the Ruhr, exceeded 10 million metric tons, and during the first half of this year they reached nearly 4 million tons. In the event of the interruption of these supplies, France will have to depend primarily for her external supplies on the United Kingdom. No official steps have yet been taken to deal with this contingency, but an emergency meeting of the South Wales Executive Board was held on Wednesday afternoon, when the more general aspects of possible immediate developments in the Anglo-French coal trade were considered.

The volume of trade has not been materially affected by the risk of war. Shipments from the South Wales ports last week totalled 408,200 tons, against 344,500 tons in the previous week and 435,466 tons in the corresponding week last year. Prices are nominally unchanged. Under the Anglo-French coal-pitwood barter agreement, the price of the 80,000 tons of French pitwood to be purchased in the three months from November 1st next in exchange for the purchase by France during the same period of 120,000 tons of South Wales coals, has been reduced from 22s. 3d. to 22s. 1½d. per ton, ex ship. The Greek State Railways are inviting fresh tenders for the supply of 60,000 tons. The coke and patent fuel markets are featureless.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that there has been a tendency to avoid entering into commitments, owing to the uncertain outlook. In some directions there has been a movement to buy for stock replenishment, but in the majority of cases the accumulations in hand have been considerably

in excess of the normal tonnage for some months past. In spite of the quiet conditions, the undertone remains firm.

In the pig iron market there has been a little buying for near requirements and some inquiry for forward delivery. The position in this department has been improved by the depletion of stocks of foreign iron, and as imports have been on a restricted scale for some time, the demand for British materials may be expected slowly to improve.

Similar conditions now rule in the semi-finished steel section of the market. Although stocks are still heavy, they have been considerably reduced, and as a consequence, there has been an expansion in the volume of business with home producers.

The demand for finished steel has been irregular, and few of the steelworks are able to maintain a full rate of operations. There has been a tendency on the part of consumers to avoid committing themselves for forward purchases and most of the recent transactions have been in small parcels for near delivery. Export business has been handicapped by the high war insurance rates.

*

Sheffield.—More inquiries are about, and business shows some expansion. Where pig-iron contracts are at the point of termination there have been some renewals, but generally consumers are pursuing a hand-to-mouth buying policy, preferring to await developments in the international and industrial spheres. Small parcels of foundry iron are changing hands, and demand for basic iron is fairly steady, but forge is still neglected. Hematite users are well covered by contract to the end of the year, and the only movement is in special sorts, consumption of which is again increasing. Bar iron business remains slow, although rather more dealings are reported in common bars.

In steels, basic billet business is showing some improvement, and wire rods are in better request. Structural steel requirements are fairly good, and a more active demand exists for small steel bars. Stainless steel sheets are a strong feature, and the call for strip is reviving.

The iron and steel scrap market is showing more life, and in view of the decision to postpone a decision on prices, which were stabilised to the end of September, it is thought probable that these may now remain unchanged until the end of the year. Meanwhile, there is a more encouraging demand for heavy iron-free basic steel scrap at from 65s. to 67s. 6d. per ton. Other prices are unchanged.

Compared with July, the output of steel ingots and castings in the Sheffield district in August shows an increase of 15,400 tons to 109,500 tons. Heavily increased requirements of special steels for national defence work have necessitated more electric furnaces being put into commission, and most of the heavy engineering sections of local industry are fully employed.

*

Middlesbrough.—Whilst the market continues with a firm undertone, potential buyers are influenced by the international situation. Consumers are reported to be using up their stocks of foreign iron and an increase in demand is therefore expected. East Coast hematite is still plentiful, but rather more is being used at producers' own steelworks.

Shipments of pig iron from the Tees up to September 27th amounted to 4,729 tons, compared with 2,371 tons during the same period in August.

Transactions in semi-finished steel are few, for users still have rather more material on hand than they carry normally.

Finished steel plant is actively employed, and in one or two departments output has been slightly increased, but further orders are necessary to keep plant fully occupied.

Foreign ore business is practically negligible, and consumers are severely restricting deliveries under old contracts. Blast furnace coke is in good supply at 27s. 6d. per ton, free on trucks at the ovens, with little business passing owing to the reduced consumption.

*

Glasgow.—It was announced at the end of last week that the New Zealand Government had placed a large order for railway locomotives with the North British Locomotive Company, of Glasgow, the value of which is approximately £400,000. Works in Glasgow and district were closed over the weekend for the autumn holiday. Since the resumption of operations on Tuesday, there has been a heavy demand from all parts of the country for galvanised sheets for municipal authorities' requirements, and manufacturers employed on Government work are also pressing for deliveries of material.

*

Cardiff.—The position in the South Wales iron and steel trade shows no material change. As our weekly table on page 43 shows, there has been a slight improvement in the tinplate industry. In August the output of pig iron in South Wales and Monmouthshire was only 36,600 tons, compared with 65,700 tons in August, 1937, and that of steel ingots and castings 102,300 tons, against 207,800 tons.

Textiles

Cotton (Manchester).—The whole market is dominated by the crisis, but traders are calm and are prepared for any emergency. Spinners have been making larger purchases of raw cotton owing to possible interference with normal trade channels. The fixing of minimum prices in the Alexandria market was an unexpected move, but so far Liverpool has not had cause to take similar action.

There has been very little business in cloth for export. Demand has shrunk, and even where business has been offering, negotiations have been difficult owing to the war risk insurance rates. On the other hand, there has been a larger turnover for the home trade, especially in fabrics suitable for A.R.P. and other emergency purposes.

*

Wool (Bradford).—The fifth series of Colonial wool sales ended yesterday, after an improvement in prices caused by fears of an outbreak of war. The biggest supply of wool available has been in New Zealand crossbred staples, and the rise in the prices has been the most marked, amounting to 2d. per lb. on many descriptions. There is no class of wool more suitable for khaki purposes than this, and immense

(Continued from page 41)

quantities will be needed in case of war. Merinos also closed firmer than at the opening. All sections of the trade operated freely, including the Continent.

The risk of war has had a beneficial effect upon consuming centres. While no important orders have been placed for woollen or worsted cloths, the Government is bound to give out important khaki orders in the event of war. Home trade requirements have not greatly increased during the past few weeks, and not much headway has been made in the placing of new business for next spring. Most wholesale and retail clothiers are still distributing mainly from stock, and until surplus goods are in the hands of the actual consumer there will not be any marked increase in activity at the mills. Fashions are still running largely upon cheap woollens rather than good worsted cloths.

Since Monday considerable sales have taken place in Bradford of both raw wool and tops, many topmakers now having withdrawn their quotations.

THE COMMODITY MARKETS

DURING the week ended last Wednesday the commodity markets were influenced by the risk of war, by the consequent depreciation of the pound in terms of the dollar and by the increase in the cost of insurance for sea transport. The tendency of the prices of many commodities essential in war was therefore upwards, but the rise was naturally less marked in the United States than in this country.

Wheat prices rose sharply with every increase in the risk of war, and fell on the announcement on Wednesday that a Four-Power conference was to be held on Thursday. Sugar was also marked up, but the rise in the prices of cotton and non-ferrous metals was not very marked. Lead was actually somewhat cheaper on Wednesday than a week earlier. In the case of rubber minimum prices were fixed.

Moody's index of the prices of staple commodities in the United States rose only slightly, the figure for Wednesday being 143.6 (December 31, 1931=100), against 143.3 a week earlier. A month ago the index stood at 143.6 and a year ago at 187.6.

Metals

Copper.—During the week copper prices improved by £1 3s. 9d. per ton and closed on Wednesday at £43 3s. 9d. per ton. The improvement was largely due to purchases in anticipation of a war, and the intrinsic position of the copper market had little influence on dealings. Until the political situation becomes clearer, no forecast on the outlook for copper prices is possible. In the United States the demand has again eased, partly in reaction to European news.

Tin.—After a temporary relapse, the price of tin recovered to £195 15s. per ton, and closed on Wednesday with a net gain of 10s. on the week. The turnover of tin has increased this week, but the demand by United States consumers is still disappointingly small.

It is believed that United States tin-plate mills will start to prepare their production programme for the next season within the next few weeks, so that an increase in American purchases before very long is quite conceivable.

Lead and Spelter.—The price of spelter closed on Wednesday at £14 6s. 3d. per ton, and thus showed no change on the week. Lead, exceptionally, declined during the past week, to close on Wednesday at £15 10s. per ton, a net loss of 7s. 6d. per ton. The lack of any further news about the restriction schemes for these two metals has apparently induced speculators, who had bought substantial quantities of lead and spelter in recent weeks, to liquidate part of their holdings.

Grains

GRAIN prices have fluctuated during the last week in sympathy with the international situation. Wheat prices rose at the end of last week, eased late on Monday, resumed their rise on Tuesday and Wednesday, but relapsed again late on Wednesday when the Four Power Conference was announced. On Wednesday, the price of Manitoba was generally about 2s. 6d. per quarter higher than on the previous Wednesday, but by Thursday evening this gain had been reduced to about 1s. 6d. per quarter. The impossibility of obtaining stable rates for war insurance has also added to the difficulties of the markets, and led to the appearance of a large premium for maize in very near positions. Offers of forward maize were small during the week, and such as there were came from the Argentine. Similar developments occurred in the barley markets, and, in spite of last week's report that sales of Russian barley had ended for the season, Russian barley was the only type offered; parcels afloat have realised up to 18s. 6d. per quarter.

Other Foods

Provisions.—On Monday, it was announced that the London Provision Exchange had recommended that prices for bacon, hams, butter, cheese, lard, margarine and cooking fats should be stabilised at their existing level for a period of 14 days. This ruling steadied the market, and trade has continued on a firm basis during the week. Home killed meat sold slowly at Smithfield, but there has been a fair demand for frozen and chilled meat. Contrary to the usual seasonal trend, eggs declined in price during the week, owing to temporarily increased supplies.

Colonial Produce.—Sugar prices were advanced by 1½d. per lb. on Monday; trading in futures has been made difficult by rising rates for war risks insurance. The cheaper teas sold well at the week's auctions, but demand for other types was hesitant. Costa Rica and Kenya coffees were marked up in price early this week.

Fruit and Vegetables.—Heavy supplies of English potatoes were cleared slowly, but prices were generally maintained at the Borough. Trade in other vegetables and in all fruits has been very slow during the week, and prices have generally been reduced.

Miscellaneous Commodities

Oilseeds and Oils.—Business in these markets has been severely curtailed, and on some days prices were only nominal. The difficulties over war risks insurance was a factor assisting in a general rise in prices, particularly for near positions. Compared with a week ago, vegetable oils on Wednesday were £1 to £2 per ton dearer; the price of linseed rose by £5 per ton, with forward positions at a discount. Refined cotton oil ex Hull rose in price by £2 per ton.

Rubber.—Rubber prices fell slowly at the end of last week as the European tension increased, and the decline was hastened on Monday and Tuesday; compared with the previous Wednesday, the buyers' price for spot had declined by 7½d. per lb. by Tuesday mid-day. The market recovered a little on Tuesday afternoon, but the decline in prices was resumed on Wednesday morning, until the Committee of the Rubber Trade Association announced a minimum price for spot or forward delivery of 7½d. per lb. Dealings in forward rubber have been rendered very difficult by the rise in war risks insurance, and by the prospect of war.

Furs.—At the fur sales held in London last week, offerings totalled approximately 50,000 silver fox skins and between 250,000 and 300,000 Persian lamb skins. Although these furs are now the most popular types, only half of the silver fox skins were sold, and the prices realised showed a decline of 10 per cent. on the preceding sale, held in May, 1938. All offerings of Persian lambs found ready buyers, but prices declined by 5 to 10 per cent. compared with the last sale in July. Nearly all the silver fox was bought by London merchants, while the bulk of the demand for Persian lambs came from Leipzig, Paris and New York, London taking only smaller lots. In view of these lower prices, the prospects for the general London sales, scheduled to begin at the end of October, is regarded with a certain note of pessimism, even if peace should be maintained.

Cotton Prices and War Measures.—The directors of the Alexandria Cotton Exchange, acting in concert with the Egyptian Government representatives, decided on Wednesday to institute a minimum price for Egyptian cotton futures in Alexandria. This was done owing to a fear of a fall in prices on account of large hedge selling orders. The minimum rates will be fixed from day to day. No similar move has been made by the Liverpool Cotton Exchange, and so far the question of either instituting minimum prices or closing the Exchange has not been considered. The directors, however, have discussed the question of insuring stocks of cotton in Liverpool, and a committee has been set up to attempt to formulate a scheme on a mutual pooling basis. It is understood that this step has been taken because it is impossible to obtain cover through the usual channels. It is expected that a scheme will be completed shortly.

COMPANY MEETINGS

E. W. TARRY AND COMPANY, LIMITED

RESUMPTION OF ORDINARY DIVIDENDS

The annual general meeting of E. W. Tarry and Company, Limited, was held, on the 23rd ultimo, at Southern House, London, Sir J. Fortescue Flannery, Bt., D.L. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the improvement in business mentioned at the last two meetings had continued during the year under review. All the branches showed an increase of business over the previous year.

The gross profit for the year was £141,732, an improvement of £16,635. There had been a very satisfactory rise in turnover. The net profit amounted to £44,698, and represented an improvement of £6,310 on the figures for 1937. They recommended the payment of a dividend of 6 per cent. on the ordinary shares. He was happy to welcome the ordinary shareholders into the dividend stage again, and he trusted that that resumption of ordinary dividend would become from now on a regular payment in future years. Since they had commenced to discharge their obligations to the preference shareholders on January 1, 1935, they had seen the fortunes of the company steadily improve, and to-day they had a substantial general reserve.

It was difficult to forecast the prospects of the current year. There had been a falling-off in British overseas commerce during recent months, and that decrease was reflected in the South African trade. While Europe was disturbed and trade hampered and curtailed, there was bound to be some repercussion felt even in distant South Africa. There was, however, the reassuring fact that the Union of South Africa owed its prosperity mainly to the gold industry, and there did not appear to be any likelihood of a decline in output in the immediate future. In all states of trade, Tarry's organisation would be found ready to supply consumers in South Africa with goods that were fully up to date, and would continue to carry the assurance that whatever goods and machinery Tarry's sold were the best and most improved of their kind.

The report was unanimously adopted.

PARNALL AIRCRAFT, LIMITED

CONTINUED EXPANSION AND DEVELOPMENT

The third ordinary general meeting of Parnall Aircraft, Limited, was held, on the 28th ultimo, in London, Sir Louis Vaughan, K.C.B., K.B.E., D.S.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the year amounted to £89,287, compared with £26,782 in the previous year, an increase of £62,505. It would not be in the public interest to give full details of their contracts. He could only say that with regard to turrets they had orders from the Air Ministry which would keep them busy for the next two or three years at least, in spite of an increasing scale of production. They also continued to build air frames, components, etc., for certain aircraft manufacturers, and their existing contracts alone would keep this section of their organisation busy for some considerable time.

They were up to schedule with their production programme and, in some cases, in advance of that schedule.

They had established at Yate a school for training R.A.F. personnel in the use and maintenance of their turret installations.

Folland Aircraft, Ltd.—Net profit for year to June 30, 1938, £16,483, against a net loss of £37,327. The directors have written down the value of the Sikorsky licences, drawings, etc., by £6,999 to the nominal figure of £1 and after writing off the balance of loss at June 30, 1937, £9,478 goes forward.

West Witwatersrand Areas, Ltd.—It is announced that borehole No. E2B on farm Driefontein No. 118, after traversing a thickness of 670 ft. of Ventersdorp lava, intersected the Ventersdorp Contact Reef at a depth of 3,512 ft., averaging 34.1 dwt. over a true width of 19 in.

Kirklees, Ltd.—Trading profit for year to June 30, 1938, £62,967, against £85,475 for preceding year. To depreciation £10,000 as before. Ordinary dividend reduced from

6 to 2½ per cent. To reserve £8,625, against £10,000. Carry forward reduced from £10,067 to £3,274.

Fine Cotton Spinners' Scheme.—Official opposition to the financial reconstruction was inaugurated by the formation of an opposition committee at a meeting of stockholders on September 23rd. The scheme was dealt with in *The Economist* of September 10, 1938, page 508.

Whitehall Court, Ltd.—Trading profit for year to June 30, 1938, £31,325, against £40,783. Ordinary dividend reduced from 7½ to 2½ per cent. Carry forward reduced from £6,923 to £2,685.

Serck Radiators, Ltd.—Preliminary figures for year ended July 30, 1938, show profit £54,683 (against £49,500). The

Pending a settlement of their patents and inventions claim against the Air Ministry, they had applied for a further interim payment, but ultimately the matter might have to be settled by arbitration.

Last year he suggested that it might be necessary to increase the capital, in order to finance their rapidly expanding production. The facilities granted by their bankers and the progress payments arranged with the Air Ministry have enabled them to avoid that necessity and, although they were faced with a similar situation, but of greater magnitude, during the next financial year, they anticipated being able to deal with the estimated programme on the same basis as during the past year.

He felt bound to point out, however, that the delay of His Majesty's Government in settling their claim without the provision of any further interim payment was a handicap to the company in financing the Air Ministry's production programme.

The structure had been built on a sure and solid foundation. They claimed to occupy the leading position in the world in aircraft armament and were an indispensable unit in the Defence Force of this country.

The report was adopted and a dividend of 7½ per cent., less tax, approved.

ALLIED INDUSTRIAL SERVICES, LIMITED

CONTINUED PROSPERITY

The fourth annual meeting of Allied Industrial Services, Limited, was held, on the 29th ultimo, at Netherwood Chambers, Bradford.

Mr W. H. Rhodes, who presided, said:—Your directors are able to report an increase in the company's business and profits, which this year, after providing for depreciation, directors' fees and other charges, amount to £159,901 2s. You will notice that, following the changes made last year in the form of the accounts, the balance sheet now incorporates comparative figures for last year, thereby enabling the accounts of the company to be more easily compared from year to year.

As I have already stated, the profit for the year under review amounts to £159,901 2s., and after taking into consideration the balance of profit and loss account carried forward from last year, namely, £19,292 5s. 2d., the sum of £179,193 7s. 2d. is available for allocation. The report now before you sets out the proposed allocations thereof, which will leave a balance of £17,193 7s. 2d. to be carried forward.

It is my custom at our annual meeting to touch briefly on the trading prospects of your company for the current year. So far, since the commencement of the present financial year, business has been satisfactory, and, provided trading conditions generally do not deteriorate, we may hope for a continuance of the company's prosperity. Since I wrote that sentence some days ago international affairs, as we all realise, have assumed an exceedingly grave aspect. We all hope that the conference at Munich to-day will lead to a just and satisfactory solution.

I should like to voice the appreciation of your board for the loyal and painstaking services rendered to the company by our managers, staff and workpeople during the past year.

The report and accounts were unanimously adopted.

The following resolution was also put to the meeting and duly passed:—"That the preference dividends for the two half-years to 30th June, 1938, and the interim ordinary dividend, already paid, be confirmed, and that a final dividend of 37½ per cent. (actual) for the year ended 30th June, 1938, making 60 per cent. for the year, together with a cash bonus of 10 per cent. (both less tax) be and is hereby declared payable on the 30th September, 1938, to the ordinary shareholders of the company."

directors recommend the payment on the increased capital of 3s. per £1 stock, and cash bonus of 1s. per £1 stock, absorbing £29,000, against £25,312. To general reserve £25,000 (against £20,000 and £4,000 obsolescence reserve). Carry forward £9,207 against £8,524 brought in.

North Broken Hill.—Net profit after depreciation, taxation and royalties £475,152. Annual report and statement of accounts (which has been audited) will be issued later.

Bristol Aeroplane Company.—Sir Kingsley Wood has announced a further extension of the Rodney Works at Bristol, at a cost of £120,000. The extension is to manufacture exhaust rings for Bristol Engines.

The Wheat Subsidy

The object of the Wheat Act, 1932, was to extend the United Kingdom wheat acreage to the pre-war average of 1,861,000 acres, by a system of subsidy calculated to raise the growers' receipts to 10s. per cwt.; but when the home supply exceeds 27 million cwt., the rate of subsidy is proportionately reduced. The funds for the subsidy are obtained by a tax on flour collected from millers and importers. Source: Report of the Wheat Commissioners upon the administration of the Wheat Act, 1932, from June 1, 1932, to July 31, 1937.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On September 23rd, applications at £99 15s. 1d. per cent. for bills to be paid for on any day of the following week were accepted as to about 62 per cent. of the amount applied for. Applications at higher prices were accepted in full. £40.0 millions of Treasury bills are being offered on September 30th.

CENTRAL AND SOUTH AMERICA

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issue the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of Bolivia and Paraguay, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate.

Bolivia.*	Sight selling rate on London was 141-40 bolivianos per £ (nominal) on August 31, 1938.
Colombia.*	Sight selling rate on New York was 176-00 pesos per 100 U.S. dollars on September 3, 1938. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was 14-65 sucres per U.S. dollar on September 2, 1938.
Guatemala.	Sight selling rate on New York is maintained at one quetzal per U.S. dollar, but a commission of 1 per cent. is charged by the Central Bank for the sale of drafts.
Nicaragua.*	Sight selling rate on New York for payment of imports was fixed by the National Bank at 5-52½ cordobas per U.S. dollar (including 10 per cent. tax and ½ per cent. commission) on September 6, 1938.
Paraguay.	Exchange is quoted on Buenos Aires; the sight selling rate was 70-50 Paraguayan pesos per Argentine "free" paper peso on August 20, 1938.
El Salvador.	Sight selling rate on New York was 2-50½ colonos per U.S. dollar on September 7, 1938.
Venezuela.	Sight selling rate on New York has been maintained at 3-19 bolivares per U.S. dollar since April 27, 1937.

* Exchange controls are operative in these countries.

Central Bank of Chile.—Discount rate for member banks, 4½%; discount rate for the public, 6%. (a) 5% applied to banks and credit institutions. (b) 5½% applied to private persons and firms.

Associated Provincial Picture Houses, Ltd.—Profits for year to May 31, 1938, £111,889, compared with £123,165 for previous year. To depreciation, £26,000, as before. To tax, etc., £20,353 (£12,404). Ordinary dividend maintained at 6 per cent. To general reserve, £15,000, as before. Carry forward increased from £89,475 to £90,511. An additional item is amounts due from subsidiary company, £26,116.

Grosvenor House (Park Lane).—Trading profit for year to June 30, 1938, £97,572, against £134,109 for preceding year. Taxation, £10,000, as before. Preference dividend £30,000, as before. No dividend is to be paid on the ordinary shares against 5 per cent., absorbing £25,000 a year ago. Carry forward, £33,807, after transferring £10,000 to general reserve.

(TWILFIT) profits are fairly close to the previous year's figures. ASPRO, LTD., net profits have been reduced from £292,320 to £253,261, and the ordinary dividend from 32½ per cent. to 25 per cent. BRITISH PISTON RING have also been unable to maintain their earnings, and profits have been reduced from £59,659 to £47,912, entailing a reduction in the ordinary dividend from 25 per cent. to 20 per cent.

Commercial Bank of Australia, Ltd.—Net profit year to June 30, 1938, £262,384 against £247,435 for previous year. Dividend 7½, against 6½ per cent. for year. To bank premises, £30,000 against £25,000. Carry-forward increased from £103,337 to £109,361. Deposits have risen from £29,294,000 to £30,053,000.

SHORTER COMMENTS

Company Results of the Week.—A substantial setback in earnings is reported by GROSVENOR HOUSE (PARK LANE) for the year to June 30th. Net profits amount to £54,601 against £88,252, and the directors have decided not to pay an ordinary dividend. Some instances of significantly lower earnings appear in the rubber group. BANTAM (JAVA), in particular, reports that profits have been reduced from £28,997 to £13,291, and the distribution has been reduced from 15 per cent. to 9 per cent. YORK STREET FLAX SPINNING net profits show a substantial setback from £71,069 to £35,331, but both J. HEPWORTH AND SONS, and LEETHEMS

(a) Paid on larger capital. † Free of Income Tax

BARRY AND STAINES LINOLEUM.—Profits for half year to July 31, 1938, are adequate to enable the usual interim dividend to be paid; but the board, in view of the very grave crisis, is awaiting further developments before making any declaration. Last year an interim dividend of 5 per cent. was paid.

CITY OFFICES.—Interim dividend declaration postponed in view of the international situation. Last year an interim payment of 5 per cent. was made.

LUCAS (JOSEPH), LTD.—Final dividend on ordinary shares 12½ per cent., making 15 per cent. for year as before.

ASSOCIATED PORTLAND CEMENT.—Interim dividend maintained at 7½ per cent. on ordinary shares on a capital of £4,000,000.

BRITISH PORTLAND CEMENT.—Interim dividend maintained at 7½ per cent.

MARCONI'S WIRELESS TELEGRAPH.—Interim dividend on ordinary shares 3½ against 2½ per cent.

Czechoslovak Government when it originally accepted it, contemplated such a hurried, imperfect and inequitable transfer of territory within ten short days. Indeed, there is evidence that nothing of the sort was in mind even on the day before the Agreements were signed. The Munich terms are less than the Godesberg memorandum; but they are considerably more drastic than was generally understood by the Anglo-French plan.

How are we to judge this Munich Agreement—the price of peace? There is some element in it of warning to the aggressors. Germany was climbing down in those last few days. There is no doubt that the mobilisation of the British Fleet, together with the firm declaration that in the case of war France would go to the assistance of Czechoslovakia and “Great Britain and Russia will certainly stand by France,” created consternation in the highest quarters in Berlin. There are very many people who join with Mr Duff Cooper in deploring that these decisive steps were not made earlier, and that more advantage was not taken of them when at last they were made. But there is a lesson for Herr Hitler in the fact, on which the Nazi extremists never counted, that the British and French peoples looked war in the eyes with less flinching than the Germans and the Italians.

But if the events of those last few days have some comforting lessons, they are entirely overridden by the *débâcle* of the past month as a whole. The final settlement is better than looked likely three days earlier. But it is so much worse than the ideas that were in men's minds a month ago that the contrast is barely credible. Herr Hitler did not secure a 100 per cent. victory; he had to knock something off the price of peace at the last moment. But he did secure the immediate realisation of demands that were too ambitious for public confession as recently as the Nuremberg Conference, and he secured them in circumstances of triumph for himself and of ignominy for his defeated foe such as are usually associated only with the end of a bitterly contested war. He has dismembered Czechoslovakia and secured the resignation of President Benes, whose only crime was to be a patriot. If we look back to the position as it stood not three days before Munich, but three weeks, there cannot be any doubt that peace has been purchased at the price of the overwhelming defeat of the international principles to which Britain and France have hitherto consistently pinned their faith. The lesson of the last three weeks is that potential aggressors will get what they want, whether it is just or unjust, if they bully, bluff, agitate, prevaricate and threaten, and that small States will be far safer if they make terms with the dictators than if they rely on the justice of their cause and the sympathy of world opinion. The lesson will not be lost in Germany or in Italy, in Poland or in Yugoslavia.

What, then are the implications for the future of the Peace of Munich? It has been jubilantly proclaimed in Italy and Germany that the system of Versailles is shattered. So it is; but what is more ominous is that the system of the League of Nations, the system that attempted to regulate international relations by law and justice and reason, is also shattered. We are back to the most naked variety of power politics. And Germany enters on the new era strengthened both materially and morally. The democratic powers, who bestrode the world in 1918, are now quite definitely on the defensive. They can no longer defend the world they created; they can only hope to defend themselves. The price we have paid for peace is clear enough. But how much peace have we got in return? The hopes of peace seem to rest on two pillars—one is Herr Hitler's declaration, reported by Mr Chamberlain, that he has no more territorial ambitions in Europe; the other is the document signed last Friday by the Fuehrer and the Prime Minister in which Germany and Great Britain pledge themselves to solve their future difficulties by discussion. Herr Hitler's record of cynically violated pledges does not en-

courage us to place much faith in either assurance. He will behave himself, we may be sure, for just as long as it suits his book. Nevertheless, there are some reasons for believing that peace *will* suit his book for some little time to come. There seems to have been a crisis in the Nazi regime between Godesberg and Munich. The extremists, the Ribbentrops, the Himmlers, the Goebbels, were blamed for leading the Fuehrer into a position from which he had to retreat, and, for the moment at least, more moderate counsellors are in favour. Secondly, there is the overwhelming evidence that war would have been bitterly unpopular in Germany. Thirdly, after Mr Chamberlain's flights it will be impossible for a long time to come to convince the German people that Britain and France are aggressive powers. Finally, there is the fact that, with the fall of the Bohemian bastion, there are no points of resistance to Germany between the Rhine and the Russian frontier that are likely to lead to war. An attempt to secure colonies by force of arms would involve a direct attack on Great Britain, for which the Nazis are not ready. Not one of these is a reason for believing that the Nazis will keep the peace indefinitely. But they do argue that there will be a breathing space of more than a month or two.

There is, however, the other end of the Axis to be considered. Hitherto a success for Germany, with Italian support, has always been followed by a fresh demand from Signor Mussolini. But here again there is some ground for modified hope. War as Germany's ally would have been so unpopular in Italy that the mobilisation had to be carried out in secret. Signs are not lacking that Signor Mussolini had a very bad fright. He was chained to Germany by the fact that he has never succeeded in making his peace with London and Paris. Having been so nearly dragged over the precipice by his chains, he shows signs of hastening to loosen them. The test, of course, will be Spain; and so many hopes have been added in the past that it would be foolish to count any chickens before they are hatched. Yet it may be that this obstinate problem is moving towards a solution.

In the sudden calm that follows the whirlwind few would be so foolhardy as to venture a definite prediction. But there are grounds for believing that Mr Harold Nicolson was as far off the mark in speaking of “peace only for six months” as was the Prime Minister in speaking of “peace in our time.” To say this is, perhaps, to risk appearing unduly optimistic. But there is nothing optimistic in a forecast that sees only a breathing space before the return of crisis, whether that breathing space be six months or two years. For in either case we are dependent on the whim of the dictators, and there is neither optimism nor security in the guess that it will be two years rather than six months before their whim leads them once more to hunt in couples on our preserves. The only thing left to us ourselves to do is to take what measures we can to deflect their whims into peaceful channels by increasing the risks, to them, of engaging in universal war. We are in a far weaker position to do that to-day than even a month ago, and if we are still to do it we shall have to submit ourselves to some measure of the discipline for which we have hitherto pitied the dictator States.

For this is the cruel dilemma in which we have placed ourselves. One of our choices is merely to mourn that “the world is given over to the cruel sons of Cain.” Or, if we still hold that liberty and democracy are worth preserving, we shall have to make a great and sustained effort which may itself infringe on liberty and democracy. If the latter is our choice and we British people will shoulder the burden which is the corollary of our faith, we may yet bring about a state of equipoise in the world. Only in such a condition can reason and the instinctive desire of mankind for freedom and peace revive in the totalitarian States and provide the antidote to those poisons which are threatening to destroy the harmony and happiness of the civilised world.

Czechoslovakia's Losses

THERE is general recognition, in the Western countries at least, that we owe our peace to the sacrifices made by Czechoslovakia. Some of her losses are apparent to every beholder—the slicing-off of large territories, the constriction of the country to an almost indefensible shape, the abandonment of natural and artificial defences. The crushing blow to the pride of a brave people, who suddenly find themselves left friendless in a carrion circle of their enemies, is also easy for the ordinary man in the French or British street to understand and appreciate. The economic losses—the sacrifices not merely in accumulated wealth but also in earning power for the future—are more difficult to convey in a convenient phrase. But the discovery that Czechoslovakia has urgent need of immediate help has been almost welcome to many an overloaded British conscience, for it has provided a means of showing concrete sympathy with a people whose conduct in the last few weeks has won them all but universal praise. It was announced in the House of Commons on Monday that, in response to a request from Prague for a loan, or assistance in obtaining a loan, of £30 millions, the British Government had requested the Bank of England to make an immediate advance of £10 millions, without prejudice to what might later be decided about a loan. It is reported that “advance” in this case means “gift.” We trust that this is so. The last war, towards its end, was costing £7,000,000 a day, and it does not seem an extravagant valuation of the worth to us of Czechoslovakia's sacrifice to assess it at thirty-six hours' peace. In addition to this official advance, a very generous response has been evoked by various private appeals for funds to assist refugees in Czechoslovakia, and the Lord Mayor of London has taken steps to start a national fund for the same purpose.

These gifts have been made out of general sympathy. Their origin lies in the gratitude of the British people rather than in any estimate of the precise needs of Czechoslovakia. Any such estimate is, indeed, extremely difficult to make. For one thing, many of the details of the transfer of territory are undecided. The International Commission at Berlin did not reach a decision on the limits of the territory to be occupied forthwith by German troops until Wednesday of this week. The plebiscite areas have not been delimited, nor will their final fate be known until the vote has been taken. The Commission has set up an economic sub-committee, but nothing is yet known of its decisions. It would be only fair if the Reich were to pay compensation for the public property it is acquiring from the Czechoslovak state and to assume liability for a proportion of the Czechoslovak national debt. In point of fact, neither concession is likely to be made; on the contrary, Czechoslovakia may be presented with a bill for alleged damage suffered by the Sudeten Germans since 1918. Again, what is to be done about Czech currency in the transferred areas? Is the Czechoslovak National Bank expected to redeem it all in foreign exchange?

But even if these and similar unsettled questions were immediately decided, it would still be very difficult to put a figure upon Czechoslovakia's immediate needs. All that can now be done is to enumerate some of the problems, all of them costing money, with which the state will be faced. The most urgent and tragic of these is, of course, the care of refugees. In spite of the provision in the Munich Agreement for a six months' period during which Czechs and others left on the German side of the new frontiers may opt for Czech nationality, Prague has been flooded with Czechs, Jews and German Democrats, nearly all of them without means. If there are to be exchanges of popu-

lation, this problem will be increased in magnitude. It is probable that hundreds of thousands of people will have to be supported for many months—some of them for years. Secondly, the Government will have to undertake heavy expenditures to reorganise the defences of the country. The new frontiers will be harder than the old to defend, and it is unlikely that Czechoslovakia will have such faith in the guarantees of her independence that she will be willing to neglect her own strength. It has been reported that the defences now surrendered to Germany cost £80 millions to construct. At least as much more will have to be found. The system of communications will have to be reorganised. The present main line between Prague and Brno goes through a German-speaking district, while the main line to North Slovakia and Ruthenia passes through the Teschen area now ceded to Poland. Many miles of new roads and railways will have to be built. Money is urgently required to maintain the stability of the currency, which has naturally been under attack in these last few weeks. It is understood that the whole of the British Government's £10 millions was needed for this purpose—though its use in the exchange market would, of course, provide an equivalent amount of Czech currency for the Government's internal needs. Finally, in this list of immediate needs, help may be needed for the banks of the country. The Czech banks have both assets and liabilities in the Sudeten areas, and while the liabilities will doubtless be enforced, the assets may prove to be unrealisable or incapable of transfer out of Germany.

These are some of the purposes for which assistance is needed immediately. But they by no means complete the tale of Czechoslovakia's losses. Many of her best industries will be lost to Germany and Poland. The extent of these losses can be estimated from the following figures, which are based on the official Census of 1930. In compiling these figures, we have assumed that all areas which, according to the Czech official figures, have a majority of Germans will go to the Reich, together with a few border-line areas in the districts of Reichenberg (Liberec) and Eger (Cheb), and that the Teschen area will go to Poland. The figures show the number of workers in these districts in the different industries and the proportion they bore to the total for the whole Republic. It must be emphasised that the districts to be ceded are almost certainly larger than those here included, and the proportions are therefore minima:—

	Workers in German and Polish areas	Proportion of total Per Cent.
Mines, etc.	58,240	48.1
Glass	39,226	61.8
Metals	93,783	24.0
Chemicals	14,373	34.6
Textiles	190,660	52.1
Paper	17,273	41.8
Woodwork	43,058	23.4
Musical instruments	5,992	79.0
Toys	1,911	68.1
Foodstuffs	62,103	25.4
Clothes and shoes	70,943	24.2
Other industries	164,959	27.6
Total industry.....	762,521	33.3

These are appalling losses to a country that is largely dependent upon its industry; and they are only slightly mitigated by the fact that the newer and more efficient factories are generally in the Czech areas.

The Czechoslovak balance of payments has hitherto been both sound and simple. Merchandise exports made up 82 per cent. of the total credit items, and merchandise imports

77 per cent. of the total debit items in the 1936 estimate. In most years, exports have exceeded imports by between one and two milliard crowns, and this surplus is needed to make the invisible payments, e.g. for interest on the debt. Much the largest items in the export list are textiles and metal products, which together made up 45 per cent. of the total in 1937. But at least half of the textile industry and at least a quarter of the metal industry are now to be ceded. If the percentages in the above table are applied to the relevant items in the export total for 1937, it would seem that total exports of almost Kc. 12,000 millions in that year would have been reduced by at least Kc. 4,000 millions without the Sudeten areas.

The effect on imports is more difficult to estimate. The Czechoslovak balance of payments will not now have to bear the cost of imports of raw materials for the ceded industries. In textiles alone, this will be a relief of nearly 1½ milliards. Food imports will also presumably be reduced. But on the other hand the Czech areas will now have to find foreign exchange for many of the goods they

previously obtained from the factories and mines of the German and Polish areas. Trade between the Czech and the German areas, hitherto so closely integrated, will now become increasingly one-sided, since the Czechs must have many of the Sudeten products to live, while German autarky will limit Czech exports to the ceded lands. On balance, the Czechs will be fortunate if their imports are reduced by half of the reduction in their exports. There will be a gap in the balance of payments, apart from capital movements, of at least two milliard crowns.

Thus, on every hand the Prague Government will be pressed to find funds. At the same time, its revenue will be grievously impaired by the departure of about a quarter of its taxable citizens and the inevitable shrinkage of Customs revenue. What all the demands will add up to before the country can complete the painful adjustment to its new rôle it is impossible to estimate. All that can be said with certainty is that the British Government's £10 millions will only cover a small corner of the needs. Our consciences cannot be so cheaply discharged.

The Universal Provider

AS an avocation, shopping is familiar to the humblest of us. As an industry, retail trade is a mystery. Well over half a million shops of all sorts and sizes serve us with our needs. The annual turnover of retail traders is something in the neighbourhood of £2,500 millions; and every year over £200 millions are paid out by shopkeepers in wages alone.

Yet the history of shops and shopping has never been fully told. And there is a sad lack of precise facts about the economics of retail trading. As is perhaps inevitable, we know most about those gargantua, the department stores, the very large establishments with multifarious departments, selling an infinite variety of articles. But in our familiarity with the department store, we may forget that it is a conscious invention—and a recent one at that. When the shop proper grew out of the booth or the stall, when it took to itself glass windows and wooden shutters, the stallkeepers-turned-shopkeepers still relied upon their "connection," upon a limited number of regular customers. They made little display of their wares; and in 1800 the largest shop in London employed only 16 assistants.

In the nineteenth century factories and mass production catered for larger markets and called for bigger shops to bridge the gap between producer and consumer. Machinery and steam caused a flood of cheap cottons to pour into drapers' shops. Railways brought shoppers to town. Gas-lighting illuminated the streets and shop windows. Omnibuses carried customers to new shopping centres. The national income grew, and the new conditions called for something much larger and more bustling than the little local shops with their fixed clientele.

Actually, it was the department store which constituted the first fundamental change in retail distribution during the Industrial Age, and it was the draper son of a Yorkshire corn factor who reaped the first fruits of the new idea. Mr R. S. Lambert, who caught up the whole spirit of the Railway Age in his biography of another Yorkshireman, George Hudson, has now told the tale of nineteenth-century shopping in the story of William Whiteley, of Bayswater fame.*

When Whiteley came to London, eighty-three years ago, London's shops were perceptibly changing. Well-to-do people were still moving westward, and the new West

* "The Universal Provider." By R. S. Lambert. Harraps. 277 pages. 10s. 6d.

Enders of Bayswater and Kensington were shopping in Oxford Street and Regent Street, in place of Poultry, Cheapside and St. Paul's Churchyard. There were garish shops for the poor in Aldgate and Whitechapel and elegant establishments on Ludgate Hill. The residents of Bloomsbury were served with linens, woollens, silks and carpets by Shoolbred's in Tottenham Court Road and with furniture by Maple's and Heal's. But the growing centres of shopping were further afield. Peter Robinson, haberdasher, Marshall and Snelgrove, drapers, and the 75-year-old drapery of Debenham and Pooley were established in Oxford Street. In Regent Street, the biggest and best-known shop was Swan and Edgar's, silk mercers, linen drapers and hosiers. The Queen Anne firm of Fortnum and Mason's did business in Piccadilly; and Harvey's drapery was already in Knightsbridge.

The young Yorkshire draper set out to excel all these. Several had added department to department within the limited range of drapery goods, but Whiteley aimed higher. As he learned the London trade with various firms, he conceived a new kind of shop, to sell everything his customers might want, to go further even than Stewart's store in New York, where 2,000 employees sold all sorts of dry (i.e. manufactured) goods. At last, in 1863, Whiteley turned west to Bayswater to set up his own shop. There new and stately mansions in aristocratic terraces and well-kept squares were springing up, and Whiteley chose Westbourne Grove, where the rich and poor parts of the new West End met.

On March 11, 1863, the morrow of the Prince of Wales's wedding, Whiteley opened with three employees to sell ribbons, laces and fancy goods. Within a year he was employing fifteen assistants. In four years he had seventeen departments, with annual sales of over £43,000 and a net profit of more than £4,000. Thereafter, year by year, he laid shop to shop. Dressmaking, outfitting, costumes, tailoring, boots, hats and furnishings—thus Whiteley expanded his business. In 1872, he deliberately set out to be, in his own words, a Universal Provider. He opened a house agency, a refreshment room and a cleaning and dyeing service, and by 1874 employed over 1,500 men and women and served 4,000 customers daily. By 1876 his net profits were larger than his whole turnover ten years earlier.

Whiteley embarked in the 'seventies upon the sale of

furniture, china and glass, ironmongery, building, house decoration and hairdressing. In 1878 deposit and current accounts in the bank he now provided for his customers—and for his own capital needs—amounted to £32,000. And the enraged protests of the small shopkeepers of Westbourne Grove were swollen tenfold by the outcries of butchers and greengrocers when Whiteley's began to sell provisions. The dream was coming true; Whiteley provided everything; he had an export department, a theatre-ticket agency, a poultry-farm, a market garden, and a free delivery service in London and the suburbs. He was bitterly unpopular, and very successful. His workers were no better off than shop assistants elsewhere; they worked nine to eleven hours a day in heat and under iron discipline; and they dwelt and slept in crowded and unhealthy quarters. But they were certainly no worse off than their fellows, and Whiteley's Kildare clubs were the precursors of welfare schemes in modern retail trade.

Five times between 1882 and 1887 fire raged in Westbourne Grove, at enormous cost to Whiteley, but the Universal Provider was undeterred. By now, however, London was catching him up. He was still the great publicist, with his laundry, his strawberry fields, his bus service, and his gigantic catering enterprises. He housed and fed King Cetewayo; supplied an elephant on demand and a second-hand coffin to order. But Harrods, the Civil Service and the Army and Navy Stores were soon hot on the trail of his many enterprises, and a still newer form of retail trade, the multiple shop, exemplified by Lipton's, the Home and Colonial Stores and Lyons', was putting in its first appearance. It was Whiteley, however, who had pointed the way to the great omniscient stores of today. In 1906 the firm's properties covered 250 acres, employed 6,000 persons, included 159 departments as well as factories, works and depots. The turnover had reached the goal of £1,000,000 a year.

A department store depends for its success on attracting more and more members of the public to its doors, on creating a shopping centre. Here Whiteley, as Mr Lambert's shrewd and vivid survey shows so well, was supremely successful. He made shopping attractive. He gave his business a striking and convenient building. He convinced his customers that they would find their requirements behind

his counters. And he made Westbourne Grove, patronised by royalty itself, the rival even of Regent Street.

Within his doors, too, Whiteley faced all the problems of finance, organisation and administration which still confront the store. Adding department to department meant more buyers and more managers, all specialists, and the task of central co-ordination was correspondingly involved. He experienced, too, the costliness of his methods; to carry every article in stock that might possibly be wanted; to give credit terms; and, above all, to deliver goods free in ever-widening areas; all these services were highly expensive. Long before Whiteley suffered a violent end in 1906 his prices had ceased to be the lowest in town. He was catering for the lazy and luxurious shopper, no longer for all and sundry. But he had discovered and worked out the economics of large store organisation. He had learned to spread buying and accountancy costs, overheads and management charges over a wider and wider field of expanding sales and quickly moving goods. He showed how easy it was to induce a customer making one purchase to make a dozen others—if the goods were there to buy.

There are perhaps a thousand department stores to-day with an aggregate annual turnover of something like £150 millions, including a dozen or so in the class, heralded by the Universal Provider, with an annual turnover of £1,000,000 or more each. But £150 millions is only a small fraction of the £2,500 millions turned over by shopkeepers every year. Even if multiple shops, chain stores and co-operatives are added to the department stores, they still make up only about one-third of the total turnover; the specialist shop, the butcher, the baker and the candlestick maker, the grocer and the greengrocer, and the small general shop remain. The average number of employees per shop in this country is only 2.4, and the average daily turnover per shop is under £10. The small traders of Westbourne Grove have not, in the long run, lost their battle with the Universal Provider. Only a small part of the tale of retail trade is told in Oxford Street, Regent Street and Knightsbridge; and a very high proportion of shops are still of the smallest possible size. Whiteley's aim was to give the customer what he wanted. To all seeming he still wants a great many very small shops close at hand and easy to get at.

Labour in New Zealand

DESPITE its tradition of progressive politics, New Zealand has only had one Labour Government since the war. On Saturday next, that one Labour Government will attempt to secure from the electorate a renewal of the large Parliamentary majority it has enjoyed for the past three years. Mr Savage and his Cabinet assumed office late in 1935. They could hardly have chosen a more favourable moment. New Zealand, more than most countries, depends for its prosperity or depression upon the state of the export trades; and throughout the whole of the last three years the export trades have been rapidly reviving. The country's farm produce exports—the foundation of its wealth—were almost half as large again in the 1937-38 season as in 1934-35. In line with this increase, unemployment has fallen to one-fifth of its former figure (though changes in the methods of calculation have had something to do with the improvement), and the aggregate of private incomes has jumped from an estimate of £103 millions in 1934-35 to £150 millions in 1936-37. New Zealand has been prosperous under Labour rule; and it is not the habit of electorates to distinguish too carefully between good fortune and good management.

The Government has carried out a crowded and ambitious programme of reform measures. Its first con-

certed efforts were directed towards radically altering the monetary system of the country. The Reserve Bank was completely nationalised and given extensive powers to control the other trading banks by regulating the reserve ratios they must hold with it, to supervise the exchanges and control them should the need arise, and to make very large advances to the Government. The aim of the Bank was also redefined as that of aiding and implementing the financial policy of the Government in power.

At the election of 1935 there had been much propaganda on Social Credit lines; and subsequently Mr Savage has periodically talked of "using the public credit" and "bursting the bonds of orthodox finance." All that this appears to have implied is a moderate use of Reserve Bank funds, particularly for housing and for the financing of the scheme of guaranteed prices for agricultural products. Throughout, the Bank has shown a proportion of reserve to notes and demand liabilities of about 70 per cent., and in their annual report for 1938 the directors record that "with the exception of the Primary Products Marketing Department overdrafts, all advances made by the Bank to the Government were repaid by the end of the financial year." Some alarm, nevertheless, has been engendered by the Government's financial policy or (perhaps more strongly)

by the tone of the talk that has accompanied it. There has been some small seepage of capital, and as a result of this and the flood of imports brought in by increased wages and expanded public works, the London funds of the Bank have shown a falling tendency. From May, 1937, to May, 1938, the exchange reserve of the Bank fell from £21 millions to £17.8 millions and the net overseas funds of the banks from £37.4 millions to £28.1 millions. That this should have happened during a period of almost maximum exports is a matter for serious concern.

Satisfied with its control over the financial mechanism, the Government turned to its social and economic policy. This has advanced on four main fronts: pensions and social services have been expanded; wages have been raised; farmers have been guaranteed a satisfactory return for their produce; and an attempt has been made to invigorate and regulate production by extensive public works and a more complicated system of State supervision and control.

As something of a climax to three years of dramatic legislation and continuous expansion of pensions and social services, an attempt was made in the last session of Parliament to co-ordinate these hitherto random and unrelated activities and mould them into a coherent charter of social security—a charter of security against sickness, unemployment and most of the economic ills that man is heir to. The Social Security Act, which is to come into operation in April next, provides among its other benefits for a general free medical service, for a free maternity service, and for a pension of 30s. (subject to a means test) for all over sixty. Provision is also made for the gradual introduction of universal superannuation. It is a piece of legislation bold in imagination and boundless in possibility: it is a measure that is also big in cost. Mr Nash, the Finance Minister, relying to some extent on a rising national income in future years, calculates that he can meet the cost by imposing on every individual a registration fee of 5s. per annum in the case of women and 5s. per quarter in the case of men over twenty, and by raising the present employment promotion tax of 8d. in the £1 on all wages and incomes to 1s. But there are many who think that Mr Nash will be very fortunate if his decidedly optimistic estimates are realised.

The Government's wage policy was pursued through that Antipodean invention, the Arbitration Court. The Court was instructed to fix a minimum basic wage on the basis of a loosely-defined standard of needs—£3 16s. a week was the minimum fixed—and to apply the forty-hour week wherever practicable. The Arbitration Court has lately shown a tendency to return its responsibility to the Government. It has declared that the inability of an industry to pay higher wages is no reason for not granting an increase and that it is the Government's job to keep the industry alive. As a result of the policy of increasing labour costs, from 1935 to 1937 the index of weekly wage rates rose by 21 per cent. (and by March, 1938, it had risen by 23.9 per cent.), and labour costs were further increased by the reduction in hours. At first these gains were concentrated on industrial labour, but later farm workers received a fully equal increase. Naturally, prices were also driven up, but owing to many factors, including the favourable swing in the terms of trade and the close supervision established over prices by the Department of Industries and Commerce, they have not risen proportionately with wages. Wholesale prices of internally produced goods rose by about 11 per cent. between 1935 and 1937—and the cost of living even less. But for an exporting country, it is the rise in costs of production rather than in domestic prices that is of fundamental importance. In her period of prosperity, New Zealand has been able to afford such a radical increase in costs. But the real test of the policy—as, indeed, of all the Savage Government's devices—will come when exports are declining.

Important support at the election had come from the

small farmer, who was, of all people, most grievously hit by the depression, and who has, by reason of his central position, always dominated New Zealand politics. His reward was the system of State purchase of export produce at a fixed or "guaranteed" price. The crucial point in any scheme of guaranteed prices is, of course, the nature of the price fixed. In New Zealand no clear decision has been reached whether the price to be fixed is to be merely the average to which actual export prices will conform over a long period (which would be at least theoretically practicable) or a price that would ensure the farmer an adequate return for his work, irrespective of the prices obtainable in the world market (which, however desirable, is almost certainly impossible of realisation).

The scheme has only been applied to dairy produce as yet, though price control has also been extended to the internal market. Two seasons have been completed, in the first of which there was a net deficit of £272,000 and in the second a surplus of £113,000. The price for the coming season has just been announced: so far the price has been raised slightly for each succeeding season, and at the end of last season there was a special distribution of some of the surplus that had accrued. These trends, together with the fact that, despite two high price years, there should be a net deficit, however small, suggest that the measure will readily develop into a form of subsidy financed by a Reserve Bank overdraft.

As was to be expected from an avowedly Socialist administration, there has been some extension of State control over industry. But it has not been excessive, and Mr Savage's attitude has been moderate: "The State is not entitled to interfere in any business from which the people—who constitute the market—are getting reasonable service . . . the Government will naturally inherit enough trouble without trying to run all the affairs of trade and industry." The State monopoly of transport has been increased by extending the control of the railways over certain road transport services: the Reserve Bank and the broadcasting services have been nationalised, as has also the small and inefficient iron and steel industry, which has been endowed with a loan of £5,000,000 and a vigorous programme of expansion. A big change has also been made by the creation of the Bureau of Industry to foster industrial development and promote efficiency. Apart from prices, over which there is continuous supervision, control can be exercised, in the interests of efficiency, over the establishment of new and the amalgamation of old units in any trade. Many producers' control boards and similar semi-monopolist institutions have been set up, the degree of State control being larger the greater the possibility of exploiting the local market. Typical of this extended bureaucratic control is the Pharmacy Plan, by which control is exercised, under a Director of Pharmacy, over the numbers of retail chemists and the prices charged for dispensing; the retailers are also provided with the advantages of a large-scale buying organisation.

This whole economic policy has obviously involved a heavy increase in expenditure, particularly as it has been accompanied by a vigorous public works and housing campaign. Both Mr Savage and Mr Nash have denounced the idea that public works should only be used to offset depression, and regard them rather as a normal feature of State activity. Last year some £17 millions was spent in this way and another £20 millions is budgeted for the coming year, of which £14 millions is to be provided by a local loan. These are very large sums for a country with only one-thirtieth the population of the United Kingdom. Expenditure from the Consolidated Fund, which had hovered about £24 millions from 1928 to 1935, rose to £25.9 millions in 1936, to £30.7 millions in 1937 and to £35.2 millions in 1938. The Budget estimate for 1938-39 anticipates a level of expenditure very similar to that of the preceding year. Taxation returns have risen nobly to bear

this burden, from £25.5 millions in 1936 to £36.8 millions in 1938, enabling Mr Nash to show a series of small surpluses, though he has borrowed locally for public works purposes and has a Reserve Bank overdraft for the guaranteed price. This expansion in revenue has required no great change in the actual rates of taxation: but it has dispelled any hope of a return to the lower pre-depression standard of taxation. There is much criticism of this failure to reduce taxation, even though the proportion of the national income taken in taxation is probably lower in New Zealand than in many other countries.

In its financial policy, as elsewhere, however, the Government has only been able to carry its policy through to success because of the prosperity of the last three years.

The Final Documents

The following is the text of the White Paper issued on October 3rd, giving further documents in continuation of the White Paper reprinted in full in The Economist last week.

No. 1.

Personal Message sent by the Prime Minister to the Reichschancellor on September 28, 1938

AFTER reading your letter I feel certain that you can get all essentials without war and without delay.

I am ready to come to Berlin myself at once to discuss arrangements for transfer with you and representatives of Czech Government, together with representatives of France and Italy if you desire.

I feel convinced we could reach agreement in a week. However much you distrust Prague Government's intentions, you cannot doubt power of British and French Governments to see that promises are carried out fairly and fully and forthwith. As you know I have stated publicly that we are prepared to undertake that they shall be so carried out.

I cannot believe that you will take responsibility of starting a world war which may end civilisation for the sake of a few days' delay in settling this long-standing problem.

No. 2

Personal Message sent by the Prime Minister to Signor Mussolini on September 28, 1938

I HAVE to-day addressed last appeal to Herr Hitler to abstain from force to settle Sudeten problem, which I feel sure can be settled by a short discussion and will give him the essential territory, population and protection for both Sudetens and Czechs during transfer. I have offered myself to go at once to Berlin to discuss arrangements with German and Czech representatives and, if the Chancellor desires, representatives also of Italy and France.

I trust your Excellency will inform German Chancellor that you are willing to be represented and urge him to agree to my proposal which will keep all our peoples out of war. I have already guaranteed that Czech promises shall be carried out and feel confident full agreement could be reached in a week.

No. 3

Extract from Statement made by the Prime Minister to the House of Commons on September 28 announcing the Reichschancellor's reply to the Message which he had sent to him that morning.

"I HAVE something further to say to the House yet. I have now been informed by Herr Hitler that he invites me

GERMAN AREAS IN CZECHOSLOVAKIA

to meet him at Munich to-morrow morning. He has also invited Signor Mussolini and M. Daladier. Signor Mussolini has accepted, and I have no doubt M. Daladier will also accept. I need not say what my answer will be."

No. 4

AGREEMENT CONCLUDED AT MUNICH ON SEPTEMBER 29, 1938

GERMANY, the United Kingdom, France and Italy, taking into consideration the agreement, which has been already reached in principle for the cession to Germany of the Sudeten German territory, have agreed on the following terms and conditions governing the said cession and the measures consequent thereon, and by this agreement they each hold themselves responsible for the steps necessary to secure its fulfilment:—

1. The evacuation will begin on the 1st October.
2. The United Kingdom, France and Italy agree that the evacuation of the territory shall be completed by the 10th October, without any existing installations having been destroyed and that the Czechoslovak Government will be held responsible for carrying out the evacuation without damage to the said installations.
3. The conditions governing the evacuation will be laid down in detail by an international commission composed of representatives of Germany, the United Kingdom, France, Italy and Czechoslovakia.
4. The occupation by stages of the predominantly German territory by German troops will begin on the 1st October. The four territories marked on the attached map (1) will be occupied by German troops in the following order: the territory marked No. I on the 1st and 2nd of October, the territory marked No. II on the 2nd and 3rd of October, the territory marked No. III on the 3rd, 4th and 5th of October, the territory marked No. IV on the 6th and 7th of October. The remaining territory of preponderantly German character will be ascertained by the aforesaid international commission forthwith and be occupied by German troops by the 10th of October.
5. The international commission referred to in paragraph 3 will determine the territories in which a plebiscite is to be held. These territories will be occupied by international bodies until the plebiscite has been completed. The same commission will fix the conditions in which the plebiscite is to be held, taking as a basis the conditions of the Saar plebiscite. The commission will also fix a date, not later than the end of November, on which the plebiscite will be held.
6. The final determination of the frontiers will be carried out by the international commission. This commission will also be entitled to recommend to the four Powers, Germany, the United Kingdom, France and Italy, in certain exceptional cases minor modifications in the strictly ethnographical determination of the zones which are to be transferred without plebiscite.
7. There will be a right of option into and out of transferred territories, the option to be exercised within six months from the date of this agreement. A German-Czechoslovak commission shall determine the details of the option, consider ways of facilitating the transfer of population and settle questions of principle arising out of the said transfer.
8. The Czechoslovak Government will within a period of four weeks from the date of this agreement release from their military and police forces any Sudeten Germans who may wish to be released, and the Czechoslovak Government will within the same period release Sudeten German prisoners who are serving terms of imprisonment for political offences.

Annex to the Agreement

His Majesty's Government in the United Kingdom and the French Government have entered into the above agreement on the basis that they stand by the offer, contained in

(1) [The map on the previous page incorporates the information given on a sketch map printed in the White Paper, but is not a reproduction of it.—Ed., Econ.]

paragraph 6 of the Anglo-French proposals of the 19th September, relating to an international guarantee of the new boundaries of the Czechoslovak State against unprovoked aggression.

When the question of the Polish and Hungarian minorities in Czechoslovakia has been settled, Germany and Italy for their part will give a guarantee to Czechoslovakia.

ADOLF HITLER.
NEVILLE CHAMBERLAIN.
EDOUARD DALADIER.
BENITO MUSSOLINI.

Munich,
September 29, 1938.

Declaration

The Heads of the Governments of the four Powers declare that the problems of the Polish and Hungarian minorities in Czechoslovakia, if not settled within three months by agreement between the respective Governments, shall form the subject of another meeting of the Heads of the Governments of the four Powers here present.

ADOLF HITLER.
NEVILLE CHAMBERLAIN.
EDOUARD DALADIER.
BENITO MUSSOLINI.

Munich,
September 29, 1938.

Supplementary Declaration

All questions which may arise out of the transfer of the territory shall be considered as coming within the terms of reference to the international commission.

ADOLF HITLER.
NEVILLE CHAMBERLAIN.
EDOUARD DALADIER.
BENITO MUSSOLINI.

Munich,
September 29, 1938.

Composition of the International Commission

The four Heads of Government here present agree that the international commission provided for in the agreement signed by them to-day, shall consist of the Secretary of State in the German Foreign Office, the British, French and Italian Ambassadors accredited in Berlin, and a representative to be nominated by the Government of Czechoslovakia.

ADOLF HITLER.
NEVILLE CHAMBERLAIN.
EDOUARD DALADIER.
BENITO MUSSOLINI.

Munich,
September 29, 1938.

We also append the text of the declaration signed by Herr Hitler and Mr Chamberlain on September 30th, which is not included in the White Paper:—

We, the German Führer and Chancellor and the British Prime Minister, have had a further meeting to-day and are agreed in recognising that the question of Anglo-German relations is of the first importance for the two countries and for Europe.

We regard the agreement signed last night and the Anglo-German Naval Agreement as symbolic of the desire of our two peoples never to go to war with one another again.

We are resolved that the method of consultation shall be the method adopted to deal with any other questions that may concern our two countries, and we are determined to continue our efforts to remove possible sources of difference and thus to contribute to assure the peace of Europe.

ADOLF HITLER.
NEVILLE CHAMBERLAIN.

Topics of the Week

Dr Benes.—The democratic countries of the world learnt with sorrow and regret on Wednesday afternoon that President Benes had resigned. If this act of renunciation by the man whose courage and poise throughout the crisis have been the admiration of the world had merely been a surrender to the undignified and abusive attacks which Herr Hitler has heaped upon him, the news would have been received with hot resentment. But the resignation means more than this. Dr Benes was one of the three creators of the Czechoslovakia of 1918. He guided the foreign policy of the new state for 17 years after the war; he, more than any other man, brought into being the Little Entente for the purpose of safeguarding the integrity of the new successor states. He was the architect of the alliances with France and Russia. Under his guidance the rôle of Czechoslovakia in the comity of nations at Geneva has become an increasingly more important one in the decades that have passed since the Great War. He symbolises in his person the international system of open diplomacy and discussion which for the time being has been displaced by the method of power politics; he has stood for the independent statehood of Czechoslovakia and the other countries of Central Europe. But the new and truncated Czechoslovakia—if it survives the pains of its re-birth—must come to terms with its big neighbour; it can no longer afford to place its main reliance in alliances and in its membership of the League. Dr Benes's past history—not merely the animosity of Herr Hitler—makes him a stumbling-block to the pursuit of this new policy. He himself is the first to realise this, and it does him honour that without any sense of humiliation or defeat he has promptly taken a step which will lighten the difficulties of his beloved country.

* * *

It is nevertheless a tragedy that events should have compelled the withdrawal from the stage of a man who has so much to contribute towards international peace and is both skilled and wise in the art of harmonising personal and national differences. In many important negotiations—as conciliator in the Anglo-Turkish dispute about Mosul, for example, and in the Disarmament Conference—he has made great contributions to peace. The decision of 1918 which placed the Sudeten Germans under Czechoslovakia has been sharply criticised in these days by many who have not stopped to think how impossible it is to draw boundaries in Europe on a strictly racial basis. Czechs and Germans have lived together in Bohemia for centuries. The fault has been that steps were not taken in time to reconcile the Germans to their new citizenship. For this, Dr Benes cannot be blamed. In 1927 he objected so strongly to the centralisation of the state which was introduced in that year that he refused to sign the decree which brought in the new regime. He has, moreover, worked consistently for economic disarmament between the countries of Danubia and, in particular, for reconciliation with Hungary. It is one of the ironies of history that he personally should pay the price for the dangerous, though intelligible, nationalism of his countrymen. During the years of his Presidency his country, which has been one of the few islands of refuge for German exiles, has been quietly bracing itself to stand against the rising menace of Nazi domination. But Czechoslovakia has given way to no panic dictatorship. Dr Benes himself has symbolised in his person the quiet courage and the democratic traditions of a freedom-loving people. Dr Benes retires from the stage at a comparatively early age, but his place in history is already assured.

* * *

Munich Debated.—For four days this week Parliament was engaged in discussing the Peace of Munich and, although striking departures from normal party lines were evident in several speeches, there was never any doubt in either house that Mr Chamberlain's activities in averting

war would be handsomely approved. At the beginning of the week, indeed, it was widely believed that the deep and intense relief which was being felt in all quarters at our escape from the horrors of hostilities would sweep Parliament and, if an early election was called for, the country in the Government's favour. In the event, however, as the debate proceeded and citizens and representatives alike found time to contemplate more calmly the consequences of what had happened, a strange mixture of sentiments was revealed. Certainly it became clear that the Government would not easily ride back to power in a November election with an augmented number of supporters, simply on a wave of emotion—though the threat of an election might restrain those Conservatives who were contemplating opposition. Indeed, most Members came soon to the view that a snap election, if it did result in Government successes, would be a piece of unscrupulous opportunism. From the very moment on Monday when Mr Duff Cooper spiked several of Mr Chamberlain's triumphal guns by the statement he gave before the Prime Minister's speech of his reasons for resigning from the Admiralty, there could be no doubt that probably a considerable majority of Members combined their relief and gratitude with many misgivings. There have been no more resignations from the Cabinet, though a handful of Ministers who had sided with the First Lord of the Admiralty were known to be searching their consciences, and one, at least, to have almost taken the plunge more than once. And the forthright attacks of Mr Churchill, Mr Eden, Mr Amery, Mr Nicolson, Mr Cartland, Lord Lloyd and others upon the Munich terms and Mr Chamberlain's methods, could not hide, by their weight and eloquence, the fact that scarcely more than a score of the Government's own supporters were ready to translate their uneasiness into overt opposition. None, when it came to a division, was willing to go further than to abstain from voting.

* * *

Yet uneasiness was very widespread. Few Members, and indeed few citizens, could escape the feeling that Czechoslovakia had been harshly and unjustly treated. Few, too, could avoid the reflection that Britain and France had suffered a serious diminution in strength and prestige. The number of Members ready to applaud the advance of Herr Hitler's might in Europe was negligible. Mr Chamberlain's promise of peace in our time soon faded into the background, and Government spokesmen, from the Prime Minister himself to Sir John Simon, laid stress upon the fact that "the drama was not ended," that the state of emergency had not passed, and that re-armament must proceed with greatly renewed vigour. The general sense of the debates in both Houses was thus very far

from the unbridled optimism of the previous week-end. Distastefully, the best was made of a bad job; Czechoslovakia which had been sacrificed must be thanked and aided; Britain must be strong. Relief won the day, and Mr Chamberlain was so far vindicated in what he had done. But, for the future, he was given *carte blanche* for no more than the mobilisation of all the country's resources against possible perils. On Monday, the Prime Minister seemed to suggest a policy of Four Powers without Russia. On Wednesday, the Chancellor of the Exchequer hastened to repudiate this narrow conception, and to mention the Soviets by name. Parliament was pleased with Mr Chamberlain, but by no means ready to follow him into unknown paths with his new-found dictatorial friends.

* * *

Palestine.—If the size of a country's weekly murder-roll constitutes its claim to space in the news, then Palestine ought to have reached first place on the front page of the daily Press last week; for, all through the crisis, there have been many more deaths by violence in Palestine than in Central Europe. In Palestine, during the three months ended on September 30th, there have been 1,768 known casualties, of which 836 were deaths; and the actual figures must be higher, as there is no accurate return of the full losses of the Arab insurgents in the field. There were 100 casualties in Palestine, more than half of which were deaths, between Thursday of last week and this last Sunday. This startling figure is partly accounted for by a pitched battle between Arab insurgents and British troops which was fought near Ramallah last Saturday. And last Sunday the toll was increased by an Arab massacre of Jews at Tiberias, in which as many as nineteen Jewish lives were taken, including those of three women and ten children. Mr Malcolm MacDonald, who was later in conference with the High Commissioner for Palestine, announced on Wednesday that additional security measures would be taken. Two cavalry regiments and one battalion are proceeding to Palestine from this country, a further three battalions from India, and in Palestine itself the British section of the police is being reinforced by several hundred ex-servicemen. In the Palestine section of the police, duties are being rearranged so as to avoid the contingency of Arabs being pitted against their fellow nationals, by an extended employment of Jews. The Foreign Minister of Iraq conferred with Mr MacDonald on Thursday; and it is thought that the question of Palestine figured in the conversation. But it is no exaggeration to say that the Palestinian situation today is as critical as the European situation was ten days ago. The only ray of light is reflected from the Prime Minister's announcement, in the House of Commons on Monday, that he does not intend to rest from his labours for the healing of Europe's wounds—for the present race-war in Palestine is in truth one of Europe's wounds, in spite of the geographical accident that the scene of this local tragedy happens to lie in Asia. The new factor which,

during these last years, has made the execution of the British mandate for Palestine finally impossible has been the sudden vast increase of the pressure of Jewish immigration in consequence of the wave of anti-Semitism in Germany and other parts of Central Europe. In the next instalment of Mr Chamberlain's work, will he take up with Herr Hitler the urgent question of relaxing the persecution of racial, religious and ideological minorities in the totalitarian States? And when the peacemakers come to the point of redistributing Europe's colonies, will they think of finding a colony for the Jews as well as for the Germans? It is only within this much larger framework of peaceful change in Europe and in Africa that the Jewish pressure on Palestine can be relaxed to a point at which a Jewish-Arab *détente* will become practical politics. There is no time to lose.

* * *

France and the Crisis.—That special powers should be accorded to M. Daladier after and not before the crisis is significant of more than rocky French finances. When the full tale of these days comes to be reckoned up it may after all be found that the decisive factor turned not on the tenor of conversations in Germany or Whitehall, nor on the mobilisation of the British Fleet, but on the lack of unity which was present throughout the negotiations both within the French nation at large and within the French Cabinet. One group wished to negotiate until the last moment had come and the last bargaining counter, if need be, surrendered; the opposing group, like Mr Duff Cooper, was for returning threat by counter-threat. Between these two positive views fluctuated the puzzled understanding of the French nation, ready to fight but very reluctant to believe that fighting was necessary. On the one hand, MM. Daladier, Bonnet and Chautemps, backed by supporters of the Right who included M. Flandin, journalists like M. Maurras, and some of the Radicals; on the other hand, MM. Mandel and Reynaud, with all the organs of the Left and influential politicians like M. Blum, demanding a firm stand. In the event there was no real "united front," of the kind which appeared most emphatically in Great Britain, about what should be done in the last resort: there was, indeed, a vacillation which meant an inevitable weakening in diplomatic strength. As things went, the first group carried the day. Returning from Munich tired and perhaps disheartened, the Prime Minister was greeted with flowers and grateful cheers in the streets of Paris.

* * *

Rejoicings at the peace were never free from doubts tinged with shame at the sacrifices demanded of Czechoslovakia; and counting the cost of what those sacrifices would mean to France herself began as soon as the peace terms became known. Apprehension of the future was heightened by the Chamberlain-Hitler declaration: commentators demanded of their readers the meaning of this strange by-product of the Four Power talks, squaring so clumsily as it did with the Entente Cordiale, and cast gloomy reflections on what many considered France's weakened position. Hot on the heels of these anxious doubts came fresh fears of impending monetary difficulties. And although these difficulties, being temporary, will pass, there is in France a growing realisation that the new situation brings with it new elements which will not pass. The Soviet and Polish alliances have clearly lost much of their force: nobody could be surprised if they were to lose all their force. An Ambassador is being hastened on his way to Rome lest France be left out of the Anglo-Italian talks; and if they are not careful the Quai d'Orsay will soon be dancing to a Roman tune. Barthou's vision of a resolute France stretching out an arm to the wavering nations beyond the Oder and the Danube, and binding them together in mighty defence of the *status quo*, fades before another vision: the vision of men like M. Flandin, of a France bereft of allies and hemmed in by enemies, withdrawn from all her outposts for a final stand upon the Maginot Line. That vision is painful; but only time can erase its possibilities.

Poland Favours Partition.—Since the eighteenth century the Poles have been notorious for their political folly, but in compensation they have enjoyed a reputation for political chivalry. They suffered for their loyalty to their French benefactor Napoleon when fortune turned against him; and for a century they gave their lives on behalf of many lost causes besides their own. As a result of the present Polish Government's handling of affairs during September, 1938, Poland's reputation for political unwisdom will have been (if that is possible) enhanced, while her good name for chivalry will have been undeniably lost. Meanness and pettiness have been the keynotes of Polish conduct; and these unpleasant qualities were shown at their worst in the last act, which followed the Four-Power agreement at Munich. At Munich, in the night of September 29th-30th, it was agreed that, if the question of the Polish and Hungarian minorities in Czechoslovakia had not been settled within three months by agreement between the respective Governments, they should form the subject of a further meeting between the four Heads of Governments of the Great Powers; as a pledge, it was further agreed that the prospective German and Italian guarantees of Czechoslovakia's new frontiers should not be given until after a settlement of the Polish and Hungarian minority questions had been reached. In other words, Poland had a Four-Power guarantee that she and her minority in Czechoslovakia should receive as favourable treatment as Germany and the German minority. Colonel Beck might well have been content to win so great a reward from other statesmen's efforts. Instead, he and his colleagues seem to have had no room for any feeling but one of pique at their not having been invited into the Council Chamber of the Big Four; and, acting on this feeling, they did their worst to upset the peace of Europe again the moment after it had been saved by a hair's breadth. During the same night of the 29th-30th the Polish Government sent Prague an ultimatum, expiring at 2 p.m. on Saturday, demanding the occupation of the Czech part of Teschen on that day and the further occupation of a larger area (including Czechs as well as Poles) by the 10th. For this childish purpose of keeping abreast of Herr Hitler's dates, the Polish Government flouted the protests of the French, British and German Ambassadors on Saturday morning. Prague capitulated perforce; and the Polish Army has marched in. But what is going to be the next chapter in the history of a post-war Polish Republic which, in its national composition, is a replica of Czechoslovakia on a larger scale? In Poland, as in Czechoslovakia, between a quarter and a third of the population does not belong to the ruling nationality—and does not wish to belong to the post-war State. In Poland, as in Czechoslovakia, one of the unwilling subject minorities is German. How long will the Poles have to wait for the Fourth Partition they have now so foolishly encouraged? And where will they then find friends?

* * *

Hungary's Discretion.—Hungary, like Poland, has been assured, in the Four-Power agreement of Munich, that she and her minority shall receive no less favourable terms than those which Germany and her minority have obtained from Czechoslovakia. Unlike Poland, Hungary seems to have made up her mind to wait until she is helped, instead of snatching from the dish before the carver has had time to finish his job. No doubt Hungary has been assisted in her choice of this path of discretion by the attitude of some of her neighbours. Roumania and Yugoslavia are reported to have told her that, if she attacks Czechoslovakia, they will honour their undertakings to Czechoslovakia under the statute of the Little Entente. And Czechoslovakia could accept the military aid of her two South-East European allies without laying herself open to a German charge of Bolshevism which would have been the awkward consequence (as a Czech spokesman has pointed out) of accepting the aid of the Soviet Union, whether against Poland or against Germany herself. It has been arranged between Budapest and Prague that negotiations are to take place, and it is not too much to hope that these will have resulted, long before the Munich term of three months is up, in an amicable agreement on fair

lines. To disentangle from the Slovaks the Magyars now under Czechoslovak rule will present as difficult a geographical problem as the disentangling of the Bohemian and Moravian Germans from the Czechs; and in this case, as in that, a clear cut will require an extensive exchange of populations.

* * *

In the past, Hungarian nationalists have demanded an integral restoration of the territories of the Crown of St. Stephen; and this, *vis-à-vis* Czechoslovakia, would mean a retrocession to Hungary of Slovakia itself, and not merely of Slovakia's Magyar fringe. Now that Herr Hitler has renounced the acquisition of all Bohemia and Moravia (which would have been the practical result of the Godesberg ultimatum), any Hungarian demand for the whole of Slovakia is presumably likewise out of court. As it is, Hungarian demands made known in Prague on Monday and Tuesday asked for immediate negotiations on the transfer of territory. To ensure "a friendly atmosphere" the Hungarian Government suggested that all Magyar political prisoners be freed, that all Magyar soldiers in the Czechoslovakian Army be released, that local civil guards replace the State police, and that a token occupation of two frontier towns be made by the Hungarian Army. Changes in the Prague Government have held up reply to these suggestions. They coincided with fresh Slovak autonomy demands, M. Cermak, the Slovak Minister in the original Sirovy Cabinet, having resigned; but, as if to set off the reported Hungarian demand for all territory south of a line drawn between Bratislava and Uzhorad, which would cut off many Slovaks, the executive of a new Slovak Party formed on Wednesday night denied any intention to secede and declared for co-operation with the Czechs and the Ruthenians. Even if Hungary did still demand Slovakia, we may already hazard the guess that Herr Hitler would be one of the promptest to intervene on Czechoslovakia's behalf. So long as the "rump" of Czechoslovakia survives as a state, Slovakia insulates Hungary and Poland from one another; and Germany will wish to keep these two neighbours of hers insulated for precisely the reason that is making them eager to possess a common frontier. If Hungary joins hands with Poland, Germany's eastward advance is barred; if Slovakia remains in Czechoslovakia, Germany's advance is still open. In the next chapter of the story we may expect to see an entente between Germany and a Czechoslovakia who will no longer possess a subject German minority, while Hungary (with her 400,000 Germans) and Poland (with her 750,000) will begin to feel the German breeze. The Hungarians appear to be seeing ahead rather more clearly than their fellow dupes at Warsaw.

* * *

Russia's Part.—One of the major mysteries of the last few weeks is the rôle of Russia and the place that is reserved for her in the new alignment of Europe. It may

be useful to recount in brief the story of Soviet diplomacy during the crisis. It comes into the open on September 10th, when M. Litvinov and M. Petrescu-Comnen were said to have included in their Geneva talks the question of the transport of Russian war materials across Bessarabia. Roumania, the rumour went, would allow that passage provided that France and Britain were involved in the war. During Mr Chamberlain's mediatory efforts Soviet comment remained strictly orthodox—indeed, the Soviet attitude throughout has tended to err on the side of self-righteousness. Charges that concessions were being made to appease the aggressors ("trembling before the dictators," as M. Litvinov was to put it) accompanied appeals to the democracies to stand firm; but already by September 17th the Geneva correspondent of *Izvestia* had reported British initiatives for the organisation of a Four-Power Conference which should exclude the U.S.S.R. On September 21st the Soviet Foreign Minister revealed at Geneva that "when asked by the French Government, a few days before the meeting of the League, what was the Soviet attitude in the event of an attack on Czechoslovakia, he replied that the Soviet Government intended to fulfil their obligations and to afford assistance to Czechoslovakia by the ways open to them." This assistance was, of course, dependent on the French, a point which M. Litvinov emphasised two days later, stating that Czechoslovakia had not raised the question of Soviet assistance apart from French intervention.

The only important Anglo-Soviet exchange of views which seems to have taken place in all this time was a meeting between M. Litvinov and Lord De La Warr at Geneva on September 23rd. On the same day the Polish Government received a Soviet note which pointed out in forcible terms that invasion of Czechoslovakia would cancel the Soviet-Polish non-aggression pact; and that this was no idle warning appeared evident from stories which came in of large troop concentrations in the recently reorganised Kiev and White Russian military districts. At any rate, Warsaw took the note in the spirit it was intended, denying that they thought of invading what they picturesquely called "the lands beyond the Olza." In short, the U.S.S.R. could with good reason declare what they now repeat with fervour, that at no time was the Soviet attitude in doubt; and their condemnation of the Munich agreement is as logical as it is natural. The Soviet Government is, of course, in a very pretty position for denouncing the way in which the peace was kept; and they have lost no time in dissociating themselves from the negotiations and from the settlement. But there is no certain indication yet of the line that Russia will pursue in future. Sir John Simon has said that the British Government would welcome a Russian guarantee for the new Czechoslovakia. But whether it will be given is more doubtful. We may hazard the guess that it will require some active solicitation of Moscow by London and Paris to prevent the great power of Russia retreating into isolation—and the further guess that that active solicitation will unfortunately not be forthcoming.

Outlook Uncertain.—It is too soon yet to say how the snatching of peace from what seemed to be the impending conflagration of Europe is likely to affect prospects for industry and trade. Extreme relief has given most markets an appearance of fresh confidence, but the search for sure grounds upon which to base an optimistic forecast is not very fruitfully rewarded. It is extremely probable that, so far from falling on the promise of peace in our time, re-armament expenditure will rise, and the vacuum in industrial demand which would succeed the abatement of munitions orders will be indefinitely postponed. Even so, as the course of events this year has shown, re-armament is not enough to compensate for cyclical slackening in industries not directly affected by Government orders, or even in those, such as iron and steel, whose concern with armaments is direct. Textiles and coal, to take only two examples, are dependent for their prosperity

upon trade with countries overseas. For many months both of these industries have been depressed; and it is far from certain that the Peace of Munich will lead to that assured confidence in the world which alone could serve as the basis of any appreciable expansion in normal trading. It is true that the reconciliation with Signor Mussolini which is rumoured to be on foot might markedly improve prospects for our exports in the Mediterranean. But it is equally true that the acquisition of Sudetenland by Germany and the intensification of the German drive in South-East Europe must in many ways further weaken the position of British exporters in a region where already they are on the defensive. For the moment, economic disarmament is no less unlikely than military.

Thus, immediate political and industrial signs are, to say the least, not favourable. There are many who believe, with Mr Colin Clark, that the upturn in the cycle, certainly in its purely British aspects, is not due before 1939 at the earliest. The September employment returns (discussed in detail on page 85) were not encouraging; and next month's report from the Commissioner for the Special Areas will tell, on balance, a gloomy tale. Yet there is one vitally important factor which should counteract any tendency towards undue pessimism about the economic outlook. Recovery in the United States has not perhaps proceeded so rapidly as some optimists had hoped; but the August indices of industrial output and building activity in that country (reported on page 66) suggest that steady revival is going on, and informed observers are convinced that the upward trend has been continued in September. If this is so—and it is to be remembered that American business, too, is not uninfluenced by political considerations, especially during an election campaign—then the powerful magnet of American demand may galvanise our primary producing customers into new life, and economic activity all over the world, and not least in this country, will benefit accordingly. The hopes of the Old World still rest, as they have done for so many months, upon the New.

Air Raid Precautions Campaign.—The nation-wide campaign to bring the country's precautions against attack from the air up to full strength, which was projected many weeks ago, began on October 3rd according to plan. The Home Secretary did not inaugurate the drive with a speech, as had been intended; the grim lessons of a fortnight's intensive improvisation had made public exhortation scarcely necessary. The Government has made it known that the enrolment and training of volunteers must proceed with all speed; and the distribution of seven million enrolment forms by hand and by post has been begun. Recruitment at this juncture is the more important because the events of the period of crisis revealed very clearly the disadvantages of the hurried organisation of vital precautions in the hands of willing but untrained persons. And, despite the feverish activity of recent days, more than 400,000 volunteers are still needed to make up the million recruits required by the Government before the end of the year. Nor is the outstanding problem one merely of personnel. London was shown short of both men and equipment. It is imperative that types of efficient air-raid shelters should be authoritatively specified; and that the threefold responsibilities of local authorities, business firms and private persons should be clearly defined and made obligatory. It must be unmistakably laid down, too, as a principle of policy, that lack of personal resources or of decent dwellings will not be allowed to prevent the poorer families from securing a measure of protection equal to that obtained by the more well-to-do.

Lessons of the Crisis.—In a bare fortnight, the Government and local authorities have spent a sum variously estimated at between £12 and £20 millions on hastily contrived A.R.P. Civilian defence in this period has cost more even than the expense of mobilising the Fleet, estimated at between £10 and £14 millions, and

very much more than the money spent by the War Office and the Air Ministry on emergency measures. Forty million gas masks, costing £5 millions, have been transported and, for the most part, distributed to citizens. Millions have been spent *ad hoc* and, in general, without tender or estimate, on the digging of trenches, the improvisation of shelters, the purchase of timber and more than a hundred million sandbags, arrangements for fire fighting, the distribution of posters and leaflets and the evacuation of children from vulnerable centres of population. It must be frankly and gratefully admitted that when the actual call came the plans of the Government and the local authorities for protection against high explosives, for evacuation and for the organisation of hospitals and transport were very much further advanced than stated official policy had earlier led critics to believe. But the successful—and costly—improvisations of the days of danger also revealed the great leeway which has still to be made up before a permanent and adequate plan of precautions can be completed.

There has been a good deal of loose thinking among the Government's critics on the question of administration. The charge has frequently been made, for instance, that a service of such national importance as A.R.P., which must be uniformly efficient all over the country, ought not to be placed in local hands. Clearly local authorities have varied widely in their competence, even under the pressure of impending danger; but, equally clearly, A.R.P. must be administered by the authorities which direct education, police, fire and public health, and must be closely fitted to particular local needs. What is needed is not a new centralised system to do for Britain what the iron framework of the Nazi Party has done for German A.R.P., but a comprehensive and detailed statement from the Government of the minimum requirements of every locality, every commercial and industrial institution, every building and every household for protection against all forms of air attack, and the rigid enforcement of these stated standards—by precisely similar means to those by which minimum standards of efficiency are centrally imposed in education and health. The chief weapon of enforcement, grants-in-aid, is already in the Government's hands. The skeleton of a central supervisory department and an inspectorate already exists at the Home Office, and could readily be brought to the required strength and stature. We have seen the perils of delay; there must now be no more of it.

Spain.—Although the insurgents, according to a Government estimate, have suffered on the Ebro front since July 25th between 60,000 and 75,000 casualties, they have won no victories. Talk of a Three-Power Spanish settlement which began to appear this week after the resumption of Anglo-Italian talks in Rome, involving as such a settlement would the withdrawal of Italian troops, may come as a welcome sign to both Burgos and Barcelona after all this unavailing bloodshed. For in that case Spaniards on either side might be more ready to make that settlement which national pride—after two years of civil war a poor, torn thing but still a real force—now forbids. The Government has already made a useful beginning by taking the 15th International Brigade out of the front line after weeks of fighting, a move which is interpreted in Barcelona as the preliminary to final evacuation according to the terms of the Spanish Government's resolution on the withdrawal of its foreign volunteers. Following that resolution the League Council has decided to send to Barcelona an international commission, made up of representatives of the United Kingdom, France and Iran, whose task it will be to hold a watching brief on the progress of withdrawal and to make a report in due course; and to-day Mr Hemming, secretary of the Non-Intervention Committee, sets out upon his long-deferred journey to Burgos for the purpose of explaining the details of the British plan for evacuation. Thus the Spanish Government presents to the world undeniable proof of its desire to get rid of foreign intervention; and the onus now rests on General Franco. The nature of that

burden, being moral, permits of the General's shelving it until the Greek Kalends; but it may possibly be that Signor Mussolini, his thoughts turned towards a pending Anglo-Italian "settlement in the Mediterranean" (whatever that may mean, it surely includes Spain), is prepared to take this opportunity of recalling his "volunteers."

Six Months' Revenue and Expenditure.—The final result of the financial year depends so completely upon the yield of revenue in the fourth quarter that the six months' figures issued on September 30th (printed in full on page 95) provide only a provisional guide. Expenditure should be less subject to variation from quarter to quarter than revenue, though even here there is a tendency for the expenditure of the last quarter to be the largest of the four. There is thus comparatively little comfort to be derived from the fact that neither civil nor defence expenditure has yet reached half of the estimate for the full year. On the other hand, the estimated increase in defence expenditure over the year as a whole was £98.9 millions, and the six months' figures already show an increase of £47.6 millions, or very nearly half the total, so it may be presumed that defence expenditure is up to schedule. The progress of defence expenditure (including money raised by loan) is shown below:—

		DEFENCE EXPENDITURE (£ million)			
		1935-36	1936-37	1937-38	1938-39
First quarter	...	27.5	37.5	46.3	65.8
Second "	...	30.3	41.2	58.3	86.4
Third "	...	37.3	48.0	68.3	...
Fourth "	...	41.8	59.4	89.3	...

It will be noticed that the increase in the second quarter's expenditure, in comparison either with the preceding quarter or with last year, is almost the largest shown in the table. Civil expenditure is not increasing so rapidly. Over the year as a whole it is estimated to increase by £43.4 millions, but only £16.6 millions of this increase has yet appeared. It may be added that the quarterly return shows no very informative signs of heavy expenditure arising out of the international crisis. It is true that the Supply Services cost £31.5 millions between September 18 and 30, 1938, compared with £23.0 millions between September 19 and 30, 1937; but the period was one day longer, and in any case such variations from week to week are not unusual.

On the revenue side, little can be told of the prospects for income tax or surtax yield from the figures of collections to date. The Estate Duties show a substantial fall of £9.4 millions (the estimated fall for the whole year was only £1.0 million), and as this source of income comes in fairly regularly over the year, a short-fall on March 31st is to be expected. Neither Stamps nor Customs and Excise are doing as well as was to be expected. Customs and Excise were together estimated to show an increase of £8.7 millions over the year, but only £1.1 millions of this has yet materialised. In short, nearly all the revenue estimates are beginning to look a little optimistic. Since defence expenditure is unlikely to be curtailed, the Chancellor's chief hope must lie in a limitation of civil expenditure if he is to attain a surplus, even within the peculiar definition of that word to which re-armament has driven us.

Watching Europe

NEW YORK, September 27.—Enough has been happening on the domestic scene in the past week to have attracted full attention in normal times. Actually, at least in New York, no one has been able to distract his attention from European developments. On September 21st, a tropical hurricane approached the mid-Atlantic coast, but instead of bending out to sea as is the usual course of such storms, it followed the New England shore, leaving over 500 dead and doing millions of dollars' worth of damage to property. The economic aspects of the political campaign have been intensified. The state of Oregon is about to vote on a referendum for a pension scheme of \$100 a month; and the endorsement of the Townsend Plan by a large proportion of candidates for Congress is a reminder that this issue, although it was submerged by the Social Security Act, is still on the political agenda.

Again, the perennial railway crisis is now reaching an acute phase. Under more tranquil circumstances any one of these items—the hurricane, the agitation for pensions, the railway crisis—would have merited full attention. Actually, they have been almost wholly obscured by the great interest in events abroad—though this absorption is perhaps peculiar to New York.

The Federal Reserve Board has published its indices for August, and the preliminary figure of 88 for industrial production is very much in line with expectation. And current evidence indicates that September will show a further increase. The following are the figures for August:—

BUSINESS INDICES				
1923-5 = 100: Adjusted for seasonal				
	Aug., 1937	June, 1938	July, 1938	Aug., 1938*
Industrial Production (Total) ...	117	77	83	88
Manufactures	117	74	82	87
Minerals	113	92	93	93
Construction Contracts (Total)...	62	54	59	70
Residential	40	42	49	53
All other	81	64	68	84
Factory Employment (Total) ...	108.6	76.3	82.9	85.1
Durable goods	108.3	65.2	70.7	72.1
Non-durable goods	108.9	88.1	94.5	97.5
Factory Payrolls (Total).....	108.2	67.2	70.6	76.9
Durable goods	110.5	58.1	58.6	63.6
Non-durable goods	105.7	78.8	84.1	91.8
Freight car loadings	79	58	61	62
Department store sales	93	82	83	83
Department store stocks	78	68	67	67

* Preliminary

The extent of the rise since June has been slightly increased by seasonal adjustment, but the difference is unimportant.

Building Activity

The rise in building contracts is especially marked. The peak of the residential building index in 1937 came in May, when the unadjusted index was 52 and the adjusted index

44. Last month the unadjusted residential building index was 53, which suggests that the actual level of residential building is now higher than at any time in the 1936-37 period of prosperity. "Other building" has shown a 20-point advance since June, but is still below the level of a year ago; and its rapid climb may be attributed to the spending programme.

It is perhaps worth while to trace the relations between production, employment, and payrolls in the course of the cycle. The decline in production in the autumn of 1937 was far more rapid than in employment; and it was not until May and June that the two had come back to approximately the same level. The fall in payrolls was faster and deeper than in either production or employment, but the subsequent upturn has been of nearly the same magnitude: in August, 1938, the indices of manufactures and employment were almost identical with those recorded in August, 1935, but payrolls were some 10 per cent. higher.

Labour Costs and Employment

This brings the discussion into the highly controversial field of labour costs. It would appear that between the base years (1923-25) and a decade later (1935), approximately the same number of persons were required to produce a given quantity of goods, but that the payrolls were much smaller. In August, 1938, again, there was no marked change in the relation between production and industrial employment; but labour costs, per index unit, were now higher than in 1935, though still relatively lower than in 1923-25.

On the whole there is remarkably little evidence that technological unemployment is a major factor in the general problem of employment. Since the abnormal years 1919 and 1920, the relation between the indices of manufactures and employment has been, on the whole, very close. In periods of high productivity, the index of manufactures climbs more rapidly, but there is certainly no clear evidence of any general changes in the relationship between the two indices to support the common belief or assumption that there is a steady demand for labour to be displaced over the entire field of manufacturing activity; there is, of course, a number of conspicuous exceptions.

On the other hand, the relations between population and production give food for thought. In 1919, the population of the United States was approximately 105 millions; now it is 130 millions. The average annual rate of increase during the two decades is close upon 1 per cent., although currently it is only about one-half per cent. Yet, during these 20 years, there is in the course of the index of production no clear evidence of a secular trend similar to the secular trend of population. Production has apparently failed to expand as rapidly as population, and this may give a more plausible explanation of non-cyclical unemployment than the more popular thesis of technological displacement—that is, if we can accept the assumption that the index of manufactures is fairly representative of general economic trends.

The Consequences of Technical Change

The index of factory payrolls has, over the past 20 years, fluctuated more widely than either the index of manufacturing output or the index of employment. Any comparison between these indices must, of course, take into account changes in the cost of living, but we can say that payrolls in 1937 were comparable with, say, 1926 or other years in the middle 'twenties, while the cost of living was lower. And there had been, meanwhile, a substantial and fairly general shortening of the working week.

In general, therefore, the labour cost of a given level of manufacturing activity in 1937 was not higher than in the middle 'twenties, even with the shorter week, and there has been some net gain in the shape of a higher real income. These data are subject to innumerable individual exceptions, but it is possible to argue that technological change has not increased unemployment, but that it has, first, made possible a shortening of the work week and, secondly, raised real weekly wages. These consequences have not been distributed evenly over industry; and it would be dogmatic to assert that the present position has not been reached at the expense of the profit margin.

France

M. Daladier Supported

PARIS, October 6.—The agreement at Munich strikingly enhanced M. Daladier's authority in the country. Financial experts and many members of Parliament exhorted the Prime Minister to use his new popularity to carry out the vast programme of financial and economic recovery which has been delayed too long. Such a plan would involve the immediate regularisation of the extraordinary expenditure incurred because of the partial mobilisation of the country and only covered by recourse to further advances from the Bank of France.

M. Daladier's statement on the Munich agreement, and his policy of working with London, Berlin and Rome towards the reconstruction of Europe was endorsed by 535 votes to 75. Only the Communists voted against the Government and this division marked the "first official rupture of the Popular Front." Peace, said the Prime Minister, could only be secured by unity, labour and self sacrifice. As a first proof of goodwill he then asked for plenary powers to carry through an immediate programme of financial and economic reforms.

Plenary Powers

Plenary powers were granted, but only by 331 votes to 78, with 200 abstentions. In the end, the Socialists abstained; it was conceded to them that the powers should last only until November 15th instead of December 31st and that the 1939 Budget would be submitted to Parliament as usual, so that the questions of civil servants' wages and old age pensions might be reopened.

Some Socialists had hoped to be brought into the Cabinet on the basis of a programme to control credit and big industry. But M. Daladier and his colleagues declared emphatically against control of the exchanges, against further devaluation, against any compulsory conversion of public funds, and against extra taxes on savings or industrial profits. The stock of the Bank of France will be revalued, which should bring in about 30,000 million francs. Production will be intensified by further modifications of the forty-hour week. The principle of the forty-hour week will be preserved, but (in M. Daladier's words) "social laws can only be safeguarded by the labour and the sacrifices of the whole nation."

The outlook is not clear. M. Daladier has not made any drastic appeal to the people and he has produced no sure and comprehensive programme. Politically, the Popular Front has been broken; but the Stock Exchange and the markets have not been given the great plan of salvation they had hoped for.

Direct taxes yielded 3,707 million francs in the first eight months of the year, or 819 millions more than in the same period of 1937. Indirect taxes in August realised 503 million francs more than a year ago and, in the first eight months of 1938 5,000 millions more than the same period of 1937—though receipts from indirect taxation were still 586 millions below the estimates. These figures are causing the experts to regret the suppression of the turnover tax.

Iron and Steel Output Down

The production of steel was 425,000 tons in August, making an average of 511,000 tons a month for the first eight months of 1938, against 659,000 tons monthly in 1937, 559,000 tons in 1936 and 523,000 tons in 1935. Pig iron production was 421,000 tons, compared with 433,000 tons in July and 644,000 tons in January, making a monthly

average of 503,000 tons, against 660,000 tons monthly in 1937, 519,000 tons in 1936 and 482,000 tons in 1935.

The number of blast furnaces in use was 76, against 74 in July and 101 in January. Exports of metal products increased from 100,000 tons in July to 113,000 tons in August. The quantity of iron ore mined remained practically stationary at 2,541,000 tons, against 2,583,000 tons in July. Exports of ore amounted to 1,311,000 tons in August, against 1,233,000 tons in July and 1,166,000 tons in June.

Coal production in August was 2,867,000 tons, and thus, in spite of paid holidays, output was 195,000 tons higher than in August, 1937. The number of miners employed was 248,000, or 11,300 more than a year ago. Coal consumption in July was 5,567,000 tons and, in August, 4,644,000 tons, which was 577,000 tons and 744,000 tons less, respectively, than in the same months of 1937. Coal imports, with 1,890,000 tons in July and 1,871,000 tons in August, were 27 per cent. below the level of the same months in 1937; and the average price per ton of imported coal was 233 francs against 230 francs in July and 176 francs in August, 1937.

Holland

Suspense Relieved

AMSTERDAM, October 1.—The relief felt in Holland when the recent world suspense suddenly broke could hardly have been surpassed. Heart-felt gratitude is expressed for Mr Chamberlain's achievement in averting the catastrophe of another European war.

Everywhere the tension has been relaxed. On the Stock Exchange gains of 40 per cent. are being recorded; and on the money market discount rates are falling again. Hoarding by the public has ceased. And the projected measures for preliminary mobilisation have not had to be put into effect.

The foreign exchange market also eased. In the afternoon of September 27th the Exchange Equalisation Fund suddenly ceased its purchases of sterling. The result was a sharp reaction in the sterling rate at Amsterdam, and it fell in two days from 8.92½ to 8.51, and then recovered, in another two days, to 8.90. By this policy the Equalisation Fund has again demonstrated clearly that the guilder is independent of sterling and also independent of gold. The Netherlands cannot be regarded as a member of the sterling bloc, either officially or semi-officially.

When the clouds of war were gathering, a number of emergency laws were enacted, including legislation to prohibit the export of certain articles and to ensure essential food supplies. Military action was confined to strengthening the frontier guards and calling up special troops for anti-aircraft work. To meet the cost of these measures the Minister of Defence has asked for a special credit of 100 million guilders.

Recovery and the Balance of Payments

The following table summarises the principal items of Holland's balance of payments in 1937:—

	Credit			Debit		
	1935	1936	1937	1935	1936	1937
Merchandise ...	711	796	1,205	979	1,072	1,607
Services:—						
Interest etc....	199	259	309	56	82	172
Shipping and port traffic..	116	141	228	...	...	...
Tourist traffic	3	4	5	35	38	42
Gold	748	456	928	504	516	1,671
Capital movements	445	878	1,621	587	843	1,392

The figures for 1937 are in marked contrast to those for the preceding year, and reflect the economic recovery which followed the depreciation of the guilder in September, 1936, and the big capital movements which then took place.

In the course of last year 875 million guilders of gold were imported, while gold exports amounted to only 101 millions. If the Netherlands Bank's earmark transactions are taken into account, gold imports exceeded exports by 743 million guilders. Short-term debts due from our banks to foreign countries increased on balance from 387 to 558 million guilders, while floating credits outstanding abroad dropped from 627 to 544 millions. On the other hand, Dutch holdings of foreign securities were further increased.

New Taxes

The political events of the past few days have somewhat diverted attention from the Budget, which was submitted soon after the recent reopening of Parliament. The Budget for 1939 will close with an estimated deficit of 61 million guilders. Ordinary expenditure for defence purposes has been increased by 24½ million guilders in the new Budget, and an additional 73 million guilders has been earmarked for capital expenditure on defence. To meet this deficit a new income and profits tax has been devised, constituting, broadly, a levy of 2 per cent. on rents, interest, wages and profits, to be collected at the source. Profits made by limited companies will incur a further tax of 8 per cent. This new taxation is estimated to yield additional revenue of 90 million guilders.

On the other hand, there will be a revision of taxation to lighten the burden on large families and to prevent industries from being disproportionately taxed. It is estimated that these reductions in taxation, tariffs and excise duties will mean a loss to the Exchequer of 40 million guilders.

More drastic measures for coping with unemployment are to be submitted to Parliament. On September 10th there were no fewer than 304,415 persons out of work. The percentage of unemployment among all workers was 22.2, compared with 23 per cent. a year ago and 30.9 per cent. in 1936.

Spain

(By a Correspondent just returned from Spain; this letter has not passed through either of the Spanish censorships)

National Integrity

PARIS, October 3.—Loyalist Spain does not look favourably upon proposals that the leading European statesmen who have just finished arranging a European peace on the basis of transferring parts of Czechoslovakia to Germany should now turn to settling the problem of Spain. It is felt that any such settlement, even if it did not involve an actual partition of Spanish territory, would certainly be at the expense of "national integrity," in so far as it might concede political and economic influence to Italy and Germany.

The keynote of Government policy was sounded by the Prime Minister, Dr Negrin, in his speech to the Cortes on October 1st, when he said that the only mediation acceptable would be among Spaniards themselves. The Negrin Government insists that any settlement must recognise the continuation of the Republican regime, and that there cannot be two Spains, one Republican and one Fascist. Although General Franco and his chief councillors have repeatedly disclaimed any intention of installing a Fascist Spain, Spaniards are not for a moment misled by such declarations. They know the propensity of the militarists and their kind for using fair words to hide sinister intentions. The Army, which counts heavily, is full of confidence and wholeheartedly against any peace that would pull down the Republican structure. Any Government which proposed it could not last.

Senor Negrin is in a strong position. He is given credit for averting defeat and setting up a strong Government when days looked dark last spring. He and Senor del Vayo, the Foreign Minister, are hailed as the men who frustrated what is regarded in Spain as the handing over of Spain to Italy as the price of Italy's assent to the Anglo-Italian agreement of last April.

Republican Optimism

It is alleged that General Franco's position is weakening and that he is only able to carry on by virtue of continued German and Italian aid. Prisoners report great dissatisfaction with him because of his failure to make good his extravagant boasts and frequent promises that the war would soon end in victory. As a military and political leader he is reputedly discounted. The dissension between the Carlists and the Falangists is growing.

Some prisoners report that the rebels still frequently kill prisoners as soon as captured. This has been alleged to be happening on the Ebro front. Your Correspondent can affirm that prisoners in Republican hands are well treated—all too often to their own surprise.

Military morale is high as the result of the Ebro battle of last July. The rebels are in their third month of counter-attack with a great wealth of foreign material, and still have

made comparatively little headway. In the meantime their plans, it is felt, have been completely upset for the rest of the year. The most important effect of this offensive has been the breaking up of the rebel attack on Valencia, which was in full headway last July. The Loyalists have also been enabled to give more attention to a defence of the Almaden mercury mines, which were also in danger of capture two months ago.

The French border has for several months been closed to the passage of arms and munitions, and the border vigilance is exceedingly strict. Petrol and oil supplies are the principal war commodities now passing, since they are not on the Non-Intervention contraband list. The Government has established its own rather extensive war industry and manages to transport a limited stream of war supplies by sea, notwithstanding repeated air raids. The much-announced, but still illegal, rebel "blockade" of Spanish ports is ineffective except for sporadic raids, and the Loyalist naval units, although little heard of, are performing effective work in conveying supply ships.

The Food Problem

Food distribution has been placed on a well organised basis with rationing, popular restaurants, eating places for children, housing and feeding of refugees, etc. It none the less presents serious difficulties which occupy the urgent attention of the Government. Hoarding and profiteering have been rigorously discouraged. The diversion into private hands of food intended for public rationing, of which there has been much complaint in the past, has been reduced greatly.

The attitude of the peasants is not very satisfactory. Everyone knows that they hoard food with which they refuse to part and that the situation would be much alleviated could the peasants be made to disgorge. The Government has so far been exceedingly tolerant of the peasants, not wishing to arouse their hostility.

Although there is a feeling in the air that something may happen to bring about an acceptable peace before the forthcoming winter is over, Loyalist territory, and particularly Barcelona, is preparing to withstand the rigours of war suffering and resistance on a scale not heretofore known. One indication is the extensive preparations for the housing of refugees and for rationing on a semi-permanent scale. Another is the more highly organised defence, particularly against air raids. Anti-aircraft guns are being multiplied, as well as shelters against raids, and coast defences are being strengthened.

There is a general feeling that the war has entered a favourable phase for the Republic. A parallel is traced between the present situation and the Napoleonic invasion of 1808 to 1813. It is recalled that, by 1811, the French armies, commanded by Napoleon and his best generals, had taken almost all of Spain, including Barcelona. Yet the French were soon making their last hopeless stand at Vittoria before the determined Spanish armies, aided by Wellington. Now they have no Wellington, it is true, but Republican army leaders will proudly tell one that their new disciplined army is their Wellington this time.

The recent proposal of Senor del Vayo, the Foreign Minister, for the withdrawal of foreigners fighting on the Republican side, is a further reflection of this confidence. It will put an end to the eternal bargaining with Italy regarding the withdrawal of volunteers; it will upset the arguments of those who attempt to justify Italian and German invasion on the supposed ground that the Loyalists are sustaining their part of the war with "foreign invasion" in their own favour, and it may be a strong argument to procure the lifting of arms embargoes, since Republican Spain will be able to say that she is fighting in defence of Spanish sovereignty against rebels and foreigners.

Books and Publications

Investment and Industrialisation

PROFESSOR L. H. JENKS'S book on British capital abroad* was first published in 1927, and then only in the United States. Since that time it has become something of a rarity, but an indispensable adjunct to nineteenth-century studies. The new English edition in the Bedford Series of Economic Handbooks is in consequence doubly welcome.

This is not merely a statistical study of a particular phase of nineteenth-century financial history. It is one of the best books ever written on the dynamics of economic development. Few authorities would disagree with Professor Jenks's statement that "all quantitative statements with regard to the export of capital, past and present, are estimates." Such estimates have, of course, been made by numerous authorities, including such outstanding statisticians as Newmarch, Giffen and Sir George Paish, and the results achieved have been reasonably consistent. Professor Jenks freely recognises this, and himself makes use of all the available statistical studies; but, at the same time, he rightly lays stress upon the unavoidable gaps, and primarily devotes himself to the *process* of investment rather than its amount. His account is "not so much of where the money went, as of how it got there." Professor Jenks's book has long been recognised as a sound and penetrating historical study and, on all counts, it merits the wider public which an English edition will undoubtedly secure.

The story of the migration of capital from this country in the course of last century is both picturesque and illuminating. Governments defeated in war and saddled with indemnities were financed by houses in the City of London who were strong enough to accept the far-reaching political consequences of their enterprise. Newly-created governments in all parts of the world depended for their very existence on the backing of men willing to stake millions on a political hazard; and old states striving to cover political weakness by financial audacity similarly sought British assistance.

A world overseas that was ready to absorb the benefits of the revolution in production and transport which had already transformed Britain needed to be put in touch with contractors in search of employment for their costly capital equipment. Professor Jenks relates how this was done. He shows how industrialisation and the railway spread from frontier to frontier and from shore to shore; and he shirks none of the aspects of a process which was sometimes unsavoury. How France paid for the Napoleonic Wars in loans issued at so heavy a discount that determined bulls (whose operations were covered by the Duke of Wellington with his army of occupation) could make millions overnight; how Greece and the Latin American Republics met their financial needs by loans which made the fortunes of contractors while leaving their citizens with heavy interest burdens; how British contractors built railways for the world without undue regard to their paying prospects; how India was made a

permanent debtor to England; and the bankruptcy of the Near East made to provide a rich harvest for loan-promoting syndicates—all is told clearly, vividly and fairly.

Professor Jenks's judgments are emphatic, but in only two cases are they likely to be regarded as unduly sweeping. These are his assessment of the relative importance for England of abundant money and free trade in the period immediately after 1848, and his wholesale condemnation of the guarantee system under which many Indian public works were carried out. A few specimens of this book imported from the States have long been prized on English scholars' shelves. No library or student of economic history should now be without a copy.

Shorter Notices

A.R.P. By J. B. S. Haldane. Gollancz. 296 pages. 7s. 6d.

In the space of a few brief days the nation has looked upon war and passed on its way unscathed. The lessons Professor Haldane sought to teach in this book, put out on the eve of the crisis, have been learned on the instant under the shadow of hostilities. It is Professor Haldane's view, derived from his scientific knowledge and his acquaintance with aerial bombardment in Spain, that the precautions advised by the British Government before the crisis were inadequate to meet the menace of hostile attack and the danger of panic. The protection provided against gas was reasonably effective; but the safeguards against incendiary bombs and, above all, high explosives were quite insufficient. Professor Haldane calls for trenches, shelters, a large-scale system of tunnels, and wholesale evacuation of women and children. Every park and open space now bears witness to the fact that imminent danger revealed the authorities converted to something like this view. Plans for the evacuation of London emerged fully drafted in the hour of danger. The report of the Anderson Committee was not published in the midst of the excitement, but clearly—to judge from the measures actually taken—its members had gone a long way in their deliberations along Professor Haldane's road. Professor Haldane made a serious mistake in mixing doctrine and not very well-thought-out views about politics with his clear and fair statement of the A.R.P. position. But, so long as A.R.P. remains unhappily of national importance, the service rendered to the community by this book will be evident.

Population. To-day's Question. By G. F. McCleary. Allen and Unwin. 222 pages. 6s.

"This book has been written in the belief that the general reader dislikes statistics and technical terms." Dr McCleary has succeeded remarkably well in telling the whole tale of the population problem in language which is at once everyday and distinguished. The history of population and of population theory since the days of Malthus is succinctly related. The present position when "the birth rate has declined in all the countries of the Western world," is fully examined, with all its social and economic implications. A grave decline in actual numbers in the not distant future can only be averted by an increase in fertility. What can be done about it? Dr McCleary himself has done much to accomplish the first step, which is to make the facts widely known, for this book is a model of intelligible and sympathetic presentation of difficult material. The second step, in Mr Keynes's words, is to frame a considered national policy. Here Dr McCleary is content to call for a thorough study of the problem and of the policies pursued in other countries. The readers of his book will assuredly come to the conclusion that such research and, as soon as possible, some definite programme should become a chief part of public policy.

An Introduction to the Study of Prices. By Sir Walter T. Layton and Geoffrey Crowther. MacMillan. 288 pages. 8s. 6d.

This book was first published twenty-six years ago. In 1935 a second edition brought the argument and the statistical record up to date. The new edition carries the story up to the end of 1937, but no changes have been made in the main body of the work.

THE BUSINESS WORLD

The Government's Exchange Profits

THE cost of last week's war preparations, from the mobilisation of the fleet to the digging of trenches in Hyde Park, is still to be revealed to the taxpayer and the ratepayer, but there is little doubt that it will be more than they will contemplate with any pleasure. One private estimate puts it as high as £30 millions, including £10 millions for the Fleet mobilisation alone, and while it is permissible to hope that these figures are an over-estimate, the sum total of all the various kinds of expenditure must be considerable. Yet while most Government departments were faced with sudden and abnormal expenditure, there is one Government fund which must have made a large profit out of the crisis. This is the Exchange Equalisation Account.

No details have been issued of the magnitude of the Account's operations, and any estimate of the size of the Account's profits is pure guesswork. Yet the technical devices adopted by the Control are fairly well known. First it intervened directly in the foreign exchange market, selling dollars acquired by its own shipments of gold. Alternatively, it sold gold to arbitrageurs in the London bullion market, so long as arbitrage was practicable. At times it bought gold—at a discount—from nervous Continental holders, who were shifting out of gold into dollars. Finally, on September 28th the Control is known to have sold dollars heavily at rates down to \$4.61, and to have bought them back later in the day at around \$4.71. All four types of operation resulted in jobbing profits to the Account.

In any attempt to calculate the profit arising from these transactions it is necessary to begin with the impression, given by the half-yearly statements of the Exchange Equalisation Account's position, that its gold is valued at 140s. per fine ounce. If, then, it sells gold at a higher price, whether it is sold to arbitrageurs or hoarders, the Account makes a profit commensurate to the price margin. Thus a substantial amount of gold was sold by the Control in the London bullion market at prices ranging around 144s. per fine ounce. This is equivalent to a profit of 2.86 per cent.

When the Account intervenes in the foreign exchange market, it has to ship the gold to New York and pay the shipping charges. On the other hand, it gets the full price of \$35 per fine ounce, whereas the London bullion market price is adjusted so as to allow for the cost of shipment; selling in London shows a higher return when the London price is at a premium, a lower when it is at a discount, compared with the "shipping parity." To illustrate this source of profit, the Account last month gave heavy support to sterling at a rate of \$4.80. Sales of gold at this rate of exchange would realise a profit of 3.54 per cent.

At the height of the crisis the Account had to turn a buyer of gold in the London market. This gold was bought at a discount, but as the vendors were simultaneously buying dollars, the Account had to ship the gold to New York in order to support sterling. In this case the net margin of profit would depend upon the discount at which the gold was bought. A 6d. discount on a price of 145s. would produce a profit of 0.35 per cent., while a discount of 1s. equals 0.69 per cent. The profit here is thus less than in the preceding cases.

The purely jobbing profits, derived from in-and-out transactions in dollars, are also not so great as might be

expected. Even if it were right to assume that the Exchange Account did all its transactions at the two extreme rates current on September 28th, the difference between sales of dollars at \$4.61 and repurchases at \$4.71 only equals 2.17 per cent. In actual fact, the Account was selling on that day long before the rate fell to its lowest point, and its average profit margin would have been more like 1 per cent.

In an attempt to evaluate the Exchange Account's total "crisis" profits, two lines of approach can be followed. First, the foreign exchange and bullion market reports can be scrutinised day by day over the period from August 27th to September 28th inclusive. A large amount of guesswork at the magnitude of the various days' transactions is needed, but the result seems vaguely to indicate a profit for that period of the order of £3,000,000. An alternative estimate is possible as a check upon the first. The total gold exports from England to the United States for the five weeks to September 29th add up to £80 millions. If it is assumed that all this gold came out of the Exchange Account, and that the average profit margin, as described above, was 3 per cent., this gives a total profit of £2,400,000, exclusive of the Exchange Account's jobbing profits and also of profits derived from purchases of gold at a discount. Taking these last into account, the former figure of £3,000,000 may not be very wide of the mark.

Under the governing legislation, any profits earned by the Exchange Equalisation Account are retained until the winding-up of the Account, when, together with the Account's original assets, they will be applied to the reduction of the National Debt. In point of fact, practice is not quite the same as theory. These profits at present take the form of sterling, which means that they are invested in Treasury bills. This in turn leads to an equivalent reduction in the volume of Treasury bills issued by tender to the market—that is, in the effective size of the floating debt. It therefore follows that if the law is allowed to take

WILLS & TRUSTS

In acting as an executor or trustee, the Westminster Bank aims at putting itself in the position of a private trustee. It is therefore its practice to employ the family solicitor, if there is one, or any other solicitor the client may name; by such means the Bank succeeds in combining domestic tradition with business efficiency. A book showing the advantages of corporate executorship and the terms of appointment may be had at any branch.

* The Migration of British Capital to 1875. By Leland Hamilton Jenks. Jonathan Cape (London). 442 pages. 15s.

its course the Exchange Account's crisis profits will be devoted not to a reduction in the National Debt generally at some remote and indefinite future date, but to a reduction in the floating debt here and now. More important still, it is extremely probable that this reduction will escape the notice of everyone concerned.

An alternative that might be suggested is that special legislation should be passed, appropriating the Exchange Account's crisis profits towards the abnormal expenses incurred by the Government as the result of the crisis. Legislation of this kind would in one sense do no more than bring out into the open the financial reactions which

will actually be going on behind the scenes. It would, however, reveal what is the net cost of the crisis, after allowing for the Exchange Account's profits. In that way it might save the Government from the possible temptation of imposing sufficient new taxation to cover the gross cost of the crisis, while at the same time allowing the Exchange Account's profits to drift away in redemption of the floating debt. It would, in fact, let fresh light into our financial position as affected by the crisis. The Exchange Account's profits may not be large in relation to the total cost of the crisis. But they arose from the crisis, and it would not be improper to appropriate them in aid of its cost.

Oil Shares in Recession

DURING the past fortnight the Stock Exchange has discounted war and tried to capitalise peace. Yet throughout these violent phases armament and "near-armament" shares have moved strictly in step with the rest of the market. To put oil shares in the latter category might be considered a strain on ordinary language, yet oil supplies to-day are one of the leading items of military matériel. And oil shares, consequently, must be considered in any investment programme which seeks to take account of a potential war or a re-armed peace.

At the moment, however, it is the economics rather than the politics of oil which deserve the investor's attention, important though the latter may be. The facts of the world oil situation are tolerably clear. The impact of recession found the industry—in the United States at least—with more than adequate stocks. Indeed, they had continued to grow during the period of recovery, despite a record consumption of refined products. Prices, however, have been less affected during the past year than those of other primary commodities; indeed, the supervision exercised by the world's leading producers outside the United States, coupled with such official American measures as the decision of the Texas Railroad Commission to restrict crude oil production to five days a week, seem to have worked more successfully than the more rigid restriction schemes in force for other commodities.

But even without a collapse of oil prices the facts explain readily enough why "Shell" Transport and Trading ordinary stock has fallen from its high level of 147s. in 1937 to the current level of 90s. 7½d.; and why Apex (Trinidad), to take a junior share in the list, now stands at 28s. 9d., compared with a "high" of 42s. 1½d. last year. The recovery since Wednesday last week has assisted these prices, but they still leave the leading issues discounting reduced earnings for the current year. How great is that reduction likely to be? In terms of individual companies, a specific answer is scarcely possible. Three months have yet to elapse before such leading concerns as Anglo-Iranian, "Shell," and Burmah Oil complete their financial years. Both prices and outputs could move considerably in that time. On the other hand, Trinidad Leaseholds accounts, to June 30th, are due next month, while Apex

(Trinidad) and Trinidad Petroleum Development have also completed their financial years, to September and July respectively.

The timing of recession on the earnings of any particular period is thus important for particular shares and potential dividends. Next, the investor must differentiate between the chief products and markets of the leading companies. There are concerns like Apex (Trinidad) and Trinidad Leaseholds whose revenues depend largely on the British petrol market. Others, like Anglo-Iranian and "Shell," are governed partly by British and partly by world conditions. Again, Burmah Oil and Attock Oil are largely insulated from world movements, since they are principally interested in the Indian kerosene market. To compute the prospects for oil companies generally by reference solely to conditions in the United States, or in the Gulf export markets, would obscure these vital differences. Yet American conditions play an important part in the world oil structure, and they are worth detailed attention.

Judging by crude oil prices, developments in the American oil industry this year do not seem spectacular. It is true that East Texas crude was reduced from \$1.35 to \$1.25 per barrel at the end of August, but Mid-Continent prices have remained absolutely stationary. The threat of excessive crude oil stocks has been removed; the total of 282,457,000 barrels on September 10th was 8½ per cent. lower than for the corresponding date of 1937. The current level, as the *Petroleum Press Service* has recently pointed out, is the lowest since 1923. But the continued accumulation of stocks of refined products reveals a sharp contrast to this achievement. Refineries have continued to operate at an unduly high level, some of them with little regard for profit. The result is that total gasoline stocks in the United States are 4½ per cent. higher, at 68,605,000 barrels, than a year ago, while stocks of heavier derivatives, like gas oil and fuel oil, show an increase of no less than 29 per cent., to 150,468,000 barrels. Meanwhile, gasoline consumption is showing a more than seasonal fall, and an appreciable reduction in heavy oil stocks depends upon a bitter winter or a marked industrial recovery.

The stock situation in the American oil industry, as we have seen, is not the sole determinant of conditions in the

world oil markets. But it has exerted a depressing influence on Gulf export business, which in turn plays a major part in the oil markets of the Western Hemisphere. From the investment angle, "Shell," Venezuelan Oil Concessions, and several Trinidad companies are closely affected by changes in the Gulf markets. During the past twelve months Gulf quotations for motor spirit have fallen from 6.125 cents per gallon to 4.625 cents, and for fuel oil from 90 cents to 60 cents per barrel. A similar price trend has also been evident in the British petrol market. The leading distributors reduced their prices from 1s. 7d. to 1s. 6½d. per gallon in February. There followed an increase of 1d. per gallon after the Budget, due to the increased duty. But in May the standard grades were again reduced by ½d. to 1s. 7d. per gallon. In effect there has been a reduction of something more than a penny per gallon in the return to the distributing companies, for some concession was made to retailers early this year. In part, this fall has been offset by reduced prices for purchased supplies, and by lower tanker freights. In the Gulf/U.K. Continent trade, for instance, rates for clean tankers have fallen from a high level of 32s. 6d. to no more than 12s. per ton during the past twelve months. It is generally assumed that, so far as the distributors are concerned, this freight reduction broadly offsets the reduction in retail motor spirit prices. But this assumption is qualified by the fact that the large integrated concerns—of which "Shell" is the foremost example—operate their own refineries and tanker fleets, and to that extent do not experience the effects of changes in the oil and freight markets in direct form.

Unless the principal consuming countries busy themselves with the further accumulation of strategic supplies, it seems probable that export activity in the oil markets is likely to decline. The accompanying table shows that substantial additions to output have been secured during the current year, particularly by Anglo-Iranian and Venezuelan Oil Concessions (output figures for Burmah Oil and "Shell" are not published). But it may be significant that Trinidad Leaseholds' production and purchases for the two months to August showed a falling tendency. Depression has not struck seriously at the output figures as yet, for they have been assisted by the secular growth in oil consumption. Yet the statistics may be more affected in coming months, unless trade recovery reappears.

These facts provide a rough-and-ready basis for assessing the prospects for individual oil companies. Marketing concerns whose business consists mainly or partly in purchasing and re-selling export gasoline should show comparatively small movements in profits for the current year, for consumption has been well maintained, and profit margins have suffered far less than those of the refiners who purchase outside supplies of crude oil. In this class "Shell" is perhaps outstanding, though, like Anglo-Iranian, it is also affected by world market conditions. Secondly, companies largely concerned in the British petrol market, like Apex (Trinidad) and Trinidad Leaseholds, should have fared reasonably well, although in each case the latest expansion of output has not been so striking as in recent years. Among the companies whose fortunes are dependent at first hand on American crude prices, Anglo-Ecuadorian and Lobitos are of principal British interest. So far as prices are concerned, both should have fared relatively well during the current year. But this is not the only criterion for valuing the shares. Anglo-Ecuadorian has recently concluded a new contract with the Government of Ecuador, on more onerous, though not crippling, terms. Lobitos obtained a useful contribution to its profits, in pre-depression years, from the tanker fleet, and in 1937, again, a substantial profit was realised after providing for depreciation. The fall in tanker earnings this year may be tempered by time charters, but it will not leave Lobitos unaffected. Meanwhile, the company has to make generous provision for obsolescence in connection with the Ellesmere refinery.

It is, perhaps, the companies which sell on the basis of Gulf export prices which stand to feel the more extreme consequences of lower prices. Among these concerns we may distinguish Venezuelan Oil Concessions, United British Oilfields of Trinidad, and Trinidad Petroleum

Development. The latter concern, which has this week announced a dividend of 12 per cent., compared with 7 per cent. for the preceding year, is a special case, for its output has been rapidly expanded during the past year. Its production is sold in turn to United British Oilfields of Trinidad under a contract which cannot be determined until 1941. The latter company's programme includes the doubling of refinery capacity and the exploration of new areas acquired in recent years. The growing importance of Trinidad oil production, indeed, is evident in a 15 per cent. increase in output for the first half of this year, and in increased exports of gasoline, of which 71½ per cent. enter the British market.

These political and economic links have some bearing on the valuation of Trinidad oil shares, compared, say, with Venezuelan issues. Venezuelan Oil Concessions has substantially increased its production since 1936—the new Tia Juana region was responsible for one-fifth of the company's output in 1937, although regular working only commenced in March of that year. The company's policy in future years may be to discover supplies of better-grade crude oil, for the substantial increase in output in recent years has been accompanied by lower quality. Again, the political risk, while not in any sense urgent in character, is of a different order to that which governs Trinidad producers.

What do these discussions imply for current investment policy? They suggest, principally, that holdings of the leading oil equities, although they have lost considerable value reckoned by last year's peaks, scarcely call for disturbance. It may be that Anglo-Iranian has recovered too fast, relatively to "Shell," from this year's lowest prices. And the fact that the latter's gross yield, reckoned on last year's dividend, is approximately equivalent to the return on an average holding of Trinidad oil shares is, perhaps, a further mark in its favour. Shares which offer a yield running into double figures, however, convey a warning of their own to the long-term investor. For that reason Lobitos, Anglo-Ecuadorian, and even Venezuelan Oil Concessions must be regarded as a preserve for the informed operator.

Finance and Banking

The Relapse in Discount Rates.—Discount rates have during the past week come down with a run considerably faster than the ascent to the peak reached on Wednesday of last week. On that day the rate for full-dated Treasury bills was around 1½ per cent. By Friday of last week the rate, as measured by the result of the tender for Treasury bills, had fallen to 1¼ per cent.—and even this figure was regarded as surprisingly high in view of the level of rates at which banks had been buying bills on Friday morning. By Thursday of this week the hot bill could be sold at ½ per cent., or at less than half the rate at which it had been tendered for last Friday. For its size and rapidity such a “turn” on bills has never before been experienced by the discount market. The main factor in the decline in the bill rate has, of course, been the removal of the threat of immediate war which last week made the discounting of a bill of exchange a profession of hope and not a rational business operation. But this alone cannot explain the rapidity of the return to those abnormally low rates which have so long been regarded as normal in the discount market. The shock which the market suffered in the three weeks that led up to the culmination of the international crisis and the grievous losses suffered through the forced sales of bills and bonds have left a legacy of caution which should be reflected in the maintenance of discount rates above the rock bottom level of ½ to ⅝ per cent. If these are again becoming the operative rates it is because technical factors in the short-loan position and the keenness in the competition for bills is again driving bill rates down to figures which are part of an artificial rate structure rather than a sober estimate of the risk involved in discounting even the highest type of bill. That risk has been significantly illustrated during the past month. If it is so soon being disregarded, it is because the clearing banks, in their competitive efforts to build up their bill portfolios, which must have been seriously depleted during the previous fortnight, have bid the rate down to their agreed minimum of ½ per cent. The strength of this demand for bills is the more surprising since this week's Bank return shows no return flow of currency after last week's sharp increase in the circulation.

The discount market is therefore being deprived of an opportunity of recouping itself for the substantial losses it has recently suffered by restocking its bill portfolios at moderately attractive rates. As it was, the success achieved at last week's tenders, when the syndicate obtained its bills at a rate of 1¼ per cent., was something in the nature of a miracle, given the fact that one of the clearing banks entered the market on Friday morning as a large buyer of

this year's bills at ¾ per cent. Last Friday, however, the discount market still had the Treasury bill tender largely in its own hands owing to the immobilisation of outside money. That situation has changed greatly this week, and the return of outside money to the market may be discerned in the fact that non-clearing bank loans against bonds are once more available at ¾ per cent.

Currency and the Crisis.—A striking consequence of the crisis has been an increased demand for currency over most of Europe. Last week the British note circulation expanded by £25 millions, mainly because the joint-stock banks were reinforcing their local currency reserves. In reality, this increase in the British note circulation, large though it appeared, was very limited when compared with the experience of other countries. This appears in the following table, in which the chief European countries are grouped together, according to their geographical situation and their political proximity to the crisis. The table also illustrates the immunity of the United States. The period covered is from the last week of August to the particular date for each country which takes most account of the crisis and its effects:—

	End of August	End of Sept.	Intervening Change Amount	%
England (£ mill.)	480	501	+ 21	+ 4.4
France (Fr. mill.)	99,065	124,428	+ 25,363	+ 25.6
Germany (Rm. mill.)	6,868	8,023	+ 1,155	+ 16.8
Hungary (Pengö mill.)	606	645	+ 39	+ 6.5
Jugoslavia (Dinar mill.)	6,246	7,404	+ 1,158	+ 18.8
Belgium (Bel. mill.)	4,223	5,099	+ 876	+ 20.8
Holland (Fl. mill.)	939	1,053	+ 114	+ 12.1
Switzerland (Fr. mill.)	1,554	1,933	+ 379	+ 24.4
Denmark (Kr. mill.)	397	356	— 41	— 10.3
Norway (Kr. mill.)	453	423	— 29	— 6.3
Sweden (Kr. mill.)	971	947	— 24	— 2.5
United States (\$ mill.)	4,145	4,219	+ 74	+ 1.8

The big percentage increases in the French and German note circulations are easy to understand, when the cost of war preparations is taken into account. Hungary escaped relatively lightly, but there was a big demand for Jugoslavian currency. The three “neutral” countries, Holland, Belgium and Switzerland, were also affected by the tenseness of the atmosphere and possibly by the precautionary measures, which they felt bound to take. Complete immunity, in fact, only existed in Scandinavia and the United States. The latest returns for Czechoslovakia and Poland are not yet available. The Czech note circulation was Kr. 8,087 millions at the end of August, rose to Kr. 9,608 millions on September 15th, and then shrunk to Kr. 7,301 millions, mainly because of the disappearance of the Kr. 2,004 millions of “State notes debt.” Up to September 20th, the Polish note circulation had undergone little change. Preparatory and precautionary expenditure for war, and a desire for liquidity common to both the banks and the public are ready explanations of these movements. So far as England is concerned, none of these notes have returned this week, so that normal conditions are yet to be re-established. This is an unexpected phenomenon which will take some explaining. Usually,

after events such as Christmas or August Bank Holiday, which require additional currency, the return flow sets in very quickly. Possibly the fact that the crisis increase is still outstanding is a measure of the extent to which emergency measures, such as the mobilisation of units of the Army, are still on foot. Even then, it is surprising that there has been no reduction since last week in the currency holdings of the unmobilised public. It remains to be seen what happens in other countries, especially in Czechoslovakia where the National Bank has to adjust itself to the new conditions. This, however, is but one facet of the general and pressing problem of the economic reconstruction of Czechoslovakia.

French Finances and the Crisis.—Although the crisis is over, France, like other countries, is now concerned with ways and means of meeting its cost. In consequence, the French Government has carried through both Chambers a Special Powers Bill, giving the Government power to take by decree measures necessary for the immediate restoration of the economic and financial situation of the country. In the course of the debate it was revealed that Government expenditure during September alone came to Frs. 12,800 millions in place of an estimated Frs. 4,225 millions. The Government had had to borrow Frs. 10,490 millions from the Banque de France during the past few weeks, and that left only a margin of Frs. 1,460 millions. In consequence, a new agreement with the Banque de France had had to be made, to permit of further borrowing, but these new powers had not so far been used. The Government declared that it would not resort either to exchange control or to a new devaluation of the franc, but dropped a strong hint that the Banque de France's gold might once more be written up, to bring its basis of valuation into line with the Daladier francs. Such a basis would be approximately 27 milligrammes in place of the present valuation of 43 milligrammes of gold, nine-tenths fine, per franc, and it would write up the Bank's gold from Frs. 55,000 millions to Frs. 88,000 millions, yielding a profit of Frs. 33,000 millions. This would be more than sufficient to cover the cost of the crisis. M. Daladier has agreed that his special powers shall only last until November 15th, instead of December 31st, as first proposed. Prior to M. Daladier's triumph, there had been distinct signs this week of a renewed flight of funds from France, and in spite of official support, the franc broke through the Daladier limit of Frs. 179, with three months francs at one time as cheap as Frs. 8¼ discount. M. Daladier claimed that since he assumed office, Frs. 19,000 millions of French capital had been repatriated, but most of this amount represents last May's big movement. On Thursday morning, following M. Daladier's success, the market was hesitant, but forward francs were firmer, and little Control support was needed in Paris. Later in the day, the market took a considerably more optimistic view of the franc and both spot and forward rates were firmer.

Paris to London to New York.—The revival of the adverse pressure on sterling a few days after the conclusion of the Munich agreement was largely the result of a purely technical circumstance. Although the flight from the franc assumed almost entirely the form of demand for dollars, the French authorities supported the franc by means of selling sterling. This meant that Frenchmen, having bought sterling from the French “control,” had to use it for the purchase of dollars in London. The Exchange Equalisation Account had to support sterling in consequence. Thus, while it received gold from the French authorities, it had to ship gold to New York. On balance, the British authorities were the losers, for the evidence of an adverse pressure on sterling induced many foreign holders of funds in London to switch into dollars, and it gave rise also to a fresh wave of speculation against sterling. When the franc recovered as a result of internal developments in France,

the indirect pressure on sterling also came to an end. The lesson of the experience is none the less worth retaining. Closer co-operation between the London and Paris authorities would remove the technical flaw which quite unnecessarily caused selling pressure on sterling.

South African Gold Losses.—The Governor of the South African Reserve Bank, in his speech at the ordinary general meeting of the bank, held at the end of July, alluded to the bank's gold and exchange losses during the year to March 31, 1938. These amounted to £8,585,000. In explanation, he pointed out that during the last financial year the Union of South Africa's imports had increased by £16 millions over those of the previous year. Exports of merchandise, however, had only increased by £6.5 millions, while the gold output was only £2.2 millions greater. This left South Africa £7.3 millions on the wrong side as compared with the previous year, and so the bank's gold losses were not surprising. He did not complete the picture by describing the actual position in the previous financial year, but went on to remind the observer that the returns of South Africa's gold exports did not distinguish between newly mined gold and withdrawals from the Reserve Bank's holdings. The bank's reserves were still ample, and imports were by July on a smaller scale than those of the year before. In fact, South Africa has shared in the usual impact of the recession on primary producing countries, though her gold production has largely mitigated the shock. The Governor also alluded to the fluctuations in the bank's holdings of British Treasury bills, which last year varied within the limits of £6,876,000 and £2,816,000. This point is not without interest to the London money market.

The Chase National Bank.—The latest quarterly statement of the Chase National Bank discloses the following recent changes:—

	Sept. 30, 1937	June 30, 1938	Sept. 30, 1938
		(\$ millions)	
Deposits	2,128	2,152	2,377
Cash	709	801	986
U.S. Government securities	575	626	662
Loans and discounts	817	654	620

On the whole this statement conforms to the general American banking trend, though it is always necessary to distinguish between the New York City banks, which include the Chase, and those operating elsewhere. There is no doubt that deflation has made some progress over the past year, for the increase in the cash held by the Chase is paralleled by the increase of \$1,594 millions in the total reserves of all reporting member banks. The general demand for credit, however, has so far failed to respond. The Chase National Bank's loans and discounts are substantially lower than a year ago, while those for all reporting member banks have fallen from \$10,041 to \$8,240 millions. The result of this lack of demand for credit is an increase in investments and only a limited expansion in deposits. In both these last respects the Chase has conformed to the general banking trend. This is helpful to the Government, but shows that deflation has not yet carried recovery to the point where the public as a whole are anxious to borrow more.

MONEY MARKET NOTES

Foreign Exchanges

AFTER rising much too rapidly to \$4.86 a week ago, sterling has sobered down, and on Monday and Tuesday had relapsed to \$4.78½. This new pressure on the pound came chiefly from Paris, where doubts in the ability of the French Government to meet the cost of the emergency without resort either to exchange control or a fresh devaluation led to the beginnings of a fresh flight from the franc. The spot Paris rate, in fact, broke once more through the Daladier limit of Frs. 179, while three months' francs were quoted up to Frs. 9 and one month's up to Frs. 5 discount. Fresh support was needed from the French Controls. M. Daladier's speech, followed by his victory in the Chamber, has so far had a reassuring influence, for the spot Paris rate had by Thursday improved to below Frs. 179, while the two forward rates had rallied to Frs. 4½ and Frs. 1½ discount. This relaxation of the pressure from France also helped sterling, which on Thursday afternoon was quoted at \$4.81½ and \$4.80½. There has been a keen demand this week for three months' belgas, and the discount has narrowed from 30 to 19 cents. Belgian banks are now overstocked with belgas, and so are taking the opportunity of earning a profit through swap operations. The glut of belgas, in fact, is so great that some English dealers have had to give a small premium for the shortest positions covering two or three days ahead. Guilders and Swiss francs have moved in sympathy with the dollar, but there has not been much business in either currency.

The Bank Return

FOR various reasons, the currency withdrawn last week in preparation for a state of emergency has not yet returned from circulation. On the contrary, more currency has been taken to provide for the normal requirements at the end of the quarter. Next week, however, should witness a substantial contraction in the note circulation.

Although the increase of £9.1 millions in the banking department's Government securities caused some surprise in the discount market, where there was a

Proportion	23.1%	30.6%	17.7%	13.8%

tendency to link it up with the advance to Czechoslovakia, it is really due to a much more mundane cause. The half-year's dividends on the 2½ and 3½ per cent. Conversion Loans fell due on October 1st, and when these are added to the Government's emergency expenditure, it is easy to see that some borrowing on Ways and Means proved necessary. These dividend payments equally explain the week's increase in bankers' deposits. The advance to Czechoslovakia could not affect the Bank's holding of Government securities.

The Money Market

NORMAL conditions are rapidly being re-established, and last week's average Treasury bill tender rate of over 1½ per cent. already looks sadly out of date. At the end of last week the banks had begun to buy bills once more, first at ½ and then at ¾ per cent., and by last Thursday they were buying November and December bills at ½ per cent. Bond money is also easier, the ruling rates being ¾ and 1 per cent., with fresh money obtainable at ¾ per cent. There has been no special buying of bills.

Last week's payments for new Treasury bills were concentrated on October 1st, for as January 1st is a Sunday, these bills mature on December 31st.

	Oct. 7, 1937	Sept. 29, 1938	Oct. 6, 1938
Bank Rate	2	2	2
London Deposit Rate	1½	1½	1½

Others	1½-5	1½-5	1½-5
Discount Rates:			
Treasury bills	1½	1½	9½-5
Three months' bank bills	17½-9½	1½	5½-11½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

There was no pressure for funds, however, for the week's maturities also fell mainly on that same Saturday, the reason being that no one paid for bills at the end of June. As the Bank return shows, the heavy Conversion Loan dividends on October 1st have kept money plentiful, even although the emergency currency withdrawn last week still remains in circulation.

The Bullion Market

WITH the termination of the crisis, Continental re-sales of gold have ceased, and instead the Continent has once more turned a buyer. It is easy to suspect a desire to replenish hoards which had been hurriedly realised owing to fears that they might be commandeered on the outbreak of war. The War Risk rate has been reduced from 2s. 6d. to 1s. 3d. per cent., and on this basis the prices at this week's fixings have ranged from par to ¼d. premium. This has made arbitrage possible.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Disc. count *	Amt. dealt in †	Cash	Two Mths.
Sept. 30, 1938	144 1	d. par	906	1912	1916

" 4	145 3½	par	1,015	1916	1912
" 5	144 10	par	646	1916	1916
" 6	144 5	½ pm	989	1916	1914

* Above or below American shipping price. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing. The New York price of silver remained at 43 cents per ounce - 99½ fine during the week.

In the silver market there has been a continuance of the American trade demand. The firm tendency of the dollar stimulated Indian buying early in the week, and as very little silver was on offer, there was a fairly sharp rise in the price. Silver, in fact, rose temporarily above the New York parity, with the result that the highest price of the week has not been held. Thursday's price was roughly on a par with New York, and the market then seemed very steady. Taking a general view of the week, there has been less Eastern selling. On balance India has been a buyer, as is usual at this time of the year.

Investment

Second Thoughts.—On Friday last week there was scarcely a check to the blaze of buying and the upward rush of prices. The Munich Agreement, followed just at the right moment by the "No more war" declaration by the Prime Minister and Herr Hitler, had its natural consequence in hectic purchasing in every department of the Stock Exchange. This week, however, the story has been different. After the impact of relief, the serious investor has been crystal-gazing into the future. Is it war averted or merely war postponed? Whatever the answer, it is evident that re-armament is to continue at an accelerated pace, and the market looks at this matter, not in terms of political logic, but of hard fiscal fact. Higher taxation and further borrowing are no tonic for the gilt-edged market. The industrial market, working out, on the one hand, the effects of last week's preparations, and, on the other, the prospective consequences of further armament expenditure, seems to be agreed that the Munich Agreement is not calculated to encourage a striking measure of natural economic recovery in the near future, whatever its long-term fruits may be. And throughout the week Parliament has been occupied in debate, while the home political situation has been confused by one actual Cabinet resignation and others threatened, and by the possibility, though finally dispelled, that a General Election might be called in November. A conjuncture of peace, a balanced Budget, and industrial recovery is required to restore investment interest on a wide scale. None of these conditions is assured, and one, at least, is impossible. But for Thursday's improvements, for which Wall Street must be given due credit, markets have, in fact, reverted to the lifeless condition which was evident before the crisis.

The Price Record.—Two threats of war within a fortnight are more than the market welcomes. The effect of the crisis on security values has been tabulated in each of our recent issues. In the following table, the same representative list of securities is given, and the price record is brought up to date from "Black Wednesday" of last week to Friday, followed by this week's second thoughts:—

	High, 1938	Lowest Mark, Sept. 14	Sept. 22	Lowest Mark, Sept. 28	Sept. 30	Oct. 3	Oct. 6	Change this week

Ord. shares								

* Close.

There are few conclusions of specific investment interest to be drawn from this record. In every section of the market prices have moved as one, for extreme political risks spare no security. Perhaps the only matter for comment, indeed, is the fact that, in the expectation both of war and of re-arming peace, armament shares have tamely followed the general line. If the assumption underlying this movement is that profits will be strictly controlled in either eventuality, it may have some logical background. But if

the suggestions for the mobilisation of industry are carefully examined, it would seem that shares in the export trades might be the more seriously affected.

Wall Street's New "High."—Wall Street has capitalised peace more effectively than London. In terms of the Dow Jones industrial average, the market has advanced from 129.91—the level recorded on Monday of last week—to the new high level for the current year of 148.32 on Wednesday (surpassed in the second hour on Thursday, but not at the close) this week. This advance represents 14 per cent., compared with a recovery of 12 per cent. in British industrial equities, as measured by the *Financial News* index, over the same period. Wall Street, however, has had more than political relief to guide its movements. It is true that the latter accounted for a major part of the rise, and for a turnover comfortably exceeding one million shares during the second half of last week. But on Tuesday, just when the market was losing its impetus, when turnover fell below the million mark and when industrial stocks were slightly reactionary, the President spoke. He expressed his belief that an upturn in industrial and trade activity was in progress, took a cheerful view of the employment situation, and declared that wheat and cotton prices must be raised. And his words were supported by the advance in steel activity (according to *Iron Age*) from 47 per cent. to 49 per cent. of capacity. According to some optimistic calculations, this is within one per cent. of the "break even" point, although the majority of estimates suggest that activity must increase further to between 55 and 60 per cent. before the steel companies are "out of the red." From assessing the war risk a week ago, therefore, the market has sharply recovered to the point at which the verities of Dow theory are again a matter for practical discussion. Even the rail market has improved appreciably during the period, though the present difficulties of the industry do not suggest that the new industrial "high" will be presently confirmed by the rail index.

The Future of Czech Bonds.—Despite the increasing evidence that the new Czechoslovakian State will face serious economic and fiscal strain now that some of its most important industrial areas and sources of revenue have been lost, Czechoslovakian 8 per cent. bonds continue to be valued on appreciably better terms than those of Germany (which, after hard negotiations, agreed to interest reductions in July) and of Hungary, whose interest was scaled down after more equalitarian discussion. Czech 8 per cent. bonds have, in fact, recovered from the "low" of 23 recorded on Wednesday of last week to the present level of 56, after touching 65½ on Monday. The German 4½ per cent. loan, which fell to 15 ten days ago, now stands at 41. Yet it cannot be seriously supposed that the maintenance of full service on the Czech debt will be assured. The ability, and probably the willingness, of the new Government to pay an admittedly high rate of interest on its obligations has been impaired by the Munich Agreement. Presumably the International Commission now sitting in Berlin to give effect to the Agreement will devote attention to this and other economic problems. Hitherto the record of the Czech Government has been unblemished, and it is understood that an appreciable proportion of the outstanding bonds (amounting to £3,930,300 sterling, apart from the American *tranche*) has been repatriated. On the basis of the 1936 estimates of the balance of payments, the service of the State debt involved a gross transfer of 230 million Czech crowns—an amount which was comfortably covered by assigned revenues. But at a time when the pressing economic needs of the Republic have been recognised by the "advance" of £10 millions by

the British Government, it is obvious that the bondholder must be prepared for sacrifices. And in the absence of any statistical proof to the contrary, it may well happen that these will include a further reaction in the market value of the bonds, apart from any adjustment of interest rates.

Foreign Bond Movements.—Increased political tension during August had only a moderate effect upon foreign bond prices generally. In September, however, when the storm increased to the verge of war, prices were more seriously affected. The index of 107 representative bonds compiled by Municipal and General Securities Company, in fact, fell to a new low level of 66.1, compared with 69.7 at the end of August (average January-June, 1934=100). Movements of the index over the past year are set out below:—

AVERAGE JANUARY-JUNE, 1934=100.

End of Month	Europe	Near & Far East	Egypt	States	Provinces	South and Central America	Complete Index	Un- limited Bonds	De- facted Bonds

June	88.5	66.2	96.1	57.7	44.4	54.2	66.1	72.3	61.7

N.B.—Figures in brackets denote number of bonds included.

Remarkable evidence of the market's relief that war had been averted is to be found in the rise of the European index, which is actually 2 points higher than at the end of August. In every other group, however, substantial falls were recorded, particularly serious for Near and Far Eastern and South American bonds. The suspension of sinking funds on the Chinese 5 per cent. (Crisp) and 4½ per cent. of 1908 loans depressed the former group. During the month the Norwegian 4 per cent. loan of 1911 was redeemed, reducing the number of bonds included in the index from 108 to 107. Revised index figures for August are given to show the effect of this elimination.

Company Notes

London Transport Fails to Pay.—As Thursday evening approached, London Transport "C" stock advanced further to 78, on the evident assumption by some optimistic purchasers that the Board would, in fact, make the required payment of 5½ per cent. for the year to June last. It has decided instead to risk the perils of a receivership action by declaring a final dividend of 2½ per cent., making 4 per cent. for the year, compared with 4½ per cent. for 1936-37 and 4 per cent. for 1935-36. It is now open to holders of not less than 5 per cent. of the £25,698,802 of "C" stock outstanding to apply, if they wish, to the High Court for the appointment of a receiver, on the ground that the Board has failed in respect of each of three consecutive years ending June 30, 1936, to June 30, 1938, to pay interest on the stock at the standard rate of 5½ per cent. We suggested on July 2nd that it would be open to the Board to challenge the implications of this

clause by defaulting on its provisions, if it took the view (as it is statutorily charged to do) that renewal provisions must be adequate, and that they have not been excessive in the past. The "C" stock has always been a hybrid, with mere equity rights in two years, yet armed with the powerful sanctions of a senior debenture in the third. Its future rights may be affected by the Board's challenge, for it seems improbable that, if an application for receivership were successful, it would transform the character of the Board's operations in any significant degree. Any alteration of the stock's rights would arouse controversy, both in public and in Parliament. But the receivership provision which was written into the 1933 Act was virtually bound, sooner or later, to challenge the ability of the Board to provide an adequate service under the general provisions of the Act, and far-sighted investors have for some time realised its limitations as a safeguard.

United Steel Companies' Progress.—The excellent United Steel dividend surprised the market, but the full accounts show that the directors' policy was amply justified. During the year to June 30th, the group's coal output increased by 28 per cent., the output of coke by 15 per cent., pig iron by 6½ per cent., and steel ingots by 4½ per cent. In the year as a whole, profit margins were good, especially for a concern so highly integrated as United Steel, and gross profits increased from £2,075,322 to £2,584,540. After higher allowances for taxation and depreciation, the earnings on the ordinary stock increased from 11.1 per cent. to 11.8 per cent., and the dividend has been stepped up from 8½ per cent. to 10 per cent. This is a boom result, which may not be repeated for some time, but it is an excellent one. The following table shows the course of profits in the last three years, while the chart portrays their rapid growth since 1932:—

	1936	1937	1938
Gross profit	1,545,278	2,075,322	2,584,540
Directors' fees	5,963	5,218	5,885

* On £6,616,365 capital ranking for dividend. † On £8,821,820 capital. ‡ Payment of tax, plus transfer to taxation reserve, minus transfer from taxation reserve.

The group's position, at the end of the steel boom, is very strong, although the balance sheet might be clarified, since two-fifths of the assets consist of shares in and advances to subsidiary companies. But the liquid position is evidently good, and a special accountants' valuation of the group's assets, which has been in progress for two years and is based upon the price-level of 1936, shows that the book value of the fixed assets is less than the real value, without applying any of the £2,750,000 central reserve for depreciation and obsolescence. The technical structure of the group, moreover, has been greatly strengthened by the modernisation of the plants. Last year's report included, as an addendum, a detailed survey of the group's business: this year's includes a full discussion of the Appleby-Frodingham Steel Company's position. These works are the largest in the country, and when the extensions are finished they will have a capacity of 900,000 tons of iron and 800,000 tons of steel—64 per cent. more iron and 22 per cent. more steel than the works produced in 1937. On all hands, indeed, the group's position is powerful. But this strength cannot protect its profits from the consequences of trade setback. The report points out that since the March quarter there has

been a general decline of demand, and it is plain that profits for the current year will show an appreciable decline. With its low-gear capitalisation, however, and

UNITED STEEL PROFITS—1932-38

its technical strength, United Steel Companies should suffer less than many other steel equities, and at 25s. 1½d., to yield 8 per cent., the shares should not prove overvalued in the long run.

Austin Motor Profits.—As the Austin Motor year runs to July 31st, the latest accounting period closely corresponds with the decline and fall of the 1936-7 motor boom. The period was marked by an uncomfortable combination of increased costs and dwindling business for the trade as a whole, from which it is clear that Austin Motor did not escape. Gross trading profit, at £1,282,828, is lower than for any year in the past decade, except those at the very bottom of the depression (1931-33), while the net earnings available for dividend (£362,158) are the lowest without even that exception. The following table compares the figures for the past three years, while the chart shows yearly earnings since 1931:—

	1936	1937	1938
Trading profit	1,496,696	1,665,125	1,282,828
Tax and fees	167,000	252,000	176,000
Maintenance	530,828	606,542	449,879
Depreciation	173,795	179,506	223,291
Deb. int. and sinking fund	71,500	71,500	71,500

Ord. shares and "A" ord.:			
Earned	365,745	369,843	180,502
Paid	237,312	233,422	135,385
Earned %	77.1	79.2	40.0
Paid %	50	50	30
Reserve	125,320	207,046	45,000*
Carried forward	373,955	303,330	303,447

* To contingencies reserve. A further £100,000 was also transferred from general reserve.

The highest gross profit recorded by the company was for the year to July 31, 1937, but the highest net profit (by a considerable margin) was as long ago as 1934, when the earnings for the ordinary shares amounted to £471,686. The explanation is, of course, that maintenance and depreciation charges have sharply increased on the enlarged plant and output.

This year maintenance costs are lower, possibly because less special tool steel (a very expensive item) has been required for the smaller output and because changes in design have been kept at a minimum, thus giving longer life to jigs and dies. But depreciation is higher on the

larger plant. In general, the profit and loss account may be said to reflect a normal "bad patch" for a large motor manufacturer. In other words, the drop in profits is sharp, but, as is usual with the larger motor concerns, it is far from being disastrous. The appearance of a contingencies reserve, to which general reserve contributes

AUSTIN MOTOR PROFITS—1931-38

£100,000, may suggest that the directors consider that the setback is not yet complete; or it may merely reflect the fact that the accounts were published at the end of a week in which any concern might have thought it wise to allow for contingencies. But whatever the course of motor profits may be this year, it is probable that the shadow aircraft factory will have a larger—and

possibly quite important—contribution to make. That expectation, indeed, may have prompted the directors to cut the prices of some of the 1939 models, which will be seen at Earl's Court next week. The balance sheet is sound, though if the "bad patch" were prolonged and price competition became severe, the £632,000 cash holding might be no more than adequate.

Argentine Railway Disappointments.—The Argentine railway dividends for the year to June last were expected to make depressing news, but they have proved even less palatable than the market anticipated. Central Argentine, which carried two maize crops in 1936-37, followed by a failure last year, was not expected to make any payments on its preference issues, and the announcement to this effect at the end of last week occasioned no surprise. But better things had been expected than the mere payment of 1 per cent. on B.A. Great Southern 5 per cent. first preference stock, and the passing of dividends on both B.A. Western issues. B.A. Southern, indeed, fared relatively well in a difficult year; in terms of the sterling traffics (which, of course, are converted at the official rate), the decline in traffics amounted to less than 1 per cent. The 1 per cent. disbursement on the senior preference issue, however, calls for only £80,000, compared with total distributions for 1936-37 (which were almost fully earned) of £640,000. Similar details are set out for all three lines below:—

Company and Stocks	Dividends, 1936-37		Dividends, 1937-38		Fall in Gross Traffics 1937-38†
	Rate	Cost	Rate	Cost	
B.A. Gr. 5% pref.	Full	400,000	1%	80,000	} 22,354
Southern 6% pref.	3%	240,000	Nil	Nil	
B.A. 5% pref.	Full	15,000	Nil	Nil	} 264,594
Western 4½% pref.	3½%	89,332	Nil	Nil	
Central 4½% pref.	Full	436,307	Nil	Nil	} 1,831,546
Arg. 6% pref.	12%*	600,000	Nil	Nil	

* 2 years to June, 1934. † Converted at official rate.

B.A. Western, on the other hand, experienced a more severe fall in receipts—of the order of 9 per cent. in sterling terms—which was partly attributable, presumably, to bad maize traffics. Since the official rate of exchange has been maintained at \$16.12 to the £, and since the railways are, in fact, remitting so little to their stockholders, it can hardly be supposed that the explanation of these dividend decisions is to be found in extensive exchange losses. It would seem, rather, to be due to higher operating costs, despite the substantial economies which have been realised by B.A. Great Southern and B.A. Western as a result of joint administration. Economies in wages, on the basis of the Presidential Award of 1934, have evidently failed to offset the fall in operating incomes. The holder of B.A. Great Southern first preference stock, which fell from 47½ to 38 on Wednesday, cannot be envied; like other Argentine railway stockholders, he can only hope for good crops and good prices during the current year, and both expectations, at the moment, are premature.

Rover Report.—It was generally believed that the Rover Company had maintained its sales well during the past difficult year (to July 31). The latest results suggest that, although higher costs have left their mark, there was probably little falling off in the company's gross income. Profits, indeed, declined only from £304,968 to £292,339. Like Austin Motors, however, the company has provided larger maintenance and depreciation (£128,391, against £109,567), and, on the higher profit, taxation absorbs £70,000, against £50,000. The net amount earned for dividend, therefore, is down rather sharply from £139,563 to £86,938, the lowest net figure for any year since 1933-34, when the Company began its brilliant recovery. Since dividends in the past have been kept well within earnings, the reduction in the latest distribution is only from 17½ per cent. to 5 per cent., covered by earnings of

19.2 per cent., against 29.8 per cent. for 1936-37. These results must be considered very satisfactory for a specialist manufacturer in a year of falling car sales. Amid the constant ups and downs of the motor trade it is impossible to foresee whether the Rover Company will maintain its relative immunity to depression; the answer depends not only on the company itself but on the comparative progress of its competitors. Complete immunity, at least, would certainly be surprising. But even if the results of 1937-38 are not fully maintained in the current year, the shadow aircraft factory should bring in larger management profits. The directors report favourably both on the reception of their 1939 models and on the output of the shadow factory. In any event, the company enjoys the double advantage of being entirely free of prior charges and even of preference shares, and of having the substantial cash balance (for a specialist manufacturer) of £358,000, with a further £116,559 in gilt-edged securities. Yet, even though the 10s. shares at 17s. 4½d. are little above the lowest level of 1937, and though they yield over 7 per cent., they are in a class which is suited only for specialised investment under present conditions.

Dunlop Rubber Statement.—The market's joy last Friday was somewhat marred by the tone of an interim statement issued by the Dunlop Rubber Company. In it, the board pointed out that the company had maintained its competitive trading position, but that the results for the current year to date showed "a material reduction." It appears that the company has fully earned the interim preference dividends which are payable at the end of the month. The fall in profits is evidently due to unsettled world conditions, reduced plantation output and reduced rubber prices. On this news, the £1 ordinary stock units were marked down sharply to 25s. in the "Street," and have fallen further this week to 24s. 1½d., a level which evidently suggests the market's anticipation that some payment will be made for the current year. It is possible that, given further recovery in the United States, the remaining months of the year may be more favourable for the group. But their benefits are likely to be small; nor is it probable that the European and Eastern interests of the group will show any substantial improvement. On the worst assumptions, the directors' statement would be compatible with a fall in net profits, after tax, from £956,993 recorded for 1937, to £271,875—the net amount required for preference dividends. This may paint an unduly adverse picture of the present position; but it is evident that the present price of the stock still values this year's prospects fairly generously.

Beechams Pills and Eno Proprietaries.—In the brief space of three months Beechams Pills has succeeded in establishing itself as the unchallenged leader of the patent medicine trade. Early in July the directors announced the agreement to acquire the ordinary shares of Macleans, Limited. Within ten days, an issue of £1,500,000 in 5 per cent. redeemable shares had been made by Beecham Maclean Holdings to raise the major part of the finance for the acquisition. Beecham Pills own deferred ordinary capital was increased by a bonus issue in August, and by a cash issue last month which completed the new finance. These important developments had scarcely been completed before this week's announcement that Beechams Pills is now to make an offer to the ordinary shareholders of Eno Proprietaries to exchange their 5s. shares into Beechams Pills 2s. 6d. deferred shares at the rate of eight Eno shares for five Beechams shares. The issued capital of Eno Proprietaries amounts to £2,000,000, of which half is in 5½ per cent. preference shares. On the basis of closing prices on the eve of the announcement, the terms of the exchange appeared to represent a disadvantage for Eno shareholders, for their shares stood at 5s. 7½d., compared with 8s. 7½d. for Beechams Pills. But the terms evidently take into account the progressive character of Beechams' profits during the past seven years, and the somewhat retrogressive trend of Eno Proprietaries' earnings since

1936. Indeed, the latter concern should benefit from the wider spread of interests which is now consolidated under Beechams Pills, while its export interests (which have suffered recently owing to recession in America) should be of value to the new group. It is difficult, however, to estimate the consequences of the merger in terms of profits at this stage. Some competitive products may be eliminated, but brands which have been built up by generous advertising in the past will still require publicity. Problems of advertising and capturing the public's taste will still have to be solved by the group, although it may be possible to effect appreciable administrative savings. For Eno Proprietaries shareholders the chief point in favour of the exchange is the promise of a wider spread of risk in a trade which is notoriously affected by the swing of the consumers' demand.

Fine Spinners' Scheme Rejected.—The mobilisation of opposition to the capital reduction scheme proposed by the board of Fine Cotton Spinners proved successful last week. Its terms incurred widespread criticism—in these columns they were analysed on September 10th—and even while the stockholder was digesting them the news that the spinning agreements had broken down suggested that the directors' estimate of future profits (on the basis of which the scheme was already hard to justify) would not be realised in the immediate future. At last Friday's meetings the ordinary and preferred ordinary stockholders approved the scheme by overwhelming majorities. But preference stockholders in favour of the scheme represented only 64.57 per cent., compared with the necessary 75 per cent. vote of each class, to secure its adoption. The chairman of the company acknowledged this defeat with good grace. Indeed, he invited suggestions from the committee representing the preference stockholders towards an amended scheme. Whether any reorganisation introduced under present conditions could provide fairly and justly for all classes of capital in the

long run, however, seems rather doubtful. Preference, preferred ordinary, and ordinary stockholders have been so long without dividends that a further interval until the outlook in the textile industries is clearer would constitute no great additional hardship.

The Week's Company Profits.—Reports have been received this week from 36 companies for which comparative results for the previous year are available. The total profits of these concerns amount to £4,882,000, compared with £4,497,000 for the preceding year—an increase of 8½ per cent. The cumulative total for 1,867 companies for the year to date shows an advance of over 10 per cent. from £226,858,000 to £250,225,000. This week's results—which are the first for some time to show a net increase over the previous year—are discussed in detail in preceding notes and under the heading "Shorter Comments" on page 84. Our usual table appears on page 100.

Company Meetings of the Week.—Reports of company meetings will be found on page 92 of this issue. Mr Joseph Ward, addressing shareholders of *Thos. W. Ward*, pointed out that the company had celebrated its diamond jubilee with a very successful year. The turnover of the business, including subsidiary and associated companies, had reached a total of nearly £6 millions, representing a tonnage of nearly 1¼ millions. Mr Paul Lindenburg, addressing shareholders of *Industrial Finance and Investment Corporation*, disclosed that the market value of the company's quoted securities was still in excess of book values, despite last week's heavy falls. Mr H. Eric Miller pointed out at the *Bajoe Kidoel Rubber and Produce* meeting that the crop of rubber for the current year was unlikely greatly to exceed 1,200,000 lbs., of which 240,000 lbs. had been booked for sale at just over 10d. per lb.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
OCTOBER 11 OCTOBER 13

THE Stock Exchange this week failed to maintain the vigorous enthusiasm of last week's closing stages. It examined the peace in a calmer light, and decided that it did not dispose of rearmament and its costs. Jobbers found it difficult to achieve a dealing basis, after three hectic weeks, to justify the new conditions. Substantial buying did not appear on Monday, although postbags were swollen with smaller business. Parliament's deliberations and Mr Duff Cooper's resignation affected sentiment. Not until Thursday, when Wall Street's buoyancy, coupled with hopes of a Mediterranean settlement, lightened the tone, was there any real impetus in the market and any improvement in trade.

Public support for *gilt-edged stocks* was disappointing at the outset, and Monday's reactions—particularly significant in the undated list—were followed by further falls on Tuesday, in which Old Consols lost a point, and War Loan ½. Mid-week conditions were firmer for a time, but not until Thursday were positive gains recorded, ranging up to ¼ of a point in Old Consols. In the *foreign bond market* a sharp recovery occurred in Czech issues on Monday, when the £10 millions advance was announced, but as the German occupation proceeded, and the full economic implications of the

Munich agreement became clearer, a steady fall set in. The 8 per cent. bonds, which closed at 65½ on Monday, were no higher than 56 at Thursday's close. German issues lost ground steadily, but the falls were checked on Thursday. Chinese issues suffered by sinking fund defaults on two senior issues, but support was evident for Japanese bonds for the greater part of the week. After an early advance, South American issues relapsed into dullness.

Interest in the *home rail market* continued limited, although price movements, both in prior charge and ordinary stocks, were usually small. The steadier mid-week tone, coupled with the improvement in the traffics (though due to the abnormal factor of evacuation) brought some support, principally for Southern issues. London Transport "C" stock was a firm feature, up to the declaration of the dividend (discussed on page 78). Argentine rail issues were depressed still further by the dividend statements (set out on page 80).

Conditions in the *industrial market* were quiet and rather dull at first, but the market showed a brighter mid-week tendency, and business broadened further on Thursday, though price movements were generally restrained. Steel shares reacted at first, but most issues became firmer in mid-week, when rises of a few pence were common. Carrier Engineering recovered after the publication of the accounts and on a promise of an early interim

dividend. Business in electrical equipment shares was small, but some recovery was reported in Callenders Cable and other leaders in mid-week. Renewed interest was taken in aircraft issues, most of the leaders rising a shilling or more on Wednesday. Motor shares, however, continued subdued. Fears of increased taxation depressed the brewery group, but the leaders, together with the principal tobacco issues, recovered appreciably in mid-week. Shipping shares remained dull, and among the miscellaneous leaders Dunlop continued depressed on the directors' statement. The rather better volume of business on Thursday led to moderate price improvements throughout the list.

After an initial setback, following an abruptly reduced demand, the *oil group* showed greater firmness, to the accompaniment of an improved turnover. Business was mainly directed towards the leaders, but some of the speculative issues also shared in the recovery. A similar general tendency was evident in the rubber share market.

Throughout the *mining markets* the trend for the first two days was easier. Some support was evident for Kaffir dividend payers, but it remained small until business broadened in mid-week. M. Daladier's success in the Chamber quelled speculative operators in Paris, and the Cape market was closed in mid-week. But local demand remained faithful and spread to the developing mines. The Rhodesian copper group

(Continued on page 84)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption. Where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The rate on ordinary stocks and shares is calculated by reference to the latest dividend, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 151 industrial ordinary shares reveals the sharp recovery in equity prices when the threat of war was averted. On Tuesday last, the index had recovered to 63.2, compared with 58.0 a week earlier, and 63.3 a month earlier. The corresponding average yields are 5.95 per cent. this week, 6.50 per cent. last week, and 5.97 per cent. a month ago. Indices of selected component groups given below show that many sections have regained early September levels.

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High
	Sept. 6, 1938	Sept. 27, 1938	Oct. 4, 1938

New York

At the end of last week the market was still in full upswing following the Munich agreement. Monday's opening, however, was rather irregular, for many operators viewed the House of Commons debate on foreign affairs and the decline in sterling as bear factors and looked for a technical reaction. Later in the day stocks developed selective strength. Indecision continued on Tuesday, but sentiment was cheerful, and there was little change at the close. On Wednesday prices went quickly ahead and continued to rise throughout the day, the Dow Jones industrial average reaching a new high since October, 1937. President Roosevelt's statement that an upturn in business was under way, coupled with favourable trade news, was a contributory factor in the vigorous upward movement. Leading motor shares experienced some profit-taking on Monday but advanced fully on Wednesday, Chrysler and

General Motors reaching new highs for the year. Steel issues were also strong on consideration of view of the rising rate of operations—Iron Age estimates production at 49 per cent. of capacity in the current week, against 47 per cent.—and on anticipations of early buying orders from the automobile industry. Foreign bonds were buoyant throughout the week, and rails also improved, especially on Wednesday's news of record rail-car loadings.

ISSUES TO SHAREHOLDERS ONLY

Simmer and Jack Mines, Ltd.—It is proposed to issue 750,000 2s. 6d. shares at 12s. 6d. each (one new share for every eight held) to finance additions to the reduction works and for other purposes.

PRIVATE PLACING

United Kingdom Gas Corporation.—This corporation has placed privately £66,186 3½ per cent. debenture stock.

SHORTER COMMENTS

Company Results of the Week.—Improved earnings are reported by BORNEO COMPANY and LEACH'S ARGENTINE ESTATES. The latter's profits amount to £148,249 against £121,647; the ordinary dividend has been increased, and a small payment is made on the deferred capital. HURST NELSON profits are appreciably higher, at £52,762, compared with £35,634; the dividend has been raised from 7½ per cent. to 10 per cent. Other companies in the engineering group include KAYSER, ELLISON, whose profits have been increased from £104,171 to £121,613, and RANSOME AND MARLES BEARING. The latter's profits are somewhat lower at £150,528 compared with £166,351, but in each case ordinary dividends have been maintained. Outstanding in the rubber group is MALAYALAM, which has recorded a satisfactory advance in profits from £253,185 to £270,730 for the year to March 31st. The 10 per cent. dividend has been maintained, and is well covered. In the miscellaneous group, improved results

Industry and Trade

The Aftermath of the Crisis.—The political crisis has left its mark on British business, though its effect cannot yet be fully assessed. Until August many observers confidently expected a business revival in the autumn. The basis for a re-stocking movement had been prepared by the reduction of stocks of semi-finished and finished goods, and recovery in the United States, accompanied by rising prices for raw materials, was expected to give the signal for a buying movement. But the crisis effectively prevented an increase in the flow of new orders to industry. As a result, industry's order books were not replenished during the past month. The Munich agreement has brought relief, but there were no signs this week of a marked expansion in the volume of business transactions. The demand for coal was a little better. The markets in textiles were slightly more active, but transactions in iron and steel remained small in volume. The immediate outlook for industry, therefore, is none too promising, and it is evident that the business trend has been temporarily deflected from its path by the events of recent weeks. Nevertheless, the prospective increase in armament expenditure, coupled with sustained recovery in the United States, may, in the absence of further political difficulties, help to prevent a serious setback in industrial activity.

Decline in Employment.—Germany's decision to obtain possession of the Sudetenland, even at the risk of general war, has brought confusion to the world of business. Commercial transactions were held up, and the flow of orders to industry did not show the increase usual in September. Although the latest count of unemployment was taken on September 12th—a fortnight before the crisis came to a head—the figures bear evidence of the unsettling effect of the political tension. Thus, the number of insured persons on the registers of the unem-

THE BACKGROUND OF FAMOUS COMPANIES:

The publication is announced of an important new series of special articles in the columns of THE FINANCIAL NEWS under the above heading.

It is intended to take one by one those really big Companies in which Investment interest is very considerable, and to present them in pictorial outline. The paper has appointed a Special Commissioner who will go down and visit the various works and gather material about the history of the Companies, the number of persons employed, how the processes are carried on, how the businesses have grown—in fact, all the necessary material in order to make these Companies "come to life."

To thousands of Investors names such as Courtaulds, I.C.I., Turner and Newall, simply signify shares—Stock Exchange counters—but in the background are great organisations, providing the livelihood of thousands of workers and their dependents; organisations where works, situated in many different parts of the country, may affect the prosperity of entire districts, and whose products may be marketed amongst millions of consumers.

The first article in this new series will be published on Friday next, October 14th, and the Company we have chosen to start the series is

BASS, RATCLIFF & GRETTON,

of Burton-on-Trent. Subsequent articles in the series will include Stewarts and Lloyds (October 21st), London Brick Company (October 28th) and the Bolsover Colliery (November 4th).

Investors in general and shareholders in these Companies in particular would be well advised, in order to avoid disappointment, to place an advance order with their newsagents.

THE FINANCIAL NEWS

(Twopence Daily)

On sale at all Railway Bookstalls and good Newsagents everywhere.

from August 1, 1937, to the end of March, 1938, was issued this week. During this period, the Commission was mainly concerned with the working of the subsidy regulations. The table given below shows the total number of animals which were certified for the ordinary subsidy of 5s. per cwt. and for the quality subsidy of 7s. 6d. per cwt. in the eleven months ended last June. Imported animals, fattened in this country, are paid a subsidy which is 2s. 6d. per cwt. smaller than that paid to home-bred cattle:—

BEEF CATTLE QUALIFYING FOR SUBSIDY IN THE UNITED KINGDOM FROM AUGUST, 1937, TO JUNE, 1938

	Total No. of cattle certified	Home-Bred		Imported	
		Ordinary	Quality	Ordinary	Quality
Aug., 1937-March, 1938 ...	1,006,256	423,586	316,267	106,235	160,168
Per cent. of total	100.0	42.2	31.4	10.5	15.9
Total payments	£2,585,877	944,479	1,118,893	125,512	396,994
April-June, 1938	356,455	105,415	149,533	24,678	76,799
Per cent. of total	100.0	29.6	41.9	6.9	21.6

It will be seen that in the last three months the proportion of the total number of cattle certified which qualified for the higher subsidy was appreciably larger than in the previous period. This is due partly to the better quality of feeding-stuffs available in the spring, but some of the improvement is undoubtedly due to the greater attention now paid by farmers to the finishing of their beef cattle, in the hope of obtaining the higher rate of subsidy.

* * *

Rise in Shipping Freight Rates.—The improvement in tramp shipping freight rates, which began in August, continued during the past month:—

The Economist INDEX OF FREIGHT RATES (1898 = 1913 = 100)

	Average, 1913	Sept., 1937	June, 1938	July, 1938	Aug., 1938	Sept., 1938
European waters	110.0	180.6	107.3	106.2	103.8	107.7
North America	113.1	146.8	108.0	108.5	110.1	110.2
South America	123.4	159.2	127.0	119.9	124.8	121.3
India	106.3	186.4	111.9	112.3	110.0	113.7
Far East and Pacific	117.4	180.8	104.7	105.2	106.2	112.8
Australia	127.9	165.0	112.8	112.5	113.0	112.2
Total	116.3	169.8	111.9	110.8	111.3	113.0
1913 = 100	100.0	145.0	96.1	95.2	95.7	97.2

As the next table shows, rates on the majority of trade routes showed an increase between August and the early days of September to which our index refers.

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	98.9	+ 3.0	South America:—		
Bay—outwards	115.4	+ 16.3	Outwards	88.3	— 7.9
Bay—homewards	138.7	+ 1.6	Homewards	154.3	+ 0.8
Mediterranean:—			India—outwards	98.9	+ 4.2
Outwards	76.0	— 0.9	India—homewards	128.6	+ 3.1
Homewards	118.6	+ 0.9	Far East, etc.	112.8	+ 6.6
North America	110.2	+ 0.1	Australia	112.2	— 0.8

During the past few weeks, the shipping freight markets were disorganised by the prospects of a general war; demand for carrying-space has been limited by the uncertain outlook and the increase in the cost of war risk insurance also hampered business. Since the conclusion of the Munich Agreement the markets have shown some improvement.

* * *

Oil Market Weakness.—In view of the vital part played by petroleum products in modern warfare, surprise has been expressed that oil prices have shown so little response to the war scare of the past few weeks. Actually, business on the Gulf export market was more active last week, but increased calls were easily met from accumulated stocks. Consequently prices were not marked up. Without this improvement in demand it is doubtful

whether petrol prices could have been prevented from showing renewed weakness. The recent trend of prices is shown below on the basis of the indices published in this week's issue of the *Petroleum Press Service*:

	GULF EXPORT PRICES (1929=100)			
	U.S. Motor Gasoline	Kerosene	Gas and Diesel Oil	Bunker Fuel Oil
An. av. 1933	50.1	57.5	78.5	88.2
" 1934	51.9	58.0	86.2	122.0
" 1935	57.4	56.9	76.2	103.4
" 1936	62.2	52.6	78.0	113.3
" 1937	67.6	68.5	99.7	121.7
September, 1937...	71.4	68.1	103.2	119.5
December, 1937...	60.7	69.4	108.5	112.9
March, 1938	57.3	65.3	95.8	102.3
June, 1938	55.6	54.7	83.5	92.1
July, 1938	56.3	55.0	85.6	89.9
August, 1938	56.0	55.5	86.2	85.0
September, 1938...	54.7	55.5	86.2	83.0

As a result of the over-production in the United States, petrol prices have shown a sagging tendency during the past twelve months. The price of gasoline has now fallen below the annual average for 1935 and other grades have fallen even more severely. Kerosene, increasingly purchased as a tractor fuel, showed a firmer tendency during the third quarter, while gas and diesel oils have benefited from the long-term progress of the oil engine. The heavy fuel oil stock position remains the most unsatisfactory feature of the Gulf market and explains the recent decline in the price of bunker oil to below the average for 1933. Prospects are dependent in the main upon two factors—the course of the output of refined products in the United States and the trend of business activity in the principal consuming countries.

* * *

Fall in U.S. Metal Stocks.—The fall in the consumption of base metals in the United States, which began in the autumn of last year, was mainly responsible for the slump in world prices, so that an improvement in demand across the Atlantic is expected to bring a rise in prices. There are already signs that a recovery of the American metal markets is under way. While the United States' production of copper, lead and spelter (tin is not produced in the United States) has declined sharply in recent months, consumption has tended to increase. As a result, U.S. metal stocks, which rose between the summer of 1937 and the spring of 1938, have recently shown a downward trend, revealed in the table below:—

UNITED STATES "VISIBLE" METAL STOCKS (In thousands of short tons)

	Copper		Lead		Spelter	
	1937	1938	1937	1938	1937	1938
January	142.4	299.1	169.8	133.4	34.1	88.5
February	136.0	326.2	156.8	138.2	24.6	108.1
March	121.5	342.8	137.0	143.5	18.2	118.0
April	99.6	355.7	128.5	156.7	13.9	135.2
May	108.6	369.8	115.8	163.7	13.8	148.1
June	111.0	359.0	113.4	163.3	14.1	149.7
July	117.7	340.0	111.1	154.2	13.6	146.2
August	123.5	315.2	103.5	140.7	11.2	143.4

Sources: copper, Copper Institute; lead, American Bureau of Metal Statistics; spelter, American Zinc Institute.

Compared with last year's levels, stocks at the end of August appear very high, in spite of the recent declines. But a year ago, the stocks held by consumers (which are not included in the figures of "visible" supplies) stood at a higher level than now. In the first half of this year consumers' stocks in the United States fell to the lowest levels recorded for many years. Although there have since been certain re-stocking purchases, especially of copper, a sustained recovery of business activity will probably stimulate further purchases. As output in the United States cannot be rapidly increased at short notice, "visible" supplies will probably fall further in coming months. Consequently, the high level of existing "visible" supplies is unlikely to prevent a rise in prices.

The 1937-38 Potato Season.—The report of the Potato Marketing Board on its activities in the year ended on August 31st strikes a somewhat apologetic note. The prices obtained by registered potato growers (to whom the Board is responsible for its actions) were considerably lower in the season just ended than in either of the two previous years. At Wisbech, for instance, growers' prices of white varieties averaged less than 80s. per ton between November and March, against an average of about 120s. per ton in 1936-37 and 110s. per ton in 1935-36. There are reasons, however, for regarding the prices in the two earlier years as exceptionally high rather than as a norm from which prices in 1937-38 showed a regrettable lapse, for home production in 1935 and 1936 was below the average of the previous ten years, while output in the past season was almost equal to this average. The success of the Board's riddle regulations in the last season is shown not so much by the absolute level of prices as by the stability during the greater part of the year and by the fact that stocks remaining on the farms and in the hands of merchants in June, 1938, had been reduced to insignificant proportions. Indeed, the Board may perhaps be criticised as being too successful in this respect, for when it was known at the end of April that the lifting of the early potatoes would be delayed by the effects of the long spring drought and late frosts, reserves of the old crop were found to be barely sufficient to meet the prolonged demand. Prices at Wisbech more than doubled between the middle of April and the middle of May, by which time the Board had reduced the size of its riddles, and had also authorised the sale of 28,000 tons of "seconds." Apart, however, from this temporary rise in prices, whose cause is to be found in the vagaries of the climate, the stabilising effect which the actions of the Board have on prices are undoubtedly appreciated by producers and consumers alike.

* * *

Dearer Bread.—One effect of the political crisis of the last ten days was to bring about a sharp rise in the price of wheat. Consequently the price of flour also rose, sufficiently to justify, in accordance with the margins authorised by the Food Council and the Bakers' Joint Price Committee, a rise of 3d. to 8½d. in the price of the quartern loaf. The increase in the price of bread could have taken place last Monday, but in view of the national emergency it was delayed and will take effect on Monday next. Meanwhile, the removal of the fear of war and the reduction in insurance rates for cargoes has caused a relapse of wheat prices to a level somewhat below that ruling a fortnight ago. As the wheat crop now harvested in the northern hemisphere is of record size, the downward trend in prices is likely to be continued during the current season. Consequently, this rise in the price of bread will probably be of short duration only, and a reduction can be expected in the near future.

INDUSTRIAL REPORTS

The Munich Agreement has brought relief to industry, and in the past week business has tended to improve. For example, there was a noticeable increase in the export of coal and other goods held up during the crisis. The fall in the cost of War Risk insurance is also facilitating new business. The order under which outstanding export licences for war materials were suspended on September 28th was rescinded on October 4th. There has been some improvement in the demand for coal, but the volume of transactions in iron and steel remains small. Turnover in cotton and jute textiles has shown expansion.

Coal

Sheffield.—On the home market prices are firm, with the exception of the smaller grades, which are in abundant supply. There is, however, a decided improvement in the demand for supplies for electricity works. Industrial fuel generally is in better request. Business in household coal is quiet, the warmer weather conditions being responsible. Gas coal moves slowly, as does coking fuel. The market in coke is dull, supplies being more than adequate.

Export inquiry is better, and prices are well maintained.

*

Newcastle-on-Tyne.—The North-umberland steam coal trade is better than for some months, but there are still collieries which are not working at their full capacity, as is evident from the recent production figures of this coalfield. Trade in Durham shows no improvement. Collieries producing large steam coals are comfortably placed, but the gas and coking groups are on short time. There has been a little more demand for patent oven coke, but the market as a whole remains quiet.

*

Glasgow.—Conditions in the Scottish coal market are again normal, but several of the ports are now dispatching tonnages which had been held back during the critical stages last week. Export trade generally has already shown some improvement, and in addition to a brisker demand from some of the Scandinavian markets, South America, Australia and one or two other countries have been in the market for splint coal. Taken all round, trade is moving steadily, and it is expected that the steel trade will be a bigger buyer in the near future. Meantime, supplies are ample for all requirements, and prices have undergone little change.

*

Cardiff.—Shipments at the South Wales ports last week were a little more active than of late, but there has been no appreciable expansion in business, and prices for all classes of coal are unaltered. The French import restrictions have been relaxed temporarily, but it is anticipated that the recently reduced quota will again become effective in the course of the next few weeks.

Some contracts have been renewed over next year, but there is little of the usual autumnal activity in forward sales.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange points out that the settlement of the international crisis has not greatly influenced business. Towards the end of last week there was an active demand for some of the lighter descriptions of steel, but conditions at the heavy steel works remained much as they were before the international tension developed. Most of the works have a reserve of orders in hand, but the industry is not operating at capacity and there is a pronounced scarcity of new business.

There has been some improvement in the demand for pig iron, but this has consisted principally of small supplementary parcels and most of the consumers are working on stocks and existing contracts. Expiring contracts generally are renewed for a limited period.

In the semi-finished steel section of the market rather more activity has been noticeable. As stocks of foreign material are gradually reduced the demand for British steel slowly expands. Imports are comparatively small and it is anticipated that the British works producing semi-finished steel will become better employed as the autumn advances.

In the finished steel department the scarcity of orders for shipbuilding steel is severely felt, but substantial tonnages of structural steel are passing into consumption. In the lighter section of the industry there is a considerable amount of unemployed plant, but new business has shown signs of improving. Overseas demand, however, fails to develop any strength.

*

Sheffield.—The apparent imminence of war brought a good many buyers into the iron and steel market with the object of making certain of supplies, but with the easing of the position business has become quiet again. Failing new alarms, a general improvement in the markets is expected. Small lots of forge and foundry iron are changing hands, and transactions in basic iron are on a slightly larger scale. Hematite business continues very restricted, the majority of users being fully covered by contract. The volume of business in finished iron shows little expansion, interest being largely confined to common bars. The mills continue to work irregularly.

A wider demand for basic steel billets exists, but acid billet requirements are still very limited. Business in wire rods shows some expansion, as does that in strip.

Although the production of ordinary steel shows little expansion, output of stainless and special steels is heavier, and more furnaces are being put into commission. A big rod-mill which has been idle for four months has also been put into operation again. A revival in trade before the end of the year is being more confidently predicted.

Middlesbrough.—Now that the political tension has been removed, the market is developing a much more confident tone. Transactions are limited to small quantities and for early delivery, as, with prices fixed to the end of December, there is no encouragement to enter into large commitments. Cleveland foundry pig iron is in steady request. East Coast hematite is plentiful, but there are indications that more iron is being consumed. Business in semi-finished steel remains quiet, re-rollers being well stocked. A quantity of 691 tons of crude sheet bars was imported into the Tees during last month. Finished steel producers are now anxious to have further orders, although structural steel is in good demand. Shipbuilding requirements are now easier. Sheet makers were able to meet last week's demands caused by the crisis and have now booked further orders.

Foreign ore imports during September totalled 63,576 tons, compared with 80,152 tons during August. Deliveries remain restricted and will continue so until there is an increase in the number of blast-furnaces operating. Blast-furnace coke is in plentiful supply, but in little request. There is no change in the heavy steel scrap position, supplies being plentiful. The shipments of pig iron, manufactured iron and steel from the Tees, both coastwise and foreign, during September amounted to 31,494 tons, an increase of about 9,000 tons over those of the previous month.

*

Glasgow.—With the exception of shipbuilding material, the demand is better for all classes of steel. Engineering concerns in Glasgow and district are all busy, many of the larger firms having work on hand which will absorb their output for many months to come, and a steady and regular demand for material to meet their requirements is assured. Structural firms are also making greater demands on the steel producers. At the moment bookings of galvanised corrugated sheets are exceptionally heavy and, while those for black sheets are not so satisfactory, there are signs of improvement here, too. Sheet makers are hopeful that it may soon be necessary to put a few additional rolling mills into operation.

*

Cardiff.—As our weekly statistics on page 91 show, there has been no significant change in the position of the tinplate industry. A feature was the experimental inauguration of the new strip mill at Ibbw Vale on Tuesday.

Textiles

Cotton (Manchester).—After great strain and anxiety, business was more active towards the end of last week, but during the last few days demand has fallen again. There has been very little change in raw cotton prices. The next official American crop estimate, which will be published on Saturday afternoon, is expected to show a slight increase over that of a month ago. At the end of last week a much larger business was done in actual cotton in

the Liverpool market, and some of the leading combines bought freely.

The yarn market has been unsettled. The cutting of prices for medium American ring yarns has resulted in a good deal of chaos, but certain big producers, after booking substantial orders, have put up their prices. Some spinners of Egyptian counts have obtained a little more business.

Rather more business has been done in piece-goods. When the war scare was at its height, big orders were placed in materials suitable for the Air Raid Precautions organisation, especially cloth for window blinds. Fair contracts have been put through for export, although the uncertainty with regard to war risk insurance has been an obstacle to business.

*

Jute (Dundee).—Considerable excitement prevailed in the jute trade last week and a large business was done in both yarns and cloth, with the result that spinners and manufacturers were able to raise their prices. Urgent orders were forthcoming for sandbags, many more than manufacturers could deliver. The Government increased the quantity to be supplied from two million to three million bags per week and this order has not yet been countermanded. Producers are all very busy and so far they have been able to maintain their increased prices, though new business is now very small and buyers are inclined to await further developments. They have allowed their stocks to run down to very low levels and replenishment is necessary.

Now that conditions are more settled, greater confidence may be expected in the jute trade, especially as the Indian jute mills are now curtailing their production to 45 hours per week. This should materially reduce the huge stocks which have accumulated during the period of unrestricted output. Prices for Calcutta goods have tended to rise, and those for hessians on spot rapidly advanced last week when buyers were falling over one another to obtain supplies. Stocks of 8-oz. hessians on spot here have been practically cleared out and a considerable proportion of the stocks of 10-oz. has also been disposed of. Buyers were paying 20s. for 10-oz. and 17s. for 8-oz., but in the case of 10-oz. the price is now nominal at 19s. 6d. The price of Dundee 10-oz. 40 in. is 2½d. and of 8-oz. 2½d. per yard; these rates are more in keeping with the cost of production. Hessian yarns are quoted at 2s. 2d. for common 8-lb. cops and at 2s. 3d. for 8-lb. spools.

THE COMMODITY MARKETS

AFTER the Munich agreement the rate of exchange between the pound and the dollar moved in favour of the former, a tendency which made for lower commodity prices in London. On the other hand, the progress of recovery in the United States prevented a general price decline, for the trend across the Atlantic was upwards.

Wheat and raw sugar slumped as sharply as they had previously risen.

American raw cotton was naturally dearer. Rubber, which had fallen in price on the fear of war, made a vigorous recovery. Among non-ferrous metals, lead and spelter were marked down, copper remained practically unchanged, but tin advanced on an expansion in demand from the United States.

Moody's index of the prices of staple commodities in the United States (December 31, 1931 = 100) rose from 143.6 to 144.1 during the week ended last Wednesday. A month ago the index stood at 143.4 and a year ago at 180.2.

Metals

Copper.—The removal of the fears of an immediate outbreak of war brought an early spell of easiness in the copper market, but later the standard cash prices recovered and closed on Wednesday at £43 per ton, a net loss of only 3s. 9d. on the week. Reports of increasing activity in the United States metal-consuming industries and the revival of buying by United States fabricators provided the chief stimulus for the copper market this week. The improvement in the U.S.A. demand was reflected in a double rise (by two steps of ½d. each) to 10.62 cents per lb. in the U.S.A. domestic price.

*

Tin.—Tin also benefited from the better outlook in the United States, where demand has increased. The Standard cash price closed on Wednesday at £197 per ton, a net gain of £1 5s. on the week. On Thursday, the price rose to £202 10s. per ton, and thus exceeded the lower limit of the buffer pool scheme. The slight increase of 289 long tons to 31,006 tons in the world's tin stocks in September had no effect on the market, as it is known that a substantial tonnage of the present visible supply is held off the market by the tin buffer pool.

*

Lead and Spelter.—Lead declined by 8s. 9d. to close on Wednesday at £15 1s. 3d. per ton, while spelter lost 6s. 3d., thus closing at £14 per ton. There has been no further news about the control schemes for the two metals. According to the American Bureau of Metal Statistics the world lead output reached 147,409 short tons in August against 153,255 short tons in July, while the world spelter output advanced from 136,430 short tons in July to 137,097 short tons in August. In both cases the output in August remained in excess of consumption, and as the United States is neither a major exporter nor an importer of lead and spelter, the London market is not affected by the rising industrial activity in America.

Grains

THE more settled political conditions of the last week led to a steady decline in grain prices, which has left them somewhat lower than a fortnight ago. The uncertainties over cargo insurance have tended to limit business to very near positions. French and home-grown wheat are now being offered in British markets and the pressure of supplies both from Europe and other countries seems to indicate a period of continued decline in wheat prices. Maize and

barley have been affected by the general trend, though maize in near positions continues to command good premiums, owing to the small stocks in importing countries. The large supplies of English malting barley are more than sufficient for demand and prices for good average lots range from 40s. per quarter upward.

Other Foods

Provisions.—Prices for the most important foods have been stabilised until October 8th. Demand for beef, English mutton and pork improved during the week and prices were advanced. Large supplies of eggs continue to arrive and prices during the week were a little lower.

*

Colonial Produce.—A brisk demand at the tea auctions at the end of last week gave way to a quieter tone, with a declining price level. The cocoa and coffee markets have been steady; sugar prices were lower on the week.

*

Fruit and Vegetables.—The supply of potatoes remains heavy at the Borough, but prices were maintained with little alteration. The market for other vegetables and for fruits improved over the week-end.

Miscellaneous Commodities

Oilseeds and Oils.—Markets in these products are slowly returning to normal conditions, aided by the reduction in rates for war risks. Demand for linseed remains negligible, but stocks are known to be small, and a revival of trade is confidently expected in the near future. The sharp rise recorded last week in the prices of cottonseed, linseed oil and cotton oil was quickly followed by a relapse at the end of the week, and prices are now about the level of a fortnight ago.

*

Rubber.—Now that the imminent danger of war has been removed, the strong position of the rubber market has had its normal effect. Prices rose sharply at the end of last week, and, after a quieter tendency on Monday and Tuesday, the advance was continued on Wednesday, when the buyers' price of standard sheet on the spot closed at 8½d. per lb. News of the American motor and tyre trade continues satisfactory.

*

Cotton.—Spinners in Lancashire were somewhat surprised by the first official estimate of the Egyptian cotton crop. As the area under cultivation has been reduced from 1.98 million feddans to 1.78 million feddans, it was expected that supplies would not reach the record level of last year's 10.7 million cantars, but the Government's estimate of 7.7 million cantars was considerably lower than had been expected. It is also reported that the crop has not been making good progress, so that there seems little probability of lower prices for Egyptian cotton.

COMPANY MEETINGS

THOS. W. WARD, LIMITED

MR JOSEPH WARD'S REVIEW

Mr Joseph Ward, J.P., presided at the thirty-fifth ordinary general meeting of Thos. W. Ward, Limited, held, on the 30th ultimo.

He said: It is with pardonable pride I present the thirty-fifth balance sheet of the company, and remind you that in July our business achieved its diamond jubilee, 60 years of continued progress and developments. The company has experienced a very successful year.

Low Moor Best Yorkshire Iron, Limited, the Midland Iron Company, and Geo. Cooper and Sons have shown very satisfactory results from the year's trading.

The rail department have had a busy year, particularly in connection with the supplying and laying of railway sidings in all parts of the country and abroad. At the present time they are engaged in laying a railway siding, which is the largest we have ever supplied, at an important works in the North of England comprising about 35,000 yards of track and 200 complete turnouts, including the ballasting. This, along with other orders recently received, will keep them occupied for many months ahead.

The Ketton Portland Cement Company, Limited, which your company controls and acts as sole distributors, have had a busy year, their production of cement showing an increase of 12 per cent. over the previous year.

The turnover of our business, including subsidiary and associated companies, has reached nearly £6,000,000, and represents a tonnage of practically 1,750,000. Purchase of shares in subsidiary and other companies represents £38,423, including those of the Darlington Railway Plant and Foundry Company. The gross yield from our investments, which total £397,483, has been £42,030.

The net results your directors consider very satisfactory.

The company have in hand for emergencies in reserve and carry-forward £234,053, and after allowing for plant and buildings being maintained in good condition out of revenue during the year, in addition to a very large sum represented by our investments at cost and the market value of those investments to-day.

I would like to add how pleased your board are to observe the honour that has been conferred upon Mr Ashley Ward by his appointment to the office of Senior Warden of the Cutlers' Company.

Mr Ashley S. Ward, managing director, in seconding, said they had heard the general trading for the year had been good and it still continued to be good in many departments of the company's business. He would assure the shareholders that serious attention had been paid in many ways to the strengthening of the company's position generally, and, in connection with depreciation of plant alone, a very large sum had been written off in addition to the large sums which were being spent annually in maintenance out of revenue. So that with their large number of works and undertakings the figure in the balance sheet representing plant and equipment was, he thought, assuming very modest proportions, at any rate some £200,000 less than it was five years ago.

The year had seen the completion with the sale of the land to the Commissioner for the Special Areas of the very large undertaking at Palmers, Jarrow.

As regards the present year, they were already busily engaged in dismantling and, given ordinary circumstances, it would appear they were again likely to be profitably employed.

Mr George Wood said: Criticism has been provided in abundance, but those who know the facts have no hesitation in saying the scheme for the control of scrap iron and steel has been a marked success and has coped with a very difficult problem over a dangerous initial period in a much more satisfactory manner than could have been reasonably expected.

A matter which I should like to touch upon is that of ship-breaking. Unfortunately the present recession in trade has brought with it a lowering of values which has again revived the menace of foreign competition, and we are finding ourselves outbid, with the result that recently a number of ships have been sold to Belgian and Dutch buyers. It is impossible to over-emphasise the undesirability of this work being taken out of the country. Although this scrap may not be wanted by the steelworks at the moment it would provide a very good reservoir from which to draw.

Mr F. R. Stagg, in proposing the payment of the dividend said the constructional steelwork department had been fully and profitably occupied throughout the year on important contracts, and the department was on the list of the Air Ministry and Admiralty. The Ketton Portland Cement Co. had had the most successful time in its history.

The report and accounts were unanimously adopted.

The auditors, Messrs Joshua Wortley and Sons, were re-elected.

INDUSTRIAL FINANCE AND
INVESTMENT CORPORATION, LIMITED
VALUATION OF SECURITIES

The 13th ordinary general meeting of this Corporation was held, on the 30th ultimo, in London.

Mr P. Lindenberg (the chairman) said that the balance sheet reflected the results of the recent reorganisation of capital. Quoted investments were £815,765, of which British and Dominion Government securities accounted for £121,904, and other investments £693,862. Those investments stood in the balance sheet at the values taken on the reduction of capital together with additions at cost. No credit had been taken for appreciation over those values, although in fact this appreciation, at the date of the balance sheet, amounted to a substantial sum, and even to-day after the last disastrous week, the market value of those quoted securities was in excess of the book value.

The quoted investments were the subject of constant consideration and it had been the endeavour to select only the soundest and most marketable securities. Over 75 per cent. were invested in Great Britain and the Dominions, in pursuance of the policy to which he had referred at previous meetings.

Unquoted securities stood at £191,846, against £243,698. Those securities were represented to a substantial extent by participations in relatively new industries and enterprises, and they had still no reason to regard those investments as other than promising.

The necessity of crediting available profits and reserves before writing off capital precluded the possibility of a dividend on the ordinary shares.

Referring to the profit and loss account, the chairman said that the reduction to £79,127 of the company's income from interest, dividend, etc., as compared with the previous adjusted figure of £104,354 did not imply to any substantial extent a drop in the company's normal sources of income, but rather the presence during the previous year of one special item of profit.

The news of the international agreement reached early that morning came as a great relief, and they must hope that, in addition to avoiding the immediate danger, the agreement might prove the first step towards that real international co-operation for which the world had waited so long.

The report was unanimously adopted.

BAJOE KIDOEL RUBBER AND
PRODUCE COMPANY, LIMITED

DIVIDEND OF 7½ PER CENT.

The twenty-seventh ordinary general meeting of the Bajoe Kidoel Rubber and Produce Company, Limited, was held, on the 4th instant, in London.

Mr H. Eric Miller, the chairman, said that their rubber crop had been obtained on a conservative tapping system. The coffee crop harvested was satisfactory considering the number of bushes cut out during the past few years, but he had warned them a year ago that the following crop was likely to be adversely affected. They had been advised that the estimated coffee crop for 1938-39 had been further reduced to 12,000 piculs.

As to the position of the coffee industry, with regard to 1938-39 the Brazilian authorities had again been obliged to exact a sacrifice quota of nearly 30 per cent. of their estimated crop of about 22,000,000 bags, and it seemed unsafe at present to estimate the exports from other countries at much below 10,000,000 bags. The supplies available to the market were therefore expected to amount to about 26,000,000 bags, which, until the recent political tension became acute, had been the market's expectation of current consumption. Although stocks outside the interior of Brazil were low, and the Brazil authorities were continuing to destroy their heavy interior stocks, they were unlikely to help their competitors by maintaining a higher price than that now ruling. The immediate statistical position was showing some improvement, but the outlook for the more distant future was not bullish.

After providing £1,400 for National Defence Contribution, they had a credit balance of just under £22,000, which compared with a little over £25,000 for the previous year. They were limiting their dividend recommendation to 7½ per cent., less tax, as against 10 per cent., and the carry-forward would be increased by more than £3,000. Shareholders would appreciate that it was impossible now to forecast the result of their current year's operations. The crop of rubber to be accounted for was not likely to be much over 1,200,000 lbs., of which about 240,000 lbs. had been booked for sale at an average of just over 10d. per lb. London landed terms. Their coffee sales to date averaged about 12½ guilders per picul.

The report was unanimously adopted.

Strikes and Lock-outs

In the following charts we review the situation in regard to strikes and lock-outs. The total numbers of workpeople involved in disputes and the total number of working days lost from 1893 to 1937 are shown on the left-hand side, together with the number of working days lost in three main industries since the general strike. On the right-hand side we analyse the numbers directly involved in disputes according as the disputes were caused by wage or other questions and according as the results of the disputes were favourable to employers or workpeople or compromised. We are, of course, indebted for these figures to the annual surveys of the Ministry of Labour, last published in the *Ministry of Labour Gazette* for June, 1938.

Finance

GOVERNMENT RETURNS

For the 6 days ended September 30, 1938, total ordinary revenue was £8,361,000, against ordinary expenditure of £2,452,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £163,490,000, against a deficit of £98,346,000 a year ago. The detailed return for the quarter ended September 30, 1938, is printed in full on page 95.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On September 30th applications at £99 13s. 5d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 48 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 13s. 6d. per cent. and above were allotted in full. £50.0 millions of Treasury bills are being offered on October 7th.

† Estimates. Totals do not allow for sinking fund allocations, for which £15.5 millions has been provided in 18 mths. to September 30, 1938. * Excluding accrued interest on Savings Certificates, and the State's assets (e.g. debt from Exchange Equalisation Fund), and including holdings of Public Departments. ‡ After deducting transfers for Death Duties. § Exchequer Bonds, 1914 and 1919. ¶ Includes American debt. ** Includes Bonds (about £4 millions).

SHORTER COMMENTS

A. W. Second Stock Trust, Ltd. (in voluntary liquidation).—The liquidator is prepared on October 13, 1938, to make to the stockholders a first return at the rate of £182 per £100 stock.

London Express Newspaper, Ltd.—Profit for year to June 30, 1938, £168,649 against £148,693. Directors' remuneration unchanged at £2,100. Ordinary dividend raised from 10 to 15 per cent. for year. Carry-forward raised from £95,115 to £95,464.

Malayalam Plantations, Ltd.—Credit balance year to March 31, 1938, £272,542 against £254,998 for previous year. Ordinary dividend maintained at 10 per cent. To taxation reserve £64,000 against £50,000. To general reserve £30,000 against £50,000. Staff fund £5,000 as before. To dividend equalisation reserve £40,000. Carry-forward reduced from £106,616 to £102,200.

Cheshire United Salt Company, Ltd.—Profits for year to June 30, 1938, have risen from £10,538 to £25,468. To depreciation £4,993 against £1,717. For taxation £2,020 against £366. Ordinary dividend raised from 3 to 7½ per cent. for year, and preferred ordinary dividend from 8 to 12½ per cent. To general reserve £2,000 against £1,000. Carry-forward raised from £8,204 to £10,834. The report adds that the works have been further improved and have been maintained in first-class condition.

Borneo Company, Ltd.—Accounts for year to March 31, 1938, shows profit of £72,027 against £59,195 for preceding year. To reserve £30,000 against £14,000. Preference dividend is now paid to February 4, 1936. Carry-forward raised from £23,304 to £32,380.

Carrier Engineering Company.—Profit for year to June 30, 1938, before tax £82,346, compared with £91,386 in 1936-37. Income tax and N.D.C. £1,226 against £10,594. Ordinary dividend reduced from 50 per cent. to 25 per cent. owing to the international crisis. Carry-forward increased from £26,855 to £66,094. In view of the new political developments a further board meeting is to be held before the annual meeting on October 10th to consider the company's dividend policy.

SHORTER COMMENTS

(Continued from page 84)

are reported by CHESHIRE UNITED SALT; profits amount to £21,681 against £9,921, and a dividend of 7½ per cent. is paid, against 3 per cent. EASTWOODS LEWES CEMENT profits are reduced from £23,813 to £18,536—a fall which has entailed a reduction in the dividend from 12½ per cent. to 10 per cent. LONDON EXPRESS NEWSPAPER achieved a further advance in prosperity during the year to June 30th. Profits rose from £206,593 to £226,747, and the dividend on the privately-owned ordinary shares has been raised from 10 per cent. to 15 per cent. The report of CARRIER ENGINEERING shows that profits have been approximately maintained at £81,119. The board's dividend decision, taken on a critical day last week, was to reduce the ordinary distribution from 50 per cent. to 25 per cent. It is now understood that a further board meeting will be held before the annual meeting takes place. BURT, BOULTON AND HAYWOOD, the timber dealers, show a significant fall in profits from £94,295 to £64,353, and the dividend has been reduced from 7 per cent. to 6 per cent.

Eastwoods Lewes Cement.—Report for year to June 30, 1938, shows net profit £12,535 against £17,812. To taxation reserve £500 against nil. To investment reserve £500 against £2,000. Ordinary and founders' shares dividends reduced from 12½ to 10 per cent. Carry-forward increased from £4,710 to £3,495.

Leach's Argentine Estates, Ltd.—Trading profit for year to March 31, 1938, £197,100 against £164,600. To general reserve £34,700 against £23,200. Ordinary dividend raised from 6 per cent. to 7 per cent. The 6 per cent. preference stockholders obtain an extra participation of ½ per cent., and deferred stockholders receive 4.7619 per cent.

Tanganyika Concessions, Ltd.—We dealt with the report for 1937 in our issue of June 25, 1938, page 730. The report for seven months to July 31, 1938, shows that the company received £190,649 from the Union Minière as dividend and royalty, and the company's total revenue during the period was £194,427. Preference dividend is to be paid at the rate of 4 per cent. for the seven months. Carry forward £111,772. Cash and investments in Government secu-

rities stand at £416,088 in the balance sheet, but on October 5th are stated to amount to £326,237. The market value of quoted shares of other companies exceeded the book value by £283,245 at July 31, 1938.

Burt, Boulton and Haywood, Ltd.—Trading profits for year to June 30, 1938, have declined from £139,597 to £107,241. To depreciation £17,190 against £17,253. Tax and N.D.C. £26,261 (£27,399). Investments written down £3,151 (nil). To reserves £17,987 (£20,262). Ordinary dividend reduced from 7 to 6 per cent. Carry forward £12,165.

Arnott and Harrison, Ltd.—The first report and statement of accounts for year to June 30, 1938, shows a trading profit of £36,206. This is allocated as follows: To depreciation, £4,566. Provision for income tax and N.D.C., £9,952. To writing down goodwill, £1,150. To balance of goodwill written off, £3,892. To amount written off cost of shares in subsidiary company, £1,485. Preliminary expenses written off, £536. Ordinary dividend, 12½ per cent., absorbing £9,515. Carry-forward, £5,110. Total assets, £139,523. Cash, £36,260. Creditors, £19,898. Debtors, £13,868. Stocks, £5,881.

Counting the Cost

WE have it on the Prime Minister's own word that the Agreement of Munich must be judged on its differences from the Ultimatum of Godesberg, "because on the difference between those two documents," he said, "will depend the judgment as to whether we were successful in what we set out to do, namely, to find an orderly instead of a violent method of carrying out an agreed decision." In the light of what has happened in the past fortnight, it must be sorrowfully recorded that the ultimate differences between Godesberg and Munich and, by that token, the degree of success for Anglo-French diplomacy, are very small. At Godesberg, Herr Hitler demanded the occupation of certain territories by a date nine days ahead. Under the Munich Agreement, he has completed the occupation of substantially the same territories eleven days after the Munich meeting; the difference between a "violent" and an "orderly" procedure, if there is one, has been whittled down to forty-eight hours. Mr Chamberlain laid considerable stress in his defence of the Munich Agreement on the fact that the new frontier of Czechoslovakia was to be drawn by an international commission on which Germany would have only one seat out of five. We know nothing for certain about the proceedings of this Commission; it is unknown how much truth there is in the report that the German representative has presented his colleagues with a series of uncompromising demands which they have been compelled to swallow. But whatever the procedure by which it has arrived at its decisions, the fact remains that the line traced by the Commission as the

limit of immediate German occupation and as the presumptive future frontier, as can be seen from the map on page 110, differs very little from the Godesberg line—and where it does, differs more often to Germany's than to Czechoslovakia's advantage. The Prime Minister can again be quoted as the authority for the statement that the Godesberg line "did take in a number of areas which could not be called predominantly German in character." It is, in fact, a military line, drawn to cripple Czechoslovak independence and including anything up to a million Czechs in Germany.

Very little has apparently yet been decided on the economic terms of the cession and of the future relations between the two countries. Here again the merit claimed for the Munich Agreement was that it left the Godesberg terms to be modified by the International Commission. Mr Chamberlain spoke of "the objectionable conditions of the appendix to the Godesberg Memorandum, to which much exception was taken, in that it was provided that no foodstuffs, cattle or raw material were to be removed." It is already clear that the Germans are raising objections to the removal of raw materials, and the refugees have in fact left most of their possessions behind. The paper provisions for the right of option ("that is," said Mr Chamberlain, "the option to leave the territory and pass into Czech territory") look like remaining on paper so far as they concern those who most need them, the German-speaking Jews and Socialists. It is generally believed in Prague that the Germans are demanding that

the Social Democrats should not be allowed to cross the border; and the fact is undoubted that from motives either of prudence or of resurgent nationalism the Czech Government is ordering all but Czech refugees to return to their homes. The sole practical and substantial difference between the Godesberg demands and the present situation as it is working out, is that there are apparently to be no plebiscites on the Czech side of the new frontier. And since this concession is due to German forbearance, it can hardly be ascribed as a merit to the Munich Agreement. Broadly speaking, the ultimatum has been conceded in full.

The Czechs are thus paying the maximum price for the world's peace. But it is not only they who are paying. The prestige and influence of France and Britain—and with them the prestige of international law and decency—have received, it is now clear, a shattering blow. In Poland, Colonel Beck, the friend of the dictators, is hailed as a hero. In Yugoslavia, Dr Stoyadinovitch, who was hard pressed by the democratic opposition, now feels himself strong enough to call an election with the certainty of winning. From Palestine it is reported that the new boldness and aggressiveness of the Arabs is due to their belief that they can negotiate with the British Empire as equals. In the Far East, the Japanese descent on Southern China, which, if it does not actually invade Hongkong, is designed to ruin its trade, is ascribed to Japanese confidence that the Western Powers' protests need not be seriously considered. Most disastrous of all, the great strength of Russia has been lost to the coalition that stood for peace and resistance to aggression. The impotence of France and Great Britain is clearly shown by the fact that they have apparently been unable to resist any of the German demands in the International Commission at Berlin.

The price we have paid for peace is thus emerging as far higher than was generally realised a fortnight ago. And the valuation to be set upon the peace we have gained in return has been as rapidly falling. Even within the few days between his return from Munich and the meeting of Parliament, Mr Chamberlain had to withdraw his phrase about "peace in our time." Since that date confidence that we shall have at all events considerable breathing space in which to put our own house in order if not to lay the foundations of peace has been badly shaken. The largest factor in this process of rapid disillusionment has, of course, been Herr Hitler's speech at Saarbrücken last Sunday, when his tepid praise of Mr Chamberlain was entirely overshadowed by his truculent statement that the advent to power of Mr Eden, Mr Churchill or Mr Duff Cooper would mean that England was planning immediate war with Germany. This speech, with its announcement of still more fortifications in the West, has been interpreted in some quarters as a signal that Herr Hitler now intends to thrust westwards, possibly to put forward a demand for Alsatian autonomy in the hope of driving another wedge between Britain and France. This is possible; the spectacle of Franco-British confusion at the moment, together with the certainty of accelerated re-armament in both countries, might induce the Fuehrer to press his immediate advantage home. If so, then any prophecy of a longer breathing-space such as was tentatively made in this place last week is clearly false.

But there are other, and rather less frightening, interpretations of the speech. It may have been mere personal annoyance at the plain speaking to which German conduct been German aims have been subjected in Paris and London. It may have been disappointment at the fact that the ordinary British Government does not put sufficient constraints on the protestations of peace at Munich to relax its further efforts. It may even—so strange is the BOULTONIAN of British psychology—have been an dealers, show a from £94,295 to 50 per cent. Mr Chamberlain against the opposition has been reduced cent.

within the Conservative Party, though the sarcastic references to Palestine are not easy to reconcile with such an interpretation. But the one forecast of the future with which the Saarbrücken speech cannot be brought into harmony is that of a Germany that is now ready to settle down in peace to the enjoyment of the restored strength and status to which Herr Hitler has brought her. But that is exactly the belief held, if not by Mr Chamberlain himself, then certainly by the circles that most firmly support his policy. The shock of disillusionment has been the more severe.

It is not only at Saarbrücken that hopes have been disappointed. The Mediterranean problem, which in the first flush of enthusiasm seemed to be so close to solution, is proving as obstinate as ever. Signor Mussolini has decided to withdraw from Spain a number of volunteers variously estimated at from 10,000 to 17,000. But it is clear from the mere fact that these are announced to be the volunteers who have been in Spain for more than eighteen months that many more are left behind; and neither artillerymen nor airmen have been withdrawn. The emphatic assertions from Rome that this withdrawal is in no way a concession to British pressure may perhaps be taken with a grain of salt. But Signor Mussolini will do no more until the Anglo-Italian Agreement has been ratified. And even thereafter it will be easy for him to shelter behind General Franco's refusal to accept the evacuation plan, even though Barcelona's plan for a neutrally-supervised evacuation of all foreigners fighting for the Government makes it more difficult for Burgos to continue in recalcitrance. But in substance, Anglo-Italian relations are back where they have been ever since the spring; Mr Chamberlain has to decide whether, if he pays cash down for Italian friendship, the Duce will, or can, give him anything worth the price. The experience of the French, who have granted unconditional recognition of the conquest of Abyssinia and have received nothing but abuse in return, is not very encouraging.

It would be less than fair not to set against these gloomy reflections the gains of the last few weeks. These gains are purely psychological, but they may be no less real for that. Despite all Dr Goebbels' boasts, it has been shown that the German people regarded a war with Great Powers, especially with France and England, with horror and alarm. And there are signs that at very long last the British people is beginning to awaken to its peril. These factors must not be omitted from the balance-sheet. But if we are awakening, it is to a position that is unmistakably grave. If we have secured peace for the remaining weeks of 1938, it is becoming more and more likely that we shall soon be faced with demands from the dictator states which we shall feel compelled to resist. It looks all too certain that the peace of Munich has broken up the strong coalition of forces that would have helped us to resist them. "Against the Italo-German bloc of 125,000,000 men, a bloc whose numbers increase by one million a year; against this bloc which to-day disposes of amazing forces and a favourable geographical and strategic position by land, air and sea; against this bloc of moral and material resources, which are solidly bound together, there is nothing more to be done." The boast comes from Rome, and something may be allowed for hyperbole. But it is true, alarmingly true, that in the alignment of European forces, for the first time in twenty years, Great Britain and France are on what is, at least on the surface, the weaker side. Strength has passed to the disturbers of the peace. In the circumstances it is hardly surprising that the only policy on which almost all sections of the British public can unite is that of ever more furious re-armament. We are starting on a desperate effort to ensure by arms a safety which a little courage and a little foresight at any time in these tragic years would have protected from all danger.

The People's Food

FOOD has supplanted drains and schools and houses as the chief plank in the platform of social reform. Some sixty years ago Disraeli declared that sanitation had become a major objective of British government, and popular education came hard on the heels of public health in political programmes. In our own times vast schemes of housing and slum clearance have been added to the tale of ameliorations, and, if the problem of ensuring proper shelter for the people has not been wholly solved, at any rate its solution is now in sight. It is now possible for politicians and economists to turn their energies to the next, and not the least important, stage in democracy's campaign to reduce the gap between the "two nations."

A nation works, as an army marches, on its stomach. Unfortunately, a great many of the men and women upon whom our industries and occupations depend for their personnel are not in fact being properly fed. To define this pressing problem precisely we need to know, first, how many families receive a total income from all sources large enough, after rent, rates, household and travelling expenses have been met, to provide for all members of the household a diet containing sufficient calories, protein, mineral and vitamins—that is, sufficient of the body-building, energy-bearing and protective foods—to maintain them in good health and physical fitness; and, secondly, how many families, even when they can afford it, do in fact furnish themselves with such diets. The groundwork for answering these questions has been well laid in recent years. Doctors still differ widely in their clinical definitions of malnutrition; but statisticians have collected and analysed actual family incomes, family budgets and incomes and expenditure per head, and experts, like the British Medical Association, Mr Seeborn Rowntree and a League of Nations Technical Committee, have worked out the cost of diets for the maintenance of health.

The upshot of these researches has been a substantial measure of agreement. Two years ago, Sir John Orr calculated that the average diet of over 20 million people in this country fell short, in one nutrient constituent or another, of the normal requirements for human health. Last spring, Mr Rowntree revised the cost of his minimum diet to allow for higher prices and estimated that 43 per cent. of the male adult workers were unable to provide themselves and their families with an adequate dietary. A house-to-house investigation into the dietary habits of some 5,000 families, selected to form a representative sample, geographically and socially, of all sections of the population, was carried out between October, 1936, and March, 1937. The results, just published in a book of unusual interest and importance,* confirm the disquieting conclusions of Sir John Orr and Mr Rowntree. About eight million men, women and children are estimated, on the basis of the sample, to lack the money for proper feeding, according to B.M.A. standards; and a further 12 to 22 millions are reckoned to be subsisting on inadequate diets. In other words, the diets of roughly half the population are deficient; either their incomes are too small for them to buy food in sufficient quantity and variety to meet the physical requirements of themselves and their families, or else, even when their incomes are large enough to make this possible, they do not in fact, because of caprice, ignorance, waste and the inescapable whims of appetite, provide themselves and their dependants with an adequate diet. This is not, except for many of the impoverished eight millions, a question of an absolute shortage of food.

* The People's Food. By Sir William Crawford and H. Broadley. Heinemann. 336 pages. 12s. 6d.

Starvation or semi-starvation, even among the poorest, is happily rare; and we are very much better off than most other countries. It is a question rather of improper feeding, of a wide shortage of constituents vital for good health.

Thus, the problem which emerges from these investigations is not wholly economic. In part it is educational. Not even among the wealthiest classes, for instance, is the daily consumption of milk up to the recognised standard of seven-eighths of a pint per head. There are already signs that the consumption of milk, green vegetables, fruit and fish is slowly rising; and a great deal could clearly be done by publicity and propaganda to persuade those people who can afford it to buy and consume something like the nutritionally correct quantity and variety of foodstuffs. One of the chief barriers to progress in this direction is habit or tradition. The social significance of feeding habits as between class and class, dependent in part at least upon mere custom, is brought out remarkably in Sir William Crawford's book. Marmalade for breakfast is a mark of social grading; so is coffee, and to a lesser extent fruit and fruit juices. The English midday meal, whether it is called lunch or dinner, is an unimaginative succession of meat, potatoes and pudding; though the upper classes add trimmings at both ends. Cheese is the rich man's aid to easy digestion; it is the poor man's stand-by for supper. The difference between afternoon tea and high tea is the difference between social strata; and dinner in the evening, instead of supper or a belated high tea, is the cachet of a surprisingly select few. Different classes eat different things at different times, and many of these habits, except where rooted in economic necessity, could be gradually changed.

Yet, in many even of the families whose present inadequate diet could be converted into an adequate diet without any extra expenditure on food, the root trouble is still lack of means. The breakfasts, dinners, teas and suppers of working people, so carefully analysed by Sir William Crawford and Mr Broadley, are dreadfully dull and monotonous. The reason for this is clear. Bread and potatoes are filling; greens and fruit are not. Tea is soothing to the nerves; milk is not. The B.M.A.'s minimum dietary itself is little more appetising or interesting than the plates of bread, gallons of tea, pans of potatoes, anonymous cuts of cheap meat and portions of fish and chips which make up the meals of the poorest. Variety, as the author says, is the spice of diet; and the nutritive ingredients in a limited and repeated range of foods are less likely to be assimilated than the same ingredients in a wider variety of foods. The conspicuous difference between the meals of the rich and the meals of the poor lies precisely in this quality of variety; and the dietetic errors of poor people are very frequently due to their attempts to break the monotony of their fare. Very few working people have any margin in expenditure for caprice and appetite.

Millions of people are spending as much as half their slender earnings on food and still getting an insufficient diet. Well-to-do people, who may spend scarcely a tenth of their incomes on food, not only have more varied things to eat than their less fortunate fellows; they actually eat more—more meat and more expensive meat, more milk, cheese, butter, eggs, green vegetables, fruit and fish, and just as much bread, flour, potatoes and sugar. In all food groups except the energy-bearing and filling foods consumption varies directly with means. The problem is clearly one of income and food prices, primarily an economic problem to be solved by economic means. Wages are often too low to cover bare family needs. The prices of many essential foods, such as milk, are too high.

It is impossible to devise a plan or policy which will at a single stroke erase the consequences of ill-feeding from our national liabilities. Inequalities of income and purchasing power are part and parcel of the system of free enterprise by which we live. It would be impracticable, for instance, except very gradually over a long period of time, to raise all wages to a level which would ensure a varied and sufficient diet for all workers and their dependants. It would be impracticable, too, to reduce all food prices to the point at which all people, rich or poor, could feed themselves adequately on their present earnings; farmers must live.

It should be possible, however, to bridge the gap between incomes and food prices; on the one side by family allowances to ensure the proper feeding of children; and, on the other side, by making essential foods available to poor people at specially low prices, while guaranteeing reasonably remunerative prices to producers. Improved and efficient marketing might be subsidised. Consumption itself might be subsidised. And money spent on allowances and subsidies, if the desired results were obtained, would be money well spent.

Economic stability depends very greatly upon the main-

tenance of popular purchasing power; and feeding the people, like housing the people, is a reform which produces tangible assets. Just as housing and slum clearance set in motion a hive of building and associated activities to the notable benefit of industry and trade, so would the deliberate raising of standards of food consumption generate profitable business in farming, distribution, foreign trade and food manufacture. A national food policy would be some safeguard against economic depression, as well as leading to a striking saving in the annual bill for ill-health. We seem to be entering a period when international insanity will preclude any advance in the social services. But when the cloud passes, a national food policy should be first on the list for a concerted effort comparable to the post-war housing programme.

Yet the chief part of such a food policy should be the lowering of food prices by the normal processes of economic progress and wisdom. Socially and economically, the future of this country depends to an extraordinary degree upon the cheapness of our food supply; and expediency and justice march together in the demand that we should make sure that he who works, and the children who will work after him, shall eat sufficiently.

The West Indies

THE Royal Commission which has this week sailed to inquire into social and economic conditions in the West Indies must be one of the most distinguished bodies of the kind that has ever been instructed to concern itself with a colonial problem. It has as its chairman a former Cabinet Minister, as its vice-chairman a former Governor of Jamaica and as one of its members the Secretary of the Trades Union Congress. The occasion calls for these eminent attentions; for nearly every island in the West Indies has recently given violent evidence of serious discontent. There is something gravely wrong with the social and economic conditions of the West Indies.

"The West Indies" is a convenient geographical appellation. But perhaps the most important thing to realise about the West Indian colonies is their astonishing diversity. The Commission's terms of reference include British Guiana, British Honduras, Jamaica, Trinidad, Barbados, the Leeward Islands and the Windward Islands. These colonies are strung out on a curved line 2,500 miles long. Their total population is only some two and a half millions, divided among the administrations (for the four Windward Islands of Dominica, St. Lucia, St. Vincent and Grenada have only their Governor in common). The largest unit is Jamaica, with rather less than the size of Yorkshire and a population of just over a million. Trinidad has half the population and two-fifths the area of Jamaica. Of the other islands, Barbados—the most crowded—has a population of over 100,000. British Guiana and British Honduras, though they are continental possessions, are as dependent on sea-borne traffic as any island.

The West Indian islands are thus inevitably isolated from each other both by sheer distance and by their smallness. Communications, in such circumstances, are inevitably poor and the sense of solidarity is small. The Englishman, looking at his atlas in London, finds it easy to suggest a West Indian Federation as the solution of the administrative problems. But in fact few of the problems would be solved thereby, since the Federal Government in Jamaica (the obvious location) would, for practical purposes, be nearly as remote from the other islands as London. And, in any case, the sentiment of the population is against federation, save among the more radical elements who see in it a means towards self-government. Generally speaking, each colony is as insular as only an island can be. British

rule has, it is true, tended to encourage this insularity by the diversity of the administrative devices it has adopted; there are hardly two islands which have exactly the same form of government, and almost all grades of rule can be found, from complete autocracy to the border-line of self-government (as in Barbados, where there is a fully-elected House of Assembly, with some control over finance). There is also great economic diversity. The main support of the group as a whole is sugar, which provides more than a third of the total exports. Some of the islands have other resources. Trinidad has the greatest diversification, with its exports of oil and cocoa, and Jamaica has a big trade in fruit, chiefly bananas. Among the smaller islands there are several whose single crop is something other than sugar, such as limes in Dominica, cocoa in Grenada and arrowroot in St. Vincent. But sugar is the one great unifying force of the whole West Indies. Even in the islands where it is not grown, the economics of sugar largely determines the standard of living.

To say that sugar is the unifying factor of the West Indies is equivalent to saying that the islands are united in poverty. Sugar suffered, like other commodities, in the two slumps of 1921 and 1929; but, unlike most other raw commodities, it never recovered. As can be seen from one of a number of graphical illustrations of West Indian problems on page 145, the West Indies' income from sugar is still at a very low level. The responsibility for the continuing low price of sugar does not rest with the West Indies—it rests *inter alia* with the countries, including Great Britain, that have expensively developed sugar production at home in competition with the tropical supply. But whatever the reason for the sugar problem, it has ruined the West Indian economy. It has condemned the native population to conditions of extreme poverty, in which malnutrition and disease are rampant. Housing conditions are peculiarly bad, especially in the towns, and the state of the people is such that education is almost a mockery. To these complaints, recent years have added another; for the stream of emigration to Cuba and the United States has first been stopped and then reversed, and the British islands have had to cope with growing unemployment. There is some danger lest, in Mr Lloyd George's vivid words, a slum empire should be created on the doorstep of the United States.

It is not quite true to say that the Mother Country has

done nothing to help the West Indies. A special preference for Empire sugar was added in 1932 to the previously existing preference. This fluctuates from time to time according to the market price of sugar, but in June last it was stated by the Colonial Secretary to be equivalent to 4s. 9d. per cwt., or almost as much as the market price. The Imperial Exchequer also gives some financial assistance to the colonies, chiefly from the Colonial Development Fund. But the total of this assistance amounted in 1936 to less than £160,000, or just over one shilling per head of the population. Apart from these two exceptions, there have been several attempts, on a small scale, to give scientific assistance to agriculture in the islands, chiefly through the Imperial College of Tropical Agriculture in Trinidad, and one or two of them have been encouraged and helped to cultivate sea island cotton to relieve their dependence on sugar. Within the slender means allowed to them, both the local administrations and the Colonial Office have doubtless been doing their best. But regarded in the round, our Imperial policy towards the West Indies has been not far removed from one of *laissez faire, laissez aller, laissez mourir*.

The British administration is, indeed, something of an incubus upon such poor islands. The total expenditure of the colonies in 1936 amounted to £6,074,000. Of this total, £738,000 went on debt services, £2,523,000 on administration and £44,000 on defence. Only £542,000 could be spent on economic development and £1,606,000 on social services in the broadest sense. These figures are cruelly small. But when they are related to the sources of revenue they seem cruelly high. More than half of the whole revenue comes from customs duties. Since the islands have to import a very wide range of their common necessities, this means that the revenue is raised by indirect taxes on con-

sumption. In 1935, £2,921,000 of customs revenue was raised on less than £15 millions of imports. The food duties are even more onerous, since the yield of the duties was £1,547,000 on imports valued at £5,247,000. The yield of these food taxes (for such, in the circumstances, is their nature) is roughly equal to the expenditure on social services. The Islanders are indeed being asked to lift themselves by their bootstraps.

What remedy will the Royal Commissioners be able to suggest? If the islands are to be left to their own resources the answer is that very little can be done. Some of the employers may perhaps be in a position to provide better conditions for their workers; some of Trinidad's industries, for example, are not so poverty-stricken as sugar. But, on the whole, the truth seems to be that the European capital in the islands is already receiving less than a remunerative return. And where the islander grows his own crop there is not even an employer whose profits can be squeezed. The Colonial Secretary virtually admitted, in the debate in the House of Commons on June 14th, that there would have to be financial assistance to the islands for the purpose of extending the social services, safeguarding the existing agricultural industries and developing new means of livelihood for the population. An Imperial subsidy thus seems to be inevitable—and the payment will have to be made at a time when the Imperial Exchequer can least afford it. But in a subsidy-ridden world this particular grant will have a threefold justification. The sum will be small in terms of the British budget. The need for it has arisen at least in part from the sums lavished by way of subsidy on the British beet-sugar industry. And no number of millions of pounds will entirely erase the debt of honour we owe to a race of people who, but for our slave traders, would never have seen the islands that are now their home.

THE WEST INDIES AND THEIR EXPORTS

Profits in Decline

OUR last survey of industrial profits, which appeared in these columns three months ago, concluded that profits had probably reached their cyclical peak. Judged by the company results published in the past quarter, that estimate has proved accurate. Both in number, and in the total profits which they represent, the reports which appear during the September quarter are the smallest in the year; on the former basis they represent 16 per cent. of the past twelve months' total, and on the latter only 11 per cent. But this year's third quarter companies have had the unenviable distinction of heralding the decline in earning power which is the inseparable mark of industrial recession.

It would be a mistake to exaggerate the absolute importance of this decline. Actually, only 374 reports were received during the past quarter, and the total profits of £32,793,241 which they revealed showed a reduction of no more than 1.4 per cent. It is only when these latest results are put in perspective with the profits recorded in 2½ years of thriving trade, as in the following table, that their significance is evident:—

TABLE I.—QUARTERLY PROFITS SINCE 1936

	No. of Cos. report- ing	Total Profits	Change on previous year		No. of Cos. report- ing	Total Profits	Change on previous year
1936		£'000	%	1937		£'000	%
1st qtr. ...	569	75,732	+13.3	3rd qtr. ...	337	28,575	+19.2
2nd qtr. ...	739	92,281	+10.6	4th qtr. ...	549	57,536	+20.2
3rd qtr. ...	382	28,975	+14.3	1938			
4th qtr. ...	496	42,135	+15.2	1st qtr. ...	646	100,355	+10.5
1937				2nd qtr. ...	805	112,473	+12.9
1st qtr. ...	628	94,733	+11.9	3rd qtr. ...	374	32,793	-1.4
2nd qtr. ...	765	100,691	+19.9				

The past quarter's decline is in fact the first for five years. Its cyclical character deserves consideration before the results are examined in close detail. It is commonly assumed that the constructional trades feel the first effects of depression, while the consumption goods trades maintain a steadier profit-earning record. A rough analysis (so far as a normally lean quarter's results are representative) shows that the reverse has actually happened during the first stages of the present recession. It is, of course, difficult to allocate some groups except on an arbitrary basis. The important group of miscellaneous companies, for instance, has been included among the constructional trades for want of a more appropriate pigeon hole. The latest profits of companies serving the consumption goods trades show a fall of 7.1 per cent. compared with the net earnings of the previous year, while constructional and general industrial concerns reveal a rise of 3 per cent. Both the utilities and transport and the finance groups show scarcely any measur-

able change in earnings, while the rise in commodity company earnings reflects the legacy of high tea and rubber prices in 1937, whose benefits are still apparent in recent reports. The full analysis is given in the following table:—

TABLE II.—THIRD QUARTER PROFITS

	Previous Year	Latest Year	Change %
Consumption goods trades	13,584,277	12,613,571	- 7.1
Constructional trades &c.	13,545,510	13,944,791	+ 3.0
Utilities and transport ...	901,563	894,826	- 0.8
Finance	3,333,300	3,343,214	+ 0.3
Commodities	1,890,843	1,996,839	+ 5.6
Total	33,255,493	32,793,241	- 1.4

There is, however, more than one possible explanation of the apparent paradox that the constructional trades are meeting depression more successfully than the consumption goods trades. The latter were hit simultaneously by rising costs and by the contraction of general purchasing power, which has become more pronounced during the current calendar year. In the constructional trades, on the other hand, the impact of recession upon profits has been softened first by controlled prices (in the steel and coal industries, for example), and, secondly, by the stimulus of re-armament expenditure. Nor must it be forgotten that the accounting years for many concerns in this group run to June 30th. Their latest results thus include six months of booming profits, earned during the first half of that period, which the consumption goods trades did not, as a whole, enjoy.

These, however, must be regarded as provisional conclusions, for they are based on a single quarter which is never prolific of company reports. Obviously there is no cause, so far, for general dissatisfaction with the reaction of industrial profits to declining trade. *The Economist's* index of business activity reached its peak in September last year, and the time-lag between the first sign of falling economic activity and the subsequent decline in profits is in strict keeping with the usual interval between the average date at which profits are earned and their publication in company reports. During the past quarter, as our third table shows, the companies represented obtained an average return of 10.3 per cent. on their preference and ordinary share capital, compared with 11.0 per cent. on a similar (though not identical) sample of companies in the corresponding quarter of 1937. That, clearly, is not a substantial setback. But there are signs that it has induced yet greater conservatism in the distribution policy adopted by many boards of directors. Table IV, for instance, shows that the average dividend paid on the ordinary capital of the September quarter companies amounted to 9.1 per cent., compared with 9.7 per cent. for the 1937 sample of

TABLE III.—THIRD QUARTER INDUSTRIAL PROFITS 1929-38

Reports Issued during Third Quarter	No. of Com- panies	Total Profit (after deb. interest)	Change since preceding year (same companies)	Total Preference and Ordinary Capital	Ratio of Profits to Capital
		£	%	£	%
1929	257	23,727,747	- 3.0	209,191,686	11.2
1930	329	23,626,502	- 6.4	268,078,042	8.8
1931	320	15,996,685	- 35.5	343,500,531	4.6
1932	303	14,722,754	- 28.6	350,474,355	4.2
1933	307	15,394,560	- 5.5	296,128,953	5.2
1934	318	17,139,932	+ 27.7	264,076,256	6.5
1935	345	22,471,189	+ 12.2	286,270,471	7.8
1936	382	28,974,570	+ 14.3	311,349,009	9.3
1937	397	28,575,020	+ 19.2	258,988,667	11.0

TABLE IV.—DIVISION OF PROFITS (THIRD QUARTER COMPANIES)

Reports issued during Third Quarter	Proportion of Profits after Debenture Interest			Rate of Payment on Each Class of Capital			
	Paid in Pref. Div.	Paid in Ord. Div.	Put to Reserve or "Carried Forward"	Deben- ture	Prefer- ence	Earned for Ordinary	Paid on Ordinary
1929	%	%	%	%	%	%	%
1930	17.8	61.6	20.6	4.9	6.0	13.7	10.3
1931	18.9	62.8	18.3	5.4	5.0	10.7	8.4
1932	37.1	71.8	Dr. 8.9	5.2	4.5	4.7	5.4
1933	30.9	65.9	3.2	5.1	3.6	4.5	4.3
1934	34.8	61.2	4.0	4.9	4.4	5.7	5.3
1935	24.7	56.8	18.5	4.9	4.1	8.0	6.0
1936	24.7	51.6	23.7	4.7	4.9	9.7	6.7
1937	19.8	50.5	29.7	4.8	4.9	12.1	7.6
1938	16.6	54.9	28.5	4.5	4.8	14.8	9.7
	19.3	51.2	29.5	4.5	5.1	14.1	9.1

companies; moreover, the proportion of net profits received by equity shareholders was reduced over the same period from 54.9 per cent. to 51.2 per cent. In short, the equity investor, who had already seen many of the fruits of prosperity ploughed back into his business, has been the first to suffer in lower cash dividends—though as yet only slightly—now that profits have taken a downward turn.

These are average results. From the detailed tables on page 151 the reader may examine the experience of the twenty-four separate groups which are represented in the quarter's total. The most impressive increases in profits have been recorded by iron and steel companies (17.2 per cent. over the previous year) and by motors and aviation (25.4 per cent.), though analysis of the latter group reveals that higher aviation profits have been principally responsible for the advance. Of the fourteen instances in which reduced profits have been recorded, textiles (63.3 per cent.), building materials (25.2 per cent.) and the large general industrial group (9.5 per cent.) are outstanding. These movements illustrate the difficulties experienced in the export trades, and the direct consequences of industrial recession. But the twin blades of rising costs and falling purchasing power clearly account for the 7.7 per cent. cut in food and provision companies' profits and for the 12 per cent. reduction in retail trading profits.

It is not, perhaps, a matter for surprise that the two groups—iron and steel and motor and aviation—whose results make the best showing during the quarter, have distributed their profits more conservatively than the average. Both groups have a real degree of protection in the form of armament work. But the course of profits from their civil business is almost certainly unfavourable, and sooner, rather than later, it will make a fuller appearance in company reports. The latest results, in these categories more than in others, reflect the prosperity of industrial boom, but individual results already throw a shadow of reduced

profits to come. And it may well be that the construction trades, having maintained relatively satisfactory earnings as a whole during the first stages of recession, may be more significantly affected in future.

What are the morals of this survey? So far as the investor is concerned, it provides little that is new, for the Stock Exchange had already begun to discount the possibility of falling profits even before the statistical signals were showing the amber light. The new industrial capital market, again, has been virtually idle for months, and the mere evidence of reduced profits will hardly rob it of business which it had little reason in any case to anticipate. To the economic statistician and the fiscal forecaster, however, the trend of profits at the moment is highly important. It has a direct bearing both on the national income and upon the financing of the defence programme. At a time when taxable income appears to have passed its maximum point the demands to be made upon the taxpayer, so far from abating, are almost certain to be increased. That is a dilemma which, whatever the economic pros and cons may be, is likely to encourage the resort to greater borrowing, to relieve as far as may be the burden of increased taxation. But it would be altogether premature to prejudge this issue before succeeding quarters have given an indication of the real extent of falling profits. During the year to June, 1931, industrial profits were reduced by 14.7 per cent. and in the succeeding year by a further 26.5 per cent. It would scarcely be safe to assume that the setback in industrial profitability will not equal the first of these figures in twelve months' time, despite the high hopes that economic recovery in the United States may help British industry in the meantime. In a re-arming world, industrial confidence has little chance to flower. For the moment, however, the basic fact is that industrial profits are now in the descendant; the extent of their fall must be left for the future to reveal.

Topics of the Week

The Crisis in Palestine.—The Republic of Czechoslovakia and the Jewish National Home in a mandated territory of Palestine were created simultaneously, twenty years ago, as parts of a single peace settlement. To-day it looks as if both of them were doomed to simultaneous destruction—or at any rate to a transformation so radical as to amount to destruction in all but name. In both territories the weaknesses of the peace settlement have been shown up by the experience of twenty years. At the peace conference of Paris the point of view of the Palestinian Arabs, like that of the Sudeten Germans, was ignored; and this error has now revenged itself in a violent upheaval of a people that has come to believe that its one hope of gaining attention and securing satisfaction lies in a resort to force. The Palestinian Arab militants, like their Sudeten German counterparts, have powerful backing. They are supported by the whole Arab, and indeed the whole Islamic, world, and in the background looms the Rome-Berlin Axis in its rôle of the champion of Gentiles against Jewry. In these untoward circumstances, which are as unpropitious as can be for a statesmanlike settlement based on reason and justice, it looks as though we may be on the eve, in Palestine, of a precipitate settlement dictated under threat of force, on the lines of the settlement that has just been imposed on Czechoslovakia. It is the tragedy of the Zionists and the Czechs, and the shame of the Principal Allied and Associated Powers, that two small, capable and patriotic peoples are apparently to pay the whole staggering price of errors in the peace settlement and procrastinations in the post-war years for which not they, but the Principal Allied and Associated Powers, are chiefly responsible. In Palestine, the British Government's policy has consisted literally in having no policy. We have let in as many Jewish

immigrants, year by year, as the economic state of the country and the political state of Arab feelings would bear; and, for the rest, we have hoped for the best. Eighteen months ago the Peel Commission warned the British Government solemnly and emphatically that this impolicy of waiting and seeing was leading straight to disaster and that their choice lay between repressing the Arabs ruthlessly and alternatively coming to terms with them on a basis which would give the Jews far less than we had allowed the Jews to hope that the Balfour Declaration meant. The Government have ignored this warning; after a year and a half the whole situation is still in flux; and the consequence is a virtual state of anarchy.

* * *

The two radical alternatives to which we have thus now allowed our choice to be reduced are plainly set forth in a letter, published in *The Times* of last Saturday, from the late Inspector-General of Police in Palestine, Mr R. G. B. Spicer. Either we must crush the Arab population of Palestine by a ruthless use of overwhelming military force, or else we must confess to the Zionists that experience has proved that the implementation of the Balfour Declaration is impossible, and that they must put up with living in a Palestinian Arab national State as a minority which will not be allowed either to reinforce itself by immigration or to acquire more land than it at present possesses. The Irish precedent makes it almost certain that the people of Great Britain would reject the former alternative (and this now all the more in view of the deadly danger to our national security at home). We may therefore expect—notwithstanding the considerable military reinforcements that are now, very rightly, being rushed to the spot—to see the

second alternative adopted in some form at short notice. This week the British High Commissioner in Palestine, Sir Harold MacMichael, and the Iraqi Foreign Minister, Sayyid Tawfiq As-Suwaydi, have both been in London in consultation with the Colonial Secretary, and the Iraqi statesman has brought with him an Iraqi plan for Palestine, which probably stands a good chance of being adopted—if only because it is less radical than a rival Syrian plan that was put forward by the Syrian delegation, and was opposed by the Iraqi delegation, last week at an Arab Congress on Palestine in Cairo. The issue between the Syrian and the Iraqi plan is whether the future Palestinian Arab State shall be re-amalgamated with Syria or shall remain a separate entity under joint Iraqi and British influences. As far as concerns the Jews, the Syrian plan does not appear to differ materially from the Iraqi, which is said to propose that the Palestinian Arab State shall enter into a treaty for a term of years with Great Britain, and that for this term Great Britain shall guarantee the rights which the constitution of the new State will promise to minorities. Under the sovereignty of the Palestinian Arab State there is to be municipal and educational autonomy for Arabs and Jews alike, but no further Jewish immigration is to be permitted. We take it that this plan foreshadows the coming settlement more or less accurately. That it also foreshadows a capitulation of British imperial authority to armed insurrection is a lesson that will not be lost on the Moslem world.

Britain's Defences.—The crisis gave cause for both encouragement and disquietude about the state of our defensive equipment. The Navy and many Territorial units were called up with speed and efficiency; there was a ready response by both men and women to appeals for recruits and volunteers for various essential activities; and plans were produced, or improvised, with great rapidity for the organisation of transport, food and civilian protection. But, at the end, it was clear that the apparent approach of hostilities had revealed very grave gaps in our preparations, and the most urgent task of central and local authorities is to take immediate stock of the considerable ground which has still to be made up. In Air Rair Precautions such a stocktaking is proceeding apace, and it is possible that the Government may soon produce the integrated programme of civil defence measures, the absence of which has hitherto been the leading cause of the inefficiency and inertia of authorities and citizens alike which have been brought to light in the last few days. Even during the crisis the balloon barrage contingents around London were not fully manned; and lack of training and practice was responsible for the deficiencies which marred comparatively successful balloon exercises a week ago. In this respect at least the Government is converted to the view that, if a thing is worth doing, it is worth doing properly; and Sir Kingsley Wood announced at Cambridge last Saturday that barrage plans would be extended to a number of important urban centres in the provinces, and that adequate training facilities and equipment would be speedily provided.

There are still too many bottlenecks in our defence preparations. It is not only the balloon and anti-aircraft units that have lacked the necessary equipment or training. The Air Minister disclosed last Saturday that the number of recruits for the Civil Air Guard now exceeded 30,000 and that the lists had been temporarily closed. So far so good; but there is a dearth of facilities for ground instruction, let alone for air training, in this branch; and here, as in so many departments, the parallel need for instructors and material equipment is pressing. Most serious of all, the bottleneck in the production of actual aircraft persists, and the drive to rival and excel foreign countries in air strength, now to be greatly intensified, is still comparatively clogged. Both Lord Austin and Lord Nuffield have lately spoken with optimism about the prospects for their respective contributions to the solution of this problem; and, at Cam-

bridge, Sir Kingsley Wood made the welcome announcement that a £1,000,000 aircraft factory was to be established at Gloucester and a £500,000 extension at Stockport; but these are only slight steps forward. All parties are agreed that the Government must press on with an augmented programme of defence and rearmament. Yet it is unhappily true that, in many ways, the leeway lost in the past has still to be made up before appreciable fresh progress can be achieved.

Air Force Expansion.—The exact size of its Air Force is one of a nation's most closely guarded military secrets. It is impossible to say, for example, exactly how the R.A.F. compares with the German Air Force. But if Great Britain is as much behindhand in numbers of aircraft and pilots as rumour suggests, any further delay in developing our maximum effort is inexcusable. What can be done in a sustained effort was demonstrated in 1914-18:—

OUTPUT OF AEROPLANES, 1914-18			
Number		Number	
Up to June 30, 1915 ...	902	1917—1st quarter	2,720
1915—3rd quarter.....	692	2nd "	3,640
4th "	948	3rd "	3,720
		4th "	4,742
1916—1st "	1,137	1918—1st "	7,154
2nd "	1,537	2nd "	7,870
3rd "	1,939	3rd "	8,558
4th "	2,020	4th "	7,200

Until fairly recently the output of military aircraft was only about 200 units per month. With the completion of the shadow factories, output is believed to have been raised to 400 units per month on a one-shift basis. If two shifts were worked, production could probably be raised to 600 units per month, and, in an emergency, 1,000 units could probably be produced per month after a comparatively short interval. In the third quarter of 1918, however, we produced aircraft at a rate of no less than 2,853 units per month. As a manufacturing job, the modern aeroplane is barely comparable with its ancestor twenty years ago; but the technical resources of the manufacturers have also increased. Our potential capacity in reserve, moreover, is substantially greater than twenty years ago, partly as a result of the enormous expansion of the motor industry. If the Government is now as anxious as the public to establish parity with Germany in the air, an extension of capacity here and there clearly will not do. Only a really large-scale expansion programme, which will involve the immediate construction of a series of large units will now give us a chance to catch up.

Reorganising the Territorials.—Central among the plans to extend the country's defences and armaments, which have been announced since the map of Europe was redrawn and the balance of power rudely shifted, is the programme outlined on Monday by Mr Hore Belisha to reorganise the Territorial Army. At present, the Territorial Army, with its divisional organisation supplemented with extra-divisional units, is a replica of the Regular Army as it was before the Secretary of State's recent radical changes. Now it is to be brought into line with its professional counterpart: the Territorials will have the same modern units as the Regulars; machine-gun battalions for the infantry, motor-cycle battalions, tank and anti-tank battalions and anti-aircraft regiments. In all, there will be five anti-aircraft divisions (as at present)—for anti-aircraft is the part-time soldier's special work and is the basis of his enhanced importance under modern conditions of warfare—three motorised divisions and a mobile division. It is imperative that the Territorial Army should be up-to-date and efficient, and the reorganisation is accordingly very welcome. Whether the scheme will work well, however, depends upon whether the reorganised units are fully and speedily provided with the equipment and materials they need. If they are not, then we are doomed to be deeply disappointed.

Distress in Bohemia.—These are sad days in Prague. With the coming of the Germans, hundreds and thousands of refugees—as many as half a million on one estimate—began to toil down the roads from the occupied areas, families walking beside carts loaded with household goods, their homes abandoned. Days ago the pressure on Prague reached alarming proportions. Partly on this account and partly at German behest the Government has now refused to allow any more German-speaking refugees to enter Prague, and it is reported (sometimes in harrowing detail) that many are being turned back. For not a few of these unfortunates the future can hold out nothing but wretchedness. A substantial sum of money has been raised in England for the relief of distress and arrangements have been made for the administration of the fund in Prague. The hardest core of the problem, however, consists of the German-speaking refugees. The Prague Government will not let them stay—indeed, its present attitude is one of refusing them even a few weeks' grace while arrangements are completed. And even if they are not driven back into the Nazis' arms, where are they to go and by what means? It will be a terrible stain on the world's conscience if those whose only faults have been loyalty and love of liberty are merely abandoned to their cruel fate.

The occupation itself was carried out with clockwork precision and without serious incident, the dignified bearing of the Czech army and of Czech officials winning admiration even in Germany. Herr Hitler has toured the Sudetenland; and Reichenberg (Liberec) is now the headquarters of this latest *Gau* of the German Reich. In fixing an exchange rate between Czech and German currency in the occupied area, the precedent of Austria has been followed. The official rate on the Berlin Bourse was 8½ pfennigs to the crown. The occupying generals first fixed a rate of 10 pfennigs and then a decree by Field-Marshal Goering fixed 12 pfennigs. This over-valuation of the crown confers a temporary advantage on the Sudeten workers, when their wages are converted into marks. But its real purpose is to protect the industries of the Reich from competition from the newly "liberated" areas. Visits between Prague and Berlin have been of almost daily occurrence, and a Czech delegation came to London early this week to discuss the details of the £10 millions which the British Government has made available. Their main meeting was with Sir Frederick Leith-Ross, the British Government's chief economic adviser. Estimates of the amount of money needed to rebuild as an economic unit what remains of Bohemia range from £30 to £100 millions, but there is no news yet of a French or British loan. Meanwhile the Czechs are searching the wreckage for signs of life. And finding few.

The Czechs Change Sides.—If the Germans may not announce, as they did for Austria, that Czechoslovakia is "a province of the Reich," it becomes daily clearer that Czechoslovak independence, whether economic or political, will soon be reduced to a mere convention of the map-makers. As we wrote in *The Economist* for September 24th (page 583), the Historic provinces of Bohemia and Moravia form an economic unit which cannot be split up without endangering the economy of all concerned. The Czech *Lidove Noviny* pointed out last week that the Republic's policy, "whether we want it or not, must be good relations with Germany." There is no other way; and with characteristic fortitude the Czechs and their Government, which is that formed on October 3rd as General Syrový's second Cabinet, are doing what they can to favour any *rapprochement* with the Reich which will help their negotiators at Komarom and at the same time ease the harsh terms being concluded this week in Berlin. That was why President Benes resigned, and why M. Chvalkowsky, Czech ambassador in Rome and a man more acceptable to Berlin than Dr. Krofta, was appointed as the new Foreign Minister. But the Germans maintain

an overbearing attitude on the International Commission which is making *rapprochement* a very bitter pill for the Czechs. The new frontier, as shown on the map overleaf, is fully as generous to the Germans as that drawn by Herr Hitler at Godesberg. At least 800,000 Czechs will now become German citizens. The road and railway communications of the Republic are cut at various points. The chief towns now frequently rely for their supplies of water or electricity on plants in Germany. There is talk of a customs union and currency assimilation with Germany, and though these proposals probably go no further at the moment than arrangements for continued trade between the Czech and German areas of Bohemia, the larger demand may well come later. Along with this tightening economic grip, changes in Czechoslovakia's internal political structure are keeping step; now there seems no doubt, supposing that democratic forms are to be preserved even in name, that the price of German clemency in the future will be delegation of executive power to parties of the Right, notably to the Agrarians and Catholics, and parties such as the National Union, the Small Traders, and the Fascist National Association, with army influence well to the fore. In the light of the past weeks the advantages of democratic connections, to put it mildly, must seem dimmed. Add to this change of heart the advantage which Germany would derive from a "sympathetic" Government in Prague; and the possibilities become immediately obvious. Two of them are a revival of extreme Czech nationalism and a crusade against Jews and Communists.

Slovakia.—The movement for Slovakian autonomy came to a head on October 6th at Zhilina when delegates of local parties and the three main Czech parties agreed upon a programme of federal autonomy for Slovakia; and the next day a deputation headed by M. Tiso, successor to the late Father Hlinka as leader of the Slovak People's Party, was received by General Syrový. Following this a provisional Government has been formed at Bratislava. Prague has approved the appointment of four Ministers, namely MM. Cermak (who resigned from the first Syrový Cabinet), Durcinsky, Lichner and Topliansky; and M. Tiso, who leads the Slovakian Cabinet, is now in charge of the frontier negotiations with Hungary at Komarom on the Danube. The Zhilina meeting predicted a Czechoslovakia governed by three provincial Diets—for Bohemia-Moravia, Slovakia and Ruthenia—having control of all national affairs except those concerning foreign and financial policy and unified by the maintenance of the President's office. In the circumstances this would be an ideal solution from the Czech and German points of view: and the Reich has turned a favourable mien towards the Bratislava Government. Indeed, there is probably much more than a suspicion of German handiwork in the formation of that Government; the manifesto issued at Zhilina

EQUITY & LAW LIFE ASSURANCE SOCIETY

declares against the "Marxist-Jewish ideology" and concludes with the statement that "the victory of self-determination means for the Slovak nation the victorious end of our years-old struggle." The Communist Party and its newspapers already have been banished from the Slovakian scene. At the same time Prague has granted Ruthenia's claims for federal autonomy, and a government is in being at Uzhorod. This is a setback to Hungarian ambitions, as Ruthenia's three-quarters of a million people cannot be expected to vote for any Government but their own.

The negotiations at Komarom have not run smoothly. The Hungarians claim all territory south of a curving line drawn between Bratislava (including this town) and Sevljus on the Ruthenian Tisa. This is apart from their demand for the whole of Ruthenia; and it includes important centres like Kosice, Uzhorod and Mukacevo, with the wide grain-farming plains of southern Slovakia. Several small towns on the frontier, including Ipolsag and Satoral-ja-ujhely, are already in the hands of Hungarian troops, but the negotiations are unlikely to yield so rich a harvest as the Hungarian public has been led to expect. The 1930 Census figures which, the Hungarians say, do not account for Magyar-speaking Jews and "stateless" persons, show 691,923 Magyars in Slovakia and Ruthenia; but cession of what is asked would include about 100,000 Slovaks and leave the remainder so poor that they might well be glad to be relieved of the expense of governing themselves. And the situation has changed since Prague's acquiescence in Slovak autonomy; Budapest is now facing a united Slovak delegation who know that they no longer have any reason to accept Hungarian help in pressing claims on Prague. But M. Tiso will find resistance difficult unless he has strong German support; and it now remains to be seen whether Slovakia is worth enough to the Germans to compensate them for the trouble and bad blood which their defence of its integrity will engender.

Confusion in France.—Those who remained cheerful in France after the wider implications of M. Daladier's acquiescence in Munich became evident, had their optimism tried again, when at Saarbrücken, on Sunday, Herr Hitler's friendly references to France were conspicuous by their absence. First impressions are

confirmed; but instead of common misfortune welding differences together, the split in the French nation (which may even be tragic) seems to be deepening. Defections from the narrow Flandin ranks this week include MM. Reynaud and Piétri; nor have they yet ended. To read the French Press of late is not a happy experience: and one's agreement, for instance, with a cartoon which appeared in *Je Suis Partout*, of La France sitting disconsolate, asking herself, "Isn't it time for them to think a little about me?" is only shocked and reinforced by the savage anti-Jewish attacks appearing in the next column. The parties of the Left maintain a shaken silence, perhaps the most disturbing thing of all. With M. Daladier still holding his hand over the special powers (apart from increased re-armament expenditure), they have nothing to say; and as was proved at this week's congress of the C.G.T., the majority of members can identify themselves with the hundred per cent. anti-fascist views of the Communists scarcely more than with the half-jubilant, half-rueful "retrenchment and re-armament" cries which are coming with increasing stridency from the Right. But there is no mistaking the Left's disillusionment. "I do not believe in war any longer," said M. Jouhaux, secretary-general of the C.G.T., "it is impossible in the present circumstances, after the collapse of the Czechoslovak bastion. Nothing will now stop Yugoslavia from sliding into Hitlerism; and much the same with Roumania. In Poland we have paid and been betrayed by the Foreign Minister. What fate is reserved for Spain?..."

The face of things in France is, of course, deceptive. This gloomy acceptance of defeat by the Left cannot in the nature of the French temperament last for long, and with the return of vitality there will be a resumption of hostilities on the Labour front. Meanwhile, the future remains unusually obscure. M. François-Poncet is on the point of departing for Rome with credentials to the King of Italy and Emperor of Abyssinia in his pocket: but signs of Italian gratitude are slow in making an appearance. Parliament cannot meet until November 15, and between now and then much water will run under the bridges. A political tide is flowing in France, but where it will go and what wreckage it will leave on the ebb, nobody can foretell with any confidence.

Roads and Motor Cars.—Next year's motor cars have held the attention of Britain's two million private car owners this week at the Earls Court Show, but the real problem of next year's motoring has been under discussion elsewhere. In his presidential address to the Institute of Transport, Mr G. S. Szlumper pointed out quite rightly that, by and large, our road system was adequate only for local needs, and that fast through traffic needed special highways. These, he proposed with rather less justice, should be built as private toll roads to relieve the taxpayer of the burden of paying for the motorists' track; he was not asked, said Mr Szlumper, to pay for the railways' track. The truth is, of course, that the motorist himself more than pays for the roads he uses; total annual expenditure on roads, including sums recoverable from property owners and utilities or raised by loan, is barely two-thirds of the £90 millions in which motorists are yearly mulcted by the Exchequer and local authorities. The owners of motor vehicles are clamouring for value for their money in their own and the public's interest, and their hopes at the present time rest, somewhat precariously, upon the Government's promised programme of road development, the recent acquisition by the Ministry of Transport of all trunk roads, and, for London, the sweeping Bressey proposals.

This week Mr Burgin announced the completion of the Ministry's survey of trunk roads and a plan to spend £800,000 on by-passing Merstham, Redhill and Horley to complete a safe and efficient route to Brighton. At the same time, the Minister repudiated the suggestion that motor-ways on the German model should be built; it would be too expensive, he said, because the compensation of vested interests was too costly and England's urban areas were too close together. The cars at Earls Court are remarkable examples of progress in engineering, but it seems likely that their chief function will be to make congestion worse confounded. The Government's road plan has not materialised; the Ministry of Transport's trunk powers have so far been too much for the department to cope with; and the Bressey Report is rapidly fading from the light of common day. It is true that the preliminary boring of the Dartford-Purfleet tunnel begun two years ago, and a key-piece in the drastically improved Bressey pattern of London's highways, has just been completed; but even this enterprise, which will provide a sorely-needed river crossing and a link for the North and South Orbital ring-roads will, when opened in 1947, have taken three or four times as long to build as it would have done in Germany and America.

Strike Without Reason.—Like a thunderstorm out of a clear sky an exasperating railway strike descended upon London early this week. It began with 300 porters, ticket-collectors, carters and cleaners at St. Pancras on Monday, spread to 500 workers of the same grades at Euston by Tuesday and then affected the great L.M.S. goods yards. This totally unexpected *démarche*, which soon bade fair to cause a serious hold-up in certain of the capital's essential services was not the consequence of any genuine grievance about wages or working conditions. The fact that the railway companies chose Wednesday to announce their refusal of the unions' claims for improved wages and schedules was no more than a coincidence. Indeed, if we are to believe the strikers' leaders, the stoppage was called at St. Pancras because it had been discovered that a 63-year-old ticket-collector was not a trade unionist, having relinquished his membership of the N.U.R. in 1926. A touch of comedy is added by the fact that the N.U.R. itself officially disapproves of the strike. The very triviality of the alleged cause of the strike has led many people to suspect some deeper underlying cause, and the stoppage was certainly in direct repudiation of the agreement between the railway companies and the trade unions. The L.M.S. with good reason threatened to discharge the strikers outright unless they returned to work on Friday. The London bus strike during the Coronation

celebrations last year was extremely unpopular, even though a great number of the sufferers believed that the strikers had a *prima facie* case. This week's strikers have no case at all, and their action is likely to bring both themselves and their union into grave disrepute.

Farmers Protest Too Much.—It is to the credit of the National Farmers' Union that, for the expressed purpose of freeing Mr Chamberlain from embarrassment, they delayed their memorandum attacking the Government's agricultural policy until the diplomatic crisis was over. It is less to the Union's credit that the memorandum, published on Wednesday, should reveal them unrepentantly seeking to make hay (in a purely figurative and sordid sense) while the sun of world peace and national security does not shine. The Union's avowed concern for rural amenities, nutrition and the salvaging of land that has gone out of heart is wholly praiseworthy. Their demand for a comprehensive soil survey is unexceptionable. Their proposals for measures to raise various food prices and to impose further rigid restrictions on food imports are quite another kettle of fish. Their main recommendation, that an independent body on the lines of the Import Duties Advisory Committee, should be appointed to fix minimum price-levels for a price insurance scheme, is not unreasonable. But the N.F.U. suggest that they would expect such prices, guaranteed for such a large production, as would make the scheme excessively onerous. In short, they take little cognisance of the fact that Mr Chamberlain's Kettering policy of (as we then put it) seeing that the people have enough to eat in peace-time without starving in war-time is assuredly the right one for a country which, more than most, depends for its social efficiency and economic prosperity upon obtaining the cheapest possible food. The Prime Minister fully realises that to be safe in war we must grow more of our food at home. But happily he is not prepared to exploit the present national emergency to secure an extravagant, needless, uneconomic and inequitable increase in agricultural protection.

New Judges.—The defects of congestion and costly delay which tend to impede the efficient working of the High Court of Justice are now generally admitted. Year by year, further ramifications of the complex laws of a complicated community swell the volume of litigation, and pressure upon both the Court's first-instance functions and its appellate jurisdiction accordingly increases. Moves have been made during the past few days towards improving the speed and dispatch of business. On Monday evening two important announcements were made: the appointment of two new and additional judges of the King's Bench Division. Mr Roland Giffard Oliver, K.C., Recorder since 1926 of Folkestone, and Mr Reginald Powell Croom Johnson, K.C., M.P., Recorder of Bath for ten years; and the official statement that the King had approved the appointment of Viscount Finlay, Sir Arthur F. C. C. Luxmoore, and Sir Rayner Goddard, all justices of the High Court, to be Lords Justices of Appeal. The creation of a third Court of Appeal had made necessary the latter promotions, and there can be no doubt that the amplification both of the judiciary's personnel and its machinery is a step in the right direction. We are, indeed, a litigious nation; but, aside from the avoidable actions due to needless legal obscurities, we are so because we are a democratic people.

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)
Annual Income : : : £6,700,000
Assets : : : £30,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

Full, fair and unfettered recourse to impartial tribunals is a mark of freedom and equality before the law. The present appointments, however, hardly do all that is required, for the number of judges of the High Court, as distinct from the Appeal Court, is reduced by one. We hope that the increase in the number of judges, so often asked for, will not be much longer delayed.

Japan Goes Her Own Way.—Hopes for a cessation of hostilities if and when Hankow is taken seem to have become dimmer than ever after the Far Eastern news of this week. The long-awaited descent from the sea on Canton came with precipitate force on Wednesday, when about 35,000 Japanese troops landed in Bias Bay, to the north of Hongkong, and began to make their way inland to Waichow, whence they can turn westwards upon the capital of South China. The Chinese have not yet resisted this thrust except at one point; their tactics are to wait until the enemy reaches the foothills. There they are in force, and well prepared, so that it seems that very many more than 35,000 men will be needed to take the city. The immediate Japanese object is apparently to stage a side-show as part of the Hankow campaign, to harass Chinese communications, and to cut the Canton-Kowloon railway which, despite continual bombardment, has kept its services running, with temporary interruptions, right through the war. British interests in Hongkong are naturally apprehensive; and within the last few days Sir Robert Craigie, the British Ambassador in Tokyo, has presented a formal reminder of the risks to Anglo-Japanese relations involved in this new offensive. The Japanese have given him assurances that British interests will be scrupulously respected. Around Hankow large armies continue to wrestle for a decision, but the Japanese front line is little nearer to the city than it was a week ago, although Japanese warships have advanced some miles farther up the Yangtse. In Tokyo the Army has again increased its influence by forcing the resignation of General Ugaki, who was Foreign Minister and reputedly one of the "moderates" in the Cabinet, upon the issue of control over Japanese affairs in China; and an out-and-out policy of conquest has been reaffirmed by the Prime Minister, Prince Konoé, who softens this harsh intransigence for British ears by hastening to add that the Anglo-Japanese conversations will continue. Instead of countering with fair words the League's application of Article 17, the Government evidently means to take advantage of this explicit recognition of a state of war between China and Japan, by using it at need against the interests of those nations which claim, individually, that no state of war exists. This inference is accompanied by another hint to the effect that Japan may now withdraw from the "peaceful" activities of the League. Since Japan's chief care at Geneva in recent years has been the Permanent Mandates Commission, the assumption of unrestricted sovereignty over the mandated Marshall, Marianne, and Caroline Groups in the West Pacific might conceivably follow this withdrawal. From all this it would seem that Japan will not be condemned in world opinion for a single lamb when the whole flock is there for the taking.

* * *

Germany and Turkey.—While the German army has been occupying the Sudeten districts of Bohemia and Moravia, the German Minister for Economics, Dr Funk, has been scouting far ahead to the south-east. Outward bound, he has visited Belgrade and Angora, and, homeward bound, Sofia. Later on he is planning to visit Athens and Bucharest. There is no evidence that Dr Funk's activities have been other than legitimate. He has negotiated—so far as we know, without any application of political pressure—certain economic agreements between Germany and these three south-east European countries which both parties may well regard as being mutually beneficial. On political grounds, no doubt, all Germany's small south-eastern neighbours would prefer to do as much as possible of their commercial business with Great Britain, France and the United States. The trouble has been that the Western democracies

could not, or would not, respond to the south-east European countries' appeal for markets. As far as Great Britain is concerned, Herr Funk has to thank the Ottawa agreements for his success. By tying ourselves to the Dominions we have inhibited ourselves from responding to the south-east Europeans' appeal; and at the same time we have put it into Germany's head that, if "special areas" of economic preference are now the order of the day throughout the world, then Germany had better make sure of securing a "special area" of her own in the no-man's-land that lies beyond her southern threshold.

* * *

Dr Funk's agreements with Turkey, by the chief of which Germany grants a credit to the value of Rm. 150 millions (£12,500,000 at the official rate) for military and industrial purposes, are specially significant because latterly Turkey and Great Britain have been making a considerable effort—no doubt for political reasons—to do business with one another. A school of British publicists who have been loudly in favour of abandoning Czechoslovakia to Germany have sometimes sought to justify their policy on grounds of *Realpolitik* by the argument that, on consideration of naval strategy, the right buffer-state for the British Empire to bolster up against Germany's *Drang Nach Südosten* is not Czechoslovakia, but Turkey. This argument has rather naively assumed that an Anglo-Turkish naval and military alliance could be had by us any day for the asking. No doubt the Turks have good political reasons for leaning towards the British Empire and looking askance at Germany (they misdoubted Germany's ambitions even when they were her allies in the War of 1914-18). After the spectacle of Czechoslovakia's fate, however, we can hardly expect the Turks to put their country at our disposal as a cats-paw.

* * *

Jews in Italy.—When the Fascist Grand Council was in session in Rome during the night of the 6th-7th of this month, it no doubt had under consideration the question, with which we deal in the first leading article, of how far Signor Mussolini is prepared to go in withdrawing Italian forces of diverse arms from Spain for the sake of securing the ratification of the Anglo-Italian agreement. The only subjects, however, on which the Council's latest deliberations have been made public are Signor Mussolini's new racial policy, and the decision to create a new Chamber of Fascios and Corporations to supersede the Chamber of Deputies which has continued with nominal functions since the inception of the dictatorship. A code of regulations "for the defence of the race" was issued by the Council before it dispersed; and we may, at any rate, be glad that this Italian system of racial discrimination is somewhat less odious than its German prototype. According to the recent special Jewish census, there are 57,422 Italian-born Jews in Italy; Rome has 12,799, Milan has 10,249 and Trieste has 6,085. Certain mitigations of the first batch of Italian anti-Semitic measures are now being made. Foreign Jews older than sixty-five, or married before the beginning of this month to persons of Italian race, are exempted from the expulsion decree of September 1st. The families of Jews who have lost their lives fighting for Italy in war or for Fascism in civil disturbances are to be exempted from discriminations other than that of the segregation of Jewish school-children in separate schools. Jews dismissed from the public service are to be pensioned. The Jews are also given the negative satisfaction of not being made the sole targets of Fascist revolver-fire. All "non-Aryans," Semitic or others, are made ineligible to become the husbands or wives of Italians. Even an Aryan foreigner may not be married to an Italian without the Minister of the Interior's leave. And Italians in public employment, civil as well as military, may not marry foreigners under any conditions. All this is silly and benighted, but it has not quite the authentic touch of full-blooded Nazi barbarism.

Gold and Recovery

NEW YORK, October 4.—It appears that, although the upturn in business activity continued in September, it was somewhat retarded by the same anxieties regarding European developments that depressed the stock market. The fact that, in the closing days of the month, the share market recovered all its losses, and now stood as high as the best levels reached in July and August, is interpreted as evidence that the recent depressing influences, both in shares and business, were not of domestic origin. These reasons are not entirely persuasive, for it would appear that motor car output in September was by no means up to the forecasts made at the end of August, and this slackening was attributable, at least in part, to labour troubles. On the whole, however, the data for September, which are still incomplete, suggest that recovery went on—perhaps with some loss of initial momentum.

The principal physical effects of the summer's disturbances on the American economy have been, first, an alteration in the relations between the dollar and other currencies, and, secondly, an unusually rapid influx of gold. From about \$5 to the pound in June, the exchange rate fell momentarily in September to \$4.62, and ended the month at about \$4.80. This is rather below the average rate of recent months, but does not in itself cause concern. There is, however, a certain amount of apprehension about the future trend of European currencies in view of the fiscal strains incurred during recent weeks.

The extent of the influx of gold can be seen in the following table:—

	Gold Stock (\$'000,000)	Gold Certificates
June 29, 1938.....	12,962	10,636
July 27, 1938.....	13,002	10,633
August 31, 1938.....	13,135	10,632
September 28, 1938.....	13,714	10,863

In July gold imports were relatively small; in August they rose rapidly; and in September the net influx was about \$600 millions. As can be seen in the table, this additional gold was not instantaneously and automatically monetised by the issue of gold certificates to the Reserve Banks, as the system was still digesting the \$1,400 millions of gold certificates issued to the Reserve Banks in April, when the Inactive Gold Fund was liquidated. In September, over \$200 millions were monetised by the release of certificates to the Reserve Banks; and, in view of the fact that the principle of the Inactive Fund was apparently abandoned in April, it may be supposed that the recent gold imports will be released as circumstances warrant. These will become excess reserves on the asset side of the member banks, and deposits on the liabilities' side.

The increase in the deposits of the member banks in recent months is one of the outstanding economic phenomena of the period. In six months, the demand deposits of these banks have risen by over \$1,000 millions. There has been, at the same time, some expansion in total loans and investments, but it was less extensive, as the following table shows:—

	REPORTING MEMBER BANKS (Millions of Dollars)			
	Outside New York	New York City only		
	Demand Deposits	Loans and Investments	Demand Deposits	Loans and Investments
1938				
March 30.....	8,168	13,234	6,100	7,576
April 27.....	8,528	13,139	6,070	7,705
June 1.....	8,488	13,054	6,101	7,482
June 29.....	8,759	13,009	6,277	7,552
July 27.....	8,882	13,066	6,278	7,490
August 31.....	8,942	13,110	6,446	7,751
September 28.....	8,946	13,401	6,562	7,838

That is, the expansion in deposits has been mostly a reflection of gold movements, through either the liquidation of the Inactive Fund or the monetisation of the increment

in the gold stock. The change in gold policy (i.e. the abandonment of the Inactive Fund) has already resulted in an unusually rapid and large increase in demand deposits; and this has, with some lag, been followed by an increase in total loans and investments—mostly investments. It may be supposed that this rapid increase in bank deposits has played some part in the revival, and, with the combined influences of gold imports and deficit financing, it is quite reasonable to expect a further extensive, and possibly rapid, increase in bank deposits in coming months.

There is, however, one qualification to be made in these calculations: that is, the velocity of circulation does not appear to be a constant, or even to fluctuate within the comparatively narrow limits of former times; it remains relatively low. The figures of debits (published from time to time in these letters) show that, although by 1936 the quantity of the circulating media in this country had equalled the figures of the late twenties, the debits never approached the corresponding levels.

A Changing Economy

This familiar fact suggests perplexing questions about the nature of the changes that have come over our economy. There is a large body of economic theory covering the subject of cycles and cyclical phenomena; but there are a good many phenomena in the American economic data that are not readily explicable in cyclical terms, and suggest rather secular or structural changes.

The existence of a secular change in the trend of population growth is widely recognised as a fact; the current increment is about one-half per cent. per annum, compared with something like 3 per cent. over much of America's economic history—a phenomenon no means confined to the United States. Again, there has been a profound structural change in our banking system. The traditional and text-book assumption that bank deposits are created by commercial loans is invalid in a system in which bank deposits are created almost exclusively by gold imports and Federal financing. The relation between this structural change in the genesis of bank deposits and the velocity of the deposits so generated may, of course, be purely fortuitous. Finally, among the secular or structural changes, there is the long continued absence of new capital issues on any considerable scale.

If the cyclical upturn continues, questions of this sort will be forgotten, as they were in 1936-37. Opinion that the upturn will persist is almost unanimous, and the most encouraging statistical series is still that of residential building. In recent years the strongest seasonal influence in the autumn has come from the production and stocking of the new motor models. The motor industry was slow in getting under way in September, but its influence is likely to be strongly felt in October.

France

Ready for Reconstruction

PARIS, October 13.—During the crisis, the people of this country never accepted the view that war was inevitable. Now the immediate danger is past they realise, perhaps for the first time, the German menace and the necessity of being prepared. The gaps which existed in Anglo-French preparations, it is being said, encouraged the Nazis. The men who "saved peace" are now regarded as the right men to re-organise the country to meet difficult problems of negotiation or even conflict in the future.

Meanwhile, people obsessed by problems of domestic politics are divided: on the Left the Communists voted against the Munich agreement, while the Socialists voted for it. In the trade unions, the old pacifism of 1913 has come into conflict with the bitter opponents of the totalitarian States. Among the Moderates, M. Kerillis is applauded by

the Communists, while M. Flandin, the leader of the Alliance Démocratique, is blamed by his colleagues for having sent a telegram of congratulations to Herr Hitler.

The trade union leaders have resisted Communist pressure. The veterans of 1914 have called for a Government of Public Safety. A movement in public opinion is getting under way to support M. Daladier in a programme to "re-build France."

The Government is drafting new decrees to bring about an "immediate financial and economic recovery." The keynote is liberalism: there will be no devaluation, no control of the exchanges, no compulsory loan. But a fresh appeal will be made to both labour and capital to work for an increase in production. A programme to make a better use of the resources of the Empire will be elaborated. There will be drastic economies in public finance and railway expenditure, and the gold stock of the Bank of France will be revalued.

These decrees will not be published for some time. Partial elections to the Senate take place on October 23rd; the results should make clear that the peasants are behind the Government and confirm the support for a moderate policy which a few recent elections have revealed. Fresh strength should be given to M. Daladier on the eve of the Radical Socialist congress.

The announcement that the decrees are being prepared has consolidated confidence in the franc, although the outlook is darkened by the prospect of a prolonged armaments race. The Treasury is sufficiently provided with short-term credits for a few weeks at least.

Improved Trading Position

Moreover, it appears more and more that the franc is being supported by favourable developments in France's foreign trade. Imports are falling and exports rising, so that the import surplus is being appreciably reduced, as the following table shows:—

	(000,000 omitted)		
	Sept., 1937	Aug., 1938	Sept., 1938
Imports—			
Foodstuffs	838	983	1,027
Raw materials	2,106	2,253	2,026
Manufactured goods	532	472	479
Totals	3,477	3,709	3,533
Exports—			
Foodstuffs	268	299	333
Raw materials	770	813	995
Manufactured goods	1,035	1,372	1,323
Totals	2,074	2,485	2,652
Import surplus	1,403	1,223	880
Import surplus (trade with French Colonies excluded)	1,041	806	591

There is, however, a number of special factors which have affected these figures. Of the exports of raw materials, for example, 260 million francs are represented by pearls and diamonds, against 20 millions in the same month of 1937. The increase in exports of manufactured goods, moreover, is largely explained by monetary depreciation, while the fall in imports is partially due to an increase in domestic coal output. Whatever the causes, however, these figures show for the present an improved trading position, which should afford a favourable springboard for the work of recovery which the Government is now contemplating.

Prices Rising Again

Prices, after a short period of stability, are tending to rise, as the following indices show:—

	Sept. 3rd	Sept. 10th	Sept. 17th	Sept. 24th	Oct. 1st	Oct. 8th
Wholesale prices (1914=100)						
General Index	641	644	645	648	646	652
Domestic products	664	668	666	669	664	671
Imported products	600	602	607	612	615	619
Foodstuffs	627	632	630	635	628	634
Vegetables	636	643	640	641	641	628
Meat	613	621	617	626	606	638
Sugar, coffee, cocoa	635	631	636	643	649	635
Raw materials	655	655	659	660	663	668
Minerals and metals	747	758	774	771	778	784
Textiles	570	566	563	570	570	580
Miscellaneous	648	646	646	646	648	651
Retail prices (1914=100)						
Lighting and heating	642	690	695	695	708	
(1914=100)	110.0	118.2	121.6	123.2		
Clothing (1930=100)	101.2	100.4	100.4	100.4		

The Statistique Générale has just published its monthly figures showing industrial output:—

	Aug., 1937	June, 1938	July, 1938	Aug., 1938
(1928=100)				
Mines	67	93	92	70
Chemical industries	96	100	97	...
Paper	151	158	149	109
Iron and steel	75	65	56	56
Engineering	83	78	73	69
Automobile	81	88	89	86
Building	58	61	62	62
Miscellaneous	108	108	108	...

In the motor industry, 11,480 automobiles were put on the road in August, compared with 18,840 in July and 18,690 in June. In the week ended October 1st, the number of persons out of work was 339,816, against 338,409 in the preceding week and 307,512 a year ago.

Hongkong

Japan's Attitude

HONGKONG, September 28.—The wave of suspense and high tension that swept over the whole world as events during the last week of September pointed towards the catastrophe of a general European war also engulfed this old Crown Colony. For Hongkong to-day is more than the leading port of the Far East, having passed Shanghai during the last year as a result of the diversion of much of China's trade to the South. It is an exposed and throbbing nerve-centre of the British Empire, certain to be affected, perhaps critically, if war were to break out in Europe.

Japan is the sole great power which can contemplate a European war with complacency. Just as during the World War of 1914-18, Japan's leaders may look forward to a rich harvest of political gains as an indirect result of any conflict which will exhaust its rivals and in which it does not become directly involved.

In order to understand this attitude one must remember that Japan's leaders do not regard the present struggle in China as exclusively a Sino-Japanese war. They believe that China's resistance would have collapsed long ago if it had not been for the help, material and moral and diplomatic, which China has received from Great Britain, the Soviet Union and France. The Chinese air force, runs the Japanese argument, would have been destroyed long ago if it had not been replenished by fresh aircraft from the Soviet Union, America and Great Britain, the British and American aeroplanes, together with a constant stream of other munitions, reaching China through the open door of Hongkong.

The average Japanese is also convinced that the Chinese currency would have gone to pieces if it had not been for technical support vouchsafed by the Hongkong and Shanghai Bank. And the opinion prevails in Japan, rightly or wrongly, that the Chinese will to resist would have been much less stubborn if there had not been hope of more substantial foreign aid in the future.

Europe and the Far East

So it is easy to understand that a war in which Great Britain, France and the Soviet Union would need every ounce of strength for the European fronts might seem a godsend to Japan. There are, broadly, two alternative policies which Japan might pursue in such a case. The first, and least likely, is that of definitely casting in its lot with Germany and Italy, striking at British and French possessions, trade and shipping throughout the Orient, and substituting for the present policy of sapping and undermining foreign interests in this part of the world that of the frontal attack. Such a policy would appeal to some of Japan's political and military hot-heads, but it would place Japan in a position of complete isolation as regards world trade. Not only would all exchange with the British Empire be cut off, but the United States, in all probability, would react to such an aggressive Japanese policy with at least economic sanction. And Japan badly needs imported gasoline, trucks, scrap iron, copper and other military raw materials, not only for its war with China but still more for its possible war with the Soviet Union.

A policy more in line with the instinctive Japanese dislike of making irrevocable decisions is one of waiting and reserve. There would be no acts of war, declared or undeclared, but there would be an increase of militarist intransigence in Shanghai and Tientsin. Perhaps the Japanese puppet governments in Peking and Shanghai would add an element

of comedy to the situation by demanding the retrocession to "China" of the International Settlement at Shanghai and of the British and French Concessions in Tientsin. And there would be a strong tendency to set a high price for not touching Hongkong and French Indo-China; stoppage of all transit shipments of munitions to China would probably be part of this price.

Hongkong Prepares

The British communities in Hongkong and in the Chinese treaty ports realise quite well that they would lead a far more anxious and disturbed existence in the event of a new European conflict than they experienced during the World War, when the Anglo-Japanese alliance preserved substantial peace in the Far East. A good deal of quiet, unostentatious preparation in the way of strengthened artillery and machine-gun emplacements, building concealed hangars, supplementing the regular forces with civilian recruits for volunteer military and first-aid work, has been carried out.

China views the possibility of European war with concern. Japan's advantages would, of course, be China's disabilities. Among educated Chinese there is almost universal sympathy with Czechoslovakia and a tendency to criticise the yielding policy of Great Britain and France. The policy of placating the aggressor at any price has too many obvious alarming implications for China's own fate.

One of the main results of a European war would be the establishment of Japanese hegemony over a large part of East Asia. And it may well be doubted whether any European power would have the resources or the will to start a new war for the sake of expelling Japan from China after the last shot in a European war had been fired.

Canada

The Impact of the Crisis

OTTAWA, October 3.—The crisis in Europe relegated all other issues to the back-ground. The first reaction to the Munich agreement was general rejoicing that the calamity of another war, which would have raised very grave problems for Canada, had been averted. Nobody was more relieved than the King Cabinet, which saw the necessity of making fateful decisions draw nearer day by day. The Ministry avoided any definite pronouncement of policy and seems to have offered no advice to the British Government, but the majority of its members had apparently made up their minds that if war came, Canadian participation in support of Britain was unavoidable.

At one time hopes were cherished that Mr King would be able to secure support from his French-Canadian followers for a war policy, but as the crisis deepened signs of opposition in Quebec developed and two prominent French-Canadian Liberals declared that Quebec had no concern with any European conflict. On the other hand, papers like the *Toronto Globe and Mail* and the *Montreal Gazette* upbraided the Government for not pledging its wholehearted support to the Chamberlain Ministry for any policy it chose to carry out.

The editorial comments of the Press have on the whole been commendatory of the Munich agreement and the part played by Mr Chamberlain, but there are notable dissentients like the *Winnipeg Free Press*. In a long and critical editorial, after quoting at length a passage from the Berlin Correspondent of *The Economist*, dealing with Nazi psychology, this paper said:—

The doctrine that Germany can intervene for racial reasons for the protection of Germans on such grounds as she thinks proper, in any country in the world which she is in a position to coerce, and without regard to any engagements she has made or guarantees she has given, has now not only been asserted but made good; and it has been approved, sanctioned, certified and validated by the governments of Great Britain and France, who have undertaken in this respect to speak for the democracies of the world. This is the situation; and those who think it is all right will cheer for it.

The President of the League of Nations Society of Canada, after noting with approval that the German dictatorship had been forced to recognise, at least in principle, the interests of other nations, declared that:—

our leaders continue to subscribe to a concept of anarchy which actually permitted the war of 1914... the new barbarism represented by Germany may now be free to extend to the Black Sea and other continents.

Negotiations with Washington

Ministers are now free to devote their energies to domestic affairs and their first preoccupation will be the projected new trade agreement with the United States. A fortnight ago the Canadian trade and tariff experts returned to Ottawa with draft proposals for a treaty and these have been considered by the Cabinet. Some of the concessions proposed in the Canadian tariff were objectionable to various members of the Ministry and the experts have now gone back to Washington with a list of suggested changes and counter-proposals.

The judicial inquiry into the contract for Bren machine guns has now been in progress for more than a week and there have been some interesting revelations in the evidence given. Apparently the Department of National Defence favoured giving the contract to the John Inglis Company of Toronto without competitive bidding, because this company had already secured a contract for Bren guns from the British War Office.

The Canadian chartered banks, under threat of legal action, have paid the corporation tax surcharge imposed last session by the Alberta legislature, which raised the levy on banks by 50 per cent. per annum. The banks propose to test in the courts the validity of the Act which imposes the tax. Meanwhile, the Aberhart Ministry had made a move for a modest experiment in the direction of Social Credit by establishing "credit houses." There are branches of the provincial Treasury at five places in the North-West section of the province; their initial function is to serve as clearing-houses for vouchers given for road work.

Business Checked

The war scare had a paralysing effect upon Canadian business. Commitments ahead seemed futile and foolish when the imminent outbreak of a general war threatened a drastic reorganisation of economic activities and a serious dislocation of both the money market and the price structure. There was a sudden falling-off in normal retail trade and the severe slump in the stock markets seriously curtailed sales of luxury goods like motors and wireless sets. The business boom expected in the prairie provinces as soon as the money from the new crop came into circulation was checked, and purchases began to be restricted to essentials like food, clothing and machinery. The following indices published by the Bureau of Statistics show how business activity was checked:

Week ended	Car loadings	Wholesale Prices	Bank Clearings	General Index
Sept. 10, 1938	87.7	74.0	99.2	110.4
Sept. 17, 1938	81.1	74.5	105.9	109.3
Sept. 24, 1938	78.7	74.4	105.1	108.3
Sept. 25, 1937	85.5	85.0	97.8	110.4

One effect of the crisis was to raise grain prices sharply and to check deliveries of wheat as farmers recalled the high prices recorded during the last war. Visible stocks of wheat, however, have been mounting rapidly; on September 23rd they were placed at 131,586,568 bushels compared with 103,006,259 in the previous week and 74,504,169 in the corresponding week of 1937.

With the lifting of the war clouds there has come a wave of optimism. Hopes are now cherished that the advance predicted for the last quarter of the year will yet take place. Industrial conditions, however, are still uneven, and gains in some directions have been counterbalanced by losses in others. The latest employment bulletin of the Bureau of Statistics up to September 1st was encouraging, as it showed in August an increase of 32,688 persons on the pay-rolls of reporting firms, which was the largest expansion on record for August.

Letters to the Editor

The Crisis at Close Quarters

TO THE EDITOR OF THE ECONOMIST

SIR,—It is not usual to write Overseas Correspondence in the form of a narrative Letter to the Editor, describing personal observations, but in unusual times when Premiers drop from the sky and when heroes who have threatened to slay their thousands and their tens of thousands are themselves nearly slain by bouquets, precedent may be departed from.

Having left Berlin on August 7, 1914, in the British Ambassador's train, I am experienced in running away from war. On the morning of Tuesday, September 27th, the Ambassador of a Great Power directly interested told me that the war had practically begun. He meant a Great War, in which Germany and possibly Italy (this I doubted) would fight three Great Powers. Czechoslovakia would defy, or had defied, the threats in Herr Hitler's speech in the Berlin Sport Palace of the night before, and would reject the famous or infamous Godesberg Memorandum; Germany would march in; and Czechoslovakia's three big friends (if one could call them friends) would be automatically at war with Germany. The fighting would not begin till October 2nd; therefore I had time to escape without waiting for the British Ambassador's train. I bought a ticket for Brussels by the Nord Express next evening.

After seeing the Ambassador I called on a prominent banker, and mentioned that I was leaving Germany. He replied, "there will be no war. Germany is not in a condition to wage war." I replied that I knew that already; but that countries that were not in a condition to wage war often had to wage it owing to their stupidity or arrogance, and that I should leave Germany next evening.

Next day, Wednesday the 28th, I was too busy to find out what was happening. But about two o'clock I had a telephone talk with another bank man, who, in the discreet language used on the German telephone, informed me that there was a panic in the highest spheres. This astonished me. I knew that the highest spheres could easily get into a panic. But I did not know of any new event that could shake even the timidest hero. At this moment I knew nothing about the mobilisation of the British Fleet, news of which was withheld until it was Queen Anne's death news.

At five on Wednesday evening I heard of the plan for a last peace meeting of Herr Hitler, Mr Chamberlain, M. Daladier, and Signor Mussolini. In view of my information that the war had practically begun, this plan pointed to a panic—somewhere. When I reached Brussels at 8.15 on Thursday morning, I understood everything. From English newspapers of Wednesday I learned that the British Fleet had been mobilised. My immediate conclusion (not since changed) was that, despite continual British surrenders, Great Britain had come out on top. Herr Hitler had withdrawn from his Memorandum and from his Sport Palace vows, threats, and dreadful resolutions, had abandoned his invasion, and had consented to negotiate. He would probably get all he had expected—and, indeed, more, because he had not expected the mobilisation of the British Fleet. But he would never again attack a small nation, as long as any big nations are lying around with fleets. That is my conclusion still.

I stayed two days with a relative in Bruges. Bruges has a British colony, and the relative had made British acquaintances. I found the British colony celebrating a British victory. A British army officer told me then that Germany had surrendered, and that Signor Mussolini, in the just belief that the mere blocking of the Suez Canal and the despatch of a few British officers and a few British aeroplanes to Abyssinia would lose him that cheaply won province of his brand new Roman Empire, and perhaps much more, had climbed down. (This I was later told actually happened.) On Saturday, the 29th, I started for London in good humour and, I admit, in a profane Mafeking mood.

In London, this mood was soon dissipated. Between the day of my arrival and Friday, October 7th, when I left London for Berlin, I met many old friends and some new, nearly all of whom were Liberals or Labourites—politicians, book-writers, and journalists. I got a shock. With one exception all told me that England had been betrayed, defeated, and humiliated. Disgust seemed to be universal. One very brilliant young barrister who last year published

a book on the international situation, told me that he would like to leave England for ever. All these persons knew that I had been twenty-five years in Germany, and had even run away from two wars; they knew I was an authority—at least on German Price Indices—but I believe that I was not asked one question about Germany. The talk was only about England's degeneracy.

In vain I persisted that Herr Hitler had said his last word at the Sport Palace, and had swallowed his last word. In vain I emphasised the mobilisation of the British Fleet. Some treated this incident as subordinate, others mildly implied that the Fleet had been mobilised in order to run away from Herr Hitler. They painted Herr Hitler as Ajax defying the lightning, and frowned when I painted him as Ajax defying the summer lightning.

I now began to understand. My Left acquaintances were so furious with Mr Chamberlain (with much reason, I held, but with too much temperament) that they would not admit that he had done anything reasonable, decent, or courageous. On looking summarily through the Vital Documents published in the *Economist*, I do not share this view. Mr Chamberlain gave Herr Hitler some sharp raps on the knuckles. And he mobilised the British Fleet. Better late than never.

Having failed to make any impression upon Left acquaintances, I visited a Conservative M.P. Here, I said to myself, as a man who witnessed the Fashoda crisis and other ancient crises, is a good Tory who will bang his fist on the table and vow that England has won, even if he doesn't believe it. But my new Conservative acquaintance, though he received me courteously, was not impressed.

In complete collapse, I sought out a neutral, an able American newspaper correspondent who has been a decade or so in London. He seemed to hold the universal defeatist view. But when I expounded my thesis that the mobilisation of the Fleet was the one decisive event, and that Herr Hitler would never attack a small nation again, he admitted that this was at least a point of view, and promised that if I would write what I had said to him he would cable it to New York. After four days of repression by fellow-countrymen I was in no condition to write, therefore declined. Still I felt encouraged.

My last visit in England was to the Reform Club, to probably the oldest and certainly the most distinguished English editor-journalist. I began by repeating for myself my barrister friend's vow that I should leave this dreadful country and never return. He smiled at me indulgently, and remarked that it was not so awful as that. During an hour's conversation I gathered that he agreed with me that, despite everything, Great Britain, thanks to the mobilisation of her Fleet, had finished off Herr Hitler.

I shall now draw a parallel. The Crisis closely resembled the Battle of Hastings as described in school histories. The Hitlerite-Saxons behind their safe stockade were successful at first. The foolish Chamberlainite-Normans ran away (the story that their flight was a feint is immaterial). Confident now of victory the brave Hitlerite-Saxons rushed from behind their stockade (to demand more and more), and the runaway Chamberlainite-Normans turned on them, and gave them a sound beating. This parallel applies to the future, as well as to the past, I am convinced that, while Herr Hitler will never again threaten a Great War, he will provide ceaseless trouble—the Saxons, never again able to face the Normans in the field, gave ceaseless trouble (Hereward the Wake, etc.). Herr Hitler, that means, will never again push things so far as to cause mobilisation of the British Fleet; but there will be no tranquillity.

I now return to Germany, which I reached on Monday, October 10th. What I learned agreed with the above interpretation of the Crisis. Germany never intended to fight a Great Power, much less three. While the English were digging trenches in Hyde Park nobody dug trenches in the Berlin Tiergarten, though in a Great War Berlin would certainly have been bombed. Germany was doing everything possible to foster the belief that she intended to fight the Great War which she did not intend to fight.

From 5 to 11 p.m. o'clock of Tuesday, September 27th, a continuous stream of motorised units passed the British Embassy as well as the Reich Chancellery in the Wilhelmstrasse. It was a terrific sight. When the motor units reached the Hallesches Tor they vanished, not to what Macaulay calls "a bloody, debateable borderland" but, it appears, to some topsy turvy suburban Erewhon. The aim was to derange the

British Embassy's nerves, and spoil its dinner. Dr. Goebbels might have arranged it.

The German public's war spirit would have reassured a fleeing hen. On the turn of July–August, 1914, I saw delighted German citizens chalking up really funny pictures of thin Frenchmen and candle-eating Russians on the mobilisation railway carriages. At the motorised demonstration before the British Embassy, I am told, a few limp civilians looked on with faces that expressed terror. (I know that Germans are courageous.)

I am told, but cannot verify, that as late as Wednesday morning, Herr Hitler persisted that he would march in. He knew of the Fleet mobilisation, but he apparently regarded it as threatening as the mobilisation before the British Embassy. But here—this point is vital—intelligence intervened. Among the intelligent persons, it appears, were Field-Marshal Göring, the Generals, and Baron von Neurath. I am no admirer of Field-Marshal Göring, but I know that he does not suffer from brain storms. In Germany one cannot become a General without having intellect. And old Baron von Neurath, it seems, issued from the cloisters of the lately-created and entirely inactive Foreign Affairs Council.

All these magnates, runs the story, said No. They declared (this is again unverifiable) that Germany could not stand war for longer than four months. Finally—I cannot guarantee this, but if not true it is *ben trovato*, and therefore characteristic—Signor Mussolini declared that the game was up. He was ready to fight beside Germany in a war against Czechoslovakia because he knew that his fighting would not be necessary. But the British fleet—that was another matter.

Results: an abandonment of the ultimatum to Prague; a retreat from the Sports Palace threats; a peaceful settlement; and a suspiciously friendly declaration signed on September 30th, establishing eternal peace between England and Germany. To discuss the machinery by which this was attained—Mr. Chamberlain's message to Mussolini, and so on, would be irrelevant; and only one comment is needed on the Anglo-German loveletter of September 30th. "We regard . . . the Anglo-German Naval Agreement as symbolic of the desire of the two peoples never to go to war. . . ." Had Mr Chamberlain been as nasty as he ought to have been he would have amended: "I regard the *British naval mobilisation* as symbolic of the desire of Germany never to go to war."

To conclude—and this is not irrelevant. When I returned to Germany, everyone from the frontier officials to my house-porter was friendly and kind, and the house-porter merely laughed at me for running away from the war. The most noteworthy thing said to me came from an old bakery-shop woman, from whom, in a condition of household disorganisation, I personally bought breakfast rolls. She said that she was not afraid of war, but that she wanted a respite of quiet: "*Wir Deutsche haben auch Recht auf Ruhe.*" I replied brutally that while she would not have war, she would not have quiet. Herr Hitler, I repeated, would not again attack small nations, and thereby risk war with big nations; but there would be plenty of other events to rack her aged nerves.

Before I had gone to bed I read that Herr Hitler, in a new speech, had attacked the England with whom in a moment of moral collapse he had exchanged the effusive declaration of September 30th; and this morning I read in *The Times* of October 10th, "Hooligans in Vienna. Cardinal's Palace Stormed." It is appalling. Then I remembered the good-looking young Belgian with whom I talked on Ostend quay on Saturday, October 1st, who told me that he wished there had been war. There was no other solution, he said.

YOUR BERLIN CORRESPONDENT

[We sincerely trust that our Correspondent's interpretation is the right one.—ED., *Econ.*]

Air Raid Precautions

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of October 8th you write:—"Equally clearly, A.R.P. must be administered by the authorities which direct education, police, fire and public health. . . ." May I say that it is equally clear to me that this is a damnable heresy. The fact that it appears to be a heresy supported by H.M. Government explains but does not excuse the sin into which *The Economist* has fallen. It only shows what a Maginot Line of ignorance must be stormed before the public can be brought to realise that totalitarian war involves totalitarian defence.

A.R.P. is the defence of the country against invasion from the air. Dispersion of the target (evacuation), camou-

flage and concealment (black-outs), anti-aircraft batteries, balloon barrages, fighters, fire-fighting, morale protection (publicity) are all aspects of this problem, which *must* be considered as a strategical and tactical unity.

Once upon a time the Royal Navy was largely run by the local authorities of the Cinque Ports. The Board of Admiralty is preferable.

A.R.P. will remain an amateurish effort and the Achilles heel of our defence system until it is raised to the status of a defence service of the first importance. It will have to be based on central co-ordination of regional defence schemes. The regional defence areas which are needed bear practically no relation whatsoever to local government areas.

Yours truly,

STEPHEN KING-HALL.

[We would firmly repudiate Commander King-Hall's surprising suggestion that *The Economist* endorsed the local administration of A.R.P. simply because it is the Government's policy. Our contention was that the unitary character of civilian defence against air attack could be assured by the central enforcement of minimum standards upon all localities, institutions and individual dwellings by Ministerial Order (which would involve the Government's producing a fully articulated and fully integrated plan), by financial supervision and by regular and expert inspection; and that within this framework administration should preferably be in the hands of the authorities who already direct education, police, fire, health, etc. In education, police, fire, health, etc., standards of efficiency are centrally laid down and centrally enforced by precisely the methods we suggest; and where regional needs override purely local requirements joint administrative arrangements are made. The need for A.R.P. is a national need. All A.R.P. must fit into a national plan. But local circumstances and local requirements vary widely; and the local articulation of civilian defence is *prima facie* a local service, just as anti-aircraft measures are a job for the fighting services.—ED., *Econ.*]

Financial Policy in France

TO THE EDITOR OF THE ECONOMIST

SIR,—True friends of France and freedom can derive small satisfaction from the Parliamentary proceedings in that unfortunate country last week, the significance of which, I am afraid, is not wholly appreciated by your comments.

Having first fallen victim to a primitive form of the quantity theory of money, which prevented a timely restoration of their economic vigour by devaluation, in the face of the German re-armament; having then espoused the crudest fallacies of the doctrine of under-consumption and aggravated their predicaments by the introduction of the 40-hour week, they now seem to be determined, to the last drop of their financial and economic power, to defend a system of free export of capital which, in the present troubled state of Europe, as contrasted with the attractions of America and more especially of Wall Street, bids fair to result in a continuous weakening of their productive capacity, which has already fallen sadly behind Germany's. For, as soon as any purchasing power is created, the saving and depreciation allowances set free are promptly exported instead of being reinvested. Nor can we expect that the abolition of the social laws alone would end this process, as the loss of confidence is now mainly due to the international political situation. A wholly one-sided sacrifice imposed on the workers, however, while this unpatriotic flight is not discouraged, bids fair to lead to conditions similar to those in Spain. The English observer cannot be indifferent to this trend of events.

The intellectual processes which have resulted in these strange sequences of events are paralleled only among the less cultured of South Sea Islanders who, it is said, choose from time to time worthless objects which they endow with divine powers. Their experiments with these fetishes can hardly be less fortunate than those of recent French Governments with their respective economic theories.

A restoration of the economic, and thus of the military and diplomatic, strength of France unquestionably depends on a speedy termination of this unseemly scramble by individuals to achieve some personal monetary security at the ruin of the State. The prevention of the flight of capital must not be confused with those restrictions of foreign exchange dealings which were animated by the same crude desire of "maintaining the currency" as the "gold bloc" of unlamented memory and represented an uneconomic and foolish system of commercial protectionism.

Restriction of the free export of capital, however lamentable from the point of view of individual freedom, is the necessary basis of industrial mobilisation, for otherwise any investor could individually sabotage the national preparations, which are obviously burdensome and fraught with unpleasant prospects. Nobody would countenance the desertion of soldiers in the face of the enemy. The desertion of capital at this juncture seems a much graver offence, as it renders the preparation for an emergency impossible. It is, to say the least, regrettable that the Financial Committee of the League of Nations chose to confound clear thinking by publishing a report condemning exchange restrictions of a totally different type at the very moment when M. Blum, however be-

latedly, proved that he was beginning to understand the French problem and proposed to a recalcitrant Senate measures (including exchange control and taxation) which might have saved us from last week's disaster.

Now that M. Bonnet's less vigorous defence of the liberty of Europe than of the licence of French capitalists has made the Western democracies more dependent than ever on their solitary strength, it is to be hoped that this problem will be reconsidered.

Yours faithfully,

T. BALOGH.

University College, London.

Books and Publications

Portrait of a Revolutionary

THIS book* is a valuable, but not an invaluable, contribution to our understanding of one of the most effective men of modern times. It is largely based on the evidence which Lenin's letters provide about his activities and the workings of his mind. Its value is therefore highest for that part of Lenin's life which preceded the October revolution of 1917, for once Lenin is in power the stream of private letters almost dries up.

What Mr Hollis has to say, in the later part of his book, about Lenin's period of power is not very satisfactory either as biography or as history. To write the life of a man of action can rarely be an important contribution to scientific history unless it be done with such fullness as to present a complete picture of the subject's sphere of activity. Mr Hollis has given us a story in the later part of this book which is a satisfactory account neither of Lenin nor of the Russian Revolution.

At present the material for a definitive account of Lenin is not available, though, in addition to the letters, there is the corpus of his published works. With these Mr Hollis is not unacquainted, and he can on occasion use them with effect, as for example in the two or three pages he devotes to the analysis of Lenin's "Imperialism." Perhaps it is due to the forbidding style of Lenin's works on political philosophy, or because this book is not primarily intended for students of political theory, that comparatively little use is made of this important source for the understanding of the mental development of Lenin. (It may indeed be wrong to call that a "development" which was rather the widening realisation of the implications of a fixed and unquestioned creed.)

The earlier part of the book is appreciably more useful, because here the letters aptly illustrate the story, and also because the fact that Lenin was still a private individual

Foreign Capital in Poland

by LEOPOLD WELLISZ

A thorough investigation into the extent to which foreign capital has been introduced into Poland. The author examines the reasons which have prompted the investment of foreign capital and outlines further prospects for foreign investments. 7s. 6d. net

GEORGE ALLEN AND UNWIN

Shorter Notice

"The Czechoslovak Crisis and Munich Agreement." *The Bulletin of International News.* The Royal Institute of International Affairs, 10 St. James's Square, London, S.W. 1. 77 pages. 1s. (Special enlarged issue).

This fortnightly bulletin of documents and collations of fact about international affairs has long been reckoned as indispensable for students of world politics. The issue of October 8th records what was written and said and done during the most momentous days since the last Great War, and the forthcoming issue of October 22nd will complete the story. In these two bulletins the Information Department of Chatham House will have rendered the greatest of their invaluable services to the true recording of our own times, and no publications deserve to sell and be read more widely by every person, lay and expert, student and citizen, than these, the raw material of the opinion and judgment that none of us can escape.

THE BUSINESS WORLD

Motor Economics

THIS year's Motor Show, which opened at Earls Court on Thursday, is not remarkable for any outstanding technical changes. The 1939 models look externally very much like this year's cars; the movement towards the substitution of 4-cylinder for 6-cylinder engines has continued, while a more important innovation, adopted by Morris and Vauxhall, for example, has been the construction of so-called chassis-less cars, where chassis and body form one unit. By constructing cars in one piece, as it were, it has been possible to reduce their total weight and, consequently, their fuel consumption. Indeed, the efforts of the motor industry have this year been concentrated on securing a reduction in the cost of running cars. Thus, the increase in the petrol tax from 8d. to 9d. per gallon has been countered by economies in fuel consumption, secured by the chassis-less car, and by improvements in the method of injecting petrol into the cylinders of the engine, a feature of the Vauxhall and Hillman models. It may be doubted, however, whether the industry as a whole has fully appreciated the importance of economy in a period of declining national prosperity. As usual, the space devoted at the Show to luxury and semi-luxury models is out of all proportion to the contribution this section of the trade has made or is ever likely to make to the industry's profits. The public shows a much better appreciation of the position by concentrating its interest predominantly on the stands where the popular models are displayed. Moreover, the number of models in production by the six largest concerns has increased from 43 to 45, and the smaller firms have also introduced a number of additional models. The only move towards the reduction of the number of independent manufacturing groups has been the purchase of Rileys by Lord Nuffield.

The Show will probably indicate which of the new models are likely to prove this season's winners. Standard has invaded the 8 h.p. market, and no doubt will meet with some success; the new Morris "10" will almost certainly tilt the balance of that section of the market in Morris's favour. A bold line has, however, been taken by Vauxhall in the 12 h.p. and 14 h.p. categories, where the lessons learnt last year with the Vauxhall "10" have been applied at very competitive prices, and it will be strange if, in a season when major changes are few, such initiative does not meet with its reward.

The motor industry's price policy for the coming year is a little difficult to understand. Prices in the 8 h.p. class have either been very slightly reduced or left unchanged, no doubt because sales in this category are much less sensitive to changes in the national income than those in any other class. A large number of models in the 10-14 h.p. categories have been reduced in price, by anything up to £10, and in one case by £26, presumably because of the need of giving some additional stimulus to sales in this range in order to check the transfer of demand to the 8 h.p. class. In contrast, high-powered cars, especially those produced to compete with American imports, have not been cheapened, and two models are actually dearer. The 25 h.p. Vauxhall has been increased from £315 to £345, and the 30 h.p. Ford from £260 to £280. The 25 h.p. Morris remains unchanged at £320, while the price of the 18 h.p. Wolseley, which in many respects must be considered as coming within the range of big cars, has been increased from £295 to £325. No doubt the new models show improvements over the old, but if the British-made high-powered car is to be competitive, and particularly if the

home market for such vehicles is to be expanded, reductions in price rather than increases are necessary, especially in times like the present. Until last year price reductions were relatively more marked in high-powered than in low-powered cars. It is difficult to understand what motives lie behind this somewhat sudden change of policy. At the new prices the British high-powered car costs about twice as much in this country as the American in the United States, and the price rise has occurred in precisely the section of the home market which suffered most severely from last season's setback to new car sales. Sales of new cars of 25 h.p. and over fell by 33 per cent., against a decline of only 15 per cent. in total sales. The British motor industry appears to have fallen into a vicious circle so far as high-powered cars are concerned; their high prices restrict sales and their low sales prevent the economies of large-scale manufacture being secured.

The evidence of the past season suggests that the first effect of a general decline in business activity is to reduce the sales of new cars but not to check the expansion in the total number of cars in use. New registrations fell from 320,000 in the year ended September, 1937, to 273,000 (estimated) in 1937-38. But the total number of vehicles licensed rose by 173,000, from 1,770,000 to 1,943,000 (estimated). Rather surprisingly, the increase in the number of cars in use in the past season was as great as in any of the preceding years of expanding economic activity. American experience has shown that, when prosperity is declining, the car is one of the last of his possessions with which the average motorist will part, but it is quite unprecedented for the number of car-owners to increase so rapidly at such a time. It is quite clear that cars are being used for a longer period than formerly, although their average age is still only eight years. This combination of an unusually high increase in the total number of cars in use with a reduced volume of new sales means that a smaller proportion of the year's output of cars was needed to replace cars withdrawn from use. This "replacement demand" was only 37 per cent. of the total sales of new cars, compared with 52 per cent. and 49 per cent. respectively in the two preceding years. This is contrary to the general trend, since, as the total number of cars on the roads reaches its maximum, the proportion of replacement demand to total demand will approach 100 per cent. The past year has thus had some surprising features. Any further fall in the national income, however, will inevitably check the increase in the number of people willing to be car-owners. This will affect, in the first place, the second-hand market. But any fall in second-hand prices reacts on new car sales, since the real cost of buying a new car depends upon the allowance given for the second-hand car offered in part payment.

Hitherto, the motor industry has taken very little collective action to expand the market for new cars. The purchase price, even of popular small models, is far too high compared with American standards, due largely to the excessive number of models produced by the larger firms, which itself is a direct consequence of the importance of the horse-power yardstick in the British motor industry; this affects not only the vehicle tax but also insurance premiums, and even in many cases repair and servicing charges and garage costs, where the horse-power rating is really quite irrelevant. Only by devoting a whole factory to the manufacture of one model, and by standardising that model in essentials for several years, as has been done in

the case of "The People's Car" in Germany, will it be possible for British manufacturers to compete effectively with American cars. More attention should also be paid to the question of insurance and repair costs, which are both very high in this country, quite apart from the irrational method of basing charges on the horse-power of cars, and to the financing of new and second-hand purchases by persons of limited means. The industry might also consider the possibility of operating in the second-hand market with a view to strengthening it, and thereby reducing the cash cost of a new car bought on a part-exchange basis. Finally—though this is beyond the means of the industry alone—there is scope for a good deal of more indirect development, which would ultimately be equally valuable as a means of extending the new car market. Such developments should include road modernisation, with a view to segregating different types of traffic, relieving congestion and speeding-up the flow of traffic, the construction of a number of new motor roads, and the simplification of signposts and traffic instructions in order to reduce the nervous strain of driving. While the planned development in Germany, first of motor roads and now of really cheap cars, and of a savings system to enable people to buy them, may be too extreme for British conditions, it should, nevertheless, be possible to find some half-way house between this and a completely happy-go-lucky approach to the problem of extending the market.

In the absence of an abrupt change in the economic outlook, some further recession in sales of new cars on the home market seems likely during the coming season, but the decline may not exceed 5 per cent. during the first few months. On the other hand, imports during recent months

have been less than 1 per cent. of new registrations, instead of the normal 5 per cent. Although this is partly due to the accumulation of unsold stocks, it may nevertheless be safely inferred that imports are unlikely to be a serious problem during the coming months. Exports, however, which last season reached some 75,000 units, compared with 78,000 units in 1936-37, have recently suffered a severe fall, and are now no more than 70 per cent. of those of a year ago; their recovery must await a general revival in world trade. Prices, however, are nowadays cut so fine on exports that they can make but little direct financial contribution to the industry.

The profits of the industry appear to have been as high per vehicle last season as in 1936-37. Last year's price increases thus appear to have taken care of the increased costs; the comparatively small price declines in the popular categories this year are probably well justified by the decline in costs, compared with a year ago, of most raw materials other than steel. In attempting to assess the trend of the total profits of motor manufacturers, as distinct from those attributable to the motor industry, sight must not be lost of the broadening of the motor manufacturers' activities; the most spectacular development has been their entry into the aircraft industry, but they are also benefiting from the growing importance of agricultural tractors, motor boats, motor yachts, and small internal combustion engines for many industrial and constructional activities. It may well be that the financial outlook for motor manufacturers during the new season is less unpromising than the prospects for the sales of new motor vehicles in either the home or export markets would suggest.

Wall Street and Recovery

WALL STREET has celebrated the peace in characteristic style. Business as usual, to many operators, means a return to chart-reading. On Wednesday of last week, only four business days after the Munich Conference, the mysteries of the chart-reader's craft were richly rewarded. For the Dow-Jones average of thirty industrial stocks was pushed above the highest previous figure of 1938, to the accompaniment of a turnover of 2½ million shares. Three days later, the strict canon of the Dow theory was fulfilled, for the rail stocks average, making game progress considering the industry's present difficulties, succeeded in breaking through the high point reached in July. For Dow theorists the market has given a definite signal. The bull market which began on June 23rd has been confirmed.

It may be difficult for the serious investor on this side of the Atlantic to measure the cosmic revelations of a pattern on squared paper, and there is some evidence in Wall Street's behaviour this week that Dow theorists alone do not determine the proximate course of the market. Stock prices pursued a less enthusiastic and rather irregular course, and the average level of twenty rail stocks in particular found some difficulty in maintaining its prescribed figure until the market obtained new support on Thursday. But it is not upon considerations of this sort that the case for or against American common stocks, either as a recovery medium or a war hedge, really depends. That case may be measured no less readily by normal methods of investment analysis.

So much is evident from the chart on the opposite page, which compares the course of industrial and railroad stocks with the fluctuations in industrial production since the beginning of 1937. The index of industrial production, after falling practically unchecked for twelve months, first showed decisive signs of recovery in July this year. At the end of May the average of industrial securities touched a secondary "low" of 107.74. For the next three weeks it showed an irregular modest recovery. By the beginning of July the average had jumped to 138.53, and towards the

end of the month to nearly 145. The rail index did not reach its secondary trough until later in June, but within a month it had bounced from 19.68 to 30.38. These July and August "high" were superseded during the course of last week. And on Thursday, the industrial index spurted another three points to 152.46, and the rail average by a point, to 31.50, in a really active market. But their basis clearly lies in hard economic fact. Politics apart, the market recovery of the past four months has been identical in direction with industrial improvement and but little different in timing. But that is not to say that recovery in the stock market and recovery in industry have kept in relative step. Wall Street does not do things by halves, and it has certainly extracted every ounce of juice from the improvement in business which is so far statistically recorded.

It is the first task of the investor—as opposed to the nimble operator—to relate any given level of stock values to potential profits. And it cannot be doubted that American industrial stocks are now discounting a much more substantial improvement in earning power than is yet apparent. That is evident from the position of two major industries alone—steel and railroads. During the first half of this year, steel activity fluctuated cheerlessly about 30 per cent. of capacity. But since the beginning of July its progress has been steady; according to *Iron Age*, production this week has reached 51½ per cent. For little over three months that represents a very substantial advance. But the industry is still only on the fringe of earning profits. It is usually held that the American steel industry as a whole cannot operate profitably under the new price structure until operations reach between 55 and 60 per cent. of capacity. Hence it follows that, in the steel group at any rate, current share prices are looking forward to the earnings possibilities of next year, on the assumption that American industrial recovery is consolidated and extended. This fact in itself explains why U.S. Steel common stock has advanced only from 57½ to 64½ since the end of June; at that time the market was already

discounting more than the much-publicised autumn recovery. There is, after all, nothing surprising in this discovery, for the market leaders in Wall Street have always been generously valued, in good times and bad.

For the general list of American equity stocks, however, the earnings test may be more essential although such stocks are unlikely to receive the same degree of attention, either from the American operator or from the British investor, as the leaders. Two points immediately follow, and both imply some reservation regarding the present level of American stock prices. The first is that a switch from British industrials into many leading American issues

STOCK PRICES AND INDUSTRIAL PRODUCTION

Industrial and Railroad Stock averages: Dow Jones, weekly close. Industrial Production: U.S. Federal Reserve Board Monthly Index, seasonally adjusted.

must involve a conscious sacrifice of present income in the hope of greater capital reward. Secondly, the investor must make the closest calculation of prospective earnings on "side line" stocks, if, indeed, those are his choice.

That Wall Street is already enjoying support from European investors is evident from the continued flight of funds to New York, though of course Wall Street is not their only refuge. In no market is the impact effect of inflationary sentiment more quickly felt, and that sentiment has undoubtedly gained ground in Wall Street on considerations of re-arming peace and unbalanced Budgets. How far this sentiment will be proof against political fears is another matter. Wall Street is disposed to believe that the President is now more willing to seek co-operation with industry, to maintain control over the new Congress by suasion since he now lacks the power of compulsion, and to assist the inflationary process by "pump-priming" and price-raising schemes for wheat and cotton. That is the market's calculation, in its optimistic mood, but it sometimes forgets that the President has expressly abandoned not a single New Deal principle. To assume that he has suddenly discovered hitherto untapped wells of human kindness for the stock market appears to reflect a newfound credulity in Wall Street, rather than a reversal of political conviction in Washington.

On the assumption, however, that compromise will be the keynote of the Administration's policy, for the remainder of the Presidential term, what economic and investment pointers emerge? It is evident that powers of further industrial recovery should be released, subject, however, to certain conditions. The principal condition is an assurance of industrial peace, which can be assumed only with the same degree of optimistic faith as the President's disposition towards compromise. In the railroad

industry, for example, labour problems remain acute. The recent increase in railway traffics has enabled the Class I lines to achieve the highest net operating income since September last year. At the moment, indeed, it is possible that these lines as a whole are just covering their fixed-charge obligations. But meanwhile the railway unions are adamant in their opposition to the 15 per cent. wage-cut proposals, and their temper is shared by certain of the motor unions, which resorted to strike action last week.

But, in spite of these doubts, there is a mass of statistical evidence which may persuade the British investor at least to consider the prospect of further recovery and higher stock prices in the United States. Building activity, which remained virtually stable during 1936 and 1937, when other industries were forging ahead, has resisted the recession fairly successfully, and is now showing positive signs of improvement. It may be objected that this improvement is not a "natural" development; indeed, but for a 20 per cent. increase in public construction contracts during the first eight months of the year, the fall in building contracts would have been about twice the actual rate of 11 per cent. Residential building contracts have been reduced by 13 per cent. in the same period. But the effects of the Federal Housing Administration's 90 per cent. loan policy are evident in the more recent months, for the April-August period shows a gain this year of 12½ per cent. in residential building work.

If these early signs of improvement herald the long-awaited construction boom in the United States, the consequences for such stocks as Johns-Manville, U.S. Gypsum and American Radiator will be highly favourable. At the moment, however, the investor is well aware that this is Government-induced recovery. The demand for structural steel and rails is still low, and the volume of construction work undertaken by the utilities remains quite subnormal. In other fields, such for instance as retail trade, the effect of Government spending is not yet clearly visible. And the

new automobile season, on which high hopes have been placed, is clearly too young to show how far recovery in demand will stimulate the further expansion of steel operations. The most decisive improvements in the American economic structure are evident in those parts where the power of the public purse is longest.

This fact is at once an encouragement and a warning to the British investor who is considering the relative attractions of London and Wall Street. If the American spending programme does in fact stimulate a substantial revival in private construction work—if it acts as a catalyst and not as a mere substitute—the present recovery movement could be carried to last year's peak level without difficulty. But booms based largely on Government expenditure have left investors nursing big losses in the past. Similarly, those who argue in favour of a coming inflationary rise in prices led by the United States might do well to recall that the President's outstanding success in the economic sphere was to prick the inflationary bubble in the spring of 1937. And if the war risk hedge is present

in the mind of the British investor, on the ground that American Agricultural Chemical, American Can, American Car and Foundry and Goodrich Rubber doubled in value between December 12, 1914 (when the Stock Exchange re-opened) and the Armistice, he might also recall that the Dollar Securities Committee intervened before these profits could be fully realised.

On balance, the probabilities suggest that American business, having climbed halfway out of recession, should be able to make up part, at least, of the remaining gap. The 1938 bull market should then be capable of further advance. It has already carried stocks halfway from the March "lows" to the "highs" of the previous year, despite the clearest indication that corporate earnings will not respond to any substantial degree until 1939 at the earliest. But in a market which is notoriously capable of giving greater weight to index numbers than to dividends, it may be pedantic for the mere individual to raise a warning voice while the bullish crowd around him is roaring to better effect.

The Market's Treasury Bills

THE Treasury bill has become so overwhelmingly the preponderant element in the supply of discountable paper in the London discount market that no calculation of the supply of bills of exchange can be regarded as complete unless it includes a fairly accurate estimate of the supply of Treasury bills which find their way to the market. In an article which appeared in *The Economist* of March 26, 1938, and in a subsequent Note on May 14, 1938, an attempt was made to estimate, on the basis of the Inland Revenue receipts from stamps on bills of exchange, the amount of such bills outstanding in this country. It could not be claimed that the whole of the amounts given as a result of these calculations (even making due allowances for inter-Allied war debt bills) represented the supply of commercial paper available for the London market. Many of the bills drawn remain in the portfolios of traders, or go direct to the banks from their customers, or in some other way avoid the London discount market. But the figures arrived at provided an incontrovertible measure of the total volume of commercial paper in this country, and their trend could be assumed to reflect changes in the amount of commercial paper coming forward for discount in the London market.

What of Treasury bills? The information concerning them is fuller than that on commercial bills. In the first place, we are given week by week the amount of bills outstanding. For a long time few people troubled to refine these data. After the establishment of the Exchange Equalisation Account it became evident that, as an index of the bills available for the market and the banking system, these figures of total bills outstanding were not merely uninformative but definitely misleading. As a result came the refinement of the total figures of Treasury bills into bills issued through the weekly tenders and, the balance, bills issued through the "tap," which was first worked out in *The Economist* in 1933.

As a measure of the supply of Treasury bills available for the market, however, the figure of bills issued through the weekly tenders has been almost as misleading as the figure of total bills outstanding. In the first place, there are substantial holdings of Treasury bills of semi-official character—bills held by central banks in the sterling area, for example—which are renewed, as they fall due, through the weekly tenders. The market is always aware of the incidence of these semi-official applications for bills which tend to recur with special severity at regular quarterly periods and which during those periods invariably restrict the amount of bills allotted to the market. Moreover, there has been clear evidence in recent months of the intrusion of even more official applications for bills at the weekly tenders. The Exchange Equalisation Account is held to have invested the sterling resources raised by its recent

sales of gold and dollars by way of purchases of bills in the open market—through the usual special channel—and also by participating in the weekly tenders. If this be so—and the market is of the strong opinion that the results of many tenders in August and September of this year can only be explained on this assumption—the figures of bills outstanding as a result of the weekly tenders are no criterion of the supply of bills issued to the market and to holders other than public departments. Incidentally, the assumption increases the difficulty of estimating the gold operations of the Exchange Equalisation Account by reference to the fluctuations in the outstanding amounts of bills issued through the "tap."

There is, however, a method for further splitting up the figures of bills issued through the weekly tender which provides a fairly accurate estimate of the supply of bills finding its way to the discount market. The origin of this method dates from the summer of 1935, when the market began to make a syndicated tender for Treasury bills. This tender is for an aggregate quota of about £30 millions. The quota is not adjusted week by week in accordance with the amount of bills on offer. It may have fallen slightly as a result of recent amalgamations in the market, since the quota for each individual firm is thought to bear some relation to its capitalisation; and unless amalgamations leave the aggregate capitalisation of the merging entities unchanged the merger should involve some reduction in the aggregate discount market quota. These minor adjustments cannot, however, have made a difference of more than a few hundred thousand pounds to the basic data on which the calculations are to be made. It then remains to determine what proportions of its quota the market obtains at the weekly tenders. The answer to this question does not provide so formidable a problem as might at first sight appear to be involved. The syndicated discount market tender for bills has with one solitary exception proved the determining factor in every weekly tender. The figure at which the syndicate has applied for bills has always been the figure representing the highest rate of discount at which bills have been obtainable at the tender in question—in other words, the lowest price accepted. Thus, after the tender of August 5, 1938 (to choose a date at random), it was announced that applications at £99 17s. 5d. per cent. had been accepted as to 40 per cent. of the amounts applied for, while applications at higher prices had been allotted in full. Regularly, week by week (with one exception), it has been the syndicate's bid which has received "proportionate" (i.e. less than full) allotment. The syndicate gets its bills more cheaply than the other participants at the tender, but it has to take what is left after these "outside" applications have been allotted in full. On August 5th it is safe to assume that the syndicate received £12

millions (i.e. 40 per cent. of £30 millions) of bills. A similar figure can be given for every week. With these figures we can then calculate—on the basis of a thirteen weeks' currency for Treasury bills—what is the outstanding amount of Treasury bills issued directly to the discount market syndicate.

The single exception to which reference has been made was provided by the Treasury bill tender for May 28, 1937. This was the occasion of a revolt of most members of the syndicate against the rate—unduly low in their opinion—at which those who decide the syndicated application figure had dictated the tender for several consecutive weeks. The result was that for once the proportionate allotment did not in fact represent the figure at which all the market tenders were sent in. This solitary exception can, however, be disregarded from the point of view of our calculations. It is a genuine specimen of that much abused "exception which proves the rule." Mention must also be made of the two tenders made at the height of the recent crisis, namely, those on September 16th and 23rd. At these the cohesion of the syndicate was not disturbed, but many houses in the syndicate refused to participate at all. On these two dates it was still the syndicate's bid which received the "proportionate" allotment, but it was a bid not for £30 millions, but probably for about half this figure. This adjustment has been made in the appended chart, and the assumption that about half the syndicate quota was not utilised may be deemed to be fairly near the mark.

In the accompanying chart three sets of data have been plotted covering the period since the beginning of 1937. It shows, first, the total amount of Treasury bills outstanding, and, secondly, the total of bills issued through the weekly tenders. The margin between these two lines represents the amount of "tap" bills outstanding. Thirdly, there have been plotted the figures of bills issued to the discount market syndicate calculated on the basis explained above. The chart would have gained in interest had it been possible to plot a fourth set of figures representing Treasury bill portfolios held by the banks. The difference between these totals and the amounts of bills issued to the market syndicate would have provided a rough measure of the portfolios of Treasury bills run by the discount market itself. Unfortunately, only a minority of the clearing banks have seen fit to accept the recommendations of the Macmillan Committee for standardising the presentation of their balance sheets, and consequently the clearing banks' aggregate holdings of Treasury as differentiated from other bills is not disclosed—at least to the public eye. It is not to be implied from this that the bills issued to the market syndicate provide the sole channel from which the banks are fed with Treasury bills. In the first place, "special open market operations" (i.e. purchases by the Bank of England) have first call—though in normal circumstances it is not a heavy one—on the bills held by the market. Secondly, the banks are fed with bills not only from the

discount market proper but also from the "outside" sources which at times are known to present formidable competition to the market at the weekly tenders. These outside institutions—merchant bankers, colonial and foreign banks—are, in fact, on the fringes of the discount market, and at times they have provided almost as substantial a feeder to the clearing banks as the market itself.

It will be seen from the chart that the volume of bills going to the market syndicate at the beginning of 1937 represented rather less than half the amount of tender bills, and that this ratio has progressively declined over the inter-

TREASURY BILLS OUTSTANDING

vening seven quarters. Apart from this continued trend, which is due to the increasing outside competition for bills (until the recent crisis), and also to the increasing semi-official tenders placed on behalf of countries in the sterling area, the seasonal fluctuations in the market bills outstanding have corresponded with the fluctuations in the total amounts of bills issued by tender. This is to be expected. Though the syndicate tenders for an unchanged amount each week it is likely to be allotted a smaller proportion of its requirements when there are fewer bills on offer and when the competition for them therefore increases.

As for the outlook, there is good ground for anticipating a reversal of the long-term trend in the ratio of syndicate bills to total tender bills. For one thing, the flight of "hot" money from London must have encroached heavily on the funds which feed the outside applications for bills. And secondly, the total supply of bills seems likely to increase as a result of the progressive unbalancing of the Budget. The statistical methods outlined in this article will provide a means of measuring whatever changes there may be in the essential "raw material" of the discount market.

Finance and Banking

Recent Gold Movements.—The tables at the head of the next page give the details of British imports and exports of gold bullion during the "crisis" weeks. The period covered is from August 5th to October 6th, and is subdivided into the last four weeks of August, the first fortnight of September and the concluding three weeks to October 6th, which were the periods of greatest strain. In this way the growing intensity of the crisis is revealed. The United States took from us the prodigious sum of £126.7 millions, over half of which was shipped in the concluding three weeks. During the whole nine weeks American monetary gold stocks increased by \$787 millions, which, at \$4.866 to the pound, equals £162 millions. At a rough approximation, three-quarters of America's enormous gold acquisitions reached her from or through London. Other countries, however, also took gold from us on balance. A net £6,375,000 went to Switzerland and £1,150,000 to

Holland, while Sweden withdrew £7,212,000, Canada £3,297,000 and Eire £1,990,000. Clearly the sterling area had begun to draw in its gold. On the import side of the account, the big movement is £32.6 millions from Belgium, but this mainly represents gold transferred to London for safe custody, and does not indicate any change of ownership. Belgium apparently had greater faith in London's safety than had many other countries, and France held out until nearly the end of the crisis, when the sudden break in the franc is reflected in a gold loss of over £9,000,000. Arrivals of new gold from South Africa gradually dwindled away, probably because of the rise in war risk rates. Finally there is an importation of £4,210,000 from Germany. The Reichsbank's gold reserves remained unaltered during the whole period, so Germany must have been either re-exporting gold or drawing upon undisclosed reserves. Our total gold exports during the whole period amounted to

£150.8 millions, while, omitting the Belgian gold, our imports were only £30 millions. This margin of £120 millions gives a rough indication of the extent of our gold losses. Due allowance must be made for the gold dis-banded in London during the latter part of September and acquired by the Exchange Equalisation Account, but even so the Account's reserves of £297.8 millions, on March 31st last, must by now have become sadly depleted.

The "Neutrals" and the Crisis.—Many of the gold movements mentioned in the previous Note are visible from the various central bank returns. An examination of recent statements of the Belgian National Bank shows that in reality it strengthened its position during the crisis. Between August 11th and September 29th it gained Bel. 34 millions of gold and Bel. 111 millions of devisen. This helped to cover the expansion of Bel. 855 millions in its note circulation, but other deposits are depleted by Bel. 176 millions, while the Bank's rediscounts rose by Bel. 294 millions and its advances by Bel. 129 millions. The returns of the Netherlands Bank, over roughly the same period, show no change except an increase of Fl. 220 millions in the note circulation, met entirely by an equivalent decrease in deposits at the Bank. Obviously, the gold recently acquired has gone into the Dutch Exchange Fund. The Swiss National Bank has apparently been playing safe, for an increase of Frs. 55 millions in the gold holdings is off-set by a decrease of Frs. 83 millions in its devisen. Incidentally, Switzerland's gold imports from England are well in excess of the increase in the National Bank's stocks. This may indicate some private movements of hoards. The Swiss National Bank also had to meet a growth of Frs. 421 millions in its note circulation, so that deposits were run down by Frs. 296 millions, while rediscounts rose by Frs. 126 millions. Both the Belgian and Swiss National Banks have, therefore, had to give assistance to their markets. The Swedish Riksbank's return gives striking evidence of an enormous influx of funds. Between August 15th and September 30th, its gold reserves rose by Kr. 48 millions, gold held abroad and outside the reserve by Kr. 41 millions, and devisen by Kr. 123 millions. In the last week of September, steps

were taken to realise foreign bills and securities, for these items were reduced by Kr. 108 millions, but the proceeds were added to the Bank's foreign balances. On the other side of the account, the note circulation expanded by Kr. 176 millions, and bankers' deposits by Kr. 169 millions. Clearly Sweden, as well as the United States, was a magnet for liquid funds, but it is impossible to tell how much of this was a repatriation of Swedish money and how much the transfer to Sweden of foreign money.

September Clearing Bank Averages.—The September returns of the ten English clearing banks throw further light upon the consequences of the heavy transfers of funds from London to New York. Deposits have fallen since August by £29.0 millions, and were also £16.4 millions lower than they were in September, 1937. It is reasonable to assume that this decrease represents partly the direct withdrawal of foreign balances, partly the removal of funds derived from foreign realisations of British securities, and partly the depletion of balances held by foreign banks in London.

(In £ millions)

	Sept., 1937	May, 1938	June, 1938	July, 1938	Aug., 1938	Sept., 1938

The transfer of funds to New York was covered almost entirely by heavy gold sales by the Exchange Equalisation Account, and it proved impracticable to re-invest the proceeds of these sales in Treasury bills without a certain amount of delay. So long as this money remained uninvested, the banking system went a little short of cash. Thus it is not surprising to see that the clearing banks held £7.1 millions less cash in September than in August, and this contraction agrees very closely with the month's drop of £9.0 millions in bankers' deposits at the Bank of England. The Exchange Account's heavy bill purchases are equally responsible for the September decrease of £20.3 millions in the clearing bank's call and short loans and discounts combined; and this contraction again agrees fairly closely with the month's shrinkage of £24 millions in the volume of Treasury bills issued by tender. Advances show a further small drop, while investments are slightly higher. The chief significance of these movements is that the clearing banks apparently felt justified in giving some support to the gilt-edged market. The aggregate cash ratio of the clearing banks has shrunk from 10.49 to 10.31 per cent., which, in the circumstances, is a microscopic movement.

Forward Belga Tactics.—At the time of the climax of the political tension, the discount on forward belgas was as wide as 50 centimes for three months. Now it is down to 5 centimes. The discount has been contracting without interruption, and the movement has not been disturbed by the fluctuations of other European exchanges. To some extent the improvement of the forward belga was justified by the removal of fears of a sharp depreciation of sterling and the French franc, with all the repercussions that would have had upon the position of Belgium. But the discount on forward belgas continued to contract also on days when sterling and the French franc were distinctly

weak. The explanation lies in the tactics pursued by the National Bank of Belgium, which, during the last few days, has been a persistent buyer of forward belgas. One possible object of these efforts to bring about a contraction of the discount may be the desire to assist the Belgian Government in its effort to place the new loan of 1,000 million Belgian francs. The response to the loan at the beginning left much to be desired. One of the reasons for this was that a large proportion of Belgian liquid resources was employed in interest arbitrage with London, New York and Amsterdam. Owing to the large discount on forward belgas, it was profitable to transfer funds to these centres with the forward exchange covered. As a result of the deliberate reduction of the discount through official intervention, however, such swap operations have ceased to be profitable, and the funds engaged in such operations are gradually being repatriated. Consequently, more money is now available for subscription to the new internal loan.

Mr J. M. Keynes.—The announcement that Mr J. M. Keynes has resigned both the chairmanship and his seat on the board of the National Mutual Life Assurance Society has caused more regret in wider circles than is usual when even such an important office is vacated. Mr Keynes's friends have known that for many months he has been handicapped by serious illness, and he now finds himself compelled to contract the astonishingly wide circle of his activities. For the National Mutual the loss will be severe, for Mr Keynes has been a very active Chairman who has taken the lead in formulating the distinctive policies for which the office has become famous. For the general public the loss will be hardly less, for Mr Keynes's speeches at the National Mutual annual meeting have long been regarded as one of the events of the year. Few chairmen have shown a similar power to influence the trend of thought in the markets. The City will hope that its loss will be matched by a decisive gain to Mr Keynes's health.

MONEY MARKET NOTES

The Bank Return

THIS week £9.4 millions of notes have returned from circulation. Part of this, perhaps three millions, is the normal return movement following the quarter-day expansion in the currency. The remainder represents the partial return of the extra £21 millions withdrawn at the height of the crisis. As a fortnight has now elapsed since the Munich Agreement, it is fair to comment that these notes are returning very slowly.

	Oct. 13, 1937	Sept. 28, 1938	Oct. 5, 1938	Oct. 12, 1938
Issue Dept.:				
Gold	326.4	326.4	326.4	326.4
Notes in circulation	489.9	500.9	505.8	496.4
Banking Dept.:				
Reserve	38.3	26.9	22.0	31.4
Public Deps.	26.1	11.4	12.1	28.3
Bankers' Deps.	92.9	99.9	109.7	94.9
Other Deps.	36.4	40.2	37.1	36.6
Govt. Secs.	105.1	112.8	121.9	114.5
Discounts & Advances	9.2	7.3	10.2	9.6
Other Secs.	20.4	22.8	22.5	21.9
Proportion	24.6%	17.7%	13.8%	19.6%

In the banking department the Reserve has risen by £9.4 millions as the result of the contraction in the note circulation. Government securities, however, are £7.4 millions less than last week, when they were swollen temporarily by Ways and Means borrowing to cover the October 1st Conversion Loan dividends. Public deposits have increased by £16.2 millions. This is partly because of an excess of Treasury bill payments over maturities during the week ended October 12th, but the Exchange Account's gold sales are probably also responsible.

The Bullion Market

Now that the crisis is over, the London bullion market has reverted to its main function of an auxiliary to the Exchange Equalisation Account. There have been heavy dealings in gold this week, consisting mainly of official sales to arbitrageurs and the price has once more been fixed at a level which makes arbitrage practicable. The key to the week's happenings in the gold market once more lies in the foreign exchange market and more particularly in the current weakness of sterling.

* Above or below American shipping price. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.
† At fixing.
The New York price of silver remained at 43 cents per ounce - 999 fine during the week.

The price of silver has continued to rise in sympathy with the dollar.

Foreign Exchanges

THERE has been a heavy demand for dollars all the week, which on Thursday became comparable with that of September 28th, when sterling fell to \$4.61. With practically no dollars on offer apart from arbitrage sales, the whole of the pressure fell upon the Exchange Equalisation Account. If its sales of dollars on the Continent and its gold sales in the London bullion market are added to its direct sales of dollars in the London Exchange Market, the Control's gold losses for the first four days of this week may possibly be in excess of £20 millions. It is no longer a question of the flight of hot money. Instead balances which have been held in London for years are now migrating to New York. Also most dealers have already bought so many dollars that they are now very short of sterling. The result is a definite stiffening of the forward rates for the chief Continental currencies, for, in order to obtain temporary supplies of sterling, dealers are selling guilders, belgas and Swiss francs spot and repurchasing them forward. During the week ended October 13th sterling depreciated from \$4.81 to \$4.73 1/2, and so long as this movement of funds to New York continues, the British Control can do no more than regularise the decline. Guilders similarly appreciated from Fl. 8.82 1/2 to Fl. 8.70, belgas from bel. 28.43 to bel. 28.00, and Swiss francs from Frs. 21.08 to Frs. 20.90. For

reasons explained above, three months' guilders were quoted on Thursday at 3 cents premium, bid, while the premium in Swiss francs has risen from 5 1/2 to 11 centimes. Three months' belgas were finally quoted at 10 cents discount. Still they were quoted at 50 cents discount only three weeks ago. French francs have been stronger at Frs. 178 1/2 and Frs. 178 1/2. Three months' francs have improved from Frs. 5 1/2 to Frs. 4 1/2 discount. The latest Banque de France return shows no fresh Government borrowing. Still the recent course of the franc does no more than to provide fresh evidence of the prevailing weakness of sterling.

The Money Market

THE dominating factor in the money market is that so far none of the funds which left London during the crisis have shown the slightest signs of returning. On the contrary, the departure of the hot money is now being followed by the transfer to New York of what hitherto had been regarded as permanent balances in London. The result is that there is still a shortage of outside money, and there is also much less outside competition for bills.

	Oct. 14, 1937	Oct. 6, 1938	Oct. 13, 1938
Bank Rate	2	2	2
London Deposit Rate...	1 1/2	1 1/2	1 1/2
Short Loan Rates:			
Clearing Banks	1 1/2-1*	1 1/2-1*	1 1/2-1*
Others	1 1/2-5/8	5/8-3/4	5/8-1/4
Discount Rates:			
Treasury bills	1 1/2	9/16-5/8	1 1/8
Three months' bank bills	1 1/2-3/4	5/8-1 1/8	1 1/8-3/4

* Viz. 1 1/2 per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. 3/4 per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

The result was that by Thursday there had developed a keen demand for money. Treasury bill rates have become firmer. By Thursday January bills, which changed hands at 1/4 per cent. on Monday, were being freely offered at 3/4 per cent., and only taken at a firm 1/2. Three months' bank bills have equally hardened to 1 1/2-3/4 per cent., with six months' bills quoted at 1/4 per cent. It certainly looks as if the departure of foreign funds has brought to an end the regime of ultra-cheap money.

Investment

The Market's Caution.—The Stock Exchange has relapsed into that condition of inert nervousness which marked the early August weeks. Its present fears, however, are only half political. It is certainly less convinced than it was of the permanence of peace. But it stands in no need of conviction regarding the economic realities of future re-armament. The Funds have faced the burden of these brute facts. Once again the imminence of further defence borrowing is being canvassed, and thoughts are being cast forward to the cheerless Budget which lies in store next April. Meanwhile the continued pressure on sterling is providing the traditional bad advertisement for the gilt-edged market, which appears also to have suffered directly from an increase in foreign selling this week, though it would not be just to expatriate all the blame for the falls. The industrial market might have responded if the blaze in Wall Street which Dow theorists proclaimed had occurred, but it has instead relapsed to a listless condition, with no significant price movements in one direction or the other. It has missed, in particular, the inflationary sentiments which have stimulated moderate interest in rubber and base metal shares. One of the features of an indifferent market record, indeed, is to be found in the progress of Rhodesian copper shares this week. But even the Kaffir market seems unable to muster support on a sufficient scale to maintain consistently firm prices. The market, in short, has lost its nerves without regaining its confidence.

First British Mutual Fund.—Advance particulars of the First British Mutual Fund (not to be confused with the First British Fixed Trust) which were circulated this week opened with the claim that this is the first trust to translate into precise terms the main recommendations of the Anderson Committee on Fixed Trusts. From the succeeding description of the methods by which it is proposed to operate the trust, however, it was evident that this claim was subject to reservations on certain important points, and the "Declaration of Trust" and explanatory booklet which have now been issued do not remove these reservations. Perhaps the most revolutionary feature of the trust is that the managers and trustees will be "coincident." In other words, the directors of the management company (Mutual Investment Fund Managers, Limited) will also act as trustees. These gentlemen are Sir John Haslam (chairman) and Messrs Francis Lewcock and Julius E. Day (joint managing directors.) Hitherto, every unit trust formed in this country has enlisted the services of a bank or insurance company to act as trustee, and there is no lack of evidence that the public has been attracted to the unit method of investment largely for this reason. It has always been possible in theory to envisage the appointment of a board of trustees consisting of independent private persons, rather than a corporation constituted under the law of the United Kingdom, empowered by its constitution to undertake trust business, and having an issued capital of £500,000, of which not less than half has been paid up in cash. The latter conditions, however, were proposed by the Anderson Committee, which in paragraph 72 of its Report recorded its opinion that it is undesirable that the management company should be closely connected in any way with the trustee company, or vice versa. Without attempting to define the term "closely connected," the Committee specifically declared that neither company should control the other. It has been stated, in the present instance, that to identify the managers with the trustees removes any ambiguity which unit holders may feel regarding "the party to which they have to look to for the exercise of their rights." By this resort to identification, responsibility has indeed become clear-cut. But if the unit-holder labours under any misapprehension regarding the function of trustees, a careful study of the obligations which managers and trustees assume under the trust deed should remove it. It may be urged that

trustees should undertake more direct supervision of unit trust management; but that is not an argument for making trustees and managers identical.

New departures in investment policy also appear to be envisaged under the trust deed. There is no list of permitted securities, nor any restriction upon individual investments. According to the Declaration of Trust, the managers have full power to invest the moneys of the Fund in such securities as they may prescribe. That form of words would appear to cover both quoted and unquoted securities. On page 7 of the booklet, indeed, reference is made to the fact that "a portion" of the Fund will always be held in cash or readily realisable securities. It is also intended to obtain the certificate of a chartered accountant for daily selling prices, in order to ensure that the managers do not derive undisclosed profits from price adjustments. In this connection it is important that the basis of prices to be employed for these calculations should be clear. Many trusts already obtain certificates from stockbrokers confirming the quoted prices of their units, which are based on market dealing prices in the underlying securities. It is, of course, well known that if Official List "offer" prices are employed, uncovenanted price advantages may result to the managers, since dealings can usually be effected well below these quotations. Special arrangements would presumably have to be made (which have hitherto been unknown in unit trust practice) if unquoted securities were in fact to be included in the portfolio at any time.

Management Costs and Investment Policy.—Although from page 4 of the booklet relating to the First British Mutual Fund it would appear that no other fees or commissions are payable by purchasers apart from the initial commission of 5 per cent., the managers will be entitled to a payment of one-quarter of 1 per cent. of the value of the fund at each quarterly distribution date. Over the ten-year life of the trust the annual charge, expressed as a percentage of the initial price (calculated on the same basis as the figures given on page 14 of *The Economist's* unit trust survey of April 17, 1937) amounts to 1.604 per cent.—a higher figure than for any trust for which similar calculations were made on that occasion, although it appears to be lower than the annual management costs for at least one flexible trust formed since that time. Nor is it clear whether the managers intend to maintain a market, in the usual sense, in the units. Under the trust deed, and according to the explanatory booklet, the managers undertake to repurchase units for not less than the amount which would be realised by a sale of the appropriate proportion of the assets of the fund. This statement, of course, relates to the minimum amount receivable, and it is not inconsistent with a smaller dealing spread than, say, the half-crown difference between offered prices on an "open" basis and bid prices on a "liquidation" basis. The managers estimate that, although a yield of no more than 5 per cent. may be obtainable at the outset, they are of opinion that 6 per cent. is a reasonable return in current conditions, and that it is obtainable without incurring unnecessary risk. It is also stated, however, that the managers intend in their investment policy to give special attention to investment in debentures, since they offer a high degree of security and steady yield. In this connection it may be pointed out that the average yield on 41 industrial debentures included in the Actuaries' Investment index amounted to 4.22 per cent. on September 22nd. In short, the methods of operation and the investment policy which are proposed by the new trust represent in several respects a radical departure from established methods which have served the unit trust movement well in the past. No one—least of all *The Economist*—has ever

pretended that the unit trust movement had reached perfection. But it has made two legitimate claims to the investor's attention in the past—the services of independent trustees, and a specific statement of the limits of investment policy, within a range of quoted securities. And neither of these conditions is fulfilled in the First British Mutual Fund.

Declining Industrial Profits.—Industrial profits are now well past the peak. The small shortfall recorded in August grew last month to the significant extent of 10.31 per cent. Moreover, the September sample of 112 companies is both larger and more representative than the August list. The following table shows the results for each month over the past two years:—

Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year	Year and Month	No. of Cos.	Net Profits*	Inc. on prev. year

* After debenture interest.

(a) Decrease.

Of the eighteen groups represented last month, only five showed improvement, usually of small dimensions. Profits of 21 iron, coal and steel companies held up fairly well, for their total was only £65,483 lower at £2,142,243. One-third of the total fall of £915,687 recorded last month was attributable to seven textile companies, whose profits were severely reduced from £428,765 to £123,070. Newspaper, rubber, and miscellaneous industrial earnings also fell considerably.

Company Notes

Callender's Cable and Crompton Parkinson.—In an official announcement on July 19th, confirming widespread market rumour, the secretary of Crompton Parkinson stated that negotiations were in progress for a closer working arrangement between Callender's Cable and Crompton Parkinson. The suggestion then under consideration was the formation of a new holding company, which would make an offer to shareholders of the two constituent concerns for an exchange of shares. Some possible consequences of the merger on the trading position of the two concerns were discussed in *The Economist* of July 23rd. At the end of last week, however, a statement from the same source disclosed that, "owing to the recent crisis and to the consequent unsettled condition of world trade and finance," the directors of the two companies had mutually agreed that it would be inadvisable to proceed with the negotiations. These reasons might explain a need for delay in reaching terms, but except on the most fatalistic view they hardly appear sufficient in themselves to call for the complete closure of the negotiations. The latter, it will be agreed, were in any case bound to be difficult, for Callender's Cable is a mature industrial giant, while Crompton Parkinson's expansion in activity and profits has been very marked in recent years. Given two parties, in different stages of maturity, the problem of valuing future profit expectations in arriving at a basis for merger terms must inevitably be acute.

Harrisons and Crosfield Meeting.—Although he spoke at a time when estimates even of the near future are more than usually difficult, Mr Eric Miller this week did not disappoint the numerous investors who look to his speech at the Harrisons and Crosfield meeting for an authoritative survey of the produce markets. Describing changes in tea consumption and stocks, Mr Miller referred to the surprise created last December by the Committee's decision to increase the quota by 5 per cent. during 1938. During the past twelve months, however, the price of common Indian tea has fallen from 1s. 2½d. to 11½d., and in his view it remains to be seen whether the extra supplies arising from the quota increase can be absorbed without a drop in prices to a level which would compel the Committee to reduce the export percentage. Incidentally, Mr Miller raised an interesting point of regulation technique when he pointed out, with satisfaction, that the new Tea Scheme allowed the Committee to change the quota at any time (instead of only one date in the year) and without previous reference to the Governments concerned. This alteration, he considered, should lead to smaller price fluctuations, since buyers would have to reckon with prompt action by the Committee if prices rose or fell unduly. The picture which Mr Miller presented for the rubber industry was rather more hopeful. Thanks to the steps taken by the International Committee, stocks had been reduced during the past six months, and even supplies in the U.K. had started to move downwards. There was now grounds for hoping that recovery would continue in the U.S.A. without further check, and that an improvement in tyre sales for replacement purposes would be linked to an expanded demand for new automobiles. But Mr Miller stressed that the "sheet anchor of the industry" was the power of the International Committee to regulate exports, and left the rubber shareholder to infer from the general tenor of his speech that improvement was well in progress.

Murex Progress.—While the improvement in the latest Murex profits is at only a third of the rate recorded in 1936-37, an advance of 13 per cent. in total profits to £429,855 is clearly satisfactory. The directors' report reveals that in the latter part of the financial year a marked decline occurred in the general demand for the company's products. But the continued upward trend in profits appears to be due partly to good business in the first part of the year and to the fruits of technical progress which has followed the ploughing back of a substantial part of profits in past years. Such rapid progress, however, has brought its corresponding liabilities, and the effect of higher taxation and of the greatly increased provision for obsolescence is to reduce the earnings available for the ordinary shareholders from £280,017 to £254,197, despite the increase in total profits. The following table shows that the 20 per cent. dividend is again very generously covered, and the bulk of the surplus is devoted to increasing the general reserve to £323,000. This table and the ten-year chart vividly portray the rapid increase in earnings in recent years:—

	Years ended June 30		
	1936	1937	1938
Total profit	£278,741	£381,550	£429,855
Obsolescence, etc.	56,519†	12,174	53,074

† Including £15,760 to investment reserve. * Also capital bonus of 66½ per cent. on £600,000.

MUREX PROFITS, 1929-38

It has been necessary to provide in the latest year for a loss of £28,847 on the sale of Local Loans, and trustee securities now stand in the balance sheet at only £46,250, compared with £335,629, while there is an equivalent increase in cash. The company's vigorous growth may be attributed partly to developments in metallurgical technique and partly to the company's own policy of extension and improvement over a decade or more. Shareholders will note that the report announces that additions to premises and plant undertaken during the past few years are virtually

completed. In the past year alone the book value of plant and machinery rose from £272,103 to £379,995. While the prospects of a continued geometric rise in profits are perhaps less certain than in the past, the current yield of £5 7s. per cent. on the £1 shares at 3¼ does not appear to over-value the probability that a highly satisfactory rate of earnings will be maintained.

Rubber Company Results.—Recent rubber company results are of particular interest, for in the past few weeks published accounts have carried the story of rubber profits to the year ended June 30th—a period which covered a full year of falling prices and reduced demand. First impressions are, therefore, far from favourable, for most important companies have reduced their dividends. Malayalam, it is true, have repeated the 10 per cent. dividend, but this company is a mixed producer; about two-thirds of its revenue is derived from tea, and its financial year ended in March. On the whole, changes in output have been of small importance compared with fluctuations in rubber prices. The average exportable allowance for the year to June 30th was 77½ per cent., against 71¼ per cent. in the previous twelve months, but the average price realised for rubber seems to have been about 1¼d. per lb. less than in 1936-37 in some cases. Fluctuations in earnings (as opposed to dividends) for rubber shareholders are more favourable than the reduced distributions would suggest, as we show in the accompanying table. Thus the sharp reduction in Kamuning (Perak) distribution contrasts with an increase of 2 per cent. in earnings, and in

no instance is the difference between earnings in 1936-37 and 1937-38 very striking. Rubber companies are clearly more anxious to conserve their resources in the face of the certain reduction in profits in the current year. Normally, fluctuations in rubber prices are a more important factor in profits than moderate alterations of, say, 5 or 10 per cent. in the quota. But under present conditions special emphasis must be laid upon the exportable allowance. Rubber now stands at 8½d. per lb., and, thanks to the expected improvement in the statistical position resulting from the September quota decision and from the satisfactory trend of American consumption, prices seem more likely to strengthen than weaken in the immediate future. But the burden on the producer remains heavy. For the second half of 1938, production is cut to no more than 45 per cent. of standard quotas—a drop involving difficulties of adjustment which will be reflected in higher costs per lb. To adopt the most conservative basis, if the quota remains at 45 per cent. throughout the year to June 30th next, and the average price obtainable is no more than 7d., while all-in costs are 1d. per lb. more than in 1937-38, Tanjong would earn

barely 1 per cent. on the ordinary stock in 1938-39, while Kamuning and Batu Rata would earn something near 2 and 3 per cent. respectively. (These percentages refer only to the profits attributable to rubber crops.) It is at present quite impossible to estimate the course of rubber prices and output in the first half of 1939, and the cautious distribution policy recently followed by rubber companies thus appears justified.

Roan Antelope Report.—The report of Roan Antelope Copper Mines for the year to June 30th reveals that total profits have been reduced from £2,078,203 to £1,816,380. During the year, production of blister copper increased from 69,560 tons to 75,253 tons. Copper sales (after adjustment of stocks) amounted to £3,421,707, against £3,549,042, while operating expenses increased to £1,492,379, compared with £1,355,573 in the previous year. Expressed as an average per ton, copper revenue declined from £51.022 to £45.469, while total costs (including obsolescence which is not included in the figure given above) were reduced from £25.496 to £24.809 per ton. The amount earned for dividend, after providing £512,000 for taxation compared with £456,500 in the previous year, amounts to £1,063,068, against £1,333,808. On the increased capital, this sum is equivalent to 28.1 per cent., and the 20 per cent. dividend is consequently well covered, the increased transfer of £250,000 being made to reserve. Capital expenditure during the year amounted to £200,659, while the depreciation and obsolescence account stood at £126,605 on June 30th, after transferring £200,000 from the current year's profits, and employing £587,574 for replacement expenditure during the year. It is estimated that approximately £750,000 will be expended on the Western Extension programme, which is designed to bring the output capacity up to 10,000 short tons of copper per month. Since existing cash holdings amount to £1,789,874, this sum will be comfortably covered. The company's basis quota at present amounts to 5,479 tons of fine copper per month. On the assumption that the new quota of 105 per cent. is maintained throughout the year, and that copper averages £45 per ton, earnings during the current year should represent approximately 25 per cent. on the 5s. ordinary shares, which stand at 19s.

Sub Nigel.—The effect of the further increase in the quantity of ore treated during the year to June last was rather more than counterbalanced by a reduction in grade and in the value of the gold produced. The average yield was 0.328 dwts. lower at 14.173 dwts. and the price of gold 10d. lower at 139s. 9d. per ounce. An additional 84,375 shares ranked for dividend; hence the dividend payment of 150 per cent. (against 165 per cent. for 1936-37) absorbed only a moderately reduced amount in cash. Taxation required £963,280, compared with the largely increased amount of £1,108,200 claimed for 1936-37, thanks to a change in the method of assessment. The carry-forward shows a small increase. Results in recent years are summarised below:—

	Years to June 30—		
	1936	1937	1938
Ore crushed..... tons	632,700	685,000	707,100
Yield per ton.....	107/4	101/11	99/-
Cost per ton.....	33/9	33/5	33/3
Profit per ton.....	73/7	68/6	65/9
Total working profit	£2,328,320	£2,345,720	£2,326,740
Dividends, amount	£1,434,370	£1,392,190	£1,328,910
Dividends, per cent.	170	165	150
Carried forward	£84,030	£107,480	£134,050
Development footage	119,700	120,370	130,120
Ore reserves	2,099,000	2,124,000	2,233,000
Average value..... dwts.	15.1	14.9	14.3

The expansion in the ore reserves appears hardly commensurate with the increased development footage, although payable ore averaged 42 per cent., against 39.4 per cent., while the inch-dwts. worked out at 537, as against 525. The details regarding underground work are of distinctly complicated character. It will be noted, however, that the consulting engineer expresses the opinion

that the persistence of the highly payable shoot zones at depth is particularly encouraging. Of the company's outside interests, the Vlakfontein holding has been slightly reduced to 424,463 fully paid and 93,637 partly paid shares, while the holding of 288,420 Spaarwaters is as before. Sub Nigel's new issue was made at £8—partly for meeting additional capital expenditure and partly for meeting calls on the Vlakfontein holdings, which at the date of the circular making the share offer included 336,540 partly paid shares. On the basis of the dividend for each of the past three half-years the yield is approximately 6¼ per cent. without adjustment for Dominion income tax, the 10s. shares being quoted at £12.

"West Wits." Group Finance.—One of the most important features in the latest reports of West Witwatersrand Areas and its two subsidiaries, Venterspost and the Libanon, is naturally to be found in their financial position. On June 30 the net cash resources of the parent undertaking amounted to no more than £176,500. The company's holding of Venterspost shares, after the sale of part of those originally received and the subscription of the company's portion of the recent new issue, stood at 1,120,000 shares. Some 975,000 Libanon shares were held, but only 9,280 Blyvooruitzicht shares. This holding represents merely the number left to be taken up under last year's offer at par. A further 636,500 will in effect be received as purchase consideration for the property. From these particulars, it may be inferred that an issue of "West Wits." shares may be necessary sooner or later to assist the company in financing further subsidiaries. The next of these is expected to take over Driefontein No. 118, upon which some encouraging discoveries have been made by diamond drilling. This property adjoins that of Blyvooruitzicht, which is controlled by Central Mining. Although development and drilling on the Venterspost property have been attended with highly satisfactory results, work has not yet reached the stage where an estimate of ore reserves can be made. Nevertheless, the position is considered to warrant the installation of a treatment plant having a capacity of 100,000 tons monthly; and on the assumption that the ore available will average 5 dwts., it is unofficially calculated that the divisible profits should represent something like 30 per cent. upon a capital of £2,450,000. As a result of the issue of 1,400,000 shares at 30s. last May, cash resources on June 30th amounted to almost £2,000,000. This sum should suffice to bring the company to the producing stage. The second subsidiary, Libanon, is in a much less advanced stage of development; if results are satisfactory, provision of further funds will follow. On June 30th the balance of liquid resources amounted to £615,000.

Trinidad Petroleum Development.—Though this company is an established oil producer, it has been known to the investor for less than two years. The first published results showed profits in excess of the prospectus estimates, and the report for the year to July 31st reveals that the rise in dividend from 7 to 12 per cent. has been accompanied by a 50 per cent. jump in trading profit to £395,078. These satisfactory results are due, of course, to the substantial increase in output from 1,485,512 to 2,598,680 barrels, for average realised prices for deliveries were lower than in the previous year. The balance sheet, no less than the production figures, shows the intensity of the company's

BRITISH - AMERICAN UNITS

A Unit Trust of 26 leading American and 26 British Ordinary Stocks

Particulars from Stockbrokers and Banks or The Managers,

36-37 KING STREET, E.C.2

activity during the past year. Wells and development account is more than £45,000 higher at £712,540, while plant now amounts to as much as £436,413, compared with £284,939 a year ago. These developments have necessitated the realisation of half the company's former holding of 2½ per cent. Funding Stock, the balance of which now stands at £91,070. Footage drilled during the year totalled 180,498 feet, against 142,150 feet, and fifty wells were completed. Between them, oil wells and development account, and appropriations for writing down plant, etc., have required £226,168, against £171,116. After bringing in sundry receipts and charging directors' fees, the balance available for the shareholders is thus £182,357, against £96,308, whereas the increase in the gross profit on oil sales is £134,000. Since equity earnings are nearly doubled at 20.6 per cent., the 12 per cent. distribution is conservative, and the reserve and carry forward are together increased by £62,357. Maintenance of production may be expected, for drilling during 1937-38 disclosed a satisfactory increase in the proved reserves of oil; indeed, during the second half of last year, production rose by 35 per cent. as compared with the first half, though the number of drilling strings employed had been reduced in the meantime. At present the £1 shares stand at 37s. 6d., and the yield of £6 8s. per cent. suggests confidence in the company's immediate future.

The Week's Company Profits.—This week 39 companies have issued reports, excluding three for which comparable figures are not available. Their total net profits

amount to £3,007,000, an increase of 24½ per cent., as compared with £2,414,000 earned by the same companies a year ago. The cumulative total for 1,906 companies reporting to date is £253,232,000, showing a rise of 11½ per cent., compared with £229,272,000 earned in the previous year. The week's results are discussed in preceding notes and on page 150 under the heading "Shorter Comments." Our usual analysis of profit and loss accounts appears on page 152.

Company Meetings of the Week.—Reports of company meetings will be found in this issue on pages 142 to 144. Mr Eric Miller's survey of rubber and tea prospects at the *Harrisons and Crosfield* meeting is discussed in a Note on page 128. At the *Indian Iron and Steel* meeting Mr Biren Mookerjee referred to favourable factors which would offset lower prices and other adverse conditions. These included forward sales at remunerative prices, satisfactory demand in export markets and an upward swing in America. Shareholders of *Carrier Engineering Company* learned from Mr S. L. Groom at the annual meeting that during the year one of the special departments had dealt with inquiries for work to the value of over £3,500,000, individual inquiries ranging from £100 to £30,000. Mr H. J. Welch, at the *Malayalam Plantations* meeting, informed shareholders that each 1d. per lb. net profit realised on the current year's estimated tea crop of 10,800,000 lb. would equal about 2½ per cent. on the issued capital, and on the estimated rubber crop of 6,000,000 lbs., 1.38 per cent.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET	ACCOUNT
OCTOBER 25	OCTOBER 27

The London market has not given a robust performance this week. There has been intermittent activity in commodity shares, and some demand for armament issues, in particular aircraft shares. But for the most part, the market has been concerned increasingly with the political and economic repercussions of re-armament. Rumours of further borrowing, fears of increased taxation, doubts regarding the future of sterling, concern for the future of British trade in Europe—all these factors have exerted a restraining influence. Wall Street, again, has displayed a rather irregular tendency, despite the Dow signals recorded at the end of last week. In consequence, business has remained sub-normal, and almost every department, from gilt-edged to the most speculative commodity shares, has been unimpressive.

Herr Hitler's week-end speech made a disagreeable impression on the *gilt-edged market* at the opening. Business was poor, and selling became more pronounced on Tuesday. In mid-week, further and heavier losses were recorded. War Loan lost ¾ to close at 100½, and comparable falls were common throughout the list. War Loan fluctuated rather considerably on Thursday in unsuccessful attempts to rally, before closing at 100½. General liquidation was evident in the Dominion list, while the slight increase in interest in home Corporation stocks quickly evaporated.

In the *foreign bond market*, Japanese advanced at first, but prices gave way on the latest phases of the campaign near Hongkong. Further sharp falls were recorded in Czech bonds, which in

mid-week closed no higher than 45½, while German issues also fell, in company with most of the European market. Apart from a slight improvement in Chilean bonds, on the rise in copper, the South American list was featureless.

Home rail stocks remained depressed, partly on fears of the traffics (which on a strictly comparative basis, were better than might have been expected) and partly on the labour troubles at St. Pancras. Great Western ordinary, however, was the principal victim, on the fear that the usual 3 per cent. dividend will not be paid. After a firm opening, Argentine rail stocks turned dull.

Subdued conditions reminiscent of pre-crisis days have returned to the *industrial market*, which was inert throughout the week. Though changes were trifling, the tendency was for prices to sag slowly from sheer lack of interest rather than from selling pressure. Iron and steel shares began the week brightly on good trade reports and the higher steel production figures, and moderate advances in quotations were widespread. But the gains were not all held, and some irregularity developed towards mid-week. B.S.A. were well supported both before and after the dividend announcement. Coal shares recovered, and for the most part were higher on balance. Electrical equipment shares were weak, both Callender's Cable and Crompton Parkinson falling on news of the abandonment of negotiations between the two companies. Aircraft shares were among the most active features early in the week, and prices went well ahead on Monday. But a growing lack of general interest and a certain amount of profit-taking brought quieter dealings and lower quotations in mid-week. Motor shares turned dull and irregular after a fairly firm start. In the textile group, the trend was undecided, and Courtaulds reacted.

Tobacco shares were dull and mainly lower, while brewery issues, after starting well on provincial support, reacted on scattered selling by short-term operators and on taxation fears. Business in the stores group was small, but the undertone was steady. Provision and catering issues were inactive and irregular. Though movements in the miscellaneous section were varied, prices drifted slightly through lack of business. Early in the week Imperial Smelting went ahead, while Horlicks responded to the good results. Lever Bros. and Unilever lost ground. Shipping shares were inactive, but prices moved only within narrow limits.

Oil shares were dull, and the amount of business remained as small as ever. Prices gave way slightly on Monday on small sales, and the tendency towards firmer prices in mid-week was quickly checked by absence of business. Early in the week rubber shares showed signs of responding to the recent firmness in the commodity, and rises in quotations were general. Later, however, the group made a mixed showing, changes being fairly equally divided between rises and falls. Tea shares lacked support, movements being mostly downward.

Dull conditions prevailed in the *mining markets*, though prices held up fairly well, and more interest was displayed in base metals than Kaffirs. Through lack of buying support, Kaffirs were uninteresting and price changes small. Rhodesian copper shares were active on the improvement in the metal price and the 10 per cent. increase in quota, and though the volume of business dwindled towards mid-week, prices continued firm. Tin share prices were satisfactory, but the turnover was small. Lead-zinc shares behaved similarly, steady prices being accompanied by only a modest volume of business.

ACTUARIES' INVESTMENT INDEX

The levels reached after last week's recovery in prices have been held, the Actuaries' index of 151 industrial ordinary share prices standing on Tuesday last (October 11th) at 63.3, compared with 63.2 a week ago and 62.6 a month ago. The corresponding average yields are 5.94, 5.95 and 6.01 per cent. A selection of the component indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High

New York

In the course of a short week (the market being closed on Wednesday for Columbus Day) Wall Street remained uninspired, showing only moderate price changes on balance. A vigorous start was followed by profit-taking though there was marked recovery when the market reopened on Thursday. Though steel mill activity for the current week is estimated by the American Iron and Steel Institute at 51.4 per cent. of capacity, against 47.9 per cent., steel shares failed to respond, the improvement being attributed more to releases against old orders than to new business. Another depressing influence was the cut in steel sheet prices. Utilities were among the brighter sections of the market, but rails were neglected and fractionally lower until they staged a recovery on Thursday. Oil shares gave way on the cuts in crude oil prices in certain fields.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

Industry and Trade

The Plight of British Shipbuilding.—The latest of *Lloyd's Register Shipbuilding Returns* concerning the activity of the shipbuilders at home and abroad are disquieting. In view of the recession in world economic activity between the summers of 1937 and 1938, which led to a fall of 13½ per cent. in the volume of international trade, and, consequently, to a break in freight rates, some decline in orders for mercantile shipbuilding tonnage was to be expected. Indeed, the tonnage of mercantile vessels commenced in the world fell from 964,000 tons gross in the second quarter of 1937 to 716,000 tons and 634,000 tons in the second and third quarters of 1938. The disturbing feature is not so much the decline in the aggregate volume of new orders as the fact that almost the whole of the reduction has fallen on the British shipbuilding industry. As the accompanying diagram shows, between 1928 and 1935 the shipping tonnage commenced in this country varied fairly closely with that on which work was begun in the world as a whole. Since then, however, the proportion of the world's shipbuilding orders secured by British concerns has fallen rapidly from 53 per cent. in the last quarter of 1935 to 14 per cent. in the third quarter of this

MERCANTILE TONNAGE COMMENCED
(Quarterly figures)

year. During July-September, for example, the tonnage commenced in the United States, Japan and Germany was substantially higher than the volume of orders received by British shipbuilders. This tendency, which seems to threaten the very existence of the shipbuilding industry in this country, cannot be explained by the fall in world trade and in freight rates. Nor, in view of the subsidies given to the shipbuilding industries of other countries, can the relative decline of the British industry be attributed to a decline in its efficiency. Nevertheless, there is a strong presumption that the diversion of orders to foreign countries has been accentuated by the increase in costs, over some of which, such as steel prices, the industry has no control. While naval work will ensure the employment of a substantial number of berths during the next few years, this is quite insufficient to prevent a serious slump in the industry in the absence of an increase in commercial orders, for even now some 46 per cent. of its capacity is idle.

Improvement in Exports.—The preliminary returns of our foreign trade in September are not as discouraging as might have been expected. The percentage fall in the value of imports between September, 1937, and the past month, at 14.6 per cent., was as big as in August, but exports showed a fall of only 10.0 per cent. compared with the corresponding month last year, against a decline of 14.6 per cent. in August. As a result, the excess of imports over exports last month was £7.2 millions smaller than a year ago. If allowance is made for seasonal variations, the volume of raw material imports showed a further de-

cline, and our index fell from 111½ (1935 = 100) in August to 105½ in September. On the other hand, our index of the volume of exports of domestic manufactures rose from 90 in August to 103 in the past month. Compared with a year ago, our September indices of the volume of raw

material imports and of exports of domestic manufactures show falls of 27½ per cent. and 9½ per cent. respectively. The relatively greater fall in raw material imports may be ascribed partly to the previous accumulation of stocks. The improvement in the volume of exports of domestic manufactures, while welcome, does not necessarily portend a change of trend.

Rise in Steel Output.—There are indications that the efforts made by the iron and steel industry since the beginning of this year to adjust new supplies to the lower level of demand by the drastic curtailment of domestic production and imports are beginning to bear fruit. The output of pig iron fell from 443,000 tons in August to 429,800 tons in September, but the production of crude steel was stepped up from 658,900 tons to 754,700 tons. Between August and September, 1937, the output of pig iron rose by 1.8 per cent., against a fall of 3 per cent. this year. Moreover, the 14.5 per cent. increase in the production of crude steel in September was due mainly to seasonal influences, for during the corresponding period last year output rose by 17.8 per cent. Nevertheless, the figures suggest that the adjustment of new supplies to the fall in demand is nearing completion, for stocks of pig iron and semi-finished materials are understood to have been substantially reduced. Although the volume of new purchases remains comparatively small, the industry is now expecting a revival in demand which may permit an early increase in output without adding to stocks. A reduction in prices at the beginning of next year would probably help to stimulate demand.

The Steel Scrap Problem.—The friction over the administration of the steel scrap control scheme, established early last year, has not yet been removed. Some of the scrap merchants are still chafing under the restrictions imposed upon them by the terms of the agreement between the Iron and Steel Federation and the National Federation of Scrap Iron and Steel Merchants. A number of steel makers are aggrieved by an arrangement under which, regardless of their respective consumption of pig iron and scrap, a uniform levy per ton of steel ingot production is now being collected to cover the difference between the fixed British price and the higher prices at which large contracts were placed by the British Iron and Steel Corporation for supplies, chiefly from the United States, during the shortage of 1937. There have been no purchases of foreign scrap by the Corporation since November, 1937,

but by far the greater part of the material bought from the United States last year has been received in the first half of this year, when total imports were 686,000 tons, compared with 328,000 tons in the corresponding period of 1937. Since June, however, imports have shown a substantial decline. The present difficulties are due chiefly to the fact that these increased imports have coincided with a sharp decline in the demand for scrap as a result of the recession in the iron and steel industry. The reaction has been accentuated by the failure of many sheet users to accept delivery of large contracts for steel placed by them during the 1937 shortage in their then natural anxiety to secure future supplies. The control exercised by the International Scrap Convention has modified considerably the former relations between import and export prices. The extent to which import and export prices have diverged from their relations before the 1937 boom may be judged from the fact that, whereas in 1936 the average export price of scrap was £2 14s. 8d. per ton f.o.b. and the average import price £2 16s. 5d. per ton c.i.f., during the first eight months of 1938 export prices averaged £3 9s. 9d. per ton f.o.b. and import prices £4 7s. 7d. per ton c.i.f. The problem is receiving the attention of merchants and steel manufacturers, but while there is a natural desire to modify the arrangements made in 1937, there is, at the same time, a reluctance to abandon the principles of domestic and international co-operation which have been in operation during the past eighteen months.

Cotton Trade Agitation.—In Lancashire cotton trade circles there is increasing anxiety owing to the marked decline in the exports of manufactured cotton goods, shipments so far this year being 30 per cent. smaller than in 1937. The Cotton Trade League has this week sent a circular to all spinners and manufacturers, in which it is pointed out that the situation renders it imperative for the United Kingdom to make increased use of its

enormous bargaining power to secure better treatment in overseas markets. It is asserted that "only by regaining these markets can Lancashire recover its prosperity, and only the Government, by trade agreements with other parts of the Empire and with foreign countries, can bring about this recovery." The League, therefore, has decided to conduct a vigorous campaign of public meetings throughout Lancashire. Recently, another organisation, the Red Rose Campaign, was formed for the purpose of holding open-air meetings, of which several have been held, to draw attention to the depression and the loss of export trade. This agitation is presumably meant to stimulate the Government into early action.

United States Cotton Crop.—At the end of last week the Department of Agriculture of the United States Government issued its third forecast of the cotton crop for this season, the figure being 12,212,000 bales, against 11,825,000 bales a month earlier. The forecast was rather larger than expected, but prices in Liverpool and New York have been scarcely affected by the bearish estimate. It is significant that the officials at Washington have increased the figure of the condition of the crop from 65 per cent. of normal in September to 66 per cent. this month and that of the yield per acre from 214.1 lb. to 221.1 lb. With regard to world consumption, there has recently been some improvement in the United States, but in the absence of a general improvement it is probable that the quantity of American cotton required by spinners during the twelve months will be less than 11,000,000 bales. It is almost certain, therefore, that the carry-over of the American staple at the end of this season will reach the record size of between 13,500,000 bales and 14,000,000 bales. Prices would be much lower but for the Government's withdrawal of cotton from the market. However, the market in raw cotton has recently been firmer owing to less satisfactory advices relating to the Egyptian crop,

Debenture Interest & Divs. (Inc. Arrears) gross	5,765,960	487,264

and it is probable that the supply from that country will be about 30 per cent. smaller than last season. Demand for most kinds of cotton in the Liverpool market, but especially of South American qualities, has recently increased, and substantial purchases have been recorded.

* * *

An International Wheat Agreement?—When the life of the International Wheat Advisory Committee was prolonged for the 1938-39 and 1939-40 seasons in July last, the wheat market seemed to attach little significance to this decision. The Committee had been formed to operate the international wheat agreement of 1933, but the agreement lost its practical value since Argentina's resignation in 1935. There is now some evidence that the Committee's prolongation in July last was not just a routine matter. About a fortnight ago it was announced that Argentina had rejoined the Committee, and in the past few days Holland, Denmark and Finland have agreed to take part in its deliberations. In other words, vigorous efforts are being made to bring about a measure of co-operation on the international wheat market in order to prevent the disastrous slump in prices which would follow an attempt of the great exporting countries to market this year's bumper crops at any price. It is no longer a secret that the centre of these efforts lies in Washington. The United States Government was not only the moving power behind the committee's decision, last July, but it was also due to the American pressure that Argentina rejoined the Committee. In the course of a speech to Kansas wheat farmers at the end of September, Mr Wallace, the United States Secretary of Agriculture, pointed out that the U.S. Government is doing everything possible to persuade the other wheat exporting countries to accept a plan for the international regulation of exports. It is still premature to make any forecasts concerning the probable outcome of these endeavours. It must be recognised, however, that the last two crops have strengthened the influence of the United States on the world wheat markets to such an extent that all other exporting countries are likely to prefer co-operation to cut-throat competition. Indeed, it was reported last week-end that, according to the information of the United States Bureau of Agricultural Economics, the Government of Argentina would support an international wheat marketing agreement, although it would oppose acreage restriction. As Argentina's refusal to co-operate was the chief cause of the breakdown of the 1933 wheat agreement, her changed attitude provides a favourable omen for the new efforts to regulate wheat exports.

* * *

Increase in the Copper Quota.—The sustained recovery in the United States, as expected, is finding reflection in the upward trend of the prices of many raw materials. The extent of the American recovery is revealed by the Federal Reserve Board's index of industrial production (1923-25 = 100), which has risen from 76 in May to 90 in September. Since the previous weakness of the copper market was not due to over-production outside the United States but to the accumulation of heavy stocks in that country, copper was one of the first commodities to benefit from the recovery in America. As a result of the successful control over production outside the United States, stocks were kept at a low level, and visible supplies are now equivalent to less than two months' consumption. On the other hand, visible supplies in the United States have been very heavy; despite some reduction in recent months, they amounted to 315,000 short tons at the end of August, while consumption in that month was estimated at only 48,000 tons. But the accumulation of heavy visible supplies in the United States has been accompanied by a sharp fall in the stocks held by consumers. As soon as consumers felt assured of the revival of general business activity, they began to increase their stocks, thus initiating a rise in prices. At the beginning of this week the London price of

standard copper rose above £45 per ton. Since the co-operating producers appear to hold the view that a price in excess of £45 per ton would stimulate production by other concerns, they promptly decided last Monday to increase their output quota from 95 per cent. to 105 per cent. of the standard tonnages from October 15th. The fact that the price of copper remained above £45 per ton in spite of this decision augurs well for the copper and other raw material producing industries.

* * *

Higher Zinc Duty?—Late last week the Import Duties Advisory Committee announced that it has under consideration proposals for changes in this country's zinc import duty. The Government introduced a 10 per cent. *ad valorem* duty on foreign zinc in 1932 as part of the Ottawa Agreements. In August, 1935, this duty was reduced to 12s. 6d. per ton (equivalent to slightly over 4 per cent. of the current price of the metal) in order to facilitate the conclusion of an international zinc cartel. In its report to the President of the Board of Trade on July 2, 1935, the I.D.A.C. pointed out that "the new rate of duty proposed is low and in the absence of agreement with overseas producers to control production and sales it may prove inadequate to safeguard the home industry." The attempts at the formation of an international zinc cartel made at that time, as well as all the subsequent endeavours towards the same goal, have failed. The I.D.A.C.'s decision to hold an inquiry, therefore, cannot be regarded as a surprising step, particularly as the maintenance of the British zinc smelting industry is of considerable strategic significance. It may be that the inquiry will force the leading international zinc producers to hasten their negotiations, which were initiated only a few weeks ago. At any rate, the United Kingdom is by far the largest zinc importing country in the world, and this market constitutes a vital outlet for most of the producers in exporting countries. Nevertheless, it is expected in London metal circles that the I.D.A.C. will not delay its recommendation to increase the duty on foreign zinc, and it is even believed possible that, in the interests of national defence, Empire producers may be given effective preference. The basis for such a tariff was laid in the Anglo-Canadian Trade Agreement of 1937, and as the earning capacity of the Imperial Smelting Corporation, Britain's large zinc-smelting concern, has deteriorated in recent months, the I.D.A.C. may, in fact, feel inclined to extend the support against competition also to Empire metal.

* * *

Agricultural Prices.—The Ministry of Agriculture has now published its revised index of the prices of British agricultural products, which is to replace the index begun in 1913. The new index is both more comprehensive and more complicated than the old. Sugar-beet, tomatoes, cucumbers, grapes, beans and peas for human consumption have been included; the average of first and second quality prices for these and the other commodities will be used henceforth, instead of those for second quality only. The new index is based on the years 1927-29, the only three years since the war when agricultural prices have been fairly stable. But the most drastic change is in the system of weighting. The old index was weighted in accordance with the relative importance of the output of the various commodities in the year 1908, and these weights have never been altered, in spite of the changes in agricultural practice in the last thirty years. The weights of the new index will be re-calculated for each year in accordance with the relative importance of the individual commodities in the preceding five years. The diagram below shows the course of both the new and old indices (the latter re-calculated with 1927-29 as base), with *The Economist's* index of wholesale prices given as comparison. The revised index of the Ministry of Agriculture, which gives a greater weight to dairy

products than the old, registered a smaller fall in 1928-33 than the old index, since the slump in these years was concentrated on cereal prices. For the same reasons, the revised index has lagged behind the old one in the years of

MINISTRY OF AGRICULTURE PRICE INDICES,
1927-37
(1927-29 = 100)

recovery, which saw an abrupt rise in the price of grains. Further, the fall in the indices of the prices of domestic agricultural products from 1927-29 to 1932 was less steep than the decline in *The Economist* index of wholesale prices. Neither the general level of prices, as measured by *The Economist* index, nor the prices of domestic farm produce, have recovered to the pre-depression level. But both the old and new agricultural indices for 1937 are relatively higher compared with the average of 1927-29 than the more general index of *The Economist*, partly, no doubt, a consequence of agricultural protection.

* * *

Veterinary Education.—Nearly two years ago, the Minister of Agriculture appointed a committee to enquire into the facilities available for veterinary education and to make recommendations thereon. The appointment was partly due to the growing belief in agricultural circles that the training of veterinary surgeons was inadequate. The recently published report of the committee fully bears out the general criticisms. The committee points out that there has been in the past no co-ordination of any kind between the Royal College of Veterinary Surgeons, which conducts examinations and grants licences, and the four training institutes—the Veterinary Colleges at London, Edinburgh and Glasgow, and the Department of Veterinary Science at Liverpool University. They consider that the various courses in the curriculum which have been added piecemeal over the last twenty years have at present no logical sequence and give too little attention to the problems of maintaining health in farm animals, as distinct from curing various specified diseases. A knowledge of animal nutrition, of the hygiene of the farm and of the routine of good farm management is, they consider, essential if the future veterinary surgeon is to play his part in improving the standards of health and production on Britain's farms. The committee also consider that the teaching institutes are overcrowded, understaffed and financially starved; further, because they are all situated in large towns, away from farms, the students obtain an entirely inadequate training in the practical work of handling and observing animals, whether ill or well.

The committee's recommendations to meet these deficiencies are drastic. They propose that the constitution of the R.C.V.S. should be amended to permit the training centres to be represented on its council and that the college should be given powers to inspect and supervise the training given to students working for its examinations. A revised curriculum has been drawn up, and the committee also recommend increased financial provision from the Treasury to enlarge and re-equip the training schools. They recommend that each school should be supplemented by a field station of about 100 acres in extent which should carry a full complement of livestock. On this, students could obtain practical experience with farm animals. Closer co-operation with local veterinary surgeons is also urged, so that the students may come into contact with a larger number of sick animals. Finally, the committee recommend that two essential qualifications for the final degree of the R.C.V.S. should be a year's practical work, of which the student should spend one-half on a farm and the other half as an assistant to a practising veterinary surgeon.

* * *

Wholesale Price Movements.—There has been a further slight rise in British wholesale prices, which makes the total increase during the past month 1.4 per cent. for the complete *Economist* index and 2.2 per cent. for sterling prices of primary products. The past fortnight, however, has witnessed a slight fall in the American prices of primary products, which brings the index back to just below where it stood a month ago. The complete Irving Fisher index has also fallen fractionally during the past month. An examination of British and American price changes in the same commodities during the past fortnight gives no definite indications that this slight divergence between the two countries reflects the recent depreciation of sterling. French wholesale prices have moved upwards by approximately the same amount as British prices.

The following table shows the complete *Economist* index number in greater detail:—

The <i>Economist</i> INDEX (1927 = 100)				
	Sept. 18, 1931	Oct. 6, 1937	Sept. 28, 1938	Oct. 12, 1938
Cereals and meat...	64.5	92.3	72.4	73.3
Other foods	62.2	67.7	58.1	57.8
Textiles	43.7	64.3	53.9	54.1
Minerals	67.4	101.0	94.0	95.5
Miscellaneous	65.8	83.5	75.3	75.1
Complete index	60.4	81.6	70.2	70.5
1913 = 100	83.1	112.3	96.6	97.1
1924 = 100	52.2	70.5	60.7	60.9

Canadian wheat is cheaper than a fortnight ago, but there has been a sharp rise in the price of maize. Meat is dearer. In the other food group the most prominent movement is a decrease in the price of butter. Among textiles, American raw cotton and also yarn and cloth are slightly dearer. Wool is unchanged, but flax is lower. Jute is again firmer. There were appreciable increases in all non-ferrous metal prices. In the miscellaneous group, hides, linseed oil and creosote are cheaper, but leather is dearer, and there was a big increase in the price of rubber.

* * *

Germany's Ore Imports.—In recent years Germany has imported increasing quantities of metallic ores and residues, in order to reduce her foreign exchange requirements, to keep her smelters and refineries working to full capacity, to employ the maximum number of skilled workers and, not least, to pile up emergency reserves of "strategic" minerals. Statistics of ore imports, given in *Metal und Erz*, indicate that the Third Reich has a long way to go before attaining self-sufficiency even in base metals.

INDUSTRIAL REPORTS

THERE are indications that the flow of orders to industry is tending to increase. In view of the fact that many purchases were postponed during the crisis, an improvement was to be expected. The markets in coal have been more active, and demand for steel is expected to expand, for stocks of certain materials have been reduced by the drastic curtailment of imports and domestic production. Transactions in cotton goods were more numerous and the wool textile industry has also gained ground. Despite the steadier trend of freight rates in recent months, there has been no increase in mercantile shipbuilding orders. The Motor Show at Earls Court, which opened on Thursday, should give some indication of the demand for private cars during the next few months.

Coal

Sheffield.—Both the inland and export markets show a better tone, and demand generally tends to improve. There is a good demand for best qualities of household coal, and industrial fuels are making a better showing. Gas and electricity works are taking larger supplies. The coke position remains very unsatisfactory, although larger deliveries under contract for central heating are being made. The market in patent oven coke is fairly steady.

Australia is taking considerable quantities of hards, cobbles and trebles, as a result of the disputes at the coal mines there, and there are some good inquiries from Northern Europe. Gas coal is also in better request for ship-

ment. Bunkers continue to move slowly, and cokes are stagnant.

The quota for the Midland (Amalgamated) District was increased in October by 5 per cent. to 65 per cent. of the standard tonnage.

*

Newcastle-on-Tyne.—The feature of the North-East coal market this week is the firm position of steam coals, in particular Northumberland steam singles. In other respects conditions are much the same. The gas and coking section of Durham is quiet, there being little new export trade, whilst inland requirements give no indication of improvement. The export coke market, governed by the International Coke Cartel, is receiving a fair amount of inquiry from Scandinavian countries, but makers are unable to quote as they have exhausted their quota.

*

Glasgow.—Collieries in Scotland are now busier. This is due mainly to expansion in home trade, where, in addition to the seasonal improvement in business with household merchants and gas and electricity undertakings, industrial buyers have also been busier. Owing to the unsettled political position there seems to be a tendency to lay in extra stocks. Export trade has on the whole also improved to some extent, and Denmark, Sweden and Germany are now all taking up substantial tonnages. French and Italian markets are, however, more or less at a standstill. Another favourable development has been a broadening of the business with

GERMAN IMPORTS OF ORES
(In thousands of metric tons)

Item	1935	1937	Jan.-June, 1937	Jan.-June, 1938	Leading Suppliers in 1937

Pyrites	1,018.6	1,464.4	766.4	700.0	Spain, Norway, Cyprus.
Metal residues	10.8	13.2	5.6	6.9	Various European countries.

Germany has increased her manganese ore purchases from the Union of South Africa at the expense of Russia. Exports of S. African ore to Germany rose from 31,000 tons in 1935 to 290,700 tons last year, whereas those of Russia declined from 228,349 tons to 61,300 tons. In her barter agreement with S. Africa, to run from September 1, 1938, to August 31, 1939, Germany has contracted to purchase from that country manganese (for £450,000), vanadium (for £100,000), industrial diamonds (for £115,000) and substantial tonnages of chromium. Newfoundland has become a noteworthy supplier of lead and zinc ores to the Third Reich. Her exports of lead and zinc ores totalled 27,085 tons, and 21,539 tons last year, whereas they were nil in 1936. German imports of pyrites from areas controlled by General Franco in Spain have risen from 464,231 tons in 1936 to 835,700 tons in 1937. Germany obtains virtually the whole of her tin ore from Bolivia.

Australia and South America. Taken all round, collieries' stocks are moving away steadily, and the market remains firm in trend.

*

Cardiff.—Shipping movements and loading operations at the South Wales docks have been disorganised during the past week by the gales, and shipments were only 339,900 tons, compared with 418,300 tons in the previous week and 437,133 tons in the corresponding week last year. Many of the delayed vessels have now reached port, and early this week only about 13 shipment appliances were unoccupied, compared with 40 at one time last week. Inquiries for future supplies are a little more active, but there is little prompt new business in the market, and the quotations for smalls, of which the stocks are heavy, have been marked down 6d. per ton. Best large grades are being well absorbed and prices are unaltered. Of sized classes there is a shortage for early delivery. The market in coke and patent fuel continues weak.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that business is still restricted. Some encouragement, however, is derived from the fact that in some sections of the industry stocks have been materially reduced and that the volume of inquiry shows signs of expanding. The demand for pig iron is better and a number of contracts have been

renewed; but in the majority of cases buyers have limited their new purchases both as regards the tonnage and period of delivery. The stocks of foreign iron, however, appear to have been largely absorbed. As little foreign iron is now being imported the demand for British pig iron should gradually improve.

Stocks in the semi-finished steel section have been materially reduced and the demand for the British product is broadening. Some of the consuming works, however, are not well off for orders and are maintaining a cautious attitude towards fresh commitments.

Irregular conditions continue to prevail in the finished steel market and whilst the heavy steel works still have a fair tonnage of orders upon their books, comparatively little new business is reaching them. In the lighter section of the trade some improvement has been noticeable. The inquiry from overseas has shown signs of expanding and a moderate amount of new business has been transacted.

*

Sheffield.—Although the volume of business in the iron and steel market is limited, there is a better undertone, with a general expectation that matters will now show progressive improvement. Although many contracts will expire at the end of the year, there is very little readiness among pig-iron consumers to make renewals at present, purchases made being just sufficient to cover known needs. Deliveries under contract show some increase, but no great impression has been made on the heavy stocks at furnaces.

Forge iron is a weak market, and the call for foundry iron is erratic. On the other hand, basic iron is in fairly steady demand. There is not much doing in hematites, most users being well contracted to the end of the year. Special qualities meet with a better demand. Finished iron shows little or no sign of development.

There is some expansion in the steel market, and both basic and acid steel billets are coming into greater demand. Strip, stainless steel sheets and wire rods are more active. Prices show no variation.

Production of special steels is expanding, for makers are working to capacity, but in the cheaper qualities output is not at the high level of a few months ago. With the completion of an agreement between motor car and steel manufacturers concerning prices, more work on stampings, pressings and forgings is expected. Heavy engineering and machinery requirements are expanding, and a good number of overseas inquiries have come to hand during the last week or so.

*

Middlesbrough.—The market continues quietly confident, and whilst the volume of business passing is not great, this is explained by the fact that prices in all departments are fixed. Steel makers in this area continue busy on production of heavy steel for constructional purposes. Sheet makers have better order books than for some time, but mostly for home requirements. Makers are anxious to obtain more export business. Re-rollers are requesting heavier tonnages, as they are experiencing a slightly increased demand. Parcels of pig iron, both Cleveland foundry and East Coast hematite, con-

tinued to change hands for early delivery. Shipments of pig iron are so far maintained on last month's basis, with shipments of steel satisfactory. All the basic iron produced locally is being consumed at the steelworks here.

There is no change in the heavy steel scrap position, and buyers are still limiting deliveries. Whilst there is little demand for good Durham blast-furnace coke, producers are in a good position owing to the export demand for coke. No new business is being done in foreign ore, and imports are restricted.

*

Glasgow.—Rather more business has been placed with the heavy steel-makers this week and transactions in lighter materials have been more numerous. There has been no fall in the demand for galvanised corrugated sheets and re-rolling and galvanising operations are maintained at a fairly high level. Tank makers and sheet metal workers in the Glasgow area are all particularly busy and orders on hand will ensure many months of steady employment for men and plants. Work on the large aircraft carrier which, it is announced this week, is to be placed with the Fairfield Shipbuilding and Engineering Company, will provide employment over a long period for shipyard workers in the Govan district.

*

Cardiff.—The heavier branches of the iron and steel industry in South Wales show little improvement, but there has recently been slightly more activity in the tinplate and sheet re-rolling departments. As world stocks of these products have been greatly reduced, it is anticipated that recovery will become more marked during the next few months. Specifications for immediate supply are restricted, but several new orders have been placed for supplies extending up to the end of March, 1939. Prices of tinplates are unchanged and are based on 20s. 3d. per standard box for some competitive markets, and on 21s. 6d. for others more effectively under the control of the International Cartel. The current statistics of the tinplate industry are given on page 141.

Textiles

Cotton (Manchester).—There have been more serious attempts to do business with fairly active negotiations between buyers and sellers, but operations have been irregular. In the raw cotton markets the event of importance has been the third crop estimate of the American Government, the forecast of 12,212,000 bales being rather larger than expected, but prices have been very little affected. Owing to the limited world consumption, the carry-over at the end of the season will be of record dimensions.

An uncertain feeling has prevailed throughout the yarn market. Many irregularities still exist in the American section as a result of the recent breakdown of the price agreement for medium American ring beams. In coarse and medium American counts, however, sales have been more encouraging, and certain Egyptian spinners have had a better week.

The improvement in the inquiry for piece-goods has been maintained. An

increased inquiry has come through for India, and more contracts have been arranged, especially in light bleaching descriptions. Some encouraging orders have been secured for South America in printing and finishing styles, and more business has come from the Continent, especially Scandinavia, Germany and Switzerland. Clearances in the home trade are improving and buyers have been more prepared to give out replacement orders.

*

Wool (Bradford).—The raw wool markets are firmer than a fortnight ago, and wool is being bought abroad with a freedom causing surprise in manufacturing districts in the West Riding of Yorkshire. The firmer tendency of prices is ascribed to increased Continental competition, heavier purchases by Australian mills, and Japan's disposition to purchase more freely, particularly in Australia.

The home trade follows this improvement very reluctantly, and the top-making section in Bradford is having a struggle to obtain prices in harmony with the cost of raw wool. In fact, merino tops are, on the average, a good penny below the price it should be possible for them to realise, and the same can be said of yarns. There is slightly more machinery running, but the industry in the West Riding cannot be said to be anything like busy. It is doubtful if 75 per cent. of the machinery is running, and there is still much short-time working.

THE COMMODITY MARKETS

THE tendency of the prices of the principal materials was upwards; the rise was due, in the main, to favourable business reports from the United States and to the renewed fall in the rate of exchange between the pound and the dollar. There has been evidence of re-stocking, especially in the United States.

Wheat and raw sugar, which fell sharply in price after the conclusion of the Munich agreement, are unchanged on the week. Cotton rose in price despite the increase in the American Government's crop estimate. Non-ferrous metals advanced vigorously, and the decision of the co-operating copper producers to raise their output from 95 per cent. to 105 per cent. of standard output from October 15th failed to arrest the rise. The market in rubber remained firm.

In the United States, the commodity markets were closed on Wednesday. On Tuesday Moody's index of the prices of staple commodities stood at 143.3 (December 31, 1931 = 100), compared with 144.1 on October 5th. A month ago the index stood at 142.8 and a year ago at 172.2.

Metals

Copper.—Better trade news from the United States, the continued armament boom and an inflationary policy in a number of countries provided the basis for a revival in both speculative and consumptive demand. Wednesday's cash closing price of £45 18s. 9d. per ton, though below the best of the week, showed a net gain of £2 18s. 9d.

COMPANY MEETINGS

INDIAN IRON AND STEEL COMPANY, LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

CONTINUED PROGRESS AND DEVELOPMENT

MR BIREN MOOKERJEE'S SPEECH

The twentieth ordinary general meeting of The Indian Iron and Steel Company, Limited, was held, on the 21st ultimo, at the registered office, 12 Mission Row, Calcutta.

In the absence of Mr Leslie Martin (chairman of the company), Mr Biren Mookerjee (acting chairman) presided, and in the course of his speech said:—Your board, as well as the managing agents of the company, have every reason to be well satisfied with the progress which these accounts reveal. The accounts for the year 1937-38 contain the first complete year's record since the absorption of the Bengal Iron Company became effective, and it is pleasing to note that not only has the scheme of amalgamation with the Bengal Iron interests been fully justified, but it was brought into effect in time to take advantage of the period of great activity in the iron and steel trade and consequent enlarged demand for our products.

PROFITS AND DIVIDEND

The profits for the year under review amount to Rs. 1,73,49,804.10.0, or, taking into account the amount set aside for the repairs and renewals reserve, Rs. 1,79,93,311.0.7. These profits would have been very considerably increased but for certain unfortunate incidents.

Your works under normal conditions were estimated to produce 790,000 tons of pig iron, but the actual production was 701,160 tons only. The reduction in output was due to the two lightning strikes at the works in June and July, 1937. Although these lightning strikes lasted only eleven days, I want to emphasise that the loss was not limited to the tonnage lost in those few days only. In the iron and steel industry, where works are of a continuous nature, lightning strikes can cause a very serious loss, as for a considerable period after resumption of work, furnaces, coke ovens, etc., have to be carefully and gradually nursed before quality and conditions are again normal.

Another factor which has made an inroad into the profits was the sudden and arbitrary increases in freight of approximately 144 per cent. imposed by the East Indian Railway in July, 1937, and a further increase in March, 1938, on pig iron to the docks. This factor accounts for an increase in freight over the year of approximately Rs. 11½ lakhs. The increase made in freights from March 1, 1938, means in effect that the East Indian Railway have increased our freight by over 232 per cent. during the course of 14 months. We would state that this matter of increase in rates has been taken up with the railway board by your managing agents and is still under discussion.

The final dividend recommended for your acceptance is Rs. 2 per share, making a distribution of 35 per cent. for the year, the biggest in the history of your company.

PIG IRON PRICES AND EXPORT MARKETS

In his address last year your chairman dwelt at length on the position of your company as a pig iron producing unit *vis-à-vis* its markets, and he directed your attention to the measures adopted by the board for the purpose of diminishing the effects of cyclical changes to which this industry is subject. As you are perhaps aware, the price of pig iron reached a peak in the summer of 1937. General trade has since suffered a regression. This arrest of the trade recovery from the deep depression of 1931-34 has not left your company unaffected.

Owing to various internal causes the prices in the United Kingdom have so far remained stable, but the serious drop in American price levels has directly influenced world prices. Japan, one of our customers, has been most directly influenced, and, despite LARD (per cwt) intensity of her demand, she has been able to procure Irish, finest br requirements at American levels.

U.S. If of the current year saw no improvement in the PEPPER, per lb. ions, but during the last three months the American Black Lampson (in B. of not only to have been arrested but to have taken (Dut. the upward swing. These factors have exercised White Muntock (in upon the Japanese market, and as far as your " acts are concerned our export market shows a much POTATOES (per cwt) future now than was apparent three months ago.

English, King E of fact I am happy to announce that the estimated SUGAR (per cwt) of your company for the remainder of the current Centrifugals, 96" of your company for the remainder of the current c.l.f. U.K./Contly sold at fairly satisfactory prices. It is also satisfied LONDON—that while these forward contracts were being Yellow Crystals that the demand was for more iron than we Cubes.....

* Weeks ended Sept. 2

could supply. It is on this score particularly that the unfortunate prolonged strike at our works is to be highly deplored.

MARKET TENDENCIES

The difficulties of the present international situation militate against an accurate forecasting of the trend of the markets. Your board can only indicate the general tendencies in the markets for our products and assure you of our vigilance to take advantage of every factor in the world economy and whenever necessary to safeguard your company's interests as far as possible.

It will be rash to anticipate as good a year for your company as the one that is past. A slight drop in world prices as compared to the summer of last year, a possible contraction of certain markets, labour troubles and freight difficulties—these are factors one cannot ignore. There is, however, the other side of the medal; forward contracts at remunerative prices, satisfactory demand from our export markets, and an upward swing of the trade in America and stable conditions in the United Kingdom. On the whole, your board considers that the picture thus presented is favourable, and there is no ground for pessimism.

We have been approached on several occasions by investors and friends with the request to issue periodical reports on the company's position. Your board has considered this request very carefully, and they feel that as long as the fortunes of the company are linked up predominantly with an export market it would be extremely unwise for your company to issue periodical reports which would prejudice the future sales position of the company. Unless some such information is conveyed to the shareholders the issue of a colourless report would hardly serve any useful purpose.

GENEROUS EMPLOYMENT CONDITIONS

As is well known to you, there occurred a general labour strike at both your works in early June which lasted for six weeks. Through the good influences of the Honourable Mr Suhrawardy, the Labour Minister, work was resumed and a Conciliation Board was set up composed of a representative each of the management and the workers, with Mr T. H. Ellis, I.C.S., a senior judicial officer of the Government, as president. This Board has been at work for some weeks past now, and it is hoped that its report will be in the hands of the public very shortly.

In view of this investigation by an authorised tribunal, I hesitate to make any remarks about our labour problems, but, considering the local factors which led to the strikes, it would be hard for anyone to believe that this was a spontaneous movement by the workmen themselves labouring under serious economic grievances, particularly when during the past year very generous benefits were awarded to them, including the provision of a provident bonus and a retiring gratuity on termination of service, privilege leave each year with full pay, sickness and maternity benefits, and participation in the profits, which latter benefit for the year 1937-38 will mean an award of four weeks' wages to each workman at Kulti and Hirapur. We claim, without fear of contradiction, that our terms of remuneration and conditions of employment are inferior to no other similar industrial organisation.

It is hoped that the Conciliation Board will indicate the path of peace and bring home to our employees their great responsibilities and develop in them a sense of pride for the splendid organisation which they are helping to build up.

A QUESTION

In reply to the following question: "When the Steel Corporation gets going, what effect will that have on the company's output? Will it make the company any less dependent on foreign markets, and therefore will it help to safeguard and stabilise the company's future profits?"

The chairman said: It is expected that the Steel Corporation will take about one-third of the output of this company. In so far as the Steel Corporation provides a regular market for this company's production of pig iron, to that extent our dependence on foreign markets is reduced. This will largely protect the company from the effect of possible fluctuations in the export market for pig iron, and accordingly will have a valuable stabilising effect on the company's profits.

The report and accounts were carried unanimously.

HARRISONS AND CROSFIELD, LIMITED

TEA AND RUBBER POSITION

Presiding at the 30th annual meeting of Harrisons and Crosfield, Limited, held, on the 11th instant, at 19, Fenchurch Street, London, E.C., Mr H. Eric Miller, the chairman, after stating that the net profit was £333,870 and that they were proposing to pay a final dividend of 20 per cent. on the deferred ordinary stock, making 25 per cent. for the year, said: At the close of my remarks last year I ventured the opinion that prospects for producers seemed favourable, and looking back over what has actually happened in the twelve months it is fair to say that tea estates generally had a satisfactory season and were able to strengthen their financial position where necessary and to distribute higher dividends than for some years previously. The recent acute phase in the European crisis has helped to keep up prices in the tea auctions for the last four or five weeks, all buyers being anxious to augment their stocks in view of the uncertain outlook, and I see from the London Warehouse Returns that the clearances from bond in September, 1938, were almost 5 million lbs. heavier than for September, 1937. Under the current International Agreement, which has 4½ years yet to run, the regulating committee, instead of being tied to only one date in the year for announcing any variation in the exportable percentage for the ensuing year, are authorised to make changes in the permissible exportable amount at any time they consider that desirable, and they no longer have to make prior reference to the Government concerned, though, no doubt, they will take local considerations into account. I think this important change is a definite improvement in the scheme.

During the years 1924 to 1929 there was an average increase in the total world absorption of tea of between 3 and 4 per cent. each year, world consumption in 1929 being in the region of 910 million lbs. A slight decline was recorded in 1930 and 1931, but then the effects of the world-wide depression commenced to tell and consumption declined yearly until it had fallen to under 850 million lbs. in 1934, a loss to the industry of some 60 million lbs. of consumption. High duties in many countries and exchange difficulties in others all helped to curtail business, and unfortunately the industry is still subject to these disabilities. The trade here suffered an unpleasant shock when the tea duty was raised in the Budget last April.

THE RUBBER INDUSTRY

Absorption of rubber during the first nine months of 1937 proceeded at a rate well in excess of that during the corresponding period of 1936, and all doubts were being dispelled as to whether the producing countries would in fact be able to furnish the supplies released for export by the International Rubber Regulation Committee, which were then fixed at 90 per cent. of the basic quotas. The setback in business activity in the U.S.A. was beginning to make itself felt, but none of us had at that time any idea of the depths of depression to which they were to descend within a few months. The depression in the U.S.A. has affected adversely not only the absorption of rubber in tyre construction, but to an equal degree in other lines of miscellaneous rubber goods, which represent a quite appreciable off-take of the raw material. Fortunately there has been a change for the better in recent months, not only in sentiment but in actual business conditions over there, and had it not been for the uncertainties created by the crisis in Europe, the probabilities are that their demand for rubber would have been more insistent. I am glad to say that in the last few days buying has been resumed.

The critical days of the last week in September are still so near and their repercussions are not yet apparent to us; you will, therefore, not expect me to attempt to foreshadow what world absorption of rubber is likely to amount to even a few months ahead. One is, however, entitled to hope that the recovery of confidence in the U.S.A. may proceed without any further serious check. During the depression, tyres there have been kept on the road much longer than is ordinarily prudent, and as general business conditions improve, so should tyre sales increase for replacement purposes; while on the basis of the average age of the vehicles on the road there is room for considerable expansion in their sales of new automobiles.

The sheet anchor of the industry—in which I include not only producers, but distributors, manufacturers and consumers—is the power which the International Committee have to regulate the exports of rubber from producing countries to meet the needs of a vacillating world.

The International Agreement entered into by the Governments concerned has been renewed with minor modifications for five years from January 1st next and I do believe that there is now a much wider appreciation of its value.

The report and accounts were unanimously adopted.

MALAYALAM PLANTATIONS, LIMITED

STRONG FINANCIAL POSITION

MR H. J. WELCH'S REVIEW

The seventeenth ordinary general meeting of Malayalam Plantations, Limited, was held on the 13th instant at 19 Fenchurch Street, London.

Mr H. J. Welch, chairman of the company, after expressing regret at the loss which the company had sustained through the death of Mr John Mackie, one of the directors, proceeded to review the statistical position of the tea and rubber industries.

Owing principally, he said, to the depression existing in the United States in the second half of 1937, and to the maintenance during that six months of the exportable percentage of rubber at 90, the year under review had been disappointing for the rubber-producing industry. With the renewal of the Regulation Scheme and the increase of stocks permitted to be held by producers in the regulated areas, there was good reason to hope, provided a major war was avoided, that the severity of the depression for producers would prove to be only temporary and would not be repeated during the next few years.

It seemed highly probable that a considerably increased world consumption would take place during the next twelve months. Trade conditions appeared to be improving in the United States. Its stocks of tyres and tubes were relatively low, as were also stocks of crude rubber in countries other than the United States and the United Kingdom. He considered, therefore, that considerable improvement in the position of rubber producers would take place in 1939.

DIVIDEND OF TEN PER CENT.

The company's financial position was one of considerable strength. The directors recommended transfers of £64,000 to taxation reserve, £30,000 to reserve account, £40,000 to dividend equalisation reserve and the payment of a final dividend of 6 per cent., making 10 per cent. for the year. After making those appropriations the surplus assets amounted to £10 per planted acre, and if deducted from the total issued capital, showed a net cost of less than £35 10s. per planted acre of tea and rubber. The stock of 2,200,000 lbs. of rubber referred to in the balance sheet, most of which consisted of off-grades, had now been sold and realised over £9,000 above its valuation.

The restricted crop of tea harvested was 10,248,609 lbs. and the cost of production 6.62d. per lb. was the same as in the previous year and within one-tenth of a penny of the lowest cost ever achieved by the company. The rubber crop harvested was 6,120,337 lbs. and the average yield 386 lbs. per mature acre tapped was the highest yield ever recorded for the company. The cost of production still compared very favourably with estate costs in other countries of production. In sales of rubber for local use the company had at present to compete with supplies from Burma, which were allowed into India without export licences. If those exports should be prohibited after the close of the present year, Burma would not only receive a larger quota, but would, in addition, benefit considerably by the higher prices always obtainable for rubber when sold with licences. The company would benefit next year from the increase in the Indian exportable quota from 13,000 to 17,500 tons. It was pleasing to note the growing increase in local consumption in India and Burma, which had developed from 510 tons in 1933 to 7,172 tons in 1937.

THE CURRENT YEAR

For the current year the company estimated to produce about 10,800,000 lbs. of tea and over 6,000,000 lbs. of rubber. Each penny per lb. net profit realised on the estimated crop of tea this year would equal about £45,000, or 2½ per cent. upon the issued capital, and each penny per lb. net profit on rubber about £25,000 or 1.38 per cent. Forward sales of exportable rubber for the current financial year amounted to 301 tons at 10.45d. per lb. London equivalent, and 500 tons without export rights at lower prices. Although owing to the fall in the price of tea and the reduction of the export percentage for rubber the total profits would doubtless show a reduction, he saw no reason at present why the dividends paid for this and last year should not be repeated in respect of the current year.

The report and accounts were unanimously adopted; resolutions for the payment of dividend and for the other appropriations were passed unanimously and the meeting closed with a vote of thanks to the directors, agents and staff.

CARRIER ENGINEERING COMPANY, LIMITED

INCREASED PRODUCTION

LARGER VALUE OF ORDERS ON HAND

The annual general meeting of Carrier Engineering Company, Limited, was held, on the 10th instant, at Caxton Hall, Caxton Street, London.

Mr S. L. Groom (chairman of the company), who presided, said:—Ladies and gentlemen,—The accounts have been in your hands for some days and I propose to deal with them as briefly as possible. As you know, in June last the subscribed capital was increased to £275,000 by the issue of 75,000 5 per cent. cumulative second preference shares of £1 each. The figure of creditors shows an increase of £26,143 over the last year, due to the greater volume of business during the year. The reserve account is the same as last year and the profit and loss account balance is £2,312 greater than in 1937.

Amongst the assets, cash, debtors, uncompleted contracts and stock show a total increase over 1937 of £78,980. The additions to investments, land and buildings, machinery and plant and office furniture are clearly set out in the balance sheet and I think call for no further explanation. The only item to which I need make special reference is the stock on hand. Our policy has been to build up stocks not only to ensure speedier completion of contracts but also to enable us to carry on should a temporary shortage of materials arise. Recent events have, I think, justified this procedure. (Hear, hear.)

BENEFITS OF NEW EQUIPMENT

The additional equipment to which I referred in my speech to the shareholders in June last has been installed and has enabled us to increase production and adjust prices in keeping with the demand and we have been able to revise our quotations and estimates and to offer a reduction of more than 33 per cent. in the price of certain of our special equipment.

The profit and loss account shows a net profit of £82,345 as compared with £91,385 last year. During the year under review one of our special departments made thousands of surveys throughout the country, prepared many hundreds of drawings, estimates and quotations in respect of inquiries for work to the value of more than £3,500,000. These inquiries ranged from £100 to £30,000 each and involved heavy expenditure. There were many delays in the placing of contracts with this department for the work to which I

have just referred, but orders are now coming in. The whole of the cost of surveying and estimating has been charged in the accounts for the past year, and the benefit of this expenditure will, I believe, be reflected in the current year's figures.

At the present time the value of the orders on hand in connection with our general business is greater than at this time last year, and the special department is now engaged on work of national importance.

PROFIT AND DIVIDEND

As I have already stated the net profit for the year was £82,345, and after bringing in the balance from last year and deducting preference dividend to March 1, 1938, and the balance on taxation account, a sum of £105,974 is left to be dealt with, which is £2,312 more than last year.

We recommend that this balance be allocated by writing off the expenses of increasing the capital and providing for the dividend on the preference and second preference shares to June 30, and in paying a dividend of 25 per cent., less tax, on the ordinary shares, leaving a balance to be carried forward of £66,094.

The board has met on more than one occasion to consider the dividend which should be recommended to the shareholders and a decision was deferred until the 30th of last month. During our last meeting, which took place in the forenoon, we received the news that Czechoslovakia had declined to consent by noon that day to the Four-Power Agreement reached overnight at Munich. We were compelled to consider the effect of this upon the international situation and decided that the circumstances made it desirable for us to declare a smaller dividend than we would otherwise have done.

It will be evident to shareholders that the commencement of hostilities would seriously affect that part of our business which could not be regarded as of immediate importance and that work would have had to give place to work of a more urgent and national character. (Hear, hear.)

QUESTION OF INTERIM PAYMENT

Now that the immediate crisis is past the board will this week consider the declaration of an interim dividend for payment before the end of this month.

In conclusion the chairman expressed the board's appreciation of the loyalty and co-operation of the staff, which, of course, meant every man and woman in the company's employ, and his own appreciation of the splendid work of his co-directors.

The report and accounts were approved and a dividend of 25 per cent., less income-tax, on the ordinary share capital was declared payable. The auditors were re-elected and a vote of thanks to the chairman, directors, and staff brought the proceedings to a close.

(Continued from page 139)

The decision of the co-operating producers to increase their quotas from 95 per cent. to 105 per cent. of standard tonnages from October 15th is discussed on page 136.

★

Tin.—The improvement in the position on the tin market was also due to increased industrial activity in the United States, and as present quotas are well below current requirements, a revival of normal purchases would have a strengthening effect on prices. The standard cash price improved by £8 5s. per ton during the week and closed at £205 5s. per ton on Wednesday. Although the lower limit of the buffer pool scheme has been passed it is not expected that the pool will sell.

★

Lead and Spelter.—Both markets benefited from the strength of other metals and lead rose by £1 to close at £16 1s. 3d. per ton, while spelter gained 18s. 9d., closing at £14 18s. 9d. on Wednesday. Spelter was supported by favourable September statistics from the United States. Stocks declined to 130,700 short tons on September 30th, compared with 143,377 short tons a month earlier. Output at about 32,000 short tons showed little change, but deliveries, which increased from 36,507 short tons in August to 43,582 short

tons in September, reached their highest level since September, 1937.

Grains

ALL descriptions of wheat were freely offered and prices generally were lower. The important mid-season crops of the Southern Hemisphere are now influencing the trend of international prices. Complaints of damage by drought are being received from Australia, but in Argentina the crop outlook is very satisfactory.

Maize prices have continued their downward course.

Other Foods

Provisions.—With the end of the period for which provision prices were stabilised most commodities have been marked down slightly. Meat prices are also lower on the week, though bacon prices were unchanged, and eggs were dearer. Demand for most commodities was steady.

★

Colonial Produce.—Tea prices were all lower on the week, though there was a firmer tendency towards the end of the period, when demand was strong. Coffee and cocoa markets were quiet; sugar prices are lower on the week.

Fruit and Vegetables.—Trade in potatoes at the Borough was slow, with supplies plentiful and prices slightly easier. In other vegetables and fruit trade was brighter with prices unchanged or a little higher.

Miscellaneous Commodities

Oilseeds and Oils.—Business is recovering only slowly from recent unsettled conditions. Demand for linseed is small and mainly for Calcutta. Better offers by Argentine shippers are assisting demand, but about 300,000 tons of the crop remains for sale before mid-December, when the new crop is expected to be ready for export. Vegetable oils are in fair demand and steady; linseed is unchanged on the week and cotton oil easier. Buyers are covering only immediate requirements. Demand for oilcakes continues to improve.

★

Rubber.—There has been no very marked activity on the rubber market during the week, but the trend on balance has been upward. There was a considerable number of trade inquiries and a slight revival of speculative interest in the more distant positions on Monday. The buyers' price of standard sheet on the spot closed at 8½d. per lb. on Wednesday, an advance of ½d.

The British West Indies

We present below a series of charts on the British West Indies, which should be read in conjunction with the leading article on page 104. The figures of revenue and expenditure and sugar exports refer to British Honduras and Guiana as well as to Britain's insular possessions in the West Indies. The diagrams in the upper panel relate to 1936.

Finance

GOVERNMENT RETURNS

For the 8 days ended October 8, 1938, total ordinary revenue was £18,399,000, against ordinary expenditure of £37,023,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £184,916,000, against a deficit of £112,380,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On October 7th applications at £99 16s. 4d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 60 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 16s. 5d. per cent. and above were allotted in full. £50.0 millions of Treasury bills are being offered on October 14th.

SHORTER COMMENTS

Company Results of the Week.—As a result of reduced tin mining activity, PERAK RIVER HYDRO-ELECTRIC operations in 1937-38 were on a lower scale, and the dividend has been lowered from 7 to 6 per cent., gross sales revenue falling from £569,415 to £500,662. Reductions in operating expenses and the saving of the Prior Lien Debenture Stock interest, however, were responsible for an increase of £10,000 in net profits, to £283,638. Profits of ELEPHANT TRADING (SOUTH AFRICA) HOLDINGS have been satisfactorily maintained; net earnings of £97,362 for the past year compare with £106,169 for a period of approximately 13 months. The execution of a considerable volume of Admiralty as well as mercantile marine orders has provided a substantial rise in PARSONS MARINE STEAM TURBINE net profits from £36,654 to £51,134. The reduction in the S.S. CARS dividend from 12½ to 5 per cent. is attributed entirely to delays in obtaining deliveries of material ordered. The works were unable to operate at full production until the last three months of the year, and a large number of

orders were unexecuted at the end of the season. The latest profits of ELLERMAN LINES have reached £1,177,906, compared with £731,108, but as the accounts cover the calendar year 1937, they do not fully reflect the subsequent change in shipping conditions. Substantial progress is also reported by WEST HARTLEPOOL STEAM NAVIGATION, whose tax free dividend for the year to March 31st is raised from 25 to 35 per cent. The second report to be issued by HORLICKS, LTD., shows net profits of £160,772 for 1937-38; this appears to represent a satisfactory improvement, since the net trading profit of £243,099 for a year compares with £246,757 for the initial 15-month period. SENTINEL WAGGON WORKS (1936) whose profits amount to £31,495 against a loss of £8,798, have cleared off the debit balance, preliminary expenses and income notes, and hope next to be able to deal with preference arrears. Although the number of meetings was slightly lower than in 1936-37, the higher average attendance per meeting has contributed to the rise in SOUTH LONDON GREYHOUND RACECOURSES net profits from £64,057 to £91,052 in the year to September 30, 1938.

London and Thames Haven Oil Wharves.—The directors have accepted the resignation from the board of Mr T. C. I. Burgess, chairman and joint managing director. Mr A. C. Adams, the other joint managing director, has been appointed chairman provisionally.

Perak River Hydro-Electric Power Company.—Net revenue for year to July 31, 1938, £331,893 against £339,753. Guaranteed debenture interest, £48,255 (£50,600). Sinking fund, £49,240 (£46,895). To depreciation, £50,759 (£68,105). To staff fund, £4,000 (£8,000). To reserve, £20,000. Ordinary dividend reduced from 7 to 6 per cent. Carry-forward raised from £8,908 to £24,921.

Horlicks, Ltd.—Profit for year to March 31, 1938, £238,099, against £245,506 in fifteen months to March 31, 1937. Tax and N.D.C., £77,327 (£58,604). Dividends equalisation reserve, £25,000 (£40,000). To general reserve, £20,000 (£37,623). Ordinary dividend, 30 per cent. for year. Carry-forward raised from £19,199 to £19,554.

SHORTER COMMENTS

(Continued from page 150)

Ismay Industries, Ltd.—Owing to continued ill-health, Mr John Ismay has resigned his directorships in the Ismay group. Messrs Price, Waterhouse and Company, on the instructions of the board, have for the past two months been investigating the company's affairs. While this investigation has not yet been completed, it is already apparent that there are investment losses which will have to be written off. Changes in the directorates will be formally announced in due course. The next accounts of the company are being prepared by the company's auditors, Messrs Franklin, Wild and Company, in conjunction with Messrs Price, Waterhouse and Company, and will be made up to the end of October to enable the board to submit the fullest possible report at the annual general meeting at the end of December.

Eno Proprietaries, Ltd.—We dealt with the proposed acquisition of this company by Beechams Pills, Ltd., in *The Economist* of October 8th, page 80. It is pointed out in a circular dated October 7th issued by Eno Proprietaries that profits before income tax were: 1935, £205,418; 1936, £204,756; 1937, £182,450. The board anticipate that profits for 1938 will be less than for 1937. The directors have accepted the Beechams Pills offer in respect of their own holdings, and recommend shareholders to do the same.

South London Greyhound Race-courses.—Profits for year to September 30, 1938, £118,509, against £84,613. Final dividend, 65 per cent., making 90 against 60 per cent. for year.

Indian Iron and Steel Co.—Speaking at the annual meeting in Calcutta on September 21st, Mr Biren Mookerjee

reported that the estimated pig iron production for the rest of the current year had been sold at fairly satisfactory prices. The demand for iron was more than the company could supply, while the export markets for the company's products looked much more promising than three months ago. Mr Mookerjee added that when the Steel Corporation comes into full operation, it is expected to take about one-third of the company's pig iron production.

Pacific Steam Navigation.—At a meeting of the court of directors on October 12th, the court was reconstituted as follows: Lord Essendon (chairman); P. G. Mylne Mitchell (deputy chairman); E. James (managing director); S. Malcolm Baird; C. C. Barber; Frank Charlton; Walter C. Warwick. It was announced last week that the company had been acquired by Royal Mail Lines, Ltd. All the above directors, except Mr E. James, are on the board of Royal Mail Lines.

National Organisation

THREE weeks after its signature the Munich Agreement continues to dominate the discussion of public affairs. On its meaning and import, on its rightness and wrongness, the British people is still deeply divided, and only the most optimistic would predict a speedy end to their disagreements. But there is a surprising unanimity in drawing from diametrically opposite arguments the same practical conclusion: that we must greatly increase the speed and volume of our re-armament. It is as well that this agreement should be recognised without its importance being exaggerated. Sincere and passionate differences on policy are likely to prevent the formation of that Government of National Unity to organise the nation's forces for which voices are crying on both sides. But it is of the essence of democracy that all parties should be able to work together for the cause on which they are agreed, without stifling their differences where they are not agreed.

The problem of organising the forces of the nation has derived a new and twofold urgency from the crisis of September. In the first place, those anxious days when war seemed imminent revealed serious deficiencies in our armaments—deficiencies both absolute and also in relation to the strength of Germany. Sir Thomas Inskip has admitted to "serious gaps," and hair-raising stories are in circulation of the woefully inadequate state of our defences against air attack. These must be put right immediately. It may or may not be true that A.R.P. and anti-aircraft

guns have been the Cinderellas of the defence programme hitherto; but in any case they must be given an urgent priority now. Secondly, not only have the events of September revealed the incomplete extent to which our existing plans have been carried out; they have made those plans themselves inadequate. Until the Conference of Munich it was always reasonable to assume that war, if it

THE ECONOMIST

The Board of Directors of The Economist Newspaper Limited has accepted, with very great regret, the resignation of Sir Walter Layton from the Editorship of *The Economist*, which he has held since the beginning of 1922. Sir Walter Layton, who will remain a Director of the company, has found that the growing weight of his other responsibilities compels him to give up the active direction of the paper.

With the approval of the Trustees, Mr Geoffrey Crowther, hitherto Associate Editor, has been appointed Editor.

An article by Sir Walter Layton, reviewing the seventeen years of his Editorship, appears on page 157.

came, would be a war of the world against the aggressors. That is not so now. We have now to contemplate the possibility of a war in which Britain and France would alone have to face Germany and Italy. Save for Portugal, Egypt and Iraq, there are no countries in the world which are pledged to be with us from the start. This is an entirely new position in which we and the French find ourselves—the most dangerous that either country has had to face in half a century. This particular war may never come; diplomacy may succeed in rallying allies to us. But it is the realisation that this war of two against two has to be envisaged as a possibility that accounts for the new urgency of re-armament.

In any such alignment, it must not be supposed that Britain and France are the weaker side. On the contrary, a very brief glance at some of the chief elements of national strength shows that potentially they are the stronger. The combined metropolitan population of France and Great Britain is, it is true, 28 millions less than that of Germany and Italy together. But there are reserves of man-power in the overseas possessions which more than redress the balance; and in any case machine-power is, with every year that passes, increasingly more important than man-power. In the productive capacity of their steel industries the two pairs of countries are equal. But Britain and France produce on their own territories six times as much iron ore and one and a half times as much coal as Germany and Italy. If peace-time production of automobiles is a measure of war-time capacity to produce aeroplanes, then Britain and France have an advantage of almost two to one. When to these facts is added the mastery of the seas and the ability to draw on all the riches of the whole wider world, there can be no lingering doubt of the potential superiority in military strength of the Western democracies. If they had the further advantage of confining the land struggle to the defence of short fortified lines where metal counts more than men, the argument would be complete.

These calculations, however, are of *potential* strength. Before it can be deployed, the potential strength must be organised into actual strength. Organisation of the national forces has, therefore, become the most urgent necessity of public policy. The extent to which this organisation has already been carried in Germany and Italy makes it necessary for us, if we are to compete successfully, to put ourselves also on a war basis in peace-time. That is a hard saying, but it is ineluctable. There are already signs that, within the Governmental machine, some of the decisions which had been postponed until the actual outbreak of war are now being taken. There is talk of new Ministries of National Service, of Supply, of Shipping, and the ordinary citizen may hope that the existing departments will now realise that the emergency is grave enough to warrant a disturbance of the even tenor of their ways.

It is obvious to all that the great enterprise of organising the nation has innumerable aspects; and there is some danger lest an undue share of attention should be concentrated on one only of these aspects—and that not the most difficult to solve. To the man in the street, with his memories of the last war, national organisation means one thing only—conscription; and if the Prime Minister is pledged against conscription in peace-time, then we must have its pale relative, a National Register, in which the individual capacities of the community can be entered and codified. This is, indeed, very essential; though the organisation of man-power takes a different form to-day from that of 1914-18. Then, the difficulty was, more and more, to comb men out for the Army. Now, it is, as much as anything, to prevent those who could be more usefully employed elsewhere from joining the Army in the first flush of the desire to serve. In particular, there is grave need for the mobilisation of brains. Nothing was more disquieting in the crisis days than the discovery that little or nothing had been done to arrange for staffing the new

Ministries that would be required in time of war; and that the plentiful supply of intellectual, administrative and business ability that offered itself could not be told what it would be wanted to do. Between now and the next crisis all this must be arranged, so that the vast war-time machine can be manned as rapidly as the anti-aircraft guns.

Enormous and complex though it is, however, the organisation of man-power is neither the sole nor the most difficult aspect of the problem, and public attention might well be focused on some of the other aspects. Pre-eminent among them is the organisation of industry. Hitherto, our re-armament programme has been pursued without more disturbance to normal industry than arose out of the inevitable competition for supplies of certain varieties of materials and skilled labour. We have produced for the defence forces and for the normal market together. In war-time every industry would have to work primarily for the Government; the normal market would be allowed to have only what could be made with the productive capacity not required for armaments. Our present task is to find some middle position. The motor industry is obviously the one chiefly affected. In war-time, it is safe to predict that nobody would be allowed to buy, or even to run, a car for purely private purposes. If we are to take our national mobilisation seriously, we shall soon have at least to restrict the supply of cars to the private market. This sort of problem is clearly productive not merely of technical difficulties but of political and social problems. It takes but a moment's thought to see that it can only be done if defence orders are centralised and co-ordinated through a Ministry of Supply, equipped with the powers of the war-time Ministry of Munitions and led by a Minister with Mr Lloyd George's driving energy.

Another whole range of difficult problems is raised when we start to discuss the organisation of finance. In one sense, the problem is more difficult than it was in 1914, since if we now went to war we should start with an income tax of 5s. 6d. in the £ and a debt of £8,000 millions. But in the fundamental sense the problem is the same now as then: it is that of securing control for the State of a very high proportion of the current output of the nation; and the task of public finance, now as then, would be that of translating into money terms this perfectly soluble economic problem. Foreign trade and the movement of capital would come under strict control as soon as war broke out. Both in this direction and in finance, we may find that we have to impose some of the war-time controls in the present half-peace if we are to catch up with Germany.

That we can catch up is beyond doubt. We are the far richer nation; we are not straining ourselves to equip an army of millions; and we still have the advantage, which Germany has now used up, of a considerable unused capacity of men and materials. This last factor may prove decisive. For though the Nazis can now produce no more guns without entrenching on their supplies of butter, we still have men and capital standing idle that could produce wealth to the value of at least £500 millions a year.

Our problem is to organise these riches for war, and in doing so we shall have to breed the same forgetfulness of any other object, the same disregard of vested interests, the same willingness to abandon cherished notions, as would be evoked by war itself. It is a bitter tragedy; indeed, a double tragedy, for not only is this energy and effort to be harnessed to the purpose of potential destruction, it is *only* for such a purpose that we are ready to do it. No high-sounding words can lessen this feeling of futility and frustration, of anger and disillusionment. But if the balance sheet of war itself has some items on the credit side—courage and service and comradeship and the demonstration that liberty is not weakness—then we may hope that the war-without-fighting on which we now seem doomed to enter may also bring some gain to offset its cruel waste.

Swedish Democracy

THE last few years have been a time of profound disillusionment for the progressively minded people in Great Britain who have been demanding large changes in our social and economic structure. Where ten years ago there was firm if not enthusiastic confidence in the future, there is to-day a paralysing sense of frustration. Our normal habits of party politics have taken on a curious air of artificiality. The reason is not far to seek. We had hardly recovered from the shock of the great financial crisis when we found ourselves face to face with the sudden rise of Nazi Germany, which was bound, sooner or later, to threaten the very foundations of our security. In such conditions it is but natural that envious eyes should have been turned towards the northern part of the Continent, where democracy shows remarkable driving force in the pursuits of peace, and particularly towards Sweden, which closely resembles our own in political and industrial traditions.

There has perhaps been a tendency among people with a superficial knowledge of Sweden to indulge in uncritical admiration, so that the real significance of what is happening there is lost in a haze of eulogy. Clearly it is important to have a first-hand knowledge of the facts; and for this reason it was a welcome step on the part of the New Fabian Research Bureau to send over a party of members in the summer of 1937 to study the character and achievements of Swedish social democracy. The results are presented in a volume entitled *Democratic Sweden*, edited by Mrs Cole and Mr Charles Smith, which makes available for the first time in this country a comprehensive survey of the political, industrial and social aspects of the life of this Scandinavian community.* Quite recently, in commemoration of the tercentenary anniversary of the first settlement of Swedes in America, there was published in the *Annals of the American Academy of Political and Social Science* a symposium, under the title "Social Problems and Policies in Sweden," written by leading Swedish economists and politicians and edited by Professor Bertil Ohlin.† These two publications, though they inevitably cover almost the same ground, do so in a way which makes them supplement each other. The two volumes taken together afford the English reader a valuable source of enlightenment on a subject which has hitherto been only partially explored.

Sweden, like the other Scandinavian countries, bases the whole of its policy on the assumption of neutrality in the next, as in the last, European conflict. This is not to say that Sweden has no problems of defence; on the contrary, much anxiety and a considerable amount of money have been devoted to the subject. But it does mean that it is still possible in Sweden for the problems of peaceful social progress to occupy the centre of the political stage. Both the books under review give an account of the system of social services; but the treatment in the *Annals* volume is more detailed, separate chapters being devoted to the administration of social welfare, the care of the indigent, maternal and child welfare, public health and medical care, social insurance, the treatment of criminals and the temperance movement and home ownership. Though Swedish health insurance is not an elaborate compulsory system like our own, it is unquestionable that the institutions promoting health on several fronts in Sweden are

more effective than in this country. It is refreshing to find a Government acting vigorously on the philosophy that "the costs of health services represent an *investment* in the most valuable productive instrument of all, the people itself." (Ohlin, p. 5.)

Closely connected with health matters is one of the most important recent departures in Swedish social policy, namely, the State's attitude towards the population trend. Mr D. V. Glass, in his interesting discussion of population policy in the N.F.R.B. volume, shows that, according to the conditions of fertility in Sweden in 1932-33, each woman was bearing 1.7 children instead of the 2.3 needed to maintain the population constant. Since the appearance of an arresting book on the population problem by Prof. and Mrs Myrdal in 1934, the attention of the public has been directed unceasingly to the causes and ultimate implications of this low reproduction rate. The Government took heed, and appointed a Royal Commission to examine the whole problem. In his essay in the *Annals* volume Prof. Myrdal provides a succinct account of the motivation behind the new policy. He argues that liberal neo-Malthusianism is not only out of date but a positive menace, and that a shrinking population will have very serious effects on the rate of investment in a capitalistic society. "The trend in population is one of the strongest forces promoting the socialistic ideas of State control in business and production."

But let no one think that the Labour Party in Sweden is occupied in spinning out a strategy for the "nationalisation of the means of production." This has never taken very deep root in Scandinavian political thought. Their originality lies in that they are planning a "nationalisation of consumption" which will serve both to promote the egalitarian ideal of socialism and to avoid the dismal prospect of a declining population. In other words, there must be a twofold redistribution of income—horizontal as between different types of families and vertical as between different social classes. And the practical solution, in Myrdal's words, is: "certain services free for all children and for families without a means test, planned as a rational co-operation among citizens in a democratic country on the principle of national solidarity, financed through the national budget, and therefore paid for according to the prevalent principles for distributing taxation according to capacity and ability." A cardinal feature of all this is that the subsidies, which have already been christened "internal dumping," must be in kind and not in cash. The forward-looking groups in British politics who have lost their old faith and are searching for new inspiration would do well to study this new trend in Swedish social policy.

Everything, however, is far from being of the best in the best of all possible democracies. Sweden may be without grimy slums; but it suffers from overcrowding to an extraordinary degree, even when measured on its own easy-going standards. Until recently this had been an ugly skeleton tucked away in the Swedish cupboard; but with the publication of the general report of the Population Commission it is no longer possible to hide it. A full and frank account of this and of the unequal distribution of income is to be found in two papers in the *Annals* volume. The number of dilapidated dwellings is estimated at 120,000 in rural areas and 30,000 in urban areas. No less than 13 per cent. of all dwellings in urban districts are overcrowded; and these accommodate 21 per cent. of the housed population. Unfortunately, it is not possible to explain this, as one of the authors tries to do, by referring to the rigidity of housing habits and regarding it as "a

* "Democratic Sweden": A Volume of Studies prepared by members of the New Fabian Research Bureau. Routledge. 12s. 6d.

† "Social Problems and Policies in Sweden." The *Annals of the American Academy of Political and Social Science*. Volume 197, May, 1938. \$2.50.

still fairly strong tradition from a not very distant time when the general standard of living in Sweden was much lower than to-day." The birth-rate before the War was high and the rate of interest comparatively low; and it therefore should have been feasible to build houses of a more spacious character. The Government now has an enormous housing problem to face, and it will require all its resourcefulness to tackle it successfully.

No account of Swedish achievements in the present decade would be complete without a reference to financial and monetary policy, which is dealt with in the N.F.R.B. book by Mr Geoffrey Wilson and Mr Hugh Gaitskell, and in the other volume by Mr Wigforss, the Finance Minister who is responsible for the whole experiment. The technique of budget balancing over a period is now being practised in Sweden: a Budget Equalisation Fund has been

established, and early this year an Emergency Budget was passed by the Riksdag empowering the Government to spend up to 230 million kronor on public works if and when it deems it desirable. The Finance Minister is in the enviable position of possessing a complete inventory of the public investment plans of central and local authorities for the next few years; and private investors know that the Government has both the firm intention and the resources to prevent the trade recession from going very far. Mr G. D. H. Cole, in his chapter on foreign trade, rightly emphasises the huge reserves of foreign exchange which have been accumulated. The country is in a strong position to combine budgetary and monetary measures in the interests of stabilising business activity; and Swedish experience in this field will continue to attract deep interest in other countries.

Branded Goods

IT has paid to advertise in retail trade ever since shopkeepers ceased to wait in their back-shops for customers to come in, and began to dress their windows to attract passers-by. With the harnessing of the inventor's skill to the business of advertisement, the speeding-up of communications and the growth of a popular Press, the pace of publicity has been immeasurably quickened; and shops and shopkeeping have undergone radical changes in consequence. By no means the least important sign of the revolution which is still taking place in retail trade is the spreading sale of packed and branded goods. Commodities are no longer exposed for sale, loose and in bulk, to be sold and wrapped and priced by the shopkeeper. They lie on the shelves and the counter, packed in tins, cartons or packets by the manufacturers, labelled with the maker's name and stamped with his prescribed retail price.

Indeed, our grandmothers would find shopping nowadays a strange and unfamiliar operation. In their day, they bought milk in an open can; we buy it at the door in a bottle or carton. They purchased peas by the pint; we buy them in packets or tins. They got their salt in a block and their coffee in the bean; now they are sold ready made up in containers. Sugar, washing soda and butter they bought from bulk and had it wrapped on the spot; we find these articles ready packaged to be taken away. Our grandmothers were trained in the *expertise* of buying, as the pages of Mrs Beeton bear witness. To-day shoppers seldom see what they are buying; they ask for a tin or packet or carton of whatever they require; and, what is more, they usually specify Somebody's named brand.

There were, of course, some branded goods even in grandmother's day. Doncaster Butter Scotch and Farrar's Harrogate Toffee are nearly a century old, and Lea and Perrin's Worcester Sauce, "from the recipe of a gentleman in the county," dates still further back. Two generations ago Epp's Cocoa, Mazawatee Tea, Epsom Salts and Pears' Soap were quite extensively sold. The branded soaps were almost the founders of national advertising; Pears' picture of "Bubbles" and Wright's Coal Tar baby who "won't be happy till he gets it" are still famous. But, for the most part, the grocer made up his own small packets of tea and sugar; the chemist lined his shop with jars and small drawers containing the galenicals and other drugs he compounded to his customers' request or to their doctors' prescriptions; and the widespread sale of branded goods is a comparatively recent growth. Before the last Great War, some 95 per cent. of the dry grocery goods then sold were taken from bulk and broken into small lots in the retailer's shop; it is estimated that in 1936 only 25 per cent. of these goods were dealt with in this way; and, in the sale

of confectionery, tobacco, cigarettes, toilet preparations and pharmaceutical goods, branded lines have come to play almost as important a part as in groceries, though no accurate figures are known. The spread of branded goods is a logical stage in the development of advertisement. Indeed, the proprietary brand is almost the only way by which advertising can be applied to the supply of household wants. The packet with its advertising matter attracts custom, while the name on the packet retains it, so that the branded packet becomes in effect the manufacturer's silent but efficacious salesman. Customers come to know one brand and ask for it always. In the old days manufacturers relied upon retailers to distribute what they made, paying special sales bonuses to the sellers of their goods to push their sales. They still do over a wide field of articles, but, more and more, they tend to rely upon advertising to increase their sales, for the simple reason that it is more effective and more profitable.

Nor is this all. Retail trade has lately become a battleground in which the manufacturers are struggling for control of the process of distribution with the large retailers—that is, the multiple shops, the co-operative societies and the department stores, who are also big enough to invoke the power of advertising. One potentate of West End retail trade, for instance, has laid it down that retailers, because they come into direct contact with customers, form the essential link in the distributive chain: that they know what customers want and, interpreting those requirements, they should direct and rule the manufacturers. Many large retail establishments have their own brands or put their names to the goods they sell; all goods within the growing compass of their activities are fitted into their own price and turnover policy; and by virtue of their size and resources they impose stringent terms on the manufacturers they deal with. The co-operative movement, the multiple shops, chemists like Boots and grocers like the Home and Colonial have even gone into the field of manufacture. The branded article is the independent maker's counter-attack; it enables him to hold a large share of the smaller shops' trade and, in some cases, even to force his way into the big department stores and chains. To an increasing extent, distribution is falling into two spheres: one in which the big retailer dominates the anonymous manufacturer, and the other in which the manufacturer's brand dominates the small retailer's activities; and in each case the dominant party buttresses his position by the publicity his large size makes possible.

From the manufacturer's point of view, therefore, branded goods are a weapon and a protection. They enable him to impose his own price policy on part at least of the

retail market; and the setting up of the maximum number of selling points, or outlets for the sale of his goods, is encouraged by popularising widely his brands. Indeed, the multiplication of selling points is a striking index of the spread of branded goods, for the shopkeeper needs no special skill to sell them. A Trial Census of Distribution covering Kidderminster, Chorley, Wycombe, Stafford, Weymouth and Jarrow revealed only 230 grocers and 25 provision dealers who could be described as professional full-time retailers; but there were 1,248 retail outlets for canned goods and 901 for pre-packed provisions. In the whole country there are only 41,000 true tobacconists' shops and no more than 60,000 confectioners; but there are 560,000 tobacco and cigarette licences and probably 250,000 confectionery outlets. There are more than 160,000 sellers of patent medicines and only 14,000 true chemists.

In fact, the business of the small independent shopkeeper has been turned topsy-turvy by the distribution of branded goods on a wide scale. Branded goods can be so easily sold that a shopkeeper is now often little more than a storekeeper or commission agent. The number of shops has grown greatly; the part-time retailer flourishes; and the trained shopkeeper is losing his craft. Yet the craftsman is by no means the rule, and many retailers are helped much more than they are hindered by having to handle branded goods packed and priced for them. Shopkeeping is, in fact, made easier.

Shopping, too, has been made easier by branded goods. There is a mass demand for cheap luxuries and cheap

varieties of clothing and foodstuffs. It is a demand stereotyped by publicity and well served by cheap articles, widely known by name and quality. Customers pay extra for the amenity of convenient and hygienic packaging; they pay, too, for the somewhat disingenuous service of advertisement; and, in return, they get the benefits of large-scale production.

In fine, while the manufacturer clearly gains from the spreading use of branded goods and the small retailer, on balance, probably loses, the consequences for the customer are less easy to define. It may, of course, be argued that the customer is always in a position to call the tune, since he pays the piper and can place his patronage where he wills. Yet it is also true that the shopper's preferences are almost entirely determined by an unending barrage of publicity. He is told, plausibly, persuasively and insidiously, what he wants and needs: more often than not, he buys it. In many cases his real interests are genuinely served in this way. But in a small but not inconsiderable number of cases the branded goods which are thrust upon him, so to speak, by a process akin to hypnotism, are at the best not worth the price, and at the worst they may be definitely deleterious. Advertisement and the branding of goods have given great power to manufacturers and their salesmen. The consequences for the community at large depend almost entirely upon the standards of good faith and honest service which the makers of branded goods set for themselves—as well as upon the common sense and discrimination of the purchaser himself.

From Washington to Munich

By Sir Walter Layton

IT is a tradition of *The Economist* that once, and once only, during his term of office the Editor is permitted to draw aside the veil of anonymity and address a personal message to his readers. The occasion is that on which he says farewell.

The seventeen years during which it has been my privilege to occupy the chair of James Wilson and Walter Bagehot have been ones of great and rapid change in the world's affairs. The first article that I wrote after my appointment was one recording the success of the mission of the late Lord Balfour at the Washington Naval Conference. My editorship closes with the Agreement of Munich. It began with high hopes of world appeasement inspired by a great practical measure of disarmament; it ends with a hair's breadth escape from world war and a precarious truce.

Three features stand out from the history of the post-war decades. The first is the great progress in science, in the arts of production and in the living conditions and well-being of the masses of the people in most countries of the world. But this encouraging record is marred by two sinister influences. One is the deterioration of political relationships which has reduced the League of Nations to impotence and has divided the world into two rival camps; the other is the failure to establish economic relationships on a reasonable basis—with the result that we have suffered one of the worst depressions in history and seem unable to build up lasting prosperity. Millions of citizens in the richest countries of the world without a means of livelihood, armies of refugees whom no country will harbour, with millions more to come, the mills of industry frantically grinding out weapons of destruction—these things are a cynical commentary on civilisation in the middle of the twentieth century.

In these dark days it is well to remember what material

advantages we now possess if we only knew how to use them. In this country the standard of living has risen almost continuously since 1920. In spite of depression in certain areas real wages are good, the standard of housing is immeasurably superior to that of pre-war days, social services have been expanded, pensions have been extended to widows, the maintenance of the able-bodied unemployed on the "dole"—which ten years ago was widely regarded as a symptom of our economic decay, has been reorganised as a central Government service and is taken as a model by other countries of the world.

New amenities have been brought within the reach of masses of the people—including the popular motor car and the radio, which dates in this country from no longer ago than 1922. In the sphere of industrial organisation, transport has been reorganised in London and on the main railways and roads of the country, major industries such as the coal, steel and cotton trades have come together with Government help or stimulus and superseded competition by co-operative marketing and production. After a series of industrial upheavals which culminated in the General Strike of 1926 (during which the editorial and advertisement staffs of this paper contrived to maintain our unbroken record of publication with the help of a hand press), relations between Capital and Labour have settled down on a harmonious basis and for over ten years the course of economic activity has been very little disturbed by industrial disputes.

In the political sphere, the franchise has been extended to every adult; the perennial unrest of Ireland has been allayed by the curious device which includes a republic under the British Crown; while by the Statute of Westminster the Dominions have been made equal partners with Great Britain and are free to come and go in the Commonwealth. Even India, after much travail and political

upheaval, is at last enjoying autonomous government in the Provinces and is on the threshold of federal self-government. In important spheres democracy has extended its domain, while in great States the status of the workers has made important progress. Experiments in living and in the social structure have been made on the grand scale. Indeed, one of them—in the Soviet Union—covers by far the largest single territorial unit in the world.

Unfortunately, those to whom has fallen the responsibility of directing the political destinies of the world have not risen to the height of their opportunities and have failed to eradicate the seeds of hatred and of ambition which were sown by the war and its aftermath.

In its attitude to the problems of our time the policies advocated by *The Economist* have been in line with its liberal tradition. It was natural that the paper which was started nearly a hundred years ago to support the repeal of the Corn Laws should in these post-war decades have emphasised the importance of restoring the freedom of commerce. In the early 'twenties there was a tendency to regard currency stabilisation as a golden key for restoring prosperity. At the time of the Austrian and Hungarian reconstruction schemes this paper was almost alone in urging that to stabilise currency and to provide foreign capital for distressed countries would be futile unless in Central Europe tariffs and other restrictions on trade were drastically reduced. It stressed the necessity of commercial agreement in Danubia, pleaded for permission to these States to make preferential arrangements, and urged that we should modify our most-favoured-nation rights in order to enable them to do so. Even after the World Economic Conference of 1927, when the delegates from over fifty nations unanimously endorsed the plea for freer trade, nothing was done except the conclusion of a few bilateral treaties in which some very minor modifications of the existing system were effected.

Again, with almost painful reiteration, *The Economist* pleaded for a more rational attitude towards Reparations and International Debts which were helping to create a gross distortion of international payments and a maldistribution of gold. This paper approved the return of Great Britain to the gold standard in 1925 in the belief that in a world where commerce was flowing freely the general level of prices that then obtained would continue. It was not foreseen that the French monetary inflation would be followed by stabilisation of the franc at a level which undervalued it in relation to the £, and that for a number of reasons there would be a long deflationary drag upon the price level in this country.

The later years of the nineteen-twenties were ones in which Britain was forced to readjust its industrial life to a new equilibrium in which foreign trade represented a much smaller percentage of our national activity than was formerly the case. Surveyed in retrospect, the economic historian will probably conclude that the difficulties which this country faced in the years 1925-30, and the restraint which they imposed on the rate of our economic advance, were partly responsible for the fact that when the great depression came in the early 'thirties this country suffered less than others. But in the world as a whole there can be no doubt that the five years preceding 1930 were ones in which a great chance was missed of rebuilding prosperity on the sound basis of international economic collaboration.

If this was the case in the economic field, it is even more glaringly true that in the political field the decade and a half that succeeded the war were years of lost opportunities. The unwise policy of keeping Germany weak and encircling her with an overwhelming force manifested itself in many ways; but it is epitomised most clearly in the sorry tale of procrastination in the matter of disarmament. This is not the place to repeat a story which students of history will find fully recorded in the files of *The Econo-*

mist. One or two quotations will serve to point the moral. On September 15, 1938, Mr Chamberlain flew to Berchtesgaden. In its issue of September 15, 1928, *The Economist* commented on a speech of M. Briand before the League Assembly in Geneva in the following terms:—

If we are meant to take this speech seriously, it is a pronouncement which condemns to failure the policy of international disarmament, and therewith, in the long run, the hope of international peace. . . .

The gist of M. Briand's speech is that Germany's actual and acknowledged fulfilment of the severe and comprehensive disarmament clauses of the Versailles Treaty is not a fact on the strength of which other powers can afford to do likewise, because the total disarmament of Germany is inherently impossible. . . .

The French Government is undoubtedly giving the German people the strongest stimulus to re-arm on the first opportunity by repeating Napoleon's error of policy—that is, by maintaining a disparity of armaments and misusing this disparity in order to bring pressure on a temporarily prostrate opponent. . . .

The policy of which M. Briand permitted himself to serve as the mouthpiece last Monday is again doomed to defeat itself; but if it is allowed to run its course to that goal of self-defeat it can hardly fail to involve the whole of Europe, if not the whole world, in this fresh catastrophe.

The article concludes with an appeal to His Majesty's Government to make disarmament the most imperative concern of their foreign policy; if they are unwilling to do so it should be made a chief issue of domestic politics.

Six months later, on March 16, 1929, *The Economist* wrote:—

For the past ten years two incompatible systems of international relations have been in competition for the mastery; and the same statesmen in the same countries have been promoting both with even-handed inconsistency. With one hand they have been preparing for perpetual peace; with the other for perpetual war. . . . Ten years hence we shall know which is going to prevail.

Eighteen months later the warning note became more specific:—

The National Socialists are not in power in Germany yet; but they may come into power very soon if the other signatories of Versailles fail much longer to redeem the promise of disarmament all round which they gave ten years ago. And if, in Germany, the National Socialists do come into power before the present naval deadlock between France and Italy is resolved, Germany and Italy will assuredly join hands.

In March, 1931, when economic catastrophe was fast approaching in Central Europe, there came the dramatic proposal for an Austro-German Customs Union. On its announcement *The Economist* wrote that "there are strong grounds for thinking that the reunion of Austria with Germany, both politically and economically, would be not only good for Austria, but for Europe as a whole," for it would introduce a moderating influence into Germany. But both countries were pledged not to take the step of political reunion. A customs union, on the other hand, would be a wise move if it were based on a compromise tariff between the higher wall of Germany and the more moderate one of Austria and provided—as the two parties proposed—that the union were open to other countries which might wish to join. This point, said *The Economist*, is vital, "for on the answer to it depends the question whether this move is a step towards freer trade in Europe or merely an Austro-German economic rapprochement."

Once again, however, political considerations had the last word. The project was summarily dismissed. Events marched on to the inevitable economic crisis, the breakdown of the Reparations structure, the abortive talks with Dr Brüning on disarmament and the rise of the Nazi power.

Considerations of space forbid that I should attempt to recall the crowded incidents of more recent years, or comment on the growing pretensions of the dictatorships and the steps which have brought us to the brink of a second world war. To do so would only serve to emphasise

the heavy price that has had to be paid for lack of foresight, imagination and understanding. Nor, in giving these quotations, do I wish to lay claim to any special gift of prophecy. No journal can always be right, and *The Economist* has many times made mistakes in its judgment of events. If *The Economist* has on balance helped its readers to form a just estimate of current forces, it must be remembered that a journal such as this is the product, not of its editor alone, but of a team consisting of its contributors and staff; and that the common outlook of the paper is the product of many minds. I should be doing them less than justice if I omitted to say how singularly fortunate I have been in the colleagues who have worked with me during my editorship on the technical as well as on the editorial sides of the paper.

It is equally futile to recall the past merely for the purpose of grieving over disappointed hopes or causes that have failed. "It might have been" is never an inspiring text. The value of a retrospect is rather to learn the lesson that evil can be averted by wisdom and understanding provided that we have also the courage and determination to grapple with our own fate.

Recent events have left us face to face with a grim and menacing world. The lamp of freedom is burning very low in Europe. Those who share our idea of the things that make life worth while, who dream of a tolerant world in which men can come and go freely, can think for themselves, can count on decent behaviour from their neighbours and have a chance to make their own way, have had their hopes badly shattered. The prestige of the democracies is at a low ebb; the idea of might is in the ascendant; every small nation looks to the future with fear in its heart. We have to brace ourselves for a struggle of wills, for a great conflict of ideas and for a test of character and endurance.

This, however, may be said for our comfort. We have

seen in the past month that the political systems of Europe that are most detached from the popular will have had to give heed to the natural instinct of mankind to save itself from self-destruction. We may be equally certain that it is only a matter of time before the unquenchable vitality of the human spirit begins to break through the shackles that confine it in so many countries of the world. The ordinary men and women of Germany are not unlike the men and women of other countries. Their outlook has not been radically changed though knowledge may be denied them.

The spirit of liberty is not dead in Europe. But it has been temporarily hypnotised, by mass suggestion and by reiterations of the voice from the microphone, into a state of coma. It will slowly revive if there is an interval of peace and if the nations which are still free communities can show that they are as efficient and as courageous as those which have surrendered to dictatorships.

I have said little in this article of the business world with which *The Economist* is so largely concerned, or of the vicissitudes which it has experienced in the past decades. This is not because their story is either unimportant or uninteresting, but because it is to-day so clearly dominated by political events. Since its foundation nearly a hundred years ago *The Economist* has never failed to stress the interplay of these two phases of public life. The rapid growth in the number of our readers in recent years is one of many signs that this intercommunication is to-day more widely appreciated than ever before.

This is not an occasion for looking into the future or attempting to forecast the course of events. I will only say, in conclusion, that, whatever the future may have in store, our readers may rest assured that, in the competent hands of my successor, *The Economist* will continue to deal with public affairs in the light of those guiding ideas which have inspired it in the years that are now passed into history.

Topics of the Week

Zero Hour in Palestine.—Last week, when the High Commissioner for Palestine started on his journey back from London to Jerusalem after having finished his consultations with Mr Malcolm MacDonald, it was announced in Downing Street that "questions of procedure and of policy" had been "tentatively examined," and that a further statement of policy would be made when the Woodhead Commission's report had been received and the Government "had had time to give it careful study." This *communiqué* reads like a bulletin from some cloistered choir of scholars who, in the profound peace of their academic retreat, and with infinite time at their disposal, are deciphering a papyrus or dismembering the atom. But this prose version of Browning's "Grammarian's Funeral" is desperately inapposite to a grave issue of practical politics in which time is a matter of life and death. Rome burnt while Nero was fiddling; Jerusalem has blown up while His Majesty's Government have been conducting their scholarly researches into the minutiae of an ideal solution for a Palestinian problem which, as they slowly con and collate, is in danger of passing out of their control. During Sir Harold MacMichael's absence in London—or are we being belatedly informed of something which really happened much longer ago?—the command of the walled city of Jerusalem passed into the hands of the Arab Nationalists, who already controlled the greater part of the Palestinian countryside. On Wednesday, British troops in full fighting kit entered and took control of all the districts in the walled city except the Haram esh-Sherif, which contains the mosques of Omar and of Aqsa. Contrary to some expectations, very few casualties were reported. *Vis-à-vis* a Palestinian Arab Nationalism which believes that it is fighting for its life, the British Govern-

ment in Palestine to-day is in the same position as Antiochus Epiphanes was in 166 B.C. *vis-à-vis* Judas Maccabæus. The historical parallel works out with most unpleasant exactness. What crippled Antiochus and ensured the Maccabees' victory was the knowledge—in the minds of both the Palestinian belligerents of that day—that, though the lawful government of Palestine was potentially far stronger than the insurgents, there was a still greater power in the background, of which Antiochus must take account, and to which the insurgent Maccabees might appeal. What ruined

the Seleucids and made the Maccabees' fortunes in the Palestine of the second century B.C. was the paramount power of Rome; and to-day Rome's part is perhaps going to be played, in our present Palestinian crisis, by Nazi Germany. Already Germany's shadow stretches over a Turkey who may now at any moment find herself leaderless. How long will it be before it reaches to Turkey's pre-war Arab provinces? We have now either to crush the Arabs or to come to terms with them; we must make our choice without delay; and both alternatives are odious. Coming to terms may mean at least partial default on the Balfour Declaration. Crushing the Arabs will mean opposing the principle of self-determination by sheer force of arms—and this in the teeth of an Arab world and a Rome-Berlin axis which will hold our British "methods of barbarism" up to execration, even if they do not go on from words to action. A pretty kettle of fish!

* * *

Defence Deficiencies.—It is believed on good grounds that at Wednesday's meeting of the Cabinet it was decided to embark upon a comprehensive campaign to repair the defects in the country's defences revealed in the recent hours of danger. The peak of the crisis, before peace was made at Munich, revealed Britain ready to fight, but seriously unprepared. The cause of the grave gaps in our defences, against air attack in particular, was not simply the not unnatural reluctance which the Government had previously shown to take the stony path which leads to the setting-up of a complete war economy. Many of the measures which had already been decided upon were in fact inadequately executed. Active anti-aircraft protection in London, for instance, was gravely impeded, as Mr Sandys' activities threatened to reveal many months ago, by an absolute shortage of artillery and other equipment. This deficiency was due in part to faulty organisation of production, in part to inefficient provisions for the distribution of material and in part again to inter-departmental jealousies and the absence of any single centralised control. The open optimism of the War Minister last spring which so disturbed Territorial officers acquainted with the facts was never justified, though Mr Hore-Belisha must unreservedly be given the credit for insisting successfully that the priority of anti-aircraft measures should be recognised. It has now been decided to man vulnerable factories with workmen trained as anti-aircraft gunners; it is rumoured that accelerated mass-production is likely to provide an adequate quota of 3.7-inch guns by next spring; and it is inconceivable that civil defence at least will not now be co-ordinated in fact. Passive air raid precautions, too, were seriously deficient when the call came. The Home Office is busily conducting a thorough inquest into A.R.P.; officials from local authorities all over the country have met in conference this week in Whitehall; and many frank reports to the councils of big cities have shown how wide the gaps were.

* * *

For A.R.P. to work within its present framework local authorities, having appointed the right kind of trained officers, which many have so far failed to do, must know precisely what protection they are under obligation to the Ministry to provide; in the crisis this had not been decided and the local authorities set to work *ad hoc* and in the dark. The local authorities must know what schemes are expected of them and what plans will therefore be approved for grants-in-aid. The A.R.P. Act of last year gave no guidance, and Ministerial circulars thereafter showed only that the Government had not made up its mind. In the event, when it was too late to prepare plans, evacuation, trenches and shelters were centrally urged upon the local bodies, who showed enthusiasm and spent heavily but failed to improvise with conspicuous success. Here, again, it is hoped that the Government is moving expeditiously to organise central staff-work; and, as an interim step, it has been decided that the Government will pay the cost of trenches and shelters constructed during the crisis. But, in the last resort, neither active nor passive

defences against air attack, neither anti-aircraft units nor local authorities, can give the community adequate protection, except within a revised frame of central direction.

* * *

Official Secrets Inquiry.—The detailed evidence given by the chief actors in the so-called Sandys case to the Commons' Select Committee on the Official Secrets Acts was published as a Blue Book on Tuesday last. The document confirms the view that the incident became a question of Privilege and a parliamentary *cause célèbre* simply and solely because it was mishandled. The really significant points which emerge from the evidence are two. First, the wide divergence between the War Minister's optimistic statements in public about the artillery equipment of London's anti-aircraft defences and the actual deficiencies is, to say the least, surprising and disquieting; and since Mr Sandys' escapade the crisis has been more successful than he in bringing these facts to light. Secondly, the evidence of Ministers makes it abundantly clear that the position of Members of Parliament under the Official Secrets Acts has hitherto been quite undefined. It is arguable that M.P.s in the Territorial Army cannot combine their duty to be watchful of departmental failings with the discretion incumbent upon them as members of a fighting service. But, when the need to be speedy and efficient in re-armament has become paramount, the obligation laid upon Members to watch carefully the progress of defence preparations has been intensified, and it is a matter of urgent moment that Members should know where they stand in this matter. Ministers must no more be allowed to hide behind official secrets than private members must be allowed to broadcast them for party advantages.

* * *

By-Elections in Prospect.—No group of by-elections, however widely scattered over constituencies of diverse characters, can fairly represent the true course of public opinion, and at the present time, when opinion is fluid and facts about future policy little known, this generalisation is as true as ever. Yet the fact that foreign policy is likely to constitute an unusually single issue, common to all forthcoming contests, lends special interest to the seven by-elections now pending. They range over the whole of England; two county contests in Lancashire and Yorkshire; two in Midland boroughs at Walsall and Oxford; one in West Lewisham in London; and two in the Southern counties of Kent and Somerset. Only one seat, the Doncaster Division of Yorkshire, is held—and safely held—by Labour, and the remaining six have hitherto been represented by supporters of the National Government. But Walsall, held by a Liberal National, was Labour as lately as 1929; and the Dartford Division of Kent has been Labour three times since the war. The seat in the Fylde Division of Lancashire—rendered vacant by the sudden and untimely death last Sunday of Lord Stanley, Secretary of State for the Dominions—should, like West Lewisham, be safe for the Government, and the Bridgwater Division of Somerset has only deserted the Conservatives for the Liberals twice (in 1906 and 1923) during the past thirty years. Oxford, too, would not normally be likely to surrender its established Conservative allegiance; but the last-minute nomination of the Master of Balliol, with Liberal and Labour support, as an independent anti-Chamberlain candidate on the specific issue of foreign policy, lends uncertainty as well as interest to the contest. On the whole these elections are unlikely to show significant gains or losses, though the proportion of votes cast for the various parties may change in favour of the Opposition, since in most of the constituencies the Government is defending a fairly safe position. One thing at any rate the contests will almost certainly show: there has not been quite that unanimous swing towards Mr Chamberlain which Conservative organisers forecast on the morrow of Munich.

* * *

The Czechs Reorganise.—That Czechoslovakia had promised to maintain an attitude of "loyalty to the Reich" was the substance of an official statement issued

after Herr Hitler had received the Czech Foreign Minister, M. Chwalkowsky, at Munich on Friday of last week. General Syrový is making sure that there will be no delay in the assumption of this attitude. Political parties of the Left have accepted its necessity to the point of considering self-dissolution, in the case of the Communists, or severance from the Second International in that of the Social Democrats. Their acquiescence concurs in what most Czechs are thinking: and once again this nation must be praised for its steadiness in adversity. To further economic ties with the Reich four Czech Cabinet Ministers, MM. Kalfus (finance), Karvas (industry and trade), Feierabend (agriculture), and Vavrecka, have gone to Berlin for discussions on outstanding problems; and these may be presumed to include the straightening out of transport difficulties arising out of the secession of roads and sections of railways, and through the stoppage of traffic on the Elbe; conditions of trade (to preserve existing connections it is expected that tariff levels will be highly preferential); transference of Czechoslovak currency taken over in the seceded areas; and the wider issue of a possible Customs union. The International Commission has concluded its work by deciding against plebiscites, after the German and Czech Governments had agreed to accept as final the line already established as the limits of the Fifth Zone, and by taking note of the decision to form a Minorities Commission which will supervise optional transfers of Germans and Czechs to their own nationality.

* * *

Pending settlement of these and other matters, General Syrový and his colleagues are working hard, through the medium of twelve administrative commissions, to set Bohemia again on its feet. While Dr Benes has accepted an invitation to lecture at the University of Chicago, the Czech political parties and the Czech Cabinet are reported to have selected a new President who is without what *Narodny Listy* calls "a political past"—rather a business man who will help build up Czech-German trade. Relations with Warsaw and Budapest are now satisfactory enough as regards the Czech Government, though it is not yet clear—and cannot be clear until the Komarom negotiations are concluded and the fate of Ruthenia settled one way or the other—how they will stand as regards the Bratislava and Uzhorod Governments, or the somewhat ephemeral federal administration. In Prague—and in Europe generally—delay in settling Hungarian frontier claims is causing little anxiety. It is felt of the Slovaks and to a lesser degree of the Ruthenians that they must now look after themselves, and that with German support they need not have much difficulty in doing this. Visits to Munich paid by members of the Bratislava and Uzhorod Governments are natural concomitants to the visit of M. Chwalkowsky to Herr Hitler: it remains to be seen what results they will achieve.

* * *

Ruthenia.—Self-government for Ruthenia, Czechoslovakia's easternmost province, was announced from Prague on October 11th; and six days later the new Cabinet met for the first time under the leadership of M. Brodý. Until the new Hungarian frontier is fixed the fate of these people must remain balanced on the play of diplomatic forces in Central Europe. They now achieve self-government for the first time in their history: but even were this not so they could hardly prefer Magyar rule, of which memories are still warm, to the enlightened Czech Government which has been theirs during twenty years. For the Czechs have not dealt lightly with their Treaty obligations to watch over Ruthenian interests and prepare the province for eventual self-government: and although the rudimentary provincial autonomy in being until last winter has never satisfied politically-minded Jews and Ruthenes, the Czechs have put no little time and money into building up the country's resources. What could be done was strictly limited by the poor resources of a province which is three-parts covered

by Carpathian hills; but communications were improved and a beginning made with the introduction of secondary industries. Even a small tourist traffic exists, encouraged by the building of hostels in the hills and the marking of routes. The peasant economy is primitive, and to a large extent must remain so. But in the affairs of Europe the importance of Ruthenia is strategic rather than economic, and any doubt that this was so disappeared with Colonel Beck's sudden visit to King Carol at Glatz. With Ruthenia intact as Czechoslovakia's third federated province, Poland and those who share her point of view may look forward to German influence being pushed to within 150 km. of the Soviet frontier, and may speculate fearfully upon the whole line of dire events which such a possibility could entail.

* * *

Portents in Poland.—The duality of Polish foreign policy was etched deep this week by two separate events. Closer relations with Germany were announced with the acceptance of a long-term credit to the value of 120 million zloties (£4,800,000 at actual rates). And as if to emphasise Polish political independence, Colonel Beck made a spectacular entry into the news by visiting King Carol at Glatz. Reports agreed that his intention was to secure Roumanian support for the Polish-Hungarian move for a common frontier by offering to Roumania a piece of Ruthenia. Polish arguments for foreign consumption are based on Pilsudski's idea for a "neutral bloc" in Central Europe, but King Carol's support could probably only be obtained, if at all, for a much more definite return than such a dubious project. Meanwhile, there is a peck of troubles to be dealt with at home. The three main Opposition parties, representing peasants and socialists and the Right Opposition, have decided not to take part in the elections planned for the first week in November, and President Moscicki has threatened to decree the dissolution of all political parties. M. Kwiatkowski, Deputy Prime Minister and Minister of Finance, spoke for conciliation at Katowice on Sunday, but the real meaning of his speech was more likely to the effect that unless the Opposition seized this "hand of friendship" now, it would not be held out to them again. On the face of things the threat is illogical. The Opposition parties boycotted the 1935 elections because they were held under inequitable electoral laws. They are presumably ready to take part in elections as soon as the new Sejm and Senate which will come into being in November have altered those laws, as the President himself has indicated will be their main task. That the issue is nothing like so simple is proved by the close co-operation which now obtains between the President, the Government, and the Army chiefs. Poland may be facing hard times ahead, and if those in power could feel the safer for a more dictatorial regime, or a regime which excluded the possibility of Opposition influence, doubtless they would take the right steps to get it.

The position of Poland *vis-à-vis* her neighbours is not a happy one on any view. Colonel Beck has been decorated for his seizure of the "lands beyond the Olza," meaning Teschen and Bohumin; but from henceforth his conduct of diplomacy must be seen through the eyes of a man who knows that his country is now in virtual isolation and that the days of security are numbered. Re-armament is all the cry, and that with speed. As if to point the moral, riots have broken out in the Ukraine. Demonstrators at Lwów have shouted "Down with Hungary" and declared for the independence of Ruthenia, which they called "Carpathian Ukraine"; and counter demonstrators have smashed Ukrainian windows. Given favourable circumstances—which since the War have been notably lacking—each of the two great minorities of Poland, the German and the Ukrainian, could move the country into turmoil; the events of the past weeks show that creation of such circumstances will not be difficult for those in whose interests it is to bring them about.

Church and State in Austria.—The fate of the Catholic Church in the "Ostmark" of Greater Germany is not encouraging for advocates of the policy of "peace at almost any price" with dictators. Last March, when Herr Hitler invaded Austria and overthrew Dr von Schuschnigg's Government, Cardinal Innitzer made a supreme effort to win the conqueror's goodwill at the risk of seeming to desert a Catholic Austrian regime in its hour of agony. The Cardinal's policy aroused misgivings at the time both among the Catholics in the Reich and also at the Vatican—whither the Cardinal was summoned by the Pope to give an account of his stewardship. Two Saturdays ago, in a sermon preached in the Stefanskirche, Cardinal Innitzer frankly and courageously admitted that his policy of appeasement had been a failure. In spite of the Austrian hierarchy's public exhortation to their flock to vote for the *Anschluss* in Herr Hitler's confirmatory plebiscite, the Cardinal now had to tell his congregation that "in the last months you have lost almost everything." On leaving the Cathedral he received an ovation from the people in the heart of Vienna. That night his palace, which stands close to the Cathedral, was stormed and gutted by a mob of Nazi roughs, and while the Cardinal himself, who was absent at the moment, escaped without physical injury, one of the canons of the Cathedral was thrown out of a window and had his legs broken.

In this piece of "direct action" the Nazi authorities have denied their complicity (though it was committed, by men wearing Nazi badges and uniforms, in the presence of police, S.S. and S.A. men, who looked on without lifting a finger to keep the Fuehrer's peace—if the King's Peace has any Nazi counterpart). The Nazi version is that the sackers of the Cardinal's palace were Jews and Czechs! As a consolation prize for the Austrian Catholics, Herr Bürckel, the Reich Commissioner in the Ostmark, has closed all church schools in Austria that had not been closed already; excepted priests, in advance, from the fore-shadowed political amnesty in Austria; refused, once for all, to grant an amnesty to Dr von Schuschnigg; and announced that there will be no further negotiations in Austria between Church and State. In Vienna on the 14th a Jewish synagogue received the same treatment as the Cardinal's palace from a mob with which the Nazi authorities, once again, denied having any complicity. Presumably their story will be that the synagogue was gutted by the Catholics. At the best, the conclusion is that the Nazi State is too weak to maintain order in the streets of Vienna; at the worst that Herr Hitler deliberately raises one moral barrier after another across the path towards that moral reconciliation which he professes to desire.

Breakers Ahead in France.—Most Frenchmen would recognise that Munich has not really shifted the root of their troubles. That root is still embedded in lagging

industry, an unbalanced budget and insecure finances. And about that recognition, unspoken as it is by many who should know better, revolve the fortunes not only of M. Daladier but the balance of political power and the future of France herself. From the knowledge of it are drawn the sheafs of rumour which make a shadow-play around the harsh demand of circumstances for re-armament and strong administration. Will M. Daladier dissolve the Chamber? Will he form new ministries for armaments and the Treasury? Will he use his special powers on the 40-hour week? The Prime Minister does not say. Powerful forces are working for and against dissolution and M. Daladier, however valuable to the Radical cause he might esteem such a step, dare not try playing a lone hand. Nor is he likely, until he has felt the temper of the Radical Socialist Congress at Marseilles on October 26th, to pronounce decisions which would have to be carried against working-class opposition. The Right demands more guns and aeroplanes, many more, and a "national" government: the arguments go all their way, for the Left (like the British Labour Party) is caught in the sharp dilemma, re-arm or submit?, and in choosing the first, risks giving away far more than it ever intended. If M. Daladier is wise he will do all that is possible to close the threatening breach between Left and Right, and to mediate should be taken by the Radicals as a most serious duty. For the ordering of chaotic financial conditions in France is of such high importance as to ride over mere party considerations; in that spirit alone will M. Daladier achieve success in his task.

Vested Interests in the Meat Trade. One of the terms of the Anglo-Argentine Trade Agreement of 1933 was that a Committee should be appointed jointly by the two Governments to inquire "into the economic and financial structure and working of the meat trade, with particular reference to the means to be adopted to ensure a reasonable return to the cattle producers." This Committee was duly appointed, with Sir George Schuster as its chairman, and has now presented its report. The trade in meat between the Argentine and the United Kingdom is peculiar in many respects, but in none more so than in the extent to which it is dominated by a close ring of large firms. Six firms operating in both countries share between them 85 per cent. of the trade; they exercise a close co-operation in buying cattle from the breeders in the Argentine, in slaughtering, chilling and shipping the meat, and finally in selling it on the British market. The real meaning of the Committee's terms of reference was that they were to investigate whether excessive profits were being made by this joint monopoly—a monopoly which has been made almost exclusive by the British Government's import licensing policy since 1932 and has been economically strengthened *vis-à-vis* the producers by the quota restriction of imports. In this task the Committee have failed, not through any lack of endeavour on their part, but because only three meat-importing companies (including only one large company) would provide facilities for an independent check of their accounts. Five of the six big companies—Armour and Company, Ltd., Swift and Company, Ltd., Wilson Meats, Ltd., the British and Argentine Meat Company, Ltd. (Union Cold Storage Company, Ltd.), and the Smithfield and Argentine Meat Company, Ltd.—refused all requests not only from the Committee but from the Board of Trade itself. As the Committee remark, this attitude can only arouse the keen suspicion that the companies have, in fact, some very guilty secrets to conceal: "a trade in an important and necessary article of food which affects the economic relations between two great countries and in which the vital interests of large sections of their populations are involved, is in the power of half a dozen private concerns, which are so jealous of their rights to conduct their operations with freedom and secrecy that they have refused to co-operate in this inquiry which was set up for public purposes by the two Governments." In the circumstances, the Committee can only present partial evidence for their conclusion that, though the profits of the companies vary from year to year, there have been several years in which they have taken advantage of the Argentine producer's poor competitive

position without passing on to the British consumer any of the reduction in price thus exacted. It is, indeed, necessary for the companies "to realise that their opportunity to continue must be conditional on their being able to satisfy the Governments in both countries that in their operations they are rendering service of public value at no more than a reasonable charge"; and the Committee recommends, as a first step, the compulsory institution of a standardised form of accounts in which the companies shall make returns to the two Governments. Language of such severity towards large and prosperous business concerns can rarely have been held in an official document. It is fully deserved; and the companies will only have their own contumacy to thank if the public puts their business high on the list of activities to be brought under strict public control.

Mr De Valera on Partition.—England's difficulty is apparently still Ireland's opportunity. Mr De Valera, who only a few months ago was, perhaps prematurely, admitted to the favour of the British Imperialists, has improved the shining hour of Munich by uttering a demand for the end of Irish Partition—that is, for the incorporation of Northern Ireland in Eire. He does not, it is true, demand a unitary annexation; the autonomy of Northern Ireland is to continue, but with the powers of the Parliament at Westminster transferred to a new body, elected by proportional representation, at Dublin. But Mr De Valera has made it clear that a mere rectification of frontiers in Counties Tyrone, Fermanagh and Down would not satisfy him, for it would leave Catholics still in Protestant territory and the national unity of Ireland would still be impaired. Until Partition is fully ended, he warns, Ireland cannot be expected to give England any positive aid in any international unpleasantness that may arise. There is no question that this utterance has caused widespread annoyance in England, partly because of its tactless timing, partly because of the irritation which the Englishman always feels at every resurrection of the Irish problem after every "final" burial. But the Englishman cannot dismiss the problem by the application of common-sense; it is doubtless true that the Southern Irish are much better off without the Protestant Ulstermen than they would be with them—after all, who should know better than the successors of O'Connell, Parnell and Redmond, how serious a nuisance a determined minority can be. But any such argument is merely beating the air. Even "sensible" and "moderate" Irishmen passionately desire the end of Partition. Nor can the Englishman leave the problem to the Irish to settle among themselves. Though he does not know it, the Catholic Irishman regards him, and not the Ulsterman, as the real cause of Partition and the chief obstacle to its removal. England created Partition, runs the argument, and England, by her troops and her subsidies, maintains it to-day. Therefore England must procure its end.

English opinion, if it was thinking about the problem at all, would find itself as divided as ever it has been—not only divided, but confused by the existence of a minority within a minority. The Left in England has recently been arguing in the Czechoslovakian affair that there are some cases in which a minority cannot fairly claim, on the strength of self-determination, to secede from the State in which it finds itself. But how does this apply to Ireland? Does it mean that Northern Ireland can justly be invited to reconcile itself to minority existence in a United Ireland, or that the Catholics of Tyrone and Fermanagh can justly be forced to remain in an independent Northern Ireland? The Conservatives, on the other hand, have been busy proclaiming the paramountcy of self-determination over all considerations of nature, history or economics. Does this mean that Ulster has a right to be independent, or that the Catholic fringe of the Six Counties must be ceded to Eire? Or perhaps both? Thus do our European policies consistently come home to roost in Ireland. In abstract justice, Mr De Valera's claim is very

strong; partition between Eire and Ulster is absurd, as absurd as partition between Great Britain and Ireland. But in the present state of English opinion, the utmost that Mr De Valera can expect is an amelioration in the condition of the Catholics in Northern Ireland. The Irish problem will continue to be with us.

Italian Withdrawals.—In the last week of July, 1936, three warplanes with obliterated identification marks made forced landings in French Morocco, and the world first learnt of Italian military intervention in the Spanish civil war. Since then a steady flow of troops and war material has gone from Italy to fill the cup of enmity between the two sides; and although sporadic withdrawals have been reported (and left unconfirmed) ever since last winter, only this week are Italians officially quitting Spain. On Monday 10,000 legionaries sailed from Cadiz for Naples. The importance of their going is not great in a military sense, for they leave behind them technicians and much war material with what may be computed as twice their number in men; while the diplomatic importance of the event might be considered marred by a telegram in which Signor Mussolini assured General Franco that "Fascist Italy is and will remain fraternally linked with you until your victory." Point is lent to this comradely greeting by official figures published in Rome last week showing Italian losses between July, 1936, and October 10, 1938, to be 12,247 casualties, 2,757 of which were fatal.

When news of an impending withdrawal became known last week Italian official circles emphasised that this would be "a unilateral repatriation," not connected with international politics or with the business of the Non-Intervention Committee, but that in their opinion "it could provide Great Britain with the opportunity of bringing into force" the Anglo-Italian Agreement of last April. Voices abroad were not slow to echo, with appropriate gloom or enthusiasm, that this withdrawal would be Signor Mussolini's contribution to that "settlement in the Mediterranean" upon which Mr Chamberlain and the whole House of Commons had set their hearts as a preliminary to ratification of the Agreement. But the legionaries have reached Naples, and nothing to confirm this prediction has yet emerged from the talks which Lord Perth and Count Ciano are having in Rome. It would be a pity, now that there is a good chance of Signor Mussolini's persuading himself that the military deadlock in Spain does not justify the presence of an indecisive number of Italian troops, to do anything to delay their withdrawal by over-hasty ratification of an agreement which has been long enough on the stocks not to take harm by a little further exposure. There is, too, another aspect of the matter. It was expected in

this country that the Anglo-Italian settlement would lead automatically to a Franco-Italian settlement; and France is not yet a party to the Rome talks. It would be a still greater pity to reach a premature settlement under conditions which excluded French co-operation.

* * *

Nazidom and the Americas.—In the Americas the Third Reich has just been making some first-class diplomatic blunders which directly militate against Nazi aims—if we are right in believing that the fundamental principle of Herr Hitler's foreign policy is to keep the democracies divided by playing upon the attractions of isolationism, and at the same time to screen his own forward movements from democratic eyes by using "the Bolshy bogey" as a stalking horse. In both the United States and Brazil at this moment, sensational subversive plots against the security of the State are being brought to light; the conspirators turn out to be German and not Russian agents; and since the United States and Brazil are the two greatest of the twenty-one American Republics, these events may have an important influence in inclining American minds to the view that solidarity rather than isolationism may be, after all, the most effective means of national defence. The sensational prosecution of German spies which opened in New York last Monday has followed close upon a report on German designs in Latin America which has been made to Mr Roosevelt by Mr Bernard Baruch. Mr Baruch's *locus standi* is that he is a North American banker, in close touch with South America, and is also the President's personal friend. To Western eyes these credentials seem good, but Mr Baruch is already being bespattered with vituperation from Dr Goebbels' denigration-machine on the ground of his being a Jew. In the meantime events in South America are speaking for themselves. At the end of last week it was publicly announced in Berlin that the Brazilian Government had expressed a wish that the German Ambassador at present accredited to Rio should not return to his post (from which he is at present on leave in Europe). The Wilhelmstrasse has retorted by expressing its astonishment and demanding the recall of the Brazilian Ambassador in Berlin. The Brazilian Government's objection to Dr Karl Ritter lies in their belief that last year he misused his ambassadorial privileges in order to foment the abortive Putsch of the Brazilian Integralistas. This revolutionary "totalitarian" movement in Brazil is, in fact, accused of having received encouragement, funds and arms both from the Reich and from the German community in Brazil. The Brazilian Government have since been dealing severely with German organisations in the country; and many Nazi-minded German (as well as Fascist-minded Italian) residents in Brazil have been migrating to other Latin American States. The doctrine of self-determination is presumably not confined to one hemisphere, and in the New World it gives food for serious thought. Is it to be interpreted to mean that "hyphenated" Americans, Brazilians, Canadians and Argentinians are to have the backing of "totalitarian" Powers in Europe for setting up in the New World a sort of *imperium in imperio* for the European dictators' benefit? The Third Reich may live to regret that it has raised this momentous question to-day.

* * *

New Zealand Labour Win.—In last Saturday's general election the Labour Government of New Zealand was returned with an identical majority for a further three years of office. A record number of votes was polled, larger by 33,000 than in 1935; and it is a striking witness to the political consciousness of a nation which numbers only 1,500,000 persons, or a franchise of about 1,000,000, that 885,271 votes should have been handed in. The Labour Party retained its 55 seats against the Opposition's 25, the Nationalists gaining four seats on their 1935 strength at the expense of the six unattached members, only two of whom were returned. Mr Savage and his Government may congratulate themselves on having so successfully withstood the wear and tear of office. Their main tasks in the coming three years will be to consolidate the legislation they have passed, and ensure that what they have already

done can and does withstand the test of any recession from the very high level of prosperity enjoyed by New Zealand in the past three years. Their efforts will be watched both with sympathy and with interest.

* * *

Land Use in Britain.—Now that the transformation of open spaces into trenchworks and cantonments has been suspended, the debates of planners upon guiding and controlling land development have been resumed. The crisis brought grist to their mill: last week-end, the Garden Cities and Town Planning Association, in a meeting at Letchworth, made the most of the arguments afforded by the vulnerability of large towns to air attack for the decentralisation of population and industry; while, at Chester where the conference of the Council for the Preservation of Rural England was in session, Lord Justice Scott laid stress upon the way in which haphazard building by disparate bodies and persons had created a gigantic evacuation problem for London in time of war. Neither the Association nor the Council, however, were content to rest their case for immediate and comprehensive control of urban development upon negative though vitally important considerations of war-time dangers. Both bodies sought a positive peace-time plan. At Letchworth an attempt was made to get down to bedrock principles in a discussion between advocates of garden cities and supporters of trading estates. In garden cities industrial and residential developments march together. On trading estates industry alone is fostered and housing is left to other and largely unrelated authorities. It is difficult to escape the view, embodied in a resolution at Chester, that the time has come for a national survey of the uses to which the land is being put or is likely to be put in the near future. It is wholly in the interests of the community that the Cliveden, Taplow and Dropmore estates in South Bucks should have lately been declared open spaces for ever; but it is where industry, housing, transport, farming and defence must continue to compete for the land that a guiding hand upon its apportionment between these competing claims and upon the siting of houses and factories is, within reasonable limits permitting an economical measure of free enterprise, *prima facie* desirable. When the Barlow Commission has finally wended its weary way to the stage of decisions and recommendations, we shall know more about the likely direction of official policy. Meanwhile, the Town Planning Institute's proposal for a National Advisory Committee, endorsed by the conference at Chester, is unlikely to do more than add to the expert and well-intentioned but quite powerless bodies which already exist in considerable numbers.

* * *

Robert Crozier Long.—With deep regret we record the death in Berlin at the age of sixty-six of Robert Crozier Long, our Berlin Correspondent. In him *The Economist* loses not only one of its most valued contributors but a personality whose flavour charmed all those who were privileged to know him. He first settled in Berlin as a newspaper correspondent before the war and—as he mentioned in that remarkable last contribution which was printed as a Letter to the Editor last week—escaped in the British Ambassador's train in August, 1914. He returned after the war and remained there ever since. An Irishman, whose tongue, even after decades spent abroad, still had a touch of Tipperary, Long had the Irishman's directness and humour. The last five years brought out his true character, for the bluntness and candour of his comments on the Third Reich made many of his friends seriously apprehensive for his safety. Long, characteristically, confessed to less disturbance than anybody. But those who saw him in London two weeks ago after the threat of war, for the second time, had driven him out of Berlin, realised that he had been under a serious strain. Nevertheless the suddenness of his death from pneumonia, after he had begun to recover from a heart attack, was entirely unexpected. It is a personal loss to the staff of *The Economist*, deepening the sympathy that is felt with his widow and daughter.

Some Check to Recovery

NEW YORK, October 10.—Although the complete data for September will not be available for some time, the Bulletin of the Federal Reserve Board estimates the index of production for that month at 90, two points above the August figure. This is approximately in line with private estimates, but is lower than was expected early in that month. It is quite clear statistically that the momentum of recovery was retarded—perhaps only temporarily.

The common explanation of the slowing-down is the uncertainty arising from the European situation. Movements in the share market coincided with important European events: prices sagged irregularly during August and violently in early September; but began to rally on the announcement of the Munich conference. In rapidity and extent, this rally has been comparable to the steep advance in the last days of June; and the averages have been raised above the highest levels of July. Simultaneously, there has been the usual change in "business sentiment," which follows the stock market regardless of other considerations—that is, that part of "business sentiment" with which Wall Street is in contact, and which passes in Wall Street for "business sentiment" as a whole.

Yet, from the data available (still far from complete) it appears that the somewhat disappointing showing of production in September was mostly attributable to the fact that motor output did not equal forecasts; and at least one contributory factor to this was the outbreak of labour controversies in the motor industry. The focus of this controversy seems to be the demand of the workers for a 32-hour week; and this question is as yet unsettled. It is likely that automobile production in October will greatly surpass the September output, but the record of the month so far is below the earlier forecasts.

Labour Laws

On October 24th, the "Fair Labour Standards Act of 1938" becomes effective. This Act (usually called the *Wages and Hours Act*) provides, first, minimum wages of 25 cents an hour for the first year, 30 cents for the following six years, and 40 cents thereafter; and, secondly, a working week not longer than 44 hours in the first year, 42 hours in the second year, and 40 hours thereafter. Overtime is permitted (to be paid for at time-and-a-half rates) in the case of certain classes of concerns.

In addition, there is an appreciable number of specifically exempted industries, mostly concerned with agriculture or the processing of agricultural products. The Act also defines child labour and prohibits the employment in industry of persons under 16 years of age. Again, it provides for the creation of "industry committees" in each industry, which are to be charged with questions of labour relations.

To sum up, the Act is designed to be a comparatively simple directive: it states certain standards, such as minimum wages and maximum hours, leaves a good deal to the discretion of the Administrator, and provides for limited industrial autonomy within the jurisdiction of "industry committees." At the time of its introduction, while the Act was not at all welcomed by the business community, it was not actively opposed by big business, nor did Wall Street, which is naturally closely interested in big business, pay much attention to it one way or the other.

This is still true. The approach of October 24th has not disturbed either big business or its financial relatives. By and large, it is probably fairly safe to say that there is scarcely a corporation listed on the New York stock exchange that needs to make any substantial change, either in wages or hours, in order to conform to the Act. Indeed, it is probable that few are now working more than 40 hours a week.

The unconcern of big business and Wall Street is not shared by small business; and there is abundant evidence that, for the smaller industrial firms, October 24th is a date of real apprehension. Wall Street, however, is so remote

from Main Street that it has no views about the validity or extent of these fears; and, rightly or wrongly, it does not take them into account.

Pensions and Politics

In the history of interim elections, this year is unique. Ordinarily, interim elections are viewed primarily with regard to possible changes in the balance of power between the major parties in Congress. As a rule, local issues are genuinely local; and not since the days when prohibition was a burning question has it been possible to make any national synthesis out of local issues. It is different this year. In State after State, it is clear that the major issue, quite unrelated to national party alignments, is old age pensions.

The schemes proposed vary widely, from the \$30-every-Thurs-Social-Credit referendum of California to the \$75 a month scheme for Massachusetts—with the Townsend Plan (\$200 a month), almost everywhere securing some sponsorship. It will be understood that these are all proposals applicable only to the individual States. It is their simultaneous appearance and general common character that makes it possible to form them into a national question extending beyond local issues. Nor does the sponsorship of, or opposition to, these schemes follow the national party lines. As late as early last summer, few or none would have been willing to forecast that the elections of the autumn would so largely centre upon this question. Yet, pension schemes are now the outstanding phenomena of our political economy as developed in the autumn's campaign.

Observations of this and similar trends provide reasons for the appearance of another phenomenon which is worth recording. Once again Wall Street is inflation-minded.

France

The Issues at Stake

PARIS, October 20.—To "rebuild France" would need longer than the thirty days to which the power of the Daladier Cabinet to proceed by decree has been limited to satisfy the Socialists. This is especially so if the effects of these decrees are to be neutralised by the social claims which will inevitably be raised during the discussion of the Budget, which will come two days after the decree powers expire—that is, on November 17th. Two dates are now of crucial political importance. On October 23rd partial elections to the Senate will be held. Between October 26th and 30th the Radical Socialist Congress, at which M. Daladier will be present, will take place.

The problem of financial reorganisation is fundamentally a political problem. So, too, is the problem of increasing production; industrialists, for instance, will not increase their expenditure on new and more efficient plant, to counteract

Falling Foreign Trade

The disappointing feature has been falling foreign trade. In July exports fell to 282.7 million dinars, 46.9 per cent. below the 1937 figure, and in August to 461.8 millions, 23.8 per cent. below the 1937 figure. Total exports for eight months amounted to 2,477,500 tons, valued at 3,132 million dinars, compared with 2,946,000 tons, valued at 3,959 millions in the same months last year—a fall of 15.9 per cent. in volume and 20.9 per cent. in value. Imports suffered less. Their total for eight months amounted to 864,700 tons, valued at 3,455 million dinars, compared with 692,000 tons, valued at 3,294 millions, in 1937; thus there was an increase of 24.8 per cent. in volume and 4.9 per cent. in value.

The relatively satisfactory import figures were entirely due to Yugoslavia's efforts to diminish her clearing credits, and they are not likely to continue, since last year's credit of 156 million dinars has now been converted into a clearing debt of 28 millions. Abundant output and smaller exports resulted in a fall in the index of wholesale prices from 79.4 to 76.8 between June and August, but this benefit was not passed on to the consumer, as is shown by the persisting high level of the retail indices.

In September, however, business came under the cloud of the Czech crisis. All business, and especially foreign trade, came practically to a standstill. Now that the immediate crisis has passed, business shows signs of reviving, but the trend of foreign trade is difficult to predict. Until June, trade had definitely tended to move towards Great Britain, who rose to second among buyers from Yugoslavia and third among sellers to this country.

Now, after the occupation of the Sudeten areas, a big German commercial drive into South-Eastern Europe is expected, and Dr Funk's visit to Belgrade, when he offered to take half of the exports of Yugoslavia in exchange for German goods, is regarded as the first step. There is every likelihood that this drive will succeed, since after the German success at Munich the reaction here is away from Great Britain and France, strengthened by the feeling that the lead in Europe has passed into German hands. The need for making good terms with Germany is being emphasised.

U.S.S.R.

Commercial Diplomacy

MOSCOW, October 15.—The most recent foreign trade figures of the U.S.S.R. provide small warrant for the apparent uncertainty in Western Europe about even the general lines of Soviet foreign policy. The curtailment of Soviet foreign trade with Japan, Germany and Italy during the first seven months of 1938 has been the most striking feature of recent Soviet economic policy abroad.

The Soviet monopoly of foreign trade is admittedly used as a political weapon to reinforce M. Litvinov's diplomacy. At times like the present, when the bulk of purchases is made for cash, without long-term financing, the time-lag between the initiation of policy and its effects on the direction of trade is relatively short. During Italy's invasion of Abyssinia, on the other hand, long-term credits maintained Soviet-Italian trade at a surprising level, in view of M. Litvinov's unsuccessful attempt to enforce general sanctions at Geneva. During the first seven months of this year, however, the Soviet Union imported exactly one ton of Italian products.

From first place among suppliers of goods to the Soviet Union in 1936, Germany slipped last year to second

Ask for

WHITE HORSE

as a matter of course

Screw-cap flasks

on sale everywhere

place, below the United States. This year Germany has been passed by Great Britain, Iran, Holland, Australia and Belgium. Soviet imports from Germany were valued at 308,463,000 roubles in 1936 and at only 35,037,000 roubles in the first seven months of this year. Traditionally the best of Soviet markets after Great Britain, Germany has purchased less in 1938 than Belgium and only slightly more than the United States and Iran.

Soviet imports from Italy, which were valued at 42,014,000 roubles in 1936, have fallen to 52,000 roubles so far this year—the value of a solitary ton of merchandise. Exports to Italy, valued at 5,835,000 roubles in 1936 and at 4,207,000 roubles in 1937, have completely disappeared in the current year. Soviet imports from Japan have fallen from 61,968,000 roubles in 1936 to 11,851,000 roubles in the first seven months of 1938, while the value of exports has declined even more precipitously, that is, from 27,679,000 roubles in 1936 to 354,000 roubles in seven months of this year.

Heavy Import Surplus

These declines are much larger than the small falling-off in Soviet foreign trade as a whole. Results for the first seven months of this year show a much larger surplus of imports than the Soviet Union has reported at this time for several years. If the usual heavy grain and lumber shipments at the end of the year do not suffice to redress the balance, the country will face its first unfavourable balance, on merchandise account, since 1932. Comparative figures of Soviet foreign trade for the first seven months of recent years are as follows:—

	(Roubles)		Import () or Export () surplus
	Imports	Exports	
1936 ...	761,182,000	724,844,000	36,338,000
1937 ...	796,422,000	827,663,000	31,241,000
1938 ...	836,511,000	647,288,000	189,223,000

Trade with China proper amounted to only ten tons of exports in seven months this year, although Sinkiang (Chinese Eastern Turkestan) apparently imported 15,528 tons of goods, worth 23,102,000 roubles, over the roads which may soon become the only open link between the Chinese Government and the foreign world. Soviet exports to Spain were valued at 19,388,000 roubles in the seven-month period, a large drop from the same period of 1937 when they averaged 10 million roubles a month.

Grain exports during the coming winter are expected to be kept down to a minimum as a result of the admittedly bad harvest in the Central region, the North Caucasus and parts of the Ukraine. As a consequence of last year's record crop, 708,935 tons of grain have already been exported during 1938. Grain exports (for twelve-month periods) have recently been: 841,050 tons in 1934; 1,594,647 tons in 1935; 322,272 tons in 1936; and 1,277,534 tons in 1937.

There are other features of recent Soviet trade for which no simple explanation is available. For instance, the nation has imported 128,698 tons of wheat so far this year; this is the first purchase of wheat abroad for many years, and it may have been used to replenish Red Army reserves in the Far East. At the same time, exports of fresh butter, which were 23,174 tons in 1936 and 14,350 tons in 1937, have amounted to only 158 tons during the first seven months of this year. The Moscow housewife, for whom butter has continued to be expensive and occasionally hard to find, can only guess where it has gone to.

Turkey

Germany's Trade Strength

ISTANBUL, October 1.—The annexation of the Sudetenland by the Reich, following upon the Anschluss with Austria, is bound to have some effect on Turkey's trade—as, indeed, it will have on the trade of all countries more or less subservient to German economic policy. Of the Turkish exports last year, amounting to £T137,983,551, the German share was £T50,412,000, the Austrian £T2,799,000, and that of Czechoslovakia £T6,093,000. Probably half of Turkey-Czechoslovakian trade has hitherto been done with the Sudetenland, so that this year's political events will probably entail something like a 12 per cent. increase in Germany's importance as a buyer of Turkish goods.

Almost the same situation was true last year of Turkish imports. Total imports amounted to £T114,379,026, of which the German, Austrian and Czechoslovakian shares were

£T48,132,000, £T1,847,000 and £T3,000,600 respectively. What business with Germany and her allies at present means to Turkey is strikingly shown by the following figures:—

	Imports		Exports	
	£T.	%	£T.	%
Germany	32,161,000	42.5	18,902,000	34.2
Austria	566,000	0.8	1,588,000	2.9
Czechoslovakia ...	3,924,000	5.2	3,611,000	6.5
Italy	2,882,000	3.8	10,682,000	19.3
Poland	1,105,000	1.5	554,000	1.1
Hungary	611,000	0.8	456,000	0.8
Total (from all countries).....	75,584,000		55,313,000	

Meanwhile, Turkey's debt to Germany, represented by funds due through the clearing, is steadily increasing, having now reached £T10,000,900, plus £T9,476,132 to become due within six months, and £T20,564,999 for which longer terms of credit have been provided—or a total of roughly forty million Turkish pounds. This, of course, means that Turkish producers have an opportunity to sell their staples at a very good price, as these clearing funds must be liquidated by means of German purchases.

Programme of Industrialisation

Recent declarations by the Prime Minister included full details of the Third Industrial Plan which is to be financed by means of the British Loan. It includes the building of an up-to-date port at Tshatal Agzi for the discharging of coal and ore and the shipping of the Karabük iron and steel products; another modern port at Trabzon on the Black Sea; twenty-eight new ships to reduce Turkey's dependence on foreign bottoms for the transport abroad of her staples; a ferry-boat link between European and Asiatic Turkey; and the modernisation of the two existing docks at Istanbul.

The Plan also provides for the manufacture of agricultural implements in a new factory at Ankara; the building of regional power stations at Zonguldak and at Kutahia, whence the requirements of a number of provinces, including that of Istanbul, will be met; and the erection of engine and aluminium alloy factories. A new cotton-spinning mill will be set up at Erzerum to spin the well-known Iğdır cotton; and three sugar factories will be erected, so that the seven sugar factories which will then be in operation will be able to meet the whole of Turkish requirements.

Meat, vegetable and fruit preserving industries, as well as the manufacture of cement, soda and sodium products, synthetic benzene, domestic fuel, etc., will be started in various towns. The cost of the whole plan is estimated at about £13 millions sterling.

Eire

In Search of Refuge

DUBLIN, October 11.—The most spectacular effect of the international crisis on the economic life of Eire was the decision of the Currency Commission to purchase £2,000,000 worth of gold bullion. The reason for this decision is that the Commission has a statutory duty to convert its notes into sterling on demand. It holds the greater part of its assets in the form of British Government stocks, and if war had broken out the sale of these stocks might have been impossible owing to the closing of the Stock Exchange, whereas sterling could always be purchased against gold, which might also have appreciated in value. No doubt the gold will be sold as soon as the danger of war is deemed to have disappeared, as its retention involves a substantial sacrifice of income for the Commission. The gold is valued at its current market price as there is no statutory price of gold in operation in Eire.

Another result of the crisis was the influx of refugees from England. Many of these were Irish emigrants who judged that their domicile of origin would be safer in war-time than their domicile of choice, but there were also numerous Jews and others who had never been in Ireland before. If war had taken place this movement of refugees would have given rise to some difficult problems. The British Government could not tolerate the flight of citizens seeking to evade their obli-

gations and the Irish Government would not welcome an immigration of such doubtful value. The movement illustrates one of the most striking features of Irish economic life, namely, the great mobility of the Irish population. Normally the movement is from Ireland to England, but on this occasion its direction was reversed. The complete absence of any need for passports, together with the cheapness of the journey, makes the Anglo-Irish population exceptionally mobile internationally, and facilitates emigration to England, which has increased so rapidly in recent years.

The Cost of Emigration

It is curiously difficult to arouse much interest in Ireland about the terrible national burden which this emigration causes. The number of emigrants is about 30,000 each year and their average age is about twenty. If it be allowed, as a rough calculation, that it costs about £1 per week to feed, clothe, house and educate a young person, it follows that each emigrant costs about £1,000 to produce. Part of this cost is borne by the parents, part by the State and part by the local authorities, but it is all borne by somebody in Ireland. As soon as the cost is fully incurred, the young person—the finished article, so to speak—is exported without any payment in return. If, instead of men and women, animals were bred and fed and fattened and then exported without payment, the disastrous drain on the country's resources would be more obvious, but it would not be more real.

In fact, the present rate of emigration involves Eire in a capital wastage of about £30,000,000 a year. If this sum were spent annually on building houses and the houses were burnt down as soon as they were completed, public opinion would be shocked. Nevertheless, the wastage of capital would not be any greater than that caused by the emigration about which public opinion is singularly complacent. Of course, the movement eases the urgency of the employment problem in the short period, and is on that account regarded with indifference, if not approval; but in the long run it means that our most costly export, socially and nationally, is given away without any payment in return and that capital is being wastefully invested on a gigantic scale. The realisation of these aspects of emigration emphasises the vital necessity of finding additional employment in Irish agriculture and industry. Unfortunately the statement of the problem is considerably less difficult than the suggestion of a successful solution.

Letters to the Editor

Counting the Cost

TO THE EDITOR OF THE ECONOMIST

SIR,—The amazing article entitled "Counting the Cost" in your issue of October 15th quite stuns one. What would you like this country to do in the terrible condition to which you apparently think we have been reduced by the events of the last few weeks? Why all this hubbub and stimulated panic? What are the facts, as contained in your own article? You commence by enlarging on the trivial point that the only difference between Mr Chamberlain and Herr Hitler in carrying out the occupation of certain territories has been whittled down to forty-eight hours. What of it? The point is: is it a just occupation and would you propose to alter the occupation by force of arms?

You state that:

it is unknown how much truth there is in the report that the German representative has presented his colleagues with a series of uncompromising demands which they have been compelled to swallow.

If the truth is unknown why take any notice of rumours, and what right have you to conclude because you don't like their conclusions that the International Commission had to swallow it?

Because the Czechoslovakia frontier has been wisely revised, and the possibility of a European war averted, and as a result the prestige and influence of France and Great Britain enormously increased, what proof do you adduce to show that they have received "a shattering blow"? I have read your article carefully and can see no proof of this statement.

What I do see is a better understanding with Germany progressing from day to day, which I trust will lead to a reduction in the devastating burden of expenditure upon armaments. Do you desire this? There may be further demands yet upon your feelings and susceptibilities when we come to discuss the former German Colonies question. In fact, what we are seeing to-day is a genuine attempt to straighten out and disentangle the follies contained in the Treaty of Versailles—and without war. Perhaps some day you will accord some appreciation and thanks to those statesmen who are engaged in this heroic task.

I am, Sir,

Your obedient servant,
D. M. MASON.

London, S.W.7.

[Mr Mason's amazing letter quite stuns us.—*Ed., Econ.*]

Low Prices and German Trade

TO THE EDITOR OF THE ECONOMIST

SIR,—Much is being written and said about the low prices of primary products and the disastrous effects these have on world economy; but less effort seems to be made to elucidate the reasons for the long depression in primary products prices.

Is it that Germany is "buying" primary products in various countries (chiefly tropical or subtropical) against payment in "aski" marks? In other words, is Germany bartering automobiles, flashlights, petrol lamps, thermos flasks, small hardware, and chemical products for various kinds of raw commodities such as coffee, cocoa, cotton, rubber, tin? The primary products taken in payment are not being consumed in Germany, but, to obtain foreign exchange, they are being sold in the world markets in competition with the producers themselves—thus keeping down the price of primary products below economic levels, lowering the purchasing power of the labourer in tropical and subtropical countries.

This reduces the exports of articles manufactured by relatively highly-paid labourers in the United Kingdom, North America, etc. As approximately 75 per cent. of the world's population are producers of primary products, the reduction in their purchasing power, with the attendant reduction of sales to them of manufactured articles, adversely affects the standard of living of the labouring classes everywhere—in manufacturing countries as well as in raw-material producing countries.

Planned economies operate on the principle (but, in Germany's case, not in practice) of balancing sales and purchases between particular countries, and Germany, not unnaturally, is endeavouring to overcome the restrictions that such planned economies place on triangular trade. In trading with Germany on the basis of barter, countries producing raw products have failed to realise the effects on the market for their own commodities of Germany's underselling practices. Producers of raw materials have been pleased to take advantage of the cheap manufactured goods offered by German traders, but they have failed to appreciate that their own products have also been offered elsewhere at cut rates in competition against themselves.

By such practices, Germany has depressed the market for primary products, enabling her to acquire at low cost the raw materials required for her national economy, and to dump goods manufactured by her under a system of what practically amounts to regimented labour. She is imposing upon the rest of the world a heavy part of the load of feeding, clothing, transporting, and training in Nazi-ism her own population. Thus Germany assures herself that none shall enjoy a standard of living higher than her own nationals, and indeed imposes on the so-called "backward peoples" the continuation of a standard of living which in many areas borders on the starvation line.

Yours truly,

FREDK. C. HARDING.

Port of Spain.

Books and Publications

Whither Poland?

FOR those interested in Poland's industrial progress and financial vicissitudes since its re-birth as a republic just twenty years ago M. Wellisz has performed an extremely useful service in compiling—for the first time—all the relevant statistical material. Since, however, the purpose of his praiseworthy effort was to direct attention to the attractiveness of Poland as a field of investment for foreign capital, it must be regarded as most unfortunate that the book* appeared just when the European balance of power was being turned topsy-turvy, first by the German annexation of Austria, and then by the dismemberment of Czechoslovakia—Poland herself, incidentally, playing anything but a gallant rôle in the latter event.

If M. Wellisz had deferred publication of his book for a few months, it is very much to be doubted whether he would have been so positive in asserting that the history of the Polish partitions cannot repeat itself because "the re-appearance of a similar set of circumstances is unthinkable." It is true that the Austro-Hungarian monarchy is no more, but it would surely need much courage—or stupidity—after the fall of Czechoslovakia to assert, as M. Wellisz does on page 161, that "any aggression undertaken against Poland by Germany and Russia jointly, with the other countries of Europe maintaining a passive attitude, is out of the question, in view of the acute conflict between the interests and tendencies of these two neighbours of Poland." Let us wait awhile, and see what happens in the Ukraine.

Eyebrows might also be raised at the statement, on page 163, that "from the point of view of the internal consolidation of the republic, the possibilities for foreign capital in Poland are by no means worse than those presented by any other country in Western Europe." Much has been said and written about national unity and internal consolidation since the death of Marshal Pilsudski three and a half years ago, but within the last few days the leaders of the Opposition parties, whose members are said to comprise a substantial majority of Poland's eligible voters, have announced that the policy of passive resistance to the governing regime has not been affected by the decision of President Moscicki to hold new elections for the Sejm and Senate in November. And this is the situation, notwithstanding "the magnificent success" which is said to have attended the foreign policy of Colonel Beck in respect of Czechoslovakia.

Until both the external and internal outlooks become much clearer, therefore, it would seem that the cautious investor would be well advised to place M. Wellisz's thorough and capable book on the shelf and to make a note to read it again a year hence—if in the meantime Poland has not suffered an even worse fate than has befallen Czechoslovakia.

Shorter Notices

"Over the Points." The Southern Railway's Quarterly Review. October, 1938. Southampton Docks Centenary Number.

We are now in the thick of the several centenaries of the early railway and steamship age. In April the first crossing of the Atlantic wholly under steam was celebrated. Last month the first linking of London and Birmingham by rail was commemorated. Ten days ago the laying of the foundation of Southampton Docks a hundred years before was duly remembered. To most people the quays and docks which lie between the mouths of the Test and Itchen are associated with Atlantic travel and blue ribands. But Southampton's progress has been based upon goods as well as passengers and upon the Far East as well as North America. In 1937 Southampton was fourth among British ports in the value of freight trade and third in tonnage. And the Peninsular and Oriental boats which inaugurated the new docks in 1842 have contributed, together with Union Castle and other Eastern

lines, as much of solid worth through the years as the express steamers to the United States and Canada. The great days of Southampton Docks date from 1891, when the London and South Western Railway (now the Southern) took over, and the £9,000,000 spent by the Southern Railway on dock extensions only a few years ago measure the port's advance since the Southampton Dock Company spent £5,000 on the dock's beginning. It is appropriate that the Southern Railway's own quarterly review should have commemorated so brightly and readably this notable centenary, when factories and warehouses on the Western Shore are at last bringing home the fruits of Southampton's famous enterprise.

"Survey of Corporate Securities." *The Financial Post*. Toronto. Published in London by The Maclean Company of Great Britain, 2-4 Cockspur Street, S.W.1. 288 pages. 9s.

This is the twelfth issue of *The Financial Post* survey of Canadian corporations whose securities are held by the investing public. It covers some 1,500 companies, setting out their financial history over the past three years, together with particulars of their capital, plants and management. The Survey is an authoritative and carefully prepared work, with an established reputation.

Secret Agent in China. By Amleto Vespa. Gollancz. 283 pages. 10s. 6d.

This is a rampaging polemic against the Japanese in Manchukuo and all their works written by an Italian, now a naturalised Chinese, who has served in the Japanese Intelligence Service. Fortunately for one's sleep at nights, the tale lacks literary skill to such a degree that the horrors the author describes and the Japanese ambitions he outlines fail to grip the emotions or stir the mind to responsive action. Very often there is significant lack of circumstantial detail. The narrative is never bald, but it is frequently unconvincing.

THE BUSINESS WORLD

The Need for Cheap Steel

AS the period during which domestic steel prices were stabilised expires at the end of this year, those entrusted with the guidance of the industry will shortly have to decide on price policy in 1939. This task, admittedly, is an unenviable one, for it will clearly be difficult to please producers and consumers alike. Steel producers, not unexpectedly, have already let it be known that, in their view, the only cogent reason for reducing prices would be a fall in costs of production. On Friday of last week Sir Walter Benton Jones, chairman of The United Steel Companies, argued that a reduction in prices with the object of stimulating demand would be unreasonable without proper regard to cost. Quite apart from the importance of the impending decision to the producers and consumers of steel, it will provide a test of the ability of the central organisation of the industry, as at present constituted, to regulate prices in the national interest. In view of the significance of the issues involved, it is essential that the air should be cleared of the fog of controversy.

Steel occupies a central position in a modern economy, for not only is it the principal raw material for the current operations of many important industries, but it also plays a significant part in the construction of factories, bridges, large buildings, railways and, indeed, in most forms of capital development. Cheap steel is essential to any highly industrialised economy, and more especially to one like Britain's, which has to maintain a large export trade in order to pay for the imported foodstuffs and raw materials necessary to support a high standard of living. Hence, if Britain is to hold her own in the world, the iron and steel industry must be able to supply home and overseas consumers at least as cheaply as those in other countries. It follows that, in the national interest, steel prices cannot be determined with reference to the profits of the iron and steel industry alone. Clearly, prices might be comparatively high and yet yield a very small financial return to the industry. Conversely, low prices are not necessarily incon-

sistent with a prosperous industry. The real test of the justification or otherwise of any given level of steel prices is whether they are as low as they can reasonably be with modern methods of production, making due allowance for the availability of raw materials and the size of the market.

In the post-war decade the financial return of the iron and steel industry was admittedly low. Even in 1929 the profits earned by 119 concerns engaged in the coal and steel industries (which, unfortunately for the clarity of analysis, are scarcely separable) represented barely 5 per cent. of their paid-up preference and ordinary share capital. In view of the wide cyclical fluctuations in demand to which the industry is subject, an average return of 5 per cent. in a year of comparative prosperity is no doubt inadequate. But, despite the meagre profits earned by the industry until a few years ago, the prices of its products were anything but low, and it steadily lost ground to overseas competitors. It was in the national interest, therefore, that the practice of the industry should be brought into line with the latest developments abroad. And, since the rationalisation of the industry was hampered by lack of resources, it was given assistance by the Government in the shape of a protective tariff introduced on March 1, 1932. This tariff gave British steel makers a virtual monopoly in the home market. The industry, however, was not assisted merely to enable it to increase its profits, but primarily in order to help it to increase its efficiency and to provide the country with cheap steel. How far has the industry succeeded in reconciling these two objects?

The profitability of the industry has certainly been increased since the grant of this virtual monopoly in 1932. The ratio of profits to the paid-up capital of a representative sample of coal and steel companies rose from 1.55 per cent. in 1932 to 12.23 per cent. in 1937. This by itself, however, is not conclusive evidence that the monopoly position has been unduly exploited. There was a very great increase in production in those years, and an industry with

INDICES OF BUSINESS ACTIVITY AND APPARENT STEEL CONSUMPTION

The first diagram shows the general trend of business activity and of apparent domestic iron and steel consumption, on the basis of *The Economist's* indices. The index of domestic iron and steel consumption is based on the average daily output of steel ingots and castings, and of forge and foundry pig iron, plus the crude steel equivalent of imports, less the crude steel equivalent of

INDICES OF PRICES FOR IRON AND STEEL AND OTHER INDUSTRIAL PRODUCTS

exports. No allowance is made for the rise and fall of stocks owing to the lack of data.

The second diagram is based on the indices published by the Board of Trade. As the Board of Trade's new index only goes back to 1930, the figures for the preceding years have been calculated from the previous series.

very heavy fixed capital, and consequently onerous overhead costs, can greatly increase its profits in a period of rising production even without an increase in prices to the consumer. But steel prices have been increased to the consumer. As one of the accompanying charts shows, steel prices moved in the years 1920-30 in almost exactly the same proportion as an average of the prices of all industrial products. But since 1930 they have diverged; while the average of industrial prices in 1937 was still no higher than the 1929 level, steel prices were more than 25 per cent. higher. And if it be objected that 1929 is not a fair basis of comparison, since the industry was not then adequately prosperous, it can be shown that steel prices are considerably higher in relation to their 1913 level than the average of other industrial prices.

That is the chronological comparison. The geographical comparison yields similar results. The comparison of steel prices in different countries is an intricate business, in which rates of exchange and transport costs have to be considered. But it can be said with certainty that British prices for comparable products have risen more since the beginning of 1937 than prices in France, Germany or the United States. Belgian prices have shown a larger increase in the past two years, but on the other hand they are still far lower than the British (e.g. £6 0s. 8d. a ton for steel angles in Belgium against £11 0s. 6d. a ton in Great Britain). Indeed, British prices are now among the highest in the world.

The steel industry, then, enjoys a monopoly position; it is making considerable, even if not excessive, profits; its prices have risen more than those charged by other British industries or by foreign steel industries; its prices are among the highest in the world. The case is impressive but still Sir Walter Benton Jones would not admit that it was complete; for, in his view, a reduction of steel prices would not stimulate demand—in other words, the present high level is not hampering the trades that depend on steel. Now it is true that, for steel as for other commodities, the periods of high price are also the periods of high demand, and that reductions of price have historically coincided with reductions in demand. But to argue from that fact that demand at any time would be as great with high prices as with low is the most topsy-turvy economics. There cannot be much doubt that the great fall in steel consumption during the present year has had a great deal to do with prices. The index of consumption shown in the accompanying diagram does, it is true, exaggerate the position; the rise in the curve last year was due in large part to purchases of steel for stocks in anticipation of a shortage, and the fall this year has been due in equal part to the utilisation of those stocks. But the complaints of the steel-using industries make it clear that they have been really hampered by the high cost of steel. It is significant, moreover, that the decision to stabilise prices until the end of 1938 was announced last November, when the re-stocking movement was beginning to lose momentum in this country and when the demand from importing countries had already taken a downward turn. It is difficult to escape the conclusion that this decision was influenced by the fact that the industry had bought large quantities of raw materials at high prices rather than on the ground that stability of prices was in the interests of consumers.

It is in the examination of the steel-using industries that the fallacy of Sir Walter Benton Jones's belief in the inelasticity of demand for steel is most clearly revealed. Shipbuilding can be taken as an example. If the world's demand for ships had vanished, then indeed it would be true that no reductions in the price of steel would induce the shipyards to increase their purchases. But the world's demand for ships has not vanished. What has been happening, as the figures of Lloyd's return published in *The Economist* last week reveal, is that Britain is losing its shipbuilding business to foreign competitors. Nobody would maintain that dear steel is the only cause of this alarming tendency, but it is certainly one of the causes. Again, the motor industry has been complaining of increased competition from foreign producers both at home and in foreign markets. The high price of British steel is not the only reason, perhaps not the chief reason, for the

expensiveness of British cars; but unquestionably it is a contributory factor. Similarly, the maintenance of prices at boom levels throughout 1938 cannot have been without influence on the consumption of steel by the constructional trades, which appear to have turned increasingly to ferro-concrete as a substitute for steel. While the growing use of ferro-concrete may have prevented constructional costs from rising as much as they would have done if this substitute had not been available, this loss of custom can scarcely be in the interests of the steel trade.

It is hardly possible to examine the evidence without coming to the conclusion that the price of steel is higher to-day than can be reconciled with the efficient functioning of the British economic mechanism. The costs of the steel producers are admittedly high. But they cannot be allowed to determine the price of steel—if they did, prices would be higher in periods of depression, when overhead costs have to be spread over a lower output, than in periods of booming trade. And if the steel manufacturers find themselves compelled to adjust their costs to the prices that the rest of the community can afford to pay, then they are, after all, in no worse position than the great majority of industries which have not enjoyed the benefits of a legal monopoly.

The price discussions of the next few weeks are, in fact, the acid test of the new organisation of the industry. Up to the present the industry has indeed achieved the object nearest to its heart, namely, an increase in its profitability; but it has not yet succeeded in providing the country with cheap steel. While it must be conceded that a heavily capitalised industry, like iron and steel, cannot bring all its plant into line with the best practice within a few years, it is clearly its duty, during a period of industrial recession, to reduce prices to the consumer, even if this means a reduction in profits. And, if the national interest cannot be made to prevail in times like the present, the central control of the industry, as constituted at present, clearly needs re-examination.

The Outlook for Sterling

DURING the weeks of tension and anxiety which culminated in the Munich Agreement it was easy to understand the colossal flight of funds from Europe to New York and the consequent weakness of sterling. So obvious was the explanation that it tended to be taken for granted that a removal of the fear of imminent war would lead to a return flow of the fleeing capital. The Munich Agreement, however, is now three weeks old, and up to the beginning of this week at least there was no sign of any return of this money or any improvement in sterling. On the contrary, the demand for dollars continued, and the pound, which had recovered sharply on the day of the Munich Agreement, and immediately after, developed fresh weakness.

This in turn raised new questions. The first and basic question was, what were the reasons for this continued weakness of sterling? Next, how long was this weakness likely to persist? Third, and of far greater importance, can we consider our gold reserves adequate after their heavy losses of the past few months? Finally, do recent events call for any change in our monetary policy?

Up to a point, the present week's reversal of tone in the foreign exchange market answers some of these questions. If in one week the Exchange Equalisation Account has to supply \$100 millions and yet see sterling sink from \$4.78½ to \$4.72½, while the next week sterling recovers to \$4.77½, on no surer foundation than a rumour that the dollar is going to be devalued, then the only description to apply to the foreign exchange market is that of oscillation and instability and not that of a continued drag upon the pound. Yet the forces behind last week's depreciation of sterling were genuine enough, while this week's recovery is partly speculative and partly due to the technical fact that the market had bought dollars ahead of its needs. Rumour plus technical readjustment, though (as is explained in a Financial Note) the latter gave the British Control a chance to recoup itself, are hardly a sound foundation for hopes of a sustained recovery in sterling.

Behind the renewed weakness of sterling since October 1st lay primarily the feeling that Europe's political problems had by no means been solved. Allied to this is the knowledge that Britain may in future spend on re-armament even more than she has spent in the immediate past, and to raise the money may resort to new borrowing in which the banking system will have to play its part. The minds of many Continental capitalists are still obsessed by the inflations of the post-war years. They do not view the issue between borrowing and taxation in quite the same way as the modern British economist. If they think that inflation, as defined by them, is coming, that is their signal to remove their funds from London. And if they think that peace is not yet assured, then that is a still more cogent reason for transferring their money to New York. This is true not only of the owners of fugitive "hot money." It is becoming true of money which has been kept placidly in London for years.

This distrust of sterling as a currency is not the only factor at work. Wall Street is now definitely regarded as a bull market, while London remains a bear market. Capital is now being naturally attracted from London to New York, and the only remedy is either a break in Wall Street or a recovery in Throgmorton Street. Profit-taking by foreigners in Wall Street may from time to time give transient support to sterling, but only if the profits are repatriated. If a bearish view is taken of sterling, the profits may well be left on deposit in New York.

Finally, almost drowned by these modern-day capital transactions, there is the commercial demand for dollars, now seasonally at its height. The autumn demand for dollars will not last now for more than some eight or ten weeks, and admittedly our passive trade balance is smaller than it was earlier in the year. Still the American balance

of payments remains active, and so long as it does so a steady demand for dollars will result.

Apart from the obvious time limit to the seasonal demand for dollars, it is difficult to say how long these forces can continue to operate. Anyone who could predict whether and when London will begin to follow Wall Street upwards could make himself a rich man without any more ado. Only the authorities can guess how much foreign money, which could be transferred to New York, is left in London, and how the amount of that money compares with the magnitude of our gold reserves. Not even the authorities can predict what will happen to our trade balance, which is at the mercy of re-armament at home and of the future course of world prices and trade.

It is clearly time, however, to look into the adequacy of our gold reserves. Unfortunately, the September 30th statement of the Exchange Equalisation Account's position is not due to appear until the end of the year. As matters stand, it is only possible to make a rough guess, which is subject to a very wide margin of error. On March 31st last the Exchange Equalisation Account held £297.8 millions of gold, valued at 140s. per ounce. During the next two months it had to face the French repatriation, which made a big inroad on its resources. Allowing also for its acquisition of newly-mined and other gold, and also for its sales in the London bullion market, it may have sustained up to the end of May a net loss of £65 millions.

During the next two months it probably neither gained nor lost on balance. French repatriation ceased abruptly, but by the latter half of July the need for supporting the pound against the dollar had developed. Imports into London and sales to the bullion market continued during the whole of this period. When the available information is examined, week by week, it seems possible that all these movements cancelled out. Then came August and September, the two months of crisis. Our net exports of gold from August 5th to October 6th were £120 millions (see *The Economist* of last week, pages 123-4), offset to a small extent by dishoarding during the latter part of September. Partly in order to select a very round figure, let our net "crisis" gold loss be put at £100 millions. This makes a total loss of £165 millions for the six months to September 30th, reducing the Exchange Account's gold reserves to about £130 millions. If it is legitimate to write them up from 140s. to 146s. per ounce, they can be taken, again in round figures, at £140 millions.

There is also a nest-egg consisting of the £65 millions of gold transferred to the Bank of England at the end of 1936, and compensated for by a reduction in the fiduciary note issue from £260 to £200 millions. This gold was only transferred to the Bank in order to replenish the Exchange Account's stock of sterling, and so could legitimately be restored to the Exchange Account, the fiduciary note issue being increased accordingly. This £65 millions is calculated at the Bank's statutory price of 85s. per ounce, but if the Exchange Account recovered it, it would be automatically written up to at least 140s. per ounce, that is, to its real value of £107 millions. One way and another, therefore, we still have £250 millions of free gold in hand without having to draw on the Bank of England's reserves, which are themselves (even at the statutory price) £110 millions above the Cunliffe Committee minimum of £150 millions, if that figure can still be considered to be of any relevance. As a gold loss of £20 millions in a week would be abnormal, there need be no nervousness about the inadequacy of our gold reserves.

The fact that the Exchange Equalisation Account alone holds nearly twice as much gold as our total national reserve ten years ago is, of course, no sort of excuse for ignoring the problem of sterling. But it does give us a certain latitude in exchange policy. For six years the declared policy of the Government has been to refrain from opposing fundamental tendencies in the exchange rates while endeavouring to remove minor fluctuations. There

have been times when this *de jure* policy of elasticity seemed to have passed over into a *de facto* policy of stabilisation. But it has never been more important than to-day to draw a clear line between what are and what are not the practicable limits of exchange control. Certain pressures of an economico-political character are being exerted in favour of an appreciation of sterling. The decline of the last few weeks has excited a certain amount of disquiet in Washington, with repercussions on the negotiations for an Anglo-American Trade Agreement. Apart from these transatlantic anxieties, there is the legitimate desire on this side of the water to restore the *morale* of sterling—a feeling that is not entirely devoid of the old affection for the figures \$4.86½. For these reasons, it may be presumed, the

control has not been sorry to see the tide turn this week and to allow the dollar rate to be carried up from \$4.74½ on Monday to \$4.77½ on Wednesday, even though Thursday witnessed a slight relapse. After so rapid a fall, a reaction is natural and desirable. But it would be a mistake to let it proceed too far or too rapidly. The basic reasons for the pound's weakness are to be found in international politics—which is to say that they remain and will continue. In the long run we can continue to act as the world's banker only if the world has confidence in our political security and financial solvency. In these circumstances replenishment of our gold reserves at every opportunity is likely to be of at least equal value to the periodic chastisement of the bears of sterling.

Copper Company Earnings

THIS has been an exciting week for the Rhodesian copper shareholder. Great interest would in any case have been aroused by the publication of the Rhokana, Rhodesian Selection Trust and Mufulira reports and by Mr Chester Beatty's speech at the Roan Antelope meeting. But, in addition, the companies co-operating under the restriction scheme have decided to remove all limitations upon production "for whatever period is considered advisable." Last week's decision to raise production from 95 per cent. to 105 per cent. of standard quotas from October 15th has thus been superseded before it entered into effect. This dramatic demonstration of the efficiency of copper output control has, indeed, only one drawback for the shareholder—he can no longer calculate the companies' outputs with precision.

But it is axiomatic that, for low-cost producers, increased output provides a better return than increased prices engineered by a stiff dose of restriction. The three principal Rhodesian producers, whose all-in costs of production are now of the order of £25-£26 per ton, evidently do not wish to see a repetition of last year's boom, in which, despite free production, copper rose to £78 10s. per ton. At these high levels, the threat of competition from high-cost producers would become material. The abandonment of control confirms the view, it would seem, that the copper companies do not desire a price greatly exceeding £50, nor, by converse, greatly below £40. Once again, £45 has proved the pivotal price at which they have taken action.

Before proceeding to discuss potential profits under free production it is desirable first to analyse the Rhodesian companies' experience during the past year to June 30th in each case. The main features of the Roan Antelope report were set out in last week's issue of *The Economist*. Even more striking figures have now been published by Mufulira Copper Mines. Production increased from 37,230 tons of blister copper to 52,436 tons in the year to June last. But, despite the fall in average revenue from £49.303 to £46.891 per ton, the profit margin actually increased slightly, since all-in costs on the higher output were reduced from £31.981 per ton to £28.608 per ton. This reduction in costs is perhaps the central feature of the report, for Mufulira is only now approaching the optimum cost level.

It is not easy to summarise the Rhokana report in a few sentences. Output, expressed in terms of fine copper, increased from 75,254 long tons to 76,275 long tons, of which slightly over 32,000 tons were in electrolytic form. Costs tended to rise—blister costs, for instance, amounted to £22 7s. 5d., against £21 3s. 7d. for 1936-37—and copper prices fell. Standard cash copper (which approximates to blister) averaged £43 13s. 10d. per ton, against £50 9s. 8d. in the previous year. Metal sales proceeds, however, show an increase from £3,906,400 to £4,038,678. A substantial expansion in cobalt production from 1,459,237 lbs. of element to 1,662,771 lbs. (presumably coupled with higher prices, since the official quotation was raised from 7s. to 8s. 6d. in June last year) has obviously been responsible for this increase. Further development of the mining property, on which £607,415 was expended from capital last year, has been acknowledged by the award

of an increased production quota as from last July. And the latest accounts, of course, have the benefit of the substantially increased Mufulira distribution. After making increased provisions for depreciation, development and taxation, the amount earned for the ordinary capital is reduced from £1,887,366 to £1,786,398, which covers the 62½ per cent. dividend with a margin of 12½ per cent.

Increased operating capacity is a feature common to all Rhodesian producers. Both Roan Antelope and Mufulira will complete extension programmes during the present year which are designed to increase monthly output capacity to 10,000 short tons—equivalent to 8,925 long tons—of copper per month. Rhokana's quota has been increased by the addition of 952 short tons to its basic quota of 6,338 short tons as from July 1st. In the past, the standard quotas have represented between 65 and 70 per cent. of maximum capacity of all seven restricting companies. So far as the three Rhodesian companies are concerned, it would seem that during the first five months of 1937-38,

PETERSON PIPES

KAPP AND PETERSON LTD., DUBLIN AND LONDON

when production was unrestricted, Roan Antelope operated at about 128 per cent. of standard quotas and Rhokana at about 122 per cent. A similar calculation for Mufulira, of course, is hardly reliable, in view of the increase in production during the year. These rates, moreover, are not inconsistent with higher activity in the early part of the period, since the companies had already agreed on October 15, 1937, to reduce operations to 105 per cent. of basic quotas by the end of November. It is unlikely, however, that the Rhodesian copper companies could immediately expand their production to capacity, even if they wished to do so. Some difficulty has already been experienced in obtaining adequate labour supplies. Moreover, undue expansion of operations would involve difficulties if restriction were to be re-introduced. Finally the Roan Antelope and Mufulira extensions, which will increase their respective capacities to 163 per cent. and 185 per cent. of existing quotas, will only be completed this year.

Any attempt to calculate potential outputs during the current year must start from the fact that the companies have already operated for 3½ months at 95 per cent. of basic quotas. Beyond this point, the element of guesswork is greatly increased. It is necessary to allow for such factors as the gradual stepping-up of production, the completion of the Roan Antelope and Mufulira extensions, and the present trend of copper supplies and consumption outside the United States. And these have much scope for possible error. Making the best attempt at the estimate, however, we have assumed that for the remaining 8½ months of the companies' financial year Rhokana and Roan Antelope will produce at 125 per cent. of standard quotas and Mufulira at 130 per cent. These are broad assumptions, and for individual companies they may not prove entirely fair. It is evident, for instance, that Rhokana, armed with an increased quota, has to be credited with a substantial increase in output, while Roan Antelope's production, on the same basis, is only slightly higher than last year. The extra 5 per cent. for Mufulira, however, seems justified in view of its rapid expansion during the past year.

When considering the accompanying earnings estimates, therefore, the investor must have in mind the fact that individual companies will be free to determine their production according to their particular conditions, and that the rates we have assumed, although apparently reasonable, are, in the last resort, arbitrary. In these circumstances, it is scarcely necessary to apologise for certain short cuts which have been employed for economy in calculation. Production quotas, for example, are expressed in terms of fine copper, but we have ignored the slight difference between blister, of say 99.5 per cent. copper content, and pure metal. In calculating the potential level of costs during the current year we have taken due account of the effect of increased production. For Rhokana, however, there is a dual stumbling-block, since output consists partly of electrolytic and partly of blister copper, while cobalt production is growing in importance. It is difficult to obtain

from the accounts more than a general impression of average cobalt costs and revenues. Our estimate therefore assumes that cobalt production and proceeds remain unchanged during the current year—a very conservative view, since the treatment capacity was increased by about 50 per cent. towards the end of the past financial year.

The general basis of the estimates for each company is explained in the table, and it is only necessary briefly to examine each in turn. It is obvious, at the outset, that Rhokana will prosper under the conditions we have assumed, for the potential increase in Rhokana's production is even more promising than for the other Rhodesian producers. Our estimates may appear somewhat generous for Rhokana, as compared, say, with those for Roan Antelope, but the importance of increased production both of copper and cobalt in the short run (and the long-term potentialities of Nchanga) cannot be denied. For Roan Antelope, the current year's estimates do not differ markedly from the past year's achievements. The main element of chance in this case, indeed, lies in the production figure, which, in view of the current Western Extension programme, may prove relatively low, particularly if the demand for copper continues to expand. Rhodesian Selection Trust earnings are, of course, derived entirely from the calculations relating to Mufulira, subject to a deduction for expenses and fees. The potential expansion of one-third in Mufulira's production from 52,436 tons to 69,150 tons may at first sight seem generous. But it is worth noting that last June the company actually produced 6,076 tons, a rate which would already assure the assumed output for 1938-39, apart from the smelter extensions which will be completed this year.

On the basis of present share prices, our estimates appear to favour Rhokana. In the popular view, these arguments might be enhanced if the directors were to decide to split the shares into smaller denomination. At present, the floating supply of shares is restricted. Over 50 per cent. of the ordinary capital is controlled by Rhodesian Anglo-American, and other substantial blocks are held by "Chartered" and Rio Tinto. The result of high quotations for Rhokana shares (though it lacks a logical basis) has been to divert speculative interest in the Rhodesian copper group to the lower priced shares, and in particular to Rhodesian Selection Trust. The latter, indeed, has acquired a reputation for valuing prospective earnings highly, though the potentialities of the company, while satisfactory, are at least not better than those of Rhokana. These market points require detailed consideration by the investor in the Rhodesian copper belt. It is a field endowed with promise, for it offers an equity in industrial recovery and in re-armament alike. Its operations are devised to maintain satisfactory prices to producers, but also to encourage increased consumption and to discourage competition from other metals and from high-cost producers. These are attributes to which the long-term investor will give full weight, if he has faith in the continued progress of copper consumption.

Finance and Banking

The Control's New Technique.—Last week we called attention to the fact that most exchange dealers had bought dollars so heavily as to leave them short of spot sterling. Since then, as described in the note on the foreign exchanges, the pound has rallied sharply, and dealers have consequently become anxious to replenish their supplies of sterling. The Exchange Equalisation Account last Monday took advantage of this change in the position to apply a new technique, for during that morning it bought spot dollars heavily, hedging the exchange risk by sales of forward dollars. In this way it replenished its supplies of dollars, and so when on Monday afternoon fresh pressure developed against the pound, it was able to give support without losing any more gold. Incidentally, its operations not only earned a profit, but also caused the premium on three months' dollars to narrow from 2 to 1½ cents. The Account has, of course, mortgaged the future to the extent that its purchases of spot dollars have already been sold, for it will have to buy dollars for delivery when its forward contracts mature. By that time, however, the seasonal demand for dollars should have come to an end. This new technique does not indicate a decision to intervene in the forward market for the purpose of regulating fluctuations in the forward rate, and so has no connection with the suggestions to that end voiced in the City several years ago. The Control's sole object was to take advantage of the over-bought condition of the market to tap a new and temporary supply of dollars, and so to conserve its gold.

Municipal Bills.—The admission of municipal authorities to the London discount market is jealously guarded. The Scottish authorities have general powers to borrow on bills, but care has been taken not to extend such power to English authorities. Some of them, such as the London County Council, the Metropolitan Water Board and the City of Liverpool, hold it by virtue of special legislation. A few months ago certain interests in the City thought they had discovered in Section 215 of the Local Government Act, 1933, a loophole through which local authorities could avail themselves of the cheap facilities of the London discount market, even though the specific powers of borrowing by way of bills of exchange had never been conferred upon them. This clause reads as follows: "A local authority may . . . borrow by way of temporary loan or overdraft from a bank or otherwise any sums which they may temporarily require (a) for the purpose of defraying expenses . . . pending the receipts of revenues . . . (b) for the purpose of defraying pending the raising of a loan which the authority have been authorised to raise, expenses intended to be defrayed by means of the loan." Though the clause does not mention bills of exchange, it admittedly has an elasticity which could be pleaded to justify resort to borrowing by this means. That at least was the opinion of certain houses in the City which, after consultation with a number of local authorities, proceeded to arrange business on this basis. Bills of six months' currency were issued for several authorities, the total running into several hundred thousand pounds at rates which represented a considerable saving on the cost of other forms of short-term borrowing by local authorities, namely, overdrafts from their banks or short market loans made against non-negotiable deposit receipts. Moreover, arrangements were made for extending such business within quite substantial limits.

At this stage the international crisis intervened. One of the results of that crisis and of the attendant tightening of short loan conditions was to bring many of these municipal bills into the clearing banks as security offered for loans to the discount market, whereas previously they had been mainly offered to other lenders. The market houses which held these bills were forced by the departure of "outside" money to finance them through their clearing

banks. These institutions immediately showed some hesitancy about accepting the bills in question as collateral for money market loans. They questioned the legality of their issue. Their critical scrutiny went even further; they questioned the principle of encouraging local authorities, large and small, to run up and maintain floating debts—admittedly the cheapest form of borrowing in normal times but one which may become extremely precarious and expensive in abnormal times. The fiasco of the recent Liverpool bill tenders was well timed to illustrate this point. The matter was referred to the clearing banks' committee, which towards the end of last week decided that henceforth the clearing banks would refuse to accept as security for market loans any municipal bills other than those eligible for rediscount at the Bank of England. The committee's permissibility bills to those issued on behalf of the London County Council, the Metropolitan Water Board, Liverpool and Glasgow. The edict hits a number of issues other than those primarily aimed at by the committee. There are about 30 local authorities which possess and have exercised special powers to borrow by way of bills of exchange, and it is evident that the terms on which these authorities, other than the favoured four, will be able to borrow in the future must be adversely affected.

War Risks.—When the marine insurance market, at the beginning of the crisis, found itself compelled to clear the decks for action it did four things. It gave the necessary forty-eight hours' notice of cancellation. It refused to give war contracts. It limited all war rates to sail-

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED

COMMERCIAL SERVICE

The Bank has over 380 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW, which is sent post free on application, gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

ings within seven days. It insisted on all war risks being covered separately from the normal marine risks. While the crisis was still on the market rescinded its decree about war contracts, and a very large number of these contracts were placed by merchants and shippers; but it did not do away with the limitation of seven days or with the separation of the war from the marine insurance. Against both these provisions there was considerable complaint. Against the restriction of quotations to sailings within seven days merchants protested strongly, and a deputation of Chambers of Commerce to the Board of Trade had little difficulty in proving that the time limit hampered trade, necessary as it may have been in underwriters' interest. The feeling against the separation of war risks from marine risks was strongest among brokers, for they had to place every insurance twice over, prepare two policies, and make double the entries in their books. The burden on the brokers was all but intolerable, however salutary the separation may have appeared in underwriters' eyes. Now since the crisis ended the seven days' limit remains, but the separation of the two insurances has gone by the board. We are therefore back at the old pre-crisis position except for the seven days' limit, and for higher rates on a number of voyages—the basic rate being 2s. 6d. per cent. instead of 6d. per cent. The result is that the main grievance of merchants—the seven days' limit—remains, and the inherent weakness of the pre-crisis underwriting position has been restored. In an article published in *The Economist* of June 18th last it was pointed out how embarrassing to underwriters the combination of war with marine insurance at peace-time war rates was likely to be, and everything that has happened since June has confirmed that prognosis. A marine underwriter who is afraid of war risks must either accept them against his judgment or give up his voyage account entirely, and some underwriters who dislike the war risk are in a somewhat painful dilemma. It is a difficult situation, in which the reasonable demands of international trade are not easily reconciled with what many underwriters regard as the vital requirements of the underwriting community.

America Swallows Her Gold.—The effect on the London market of the heavy "crisis" gold shipments to New York has already been well ventilated, but so far little has been said of what effect the arrival of this gold has had upon the American banking system. This last point is illustrated in the following table.

MONEY MARKET NOTES

Foreign Exchanges

LAST week has witnessed a definite change in the foreign exchange market. It began on October 14th, when by selling dollars very heavily indeed the Control kept the New York rate at \$4.73½. It also forced on the market more dollars than it could readily absorb, with the result that the market became saturated and by the week-end began to offer dollars up to \$4.74. At this juncture, as explained in a Financial Note, the Control came in and bought spot dollars against forward sales. Then during the first three days of this week, dollars were offered in New York after London's close, and in Switzerland early every morning. This created an atmosphere conducive to a recovery in sterling, which by Wednesday evening had improved to \$4.77½. Then on Thursday the market turned round again, shook itself clear of this new atmosphere, and bid dollars back to \$4.75½. French francs were bid consistently until Thursday morning, but

then came on offer and eased from Frs. 178½ to Frs. 178¼. This week's Banque de France return shows that a further Frs. 2 milliards of Government advances have been repaid, while nearly Frs. 5 milliards of notes have returned from circulation. Belgas, guilders and Swiss francs all followed the dollar, with forward belgas still in demand at very narrow discounts.

The Bank Return

THE crisis currency has at last returned so that the note circulation has now been restored nearly to the *status quo*. The Reserve and the Proportion have recovered accordingly, but these movements have been neutralised by an equivalent reduction in Government securities held by the banking department. Thus the total assets of the department remain unchanged, and the return of the currency has not been allowed to expand bankers' deposits.

There has in fact been a fresh contraction in bankers' deposits, which explains this week's slight and temporary shortage of money. The reason for this

	Oct. 20, 1937	Oct. 5, 1938	Oct. 12, 1938	Oct. 19, 1938

Other Secs.	23.2	22.5	21.9	23.9
Proportion	28.1%	13.8%	19.6%	25.7%

is a further expansion in public deposits. This is partly the result of the Exchange Account's heavy gold sales of last week, but for one reason or another public deposits have been running high in October for the last two or three years. It is reasonable to expect that this concentration of funds in public deposits will be rectified before long, and in any case bankers' deposits are no lower than they were a year ago.

" time	5,193	5,210	5,175
Monetary gold stock	13,033	13,135	13,812

Broadly speaking, most of America's crisis gold acquisitions have been sterilised. Total monetary gold stocks have risen by \$779 millions, a figure roughly commensurate with Europe's known losses. Yet the gold certificates held by the Federal Reserve system have only increased by \$334 millions, or by less than half the total increase in America's gold. Moreover, \$127 millions of the expansion in the Reserve Banks' stocks is offset by the simultaneous growth in the note circulation. As a result member banks' total reserves have only risen by \$275 millions, and excess reserves by a mere \$100 millions. There has been some increase in the total of deposits with the member banks, which explains the limited growth in their excess reserves, and this no doubt is connected with the influx of foreign money. But the bulk of this gold has virtually disappeared from view, and this can only be regarded as one of the untoward economic consequences of the crisis. The main consolation is that as the loss of this gold has caused no real stringency in London or elsewhere, it is reasonable to infer that the world—or at least that part of it which still relies upon gold for the settlement of international payments—is amply supplied with gold.

Scandinavian Currency.—We regret that in a note on international currency changes during the crisis, which appeared in *The Economist* of October 8th, incorrect figures were given for the three Scandinavian countries. Actually, during September, the Danish note circulation increased from Kr.396.6 to Kr.428.8 millions, the Norwegian circulation from Kr.452.8 to Kr.470.6 millions, and the Swedish circulation from Kr.971.3 to Kr.1,083.4 millions. Thus the crisis did give rise to some special demand for currency in those countries.

The Money Market

ON Monday and Tuesday money was in good demand. This week's Bank return shows how the recent gold sales of the Exchange Equalisation Account have once more drawn money out of the banking system and into public deposits. To rectify this, last week's Treasury bill issue was under-allotted by £5 millions, but even so a little assistance had to be given early this week. This took the form of special buying of November Treasury bills at ½ per cent. and Januarys at ¼ per cent.

	Oct. 21, 1937	Oct. 13, 1938	Oct. 20, 1938

Others	1½-5/8	5/8-3/4	5/8-3/4
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	1½-9/16	1½-3/4	¾

* Viz. ½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Conditions became easier later in the week. The banks were not keen buyers of bills, but took a certain number of December bills at ½ per cent. They also

bought mixed parcels of December and Januarys, on a fifty-fifty basis, paying ½ per cent. for December and ¼ per cent. for Januarys. There was practically no business in January bills alone, though hot Treasuries are quoted nominally at ¼ per cent. Bond-money was readily available at ½ and ¾ per cent., and any suggestion of higher rates was rejected by borrowers. Still money generally is less plentiful than before the crisis.

The Bullion Market

THIS week has served to illustrate one of the conditions under which arbitrage is possible. The prevailing practice of arbitrageurs is to buy their gold first and to cover their exchange afterwards. Obviously this is only possible at a time when sterling is weakening, for if the pound is rising in value, the exchange is moving against arbitrageurs between the time when they buy their gold and when they sell their dollars. This was the position early this week, and so the volume of business in gold shrank to very small dimensions. On Thursday when sterling weakened arbitrage became possible, and the volume of dealings at once jumped up to more than

twice its size of the previous day.

* Above or below American shipping price. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing. The New York price of silver remained at 43 cents per ounce .999 fine during the week.

Silver eased at the week-end, owing to Eastern selling and the recovery in the pound, but early this week the price hardened in spite of the further strengthening of sterling. At Wednesday's fixing there was practically no silver on offer, but later in the day India realised that the London price was too high in relation to the New York exchange. By the evening the price had already fallen to the lower levels established at the fixing of the following morning.

Investment

London and Wall Street.—Any hope which investors might have entertained that the market's improvement at the end of last week was the prelude to an effective recovery over a wide front has been disappointed this week. Gilt-edged have indeed staged a moderate rally, though perhaps "natural bounce" might be a better description of a recovery which was to be expected after last week's sharp falls. Of decisive market pointers there have been few. The rapid recovery in sterling has undoubtedly assisted the funds sympathetically, and despite the re-assembling of the Cabinet, concern for the future financing of re-armament has been less vocal. Meanwhile, dealing conditions remain difficult in almost every section of the market. Save in a limited range of leading securities, and in areas of local activity like the copper and tin share markets, dealing conditions are hardly any improvement on negotiation. The duration of this dreary situation must depend first on the impact of politics and secondly on the fate of American recovery. The immediate rush to obtain security and profits in American common stocks appears to have subsided. And international issues, which gave some demonstration of liveliness early this week, became more subdued on Wall Street's mid-week fall. On Thursday of last week, the Dow industrial average broke into new high ground for the current year, an achievement which was doubled two days later by the utilities index. But these levels have not been held. To the accompaniment of a turnover approaching 2½ million shares in the first half of the week, the protagonists of further progress waged battle with the profit-takers, and a two-point fall in the average resulted on Wednesday. But this victory was not decisive, for although turnover was reduced to 1,620,000 shares on Thursday, the market staged an all-round rally. The slight setback in steel operations, from 51½ per cent. to 51 per cent. of capacity according to the estimates of *Iron Age*, was not to the market's taste. And the subsequent news that the \$6 cut in sheet steel prices had been restored was tempered by the knowledge that substantial bargain buying had already occurred and would inevitably affect the steel companies' progress towards profitable operation. Thus, for the time being, both London and New York lack direction. In the latter centre, this week's check may prove no more than a pause for breath-taking. But in London it is the heart rather than the lungs which are debilitated.

Dealings with Non-Members.—The proposals of the Committee for General Purposes for amending the rules governing, broadly, the question of dealings between brokers and non-members were first due for ratification on August 8th. The controversy to which they gave rise, however, prompted the wise decision to postpone the date for confirmation to October 17th, and a further deferment until next month resulted from the diversion of interest and discussion during the crisis period. A "House" correspondent points out that these delays have served an invaluable purpose, for the extended period has permitted the ventilation of all aspects of the fundamental and complicated issues which are at stake. Some critics in the "House," indeed, now consider that confirmation of the proposals in their present form is unlikely. At longer range, the real proportions of the problem are becoming more widely appreciated. The opportunity has been taken to bring home to influential "outside" circles the common City interest in preserving the official market as the jocular channel for stock and share business. There is no doubt that these steps have demonstrated to some of the principal houses concerned in direct business in gilt-edged stocks the wider implications of dealing methods which threaten to imperil the machinery on which the maintenance of an effective market depends. At the same time, some critics question whether the situation can be tackled solely by moral suasion, since they hold that the problem covers far too wide a field and springs from sources too deep for such treatment.

A growing body of opinion holds that no permanent solution is likely to result from any set of devices whose net effect is merely to put obstacles in the way of brokers' participation in the direct or semi-direct trade, for trade follows the most economic channel. In the absence of any power to govern the actions of originating sellers of securities and the ultimate buyers, the only way in which the "House" can make any effective claim to handle the business is to provide a service which, both in point of efficiency and of expense, is superior to the available alternatives. There is, of course, a good deal of force in the contention that but for the guidance and

support afforded by the official market outside business would rapidly become impracticable. The railways were faced with much the same problem, and in the last analysis a solution was only found by comprehensive legislation, coupled with reorganisation of the industry on a nationally conceived plan. In the long run it may prove that the rehabilitation of normal trading on the Stock Exchange will involve treatment on no less radical lines.

New Zealand's Credit.—The return of the Savage government in New Zealand last week had been largely discounted in advance by the market. For many months New Zealand's credit has felt the consequences of the Government's efforts to improve the lot of the dairy farmer and of the ordinary citizen, which, if commendable in principle, are certainly costly in practice. Mr Savage has again emphasised this week that the British investor need have no fear for his holdings of New Zealand securities, and has claimed with justice that the Dominion has always met her obligations to the penny. But the investor cannot look towards the future of New Zealand's finances without feeling some cause for anxiety. Apart from the specific budget burden of the new security legislation, New Zealand has an ever-recurring transfer problem, since her economy depends almost entirely upon the movements of primary produce and foodstuff prices. The general trend of New Zealand's economic and fiscal development was examined in a leading article in our issue of July 23rd. Since that time, no fundamental change has occurred which would lighten the investor's apprehensions. Indeed, the substantial decline in trade during the current year suggests that the Dominion's export surplus will again prove insufficient to provide the £10 millions required for the service of central and local government debt held in this country. Meanwhile, New Zealand stocks remain deflated, as the following table clearly shows:—

Stock	High		Low 1938	1938 Prices		
	1937	1938		Apr. 1	Oct. 17	Oct. 19
3½% 1940.....	103½	101½	92	101	98½	98½
4% 1943-63.....	103	101½	91	100	96½	96½
5% 1946.....	110	107½	95½	106	102	102½
4½% 1948-58.....	108	105½	93	102	99½	98½
3% 1952-55.....	97½	90¼	80	88	84½	84½

Falls ranging up to 4 points since April (that is, before the announcement of the "pensions at 60" plan) are partly, but not entirely, attributable to the reaction in fixed-interest securities generally. Mr Nash's first problem, so far as the British investor is concerned, is to provide for the repayment of the 3½ per cent. stock due on January 1, 1940, of which £17,172,191 is now outstanding. The Dominion's medium-term credit ranking appears to be approximately one per cent. higher than the rate on this stock.

Standard Motors Setback.—Recent motor reports and the reduced cash distribution have prepared the holder of Standard Motors shares for a considerable decline in profits. The fall of 32 per cent. disclosed in the report, however, is disappointing in view of the vigour with which the company has extended and re-equipped its manufacturing facilities. In fact, 1937-38 should normally have been the first period to reflect a full year's benefit from the programme begun nearly three years ago. These extensions have continued this year, and some £650,000 gross was subscribed towards the end of last year by the issue of 1,040,000 5s. shares at 7s. 6d. premium, though no contribution to realised profits can yet have resulted from these particular funds. The report expresses the opinion that the company obtained its full share of available trade, but the year's output was lower, both in the home and the export markets. It would appear that the reduction in sales was particularly heavy in the

latter part of the financial year, for in November, 1937, it was reported that the company had contracted to supply at least 25 per cent. more cars. The consequences of the latest setback for the stockholder is evident in the following comparative table of profits:

	Years ended August 31		
	1936	1937	1938
Profit	339,254	423,051	288,137
Depreciation, etc.	77,578	119,034	114,757
Taxation	60,000	100,000	40,000
Other charges	1,722	3,271	3,014
Ordinary Shares—			
Earned	199,954	200,746	130,366
Paid	87,688	138,000	117,450
Earned %	57.0	58.2	25.0
Paid %	25	40	22½
Reserve	90,000	50,000	...
Employees' Fund	20,000	10,000	5,000
Issue expenses	1,683	...	3,212
Carry forward	57,195	59,942	64,646

The fall in total profits has reduced taxation requirements by £60,000, and there is a small saving on depreciation, which limits the reduction in net earnings to £70,000. Although the lower dividend of 22½ per cent. is payable on £720,000 capital instead of £460,000, the margin between earnings and dividend is small, and no allocation is made to reserves. As a result of the extension programme, the book cost of fixed assets is well over double the level of August, 1935, though additions in 1937-38 were smaller, at £260,925, than those of the previous year, when £375,656 was spent. Cash stands at over £500,000, and the balance sheet contains a new item, £100,000 invested in a 10-year bond maturing 1947. Since the date of the accounts, the Motor Show has opened, and the company's new 8 h.p. model is available. The "economy motoring" appeal of this type is strong, but it must also compete with other established makes. The current yield of £8 6s. 8d. per cent. on the 5s. units at 14s. 7½d. suggests only moderate optimism regarding the outcome of the present year.

B.S.A. Recovery.—The resumption of ordinary dividends with a 10 per cent. payment had prepared Birmingham Small Arms shareholders for a good report, and they will not be disappointed. Total profits have increased by 20 per cent. from £699,085 to £837,975 during the year to July last—a most satisfactory improvement in view of the change in the business outlook since 1937. The group's activities, however, are widely varied in character and it is evident that re-armament has contributed largely to such satisfactory results at a time when the demand for cars and cycles has been falling off. In the following profits analysis, we show the course of ordinary earnings assuming normal preference dividend requirements in each year:—

	Years ended July 31		
	1936	1937	1938
Total profits	447,049	699,095	837,975
Depreciation	131,815	143,501	207,551
Tax and fees	22,093	53,633	107,908
Debt interest	96,030	74,714	62,220
Deb. repayt. reserve	25,840	28,817	28,950
Earned for dividends	171,271	398,430	431,346
Preference divs. paid	38,725	102,275	22,614
Earned for ordinary divd. % †	6.9	17.8	20.0
Ordinary dividend	...	...	204,100 (10%)
Reserve	...	122,994	196,050
Issue expenses	...	33,073	719
Carry-forward	64,673	204,761	212,624
† Assuming one year's preference dividends paid. In 1937-38, £408,732 earned for ordinary stock.			

In 1935-36 it would already have been possible to pay off all preference arrears, though their discharge was actually effected a year later. Even in the latest period, the distribution of profits has been on a most

cautious basis. In addition to the normal depreciation allowance of £157,551, a special provision of £50,000 has been made, while the provision for taxation is raised to £100,000. Finally, the 10 per cent. dividend represents only half the available earnings. The decision to conserve available earnings in 1936-37 arose from the need to finance extensions and equipment. The balance sheet reflects these extensions, for the net book cost of fixed assets stands at £1,304,825, against £1,138,358. A new factory is being built at Redditch in connection with the arms programme, and the Daimler shadow factory has been in operation during the past year. A diversity of interests covering guns, aircraft and special steels is obviously well placed to secure armament business. At the current level of 25s. 10½d. the £1 stock units provide a satisfactory yield of £8 7s. 6d. per cent., even on last year's conservative distribution.

United Steel Prospects.—Part of the hesitation which has affected the steel share market recently has proceeded from the fear that some reduction may be made in steel prices, when the existing stabilised prices terminate in December. In his speech to the stockholders of United Steel Companies last week, Sir Walter Benton Jones produced some outspoken and controversial comments on steel prices which form the subject of a leading article elsewhere in this issue of *The Economist*. Apart from this matter of high industrial policy, however, Sir Walter's references to the particular position of United Steel Companies were distinctly interesting, although they attracted less publicity. They clearly tend to confirm the long-term investment argument for the company's ordinary stock. The central obsolescence reserve has been built up (by appropriations exceeding the level required by the formula adopted in 1933) to £2,750,000, and since it appears from the recent report that a valuation of assets shows a surplus over book values, the entire fund may be regarded as a "free" reserve. The stockholder's present interest, however, is probably centred upon the progress of the Appleby-Frodingham extensions (which formed the subject of the addendum to the latest report) and upon future profit prospects. Progress at Scunthorpe has been less rapid than was expected. The coke ovens (due for completion this autumn) should be in operation by next January, and the blast furnaces before the end of June. One of the new steel furnaces is in operation, and the second, together with the steel mixer, will be completed by the end of December. The chairman indulged in no forecast of future profits. But he did emphasise that the curtailment of steel imports would prevent the industry from plumbing the low production levels of 1931-32. If, despite the chairman's hopes, the demand for steel fails to recover, and if production is less than the maximum of 13 million tons recorded last year, there are still—to use his words—"lower levels at which we can obtain satisfactory results." In any event, the company has made excellent use of the fruits of prosperity and should be able to treat the stockholder with fair generosity if profits fall in the future.

B.A. Great Southern Adversity.—It may seem strange that the Stock Exchange has obtained sufficient encouragement from the admittedly disappointing results of Buenos Aires Great Southern Railway to raise the price of the ordinary stock this week from 10¼ to 12. This response, however, is based on the assumption that the darkest hour precedes the dawn. It would, indeed, be a travesty of Nature's compensations if the current year were attended first by frosts and then by the drought and scorching winds which caused a total failure of cereal crops in many parts of Argentina last year. But the harvest failure, though it accounted for a reduction of £505,000 in revenue from all cereals, did not spell disaster for gross receipts, which, thanks to an increase of £193,034 in passenger train receipts (7.15 per cent. over the previous year) and of £95,419 (9.18 per cent.) in livestock receipts, were only 1.02 per cent. lower at £10,879,900. The explanation of the mere 1 per cent.

payment on the 5 per cent. preference stock is due rather to an increase of nearly 5½ per cent. in operating expenses, to £7,730,277. Of the increase, rolling stock maintenance accounted for £148,048, and locomotive running expenses for £220,035. The result, as the following analysis shows, is that net receipts from railway operations have fallen from £3,663,419 to £3,149,623:—

	Years ended June 30		
	1936	1937	1938
Gross receipts	9,922,015	10,992,266	10,879,900
Working expenses	7,241,593	7,328,847	7,730,277
Net receipts	2,680,422	3,663,419	3,149,623
Dividends, etc., received	Cr. 210,095	Cr. 178,292	Cr. 190,158
Exchange differences	\$1,173,982	1,297,822	1,311,043
Charges under working agree- ments†	548,699	546,949	£622,331

Carried forward	31,304	20,830	76,064

* 5 per cent. preference in full, and 3 per cent. on 6 per cent. preference. † On 5 per cent. preference only, 1 per cent. ‡ And, in 1937-38, £41,656 net charged for fire insurance, claims, etc. § After crediting £190,675 in respect of currency floating assets.

Exchange differences are slightly higher, and the company has this year provided £186,094 (against £282,335) for renewals and also £41,656 for insurance and claims. Thus after meeting all fixed charges and payments under working agreements, net revenue available for preference dividends amounts to only £135,234, against £629,526 for 1936-37.

Clearly, the hope for the future does not lie in figures such as these. In part, last year's apparent loss of cereal traffics (as the Director-General points out in his report) will be made good since increased supplies of fine grains have been carried over from last season, although traffics for the first 3½ months of the current year show scarcely any improvement. And while crop prospects appear satisfactory, the danger period has yet to come, in the next few weeks. Road competition, again, is still acute, and the improvement in passenger working is due more to the general economic recovery in Argentina than to any decisive competitive victory over road transport, although lower fares and improved services have undoubtedly helped. Transport co-ordination in Buenos Aires has now entered a practical stage, and the National Commission for transport co-ordination has also been set up. These are steps in the right direction, but the goal of restored prosperity for the stockholder is a long way off.

Central Argentine Position.—In the most favourable circumstances, the results of Central Argentine Railway for the year to June 30th would have compared badly with those of the preceding year, when virtually two maize crops were carried. But last year, the crop position was completely reversed by the large-scale failure

of the wheat, maize and linseed harvests. Gross income fell by nearly 25 per cent. to £9,315,262—the lowest level recorded since the War—and more than three-quarters of the fall was due to reduced grain traffic. Working expenses, naturally, were reduced, by 12½ per cent. to £7,401,431, for train mileage declined by 5.7 per cent., and freight train mileage by no less than 20.5 per cent. But the result was to halve the company's net revenue, from £3,756,892 to £1,913,831 and to increase the operating ratio from 61 to 80 per cent. After providing for lower exchange differences, total prior charges are short-earned by £222,722, compared with earnings for preference dividends in the preceding year amounting to £1,196,239. The results of the past three years are analysed below:—

	Years ended June 30		
	1936	1937	1938
Gross receipts	9,777,638	12,217,048	9,315,262
Working expenses	7,370,191	8,460,156	7,401,431
Operating profit	2,407,447	3,756,892	1,913,831
Income from investments, etc. Cr. 34,816		Cr. 32,077	Cr. 34,222
Exchange losses	1,021,079	1,320,123	915,040
Debtenture interest	1,037,280	1,049,638	1,053,734
Other interest charges, etc.	270,042	222,969	200,001
Preference stocks:—			
Earned	113,862	1,196,239	Dr. 222,722
Paid*	339,350	1,036,307	Nil
Contingencies reserve	...	157,434	...
Carry forward	448,260	450,757	228,034

* On 4½ per cent. preference stock, £339,350 or 3½ per cent. in 1935-36, £436,307 or 4½ per cent. in 1936-37; on 6 per cent. cumulative preference stock, £600,000 or 12 per cent. in 1936-37, being for 2 years to June 30, 1934.

The fact that the company failed to earn its prior charges by a considerable margin last year is undoubtedly disappointing. Moreover, the revenue account bears no charge for renewals (for which £977,409 was provided in 1936-37), for £384,979 net expenditure under this heading has been charged to the renewals fund accounts, which now stand at £4,048,882. The immediate traffics outlook is not encouraging. Sterling receipts during the current year to date have fallen by £497,206, and they will continue to wane at least until the end of the calendar year, when the wheat and linseed crops should begin to move. Crop prospects, therefore, are of vital importance for the Central Argentine stockholder. But cost reductions are perhaps more dubious. Fuel rose substantially last year, and although wage "retention" has been in force since the beginning of August, the actual benefit to the current year's expenses depends upon the level of gross receipts at the end of the year.

United Dairies' Stability.—The reputation for stability of profits which United Dairies enjoys will be enhanced by the results for the year to June 30, 1938. Total profits, at £654,466, are only £346 higher. Dividends received rose by about £8,000 to £277,641, and other revenue items showed a comparable net decline. The report, however, sets out the different expense items in but little detail, but the variation from year to year appears to be small, and earnings for the ordinary stock are slightly higher at £436,654, compared with £435,431. The 12½ per cent. dividend, paid for the seventh successive year, is accordingly covered by earnings of 19.7 per cent., against 19.4 per cent. From the surplus, amounting to £128,654, £100,000 is placed to reserve, which in the previous year received £124,000, apart from the provision of £10,000 against trade investments. Such static results, however, do not convey a just impression of the constant development shown by the undertaking. Last year Mr Maggs disclosed that the £25,584 increase in net profits shown by the 1936-37 accounts resulted from an expansion in turnover of no less than £1,000,000. Meanwhile, financial year should have contributed a full year's profits, while further economies and extensions are referred to in the latest report. The balance sheet, again, shows that

shares in subsidiaries have risen from £744,561 to £916,591. On the other hand, profits will have been affected by the advance in wages granted to certain classes of employees a year ago. It is possible too that distributing and bottling costs have again increased, for the present-day tendency is for the quantity of milk delivered per customer to decline, although the number of customers has been rising. A return of £4 12s. 9d. per cent. on the £1 ordinary stock units, which now stand at 54s., gives full recognition to the satisfactory and steady dividend record of the company in good and bad times alike.

Australian Estates Revised Scheme.—Last December the directors of Australian Estates introduced a reorganisation scheme which incurred widespread criticism and was wisely withdrawn. It has now been replaced by a revised scheme to which no exception can be taken. The chief difference in the new proposals lies in their treatment of preference shareholders' claims. Apart from the debtenture stocks (which are unaffected), the company's capital consists of £500,000 in 6½ per cent. cumulative preference shares on which there are 4½ years' dividend arrears amounting to nearly 6s. gross per share, and £961,705 in ordinary stock. There is in addition a trifling amount of partly-paid ordinary capital which is being separately dealt with. The new capital will consist of £500,000 in 5 per cent. cumulative £1 preference shares, and £600,000 ordinary stock. Preference arrears are nominally foregone, but in effect they will be paid off, since 25 per cent. free of tax is being distributed in cash from free reserves, amounting to £125,000 compared with £110,000 offered a year ago. Future dividends, however, are to be reduced to a 5 per cent. cumulative basis. In compensation, a preference dividend equalisation reserve of £50,000 is being set up from reserves, and this sum will be maintained by an allocation of up to £5,000 yearly before any ordinary dividend can be paid. More important, preference shareholders will receive £20 ordinary stock per £100 preference capital held, by a transfer from existing ordinary stockholders, who have also to find £361,705 for writing down the Australian assets. The preference stockholders will thus obtain one-sixth of the equity, while a holder of £100 ordinary stock will obtain £51.9 of new ordinary capital. Under the new scheme, some £110,400 will be needed annually for debtenture interest, preference dividend and dividend reserve. This amount was covered by a small margin in 1937, and the preference shareholders' interest in the equity is thus of real potential value. The Association of Investment Trusts have given their blessing to the scheme, which will obviously commend itself to preference shareholders.

Luipaards Vlei.—Owing to labour shortage, delay occurred in bringing the first extension of the treatment plant into operation. As a result, the quantity of ore crushed during the year to June last increased by only 41,000 tons to 593,000 tons. Little change occurred in average yield and costs, but the average price realised for gold was 9d. lower at 139s. 10d. per ounce, and profits were only £15,300 higher at £228,300. Dividends were maintained at 50 per cent., and £70,030 was carried forward, compared with £92,120 brought in. Capital expenditure required £86,980, but taxation and interest provisions were lower than in the previous year. A slight increase in development footage was accompanied by a more than proportionate expansion of 206,000 tons in the ore reserves to 2,542,000 tons. The capital structure has been greatly changed, as a result of the conversion of notes into shares and of the issue of nearly a million and half shares at 15s. The issued capital on June 30th consequently amounted to £449,820, against £282,170 a year earlier, while the note issue was reduced from £209,230 to £61,560. Working capital, amounting to £825,030 at the end of June, has since been increased by £300,000 as a result of the subscription by New Consolidated Gold Fields of 400,000 reserve shares at 15s. per share. The provision of these substantial

resources has been required by satisfactory development, particularly in the Tudor section of the mine. A new shaft is being sunk and development is being extended in order to increase the milling rate to 100,000 tons monthly—nearly double the recent scale. On the basis of a 50 per cent. dividend, the shares yield barely 5 per cent.; but there are prospects of bigger returns in the future.

The Week's Company Profits.—Reports have been received this week from 45 companies, excluding five for which comparable figures last year are not available. Their total net profits show a fall of 11 per cent. from £3,346,000 to £2,979,000 in the latest year. The cumulative total for 1,951 companies reporting to date is £256,211,000, against £232,613,000—an improvement of 10 per cent. The week's results are discussed in preceding Notes and on page 201 under the heading "Shorter Comments." Our usual analysis table appears on page 203.

Company Meetings of the Week.—Reports of company meetings will be found in this issue commencing on page 193. Sir W. Benton Jones's survey at the *United Steel Companies* meeting is discussed in a Note on page 181. At the *Murex* meeting Mr George P. Joseph expressed the hope that costs would be further reduced by the greater production capacity of the new factory at Freezywater. Addressing *Perak River Hydro-Electric Power* shareholders, Mr George Balfour derived encouragement from the fact that even under the abnormally severe restriction on tin production, the company was dealing with a load of 20,000 kw., whereas a few years earlier, when tin output was at a similarly low level, the load was only 6,000 to 8,000 kw. Viscount Stonehaven, at the *Tanganyika Concessions* meeting, referred to the satisfactory consequences for the company of the Union Minière's operations. The Benguela Railway interest, moreover, should benefit from the expected increase in copper production. At the *Roan Antelope Copper Mines* meeting, Mr A. Chester Beatty warned his hearers against exaggerating the amounts of copper required for re-armament. Conditions favourable for relaxing re-armament also favoured an expansion of trade and an increased demand for copper for peace-time purposes. At the *Modderfontein East* meeting, Mr R. S. G. Stokes emphasised that the dominant factor in the company's policy of steady expansion was the mine's large resources of low-grade ore; the rate of milling had been increased in five years from 1,000,000 to 1,500,000 tons a year. Shareholders of *Consolidated Main Reef Mines* were informed by Dr Hans Pirow that mine development on the Main Reef and Main Reef Leader had reached the stage where exploration could be commenced on an extensive and so far undeveloped area to the west of current workings. At the *Johore Rubber Lands* meeting Mr E. B. Ridsdel declared that the f.o.b. cost of 4.941d. and the all-in cost of 5.882d. per lb. could be considered satisfactory on a restricted crop. Mr James Davenport informed members of *British Rubber Estates of Java* (1932) that though 90,000 lb. more of rubber had been exported, the net selling price was 1½d. a lb. less, and a larger quantity was valued in the accounts at the nominal price of 1d. a lb.

SCIENTIFIC INVESTMENT

By HARGREAVES PARKINSON,
B.A., B.Com. Editor, *Financial News*.

The Third Edition of a widely read and recommended book. Methods are discussed by which statistical analysis may be brought to bear on investment problems and the important "laws" of investment which emerge are formulated. 244 pages. 10/6 net (by post 11/-).

"This is a practical and interesting book for investors and their professional advisers."—*Investors' Chronicle*.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET ACCOUNT
OCTOBER 25 OCTOBER 27

SIGNS of a more confident tone were evident on the London Stock Exchange this week, but they were only modest portents, unaccompanied by any appreciable expansion in turnover. Base metal shares and armament issues have perhaps been outstanding. In the gilt-edged section, the improvement has resulted largely from a technical rebound after last week's substantial falls, for even when stocks made renewed progress in mid-week there was no marked increase in demand.

The sharp improvement in sterling, however, provided the right background for a technical recovery in the *Funds*. Initial falls ranged up to $\frac{1}{2}$ in Old Consols, and to $\frac{1}{4}$ in War Loan, which closed on Monday below par, almost full of interest. Tuesday's recovery, however, restored these falls, and further progress, though at a diminished rate, was recorded on Wednesday. Undated stocks which had been most depressed at the beginning of the week, made the best progress in recovery. Home corporation scrips were depressed at first, but New Zealand issues responded to Mr Savage's assurances regarding the debt service.

Among *foreign bonds*, Czech issues staged a sharp rally, and European issues generally strengthened after an indifferent opening. Chinese bonds remained depressed, but Japanese issues rallied in mid-week, apparently on bear covering. Chilean bonds derived support from the rise in copper and the removal of restriction.

The *home rail market* still lacks life, although some recovery occurred in mid-week on the more favourable trend of traffics. Continued depression among the preference and guaranteed stocks was still evident. A sharp improvement occurred in London Transport "C" stock in anticipation of measures to increase fares. Argentine rails found better support, based on the tone of the B.A. Great Southern report and encouraging news of crop conditions, rather than the latest accounts. The better class debenture stocks made the best response to the resumption of buying.

In the *industrial market*, quiet conditions continued, although the early tendency towards lower prices was followed by a better tone in mid-week. Turnover was on a small scale, and the most active shares were those with an armament interest. Iron and steel shares were firm almost throughout the week. Most leading issues went ahead on Monday (when other sections of the market were subdued), held their position, and then made fresh advances, and some broadening of interest occurred. Coal shares were unexciting but were firmer for choice. Engineering shares brightened after a hesitant start, B.S.A. responding to the report (discussed on page 180). A mixed showing was made by electrical equipment shares, which became more irregular as the week progressed. Motor shares also were uneasy despite the good reports

from the Motor Show, but they steadied a little in mid-week. Standard Motors improved after the report, as the fall in profits was rather less than had been feared. Aircraft issues again behaved independently of the rest of the market and after a firm but unexciting start became a little easier, though prices moved within narrow limits. Textile and rayon shares were undecided, with Patons and Baldwins a firm feature after early weakness. Breweries also were irregular at the opening, but the undertone improved in mid-week. Tobacco shares followed the general trend. Provision and catering issues lacked special features, although United Dairies hardened on the year's results. In the stores group, Woolworths gave way slightly. No marked trend emerged among miscellaneous shares, where price movements were small and varied and turnover was modest.

Oil shares opened under the influence of the cut in Mid-Continent crude oil prices and fears of a reduction in British petrol prices, and most quotations were depressed. In common with other markets, however, the trend improved on Tuesday afternoon and the "bear" covering intensified the movement, but turnover remained small. The volume of business in rubber shares continued at a minimum; there were a few small losses on Tuesday following the reaction in the commodity price. Tea shares were as lethargic as ever, though there was a glimmer of improvement in mid-week.

The *mining markets* were inactive on the whole, though they shared in the brighter tendency that set in on Tuesday. As in the previous week, pride of place was given to base metal shares, especially coppers. Kaffirs were subdued and inclined to sag on slight selling from the Cape, and a firmer tone on Wednesday was not accompanied by any expansion in turnover. Rhodesian coppers went ahead on the removal of restriction, but there was some reaction on profit-taking, and prices became more sensitive to fluctuations in the metal price. Lead, zinc and tin shares were firmer in mid-week.

WALL STREET'S turnover in the short session at the end of last week was among the highest, for a Saturday, in (Continued on page 187)

Industry and Trade

Stabilisation of Coal and Coke Prices.—One of the most noteworthy developments in the British coal-mining industry in recent months has been the progress made towards evening out price fluctuations. In *The Economist* of October 1st (page 39) reference was made to the decision of the Central Council to tackle the problem of the co-ordination of district price schedules. This is a task of great complexity and will require time. Meanwhile, measures have been taken in other directions to reduce the violence of short-period price fluctuations. Much has already been done to stabilise both short-period and long-period prices by voluntary arrangements between District Boards and between these Boards and associations representing large consumers. Moreover, directions have recently been issued by the Central Council for the co-ordination of arrangements affecting the supply and sale of coal in the London area. These relate chiefly to wholesale merchants purchasing at least 15,000 tons per annum, and their administration is in the hands of a Joint Consultative Committee representative of the Central Council and the Chamber of Coal Traders. Then, again, an agreement has just been concluded for the supply of coke to iron and steel manufacturers according to a schedule relating to the prices principally of pig iron and ingot steel. The coke industry is being reorganised, and discussions are now proceeding for the formation of an Inland Coke Co-ordinating Federation, which, in the inland trade, will discharge functions very similar to those now performed by the International Coke Convention in the regulation of the European coke export trade.

Removal of Copper Restriction.—The decision of the co-operating copper producers to increase their output quota from 95 per cent. to 105 per cent. of the standard tonnages, announced on Monday last week, failed to stem the upward trend of prices. As we pointed out in *The Economist* of October 15th (page 136) the position of the copper market is very strong, for supplies available to the market outside the United States are equivalent to less than two months' consumption, at the current rate. But heavy visible supplies in the United States have until recently tended to depress world market prices. The severe curtailment of visible supplies outside the United States has thus probably been prompted by the weakness of the position across the Atlantic. The recovery in the United States

(Continued from page 186)

the whole year. Utilities, which had tended to be camp followers rather than leaders in the earlier advance, forged ahead to new high levels, in the hope that a spirit of conciliation would prevail in Washington. And the addition of a substantial re-armament programme to normal "pump-priming" encouraged the aircraft and base metal sections. Trading remained active during the present week, but prices were less satisfactory. On Monday, utilities again took the lead, followed by aircraft and copper issues. Industrial stocks made temporary progress, until late profit-taking exposed stop loss orders. On Tuesday the market benefited from the stimulus of the General Motors decision to expand operations and to restore salary cuts, and Monday's losses were regained, General Motors itself rising to a new high level for the year. It was remarked, however, that steel stocks did not follow the rise, for uncertainty still prevailed regard-

quickly demonstrated that visible supplies elsewhere were too low to prevent an increase in prices above the level of £45 per ton, regarded as a maximum by the co-operating producers. Indeed, the price of standard copper rose from £45 8s. 9d. per ton on October 10th (when the quota was increased) to £48 6s. 3d. per ton last Monday. The co-operating producers then took the more drastic step of removing restriction altogether for such a period as may be found advisable. Although the price of standard copper was still about £46 per ton on Thursday, the prompt action of the industry has at least prevented a speculative boom which could only have been followed by a collapse.

Fall in American Crude Oil Prices.—After having remained virtually unchanged since the end of January, 1937, crude oil prices on the mid-Continent market of the United States were cut by an average of 20 cents a barrel at the end of last week. This is the first general reduction in the mid-Continent price since September, 1933, and there is no doubt that the current price of \$1.02 a barrel for oil of 36 gravity is quite unremunerative for a considerable number of producers. Although signs of weakness had been accumulating in recent weeks, a general reduction of such dimensions must appear somewhat surprising in present circumstances, for the statistical position of the crude oil markets is one of great strength. Production has been kept well below the 1937 level ever since the middle of March, while stocks now amount to no more than 280,852,000 barrels, against 309,036,000 barrels a year ago. The reason for the decline in the price of crude oil must be sought not at the producing, but at the refining end of the industry. As we showed in *The Economist* of September 10th, on page 517, over-production of finished products has been responsible for a heavy accumulation of petrol and fuel oil stocks, which have had a depressing effect on the price of these products. With many refineries operating at a loss, the pressure for a reduction in the price of the raw material has proved irresistible. But it is feared in oil circles that the cheapening of crude oil may be the signal for a fresh bout of price-cutting by the smaller refiners, to be followed, in turn, by a demand for further concessions from the crude oil producers. If such a vicious circle were in fact established, there might possibly be a repetition of the *débacle* of 1932, when crude oil was sold for as little as 10 cents a barrel in certain cases.

(Continued from page 189)

demand for practically all classes of heavy material—the notable exception being that for shipbuilding material, which remains poor. For this, however, an early improvement is looked for as a result of the Admiralty work on hand and from work which it is confidently expected will shortly be placed with Clyde shipbuilders. Re-rollers of steel bars are still finding business quiet. Sheet re-rollers, on the contrary, find business still improving and a few more mills are in operation this week. In Glasgow and district the position in regard to the many manufacturing activities carried on is very satisfactory; plants are running to capacity and work on hand will ensure a satisfactory level of activity for several months.

★

Cardiff.—The recently improved tone in the tinplate market is maintained, particularly for deliveries in the home market, and current production is at a higher rate (nearly 50 per cent. of capacity) than it has been at any other period this year since February. With world stocks greatly reduced, and the recent international tension allayed, a recovery in the export trade is expected. The market for sheets shows little change, and the export trade in galvanised products is dull and very restricted. Stocks of ingots at works are still heavy and the output of pig iron and steel is less than half of what it was earlier in the year. Prices are unchanged.

Textiles

Cotton (Manchester).—Although there has been no general buying movement, inquiry for yarn and piece-goods has tended to broaden, and in certain quarters more contracts have been arranged than for some little time back. Some leading buyers have come to the conclusion that more favourable opportunities of purchasing are not likely to occur in the near future. A rather firmer feeling has prevailed in the raw cotton markets. A feature in the trading in futures has been the appreciation of prices for near positions. More cotton is being delivered by American farmers to the Government against a loan, and supplies in the control of Washington now amount to about 8 million bales.

The undercurrent of demand in the spinning section has improved. In American qualities orders have been given out rather irregularly, but fair weights have been booked. The reduction of ½d. per lb. in list prices for medium wefts has caused some comment. Most Egyptian spinners have net with a more encouraging turnover. A better tone has shown itself in the cloth market, and inquiry has expanded. A development of interest has been the increased activity for India, and a much healthier turnover has taken place in a variety of goods, with the result that some manufacturers have extended their order lists and cases have been re-ordered of idle looms being restarted.

★

Jute (Dundee).—Raw jute prices are being very well maintained, with sellers showing a certain amount of reserve. The statistical position seems to favour a comparatively high level of prices this season, as it stands to reason that all consumers will be anxious to

obtain sufficient supplies to prevent them from drawing further on their stocks, which have been reduced to a low level during the past few seasons. Though the Indian jute mills are now working only 45 hours per week, they will still require six million bales for the current season, yet the final forecast gave a quantity to be received from the present crop of only 6,696,000 bales. There seems to be little doubt that four million bales will be required by other consuming centres, so that all the available unsold stocks carried forward from the previous season will be needed. It can scarcely be imagined that the final forecast can be under-estimated by about 3½ million bales. The full group of Daisee-2/3 is quoted at £19 10s. per ton and fours at from £18 15s., with good marks at from £20 and £18 17s. 6d. respectively, October-November. There is a great scarcity of offers of white jute at £21 5s. for good Lightnings and from £19 17s. 6d. for Hearts, October/November.

Jute yarns are very firmly held all round, though business is now very much quieter. Spinners are very busy and are harassed to give delivery of yarns on order.

THE COMMODITY MARKETS

THE prices of many raw materials rose further this week on favourable business news from the United States. Non-ferrous metals, cotton and rubber were all dearer last Wednesday than a week earlier. On the other hand, wheat prices fell further on the Liverpool futures market. The decision of the co-operating copper producers on Monday last week to raise output quotas from 95 per cent. to 105 per cent. of the standard tonnages from October 15th failed to stem the upward trend of prices. But when it was announced last Monday that restriction of output was to be removed, the advance in prices was checked.

Moody's index of the prices of staple commodities in the United States (December 31, 1931 = 100) fell slightly during the week ended last Wednesday, from 143.3 to 143.0. A month ago the index stood at 144.5 and a year ago at 167.0.

Metals

Copper.—The co-operating producers' decision to remove the restriction on production from October 15th checked the rise in prices, but there was a net gain of 17s. 6d. on the week in the standard cash closing price of £46 16s. 3d. on Wednesday. The September statistics show that stocks outside the United States, at 164,374 short tons, are about 15,000 short tons less than a month earlier, and are equivalent to only five weeks' requirements. It is felt, therefore, that the rise in prices may continue.

★

Tin.—Tin prices gained a further £5 10s. this week to close at £210 15s. on Wednesday. The demand for the metal has been strong and increased tonnages have been acquired on the United States account. Supplies, which are showing the effect of the low free market quota, are now less than current

requirements and prices are likely to rise further unless the quota is increased.

★

Lead and Spelter.—Although the prices of both metals were higher on the week the improvement was chiefly due to the strength of copper and tin. These metals are not directly affected by increased trade activity in the United States, and in other countries production is in excess of consumption. Lead gained 7s. 6d. on the week, closing at £16 8s. 9d., while spelter advanced 10s. to £15 8s. 9d.

Grains

THE wheat market has been helped this week by drought in Australia and the absence of seeding rains in the United States, but prices failed to advance. The reduction in the world's surplus due to a partial failure of the Australian crop cannot be substantial and may well be offset by the heavier production in Argentina. The Wheat Advisory Committee is reported to be framing a plan to deal with world wheat over-production and the Premier of Manitoba has invited representatives of all the exporting countries to a Conference at Winnipeg in December.

The maize market has been steadier during the week and prices are more closely in line with wheat. There has been a fair trade in Russian and Iranian barley, but supplies of English barley are in excess of demand.

Other Foods

Provisions.—The market in most provisions was quiet but firm. Bacon prices were lower but others showed little change on the week. Eggs and Danish butter were dearer.

★

Colonial Produce.—Demand for tea continues strong but prices were a little lower on the week. Sugar prices were also weaker but coffee showed some improvement and cocoa remained unchanged.

★

Fruit and Vegetables.—Supplies of potatoes at the Borough were heavy and prices difficult to maintain, but those of other vegetables were more restricted and prices were firmer. Fruit prices were lower, with the exception of apples and pears, which were less plentiful.

★

Milk Prices.—The September statistics issued by the Milk Marketing Board are summarised below:—

	Sept., 1937	July, 1938	Aug., 1938	Sept., 1938
Prices (per gall.)	d.	d.	d.	d.
Liquid	15	17	15	15
Av. manufacturing ..	6.425	6.655	6.606	6.950
Av. pool	12.38	12.61	11.5	11.84
Contract sales (mill. gall.)				
Liquid	49.3	53.1	51.1	50.6
Manufacturing	18.2	35.0	32.1	24.2
Total contract	67.5	88.1	83.2	74.8
Used by farmhouse cheesemakers	2.3	3.4	3.3	2.8

The price for liquid milk remains fixed but the average manufacturing price was slightly higher than in August. Liquid consumption, though a little lower than in August, was 1.3 million gallons higher than in September, 1937.

COMPANY MEETINGS

MODDERFONTEIN EAST, LIMITED

BOARD'S POLICY OF CONSTRUCTION

MR R. S. G. STOKES'S SURVEY

The annual general meeting of Modderfontein East, Limited, was held, on the 19th instant, at Johannesburg.

Mr. R. S. G. Stokes (the chairman), who presided, moved the adoption of the report and accounts.

Commenting on the accounts, the chairman remarked that provision for taxation and lease consideration together represented the heavy burden of 46 per cent. of the company's working profit.

FINANCING OF CAPITAL EXPENDITURE

Continuing, he said that in terms of the resolution of shareholders dated November 15, 1937, the authorised capital of the company had been increased from £930,805 to £950,000, and the directors had been empowered to issue new shares at their discretion in order to finance a portion of the company's heavy capital expenditures on construction work, estimated to total approximately £150,000 during the year ended June 30, 1938, and the following half-year.

Conditions up to the end of the financial year had been, in the opinion of the Board, unfavourable for the disposal of any large parcel of reserve shares on satisfactory terms. Consequently, none of the shares had been issued and capital expenditure for the year under review, totalling approximately £121,000, had been met out of distributable profits and cash resources. Although opportunities for the sale of reserve shares at a figure favourable to shareholders were today substantially better than at any time during the last financial year, it was now the intention of the Board to provide from working profits the funds required for the completion of construction. The additional amount was estimated to be a little in excess of £20,000.

The bulk of the construction work had been completed. The additions to the treatment plant had been finished in March; with the installation of additional electrically driven air compressors, the boiler plant had been closed down; and a new electric hoist at No. 1 main shaft was now in commission. Good progress had been made with the Clover Incline, which was already in service, to the 26th level. The erection of a new electric hoist at No. 5 shaft should be finished before the end of the calendar year.

GOOD OPERATING RESULTS

Operating results disclosed satisfactory records for tonnage milled and working profit earned, and with an increase in the scale of operations, working costs had shown a considerable decline to 17s. 9d. per ton milled.

A general tendency towards a decline in the grade and percentage of payability in easterly development continued. At the same time marked irregularity in values occurred from point to point and it was significant that one of the most advanced easterly raises had recently disclosed a value of 2 ozs. over a channel width of 36 ins. for a distance of 280 ft. In interpreting development returns, moreover, close comparisons would not be justified. Large quantities of ore were developed by stoping and the annual decline in the average value of payable footage and of the tonnage developed was largely due to the gradual lowering of the pay limit in conformity with the reduction of working costs.

The development footage had totalled 55,484 ft., showing a heavy decline in comparison with the aggregate for the previous year. Assuming an adequate supply of native labour, a similar rate of advance during the current year was to be expected under the present programme. Subsequent footage requirements would depend upon the percentage of payability disclosed which, as indicated by the remarks made by the consulting engineer in his report upon variable conditions prevailing in the different development areas, could not be predicted with confidence.

INCREASE IN ORE RESERVES

The increase in the available ore reserves to 6,329,100 tons, at an estimated average value of 4.3 dwts. per ton, was particularly satisfactory, reflecting primarily the influence of a reduction in the pay limit upon the economic value of the marginal ore.

The mine's large resources of low grade ore were the dominant factor in the company's decision to adopt a policy of steady expansion, in accordance with which the rate of milling had now been increased in five years from 1,000,000 to approximately 1,500,000 tons a year.

During the last few years the Black Reef, underlying a large area in the Far East Rand, had been successfully prospected and mined three or four miles to the west of Modderfontein East. The Black Reef formation was known to underlie fully 3,500 claims upon the company's property. Present information was too limited to warrant any statement regarding the possible economic value of that reef to the company.

The outlook for the coming year was highly encouraging, concluded the chairman.

The report and accounts were adopted unanimously.

CONSOLIDATED MAIN REEF MINES AND ESTATE, LIMITED

RESULTS WELL MAINTAINED

PROMISING NEW DEVELOPMENT

The annual general meeting of the Consolidated Main Reef Mines and Estate, Limited, was held, on the 19th instant, at Johannesburg.

Dr Hans Pirow, the chairman, who presided, in moving the adoption of the report and accounts, referred to the loss which the company had sustained through the resignation of Mr C. L. Read, a former chairman of the company, on his departure from South Africa.

YEAR'S RESULTS

The results of the past year's operations, continued the chairman, did not differ materially from those of the preceding twelve months. Tonnage milled had increased by 18,500 tons to the record figure of 1,935,000 tons, yield and revenue had been lowered by 0.094 dwt. and 10d. per ton milled respectively, and, although costs had fallen by 5d. per ton milled, the total working profits at £583,585 had shown a decrease of £33,201.

The net capital expenditure had been £91,563, and after deducting £2,415 realised by freehold property sales appropriation from profits on capital account for the year had amounted to £89,148.

It was estimated that for the current year capital expenditure would amount to approximately £50,000.

As foreshadowed, development footage had been considerably reduced—from 111,953 ft. in the previous year to 86,610 ft. With the smaller development of footage, payable ore developed totalling 2,098,400 tons had been 1,256,600 tons less than for the previous year, and the average value at 4 dwt. had shown a decrease of 0.1 dwt. It was gratifying to note that the very satisfactory ore reserve tonnage had been maintained with the smaller development footage, although the average grade of reserve had fallen by 0.1 dwt.

EXPLORATION OF FRESH AREA

An interesting feature was that mine development on Main Reef and Main Reef Leader had now reached the stage when it was possible to begin exploration of an extensive and hitherto undeveloped area lying to the west of the current workings from which it was separated by Bantjes Dyke. The results obtained in that exploratory work were bound to have considerable bearing on the future of the mine. Five drives were being advanced into the area in order to test it on as many levels as was practicable.

That development had not yet penetrated much beyond the dyke, and although results to date were promising, much more work would have to be done before it would be possible to form any estimate of the value of that ground.

Development footage was being maintained at last year's level, and if the present satisfactory supply of native labour continued results for the current year should compare favourably with those of last year.

The report and accounts were adopted unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

ROAN ANTELOPE COPPER MINES LIMITED

REVIEW OF THE COPPER POSITION

MR CHESTER BEATTY'S REVIEW

The eleventh ordinary general meeting of the Roan Antelope Copper Mines, Limited, was held, on the 18th instant, in London, Mr A. Chester Beatty (chairman of the company) presiding.

The chairman, in the course of his speech, said:—During the year 75,253 long tons of copper were produced, an increase of 5,693 tons over the previous year. On the other hand, the average realised price of £45 9s. 4d. was £5 11s. per ton lower. The all-in cost was £24 16s. 2d. per ton, and the net profit for the year was £1,575,068. This result was arrived at after transferring £200,000 to replacements reserve, as against £175,000 in the previous year, and also charging £50,200 to operating expenses as a provision for the pension and bonus funds for mine employees.

Out of the net profit the sum of £512,000 has been appropriated to meet the company's liabilities for taxation, including £67,000 for National Defence contribution, £250,000 has been transferred to general reserve, and £10,000 added to the mine pension fund contingency reserve, bringing that reserve up to £30,000. An amount of £30,000 has been appropriated as a reserve for mine employees' leave pay. At present leave pay is charged to operating expenses each year, and it is the intention to continue this practice. The accrued liability, at any date, is about £30,000, and it is considered prudent to set aside this sum as a permanent reserve. After providing for these reserves and for the interim and final dividends for the year, there remains a balance of £261,844 to be carried forward, as against £263,120 in the previous year.

THE COPPER POSITIONS

In my review of the copper position last year I mentioned the factors which had brought about an undue rise in copper prices, reaching its peak in the first half of 1937, and of the difficulties which resulted therefrom. Subsequent to my address to you the continued decline of business in America resulted in a further reduction of copper consumption and a considerable increase in copper stocks in that country. World copper consumption outside the United States continued at a high level, but the London market was under the influence of the unbalanced position in the United States and a consequent increase in exports from that country. This resulted in the prices of Standard Copper on the London market falling to the low figure of £32 10s. per ton. Producers who are members of the restriction scheme decided to reduce the output, which since December last had been maintained at 105 per cent. of basic quotas to 95 per cent. as from July 1st last.

Since that date there has been a marked improvement in copper consumption in the United States and, following on the improvement in the European political situation, there has also been an increase in the demand on the London market. With a view to meeting this increased market requirement, producers who are members of the restriction scheme have decided as from the 15th of this month to remove restriction on output for such period as may be found advisable.

It is impossible to estimate how much of the current demand for copper outside the United States arises from supplies purchased for re-armaments, but I think it is easy to exaggerate the amounts so used. On the other hand, conditions favourable for a relaxation of re-armament, to which we all look forward, also favour an expansion and a freer flow of world trade which will result in an increased demand for copper for peace-time purposes.

Recent experience has amply demonstrated the advantage to be obtained from close co-operation among producers with a view to maintaining, so far as possible, a sound market position for the metal and in May last members of the restriction scheme decided unanimously to extend the scheme for a further period.

FUTURE PROSPECTS

The quarterly statement of our estimated revenue and expenditure to September 30, 1938, will be issued to shareholders, with reprints of the proceedings of this meeting, and will show an estimated net profit of about £250,000, subject to taxation.

In these uncertain times one does not like to prophesy, but I do think that in spite of the present unsettled world conditions we have reason to be satisfied with our business. There is no doubt that the demand for copper is a persistent one, and, taken over a period, it has been a consistently expanding one. Therefore, with our large ore reserves, our low operating costs and our location in the British Empire, we can look forward with confidence to the future. The report was unanimously adopted.

THE UNITED STEEL COMPANIES, LIMITED

RECORD PRODUCTION AND PROFIT

The annual general meeting of the United Steel Companies, Limited, was held, on the 14th instant, at 21, Tothill Street, London.

Sir W. Benton Jones, Bt. (the chairman), in the course of his speech, said that the year ended June 30, 1938, was the fifth year in succession in which the directors had been able to report a year of trading and financial results which were better than the year before. The company reached its highest rate of production and earned its largest profit.

A year ago the directors reported that the works of the company and its subsidiaries had been operated continuously at a high rate and production has been greater than in the previous year. The high rate continued until the first quarter of 1938, when the speed began to fall, and in the second quarter the fall continued.

Steel production in Great Britain in 1937 was 135 per cent. of the production of 1929. In Western Europe, excluding Great Britain, production in 1937 was 98 per cent. of 1929. In the United States of America the production in 1937 was 89 per cent. of 1929. In the first six months of 1938 production declined in Great Britain to a rate which was 123 per cent. of 1929, in Western Europe to 93 per cent. of 1929, and in the United States to 38 per cent. of 1929.

An indication of the future might be found in the records of recent production month by month. It was to be hoped that these figures indicated a turn of the tide.

In Great Britain exceptional circumstances had accentuated the recession, but the effect of these exceptional circumstances, he thought, must by now be nearly passed and unless actual consumption declined further a larger proportion of home-made steel and iron would be required.

IMPORTANCE OF PIG IRON

He referred to the recent difficulty in obtaining sufficient materials at home to supply the steel works when working at maximum production. He said: "If the steel trade is to be self-supporting it must make sufficient pig iron to meet its maximum needs. Pig iron is a very suitable commodity to store. It is too heavy to be pilfered; it occupies very little space; it is very easily handled and it does not deteriorate appreciably. It seems obvious to suggest that the steel trade should organise the storing of pig iron in lean times and draw on its store when demand is high. Such an arrangement would make it unnecessary to provide more pig iron making capacity than is required by the average demand. It would enable selected pig iron works to operate at a uniform rate and at the same time would provide coke makers and colliery proprietors with a uniform outlet for the coal and coke consumed directly and indirectly in the manufacture of pig iron."

Referring to prices, he had heard it said that they were too high and that a reduction in price was required to stimulate buying. If this meant that a reduction should be made in price with the object of stimulating demand without proper regard to cost, it was unreasonable. The prices of steel had been regulated during the recent trade activity. In spite of rising costs little change had been made until in May, 1937. Later, the prices then fixed were stabilised until the end of this year to allow buyers to undertake forward commitments without risk. He did not think it would be denied that if prices had been free they would have risen to a higher level than they were to-day. Prices have been regulated by reference to costs when trade activity was rising, and the only good reason for reducing prices would be a fall in costs.

THE OUTLOOK

In concluding, he said: "I have said before and I repeat that the production of steel in this country is established at a permanently higher level in any circumstances because the imports of steel, which a few years ago amounted to over 4,000,000 tons, are now limited to a much lower figure, and the difference becomes an addition to the demand for British steel. For this reason, even if there should be a further recession in the steel industry, which seems unlikely, production would not fall to the low levels which it reached in the depression of 1931 and 1932."

"I have already referred to the figures of production in recent months and the possibility that they may indicate some revival. In any case, however, there is a wide margin between the maximum production of 13 million tons in 1937 and the minimum production of a little more than 5 million tons in 1931, and even if, for the next few years, production is to be less than the maximum there are lower levels at which we can obtain satisfactory results."

The report was unanimously adopted.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY, LIMITED

DIVIDEND OF SIX PER CENT.

The twelfth annual general meeting of the Perak River Hydro-Electric Power Company, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Mr George Balfour, J.P., M.P. (chairman of the company), in the course of his speech, after expressing regret at the death last week of the Sultan of Perak, said:—The accounts we present to-day justify the forecast given you at our last annual general meeting. In fact if we only made exactly the same appropriation to writing down, depreciation and reserve as in the previous year the balance of revenue account available for loan interest dividend, etc., would show an increase of some £23,000. Your directors, however, feel that it is wise policy to make larger appropriations during the years of heavy tin consumption so that they can feel justified in making more modest appropriations in any lean year or years if we have to face them.

The international upset which culminated in the crisis of a few weeks ago has no doubt been responsible for the slackening of trade and the consequent decline in demand for tin. I think we are entitled to assume that we are now facing the low level of demand, but that the trend of world trade will be steadily and firmly on the up grade, so that we might expect considerable improvement during this financial year. The most encouraging fact is that under the abnormally severe conditions we are facing at the moment we are dealing with a load of 20,000 kw., whereas a few years ago when the tin output was at a similar low level we were only dealing with a load of some 6,000 kw. to 8,000 kw. this, in my opinion, is good evidence of a more stable foundation for our business.

UNITS SOLD

We sold 214,000,000 units last year, compared with 228,000,000, a decrease of 14,000,000. The load on our plant—a maximum of 42,900 kw. peak, falling to 27,000 kw.—shows the rapid effect of the fall in output of tin. On the maximum load we had to work all our plant, both hydro-electric and steam, to full capacity. With the completion of this plant we shall be prepared for any load we are likely to have to deal with for some years to come.

During the last two or three years we have overtaken the necessary extensions to both our steam generating stations and remodelled and reinforced our transmission system. We can look forward, after the balance of payment for the work now nearing completion has been made, to no very heavy capital commitments for some time to come unless due to any acquisition of property.

You will note that at the conclusion of the ordinary business a resolution will be submitted to increase the capital by £500,000 by the creation of 500,000 "A" shares of £1 each, which may be issued either as preference shares or ordinary shares, but so that not more than 200,000 of the additional shares should be issued as preference shares. I do not anticipate that we shall require to issue more than one-half of the amount to be authorised to cover fully the balance of all our capital commitments outstanding.

REVENUE FROM SALE OF CURRENT

The actual revenue from sale of current amounts to £531,661, as compared with £569,414 in the previous account. On the actual earnings for the year neglecting the present position your directors would have been justified in recommending a higher dividend than in the previous year. Under existing conditions, however, such a dividend is not justified in recommending more than six per cent.

Now I know you will want to know what I have to say about the output. My opinion is that, short of a second half-year, and if I am right, while the same high revenue balances next year, we should be able to give a not unsatisfactory account.

I hoped we should have been able to arrange with the Federated Malay States Government to deal with the various small supply undertakings which they operate in our area in the Perak State, as I have always held, and still hold, the view that it would be to the benefit of the State and the consumer. We have so far not been able to convince the authorities. We certainly have no right to be aggressive in pressing the matter, but I still hope that in the interest of the development of electricity supply in the Perak State we may some day reach agreement on the matter. I might add that our relations with the authorities are of the most cordial nature, founded, I believe, on mutual confidence and respect.

The report and accounts were unanimously adopted and the proposed increase of capital was approved.

MUREX, LIMITED

DIVIDEND AND BONUS 20 PER CENT.

The nineteenth ordinary general meeting of Murex, Limited, was held, on the 17th instant, at Winchester House, London.

Mr George P. Joseph (the chairman), who presided, said that the profits from trading showed a satisfactory increase of about £43,000, and dividends received an increase of nearly £4,000. A final dividend of 10 per cent. and a cash bonus of 2½ per cent. (making 20 per cent. for the year) was recommended. Their subsidiary, Murex Welding Processes, whose entire capital was held by Murex, had completed the transfer of its tariff and employees to the new freehold premises at Freezywater, Waltham Cross. The main building, with a floor area of approximately four and a half acres, represented, perhaps, the finest example in the British Isles of an all-welded single storey factory. In the whole area of four and a half acres there were only four internal columns supporting the roof.

The welding industry continued to expand, and despite the keen competition to which he had repeatedly referred, their output and sales had shown some increase during the year under review. Selling prices had been reduced to meet continued and increasing competition, but the board hoped that the greater manufacturing capacity of the new factory at Freezywater would further reduce costs and enable the company to continue successfully to meet such competition. The interests which Murex Welding Processes had in the Premier Electric Welding Company (Mersey), Limited, of Liverpool, and in the Australian E.M.F. Company both continued to be satisfactory.

Their other subsidiary company, Magnesium Metal and Alloys, whose entire capital they also now held, confined its activities to the production of pure magnesium metal and magnesium alloys, for which products there was a growing demand.

The new financial year had opened in a period of international political unrest, and the economic and industrial conditions obtaining during the latter part of the financial year had severely affected the demand for such products as they manufactured. So far they had experienced a very considerable falling off in trade and profits. It might be that the recession would go no further, and that trade would improve; the figures for September pointed to that being the case. With any marked revival he saw no reason to doubt that the company would obtain its full share of business.

The report was unanimously adopted.

JOHORE RUBBER LANDS

SOUND FINANCIAL POSITION

The twelfth ordinary general meeting of Johore Rubber Lands, Limited, was held on October 18th at Winchester House, London, E.C.

Mr E. B. Ridsdel, who presided in the absence of the chairman, Mr H. M. Graham, owing to illness, said that the profit earned amounted to £3,343 as against £6,888 last year. The falling off in their profits was due to the poor trading conditions that prevailed during the year covered by the accounts. The price of rubber steadily declined throughout the year and the average price realised was 7½d. per lb., London landed terms, as against 9½d. per lb. the previous year, or a difference of 1½d. per lb. Their replanting programme and increased taxation accounted for a further £930 in their expenditure.

As stated in the report, the exportable allowance for the year was 82½ per cent., but he was sorry to say that the export allowance for April-June of this year was 60 per cent. and for June-December it was only 45 per cent. If the exportable allowance was only 45 per cent. for the remaining three months of the financial year, viz., to March 31, 1939, the average percentage for the year would be only 48½ per cent., which must have a very adverse effect on their costs. Output was a very important factor, apart from the price of the commodity.

The average price realised during the current year was about 7½d. per lb., London landed terms. Although the price had recently advanced to 8½d. per lb., with such drastic restriction it must advance much more to enable them to make reasonable profits. The f.o.b. cost for the year was 4-9½d. per lb., and the all-in cost 5-882d. per lb. Those costs, on a restricted crop, must be regarded as satisfactory.

The directors recommended the payment of a dividend of 2½ per cent., less tax, which would absorb £2,743, leaving £8,456 to be carried forward, as against £7,856 brought in.

It would be observed from the balance sheet that the company's financial position was sound, as cash in hand, war loan, debtors and rubber stocks, less creditors, amounted to £18,027, or nearly £10 per planted acre.

The report and accounts were unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED

IMPROVED POSITION

The ordinary general meeting of the Tanganyika Concessions, Limited, was held, on the 14th instant, in London.

The Right Hon. Viscount Stenhouse, P.C., G.C.M.G., D.S.O. (the chairman), in the course of his speech, said:—The effect of the scheme for reduction and reorganisation of capital is reflected in the balance sheet under review and shows a much more satisfactory position. I am pleased to say the results for the seven months ended July 31, 1938, justify our recommending the payment of a dividend on the preference stock for that period. In fixing the dividend at 4 per cent., the board have had in mind the advisability of conserving the company's resources and building up a reserve, and it is satisfactory that, after paying the present dividend, we are able to carry forward over £111,000.

With regard to the company's interests, the operations of the Union Minière are proceeding satisfactorily and sales are well maintained. The position of the copper market appears to be favourable, and the price has now improved to a more reasonable figure. A decline in the earnings of the Benguela Railway is to be noted for the first six months of 1938, due principally to a decrease in shipments of metals. The increase in copper production and the improvement in price should be reflected in the earnings of the railway, which will also be assisted by a resumption of shipments of zinc, lead and manganese.

As regards our East African gold interests, the construction of the 250-ton mill which is being erected by the Geita Gold Mining Company is proceeding very satisfactorily, and it is expected that gold production will commence early next year. The interest which you have in that concern should provide a new source of revenue.

I see no object in concealing the fact that any anxiety which may be felt about our interests in Tanganyika Territory has arisen from doubts as to the future fate of the Territory itself. The Geita goldfield is a very important asset for Tanganyika Territory. Our interest in it is relatively small and, leaving it out of account altogether, I feel justified in saying that now we have recommenced

the payment of dividends, the income which we may expect from the Union Minière alone should, in the present favourable conditions, ensure their continuance.

The report was unanimously adopted.

BRITISH RUBBER ESTATES OF JAVA (1932), LIMITED

FURTHER REDUCTION OF DEBENTURE STOCK

The sixth ordinary general meeting of British Rubber Estates of Java (1932), Limited, was held, on the 18th instant, at 58 Mark Lane, London.

Mr James Davenport, the chairman, said, in the course of his remarks: The accounts show a reduction in the profits from £50,400 to £29,500, and they show a strong financial position, with net liquid assets of over £87,000. Moreover, we have reduced our debenture debt from £120,000 to £98,800. We are setting aside out of this year's profits just under £7,400 in further redemption. This will bring the issue down to approximately £92,000, from £132,000 a couple of years ago.

The working for the year may be summarised as follows: Profit on rubber, £34,034; profit on tea, £8,861; loss on coffee, £418; or a gross profit of £42,486. There was little change in the result from tea, but a very considerable decline from both rubber and coffee. The most serious reverse was on rubber. Although we were able to export 90,000 lb. more than in the previous year, our profit was reduced by £18,121, caused by (1) a net selling price of 1½d. per lb. less, and (2) an increase in the quantity valued in our accounts at the nominal price of 1d. per lb.

I think it must be clear to you that, unless there is very material improvement in prices, this year's results are bound to be disappointing. At the same time I would not have you think I am despondent regarding the future. The International Committee are handling a difficult problem with great ability, and producers (and consumers, too) are in good hands. If the revival of business in the United States continues to make progress, it may well be that after the turn of the year we may see a different picture.

The report and accounts were adopted.

(Continued from page 187)

Capital Issues

PUBLIC appeals for new capital this week are limited to the issue of 500,000 4 per cent. £1 preference shares of *Scottish Power Company* at par. The new shares rank *pari passu* with the existing 6 per cent. and 4 per cent. issues, and although the issue price little advantage in relation to the market price of the existing 4 per cent. issue, the attraction of a sound electricity preference issue free of stamp evidently assisted the over-subscription on Thursday. An offer of conversion, in dual form, has been made to *Hambleden Estates* 6 per cent. debenture holders to exchange their stock (which is due for repayment in October next year) into £60 4½ per cent. "A" debenture stock and £40 4½ per cent. "B" debenture stock for every £100 6 per cent. stock now held.

PUBLIC OFFERS

Scottish Power Company.—Issue of 500,000 4 per cent. cumulative £1 preference shares at par. Rank with existing £2,200,000 6 per cent. and £1,000,000 4 per cent. preference stocks. Owns capitals of operating companies. Supply area, 12,000 sq. miles; installed capacity, 152,000 kw. Combined profits: 1935, £465,035; 1936, £523,141; 1937, £569,631 (before depreciation, etc., of £162,106). 1938, £188,328 and £201,329 respectively to costs when trade activity was normal.

BY

West Surrey
Sale by tender of

cent. preference s. In concluding, he said: "Lipal of this stock will be repaid yielding 4 per cent. per level in any c. Water rental: 1935, £4 years ago and £50,825; 1937, £53,172, such 1000

Torquay and Paignton Gas Company.—Sale by tender of £80,000 4 per cent. redeemable preference stock, redeemable at par 1968, or from 1963 on notice. Minimum price is par.

UNIT TRUST

Keystone Gold Certificates: Fourth Series.—Managers, Gold Producers Fixed Trust, Ltd. Initial portfolio, 16 dividend-paying Rand companies (7 further companies can be included). Life, 10 years. Issue price, 13s. per sub-unit. Service charge, 5 per

cent. (to 3d. up); half-yearly fee, ½ this per cent.

BONUS SHARES

South London Greyhound Racecourses.—It is proposed to increase capital to £180,000 and to issue 400,000 additional deferred shares to present holders in the proportion of one bonus share for five shares held.

Lightalloys, Ltd.—A share bonus is recommended of one new share for every two shares held as at November 1st.

National Omnibus and Transport.—This company is making a free bonus issue of three £1 ordinary shares for every twenty held on November 7, 1938, by capitalising £150,000 ordinary reserve.

THE Government 4 per cent. debenture stock, 1939-1959.—The Lpal of this stock will be repaid in that par on April 15, 1939.

Hambleden Estates, Ltd.—On October 1, 1939, this company will redeem at 110 all the 6 per cent. debenture stock (on March 31, 1938, the amount outstanding was £1,686,770). For this purpose £1,075,000 4½ per cent. "A" debenture stock and £725,000 4½ per cent. "B" debenture stock have been created. For each £100 of first debenture stock-holders are offered in exchange £60 first mortgage "A" debenture stock and £40 first mortgage "B" debenture stock, together with an adjusting interest payment of £1 7s. (less tax). Holders are given until October 31, 1938, to accept.

Where are the Jews?

The charts which we present below have been derived from estimates for about 1937, published in the official German bulletin *Wirtschaft und Statistik*, 1938, June, Part II. It is to be emphasised that these figures are based on religion and not on race. In many countries, Great Britain included, no questions are asked in the census as to the religion of the population. Consequently, all statistics of the numbers of Jews in different countries contain a certain margin of error. Those used, however, do not, in most cases, differ substantially from others published in the Jewish Year Book, 1938.

Finance

GOVERNMENT RETURNS

For the week ended October 15, 1938, total ordinary revenue was £16,201,000, against ordinary expenditure of £17,599,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £186,315,000, against a deficit of £116,314,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On October 14th applications at £99 16s. 1d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 69 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 16s. 2d. per cent. and above were allotted in full. £40.0 millions of Treasury bills are being offered on October 21st.

OIL OUTPUTS

Anglo-Iranian Oil Company, Ltd.—Output in Iran for August, 1938, 763,000 tons. Total output for the period January 1 to August 31, 1938, was 6,725,000 tons.

British Controlled Oilfields, Ltd.—Total output for week ended October 15, 1938, 12,122 barrels.

The Dacia Romano Petroleum Syndicate, Ltd.—Gross output, September, 1938, Dacia, 1,462 tons; Perimeter X, 2,882 tons; Starnapha, 331 tons.

Phoenix Oil and Transport Company, Ltd.—The gross production of crude oil of the Phoenix Group for September, 1938, was 50,288 tons.

Tampico Oil, Ltd.—The total production from the company's properties in Mexico during September was 4,565 barrels, in respect of which the royalty due to Tampico Oil, Ltd., was 342 barrels.

Kern Oil Company, Ltd.—The total production during September was 236,071 barrels, or approximately 33,724 tons.

Lobitos Oilfields, Ltd.—Output of the Peruvian company for September, 27,863 tons.

Trinidad Petroleum Development Company, Ltd.—Output for week ended October 15, 1938, 54,890 barrels.

Venezuelan Oil Concessions.—Total output week to October 15, 1938, 1,312,461 barrels.

Mexican Eagle Oil Company.—Claiming to be the owners, this company attached on October 7th about 12,500 tons of gasoline shipped to Havre from Mexico in three tankers. The gasoline is in tankage belonging to the Compagnie Industrielle Maritime, in which London Thames Haven Oil Wharves have a substantial interest.

The Need for New Methods

WE are on the threshold of a new and historic session of Parliament in which the course of our history for at least a generation may well be marked out. This week, in preparation, the Cabinet has met; a defence committee of Ministers has been in consultation; and individual members of the Government have conferred with Mr Chamberlain. So far, no steps have been officially announced to establish fresh ways and means of ensuring that the men and materials required for intensified re-armament will be delivered more promptly and efficiently in future months than they have been in the past few years. Lord Stanhope and Lord De La Warr have been given new offices; but the much bruited reports that Mr Chamberlain is at last ready to set up Ministries of Supply and Man-Power remain no more than rumours.

Englishmen by tradition face facts only at the last minute; and the present Government's defence policy has up to now borne the national mark. Self-pledged to the task of making the country secure against all possible perils, committed in many Ministerial speeches to the urgent duty of repairing the grave deficiencies in national defence disclosed by the recent crisis (failings which fatally hampered the policy of Britain as well as of France at Godesberg and Munich), the Prime Minister has not yet given any overt sign that he is ready to depart from the view he expressed last June, namely that there is no need to set up special Ministers and departments to make re-armament really work. It is surely not too optimistic to hope that Mr Chamberlain will reveal to Parliament next week that he has revised this opinion.

Ministers of Supply and Man-Power are identified in many minds, including Mr Chamberlain's, with compulsory service imposed upon citizens by the State. The Prime Minister's repeated resolution to rely upon voluntary service to speed up the output of arms and man the nation's defences is wholly praiseworthy; it exemplifies the determination expected of a Parliamentary leader to lay no needless restrictions upon traditional liberties and freedom of enterprise; and it contrasts brightly with the regimentation which is bone of the bone of totalitarianism. Yet no problem can be solved simply by passing it by. In the words of Lord Halifax,

because we have the conviction that we have something of priceless value to give the world, we need the whole strength of the nation, moral and material, to discharge the responsibilities which seem to have been providentially entrusted to our keeping.

The security of democratic countries like our own against the threat of force is even more important, if a choice has unhappily to be made, than the diurnal details of democratic practice. It has been agreed, and no member of the Cabinet would dissent from this view, that re-armament must now be executed, not only more efficiently than it has been hitherto, but also on a much wider scale. And, whether the services required of the people are voluntary or compulsory, there must be a system of organisation capable of delivering the goods vital for security in the quantity and at the times laid down.

This is not, in the first instance, a choice between opposite ways of political action, between compulsion and

service freely given. Even voluntary co-operation in the production of aircraft and munitions must be organised and proceed according to some precise plan. Indeed, there are good grounds for believing that, at least as long as the demands of defence are not sufficiently extensive to establish a prior lien upon the majority of men and materials available in the nation's economy, the national mobilisation immediately called for can be secured by voluntary agreement. In any case, we must give the voluntary principle the fullest chance to prove that it is compatible with efficient organisation. The one fatal mistake would be to put off the task of efficient organisation because it is associated, perhaps wrongly, in the public mind with compulsion. Organisation we must have—voluntary if possible, compulsory if not. There must be a plan, and it must work. And it is as ineluctably true of nations as of individuals that they who will the end must will the means to that end. If we have made up our mind to re-arm, we must re-arm letting nothing stand in our way, even though it is almost certain that, as the structure of re-armament expands and grows, we shall be unable to avoid some measure of compulsion in its ordering. The nearer we approach a war-time basis, the more do we necessarily discard peace-time practices. But, at the outset, this problem does not acutely arise. The immediate task is to smooth out the frictions which have until now blocked the delivery of airplanes and anti-aircraft artillery, frictions almost entirely organisational, due to faulty methods of designing and contracting, inadequate liaison between Government departments and industry and the absence of any single-minded planning or proper co-ordination between departments and firms. Within the comparatively restricted frame of present or prospective defence programmes this can largely be achieved by co-operation and moral suasion; but it must be effectively planned and organised.

The growing demand for new Ministries is a reflection of the extent to which this need for organisation is felt by the public. Partly, it arises out of criticism of the existing departments concerned with defence. But mainly it comes from the conviction that our present dangers require treatment of a type for which the great permanent departments are fitted neither by temperament nor by personnel. This is particularly true of the case for a Ministry of Supply. Those who have been advocating the creation of such a

Ministry ever since the inception of re-armament have been told by the Government that it would be an unnecessary interference with the normal course of industry. The Government have preferred the alternative course of co-ordinating the activities of the independent Ministries through a Minister with Cabinet rank but without executive powers. It may fairly be said that the system associated with the name of Sir Thomas Inskip has failed. It is precisely because interference with the normal course of the armaments industry is required that a Ministry of Supply has now become a necessity. What was formerly an objection to the proposal has become its very marrow.

It is no insult to the Defence Departments to say that they are not equipped for the mass production of armaments. They are staffed by officers, by civil servants and by technical experts; the one character who never penetrates their portals is the business organiser or the big industrialist. They are hampered at every turn by Treasury control. This mechanism cannot compete with the totalitarian domination of industry in Germany. Sir Kingsley Wood has recently announced that 20,000 to 80,000 man-hours of work are now required to produce an airplane. This figure in itself is a conclusive condemnation of the present system. Germany is believed to be turning out 600 machines a month, and she is certainly not devoting 48, or even 12, million man-hours to the job. Doubtless our methods of production turn out excellent machines; the Russians in 1916 made shells that were engineering masterpieces. But they lost the war because their shells were too good and too few, and we shall lose the peace if our aircraft are too good and too few. One of the most urgent tasks before the Government is drastically to reduce the number of man-hours per airplane, per gun, per shell turned out. It is not a task for which the officer, the designer, the civil servant has any qualifications. It is a task for the industrial manager. He must be enlisted, as he was in the war, in a special Ministry, led by a human dynamo, and equipped with the legal powers necessary to organise the production of arms as the biggest mass production industry the world has ever known. It is in the nature of things that the Prime Minister will be told by the entire existing machine of government that such drastic steps are not necessary. It will be a disaster if the Foreign Office is the only Department whose conventions he has the strength of mind to disturb.

American Horoscope

1. The President and the Electors

ON November 8th, "the Tuesday after the first Monday in November," the biennial General Election takes place in the United States. This is what is known, in American political parlance, as an "off-year," which is to say that the Presidency is not immediately at stake. But one-third of the Senate and the whole House of Representatives have to be elected and many of the individual States are also choosing executive officials and legislators. Many of these local contests are not without interest even to the foreign observer. In New York, for instance, the contest for the Governorship is one of personalities between the incumbent, Mr Lehman, and Mr Dewey, the young District Attorney who is leading the current attack on corruption in New York City. In California, the fight turns on Ham and Eggs, the appealing title given to their movement by the latest band of Utopians, whose actual panacea is the familiar one of lavish old-age pensions.

But these State contests, even when multiplied by forty-eight, are subordinate in interest to the Congressional elections. And they, off-year or not, are of interest mainly because of the light they shed on the prospects of a change in the tenancy of the White House. It is generally conceded both that the present Democratic majority in the House of Representatives will be reduced and also that it will remain a majority. In the Senate, only one-third of which has to face re-election, the continuance of a Democratic majority is a matter of mathematical certainty. The next Congress, like the last three, will be in the control of the party to which the President also belongs. A General Election without any prospect of a change in political complexion might seem to be a dull affair. But in fact, the votes to be cast on Tuesday week are the opening shots in the Presidential campaign of 1940.

The off-year election in the middle of his second term is

a peculiarly dangerous milestone for any President. Normally a President is rigidly limited to eight years. With only two more years to go, he ceases, unless he has a very attractive personality, to interest the electors as much as the competitors for the succession, while the professional politicians begin to wonder which band-wagon they should climb aboard, and begin to realise that his band-wagon is the only one in evidence that can safely be deserted. In addition, the President (whether in his first term or his second) faces the possibility of having a hostile Congress returned and being left in the exasperating position of bearing the responsibility for the government of the country without the power to execute his policies. It is one of the peculiarities of the American Constitution that many Presidents are in power for two years less than they are in office.

This, however, is an unusual off-year, because the United States has an unusual President. To an astonishing degree Mr Roosevelt still dominates the scene. In the electoral sense he is the only giant in a race of pygmies, and though his name will not appear on any ballot paper, he is the candidate for almost every office. Even the efforts of the Republicans to recover from their disastrous routs of 1932, 1934 and 1936 derive interest chiefly from his reflection, for the question that will be asked of every successfully elected Governor or Senator is whether he is a big enough man to succeed Mr Roosevelt. The Republicans will gain some Congressional seats. In the summer, they seemed to have a good chance of recapturing a substantial block. Since then, however, recovery has returned; the elector is not much concerned with the question discussed in the succeeding article, whether the recovery will last. It is a fact, and a Democratic fact.

Mr Roosevelt is doubtless sorry that he is not facing re-election. There is every indication that his personal popularity stands as high as ever it did. The combined effect of recovery and of his forceful and tactful intervention in the international crisis has been to increase his popularity in the recurrent tests of the "straw ballots" by some 4 per cent. But the American elector has a confusing ability to distinguish between a man and his policies, a perverse delight in liking both the President and his opponents. Mr Roosevelt's recent attempt to "purge" his party of its Conservative Senators was a complete failure. The net effect has not even been to frighten his opponents within the

Democratic Party; they return to Congress reinforced. A Democratic Congress may, therefore, be anything but a Roosevelt Congress. On the contrary, it is likely that the coalition between the Republicans and the so-called Conservative Democrats will command a majority. If so, Mr Roosevelt will be almost as impotent as Wilson after 1918 or Mr Hoover after 1930. Were he himself standing for election, he might hope by his own success to acquire enough prestige to dominate Congress. As it is, he will be told that the popular vote is against his policies.

The bearing of these considerations on 1940 is becoming both interesting and intriguing. To become President of the United States a man must be both nominated by his party and elected by the people. Mr Roosevelt is doubtless hoping to choose his own successor and push him both to nomination and to election. But his power to do so is becoming doubtful. The personnel of the Party Convention is made up of machine politicians from all over the country. Normally, a President in office has no difficulty in securing a convention favourable to himself. But the President wields his patronage weapon through the agency of the Postmaster-General, and the present incumbent of that office, Mr Farley, is both an extraordinarily able machine politician and believed to be out of sympathy with many of the President's policies. An attempt by Mr Roosevelt to force an extreme New Dealer on his party might lead to a break with Mr Farley—and the machine might follow Mr Farley. Even if a New Dealer could be nominated, there might be Conservative defections from the Democratic ranks, and none of the New Dealers, save one, has the popular following to compensate for such losses. That one is Mr. Roosevelt himself. He may find himself, two years hence, in the position of choosing between a third candidature for himself and the defeat of all his Liberal ideas, not at the election, but in the Democratic convention. Against such a course stands the traditional dislike of third terms. It is a strong convention, but Mr. Roosevelt is an unconventional President who is, despite all that his enemies may say, passionately sincere in the advocacy of his Liberal beliefs. The overriding question of American politics between now and 1940 will be whether he will choose this way of giving the New Deal a good chance of survival. The elections to be held on Tuesday week will provide some of the raw material for an answer.

2. Is it Recovery?

SINCE the last week in June there has been a sharp revival in the industry of the United States, which in the preceding nine months had suffered such an unprecedentedly rapid recession. The herald—some would say the father—of this recovery was the sudden decision of the New York Stock Exchange on June 20th (the start can be determined to the day) that security prices were far too low. For two or three weeks the markets blazed and, as a tribute either to the prevision of the Stock Exchange or to its power of initiative in the American economy, industry followed. Wall Street has had sinking spells since the beginning of August, but the industrial indices have continued their rise. The diplomatic scares of September brought some hesitation, but no more, and it is already apparent that October will be another good month.

The extent of the recovery in industrial activity in comparison with the previous decline can be seen from the movements of the *New York Times* weekly index of business activity plotted in the first of a series of charts printed overleaf. The 1938 curve is still below that of either of the two preceding years; the latest figure of 87.6 in the week of October 15th compares with 100.2 in the corresponding week of 1937 and 102.3 in 1936. But the index

has recovered about one-third of its fall from the highest point in August, 1937, to the lowest point in June, 1938.

On the surface, then, the American recovery of 1938 looks very impressive. At least, it deserves closer analysis. This is the task that is attempted in this article. The method pursued has the merit of logic; for we shall first inquire what causes have been plausibly assigned for last year's sudden recession and shall then try to determine how far they have ceased to have effect.

As with every business recession, the slump of 1937-38 had as its most prominent phenomenon a collapse of the industries producing durable goods for capital construction. This can be seen from the second chart, which shows, in the form of index numbers, the employment provided by the durable and non-durable goods industries. It is obvious from this chart that no cure for the depression will have a chance of success unless it can increase the activity of the capital industries. It does not, however, necessarily follow that the originating cause of the depression must be found in the capital industries. Close inspection of the two curves will show that the non-durable (i.e. consumption) goods industries were actually the first both to stop increasing and to turn downwards. It may well be that

the first impetus to depression came from the side of consumption rather than from that of investment. Production goods, after all, are of use only in so far as they assist in the manufacture of consumption goods, and if the demand for the latter is not rising, there will be fewer orders for new plant, machinery or buildings.

What caused American consumption to fall—or, more accurately, to cease rising—in the early months of 1937? There were several factors which had caused a rapid expansion of purchasing power in 1936 but came to an end with that year. The payment of the veterans' bonus in the second half of the year stimulated spending; but the money was all distributed by the end of the year. Moreover, even apart from the bonus, the net deficit of the Government was shrinking rapidly in the early months of 1937, and by the middle of the year the total receipts of the Treasury, if the old age and unemployment trust funds are included, were in excess of its expenditure. Thirdly, the undistributed profits tax had led to a considerable increase in dividend disbursements in the autumn of 1936, and though dividend payments did not fall in early 1937, they did not show a comparable increase. From April onwards, falling security prices were a further discouragement to spending. Thus for a variety of reasons the income of the consumer stopped rising and began to decline.

There is thus no lack of explanations for a certain faltering in consumption at the crucial period, which may well have touched off a decline in orders for capital goods. But once such a decline started, a different set of factors came in to reinforce it. The efforts that the Federal Reserve Board had been making ever since the previous summer to absorb some of the surplus supplies of credit bore fruit at precisely the wrong psychological moment. The two final instalments of the increase in the reserves that were required to be kept by member banks of the Federal Reserve system came into effect in March and May, and the immediate effect—as can be seen from the fifth chart—was to put down the price of bonds and thus impede the raising of capital by this means. At the same time, wage-rates were rising, assisted by aggressive trade union action, and construction costs were raised so considerably as to choke off some of the demand for construction goods that might otherwise have appeared. From April onwards, however, the prices of industrial raw materials began to fall. A large part of the activity of late 1936 and early 1937 had been due to the increase in stocks of materials and goods by all sorts of manufacturers and traders. With the change in the trend of prices, this tendency ceased and the well-known paradox appeared: whereas rising prices had induced an increased demand, falling prices led to a reduced demand, since everybody was now anxious to reduce his inventories.

We must now examine what has happened to these various elements which, in combination, produced the depression of 1937. The third chart presents some facts about the cash incomes of the two largest sections of the people—wage-earners and farmers—and shows the course of retail trade. The curve entitled "employees' compensation" is taken from the new monthly statistics of national income published by the Department of Commerce. It shows that, while the fall has been steep, it has been arrested in the last few months and the curve is now beginning to move upwards again—and its direction is, in some respects, more important than its level. The cash income of the farming community is also on the upward grade, and department store sales, in consequence, have been rising since May. The consumers' purchasing power, in short, is lower than it was a year ago. But it is rising, and therefore exerting a favourable influence on business in general. Moreover, the Federal Government is making great efforts to spend money, and though the monthly deficit is not yet very much larger than the inflow of Social Security funds, some assistance to the total of cash incomes

by the latest band of old-age
familiar one of lavish old-age

can be expected from this source. As for the classes of society who are interested neither in wages nor in relief payments, security prices are now rising again. This has a double effect on spending, both directly through its psychological effect and indirectly through its promise of increased dividends to come.

On the side of consumption, then, progress is being made, and those who control the consumption goods industries should soon be increasing the orders for new equipment they give to the capital goods industries. Meanwhile, some of the depressing influences on the investment of capital have been removed. The excess reserves of the member banks have been restored, not merely to what they were before the "mopping-up" process started in August, 1936, but to much more, and undisturbed monetary ease prevails once more. On the other hand, labour costs, as shown in the sixth chart, are still very high relatively to profits, with the result that the margin of profit to attract capital investment is still small. The new Wages and Hours Act may not have much immediate effect in forcing further increases in labour costs, but it will certainly not reduce them. Labour policy provides ample reason for caution in assessing the prospects of capital expansion.

The seventh chart shows the relationship between costs and rewards in the building industry. Here again, though there is no decided favourable change, there is equally no deterioration. The third curve shows the total of construction contracts awarded; it is a total figure, and contracts for purely residential building have recently been rising in a definitely encouraging fashion. Finally, the last chart presents some data on a subject which is always difficult to reduce to mathematical form. The curve of inventories relates to the figures appearing, quarter by quarter, on the balance sheets of fifty large companies.* Stocks of commodities, if this test is sound, had been considerably reduced by the summer, and are probably lower now. The renewed upward trend of commodity prices will arrest the eagerness to reduce inventories and consequently assist demand.

This statistical analysis results in conclusions that are undoubtedly encouraging. But caution is suggested by the fact that, although nearly every series is now moving in the right direction, all are starting upwards again from a very low level. In 1938, as in 1937, or in any other year, the continuance of recovery depends entirely upon the maintenance of a firm demand for the products of the capital goods industries. That, in turn, depends upon an increasing volume of consumption, an ample supply of money available for investment in industry and confidence in the continued profitability of industry. Under all three heads, the present position is encouraging. But any one of the three could easily be disturbed by reckless policies. If the Wages and Hours Act is administered in such a way as radically to raise the costs of production throughout industry, as happened in 1933 and again (though to a minor extent) in 1936-37, the result might well be to diminish the effective purchasing power of the people and lead to another decline in consumption. Credit policy, after the surprising experience of 1937, has now set its face, perhaps too firmly, towards expansion of the monetary circulation, and industrial expansion is unlikely to experience any interference from this direction. It is alleged in Wall Street that the third factor, "confidence," is an absolute function of the ideas that circulate in the White House. This view is undoubtedly exaggerated; politics, in America, depends upon economics far more than economics on politics. But so firmly is the view held that it must be taken into account as a reality. As the previous article suggests, Mr Roosevelt is likely to find his freedom of action smaller in the re-

* Credit for these figures belongs to Mr D. C. Elliott of the Reconstruction Finance Corporation and the Cleveland Trust Company.

maining two years of his term than at any other time in his Presidency. Opinions will differ about the long-term implications of that fact. In the short term, however, it will unquestionably lighten the spirits of the American investor, and assist the activity of the investment industries.

The events of the last twelve months have shown the capacity of the American economy for sudden and very

drastic fluctuations. They have also shown the extreme difficulty of determining, in retrospect, which are the most significant factors to isolate for observation. Every allowance must, therefore, be made for accidents. But with this formidable battery of qualifications it may be guessed that the present upward trend of American business will continue at least through the winter.

City Pleasures

THE Pioneer Health Centre at Peckham, whose work in the field of medicine has caused a flutter in the dovecotes of doctors and sociologists in recent years, is run in the belief that prevention is better than cure. By making periodic overhauls of whole families the Peckham practitioners arrest minor maladies and prevent major illnesses. By disclosing and dealing with ailments commonly treated as trivial they avert the onset of important disorders. Now the Centre's latest report reveals that its pioneers have gone still further in their analysis of family ills. "Far too often (they say) when sickness is cured, there remains *devitalisation* based neither on poverty nor on physical malnutrition. We have found evidence that it is in some way related to social malnutrition."

What do the Peckham scientists mean by "social malnutrition"? In brief, it is their view that people need from society not only wages, but companionship and a chance to take part in communal activities. Nor are their needs met by leisure pursuits as we know them: "a nation seeking health cannot leave that to football promoters, dog racers and the brewers." Accordingly, the Centre adds a host of social entertainments to its work of doctoring—as a necessary part of that work.

At first sight it might seem otiose for a clinic in London to provide amusements for its patients. In London the facilities for entertainment to be found nowadays in every town are multiplied to the *n*th degree. Eighteen months ago an article in *The Economist's* London Supplement described the spare-time pursuits open to Londoners and drew a rich and varied picture of the multi-sided gaiety always associated with the life of great capital cities. London is all things to all pleasure-seekers.

The report issued this week by the London Passenger Transport Board limns the same attractive portrait of the metropolis. One-third of each year's total traffic, or 1,250,000,000 passenger journeys annually, the Board compute, is made up by persons bent on recreation or pleasure. And these happy travellers spread themselves widely over the whole gamut of what London has to offer. London's population is less than ten millions; but forty million attendances are recorded at cinemas and theatres in the West End alone every year, and more than six times as many visit cinemas and theatres in the suburbs. Nine millions go annually to cricket, tennis, boxing and football matches, fifteen millions to racecourses or greyhound tracks, and as many as thirteen millions to museums and art galleries, the Zoo and Whipsnade, Hampton Court, the Tower, Madame Tussauds and the Imperial Institute. The Cup Final, the Derby, the Boat Race and the Lord Mayor's Show, and divers famous exhibitions, shows and fairs attract not far short of ten millions more. And even the aggregate of these impressive figures (each visit or attendance counts as a double journey) accounts for barely half the 1,250,000,000 passenger journeys recorded annually as recreational by the Transport Board—who not only carry London's citizens and visitors, but tell them where to go; by cultured and compelling posters; and in persuasive pamphlets, now initiating tyros into the city's serious pleasures, now teaching them how to look at buildings. For the rest, there is shopping—London's lodestone to the

suburbs and the world outside—skating, dancing, playing a whole host of games, visiting friends, week-ending and making holiday. And there is always, and almost everywhere, as Karl Baedeker discovered a century ago, the public-house.

To the Londoner with time to spare and money to spend, therefore, the city would seem to be indeed his oyster. The New Survey of London estimated that the average free time available to Londoners had increased 15 per cent. in forty years; and it is well known that, in spite of the scandalously long hours still worked in some shops and offices, recognised weekly hours of labour have fallen by between four and seven hours in most occupations since before the war. Most sections of the population have some six hours' leisure daily, including meal-times, and many have much more. In spite of this increase in leisure, real wages have risen in our generation, and the application of invention to transport and entertainment has created a new world for the enjoyment of leisure.

Yet the Peckham pioneers are not alone in the doubts they throw upon the real worth of all this pleasurable activity. A recent book on the pressing problem of leisure,* for instance, was largely written with the intention of demonstrating that existing facilities for recreation, entertainment and culture by no means meet the real requirements of city dwellers. Neither the nature of their work nor their living conditions, the author argues, with more than a little justification, provide the outlets they need; and contemporary amusements, for the most part, do not fill the gap.

There is a good deal in this sobering opinion. Some industrial psychologists tell us that ninety per cent. of people are engaged in work below their capacities. "Work has lost its thrill as a means to wealth and position," while most people's environment outside working hours scarcely helps them to make the best use of their spare time. Long hours spent in travelling to and from work sap energy and waste time; scope for the formation of social groups with common interests is seriously restricted by the conditions of city life; and, indeed, as Mr Durant points out, one of the most important and depressing characteristics of city dwellers is a sense of isolation, a feeling of being "lost in a crowd."

People so placed come willy-nilly to rely for their leisure upon "entertainment on tap," upon agencies of social intercourse provided ready made, upon the standardised romance and excitements of cinemas and race-tracks, upon the machinery of the great amusements industry. London's diversions may be widely diversified; but the pleasures of a great majority of Londoners are bounded by the pictures, the dogs, the pools and Saturday's football match. Indeed, the position is much the same all over the country, for four-fifths of the population live in towns and half of them in big cities. In the space of a single year the cinemas and football clubs take in admission money some £100 millions, or as much as is spent from rates and taxes on all kinds of public education; and the annual turnover of the gambling industry is close upon five times as much.

* "The Problem of Leisure." By H. W. Durant. Routledge. 276 pages. 10s. 6d.

Nor is this rush to standardised amusements surprising. For one thing, this is a mechanical age, a period of publicity and standardisation. For another, the man who has only a small part of a slender income available for recreation after he has paid for food and clothing and shelter must rely upon standardised, mass-produced and, therefore, relatively cheap methods of enjoyment. Highly organised urban transport systems provide him with cheap travel; the vast cinema industry offers him cheap seats; the pools and the dogs supply him with comparatively inexpensive thrills. On the other hand, the critics of the way in which the ordinary townsman is forced to spend his time do exaggerate the evils they want to see removed. After all, just to take one example, the visits recorded every year to museums and art galleries, historical places and zoological gardens run into very many millions, and trips like these scarcely come into the category of soulless and mechanical pleasure. As we have seen, most of the pleasure journeys made in London in a year are certainly not made simply in search of "amusement on tap"; townsfolk have to rely on mechanical ways of getting about, but there is a good deal of quiet companionship in the circle of families and friends, which finds no place in statistical charge-sheets. It is true that, as Sir William Beveridge once put it, work is a means of making money, while leisure is a method of spending it: in that far, the poor man must rely upon cheap pleasures that may be sometimes nasty.

It is true, too, that people who live in big towns, rich or poor, have very little choice in deciding what to do with their spare time: they are hemmed in by miles upon miles of houses; they live at one end of a tube or bus route and work at the other. But they are not yet in sight of becoming mere robots.

After all, civilisation as we know it means town life. The trouble is that many of our towns are too big; and many of our citizens are too poor. At bottom, this problem of leisure is a problem for the town-planner, for those who site industry, for architects, economists and politicians, for the Royal Commission on the Geographical Distribution of the Industrial Population, but scarcely for the moralist. The pleasures of to-day reflect the towns of to-day; and if, as the Oxford Dictionary contends, leisure means simply "freedom or opportunity to do something," then just as we need new roads for safer traffic and new houses for better health, so we need new towns for the freer use of time to spare. They are quite right at Peckham; prevention is better, and should be easier, than cure; we need to overhaul our towns as thoroughly and as purposefully as they do their families. The enormity of London and its lesser bloated brothers is to blame for the "social malnutrition" and sapping loneliness that they are seeking to remedy down Peckham way by adding concerts and cafés to their clinics and the Lambeth Walk to their list of prescriptions. Meanwhile, we play as best we can.

Japan Pays for War

THE past week has been the most successful, in a military sense, for Japan since the "China incident" began fifteen months ago. Both Canton and Hankow have been evacuated by the Chinese and handed over to the invaders. The first major phase of Japan's war on China is clearly at an end. It remains to be seen whether the Japanese will prove correct in their hope that the national unity of China will now crumble. But whether China makes terms or not, the large-scale military operations between the two national armies are probably now over. Japan's task is to digest what she has swallowed. The enormous devastations wrought by the "scorched earth" policy, the ubiquity of guerrillas and the passive resistance of the Chinese people will undoubtedly make the process of digestion very long and expensive. It will be a very long time before Japan's new Chinese Empire will pay its own way. The economic strain on Japan will continue.

The cost of Japan's continental policy has been high in recent years, as the following figures show:—

	1931-2	1936-7	1937-8	1938-9
Government expenditure (million yen)	1,477	2,272	5,463	8,400
Of which borrowings: mill. yen	120	680	3,393	5,800
War expenditure per cent. of total	31	46	73	81
Outstanding Govt. bonds, end December (mill. yen) ..	4,525	9,072	10,585	12,422†
* Budget estimate. † End June.				

Since the "incident" began its cost in budget and supplementary estimates stands at 7,400 million yen, and the outstanding total of government bonds is now about the same as the whole national income—a formidable total for a nation whose finance-capital is still proportionately small.

The cost of the war, it will be seen, is being met very largely by borrowing, which, on the Budget estimate, will amount to over 9,000 million yen in the two years ended March, 1939. Borrowing at such a rapid rate as this inevitably gives an inflationary twist to the economic system, and there have been manifold signs of inflation in Japan in recent months. The note circulation of the Bank of Japan, for example, has increased much more rapidly since the

summer of 1937 than previously. In the single year to the end of August, 1938, the increase was from 1,660 million yen to 3,071 million yen—an increase of 25 per cent. in a year. The deposits of the clearing banks increased in the twelve months ended July, 1938, by almost 20 per cent.

In order to restrain the growth of inflation, a lengthening list of controls has been developed to ensure that economic and financial resources are used to the minimum extent to satisfy consumers' needs, and to the maximum extent for the desired expansion of war industries, or for army supplies. Companies may not expand their capital without licence, supplies of consumers' goods are restricted, many prices are controlled, and every effort is made to force savings and divert them to the Government's needs. There is no satisfactory index of production which would show the changing structure of Japan's economy, since official figures for some of the heavy industries are no longer published. A new index compiled by the *Oriental Economist* (average 1931-33=100) puts consumers' goods production at 137 in April, 1937, and down to 119.7 in May, 1938. In the same interval the production of producers' goods grew from 194 to 221. It is probable that this index under-estimates the extent to which resources are being diverted to the needs of war. In any case, the combined index for all production stood virtually no higher in the summer of 1938 than a year earlier, while the same period's index of Business Activity fell from 118.3 in July, 1937, to 107.9 in June, 1938.

The great increase in the monetary means of payment has thus been unaccompanied by any corresponding increase in the volume of goods to be sold—the classical definition of inflation. Accordingly, prices have risen. There had been a steep rise in Japanese wholesale prices in the autumn of 1936; but this was intensified after the outbreak of war. The *Oriental Economist* index of Tokyo wholesale prices shows a 30 per cent. increase in the year to July, 1938; changes in some of the component series were: cereals, 13 per cent.; other foods, 12 per cent.; textiles, 60 per cent.; metals, 80 per cent. Some metals are at scarcity prices; lead trebled in price in the

past twelve months, and tin jumped from 483.75 yen per 100 kg. in July, 1937, to 1,200 yen this last July. Relatively to world prices, Japanese prices have risen by over 50 per cent. in a year.

Retail prices and the cost of living have not risen as rapidly as wholesale prices. The increase, nevertheless, has been considerable. The Bank of Japan's indices show a rise in the year to July, 1938, of 16 per cent. for the cost of living as a whole, of 6 per cent. for food, 24 per cent. for fuel and light and 31 per cent. for clothing. The Japanese worker is clearly having to pay much more for his necessities. Moreover, he has gained very little in cash income. There has been a slight increase—of the order of 5 per cent.—in average earnings, but this is due more to increased employment in the more highly-paid heavy industries than to increases in wage-rates. There has also been some reduction in unemployment. But hours of work, under the drive of patriotic necessity, are longer, and the real income of the workers is considerably lower. The Japanese people are paying very heavily in their own standard of living for the heavy expenses of ambitious militarism.

The effects of the war are most noticeable in Japan's foreign trade:—

	Imports (In million yen)	Exports	Balance
1936—1st half	1,578	1,263	— 315
2nd half	1,350	1,535	+ 185
Total	2,928	2,798	— 130
1937—1st half	2,238	1,598	— 641
2nd half	1,708	1,710	+ 2
Total	3,954	3,318	— 636
1938—1st half	1,479	1,284	— 196

It will be noticed that the adverse balance in the first half of 1938 was less than in 1937, which was a difficult year for Japan's balance of trade. During the first six months there were heavy imports of raw materials, particularly cotton, and of military materials. But the adverse balance has been reduced in 1938 only at the cost of a drastic shrinkage in all Japanese foreign trade. Exports have been reduced by 20 per cent, and imports by 34 per cent., in spite of the steep rise in prices. Japan has imposed a semi-blockade on herself. Moreover, the improvement in the balance was not quite as marked as indicated by the above table, from the point of view of the influence on the foreign exchanges. For this purpose one should exclude the trade with China and Manchukuo, which is handled in yen. The import balance, excluding these countries, was 747 million yen in the first half of 1937, reduced to 390 millions in the first half of 1938.

The decline in Japanese exports can be partly ascribed to the recession in world trade; but the concentration of Japanese industry on war and—latterly—the difficulty of procuring raw materials, have also played a big part. Some of the biggest falls are in exports to those Asiatic countries with low standards of living where Japan has hitherto had the greatest advantage. Thus exports to India (in the seven months January to July) fell from 147 million yen in 1937 to 93 million yen in 1938, to the Dutch East Indies from 136 million yen to 51 million yen, and to Malaya from 48 million yen to 12 million yen. Analysed by commodities, there has been very little fall in raw silk exports, but all manufactured products show steep declines. In the most important—cotton piece-goods—the decline was slow in showing itself. Thus exports in the seven months to July were only 18 per cent. lower than in 1937; but July exports were little more than half those of July, 1937, and that this was no isolated month is shown by the fact that imports of raw cotton in the seven months were cut from 238 to 75 million lb., and raw material imports as a whole from 1,497 to 752 million yen. Once stocks are used up, the problem of the exporting industries will get worse.

Thus the very drastic limitation of imports, with the aim of supporting the yen and facilitating the purchase of war supplies, is wreaking its own revenge. Naturally, drastic control is exercised over the use of foreign exchange for anything but military purposes. Long schedules have been published of permitted and forbidden goods for import, and official approval and permission must be obtained before foreign exchange can be acquired. Control is exercised over foreign assets of Japanese corporations to prevent their use for uncontrolled imports. Raw material imports are in future, according to a recent announcement, to be financed by a revolving fund which is to receive back its advances when the material is exported in manufactured form. Whether the military will be able to keep their hands off this fund for financing imports whose only exportable counterpart is the bombs that are "exported" to China, remains to be seen.

Japan has had to adopt many devices to protect her gold, of which heavy exports have been necessary. The Bank of Japan's reserves were valued at 1,262 million yen in August last, when they were written up to conform with the depreciation of the yen. Of this total, 400 million yen was allocated to an exchange account and a further 300 million yen to the revolving fund for purchasing raw materials mentioned above. There is some reason to suspect that the exchange fund has now exhausted its supply of gold, and the revolving fund may seep away in military purchases. The gold reserves are thus dwindling, and the annual domestic production of about 200 million yen will not be enough to meet the demand. The last line of reserves that could be mobilised in defence of the 1s. 2d. yen consists of Japan's holdings of foreign securities which, though considerable, are not large enough to stand a long-continued drain of the present dimensions.

The picture of Japan's economic position, whose main outlines have been sketched here, is unhappy, but not yet desperate. The strain of the war is imposing severe sacrifices on the Japanese people, distorting the economic structure of the country and undermining its international competitive position. But nothing has yet reached cracking point. Another year of war expenses as heavy as the last, however, would greatly intensify the stresses and strains. Inflation would have to be continued and, as is its nature, might well quicken its pace. The exhaustion of raw material stocks will lame the export industries, while any fall in the exchange value of the yen, which may become inevitable, would increase the cost of pursuing the war.

It is thus becoming a matter of urgent necessity for Japan to bring the financial and economic drain of the war to an end. But this may well prove far more difficult for the Japanese army than the capture of Shanghai, Canton and Hankow, and if the economic strain continues, with no relief to the standard of living of the Japanese worker, without the comforting glory of conquests, but merely with the hard work of "pacification," even the patient Japanese worker and peasant may begin to object.

Perhaps as much concern must be exercised in Japan over the post-war prospects as over the present costs. All her past wars have been turned to her economic benefit; after the wars, indemnities from the victim were augmented by heavy foreign loans and investments in Japan, and industry boomed. After this war, Japan will have the serious problem of shifting the drive from military to peace-time purposes, unaided by any indemnity from China, or by any loans from Europe or America.

These calculations are very present to all the wiser heads in Japan. If Japanese policy were decided by reason, they would lead to an immediate peace with China on such terms as could be secured by negotiation. But the Japanese generals have shown before that they have no patience with economics. They may yet prove strong enough to ruin their country.

Topics of the Week

We were not Ready.—It must have been with very deep feeling that Sir Kingsley Wood declared on Monday that the discovery of a means to combat bombing aircraft would be of incalculable benefit to mankind. Only a few weeks ago we in this country were wide open to aerial attack in the hour of danger; the Air Ministry had failed to furnish sufficient airplanes; the War Office had failed to provide the anti-aircraft equipment required; the Home Office had failed to make and execute adequate schemes for air-raid precautions. We know now, as day after day brings new confessions of wholesale failure from all quarters, what our real peril was in the dying days of September. We are inclined perhaps to exaggerate our failings in the enthusiasm of self-rebuke, but a list of the gaps and deficiencies disclosed would be one of the most staggering indictments ever published. At least, it would be, if the Cabinet were prepared to be as frank as Mr Eady, permanent head of the A.R.P. department of the Home Office, was in a speech on Wednesday. He told his audience of officers of the fighting services that we had hardly begun to prepare when the crisis came—despite years of discussions and promises—and, even now, we scarcely knew what to do to be better placed next time. On the one hand, Mr Eady said, the Home Office's own instructions to local authorities might be called "probably the sloppiest regulations ever produced by any Government department"; on the other, the recruits required for voluntary air-raid work had not come forward. The industrial workpeople had offered their services with reasonable willingness; the so-called "governing classes" had very largely stood aloof. In rural and suburban areas some householders were surprisingly fastidious about billeting working-class children—though many local schemes were admittedly ill-considered; and the panic purchases of foodstuffs in the West End and Central London which sent up retail food sales by 25 per cent. in September were scarcely more creditable to the populace than the lamentable lack of leadership shown by Government departments. A.R.P. needs a comprehensive plan for all places; a competent central department; a general staff of efficient experts; trained and able local and regional superintendent officers; and a full complement of trained local workers. The local authorities who are now bombarding the Home Office with unanswerable rebukes must be essential parts of the pattern; but full and sufficient orders must come from above.

Evacuation Plans.—Last May a Parliamentary Committee under the chairmanship of Sir John Anderson was appointed by the Home Secretary to consider the problem of transferring persons from areas likely to be exposed

to continuous air attack in time of war. The Committee's report was signed on July 26th, and the Government had already considered its proposals when the crisis burst upon the country in September. Publication of the report was postponed, but the Committee's recommendations, made public in a Blue Book on Thursday last, were clearly the genesis of the hasty instructions for evacuation and billeting sent to local authorities by the Home Office at the eleventh hour of emergency—though the confusion which then prevailed in several places cannot be taken as any test of the Committee's plans since the arrangements were so hastily improvised. Broadly, the Committee concluded that evacuation from densely populated areas might be a decisive issue in any future war; and the country could not be fully prepared against attack until the necessary organisation had been set up. On the other hand, wholesale evacuation is, in the Committee's view, neither practicable nor desirable, since industrial production must be maintained at a high rate in time of war; and measures for the active and passive protection of towns remain the first line of civil defence. The chief areas listed for evacuation in the report are London and Middlesex; Newcastle and Gateshead; Leeds, Bradford, Sheffield and Hull; Liverpool, Manchester, Bootle and Salford; Birmingham; Edinburgh, Glasgow and Dundee. A map shows the various zones in which persons from these areas would be billeted, Wales and Shropshire being reserved for further transfers in case of congestion. Compulsory powers for billeting in private houses are recommended (with the not very generous overcrowding standards of the Slum Clearance Acts), though evacuation is to be voluntary. An attached memorandum by the Home Secretary approves the principles laid down by the Committee, and accepts the view that the initial costs of evacuation should be borne by the Government. The course of events during the crisis lends special point to the emphasis laid by both the report and the memorandum upon the need for thorough, detailed and forehanded planning for evacuation, transport, billeting, feeding and welfare services. The Committee have done a good job of work, but it ought scarcely to have taken two years for the Government to find itself in agreement with its many earnest and sincere critics who urged the need for evacuation plans long ago.

The President and Palestine.—The rally in the military situation in Palestine which set in towards the end of last week has since been confirmed. The reoccupation of the walled city of Jerusalem has been completed; and although the greater part of the countryside is still in a state of utter insecurity and turmoil, the din of the physical conflict has for the moment sensibly diminished.

Politically, the Mandatory Power is between the devil and the deep sea. If we persist in trying to execute our mandate, even on a minimum interpretation of its scope, it is to be feared that the Palestinian Arabs now in arms will have the support of all their fellow Arabs from Baghdad to Fez—and the Arab world to-day, like the Hungarians and the Ukrainians, feels strong in virtue of having secured the potent patronage of the Berlin-Rome axis. On the other hand, this country is not free simply to shape its policy in Palestine in accordance with its own necessities. Bonds of contract, of honour and of interest bind us, in respect of Palestine, to the League, to Jewry, and to the United States. This week the British member of the Permanent Mandate Commission has asked his colleagues for a ruling as to whether it is permissible, under the Mandate, for the Mandatory to restrict Jewish immigration. The Board of Deputies of British Jews has come out in support of the Jewish Agency for Palestine in declaring its opposition to any policy which may envisage either artificial restrictions upon Jewish immigration into Palestine or the relegation of the Jews in Palestine to the status of a minority. But the gravest of this week's pronouncements on Palestine came from the President of the United States.

President Roosevelt has made his views known in an interview with a United States senator. According to Senator R. F. Wagner, the President is prepared to take "a more than formal action" to safeguard the Jewish National Home in Palestine and to prevent any restriction of Jewish immigration. "I believe," added the Senator, "we are so situated that we can make our protests to the British Government effective." To another correspondent the President writes that "we have kept constantly before the British Government through our Ambassador in London the interest which the American people have in Palestine, and I have every reason to believe that that Government is fully cognisant of public opinion in this country." We do indeed know how disastrous it may be for any European Power which desires friendship with the United States to be—rightly or wrongly, reasonably or unreasonably—in Jewry's black book. We have only to see how the Nazis' anti-Semitism has made Germany odious to-day in America's sight. The American factor has been a vital consideration in British policy towards Zionism from first to last. At the beginning of the last war, Jewry was inclined to be anti-Ally because it was anti-Russian. After the great Russian retreat in 1915, the German General Staff took a party of American Jewish journalists round the newly occupied territories to show them what the departing Russian troops had done to the Jewry of the Pale. Great Britain had, somehow or other, to steal Germany's philo-Semitic thunder; and therefore, as soon as the Czar's veto on Jewish immigration into Palestine had fallen with the Czar himself, the Balfour Declaration was launched. A queer tale, which has not yet reached its end. The British Government must obviously walk very warily in the next steps of their policy for Palestine.

Central Europe and Italy.—The small province of Ruthenia, newly granted self-government, has frontiers with four other nations: the Czechoslovaks, Poles, Roumanians, and Hungarians. These four are engaged in more or less open diplomatic exchanges on what each of them severally thinks should be done with Ruthenia, from which it appears that the Poles and Hungarians are together in demanding secession to Hungary as a means of giving them a common frontier, and that the Roumanians and Czechoslovaks are together in supporting Ruthenian autonomy within the Czechoslovak State. The Roumanian attitude was made clear by King Carol's rejection of Colonel Beck's proposals made at Galatz last week. If that were the whole of the matter, commonsense would anticipate a repetition on Poland's part of her Teschen tactics with Hungary marching in from the south as bands of Hungarian extremists have already attempted to do. But behind the four immediate protagonists stand Italy and Germany, and although in

this matter they are ranged on different sides the public integrity of the Axis may on no account be endangered. Accordingly, there is a chance of peaceful negotiation on a far fairer basis than was the case in the Sudetenland. A slight fracture in the Axis which appeared when Italian support—openly avowed in Italian newspapers—for Colonel Beck's Roumanian visit was falsified in the event, will now be further strained if Germany and Italy agree to arbitrate, as they have been requested, in Czechoslovak-Hungarian differences. It is a rather piquant situation; for although it is unthinkable that Herr Hitler and Signor Mussolini do not know well enough what is in each other's mind, in the case of Ruthenia they seem to have engaged, at far remove and buffered by smaller protagonists, in a concealed test of strength. It may be Herr Hitler who looks like winning in Central Europe, yet he chooses this not very opportune moment to send his Foreign Minister hot-foot to Rome. Herr von Ribbentrop went to discuss the matter of arbitration on Hungarian claims—or, in other words, to define German wishes: but he went at a moment when Italy was concluding successful negotiations with Great Britain and a new French Ambassador was taking up residence in Rome. The French Government is eager to reach an understanding with both partners of the Axis: is it inconceivable that Herr von Ribbentrop, after making sure that the southern end of the Axis, though denied decisive influence in Central Europe, is not weakening, also discussed what terms the partners shall concert for France?

Decision in China?—Canton and Hankow have fallen to the Japanese. By Saturday the leading columns of troops landed the week before in Bias Bay had made a rapid thrust inland and taken command of a Canton deserted by the Kwangtung armies, lit by the flames of great fires, and packed with thousands of refugees in fearful plight. Four days later the same fate had overtaken Hankow; and so the Japanese are now in virtual control of all China east of a line drawn between Peiping and Canton. They control the seaboard from Tientsin to the Straits of Hainan: through their hands must pass all who wish to enter China by any other route but the long trails from Yunnan into Burma and French Indo-China, and from Lanchow and Hami into the U.S.S.R. Beyond the gorges of the Yangtse the Government is slowly reforming itself at Chungking, while its armies under their indefatigable Marshal have withdrawn south-westwards to cover the provinces of Szechuan, Yunnan, Kweichow and Hunan which, apart from Shensi and Kansu in the north, are all that remain to be defended. Although cut off from supplies from the sea, they must maintain themselves as best they can; in this they will be fortified by desperation, for their backs are hard against the wall, and the knowledge that with each retreating step their chance of victory or even of self-preservation only weakens. The invaders thus reach a decisive stage in their campaign. At this point they can afford not to press the immediate advantage, but instead consolidate their positions along the Peiping-Hankow-Canton railway, the most vital man-made artery in China, and consider what shall be their next move. They may decide to advance up the Yangtse to Ichang and try to detach Chiang Kai-shek from Chungking, or to carry the war into the south-west; but in any case, they can afford to ignore neither Chiang Kai-shek nor the guerrilla activities of the Eight Route Army and its like in the north. The war enters a new phase; but it is not over.

French Senatorial Elections.—Elections were held in France last Sunday for that third of the Senate which, under the French Constitution, automatically retires every three years. This time, as usual, the changes are not sensational; but, such as they are, they seem to show that the Radical-Socialists are somewhat out of favour with their previous supporters, and this on account of their having co-operated in the Popular Front. The Tranche Democratique, the Senatorial party which corresponds more or less to the Radical-Socialist party in the Chamber, though it stands rather farther towards

the Right, has lost eleven seats and, therewith, its previous absolute majority in the Senate. Nine of these seats have been gained by parties to the Right, but the other two have been gained by a Socialist and an Independent Socialist. Will M. Daladier break up the Front Populaire and co-operate with the Right? If that meant merely a breach with the Communists, no doubt he would not hesitate. But can he carry the Socialists with him, even to the extent of mere passive non-opposition? Can the Socialists afford, for their part, to make a complete breach with the Communists, who are their formidable competitors for the allegiance of the French working class? And with the Chamber as at present constituted—and this Chamber has a still unexhausted mandate from the electorate—could any government of the Centre and Right make headway against an active opposition on the part of the Socialists, who, after all, are the largest single party now represented? The only satisfying answer to these questions could be found in a coalition between all the parties from the Socialists to the Right. A government such as this is the obvious salvation for France. Its policy can even be said to be waiting ready-made—a compound of increased financial burdens on the rich, in an effort to balance the Budget, and of the temporary abandonment of restrictive labour practices by the Left, in an effort to restore French productivity. But in France (as, indeed, in England) the number of politicians who preach national unity is greater than the number of those who will make sacrifices to achieve it. Meanwhile, M. Daladier is deferring his use of the special powers granted him by Parliament until he knows more certainly to which section of opinion he must look to provide the main support for his decrees.

Farmers and the State.—It was an impressive-looking list of performances which Mr W. S. Morrison, Minister of Agriculture, advanced last week-end to rebut his critics' accusation that the National Government had neglected agriculture. A guaranteed wheat price, now double the world price; a guaranteed price, too, for bacon pigs; a subsidy for beef and financial aid for milk; tariffs on every important agricultural commodity purchased overseas, including meat, vegetables and fruit; and quantitative regulation of imports of beef and potatoes; to say nothing of the powers given to the Milk Board and the virtual monopoly of the Potato Board; a large amount of legislation for farmers has been passed in the years since the first National Government took office, and a great deal of administrative machinery has been set up. The cost, which in one way or another all comes out of the pockets of the public, either as taxpayers or consumers, has not been inconsiderable. A few months ago the Chancellor of the Exchequer announced that subsidies from public funds for beet sugar, cattle, milk, land fertility measures and oats and barley had added up in seven years to over £47 millions. A note in the latest issue of the Journal of the Royal Statistical Society puts the actual charge to public funds in 1938-39 at £32 millions, and this does not include the other sums which agriculture, with the assistance of the State, is enabled to exact from the consumer. Admittedly it would ill beseem anyone at a time when the principle of doles for industry is part and parcel of national economic policy, and especially when considerations of defence and proper feeding make a healthy and productive farming industry imperative, to deny agriculture's claim to comprehensive assistance. But it is as well that the formidable dimensions of the assistance already provided should be known and admitted.

Farming has been fairly consistently a State pensionary, usually quite an able-bodied one, throughout English history; and, although a plentiful supply of the cheapest possible foodstuffs from all sources, home and abroad, is unquestionably a first requisite for an urbanised industrial island like ours, the present is hardly the time to cut off agriculture's allowance. It should, nevertheless, be laid down as an infrangible principle of policy that pensions paid should be money expended to the best advantage.

The National Farmers' Union are right, for instance, when they contend that the piecemeal policy of the Government does not amount to a comprehensive and economical programme; just as the N.F.U. are wrong when they argue that agriculture is on its last legs through neglect—actually, though its acreage and personnel are declining, its output is markedly on the upgrade. The farmers are probably right again when they point to a policy of guaranteed prices over the whole range of their products as the most desirable method of State aid; but wrong when they suggest that such a programme ought to involve considerably higher prices than now prevail. The danger of guaranteeing prices is that the inefficiencies of vested interests may be protected and perpetuated; and our mal-nourished millions may be faced, as they often are now, with prohibitively expensive foods. Even now, as the Minister of Pensions admitted a few days ago, heralding a new Bill to amend methods of milk distribution, milk prices which are statutorily safeguarded cover defects in distribution which, if in existence in the distribution of tobacco and cigarettes, would cause millions of people to give up smoking as too expensive. Mr Morrison's list of *ad hoc* items do not add up to an effective policy for agriculture; we are admittedly wasting some of our money. As things are, we must take due care of farming in the most efficient and economical way, and it is an integrated price policy, with the widest interests of the whole community always borne in mind, over the entire field which is most urgently needed.

The Rôle of Roads.—Among the gaps disclosed in the nation's defences by the war-which-nearly-came, none was more conspicuous than the incapacity of our highway and transport systems to meet the demands made upon them. It is true that in appreciable measure this was due to the absence of prior arrangements. Mr Burgin himself told the National Liberal Forum a few days ago that he was taken by surprise when, at the peak of the crisis, he was told that the Ministry of Transport would be responsible for making possible the evacuation of city populations, the distribution of food (if possible from Western ports to the exclusion of Eastern ones) and the movement of troops. These duties might reasonably have been detailed and provided for in advance. But, even if Mr Burgin had had a complete scheme fully prepared and co-ordinated, he probably could not have put it into operation. The appalling casualty figures and the congestion always experienced at week-ends and holiday times are sufficient evidence that our roads are inadequate to carry the traffic which uses them, even in peace-time. A recent pamphlet of the British Roads Federation points out that our roads are the most congested in the world; that the

toll of deaths and injuries on our roads is relatively the highest in the world; that the number of vehicles on the roads is likely to double in 15 years; and that, since 1910, while the number of motor vehicles has risen by 2,000 per cent., the total mileage of roads has only been increased by 2 per cent. Yet the Minister of Transport now has full control over all trunk roads; in one of the Ministry's pigeon-holes the far-reaching Bressey plan for London's highway development is gathering dust; and for three years now the Government has been pledged to a five-year programme of road reform and reconstruction which, judged by annual figures of highway expenditure, has hardly been begun.

The Government's reliance upon by-passes here and road widening there demonstrably has not provided the smooth and safe flow of traffic required under normal conditions. It is even less likely to be adequate under war-time conditions when a wideflung pattern of transport and distribution would be the nation's lifeline. Mr Burgin has said that motorways would cost too much to build in this country, because of land prices, labour charges and limited space—though he seems to have made no allowance for the fact that our need for such roads was greater than that of other nations or that the revenue provided by our motor transport was relatively much the highest in the world. But, even if their cost in peace-time really would outweigh the price unceasingly paid in casualties and wasteful congestion, might it not reasonably be paid, or at least seriously reconsidered, in the cause of national security? At any rate, some programme of priorities should be devised, in the light of defence requirements; the new Redhill by-pass which has been opposed, with some reason, as a pleasure track, will cost £800,000, while Western Avenue, one of the vital war-time outlets to the West, is still incomplete at both ends.

Federal Problems in Australia.—In spite of their distance from Europe the people of Australia find much to concern them in the terms of the Munich settlement, and together with other British peoples have decided that their country's defences must be strengthened. Both Commonwealth and State Governments are much occupied with this decision. Last week-end the Loan Council met to consider Commonwealth proposals on the financing of defence works. The Council announced that the new internal defence loan of £4,000,000 (see *The Economist* of September 24th, page 586) would carry a rate of interest of 3½ per cent., and be redeemable within 14 to 16 years, and further that the £68,000,000 conversion issue recently decided upon would be on identical terms. But the crux of the Council's meeting was the rejection by Prime Ministers of all the States of Mr Lyons' proposals for unification of control over defence works. The Commonwealth Government suggested that the States should transfer loan expenditure earmarked for public works to those works most needed in the interests of national defence, and that an Advisory Committee consisting of Commonwealth and State representatives should be set up to investigate and pronounce upon the order of priority in which those necessary works were to be undertaken. To the States the Advisory Committee represented an invasion of their rights by the Federal power, and although Mr Lyons pointed out that without unified decision on priority the Committee's work was valueless, they would have none of it. At this they went home, with a general feeling of disappointment. Some of that feeling was expressed in Mr Curtin's Labour motion of censure in the Commonwealth Parliament which said that the Government had shown a "lamentable lack of leadership regarding urgent national problems." Mr Lyons refuses to regard the issue as closed, and he may appoint an Advisory Committee with abridged powers which would carry out investigatory work on the siting of new industries and other matters of national interest. It is understandable that the States should be jealous of their rights; but it would be an act

of folly on their part to burke an issue which in some form or other confronts all democratic systems of government: not to recognise that national safety depends upon national defence controlled from the centre.

London's Business Activity.—The annual report of the London Passenger Transport Board, the subject matter of which is so varied that it is mentioned in two other places in this issue of *The Economist*, contains a most praiseworthy piece of statistical pioneering in the form of an index of Business Activity in the London Transport area. By the courtesy of the Board, we are enabled to show the course of this new index, compared with *The Economist* index for the whole United Kingdom, from the beginning of 1930 (both indices are corrected for seasonal fluctuations):—

It is understood that the index is based upon bank clearings (corrected by a price index), employment statistics, the value of building plans passed and the number of new car registrations. The two first-named constituents are given the largest weights. The utility of the index to the Board is, of course, to serve as a comparison with their own traffic figures, which are consequently not included. From the public's point of view, this is a pity, as the Board's traffics should be one of the most reliable indications of conditions in the London area. The course of the index is such as would be expected from general observation. London suffered a less severe slump than the rest of the country, owing to its small proportion of heavy industries and export trade; but it recovered first and, at least to begin with, fastest. The most remarkable feature of the curve is that it reached its maximum as early as October, 1936, when it turned definitely downward. During the year between this date and the highest point of the United Kingdom curve, there was a definite slackening in housebuilding in the London area, and some decline in the volume (but not the value) of retail sales, while the gathering momentum of re-armament helped other parts of the country more than London. For these reasons, it would be reasonable to expect that London should advance during this year much more slowly than the rest of the country. But it is nevertheless surprising to be told by the new index that London was actually going downhill during a period when the country, as a whole, was still climbing the slope of recovery. The future progress of the index will be interesting to watch, and it is to be hoped that the Board will publish it at frequent intervals.

Memel and the Nazis.—Now and then in the past few years political wiseacres have declared that Hitler's "next step" would be to effect a junction of Memel with East Prussia. That feeling was roused afresh after the Munich agreement, not only by signs of renewed Nazi activity in Memel, but also by the attention given in

the Reich Press to conditions within the city and, most recently, by the draft of a new Lithuanian law remitting the state of martial law which has existed since 1926. At first sight this looks like a German gain, but in German eyes the Bill only gives with one hand in order to take away with the other, and does little or nothing to remove the heavy restrictions under which Memel strives to govern itself. The Bill has had its first reading, and is now in committee, where extensive modifications in answer to German protests may be made and are, in fact, already unofficially predicted. As things are, the Memel Diet has demanded full autonomy, and Nazi feelings are running high. Even if good relations with the Reich continue uninterrupted, there are those who see in the present moment a stage well appointed for a spectacular Hitlerian entry in the best Berchtesgaden manner. Early this year Dr Neumann came out of prison. As leader of the united German *Einheitsliste* group, which holds 24 out of 29 seats in the Memel Diet, he was one of those sentenced under charges of treason at Kaunas in 1935. Presumably he is now preparing for the Diet elections of December 11th, and between to-day and then there is likely to be a good deal of agitation for an administrative reform which would bring the status of Memel many steps nearer to that "legislative, judicial, administrative, and financial autonomy" stipulated in the Allied-Lithuanian Convention of 1924 which followed on Lithuania's seizure of Memel. Disregarding the rumours which fulminate around Dr Neumann's somewhat obscure head ("another Henlein," murmurs the popular Press), there is very much to be said for the institution in Memel of a more liberally inclined regime; and courses of prudent reconciliation will doubtless recommend themselves to the Lithuanian Government.

New President in Chile.—The Presidential election in Chile has had a surprising result. Señor Gustavo Ross, the candidate of the Right parties, who call themselves Conservatives, Liberals, Doctrinaire Radicals, Democrats and Agrarians, had the support of the present President, which, in any South American country, is a very powerful assistance. Until last month he seemed assured of election, since the opposition was split between two candidates. But the Nacista rising in Santiago on September 5th implicated General Ibañez, who, though acquitted of complicity, withdrew from the fight and threw his support to Señor Pedro

Aguirre, who stood as the candidate of a Popular Front, embracing Radicals, Socialists, the Democratic Party and two brands of Communists. Señor Aguirre has been elected by the very narrow majority of some 7,000 votes out of about 430,000. It will be noticed that the Chilean parties are fond of European political nomenclature. But the names do not have the same meanings in Santiago as in Paris, Berlin or Barcelona. Señor Aguirre himself comes from the Right Wing of the Coalition that elected him, and his policy is unlikely to be so extreme as to disturb either the peaceful development of the country or its relations with foreign countries. Chile has long been the most aristocratic of the Latin-American republics; even now, the electors are very few in a population of 4½ millions. It is a tribute to the country's political stability that a Popular Front candidate could be peacefully elected.

Leonard J. Reid.—It is with deep regret that *The Economist* has to record the untimely death of Mr Leonard Reid at the early age of fifty. For the greater part of his working life Reid served on the staff of *The Economist*, which he joined in 1912. For over ten years after the war he was assistant editor; and the character of the paper during the nineteen-twenties owes much to his lucid style, and his great gift for expounding complex economic and political affairs. Son of the late Professor of Ancient History in the University of Cambridge, Reid was brought up in a Liberal and literary atmosphere. The effect of this environment was a remarkable combination of enthusiasm with exceptional clarity of style and literary quality. His technical equipment as a financial journalist was of a high order; but he was at heart chiefly interested in finance and economics from the standpoint of their reaction on politics. It is characteristic that in his late years, and in particular after joining the staff of *The Daily Telegraph* in 1932 as City editor, he devoted much effort to pressing forward the project of an Anglo-American trade agreement, for in this he saw the only hope of reversing the tendency of the world towards autarky. And in that work he died, for he was taken ill on one of his many journeys to the States and succumbed in New York to an attack of bronchial pneumonia. His colleagues mourn the loss of a very loyal friend, and will miss very deeply the healing effect of his kindly and gentle nature. The City has lost one of the wisest and most respected of its interpreters in the Press.

Railroad and Utility Prospects

NEW YORK, October 17.—By October 27th, the fact-finding Board appointed by the President to examine the proposal of the railroads for a 15 per cent. reduction in wages must render its report. The hearings have been concluded, and it is expected that the Board will use the next ten days to elaborate its findings into something like a comprehensive railroad programme. Hopes of a comprehensive programme have been raised again and again in recent years, only to be disappointed; and the railroads have, so to speak, staggered from crisis to crisis, with a continuous increase in the mileage under receivership. This year, when the ability of certain roads to continue to make their operating expenses was an open question, the recovery in traffic came just in the nick of time to resolve the immediate and most pressing problems.

Hopes of an understanding between the Administration and the utility companies have also been raised. It will be remembered that the "death sentence" legislation of the summer of 1936 called for a reintegration of the utility systems, and plans for this have been scheduled for December 1st of the current year. The question whether this enact-

ment actually did pass a "death sentence" or merely required a more or less difficult reorganisation has always been more administrative than legislative, and the apprehensions aroused were based more upon the way in which the Act might be administered than upon the terms of the Act itself. This long and economically costly controversy may still be settled amicably within the terms of the existing legislation. *The*

The NATIONAL BANK of NEW ZEALAND, Limited

Head Office:—8 MOORGATE, E.C.2

Subscribed Capital - £6,000,000

Paid-up Capital - £2,000,000

Reserve Fund - £1,000,000

Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

demand for electrical power has continued to rise steadily since 1929, and promises soon to be at a new record high level. This would tax existing facilities heavily, and there would be urgent need for additional plant and equipment.

The most active force in our economy at the moment is the motor industry. It was remarkably slow in getting the production of new models under way; it was not until the middle of October that output on a large scale was reported; and even now it is only a little more than half that of a year ago, but it does appear to be rising rapidly.

On the other hand, steel production, which was about 47 per cent. of capacity a month ago, has only slightly bettered that figure during the past four weeks; and at this level is still susceptible to weakness in the price structure, as was shown by the recent reduction in steel sheet prices. Some weakness in prices has also appeared in the oil industry, in spite of large consumption. Summarising industrial trends at the end of the third quarter, one could say that the impulse which first became effective at the end of June was still in operation, but with somewhat retarded momentum. Such a slackening is not at all surprising in view of the rapidity of the previous upturn, and may be but a temporary hesitation—so long as the motor car industry fulfils its programme for the remainder of the year.

Pressure for Pension Reform

The current elections are probably more significant than usual. In a large number of States the point at issue is a State pension proposal; and it is worth noting that these proposals are generated, not in States where the problem of old age is particularly acute, but in States where local sentiment is so divided as to promise a fairly close vote. In such States the balance of power may be held by any relatively small group, however hastily organised; old age pensioners or prospective pensioners can readily be converted into such a group.

The significance of this trend lies not merely in the fact that the various proposals are usually far beyond the resources of the respective States, but also in the fact that the cumulative effect of these local issues is already making itself felt in Washington in the shape of proposals for the extension of the provisions for old age benefits in the Social Security Act. This Act provided for a contributory pension plan to come into effect in 1942. In the meantime, the Federal Government will contribute \$15 a month per pensioner to any State establishing a satisfactory local pension provision of equal amount. A number of States are taking advantage of this legislation, but in several cases have been so short of funds that the actual monthly payments have been well below \$30. One State, in an effort to establish a \$45 rate (\$15 from the Federal Government) has enmeshed itself in serious financial difficulties.

In short, the entire pension system is in a condition of confusion, which promises to become even more tangled after the local elections. It requires no prescience, therefore, to anticipate that the provisions of the Social Security Act will come up for amendment in Congress, and to surmise that the amendments will take the form of more liberal provisions, with no corresponding increase in the contributory element; for the contributory benefit provided by the Social Security Act is far smaller than even the present non-contributory systems.

Gold and the Banks

The great gold imports of the past two months have materially influenced our banking position, as follows:—

RESERVE BANK ITEMS (\$000,000)			
	Aug. 10, 1938	Oct. 12, 1938	
Gold Stock	13,033	13,869	+ 836
Gold Certificates	10,633	11,020	+ 387
Member Bank Reserves	8,179	8,400	+ 221
Money in Circulation	6,503	6,667	+ 164

It will be noticed that these gold increments are being released gradually rather than dumped into the system; and that, owing to the seasonal increase in the currency, not all of the gold so monetised has yet gone into excess reserves.

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)

Annual Income £6,700,000
Assets £30,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

Nevertheless, bank credit has been expanding with great rapidity, as the following table shows:—

REPORTING MEMBER BANK ITEMS (\$000,000)			
	Aug. 10, 1938	Oct. 12, 1938	
Total Loans and Investments	20,611	21,295	
Loans	8,199	8,272	
U.S. Obligations	7,669	8,053	
U.S. Guaranteed Obligations	1,650	1,678	
Other Securities	3,093	3,292	
Demand Deposits	15,009	15,604	

From the end of March to August 10th demand deposits rose by over \$700 millions; in the last two months they have risen by \$600 millions—the total increase in a little over six months being almost 10 per cent. From the end of March to August 10th total loans and investments declined \$200 millions, but in the past two months they have risen by \$700 millions. Between the end of March and August 10th total loans fell almost \$500 millions; since then they have risen by less than \$100 millions. That is, the expansion in deposits was initially attributable to the release of the Inactive Fund, and was represented by excess reserves. In turn, the expansion of deposits was followed by an expansion of investments, which at first merely offset or partially offset the decline in loans. Then there was a net increase in total loans and investments, first in investments and recently and seasonally in loans. Expansion has been due to the gold programme and the deficit; and the consequence has been one of the most rapid expansions of demand deposits in American history.

France

Changing Political Opinion

PARIS, October 27.—M. Caillaux has emphasised that the first task of the Government is "to re-establish the stability of the purchasing power of the 100 francs banknote." This purchasing power has been considerably curtailed during the last two years by the rising cost of living. This has imposed no extra hardship upon the workers in industry, who have been protected by a rising scale of wages—though their standards of remuneration at the outset were far from generous. But the position of the middle-class has been different, for they received fixed incomes; and the peasants, too, have been hard hit, for the rise in the prices of wheat and of secondary cereals—after bumper crops—has markedly failed to keep pace with the increase in industrial prices.

The grievances of the middle-class and the peasantry have caused some discontent; and in the recent senatorial elections some impatience with Popular Front policy was in evidence for the first time. These elections were a setback for the Socialists. Radicals of Socialist inclinations were also beaten; and the main beneficiaries of this change-over in opinion were the Conservatives led by M. Marin. These electoral signs will doubtless have important echoes in the Radical-Socialist Congress at Marseilles, where M. Daladier is to reveal the outlines of the forthcoming decrees to bring about financial and economical recovery. It is generally considered now that the programme of recovery, even though it must be political in character, will nevertheless entail no dissolution of the Chamber, and no broadening of the Cabinet, except probably the inclusion of one or two Ministers delegated with the duty of pressing on with armaments and aircraft production.

The political issue is not simple. The Popular Front parties still command a majority in the Chamber; but the problem would not really be eased by the inclusion in the Government of such men as the Socialist, M. Blum, and the Conservative, M. Marin. Meanwhile, the decision to apply immediate penalties to all men refusing to work the extra hours ordered by the Government has cleared the air. The many failures of the Popular Front in economic and financial matters; the fear of war, much of the responsibility for which has been charged to the Communists; the determination of the trade union leaders to look first to the defence of their professional interests against the intrusion of political questions; the comparative failure of the Socialists in the recent elections—all these factors and many other less important events suggest that public opinion may now be ready for the firm policy which the military and monetary security of the country requires.

The recent weakness of the pound has improved the prospects of the franc. A large-scale programme of credit expansion, combined with an increase in working hours, as required, and stringent budgetary economies should now be

possible. Such a policy—and peace can only be safeguarded by a demonstration of France's determination to set her house in order—would certainly evoke a striking response in the country; and its salutary effects on all markets would disarm the Government's critics.

Reviving Foreign Trade

Professor Charles Rist has warned the Government against any further increase in protectionist measures in order to cut down the import surplus. This surplus is already falling. Excluding trade with the French colonies, the surplus over the whole of 1938 will amount to no more than 10,000 million francs, which will certainly be largely covered by invisible exports—interest on capital abroad alone is estimated to have brought in 7,000 millions last year. An increase in foreign sales of French manufactured goods is the best way to revive business now that internal purchasing power has been considerably curtailed by a series of monetary depreciations and an excessively heavy tax-burden. Moreover, the huge increase in the import surplus which took place in 1936 and 1937 was a consequence of devaluation which led to speculative imports of raw materials. Expressed in gold francs, the import surplus in the first eight months of this year was only 3,968 millions, compared with 6,548 millions in the same period of 1937 and 4,828 millions in eight months of 1936. Expressed in francs of 1912, this year's surplus so far amounts to 1,310 millions, or appreciably less than the surplus of 1,518 millions recorded in eight months of 1912 itself.

These views are endorsed by the Minister of Commerce, M. Gentin, who recently emphasised that the import surplus was steadily falling. And it is falling just at a time when Britain's import surplus is rising and Germany's export surplus has disappeared. Exports of manufactured goods rose by 50,000 tons in the first eight months of this year and the outlook is increasingly favourable. Exports will be further aided by the State by means of insurance credits, while the National Economic Council is searching for new markets and, in particular, investigating the possibilities of large sales to Anglo-Saxon and Scandinavian countries.

The railway accounts for 1938 will show a fresh deficit of 2,000 million francs, because of the fall in traffic; the loss on merchandise will be 3,000 millions, the same as in 1937, in spite of two increases in charges amounting to 25 per cent. and total economies of 1,000 millions. These measures have been neutralised by the general rise in prices, and especially by the increase in the price of coal. The Budget for 1939 will have to provide for additional railway charges according to the agreement which came into force this year. Further increases in charges are impracticable, so that any improvement in the position can only be brought about by fresh economies. But the best remedy would be a real revival in business and a consequent increase in traffic; and this depends upon the outcome of the Government's policy.

The following table shows the recent movements of wholesale prices:—

	Sept. 17th	Sept. 24th	Oct. 1st	Oct. 8th	Oct. 15th	Oct. 22nd
General index	645	648	646	652	657	653
Domestic products	666	669	664	671	673	670
Imported products	607	612	615	619	627	623
Foodstuffs	630	635	628	634	637	635
Raw materials	659	660	663	668	674	670

In the week ended October 15th, the number of persons out of work was 359,349, against 350,229 in the previous week and 314,436 a year ago.

Poland

After Czechoslovakia

WARSAW, October 24.—Three years and four months after his death the devout wish of Marshal Pilsudski was fulfilled with the disappearance of the Czechoslovakian Republic of Masaryk and Benes. The action of the leaders of Poland—the closest followers of Pilsudski and guardians of his political will and testament—during the Czech crisis showed beyond doubt that they were more anti-Czech than they were anti-German. This is not true of the Polish masses, but the Press and wireless services are now so heavily "doped" that the masses know only what those in control of foreign policy want them to know. But, even if the Polish masses had been fully informed about the events of the past few weeks, they could not have influenced their country's policy.

Poland has already gained substantially, and may gain still more, from the dismemberment of Czechoslovakia. The "redeemed" Teschen-Silesian territory is rich in mines and industrial plants, but if their exploitation merely means more guns, more shells, more discontent and more taxes, the "rich dowry" which the returning Poles brought to the motherland will benefit nobody except a few hundred officials and politicians. The operation of the plants, for the present, appears to have been thrown into confusion by the wholesale expulsion of Czech engineers and technicians or their voluntary flight. Polish skilled workers from Upper Silesia are being sent to replace Czechs in the "redeemed" territory, but it seems to have been both unnecessary and unwise to drive out specialists who had grown up with the plants.

Polish attention is now directed towards, first, the separation of Ruthenia from Czechoslovakia, primarily because some five million more or less discontented Ukrainians in Eastern Galicia will not be any happier with a "free" Ruthenia on their flank; and, secondly, to the separation of Slovakia from Bohemia so that, it is hoped, "peace and order" will at last be brought to the Danubian basin. This re-making of the map, with a recrudescence of the imperialism of the sixteenth and seventeenth centuries, now provides local leader writers with inspiring themes, but the grim realities of deepening economic distress are only momentarily obscured. For a poor agricultural nation like Poland to arm in competition with giants like Germany and Russia may have its inspiring side, but it does not presage a prosperous and contented future.

A New Parliament

So that the legislative houses should "more truly reflect the prevailing sentiments of the nation," President Moscicki, on September 13th, dissolved the Sejm and Senate elected in September, 1935, and new elections will begin on November 6th. On that day 208 Deputies from about 1,000 names which have already been submitted to the electors in 104 electoral zones will be elected to the Sejm, and on November 13th, on a much more restricted franchise, 64 senators will be elected. President Moscicki will then bring the Senate membership up to 96 by appointing 32 others.

Although the 1935 Parliament—the first to be elected under the present authoritarian constitution, enacted just before Pilsudski's death—was as "hand-picked" as the next one will be, it had begun to stray from the path marked out for it. Its doom was sealed when the Sejm, last June, following the death of M. Car, the "father" of the present Constitution, elected as Marshal (Speaker) Colonel Valerian Slawek, the former Prime Minister, who had hopes of becoming President in 1940. The second seven-year term of President Moscicki expires in that year, and the Parliament to be "elected" next month will have a decisive voice in the appointment of his successor. President Moscicki, now in his seventy-second year, may be invited to accept a third term.

All the Opposition parties which boycotted the 1935 elections—when less than 50 per cent. of the electorate voted—have announced their intention of doing so again; but the Government feels that its position has been much strengthened by recent successes in the international field. If this view is accepted by all those who owe allegiance to no political party, the poll on November 6th will reflect it. The anxiety of Colonel Beck, the Foreign Minister, to bring about a rapid and complete dismemberment of Czechoslovakia,

SUN LIFE ASSURANCE COMPANY OF CANADA

and a common frontier for Poland and Hungary, may have been inspired, not only by the desire for "peace and order in the Danubian basin," but also by the election campaign.

Foreign Trade Difficulties

The following are the official foreign trade returns for the first nine months of the year:—

(In millions of zlotys)			
	1936	1937	1938*
Imports	725.6	929.5	982
Exports	741.2	867.7	837
Export (+) or Import (—)			
Surplus	+15.6	—61.8	—145

* Preliminary.

The armament programme, which requires increasing imports of industrial equipment as well as of raw materials, and the continuous growth of barter trade—mainly with Germany—are now finding reflection in a "stabilised" deficit in foreign trade of between ten and fifteen million zlotys a month. The gold and foreign exchange holdings of the Bank of Poland fell only by twenty million zlotys in the first nine months of 1938, indicating either that the Bank had "hidden reserves" of foreign exchange at the beginning of 1938 or that part of the present year's import surplus has still to be paid for.

The new trade agreement with Greater Germany (reported in *The Economist* of July 30, on page 227), which took effect last month, was supplemented by another agreement signed on October 18th. Under the latter, Germany will supply machinery and equipment—mainly for the new industrial region in South-Central Poland on which work began two years ago—to a value of 120,000,000 zlotys over the next four years, receiving in return timber and agricultural produce (chiefly rye) over a period of nine years.

Germany also pays annually to Poland a substantial amount in goods for railway transit across the Corridor, and when the existing agreements assume full effect about 40 per cent. of Polish-Danzig foreign trade will be with Germany. As Poland must continue to find foreign exchange for such necessary imports as cotton, wool, rubber, copper, etc., which cannot be obtained on a barter basis, it naturally follows that imports of machinery and manufactures from the free exchange countries will continue perforce to decline.

Canada

Isolationist Sentiment

OTTAWA, October 17.—The settlement achieved at Munich has been hailed with general relief throughout Canada, but it has left a legacy of deep anxiety about the future. A widespread feeling has developed that Canada cannot afford to continue with the nebulous and opportunist foreign policy practised by her present Government; and that she should either try to exercise more influence over the British Government's policy, in whose consequences she is deeply involved, or frankly disavow all responsibility.

The Prime Minister of Ontario, Mr. Hepburn, takes the line that, in view of the parlous plight of Europe and the likelihood of Canada's trade there shrinking steadily, it would be wise for Canada and the United States to co-operate in economic arrangements to make themselves independent of Europe. The negotiations for the new trade treaty with the United States, which is a move in this direction, have con-

tinued to make good progress. Mr. Mackenzie King has announced that agreement has been reached about basic principles, and he expects the treaty to be completed by the end of the present month.

The salient features of the story of the Bren gun contract are now reasonably clear. The Canadian Government was anxious to secure a supply of Bren machine guns, and Major J. E. Hahn, the President of the John Inglis Co., was anxious to provide them. Economical production required an order for 12,000 guns, and the Canadian Department of National Defence, which wanted only 7,000 guns, exerted itself vigorously to help Major Hahn, not only to obtain information from the British War Office, but also to secure an order for a further 5,000 guns. The unwillingness of the King Ministry to become involved with the British Government in any armament contracts was overcome, and considerable pressure was exerted upon the British War Office, which at first wanted Canada to make the guns in a Government arsenal, to place the order with the Inglis Company. No public tenders were called for, although the plant of the Inglis Company was a more or less derelict boiler factory, and the excuse advanced for this course was that speed was essential.

More Wheat

The harvesting of the Western grain crop has been virtually finished at an abnormally early date. The existence of a guaranteed price, now about 20 cents above the market price, gives the farmers no motive for holding up their wheat, and the new crop has been moving very rapidly to market. Visible stocks of Canadian wheat have been mounting steadily and, on September 30, were placed at 133,470,967 bushels compared with 74,809,661 on the corresponding date in 1937. So far export demand has been reasonably good, but there are fears that it will fall off when Argentinian and Australian crops appear, and a heavy carry-over is forecast.

The yield of the Federal revenues in September was 35 million dollars, roughly 2 millions below estimates, but the total expenditure of 29 millions was also down by some 1½ millions. For the first half of the current fiscal year, which ended on September 30th, total revenue was 287½ millions compared with 281 millions in the corresponding period of the previous fiscal year, while total expenditure was 235½ millions compared with 227 millions. Thus there is a surplus for the half-year of 51.8 million dollars compared with 53.9 millions last year, but in the second half of the current year the revenue returns will be less favourable, since the greater part of the income tax has already been collected; and the loss resulting from the guaranteeing of a price of 80 cents per bushel for wheat will be a heavy debit.

Business Confident Again

The dislocation of Canadian business caused by the war scare was serious and will take some time to repair; but some encouraging signs are now visible. In the week ended October 8th the general index of economic activity issued by the Bureau of Statistics showed the largest weekly advance this year, as the following table shows:—

	Weeks Ended			
	Sept. 24, 1938	Oct. 1, 1938	Oct. 8, 1938	Oct. 9, 1937
Car loadings.....	78.7	80.7	81.0	81.6
Wholesale prices	74.4	74.5	74.2	84.8
Bank Clearings	105.1	104.2	107.5	101.7
General Index	108.3	106.3	110.4	109.1

There has been a distinct revival in business confidence during the past fortnight, but the continuance of abnormally warm weather has injured retail trade by delaying the purchase of winter clothing and supplies. One favourable factor is the distinct recovery of business in the United States; if it continues, it is bound to increase the sales of Canadian products like newsprint. In September the output of newsprint was 231,940 tons compared with 220,803 tons in August and 312,351 tons in September, 1937.

The mining industry still enjoys substantial prosperity, and producers of base metals stand to gain by the rise in the price of copper and other minerals. The building industry is experiencing the usual seasonal recession, but this is not serious, and the latest employment bulletin of the Bureau of Statistics (up to September 1) showed a larger gain in employment than in any August on record. Manufacturing industry is enjoying varied fortunes, but hopes are cherished of further armament orders from Britain, and there has been a welcome improvement in the earnings of both railway systems, largely as the result of a much heavier movement of wheat.

Letters to the Editor

Germany's Next Moves

TO THE EDITOR OF THE ECONOMIST

SIR,—In the German advance towards the South-East the execution of the Munich Agreement, which will turn Czechoslovakia into a vassal of the Reich, if Czechoslovakia is frustrated in her attempt to retain a neutral position, has opened a new phase. The German advance can now be speeded up because the strongest bulwark in the South-East has been removed. Not only that; Czechoslovakia, with its entire economic, political and military capacities, may now become an instrument of the greatest value to Herr Hitler for the continuation of the push to the South-East. As the correspondent of a number of English papers in Prague until a few days ago when I left for London, I was able to observe the steadily increasing tempo of this process of "digestion" in Czechoslovakia. What is astonishing is not the cessation of resistance by a country abandoned by its friends and, after the surrender of the fortifications, almost completely bereft of military protection, but rather the speed with which it is being converted from a *bulwark* against the German advance into an *instrument* of that advance. Men with leanings to Germany now occupy the important Government and industrial positions. There is only one way to arrest the German march from the Rhine to the Black Sea: that is for this country and France to fulfil the guarantee they have given to defend the neutrality of this gallant people which has done so much for the cause of peace and democracy.

When I addressed British audiences some months ago, at Chatham House and elsewhere, the argument was frequently put to me in discussion that Czechoslovakia would certainly be difficult for Hitler to digest and that the course of the German advance to the South-East would accordingly by-pass Czechoslovakia and run down the Danube via Austria, Hungary and Yugoslavia, and possibly also through Poland, with the goal of reaching the Ukraine and the Black Sea. More recent events have shown that the Germans chose the alternative course, which was rightly much more feared; and events will, I believe, show in the future that Germany's whole South-Eastern policy will be chiefly determined by the best means of utilising the very valuable military and economic element of Czechoslovakia.

For these reasons I regard it as more than improbable that Berlin will seek support in the immediate future mainly from Hungary and Poland. The Hungarian problem is a difficult one for Germany, because it might easily lead to conflicts with the other partner of the axis—and Germany is, at least for the present, still anxious to avoid such conflicts. Moreover, at every further step in Germany's march to the South-East, Hungary, as has already been shown, will demand a share in the territorial booty by claiming the lands she lost after the war, and she might well be supported by Mussolini in these claims. Similar considerations apply to Poland, where the problem is perhaps even more difficult, since in this case a conflict with Russia might arise.

If negotiations are already going on in Berlin with the Ministers from Prague about the construction of a great highway directly linking Berlin and Hamburg through Prague to Jasina, the extreme south-easterly point of Czechoslovakia, this shows clearly that the next German object is the great mineral wealth of Roumania. This road and railway connection is to be ready in an astonishingly short time. Some links of it, as I have myself confirmed in Bohemia and Carpathian Ruthenia, are already prepared for the transport of considerable quantities of goods, troops and war material. It is probable that this trans-Continental axis, the alternative to the Danube, will be completed in a surprisingly short time. In this way, the military approach to the Roumanian frontier will be assured, if Poland and Hungary cover the flanks. From the political point of view, a German advance to Roumania is helped by the fact that almost every one of Roumania's neighbours has territorial demands upon her. Russia has never finally abandoned her claim to Bessarabia. Bulgaria had severe losses of territory to Roumania in the Balkan and World Wars. Hungary for twenty years has been claiming Siebenbürgen and now need take less notice of the two other partners of the little entente, Czechoslovakia and Yugoslavia. Moreover, from the standpoint of the principle of nationality, whose application to European politics has now been fundamentally recognised, Roumania is possibly the greatest mixture of nationalities in Europe.

Carefully assessing all the factors, anybody who has observed the methods hitherto applied by Germany in her push to the South-East will find it hard to feel any confidence that it is possible to erect in the Roumanian plain that barrier against Germany's advance which existed in the mountainous fortifications of Bohemia—and was abandoned.

Yours sincerely,

DR GERHARD SCHACHER.

London, W.C.2.

Branded Goods

TO THE EDITOR OF THE ECONOMIST

SIR,—In the article on "Branded Goods" on page 156 of your issue of October 22nd you say that:

One potentate of West End retail trade, for instance, has laid it down that retailers, because they come into direct contact with customers, form the essential link in the distributive chain: that they know what the customers want and, interpreting those requirements, they should direct and rule the manufacturers.

I would like to suggest two corrections to this, namely:—

(1) That those who know what the customers want and interpret those requirements should rule and direct, and it is simply a matter of convenience whether their head offices are situated at the manufacturing, the wholesaling or the retailing point, or elsewhere for that matter.

(2) That those who claim to know what the customers want and claim to interpret those requirements should brand their goods or services so that the customer may know whom to hold responsible for the interpretations.

Yours truly,

FRANK MURPHY.

on sale everywhere

The List of Applications will open and close on Tuesday, 1st November, 1938, for an

Offer for Sale by PHILIP HILL & PARTNERS LIMITED of 2,200,000 F. W. WOOLWORTH & CO. LIMITED Ordinary Shares of 5s. each at 58s. per Share.

The capital of F. W. Woolworth & Co. Limited is £12,500,000 divided into 5,000,000 6 per cent. Cumulative Preference Shares of £1 each and 30,000,000 Ordinary Shares of 5s. each, all of which Shares have been issued and are fully paid.

The Ordinary Shares comprised in this Offer form part of the existing issued Ordinary Share Capital of F. W. Woolworth & Co. Limited, the whole of which is already Officially Quoted on the London Stock Exchange.

All the Ordinary Shares of the Company rank *pari passu* in all respects and the Shares which are now offered for sale will, therefore, be entitled to any dividends which may hereafter be declared.

The Shares now offered will be delivered to purchasers FREE OF STAMP DUTY AND REGISTRATION FEES.

Firm applications for the purchase of 750,000 of the Ordinary Shares now offered have been received from Underwriters and Sub-underwriters and will be accepted in full.

The Offer for Sale will show that:

The Company, which was incorporated in 1909, operates 3d. and 6d. retail stores throughout Great Britain and Ireland, and 711 Branches were in operation at 31st December, 1937.

The Trading Profits of the Company for the seven years ended 31st December, 1937, as shown in its published Balance Sheets, were as follows:—

Year ended 31st December.	Trading Profit. £
1931	4,393,848
1932	4,671,778
1933	4,734,221
1934	5,108,748
1935	5,548,451
1936	6,127,221
1937	6,781,202

The net profit for the year ended 31st December, 1937, amounted to £6,490,013 after providing for depreciation. After deducting £300,000 the dividend on the 5,000,000 6 per cent. Cumulative Preference Shares of £1 each, and the sums recommended by the Directors to be transferred to Reserves, there remained £5,990,013 before providing for taxation. Deducting therefrom, say, £325,000 in respect of a full year's National Defence Contribution there would remain £5,665,013 before providing for Income Tax, which is equivalent to more than 75 per cent. on the nominal value of the 30,000,000 Ordinary Shares of 5s. each, or to £6 10s. 2d. per cent. on the price at which the 2,200,000 of such Shares are now being offered.

For the year ended 31st December, 1937, a dividend of 50 per cent. and a bonus of 10 per cent. were paid on the Ordinary Share Capital as increased by a Capital Bonus of 100 per cent. distributed in November, 1936. For the current year ending 31st December, 1938, an interim dividend of 15 per cent. was paid on 15th June last, being at the same rate as for the previous year.

Philip Hill & Partners Limited has been informed that the business of F. W. Woolworth & Co. Limited has been fully maintained during the current year, that during this period 20 new Branches have been opened, and that it is intended shortly to open additional Branches.

Copies of the Offer for Sale, on the terms of which alone applications will be considered, and Forms of Application are now available from:

Messrs. COUTTS & CO., 440, Strand, London, W.C.2, or 15, Lombard Street, London, E.C.3, and Branches; MIDLAND BANK LIMITED, Head Office, Poultry, London, E.C.2, and THE CLYDESDALE BANK LIMITED, 30, St. Vincent Place, Glasgow, C.1, and NORTH OF SCOTLAND BANK LIMITED, 5, Castle Street, Aberdeen, and any of their respective Branches Messrs. ROWE, SWANN & CO., 24, Old Broad Street, London, E.C.2; Messrs. JOSEPH SEBAG & CO., 22, Old Broad Street, London, E.C.2; Messrs. VIVIAN, GRAY & CO., 10, Throgmorton Avenue, London, E.C.2; and from PHILIP HILL & PARTNERS LIMITED, Kingsbury House, King Street, St. James's, London, S.W.1.

THE BUSINESS WORLD

London Transport Finance

RELIABILITY, as the Board's advertisements have recently reminded us, is a virtue eagerly sought by London Transport. Comparatively few of its 3,723,655,768 originating passengers last year would reject that claim. Even the "C" stockholder has come to rely upon the Board to produce an annual report which is a model of its kind—and which, incidentally, is the more acceptable this year because it is distributed free to stockholders. But in one crucial matter the Board has proved unreliable. It has completed its first five years, two as a probationer and three as a fully-fledged undertaking, without achieving the 5½ per cent. standard dividend on the "C" stock. The power to apply for a receiver has become operative (if holders of 5 per cent. or more of the £25,698,802 of "C" stock now outstanding wish to invoke it) at the earliest moment permitted under Clause 39 of the Act of 1933.

To write the Board off as a failure would be a crude judgment of which even the most disappointed holder of "C" stock would not be guilty. The opening sections of the report for 1937-38 review in minute detail the work of improvements to services, extensions to capital works, standardisation of wages and labour conditions, and the unequal race between rising traffic receipts and working expenses since July, 1933. On any objective analysis of this account of stewardship, it is impossible to deny that the Board has observed its primary duty to provide an adequate system of passenger transport in its area; that it was essential to remove anomalies in staff conditions and expedient to raise wages in certain grades; and that the increase in other operating expenses, such as fuel and coal, has been largely outside the Board's control. The Board, indeed, can fairly claim that but for increased efficiency an even greater increase in working expenses might have been recorded.

That is the general background of the first five years of London Transport, of which the detailed financial results are analysed in the following table:—

LONDON TRANSPORT REVENUE, 1934-1938

	Years to June 30th				
	1934	1935	1936	1937	1938
Revenue:—

Total	4,956,691	5,126,271	5,202,671	5,290,896	5,293,378

NOTE.—The figures for 1933-34 and 1934-35 are not strictly comparable with those of succeeding years. In 1936-37, the results were affected by the Central bus strike.
* Less £48,374 charged to capital cost of new works. † Less £140,527 charged to capital, 1936-37, and £215,292, 1937-38. * After crediting £230,000 income tax not required.

It is, however, plain that the benefits of rising traffic receipts have been short-circuited, so far as the "C" stockholder is concerned, into the various constituents of working and general expenses. This effect was rather masked in 1937, owing to the saving of direct bus costs during the strike. But in the latest year its force is more evident. Total traffic receipts, after pooling, have advanced from £30,247,378 to £30,923,828—an increase which roughly agrees with that shown by the Board's own traffics for the 52 weeks to June 25, 1938. But while traffic receipts have increased by £676,450, working and general expenses are over £1,000,000 higher at £24,923,256. Net traffic receipts, after renewals provision, amount to £3,575,572—the lowest yet recorded. In fact, the "C" stockholder has to thank a special windfall even for his 4 per cent. dividend; but for the release of a previous provision for income tax, amounting to £230,000, earnings for the "C" stock would have been nearer 3 per cent. than 4 per cent.

Once again, therefore, the "C" stockholder has sharp proof that he ranks after a process of double gearing, in which operating expenses first absorb over three-quarters of gross revenues, and renewals and interest on prior charges between them another 20 per cent. The following percentage analysis, showing the composition and allocation of the Board's gross revenues since its inception, throws vivid light on this fact:—

ALLOCATION OF GROSS REVENUE
Years to June 30th

	1934	1935	1936	1937	1938
Traffic Receipts.....	94.7	95.1	94.9	94.8	94.8
Other Receipts	5.3	4.9	5.1	5.2	5.2
Gross Revenue	100	100	100	100	100
Allocation:					
Rates, taxes, vehicle and fuel	8.6	8.3	8.5	8.7	8.5
duties	4.6	4.4	4.8	4.9	5.3
Electric current	51.6	51.8	52.9	52.7	53.4
Wages and staff payments	11.0	10.4	9.9	9.7	9.2
Other expenses	75.8	74.9	76.1	76.0	76.4
Total operating expenses	7.0	8.3	7.4	7.5	7.4
Renewals.....	14.1	13.5	13.1	12.8	12.5
Interest: Prior charges	3.0	3.3	3.3	3.4	3.2
Do., "C" stock	0.1	...	0.1	0.3	0.5
Misc. items.....	100	100	100	100	100

Gross receipts have increased during the quinquennium from £28,919,759 to £32,606,418, but of this larger cake operating expenses (and particularly wages and staff payments) have taken a growing slice. Of all participants in the allocation of gross revenues, the "C" stockholder obtains the smallest return; he is also the only partner, in the nexus of passengers, staff and stockholders, who has not shared in the progress of the past five years.

Two major questions thus arise. First, will the Board be able to improve the "C" stockholder's lot, either by any reduction in operating costs or by obtaining increased receipts? Secondly, what are the chances of an application for receivership before the High Court? The answers to the first question may considerably affect the second. In order to meet the standard rate of 5½ per cent. on the "C" stock, the Board must augment its net revenue by approximately £385,000. From what direction is this sum to be found? Some stockholders have held that over-generous provision has been made for renewals. In previous years, however, we have shown that the renewals allocations

appearing in the Board's accounts do not seem to put an excessively conservative estimate of life on the rolling stock, quite apart from any replacements on the railway lines and electricity services which may be required. The renewals reserve now stands at the considerable figure of £9,818,497. But the accumulation of a fund of this size is not a peccadillo of "sound finance." It has a definite relation to the assets in service—as the increase in last year's provision indicates. In the following table we again relate the renewals allocations for the latest year to total capital expenditure on different types of rolling stock to illustrate this point:—

COMPUTED WORKING LIFE OF ROLLING STOCK
(Capital expenditure ÷ renewals provision)

	Years		Years
Railway rolling stock.....	11.3	Trams	5.9
Buses and coaches.....	8.5	Trolley buses.....	9.4

This, of course, is the roughest basis for estimating the adequacy of renewals provisions. But when the estimates are compared with those of previous years, they appear to lend little support to the view that the Board is over-providing for renewals. As for direct operating costs, it is evident that the adjustments of wage rates and conditions have come to stay. Nor would it be wise to expect any reduction in rates, taxes and vehicle and fuel duties, which together absorbed 8½ per cent. of gross revenue last year. Some reduction in the cost of fuel, which has increased by over 30 per cent. since 1934, may be more likely. It has been estimated that 1d. per gallon on oil means £180,000 for London Transport, and a 10 per cent. saving in coal costs, on last year's consumption, would represent £53,000. But while rising prices of fuel and stores have been detrimental in the Board's early years, they represent an ordinary trade risk which every commercial enterprise must face. Apart from movements in operating costs, again, the time is approaching when the interest on the London Electric Transport Finance Corporation's loan to the Board will be fully chargeable to revenue, although the earnings from the underground railways extensions, which come into operation from next year onwards, may not fully provide for their capital cost in the early years. And the Board has the long-term problem of replacing these loans, between 1950 and 1955, by its own issues of stock.

Clearly, there is little hope of attaining standard dividends by way of a permanent reduction in working expenses and capital charges. It must be left to the Board's revenues to correct the deficiency, not necessarily for the aversion of a threat of receivership—that is already too late—but so that the Board may play its full part as a self-supporting public service. It has always been emphasised by Lord Ashfield that a blanket adjustment of fares would not make a satisfactory contribution to net revenues. But it does seem possible that the Board, in co-operation with

the main-line railways which contribute to the pooling scheme, may seek an adjustment of charges at some future date. Reports in specific terms that the main-line companies are about to apply to the Railway Rates Tribunal for a basic 5 per cent. increase in passenger fares in the London Transport area, which were excluded from the award of last year, are officially stated to lack foundation. The Board, for its own part, has the independent power to adjust railway fares in cases where they are below the statutory maxima, to determine bus fares as it deems fit, and generally to adjust anomalous and reduced rate fares, subject to any statutory limits. At present it is impossible to estimate what proportion of a given basic increase in main-line suburban fares (if it were granted) would in fact be retained by the companies. And the volume of extra revenue which the Board might contribute to the pool, if it chose to adjust fares, is even less certain. Two points, at least, appear to be clear, and they are of importance alike for the passenger and for the "C" stockholder. The first is that any over-all increase in fares is ruled out by the impossibility of adjusting low-priced tickets and short fare stages—although the main lines might well be more successful than the Board in this respect. The second point is that, granted the desire of the Board to achieve standard dividends on the "C" stock (for it must be in a position to raise new capital at some future date) the extra margin of net revenue required is relatively small. It is imperative, of course, that if the pooling scheme is to work smoothly, on the present basis, each party should make an increased contribution which bears some rough relation to his final share. London Transport's present share in the pool is just over 62 per cent. It follows that to provide the Board with the £385,000 of additional revenue required to pay the standard dividend, the pool receipts must increase by about £620,000. This figure is approximately 1.47 per cent. of the total pool receipts last year, or 3.18 per cent. of the receipts from the main-line companies and the Board's railways, subject to operating allowances.

If these changes occur—and at present they are hardly in the blue-print stage—when may the "C" shareholder expect to benefit? Clearly, it would be unwise to expect any substantial addition to revenues during the current year. Even if terms had been agreed for the adjustment of fares, the sanction of the Railway Rates Tribunal must first be obtained. The problem of fare adjustment in the London area is obviously extremely complex and lengthy. But, if there is no basic change in economic conditions, it seems reasonable to assume that the Board may be much nearer the payment of a standard dividend on the "C" stock in 1939-40 than it is to-day. That is the argument for retaining the stock at its present price of 77. It is also a powerful argument which any application for the appointment of a receiver might have to overcome in the Courts.

Jute in Dundee and Calcutta

FOR a number of years the Dundee jute industry has been the helpless victim of a struggle between the associated mills and the so-called "outside" mills in India. This struggle, which had resulted in over-production and in unremunerative prices, has now been terminated by official intervention. The recommendation of the Jute Advisory Committee (set up under the State Ordinance promulgated by the Governor of Bengal) to restrict the production of jute manufactures by limiting the hours of work to forty-five a week in the big mills and to seventy-two a week in five small mills, came into force on September 26th. This step, coupled with the amelioration of the conditions under which Calcutta mill-hands labour, should go far to remove Dundee's grievances and assist in expediting the negotiations for the renewal of the Anglo-Indian trade agreement. The occasion calls for a fresh review of the position and prospects of the jute industry in this country and in India.

Though India has a virtual monopoly in the production of raw jute, neither the cultivator of the crop nor the Calcutta manufacturer can be said to have reaped the full advantages accruing from such a position. Jute is grown on relatively small holdings by thousands of poor cultivators in the Provinces of Bengal, Bihar and Assam, who sell their season's crop as soon as the fibre is prepared for baling or transport. Unlike the capitalistic tea and rubber plantation industries, jute growers lack organisation, and they were harder hit than the manufacturers in the early phase of the great depression. The price of raw jute (first marks) fell sharply in 1930 and the downward trend continued until 1934, when the average price was £15 10s. per ton, or just half that of 1929. It recovered to about £18 10s. in 1935 and 1936, rose above £20 in 1937, and now stands slightly above £19 per ton. The reduction in the area under cultivation since 1930 was due to this catastrophic fall in the price rather than to official propaganda.

The official estimate, which persistently understates the actual yield, forecasts the current season's crop at 1.675 million tons, but unofficial opinion is inclined to place it in the neighbourhood of 2.250 million tons.

AREA AND PRODUCTION OF RAW JUTE IN INDIA

	1930-31	1933-34	1934-35	1935-36	1936-37	1937-38
Area ('000 acres).....	3,492	2,517	2,670	2,181	2,886	2,861
Yield ('000 tons).....	2,001	1,426	1,518	1,293	1,710	1,534

The Indian jute mills, situated on the banks of the Hooghly, purchase their raw material a year in advance and carry substantial stocks at the end of the season. Their stocks have varied from 1,071,000 tons in 1931 to 855,000 tons in 1936. Exports of raw jute and jute manufactures from India have registered a steady increase, especially during the past four years.

INDIA'S EXPORTS OF JUTE

	1930	1933	1934	1935	1936	1937
Raw jute ('000 tons).....	626	729	721	795	769	830
Jute manufactures ('000 tons).....	842	677	669	735	911	1,031

The 36 per cent. increase in exports of Indian jute manufactures since 1934 is to be attributed to the general trade revival following the economic depression, reinforced by re-armament demands. The leading importers of Indian raw jute last year were the United Kingdom (158,000 tons), the United States (122,000 tons), Germany (98,000 tons), Italy (86,000 tons), France (74,000 tons), Belgium (43,000 tons), Brazil (26,000 tons), Japan (24,000 tons), Holland (14,000 tons), China (14,000 tons) and Argentina (10,000 tons).

Over 50 per cent. of the Indian jute crop is consumed by local mills, whose output of manufactures increased from 932,000 tons in 1934 to 1,271,000 tons last year. Moreover, the internal consumption of jute manufactures last year was equivalent to 20 per cent. of the total output. Stocks of manufactures at the end of the past four years, including those of the associated mills and of four of the "outside" mills, are given below:—

STOCKS OF JUTE GOODS IN INDIA
(In million yards)

	1934	1935	1936	1937
Hessian cloth	63.3	45.7	95.2	185.9
Sackings	75.0	103.7	82.2	81.9

Stocks of hessian cloth at the end of last July amounted to 433 million yards, an increase of no less than 342 millions over those of July, 1937, while stocks of sackings, at 188 million yards, were 74 millions higher than those of a year earlier. The huge accumulation of hessians

is a measure of the unhealthy position of the industry, due to prolonged internal competition, aggravated this year by the advent of the recession in world economic activity.

The struggle within the industry began during the great depression. The decline in demand for jute manufactures during that period led to over-production, which the Indian Jute Mills Association sought to cure by restriction of output. This "self-denial" on the part of the Association mills was accompanied by an increase in the output of the "outside" mills, whose capacity was expanded by the erection of additional mills. The Association therefore approached the Government with proposals for an increase in the export duty on raw jute, a reduction of duty on manufactured jute and a statutory restriction of working hours to fifty-four a week. Following the rejection of these proposals, the Association removed the voluntary restriction of output by stages.

Early this year the position was as follows: There were 82 concerns engaged in the manufacture of jute, with 66,000 looms. Of these 71, with 63,000 looms, were operating in Bengal, where 57 concerns with 57,000 looms are members of the Indian Jute Mills Association. This left in that Province 14 non-associated mills with 6,000 looms, and outside it 11 mills with 3,000 looms. While the 9,000 looms operating outside the Association form less than 14 per cent. of the total number of looms, they produced a substantially bigger proportion of the total output by working two or three shifts.

This "outside" production defeated the attempts of the Association to maintain prices. The unremunerative prices and the heavy accumulation of stocks were the cause of the bitter complaints from the Scottish industry in Dundee. In addition to severe competition, the Indian jute industry has had more than its share of labour troubles. No less than 4,891,000 working days were lost by strikes last year, and the Premier of Bengal had to intervene to bring about a settlement between the mill-hands and mill-owners. The improvement in labour conditions is a move in the right direction and as welcome to Dundee as the restriction of output.

The Scottish industry has had its own troubles in recent years. The industry centred round Dundee was superimposed a century ago on an existing flax industry, and in due course the cheaper fibre replaced linen in many uses. It was largely on the initiative of the Scotsmen from Dundee that jute mills were established in the middle of last century on the banks of the Hooghly, where the crop grows and labour is cheap. The industries in both countries were then reaping the full benefit of expanding international trade, though even then there was a tendency for the Indian mills to concentrate on the cheaper standardised qualities, while Dundee was discovering new uses for the fibre and concentrating on the output of quality

ACTUARIES

Any public body, company, society or person requiring the permanent whole-time services of a qualified Actuary or of an actuarial student is invited to apply to the Chairman of either of the undermentioned Boards who will be pleased to supply the names of such members of the Institute of Actuaries or of the Faculty of Actuaries in Scotland as may be interested in the appointment and qualified to undertake the duties involved.

THE INSTITUTE OF ACTUARIES APPOINTMENTS BOARD
STAPLE INN, HOLBORN, LONDON, W.C.1

THE FACULTY OF ACTUARIES APPOINTMENTS BOARD

goods. As in the case of cotton, many overseas countries which were formerly customers of Dundee or Calcutta set up their own jute mills during the Great War. But if the British jute industry felt the full force of the world depression, it also shared in the general prosperity during the years of recovery, as the following statistics show:—

IMPORTS OF RAW JUTE INTO THE U.K.				
	1934	1935	1936	1937
Tons.....	194,618	173,242	181,730	192,632
Value (£'000)	2,872	2,911	3,328	3,729

VALUE OF U.K. JUTE EXPORTS (in £'000)				
	1934	1935	1936	1937
Yarn	276	304	350	435
Jute manufactures and piece goods	1,128	1,388	1,342	1,548
Sacks, bags, etc.	822	893	925	1,137
All other descriptions.....	118	76	103	183
Total	2,344	2,661	2,720	3,303

There is, however, a darker side to the picture. The number of insured persons in the jute industry declined from 38,400 in July, 1927, to 30,030 in July, 1937, and it would seem that this shrinkage is permanent. The number of insured workers unemployed fell steadily from 14,026 in January, 1933, to 6,354 in January, 1937, and rose slightly to 8,340 last January. It is presumably this hard core of unemployment that prompted Dundee to demand the imposition of a quota, based on the figures for 1928, on Indian jute manufactures entering the United Kingdom market. As the Indian jute industry is many times larger than the British, Dundee is naturally afraid for its market. The Indian industry is not inclined to accept Dundee's terms, retorting that Great Britain enjoys a

certain measure of preference on her manufactures in the Indian market and that Dundee should not be allowed to jeopardise the national interests of both countries by agitating for an impossible quota limit on Indian imports. If that were done it is open to India to raise the price of raw jute to the Dundee manufacturers by an increase in the export duty. Moreover, by restricting the working hours and improving the conditions of Indian labour, the Hooghly mills are already doing something to meet Dundee's grievances.

Meanwhile, the British Government has been assisting the home industry in two ways. In trade agreements with foreign countries the Government has endeavoured to bring a measure of relief to the domestic jute industry by stipulating that the foreign countries should buy a quantity of British jute bags sufficient to contain their exports to the United Kingdom, provided the price of the British product did not exceed by a certain percentage that of foreign manufacture. In connection with the re-armament programme some 32 million sand bags were acquired by the Government and orders for 275 million more bags are on the industry's books.

Jute is used mainly in the form of bags for meat, grain, beet, potatoes, etc., but it is also employed in the manufacture of imitation leather foundations, linoleum, floor cloth backings, cable wrappings, roofing felts, tailors' paddings, shoe soles, and in road making. In the long run, the fortunes of the jute industry in this country and in India are linked to the course of international trade. But Dundee could probably do much to improve its position not only by increasing the technical efficiency of the mills, but also by the development of new uses for jute and by concentrating production on high-quality goods, leaving Indian mills to turn out the bulk materials.

Finance and Banking

Northern Ireland Bills.—The clearing banks' ban on municipal bills—other than those eligible for rediscount at the Bank of England—as collateral for money market loans has already made its effect felt on the terms on which two local authorities have been able to borrow in the bill market. Midlothian offered £100,000 of six months' bills dated October 26th for tender on Monday, but as a result of the ban the applications proved to be based on so unattractive a price that the offer was withdrawn. As in the case of the recently abandoned Liverpool bill tender, the necessary accommodation, unavailable on reasonable terms in the bill market, has been obtained direct from the local authority's bankers. A more important operation was the tender for Northern Ireland bills which took place at the beginning of this week. The tender was for close on £300,000 of three months' bills and resulted in the full issue of the bills on offer at an average rate of discount of 25s. per cent. per annum. Northern Ireland has a bill indebtedness of about £2,000,000, and its three months' bills have in the past been placed at rates approximating very closely to the British Government Treasury bill rate prevailing at the time. Since the clearing banks' ban covers Northern Ireland bills, few houses in the discount market felt disposed to tender for these bills, and those which did based their tenders on prices which allowed fully for this new factor in the situation. Consequently the Northern Ireland Treasury has found itself forced to pay just about double what it would otherwise have paid for its accommodation.

The outcome of this tender is likely to bring the whole problem of municipal bills to a head. There can be little cavilling at the attitude of the clearing banks in declaring their ban on non-eligible municipal paper. These institutions cannot allow their second line of defence to be weakened by the acceptance as collateral of bills which in an emergency could not be turned into cash at the Bank of England. The attitude of the Bank in determining what are and what are not eligible municipal bills seems, how-

ever, to require restatement. At present it is dictated by a wholly arbitrary consideration, namely, whether the bills in question were issued through the Bank or not. If they were, they will be rediscounted. This privilege applies to four local authorities for which the Bank of England acts as banker. For all others, however important and credit-worthy, the privilege of rediscount by the lender of last resort is withheld. The ruling is hardly in the orthodox tradition of central banking. It tastes more of that tradition of commercial banking which in most respects the Bank of England is at pains to forget and live down. Perhaps there is a more fundamental principle at stake. The British Treasury may wish to keep the bill market free from the intrusion of municipal borrowing in view of its own needs. The authorities may, for other reasons, deem it undesirable to give municipal finance the cheap facilities of the discount market. Even if these wider issues enter into the question, they do not obviate the need for a less arbitrary rediscounting rule on bills issued by local authorities than that which obtains at present.

Exchange Speculation and the Sterling Bloc.—Without contesting the substantial advantages of the sterling bloc system from this country's point of view, it is necessary to admit that there are a few items also on the debit side of its balance sheet. The existence of the sterling bloc tends, for example, to increase the strength both of downward and of upward pressures on sterling and thus to make more difficult the task of the British authorities. This arises from the fact that the speculative activities of traders in sterling bloc countries tend to be concentrated in London. During the last two months speculation in dollars by the Scandinavian countries has been one of the outstanding features of this market. Stockholm, Oslo and Copenhagen do not possess a very good market in dollars, and since their exchanges are pegged in relation to sterling it is convenient for Scandinavian speculators to

operate in London. Were they to operate in Amsterdam or Paris they would lose an extra turn, since, owing to the fluctuation of the Scandinavian exchanges in both markets, the margin between buying and selling rates is apt to be wide. On the other hand, owing to the sterling bloc arrangement, their margin in London is very narrow, so that Scandinavian speculators can buy and sell dollars in this market against the sale of their national currencies on very advantageous terms. The result is a selling pressure on sterling whenever Scandinavian speculators choose to go long in dollars. For their respective monetary authorities offset the selling pressure on their currencies through sales of sterling out of their foreign exchange reserves kept in London, and the Exchange Equalisation Account has to stand the burden of the Scandinavian demand for dollars. It is true that sooner or later these speculative operations are covered, but while the positions are running they constitute a drain on the resources of the Exchange Equalisation Account.

New Zealand Exchange.—On October 20th, the New Zealand trading banks raised their selling rate for telegraphic transfers on London from £NZ124 10s. to £NZ125 per £100 sterling, while their buying rates were raised from £NZ124 to £NZ124 10s. Rates for other usances were also increased by ten shillings. The custom of the trading banks is to operate upon a ten shilling margin, while the New Zealand Reserve Bank quotes a margin of one pound, buying at £NZ124 and selling at £NZ125. The effect of this change, therefore, is to bring the trading banks' selling rate into line with that of the Reserve Bank. Hitherto, the trading banks have been able to sell sterling out of their own accumulations of London funds, but as the following table shows, these have lately become attenuated.

LONDON FUNDS			
	July, 1936	July, 1937	July, 1938
	(£NZ millions)		
Held by—			
Reserve Bank	22.1	20.9	15.1
Trading banks.....	21.1	14.1	8.2
Total	43.2	35.0	23.3

By a few weeks ago, the trading banks were finding some difficulty in meeting their customers' needs out of their own resources, and it is becoming clear that they will shortly have to replenish their sterling by purchases from the Reserve Bank. This is why they have decided to bring their selling rate into line with that of the Reserve Bank, for otherwise they would have found themselves selling sterling at a loss.

The most significant of the reasons for the recent diminution in New Zealand's London funds are the effect of the recent recession in world trade and prices upon New Zealand's exports; the recent nervousness of capital, due to political fears and motives; and the fear lest the spending policy of the Labour Government will prevent any reduction in imports. Also the primary produce marketing scheme of the Labour Government, already applied to exports of dairy produce, means that the proceeds of all such exports accrue to the London balances of the Reserve Bank, and not to those of the trading banks. Hence, as the table shows, the London funds of the trading banks have suffered more than those of the Reserve Bank. These are the reasons behind this recent adjustment in the trading banks' rates. It is only necessary to add that an alteration of this magnitude is far too small either to affect New Zealand's balance of payments or by itself to check any future drain of funds from New Zealand.

MONEY MARKET NOTES

Foreign Exchanges

THE London market has been very quiet all the week, but sterling has had a stronger undertone, having risen from \$4.75½. Thursday's improvement in the dollar from \$4.77½ to \$4.77½ was mainly technical. Paris is closed from Friday to Tuesday of this week-end, and certain operators bought dollars on Thursday, in case any new development came from Paris during the holiday—as indeed, has happened several times in the past. French francs have been weak at Frs. 178½, but hardly any support has been needed from the French Control. Spot belgas followed the dollar, but forward belgas improved in sym-

pathy with the reduction of the Belgian Bank rate from 3 to 2½ per cent. On Thursday one month's belgas were quoted at a small premium, and three months' at par to one cent discount. There have been very few dealings in guilders and Swiss francs, and these rates have moved with the dollar in a largely nominal market.

The Bank Return

MORE of the "crisis" notes have returned, and the note circulation is now only £3.3 millions bigger than it was

before these notes went out. The Reserve is consequently strengthened, while the Proportion has been restored to 28.1 per cent.

TENOVA SOCKS

never let you down

Tenova socks stay up under their own power. The band at the top, containing Lastex yarn, adjusts itself instantly to your leg, supports the socks gently but firmly all through the day—and goes to the laundry with them. For town, 3/6, 4/6, 5/6 and 7/6. For tennis, from 3/6. For golf, 7/6. Black Silk for evening, 7/6 and 12/6. Obtainable from good shops for men.

TENOVA self-supporting socks
Reg. Trade Mark 506265. Patent No. 523487. Reg. Design 748974.

Stephens Brothers Limited, Distributors for Tenova Limited, 157-161 Regent Street, London, W.1. Regent 2420

There were several wide movements in the banking department. First Government disbursements and a discrepancy between the dates of Treasury bills issues and maturities have reduced public deposits by £8.8 millions. Hardly any of this decrease is due to Exchange Account operations. Next there is a small increase in Government securities, more than offset by a reduction of £3.8 millions in discounts and advances, the latter movement being unconnected with the money market. Other securities, which rose by about two millions last week, have fallen back again. As a result of these changes and the increase in the Reserve, bankers' deposits have risen by £9.1 millions.

The Money Market

MONEY has become considerably easier this week, and by Thursday discount rates were showing signs of returning to the low levels current prior to the crisis. The clearing banks were buying mixed parcels of December and January Treasury bills at $\frac{1}{2}$ per cent., and were prepared to take them even in the proportion of 75 per cent. Januarys and only 25 per cent. December. The market rate for January Treasuries alone and also for three months' bank bills is no better than $\frac{1}{8}$ per cent. Bond money is also plentiful at $\frac{3}{4}$ per cent. The simple explanation of their ease lies in the increase in bankers' deposits shown in this week's Bank returns. This

Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

* Viz. $\frac{1}{2}$ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. $\frac{3}{4}$ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

does not account, however, for the fact that money has once more become easy in spite of the continued absence of the large quantity of funds transferred to New York during August and September. The real explanation is that if the market now has less money at its disposal, it also has fewer bills in which to invest it; for the Exchange Equalisation Account is holding many more bills than two months ago, while the total amount issued by tender is considerably less. The banking system, in fact, is working on a smaller turnover.

The Bullion Market

THE firmer tendency of sterling during the early part of the week made arbitrage more difficult, as arbitrageurs saw greater risk in covering their exchange after buying their gold. Also on most days the authorities were only ready to sell gold at a premium. Thus in spite

of some Continental buying, the total volume of business was limited. On Thursday, however, sterling developed weakness and so arbitrage became more attractive. Therefore, although gold was fixed at a penny premium, there was a big increase in the amount dealt in at the fixing.

" 27 ...	145 7	1 pm	1,085	19½	19½

* Above or below American shipping price. This week's calculations are based on a "temporary parity," in which the war risk rate is taken as 1s. 3d. per cent.

† At fixing.
The New York price of silver remained at 43 cents per ounce .999 fine during the week.

In the silver market, most of the demand came from the United States. Sellers were rather reserved, but India operated both ways, with some bear covering in evidence on Friday. Wednesday's price was rather too high in comparison with the New York exchange, and so the price was left unaltered on Thursday, in spite of the intervening appreciation of the dollar. This brought out a better American demand, with the general feeling that Thursday's price was "about right" in comparison with that morning's quotation of \$4.77½ to the pound.

are known can these uncertainties be terminated. The relative part to be played by borrowing and taxation and the possibility that industrial mobilisation might cut across civil work and possibly interfere with the size of company profits and dividends—these are among the unresolved quantities which prevent any precise formulation of investment policy.

Repatriation and Control.—No method, it would seem, is better calculated to inspire new life into a comatose capital market than to market a substantial block of shares which already have high investment favour. That, however, is not the only interesting aspect of the deal by which 2,200,000 5s. ordinary shares in F. W. Woolworth and Company will be offered for sale by Philip Hill and Partners on Tuesday next at 58s. per share. It is permissible, perhaps, to speculate on Treasury policy in consenting to the repatriation of so large a block of shares, involving the transfer of over £6 millions sterling at a time when pressure on the pound was attracting comment in Washington. That consent, however, is strictly in accordance with the more liberal objectives of control announced some time ago. Further, it would appear that the transfer of this block of shares from a private holder in the United States does not affect the control of the British company in any way. The American Woolworth company will continue to hold a majority of the 30,000,000 5s. ordinary shares now in issue. The offer will, of course, provide a stern test of the market's digestive powers, for £6,380,000 is a large sum to find even for the opportunity of acquiring the best type of industrial share. The offer must be listed among the important repatriations of recent years, including those, such as Boots and Edmundsons Electricity, which have restored control to British

ownership. There is a natural limit to transactions on this scale, but in the long run other direct investments in British industry may well be transferred, in part at least, from American to British ownership. That is already the case with Woolworth and Ford Motor. An exception which will spring to the investor's mind is the 100 per cent. control of Vauxhall Motors' equity, which is held by General Motors Corporation.

Mitchells & Butlers Setback.—The report of Mitchells & Butlers for the year to September 30th shows a disappointing fall of 9 per cent. in total profits. The percentage is not large in itself, but it is somewhat unexpected for a business operating in the Birmingham region, which has been more successful in maintaining industrial activity than some districts. Trading profits, struck after depreciation and taxation, are reduced from £754,412 to £686,730. It would seem, in fact, that higher taxation and the increased cost of materials are jointly responsible for this decline, for the directors state that turnover was fully maintained. As we show in the following table, the reduced dividend represents approximately the same proportion of available earnings as in recent years:—

	Years ended September 30th		
	1936	1937	1938
Profit	719,119	754,412	686,730
Fees	2,500	2,500	2,967

† After £1,198 issue expenses. On gross basis.

As in 1936-37, £50,000 is placed to general reserve, and £50,000 to the property reserve account, which was inaugurated a year ago to provide for expenditure on properties which does not add to capital value from a trading point of view. The balance sheet again shows impressive strength, and reflects the issue announced last May of £535,000 nominal of 4 per cent. "A" debentures, which has raised the amount outstanding to the maximum of £1,250,000. Fixed assets continue to expand—they now exceed £8½ millions—while cash holdings amount to no less than £1,065,369, against £823,379. The latest year's setback, in fact, is of minor importance when related to the company's financial strength and satisfactory profits record—merits to which the current yield of £5 10s. 3d. per cent. on the £1 shares bears witness.

American Steel Profits.—The publication of third-quarter earnings by the leading American steel companies has provided a salutary reminder that, despite the improvement in operations recorded since June, the companies are still "in the red." United States Steel, in particular, has announced a net loss of \$5,847,791 for the September quarter, compared with a profit of \$30,618,000 for the third quarter of 1937. The average level of operations, at 34.6 per cent. of capacity, was, however, only 2.6 per cent. higher than in the June quarter, when the smaller loss of \$5,010,000 was recorded. This fact reveals the consequences of the change in the industry's price structure, following the abandonment of the "basing point" system last June, and of the outbreak of price-cutting. The latest results for the leading steel companies are summarised in the table at the head of the following column. In each case profits (or losses) are shown before providing for preferred stock dividends. The United States Steel Corporation has declared the usual quarterly payment of \$1.75 on the preferred stock, while Inland Steel—an exception to all generalisations on American steel conditions

AMERICAN STEEL EARNINGS
In \$'000s

	September Quarter		Nine Months	
	1937	1938	1937	1938
U.S. Steel	30,618	Dr. 5,848	95,353	Dr. 12,150
Republic Steel	3,237	Dr. 2,388	9,291	Dr. 8,306
Youngstown	3,586	Dr. 728	10,494	Dr. 750

—has declared a further dividend of 50 cents on the common stock (making \$2.50 this year), from earnings of 69 cents per share. The market received these results rather coldly at first. Then it gathered fresh inspiration from optimistic trade reports, among which the estimate by *Iron Age* that ingot production had advanced to 54 per cent. of capacity, compared with 51 per cent. a week ago, coupled with evidence of a continued expansion in demand and more stable prices, was most welcome. But the latest results suggest that the expansion in output has further to go than recent optimistic estimates have suggested before the industry is earning positive profits.

B.A. Western Position.—In his report, the Director-General of B.A. Western Railway describes the past year as one of the worst in the company's history. Operating profits were, in fact, lower even than in the last depression. Disastrous crop conditions reduced receipts from cereals traffic from £729,703 to £279,690, and only an improvement in passenger receipts lessened the force of this serious setback. Passenger traffic, mainly in the suburban services, provided about £50,000 more revenue, and though receipts fell on other traffics, the loss was on a relatively modest scale. Livestock receipts, for instance, were only 1.68 per cent. lower, at £866,222, than in 1936-37, and general merchandise, which accounted last year for as much as 24 per cent. of all goods receipts, fell by only 2.02 per cent. Operating expenses fell in a smaller proportion than total receipts, since a 17½ per cent. increase in the price of fuel prevented larger economies. The 5 per cent. wages cut took effect only in April, and though this reduction has since been increased to 8 per cent., the effect on the present year's wages bill is not yet known. As we show in the following table of results, stockholders do not suffer the full force of the reduction of £314,713 in operating profits, for exchange differences require about £70,000 less, and no charge against revenue is made for renewals:—

	Years ended June 30th		
	1936	1937	1938
Operating receipts	3,502,899	3,735,632	3,340,028
Operating expenses	2,921,846	2,971,985	2,891,094

Renewals expenditure absorbed £61,876 during the year, but it was entirely provided by the renewals fund, which now stands at £2,825,030, whereas in 1936-37 net expenditure of £49,072 was met in full from revenue. In spite of these savings, however, debenture interest is short-earned to the extent of £117,110, and no preference dividends are paid. The profit and loss account is restored to credit by a transfer of £100,000 from general reserve. Total reserves now stand in the balance sheet at £1,651,372. By present indications passenger traffic is developing satisfactorily, crop conditions are more hopeful, and in 1938-39 wages reductions may play a more important part. But the 17 per cent. decline in sterling traffics already recorded for the 16 weeks to October 22nd will damp any undue optimism.

B.A. and Pacific Results.—The disappointing story of British-owned Argentine railways for 1937-38 is completed with the issue of the Buenos Aires and Pacific report. As in the case of the other major systems, the improvement recorded in 1936-37 was not sustained, and the latest results are but little better than those for 1935-36. Buenos Aires and Pacific depends predominantly on goods traffic, and the 10.47 per cent. drop in gross receipts is due chiefly to the serious decline in grain freights. The effect of drought and small crops was to reduce total receipts from cereals by one-half to £625,348. But the most important product carried is wine, which accounts for over one quarter of gross operating receipts of all kinds. In this category the decrease of 12.27 per cent. to £1,706,851, was smaller, but cereals and wine traffics together show a drop of no less than £880,170. A modest but satisfactory rise of 4.03 per cent. in passenger receipts, and an increase of £37,519 in parcels traffic, limits the fall in total receipts to £756,955. As we show in the following table, working expenses have been reduced by 7 per cent. to £5,116,262:—

	Years ended June 30,		
	1936	1937	1938
Operating receipts	6,529,274	7,226,550	6,469,595
Operating expenses	5,179,229	5,501,273	5,116,262

Net loss	Dr. 889,114	Dr. 606,881	Dr. 914,117
Carried forward	Dr. 4,184,665	Dr. 4,791,546	Dr. 5,705,663

* Including interest on arrears.

Despite the operation of lower wage charges during part of the year, this reduction is proportionately smaller than the fall in gross traffics, and the operating ratio is nearly 3 per cent. higher at 79 per cent. Renewals charged in the various operating accounts amount to only £168,422 against £280,802, but this item of expense in recent years has been on too small a scale to affect operating results very considerably. The balance available for fixed charges amounts to £826,217 against £1,120,513. But the heavy weight of accumulated losses robs the annual results of any special significance. The renewal of the moratorium last June for a further five years was, in fact, scarcely more than a formality, for while interest payable in respect of debentures and guarantees, as well as interest on arrears, is fully charged each year, it is only partly paid. At present the first and second debenture stocks are receiving interest

in full, payments on the 4½ per cent. consolidated debenture stock have been made to July 1, 1934, while holders of the 5 per cent. (1912) debenture stock have 6½ years' arrears due to them. The General Manager's report points out that crop prospects are better this year, but in the meantime, stockholders will derive little consolation from a fall of £156,264 in gross receipts for the first 16 weeks of the current year.

Associated Piano Scheme.—The report of Associated Piano Company for the year to March 31st shows that net profits have been reduced from £17,104 to £13,364. Hence, the net preference dividend, which requires £8,925, is covered 1½ times. In these circumstances the directors' proposal to convert the £160,000 of 7½ per cent. cumulative preference capital into a corresponding amount of 5 per cent. loan stock, repayable by the end of 1944, is somewhat surprising. It may be conceded at once that the company's circumstances are unusual. The retailing side of the company's business has not shown a satisfactory return in recent years; on the other hand, the capital invested in this branch is represented largely by hire-purchase debts, which will be gradually realised during the next five years. In a situation where the preference capital is fully covered by assets, but may be prejudiced as to dividends (although that is a problem which lies in the future) the board offers preference shareholders the opportunity to exchange their status for that of creditors, holding a security whose service will not depend upon profits. It is doubtful, however, whether this point offers adequate compensation for the loss, first, of one-third of current income rights and, secondly, of the capital right to be paid off at 25s. per £1 share. The present quotation of 13s. 9d. for the preference shares may possibly represent a fair market appraisal of their prospects. But if the preference shares were converted into loan stock the company might be able to take advantage of any fall in the market value of the stock below par, by making drawings on advantageous terms. The company, on the directors' own showing, is over-capitalised in relation to its profit-earning capacity. In that event it would surely be possible to accumulate free resources as surplus assets are realised, and then to proceed to a reduction of share capital in the normal way, observing in the process all existing rights of the preference shareholders.

Imperial Smelting Prospects.—The failure of Imperial Smelting Corporation to pay its preference dividend in full, coupled with the general setback in metal prices, had prepared shareholders for a sharp decline in profits for the year to June last. Actually, total revenue, at £117,447, is 57 per cent. lower than for the previous year, and also the lowest figure recorded in the Corporation's existence. The consolidated profits of the group show a smaller reduction of 45 per cent. to £268,812, but the two years are not strictly comparable. The amount earned for dividends by the Corporation is £103,327, against £257,092, and the 6½ per cent. preference shares receive a dividend of 4½ per cent. out of a possible 5 per cent., the excess of £10,186 being used to increase the carry forward to £80,806. This sharp contraction in earnings is explained by the rapid fall in spelter prices last autumn; the average price during the financial year was reduced by £3 7s. to £16 15s. 1d. per ton, while profits were also affected by a general increase in costs. The outlook for the current year, however, may be very different. The Corporation has long urged that assistance should be given to the British zinc smelting industry, and Empire zinc producers have put forward a scheme which is now under consideration by the Import Duties Advisory Committee. It is proposed that the present duty on foreign imports, and the equalising premium of the Empire metal over the market price, should be raised from 12s. 6d. to 30s. a ton. Empire producers would retain only 2s. 6d. out of this increase; of the balance they would pay 10s. a ton to Imperial Smelting Corporation and also 5s. to a pool for subsidising exports, and the Corporation would

also contribute 5s. for each ton of metal produced to this pool. On the basis of imports and domestic production for the year to June 30, 1938 (when the Corporation produced 65,153 tons of zinc, and imports from the Empire amounted to 106,124 tons), the Corporation would receive some £150,800 gross from the 30s. premium obtainable from its sales and from the 10s. a ton levy on Empire imports. After deducting its own contribution to the pool of, say, £16,300, and the premium of 12s. 6d. a ton already obtained, the net gain to the Corporation would represent £93,800—equivalent to 3.7 per cent. actual on the ordinary capital. In addition, there should be some gain from increased exports since, on the basis of the 1937 figures, receipts into the pool would subsidise exports amounting to some 27,000 tons, against actual exports in 1937 of 7,316 tons. Moreover, the market price of spelter has already improved in the present financial year. The current price of 12s. 9d. for the £1 ordinary shares makes due allowance for the Corporation's improved outlook, assuming that the proposed scheme is officially approved.

"Twin Eagle" Guarantees.—It is not easy to summarise the revised terms which in future will govern mutual guarantees between the Canadian Eagle and Mexican Eagle companies. These guarantees have covered the due operation of sinking funds for each company's first preference shares, and, so far as profits permit, the payment of dividends on their respective first preference and participating shares. The Canadian Eagle report, issued in August, announced that the obligations of the Canadian company under its guarantee agreement were to be submitted to arbitration. The two companies and the trustees, however, have instead negotiated a tri-partite agreement. As from the end of 1937, the existing provision that any debit balance shown by one of the companies must be offset by a corresponding reserve provision by the other, before the latter can pay a dividend, will be deleted—obviously a point of importance for Canadian Eagle in the present situation. For the determination of respective liabilities, the two companies are to act on the basis of the best profit and loss account which can be produced by Mexican Eagle (whose books and records have been seized), with the proviso that adjustments may subsequently be made if proper accounts are subsequently prepared. Payments from available profits will be made by the Canadian company under its guarantees to the extent to which the Mexican company is unable to pay its first preference and participating dividends. It is laid down, however, that any amounts received under guarantee in respect of dividends on the first preference shares shall be repayable by the company concerned out of future profits (subject to the prior claim of the first preference dividends), while payments on the participating preference shares may be recouped only from profits, if any, which might have been applied, but were not in fact applied, in payment of such dividends. Finally, the mutual guarantees of sinking funds on the first preference shares of both companies remain in force.

Canadian Eagle Distributions.—Following this agreement, the Canadian Eagle company proposes to distribute the available balance of £741,650 (after paying first preference dividends) shown in the 1937 report. A sum of £5,624 is required to meet the Mexican Eagle first preference dividend for two months to the end of 1937. A dividend of 23.88 Canadian cents is declared on Canadian Eagle participating preference shares, absorbing £42,525, while the fixed dividend on the Mexican Eagle participating preference shares requires £10,800. The distribution of 6d. per Canadian Eagle ordinary share absorbs £303,207, leaving £379,494 to be carried forward. These payments, of course, relate to 1937, and have been held in abeyance. For the current year, the situation is obviously obscure. The Mexican oil companies now await the Supreme Court's decision on the legality of the expropriation of their property, while the Canadian Eagle

concern has been compelled to seek new sources of supply for its trading activities. President Cardenas has recently claimed that Mexico would be able to wipe out her obligations if she could sell a portion of her oil through the expropriated companies. What this statement means in terms of political or economic probabilities is not immediately apparent. The revision of the agreement between the Eagle companies implies first that the revenue obligation upon Canadian Eagle for the payment of Mexican Eagle preference dividends should be relatively moderate; the capital obligation for the sinking fund on the latter's first preference shares is, of course, well covered by its own liquid resources.

Trinidad Leaseholds Profits.—Although the dividend was reduced from 30 per cent. to 27½ per cent., and total profits were 12 per cent. lower, the Trinidad Leaseholds accounts for the year to June 30 make a satisfactory impression. The report points out that the average price obtained for the company's products rose, but an important proportion of sales is in the form of heavy oils for the bunker and export markets, and these showed a decrease which more than offset an improvement in "Regent" petrol sales in this country. Total sales, however, amounted to 10,062,000 barrels—a reduction of 2 per cent.—which is considerably lower than the rate of decline in profits. But the company has incurred expenses incidental to a larger production and to the extension of the refinery operations, as a result of which 10,476,000 barrels of crude oil were treated in 1937-38, against 10,169,000 barrels in 1936-37. Moreover, the introduction of the new plant involved extra expense, and there was a rise in the cost of labour and materials. The refinery extensions were practically complete before the end of the financial year (£898,503, incidentally, was spent on capital works of all kinds in 1937-38, against £588,628 in 1936-37), but they have not been at work long enough to affect profits. Meanwhile the reduction in earnings available for the shareholders, as we show in the following table, exceeds the fall in total profits by £63,240.

	Years ended June 30,		
	1936	1937	1938
Total profit	679,409	1,108,833	977,147
Expenses and fees	36,147	46,062	46,269
Depreciation	231,411	250,169	245,008
Written off shares, etc.	12,650	26,566	81,262
Taxes	55,000	137,500	151,000
Shares:—			
Earned	344,202	648,534	453,608
Paid	327,891	491,835	450,849
Earned %	26.2	39.6	27.7
Paid %	25	30	27½
Reserve	...	100,000	...
Carry forward	86,472	143,171	145,930

This reduction is due chiefly to an increased provision for writing down interests in other companies, while the total taxation allocations include £21,000 for the Trinidad cocoa levy. The dividend is in consequence covered with only a trifling margin and no addition is made to reserve. The current year's outlook is affected by the uncertainties of the oil price structure, and in the absence of a recovery in shipping movements sales might well fall further. The company, however, has an established position in the British petrol market, and in due course the new refinery should make a considerable contribution to profits. The £1 shares are quoted at 91s. 3d., to yield £6 0s. 6d. per cent.

Consolidated African Selection Trust.—The less prosperous circumstances of the diamond industry are strikingly reflected in the results of Consolidated African Selection Trust for the year to June 30th last. Net revenue from diamond production and trading account fell by £186,700 to £419,150. The substantially increased

amount of £21,000 was expended upon investigation, while new issues expenses were higher. Taxation absorbed £68,330 net, against £84,610 for 1936-37, when a sum of £27,500 was written back. The net balance available for dividends on the ordinary shares amounts to £271,220, against £457,910, and since the capital was increased last year by a 300 per cent. scrip bonus, the 15 per cent. distribution requires £226,220, against £339,330 for the 90 per cent. paid on the former capital. Only £24,220 has been set aside to reserve, which received £100,000 a year ago, and the slightly increased amount of £39,920 is carried forward. The general reserve account, which now stands at £170,000, shows the effect of crediting £1,027,550 arising from the revaluation of investments and deducting £1,139,090 in respect of the share bonus. Investments, chiefly at directors' valuation, now stand in the balance sheet at £1,252,090, compared with £224,680 at cost. On the basis of last year's dividend the return at current price of 13s. 6d. for the 5s. shares is over 5 per cent., tax free. In view of the continued demand for industrial diamonds, and of the more cheerful conditions now prevailing in the United States, shareholders may feel justified in expecting somewhat improved results for the current year.

The Week's Company Profits.—This week reports have been received from 43 companies, excluding two for which comparable figures are not available. The total net profits of these concerns amount to £3,411,000, showing a fall of 18 per cent. compared with their earnings of £4,181,000 for the previous year. The cumulative total for 1,994 companies reporting to date is £259,622,000, a rise of 9½ per cent. on the corresponding total last year of £236,794,000. The week's results are discussed in preceding Notes and on page 236 under the heading "Shorter Comments," while our usual analysis table appears on page 252.

NOVEMBER 8 NOVEMBER 10

THE new account opened in encouraging fashion this week. From the outset it was evident that the demand for iron and steel issues was of a determined character, well able to resist the profit-taking to which many shares were naturally subjected after their recent gains. But the advance was not on a broad front, nor was it fully sustained. Lord Halifax's references to the financial obligations inherent in national preparation first checked the rise, and the German colonial demands, with their unpalatable possibilities for Imperial politics, have taken fresh toll of gold mining issues. The course of the fixed-interest securities has been irregular, and neither gains nor losses were extensive.

A limited amount of support for gilt-edged stocks on Monday, led by support for War Loan before the deduction of interest, produced fractional gains of the order of a quarter of a point. On Tuesday, War Loan was marked ex interest, but lost more than the due amount. Some bear operations were reported and investment support was lacking. Further falls were initially recorded on Wednesday, but the sharp advance in sterling provided a signal for bear covering and small gains were recorded at the close.

In the foreign bond market, both Chinese and Japanese bonds responded

to the hope that the fall of Hankow would be followed by a truce. Some Japanese issues jumped as much as six points on Monday, although later profit-taking limited their net advance. Some shortage of Chinese bonds contributed to the two-point advances on Tuesday and again on Wednesday. European bonds were firmer, and Czech issues recovered after an early reaction associated with Hungary's demands.

Home rail stocks responded at first to hopes of good traffics with preference issues well in the lead, though ordinary stocks were not without support. Part of this bloom had already been lost by Tuesday evening, however, and when the traffics were published an all-round setback occurred, except in Southern preferred. Small declines were also recorded in the preference list. Demand for Argentine rail preference and ordinary stocks was well maintained.

Apart from activity in iron and steel and armaments shares generally, the industrial market passed an uneventful week, with no pronounced trend in either direction. Iron and steel shares went ahead strongly at the opening, with Dorman, Long in the lead, although nearly all the principal shares showed good gains. Investment demand slackened in mid-week, and there was also some profit-taking, but after it had been absorbed the market became firmer. More interest was taken in coal shares than in recent weeks, and on the whole the trend was upward. While there were some good gains among engineering

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 243. At the Buenos Ayres Great Southern Railway meeting, Sir Follett Holt referred to heavy increases in costs. At one time last year, coal delivered rose by as much as 7s. 7d. a ton. Strenuous efforts to reduce expenses were described by Mr H. Howard-Williams at the Central Argentine Railway meeting. A total reduction of about £1,000,000 had been effected. Addressing Manila Railway (1906) Company members, Lieut.-Colonel C. A. Reid Scott showed that the estimate of an annual surplus of £16,000 would have been exceeded under normal conditions. Coal traffic was declared by Mr E. A. A. Joseph to be the main cause of the Assam Railways and Trading Company's rise in profits. Sir Auckland C. Geddes, at the Rhokana Corporation meeting, expressed the opinion that the Corporation's total plant capacity was largely in excess of 10,000 short tons a month—the figure previously given to shareholders. Addressing shareholders of John Delaney, Limited, Mr A. Woolley-Hart pointed out that the output of lime had increased by over 30 per cent. to 86,546 tons. Sir Louis Sterling informed members of Herrburger, Brooks that the effect of lower turnover had been partly offset by reductions in expenses. Dr Hans Pirow, at the New Modderfontein Gold Mining meeting, explained the reasons for the company's decision to undertake a certain amount of development work on the Black and Kimberley reefs. Nourse Mines shareholders were informed by Mr R. S. G. Stokes that capital expenditure to be incurred during the current year was expected to exceed £60,000, but that this work should practically complete the programme. At the first annual meeting of Blyvooruitzicht Gold Mining Company, Mr Stokes summarised certain additional information which had been obtained by West Witwatersrand Areas and which had a favourable bearing upon their own company's prospects.

shares, the tone was irregular. Electrical equipment issues also became more uncertain as the week progressed. Motor shares were firm rather than exciting, although Triplex was well supported. Aircraft shares made a mixed showing, for a slightly easier tendency followed the firm start. Imperial Airways lost 1s. on the dividend announcement. Except for a burst of interest on Tuesday, textiles lacked special features, though in the rayon section Courtaulds went ahead quietly. Breweries were at first well supported from the provinces, but the Mitchells and Butler's report depressed prices later. Seager Evans were bought on market rumours, but reacted in mid-week on profit-taking. Tobacco shares were neglected. Store shares were undecided, but showed a somewhat steadier tendency on Wednesday. Woolworth were inclined to droop before the terms of the offer for sale, but showed a sharp advance to 59s. 6d. on Thursday. Tate and Lyle were a firm feature in the provision and catering section. As in the previous week, price movements in miscellaneous shares were unimportant. Until profit-taking brought a reaction, Imperial Smelting were firm, despite the report.

Idle conditions continued in the oil share market, and though occasional gains were recorded, an easier tendency developed later in the week from lack of support. The firm opening note was not maintained, for a little Continental selling subdued prices. Mexican Eagle were indifferent to news of the rejection of the companies' petition to President

New York

AFTER reaching new highs at the end of last week, Wall Street evidently felt that the time for a breathing space was at hand. For two days, stocks moved within the narrowest of margins, until mid-week brought a profit-taking test which, on the whole, the market survived very satisfactorily. For the first three days, turnover remained fairly stable, only dropping below 1½ million shares on Tuesday. Reports that the Administration had reached a *modus vivendi* with the utilities (which would release substantial expenditure for new construction), coupled with the further rise in steel activity, encouraged the industrial market at first, but after a bout of profit-taking, the market relapsed into featureless trading. The prospects of increased armament expenditure brought support in the aircraft section and the general background of market sentiment undoubtedly remained bullish. Nevertheless, the third quarter steel earnings figures proved less palatable than the optimists had hoped. The mid-week reaction, however, was in any case overdue, and its importance for the chartists was tempered by the ability of the market to stage a vigorous rally in the last hour. Rail stocks were generally out of favour (although rail bonds improved), but utilities have continued to rise unhampered into new high ground.

ACTUARIES' INVESTMENT INDEX

The Actuaries' index of 151 industrial share prices reflects the recovery that has taken place since the September crisis. On Tuesday, October 25th, this index stood at 63.7, compared with 58.0 a month ago, but with 77.5 a year ago. The corresponding average yields are 5.85, 6.50 and 4.69 per cent. A selection of the separate indices, and also the usual monthly particulars of fixed interest prices and yields, follow:—

BY TENDER

Elham Valley Water.—The directors are offering for sale by tender 2,000 £5 7 per cent. ordinary shares at a minimum of £5 10s.

(Continued on page 236)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 233)

FORTHCOMING ISSUE

F. W. Woolworth and Company, Ltd.—An offer for sale is to be made of 2,200,000 5s. ordinary shares, at 58s., by Philip Hill and Partners, Ltd. Subject to firm applications from underwriters, preferential consideration will be given to existing preference and ordinary shareholders. The list will open and close on November 1st.

RESULT OF ISSUE

Scottish Power Company.—It is understood that the basis of allotment of the 500,000 4 per cent. cumulative £1 preference shares is about 30 per cent. to the public, and 50 per cent. to the stockholders.

SHORTER COMMENTS

Company Results of the Week.—The relatively favourable position of the heavy industries is again illustrated by recent company reports. **ROUND OAK STEEL WORKS**, for example, have earned £119,433 against £88,169 (though the dividend is unaltered at 6 per cent.), while **LAMBERT BROTHERS** pay 15 per cent. against 8 per cent., and the change in **SNEYD COLLIERIES** profits, though small, is in the right direction. **HENLYS, LTD.**, profits have suffered severely from the fall in the general demand for motors, and also from inability to obtain delivery of S.S. cars. Some orders were cancelled and many of the remainder were unfilled at the end of the year. The majority of the rubber companies whose reports have appeared this week have reduced their dividends, though the degree of change in profits varies widely. Trading profits of **BURBERRYS, LTD.**, have contracted sharply from £139,506 to £96,983; of the latter sum, about half is appropriated to write down the investment in H. J. Nicoll and Company. Some improve-

ment in net earnings is shown by the **CAVENDISH FURNITURE COMPANY** and the **BRITISH AND COLONIAL FURNITURE COMPANY**, the latter company doubling its dividend at 20 per cent. The fertiliser manufacturers, **FISON, PACKARD AND PRENTICE**, show a satisfactory improvement in profits from £128,891 to £160,580, and sales have expanded in every department. The accounts are now presented in a much improved form, and include two consolidated balance sheets covering the group's interests, which are listed in the report. During the year ended July 31, 1938, the expansion of **TECALEMIT, LTD.**, continued, and net profits rose from £97,487 to £110,851. A sharp drop in earnings has been experienced by **THE TIMES PUBLISHING COMPANY**, whose net profits are some £72,700 lower at £84,006. The ordinary dividend, however, is reduced only from 10 to 7½ per cent.

MISCELLANEOUS

Burberrys, Ltd.—Profit for year to March 31, 1938, declined from £129,993 to £74,602. Dividend on preference stock for 16 months to September 30, 1935, £100,000. To writing off investment in H. J. Nicoll and Company, £50,000. Carry-forward reduced from £146,160 to £70,762.

Round Oak Steel Works.—Profits for year ended June 30, 1938, £184,240, an increase of £59,076. Tax and N.D.C., £47,500 (£17,000). For depreciation, etc., £32,052 (£30,397). Ordinary dividend maintained at 6 per cent. To reserve, £60,000 (nil). Carry-forward, £18,157.

Lambert Brothers, Ltd.—Total income year to June 30, 1938, £133,640 against £105,310. To depreciation of investments, etc., £12,082 (£35,315). Tax and N.D.C., £14,500. Preference dividend, £10,312 (same). Ordinary dividend, 15 per cent., absorbing £84,375. (Last year 8 per cent. dividend absorbed £45,000, but a further 1½ per cent. tax free was paid from capital accretions.) Carry-forward raised from £90,417 to £100,788. Consolidated balance-

sheet shows rise in fixed assets, after depreciation, from £377,004 to £406,663.

South Wales Aluminium Company.—This has been registered as a private company, with an initial share capital of £500,000, to erect an aluminium factory in South Wales. The new company has been promoted by Swiss interests in association with the British Aluminium Company and the Aluminium Company of Canada. In addition, there are £200,000 of debentures. The chairman is Sir Rhys Williams. The board consists of Messrs Arnold Bloch, Emil Kaufmann, Wm. M. Morrison and Elmer G. MacDowell.

Ferranti, Ltd.—Net profit for year to June 30, 1938, increased from £64,923 to £68,263. Total profits rose from £246,676 to £279,605. General charges and N.D.C., £154,349 (£127,638). Ordinary dividend unchanged at 6 per cent. To reserve, £15,000 (£10,000). Carry-forward, £56,658.

Fison, Packard and Prentice, Ltd.—Gross profits for year ended June 30, 1938, £222,528 against £174,602. Tax and N.D.C. take £16,400 more at £48,912. To depreciation, £21,174 (£22,149). Net profit increased by £32,108 to £126,391. To general reserve, £15,000 (£8,740). Ordinary dividend is raised from 9 to 10 per cent. Carry-forward rose from £32,366 to £37,295.

Imperial Airways, Ltd.—Net profit for year to March 31, 1938, £97,267 (after £145,420 for obsolescence), against £164,735 after providing £193,918. To tax reserve, £5,000 (£30,000). Ordinary dividend 7 per cent., against 7 per cent. plus 2 per cent. bonus. Owing to capital increase from £624,089 to £1,624,089, dividend absorbs £82,738 against £42,126. To contingency reserve, £10,000 (£95,000). Carry forward, £5,447.

Celanese Corporation of America.—Net profit for September quarter, 1938, \$1,325,098, compared with \$1,695,279 for June quarter, 1938, and \$1,748,828 for March quarter, 1938. Consolidated earnings statement for 12 months ended September 30th shows net income is \$1,857,336 (£371,667).

Industry and Trade

Cocoa Commission's Report.—The Report of the Commission appointed to inquire into the marketing of West African cocoa is a curious document. The trouble in the cocoa trade in the Gold Coast and Nigeria started with the decision of the European buyers to work in co-operation in their purchases during the 1937-38 season. The avowed purpose of this Agreement was to eliminate the costly services of the middlemen, and the price to be offered was to be determined by the price prevailing on world markets. The formation of a buyers' monopoly happened to coincide with a collapse in the world market, and the native African growers not unnaturally associated the sharp fall in the price they could obtain with the conclusion of the agreement among the buyers. They consequently withheld their supplies and brought the trade to a standstill. The Commission acquits the buyers of having, in fact, depressed the price, but they hold that a buying monopoly is inherently open to suspicion. The remedy they suggest, however, is remarkable. The buyers' agreement is to be dissolved, but the producers are to be organised in an elaborate scheme on the lines of the English Agricultural Marketing Boards.

Thus the monopoly of buyers is to be replaced by a monopoly of sellers, with the difference that there is to be no obligation to fix the price by reference to world markets. This seems, in principle, to be as unbalanced an arrangement as that to which the Commission takes exception. Moreover, it is questionable whether, in practice, the elaborate organisation prescribed for the producers' marketing body will not be beyond the capacity of the natives. The real crux of the matter would seem to be not organisation but price. A fair price is not, of course, the same thing as a good price, but it might go some way to improving the atmosphere in the trade if an impartial body were set up to decide what is, at any time, a fair price, having regard to the world market. As for improving the world price, the Commission points out that West Africa can do little or nothing by itself. The possibilities of a world-wide agreement, from which some British colonies would benefit, are worth official exploration.

Steel Price Truce in America.—The dissensions among American producers of steel sheets and strips for the motor industry, reflected in competitive price-cutting during the past six months and acknowledged a fortnight ago by a cut of 6 dollars per ton in the official selling prices of the two largest producers, have ended in a truce last week, when the official prices were restored to their former level. The shading of official prices for sheets and strips was a direct consequence of the dearth of orders for motor-car steel, and it contributed to a decline in prices on world markets, for the lower prices were quoted for export orders. The abandonment of competitive price-cutting is

expected to stimulate purchases of other than motor-car steel in the United States, and this week's increase in the proportion of America's crude steel capacity in operation to 53.7 per cent.—the highest rate for exactly one year—compared with 49.4 per cent. a week ago, may be partly attributed to the price truce. It seems that the larger part of the steel requirements of the motor industry has been covered at the low prices ruling before the truce. The improvement in the demand for steel for domestic purposes in the United States will, in turn, have a stabilising effect on the price structure in Europe, although there are still no signs that the American producers who do not co-operate with the European Cartel are inclined to give up their export connections formed during the last one-and-a-half years.

Increase in Idle Shipping.—As a result of the shrinkage in international trade since the autumn of last year, unemployment among shipping tonnage has been steadily increasing. Thus, the tonnage of vessels laid up at the ports of Great Britain and Ireland rose from 99,496 net tons at October 1, 1937, to 332,004 net tons on July 1st and 455,667 net tons on October 1, 1938. Between July 1st and October 1st the shipping tonnage on the United Kingdom Register increased by 67,000 gross tons as a result of the completion of vessels ordered during the boom in freight rates. As the laid-up tonnage increased by 193,000 gross tons during this period, there must have been a decrease of 126,000 gross tons in the tonnage of vessels in commission. Despite the increase in idle shipping tonnage little has been heard recently of the scheme designed to compensate owners of unemployed tramp tonnage by means of a levy on vessels in commission. Fortunately, there are indications that the force of the downward movement in international trade has been broken. Thus the indices of the volume of imports and exports, published in this week's *Board of Trade Journal*, show a slight rise between the second and third quarters of this year, from 104.8 (1935 = 100) to 105.3, and from 94.3 to 95.5, respectively. The firmer trend of freight rates also reflects an improvement in the outlook.

Proposed Changes in Zinc Duty.—At the end of last week an official plan for assisting the domestic and Empire zinc industries was circulated. It proposes to continue to allow imports of Empire zinc duty-free, while raising the duty on non-British zinc from 12s. 6d. to 30s. per ton. Of this increased preference, Empire exporters would pay 10s. per ton to the Imperial Smelting Corporation—whose need for assistance is revealed in the decline of profits from £257,092 in the year ended June 30, 1937, to £103,327 last year. A further 5s. per ton would be paid into a pool from which British exporters of zinc products would be compensated for the rise in the cost of their raw material. The scheme is, as yet, only in draft form, and it has been sent for comment to British circles interested in the supply, trading and consumption of zinc. Criticism has been levelled against this plan on the grounds that consumers may not be able to add the increased costs to their selling prices, and also that the marketing of zinc will be complicated, possibly even requiring two markets, one for British and one for non-British metal. It should be noted, however, that at the present price of zinc the new duty would not exceed the 10 per cent. *ad valorem* tax agreed upon at Ottawa. It is felt that a short trial period before its final adoption might enable some of the difficulties of working the scheme to be overcome.

The Nickel Monopoly.—Since the discovery of the Sudbury deposits in the province of Ontario in 1883, Canada has dominated the world nickel market. This domination has become even more marked since the amalgamation of the old International Nickel Company with Mond Nickel into the International Nickel Company

of Canada late in 1928. This company, which produces over four-fifths of the world's nickel, has so far been able to retain its monopoly without any major challenge, partly because of its far-sighted price and marketing policy and partly because of its policy of participating in the exploitation of new nickel deposits. The development of the Finnish deposits near Petsamo by the Mond Nickel Company, for example, has prevented the emergence of an important competitor. Last week reports from Amsterdam indicated that International Nickel might take an interest in the new company formed by the Billiton Tin group to exploit the promising nickel deposits of Celebes in the Dutch East Indies. Simultaneously, it was reported from Rio de Janeiro that the Brazilian Federal Minister of Agriculture has given orders for a survey of the Goyaz nickel deposits with the object of preparing road and other transport schemes necessary to link the deposits to the Brazilian transport system, thus rendering possible their exploitation. It is hoped in Brazil that International Nickel, with its large cash reserves, will take a hand as soon as the Goyaz deposits are brought within reach of the world market. Whether these expectations will prove correct remains to be seen. At any rate, there is no doubt that International Nickel will continue to defend its world monopoly. Nickel consumers, however, have no reason to be disturbed by these endeavours, for the nickel monopoly is one of the few organisations of this species which are not exploiting their customers by means of unreasonable prices and other harmful trade practices.

Rise in Agricultural Wages.—The steady increase since 1932 in the minimum rates of wages prescribed by the Agricultural Wages Boards has been noted in recent issues of *The Economist*. There is, however, very little evidence concerning the rate of wages paid in England and Wales to the different classes of agricultural workers. Apart from the occasional surveys of farming conditions carried out by the various agricultural advisory centres, the data collected by inspectors under the Agricultural Wages Act form the only comprehensive estimate of the wages actually paid. It is, therefore, the more to be regretted that the annual report of the proceedings of the Agricultural Wages Boards,* in which this information is given, should be published so long after the conclusion of the year to which they refer. The latest report, published last week, covers the year ended in September, 1937. During that year, the average of the minimum wage rates prescribed by the Wages Boards for ordinary male workers was 33s. 4d. per week, while the average wage paid is estimated, on the basis of the data collected, at 2s. a week higher. For the more skilled grades of workers, the average wage paid ranged from 38s. 4d. per week for horsemen to

40s. 10d. per week for stockmen. It may be noted that the minimum wage rates have again risen considerably since last September, so that it is probable that the average wages paid to agricultural workers is now about 1s. per week higher than in the year ended in September, 1937.

* * *

Growth of Asbestos Production.—The world output of asbestos, the fibrous mineral with fireproof qualities, has increased enormously with the general industrial revival, reinforced by re-armament demands. It is indispensable to all types of motor transport on land and essential to many machines and equipment. The highest grades of fibre, $\frac{3}{8}$ in. long and over, are suitable for manufacture into woven brake-bands, clutch facings, gaskets, packings, firemen's suits and other fabrics. Chrysotile, chief asbestos of commerce, is the only variety capable of being spun and woven. Shorter fibres are used in fireproofing building materials and heat insulation. Leading producers of asbestos include Canada, the U.S.S.R., Southern Rhodesia, the Union of South Africa, Cyprus and the United States. The British Empire is in a strong position as a producer of this mineral fibre. As is to be expected, the United States and the United Kingdom are the major consumers. The subjoined table gives the world production of asbestos in recent years:—

	1934	1935	1936	1937
	(In metric tons)			
Canada	141,502	190,931	273,332	371,967
U.S.S.R.	92,200	95,500	125,117	(c)
Southern Rhodesia.....	29,224	38,644	51,116	51,722
Union of South Africa....	15,960	20,600	22,894	25,975
Cyprus (a)	7,712	7,634	9,659	11,892
U.S.A. (b)	4,615	8,092	10,037	10,958
(a) Exports. (b) Sold or used by producers. (c) Not available.				
[Source: Minerals Year Book, 1938.]				

The price of the fibre varies with its quality and length, "Crude No. 1" ($\frac{3}{8}$ in. and over) fetching \$700-750 per ton and "Crude No. 2" ($\frac{3}{8}$ in. to $\frac{3}{4}$ in.) \$200-250 per ton. Mineral wool and glass wool are now used extensively for heat insulation and to that extent they encroach on a field hitherto the monopoly of asbestos. Neither of these materials, however, has the unique combination of qualities—fineness, requisite length, flexibility, strength and non-inflammability—which would enable it to supplant the use of asbestos in industry.

* * *

Wholesale Price Movements.—British wholesale prices continue to maintain the stability which was such a noticeable feature of the crisis weeks. The complete *Economist* index number has only fallen during the past fortnight from 116.8 to 116.1, while the British primary products index has fallen from 135.9 to 134.9. The main changes have been a continuation of the fall in the cereals

INDUSTRIAL REPORTS

THE tone of this week's reports from industry is definitely more encouraging, a reflection of the increase in new orders. Although transactions in iron and steel have been hampered by the uncertainty concerning steel prices next year, consumption appears to be expanding. The proportion of the capacity of the Welsh tinplate industry in operation increased from 49.8 per cent. during the week ended October 8th, to 54.6 per cent. in the following week. The demand for coal is also increasing, and the brighter outlook in the iron and steel industry is reflected in the heavier orders for furnace coke. The improvement in the cotton textile industry has been maintained, and the volume of business in wool textiles has shown an encouraging increase. The general trade outlook, as well as the

position of individual industries, is discussed in the *Trade Supplement* accompanying this issue of *The Economist*.

Coal

Sheffield.—The inland market is showing steady improvement. Industrial steam coals are in good request, but heavy stocks of the smaller grades make restriction of output necessary. There is some shortage of best hard. All screened coal is well booked, and the approach of winter has raised the demand for household coal. Gas fuel is fairly active, and electricity works are in excess of requirements. Prices generally are unchanged.

In the export market best steams are firm and in demand, and there is a moderate demand for bunkers. A few inquiries for coke are about, but actual business is small.

Workington.—The coal trade has not yet recovered from the effects of the accumulation of stocks during the crisis. Irish shipments are only occasionally above 6,000 tons weekly. Last week there was a shipment of 1,360 tons of coal from Workington to Latvia. Local sale is sluggish and is likely to remain so for a few weeks to come. Industrial fuel is in diminished request as the coking plants supplying the local blast-furnaces are on short-time and needs of smalls are therefore restricted. Other descriptions are, however, in fair demand. Prices are firm.

and meat groups, offset by a firmer tendency in textiles and a fresh rise in non-ferrous metals. *The Economist's* index number of primary products' prices in the United States is fractionally higher, but there has been a fall of nearly one point in the complete Irving Fisher index number. There is little change in prices on the Continent.

1913 = 100	83.1	111.0	97.1	96.4
1924 = 100	52.2	69.7	60.9	60.6

Grain prices are again lower, while bacon is also cheaper. Tea, coffee, butter and cheese are all dearer, but sugar is slightly lower in price. Cotton and jute are higher, wool unchanged, and flax cheaper. There were fresh advances in non-ferrous metal prices. Among miscellaneous materials, Swedish timber and rubber were lower, but there were advances in hides and creosote.

Newcastle-on-Tyne.—With indications of some recovery in the iron and steel trade, home demand for Durham manufacturing coal is beginning to show improvement. Seasonal trade is also brisker and altogether Durham collieries are now better placed than they have been for some months. Northumberland steam collieries continue to work more regularly, there being steady shipments for both export and home accounts, and a number of collieries are fully sold until the end of the year. Patent oven coke is a steady market with shipments abroad at a good level.

Glasgow.—There has been no change of note in conditions in the coal trade. The majority of the collieries are now working regularly, with trade moving steadily for the most part. Shipping business has been handicapped to some extent owing to boats being delayed by stormy weather, and there is still rather a marked scarcity of forward business in this branch of the trade, although the movement against contracts remains on a fairly satisfactory scale. Home trade is broadening and coastwise business to London and elsewhere is steady. The market tone generally is firm, with nuts a strong feature in Fife and the Lothians.

Cardiff.—Business has been a little more active during the past week. The improvement in exports, both foreign and coastwise, is maintained, and in the week ended October 23rd they totalled 457,500 tons, compared with 458,400 tons in the previous week and 442,047 tons in the corresponding period last year. Contracts are now being renewed for next year with shipping companies as well as with foreign railways and other large consumers, and the Egyptian State Railways have placed orders with T. Beynon and Company, Ltd., Cardiff, for 600,000 tons, principally Monmouthshire grades.

The firmest classes of coal on the market are best large and sized, for which recent quotations are firmly maintained. Washed smalls are also steady, but for ordinary smalls current demand is quiet and stocks remain very heavy. There are indications of reviving tendencies in the pig iron industry, and these are reflected in an improved demand for furnace coke. Patent fuel is featureless.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that the volume of business remains disappointing. Although occasionally there appears to be some improvement in the tonnage changing hands, consumers in all departments are pursuing a cautious policy.

In the pig iron section of the market, demand has become more active, and additional furnaces are being put into operation. Business in the foundry iron department has been helped to some extent by requirements for the re-armament programme and there has also been a better demand from the engineering trades in connection with defence work. Many consumers have allowed their stocks to drop to a very low level, with the result that even a slight movement in the direction of replenishment has an immediate effect upon the market.

Consumers of semi-finished steel have

also shown more interest in the market than for some time, although a considerable amount of business passing has been in special quality steels. Production in this department, however, is still restricted, but imports of Continental material have been limited during recent months.

In the finished steel market conditions have improved and there is a more general inclination noticeable to undertake forward commitments. This movement, so far, has been confined to a few departments, but it has imparted a better tone to the market. Business on overseas account has consisted of comparatively small parcels, but the volume of inquiry has shown signs of expansion.

Sheffield.—The tone of the iron and steel market shows definite improvement, although the volume of actual business is still comparatively meagre. There are more inquiries for pig iron, and consumers of foundry iron are coming more readily into the market for parcels for early delivery. Basic iron is in fairly steady request, but forge iron makes no great headway at present. Not much forward business is being booked, consumers holding off until the price question is settled, although a reduction is now less confidently expected. Some impression is being made on producers' stocks, but it is likely to be some time before these are disposed of. There is rather more doing in hematites, and in finished iron common bars are the best feature.

There is a wider inquiry for basic steel billets, and acid qualities also make a better showing. Wire rods are more freely bought, and strip and stainless steel sheets are good lines. Structural steel business continues rather slow, but the outlook is improving.

Better inquiries for iron and steel scrap are coming to hand, and prices not subject to control show a rising tendency.

Production of steel ingots and castings in this district in September was 110,000 tons, against the low level of 94,100 tons reached in July. The aggregate output for the first nine months of this year is 1,164,900 tons, against 1,277,500 tons in January-September, 1937.

Workington.—A welcome feature in the North-West Coast hematite pig-iron trade is that at last consumers are beginning to take quicker and larger deliveries against contracts arranged more than a year ago. Not only the Midlands and Scotland, but also South Wales is affected, and if the condition of the steel trade were to improve to such a degree that the rolling mills at Workington and Barrow could work to capacity and thereby restore local consumption to its normal level, the liquidation of the 160,000 tons of iron on the ground would be in sight. There is not yet any considerable volume of new business available, nor is much expected before the fixation of new and lower prices at the end of the year. The steel trade is exceedingly quiet, and the mills seldom roll for more than two to three weeks in four. Native ore, at 24s. 6d. per ton f.o.t. is in decreased local request.

Middlesbrough.—The improvement in the tone of the market has

been maintained, but transactions are mostly for parcels for early delivery. Consumers of Cleveland foundry pig iron are taking deliveries more regularly and stocks in makers' yards are being reduced. East Coast hematite pig iron is also in increasing demand and deliveries against existing contracts are improving. Forward business is not entertained pending an announcement regarding prices after the end of this year. More inquiries from the Continent for pig iron are reported but business is small as prices quoted are not always competitive.

Semi-finished steel is in rather better request, and the demand for manufactured steel is slowly increasing; here, again, an announcement is awaited with regard to the prices applicable after December 31st.

The schedule prices for heavy steel scrap remain unchanged, and deliveries are restricted. Heavy machinery scrap is, however, in good demand. Foreign ore is not mentioned so far as new business is concerned, whilst deliveries continue to come forward under existing contracts, but are much below the requisite quantities. Good Durham blast furnace coke can be obtained at 27s. 6d. per ton free on trucks at the ovens, with demand easy.

If the present general improvement in the position continues it is expected that more furnaces will be put into operation in this area before the end of the year.

Glasgow.—Conditions continue to show signs of improvement and in practically every branch the immediate outlook is regarded hopefully. Steel-makers are booking greater tonnages for forward delivery than they have done for some months past. Production of semis is still somewhat restricted, but here too some improvement is discernible and a more regular business is anticipated as the excessive stocks at consumers' works have almost disappeared. The demand for finished material is satisfactory.

Cardiff.—The revival of the tinplate industry is becoming more marked, and the proportion of its capacity in operation during the week ended October 15th was nearly 10 per cent. higher than in the preceding week. Business is decidedly better in both the inland and the export trades, and it is anticipated that the upward trend of production will be maintained. The inland market is also a better customer for sheets, but in the export trade the demand for galvanised sheets continues depressed. In the heavy branches of the iron and steel industry there is no material change and existing stocks of pig iron and ingot steel must be further reduced before operations at furnaces and mills closed down during the depression will be resumed.

Textiles

Cotton (Manchester).—The improvement in the market has been maintained. Buyers can no longer dictate prices, and there is determination on the part of producers to obtain more remunerative prices. Only minor fluctuations have occurred in raw cotton prices.

The yarn market has been unsettled. Few sales have been made in American (Continued on page 242)

(Continued from page 239)

counts, but there is much nervousness concerning the price agreements, and certain difficulties have arisen with regard to the 42's weft price pact. The demand for Egyptian yarns has continued healthier, not only in home quantities but also in export numbers.

Business in piece-goods has not been of a general character, but numerous contracts have been arranged for small and moderate lots, and certain manufacturers have again tended to improve their position. Steady buying has taken place for India in regular styles. The better demand for South America has been maintained, and fair orders have been booked for the Continent and the Dominions. Some substantial Government contracts are pending in tent cloths, overall materials and heavy goods generally. Isolated cases are reported of idle looms being restarted in certain weaving districts.

Wool (Bradford).—The past two weeks can be regarded as probably among the most satisfactory in the wool world for several months. Considerable activity has prevailed at the raw material end of the industry, there being a good weight of raw wool dispatched to the Continent in fulfilment of orders placed immediately after the recent crisis. The improvement in the demand for raw wool, with prices slightly in favour of sellers, has had a beneficial effect at the spinning and manufacturing end of the industry. There has been more business, and cross-breeds have perhaps benefited most. This is largely due to the increase in hosiery requirements, it being commonly reported that Leicester hosiery manufacturers have been in receipt of considerable Government orders for khaki purposes, and altogether there is more machinery running throughout the West Riding.

According to the National Council of Wool Selling Brokers of Australia, there is every prospect of a further reduction of about 100,000 bales in the original estimate of the current clip, and a revised estimate will be issued as soon as the November statistics become available.

THE COMMODITY MARKETS

The movements of the prices of the principal primary products have been irregular this week. Thus, the prices of wheat and raw sugar continued to decline. While rubber was slightly cheaper on Wednesday than a week earlier, many industrial raw materials were dearer, in sympathy with the sustained improvement in business activity in the United States. Prices of copper, tin, lead and spelter, for example, rose further. In view of the temporary abandonment of output restriction, the renewed advance in copper prices is significant. Raw cotton also gained a few points, in spite of the heavy surplus of this raw material.

Moody's index of the prices of staple commodities in the United States (per 31, 1931=100) rose from 144.9 during the week ended Wednesday. A month ago the index stood at 144.4 and a year ago at 144.0.

Metals

Copper.—In spite of the lifting of restriction the copper market remained firm and standard cash closed on Wednesday at £46 17s. 6d. per ton, a net gain of 1s. 3d. on the week. Demand by consumers and speculators as well as by the armament authorities of various countries continues to be substantial, while sellers are inclined to hold back in anticipation of higher prices. If the United States trade activity continues to make headway these anticipations may prove well founded, particularly as the lifting of restriction will not make itself felt in supplies until the end of this year.

Tin.—Tin gained another £1 5s., thus closing on Wednesday at £212 per ton, the highest official quotation for exactly one year. The turnover of the L.M.E. reached very high levels this week, due to restocking purchases by European consumers and the revival of United States' buying. Activity in tinplate mills on both sides of the Atlantic is still at very low levels, but it is expected that an increase in production is imminent. If that expectation should prove correct, the price of the metal will probably rise further, as current supplies would be below demand.

Lead and Spelter.—Lead gained 3s. 9d. and thus closed on Wednesday at £16 12s. 6d. per ton, while spelter, at £15 8s. 9d., showed no change on the week. The demand for the two metals was less pronounced than that for copper and tin, due largely to the fact that the building trade, which absorbs huge quantities of the two metals, has now passed its seasonal peak and shows a disappointing state in many countries. Further, there was again no news regarding the international cartel discussions, though it is learned that the endeavours to bring producers together have not yet been given up. The August zinc production figures published this week were again disappointingly large. According to the Metallgesellschaft the world's smelter output outside the United States reached 94,461 metric tons in August, against 95,969 tons in July; the monthly average of last year was 94,037 tons. Production in the first eight months of this year reached 771,808 metric tons, against 742,101 metric tons in the corresponding period of last year.

Grains

ON a quiet market prices for wheat have tended to sag slowly. Beneficial rains have been reported from Australia, whose wheat area has suffered severely from the prolonged drought; the estimate of the forthcoming crop has been correspondingly increased, but, at the best, only a moderate production can be expected. The second estimate from the Argentine Government raised the area seeded to wheat in the Argentine by 618,000 acres to 20,625,000 acres. Shipments from Canada are heavy, while sales of Russian wheat have fallen off. A certain reserve on the part of American shippers of maize brought a firmer tendency in prices during the past week and more attention has been paid to Danu-

bian maize. The market for barley has also been quiet, though a better demand developed in the early part of the week.

Other Foods

Provisions.—Bacon prices were reduced at the end of last week, since when the market has been steady. Trade in meat has been slow and prices, particularly for frozen meat, have tended to fall. Egg prices continue their seasonal rise and Danish butter was marked up at the end of last week.

Colonial Produce.—Sugar prices were reduced by 1½d. per cwt. on Monday and again on Wednesday. There was a tendency towards higher prices for coffee and Accra cocoa, but demand at the tea auctions slackened early in the current week.

Fruit and Vegetables.—Good supplies of potatoes at the Borough were easily cleared, with no alteration in prices. Trade in fruit and vegetables was brisk at the end of last week, but slackened after the week-end. The demand for dessert apples remains good; the supply of cauliflowers has been reduced by the cold weather and prices tended higher.

Miscellaneous Commodities

Oilseeds and Oils.—Very quiet conditions have prevailed in these markets; prices have been steady with the exception of Plate linseed, which is somewhat lower. The price of linseed oil moved in sympathy and is now about 25s. per ton below the level ruling early in the month. There is a fair demand for cotton oil at £21 per ton ex Hull.

Rubber.—The market has been dull and inactive during the past week, and prices have moved within narrow limits. Although reports from the American motor industry indicate increased activity, manufacturers are postponing their purchases of rubber, in the hope that the Regulation Committee may raise the export quotas for the January quarter. Such an action is considered unlikely, but the possibility will weigh on the market until the Committee's meeting on November 15th.

Radium.—Reports have arrived in London this week that an agreement has been reached between the Belgian and Canadian radium producers with the object of preventing price-cutting on the international market. Until officially confirmed, these reports should be treated with caution, as the Canadian firm, the Eldorado Gold Mines, Limited, has in the past systematically reduced its prices in order to widen the market for its rapidly increasing production. Its output, which amounted to 0.086 grams in 1935, is scheduled to total about 70 grams in 1938 and its capacity is estimated at 108,000 grams. Its output in 1938 will probably exceed, for the first time, that of the Belgian firm, the Union Minière du Haut Katanga, which was for many years the world's largest producer of radium.

COMPANY MEETINGS

JOHN DELANEY, LIMITED

DIVIDEND OF 10 PER CENT. FOR THE YEAR

MR A. WOOLLEY-HART'S ADDRESS

The thirteenth ordinary general meeting of John Delaney, Limited, was held, on the 25th instant, at the registered offices of the company, 11-12 Pall Mall, London, S.W.

Mr A. Woolley-Hart, the chairman of the company, presided.

The Secretary (Mr L. A. Daly) read the notice convening the meeting and the report of the auditors.

The Chairman said:—The directors' report and the accounts for the year ending July 31st last having been in your hands for some time, I propose they be taken as read.

It is with pleasure we meet our shareholders again and are able to put before them a considerably improved state of affairs. Shareholders are usually most anxious to know two important points as regards any undertaking they are interested in, the first is that the company is in sound condition, the second as to the dividends and prospects.

THE RESOLUTION

The report issued with the balance sheet, I claim, concisely reassures you upon these subjects, as I hope, to your satisfaction. I will now put to you the resolution I have to propose, which I will ask to be seconded. It will then be before the meeting.

I now formally move that the statement of accounts and balance sheet as at July 31, 1938, as presented, together with the reports of the directors and auditors thereon, be and they are hereby approved and adopted. That a final dividend of 5 per cent., less tax (making 10 per cent., less tax, for the year), be paid forthwith to the ordinary shareholders whose names appear on the register on October 11, 1938, that a sum of £597 2s. 8d., less tax, be distributed by way of dividend to the deferred shareholders in accordance with Article 8 (1) of the company's articles of association, that the sum of £2,163 be written off debenture expenses and redemption account, and that the balance of £3,407 9s. 7d. be carried forward to next year's accounts.

Before putting this to the meeting I will make a few remarks as to the balance sheet and ask for any questions or remarks you may wish to make.

BALANCE SHEET

The balance-sheet items call for little comment, with the exception of one or two noteworthy features. On the liabilities side the only items to note are the amount owing to bankers, which has been reduced from £17,691 to £7,529, and sundry creditors, which have increased from £14,260 to £16,705, this latter figure including an extra reserve for taxation which I will explain later on. On the assets side sundry debtors are £22,889, as against £23,940 last year. Stocks on hand, £12,095, are up by £2,158, largely due to increased price of fuel and stores.

THE INVESTMENTS

Our investments show a reduction of some £15,700. Against this you will have noted from what I said just now that the overdraft at the bank has been reduced by £10,162, and almost the whole of the balance has been spent on capital expenditure.

The shares in our subsidiary company stood at £2,521 10s. 3d. last year, which was the actual net cost to the company, your directors having decided that until the Craven Quarry was reopened they should be taken in on this particularly low basis. The quarry having now restarted—we believe it will shortly be working to full capacity—we have thought it quite right to revalue the shares at £7,935—i.e. par (7s. 6d. per share)—at which price the investment returns us 25 per cent. The difference of £5,413 has been placed to investment reserve account, and we have lowered the value of another investment, although we believe it fully worth the price at which it previously stood. We feel that the total of investments and the shares in the subsidiary company standing at £51,566, is quite a reasonable valuation.

Full provision has been made in the accounts for income tax and National Defence Contribution, but the substantial increase in the company's profits during the past year will involve a much heavier assessment for 1939-40. In order to make provision for this we have held up, out of the profits, an additional £1,000.

TRADING POSITION

Our output of lime has increased over 30 per cent. from 65,333 tons to 86,546 tons. The output of hydrated lime has increased

from 4,522 tons to 8,266 tons, and the demand being much in excess of this necessitated working to full capacity. The improved outlook for sales last year caused us to decide upon the erection of a new and improved hydrating plant at the Horton quarry having a capacity of 4 tons an hour, which is now almost complete, and we hope within a few weeks to be turning out a much larger tonnage than heretofore and an improved product.

The electrification of certain portions of our plant already shows a considerable saving in cost.

During the year the cost of fuel and other materials has increased considerably, but this has been more than offset by economies we have been able to effect and by the increased selling price that has been in operation since January 1, 1938.

I will anticipate that you expect me to say something as to the prospects for next year. It is rather unwise to try and prophesy, particularly in view of the times such as we have been passing through and are still living in. I think, however, we are justified in being optimistic in contemplating that we shall at least maintain the present position, and I hope be able to show some further improvement at our next meeting.

Mr Hill-Cole seconded the resolution and it was unanimously approved.

The auditors, Messrs Joshua Wortley and Sons, were reappointed, and the proceedings then terminated with a unanimous vote of appreciation and thanks to the staff.

RHOKANA CORPORATION, LIMITED

DIVIDEND OF 62½ PER CENT.

The sixteenth ordinary general meeting of the Rhokana Corporation, Limited, was held, on the 27th instant, in London.

The Rt. Hon. Sir Auckland C. Geddes, G.C.M.G., K.C.B., the Chairman, said that their interest in Mufulira Copper Mines still remained at 32.303 per cent. Although there was no market quotation for those shares they had, taking a line through Rhodesian Selection Trust, a value on last Monday's quotation of £5,124,000. Their holding in Nchanga Consolidated Copper Mines, Limited, remained at 2,323,150 shares, which at June 30, 1938, had a value of £3,920,315. Sales of metal had increased by £132,000 and operating costs and realisation charges had also increased; the operating profit was, however, decreased by only £8,500. The balance of profit and loss account was £2,138,917, as compared with £2,137,128 last year. The dividend received from Mufulira Copper Mines, Limited, this year was £217,149, as compared with £144,826 in the previous year. The directors had decided to appropriate to general reserve £200,000 and recommended a final dividend of 37½ per cent., less tax, on the ordinary "A" shares, making 62½ per cent., the same as for the previous year.

Their production for the year was 44,247 long tons of blister copper and 32,028 long tons of electrolytic copper, making a total of 76,275 long tons, as compared with 75,254 for the previous year. During the year development in both sections of the mine amounted to 196,709 ft., and they now had 9,212,608 short tons of ore of a grade of 3.9 per cent. copper immediately available for stoping, compared with 7,391,776 short tons of 3.74 per cent. copper last year.

Various additions had been made to the concentrator, and the additions, together with the subsidiary equipment which was also being installed, were additional to the plant ordered when they told the shareholders that it was their intention to equip the Rhokana plant for a capacity of 10,000 short tons a month. He thought he could safely say that, together with the expansion in capacity given by improvements in technical operation, their total capacity in the plant was largely in excess of that figure. They were more than satisfied at the excellent progress and standard of the work done at Nchanga.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED

IMPROVED PROSPECTS

The one hundred and twentieth ordinary general meeting of this company was held, on the 26th instant, in London.

Sir Follett Holt, K.B.E., M.Inst.C.E., the chairman, in the course of his speech, said: Last year at our meeting I described to you how in one year Argentina had turned round from depression to prosperity. At that time all promised well, but in the following weeks a series of heavy frosts fell over the country and except in comparatively small areas, caused the almost total loss of the ripening crops. The exports and balance of trade figures for the first eight months of 1938 as compared with those of last year show the disastrous effect upon the country. Nearly eight million tons less was exported and the favourable trade balance of 50 millions sterling was converted into an adverse balance. Our hopes, therefore, of a better exchange and other improved conditions were dashed to pieces for the time being, and now can only revive with the advent of a normal crop, which with any good fortune may come to us within the next few weeks. In the meantime we have all had to face unpleasant consequences, with the result that our total traffic receipts fell by £112,000. On the expense side, as I warned you last year would be the case, we had to face a heavy increase in the cost of practically all materials, oil fuel, for instance, rising at one time as much as 8s. 8d. per ton and coal delivered 7s. 7d. per ton.

With the loss in revenue and increase in expenses, after charging to the year the full cost of operating, we found ourselves £514,000 worse off than in the previous year, and this explains how it became necessary to reduce the payments to the preference stockholders.

For us, and, I maintain, for the best interests of the Republic, the amelioration of the railway industry is an urgent need. It is inevitable—in my opinion at any rate—that the people of Argentina through their Government should at least be prepared to share some of the responsibilities and the financial risks of the railways upon which their continued progress and prosperity depend.

As to immediate prospects, the message received from Mr Harris for this meeting indicates that, unless we are smitten again with frost in the near future, you will be able to look forward next year to hearing a better account than it has been possible to give to-day.

The report was unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED

AN ALL-ROUND IMPROVEMENT

The fifty-eighth ordinary general meeting of this company was held, on the 26th instant, in London.

Mr E. A. A. Joseph, the chairman, presided, and, in moving the adoption of the report and accounts, said that in the railway the profit had improved from £44,594 to £66,464. Coal traffic was mainly responsible, but general traffic also showed a definite improvement. Passenger traffic showed an increase in money owing to the reduction in fares, but the number of passengers carried was growing. Their two rail cars, now in service, were doing very well; the board were continuing and developing the feeder bus services, and were also about to experiment with two motor lorries which might be successful in retaining for the railway the traffic of some outlying gardens. Expenditure again showed a decrease, while the percentage of earnings represented by profit—44.56 per cent.—had not been reached since 1933.

The company's collieries showed a very considerable and encouraging improvement; the timber department had again done well, showing a good advance, and the brick works, in their small way, had had a good year. The result of those activities was that the general trading account had improved by over £15,000, to £49,744. Dividends received also showed an improvement corresponding to that in the other headings of accounts. Both the tea companies in which they were interested had been able to increase their dividends, the Makum paying 15 per cent. and the Namdang 10 per cent., while the Rivers Company had improved its dividend from 5 per cent. to 6 per cent., free of tax. The company's cash position also was sound.

He thought he could say the condition and prospects of their property were not unsatisfactory. In the current year they had made a good start. The railway was holding its own, colliery sales had improved, and the monthly accounts so far received showed good results. Therefore he was hopeful about the result of the present year.

The report and accounts were unanimously adopted and the payment of 4 per cent. on the "A" stock as recommended was approved.

CENTRAL ARGENTINE RAILWAY, LIMITED

DIFFICULT CONDITIONS

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 27th instant, in London.

Mr W. Howard-Williams, C.B.E. (the chairman), said that at the meeting last year he had been able to inform shareholders that at that time a considerable improvement in the position of the company was discernible. Naturally it had been their hope that that improvement would be maintained and extended. From that time, however, the position had grown steadily worse, and as a result of drought one-third of the wheat and half the linseed crop had been wiped out. Later about half the maize crop had also been lost. The result was that they had transported 3,460,000 tons of those three products against 7,737,000 tons in the previous year, a decrease of 55 per cent., receipts showing a decrease of 53 per cent. As a consequence, their gross revenue for the year showed a total falling off of £2,902,000, and was the lowest since the war.

Strenuous efforts had been made to reduce expenses, but, while a total reduction of some £1,000,000 had been effected, almost the whole of that had had to be obtained by cutting down contributions to the renewals fund. What he had said was, he thought, a sufficient explanation of why the directors had found themselves unable to declare a dividend even on the preference stocks. Crop failures, of course, were transitory, but there were other factors in the situation. He believed that the Argentine Government would recognise the importance of the railways and the fact that under present conditions it could not be expected that new capital would be forthcoming to provide for new equipment and wear and tear.

This company would continue to do what they could in the direction of modernisation, and he was glad to say that the Argentine Government knew their difficulties and viewed them with, he believed, increasing understanding. The directors would be prepared at all times to co-operate with the State Railway organisation in all matters affecting general railway interests, but the situation as a whole called with some urgency for the exercise of statesmanship on a large scale and would, they believed, be so regarded by the Argentine Government.

The report was adopted.

MANILA RAILWAY (1906) COMPANY, LIMITED

EFFECTS OF TAXATION

The thirty-first annual ordinary general meeting of the Manila Railway (1906) Company, Limited, was held, on the 27th instant, in London.

Lieutenant-Colonel C. A. Reid Scott, D.S.O., the chairman, said that the income for the year, including interest on bonds in the Manila Railroad Company, £133,201; interest on holdings of their own debentures, investments and bank interest, £6,845, and transfer fees, £21, was £140,069. Expenditure amounted to £4,624, and income tax and National Defence Contribution was credited with £14,950, as against £9,500 last year.

In the net revenue account, sinking fund "B" debentures was debited with £24,685, and interest on the 4 per cent. and 3½ per cent. debentures with £87,094, leaving a surplus for the year of £8,714. In the balance sheet on the assets side was shown their remaining investment in the Manila Railroad Company, \$13,236,000 5 per cent. refunding mortgage bonds, which at par redemption at rate of exchange \$4.86½ to the £ amounted to £2,719,763. Accrued interest on those bonds at June 30th was £67,051. Investments at cost, £52,237, were regarded as a reserve for taxation liabilities.

Out of the balance of revenue for the year of £8,714 the directors recommended that a dividend at the rate of 1 per cent., less tax, be paid on the preference capital, which would absorb £8,689, leaving £16 to be added to the balance brought forward, making a total of £2,352 to be carried forward.

At the last meeting he had referred again to the Scheme of Arrangement and to the effect of it upon the company's position and prospects. The year 1938 represented almost the first full year after the Scheme as they had nearly completed it. Shareholders would remember that the board estimated that, in normal circumstances, there would be an annual surplus of about £16,000 a year after the Scheme. The surplus for 1938 was £8,714. If they added loss on exchange, £2,787, and increased taxation, £5,450, they arrived at a total of £17,001, which showed that the board's estimate was conservative and would have been exceeded in normal times.

The report was unanimously adopted.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED

ORE RESERVES

DR HANS PIROW'S REVIEW OF OPERATIONS

Dr Hans Pirow, the chairman, presided at the annual meeting of the New Modderfontein Gold Mining Company, Limited, held on the 21st instant, at Johannesburg.

In moving the adoption of the report and accounts, the Chairman reviewed in detail the financial results of the past year's operations.

Referring to the dividend declarations, Dr Pirow said that, as foreshadowed in the chairman's speech at the last annual meeting, dividends could not be maintained at the previous level. But in view of all the circumstances, two dividends of 27½ per cent. for the first and second half-years must be regarded as satisfactory.

"Reductions in profits and dividends," he said, "are due to the decline in the yield per ton milled (the average recovery being 3.776 dwts. for the year 1937-38, 4.075 dwts. for the preceding twelve months), and to the fact that the tonnage milled dropped by 6,000 tons, while working costs increased by 2d. per ton milled."

Development footage had been adversely affected by the shortage of native labour during several months, and had decreased from 65,598 for the previous year to 54,713. The decrease in development was reflected in a reduction of 367,000 tons in payable tonnage developed during the year. Apart, however, from any shortage of native labour it should be clear that the mine had reached a stage when payable ore developed and ore reserve must show appreciable declines from year to year.

TOTAL ORE RESERVES

Thus total ore reserve, which had stood at 8,730,000 tons, valued at 4.2 dwts. per ton on June 30, 1937, had dropped to 7,996,600 tons, valued at 3.8 dwts. when re-estimated at June 30, 1938.

Available ore reserve did not show a corresponding reduction, owing to the transfer of a large tonnage in shaft pillars at Numbers 1 and 2 Circular Shafts from "unavailable" to "available" reserve. That transfer had been possible owing to the successful application at Number 1 Circular Shaft of a method for extracting the pillar while ensuring the stability and safety of the shaft.

Steps had now been taken to apply the same method at Number 2 Circular Shaft, as it was considered sound policy to reclaim that tonnage concurrently with exploitation of other sources of ore.

The possibility of opening up further reserves by development on the Black Reef and Kimberley Reef series had received close attention during the past few months. Those reef series occurred over a small area, in extent roughly 2,000 ft. by 500 ft., in the southern portion of the mine property adjoining the Modder Deep Boundary, and represented a continuation of the deposits being opened up in the latter property. Five boreholes had been sunk from the surface of the New Modder area to test those reefs. All five had intersected the Black Reef series at a depth of from 200 to 300 ft. and had been continued for some distance into the immediately underlying Kimberley Reef series. One borehole had been sunk right through the latter series to the Kimberley shales, some 700 ft. below the surface. Although a number of well formed reef bands had been intersected in the Black Reef horizon by all five boreholes, only one—Number 3 borehole—had disclosed payable values, particulars of which were as follows:—

Depth from surface (ft.)	Reef width (in.)	Reef value (dwts.)	Inch (dwts.)
Plus or minus 295 ...	53	3.1	164
Plus or minus 305 ...	60	7.2	432
Plus or minus 310 ...	36	5.58	201

"The last of these reef bands lies on what is taken to be the contact of the Black and Kimberley Reef series, and the adjoining 45 in. of Kimberley Reef bands gave an average value of 2.20 dwts.

"In another borehole—Number 5—at a depth of some 65 ft. below the probable contact plane between the two series, a Kimberley Reef band, 13 in. in width, gave an average value of 4.32 dwts., and was separated by 6 in. of quartzite parting from a 1-in. reef band assaying 87 dwts. The combined value of these two bands was 7.16 dwts. over a channel width of 20 in.

BLACK AND KIMBERLEY REEFS

"Apart from the intersections described above, no values of importance were disclosed in any of the numerous reef bands which these five boreholes penetrated. The results I have quoted are,

however, sufficiently encouraging to warrant a certain amount of development being undertaken on the Black and Kimberley Reefs, and plans to this effect are now under consideration.

"At the same time the variable character of the reef bands, the known dissemination of gold in these reefs, and the strictly limited area underlain by the series, clearly indicate that, although a very welcome addition to our exploitable tonnage may result from such development, the ultimate amount of ore to be obtained from this source cannot be so large as to affect the future of the mine to any considerable extent.

"The general prospects of the company still remain essentially those outlined in the well-balanced summary which was submitted to you by your chairman at the last annual meeting, and I can do no more than express complete agreement with his views."

The report and accounts were adopted unanimously.

HERRBURGER, BROOKS, LIMITED

UNSETTLED CONDITIONS AFFECT RESULTS

BOARD'S DIVIDEND POLICY

The eighteenth annual ordinary general meeting of Herrburger, Brooks, Limited, was held, on the 24th instant, at Winchester House, London, Sir Louis Sterling (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said it was a matter of considerable regret that the results of the past year's trading showed such a large reduction in the figure of profit. A year ago he informed the shareholders that, owing to various influences, many trades, including their own, were showing hesitancy in their progress. That position almost immediately became worse, and apparently owing to the unsettled national conditions the piano trade, in company with others, suffered very severely, mainly where sales were largely made by means of hire purchase. In all the circumstances the directors felt that the results, less satisfactory as they were, were if anything better than might have been expected. The reduction in turnover as reflected in the reduction of gross profits was to some extent offset by reductions which appeared in the items of expenditure, representing approximately £6,000.

DIVIDEND

It was proposed to pay a final dividend of 5 per cent., making 7½ per cent. for the year, carrying forward £26,270. The payment of that dividend meant that £1,910 would have to be taken from the balance of profit and loss account, but the directors, in view of the past conservative policy and the company's very strong position, considered it not unreasonable to pay the final dividend of 5 per cent., even at the expense of reducing the carry-forward by the small sum of £1,910. After all, the carry-forward had been created by profits earned in the past and not paid out to shareholders, and in exceptional conditions such as existed to-day the directors felt satisfied that they would approve their recommendation, making the dividend slightly higher than the profits for the current year would warrant. Unfortunately, up to the present, the board were unable to report any advance in trade, but at the same time there were signs that the retardation had been stopped and a slight upward movement indicated. With regard to their subsidiary companies, those were wholly owned and possessed assets consisting only of cash.

THE OUTLOOK

In regard to the company's main premises in London, the present lease expired in about a year's time, and it was expected they would then be faced with the necessity of buying or building a factory in some other part of London. He was pleased, however, to report that as a result of negotiations with the landlords a new short lease had been obtained which contained an option to enter into a further long lease provided that a considerable amount of rebuilding was undertaken. No immediate decision had to be taken, however, and it was hoped that by the time they had to consider that matter a more settled state of affairs would obtain. There seemed to be no doubt that with a settlement of the present international difficulties trade would largely improve. So far as their company was concerned, their products still ranked high and consequently the piano trade should get its share of any renewal of general trade prosperity.

Mr A. E. Healey seconded the resolution, which was carried unanimously, and the retiring directors and auditors were re-appointed.

BLYVOORUITZICHT GOLD MINING COMPANY, LIMITED

DEVELOPMENT PROGRESS

Mr R. S. G. Stokes, chairman of the company, presided at the first annual meeting of the Blyvooruitzicht Gold Mining Company, Limited, held, on the 21st instant, at Johannesburg.

Moving the adoption of the report and accounts, the chairman said that the authorised capital of the company remained unchanged at £2,950,000 in 5,900,000 shares of 10s. each, of which 4,111,143 shares had been issued and 788,857 shares set aside for subscription at par by the vendors upon cession of the mining lease to the company. One million shares were held in reserve. It was expected that all formalities in connection with the mining lease would be completed shortly.

Expenditure incurred to June 30, 1938, upon equipment, shaft sinking and general charges exclusive of property account had totalled £318,811.

After recalling the references to borehole results mentioned at the statutory meeting, the chairman said that since then there had been obtained by West Witwatersrand Areas, Limited, certain additional information that had a favourable bearing upon the prospects of the Blyvooruitzicht Gold Mining Company. The information consisted of the results obtained in borehole No. E4A, 8,500 ft. to the east of the company's boundary, and in borehole No. E8, 6,700 ft. to the west of the company's property, in both of which "Carbon Leader" had been intersected. Borehole E4A had cut reef at 4,352 ft. and had shown a value of 4.5 dwts. over the true width of 26 in., equivalent to 117 in.-dwts. That hole had been deflected and a second intersection of "Carbon Leader" obtained, also at a depth of 4,352 ft., showing the very favourable value of 12.2 dwts. over 29 in. or 354 in.-dwts. Although the value in borehole E8 was considerably lower than those disclosed by boreholes further east, proving of "Carbon Leader" was of importance in providing further evidence of the regularity and persistence of ore-body now recognised as the principal gold carrier in that section of the Far West Rand.

SINKING OF SHAFTS

The sinking of No. 1 (rectangular) shaft had been started in November, 1937, and a depth of 972 ft. had been reached on September 30th last. The sinking conditions and rates of progress had been extremely variable. On reaching water level at 376 ft. cementation practice had been introduced as part of the sinking routine. Delays occasioned by the drilling of pilot holes and the injection of cement were sometimes long and costly, but unless that method was employed, shaft sinking through dolomite formation of Far West Rand, containing frequent water-bearing fissures and pockets or seams of soft wad, would be impracticable.

No. 2 (rectangular) shaft, the site of which was approximately 7,000 ft. to the west of No. 1 shaft, had been started in July last and had reached a depth of 253 ft. on September 30th. The shaft had been concrete-lined throughout. The water level would be reached at 415 ft., from which point routine cementation practice would be introduced.

It was estimated that shafts would pass from dolomite into Witwatersrand formation at a depth of 4,000 ft. and would intersect the Main Reef group at about 4,500 ft.

No estimate could be submitted of the average sinking speed, which might vary within wide limits, depending upon the form and frequency of the cavities encountered in the dolomite. It would be equally difficult to estimate the average sinking costs, which were more a function of time than of distance. Two factors encouraged the hope of satisfactory progress: these were, firstly, evidence, furnished by diamond drilling in the area, of more regular and compact conditions in dolomite at a depth; and, secondly, the success achieved by the Libanon Gold Mining Company, Limited, to the east, in sinking their No. 1 circular shaft through 2,200 ft. of dolomite in approximately 17 months of active work.

The financial position of the company was strong. At September 30th the cash available, after allowing for a sum of £394,429 to be received when 788,857 unissued shares were taken up by vendors, totalled £1,486,888.

Additional items of major equipment essential for operations up to the development stage comprised three permanent winding engines, to be erected at each shaft, and steel headgear boiler plant and air compressors, to be installed at No. 2 shaft.

The progress made to date upon property which lay a considerable distance from established communities and general industrial services must be regarded as highly satisfactory.

The report and accounts were adopted unanimously.

NOURSE MINES, LIMITED

GOOD DEVELOPMENT RESULTS

MR R. S. G. STOKES ON FAVOURABLE OUTLOOK

Mr R. S. G. Stokes, the chairman, presided at the annual meeting of Nourse Mines, Limited, held, on the 21st instant, at Johannesburg.

In moving the adoption of the report and accounts, the chairman reviewed the financial results and mentioned that provision for taxation at £84,483, equal to 30 per cent. of the working profit, showed an increase of £8,849 owing to the adjustment of factors upon which the amortisation allowance was based.

HEAVY CAPITAL EXPENDITURE

Continuing, the Chairman said that on account of heavy capital expenditure incurred during the period and future capital commitments, total dividend payments had been reduced to 20 per cent. for the past year, as compared with a total of 22½ per cent. in each of the two preceding years. The balance carried forward showed an increase of £3,030.

A decrease of 31,000 tons in ore milled was attributable to a severe shortage of native labour towards the end of 1937 and also in part to experimental modifications of metallurgical practice, through which the value of the residue had improved by 2d. per ton milled. Development footage had also been adversely affected by labour shortage, the advance for the year having been 20,997 ft., compared with 24,684 ft. accomplished in the preceding year. The higher rate of advance would be attained again this year if practicable.

The rate of progress and expenditure recorded in accomplishing the heavy programme of construction work underground had also been retarded by labour shortage. The Main Incline Shaft (Number 3 D) had been sunk 359 ft. during the year and was to-day down to the 39th level.

Excavation of the main hoisting chamber for that shaft had now been completed and a start made upon the installation of a new winding engine. Capital expenditure to be incurred during the current financial year upon underground winding engines and chambers, upon pumping plant, ventilating equipment and power supply was expected to exceed £60,000. That work would practically complete the company's programme and thereafter capital charges throughout the life of the mine were unlikely to constitute an unduly heavy burden.

DEVELOPMENT RESULTS

Results of developments during the year, notably to the south of Goch Dyke, continued to be very satisfactory. Disclosures in that new area could be summarised as follows:—

Footage on the reef.....	12,300
Footage payable	8,880
Percentage payable	72.2
Inch-pennyweights	314

Results of the development on the South Reef for the year had been substantially better than expectations based on previous experience of that reef on the property. There had been a falling-off in grade and in percentage of payability in recent months, but average values were still satisfactory. Some encouraging disclosures had been made up on the Main Reef Leader above the dyke to the east of number 3 C shaft.

Available ore reserve totals for the last four years had shown little change and the current estimate was satisfactory under prevailing conditions. The introduction of a new shaft system underground involved considerable dead work in crosscuts, passes and stations, in consequence of which productive development was usually liable to be retarded. Further, the new deep level section of the mine was of comparatively narrow width, not conducive to rapid exploitation.

ORE RESERVES STRENGTHENED

The ore reserve position of the company was strengthened by large tonnages of profitable ore available in miscellaneous sources outside reserves, less than half the ore stoped during the past year having been drawn from ore reserve faces.

"General prospects for the current year are favourable," concluded the Chairman.

The report and accounts were adopted unanimously.

Electricity

In the charts presented below we have gathered together a number of statistics relating to the electrical industry and certain comparative figures for the gas industry. In the case of electricity the aggregate figure shown for any year, say 1936, is made up of (1) a figure for all companies in Great Britain in respect of the actual calendar year 1936, (2) a figure for local authorities in England and Wales in respect of the 12 months ended March 31, 1937, and (3) a figure for local authorities in Scotland for the 12 months ended May 15, 1937. In the case of gas the statistics relate to calendar years in respect of producers in England and Wales and to the 12 months ended May 15th in the following years in respect of Scottish producers.

Finance

GOVERNMENT RETURNS

For the week ended October 22, 1938, total ordinary revenue was £21,725,000, against ordinary expenditure of £12,686,000. Thus, excluding sinking fund allocations, the deficit accrued since April 1st last is £177,275,000, against a deficit of £108,323,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On October 21st applications at £99 16s. 6d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted at about 44 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at £99 16s. 7d. per cent. and above were allotted in full. £35.0 millions of Treasury bills are being offered on October 28th.

Half Measures

THE first act of the grand inquest on the Government's policies which will inevitably occupy the greater part of the new session of Parliament has been presented on the Westminster stage. For three days the Commons have debated the great issues of foreign policy and defence which, as time goes on, become more and more inseparable. The Government's foreign policy, in particular the Munich Agreement and the decision to ratify the Anglo-Italian Agreement of last March, have come in for very heavy criticism from members of all parties; but it has been made clear that on these questions the Government still commands a substantial majority of the House. On matters of home defence and re-armament, there is a still more formidable volume of criticism, and it is clear that uneasiness both about the Government's achievements to date and about its methods of procedure for the future is affecting many of those, both inside and outside Parliament, who count themselves in diplomatic matters among Mr Chamberlain's convinced supporters.

The prevailing anxiety about the present and prospective state of our national defences has in the main been directed to two desires: the first, that the available manpower of the nation should be at least surveyed; the second, that steps should be taken materially to increase the output of war materials. In the convenient terminology of the headlines, these are the problems of National Service and Supply. In his speech on Tuesday, the Prime Minister moved some way towards meeting the

questionings are at least held in suspense, and there is a general disposition to wish Sir John Anderson well and to give him at any rate an even chance of success.

If the Prime Minister has gone part way to meet his critics on National Service, he has made no concession at all to them on what is by any definition the much more important matter of Supply. There is a remarkable body of opinion that is pressing for the establishment of a Ministry of Supply to take charge of the production of munitions in the same way as was so successfully done during the war by the Ministry of Munitions. The various political Oppositions are united in this demand—Labour, Liberals and Churchillites alike. But even within the ranks of Mr Chamberlain's supporters there is a strong current of opinion in favour of a Ministry of Supply. Repeated report has it that the Secretary of State for War, the Air Minister and the Home Secretary—all directly concerned—are of this opinion, and Mr Duff Cooper, who until a month ago was at the head of the Admiralty, has publicly expressed his support for the proposal. Mr Hore-Belisha has done virtually as much, since on October 21st he said in a speech at Cardiff that "it must be recognised that, under our present system, nothing can guarantee appreciable acceleration (of the arms programme), nor can there be an appreciable enlargement of it in the given time." Lord Baldwin has pronounced for the "mobilisation of industry" which, if it means anything, means at least a Ministry of Supply. In the debates in the House of Lords this week both Lord Swinton and Lord Trenchard advocated the same remedy. Indeed, it can be truthfully said that almost the only persons of experience who are known to oppose the Ministry of Supply are the Prime Minister himself and the Chancellor of the Exchequer.

It requires considerable stubbornness of will to oppose a powerful combination of opinion such as this. But Mr Chamberlain's speech on Tuesday can be searched in vain for any compelling reason that would justify him in setting his opinion against so many others of such great weight. It has been suggested in some quarters that Mr Chamberlain is unwilling to order a radical acceleration in British armaments lest it offend the dictators and obstruct his policy of appeasement. In his speech, the Prime Minister was at pains to argue that appeasement and re-armament can march together; but there were other passages which seemed to suggest that, while maintaining our present programme, he was unwilling to increase it, but rather put his trust in eventual limitation of arms by international agreement. If this is Mr Chamberlain's opinion, it is an almost perfect example of the ineffective half-measure. If appeasement is compatible with 2,000 airplanes, then it is equally compatible with 3,000 machines. If we are not going to make every effort to keep up with the strength of others, then most of what has been spent on re-armament has been wasted. There is an argument for disarming and there is an argument for arming as strongly as others. There is no tenable argument for arming just sufficiently to burden the taxpayer without strengthening the hand of our diplomacy.

Another contention that has been advanced against the Ministry of Supply is that its prior lien on materials and labour would hamper the export trades. There is serious confusion of thought here, too. It is possible that if the creation of a Ministry of Supply led to a really effective and successful programme of arms production, difficulties would be created for the export trades. But the difficulties would emerge from the effectiveness and success of the programme, not from the fact that it was organised by a Ministry of Supply. On the contrary, those difficulties can only be minimised if the demands of the armaments programme can be properly organised and co-ordinated through a central control, one of whose tasks it would be to meet its requirements with as little disturbance as possible to the export trades. Given that a certain quantity of

arms is to be produced, and that they can only be produced from certain varieties of materials by certain varieties of labour, the effect on the export trades—or indeed on any other trades—will be far less harmful if the process is properly planned than if it proceeds, as at present, largely haphazard. The example of Germany's expanding export trade, which is examined in a special survey in this issue of *The Economist*, is sufficient proof, if any is needed, that proper organisation can protect the export trades from damage by a gigantic arms programme.

Mr Chamberlain's main argument against a Ministry of Supply was that such a Ministry was synonymous with compulsion upon labour and capital. Now it is possible that a Ministry of Supply might have to use—it would certainly have to possess—certain powers of establishing compulsory priorities. But here again it is misleading to suppose that the necessity for compulsion arises from the existence of a single centralising Ministry. If we are to make arms on the requisite scale those priorities will have to be established. If they can be established voluntarily, a single Ministry can accomplish the task better than four; if they require compulsion, it will have to be forthcoming from a Ministry of Supply or elsewhere. The distinction which the Prime Minister draws between what he calls a compulsory and what he calls a voluntary method is not the distinction between a Ministry of Supply and some other practicable method; it is the distinction between an effective and an ineffective system. Mr Chamberlain himself seemed to realise this fact, for his frequent references to the question "whether the time had come" when a Ministry of Supply would be necessary, implicitly recognised that it would be inevitable sooner or later, and his final conclusion that "when we have done everything that we can on voluntary lines, if then we find that we still cannot fill our requirements, then it will be time enough to talk about a Minister of Supply" comes very close to saying that we must be found unprepared in still another emergency before the needs of the situation will be faced.

In fact, however, the use of compulsion is by no means the essential part of the proposal for a Ministry of Supply. Business men in general are anxious to do what is required of them; the difficulty, for many of them, is that they are told different things by different Ministries, or by the same Ministry at different times. The two main tasks for which a Ministry of Supply is needed could be carried out, at least in their earlier stages, without any compulsion save on the defence departments themselves. The first is the task of organising priorities, of seeing that the present wasteful overlapping and confusion are removed. It is a task that cannot be undertaken by a co-ordinator who is not himself in executive control of orders. The second is the task of organising mass production. Mass production involves enormous quantities of standardised goods manufactured and delivered by plant working at optimum load for long periods. It requires designing and planning in advance for bulk orders in the closest consultation with industry; a self-denying ordinance on the designers to make no changes during production; the acceptance of testing by sample; and efficient methods of costing and waste-chasing. The organisation of supply on this scale is one of the most responsible and technical jobs there is, in which the experienced industrial manager should give the instructions, not receive them.

The case for a Ministry of Supply, in short, is not that it represents the compulsory as opposed to the voluntary system. The case is partly that it would be one Ministry rather than four or five; and partly that it would be a different kind of Ministry from those that are effective in peace-time. Once the case is fully appreciated—and it is the task of all those who fear that the Prime Minister has not yet grasped it to preach it continuously—it will be found to be unanswerable.

The End of the *Front Populaire*?

FOR France, as for Great Britain, it is already clear that the crisis of September, 1938, has been of epoch-making importance. Fundamentally, the situation of the two countries is the same; on the morrow of Munich we are both confronted with identical hopes and fears; France, however, seems to be suffering still more severely than we are from the common shock; and she has, in fact, been harder hit. The post-war "system" in Central and Eastern Europe was, after all, designed by French minds and maintained by French strength, and Herr Hitler's success in re-writing the territorial chapter of the peace settlement this year has been a direct blow to French prestige. Moreover, this severe reverse abroad has overtaken France at a moment when her finance and her economy are in disorder and her politics in flux. In British terms, it is as though September, 1938, had been combined with September, 1931. In France, at this moment, the depth of the disturbance can be gauged by the extent of the agitation on the surface of French life.

The political and the financial-economic aspects of the present French internal crisis are, of course, intimately related, and neither of them can be dealt with realistically apart from the other. The political crisis came to a head at the annual conference of the Radical-Socialist Party at Marseilles last week. It was supposed that M. Daladier would take this occasion for announcing at least the main points of a policy of financial and economic reconstruction, and this expectation was strengthened by the speech which the Minister of Commerce, M. Gentin, made at the first day's proceedings. M. Gentin hinted that the times called for a compromise between Liberal orthodoxy and a State-planned economy; but his notion of a "directed" economy, as he sketched it, seemed to be well on the way towards full-dress planning; and there was something incongruous about the airing of this project in the councils of a party which is the chief trustee, in France, of classical Liberalism. Before the Congress closed, the Prime Minister himself had given his audience some startling statistical information about the financial straits which were driving his Government into contemplating strong measures. The expenditure of the Government, he declared, amounted to 102 milliard francs out of a total national income which he put as low as 220 milliard francs, and taxation yielded only 66 milliards. But, to the general surprise, M. Daladier did not launch any financial plan of his own, and his principal speech was mainly devoted to a vehement attack upon the Communists.

This political offensive on the home front followed rather inconsequently upon an account of M. Daladier's stewardship at Munich. For he pointedly differentiated the Communists from both the die-hards and the faint-hearts of other parties. The Communists, he admitted, could claim to have been consistent in preaching intransigence even at the cost of war; but it was this Communist violence and intransigence, so M. Daladier declared, that had paralysed his action during the recent international crisis. His speech leaves the impression that he was attacking the Communists, not so much for what they had done in September, as for the sake of making a new departure in his own policy now. The speech looks, in fact, like a deliberate attempt to make a restoration of the Popular Front impossible; and in this it may have succeeded. Unfortunately, it may also have made it difficult for M. Daladier to proceed with the much more important side of his present urgent task, and that is to give France a strong and representative Government under which Frenchmen of all parties and classes can retrieve their

country's fortunes by hard work. The Prime Minister's new line was not left unchallenged even in the ranks of his own party. In a notable speech, M. Herriot declared that all patriotic Frenchmen must contribute to the national recovery, and that he was not in favour of excluding anyone from his share in the task. On this capital question of immediate political tactics, there seems to be a distinct difference of opinion, in the Radical-Socialist Party, between the Right and Left wings; and it is possible that M. Daladier's stroke may produce a more acute cleavage among the Socialists. His onslaught on the Communists has thrown M. Blum's followers into extreme embarrassment. Even if M. Daladier still seeks their collaboration, they may fear to lose their hold on the allegiance of the French working class if they agree to remain in association with a bourgeois regime which has now put the rival working-class party "on the spot." M. Blum may thus be faced with a choice between a split in his own party or a retirement, intact, into the wilderness—leaving M. Daladier to govern as best he can with the support of an exclusively bourgeois *bloc* in Parliament. This would be a difficult task, as the Radicals and the Socialist-Republicans (who generally act with them) have only 145 Chamber seats out of 618. These two parties, together with every fraction to their right, can muster only 369 seats. But M. Daladier is apparently determined to move to the right—and there are persistent reports that if he cannot get his way with the present Chamber he will try to get a new one.

This point, at which politics impinge upon economics, is the crux of the present French internal crisis. If M. Daladier is now really lending his ear to voices which counsel a breach, not only with the Communists, but with the Socialists as well, his motive is probably a conviction that M. Blum, as well as M. Thorez, is so deeply committed to a forty-hour week that any French Government which included the Socialists would find itself unable to deal energetically and effectively with the supremely important task of putting France back to work. The urgency of this task is not in dispute. To regain the same position relative to Germany as existed in 1929, French industrial production needs to be doubled. Nor is it the first time that the apparently incurable weakness of the economic policies of the French Left has driven the Radicals into the arms of the Right. The chief difference between 1926 and 1938 is that domestic production rather than the external value of the franc is the rock on which the alliance of the Left—call it *Cartel des Gauches* or *Front Populaire*—is wrecked. Yet, difficult as it might be for a partly Socialist Government to get to grips with the problem of production, this might prove still more difficult for a Government that was wholly unrepresentative of the working class. Labour—at any rate French or British Labour—cannot be driven; it must be led. It will be slow to follow a Government containing no Labour leaders, and at the same time it will want to be sure that other classes are pulling their weight. The second of these demands is as reasonable as the first; for it is not only Labour whose sins have brought France to her present plight. Labour has rather given the finishing touch to the work of the bourgeoisie. For economic and financial salvation three things are necessary. The worker must work, the taxpayer must pay his taxes, and the capitalist must invest his money in French enterprise. It would hardly be unfair to the French rentier and capitalist to say that, since 1936, the French workman had taken, for his own standard of work, their standard of paying taxes, and that France cannot live unless all Frenchmen return, in tax-paying and in production alike, to the

strenuous way of life which used to be their country's strength and pride.

M. Daladier's programme cannot, therefore, ignore Labour even though it is apparently to be carried through without Labour's votes. Whatever the party complexion of the Government in office, the only policy that has a chance of success is one that demands sacrifices from both sides impartially. Labour's prospective sacrifice is already clear; it consists of a return to longer hours of work in order that the production of wealth may once more expand. But there is still obscurity over the precise form of the sacrifices to be demanded of those who do not work for wages. It is now apparent that M. Daladier's long delay in producing his plans has been due to disagreement between his Minister of Finance, M. Marchandau, and other members of the Cabinet on the nature of these demands to be made on capital. On Tuesday, M. Marchandau changed places with M. Paul Reynaud. The exact nature of the matters in dispute is not known, but the appointment of M. Paul Reynaud, who enjoys a great reputation, in more countries than his own, both as a financial expert and as a statesman who refuses to be bound by the leading-strings of doctrinaire views, has been welcomed on all sides. The full powers granted to the Government expire in less than two weeks, but M. Reynaud inspires more confidence than any Minister of Finance for some time past that he knows his mind and will not be afraid to act. Moreover, though he stands

formally to the right of the Radicals, being a member of the Centre, he is in a strong personal position—partly because of his known views on foreign affairs, which do not coincide with those of M. Bonnet—to secure the abstention of the Socialists from active opposition, even though M. Daladier has made their positive support almost impossible.

To secure even the neutrality of the Socialists, however, M. Reynaud will need to convince them that he is not going to play with the business of collecting the revenue and persuading—or compelling—the return of capital. The state of France to-day is so serious that unpopular and unorthodox measures must be taken. The Radicals are the pillars of orthodoxy in financial matters, but the time has passed when such things as “controlled economy” or even the imposition of restrictions on the free movement of capital (such as were imposed in England in skeleton form in 1931) can be merely dismissed, without argument, as economic heresy. For too long the vested interest of tax evasion and the divine right of capital to desert have masqueraded as the classical principle of free enterprise.

There is a possibility, if all classes will contribute, for France to set her economic affairs in order and to play her true rôle on the world's stage. MM. Daladier and Reynaud have the chance to prove themselves the men of the hour.

Gaps in Health Defences

THE twentieth century has seen the power to save civilian life raised to almost the same high pitch as the science of military slaughter. Knowledge and organisation have marched together to erect a barrage of health services and specialist treatments against the onflow of death and disease. The death rate has been more than halved in two generations.

True, the death roll of our generation is still high. War takes pride of place with over 812,000 lives lost on active service between 1914 and 1919; and, even now, another and more deadly duel of the nations is scarcely impossible. But peace has casualties no less than war. Over 25,000 workers have been killed in mines, in factories, on ships and on railways during the last ten years; and many more than 6,000 people are slain on our roads every year. Cancer carries off 66,000 victims yearly, while respiratory diseases, including bronchitis and pneumonia, account for 50,000, and tuberculosis for 30,000 more.

Yet, since early this century the rate of infantile mortality has been very much more than halved; the rate of deaths from typhoid and paratyphoid fevers has been reduced by over 95 per cent.; the rate of deaths from tuberculosis has been almost divided by three; and small-pox has virtually vanished. The scourges of childhood, measles, scarlet fever, diphtheria and whooping-cough, remain; but even these have lost much of their fatal sting.

The truth is that civilian defence against disease has been revolutionised in our own lifetime. Since the days of the barber-surgeons, the apothecaries and the physicians who dabbled in magic, and especially in the last hundred years, the doctors have written history afresh; they have developed the uses of anaesthetics and antiseptics; they have evolved precise instruments and studied pathology in their laboratories; they have harnessed chemistry, physics and electricity to healing. At the same time the aims and methods of governments have changed, and their responsibilities have grown. To-day, while the National Health Insurance scheme offers general medical aid to 18½ million contributors, local authorities and voluntary hospitals together provide obstetricians, gynaecologists, officers for infant and child welfare, medical, dental, orthopaedic, goitre

and diabetic clinics, cancer and tuberculosis treatment, ear and throat specialists, special schools for defective children, isolation hospitals and pathological laboratories.

Yet, despite this impressive catalogue, we are far from being in a position to take a breathing space in the struggle against sickness and death. We have it on the authority of the Chief Medical Officer of the Ministry of Health, from whose report for 1937* many of these facts and figures have been drawn, that the nation's health services need further co-ordination and development before they can become fully effective. Our annual bill for ill-health is not less than £300 millions; and our administrative plant needs replacement and rationalisation. The so-called Ministry of Health is a vast multi-functioned Local Government Board in disguise; local health duties are scattered broadcast among a crowd of overlapping and unco-ordinated authorities, officials and institutions; and the general practitioner, the mainstay of medicine, works for the most part in his own pigeon-hole apart from the main structure of Public Health. This isolation of the general practitioner is the chief ground for welcoming the new scheme mentioned in the Chief Medical Officer's report for giving free post-graduate courses to insurance practitioners. Our system of national insurance is incomplete: the dependants of insured persons are not included, while specialist services are for the most part held aloof.

Nor does this list of “gaps and deficiencies” tell the whole tale of the work there is still to do. It is not simply a matter of planning administrative reforms. Influenza, cancer, and diabetes have grown more menacing than they were a generation ago; the rate of maternal mortality has not appreciably fallen in twenty-five years; and heart and respiratory diseases and tuberculosis are still grim and powerful killing agents. A mass of evidence has been disclosed by researchers in recent years to show how very vulnerable a salient in our health defences has been created by defects in our social and industrial system, by the evils of overcrowding and low wages, by persistent unemployment and inadequate feeding. There are

* “On the State of the Public Health, 1937.” H.M. Stationery Office. 3s. 6d.

black spots where the tide of improvement in health and the duration of life has risen much less high than in the country as a whole. The Chief Medical Officer can fairly claim that the diseases which have almost disappeared, such as cholera, typhus, typhoid, plague, dysentery and malaria, were those which had their root in bad environment of living. The State services of sanitation and inspection have largely removed the diseases in improving the conditions of life. But the health policy of the State now has a new objective: not merely to cure disease but to prevent ill-health. There again, the attack must be on the conditions of living, and though we spend £100 millions a year on services to furnish the environmental conditions of good health, the open door to sickness and disease is still poor conditions of living. It is no longer a matter of cess-pools and bad drains, but rather of under-nourishment and bad feeding, unemployment and poverty.

Mr Richard M. Titmuss has written a very good book* to point this particular moral, mobilising (in the words of Lord Horder's foreword) a large amount of material about the relation of poverty to premature death, disease and incapacity. He turns the searchlight of statistics upon the North and Wales; and, comparing these depressed districts with the counties round London, the “standard” region of good health and decent living conditions, he discloses differences in their rates of death and disease which might well distinguish two separate nations. The expectation of life at birth and at all ages is appreciably lower in the North and Wales than in the South-East. Durham and Northumberland have much the highest rate of infant mortality in England and Wales, averaging 76 per 1,000 live births and rising to 92 in Sunderland and 114 in Jarrow. Of 401 infantile deaths in Durham in 1936 from respiratory diseases, as many as 266 would not have happened had conditions been the same as in Surrey. And if the national infant mortality rate, which is driven up to 59 per 1,000 live births by the heavy mortality in the fertile industrial North, could be brought down to 45, or midway between the 47 of the South-East (including Greater London) and the 42 of the Home Counties, the lives of 8,000 infants would be saved every year. Deaths of children between one and five years of age show the same disparities; in 1936, 524 children between these ages died per 100,000 living in Durham and Northumberland from measles; pneumonia, whooping cough and bronchitis;

Topics of the Week

The Meaning of Appeasement.—According to dictionaries, the word “appeasement” means the process of pacification or satisfaction; “to appease” is to calm or pacify angry persons, to propitiate them, to satisfy their demands or even, in Dr Johnson's usage, to offer them blandishments or bribes. The Prime Minister has seemingly studied his dictionary well. Starting from the surprising premise that he alone in British politics is anxious to seek peace and ensue it, he has decided, very reasonably, that if possible breakers of the peace are given forthwith what they are ready to fight in order to get, they will not need to have recourse to war. Accordingly, German designs in Czechoslovakia are recognised to the full, even though the Prime Minister was disinclined in the Commons on Tuesday to describe the Munich settlement and its aftermath as just or righteous. A formula is found to allow Signor Mussolini continued freedom of action in war-ridden Spain though no more than a vague promise of a *quid pro quo* is forthcoming. Mr Churchill and Mr Lloyd George, together with that very large body of people in this country who are disposed to be critical both of the methods of Mr Chamberlain's new-found totalitarian friends and of the startling deficiencies in Mr Chamberlain's own defence

the rate for Greater London was only 283 per 100,000, for the rest of the South-East 167.

Tuberculosis is especially associated with malnutrition; and a close statistical relation between overcrowding and deaths from tuberculosis has been worked out for Jarrow, Blaydon and Sheffield. Among men, the rate of deaths is 180 per cent. above the national average in South Shields and 97 per cent. above in Cardiff.

Just as unduly high phthisis rates are due to want and impoverishment, the consequence of long unemployment and low wages, so is the exceptional maternal mortality in the North and Wales due to the effect of depression upon mothers in industrial areas in the form of under-feeding. The maternal mortality rate for the North in 1936 was the same as in the county of London over 40 years before; and in no years since the statistics began in 1891 has the rate for all England and Wales been higher than the rate for Wales two years ago. If the rates had been the same in the North and Wales as in Mr Titmuss's standard South-Eastern area, 30,000 mothers would have been saved in ten years up to 1936. And, in the same decade, if all mortality rates in these depressed areas had been the same as in the South-East, no fewer than half a million lives, men, women and children, would have been saved.

Thus Mr Titmuss's regional analysis yields very grave results. It may be that mortality rates as a whole cannot be appreciably reduced in the future, though there is no evidence to justify such a defeatist conclusion. But even so, we cannot possibly say that the grave excess rates registered in particular districts are irreducible. We can certainly do all over the country what has been successfully done in a large part of it. It is not simply a matter of additional deaths, but of sickness and incapacity in life as well. Men from Wales, Northumbria, the West Riding of Yorkshire and Lancashire, all of them between 15 and 24 and about half between 18 and 20, when medically examined for the army, found well over one out of every two rejected as unfit; and the rejection rates in these districts are between 50 and 80 per cent. higher than for the Home Counties. The health campaign cannot engage only doctors and hospitals; its terrain is the entire field of social welfare. Every step to raise the standard of living is a blow to disease; every fillip to exports and the staple industries is a riposte to sickness; every move towards a national food and nutrition policy earns a life-saving certificate. No nation can be wise or strong until its health is at least as great as its wealth.

* * *

What then does appeasement mean in actual practice? It would be complete folly to deny that the examination and removal of grievances is the sovereign road to international peace; but it would be no less foolish to maintain that the indiscriminate satisfaction of, say, Germany's claims, advanced with the show and threat of force and unaccompanied by any disposition to be bound by reciprocal obligations in return, leads along this pacific path. The Prime Minister has high hopes of his policy; he sees at its end the abolition of arms, the freeing of world trade and the improvement of the standard of living of

the people. He said so in the House on Tuesday, but he gave not the slightest indication of what guarantees for the interests and security of Britain and the unrestricted development of British democracy his programme of one-sided appeasement provided. It takes two to make peace, just as it takes two to make a quarrel; and Mr Chamberlain's policy rests simply and solely upon his reiterated conviction that Herr Hitler—and Signor Mussolini—do not want war. They do not, if their claims can be satisfied, if they can get whatever they want without it; but, while there are presumably some claims which we could not possibly satisfy, for honour or safety, or both, we have no evidence at all that the dictators would necessarily abate such claims for the sake of the peace which Mr Chamberlain—and all his fellow countrymen of all parties—so earnestly desire. In other words, can Mr Chamberlain be sure that the Fuehrer and Duce share his own faith in appeasement? Perhaps the outcome of the colonial question will provide the answer.

* * *

England and Italy.—It was a foregone conclusion that the bringing into force of the Anglo-Italian Agreement which has been hanging fire since April 16th, would be part of the Prime Minister's post-Munich policy of appeasing the European dictators. By 345 votes to 138 the House of Commons accepted the inevitable on Wednesday. The Agreement itself, mainly concerned with Arabia and Africa, does not mention the war in Spain, except that the two contracting Powers pledge themselves to maintain the *status quo* in the Mediterranean and to exchange information about the disposition of their fighting forces in Mediterranean territories. Nor is the Italian claim to *de jure* recognition of the conquest of Abyssinia included. Yet the questions of Spain and Abyssinia are the most vital elements in Anglo-Italian rapprochement, and notes attached to the April Agreement made three points clear: first, that the British Government intended to recognise Italian sovereignty in Abyssinia; secondly, that the Italian Government, having no territorial ambitions in Spain or the Spanish possessions, were ready to withdraw Italian forces from Spain by stages; and, thirdly, that the British Government regarded "a settlement of the dispute in Spain" as a prerequisite of the Agreement's entry into force. Since then, a settlement in Spain has been brought no nearer and Italian intervention has remained the most potent factor in the war, at least in the air. This situation remains unaltered now. The Non-Intervention (or British) plan for the evacuation of foreign volunteers has been treated with contempt by General Franco and remains inoperative, although the Spanish Government has disbanded the International Brigade. Italian airplanes continue to wreak destruction on the Ebro and over the open towns of Government Spain; British ships trading to Spain run the gauntlet of Italian bombs. Yet Mr Chamberlain is convinced that the necessary conditions for the Agreement's entry into force now exist.

* * *

The question whether the ratification of the Anglo-Italian Agreement is right can only be answered in the negative. International morality can only look the other way while we condone the swallowing of one League member and armed assault upon another. But it is doubtful how far the ratification is even expedient. It would seem that, in the Prime Minister's view, the nocturnal Four Power talks at Munich changed the Spanish situation radically. Signor Mussolini (and Herr Hitler) then conventionally disclaimed territorial ambitions in Spain. The Italian dictator further agreed to withdraw 10,000 infantry troops from Spain (which he contrived to do) and send no more troops out; not to gether provide "compensatory air squadrons"; and to plan for evacuation came into force.

Mr Chamberlain is apparently so anxious to reward the Duce for his past good offices in the peaceful dismemberment of the Czech State and for possible future services, that he has convinced himself that these wholly disingenuous pledges are tantamount to a "settlement" in Spain. Actually, Signor Mussolini's Munich protestations promise no more than he promised and failed to effect last April. The bulk of the Italian forces are still in Spain, and there is no chance of the evacuation plan coming into force so long as General Franco, presumably on Italian pressure or advice, refuses to accept it. Meanwhile, there is no suggestion whatsoever that Italian airplanes or war material will be withdrawn; or even that they will not be replenished, provided no more than 9,999 extra pilots (since 10,000 would be "compensatory") are drafted to Spain. No one can contend that the Prime Minister has obtained any guarantee that Italian intervention will be relaxed in the coming winter. The Duce has not been notable for strict adherence to his promises in the past, and it is the naive faith of the obstinate gambler—who stakes in this case the vital interests and security of his country—which leads Mr Chamberlain to assume that Signor Mussolini will act otherwise in the future when every sign points to the opposite conclusion. The whole country will hope that all Mr Chamberlain's assumptions prove correct—that Italian intervention in Spain will come to an end, that the new Spain will not merely preserve its territorial integrity but will not be in fact an Italo-German dependency, that the Rome-Berlin axis will cease at least at its southern end to threaten vital British interests. But we pay cash down in a gamble where the odds seem strongly against our success.

* * *

Metropolitan and Provincial Politics.—It was a characteristic of pre-*Anschluss* Austria, at least before democratic forms were destroyed in Dollfuss's day by shot and shell, that while Vienna was Socialist the provinces were Conservative. The same centripetal tendency is dimly evident in English Socialism. The County of London is the largest unit in the world under Socialist rule; and last Tuesday's municipal elections, when one-third of the borough councils went to the polls, showed a growth of Labour influence, outside the County, in Greater London and the urban parts of the Home Counties. There were no elections in the L.C.C. area, where contests for all seats are triennial. In Tuesday's elections, over the whole country, Labour lost five seats on balance, mainly to Conservatives, who registered a net gain of five. Thus, as in 1932 and 1935, when the seats contested this week were last balloted for, there was little net change. But there were important swings of opinion in particular places: three years ago Labour lost Leeds; this year majorities at Burnley, Bristol, Leicester, Sunderland, Hull and Wakefield have gone. There was no sign of a knock-out blow in Tuesday's fight, but, away from London, anti-Socialist groups were victorious on points. Yet Labour still controls 17 out of 28 metropolitan boroughs in London, as well as the County Council, and 37 cities and towns elsewhere. Socialist candidates have the aid of a national organisation in municipal contests; and Socialist councils have frequently been sound and successful in power. The Labour Party won its spurs in local affairs, and in the boroughs there does not prevail that view which hovers over all Parliamentary elections that Socialism in power would mean national ruin. Labour's third of the poll in the last two general elections was largely concentrated in urban constituencies, apart from mining areas; and it would be surprising if Socialist politicians did not cut a dash in the local affairs of towns.

* * *

The Economics of Fear.—Changes in the structure of demand are inevitable under the continued threat of air bombardment, but it is not yet clear what these changes will be. During crisis week many working-class families

upset their household budgets by providing children with the minimum clothing and footwear required for evacuation purposes, while many other families showed a new interest in tinned foods, reflected in the 27 per cent. increase of sales of grocery, provisions and bakery in Central and West End districts of London during September, 1938, as compared with September, 1937. Since the Peace of Munich, demand appears to have taken two rather contradictory directions—an increased craving for all forms of amusement, and a good deal of quiet preparation for the moment when "peace in our time" may expire. In cynical terms, there is a brisk demand for sand in which the ostriches can bury their heads and for burrows into which the rabbits can bolt at the next warning. If the salesmen of this country think of presenting a trophy for 1938 they should seriously consider the claims of Herr Hitler, who in addition to his other recent achievements, has been the first man to create a sale for caravans in the autumn. Another significant trend in demand has been the rush of orders for battery portable wireless sets. Whether land values will be substantially affected remains to be seen, but risks of air bombardment have undoubtedly introduced a new demand factor which was conspicuous in the crisis and still to some extent persists, not only for residential but for office purposes, as well-known firms are taking steps to remove from central London. Anyone who had any illusions that there might be less muddle and less readiness to profiteer in a national emergency in 1938 than in 1914 must have lost them by now. It was owing to the existence of an accidental glut, rather than to patriotism in the trade, that a number of food prices could be stabilised without the most drastic action in September, while some prices actually showed spectacular rises. It is essential that, for instance, food stocks and retreats for wives and families should be available in case of trouble, but evidently to leave so much to individual cunning and resource is going to cause not only economic maladjustments but social and political friction.

The New Hungarian Frontier.—The Italo-German arbitral decisions in the Czechoslovak-Hungarian frontier dispute were announced from Vienna on Wednesday. That this dispute was always, *au fond*, a matter between Germany and Italy rather than between Hungary and Czechoslovakia was confirmed by Herr von Ribbentrop's sudden visit to Rome on the 27th. The Vienna "award" was then arranged. Italy accepted Germany's proposal that the principle of nationality, rather than economic or financial claims, should be taken as a basis for settlement; and in return Germany agreed that the 1910 census figures should be those used in demarcation, as they were in the Czech-German settlement. Italian and German wishes that the Axis should revolve smoothly in this new test of its tensile strength are largely responsible for the decisions reached. There has been give-and-take on both sides, though Germany has taken more than Signor Mussolini seems to have hoped it would be necessary for him to give. A part of Ruthenia does remain independent. But Hungary has fared far better than was generally expected, receiving territory containing a population of nearly 900,000, of which 100,000 are Slovaks and 90,000 Ruthenians, and the important towns of Kosice (Kaschau), Uzhorod (Ungvar) and Mukacevo (Munkacs) with all the fertile lands to the south of them. Bratislava remains in Slovakia, though as consolation it is proving inadequate. A joint Czechoslovak-Hungarian Commission will decide the details, but at one stroke Ruthenia is depleted of its two important towns, its east-west rail and road communications, and nearly all of its mineral and agricultural wealth. From the German point of view this attenuated Carpathian province may be valuable as the tail-end of a Ukraine which stretches eastward to Rostov and northward to Brest-Litovsk; but it is a very small tail and uncommonly difficult to wag. Its only lines of communication now are three north-south sections of railway and a number of ill-kept hill roads. Access to Roumania from the west must be through Hungary—which augurs ill for those in Budapest who

would resist German influence. The Vienna "award" has, of course, a general as well as a local interest. It shows that Germany can make her will prevail in Central Europe against the combined wills of Italy and Poland; and it further shows that Herr Hitler means to advance by championing the principle of nationality. For the remnants of Ruthenia, as a focal point for Ukrainian nationalist aspirations, may yet provide Poland's enemies with a most useful weapon.

* * *

Mr Pirow, the Colonies and Germany.—The visit to Europe of Mr Oswald Pirow, South Africa's Defence Minister, has set buzzing a hive of rumours on the *Kolonialfrage*. We may be reasonably certain that his purpose was to explore the ground for a friendly settlement of that question; but it is unlikely, for instance, that he suggested at Lisbon a South African or United Kingdom "deal" in Portuguese colonies so as to keep German hands off Tanganyika or South-West Africa. The main topic of conversation between Mr Pirow and Dr Salazar seems to have been that of common defence of their possessions in Africa, whatever dark hints the scandal-mongers may have let fall. In Germany his visit coincides with an intensification of the propaganda which, with quiet determination, is persuading the German citizen that he ought to have the power and glory attaching to colonial possessions, and that very soon he will have them. General von Epp, whose business it is to "look after" German colonial interests, has been making his voice heard; and the Berlin institution which teaches the theory of colonial administration finds little time on its hands. Arranged for next spring is an exhibition of German "colonial" art. No chances are lost of impressing on the public the justice and the value of colonial claims.

* * *

Germany, it is said, will not be provoked into taking the first step in discussing a colonial settlement, for she was a victim of injustice, and it is not for her to set wrongs right. Also, her ability to govern has been called in question; and that is not to be borne. But the Nazis are astute enough to realise that so long as Britain can be scared into worrying about colonial concessions, they have much to gain by waiting, and in the eyes of the world everything to gain by refusing to consider rumoured "arrangements" which would include the colonies of countries like Portugal and Belgium. Meanwhile their propaganda works day and night to create an atmosphere outside Germany in which the real question will not be "Ought Germany to have colonies?" but "Which colonies ought Germany to have?" In that way they will

Japan in China.—Hankow and Canton are now fully in Japanese hands, and the rest of China's ports and railways may go the same way before the winter pause in operations of war. Meanwhile, President Chiang Kai-shek and the Chinese armies have made good their withdrawal to the south-west. What next? The next act in the Chinese drama may be a diplomatic conflict between Japan and other foreign Powers over Japanese interference with the latter's rights. At Washington on October 27th the State Department published an American note to Japan which had been delivered on the 6th. This State paper recites a number of Japanese infringements of American rights in China, and demands satisfaction from Japan on three heads: the discontinuance of discriminatory exchange control; the discontinuance of any monopoly or preference that would promote Japanese business in China to the detriment of American business; and the discontinuance of interference by the Japanese authorities in China with American property and other rights—e.g. censorship of mail and telegrams, and restrictions upon residence, travel, trade and shipping. The American complaints against Japan set out in this note are illuminated by a statement made in Tokio on the same day—October 27th—by the newly appointed Japanese Ambassador to the Quirinal in an interview given to a German journalist. In this journalistic transaction, in which all three of the "Triangle" Powers were concerned, the Japanese diplomatist declared that, while the rights of foreign Powers in China would be respected, and their financial co-operation welcomed, Japan had no intention of sharing her victory with the Western Powers, and he added that the British predominance in Eastern Asia had been ended for all time to come. German technicians and industry and German trade would still be able, he declared, to work in China on a preferential basis; and, in speaking to the representative of a newspaper belonging to another anti-Comintern country, a Japanese diplomat could say no less. The German business community, however, is more impressed by Japanese acts than by Japanese words. For Germany, who at the outbreak of war had a larger annual volume of trade with China than any other foreign Power, has been particularly hard hit commercially by the Japanese invasion. At Shanghai the whole foreign business community is now feeling the effects of Japanese control over the raw cotton market. But these actual and prospective business losses, serious as they are, are not so ominous as the protest made on the 28th by the Japanese Prime Minister, Prince Konoe, to the French Ambassador in Tokio over the import of arms into South-Western China via French Indo-China. Since the Japanese envelopment of Hongkong and capture of Canton, the French railway to Yunnan is virtually the only means of

communication between China and the West. For the moment, at any rate, Mr Arita, who became Foreign Minister at Tokio for the second time on October 30th, holds strong cards.

* * *

The Expulsion of Polish Jews from Germany.—Totalitarian nationalism is an inhuman force. While nations struggle for power, human beings are trampled under Leviathan's foot. The most pathetic victims of the idolatrous worship of the many-headed Beast are the rapidly growing host of uprooted refugees; and what is perhaps the worst case of cruelty in this field up to date has occurred within the last few days. On the night of October 27th about 20,000 Polish citizens—most, but not all of them, Jews—who were resident in Germany were suddenly arrested by the German police and about 5,000 of these unfortunate people were then marooned in no-man's-land between the German and the Polish frontier. Deprived of their possessions, separated from their families, and huddled in trains, or even out in the open, at a season which, in north-eastern Europe, is already inclement, these outcasts were subjected to treatment which Europeans have not been wont to inflict upon one another deliberately, in peace time, since the close of the Dark Ages. The excuse given by the German authorities was that on October 30th a new Polish regulation was to come into effect, under which all holders of Polish passports issued outside Poland must obtain a special visa in order in future to be entitled to re-enter Poland. Whatever the purpose of this Polish regulation may have been, the German authorities saw in it a threat to make it impossible for Germany to deport Polish residents, if she so desired, at a later date; and so they took these steps to rid themselves of Polish residents of Jewish nationality before the new Polish regulation came into effect. On Saturday, October 29th, however, it was announced in Berlin that the present deportations had been suspended, pending a settlement of the question by negotiations between the German and Polish Governments. Poland had, it appears, threatened to retaliate by expelling Germans, and the Polish authorities had already gone the length of making preparatory arrests. Meanwhile, the 8,000 Jews marooned in no-man's-land have been provisionally admitted into Poland, while Germany has agreed provisionally to suspend action in respect of the rest of the 20,000 persons affected. It remains to be seen whether Poland or Germany will get the best of it in the present struggle of wills.

* * *

The Issue in Yugoslavia.—Dr Stoyadinovitch and the Government of Yugoslavia hope to take advantage of a favourable reaction to the Munich settlement in next month's elections, and the Government's campaign in the country has started off with a fighting speech by the Prime Minister in which he outlined the successes of his diplomacy during the past year. This is the best card in the Prime Minister's hand. For no matter what repugnance his leanings towards the dictators may arouse among the democratic parties—and democratic they remain in spite of curtailed political liberties—Dr Stoyadinovitch is confident, not without reason, that moderate Yugoslavs will nevertheless see the advantage of a foreign policy which permits the head of their Government such unusual flexibility of movement. The friendship of Yugoslavia, Dr Stoyadinovitch says in effect, remains open to the highest bidder; and if at the moment Germany leads the auction, that is no reason to suppose that France may not be doing it to-morrow. Only, one is given to understand, Dr Stoyadinovitch does not think so; for he sets a low value on democratic competition. But even allowing for fresh support gained by recent vindication of its pro-German policy, and for the repressive control with which it can hinder the Opposition's campaign, the Government will not have an unruffled course through the elections. The main Opposition parties have agreed to waive their differences. They have

received the support of a surprising variety of political opinion, both Left and Right: and as a warning of their strength Dr Matchek, leader of the Croat People's Party, visited Belgrade on August 14th and won applause from a crowd which is reported to have included a large number of Serbs. That meeting was the first shot in a united Opposition campaign. Not only have Serb and Croat democrats joined forces, but it appears that the J.N.S. section of the Right opposition—the Yugoslav National Party, or what remains of it after many defections—have accepted Dr Matchek's leadership, including his former adversaries, Yevtitch and Zhivkovitch. During the crisis the Belgrade Sokols demonstrated in support of Czechoslovakia; and now a consciousness of Yugoslavia's enhanced danger of domination from the north seems to have rallied against Dr Stoyadinovitch and his pro-German policy, people and parties lately in outspoken enmity against one another. Whether, within the framework of electoral law and practice, that consciousness can be translated into effective political action is doubtful indeed. And it is even more doubtful whether, in the very unlikely event of an Opposition win on December 11th, such a strange electoral coalition of conflicting aims could long hold together. Yet they will make Dr Stoyadinovitch sweat for his victory.

* * *

Italian Self-Sufficiency.—In Italy there is action on the autarky front. The first meeting of the Supreme Self-Sufficiency Commission which met in Rome on October 10th under the eye of Signor Mussolini, issued a statement saying that it "reaffirmed most categorically the necessity of carrying on the battle for the economic independence of the nation with extreme energy and the highest speed." Signor Mussolini told the Commission that it must find food for 50 million Italians. Seven million of these are yet unborn, but the task is at present stiff enough to demand at least one measure which is a direct departure from programme. That is the projected increase of the wheat-growing area to 5½ million hectares, about 350,000 hectares more than was sown last year, with the aim of producing a harvest of 90 million quintals of wheat. An increase in the area of maize is also anticipated, and since both these increases detract from the area available for other cultivations (and particularly from that available for stock-raising and dairy produce) agricultural autarky will be as far away as ever. It is clear that the Italians are not going to be encouraged or permitted to eat more meat; and with the internal price of wheat maintained far above prevailing world levels, the same remark applies to Italian consumption of bread and macaroni. An important comment on the financial side of self-sufficiency has been provided by Signor de' Stefani, a Fascist financial authority. Writing in *La Stampa* for October 11th, he warned everyone concerned that they need not expect the State to finance indefinitely the transformation to new methods of manufacture. "Big industries," he wrote, "must undertake this task of financing themselves as a compensation for the protection afforded them by the State." This is presumably a new form of taxation at the source: for political interest would frown on a passing-on to the consumer of a rise in the cost of production incurred by the diminution of State credits. And the task of making Fascism a "rural phenomenon" has received another encouragement of late. On October 28th 20,000 peasant colonists, the biggest contingent for many years, sailed for lands in Libya on which cottages stocked with tools and stores and livestock have been built ready for them. Most of the settlers are young and all should be enthusiastic, for their reception is planned to the last detail and nothing left to chance.

* * *

The Spanish War.—The seventh battle of the Ebro began this week. From early reports it seems that General Franco will gain from this new counter-offensive

no more than he has gained from his six previous attempts to oust the Republicans from their mountain strongholds—and that is less than nothing. His persistence is understandable. With the winter drawing on and continued stalemate on the Ebro, his plans are all awry. Barcelona may be on short commons that near starvation point, Italian aeroplanes may go on dropping bombs on civilian populations, and his own diplomatic position be strengthened by ratification of the Anglo-Italian Agreement: but for all that his soldiers do not advance. And unless he can keep up the pressure on the Ebro, it is even becoming doubtful whether he can develop fruitful offensives elsewhere: for in quantity also his soldiers fail him.

* * *

Bellahouston Finale.—At midnight on October 30th the Empire Exhibition at Glasgow came to an end. Not even continuous rain was sufficient to damp the determination of the Scots to outdo the Sassenach, and 364,092 people passed the turnstiles on the final Saturday to eclipse Wembley's fourteen-year-old record attendance of 321,232 visitors on a single day. In all, 12,593,232 have visited Bellahouston Park since the Exhibition opened last May; and, although the final accounts have still to be cast up, it seems likely that, for an exhibition, the Glasgow venture has fared well, even in cold terms of pounds, shillings and pence. A total attendance of between 12,000,000 and 16,000,000 was budgeted for; and, while the golden occasions in 1888, 1901 and 1911, when Scottish exhibitions actually made profits, are scarcely likely to find a successor this time, at the worst Glasgow's guarantors are likely to have to find no more than 2s. or 3s. in the £ in contrast to the 15s. in the £ required of Wembley's backers as well as a supplementary vote of £1,100,000 from Parliament. Like Wembley, Bellahouston has been plagued by rain. Unlikely Wembley, it has been managed with unusual efficiency and economy, and it is likely that the wide but hardly measurable gains in business and publicity which have been sought by exhibitions ever since the Prince Consort's monstrous greenhouse was set up in Hyde Park eighty-seven years ago will be reaped by Scotland—still in sore need of tangible economic aid.

"Japan Pays for War."—In an article in last week's issue of *The Economist* under this title the following sentence occurred: "In the single year to the end of August, 1938, the increase [in the note circulation of the Bank of Japan] was from 1,660 million yen to 3,071 million yen—an increase of 25 per cent. in a year." The figure 3,071 was a misprint for 2,071. The proportional comparison was, of course, correct.

GERMANY'S TRADE OFFENSIVE

I. German Methods of Foreign Trade

THE methods by which the German Government aims at stimulating foreign trade constitute a startling innovation in the system of international trade. In the past, Government intervention usually assumed the form of direct or indirect subsidies to exporters. This device, which in the changed circumstances has come to be regarded as almost orthodox, is freely applied by the German authorities; but it is supplemented by a series of other devices.

Until comparatively recently the most important among the new methods was the encouragement of exports through the use of blocked currencies at depreciated rates. Permission was given to spend the various types of blocked marks on the purchase and export of certain types of goods which in the ordinary course could not have been marketable abroad. In effect, for export purposes—but for export only—the mark was depreciated to a fraction of its official value. Germany got the advantage of a low-value currency for her exports and of a high-value currency for her imports, at the expense of the foreign owners of blocked marks. The range of goods which were allowed to be exported by such means has, however, tended to become narrower and narrower. At present the use of blocked marks in payment for German exports has almost completely ceased, although a large part of German trade with Latin America is paid for with the so-called Aski marks or compensation marks. These are not blocked marks proper; they are received by Latin-American exporters in payment for goods sold to Germany, and can be used in payment for German goods imported into the same country. Since Aski marks are always quoted at a big discount, this method amounts to one more of the many disguised forms of currency depreciation. The difference between this method and straightforward devaluation is that the depreciation of the Aski marks is not uniform in the different countries. It can be regulated according to the special requirements of trade with the various Latin-American countries. Thanks to the use of these Aski marks, Germany has succeeded to a considerable extent in capturing some of the Latin-American markets from Great Britain and the United States. Indeed, in Chile and some other countries, the use of Aski marks has increased the competitive capacity of German exporters to such an extent that even local industries have begun to suffer.

Sophisticated as this method may sound, it is simplicity itself compared with the wide variety of methods resorted to by Germany in her trade with South-Eastern Europe. The German inventive genius seems to be indefatigable in devising new uses for the exchange clearing system, by means of which Germany is enabled to import goods without having to pay cash for them, and at the same time to plant her manufactures upon a number of countries.

The first device, originally adopted some years ago, was to increase German purchases of the products of the Danubian and Balkan countries. The prices paid were attractive, and the governments did not dare to incur unpopularity among the producers by hampering the sales to Germany of Roumanian and Hungarian wheat, Yugoslav and Roumanian timber, Greek, Bulgarian and Turkish tobacco, etc. It was some time before the exporting countries realised that the result of the one-sided

purchase of their goods by Germany was the accumulation of large frozen balances owed to them by Germany on their clearing accounts with her. In order to liquidate these balances, it became necessary for the governments of these countries to do their utmost to encourage the purchase of German goods. To that end they refused import licences for British and other manufactures in order to divert purchases to Germany. The German authorities, however, realising the strength of their bargaining position, were reluctant to allow the South-Eastern European countries to buy German goods freely. They refused to sell them goods which they were able to sell abroad for cash, and were only prepared to sell stocks which were not wanted in countries with free currencies. Thus, in order to reduce the frozen clearing balances, Yugoslavia was compelled to buy huge quantities of aspirin, Roumania bought many thousands of typewriters, and Greece bought mouth-organs by the hundred thousand.

It may appear astonishing that after this experience the countries of South-Eastern Europe should have continued to sell their goods to Germany. The reason lies partly in the fact that German purchases drove the price of their agricultural products well above the world market level, so that the peasants did not want to sell elsewhere, and partly in the fact that Germany's own activity spoilt the world market and made it difficult for these countries to sell elsewhere. Since Germany did not want all the Greek and Bulgarian tobacco, Turkish raisins, etc., for her own consumption, she resold abroad a large part of the quantity purchased. While she did not pay cash for the goods to the exporting countries, she obtained free exchange for them when she re-exported them. In her keenness to raise free exchange she was prepared to sell the products at low prices, and in doing so she killed two birds with one stone, since she spoiled the market for the exporters of the producing countries. As a result, the prices offered by Germany became still more attractive to the agriculturists of the Danubian and Balkan countries. Their Governments were reluctantly compelled to allow them to sell to Germany, even though this meant interminable delay in receiving payment, during which time the Central Bank had to finance the exporters. This method was applied also in some Latin-American countries. For instance, Germany acquired large quantities of Colombian coffee with the aid of Aski marks and sold it for cash in Copenhagen and other markets, with the result that Colombian exporters found it very difficult to sell their products in any other country but Germany.

The world-wide re-armament fever has also assisted German foreign trade. Countries with no arms industries of their own found it difficult to place orders for early delivery, partly because armament industries were fully engaged by orders for their own Governments and partly because, in the circumstances, arms were not being sold on a credit basis. Germany became practically the only country which was prepared to sell war material in really large quantities for immediate delivery without even asking for cash payment. Considering the extent to which German industries were engaged in meeting German re-armament requirements, this may sound surprising. The explanation lies in the fact that the German Government was anxious to discard certain

types of war material because better models had been invented in the meantime. The Governments of certain Balkan and Latin-American States were only too pleased to buy the Reichswehr's discarded aeroplanes, tanks and anti-aircraft guns. These purchases enabled Germany to obtain new material and at the same time to acquire some political influence in the purchasing countries. After all, it is necessary to secure the continuity of the supply of replacement units, spare parts, ammunition, etc., and this could only be done so long as the countries concerned remained friendly with Germany. While Latin-American countries such as Chile and Peru were only too willing to buy German war material, some of the South-Eastern European countries were, for political reasons, reluctant to accept the German offers. Nevertheless, Germany succeeded in selling large quantities of war material to Greece (which country promptly resold part of it to the Spanish Government) and Hungary, while Turkey and Roumania were unwilling to commit themselves politically by accepting German war material. Quite recently, however, Turkey has also yielded to the pressure of the growth of the frozen German clearing balance, and has agreed to the delivery of war material.

By far the most subtle device adopted by the German Government for the stimulation of foreign trade was what may be described as the long-term credit trick. Time after time during 1937 and 1938 it was announced that Germany had succeeded in obtaining orders for delivery of industrial plant or other capital goods on a long-term credit basis. This appeared all the more astonishing since Germany's banking resources did not allow for such generous credit terms. The explanation lies in the fact that in reality the credit transactions were financed not by Germany but by the Governments of the debtor countries. These Governments, being anxious to safeguard themselves against the earlier experience of one-sided German purchases of their goods, made it a condition that imports and exports in relation to Germany must balance each other. Subsequently, however, they were forced to realise that this did not provide an adequate safeguard for their exporters. It is true that the Roumanian wheat grower exported his product to Germany on a cash basis, and that the cash was actually paid into the clearing account at the Reichsbank. But the Roumanian exporter did not receive his cash, because the German manufacturer of machinery sold his goods to Roumania on a ten-years' credit basis, and this meant that the purchase price of the

machinery would not be paid into the German-Roumanian clearing account in Bucharest until the credit fell due. And since the Roumanian wheat exporters could hardly be expected to wait ten years for their money, the Roumanian authorities had to finance them pending the collection of funds from the Roumanian purchasers of German machinery. On the other hand, even though the exporters sold their goods on a long-term credit basis, they were able to obtain cash, because the proceeds of the Roumanian wheat exports to Germany became immediately available in the Roumanian-German clearing account in Berlin.

Since the export of German goods to Roumania enabled Germany to import Roumanian goods to the same value, irrespective of whether or not the Roumanian purchaser of the German goods would ever pay the purchase price, there appeared to be no reason to be cautious in granting credit. Indeed, for this reason German exporters have been delivering goods on a credit basis in Roumania and other countries to purchasers who are considered to be anything but credit-worthy. The sale of goods on the instalment system has also been encouraged, and it has been made possible for anyone in the Balkans to buy a German motor-car or bicycle against a nominal deposit and on extremely easy terms. The moment these goods cross the frontier of the importing country, Germany is entitled to buy goods there, even though the purchasers of the German motor-cars and bicycles may default. If they meet their liabilities, well and good. If they eventually default, better still, since it means the accumulation of frozen balances in Germany owing to the Balkan countries, which places the countries concerned in a state of commercial and political dependence upon Germany.

While Germany was in a comparatively weak position both commercially and politically, she had to resort to these subtle devices to obtain expansion of her trade. The moment she became strong enough, however, they were reinforced by the assertion of political and economic power. Having secured between 40 and 50 per cent. of the trade of the Danubian and Balkan States, she can afford to threaten that, unless the countries concerned refrain from attempting to divert elsewhere part of their trade, Germany will stop buying their goods, or that she will stop liquidating their frozen claims. This argument, reinforced by the growing preponderance of the German military power in Central Europe, has been very effective indeed in assisting Dr Funk in the course of his negotiations in various capitals in South-Eastern Europe.

2. Anglo-German Competition

THERE has been much discussion, especially in recent weeks, of the direct impact of Germany's trade policies on the British export industries. Much of this discussion relates to changes that are expected in the future, which cannot, of course, be subjected to any objective test. But the only sound basis for forecasts of the future is the experience of the past. This article is devoted to an analysis of British and German competition in the markets of the world during the past decade.

The main facts upon which such an analysis must be based are contained in the table at the top of the next page. For the purposes of comparison, the three years 1929, 1932 and 1937 have been chosen—1929 because it was the peak year for international trade, and 1932 because it was both the lowest year and the last before the advent of the National Socialist Government in Germany. For each of the 39 most important countries of the world, figures are given in the table showing, in each of the three years, the proportion of their imports and exports coming from or going to the United Kingdom and Germany respectively. The method of showing percentages has been chosen because it automatically eliminates all difficulties arising out of shifting price-levels and exchanges.

The mass of figures in the table is too great to be digested at a glance. It may therefore be useful to pick out the main conclusions that emerge, following the geographical divisions of the table.

Western Europe.—German progress in the majority of these countries has been slight. She had a smaller share of imports into France, Belgium, Holland and Switzerland in 1937 than in either 1929 or 1932. The same is true of German purchases, save that the German share in these countries' exports is in some cases rather higher than in 1932. Britain also has a smaller share in the trade of these four countries than in 1929, though in some cases larger than in 1932. In Portugal, however, there is a definite decline in the British share of Portuguese purchases. The German share was no higher in 1937 than in 1929, but there has been a considerable increase in 1938. With the exception of Portugal, British and German experience in Western Europe has been very similar.

In *Northern Europe* such changes as have occurred have been to Britain's advantage and to Germany's disadvantage. Thus, our share in Finland's imports has risen from 13.0 per cent. to 22.2 per cent., while Germany's share has fallen from 38.3 per cent. to 20.3 per cent., and similar figures could be quoted for nearly every country in this section of the table. Germany's purchases have held up better than her sales. In Sweden, Norway, Latvia and Estonia they are a higher proportion of the total than in 1929. The six months' figures for 1938 show that efforts are being made by Germany to recapture her Scandinavian and Baltic trade. But in general this part of the world shows greater success for British than for German methods.

Central and South-Eastern Europe has been the scene of Germany's most spectacular gains. Of the eight

countries included, all except Czechoslovakia show big increases in the share of their import trade that goes to Germany. Some of these increases are spectacular—for instance, 17.5 per cent. of Turkey's purchases in 1929 increasing to 43.7 per cent. in 1937. The figures for the first half of 1938 show this increase continuing in most of the countries. This great increase in Germany's sales to the Danubian and Balkan countries has not, however, been generally at the expense of Great Britain. The British share in the imports of Italy, Turkey, Greece and Bulgaria has fallen; but it has increased in the other four countries. Moreover, the 1938 figures make, on the whole, a favourable comparison. Our share of the Turkish market, which had fallen most drastically, has been more than double this year what it was last year. On the side of the exports of these countries, Germany is, in general, taking a larger share, but Roumania, Hungary and Czechoslovakia are significant exceptions. British purchases are higher from Czechoslovakia, Yugoslavia (notably), Roumania and Hungary, but lower from the other countries.

The figures for the *British Dominions* show, in general, considerable increases in the already large proportions of their exports going to the United Kingdom and, on the other side of the account, at least a maintenance of the British position in their markets. The chief exception to these generalisations is Eire. It is also notable that our share of the Indian market has fallen, and India is also the only country of the group to show a significant increase in her purchases from Germany. The position in the *British Colonies* is very similar to that in the Dominions. Germany's share in the imports of the colonies is everywhere small, and nearly everywhere lower than in 1929. Nigeria and the Gold Coast are the chief colonies having a substantial trade with Germany, and there it is mainly on the side of exports. Germany took 19½ per cent. of Nigeria's and 18 per cent. of the Gold Coast's exports in 1929, and 23 per cent. of Nigeria's and 18 per cent. of the Gold Coast's in 1936. The British share in the colonies' trade is everywhere large, but has not in general increased since 1929.

In *South America*, the position is different in different countries. In Brazil, Chile and Peru, Germany has considerably increased her trade. She has increased her sales to Venezuela and her purchases from Colombia, but in each case the counterpart is lacking. In Argentina and Uruguay, her share both in exports and in imports has declined, though German-Uruguayan trade on both sides and German purchases from Argentina have increased in 1938, mainly due to imports of maize. British experience has in almost every case been the opposite of German so far as our sales are concerned—bad in Brazil, Chile and Peru and well maintained in Argentina and Uruguay. But the countries which have diminished their purchases from us now send us a larger share of their exports.

In the *United States* the British share has been maintained, but the German share has been halved. In *Egypt* there has been some increase in German trade, but not at Britain's expense. In *Japan* both countries have a smaller share of imports and a larger share of exports.

The significance of these facts cannot be grasped without some appreciation of the relative importance of these different groups of countries in our foreign trade. This is shown below:—

	Percentage of British Trade, 1937	
	Exports	Imports
Western Europe	11	9½
Northern Europe	9½	14½
Central & South-Eastern Europe...	3	3
British Dominions	31½	33
British Colonies	17	6½
South America—Argentina	3½	5½
Remainder	3½	2

It will be seen that the two areas where Germany has advanced and Great Britain has declined—Central and South-Eastern Europe, and the South American countries other than Argentina—together represent only a very small fraction of our foreign trade. On the other hand, in the areas that are important for us, we have at least maintained our position or, where we have lost ground, have not lost it to Germany.

It is a difficult matter to indicate exactly which British industries have suffered most from German competition. In Italy, where the displacement of British goods by German has been most deliberate, the sufferers have been the coal and engineering industries, but German sales of textile goods have been reduced even more than the

British. On the other hand, in Turkey, and to a lesser extent in Brazil, Germany has captured our market for cotton piece-goods, but the demand for British machinery, relatively to German machinery, has been fairly well sustained. These facts illustrate the impossibility of generalisation. Subject to all the necessary provisos, however, German competition seems to be most severe in cotton textiles and machinery.

The conclusions to be drawn from this factual survey are not in very close accord with the assumptions of much current discussion. Germany has not increased her share of the world's trade to any very sensational extent and where she has succeeded it is mainly in areas that are not of primary importance to Great Britain. These facts, however, relate to the past. The future is a different matter, which receives some consideration in the last section of this survey.

3. Germany in South-Eastern Europe

GERMANY'S two-fold aim, to increase her self-sufficiency in primary products and to foster her manufacturing industries through the conversion of South-Eastern Europe into a kind of hinterland, has been brought a step nearer realisation by the mutilation of Czechoslovakia as an independent national unit, as a result of which the other countries south of Poland and Russia now are much more directly exposed to German penetration. This article attempts to examine (a) the resources of South-Eastern Europe in relation to Germany's need for raw materials, (b) the methods employed by Germany in furthering her aims, and (c) the effect of Germany's drive on Britain's trade with South-Eastern Europe.

Hitherto Germany's greatest weakness has been the comparative paucity of her domestic raw material supplies. Almost as much as one-third of her total consumption of industrial raw materials, as well as a substantial proportion of her requirements of foodstuffs, have to be imported. Owing to the change in her political orientation, Germany has encountered great difficulties in finding ways and means of satisfying her needs of foreign raw materials and crude foodstuffs. Imports of these amounted to as much as Rm. 3,000 millions in 1937, but even so, owing to the pace of Germany's re-armament, they were scarcely sufficient for all purposes, and the value of her present requirements may be estimated at as much as Rm. 3,500-4,000 millions per annum.

As Germany, with her present political and economic policy, encounters great difficulties in securing sufficient foreign exchange to meet her requirements in raw materials, she has been anxious, for some time, to obtain an increasing proportion of her imports of primary products against payment in kind. It is scarcely surprising, therefore, that the conclusion of the Munich Agreement has been the signal for an intensification of her attempts to utilise the resources of South-Eastern Europe to the full. It has been estimated that East-European countries could provide something like 50 per cent. of Germany's import requirements in raw materials. If Germany had access not merely to the total exports but to the total production of these seven countries, she would, for example, be self-sufficient in the following commodities:—

Cereals.	Timber.
Livestock and meat.	Skins.

Tobacco.	Bauxite (the raw material of aluminium).

In addition, these countries could provide Germany with substantial quantities of

Iron ore.	Other metallic ores.
Steel.	Fats.
Copper ore.	Petroleum.
Manganese ore.	Cotton.
Chrome ore.	Wool.

Until fairly recently the economy of the South-East European countries was based on agriculture. It had long been known that some of them possessed valuable deposits of minerals, but lack of capital prevented large-scale exploitation of these resources. But under the influence of the movement towards economic nationalism, which gained momentum during the depression, when these countries were thrown back on to their own resources, attempts were made by most of them to establish manufacturing industries, mainly on the basis of domestic raw material supplies. The exploitation of their raw materials resources and the establishment of manufacturing industries has been fostered by Germany in recent years in order to secure for herself larger supplies of raw materials from countries whose communications with her could not easily be interrupted, and in order to secure an outlet for her manufacturing industries, such as engineering and textiles. The progress of the industrialisation of these countries in the past decade has

been surprising. The volume of industrial production between 1929 and 1937 showed increases of 51.2 per cent. in Greece, 37.3 per cent. in Hungary, and 31.7 per cent. in Roumania.

The current output of ores and metals, however, is not necessarily an indication of the potential output. Yugoslavia, for example, is one of the richest metalliferous regions in the whole of Europe, possessing resources complementary to those of Germany. Yugoslavia's copper deposits are the most important of the known resources in Europe, and she takes third place in resources of manganese ores. In addition, Yugoslavia is rich in chrome, lead, bauxite, antimony, iron ore and zinc. It is possible that Roumania's resources are even greater but, in the absence of a comprehensive survey, it is difficult to obtain precise estimates. Roumania is known to possess gold, silver, platinum, copper, iron, lead and spelter, antimony, chrome, manganese, bauxite, bismuth, molybdenum and mercury. Some of these deposits have only recently been surveyed, and, as far as is known, they are very substantial. Bulgaria, too, is known to have important mineral deposits, though their exploitation as yet has scarcely begun. Gold, silver, copper, lead, zinc, iron ore, chrome, manganese, coal and graphite are known to exist in Bulgaria. Turkey, also, is rich in minerals, but apart from some of them, including coal and chrome, little has yet been done for their exploitation. Moreover, Turkey, Bulgaria and Greece are apparently suitable for the cultivation of cotton, another raw material for which Germany is dependent on imports.

These undeveloped riches present possibilities for the future. But even in the present these Danubian and Balkan countries could be a considerable assistance to Germany if she could secure the greater part of their exports. An examination of the resources of South-Eastern Europe in relation to Germany's import requirements yields the following approximate results:—

Cereals.—On the average, Germany's import requirements amount to 41 million metric quintals (of 100 kilogrammes) per annum. On the other hand, the export surplus of the East-European countries averages about 46 million metric quintals per annum, over a period of years. Germany's imports requirements, therefore, could be fully covered by South-Eastern Europe.

Timber.—As a result of the annexation of Austria Germany's import requirements have been reduced from 44½ million metric quintals per annum to 27½ millions. But, as the combined exports of Roumania, Czechoslovakia and Yugoslavia amount to about 38 million metric quintals per annum, the control of the resources of these countries would render Germany independent of other external supplies.

Tobacco.—The export surplus of Bulgaria, Greece and Turkey amounts to 1,000,000 metric quintals per annum, compared with Germany's import requirements of 900,000 metric quintals.

Bauxite.—Germany's import requirements amount to about 13 million metric quintals per annum. Hitherto, the export surpluses of Yugoslavia and Hungary have been only in the neighbourhood of 8 million metric quintals, but as a result of the intensification of the output, these are now being substantially increased.

Copper Ore.—Germany's requirements of about 5.5 million metric quintals per annum could be met in full by an expansion of output in Yugoslavia and Roumania.

Skins and Leather.—Germany's requirements of 1.5 million metric quintals per annum could be fully covered by the export surplus of Bulgaria, Roumania, Greece, Turkey and Yugoslavia.

Livestock, Meat and Fats.—Germany's import requirements of these, as well as of eggs, vegetables and fruit, could be fully covered, though she might have to supplement her imports from South-Eastern Europe by purchases from other countries in case of poor harvests.

Iron Ore.—Germany's imports of iron ore were no less than 206 million metric quintals in 1937, but the annexation of Austria and the development of domestic low-

grade ores will reduce this dependence on imports. Moreover, it is doubtful whether Germany would wish to dispense with her imports of ore from Lorraine and Sweden. Present production in the South-Eastern countries is very small, but it might be developed considerably.

Oil.—Germany's requirements of oil amount to about 30-40 million metric quintals per annum. Roumania is not in a position to present to export more than about 7-8 millions. Consequently Germany is anxious to increase Roumania's productivity by sinking additional wells.

Cotton and Wool.—It is Germany's aim to cover half of her requirements in cotton by an increase in its cultivation in Turkey, Bulgaria, and Greece, possibly also Jugoslavia. She is also seeking means to stimulate the production of wool in South-Eastern Europe.

In sum, the South-East European countries, whose aggregate exports amounted in 1937 to roughly Rm. 2,000 millions, are already in a position to meet something like 20 per cent. of Germany's import requirements of primary products. The potential output of these countries, moreover, is considerably in excess of current production. A vigorous exploitation of their resources, accompanied by a drive for industrialisation, would considerably strengthen Germany's economic position.

The Munich Agreement has undoubtedly strengthened Germany's ascendancy over South-Eastern Europe. The figures in the preceding article show that she already dominates the trade of these countries; but she is not yet in complete control of their economic policy. At the same time, her influence over them is increasing day by day. What methods is Germany pursuing in her attempt to organise the economies of South-Eastern Europe for her benefit?

Hitherto, Germany's drive in South-Eastern Europe has been somewhat indiscriminate. She bought as much as she could and gave her customers only a limited choice in their purchases. Germany's imports, not necessarily by coincidence, thus frequently exceeded her exports, giving her an opportunity to obtain foreign exchange by unloading a proportion of her imports on to the world markets.

Now, Germany is endeavouring to organise the economies of South-Eastern European countries as a complement to her own. Her aim is (a) to promote their output of primary products in which she herself is deficient, and (b) to improve their communications and to foster industrialisation in order to secure an outlet for her manufacturing industries. In order to achieve these aims, which necessitates planning ahead, Germany is anxious to stabilise the exchange rates of the currencies of South-Eastern Europe in relation to her own, to stabilise prices at which products are to be exchanged, to grant long-term revolving credits and to divert the resources of each country into the required channels. These aims are clearly discernible in the latest discussions between Germany and the South-Eastern countries, and stable exchange rates have already been fixed with Roumania and Jugoslavia.

Dr Funk has declared that Germany is not attempting to prevent the Danubian and Balkan countries from trading with others. This declaration may be more sincere than, for example, Japan's repeated protestations of respect for the "open door" in China. But it is obvious that the objectives of Germany's commercial policy in Europe cannot be achieved without a considerable degree of exclusivity. Only the purchase of the whole of the export surpluses of these countries would assist in the solution of Germany's raw material problem to the powerful extent indicated earlier in this article. Moreover, Germany will not be willing to see her efforts to exploit their mineral resources turned to other countries' advantage.

But the Danubian and Balkan countries are not in the least anxious to become exclusively tied to Germany. On the contrary, they are disposed to view with alarm any further increase in the German share of their trade. Political considerations naturally play a part in this attitude. But there are good economic reasons too. Each of these countries requires free exchange for purchases of tropical products and other goods that Germany cannot supply. Each of them fears that the large imports of German goods, which are the counterpart of large sales to Germany will stifle their domestic manufacturing indus-

tries. While ready enough to have their mineral resources developed, they do not wish to do so for Germany's benefit alone. And finally, it is being increasingly realised that the burden of the attractive prices that Germany can offer for Balkan agricultural produce falls ultimately on the Balkan consumer of manufactured goods.

These smaller countries are thus far from being enthusiastic adherents of the German commercial cause. But they have to live, and the German offers are very attractive to the dominant agrarian elements. Resistance to Germany's claims can only be effected if alternative markets can be found. This is where Britain comes in.

British policy in the trade relations of South-Eastern Europe was authoritatively restated by the Prime Minister in the House of Commons this week. Great Britain, he said, was not attempting to prevent Germany's commercial expansion in this part of the world. Geographically, Germany "must occupy a dominating position there. . . . So far as this country is concerned we have no wish to block Germany out from those countries or encircle her economically." But Britain, too, has trade interests there, "and of course we mean to maintain those trade interests." Last June the President of the Board of Trade was even more emphatic. "The Government," he said, "are anxious to develop in every possible way trade in that quarter of the world, and they will be glad to use any practical methods to develop it."

One method that has been adopted to foster British trade has been the granting of loans for the purchase of British goods. One such loan has been granted to Turkey, and there have been suggestions of further loans to Roumania and Bulgaria. But loans cannot be repaid unless these countries can sell their goods in the British market. The only sane way of defending British interests in these countries is by taking steps to ensure that British purchases of their goods are maintained. This is the policy that has already been begun by the British purchases of Roumanian wheat.

With the exception of Czechoslovakia, all the other states of this region—Hungary, Jugoslavia, Roumania, Bulgaria, Greece and Turkey—are agricultural countries dependent, in most cases, on the export of one or two commodities. Oil and cereals make up 70 per cent. of Roumania's exports, and tobacco is half of Greece's and one-third of Bulgaria's sales. Jugoslavia and Hungary have slightly more diversified economies, but cereals, timber, livestock and metals account for fully half Jugoslavia's exports and cereals, and livestock for nearly one-third of Hungary's. The leading exports of the countries together are wheat, maize, livestock, tobacco, oil, timber and metals.

For nearly all these commodities the United Kingdom is by far the largest element of the world market. British imports of wheat, maize and barley, for example, amounted to £76 millions. The shipments of these grains from the Balkan countries were in every case small, Roumania's, for example, amounting to little more than £1 million. In oil, only £2 millions of Britain's total imports of £48 millions come from these countries. In fact, the only commodity of which Danubian and Balkan exports formed a substantial part of British imports was dead poultry. In 1937 Great Britain took one-third of her imports from Hungary and a further share from Jugoslavia; but the total trade amounted only to £2 millions.

There is no question, then, that Great Britain, if she chose, could buy a largely increased proportion of these countries' exports without making more than a small difference to her own imports. Other countries would, of course, be affected. A diversion of British imports would hit Argentina (maize, beef and wheat), Canada (wheat, timber, copper and lead), the United States (tobacco, oil and timber), and Australia (wheat, beef and lead). But the quantities in question are very small. British imports in 1937 amounted to nearly £1,000 millions, whereas no Danubian or Balkan country's exports, except Czechoslovakia's, exceeded £35 millions. On the other hand, to compete with overseas, the produce of these countries would, in most cases, require the assistance of a subsidy. British trade with these countries can, then, unquestionably be fostered, but only with the definite assistance of the British Government.

4. Results and Prospects

WHAT conclusions is it possible to draw from the foregoing analysis of what has been achieved by German commercial policy? In particular, what lessons can be learnt by Great Britain?

The first conclusion that emerges is that Germany's efforts to expand her foreign trade have met with considerable success, but in a limited range. Germany has secured a very high proportion of the trade of the countries to the south-east of her, and she has made some progress in several South American States. But in those areas of the world which are of greatest importance for British trade her success has been meagre. Even in the Balkans, Germany's trade drive is likely to be of more importance to us because of the benefits it confers on the German war machine than through any effect that has hitherto been noticeable on our own trade.

If German trade expansion stopped at the point it has now reached there would be no excuse for much of the alarmist talk now current. But that it will not stop at this point can be taken for granted. What of its further development? In assessing the prospects for the future, it is of primary importance to notice that virtually all Germany's successes have been with countries that have imposed some form or other of exchange control. Indeed, it is wholly natural that German penetration should be assisted by the existence of exchange control. It is only when a country is already selling its own goods on a barter basis that it will take German goods on those terms.

It would be a delusion, however, to suppose that none of the German expedients for fostering exports would be effective without some form of exchange control in the recipient country. For other countries there is the powerful weapon of the export subsidy, which can be wielded with such delicate precision by an autocratic government. And an importing country inevitably strengthens its bargaining position if its imports are, in effect, bought in bulk by a government which is frequently ready to pay somewhat more than the competitive price. These methods will unquestionably be extended in the future. It is reasonable to suppose that they will be applied first to agricultural countries with raw materials to sell and industrial products to buy, and it would only be a natural extension of the present direction of the drive if the Near Eastern countries were the first on the list.

The probability must therefore be faced that Germany's efforts to expand her trade will affect British trade more in the future than in the past. If ever the pace of the armaments race were to slacken, Germany would have additional energies and resources to apply to the export industries. British public opinion and the British Government should, therefore, in common prudence, begin, while there is still time, to study the measures that could be taken to defend British foreign trade. Britain's need of imports is greater than that of any other first-class Power, and our earnings are already barely large enough to pay for our imports. Any substantial encroachment on our markets would directly limit our access to the raw materials and foodstuffs we need. Maintenance of our foreign trade is an aspect of defence which we cannot afford to neglect.

It goes without saying, too, that most of the measures that would have to be taken in the cause of commercial defence would probably be as objectionable and as wasteful as the building of bombers and the digging of trenches. In a sane world it would be necessary neither to equip armies nor to encase our foreign trade in armour plate. We must attempt, while defending ourselves in an insane world, to preserve as many as we can of the elements of sanity.

There is one possible measure of defence to which these reflections do not apply. In economic peace or war, and under any economic system, it will be to Great Britain's advantage that the goods she has to sell are priced as reasonably as possible. To an increasing extent of recent years Great Britain has been becoming a dear seller.

Except for coal, our exports are predominantly manufactured from imported raw materials. But in the past ten years the average price of our exports, relatively to our imports, has risen by 24 per cent. In other words, the charge we make upon the world for converting raw materials into manufactures has increased by about a quarter. There is always the danger that the world may consider that British manufacturing services are too dear at the price. If our export trades were in danger it would become a matter of urgent national importance to review the desirability of assisting the coal and steel industries artificially to maintain the prices of their products.

It is unlikely, however, that any practicable reduction in British conversion costs would be sufficient in itself to defend our export markets from attack. More drastic measures would have to be considered. It is not intended in this article to give an exhaustive list of the steps that could be taken, or even to pronounce upon the desirability of any particular expedient. The following comments, in fact, are intended to serve as no more than a preliminary agenda for a discussion of possibilities.

Subsidies.—Germany's export subsidies achieve their effect because a Government which is above criticism can exercise the necessary arbitrary discrimination. But would it be possible for a British Government to subsidise one export industry and not another, making its choice not according to the degree of depression of the different industries but according to the amount of effect that a subsidy could have? Would it be possible to subsidise the export of cotton cloth to, say, Brazil but not to Italy? These are some of the difficulties that beset a policy of subsidy, even apart from the difficulty of raising the funds.

Anti-Dumping Conventions.—It might be possible for Great Britain to use the lever of her enormous purchases to induce other countries to impose special penalties on goods coming from countries employing trade practices defined as "unfair." There is some precedent for this sort of procedure, but it might not be easy to induce a sufficient number of countries to impose severe enough penalties for the policy to be effective.

Payments Agreements.—Another possible use of Britain's buying power would be to induce the countries from which we buy to guarantee the expenditure on British goods of fixed percentages of the sterling received by them. This is the principle of our payments agreements with Germany and other countries. The great objection to this method is that it encourages the strait-jacketing of trade. But even strait-jackets are necessary in asylums.

Bulk Buying.—None of these methods, however, offers a satisfactory riposte to Germany's new technique of offering to buy the whole of a country's crop of a commodity at an attractive price. If Great Britain wants to secure her share in that crop, the only possible reply is to go in for bulk buying on our own account. A precedent has been created in the last few weeks by a British Government purchase of Roumanian wheat. In these purchases the British Government can always offer a lower price than the Germans, because of the superior attraction of the free pound over the blocked mark. But the price to be offered must in most cases be higher than the price prevailing in world markets. For this reason, if for no other, it is a matter for the Government and not for private firms.

This, as has been remarked, is only a tentative list of the possible expedients. *The Economist* must not be taken as regarding them with anything but the same revulsion with which it regards anti-aircraft guns, balloon barrages and gas masks. But in the commercial field even less than in the military, can we afford to be pacifists?

For the moment, any serious threat to our trade from Germany or any other country is remote. But for the first time in modern history a first-class industrial power is applying methods of discrimination, exclusion, controlled dumping and autocratic control to foreign trade. We shall do well to be on our guard against the results.

France

Freedom or Control?

PARIS, November 3.—Since Munich the slogan of the Radicals and Moderates has been: "Be strong, so that you may be able to negotiate profitably—you and your British allies—with the dictatorships." At the Congress at Marseilles, M. Daladier announced the rupture with the Communists, declaring them to be guilty of inciting the country to make war while refusing their support to industry for increasing production. This condemnation was balanced by a warm appeal to the workers to co-operate and a pledge that the social laws would be observed. Nevertheless, these laws are to be altered by new decree-laws dealing with workers' representation in factories, strikes and strike ballots, the entry of foreign workers and so on.

So far so good. But, as soon as the problem of increasing production and maintaining the stability of the franc approaches, the real difficulties crop up. The old Liberal thesis of a balanced Budget (which would require economies of 20,000 to 30,000 million francs!) and the return of expatriated capital has been abandoned. The Minister of Commerce, for instance, is a supporter of a directed economy. But this would mean the supervision of private industry by the State and supervision or control of the currency of the exchanges. Private industry is ready to accept the subventions of the State, and to welcome protection through tariffs, but rejects any further State intervention. Industrialists argue that State interference would raise prices—by bringing prices into line with the costs of the worst producers; and they object to what they contend would be the injection of politics into economics. Their arguments are a mixture of theory and self-interest.

The needs of the Treasury, as well as assistance to private industries, will require a very great deal of money. How can this be forthcoming if exporters continue to abstain from repatriating the produce of their exports? "Control foreign trade to avoid controlling the exchanges," proposed M. Herriot at Marseilles. M. Marchandau, the then Minister of Finance, actually advocated control of the exchanges, which would facilitate the expansion of credit in spite of imposing heavy sacrifices on capital. But M. Daladier rejected this course, which he conceived to be in contradiction to Liberal doctrines, to the Tripartite Agreement, to collaboration with London and to the hopes of renewed international co-operation which an understanding with Germany would evoke. Moreover, exchange control was rejected by the Senate when the Popular Front was in power.

Reynaud vice Marchandau

So M. Marchandau, who curiously enough had adopted the Socialist proposals of March last, resigned. M. Reynaud succeeds him. M. Reynaud has several times spoken in favour of devaluation, but now he contends that the French problem has no monetary solution, because the situation in 1938 is very different from that in 1935, when high French gold prices hampered economic recovery. M. Reynaud has been a constant advocate of increasing production in order to stabilise the purchasing power of the franc. Without a greatly increased industrial output no budgetary equilibrium is possible, no monetary stability, no credit, no military security, no social laws. Work is the key to the maintenance of liberty and peace.

The Radical Marchandau, after having supported the Socialist plans of M. Blum, resigned in favour of the Liberal Reynaud, who supports the Franco-Russian pact, only a few days after M. Daladier's denunciation of the Communists.

This may not be pure coincidence. The decision of M. Daladier conforms with the main thesis he developed at Marseilles: "Be strong in order to be able to choose your friends independently, while at the same time you negotiate usefully with your vigorous competitors, the dictatorships."

The French financial and economic balance sheet will be cast up in five days by M. Reynaud. At present the power to govern by decree ends on November 15th; but the first consequence of the latest Ministerial change may be a prolongation of this period.

Less Coal Consumed

Coal consumption in September was 5,729,000 tons, against 6,322,000 tons in September, 1937. Output was 4,044,000 tons, or 277,000 tons more than in September, 1937. Coal imports amounted to 1,741,000 tons, or 805,000 tons (31½ per cent.) less than in 1937; and their value was 387 million francs, or 40 millions less than in August and 81 millions less than in September, 1937.

Coal consumption during the first nine months of this year was 5,400,000 tons smaller than in 1937, imports were 5,600,000 tons less, and production only 1,635,000 tons more. Stocks, after having fallen by 815,000 tons between January and September last year, have risen by 527,000 tons since then. Thus the diminution of coal imports appears to have been mainly due to the slackening of industrial activity.

Switzerland

Smaller Tourist Returns

GENEVA, October 28.—The unsettled political outlook and adverse weather conditions in August resulted in a decrease in tourist traffic. Earnings of transport undertakings were generally smaller, except those of the Alpine Postal Motor Coach service which, during the summer, transported 534,662 passengers, against 511,143 last year. The Federal Railways carried 75 million passengers from January to September, compared with 83½ millions the previous year, the drop being 600,000 in September alone.

During the first nine months of the year, 7,186 Swiss hotels accommodated 3,249,000 guests of whom 1,483,000 came from abroad, compared with 3,308,000 and 1,668,000, respectively, in 1937. Tourism, of which the profits are nearly 200 million francs in normal years, is, considering the number of persons employed, our most important industry after the machine and the watchmaking industries. Regular tourist hotels were rare before 1840, but in 1880 their number had grown to 1,002 with 58,137 beds and a staff of 10,000. The number rose to 1,708 with 88,634 beds and 20,000 employees in 1894; and to 3,585 with 168,625 beds and a staff of over 43,000 in 1912.

The hotels were hard hit by the War and post-war economic crisis; and measures were taken by the Government in agreement with the Hotel Keepers' Association to close down some hotels and prevent the building of others, while State subsidies enabled the *Fiduciaire Hôtelière* to restore to financial health about 150 hotels which were labouring under heavy mortgages. Consequently, from 1929 to 1938, the number of hotels was reduced by 414 to 7,186, with nearly 185,000 beds and a staff of 74,000.

The importance of the tourist industry to Switzerland may be gathered from a few examples. Last year, the hotels'

bill for foodstuffs and drinks was 83 million francs, 70 per cent. of which was spent in the country; 24 millions for wood, coal, gas and electricity; 68 millions for salaries and 47 millions for repairs and improvements. Theatres, cafés, restaurants, banks, garages, transport undertakings, as well as all sorts of shops, doctors, Alpine guides, ski teachers, musicians, hairdressers, etc., benefit from the industry. It is estimated that foreign tourists provide 10 per cent. of the earnings of the postal service, and 5 per cent. of those of the telephone and telegraph service, while their contribution to the receipts of transport undertakings reaches about 17 per cent.

A Tourist Franc?

But Switzerland to-day suffers from the attractiveness to tourists of other countries where life is somewhat cheaper. Accordingly, a suggestion has been made that a special tourist currency should be established. The French lose 88 per cent. and the Italians 78 per cent. on their money in Switzerland at present, and the establishment of a "Tourist Franc" might reduce their losses by 30 or 40 per cent. The question is far from being settled, and meanwhile more immediate measures for fostering tourist traffic suggest themselves. Swiss hotels are no more expensive than their French or Italian counterparts as regards "pension" prices, and their standard is a higher one, but they are more expensive as regards "extras," and the Swiss hotel keepers do not yet realise that by charging less for drinks they would sell more, make a bigger profit and attract more visitors. They are of course entitled to make a profit on drinks, but it is inadmissible, in the opinion of many British visitors, that they should make a profit of 200 per cent. on a bottle of wine, of 300 per cent. on a bottle of whisky, or of 320 per cent. on a bottle of Vichy water.

No More Germans

Tourist traffic could be further encouraged by an abatement in transport taxes, and it is said that the Federal Railways are contemplating a reduction in fares. It might also be worth while to bring down the charges of taxis and other sundries paid for out of the tourist's purse. In fact, a general reduction of all sundry charges would do more to encourage tourist traffic than creation of a tourist currency of which the advantages seem in doubt.

The drop in the number of foreign visitors is also due to the fact that German tourists, who once accounted for nearly 25 per cent. of the total number of visitors, are now prevented from going abroad. An arrangement was made a few years ago between Germany and Switzerland in regard to tourists. Switzerland agreed to advance to German tourists the money for their stay in Switzerland, and these advances were repaid by goods imported from Germany. At one time, German tourists could thus be exchanged for coal; but at present trade is far from brisk. The clearing account is against Switzerland, which had advanced up to the end of September last about 17 million francs, for which no compensation is so far available from Germany.

Spain

Trends in Barcelona

THE FRENCH FRONTIER: *Uncensored*, October 26.—The Spanish kaleidoscope has shifted since my letter from Paris. Dr Negrin's speech of October 14th, in which he set forth the conditions upon which Republican Spain would have peace, has clarified the Government's position. The substance of those conditions was that, first of all, the foreign troops aiding Franco must either get out of the country or be driven from it, whereafter Spaniards would undertake to settle differences without foreign intervention.

Barcelona to-day is preparing both for peace and war. One hears much discussion of a peace by armistice or by a gesture from one of the Powers. But the fact that the Government goes ahead with its war preparations at accelerated speed is not lost on observers. The situation is such that "anything might happen," but peace is most likely to linger around the corner for some months at the very least.

Conciliatory Policy

There is also another change. When the Cortes met on September 30th and October 1st there existed considerable internal political tension. This tension was already reflected in the crisis of August 20th last when the Catalan and Basque Cabinet members resigned, their differences being aired in the Cortes with some bitter criticism. No one who understood the way of things in Spanish politics would make the mistake of thereby assuming a rupture in the solid war-front. The dissenting sections voted their unconditional confidence in the Government from which they were absent. It is now evident that, since the meeting of the Cortes, both sides are striving for greater cordiality, hard words spoken on the floor of the House, which did not appear in the Press, local or foreign, no doubt having had some effect.

The Negrin Government's policy of placating all sections of the Popular Front as far as possible, which is getting results, has also a bearing on the larger problem of Spanish conciliation in preparation for peace. This is particularly true of the Government's determination to re-establish at an early date public Catholic worship, so as to show that the Government is neither anti-God nor anti-religious. On October 17th three Ministers of the Government marched through the principal boulevards in a public funeral procession, in which appeared a surpliced priest and the Cross. It is significant that this public manifestation of religion was received everywhere with the utmost respect.

It is taken for granted by observers in Barcelona that Signor Mussolini continues to demand a free hand in Spain as the price of an understanding with Great Britain. At Munich he is reported to have made a four-fold demand on Mr Chamberlain, as follows:—

(1) A foothold in the Balearic Islands, if not actual possession of them; (2) guarantees that the political and economic pledges given him by Franco in return for his aid may be fulfilled; (3) the establishment in Spain of a "friendly" Government which would not be anti-Fascist; (4) the settlement of other Mediterranean questions.

Barcelona believes that the British Government is not disposed to accede to these demands. Even though they may find no support, there still remains the question of the political and economic pledges given to Italy and Germany. No one knows quite what these are, but at the same time no one doubts their existence. The question then arises, how are Germany and Italy to be compensated for their heavy expenditures in Spain?

It is true that the Negrin Government repudiates any suggestion that Spain should give Germany and Italy compensation, perhaps in the form of a financial settlement, as the price of their departure. Yet many thoughtful Spaniards are conjecturing whether such a settlement would not be a small price for ridding Spanish soil of these intruders and establishing peace in Spain's household once more.

Mediation by the Powers

In his declaration to the Cortes Dr Negrin emphasised that Republican Spain would recognise no obligations towards Italy and Germany on the rebel regime. In the opinion of this correspondent Spanish public opinion would not object to buying off those countries by monetary arrangement, if the main obstacle to peace was thereby removed; and it may be assumed that in this respect the Republican Government—Dr Negrin's or another's—would follow popular opinion.

There is no doubt about the intention of the Republican Government that Italy and Germany must get out. "If

West End Branch: 198 Piccadilly, W.1

they don't, we will fight until we are crushed, if necessary," a member of the Government said to me; and he went on to add: "The words of Dr Negrin regarding 'mediation between ourselves and the invaders' (as distinguished from mediation between Spaniards), do not mean that Spain is ready, either to treat with Germany and Italy, or to compensate them for war expenditure and efforts aimed at destroying us. His words mean that foreign Powers which, by their policy of so-called non-intervention, have made it virtually impossible for the legitimate Government to defend itself against invasion, are free to negotiate with the invaders to get them out of Spain if they can. In other words we accept negotiations by foreign Powers which, juridically at least, are on friendly terms with us, with foreign Powers which are not. But we will have no foreign mediation between Spaniards."

There is a growing feeling that the authorities in England are again being made the dupe of Franco's false promises. "I am confident," said this Cabinet member, "that Franco was egged on by Germany and Italy to make such an offer in the hope of deluding England and catching her unawares in Spain. By so doing they might have procured a blockade of Spain which would have strangled the Republican Government, a natural war ally of England in spite of injuries incurred by England's recent policy. With the Spanish war thus liquidated, Germany and Italy would have been in a stronger position to menace England and France by sea and by land."

In connection with Dr Negrin's policy of conciliation it is interesting that the execution of death sentences has for some time been suspended, although General Franco has refused to suspend death sentences on his side by agreement. Some 200 persons are under sentence of death in Republican prisons for treason and kindred crimes. It is suggested that the Government would like to spare all these lives and in general pursue a more generous policy towards prisoners.

Estonia

Regulating Foreign Trade

TALLINN, October 24.—At the end of September the Government set up a Trade Commission to grant import permits, as part of the new policy of trade regulations. A large part of Estonian imports is subject to regulation, and permits have hitherto been granted by the Ministry of Economics. The new Trade Commission is composed of a chairman nominated by the President of the Republic, four representatives of the Ministries of Economics, Trade and Agriculture, the president of the Estonian Bank, and four representatives of business organisations. In order to co-ordinate trade and exchange policy, the Commission has the right to instruct the Estonian Bank concerning exchange permits. And it is also empowered to prepare plans for the regulation of exports.

Foreign trade has further improved during recent months, though the volume of business has for some little time shown a reduction compared with the previous year. Thus, imports in August were valued at 9.2 mill. Kr., against 9.8 in August, 1937, while exports amounted to 9.7 million Kr., against 11.1 million Kr. The reduction in imports is due partly to the diminished demand for raw materials and partly to the reduced prices of a wide range of goods. Exports of agricultural produce are still at a high level, but sales of industrial goods have noticeably declined—except for shale oil, which is now being exported in increasing quantities at good prices. Exports of timber have fallen heavily and prices are low.

In the first eight months of the current year imports and exports were valued as follows:—

	(Mill. Kr.)	
	1937	1938
Exports	62.4	65.6
Imports	72.0	72.6
Surplus of imports	9.6	7.0

England provided 17 per cent. of the imports and Germany 32 per cent., compared with 16 and 27 per cent., respectively, in the first eight months of last year. Of total exports 37 per cent., compared with 36 per cent. last year, went to England and 27 per cent., compared with 25 per cent. last year, to

Germany. The shares of England and Germany in the foreign trade of Estonia are on the increase; but trade with Belgium, Holland, Italy, Russia, and neighbouring countries shows a considerable decline.

Prosperous Agriculture

As far as it is yet possible to tell, crops have shown satisfactory results. The estimated rye crop is about 179,000 tons, or about 30,000 tons less than last year, but the wheat crop has increased from 76,000 tons to 82,000 tons. Crops of barley and oats are considerably larger than last year; and the hay harvest is so good that some increase in the number of cattle is likely.

Because of low prices the area under flax has been considerably reduced, and the crop, estimated at 7,300 tons, is about 3,000 tons smaller than last year's. The dry weather in August and September favoured harvesting, though it damaged the potato crop, which, according to a preliminary estimate, will amount to only 897,000 tons, compared with 987,000 tons last year. Prices of meat, butter and grain are relatively high, and the purchasing power of the farmers is correspondingly high, and business in agricultural machinery and artificial fertilisers is brisk.

Industrial Recession

In industry, no improvement is evident. Exports are low and show no signs of any marked advance; and the total number of workers in heavy industry amounted to 51,990 on August 1st, compared with 52,154 on August 1, 1937. In consequence of the falling off in the flow of investment the money market continues to be well supplied.

During the political events of September Estonia took up a firmly neutral attitude, though the public was considerably alarmed. The Foreign Minister declared in Geneva last month that Estonia regarded Article 16 of the League of Nations Covenant as optional and reserved the right to decide for itself about application of sanctions; and this declaration has been received by the Press with satisfaction.

Palestine

Financial Difficulties

JERUSALEM, November 3.—The announcement by the Palestine Government of a new Immigration Schedule for the coming six months has caused some surprise among informed onlookers. This surprise is not on political grounds, despite the reiterated Arab demand that Jewish immigration should entirely cease. There never was any expectation that this demand would be met. The Royal Commission recommended that, as a "palliative," Jewish immigration, independent of any demand by industry, should be limited to a maximum of 12,000 per annum in all categories. For the past year immigration has been arranged so that this maximum should not be exceeded, and the new schedule of 4,870 immigrants in six months continues this practice. In fact, under this schedule immigration should fall below the 12,000 maximum.

The surprise is due to another cause, the present deplorable economic and financial situation, in which there seems to be no relieving feature. Public finances, which a few years ago, despite reductions in taxation and an expenditure that ran to the verge of extravagance, persisted in showing a surplus month by month, now tell the opposite tale, and the large accumulated surplus has so nearly disappeared that the British Government has announced that, for the next two years at any rate, the additional cost of the armed forces in Palestine will fall on the British and not on the Palestine Exchequer. Palestine expenditure is thus for the first time a charge on the British taxpayer.

Business is at a standstill. The relatively very large sum of over £17 millions remains stagnant at the banks; and the owners, mostly immigrants whose main, if not sole, capital these millions represent, prefer the nominal interest they receive to the risks of investment. Despite the insistent demand for immigration certificates by Jews anxious to escape from Central Europe, the quota allotted to so-called "capitalists," men with £1,000 and upwards, remains incomplete. Factories, workshops and businesses close one after the

other. Bankruptcies are numerous, but in number far below the insolvencies, for small shopkeepers and industrialists seldom have sufficient assets to justify the cost to creditors of a formal bankruptcy.

The Extent of Unemployment

In these circumstances unemployment is inevitably widespread. The Palestine Government ceased some years ago to publish estimates of unemployment, but when arriving at the amount of immigrant labour to be admitted it must necessarily have had some figures at its disposal. That Arab unemployment is very widespread a casual visit to any Arab town furnishes evidence; also recruiting of the rebel "army" depends to some extent on Arab unemployment, increased by the policy of destroying Arab houses on the scene of outrages.

Among the Jews the large number of young men and women who fill the streets of Tel Aviv at all times, day and night, suggests a considerable reservoir of spare labour. But more definite information is available. At the beginning of this year, in the middle of the orange picking, on which thousands of men and women are employed, the Government estimated the number of Jewish workers wholly unemployed at from 8,000 to 9,000, with another 5,000 or 6,000 in part-time employment. This represented, after the conversion of the latter to full "units," about 13 per cent. of the total number of Jewish wage and salary earners. (It is interesting to note that the Jewish Agency, always conservative on the subject of unemployment, reported to the Mandates Commission of the League of Nations that Jewish unemployed, apart from part-time workers, whose numbers were not given, amounted to about 5,000.) Ten months of increasing stagnation must have swollen this figure, but one improvement on the situation a year ago is the large number of young Jews, about 8,000, employed as temporary police. There are also relief works, never so designated, which subsidiaries of the Jewish Agency have arranged, and Government extraordinary works.

Embryonic Socialism

The General Federation of Jewish Labour, the all-embracing Palestine Jewish trade union, has for the past three or four years regularly taxed its members in employment for the benefit of those who were without work. The proceeds are devoted to several objects, only in part to direct relief. The Federation, which is much more than a trade union, is, in fact, an embryonic Socialist State. It carries out contracts in competition with private employers, who are compelled to employ only union members. It settles its members on the land in communal groups, disposing of their produce on a co-operative basis and supplying them with all their needs. It trades both in wholesale and retail, has its own schools, hospitals and health services, for which, however, it demands and receives outside assistance, and pursues other activities. Above all, it is the strongest political party in Zionism and in Palestine. With the funds it raises for unemployment relief it finances works which could not otherwise be undertaken. It even supplies private employers with credit and makes loans to hospitals, schools, etc., so that its black-coated members may be given employment. By these means the visible volume of unemployment is reduced.

In all these circumstances it seems difficult to justify on economic grounds the immigration of even so small a number of workers as 1,150 during the next six months.

Japan

Lighter Harvests

TOKIO, October 8.—Nature has not been very generous this year to the Japanese farmer. According to the preliminary estimate of the Department of Agriculture and Forestry, just published, the rice crop for the country as on September 20th is 64,758,000 koku, a decrease of 1,529,000 koku (2.3 per cent.) from the actual yield of last year, but 2,028,000 koku (3.2 per cent.) more than the quinquennial average. The Korean crop is placed at 23,504,000 koku, a decrease of 3,292,000 koku (12.3 per cent.) compared with last year's actual yield, but 3,704,000 koku (18.7 per cent.) above the five years' average. The total yields of wheat and

allied grains for Japan, excluding that of Hokkaido, amounted to 19,882,000 koku, a decline of 2,482,000 koku (11.1 per cent.) compared with last year, and 1,721,000 koku (7.9 per cent.) less than the average of the last five years. Although these reports point to a less satisfactory harvest this year, the anticipated size of the yields will suffice to cover the country's requirements.

The autumn cocoon crop is also reported to have greatly deteriorated owing to unfavourable weather, the decline being put at some 20 per cent. But raw silk prices were sharply marked up in recent weeks, and smaller crops will be compensated to a considerable extent by higher prices.

Industrial Earnings

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese industrial undertakings, the aggregate net earnings of 1,000 companies, for the half-year ended June last, amounted to 602.2 million yen, an increase of 37 million yen on the earnings of the same concerns in the preceding half-year. Experience of different groups was not uniform; iron and steel and other metal trades, machinery and tools, mining, and chemicals showed a considerable increase in profits, while textiles, bricks, stock and produce exchanges, shipping, and rubber recorded smaller earnings. The ratio of net profits to capital was 12.9 per cent., and that of amounts put to reserve was 3.9 per cent. In the preceding half-year the profit percentage was 12.7 per cent., and the reserve percentage was 3.8 per cent.

The month of September witnessed a continued seasonal improvement in the export trade, though the value figure was still far below last year's level. Imports, valued at 194 million yen, fell by 68.8 million yen, or 30.4 per cent., compared with September, 1937; while exports, valued at 226.2 million yen, declined by 65.9 million yen, or 22.6 per cent. The most notable features in the September returns are a marked recovery in cotton imports and a heavy decline in silk exports.

The active trade balance for the month was 2.8 million yen higher than a year ago at 32.2 million yen. For the nine months of 1938 to date the total import surplus amounts to only 111.6 million yen—718.5 million yen less than in the corresponding period of 1937.

Increased Savings

The Savings Encouragement Bureau estimates the aggregate new savings during the first eight months of this year at 4,744 million yen, which exceeds the whole 1937 figure of 4,721 million yen. The official calculation is based on net increases in deposits in the Post Office Savings Bank, savings banks, trust companies, industrial and provident societies, and other savings institutions. It remains to be seen whether yearly savings of 8,000 million yen, which is the avowed objective of the Government's thrift and saving campaign, will be reached by the end of the year. Judged, however, by the result so far attained, it is not unlikely that the year's total savings will approach the mark, if not exceed it.

During the same period Government borrowing amounted to 2,530 million yen, and another 2,500 million yen is scheduled for borrowing during the current year. In view of the growth of new savings, as we have seen, and drastic economies effected in national expenditure which will reduce scheduled borrowing, it is generally expected that the Government will be able to raise necessary funds without much difficulty.

The pattern of Japan's economy is more and more determined by the strain imposed by the heavy cost of the war in China and the dislocation of Far-Eastern trade. It is from Japan's point of view, no less than from that of the other powers, that the economy of China should be reconstructed.

Letters to the Editor

Financial Policy in France

TO THE EDITOR OF THE ECONOMIST

SIR,—I am sorry to disagree entirely with an interesting letter of Mr T. Balogh, which appeared in *The Economist* of October 15th. I do not wish to examine the general problem of exchange restrictions, but I shall try to state the reasons why these restrictions would be disastrous in the present position of France; they are as follows:—

First, it is difficult to estimate the amount of capital exported by the French investing public, but good authorities consider that it is probably in excess of 100 milliard francs. The present French problem is not to prevent exports of fresh capital, but to obtain the return of capital previously exported. Exchange restrictions seem hardly fitted for this purpose, for they might, perhaps, prevent some exports, but they would certainly prevent any return.

Secondly, while it has taken years for dictatorial countries without colonies, like Germany, to enforce exchange restrictions, and while it has not prevented them from losing practically all their gold, think of the difficulties of enforcement in a democratic country like France with thousands of miles of colonial borders to protect.

Thirdly, exchange restrictions would draw France into the continental system of closed economic units, while the normal position of France, which requires the freedom of the Channel and of the Atlantic for its supplies, is to be linked with the freer economic systems of Great Britain and of the United States.

Fourthly, the franc is at present undervalued: French prices, which in 1935 were about 20 per cent. above British prices, are now about 20 per cent. below. As a consequence, the commercial deficit has now a tendency to decrease and the general balance of payments is probably now in favour of France, owing to the increase of invisible exports (*tourism*, etc.). This situation may improve still further when the 40-hour law is amended, as now appears certain. The franc has thus become a strong currency and does no more require any artificial support. This is clearly shown by recent events: since last May there has been in total more gold imported into France than exported, notwithstanding the war scares. There may even come a time when France, where interest rates are double those in other countries, may again attract foreign capital.

It would be foolish, under such conditions, to establish exchange restrictions whose sole effect would be to prevent the influx of capital which should normally occur in France.

Yours faithfully,

ANDRE ISTEI.

Paris.

[The following is the reply of Mr Balogh, who was enabled to see M. Istel's letter in proof.—ED., *Econ.*]

TO THE EDITOR OF THE ECONOMIST

SIR,—M. Istel's four arguments further increase—if possible—my doubts about the future of France as a democracy and as an independent power. To take his arguments one by one:—

(1) The problem of France is the problem of ensuring full employment and increased production. This is impossible as long as the newly formed or freed capital disposition is used to buy gold or foreign assets instead of being re-invested. The re-import of capital is a wholly secondary consideration; it could internally be completely substituted by credit creation. It is useful only in helping to pay for the excess of imports which must materialise as a result of increased employment (especially for re-armament). The Bank of France reserves are as ample for that purpose as they are inadequate to stand the further drain of capital exports. I should also like to ask M. Istel how many of the French companies' bye-laws permit them to speculate in foreign exchange and how much capital would be repatriated if the laws were observed or enforced.

(2) Surely it would be quite sufficient to control France itself. Or does M. Istel suggest that the negroes and other natives are endangering the French currency by exporting their enormous capital increments.

(3) The prevention of capital exports as such has nothing to do with collective or totalitarian economy (it is, of course, conversely true that totalitarian economies are based on foreign trade monopoly and a restriction of capital exports). It ill behoves the French Right to play the rôle of champions of *laissez passer* (in contradistinction to financial *laissez faire*). They have, by the introduction of quotas and other restrictions, transformed France in an almost closed economy—though without securing the full employment and adequate re-armament vouchsafed by the German policy.

(4) This argument merely supports my first contention that there is little reason to worry about the re-import of exported capital except that of the companies incorporated under law. It also shows that M. Istel still labours under the misapprehension that exchange control is merely an expedient to "safeguard" an uneconomic level of the exchange rate and not merely to prevent a continuous despoliation of the capital equipment of the country.

Gold export and import figures prove little about capital movements in these days of Exchange Equalisation Funds. To entrust *now* the economic destinies of France to the volatile factor of "confidence" is tantamount to being prepared to submit to any and every demand of Hitler for fear of a "financial crisis." It is *a fortiori* tantamount to forfeiting the possibility of national unity, because the working-class cannot be expected to make the necessary sacrifices, if at the same time the entrepreneurs and rentiers are not willing to bear their part of the burden. But in the face of the risk of international complications, voluntary capital repatriation is only likely if extremely favourable returns are offered for capital investment. Extremely favourable returns preclude not only such increase in direct taxation as is necessary for the reorganisation of public finances, but also necessitate depression of wages and social services far below the point demanded by the state of the Budget alone.

The internal flight of capital from Alsace will, perhaps, in time open the eyes of the French. I hope it will still be in good time.

Yours faithfully,

T. BALOGH.

University College,

Settlement in Spain

TO THE EDITOR OF THE ECONOMIST

SIR,—The dangers to world peace inherent in the Czechoslovakian crisis perhaps forced Mr Chamberlain to approve an agreement, without giving the Czechs an opportunity to discuss their own fate. This "incident" has passed, and, according to our beliefs, we either condemn or applaud it; but it is to be sincerely hoped that the unfortunate precedent will not be adopted in the case of Spain.

Spain is a different proposition from Czechoslovakia amputated and weak. She has a larger population, a greater practical experience in modern warfare, and her geographical position will always enable discontented minorities to obtain outside help, unless the "Big Four" intend to institute a permanent naval patrol off her shores. These few of many considerations indicate the need of giving the Spanish peoples some say in their future.

It might suit the dictators to see a Franco regime established, while France, and perhaps England, would wish to see the Republican Government restored. But consideration of either must lead to stalemate.

Perhaps the true solution of the problem may be found in the use of the knife that has been wielded against Czechoslovakia. Why not cut up Spain so that each element may gain at least partial satisfaction? The knife need not be drastic, since Spain naturally falls into three main groups, these differing in race, language and customs; the Castilians, the Catalans, and the Basques.

The Catalans and the Basques would probably desire to remain democratic, while the Castilians, or at least part of them, might be more interested in following Franco. Since

the Basque country and Catalonia border France, such an arrangement would presumably satisfy the French and the English, while the totalitarian powers might find satisfaction in a Fascist control of the Castilians.

If such an arrangement came about, it would be more satisfactory were it possible to sterilise Spain entirely by making her neutral in all future conflicts. In this way neither the Fascists nor the democrats would have any cause of fear.

Conversations are about to take place on the future of Spain, and it is to be hoped that such schemes as the one outlined here will be given at least careful consideration, and that the Spanish peoples themselves are permitted to have their say. Dare we mention Mussolini's insistence upon plebiscites?

Yours faithfully,

V. R. H. AUSTIN.

London, W.1.

The Danger of Re-armament

TO THE EDITOR OF THE ECONOMIST

SIR,—The need for acceleration in our armaments programme and for strengthening our national defences is voiced on all sides, but the hoped-for legacy of Munich—an attempt to settle outstanding questions by conference—seems to have been lost.

One shudders at the growing tendency to set Might on a pedestal. At the cinemas, in the streets, in most of our newspapers, in all walks of life, a military complex prevails, now that war is becoming to be regarded as inevitable. It will become inevitable unless some attempt is made to arrest the germ that has spread throughout the world.

In the certainty that the forces of England, France and Russia would be arrayed against him, Hitler would not commit his regime to war. In the post-Munich phase there is a more potent force making for war than the German self-determination claim. In producing armaments we diminish economic wealth, for they cannot be consumed. If they are utilised they destroy real wealth—the lives of men and women in all their productiveness—for their utilisation lies in war. Continued production of armaments without con-

sumption leads to the breakdown of the economic machine, and internal bankruptcy. The armament race goes on until one country faces bankruptcy. Internal bankruptcy means the defeat of the ruling class in a country. What is the alternative? War. War will be waged because it prolongs the existing rule, and because it is a risk as opposed to a certainty of defeat for the ruling power.

The situation calls for action on a wide field. Apart from the fundamentally economic insanity of armament production there is the grave danger of the possibility of "incidents" which may set the whole world at war. In a world prepared for war, "incidents" occur at the slightest friction. Our only true interest is to strive for a settlement which will result in an immediate and progressive scaling down of armaments.

Yours, etc.,

E. R. NUTTALL.

Prestatyn.

Counting the Cost

TO THE EDITOR OF THE ECONOMIST

SIR,—To the letter of Mr Mason published in your issue of October 22, 1938, I should like to make two remarks:—

1. In Bohemia, Moravia, and Silesia the Czechoslovak Republic loses: to Germany 2,800,000 Germans and 700,000 Czechs; and to Poland 67,000 Poles and 88,000 Czechs. Is it a "just" occupation, when Germany gains 3.5 per cent. of her population and Czechoslovakia loses 10 per cent. of her Czech population, and when to Germany are transferred the following cities with practically no Germans at all: Policka, with 5,221 Czechs and 35 Germans; Pribor, with 5,124 Czechs and 226 Germans; and Stramberk, with 3,268 Czechs and 72 Germans; and when to Poland are transferred more Czechs than Poles?

2. Who can rely upon the fact that, when the former German colonies question comes up for discussion, there will be only "further demands upon feelings and susceptibilities"?

Yours very truly,

JOSEF HRASE.

Prague.

Books and Publications

The Two Nations

A PLACE may usefully be found for this book* on the shelf of everyone interested in wage statistics. As a compendium and examination of existing information about earnings in different industries it is admirable. But the general reader, who skips the difficult sections and glances at the conclusions, is certain to be led astray.

Mr Kuczynski commences by estimating the percentages of men and women in each industry earning less than the Rowntree minima. In the case of men this wage is the minimum cost of maintaining a man, wife and three children. It is perfectly true that, if the population is to reproduce itself, every working man's wage must be sufficient to provide for a wife and three children. Nor, indeed, do Mr Rowntree's figures err on the generous side. Indeed, Sir John Orr has declared the Rowntree standard to be below the minimum requirement for health. But that is not the point. Mr Kuczynski is describing existing conditions. Less than a tenth of the population is to be found in families consisting of one earner and four or more dependants (wife and three or more children), while 60 per cent. of the population lives in families supported by more than one earner. The Rowntree minimum wage only applies to a small proportion of the employed population.

Thus, although a statement such as that 80 per cent. of coal miners are earning less than the Rowntree minimum wage may have a meaning for demographers, it does not give

* "Hunger and Work." By J. Kuczynski. Lawrence and Wishart. 132 pages. 3s. 6d.

any specific information about the current extent of poverty, unless we have some idea of the numbers of dependants. Perhaps only 20 per cent. of coal miners are really unable to maintain families at a level above that defined by Mr Rowntree. Moreover, the figure of 80 per cent. is itself fixed—in the absence of official statistics of the distribution of earnings—on the crude assumption that if the average earnings of men and women are above the minimum, then all the men and women employed are earning more than the minimum and *vice versa*.

Mr Kuczynski next proceeds to add up the results of his inquiries into various industries, and he finds that four million men and two million women are earning wages lower than the Rowntree minima (for women the Rowntree minimum wage is not calculated to provide for the maintenance

Ask for

WHITE HORSE

as a matter of course

Screw-cap flasks

on sale everywhere

of dependants); and from these figures he deduces by a series of estimates, intended to take account of the varying sizes of families, but which seem to be little more than guesses, that ten million people are living at a level below the Rowntree standard.

It is interesting to compare this figure of ten millions with others computed by, say, Sir John Orr and Mr Colin Clark. The Rowntree minimum wage for a man, wife and three children at October, 1935, was 51s. 3d., or 10s. 3d. per head. Mr Colin Clark's estimate (which is higher than Sir John Orr's) gives six and a half million people with incomes below 10s. per head per week. This estimate strongly suggests that Mr Kuczynski's figure of ten millions is too high.

In the last chapter of this book, entitled "Seven Lean Years," Mr Kuczynski attempts to prove not only that the rich are getting even richer, but also that they are getting richer relative to the rest of the population even more quickly; "the abyss between the two nations is growing in size." Comparing 1931 and 1937, he finds that average real earnings have risen 5 per cent. and the workers' share in the national income has remained constant. These results are not unreasonable, but it is doubtful if the numbers of the working classes have been increasing more rapidly than the rest of the population so as to worsen their relative position. But even if this were the case, it is well known that profits fluctuate far more widely than wages, and it would not be surprising if the relative position of the rich had improved between 1931, a year of depression, and 1937, a year of prosperity.

Finally, one may give a word of unreserved praise to Mr Kuczynski's computation of an index number of earnings for those industries for which particulars are regularly published. These are coal mining, the cotton and woollen industries, iron and steel, boots and shoes, bricks and pottery; and, together, they cover about a seventh of the insured population. This is a valuable addition to our stock of information, but the author has no justification for using his index as though it were representative of the whole of industry.

The defects of this book are less of technique than of deliberate and avowed bias. "La statistique est une maîtresse perfide, qui égare ses adorateurs," someone once said. But Mr Kuczynski is no ardent seeker after truth led astray by a too uncritical reliance on his statistics. To continue the metaphor, he is no Don José seduced and deceived by a fickle mistress. On the contrary, he has coldly exploited her for his own ends, those ends which he explains in the preface.

The book is written to put into the hands of the workers computations based on Government material, which will help them in their fight for higher wages, to assist trade unionists in negotiations for better living conditions, . . . for all those who . . . are ready to fight for the general welfare of the people and for social justice.

[Owing to a technical hitch the above Review as well as the following Shorter Notice appeared in a few copies of last week's *Economist*. We apologise to those readers whose copies have duplicated these items.—ED., *Econ.*]

Shorter Notices

"Manganese." Second Edition. By Dr A. W. Groves. (London) Imperial Institute (Mineral Resources Department). 164 pages. 3s. 6d. net.

It is reassuring to learn that "the British Empire is favourably situated with regard to supplies of manganese ore" and that Empire production rose, between 1932 and

1936, from 22 to 29 per cent. of the world's production, while exports similarly rose from 42 to just over 60 per cent. In this excellent handbook, the Institute, with characteristic thoroughness, reviews the various ores of manganese, its preparation and properties, prices, the world's production, and deals in detail with manganese ore in various countries within and without the British Empire. The most important use of manganese is in the steel and ferro-alloy industry, for manganese imparts important qualities to the steel or alloy product, including high tensile strength. Copper-manganese alloys are used for turbine blades, and manganese-bronze in marine engineering. Among the chief non-metalurgical uses of manganese ore is the manufacture of dry cells; and its catholic utility makes manganese important in glass-making, in the production of ceramic tints, as a "drier" in combination with vegetable oils, in the manufacture of pigments, in the chemical industry, in agriculture, and elsewhere. This handy treatise is as interesting as it is informative.

"The Good Society." By Walter Lippmann. George Allen and Unwin. 10s. 6d. net.

In this book Mr Lippmann has penetrated to the ultimate sources of freedom and, with renewed faith, based his defence of liberty on personality, whose essence is an energy, however we choose to describe it, which causes men to assert their humanity, and on occasion to die rather than to renounce it.

He flays the tyrannies, whatever their flag, which to-day oppress multitudes of mankind. He excoriates no less the softness and degenerate self-interest among the democracies which have lent the contemporary dictatorships such small show of plausibility as for the time being they possess. He demonstrates that all their vaunted planning aims, in fact, at war. So much is excellent. With the more severely economic parts of his book the position is different. His criticism of all forms of central direction of economic affairs and his reliance upon the sole operation of rightly conceived and equitably administered laws as the sufficient instrument for dealing with the economic troubles of the democracies are, to the English reader, over-coloured by American conditions, and rest at bottom upon assumptions which depart too far from the facts of social life to provide adequate foundations for the Great Society which he, and all men of good will, wish to build. But if this part of his argument needs broadening, the spirit which suffuses the book as a whole deserves the highest praise. In these overcast and troublous times the worst thing that can befall us is loss of faith. Since "The Good Society" is a work which must hearten the waverers and encourage the flagging, Mr Lippmann has made in it a real contribution to the spiritual regeneration, now so sorely needed, which is the first essential for the successful defence of freedom.

"Mending Minds." By Paul Winterton. Peter Davies. 252 pages. 8s. 6d.

This quiet but convincing book about mental hospitals is out of the usual run of such books in several respects. For one thing, it is based upon the actual experience of a careful and open-minded personal examination of the way in which hospitals and clinics are run. For another, it makes no attempt to parade as a stunt or a scoop; there is no straining, as there so often is, to "expose" something or other. Legislation, administration, methods of treatment, the problems of patients and staff alike are simply described in the non-technical terms of an intelligent layman. The conclusions are clear: too many local authorities are not doing their duty; "mental health is the Cinderella of the social services"; not even £10 millions annually can be found for mental treatment, though skilled workers are doing a fine job well. What is the remedy? The State must make mending minds a first duty; and, most important of all, the ignorance and prejudice of all classes on this subject must be swept away. Inertia and the idea of "stigma" are the present obstacles. Honest and informed publicity is the cure, and Mr Winterton has made an almost model beginning.

THE BUSINESS WORLD

Argentine Railway Problems

BLESSINGS for the Argentine railway stockholder in recent years have been all too few. Traffics have usually been poor, while exchange losses and increased working costs have diverted from the stockholders' pocket such revenues as could be earned. But the year to June last, as the managers of the Argentine railway systems unanimously admit, was one of the worst in their history. The depressing results for each line have already been reviewed in detail in the last two issues of *The Economist*, and need only be briefly recapitulated. It is sufficient to recall that Buenos Ayres Great Southern earned only £135,234 for preference dividends (against £629,526 in the previous year) and paid only 1 per cent. on its first preference stock; that Buenos Aires Western converted a net profit of £100,687 for 1936-37 into a loss of £117,110; that Central Argentine, more grievously affected by last year's crop failures than any other line, suffered a fall of 25 per cent. in gross revenues, and failed to earn its prior charges by £222,722; and, finally, that Buenos Aires and Pacific further increased its heavy debit balance at profit and loss by £914,117.

This is not an optimistic setting for discussion of the future. And the open canvassing of the possibilities of "nationalisation" in the chairmen's speeches seems to be based in part upon the feeling that company administration of Argentina's railway systems may never again be rewarded on the pre-depression scale, although the industry justly acknowledges that the Argentine Government to-day is showing a keener appreciation of railway problems. Yet, if the truth be told, Argentine railway stocks have recently fared somewhat better than home rails, despite the shock of the B.A. Great Southern and B.A. Western preference dividend cuts. These symptoms of encouragement deserve close examination.

A crop failure in Argentina plays havoc with the entire economic structure of the Republic. In October and November last year a series of frosts wiped out large areas of fine cereals and maize. Central Argentine, which carried virtually two maize crops in 1936-37, handled 60 per cent. less last year. The fall in grain traffic on B.A. Western was as high as 68.6 per cent. by volume and 72 per cent. by value. B.A. Great Southern lost one million tons of cereal traffic last year (including maize), representing over £500,000 in revenue. Even B.A. and Pacific, which must be treated as a case apart in any discussion of Argentine railway problems, felt the brunt of the crop failure both in reduced cereal receipts and also in lower wine freights. Nature would indeed be cruel to inflict such hardships on the Republic for a second year in succession. While there was some frost at the end of September (which according to one report damaged about 10 per cent. of the increased area sown to fine grains), the general impression is that crop prospects remain favourable. But until the present month has safely elapsed the harvest cannot be regarded as secure.

In order to illustrate the relative importance of different classes of traffic for the four companies, we show in the following table the contribution to total receipts from passengers, parcels and miscellaneous, grains, total goods, and livestock for the past three years and also for 1929. The first impression is that even the best recent year—1936-37—makes a sorry comparison with 1929, when traffics were good, exchange charges non-existent and ordinary dividends satisfactory. To-day, 1929 must be

regarded as a Golden Age. The investor is left with the unenviable task of divining his prospects in a "normal" year under post-depression conditions. It is, perhaps, permissible to hope that 1936-37 approaches more nearly to a norm than either its predecessor or its successor—with the reservation that, for Central Argentine, it was unduly favourable. On this assumption it is illuminating to compare the movement of different classes of traffic during the past two years, which is set out below:—

SOURCES OF GROSS OPERATING RECEIPTS

1937	843	695	485	665	1,267	5,260	428
1938	877	737	213	356	625	4,478	377

A feature common to all four lines is the successful development of passenger traffic. In part, this is due to the general forces of recovery in the Republic during the past three years. But to no small extent it has followed the enterprise of the companies themselves in providing cheaper and improved services. Suburban traffic on B.A. Western showed an increase of 9 per cent. last year and 8.2 per cent. in 1936-37. On Central Argentine, suburban traffic last year was a record, while B.A. Great Southern has increased its passenger takings by 15 per cent. during the past two years. It is evident, indeed, that the railways have already been able to meet urban road competition with considerable effect. And the inauguration of transport co-ordination in Buenos Aires last June should further assist the railways when all the undertakings are effectively transferred to the Corporation. Moreover, the National Commission for Co-ordination of Transport has now been appointed, and should be able, without undue further delay, to provide a greater measure of relief to the railways from demonstrably unfair competition, although it is worth recalling that the Co-ordination Law does not apply to intra-Provincial lorry services. But already, as the report of the Director-General of the B.A. Great Southern Railway shows, special rates for traffic to stations within a radius of 270 kilometres from Buenos Aires have forced the road haulier to go further afield in search of business.

Our table affords only a rough measure of the benefits which the companies may obtain if the current year's crops are of normal size. Grain movements are sensitive to world market conditions, and in recent years farmers have sometimes held back supplies when world prices have been unfavourable. Moreover, the benefit of normal crops will be

SCIENTIFIC INVESTMENT

By HARGREAVES PARKINSON,
B.A., B.Com. Editor, *Financial News*.

The Third Edition of a widely read and recommended book. Methods are discussed by which statistical analysis may be brought to bear on investment problems and the important "laws" of investment which emerge are formulated. 244 pages. 10/6 net (by post 11/-).

"This is a practical and interesting book for investors and their professional advisers."—*Investors' Chronicle*.

From a bookseller or direct from

SIR ISAAC PITMAN & SONS, LTD., Parker St., London, W.C.2

spread between the current and subsequent financial years. The current year's traffics are already suffering from the abnormally small carry-over of grain from last season; by converse, a larger carry-over next June will not come into the traffic receipts until the first part of 1939-40. One should not regard the bald difference between 1936-37 and last year as an indication of the potential improvement in gross receipts during the current year. And it is clear that goods traffic (apart from grain), which held up reasonably well on all four lines last year, will need improved grain business to offset the general decline in economic activity.

Short of a natural catastrophe, therefore, the investor is entitled to expect some recovery in gross revenues during the current year, although he cannot ignore total traffic losses of £850,000 to date. On the costs side, the balance of probabilities is against any major change. Wages retention has been in operation for some time; a cut of 5 per cent., for instance, was introduced by B.A. Western last April, and this has subsequently been increased to 8 per cent. But it is impossible to calculate the benefit of wage cuts for, under the terms of the Presidential Award, the amount of wage deductions which is actually retained is determined by the results of each complete financial year. Moreover, if, as we have assumed, some increase in grain traffics is recorded this year, direct operating costs will rise, although improved vehicle loadings and substantially reduced operating ratios should also result.

Exchange provisions, again, must remain a burden on the companies' accounts unless the peso is ultimately to revert to the old parity of \$11.45. During the past six years, to take one example, B.A. and Pacific has failed to earn its prior charge requirements for the period by £4,657,000. Of this sum, however, no less than £3,949,000 is attributable to exchange differences. During the past year there has been no change in the average rate applicable to the railways, which has remained at 16 pesos to the £. Any hope of immediate improvement in the exchange position must be dashed by the current year's trade figures. During the first nine months of 1937, Argentina had a favourable balance amounting to \$751 millions; during the corresponding period of 1938 her imports have been practically maintained, but exports have dropped by nearly 45 per cent., and in consequence an adverse trade balance of \$61½ millions has resulted.

To speculate, say, whether B.A. Great Southern 5 per cent. preference stock, which received 1 per cent. last year, is fairly valued at 47 in relation to its prospects for the

current year hardly meets a situation in which even the best preference stocks are marginal. There is, indeed, much more to be said for concentrating attention on the debenture issues. Even last year B.A. Great Southern covered its 4 per cent. debenture interest 1½ times. B.A. Western failed, for the first time, to cover its 4 per cent. debenture interest, which requires nearly £395,000, by approximately £57,000—a point which accounts for a quotation of 61 for the latter, compared with 70 for B.A. Great Southern first debenture. Central Argentine 4 per cent. debenture stock stands at 61½ and was fully covered, but the margin was not sufficient to meet in full the interest on the 5 per cent. debentures and notes. A yield basis of 5½-6½ per cent. for such stocks is not inappropriate under present conditions. But they should be the first to respond to the prospects of better cover if traffics improve during the second half of the year.

There is, moreover, another pointer which favours debenture rather than sub-marginal preference and ordinary stocks. On the assumption that the Argentine Government will ultimately take over some share at least of the administration and financial risks of the British-owned railways, it is obvious that the most equitable basis of purchase would still leave junior stockholders to face greater sacrifice than would be required of debenture holders. The problem, perhaps, is not urgent. The purchase of the Cordoba Central undertaking was first contemplated in 1924; but it is not yet an accomplished fact, for it still awaits the sanction of the Chamber of Deputies.

For the time being the companies are doing their utmost, under discouraging conditions, to improve net revenues. Joint administration, so far as it is permitted by the existing law, is in effect on the B.A. Great Southern and Western systems, and B.A. and Pacific and Central Argentine are also working together. If the pooling law which was first submitted in 1935 is finally approved by Congress this month, pooling and joint working arrangements will be greatly facilitated. Both on economic and political grounds, therefore, it is possible to justify the market's recent hopes. But the Argentine railway systems are not returning to prosperity overnight. And, in the long run, an equitable basis of nationalisation may prove difficult to work out. The stockholder, therefore, must hope that he will soon enjoy more prosperous conditions, firstly, because he deserves them, and secondly because they might play an important part in the determination of fair purchase agreements.

Alcohol Economics

TO the man in the street the word "alcohol" has a meaning at once vague and definite. Just exactly what it is he would be hard pressed to say. But for all practical purposes he regards it as synonymous with the various forms of liquid refreshment, with their differing degrees of intoxicating power, which he is accustomed to pour down his gullet to the end of stimulating his nerves or, alternatively, of losing his immortal soul. Until very recently, the layman's rough meaning would have passed as an industrial definition: the alcohol industry was mainly concerned with the production of distilled spirits for human consumption. Even as recently as ten years ago, more than half of the British retained production of alcohol was still being consumed in the old-fashioned way. But since then there has been an astonishing growth in the industrial uses of alcohol, until to-day only one-fifth of the total production is destined for the decanter and the tumbler. The volume of spirits drunk has fallen by 25 per cent. in the decade, but the amount used for other purposes has increased by over 400 per cent. This revolution in the industry has an interesting geographical aspect. There are 77 alcohol distilleries in the United Kingdom, making something over 40 million gallons a year. Of these 66 are in Scotland and with one exception are engaged in pro-

ducing whisky. One is in Northern Ireland and ten in England and Wales. The English distilleries account for two-thirds of the total output, and they concern themselves almost wholly with the new industrial uses for alcohol. There is both an import and an export trade in potable spirits—rum, gin and brandy coming in and whisky going out—but the exports are considerably larger than the imports.

The varieties of alcohol are many and confusing, and it will be as well to set them out in tabular form before mentioning the uses of each:—

- A. Methyl Alcohol.
- B. Ethyl Alcohol.
 - 1. Potable spirits.
 - 2. Non-potable spirits.
 - a. Unmethylated.
 - b. Methylated.
 - i. Mineralised (domestic).
 - ii. Industrial.
 - iii. Power alcohol.

The major distinction, it will be seen, is between methyl and ethyl alcohol. The difference is one both of preparation and of chemical nature when produced. The two varieties can be substituted for each other when used as solvents, but

not in other uses. Methyl alcohol cannot be drunk—or, perhaps, it would be more accurate to say that it should not be drunk, as large quantities of "wood alcohol" were consumed in the early years of the Prohibition experiment in the United States by persons whose thirst exceeded their discretion. Methyl alcohol can be made either by distillation from wood or synthetically. In this country, it is made only at the Billingham plant of Imperial Chemical Industries, where it is prepared synthetically from water gas; the output amounts to some 9 per cent. of the total production of alcohol of all kinds. Methyl alcohol need concern us no longer in this article.

The present production of ethyl alcohol in this country is manufactured from molasses to the extent of 72 per cent. of the total (i.e. of the total of ethyl spirits), from malt and unmalted grain to the extent of 15 and 13 per cent. respectively. Most of the molasses comes from Cuba, and the yield is three or four gallons of alcohol per cwt. of molasses. All ethyl spirits are potentially potable, and those which are not destined to be drunk have to be denatured. This can be done in two ways. Methylation involves the addition to the spirits of denaturants such as pyridine, wood naphtha or aniline dye, which render the resulting mixture virtually non-potable. For some uses, however, methylation would diminish or remove the usefulness of the alcohol. In these cases, other denaturants are added, and the product is known as unmethylated spirits.

The British consumption of alcohol for non-potable purposes amounts to some 30 million gallons a year. Approximately half of this total now consists of methylated and half of unmethylated but denatured spirits; but it is the second category that has been increasing most rapidly in recent years, the consumption having trebled in six years. The chief demand comes from the use of alcohol in the manufacture of cellulose acetate for artificial silk; but unmethylated spirits are also widely used in the manufacture of industrial solvents, dyes, drugs and fine chemicals. The production of unmethylated spirits for these and similar purposes is now the largest single branch of the alcohol industry in this country, and the British Celanese Company is the largest consumer of industrial alcohol in the country.

Methylated spirits are familiar to everyone who has used a spirit lamp. But mineralised methylated spirits for domestic consumption are a small part of the total output; only some 1,500,000 gallons a year are produced. Industrial methylated spirits, amounting to about eight million gallons, are far more important; they are used chiefly in making paints, polishes and lacquers, and also to a considerable extent in the manufacture of perfumery, inks and dyes; toilet articles, oilcloths, liniments and lotions. Finally, there is power methylated spirits, i.e. alcohol used as a fuel for internal-combustion engines, or more accurately as a 12 to 15 per cent. blend in motor fuels. The consumption of power alcohol has increased from 13,000 gallons in 1931 to 5,600,000 gallons in 1937, and in the latter year amounted to nearly one-fifth of the total consumption of non-potable alcohol and a sizable proportion of the total consumption of motor fuels.

No industry has ever had closer contacts with the taxing authorities than the alcohol industry. The Exchequer receives an annual revenue of £36 millions from the spirit duties; and to protect this revenue Government control of the alcohol industry has always been close. The regulations involve appreciable modifications of the normal technique of production; for example, it is illegal to brew and distil at the same time in the same plant, and there are regulations affecting stocks and the keeping of records. These precautions are costly and inconvenient, but they are worth while to the Government, since it draws a revenue of nearly £4 a gallon from potable alcohol. As long ago as 1860 it was recognised that the system of supervision made it more difficult for British whisky to compete in the world market, and since that date all alcohol exported has not merely been exempted from all duties, but has been paid an allowance equivalent to the additional costs imposed on the manufacturers by the Excise precautions.

When at the beginning of the present century various industrial uses of alcohol began to develop, this allowance, over and above exemption from duty, was paid to "authorised methylators" for making industrial methylated spirits and also for all unmethylated spirits used in "any approved art or manufacture." The allowance was extended to power methylated spirits in 1920, and fixed in the next year at 5d. per proof gallon, which is equivalent to 8½d. per imperial gallon. Since this rate was fixed, the conditions of the industry have changed out of all recognition. In 1921 the production of ethyl alcohol for industrial purposes was only 2,850,000 gallons and for power purposes negligible; last year the production was 24 million and 5,600,000 gallons respectively.

These taxation provisions produced a particularly anomalous position in the case of power alcohol. This fuel competes with petrol, but until this year it escaped the duty levied on light hydrocarbon oils, and in addition it benefited from the allowance. The expansion of the use of power alcohol seems to indicate that this allowance was a considerable assistance to the industry. Indeed, on general grounds, it would seem probable that a rate of allowance fixed when the production of industrial alcohol was a minor by-product of the whisky industry is not necessarily appropriate to the very changed conditions of to-day. So far as power alcohol is concerned, the anomaly was recognised in this year's Finance Act, which imposed an Excise duty at the same rate as that on light hydro-carbon oils, namely, 9d. per imperial gallon, though the allowance still remains and virtually offsets the duty. The use of alcohol as a motor fuel is definitely encouraged and even made compulsory in a number of Continental countries, with a view to assisting agriculture, as the alcohol is produced from surplus crops of sugar beet, potatoes, or even sometimes of grapes. The same position does not, however, obtain in the United Kingdom, where there are no such surplus crops, and where, apart from a negligible quantity of sugar beet, the production of power alcohol is entirely from imported raw materials.

By far the largest producer of alcohol, in the industrial as in the potable field, is the Distillers Company, which distributes to industrial users through associated undertakings, the most important of which are Solvent Products and British Industrial Solvents. The chief other producers, in addition to Imperial Chemical Industries, are J. M. Mills, of Liverpool, and Commercial Solvents, of Bromborough, the latter concern being connected by interlocking directorate with British Celanese. The long-term prospects of the industrial alcohol industry must be rated as definitely favourable, since alcohol consumption is assisted by the secular trend towards the expansion of luxury and semi-luxury industries, such as artificial silk, paint, polish and lacquer, perfumery, toilet preparations, lotions and patent medicines. The drinking of spirits faces a declining secular trend, but potable spirits are already such a small part of the industry that their decline can easily be offset by the growth of other uses. The future of power alcohol is more difficult to assess, now that it has to compete with petrol on more equal terms. But on the whole the industry is an almost perfect example of an age-old craft escaping, by the help of technical invention, from a declining backwater to a broad stream of industrial progress.

America's Balance of Payments

THERE are few matters in the realm of international finance which have been subject to more obstinate misconceptions than the balance of international payments of the United States. The persistence of these false beliefs is remarkable in view of the volume of detailed information on the subject which is regularly made available in the annual estimates of the Department of Commerce. The latest of these informative bulletins has just been published.* Like its predecessors, it is a booklet of over 100 pages, containing a volume of information that entirely puts to shame the meagre estimates of other countries.

In the gold standard era—and, indeed, until very recently—it was very tenaciously believed that the United States was a creditor country which, unlike Great Britain, refused to behave as a creditor should. Great Britain, it was said, accepted payment of the interest due to her in the form of goods, while America persisted in having an export surplus and compelled her wretched debtors to ship gold. In actual fact there has been very little fundamental difference between the balances of payments of the two countries on the average of the last dozen years, as can be seen from Table 1, and the illusion that there was some such fundamental difference is almost entirely due to the excessive attention that is paid to the figures of visible merchandise trade. Both Britain and America, on the average of these years, have had a net surplus on current account which has been available for lending abroad. For

both countries this state of affairs has apparently come to an end, at least temporarily, since neither country has had a surplus in more than one of the last four years. The chief difference is that America has a surplus (in most years) on visible trade and a deficit on the invisibles, while the United Kingdom is in the reverse position. But in economic effect there is no difference whatever between the two categories of trade. Fundamentally, both countries are creditors, temporarily living beyond their means and drawing on capital. America is in what for the moment the favourable position of being offered vast sums of other people's capital to live on, while Great Britain is currently having to return capital previously deposited with her. But that has no direct connection with the two countries' balances of payments on current, or income, account.

Another persistent misconception is that, in her relations with Britain, America sells but does not buy. As recently as October 20, no less a person than the President of the Association of British Chambers of Commerce is reported as having said that "there is nothing equitable or reasonable in a position where the United States sold us

* "The Balance of International Payments of the United States in 1937." Prepared in the Finance Division of the Bureau of Foreign and Domestic Commerce, Department of Commerce, under the direction of Amos E. Taylor. (Washington) Government Printing Office. 113 pages. 15 cents.

£114 millions' worth of goods in 1937 and bought from us only £31 millions. If the United States cannot buy more from us we must reduce the amount coming from her by many millions a year." This is another example of the very elementary fallacy of looking only at the visible trade that passes directly between the two countries. In an effort to demonstrate the complete facts about British-American trade we have compiled Table 2. This table is based upon the official American figures, but the figures it contains are estimates by *The Economist*, and they cover the whole

range between precise statistics and guesses. Even the guesses, however, have some foundation of ascertained fact, and no figure has been included unless there is some indication to guide the estimator. In every case of doubt the estimate has been put at a conservative figure from the British point of view.—i.e. our receipts are probably higher and our payments lower than the table indicates. There are many gaps (e.g. there is almost certainly a net flow of immigrants' remittances from the United States to Canada, but no indication of its amount is available), but it is believed that all the major factors are included, with the sole exception of motion picture royalties, which are not large enough materially to modify the conclusions to be drawn from the table.

It will be seen that the inclusion of invisible items approximately halves the net surplus accruing to the United States from her trade with the United Kingdom. Moreover, it is always very rightly contended from the American side that trade with the Crown Colonies cannot be left out of account. For example, in 1937 the United States imported \$235 millions' worth of goods from British Malaya, but sold less than \$9 millions in return. Here is a disproportion far greater than that in the trade between the two metropolitan countries, and if the United States, following Sir Granville Gibson's prescription, attempted to cut down her imports from Malaya, Great Britain would be the direct sufferer, since we have the lion's share both in Malaya's imports and in her dividend payments. In the most direct way, the dollars earned by Malaya pay for that part of our net imports of American goods which is not paid for by the earnings of British ships, hotels and insurance companies. Not only because Great Britain controls the colonies' commercial policy, not only because foreign countries hurt by our commercial policy will retaliate against the colonies, but because of the actual economic relationships existing, Great Britain and the colonial empire must be considered as a unit. When this is done, it is discovered that British-American trade is, as nearly as can be estimated, evenly balanced. Columns have been added to the table giving figures for Canada and Newfoundland and for the other Dominions and India.

Prior place has been given to these controversial ques-

tions because the American balance of payments with the world as a whole in 1937, for which the main figures are

given in Table 3, exhibits few features of outstanding interest. The years 1935 and 1936, as can be seen from Table 1, were the least typical of the last dozen. In both of them the United States had a deficit on visible trade as

well as on invisibles. In 1937 there was a strong recovery in American exports, with the result that the normal balance of merchandise trade was restored. On the other hand, many of America's invisible expenses, notably freight charges and tourist expenditures, increased with returning prosperity, and the big invisible receipt, interest and dividends, remained unchanged. The result was that, while the visible balance improved by \$319 millions, the invisible balance deteriorated by \$99 millions, and for the third year in succession the net balance on current or income account was negative. This did not, however, prevent the second biggest inflow of gold ever recorded. The explanation is, of course, that capital was flooding into the country for at least three-quarters of the year until the sharp stock market decline in the autumn. Even the fine-mesh net of the American returns appears to have missed some of this immigrating capital, since the estimate has to conclude with a residual item of \$676 millions. The report suggests that part of this residual item may be due to the operations of the American exchange stabilisation fund and to undisclosed earmarkings of gold for foreign customers which would offset the heavy import.

The American balance of payments is clearly entirely dominated by this large import of capital, which has to come in the form of gold. The initiative for this movement, however, lies almost entirely in non-American hands and rests on non-economic factors. Some day, however, America will have to pay attention again to her income account. Neither the United States nor Great Britain is occupying the place it should in the world until it has a net surplus every year which it both can and will lend out to other nations in need of capital.

Finance and Banking

October Cross-Currents in France.—October witnessed an apparent improvement in the French financial position. To judge from the returns of gold imports into Great Britain, the crisis flight of funds was short-lived, for the movement of gold from France was only £14.8 millions, confined to the fortnight ended October 13th. The following table, extracted from recent Bank of France returns, shows the reactions of the crisis on the internal credit position:—

	Aug. 4	Sept. 1	Sept. 15	Sept. 29	Oct. 13	Oct. 27
			(Frs. millions)			
Gold	55,808	55,808	55,808	55,808	55,808	55,808
Discounts	6,819	8,360	12,360	22,172	18,250	18,227
Loans on securities	3,675	3,693	3,878	4,362	3,896	3,865
30-day advances	826	766	1,061	1,311	917	1,600
Provisional loans to State	40,134	40,134	40,134	50,134	48,134	48,134
Note circulation	101,351	101,760	108,186	124,428	113,417	110,446
Public deposits	3,172	2,539	2,838	2,825	3,697	3,642
Private deposits	13,506	15,805	16,617	18,418	20,862	23,643
Ratio of gold to sight liabilities	47.2%	46.4%	43.7%	38.3%	40.4%	40.5%

In addition to the Frs. 10,000 millions increase in provisional loans to the State, the crisis led to a general desire for liquidity, reflected both in the increase in the note circulation and also in the expansion in discounts and loans of various kinds. It was noticeable, however, that there was no decrease in private deposits, which include bankers' balances, and this suggests that there was no serious run on the banks. During October the Treasury repaid part of its crisis borrowings, and discounts and advances were also reduced. Notes have equally returned from circulation, and both public and private deposits were strengthened. On the other hand, the pre-crisis position has by no means been restored, and during the latter part of October there was a general feeling that all was not well beneath the surface. At the end of the month, just before Paris closed for the All Saints' holiday, there were signs of a new incipient flight from the franc while there were strong rumours that M. Marchandau's thoughts were turning in the direction of such radical measures as the requisitioning of private holdings of gold and foreign ex-

change, as well as heavier taxation on coupons and rentes. It was not surprising that a week ago London bankers were being asked to buy quantities of French currency, for these represented the least traceable way in which capital could be exported from France. There was also heavy selling of forward francs.

* * *

M. Reynaud takes over.—Nothing was disclosed by M. Daladier at the Marseilles Congress, but on the evening of November 1st it was announced that M. Paul Reynaud had been appointed Minister of Finance in succession to M. Marchandau. It also became known that whatever views M. Reynaud had held in the past, he was now convinced that no further depreciation of the exchanges or devaluation of the franc was necessary. France's economic problem, in fact, no longer needed tackling from the monetary end. This led to hurried covering of bear positions in forward francs, as is described in the foreign exchange note on page 281. One question that falls to be decided is that of the revaluation of the Bank of France's gold. M. Reynaud has still to outline his general proposals, but he might be wise to write up the Bank's gold so that it conforms to the Daladier franc of Frs. 179 to the pound, and to use the resultant profit as a Treasury reserve for abnormal expenditure. If he can also find a way of balancing the purely "administrative" budget, as distinguished from re-armament expenditure, he will have solved the first of his problems. Psychologically, the revaluation of the Bank's gold might confirm the stability of the Daladier

franc in the minds of the public. In these ways he might be able to approach his ultimate goal of tapping the mass of French savings, which, in spite of the country's economic difficulties, must be growing every day. If the Treasury no longer has to approach the investor as a suppliant, but instead can induce in the investor an eagerness to lend his money to the country as the best and safest means of finding employment for his savings, then M. Reynaud will have achieved his principal ends. But to do these, he must first convince the investor of the financial stability of the country, and then give the Paris market a chance to settle down without fear of further interruption.

* * *

Cheques and their Substitutes.—Mr R. A. Wilson, who has been re-elected as President of the Institute of Bankers for another year of office, delivered his inaugural address this week and chose as his text that most commonplace article of British banking, the cheque. The evolution of that instrument of credit, its gradual adaptation through the development of commercial practice, legislation and legal decisions to the objects which it serves to-day, were admirably drawn. The most interesting part of Mr Wilson's address, however, was the concluding section in which he questioned whether recent legal decisions had not deprived bankers of some of the protection to which they felt entitled in handling cheques, and whether these decisions did not impose upon bankers a standard of care which it was impossible to discharge, given the volume of present-day business and the speed at which it must be conducted. From this observation Mr Wilson went on to deal with possible substitutes for cheques as means of payment out of and into bank accounts. They are many and they are growing in importance. Traders' payments or traders' credits are perhaps the most important. In addition there has been an increase in the number of payments made by direct transfer from one banking account to another in dividend distributions, hire purchase instalments, standing orders, salary payments, disbursements of the Milk Marketing Board, and such like. These non-cheque payments at present represent about 4 per cent. of the payments made by cheque. But they have doubled in the past few years. Will they continue to grow? Mr Wilson as a banker sees some of their advantages—the greater economy of handling, their avoidance of some of the risks attendant on the use of cheques. But he doubts whether their use will ever extend beyond a strictly limited field of usefulness. Moreover, the Inland Revenue authorities may intervene if the movement for displacing cheques reaches a momentum at which serious interference will occur with what is at present an important source of revenue, namely, the stamp duty on cheques.

* * *

The Belga's Recovery.—The belga has emerged with great credit from a fairly prolonged period of pressure. From remaining for several months in the vicinity of gold export point *vis à vis* the dollar it has recently swung violently to gold import point from London, and during the past week has been one of the strongest currencies in the foreign exchange market. Last week's reduction of the National Bank's discount rate was a token of this recovery. The earlier weakness of the belga was altogether due to adverse capital movements prompted by the fear that the belga would not be able to stand the pace set by the appreciating dollar. Tied by its rigid link with gold, the belga was being drawn reluctantly in the wake of this appreciating dollar, and was thus in danger of becoming considerably overvalued in terms of the Continental currencies with whose movements the belga is usually far more closely identified than with those of the dollar. The rise in the dollar, however, was arrested and partly remedied before any such danger to Belgian economy could emerge. By this time, however, a sizeable speculative position had been built up against the belga. It is the covering of this position which has been primarily

responsible for the sudden recovery in the exchange value of the belga. That movement has also been helped by the recent transfer to Belgium of a certain amount of French capital which in the recent tribulations of the franc has shown definite preference for the gold currencies—dollars and belgas—as havens of refuge. The strength of the belga during the past week has led to some gold arbitrage operations between London and Brussels. This traffic provides part of the explanation of the readiness of arbitrageurs in London to buy gold at a premium on the dollar parity. Most observers of the gold market have become so obsessed with this dollar parity that they fail to realise that there are other parities which can at times become the effective anchor for the sterling price of gold. The belga is one of these, and during the past week it has at times been the effective parity. At such times, in other words, the price of gold in London was in fact fixed at parity with the belga and without reference to the dollar.

* * *

Triangular Exchange Effects.—On several occasions recently we have drawn attention to the way in which sterling is liable to be affected adversely as a result of London's intermediary position between Continental centres and New York. Continental people desirous of buying dollars for the transfer of their funds to New York, and Continental speculators desirous of building up a long position in dollars, do so in the London market, thereby giving rise to a technical selling pressure on sterling. The evidence of such selling pressure is liable to lead to additional sales of sterling by foreign holders and by speculators, and thus tends to weaken the gold resources of the Exchange Equalisation Account. During the past week, however, London's intermediary position has been decidedly beneficial to sterling. Following upon the announcement of M. Paul Reynaud's appointment as French Finance Minister, sterling became distinctly firmer as a result of covering operations by French speculators who had bought dollars in London. Nevertheless it seems that on balance sterling stands to lose rather than gain through triangular exchange transactions. For, as we pointed out recently, the French Exchange Stabilisation Fund has made it a rule to pay out sterling irrespective of whether the demand of the French public is for sterling or dollars, while, on the other hand, when the trend changes in favour of the franc, the French Stabilisation Fund is a ready buyer of both sterling and dollars. The explanation of the unwillingness of the French authorities to sell dollars in support of the franc lies in the fact that the sale of dollars would have necessitated the export of gold to New York; and since the United States authorities melt down all the gold they buy, involving a loss of about $\frac{1}{2}$ per mille for the seller, the French authorities prefer to sell their gold in London rather than in New York. It is for this reason that they prefer to support the franc by selling sterling in preference to dollars.

* * *

Martins Bank Chairmanship.—Less than a year after he took office, Sir Richard Holt has most regrettably been forced by ill-health to resign the chairmanship of Martins Bank. He is to resume his former position as deputy chairman of the bank. The new chairman is Mr F. A. Bates, who has been deputy chairman for the past nine months. Mr Bates is deputy chairman of the Cunard Steam Ship Company, of which his brother is chairman, and is also a partner of Messrs Edward Bates and Sons, merchants and bankers. In addition he holds important insurance directorships. While Sir Richard Holt's enforced retirement is greatly to be regretted, Martins Bank will have in its new chairman a man intimately acquainted with the chief activities of the bank. It will also have the benefit of Sir Richard Holt's advice and assistance as deputy chairman, and both on personal and public grounds it is to be hoped that Sir Richard's health will permit him to carry out his less arduous but still important duties.

MONEY MARKET NOTES

Foreign Exchanges

IN spite of the immediate reactions of M. Marchandau's resignation, referred to in a Financial Note, the London foreign exchange market has had a very quiet week. Paris was closed for the All Saints' holiday from Friday evening until Wednesday morning. During this period there was considerable uncertainty as to M. Daladier's financial programme, for M. Reynaud's appointment as Finance Minister was only announced on Tuesday evening. There was a fair amount of pressure to sell forward francs, and the French banks, who normally buy, so as to secure the profit corresponding to the discount on the forward position, were closed for the holidays. Hence by Tuesday the three months' rate had widened to Frs. 6 $\frac{1}{2}$ discount. The next day Paris reopened, while M. Reynaud's appointment also made a good impression. Forward francs were once more bid, and by Thursday afternoon the three months' rate had come back to Frs. 3 $\frac{1}{2}$ discount. The spot rate remained steady during the whole week at about Frs. 178 $\frac{1}{2}$. The French Control lost exchange up to Tuesday evening, but has bought back a fair amount since. There has been little business in dollars, with the New York rate mainly influenced by events in Paris. Thus the nervousness in France over the week-end caused sterling to fall from \$4.77 $\frac{1}{2}$ to \$4.75 $\frac{1}{2}$; for French interests were buying dollars through London. On Wednesday, when the French position changed, dollars promptly came on offer at \$4.76, but by Thursday sterling had eased again to \$4.75 $\frac{1}{2}$. Belgas, guilders and Swiss francs followed the dollar, with very little business.

*

The Bank Return

THERE is the usual end-of-the-month increase in the note circulation, but its only significance is to show that the return of the "crisis" currency had been completed by last week.

	Nov. 3, 1937	Oct. 19, 1937	Oct. 26, 1937	Nov. 2, 1938
Issue Dept.: Gold	326.4	326.4	326.4	326.4
Notes in circulation	485.9	486.4	482.5	483.9
Banking Dept.: Reserve	42.1	40.0	43.9	42.5
Public Depts.	30.3	33.8	25.0	14.1
Bankers' Depts.	89.4	90.9	100.0	109.5
Other Depts.	36.6	35.9	35.5	36.4
Govt. Secs.	103.4	104.9	107.6	102.4
Discounts & Advances	7.8	8.0	4.2	10.4
Other Secs.	20.7	23.9	21.6	21.1
Proportion	26.9%	25.7%	28.1%	27.3%

There are several wide movements in the banking department. The Conversion and Funding Loan dividend payments on November 1st are the chief explanation of the week's big drop in public deposits. Meanwhile discounts and advances have risen by £6.2 millions, an increase which probably indicates the first Czech drawings against their £10 million credit. As other deposits, which would include any balances held by the Czech National Bank with the Bank of England, are less than a million higher, it looks as if the bulk of these drawings have already been spent. The changes already described would by themselves have caused an increase of no less than £16 millions in bankers' deposits, and so to

prevent so large an expansion Government securities are reduced by £5.2 millions. In consequence, bankers' deposits are only £9.5 millions higher than a week ago.

*

The Money Market

THE November 1st dividend payments, revealed in this week's Bank return, have made money very easy, and even bond-money has been generally obtainable at $\frac{1}{2}$ per cent. There has also been a very small demand for money. The banks have been buying January Treasury bills at $\frac{1}{2}$ per cent., and have largely given up the attempt to take them only in conjunction with December maturities, which are no longer readily obtainable. The market is trying to quote three months' bank bills at $\frac{1}{4}$ per cent., but $\frac{1}{2}$ per cent. is really the effective rate. Even six months' bank bills are as low as $\frac{1}{8}$ per cent.

	Nov. 4, 1937	Oct. 27, 1937	Nov. 3, 1938
Bank Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
London Deposit Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan Rates: Clearing Banks	1 $\frac{1}{2}$ -2 $\frac{1}{2}$	1 $\frac{1}{2}$ -1 $\frac{1}{2}$	1 $\frac{1}{2}$ -1 $\frac{1}{2}$
Others	1 $\frac{1}{2}$ -2 $\frac{1}{2}$	5 $\frac{1}{2}$ -5 $\frac{1}{2}$	5 $\frac{1}{2}$ -5 $\frac{1}{2}$
Discount Rates: Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	1 $\frac{1}{2}$ -2 $\frac{1}{2}$	$\frac{1}{2}$	1 $\frac{1}{2}$ -2 $\frac{1}{2}$

* Viz. $\frac{1}{2}$ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. $\frac{3}{4}$ per cent. for loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Apart from such temporary influences as Government dividend disbursements, the real explanation of the return of the previous ease is that the crisis withdrawals of funds from London have been largely neutralised by the contraction in tender issues of Treasury bills, which has occurred in spite of the autumn increase in the floating debt. This is an automatic consequence of our present monetary system, whereby withdrawals of funds lead to gold sales by the Exchange Equalisation Account and so to an expansion in the tap issue and a reduction in the tender issue of Treasury bills. Many of the tender Treasury bills still outstanding were also bought by the Exchange Equalisation Account during the crisis. Unlike the normal gold standard, the disappearance of money from London does not lead to more stringent credit conditions at home, except during the time taken by the authorities to re-invest the proceeds of its gold sales.

The low level of public deposits shows that this re-investment process is now complete.

*

The Bullion Market

THERE have been some Continental purchases of gold this week, but the main demand has come from arbitrageurs. Early in the week the dollar was inclined to strengthen and so it was relatively easy for arbitrageurs to operate even though the London gold price was fixed at a small premium. On Wednesday, when sterling rallied, arbitrage became less certain, and so the volume of business shrunk. On Thursday the dollar was again firmer, and so dealings expanded. Under present conditions, when arbitrageurs buy their gold first and cover their exchange afterwards, the trend of the New York exchange can easily prove of greater importance than the presence or absence of a small premium.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Discount	Amt. dealt in £	Cash	Two Mths.

" 3 ...	146 1 $\frac{1}{2}$	1 $\frac{1}{2}$ pm	530	19 $\frac{1}{2}$	19 $\frac{1}{2}$

* Above or below American shipping price. This week's calculations are based on a temporary parity, in which the war risk rate is taken as 1s. 3d. per cent.
† At fixing.
‡ The New York price of silver remained at 43 cents per ounce .999 fine during the week.

In the silver market, the margin in the cash and forward prices is now wider than it has been for some time, mainly because of some shortage of spot silver, combined with Eastern offering of forward. There has developed in the market a lack of "mines," i.e. silver, .999 fine, and as United States buyers do not like to take silver of less fineness, this is also disturbing business. Monday's improvement in the market was due to special buying, probably connected with the shipment to Hungary shown in this week's export returns. There has since been further Eastern selling, and with the United States disinclined to buy, prices have since eased again.

ADDRESS

Investment

Course of Share Values.—October was devoted to capitalising the gains of peace in every stock market in the world. But only Wall Street enjoyed the additional advantage of domestic recovery. That market has steadily pursued its upward course—though recently at a reduced pace—unaffected by the schism between the chart-readers whether its action is to be interpreted as a primary recovery or merely as an intermediate rally. While common stock prices have almost exactly regained their position of twelve months ago, British equities are only fractionally higher than their end-August level, when the European crisis was already casting a long shadow. The same contrast is evident in the record of business in the two centres. During the past week or two, turnover has been relatively satisfactory in New York, but in London new buying incentive has been restrained, partly on second thoughts regarding the European prospect, and partly because investors were loth to incur new commitments until the Government's political and financial policy had been clarified. This week's debates appear to have removed the second uncertainty. Re-armament is to continue but

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(July 1, 1935 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

not, apparently, to be accelerated. The Government will not seek compulsory powers to control industrial activity, and fears that the profits and dividends of companies engaged in the re-armament programme might be rigorously supervised have proved groundless. For the gilt-edged market, the immediate consequence, it would seem, is to limit the burden of defence finance, and to avoid any inflationary consequences of intensified re-armament. The market will doubtless be able to cope with the present scale of expenditure without strain, but an accelerated programme would obviously have involved problems of capital market control, and immediate budgetary stringency. For the industrial market, normal economic factors must now take a higher place, while the expected benefits of re-armament must be demoted. This interpretation suggests that the recent advance in armament and "re-armament" shares may not be maintained, although the level of activity which is in prospect for such companies should ensure satisfactory profits for the next year or two. It is possible, without an undue indulgence in wishful thinking, to anticipate a moderate cyclical recovery in industrial conditions during the course of the next few months. Its pace, however, depends first upon the assistance

which the United States can provide, and secondly upon the success of the Prime Minister's task of appeasement. Caution, tempered with a mild degree of optimism, appears to be the investor's watchword.

Wall Street and Recovery.—American industrial stocks have fluctuated this week within a narrow range, and turnover on the New York Stock Exchange has been significantly lower. Operators still appear to be confident that the market conditions are favourable, though perhaps they feel that little will be lost by waiting until next week's Congressional elections are out of the way. That confidence is merited is again confirmed by the steel operation figures. *Iron Age* estimates this week's rate at 57 per cent. of capacity, compared with 54 per cent. last week. Again, optimistic guesses that the Federal Reserve Board's index of production for October may reach 95, against 90 for September, suggest that the fuel for a further advance exists, if it can be kindled. During the past week, three major developments, affecting the relations of the market with the Administration, have been reported. The first, and most important, is the new programme of "conciliation and development," which has been drawn up by the Administration and the utility companies. These plans, which are reported to involve immediate expenditure of between \$200 millions and \$350 millions and a total expenditure of \$2,000 millions over the next two years, have been coupled with the national defence programme. The new construction work, it is stated, will be carried out in "strategic war-material centres." Doubtless this phrase covers an association of aims, among which internal political considerations have a place. From the investor's point of view, two important consequences follow from the agreement. First, after several years of mutual distrust, the Administration and the utility industry appear to have established workable relations, which, even without the impetus of the new construction projects, would encourage the industry to undertake some unassisted capital expenditure. Secondly, the consequences for the electrical equipment industries and ancillary construction trades are obviously favourable.

The railroad industry may well look at the utilities with jealous eyes for, at the end of last week, the President's fact-finding Commission rejected the companies' claim for a 15 per cent. wage cut, and declared that the financial distress of the carriers during the past year is only a "short-term situation." It is true, of course, that the railroads have shared in recovery since last June. But even the Class I roads only covered their bond interest with a margin of \$1,097,000 in August, and their net losses for the previous seven months aggregated \$185,149,000. Both sides now have a breathing space of thirty days before they may take action. Railroad stocks were not greatly affected by this adverse report, nor indeed did the general market react to the news that further measures of control had been recommended by the Securities and Exchange Commission. The Whitney case has doubtless encouraged Mr William Douglas in his difficult task of drawing the line between professional speculation and permissible investment. Inter-member dealings on margin are to be forbidden; brokers must reduce the maximum proportion of indebtedness to working capital from 22-1 to 15-1; in future, quarterly reports of member firms will replace the present half-yearly reports; yearly audits and more frequent checks are to be imposed; and brokerage capital must be segregated from underwriting commitments. Finally, it is proposed to establish a central depository to hold and make delivery of customers' securities. The obvious intention of these rules is to limit overtrading, to separate brokerage from banking business, and to control the physical dis-

position of securities. The New York Stock Exchange authorities have consented to this programme, which may prove irksome in detail, but is commendable in many points of principle.

London Transport Pool Receipts.—A year ago we ventured to make the suggestion that the London Transport Board might make copies of its excellent annual report available to stockholders without charge. Without flattering ourselves that the Board's decision to circulate the latest report to stockholders was directly associated with this appeal, the coincidence provides an encouraging context for a further suggestion. At present, the Board publishes weekly traffic receipts before pooling. These sums are paid into the London Passenger Pool, the total of which is subsequently re-distributed among the members—the Board and the main line railways—after making certain allowances for unfructified capital and other operating factors, the Board's share being 62.10364 per cent. The "C" stockholder has only to compare the Board's receipts for the 52 weeks to June 25th, which amounted to £29,388,200, with its receipts for the full year, after pooling, which amounted to £30,758,440, to realise that the Board's own receipts give no indication, unless perhaps one of trend, of its effective receipts. In certain circumstances—such as the bus strike in 1937—the record of the Board's own receipts may become positively misleading. On that occasion the other constituents of the Pool received part of the diverted bus traffic, of which London Transport eventually received its due share from the Pool. According to the Act of 1933, the Pool allocations are determined month by month. Does any major consideration of policy stand in the way of publication of the Board's monthly share, as and when it is calculated? "C" stockholders, we believe, would welcome such figures as a more accurate guide to the effective receipts of the Board than the present weekly returns.

New Issue Inactivity.—During October the capital market came almost to a complete standstill. The only public offer consisted of £500,000 4 per cent. preference shares by Scottish Power Company, and issues to shareholders accounted for most of the remaining new money, which totalled £1,168,000 on our "old basis." On the "new basis," the October total of £6,890,000 was higher than for September, but still abnormally small. Particulars under both headings are set out below:—

Monthly Average	United Kingdom		British Possessions	Foreign Countries	Total
	£	£	£	£	£
Old basis	18,603	1,842	525	20,970

† Includes £40,804,000 for Tithe Redemption 3 per cent. stock.

Such poor results must be attributed in large part to the aftermath of the September crisis. The market, however, stirred itself into activity at the very close of the month, in preparation for the Woolworth offer, which is expected to herald further issues in the near future. This offer is not included in our October total, for the lists opened on November 1st.

Foreign Bond Movements.—The reaction in European bond prices last month is in marked contrast to the improvement in Far Eastern and South American issues. The resultant of these forces is evident in the index of

107 foreign bonds compiled by Municipal and General Securities Company, which recovered to 67.8—1.7 points higher than the low level of 66.1 recorded in September. This improvement, however, still leaves the index nearly two points lower than at the end of August. Movements of the component indices over the past year are set out below:—

Below. —

AVERAGE JANUARY-JUNE, 1934 = 100.

N.B.—Figures in brackets denote number of bonds included.

Despite the payment of the October coupon on the Czechoslovakian loan, its price fell sharply during the month, and German, Austrian and Hungarian issues also failed to maintain their post-Munich advances. The substantial recovery in Far Eastern bonds from 66.2 to 70.8 has followed Japan's military successes. A separate index of seven Japanese bonds, based on June, 1937=100, shows a jump from 50.5 to 64.0 during the month, but Chinese issues were only slightly higher. In the South American list, Argentine and Chilean bonds show an improvement—the latter assisted by higher copper prices and mining activity.

Philip Hill and Partners.—This week's offer of 2,200,000 5s. shares of F. W. Woolworth appears to be the largest individual transaction handled by Philip Hill and Partners. At the annual meeting last May the chairman declared that the company had been instrumental in raising over £8 millions of new finance during the year to March, 1938. That figure has been comfortably exceeded during the six months which have since elapsed. In the following table we set out a number of the principal issues which the company has sponsored during 1937 and 1938:—

Company	Issue	Issue Price	Latest Price	Money involved
Odeon Theatres	£1,800,000 5% deb. stk.	99	84½	1,782,000
Hawker Siddeley Aircraft	180,000 5s. ord. shrs.	5/-	6/3	45,000
Covent Garden Properties	2,000,000 5% red. £1	20/-	21/3	2,000,000
Beecham Maclean Hldgs.	pref. shares			
	£1,000,000 4% deb. stk.	99	96	990,000
	1,496,500 5% £1 pref.	20/-	20/-	1,496,500
Beechams Pills	2,400,000 2s. 6d. def. shares	7/6	8/-	900,000
F. W. Woolworth	2,200,000 5s. ord. shrs.	58/-	...	6,380,000

This list does not claim to be exhaustive. It does not include such indirect financing as the marketing of Odeon Theatres preference shares, nor the offers to

shareholders of Eno Proprietaries and John Greenwood (Millers) to exchange their holdings for shares in Beechams Pills and Ranks, Limited, respectively. But it goes some way to confirm the impression that Philip Hill and Partners have secured a major share of industrial financing in recent months, when market conditions generally have been far from propitious. The total of new money involved in the issues we have set out is £13.6 millions. Since the beginning of 1937 the total sum raised for general industrial purposes, using our "old basis" figures (which also cover offers to shareholders only), slightly exceeds £80 millions. Approximately 17 per cent. of this sum, therefore, is represented by issues sponsored by Philip Hill and Partners. The firm will offer for sale on Wednesday next at 17s. 6d. a block of 2,800,000 5s. shares in Ranks, Limited, which has hitherto been in private hands.

Butter and Guns.—The investor this week has been well provided with illuminating company speeches. Of these, two are of especial interest. There are few companies with a more consistent profits record than United Dairies, but Mr Joseph Maggs' speeches have invariably claimed that operating conditions are in constant flux, and that good results are due to high efficiency and not large profit margins. The company's sales increased last year by over £2 millions, and milk purchases were six million gallons higher. But the effect of high milk prices on consumption has become marked, and the drought increase last July, which was subsequently consolidated for the whole year, will take its toll during the current year. Indeed, milk retailing during the first half of the current financial year is expected to involve a loss, and the additional profit on summer milk will not come into account until the following financial year. Moreover, the rise in butter prices towards the end of 1937 seems permanently to have affected consumption, although prices have since fallen. There is no relief from manufacturing milk costs, and wages and other charges are still rising. For any other company, with a less stable record than United Dairies, these adversities might spell a revision of ordinary share prospects. The chief points in Sir Alexander Roger's speech at the Birmingham Small Arms meeting necessarily concerned the company's armament work and its finance. The company was among those which suffered severely in post-war years and it is not anxious to repeat that experience. In addition to the Daimler shadow factory, and sub-contract work on aero engines, B.S.A. has undertaken to erect a large new works at Redditch. Reading between the lines of Sir Alexander's remarks, it would appear that Government assistance has been given—or is anticipated—in connection with this new venture. "It cannot be expected," he declared, "that stockholders will again bear the brunt of maintaining a nucleus arms plant at their own expense, capable of great expansion in emergency, without compensating orders." Yet from a subsequent passage it would appear that the munitions industry, apart from a few firms, is not fully occupied—even B.S.A. Guns could undertake more orders. Shareholders with long memories will appreciate the chairman's emphasis on the preparation of plans for purely peace-time activity.

Investment Trust Results.—During the past fortnight the flow of investment trust reports to September 30th has commenced. From these reports the investor can obtain some measure of the effect of a year of industrial

recession upon trust profits. In the following table, accordingly, we have analysed the more important results. We also show the proportion of portfolios represented by British stocks and equities, and compare the market values of portfolios with book values:—

Company (years to Sept. 30th)	Total Rev.	Earned for Ord.		Div.	Portfolio			Current

† £1 shares.

While trust profits are inevitably related to the course of industrial activity, a time-lag of fifteen months or more may operate between a change in industrial profits and its reflection in investment trust accounts. For this reason, the decline in earnings which is shown by five out of the six trusts listed in our table is somewhat disappointing. Industrial profits, indeed, have only begun to fall during the past three months, and if the whole year to September is taken a satisfactory rise is still apparent. But distribution policy during the period has been more, rather than less, conservative, although most of the trusts in our table, having a generous margin, maintain their dividend even where earnings are lower. Moreover, the decline in profits and dividends in the United States began earlier and proceeded more rapidly than in this country—a matter of some consequence, since the percentage of American holdings varied between 17 and 26 per cent. for the four companies which disclose particulars of their investment distributions. Substantial falls in market values as compared with book values of securities would have been greater but for the Munich recovery. Current dividend yields of between 5½ and 6½ per cent. appear appropriate in to-day's circumstances.

Naval Shipbuilding Results.—Three reports from shipbuilding companies closely associated with naval work indicate that 1937-38 was a more successful year even than 1936-37. For the year to June 30, 1938, Fairfield Shipbuilding and Engineering Company, of Glasgow, record total profits of £263,520, against £223,679, and after deducting £70,000 for depreciation and £21,950 for debenture interest (as in the previous year), earnings available for dividend amount to £171,570, against £131,729. Recovery has been so rapid that in 1937-38 it would have been possible to pay off the five years' preference dividend arrears, and still leave earnings of £66,570 (equivalent to 37 per cent.) available for the ordinary shareholders. But the company has wisely conserved its resources to finance its growing volume of business. The net value of the work in progress rose last year from £224,000 to £277,000, and there is an excess of current liabilities over current assets of £37,000. Hence only one year's preference arrears are being paid in addition to the normal preference dividend, though a

further year's payment is to be made in January and the remainder will be worked off gradually. Yarrow & Company, like all shipbuilding companies, have a fluctuating profits record, but the company now has a straight capitalisation, and with one exception it has paid a dividend in each of the past twelve years. The latest year's total profit is £48,067, as compared with £32,601—a comparison which is the more favourable since earnings in 1936-37 were reduced by £5,630 owing to the rapid increase in the cost of materials. The amount earned for dividend is £45,867, against £30,511 (or 34.6 per cent., against 22.1 per cent.), and the distribution is raised from 15 to 20 per cent. by increasing the cash bonus from 5 per cent. to 10 per cent. Although in the current year further orders have been received from the Admiralty, the company is not ignoring the trading problems which may arise when the naval programme nears completion. For this reason large sums are being spent on re-equipping the works. The growth of current work has resulted in a rise of £706,250 to £982,360 in the gross amount of stock and work in progress. Satisfactory prospects for the near future are reflected in a current yield of £6 16s. 9d. per cent. on the £1 ordinary shares. Finally, John I. Thornycroft, which specialises in destroyers, smaller naval craft and road vehicles, has this week announced a dividend of 8 per cent. on the ordinary shares for the year to July 31st—the first since 1929-30. The company cleared off all preference arrears last March, and is now in a position to share the fruits of recovery between ordinary shareholders and reserves. The latter were drawn upon to the extent of £362,000 during the depression. Out of the latest profits, £50,000 is transferred to special reserve and £50,000 to general reserve. The The medium-term outlook for all three companies must be regarded as favourable.

Tin Mining Results.—During the year to June 30th, Malayan tin producers have been faced with two problems: falling metal prices and a tendency towards rising costs due to the reduction in the Malayan quota from 73 per cent. in 1936-37 to 64½ per cent. for 1937-38. The share market has long discounted a reduction in tin mining earnings, but as the following table shows, the incidence of these factors upon individual companies has shown considerable variation:—

Company (years to June 30)	Per ton of output		Total revenue	Earned for ord.		Div.	Ordinary Shares	
	Pro- ceeds	Costs		Amt.	Rate		Price*	Yield

1938	124	86½	44,455	6,136	4.5	5		

* 5s. shares, except Kepong, £1. † Years to July 31st.

Producers have exploited a number of alternatives to meet adverse conditions. Some have reduced their dredging operations. Others have increased their stocks or have bought export rights. Kamunting, for example, worked at an even higher level than in 1936-37; the cubic yardage dredged increased by 8 per cent., and production of tin ore was 202 tons higher at 2,746 tons. These results were obtained by increasing end-year stocks by 157 tons, and by purchasing export rights for 452 tons, but despite this increase, costs were slightly higher, owing, apparently to higher dredging costs in the Kamunting area. Pahang also increased its production from 2,793 tons to 3,118 tons of black tin, and milled no less than 30 per

cent. more ore. This company's higher level of activity and lower costs were also achieved by buying rights and keeping 464 tons in stock. The policy of buying quota rights made a considerable difference to Ayer Hitam, a low-cost producer whose increased dividend is in a class by itself. Dredging costs rose substantially, for the area dredged was little more than half that for 1936-37, but thanks to a yield of 2,481 lbs. per cubic yard, against 1,066 lbs., the ore obtained rose by 339 tons to 1,590 tons. The fall in working costs corresponded closely to the fall in proceeds per ton; consequently the same working profit per ton was obtainable on a larger output. The company actually produced 111 per cent. of its annual assessment, despite the average quota of only 64½ per cent., by purchasing rights for the balance. By dredging richer ground, Kepong Dredging was able to increase ore output and thus to obtain practically the same gross proceeds as in 1936-37. The volume of ground treated was reduced to only 750,900 cubic yards, against 948,600 cubic yards, and costs were consequently about £15 a ton higher. Since the end of June, tin has risen substantially and standard cash now stands at £212. Producers may assist their revenues by concentrating upon richer ground, as they had already done last year, and low-cost producers, such as Ayer Hitam, may still find profit in the purchase of export rights. But a current general quota of only 45 per cent. weighs very heavily against such advantages.

Lake View and Star.—Last year's operations of Lake View and Star showed a general improvement upon those of 1936-37. The increased tonnage of ore treated carried higher average values, the percentage of extraction was improved, and a small reduction in costs resulted from the installation of improved equipment in the underground workings. These factors produced an increase of £42,130 in profits to £482,030. Special appropriations, at £85,840, required somewhat less than before, but the directors have placed £92,000 to reserve for British and Australian taxation, compared with £69,000, and also allocated £5,000 to general reserve. The increase in earnings was insufficient to permit any advance in the total dividend of 50 per cent., but £19,280 has been carried forward, against £10,090 brought in. At 3,589,000 tons, ore reserves, including probable and broken ore, show an increase of 174,400 tons to 3,589,000 tons, the grade being a trifle lower at 5.67 dwts. The average value of the ore treated last year, however, was 6.28 dwts.—more than ½ dwt. above the average of the reserves. Any reduction in the grade sent to the mill might be counter-balanced by the rise in the price of gold, but little ground is apparent for anticipating any increase in the rate of dividend. At this week's meeting Mr John A. Agnew referred to the favourable development results. The Minor lodes had responded well, not only in respect of tonnage, but also in an improved grade of ore. Although the new basic wage

system comes into operation this year—at a cost for Lake View estimated at £25,000 directly, and possibly £40,000 in total—Mr Agnew was able to report that the labour situation had improved. On the basis of the distributions for the past two years, the current yield on the shares is about 10 per cent., while the ore reserve tonnage represents nearly six years' supply.

* * *

The Week's Company Profits.—Rubber companies, investment trusts and companies engaged in the heavy industries form the bulk of the 43 companies whose reports have been received this week (excluding six concerns for which comparable figures are not available). The total net profits of these companies show a fall of 11 per cent. from £1,716,000 to £1,528,000. The cumulative total for 2,037 companies during the year to date is £261,150,000, a rise of 9½ per cent. as compared with the £238,510,000 earned in the previous year. The week's results are discussed in preceding Notes and on page 290 under the heading "Shorter Comments," while our usual analysis table appears on page 308.

SETTLING DAYS

TICKET	ACCOUNT
NOVEMBER 8	NOVEMBER 10

EYES have been turned towards Parliament this week, rather than the Stock Exchange. The account has ended with scarcely more activity than at the opening, but with a suggestion of a better tone, following the Prime Minister's statement of policy. In terms of prices, the response was small, but it was well distributed throughout the market. Each section had its own cause for satisfaction—gilt-edged because the need for extreme financial measures might be avoided, and industrials because the slight improvement in economic conditions might now have an opportunity to broaden. Even armament issues, paradoxically, made the best of a speech which contained no plums for them, although it removed the danger of Governmental control.

Drifting conditions in *gilt-edged*, led by the undated list, were arrested in mid-week following the Premier's speech. But at first only the symptom of improvement was recorded. Business failed to expand, and gains were limited to one-eighth of a point. Better advances were recorded on Thursday, ranging up to ¼ on Old Consols, though dealings remained small. After a lame start, improved business was recorded in Dominion stocks.

Among *foreign bonds*, both Japanese and Chinese issues were depressed, the former losing last week's buoyancy on consideration of the economic effects of war, as reflected in particular by the trade figures. The official statement regarding the debt service further discouraged Brazilian bonds, whose recent rise was demonstrably due to excessive optimism. Peru Corporation issues were also affected by the adverse report, but Chilean bonds enjoyed some support. Czech 8 per cent. bonds jumped smartly in mid-week, on the settlement of the Hungarian frontier claims.

Little interest was shown in *home rails*, and the publication of depressing traffics did not shake the general level

of quotations by more than a fraction of a point. Southern deferred, indeed, managed to improve slightly. Interest in Argentine rail stocks, whose prospects are discussed in a leading article on page 275, was devoted principally to debentures and leading preference issues.

Although prices were well maintained on the whole, the *industrial market* early this week was lifeless, and the slightly brighter tone in mid-week provided only fractional gains. The firmness of iron and steel shares in recent weeks was less in evidence, and movements were irregular. Brown Bayley responded to the increased dividend, and Yarrow to the good report. Engineering shares were comparatively active and tended to advance despite unimportant declines in some issues. The B.S.A. meeting had a good effect on the shares. Coal shares, in particular Shipley, were harder, but Horden Collieries eased slightly on the report. Movements in electrical equipment shares were uncertain and featureless. Motor shares were typical of the industrial market generally. They showed no pronounced trend; different issues behaved independently and prices moved irregularly within narrow limits. Aircraft securities were rather steadier than other sections, but turnover remained small. There was some support for textiles on Wednesday, but the earlier part of the week was listless. British Celanese were active in anticipation of the report. Tobacco issues steadied in mid-week after being inclined to sag. Brewery shares were depressed almost throughout, on fears of higher taxation and lower dividends. The satisfactory output figures checked the decline only temporarily. Tate and Lyle were the most prominent in a variable provision and catering section. Interest in stores was concentrated on Woolworth, which were active though not always steady. Some reaction followed the improvement resulting from the success of the new issue. Miscellaneous shares were irregular, but price changes remained small; Murex, however, were a firm feature. Shipping shares were dull and Argentine Navigation preference fell sharply on the postponement of a dividend decision.

Company Meetings of the Week.—Reports of company meetings will be found in this issue on pages 299 to 301. Reductions in operating expenses of the *Buenos Aires Western Railway* totalling £80,000 were described by Sir Follett Holt at the annual meeting. Mr. J. A. Goudge explained to *Buenos Aires and Pacific Railway* stockholders that out of total net losses of £4,657,000 recorded in the past six years, exchange losses accounted for no less than £3,949,000. Mr Joseph H. Maggs's discussion of milk policy at the *United Dairies* meeting, Sir Alexander Roger's survey of the *Birmingham Small Arms* position, and points from Mr John A. Agnew's address to *Lake View and Star* shareholders are discussed on earlier pages. At the *Consolidated African Selection Trust* meeting, Mr A. Chester Beatty reported that there had been encouraging progress in research upon the extension of industrial uses for diamonds. At the *Imperial Smelting* meeting, Lord Horne referred at length to the proposals for an increased duty on foreign zinc, coupled with revised arrangements governing Empire supplies and prices. Together with the improvement in prices, and recovery in the United States, these proposals formed the basis for a confident estimate of future prospects.

There was a still further shrinkage in the very small turnover that has characterised the *oil market* for some time past. Prices, however, became a little firmer after a weak start. Trinidad issues were steady. Business in rubber shares was again negligible, and no special activity is anticipated until the quota for the first quarter of 1939 is decided. Though price changes remained very small, tea shares tended to weaken.

Apart from some short-lived improvement in *Kaffir* prices, conditions in the mining market were again dull, and changes in quotations small. A poor level of activity in the Kaffir market and the closing of the Paris Bourse on Monday and Tuesday made prices rather sensitive to Cape initiative. Monday was thoroughly dull, and though quotations advanced towards mid-week, quiet conditions were soon resumed. Rhodesian copper issues became firmer after initial weakness, but business was on a small scale. Other base metals were neglected.
